Severe cutaneous adverse reactions (SCARs), including cases of Stevens-Johnson syndrome (SJS) and toxic epidermal necrolysis (TEN), have been reported in patients treated with immunostimulant antineoplastic drugs, such as pembrolizumab. Healthcare professionals are advised to monitor patients for suspected severe skin reactions and exclude other causes. Patients should be advised to seek urgent medical attention if severe skin reactions occur. If a SCAR is suspected, pembrolizumab therapy should be withheld and the patient referred to a specialist for diagnosis and treatment. Pembrolizumab should be permanently discontinued for any grade confirmed SJS or TEN, and for any grade 4 SCAR. Caution is recommended when considering the use of pembrolizumab in patients with a history of severe or life-threatening SCAR associated with other immunostimulant antineoplastic drugs.

- **CAUTIONS** May increase risk of severe graft-versus-host reaction in patients who have had prior haematopoietic stem cell transplant (particularly in those with a prior history) · patients may need pretreatment to minimise the development of adverse reactions (consult product literature)

- **INTERACTIONS** → Appendix 1: monoclonal antibodies

### ● SIDE-EFFECTS

- ▶ **Common or very common** Alopecia · anaemia · appetite decreased · arrhythmias · arthritis · asthenia · chills · connective tissue disorders · constipation · cough · cytokine release syndrome · decreased leucocytes · diarrhoea · dizziness · dry eye · dry mouth · dyspnoea · electrolyte imbalance · enterocolitis haemorrhagic · eye inflammation · eyelid hypopigmentation · fever · fluid imbalance · gastrointestinal discomfort · gastrointestinal disorders · genital abnormalities · headache · hepatic disorders · hypersensitivity · hypertension · hyperthyroidism · hypothyroidism · increased risk of infection · influenza like illness · infusion related reaction ·

insomnia · joint disorders · lethargy · lip swelling · musculoskeletal discomfort · myalgia · myopathy · myxoedema · nausea · nerve disorders · neutropenia · oedema · pain · pressure ulcer · respiratory disorders · severe cutaneous adverse reactions (SCARs) · skin reactions · taste altered · thrombocytopenia · thyroid disorder · thyroiditis · torticollis · vomiting

▶ **Uncommon** Adrenal hypofunction · cardiac inflammation · diabetic ketoacidosis · eosinophilia · epilepsy · glomerulonephritis · hair colour changes · hypophysitis · hypopituitarism · nephritis · nephrotic syndrome · pancreatitis · pericardial effusion · renal impairment · sarcoidosis · tendon disorders · type 1 diabetes mellitus

▶ **Rare or very rare** Cholangitis sclerosing · cystitis · erythema nodosum · haemolytic anaemia · haemophagocytic lymphohistiocytosis · meningitis · meningitis non-infective · neuromuscular dysfunction · pure red cell aplasia · transverse myelitis · vasculitis

▶ **Frequency not known** Solid organ transplant rejection

**SIDE-EFFECTS, FURTHER INFORMATION** **Immune-related reactions** Most immune-related adverse reactions are reversible and managed by temporarily stopping treatment and administration of a corticosteroid—consult product literature for further information.

**Infusion-related reactions** Manufacturer advises to permanently discontinue treatment in patients with severe infusion reactions.

● **CONCEPTION AND CONTRACEPTION** Manufacturer recommends effective contraception during treatment and for at least 4 months after treatment in women of childbearing potential.

● **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—no information available

● **BREAST FEEDING** Manufacturer advises avoid—no information available.

● **MONITORING REQUIREMENTS** Manufacturer advises monitor for signs and symptoms of infusion- and immune-related reactions.

● **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises for *intermittent intravenous infusion* (*Keytruda*®), dilute to a concentration of 1 mg/mL to 10 mg/mL with Glucose 5% or Sodium Chloride 0.9%; give over 30 minutes using a low-protein binding 0.2–5 micron filter.

● **PRESCRIBING AND DISPENSING INFORMATION** Pembrolizumab is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1; record the brand name and batch number after each administration.

● **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator at 2–8°C.

● **PATIENT AND CARER ADVICE** Patients should be provided with an alert card and advised to keep it with them at all times. A patient information brochure highlighting important safety information to minimise the risk of immune-related side-effects is also available.

**Driving and skilled tasks** Patients should be counselled on the effects on driving and performance of skilled tasks—increased risk of dizziness and fatigue.

● **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website

#### NICE decisions

- ▶ Pembrolizumab for treating advanced melanoma after disease progression with ipilimumab (updated September 2017) NICE TA357 Recommended with restrictions
- ▶ Pembrolizumab for advanced melanoma not previously treated with ipilimumab (updated September 2017) NICE TA366 Recommended with restrictions

- ▶ Pembrolizumab for adjuvant treatment of completely resected stage 3 melanoma (February 2022) NICE TA766 Recommended
- ▶ Pembrolizumab for treating PD-L1-positive non-small-cell lung cancer after chemotherapy (updated September 2017) NICE TA428 Recommended with restrictions
- ▶ Pembrolizumab for untreated PD-L1-positive metastatic non-small-cell lung cancer (July 2018) NICE TA531 Recommended with restrictions
- ▶ Pembrolizumab with pemetrexed and platinum chemotherapy for untreated, metastatic, non-squamous non-small-cell lung cancer (March 2021) NICE TA683 Recommended with restrictions
- ▶ Pembrolizumab with carboplatin and paclitaxel for untreated metastatic squamous non-small-cell lung cancer (February 2022) NICE TA770 Recommended with restrictions
- ▶ Pembrolizumab for treating locally advanced or metastatic urothelial carcinoma after platinum-containing chemotherapy (April 2021) NICE TA692 Not recommended
- ▶ Pembrolizumab for treating relapsed or refractory classical Hodgkin lymphoma [in adults who have had autologous stem cell transplant and brentuximab vedotin] (September 2018) NICE TA540 Not recommended
- ▶ Pembrolizumab for treating relapsed or refractory classical Hodgkin lymphoma [in adults who have had brentuximab vedotin and cannot have autologous stem cell transplant] (September 2018) NICE TA540 Recommended with restrictions
- ▶ Pembrolizumab for treating relapsed or refractory classical Hodgkin lymphoma after stem cell transplant or at least 2 previous therapies (February 2022) NICE TA772 Recommended with restrictions
- ▶ Pembrolizumab with axitinib for untreated advanced renal cell carcinoma (September 2020) NICE TA650 Not recommended
- ▶ Pembrolizumab for untreated metastatic or unresectable recurrent head and neck squamous cell carcinoma (November 2020) NICE TA661 Recommended with restrictions
- ▶ Pembrolizumab for untreated metastatic colorectal cancer with high microsatellite instability or mismatch repair deficiency (June 2021) NICE TA709 Recommended with restrictions
- ▶ Pembrolizumab with platinum- and fluoropyrimidine-based chemotherapy for untreated advanced oesophageal and gastro-oesophageal junction cancer (October 2021) NICE TA737 Recommended

#### Scottish Medicines Consortium (SMC) decisions

- ▶ Pembrolizumab (*Keytruda*®) as monotherapy for the treatment of advanced (unresectable or metastatic) melanoma in adults previously untreated with ipilimumab (November 2015) SMC No. 1086/15 Recommended
- ▶ Pembrolizumab (*Keytruda*®) as monotherapy for the treatment of advanced (unresectable or metastatic) melanoma in adults previously treated with ipilimumab (December 2016) SMC No. 1087/15 Not recommended
- ▶ Pembrolizumab (*Keytruda*®) as monotherapy for the adjuvant treatment of adults with stage III melanoma and lymph node involvement who have undergone complete resection (May 2019) SMC No. SMC2144 Recommended
- ▶ Pembrolizumab (*Keytruda*®) for the treatment of locally advanced or metastatic non-small cell lung carcinoma (NSCLC) in adults whose tumours express programmed death ligand 1 (PD-L1) and who have received at least one prior chemotherapy regimen (January 2017) SMC No. 1204/17 Recommended with restrictions
- ▶ Pembrolizumab (*Keytruda*®) as monotherapy for the first-line treatment of metastatic non-small cell lung carcinoma in adults whose tumours express programmed death ligand 1 with a 50% or more tumour proportion score with no epidermal growth factor receptor or anaplastic lymphoma kinase (ALK)-positive tumour mutations (July 2017) SMC No. 1239/17 Recommended with restrictions

- ▶ Pembrolizumab (*Keytruda*®) in combination with carboplatin and either paclitaxel or nab-paclitaxel, for the first-line treatment of metastatic squamous non-small cell lung cancer in adults (September 2019) SMC No. SMC2187 Recommended with restrictions
- ▶ Pembrolizumab (*Keytruda*®) in combination with pemetrexed and platinum chemotherapy for the first-line treatment of metastatic non-squamous non-small cell lung carcinoma in adults whose tumours have no epidermal growth factor receptor or anaplastic lymphoma kinase (ALK)-positive mutations (October 2019) SMC No. SMC2207 Recommended with restrictions
- ▶ Pembrolizumab (*Keytruda*®) as monotherapy for the treatment of locally advanced or metastatic urothelial carcinoma in adults who have received prior platinum-containing chemotherapy (February 2018) SMC No. 1291/18 Recommended with restrictions
- ▶ Pembrolizumab (*Keytruda*®) as monotherapy for the treatment of locally advanced or metastatic urothelial carcinoma in adults who are not eligible for cisplatin-containing chemotherapy (first line) (September 2018) SMC No. 1339/18 Not recommended
- ▶ Pembrolizumab (*Keytruda*®) as monotherapy for the treatment of adult patients with relapsed or refractory classical Hodgkin lymphoma who have failed autologous stem cell transplant and brentuximab vedotin, or who are transplant-ineligible and have failed brentuximab vedotin (March 2018) SMC No. 1296/18 Recommended with restrictions
- ▶ Pembrolizumab (*Keytruda*®) as monotherapy for the treatment of adult and paediatric patients aged 3 years and older with relapsed or refractory classical Hodgkin lymphoma who have failed autologous stem cell transplant (ASCT), or following at least two prior therapies when ASCT is not a treatment option (November 2021) SMC No. SMC2380 Recommended with restrictions
- ▶ Pembrolizumab (*Keytruda*®) in combination with axitinib for the first-line treatment of advanced renal cell carcinoma (RCC) in adults (September 2020) SMC No. SMC2247 Recommended with restrictions
- ▶ Pembrolizumab (*Keytruda*®) as monotherapy or in combination with platinum and 5-fluorouracil chemotherapy, for the first-line treatment of metastatic or unresectable recurrent head and neck squamous cell carcinoma in adults whose tumours express programmed death ligand 1 with a combined positive score of 1 or more (September 2020) SMC No. SMC2257 Recommended with restrictions
- ▶ Pembrolizumab (*Keytruda*®) as monotherapy for the first-line treatment of metastatic microsatellite instability-high or mismatch repair deficient colorectal cancer in adults (September 2021) SMC No. SMC2375 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for infusion

EXCIPIENTS: May contain Polysorbates

- ▶ *Keytruda* (Merck Sharp & Dohme (UK) Ltd)

Pembrolizumab 25 mg per 1 ml *Keytruda* 100mg/4ml concentrate for solution for infusion vials | 1 vial [PoM] £2,630.00 (Hospital only)

## Pertuzumab

17-May-2021

- **DRUG ACTION** Pertuzumab is a recombinant humanised monoclonal antibody, and acts by inhibiting human epidermal growth factor receptor 2 protein (HER2) dimerisation.

#### ● INDICATIONS AND DOSE

**HER2-positive early stage breast cancer (in combination with trastuzumab and chemotherapy) | HER2-positive metastatic or locally recurrent unresectable breast cancer (in combination with trastuzumab and docetaxel) (specialist use only)**

- ▶ BY INTRAVENOUS INFUSION

▶ Adult: (consult product literature or local protocols)

- **CAUTIONS** Conditions that could impair left ventricular function · history of congestive heart failure · impaired left ventricular function · prior anthracycline exposure · radiotherapy to the chest area · recent myocardial infarction · serious cardiac arrhythmia · uncontrolled hypertension

- **INTERACTIONS** → Appendix 1: monoclonal antibodies

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Alopecia · anaemia · appetite decreased · arthralgia · asthenia · chills · congestive heart failure · constipation · cough · cytokine release syndrome · diarrhoea · dizziness · dyspepsia · dyspnoea · excessive tearing · fever · headache · hypersensitivity · increased risk of infection · infusion related reaction · insomnia · left ventricular dysfunction · leucopenia · mucositis · myalgia · nail disorder · nausea · neutropenia · oedema · pain · peripheral neuropathy · respiratory disorders · skin reactions · stomatitis · taste altered · vomiting

**SIDE-EFFECTS, FURTHER INFORMATION** Side effects mostly described for pertuzumab in combination with trastuzumab and docetaxel.

- **CONCEPTION AND CONTRACEPTION** Ensure effective contraception during and for six months after treatment in women of childbearing potential.

- **PREGNANCY** Avoid (toxicity in *animal* studies). Most cytotoxic drugs are teratogenic and should not be administered during pregnancy, especially during the first trimester. Considerable caution is necessary if a pregnant woman presents with cancer requiring chemotherapy, and specialist advice should always be sought.

