## Pethidine Hydrochloride

### [General Notices](#)

(Ph. Eur. monograph 0420)

$C_{15}H_{22}ClNO_2$  283.8 50-13-5

### Action and use

Opioid receptor agonist; analgesic.

### Preparations

[Pethidine Injection](#)

[Pethidine Tablets](#)

Ph Eur

## DEFINITION

Ethyl 1-methyl-4-phenylpiperidine-4-carboxylate hydrochloride.

### Content

99.0 per cent to 101.0 per cent (dried substance).

## PRODUCTION

If intended for use in the manufacture of parenteral preparations, the manufacturing process is validated to show that the content of impurity B is not more than 0.1 ppm.

## CHARACTERS

### Appearance

White or almost white, crystalline powder.

### Solubility

Very soluble in water, freely soluble in ethanol (96 per cent).

## IDENTIFICATION

*First identification:* B, D.

*Second identification:* A, C, D.

- A. Melting point ([2.2.14](#)): 187 °C to 190 °C.
- B. Infrared absorption spectrophotometry ([2.2.24](#)).

*Comparison* [Ph. Eur. reference spectrum of pethidine hydrochloride](#).

- C. Dissolve 0.1 g in 10 mL of [ethanol R](#) and add 10 mL of [picric acid solution R](#). A crystalline precipitate is formed which, when washed with [water R](#) and dried at 100-105 °C, melts ([2.2.14](#)) at 186 °C to 193 °C. Mix equal quantities of the precipitate and the substance to be examined and determine the melting point of the mixture. The melting point is at least 20 °C lower than that of the precipitate.
- D. To 5 mL of solution S (see Tests) add 5 mL of [water R](#). The solution gives reaction (a) of chlorides ([2.3.1](#)).

## TESTS

### Solution S

Dissolve 0.5 g in [carbon dioxide-free water R](#) and dilute to 25 mL with the same solvent.

### Appearance of solution

Solution S is clear ([2.2.1](#)) and colourless ([2.2.2, Method II](#)).

### Acidity or alkalinity

To 10 mL of solution S add 0.2 mL of [methyl red solution R](#) and 0.2 mL of [0.01 M sodium hydroxide](#). The solution is yellow. Add 0.3 mL of [0.01 M hydrochloric acid](#). The solution is red.

### Impurity B

Liquid chromatography ([2.2.29](#)).

*Test solution (a)* Dissolve 0.100 g of the substance to be examined in a mixture of 20 volumes of [acetonitrile R](#) and 80 volumes of [water R](#) and dilute to 25.0 mL with the same mixture of solvents.

*Test solution (b)* Dissolve 0.125 g of the substance to be examined in a mixture of 20 volumes of [acetonitrile R](#) and 80 volumes of [water R](#) and dilute to 10.0 mL with the same mixture of solvents.

*Reference solution (a)* Dilute 0.5 mL of test solution (a) to 100.0 mL with a mixture of 20 volumes of [acetonitrile R](#) and 80 volumes of [water R](#).

*Reference solution (b)* Dissolve 10.0 mg of [pethidine impurity A CRS](#) in a mixture of 20 volumes of [acetonitrile R](#) and 80 volumes of [water R](#) and dilute to 100.0 mL with the same mixture of solvents.

*Reference solution (c)* Dissolve 12.5 mg of [1-methyl-4-phenyl-1,2,3,6-tetrahydropyridine R](#) in a mixture of 20 volumes of [acetonitrile R](#) and 80 volumes of [water R](#) and dilute to 10.0 mL with the same mixture of solvents. Dilute 1.0 mL of the solution to 100.0 mL with a mixture of 20 volumes of [acetonitrile R](#) and 80 volumes of [water R](#).

*Reference solution (d)* Dilute 5.0 mL of reference solution (b) and 1.0 mL of reference solution (c) to 100.0 mL with a mixture of 20 volumes of [acetonitrile R](#) and 80 volumes of [water R](#).

*Column:*

— size:  $l = 0.25$  m,  $\varnothing = 4.0$  mm,

— *stationary phase*: spherical [end-capped octadecylsilyl silica gel for chromatography R](#) (5 µm) with a specific surface area of 340 m<sup>2</sup>/g, a pore size of 10 nm and a carbon loading of 19 per cent.

*Mobile phase*:

— *mobile phase A*: mix equal volumes of a 42.0 g/L solution of [sodium perchlorate R](#) and of a 11.6 g/L solution of [phosphoric acid R](#), adjust to pH 2.0 with [triethylamine R](#),

— *mobile phase B*: [acetonitrile R](#),

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 15	80 → 75	20 → 25
15 - 31	75 → 55	25 → 45
31 - 40	55	45

*Flow rate* 1.0 mL/min.

*Detection* Spectrophotometer at 210 nm.

*Injection* 50 µL; inject test solution (b) and reference solution (d).

*Relative retention* With reference to pethidine (retention time = about 24 min): impurity B = about 0.66; impurity A = about 0.68.

*System suitability* Reference solution (d):

— [signal-to-noise ratio](#): minimum 10 for the first peak,

— [peak-to-valley ratio](#): minimum 4, where  $H_p$  = height above the baseline of the peak due to impurity B, and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity A.

*Limit*:

— *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (10 ppm) if intended for non-parenteral administration.

## Related substances

Liquid chromatography ([2.2.29](#)) as described in the test for impurity B with the following modifications.

*Injection* 20 µL; inject test solution (a) and reference solution (a).

*Limits*:

— *any impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent),

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

## [Loss on drying \(2.2.32\)](#)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

## [Sulfated ash \(2.4.14\)](#)

Maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.220 g in 50 mL of *alcohol R*. Add 5.0 mL of *0.01 M hydrochloric acid*. Titrate with *0.1 M sodium hydroxide* determining the end-point potentiometrically (*2.2.20*). Read the volume added between the 2 points of inflexion.

1 mL of *0.1 M sodium hydroxide* is equivalent to 28.38 mg of  $C_{15}H_{22}ClNO_2$ .

## STORAGE

In an airtight container, protected from light.

## LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

## IMPURITIES

A. 1-methyl-4-phenylpiperidine (MPP),

B. 1-methyl-4-phenyl-1,2,3,6-tetrahydropyridine (MPTP),

C. 1-methyl-4-phenylpiperidine-4-carboxylic acid,

D. methyl 1-methyl-4-phenylpiperidine-4-carboxylate,

E. ethyl 4-phenylpiperidine-4-carboxylate,

F. 1-benzyl-4-phenylpiperidine-4-carboxylic acid,

G. 1-methylethyl 1-methyl-4-phenylpiperidine-4-carboxylate,

H. ethyl 1-benzyl-4-phenylpiperidine-4-carboxylate,

I. ethyl (4 $_{RS}$ )-1-methyl-4-phenyl-1,2,3,4-tetrahydropyridine-4-carboxylate,

J. ethyl 1-ethyl-4-phenylpiperidine-4-carboxylate.