- **BREAST FEEDING** Avoid—no information available.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution (no information available).

- **RENAL IMPAIRMENT**  Use with caution in severe impairment (no information available). 

#### ● MONITORING REQUIREMENTS

- ▶ Assess for signs and symptoms of congestive heart failure (including left ventricular ejection fraction) before and during treatment—consult product literature, and withhold treatment if necessary.

- ▶ Monitor for febrile neutropenia.

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises resuscitation facilities should be available.

- **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

#### **NICE decisions**

- ▶ Pertuzumab for the neoadjuvant treatment of HER2-positive breast cancer (December 2016) NICE TA424 Recommended with restrictions

- ▶ Pertuzumab with trastuzumab and docetaxel for treating HER2-positive breast cancer (March 2018) NICE TA509 Recommended with restrictions

- ▶ Pertuzumab for adjuvant treatment of HER2-positive early stage breast cancer (March 2019) NICE TA569 Recommended with restrictions

#### Scottish Medicines Consortium (SMC) decisions

- ▶ Pertuzumab (*Perjeta*®) for use in combination with trastuzumab and chemotherapy for the neoadjuvant treatment of adult patients with human epidermal growth factor receptor 2 (HER2)-positive, locally advanced, inflammatory, or early stage breast cancer at high risk of recurrence (December 2018) SMC No. SMC2119 Recommended
- ▶ Pertuzumab (*Perjeta*®) for use in combination with trastuzumab and docetaxel in adult patients with HER2-positive metastatic or locally recurrent unresectable breast cancer, who have not received previous anti-HER2 therapy or chemotherapy for their metastatic disease (January 2019) SMC No. SMC2120 Recommended
- ▶ Pertuzumab (*Perjeta*®) for use in combination with trastuzumab and chemotherapy for the adjuvant treatment of adult patients with human epidermal growth factor receptor 2 (HER2)-positive early breast cancer (eBC) at high risk of recurrence (September 2020) SMC No. SMC2284 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for infusion

- ▶ *Perjeta* (Roche Products Ltd)  
Pertuzumab 30 mg per 1 ml *Perjeta* 420mg/14ml concentrate for solution for infusion vials | 1 vial [PoM](#) £2,395.00 (Hospital only)

## Pertuzumab with trastuzumab

06-Aug-2021

The properties listed below are those particular to the combination only. For the properties of the components please consider, pertuzumab p. 952, trastuzumab p. 958.

#### ● INDICATIONS AND DOSE

**HER2-positive early stage breast cancer (in combination with chemotherapy) (specialist use only) | HER2-positive metastatic or locally recurrent unresectable breast cancer (in combination with docetaxel) (specialist use only)**

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Adult: (consult product literature or local protocols)

- **INTERACTIONS** → Appendix 1: monoclonal antibodies
- **CONCEPTION AND CONTRACEPTION** [EvGr](#) Ensure effective contraception during and for 7 months after treatment in females of childbearing potential. [M](#) See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** [EvGr](#) Avoid breast-feeding during treatment and for at least 7 months afterwards—no information available. [M](#)
- **PRESCRIBING AND DISPENSING INFORMATION** Pertuzumab with trastuzumab is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1; [EvGr](#) record the brand name and batch number after each administration. [M](#)
- **HANDLING AND STORAGE** [EvGr](#) Store in a refrigerator (2–8°C); consult product literature for storage conditions after preparation of the injection. [M](#)
- **PATIENT AND CARER ADVICE**  
**Driving and skilled tasks** [EvGr](#) Patients and carers should be counselled on the effects on driving and other skilled tasks—increased risk of injection-related reactions and dizziness. [M](#)
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website

#### Scottish Medicines Consortium (SMC) decisions

- ▶ Pertuzumab/trastuzumab (*Phesgo*®) used in combination with chemotherapy for the treatment of adults with HER2-positive early stage breast cancer or in combination with docetaxel for the treatment of adults with HER2-positive metastatic or locally recurrent unresectable breast cancer (July 2021) SMC No. SMC2364 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

EXCIPIENTS: May contain Polysorbates, sucrose

- ▶ *Phesgo* (Roche Products Ltd) ▼  
Pertuzumab 60 mg per 1 ml, Trastuzumab 60 mg per 1 ml *Phesgo* 600mg/600mg/10ml solution for injection vials | 1 vial [PoM](#) £3,617.00 (Hospital only)  
Trastuzumab 40 mg per 1 ml, Pertuzumab 80 mg per 1 ml *Phesgo* 1200mg/600mg/15ml solution for injection vials | 1 vial [PoM](#) £6,012.00 (Hospital only)

## Polatuzumab vedotin

12-Nov-2020

- **DRUG ACTION** Polatuzumab vedotin is an antibody-drug conjugate that contains polatuzumab covalently linked to MMAE, a cytotoxic microtubule disrupting agent.

#### ● INDICATIONS AND DOSE

**Relapsed or refractory diffuse large B-cell lymphoma (in combination with bendamustine and rituximab) (specialist use only)**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: (consult product literature)

- **CONTRA-INDICATIONS** Active severe infection
- **CAUTIONS** High tumour burden—risk of tumour lysis syndrome · patients may need pre-medication to minimise infusion-related reactions · peripheral neuropathy · rapidly proliferating tumours—risk of tumour lysis syndrome  
**CAUTIONS, FURTHER INFORMATION**
- ▶ Pre-medication Manufacturer advises pre-medication with an antihistamine and antipyretic to minimise the development of infusion-related reactions—consult product literature.
- **INTERACTIONS** → Appendix 1: monoclonal antibodies
- **SIDE-EFFECTS**
- ▶ **Common or very common** Anaemia · appetite decreased · arthralgia · asthenia · bone marrow disorders · chills · constipation · cough · decreased leucocytes · diarrhoea · dizziness · electrolyte imbalance · fever · gait abnormal · gastrointestinal discomfort · hypoalbuminaemia · increased risk of infection · infusion related reaction · nausea · neutropenia · peripheral neuropathy · pneumonitis · pruritus · sensation abnormal · sepsis · thrombocytopenia · vision blurred · vomiting · weight decreased
- ▶ **Frequency not known** Gastrointestinal toxicity · hepatic disorders · progressive multifocal leukoencephalopathy (PML) · reactivation of infection
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises females of childbearing potential should confirm pregnancy status before treatment and use effective contraception during treatment and for 9 months after last treatment; male patients should use effective contraception during treatment and for 6 months after last treatment if their partner is pregnant or of childbearing potential. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—toxicity in *animal* studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962

- **BREAST FEEDING** Manufacturer advises avoid breast feeding during treatment and for at least 2 months after treatment.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid in moderate to severe hepatic impairment. Manufacturer advises monitor liver enzymes and bilirubin levels (risk of hepatic toxicity)—consult product literature.
- **RENAL IMPAIRMENT**  
**Dose adjustments** Manufacturer advises no dose adjustment required if creatinine clearance is more than 30 mL/minute; no established dose if creatinine clearance less than 30 mL/minute—no information available. See p. 21.
- **MONITORING REQUIREMENTS** Manufacturer advises monitor complete blood counts prior to each dose; more frequent monitoring may be required—consult product literature for treatment adjustment.
- **PRESCRIBING AND DISPENSING INFORMATION**  
 Polatuzumab vedotin is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1; manufacturer advises to record the brand name and batch number after each administration.
- **HANDLING AND STORAGE** Store in a refrigerator (2–8°C) and protect from light—consult product literature for further information regarding storage conditions after reconstitution and dilution.
- **PATIENT AND CARER ADVICE**  
**Driving and skilled tasks** Manufacturer advises patients and carers should be counselled on the effects on driving and other skilled tasks—increased risk of infusion-related reactions, peripheral neuropathy, fatigue, and dizziness.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
 For full details see funding body website  
**NICE decisions**
  - ▶ Polatuzumab vedotin with rituximab and bendamustine for treating relapsed or refractory diffuse large B-cell lymphoma (September 2020) NICE TA649 Recommended**Scottish Medicines Consortium (SMC) decisions**
  - ▶ Polatuzumab vedotin (*Polivy*<sup>®</sup>) in combination with bendamustine and rituximab for the treatment of adult patients with relapsed/refractory diffuse large B-cell lymphoma (DLBCL) who are not candidates for haematopoietic stem cell transplant (September 2020) SMC No. SMC2282 Recommended
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Powder for solution for infusion**

EXCIPIENTS: May contain Polysorbates, sucrose

▶ **Polivy** (Roche Products Ltd) ▼**Polatuzumab vedotin 30 mg** Polivy 30mg powder for concentrate for solution for infusion vials | 1 vial [PoM] £2,370.00 (Hospital only)**Polatuzumab vedotin 140 mg** Polivy 140mg powder for concentrate for solution for infusion vials | 1 vial [PoM] £11,060.00 (Hospital only)**Ramucirumab**

20-Aug-2020

- **DRUG ACTION** Ramucirumab is a human monoclonal antibody that binds to the vascular endothelial growth factor receptor-2 (VEGFR-2), inhibiting VEGF-induced angiogenesis.

**INDICATIONS AND DOSE****Treatment of advanced gastric cancer or gastro-oesophageal junction adenocarcinoma, in combination with paclitaxel, in patients with disease progression after prior platinum and fluoropyrimidine chemotherapy**

## ▶ BY INTRAVENOUS INFUSION

- ▶ Adult: 8 mg/kg on days 1 and 15 of a 28 day cycle, dose to be administered prior to paclitaxel infusion, consult product literature for dose adjustments due to side-effects and infusion-related reactions

**Treatment of advanced gastric cancer or gastro-oesophageal junction adenocarcinoma, as monotherapy, in patients with disease progression after prior platinum or fluoropyrimidine chemotherapy, and for whom treatment in combination with paclitaxel is not appropriate**

## ▶ BY INTRAVENOUS INFUSION

- ▶ Adult: 8 mg/kg every 2 weeks, consult product literature for dose adjustments due to side-effects and infusion-related reactions

**Treatment of metastatic colorectal cancer, in combination with FOLFIRI (irinotecan, fluorouracil and folinic acid), in patients with disease progression on, or after, prior therapy with bevacizumab, oxaliplatin and a fluoropyrimidine**

## ▶ BY INTRAVENOUS INFUSION

- ▶ Adult: 8 mg/kg every 2 weeks, dose to be administered prior to FOLFIRI administration, consult product literature for dose adjustments due to side-effects and infusion-related reactions

**Treatment of locally advanced or metastatic non-small cell lung cancer, in combination with docetaxel, in patients with disease progression after platinum-based chemotherapy**

## ▶ BY INTRAVENOUS INFUSION

- ▶ Adult: 10 mg/kg on day 1 of a 21 day cycle, dose to be administered prior to docetaxel infusion, consult product literature for dose adjustments due to side-effects and infusion-related reactions

**IMPORTANT SAFETY INFORMATION****MHRA/CHM ADVICE: SYSTEMICALLY ADMINISTERED VEGF PATHWAY INHIBITORS: RISK OF ANEURYSM AND ARTERY DISSECTION (JULY 2020)**

A European review of worldwide data concluded that systemically administered VEGF pathway inhibitors may lead to aneurysm and artery dissection in patients with or without hypertension. Some fatal cases have been reported, mainly in relation to aortic aneurysm rupture and aortic dissection. The MHRA advises healthcare professionals to carefully consider the risk of aneurysm and artery dissection in patients with risk factors before initiating treatment with ramucirumab; any modifiable risk factors (such as smoking and hypertension) should be reduced as much as possible. Patients should be monitored and treated for hypertension as required.

- **CAUTIONS** Elective surgery—discontinue treatment for at least 4 weeks prior to surgery · hypertension · impaired wound healing—discontinue treatment until wound fully healed · pretreatment is recommended to minimise the development of adverse reactions (consult product literature) · risk factors for aneurysm or artery dissection · risk of bleeding

**CAUTIONS, FURTHER INFORMATION**

- Monitoring of blood pressure The MHRA advises to monitor blood pressure regularly—consult product literature if hypertension occurs during treatment.
- INTERACTIONS** → Appendix 1: monoclonal antibodies
- SIDE-EFFECTS**
- Common or very common** Arterial thromboembolism · diarrhoea · electrolyte imbalance · epistaxis · gastrointestinal discomfort · gastrointestinal disorders · headache · hepatic coma · hepatic encephalopathy · hepatic pain · hypertension · hyposalbuminaemia · infusion related reaction · nephrotic syndrome · neutropenia · peripheral oedema · proteinuria · rash · thrombocytopenia
- Frequency not known** Aneurysm · artery dissection · cardiac arrest · cerebrovascular insufficiency · haemangioma · myocardial infarction · thrombotic microangiopathy
- SIDE-EFFECTS, FURTHER INFORMATION** Infusion-related hypersensitivity reactions have been reported with rituximab, particularly during or following the first or second infusion; if the patient experiences a grade 1 or 2 infusion-related reaction, the manufacturer advises to reduce rate of infusion by 50% and give premedication for all subsequent infusions—consult product literature. Manufacturer advises to permanently discontinue treatment in the event of a grade 3 or 4 infusion-related reaction.
- CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during treatment and for up to 3 months after treatment in women of childbearing potential.
- PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—no information available.
- BREAST FEEDING** Manufacturer advises discontinue breast-feeding during treatment and for at least 3 months after treatment—no information available.
- HEPATIC IMPAIRMENT** Manufacturer advises caution in severe cirrhosis, cirrhosis with hepatic encephalopathy, cirrhosis with clinically significant ascites, or hepatorenal syndrome (risk of progressive hepatic failure, no information available).
- MONITORING REQUIREMENTS** Manufacturer advises monitor for signs of infusion-related hypersensitivity reactions; monitor for development or worsening of proteinuria during treatment—consult product literature; monitor blood counts and coagulation parameters in patients at risk of bleeding.
- DIRECTIONS FOR ADMINISTRATION** For intravenous infusion (Cyranza<sup>®</sup>), manufacturer advises give intermittently in Sodium chloride 0.9%; dilute requisite dose with infusion fluid to final volume of 250 mL and invert gently to mix. Do not exceed a rate of 25 mg/minute, and give over approximately 60 minutes via an infusion pump using a separate infusion line with a protein sparing 0.22 micron filter.
- PRESCRIBING AND DISPENSING INFORMATION** For Cyranza<sup>®</sup>, each 10 mL vial contains sodium 17 mg (equivalent to Na<sup>+</sup> 0.74 mmol).
- NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
- NICE decisions**
- Ramucirumab for treating advanced gastric cancer or gastro-oesophageal junction adenocarcinoma previously treated with chemotherapy (January 2016) NICE TA378 Not recommended
- Ramucirumab for previously treated locally advanced or metastatic non-small-cell lung cancer (August 2016) NICE TA403 Not recommended

- MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for infusion**

ELECTROLYTES: May contain Sodium

- Cyranza** (Eli Lilly and Company Ltd)

**Ramucirumab 10 mg per 1 ml** Cyranza 100mg/10ml concentrate for solution for infusion vials | 1 vial [PoM] £500.00 (Hospital only)  
 Cyranza 500mg/50ml concentrate for solution for infusion vials | 1 vial [PoM] £2,500.00 (Hospital only)

K 926

**Rituximab**

16-Nov-2020

**INDICATIONS AND DOSE****Rheumatoid arthritis (specialist use only)**

- BY INTRAVENOUS INFUSION

- Adult: 1 g, then 1 g after 2 weeks, consult product literature for information on retreatment

**Non-Hodgkin's lymphoma (specialist use only) | Chronic****lymphocytic leukaemia (specialist use only) |****Granulomatosis with polyangiitis and microscopic polyangiitis (specialist use only)**

- BY INTRAVENOUS INFUSION

- Adult: (consult product literature)

**Non-Hodgkin's lymphoma (specialist use only)**

- BY SUBCUTANEOUS INJECTION

- Adult: (consult product literature)

**Pemphigus vulgaris (specialist use only)**

- BY INTRAVENOUS INFUSION

- Adult: 1 g, then 1 g after 2 weeks; maintenance 0.5 g, at months 12 and 18, and then every 6 months thereafter if needed, consult product literature for the treatment of relapse

**CONTRA-INDICATIONS****GENERAL CONTRA-INDICATIONS** Severe infection**SPECIFIC CONTRA-INDICATIONS**

- When used for granulomatosis with polyangiitis and microscopic polyangiitis Severe heart failure · severe, uncontrolled heart disease
- When used for pemphigus vulgaris Severe heart failure · severe, uncontrolled heart disease
- When used for rheumatoid arthritis Severe heart failure · severe, uncontrolled heart disease

**CONTRA-INDICATIONS, FURTHER INFORMATION**

For full details on contra-indications, consult product literature.

**CAUTIONS**

**GENERAL CAUTIONS** History of cardiovascular disease (exacerbation of angina, arrhythmia, and heart failure have been reported) · patients receiving cardiotoxic chemotherapy (exacerbation of angina, arrhythmia, and heart failure have been reported) · pre-medication recommended to minimise adverse reactions (consult product literature) · predisposition to infection · transient hypotension occurs frequently during infusion (anti-hypertensives may need to be withheld for 12 hours before infusion)

**SPECIFIC CAUTIONS**

- When used for granulomatosis with polyangiitis and microscopic polyangiitis *Pneumocystis jirovecii* pneumonia—consult product literature for prophylaxis requirements
  - When used for pemphigus vulgaris *Pneumocystis jirovecii* pneumonia—consult product literature for prophylaxis requirements
- CAUTIONS, FURTHER INFORMATION** For full details on cautions, consult product literature or local treatment protocol.
- Hepatitis B infection and reactivation Hepatitis B infection and reactivation (including fatal cases) have been reported in patients taking rituximab. Manufacturer advises patients

with positive hepatitis B serology should be referred to a liver specialist for monitoring and initiation of antiviral therapy before treatment initiation; treatment should not be initiated in patients with evidence of current hepatitis B infection until the infection has been adequately treated. Manufacturer also advises patients should be closely monitored for clinical and laboratory signs of active hepatitis B infection (consult product literature).

● **INTERACTIONS** → Appendix 1: monoclonal antibodies

● **SIDE-EFFECTS**

- ▶ **Common or very common** Angioedema · anxiety · appetite decreased · arrhythmias · bone marrow disorders · bursitis · cancer pain · cardiac disorder · chest pain · chills · dizziness · dysphagia · dyspnoea · ear pain · electrolyte imbalance · gastrointestinal discomfort · gastrointestinal disorders · hepatitis B · hypercholesterolaemia · hyperglycaemia · hyperhidrosis · hypertension · hypotension · insomnia · lacrimation disorder · malaise · migraine · multi organ failure · muscle complaints · muscle tone increased · nausea · nerve disorders · oedema · oral disorders · osteoarthritis · respiratory disorders · sensation abnormal · sepsis · skin reactions · throat irritation · tinnitus · vasodilation · weight decreased
- ▶ **Uncommon** Asthma · coagulation disorder · heart failure · hypoxia · ischaemic heart disease · lymphadenopathy · taste altered
- ▶ **Rare or very rare** Cytokine release syndrome · facial paralysis · renal failure · Stevens-Johnson syndrome (discontinue) · toxic epidermal necrolysis · tumour lysis syndrome · vasculitis · vision disorders
- ▶ **Frequency not known** Epistaxis · hearing loss · hypogammaglobulinaemia · infective thrombosis · influenza like illness · irritability · muscle weakness · nasal congestion · posterior reversible encephalopathy syndrome (PRES) · psychiatric disorder · seizure · skin papilloma · tremor

**SIDE-EFFECTS, FURTHER INFORMATION** Associated with infections, sometimes severe, including tuberculosis, septicaemia, and hepatitis B reactivation.

Progressive multifocal leucoencephalopathy has been reported in association with rituximab; patients should be monitored for cognitive, neurological, or psychiatric signs and symptoms. If progressive multifocal leucoencephalopathy is suspected, suspend treatment until it has been excluded.

- **CONCEPTION AND CONTRACEPTION** Effective contraception in females of childbearing potential required during and for 12 months after treatment.
- **PREGNANCY** Avoid unless potential benefit to mother outweighs risk of B-lymphocyte depletion in fetus.
- **BREAST FEEDING** Avoid breast-feeding during and for 12 months after treatment.
- **MONITORING REQUIREMENTS** For full details on monitoring requirements consult product literature.
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion*, give intermittently in Glucose 5% or Sodium chloride 0.9%; dilute to 1–4 mg/mL and gently invert bag to avoid foaming; for further information, consult product literature.
- **PRESCRIBING AND DISPENSING INFORMATION** Rituximab is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1.
- **PATIENT AND CARER ADVICE** Alert card
  - ▶ When used for Granulomatosis with polyangiitis and microscopic polyangiitis or Rheumatoid arthritis or Pemphigus vulgaris Patients should be provided with a patient alert card with each infusion.

● **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

- ▶ **Rituximab in combination with glucocorticoids for treating anti-neutrophil cytoplasmic antibody-associated vasculitis (March 2014)** NICE TA308 Recommended with restrictions
- ▶ **Adalimumab, etanercept, infliximab, rituximab, and abatacept for the treatment of rheumatoid arthritis after the failure of a TNF inhibitor (August 2010)** NICE TA195 Recommended with restrictions
- ▶ **Rituximab for the first-line treatment of stage III-IV follicular lymphoma (January 2012)** NICE TA243 Recommended
- ▶ **Rituximab for the treatment of relapsed or refractory stage III or IV follicular non-Hodgkin's lymphoma (February 2008)** NICE TA137 Recommended with restrictions
- ▶ **Rituximab for the treatment of relapsed or refractory chronic lymphocytic leukaemia (July 2010)** NICE TA193 Recommended with restrictions
- ▶ **Rituximab for the first-line maintenance treatment of follicular non-Hodgkin's lymphoma (June 2011)** NICE TA226 Recommended
- ▶ **Rituximab for the first-line treatment of chronic lymphocytic leukaemia (July 2009)** NICE TA174 Recommended
- ▶ **Idelalisib for treating chronic lymphocytic leukaemia [in combination with rituximab] (October 2015)** NICE TA359 Recommended
- ▶ **Venetoclax with rituximab for previously treated chronic lymphocytic leukaemia (February 2019)** NICE TA561 Recommended with restrictions

**Scottish Medicines Consortium (SMC) decisions**

- ▶ **Rituximab (*MabThera*<sup>®</sup>)** for use in combination with glucocorticoids for the induction of remission in adult patients with severe, active granulomatosis with polyangiitis (Wegener's) and microscopic polyangiitis (September 2013) SMC No. 894/13 Recommended with restrictions
- ▶ **Rituximab (*MabThera*<sup>®</sup>) subcutaneous injection for the treatment of non-Hodgkin's lymphoma in adults (July 2014)** SMC No. 975/14 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

- ▶ **MabThera** (Roche Products Ltd)  
**Rituximab 119.66 mg per 1 ml** MabThera 1400mg/11.7ml solution for injection vials | 1 vial [PoM] £1,344.65 (Hospital only)

 Truxima 500mg/50ml concentrate for solution for infusion vials | 1 vial [PoM] £785.84 (Hospital only)

## Sacituzumab govitecan

01-Apr-2022

● **DRUG ACTION** Sacituzumab govitecan is an antibody–drug conjugate. The monoclonal antibody component, sacituzumab binds to tumor-associated calcium signal transducer 2 (Trop-2) expressing cancer cells to deliver the linked topoisomerase I inhibitor component into the cells, leading to apoptosis and cell death.

### ● INDICATIONS AND DOSE

#### Breast cancer (specialist use only)

► BY INTRAVENOUS INFUSION

► Adult: 10 mg/kg on days 1 and 8 of a 21-day cycle, for dose adjustments or discontinuation due to side-effects and infusion-related reactions—consult product literature

● **CAUTIONS** Patients with reduced uridine diphosphate glucuronosyltransferase 1A1 (UGT1A1) activity (increased risk of adverse reactions) · pre-medication recommended to minimise the development of adverse reactions and infusion-related reactions—consult product literature

● **INTERACTIONS** → Appendix 1: sacituzumab govitecan

#### ● SIDE-EFFECTS

► **Common or very common** Allergic rhinitis · alopecia · anaemia · appetite decreased · arthralgia · asthma · back pain · chest discomfort · choking · constipation · cough · decreased leucocytes · dehydration · diarrhoea · dizziness · dyspnoea · electrolyte imbalance · epistaxis · eye inflammation · eye pruritus · facial swelling · fatigue · fever · flushing · gastrointestinal discomfort · headache · hyperglycaemia · hypersensitivity · hypotension · increased risk of infection · insomnia · nausea · neutropenia · oedema · oral disorders · respiratory disorders · scrotal oedema · seasonal allergy · skin reactions · swelling · taste altered · throat tightness · vomiting · weight decreased

● **ALLERGY AND CROSS-SENSITIVITY** [EvGr] Contra-indicated in patients with hypersensitivity to previous irinotecan therapy. ⚠

● **CONCEPTION AND CONTRACEPTION** [EvGr] Females of childbearing potential should use effective contraception during treatment and for 6 months after last treatment; male patients should use effective contraception during treatment and for 3 months after last treatment if their partner is of childbearing potential. ⚠ See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962. [EvGr] Female fertility may be impaired—impairment of fertility has been observed in *animal studies*. ⚠

● **PREGNANCY** [EvGr] Avoid—theoretically teratogenic (topoisomerase I inhibitor). ⚠ See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **BREAST FEEDING** [EvGr] Avoid during treatment and for 1 month after last treatment—no information available. ⚠

● **HEPATIC IMPAIRMENT** [EvGr] Avoid in moderate or severe impairment (no information available). ⚠

#### ● MONITORING REQUIREMENTS

► [EvGr] Monitor complete blood count before each dose and as clinically indicated.

► Monitor patients for signs and symptoms of infusion-related reactions during and for at least 30 minutes after completion of each infusion. ⚠

● **DIRECTIONS FOR ADMINISTRATION** Resuscitation facilities should be available during administration of sacituzumab govitecan.

#### ● PRESCRIBING AND DISPENSING INFORMATION

Sacituzumab govitecan is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1; record the brand name and batch number after each administration.

● **HANDLING AND STORAGE** Store in refrigerator (2–8°C)—consult product literature for storage conditions after preparation of the infusion.

● **PATIENT AND CARER ADVICE** Patients and their carers should be advised to seek immediate medical attention if they have black stools, rectal bleeding, dehydration or are unable to tolerate oral fluids.

**Driving and skilled tasks** Patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of dizziness.

#### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### Scottish Medicines Consortium (SMC) decisions

► Sacituzumab govitecan (*Trodelyv*<sup>®</sup>) for the treatment of adult patients with unresectable locally advanced or metastatic triple-negative breast cancer (mTNBC) who have received two or more prior lines of systemic therapies, at least one of them given for unresectable locally advanced or metastatic disease (March 2022) SMC No. SMC2446 Recommended

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for solution for infusion

EXCIPIENTS: May contain Polysorbates

► *Trodelyv* (Gilead Sciences Ltd) ▼

**Sacituzumab govitecan 180 mg** Trodelyv 180mg powder for concentrate for solution for infusion vials | 1 vial [PoM] £793.00 (Hospital only)

## Siltuximab

30-Jul-2020

● **DRUG ACTION** Siltuximab is a monoclonal antibody that inhibits interleukin-6 receptor binding.

### ● INDICATIONS AND DOSE

**Treatment of multicentric Castlemans disease (MCD) in patients who are human immunodeficiency virus (HIV) negative and human herpesvirus-8 (HHV-8) negative**

► BY INTRAVENOUS INFUSION

► Adult: 11 mg/kg every 3 weeks

● **CAUTIONS** Patients at increased risk of gastrointestinal perforation—promptly investigate those presenting with symptoms suggestive of gastrointestinal perforation · severe infection— withhold treatment until resolved · treat infection prior to treatment

#### CAUTIONS, FURTHER INFORMATION

► Hypersensitivity reactions Infusion-related side-effects are reported commonly with siltuximab; resuscitation facilities should be available during treatment.

Consult product literature for further information about siltuximab cautions.

● **INTERACTIONS** → Appendix 1: monoclonal antibodies

#### ● SIDE-EFFECTS

► **Common or very common** Abdominal pain · arthralgia · constipation · diarrhoea · dizziness · dyslipidaemia · gastrooesophageal reflux disease · headache · hypersensitivity · hypertension · hyperuricaemia · increased risk of infection · infusion related reaction · localised oedema · nausea · neutropenia · oral ulceration · oropharyngeal pain · pain in extremity · renal impairment · skin reactions · thrombocytopenia · vomiting · weight increased

**SIDE-EFFECTS, FURTHER INFORMATION** Siltuximab therapy should be discontinued permanently in the event of a severe infusion-related reaction, anaphylaxis, a severe allergic reaction, or the occurrence of cytokine-release syndrome. Mild to moderate infusion-related reactions may improve by temporarily reducing the rate or stopping the infusion. When restarting treatment, a reduced infusion rate and the administration of antihistamines,

paracetamol, and corticosteroids may be considered. Consider discontinuation of siltuximab if more than 2 doses are delayed due to treatment-related toxicities during the first 48 weeks—for full details consult product literature.

- **CONCEPTION AND CONTRACEPTION** Women of childbearing potential should use effective contraception during and for 3 months after treatment.
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (no information).
- **MONITORING REQUIREMENTS**
  - ▶ Monitor neutrophil and platelet count, and haemoglobin levels prior to each dose of siltuximab treatment for the first 12 months and thereafter prior to every third dosing cycle. Consider delaying treatment if required neutrophil, platelet, and haemoglobin levels not achieved—consult product literature for details.
  - ▶ Monitor for infection during treatment.
- **DIRECTIONS FOR ADMINISTRATION** For intravenous infusion (Sylvant<sup>®</sup>), manufacturer advises give intermittently in Glucose 5%. Allow vials to reach room temperature over approximately 30 minutes, then reconstitute each 100 mg vial with 5.2 mL of water for injection, and each 400 mg vial with 20 mL of water for injection, to produce a 20 mg/mL solution. Gently swirl without shaking to dissolve. Further dilute to 250 mL with glucose 5% and gently mix. Use within 6 hours of dilution and give over 60 minutes using an administration set lined with polyvinyl chloride or polyurethane, through a low-protein binding in-line 0.2 micron filter.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for solution for infusion

- ▶ **Sylvant** (EUSA Pharma (UK) Ltd) ▼
  - Siltuximab 100 mg Sylvant 100mg powder for concentrate for solution for infusion vials | 1 vial [PoM] £502.00 (Hospital only)
  - Siltuximab 400 mg Sylvant 400mg powder for concentrate for solution for infusion vials | 1 vial [PoM] £2,009.00 (Hospital only)

## Tafasitamab

02-Mar-2022

- **DRUG ACTION** Tafasitamab is a monoclonal antibody that binds to CD19, a cell-surface antigen, resulting in lysis of B lymphocytes by immune-mediated actions and apoptosis.

#### ● INDICATIONS AND DOSE

##### Diffuse large B-cell lymphoma (specialist use only)

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: (consult product literature)

- **CAUTIONS** Active infection (should be treated and well controlled) · high tumour burden (risk of tumour lysis syndrome) · history of recurring or chronic infections · patients may need premedication to minimise infusion-related reactions · rapidly proliferating tumours (risk of tumour lysis syndrome)

#### CAUTIONS, FURTHER INFORMATION

- ▶ Premedication [EVGr] Premedication with an antihistamine, antipyretic, or corticosteroid is recommended—consult product literature. (M)
- **INTERACTIONS** → Appendix 1: monoclonal antibodies
- **SIDE-EFFECTS**
  - ▶ Common or very common Abdominal pain · alopecia · anaemia · appetite decreased · arthralgia · asthenia · basal cell carcinoma · constipation · COPD exacerbated · cough · decreased leucocytes · diarrhoea · dyspnoea · electrolyte

imbalance · fever · headache · hyperbilirubinaemia · hyperhidrosis · hypogammaglobulinaemia · increased risk of infection · infusion related reaction · malaise · mucositis · muscle spasms · nasal congestion · nausea · neutropenia · pain · paraesthesia · peripheral oedema · sepsis · skin reactions · taste altered · thrombocytopenia · vomiting · weight decreased

- ▶ **Frequency not known** Bone marrow depression · tumour lysis syndrome
- **CONCEPTION AND CONTRACEPTION** [EVGr] Females of childbearing potential should use effective contraception during treatment and for at least 3 months after last treatment. (M) See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** [EVGr] Avoid—no information available; if exposed during pregnancy, monitor infant for B-cell depletion. (M) See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** [EVGr] Avoid during treatment and for at least 3 months after last treatment—no information available. (M)
- **MONITORING REQUIREMENTS** [EVGr] Monitor complete blood counts before each treatment cycle and throughout treatment. (M)
- **PRESCRIBING AND DISPENSING INFORMATION** Tafasitamab is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1; record the brand name and batch number after each administration.
- **HANDLING AND STORAGE** Store in a refrigerator (2–8°C) and protect from light—consult product literature for storage conditions after preparation of the infusion.
- **PATIENT AND CARER ADVICE**
  - Driving and skilled tasks Patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of fatigue.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for solution for infusion

EXCIPIENTS: May contain Polysorbates

- ▶ **Tafasitamab (non-proprietary)** ▼
  - Tafasitamab 200 mg Minjuvi 200mg powder for concentrate for solution for infusion vials | 1 vial [PoM] (M) (Hospital only)

## Trastuzumab

20-Apr-2021

#### ● INDICATIONS AND DOSE

Treatment of early breast cancer which overexpresses human epidermal growth factor receptor-2 (HER2) (initiated by a specialist) | Treatment of metastatic breast cancer in patients with HER2-positive tumours who have not received chemotherapy for metastatic breast cancer and in whom anthracycline treatment is inappropriate (in combination with paclitaxel or docetaxel) (initiated by a specialist) | Treatment of metastatic breast cancer in postmenopausal patients with hormone-receptor positive HER2-positive tumours not previously treated with trastuzumab (in combination with an aromatase inhibitor) (initiated by a specialist)

- ▶ BY INTRAVENOUS INFUSION, OR BY SUBCUTANEOUS INJECTION
- ▶ Adult: (consult product literature or local protocols)

**Monotherapy for metastatic breast cancer in patients with tumours that overexpress HER2 who have received at least 2 chemotherapy regimens including, where appropriate, an anthracycline and a taxane (initiated by a specialist)**

- ▶ BY INTRAVENOUS INFUSION, OR BY SUBCUTANEOUS INJECTION
- ▶ Adult: Women with oestrogen-receptor-positive breast cancer should also have received hormonal therapy (consult product literature or local protocols)

**Treatment of metastatic gastric cancer in patients with HER2-positive tumours who have not received treatment for metastatic gastric cancer (in combination with capecitabine or fluorouracil and cisplatin) (initiated by a specialist)**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: (consult product literature or local protocols)

- **CONTRA-INDICATIONS** Severe dyspnoea at rest
- **CAUTIONS** Coronary artery disease · elderly · history of hypertension · impaired left ventricular function · symptomatic heart failure · uncontrolled arrhythmias
- **INTERACTIONS** → Appendix 1: monoclonal antibodies
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Alopecia · anaemia · angioedema · anxiety · appetite decreased · arrhythmias · arthralgia · arthritis · asthenia · asthma · breast abnormalities · cardiomyopathy · chest pain · chills · constipation · cough · cystitis · depression · diarrhoea · dizziness · drowsiness · dry eye · dry mouth · dyspnoea · excessive tearing · eye inflammation · fever · gastrointestinal discomfort · haemorrhage · haemorrhoids · headache · heart failure · hepatic disorders · hyperhidrosis · hypersensitivity · hypotension · increased risk of infection · influenza like illness · infusion related reaction (may be delayed) · insomnia · leucopenia · malaise · mucositis · muscle complaints · muscle tone increased · nail disorders · nausea · neutropenia · neutropenic sepsis · oedema · oral disorders · pain · palpitations · paraesthesia · peripheral neuropathy · renal disorder · respiratory disorders · rhinorrhoea · skin reactions · taste altered · thrombocytopenia · tremor · vasodilation · vomiting · weight decreased
  - ▶ **Uncommon** Deafness · pericardial effusion
  - ▶ **Frequency not known** Cancer progression · cardiogenic shock · glomerulonephritis · hyperkalaemia · hypoproteinaemia · hypoxia · pulmonary fibrosis (may be delayed) · pulmonary oedema (may be delayed) · renal failure
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception in women of childbearing potential during and for 7 months after treatment. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Manufacturer advises avoid—oligohydramnios reported. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Avoid breast-feeding during treatment and for 7 months afterwards.
- **MONITORING REQUIREMENTS**
  - ▶ **Cardiotoxicity** Monitor cardiac function before and during treatment—for details of monitoring and managing cardiotoxicity, consult product literature.
- **DIRECTIONS FOR ADMINISTRATION** Resuscitation facilities should be available during administration of trastuzumab.
- **PRESCRIBING AND DISPENSING INFORMATION** When prescribing, dispensing, or administering, check that this is the correct preparation—trastuzumab is **not** interchangeable with trastuzumab emtansine or trastuzumab deruxtecan.

Trastuzumab is a biological medicine. Biological medicines must be prescribed and dispensed by brand

name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1; record the brand name and batch number after each administration.

- **HANDLING AND STORAGE** Store in a refrigerator (2–8°C); consult product literature for storage conditions after preparation of the infusion.

- **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

- ▶ **Guidance on the use of trastuzumab for the treatment of advanced breast cancer (March 2002)** NICE TA34 Recommended with restrictions
- ▶ **Lapatinib or trastuzumab in combination with an aromatase inhibitor for the first-line treatment of metastatic hormone-receptor-positive breast cancer that overexpresses HER2 (June 2012)** NICE TA257 Not recommended
- ▶ **Pertuzumab with trastuzumab and docetaxel for treating HER2-positive breast cancer (March 2018)** NICE TA509 Recommended with restrictions
- ▶ **Trastuzumab for the treatment of HER2-positive metastatic gastric cancer (November 2010)** NICE TA208 Recommended with restrictions

**Scottish Medicines Consortium (SMC) decisions**

- ▶ **Trastuzumab (Herceptin<sup>®</sup>) for the treatment of adult patients with HER2 positive metastatic breast cancer and early breast cancer (January 2014)** SMC No. 928/13 Recommended with restrictions
- ▶ **Trastuzumab (Herceptin<sup>®</sup>) in combination with capecitabine or fluorouracil and cisplatin for the treatment of patients with HER2 positive metastatic adenocarcinoma of the stomach or gastro-oesophageal junction who have not received prior anti-cancer treatment for their metastatic disease (October 2015)** SMC No. 623/10 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

- ▶ **Herceptin** (Roche Products Ltd)

Trastuzumab 120 mg per 1 ml Herceptin 600mg/5ml solution for injection vials | 1 vial [PoM] £1,222.20 (Hospital only)

## Trastuzumab deruxtecan

11-Feb-2022

● **DRUG ACTION** Trastuzumab deruxtecan is an antibody-drug conjugate that contains trastuzumab covalently linked to deruxtecan, a topoisomerase I inhibitor.

### ● INDICATIONS AND DOSE

**HER2-positive unresectable or metastatic breast cancer (specialist use only)**

► BY INTRAVENOUS INFUSION

► Adult: (consult product literature or local protocols)

● **CAUTIONS** History of interstitial lung disease or pneumonitis · impaired left ventricular function · patients aged 75 years and over (limited information available)

● **INTERACTIONS** → Appendix 1: monoclonal antibodies

### ● SIDE-EFFECTS

► **Common or very common** Alopecia · anaemia · appetite decreased · asthenia · constipation · cough · decreased leucocytes · diarrhoea · dizziness · dry eye · dyspnoea · epistaxis · flushing · gastrointestinal discomfort · headaches · heart failure · hypersensitivity · hypokalaemia · increased risk of infection · influenza like illness · infusion related reaction · lymphangitis · nausea · neutropenia · oral disorders · respiratory disorders · skin reactions · thrombocytopenia · vomiting

● **CONCEPTION AND CONTRACEPTION** [EvdGr](#) Females of childbearing potential should use effective contraception during treatment and for at least 7 months after last treatment; male patients should use effective contraception during treatment and for at least 4 months after last treatment if their partner is of childbearing potential. [M](#) See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **PREGNANCY** [EvdGr](#) Avoid—oligohydramnios reported with trastuzumab. [M](#) See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **BREAST FEEDING** [EvdGr](#) Avoid breast-feeding during and for 7 months after treatment. [M](#)

● **HEPATIC IMPAIRMENT** [EvdGr](#) Caution in moderate or severe impairment (primarily biliary excretion). [M](#)

### ● MONITORING REQUIREMENTS

► [EvdGr](#) Measure complete blood counts prior to initiation, before each dose, and as clinically indicated.

► Test cardiac function before treatment and regularly during treatment—delay or discontinue treatment in cases of left ventricular dysfunction; discontinue treatment in symptomatic heart failure.

► Monitor for signs and symptoms of interstitial lung disease or pneumonitis—discontinue if confirmed (fatal cases reported). [M](#)

● **PRESCRIBING AND DISPENSING INFORMATION** When prescribing, dispensing, or administering, check that this is the correct preparation—trastuzumab deruxtecan is **not** interchangeable with trastuzumab or trastuzumab emtansine.

Trastuzumab deruxtecan is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines and Biosimilar medicines*, under Guidance on prescribing p. 1; record the brand name and batch number after each administration.

● **HANDLING AND STORAGE** Store in a refrigerator (2–8°C); consult product literature for storage conditions after preparation of the infusion.

● **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website

### NICE decisions

► Trastuzumab deruxtecan for treating HER2-positive unresectable or metastatic breast cancer after 2 or more anti-HER2 therapies (May 2021) NICE TA704 Recommended

### Scottish Medicines Consortium (SMC) decisions

► Trastuzumab deruxtecan (*Enhertu*<sup>®</sup>) as monotherapy for the treatment of adult patients with unresectable or metastatic HER2-positive breast cancer who have received two or more prior anti-HER2-based regimens (January 2022)  
SMC No. SMC2388 Recommended

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Powder for solution for infusion

EXCipients: May contain Polysorbates

► *Enhertu* (Daiichi Sankyo UK Ltd) ▼

Trastuzumab deruxtecan 100 mg *Enhertu* 100mg powder for concentrate for solution for infusion vials | 1 vial [PoM](#) £1,455.00 (Hospital only)

## Trastuzumab emtansine

17-May-2021

● **DRUG ACTION** Trastuzumab emtansine is an antibody-drug conjugate that contains trastuzumab covalently linked to DM1, a cytotoxic microtubule inhibitor.

### ● INDICATIONS AND DOSE

**HER2-positive metastatic breast cancer (specialist use only) | HER2-positive early breast cancer (specialist use only)**

► BY INTRAVENOUS INFUSION

► Adult: (consult product literature or local protocols)

● **CAUTIONS** Dyspnoea at rest—increased risk of pulmonary events · history of congestive heart failure · patients over 75 years · peripheral neuropathy (temporarily discontinue treatment—consult product literature) · recent history of myocardial infarction · recent history of unstable angina · risk of left ventricular dysfunction—consult product literature for specific risks with trastuzumab treatment · serious arrhythmias

● **INTERACTIONS** → Appendix 1: monoclonal antibodies

### ● SIDE-EFFECTS

► **Common or very common** Alopecia · anaemia · arthralgia · asthenia · chills · conjunctivitis · constipation · cough · diarrhoea · dizziness · dry eye · dry mouth · dyspnoea · excessive tearing · fever · gastrointestinal discomfort · haemorrhage · headache · hypersensitivity · hypertension · hypokalaemia · infusion related reaction · insomnia · left ventricular dysfunction · leucopenia · memory loss · musculoskeletal pain · myalgia · nail disorder · nausea · neutropenia · peripheral neuropathy · peripheral oedema · skin reactions · stomatitis · taste altered · thrombocytopenia · urinary tract infection · vision blurred · vomiting

► **Uncommon** Hepatic disorders · nodular regenerative hyperplasia · pneumonitis

● **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception must be used during and for 7 months after stopping treatment in women and men. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **PREGNANCY** Manufacturer advises avoid—oligohydramnios reported with trastuzumab. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **BREAST FEEDING** Manufacturer advises avoid breast-feeding during and for 7 months after treatment.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution—consult product literature.

**Dose adjustments** Manufacturer advises dose reduction according to liver function tests—consult product literature.

● **RENAL IMPAIRMENT** [EvdGr](#) Caution in severe impairment (no information available). [M](#)

### ● MONITORING REQUIREMENTS

- ▶ Monitor hepatic function before each dose.
- ▶ Monitor for signs and symptoms of neurotoxicity.
- ▶ Monitor closely for infusion-related and hypersensitivity reactions.
- ▶ Monitor platelet count before each dose and as clinically indicated (consult product literature for treatment modification in thrombocytopenia).
- ▶ Test cardiac function before treatment and regularly during treatment—delay or discontinue treatment in cases of left ventricular dysfunction.
- ▶ Monitor for dyspnoea, cough, fatigue and pulmonary infiltrates—discontinue if interstitial lung disease or pneumonitis confirmed (fatal cases reported).

● **DIRECTIONS FOR ADMINISTRATION** Resuscitation facilities should be available during administration of trastuzumab emtansine.

● **PRESCRIBING AND DISPENSING INFORMATION** When prescribing, dispensing, or administering, check that this is the correct preparation—trastuzumab emtansine is **not** interchangeable with trastuzumab or trastuzumab deruxtecan.

Trastuzumab emtansine is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1; record the brand name and batch number after each administration.

● **HANDLING AND STORAGE** Store in a refrigerator (2–8°C); consult product literature for storage conditions after preparation of the infusion.

### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### NICE decisions

- ▶ Trastuzumab emtansine for treating HER2-positive advanced breast cancer after trastuzumab and a taxane (updated November 2017) NICE TA458 Recommended with restrictions
- ▶ Trastuzumab emtansine for adjuvant treatment of HER2-positive early breast cancer (June 2020) NICE TA632 Recommended

#### Scottish Medicines Consortium (SMC) decisions

- ▶ Trastuzumab emtansine (*Kadcyla*<sup>®</sup>) for HER2-positive, unresectable locally advanced or metastatic breast cancer after trastuzumab and a taxane (April 2017) SMC No. 990/14 Recommended
- ▶ Trastuzumab emtansine (*Kadcyla*<sup>®</sup>) as a single agent, for the adjuvant treatment of adult patients with HER2-positive early breast cancer who have residual invasive disease, in the breast and/or lymph nodes, after neoadjuvant taxane-based and HER2-targeted therapy (November 2020) SMC No. SMC2298 Recommended

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for solution for infusion

##### ▶ *Kadcyla* (Roche Products Ltd)

Trastuzumab emtansine 100 mg *Kadcyla* 100mg powder for concentrate for solution for infusion vials | 1 vial [PoM] £1,641.01

Trastuzumab emtansine 160 mg *Kadcyla* 160mg powder for concentrate for solution for infusion vials | 1 vial [PoM] £2,625.62

## 2 Carcinoid syndrome

### ENZYME INHIBITORS

#### Telotristat ethyl

23-Oct-2020

● **DRUG ACTION** Telotristat ethyl and its active metabolite inhibit L-tryptophan hydroxylases TPH-1 and TPH-2 which reduces the production of serotonin, thereby alleviating symptoms associated with carcinoid syndrome.

#### ● INDICATIONS AND DOSE

##### Carcinoid syndrome diarrhoea (specialist use only)

###### ▶ BY MOUTH

- ▶ Adult: 250 mg 3 times a day, review treatment if no response after 12 weeks

● **INTERACTIONS** → Appendix 1: telotristat ethyl

#### ● SIDE-EFFECTS

▶ **Common or very common** Appetite decreased · constipation · fatigue · fever · gastrointestinal discomfort · gastrointestinal disorders · headache · peripheral oedema

● **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies.

● **BREAST FEEDING** Manufacturer advises avoid—no information available.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild to moderate impairment; avoid in severe impairment (no information available).

**Dose adjustments** Manufacturer advises consider dose reduction to 250 mg twice daily in mild impairment and to 250 mg once daily in moderate impairment, according to tolerability.

● **RENAL IMPAIRMENT** Manufacturer advises caution in mild-to-moderate impairment; avoid in severe impairment—no information available.

● **MONITORING REQUIREMENTS** Manufacturer advises monitor liver function at initiation and during treatment as clinically indicated—discontinue if liver injury suspected.

● **PATIENT AND CARER ADVICE** Manufacturer advises inform patients to report any symptoms of depression or decreased interest.

#### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### Scottish Medicines Consortium (SMC) decisions

- ▶ Telotristat ethyl (*Xermelo*<sup>®</sup>) for the treatment of carcinoid syndrome diarrhoea in combination with somatostatin analogue (SSA) therapy in adults inadequately controlled by SSA therapy (June 2018) SMC No. 1327/18 Recommended with restrictions

#### All Wales Medicines Strategy Group (AWMSG) decisions

- ▶ Telotristat ethyl (*Xermelo*<sup>®</sup>) for the treatment of carcinoid syndrome diarrhoea in combination with somatostatin analogue (SSA) therapy in adults inadequately controlled by SSA therapy (July 2018) AWMSG No. 2037 Recommended with restrictions

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

## 3 Cytotoxic responsive malignancy

### Cytotoxic drugs

27-Sep-2018

#### Overview

The chemotherapy of cancer is complex and should be confined to specialists in oncology. Cytotoxic drugs have both anti-cancer activity and the potential to damage normal tissue; most cytotoxic drugs are teratogenic. Chemotherapy may be given with a curative intent or it may aim to prolong life or to palliate symptoms. In an increasing number of cases chemotherapy may be combined with radiotherapy or surgery or both as either neoadjuvant treatment (initial chemotherapy aimed at shrinking the primary tumour, thereby rendering local therapy less destructive or more effective) or as adjuvant treatment (which follows definitive treatment of the primary disease, when the risk of subclinical metastatic disease is known to be high). All cytotoxic drugs cause side-effects and a balance has to be struck between likely benefit and acceptable toxicity.

Combinations of cytotoxic drugs, as continuous or pulsed cycles of treatment, are frequently more toxic than single drugs but have the advantage in certain tumours of enhanced response, reduced development of drug resistance and increased survival. However for some tumours, single-agent chemotherapy remains the treatment of choice.

Cytotoxic drugs fall into a number of classes, each with characteristic antitumour activity, sites of action, and toxicity. A knowledge of sites of metabolism and excretion is important because impaired drug handling as a result of disease is not uncommon and may result in enhanced toxicity.

#### Cytotoxic drug handling guidelines

- Trained personnel should reconstitute cytotoxics
- Reconstitution should be carried out in designated pharmacy areas
- Protective clothing (including gloves, gowns, and masks) should be worn
- The eyes should be protected and means of first aid should be specified
- Pregnant staff should avoid exposure to cytotoxic drugs (all females of child-bearing age should be informed of the reproductive hazard)
- Use local procedures for dealing with spillages and safe disposal of waste material, including syringes, containers, and absorbent material
- Staff exposure to cytotoxic drugs should be monitored

#### Intrathecal chemotherapy

A Health Service Circular (HSC 2008/001) provides guidance on the introduction of safe practice in NHS Trusts where intrathecal chemotherapy is administered; written local guidance covering all aspects of national guidance should be available. Support for training programmes is also available. Copies, and further information may be obtained from the Department of Health and Social Care website ([www.gov.uk/government/organisations/department-of-health-and-social-care](http://www.gov.uk/government/organisations/department-of-health-and-social-care)).

#### Safe systems for cytotoxic medicines

NHS cancer networks have been established across the UK to bring together all stakeholders in all sectors of care, to work collaboratively to plan and deliver high quality cancer services for a given population. NHS cancer networks have websites containing information on local chemotherapy services and treatment.

Safe system requirements:

- cytotoxic drugs for the treatment of cancer should be given as part of a wider pathway of care coordinated by a multidisciplinary team
- cytotoxic drugs should be prescribed, dispensed, and administered only in the context of a written protocol or treatment plan
- injectable cytotoxic drugs should only be dispensed if they are prepared for administration
- oral cytotoxic medicines should be dispensed with clear directions for use

#### Cytotoxic drugs: important safety information

##### Risk of incorrect dosing of oral anti-cancer medicines

The National Patient Safety Agency has advised (January 2008) that the prescribing and use of oral cytotoxic medicines should be carried out to the same standard as parenteral cytotoxic therapy.

- non-specialists who prescribe or administer on-going oral cytotoxic medication should have access to written protocols and treatment plans, including guidance on the monitoring and treatment of toxicity;
- staff dispensing oral cytotoxic medicines should confirm that the prescribed dose is appropriate for the patient. Patients should have written information that includes details of the intended oral anti-cancer regimen, the treatment plan, and arrangements for monitoring, taken from the original protocol from the initiating hospital. Staff dispensing oral cytotoxic medicines should also have access to this information, and to advice from an experienced cancer pharmacist in the initiating hospital.

#### Cytotoxic drug doses

Doses of cytotoxic drugs are determined using a variety of different methods including body-surface area or body-weight. Alternatively, doses may be fixed. Doses may be further adjusted following consideration of a patient's neutrophil count, renal and hepatic function, and history of previous adverse effects to the cytotoxic drug. Doses may also differ depending on whether a drug is used alone or in combination.

Because of the complexity of dosage regimens in the treatment of malignant disease, dose statements have been omitted from some of the drug entries in this chapter. However, even where dose statements have been provided, detailed specialist literature, individual hospital chemotherapy protocols, or local cancer networks should be consulted before prescribing, dispensing, or administering cytotoxic drugs.

Prescriptions should **not** be repeated except on the instructions of a specialist.

#### Cytotoxic drug side-effects

Side-effects common to most cytotoxic drugs are discussed below whilst side-effects characteristic of a particular drug or class of drugs (e.g. neurotoxicity with vinca alkaloids) are mentioned in the appropriate sections. Manufacturers' product literature, hospital-trust protocols, and cancer-network protocols should be consulted for full details of side-effects associated with individual drugs and specific chemotherapy regimes.

Many side-effects of cytotoxic drugs often do not occur at the time of administration, but days or weeks later. It is therefore important that patients and healthcare professionals can identify symptoms that cause concern and can contact an expert for advice. Toxicities should be accurately recorded using a recognised scoring system such as the Common Toxicity Criteria for Adverse Events (CTCAE) developed by the National Cancer Institute.

#### Extravasation of intravenous drugs

A number of cytotoxic drugs will cause severe local tissue necrosis if leakage into the extravascular compartment

occurs. To reduce the risk of extravasation injury it is recommended that cytotoxic drugs are administered by appropriately trained staff. See information on the prevention and management of extravasation injury.

#### Oral mucositis

A sore mouth is a common complication of cancer chemotherapy; it is most often associated with fluorouracil p. 985, methotrexate p. 987, and the anthracyclines. It is best to prevent the complication. Good oral hygiene (rinsing the mouth frequently and effective brushing of the teeth with a soft brush 2–3 times daily) is probably beneficial. For fluorouracil p. 985, sucking ice chips during short infusions of the drug is also helpful.

Once a sore mouth has developed, treatment is much less effective. Saline mouthwashes should be used but there is no good evidence to support the use of antiseptic or anti-inflammatory mouthwashes. In general, mucositis is self-limiting but with poor oral hygiene it can be a focus for blood-borne infection.

#### Tumour lysis syndrome

Tumour lysis syndrome occurs secondary to spontaneous or treatment-related rapid destruction of malignant cells. Patients at risk of tumour lysis syndrome include those with non-Hodgkin's lymphoma (especially if high grade and bulky disease), Burkitt's lymphoma, acute lymphoblastic leukaemia and acute myeloid leukaemia (particularly if high white blood cell counts or bulky disease), and occasionally those with solid tumours. Pre-existing hyperuricaemia, dehydration, and renal impairment are also predisposing factors. Features include hyperkalaemia, hyperuricaemia (see below), and hyperphosphataemia with hypocalcaemia; renal damage and arrhythmias can follow. Early identification of patients at risk, and initiation of prophylaxis or therapy for tumour lysis syndrome, is essential.

#### Hyperuricaemia

Hyperuricaemia, which may be present in high-grade lymphoma and leukaemia, can be markedly worsened by chemotherapy and is associated with acute renal failure. Allopurinol p. 1213 should be started 24 hours before treating such tumours and patients should be adequately hydrated. The dose of mercaptopurine p. 986 or azathioprine p. 902 should be reduced if allopurinol needs to be given concomitantly. Febuxostat p. 1214 may also be used and should be started 2 days before cytotoxic therapy is initiated.

Rasburicase p. 1017, a recombinant urate oxidase, is licensed for hyperuricaemia in patients with haematological malignancy. It rapidly reduces plasma-uric acid concentration and may be of particular value in preventing complications following treatment of leukaemias or bulky lymphomas.

#### Bone-marrow suppression

All cytotoxic drugs except vincristine sulfate p. 1003 and bleomycin p. 993 cause bone-marrow suppression. This commonly occurs 7 to 10 days after administration, but is delayed for certain drugs, such as carmustine p. 966, lomustine p. 970, and melphalan p. 971. Peripheral blood counts must be checked before each treatment, and doses should be reduced or therapy delayed if bone-marrow has not recovered.

Cytotoxic drugs may be contra-indicated in patients with acute infection; any infection should be treated before, or when starting, cytotoxic drugs.

Fever in a neutropenic patient (neutrophil count less than  $1.06 \times 10^9$ /litre) requires immediate broad-spectrum antibacterial therapy. Appropriate bacteriological investigations should be conducted as soon as possible. Patients taking cytotoxic drugs who have signs or symptoms of infection should be advised to seek prompt medical attention. All patients should initially be investigated and

treated under the supervision of the appropriate oncology or haematology specialist.

In selected patients, the duration and the severity of neutropenia can be reduced by the use of recombinant human granulocyte-colony stimulating factors.

Symptomatic anaemia is usually treated with red blood cell transfusions. For guidance on the use of erythropoietins in patients with cancer, see MHRA/CHM advice and NICE guidance.

#### Alopecia

Reversible hair loss is a common complication, although it varies in degree between drugs and individual patients. No pharmacological methods of preventing this are available.

#### Thromboembolism

Venous thromboembolism can be a complication of cancer itself, but chemotherapy increases the risk.

#### Cytotoxic drugs: effect on pregnancy and reproductive function

Most cytotoxic drugs are teratogenic and should not be administered during pregnancy, especially during the first trimester. Considerable caution is necessary if a pregnant woman presents with cancer requiring chemotherapy, and specialist advice should always be sought.

Exclude pregnancy before treatment with cytotoxic drugs. Contraceptive advice should be given before cytotoxic therapy begins—women of childbearing age should use effective contraception during and after treatment.

Regimens that do not contain an alkylating drug or procarbazine may have less effect on fertility, but those with an alkylating drug or procarbazine carry the risk of causing permanent male sterility (there is no effect on potency). Pretreatment counselling and consideration of sperm storage may be appropriate. Women are less severely affected, though the span of reproductive life may be shortened by the onset of a premature menopause. No increase in fetal abnormalities or abortion rate has been recorded in patients who remain fertile after cytotoxic chemotherapy.

#### Cytotoxic drugs: nausea and vomiting

Nausea and vomiting cause considerable distress to many patients who receive chemotherapy and to a lesser extent abdominal radiotherapy, and may lead to refusal of further treatment; prophylaxis of nausea and vomiting is therefore extremely important. Symptoms may be acute (occurring within 24 hours of treatment), delayed (first occurring more than 24 hours after treatment), or anticipatory (occurring prior to subsequent doses). Delayed and anticipatory symptoms are more difficult to control than acute symptoms and require different management.

Patients vary in their susceptibility to drug-induced nausea and vomiting; those affected more often include women, patients under 50 years of age, anxious patients, and those who experience motion sickness. Susceptibility also increases with repeated exposure to the cytotoxic drug.

Drugs may be divided according to their emetogenic potential and some examples are given below, but the symptoms vary according to the dose, to other drugs administered and to the individual's susceptibility to emetogenic stimuli.

*Mildly emetogenic treatment*—fluorouracil, etoposide p. 997, methotrexate p. 987 (less than  $100 \text{ mg/m}^2$ , low dose in children), the vinca alkaloids, and abdominal radiotherapy.

*Moderately emetogenic treatment*—the taxanes, doxorubicin hydrochloride p. 975, intermediate and low doses of cyclophosphamide p. 968, mitoxantrone p. 978, and high doses of methotrexate ( $0.1$ – $1.2 \text{ g/m}^2$ ).

*Highly emetogenic treatment*—cisplatin p. 996, dacarbazine p. 969, and high doses of cyclophosphamide.

**Prevention of acute symptoms**

For patients at *low risk of emesis*, pretreatment with dexamethasone p. 743 or lorazepam p. 369 may be used.

For patients at *high risk of emesis*, a 5HT<sub>3</sub>-receptor antagonist, usually given by mouth in combination with dexamethasone and the neurokinin receptor antagonist aprepitant p. 465 is effective.

**Prevention of delayed symptoms**

For delayed symptoms associated with moderately emetogenic chemotherapy, a combination of dexamethasone and 5HT<sub>3</sub>-receptor antagonist is effective; for highly emetogenic chemotherapy, a combination of dexamethasone and aprepitant is effective. Rolapitant and metoclopramide hydrochloride p. 464 are also licensed for delayed chemotherapy-induced nausea and vomiting.

**Prevention of anticipatory symptoms**

Good symptom control is the best way to prevent anticipatory symptoms. Lorazepam can be helpful for its amnesic, sedative, and anxiolytic effects.

For information on the treatment of nausea and vomiting, see Nausea and labyrinth disorders p. 460.

**Treatment of cytotoxic-induced side-effects****Anthracycline side-effects****Anthracycline-induced cardiotoxicity**

The anthracycline cytotoxic drugs are associated with dose-related, cumulative, and potentially life-threatening cardiotoxic side-effects.

**Anthracycline extravasation**

Local guidelines for the management of extravasation should be followed or specialist advice sought.

See further information on the prevention and management of extravasation injury.

**Chemotherapy-induced mucositis and myelosuppression**

Folinic acid p. 1015 (given as calcium folinate) is used to counteract the folate-antagonist action of methotrexate p. 987 and thus speed recovery from methotrexate-induced mucositis or myelosuppression ('folinic acid rescue').

Folinic acid is also used in the management of methotrexate overdose, together with other measures to maintain fluid and electrolyte balance, and to manage possible renal failure.

Folinic acid does not counteract the antibacterial activity of folate antagonists such as trimethoprim p. 625.

When folinic acid and fluorouracil p. 985 are used together in metastatic colorectal cancer the response-rate improves compared to that with fluorouracil alone.

The calcium salt of levofolinic acid p. 1016, a single isomer of folinic acid, is also used for rescue therapy following methotrexate administration, for cases of methotrexate overdose, and for use with fluorouracil for colorectal cancer. The dose of calcium levofolinate is generally half that of calcium folinate.

The disodium salts of folinic acid and levofolinic acid are also used for rescue therapy following methotrexate therapy, and for use with fluorouracil for colorectal cancer.

**Urothelial toxicity**

Haemorrhagic cystitis is a common manifestation of urothelial toxicity which occurs with the oxazaphosphorines, cyclophosphamide p. 968 and ifosfamide p. 970; it is caused by the metabolite acrolein. Mesna p. 1015 reacts specifically with this metabolite in the urinary tract, preventing toxicity. Mesna is used routinely (preferably by mouth) in patients receiving ifosfamide, and in patients receiving cyclophosphamide by the intravenous route at a high dose (e.g. more than 2 g) or in those who experienced urothelial toxicity when given cyclophosphamide previously.

**Anthracyclines and other cytotoxic antibiotics**

Drugs in this group are widely used. Many cytotoxic antibiotics act as radiomimetics and simultaneous use of

radiotherapy should be **avoided** because it may markedly increase toxicity. Daunorubicin p. 974, doxorubicin hydrochloride p. 975, epirubicin hydrochloride p. 977 and idarubicin hydrochloride p. 977 are anthracycline antibiotics. Mitoxantrone p. 978 is an anthracycline derivative.

Doxorubicin hydrochloride is available as both *conventional* and *liposomal* formulations. The different formulations vary in their licensed indications, pharmacokinetics, dosage and administration, and are not interchangeable. *Conventional* doxorubicin hydrochloride is used to treat the acute leukaemias, Hodgkin's and non-Hodgkin's lymphomas, paediatric malignancies, and some solid tumours including breast cancer.

Epirubicin hydrochloride is structurally related to doxorubicin hydrochloride and can be used to treat breast cancer.

Idarubicin hydrochloride has general properties similar to those of doxorubicin hydrochloride; it is mostly used in the treatment of haematological malignancies.

Daunorubicin also has general properties similar to those of doxorubicin hydrochloride.

Mitoxantrone is structurally related to doxorubicin hydrochloride.

Pixantrone p. 978 is licensed as monotherapy for the treatment of refractory or multiply relapsed aggressive non-Hodgkin B-cell lymphomas, although the benefits of using it as a fifth-line or greater chemotherapy in refractory patients has not been established.

Bleomycin p. 993 is given intravenously or intramuscularly to treat metastatic germ cell cancer and, in some regimens, non-Hodgkin's lymphoma.

Dactinomycin is principally used to treat paediatric cancers. Its side-effects are similar to those of doxorubicin, except that cardiac toxicity is not a problem.

Mitomycin p. 994 can be given intravenously to treat gastro-intestinal, breast, non-small cell lung, and metastatic pancreatic cancers; and by bladder instillation for superficial bladder tumours. It causes delayed bone marrow toxicity.

**Vinca alkaloids**

The vinca alkaloids, vinblastine sulfate p. 1002, vincristine sulfate p. 1003, and vindesine sulfate p. 1003, are used to treat a variety of cancers including leukaemias, lymphomas, and some solid tumours. Vinorelbine p. 1004 is a semi-synthetic vinca alkaloid. See also, role of vinorelbine in the treatment of breast cancer.

**Antimetabolites**

Antimetabolites are incorporated into new nuclear material or combine irreversibly with cellular enzymes, preventing normal cellular division.

**Alkylating drugs**

Extensive experience is available with these drugs, which are among the most widely used in cancer chemotherapy. They act by damaging DNA, thus interfering with cell replication.

Cyclophosphamide is used mainly in combination with other agents for treating a wide range of malignancies, including some leukaemias, lymphomas, and solid tumours. It is given by mouth or intravenously; it is inactive until metabolised by the liver.

Ifosfamide is related to cyclophosphamide and is given intravenously.

Melphalan p. 971 is licensed for the treatment of multiple myeloma, polycythaemia vera, childhood neuroblastoma, advanced ovarian adenocarcinoma, and advanced breast cancer. However, in practice, melphalan is rarely used for ovarian adenocarcinoma; it is no longer used for advanced breast cancer. Melphalan is also licensed for regional arterial perfusion in localised malignant melanoma of the extremities and localised soft-tissue sarcoma of the extremities.

Lomustine p. 970 is a lipid-soluble nitrosourea and the drug is given at intervals of 4 to 6 weeks.

Carmustine p. 966 has similar activity to lomustine; it is given to patients with multiple myeloma, non-Hodgkin's lymphomas, Hodgkin's disease, and brain tumours. Carmustine implants are licensed for intralesional use in adults for the treatment of recurrent glioblastoma multiforme as an adjunct to surgery. Carmustine implants are also licensed for high-grade malignant glioma as adjunctive treatment to surgery and radiotherapy.

Estramustine phosphate p. 969 is a combination of an oestrogen and chlormethine used predominantly in prostate cancer. It is given by mouth and has both an antimetabolic effect and (by reducing testosterone concentration) a hormonal effect.

**Mitobronitol** is occasionally used to treat chronic myeloid leukaemia; it is available on a named-patient basis from specialist importing companies.

## ANTINEOPLASTIC DRUGS > ALKYLATING AGENTS

### Bendamustine hydrochloride

02-Aug-2021

#### ● INDICATIONS AND DOSE

**Treatment of chronic lymphocytic leukaemia | Treatment of non-Hodgkin's lymphoma | Treatment of multiple myeloma**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: (consult local protocol)

#### IMPORTANT SAFETY INFORMATION

**MHRA/CHM ADVICE: BENDAMUSTINE (LEVACT<sup>®</sup>): INCREASED MORTALITY OBSERVED IN RECENT CLINICAL STUDIES IN OFF-LABEL USE; MONITOR FOR OPPORTUNISTIC INFECTIONS, HEPATITIS B REACTIVATION (JULY 2017)**

Recent clinical trials have shown increased mortality when bendamustine was used in combination treatments outside its approved indications. In addition, a recent European review of post-marketing data has suggested that the risk of opportunistic infections for all patients receiving bendamustine treatment may be greater than previously recognised.

The MHRA recommends monitoring patients for opportunistic infections as well as cardiac, neurological, and respiratory adverse events; known carriers of hepatitis B virus (HBV) should be monitored for signs and symptoms of active HBV infection. Patients should be advised to report promptly new signs of infection; consider discontinuing bendamustine if there are signs of opportunistic infections.

**MHRA/CHM ADVICE: BENDAMUSTINE (LEVACT<sup>®</sup>): INCREASED RISK OF NON-MELANOMA SKIN CANCER AND PROGRESSIVE MULTIFOCAL ENCEPHALOPATHY (PML) (MARCH 2021)**

Evidence from clinical trials and a European review of safety data found an increased risk of non-melanoma skin cancers (basal and squamous cell carcinoma) in patients treated with bendamustine-containing regimens. Healthcare professionals are advised to perform periodic skin examinations in these patients, particularly those with risk factors for skin cancer.

The review also identified very rare cases of PML in patients treated with bendamustine, usually in combination with rituximab or obinutuzumab. Healthcare professionals should consider PML in the differential diagnosis for these patients with new or worsening neurological, cognitive, or behavioural signs or symptoms. If PML is suspected, appropriate diagnostic evaluation should be undertaken and treatment suspended until PML is excluded.

● **CONTRA-INDICATIONS** Jaundice · low leucocyte count · low platelet count · major surgery less than 30 days before start of treatment · severe bone marrow suppression

● **CAUTIONS** Cardiac disorders—monitor serum potassium and ECG

● **INTERACTIONS** → Appendix 1: alkylating agents

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Alopecia · amenorrhoea · anaemia · angina pectoris · appetite decreased · arrhythmias · cardiac disorder · chills · constipation · decreased leucocytes · dehydration · diarrhoea · dizziness · fatigue · fever · haemorrhage · headache · hepatitis B reactivation · hypersensitivity · hypertension · hypokalaemia · hypotension · increased risk of infection · insomnia · mucositis · nausea · neutropenia · pain · palpitations · respiratory disorders · skin reactions · stomatitis · thrombocytopenia · tumour lysis syndrome · vomiting
- ▶ **Uncommon** Bone marrow disorders · heart failure · myocardial infarction · neoplasms · pericardial effusion
- ▶ **Rare or very rare** Anticholinergic syndrome · aphonia · ataxia · circulatory collapse · drowsiness · haemolysis · hyperhidrosis · infertility · multi organ failure · nervous system disorder · paraesthesia · peripheral neuropathy · sepsis · taste altered
- ▶ **Frequency not known** Extravasation necrosis · hepatic failure · necrosis · progressive multifocal leukoencephalopathy (PML) · renal failure · severe cutaneous adverse reactions (SCARs)

#### SIDE-EFFECTS, FURTHER INFORMATION Secondary

**malignancy** Use of bendamustine is associated with an increased incidence of acute leukaemias.

**Infections** Serious and fatal infections are reported, including opportunistic infections such as *Pneumocystis jirovecii* pneumonia (PJP), varicella zoster virus (VZV) and cytomegalovirus (CMV)—manufacturer advises monitoring for respiratory signs and symptoms throughout treatment; patients should be advised to report new signs of infection, including fever or respiratory symptoms, promptly. Reactivation of hepatitis B is reported in patients who are chronic carriers of the virus—manufacturer advises monitoring for signs and symptoms of active hepatitis B during treatment and for several months after stopping treatment.

● **CONCEPTION AND CONTRACEPTION** Effective contraception is required during treatment in men or women, and for 6 months after treatment in men. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **PREGNANCY** Avoid (teratogenic and mutagenic in *animal* studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **BREAST FEEDING** Discontinue breast-feeding.

● **HEPATIC IMPAIRMENT** Manufacturer advises avoid in severe impairment—no information available.

**Dose adjustments** Manufacturer advises reduce dose by 30% in moderate impairment.

● **RENAL IMPAIRMENT** No information available on use in patients with creatinine clearance less than 10 mL/minute. See p. 21.

#### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### NICE decisions

▶ **Bendamustine** for the first-line treatment of chronic lymphocytic leukaemia (February 2011) NICE TA216 Recommended

- ▶ **Common or very common**
- ▶ With intravenous use Anaemia · anxiety · appetite decreased · arrhythmias · arthralgia · ascites · asthenia · asthma · cardiomegaly · chest pain · chills · confusion · constipation · cough · depression · dizziness · dyspnoea · dysuria · electrolyte imbalance · embolism and thrombosis · fever · gastrointestinal discomfort · gastrointestinal disorders · haemorrhage · headache · hiccups · hyperglycaemia ·

hypersensitivity · hypertension · hypoalbuminaemia · hypotension · increased risk of infection · insomnia · mucositis · myalgia · nervous system disorder · neutropenia · oedema · pain · pancytopenia · pericardial effusion · pericarditis · reactivation of infections · renal disorder · renal impairment · stomatitis · vasodilation · weight increased

- ▶ With oral use Amenorrhoea (may be reversible) · azoospermia · bone marrow disorders · cardiac tamponade · delayed puberty · hyperbilirubinaemia · infertility male · leucopenia · leukaemia · menopausal symptoms · oral disorders · ovarian and fallopian tube disorders · testicular atrophy

▶ **Uncommon**

With intravenous use Capillary leak syndrome · delirium · encephalopathy · hallucination · hypoxia · intracranial haemorrhage

▶ **Rare or very rare**

With oral use Dry mouth · erythema nodosum · gynaecomastia · myasthenia gravis · radiation injury · Sjögren's syndrome

▶ **Frequency not known**

With intravenous use Hypogonadism · ovarian failure · premature menopause · sepsis

**SIDE-EFFECTS, FURTHER INFORMATION Lung toxicity**

Discontinue if lung toxicity develops.

**Secondary malignancy** Use of busulfan is associated with an increased incidence of secondary malignancy.

- **CONCEPTION AND CONTRACEPTION** Manufacturers advise effective contraception during and for 6 months after treatment in men or women. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **PREGNANCY** Avoid (teratogenic in *animals*). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **BREAST FEEDING** Discontinue breast-feeding.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution (no information available)—monitor hepatic function, especially following transplant (consult product literature).

● **MONITORING REQUIREMENTS**

- ▶ Monitor cardiac and liver function.

- ▶ Frequent blood tests are necessary because excessive myelosuppression may result in irreversible bone-marrow aplasia.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: capsule, oral suspension, oral solution

**Tablet**▶ **Busulfan (Non-proprietary)**

**Busulfan 2 mg** Busulfan 2mg tablets | 25 tablet [PoM] £14.43-£69.02 DT = £41.73

**Solution for infusion**▶ **Busulfan (Non-proprietary)**

**Busulfan 6 mg per 1 ml** Busulfan 60mg/10ml concentrate for solution for infusion vials | 8 vial [PoM] £1,529.50-£2,356.00 (Hospital only)

▶ **Busilvex (Pierre Fabre Ltd)**

**Busulfan 6 mg per 1 ml** Busilvex 60mg/10ml concentrate for solution for infusion ampoules | 8 ampoule [PoM] £1,610.00 (Hospital only)

**Carmustine**

13-Jul-2020

● **INDICATIONS AND DOSE****Brain tumours | Multiple myeloma | Non-Hodgkin's lymphomas | Hodgkin's disease**▶ **BY INTRAVENOUS INFUSION**

- ▶ Adult: (consult product literature)

**Recurrent glioblastoma multiforme as an adjunct to surgery | High-grade malignant glioma as adjunctive treatment to surgery and radiotherapy**

- ▶ BY INTRALESIONAL IMPLANTATION
- ▶ Adult: (consult product literature)

- **CAUTIONS** Avoid in Acute porphyrias p. 1150
- **INTERACTIONS** → Appendix 1: alkylating agents
- **SIDE-EFFECTS**

**GENERAL SIDE-EFFECTS**

- ▶ **Common or very common** Alopecia · anaemia · ataxia · constipation · diarrhoea · dizziness · headache · nausea · seizures · vomiting

**SPECIFIC SIDE-EFFECTS**

- ▶ **Common or very common**
    - ▶ When used by implant Abdominal pain · abscess · anxiety · asthenia · chest pain · coma · confusion · conjunctival oedema · depression · diabetes mellitus · drowsiness · dysphagia · electrolyte imbalance · embolism and thrombosis · eye pain · faecal incontinence · fever · gait abnormal · haemorrhage · hallucination · healing impaired · hydrocephalus · hyperglycaemia · hypersensitivity · hypertension · hypotension · increased risk of infection · injury · insomnia · intracranial pressure increased · leucocytosis · memory loss · meningitis · oedema · pain · paralysis · paranoia · peripheral neuropathy · personality disorder · rash · sensation abnormal · sepsis · speech impairment · stupor · thinking abnormal · thrombocytopenia · tremor · urinary incontinence · vision disorders
    - ▶ With intravenous use Acute leukaemia · appetite decreased · bone marrow depression · encephalopathy (with high doses) · hepatotoxicity · myelodysplastic syndrome (following long term use) · ocular toxicity · respiratory disorders · retinal haemorrhage · stomatitis
  - ▶ **Uncommon**
    - ▶ When used by implant Cerebral infarction · intracranial haemorrhage
  - ▶ **Rare or very rare**
    - ▶ With intravenous use Gynaecomastia · nephrotoxicity (cumulative) · peripheral vascular disease (with high doses)
  - ▶ **Frequency not known**
    - ▶ With intravenous use Infertility · myalgia
- SIDE-EFFECTS, FURTHER INFORMATION Pulmonary toxicity** Lung infiltration, pulmonary fibrosis, pneumonitis, and interstitial lung disease have been reported with intravenous use, some of which have been fatal. These appear to be dose-related, cumulative, and may be delayed.
- Hepatotoxicity** Hepatotoxicity has been reported to occur with high intravenous doses, and may be delayed up to 60 days after administration; usually reversible.
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during treatment in men or women. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
  - **PREGNANCY** Avoid (teratogenic and embryotoxic in animals). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
  - **BREAST FEEDING** Discontinue breast-feeding.
  - **HANDLING AND STORAGE** For intravenous infusion, manufacturer advises store in a refrigerator (2–8°C) and protect from light. For intraleSIONAL implant, manufacturer advises store in a freezer (–20°C)—consult product literature for further information regarding storage outside freezer.
  - **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website

**NICE decisions**

- ▶ Carmustine implants and temozolomide for the treatment of newly diagnosed high-grade glioma (June 2007) NICE TA121 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Implant**

- ▶ **Glialid** (Eisai Ltd)  
**Carmustine 7.7 mg** Glialid 7.7mg implant | 8 device (POM) £5,203.00 (Hospital only)

**Chlorambucil**

13-Jul-2020

● **INDICATIONS AND DOSE**

**Some lymphomas and chronic leukaemias (used either alone or in combination therapy)**

- ▶ BY MOUTH
- ▶ Adult: (consult local protocol)

**IMPORTANT SAFETY INFORMATION**

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **CAUTIONS** Children with nephrotic syndrome (increased seizure risk) · history of epilepsy (increased seizure risk)
  - **INTERACTIONS** → Appendix 1: alkylating agents
  - **SIDE-EFFECTS**
    - ▶ **Common or very common** Anaemia · bone marrow disorders · diarrhoea · gastrointestinal disorder · leucopenia · nausea · neoplasms · neutropenia · oral ulceration · seizures · thrombocytopenia · vomiting
    - ▶ **Uncommon** Skin reactions
    - ▶ **Rare or very rare** Cystitis · fever · hepatic disorders · movement disorders · muscle twitching · peripheral neuropathy · respiratory disorders · severe cutaneous adverse reactions (SCARs) · tremor
    - ▶ **Frequency not known** Amenorrhoea · azoospermia
- SIDE-EFFECTS, FURTHER INFORMATION Secondary malignancy** Use of chlorambucil is associated with an increased incidence of acute leukaemia, particularly with prolonged use.
- Skin reactions** Manufacturer advises assessing continued use if rash occurs—has been reported to progress to Stevens-Johnson syndrome and toxic epidermal necrolysis.
- **CONCEPTION AND CONTRACEPTION** Contraceptive advice required, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
  - **PREGNANCY** Avoid. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
  - **BREAST FEEDING** Discontinue breast-feeding.
  - **HEPATIC IMPAIRMENT** Manufacturer advises caution—monitor for signs and symptoms of toxicity.  
**Dose adjustments** Manufacturer advises consider dose reduction in severe impairment—limited information available.
  - **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
- NICE decisions**
- ▶ Obinutuzumab in combination with chlorambucil for untreated chronic lymphocytic leukaemia (June 2015) NICE TA343 Recommended with restrictions
  - ▶ Ofatumumab in combination with chlorambucil or bendamustine for untreated chronic lymphocytic leukaemia (June 2015) NICE TA344 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Tablet

- ▶ **Chlorambucil (Non-proprietary)**

Chlorambucil 2 mg Chlorambucil 2mg tablets | 25 tablet **[POM]**  
 £11.15-£42.87 DT = £27.01

## Chlormethine

10-Sep-2021

- **DRUG ACTION** Chlormethine is an alkylating agent which inhibits rapidly proliferating cells.

#### ● INDICATIONS AND DOSE

##### Mycosis fungoides (initiated by a specialist)

###### ▶ TO THE SKIN

- ▶ Adult: Apply once daily, apply thinly to the affected areas, for dose adjustments due to side-effects of the skin—consult product literature

- **CAUTIONS** Avoid contact with mucous membranes

- **INTERACTIONS** → Appendix 1: chlormethine

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Hypersensitivity · skin infection · skin reactions · skin ulcer

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises contraception in women of child-bearing potential during treatment. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies following systemic administration. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962

- **BREAST FEEDING** Manufacturer advises avoid—no information available.

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises apply to dry skin at least 4 hours before or 30 minutes after showering or washing. The treated area should be allowed to dry for 5 to 10 minutes.

- **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator (2–8 °C)—consult product literature for storage in a freezer.

- **PATIENT AND CARER ADVICE** Patients and carers should be advised to wash hands after each application and should wear nitrile gloves for each application. If non-affected areas are exposed, these areas should be washed. Occlusive dressings should not be applied over the treated area.

- **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

#### NICE decisions

- ▶ Chlormethine gel for treating mycosis fungoides-type cutaneous T-cell lymphoma (August 2021) NICE TA720 Recommended with restrictions

#### Scottish Medicines Consortium (SMC) decisions

- ▶ Chlormethine hydrochloride (*Ledaga*<sup>®</sup>) for the topical treatment of mycosis fungoides-type cutaneous T-cell lymphoma (MF-type CTCL) in adult patients (May 2021) SMC No. SMC2318 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Gel

EXCIPIENTS: May contain Butylated hydroxytoluene, propylene glycol

- ▶ **Ledaga** (Recordati Rare Diseases UK Ltd)

Chlormethine hydrochloride 160 microgram per 1 gram Ledaga 160micrograms/g gel | 60 gram **[POM]** £1,000.00

## Cyclophosphamide

10-Jan-2022

#### ● INDICATIONS AND DOSE

##### Rheumatoid arthritis with severe systemic manifestations

###### ▶ BY MOUTH

- ▶ Adult: 1–1.5 mg/kg daily

##### Severe systemic rheumatoid arthritis | Other connective tissue diseases (especially with active vasculitis)

###### ▶ BY INTRAVENOUS INJECTION

- ▶ Adult: 0.5–1 g every 2 weeks, then reduced to 0.5–1 g every month, frequency adjusted according to clinical response and haematological monitoring. To be given with prophylactic mesna

##### Used, mainly in combination with other agents for treating a wide range of malignancies, including some leukaemias, lymphomas, and solid tumours

###### ▶ BY MOUTH, OR BY INTRAVENOUS INFUSION

- ▶ Adult: (consult local protocol)

- **UNLICENSED USE** Not licensed for rheumatoid arthritis with severe systemic manifestations.

#### IMPORTANT SAFETY INFORMATION

RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES  
 See Cytotoxic drugs p. 962.

- **CAUTIONS** Avoid in Acute porphyrias p. 1150 · diabetes mellitus · haemorrhagic cystitis · previous or concurrent mediastinal irradiation—risk of cardiotoxicity

- **INTERACTIONS** → Appendix 1: alkylating agents

#### ● SIDE-EFFECTS

##### GENERAL SIDE-EFFECTS

- ▶ **Common or very common** Agranulocytosis · alopecia · anaemia · asthenia · bone marrow disorders · cystitis · decreased leucocytes · fever · haemolytic uraemic syndrome · haemorrhage · hepatic disorders · immunosuppression · increased risk of infection · mucosal abnormalities · neutropenia · progressive multifocal leukoencephalopathy (PML) · reactivation of infections · sperm abnormalities · thrombocytopenia
- ▶ **Uncommon** Appetite decreased · embolism and thrombosis · flushing · hypersensitivity · ovarian and fallopian tube disorders · sepsis
- ▶ **Rare or very rare** Bladder disorders · chest pain · confusion · constipation · diarrhoea · disseminated intravascular coagulation · dizziness · eye inflammation · fluid imbalance · headache · hyponatraemia · menstrual cycle irregularities · nail discoloration · nausea · neoplasms · oral disorders · pancreatitis acute · renal failure · secondary neoplasm · seizure · severe cutaneous adverse reactions (SCARs) · SIADH · skin reactions · visual impairment · vomiting
- ▶ **Frequency not known** Abdominal pain · altered smell sensation · arrhythmias · arthralgia · ascites · cardiac inflammation · cardiogenic shock · cardiomyopathy · cough · deafness · dyspnoea · encephalopathy · excessive tearing · facial swelling · gastrointestinal disorders · heart failure · hyperhidrosis · hypoxia · infertility · influenza like illness · multi organ failure · muscle complaints · myelopathy · myocardial infarction · nasal complaints · nephropathy · nerve disorders · neuralgia · neurotoxicity · oedema · oropharyngeal pain · palpitations · pericardial effusion · peripheral ischaemia · pulmonary hypertension · pulmonary oedema · QT interval prolongation · radiation injuries · renal tubular disorder · renal tubular necrosis · respiratory disorders · rhabdomyolysis · scleroderma · sensation abnormal · sinusoidal obstruction syndrome · taste altered · testicular atrophy · tinnitus · tremor · tumour lysis syndrome · vasculitis

##### SPECIFIC SIDE-EFFECTS

- ▶ With intravenous use Infusion site necrosis · injection site necrosis

**SIDE-EFFECTS, FURTHER INFORMATION Haemorrhagic cystitis** A urinary metabolite of cyclophosphamide, acrolein, can cause haemorrhagic cystitis; this is a rare but serious complication that may be prevented by increasing fluid intake for 24–48 hours after intravenous injection. Mesna can also help prevent cystitis when high-dose therapy (e.g. more than 2 g intravenously) is used or when the patient is considered to be at high risk of cystitis (e.g. because of pelvic irradiation).

**Secondary malignancy** As with all cytotoxic therapy, treatment with cyclophosphamide is associated with an increased incidence of secondary malignancies.

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during and for at least 3 months after treatment in men or women. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Avoid. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding during and for 36 hours after stopping treatment.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (risk of decreased cyclophosphamide activation and increased risk of veno-occlusive liver disease).  
**Dose adjustments** Manufacturer advises consider dose adjustment in severe impairment—consult product literature.
- **RENAL IMPAIRMENT**  
**Dose adjustments** EvGr Consider dose reduction (consult product literature). M
- **DIRECTIONS FOR ADMINISTRATION**
  - ▶ With intravenous use For *intravenous infusion* (cyclophosphamide injection; *Baxter*), manufacturer advises give via drip tubing in Glucose 5% or Sodium Chloride 0.9%; reconstitute 500 mg with 25 mL Sodium Chloride 0.9%; reconstitute 1 g with 50 mL Sodium Chloride 0.9%.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: tablet, oral suspension, oral solution, solution for injection, solution for infusion

#### Tablet

CAUTIONARY AND ADVISORY LABELS 25, 27

- ▶ **Cyclophosphamide (Non-proprietary)**  
Cyclophosphamide (as Cyclophosphamide monohydrate)  
50 mg Cyclophosphamide 50mg tablets | 100 tablet PoM £139.00  
DT = £139.00
- ▶ **Cytoxan** (Imported (United States))  
Cyclophosphamide 25 mg Cytoxan 25mg tablets | 100 tablet PoM S

#### Powder for solution for injection

- ▶ **Cyclophosphamide (Non-proprietary)**  
Cyclophosphamide (as Cyclophosphamide monohydrate)  
500 mg Cyclophosphamide 500mg powder for solution for injection vials | 1 vial PoM £8.21–£9.66 (Hospital only)
- Cyclophosphamide (as Cyclophosphamide monohydrate)  
1 gram Cyclophosphamide 1g powder for solution for injection vials | 1 vial PoM £15.22–£17.91 (Hospital only)
- Cyclophosphamide (as Cyclophosphamide monohydrate)  
2 gram Cyclophosphamide 2g powder for solution for injection vials | 1 vial PoM £28.22 (Hospital only)

## Dacarbazine

24-Jun-2021

### ● INDICATIONS AND DOSE

**Metastatic melanoma | Soft-tissue sarcomas (combination therapy) | Hodgkin's disease (combination therapy)**

- ▶ BY INTRAVENOUS INFUSION, OR BY INTRAVENOUS INJECTION
- ▶ Adult: (consult local protocol)

- **CAUTIONS** Caution in handling—irritant to tissues

- **INTERACTIONS** → Appendix 1: alkylating agents

### ● SIDE-EFFECTS

- ▶ **Common or very common** Anaemia · appetite decreased · leucopenia · nausea · thrombocytopenia · vomiting
- ▶ **Uncommon** Alopecia · infection · influenza like illness · photosensitizing reaction · skin reactions
- ▶ **Rare or very rare** Agranulocytosis · confusion · diarrhoea · flushing · headache · hepatic disorders · lethargy · pancytopenia · paraesthesia · renal impairment · seizure · visual impairment
- **CONCEPTION AND CONTRACEPTION** Ensure effective contraception during and for at least 6 months after treatment in men or women. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Avoid (carcinogenic and teratogenic in animal studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** EvGr Caution in combined renal and hepatic impairment (elimination prolonged); avoid in severe impairment. M
- **RENAL IMPAIRMENT** EvGr Caution in combined renal and hepatic impairment (elimination prolonged); avoid in severe impairment. M
- **PRESCRIBING AND DISPENSING INFORMATION** Dacarbazine is a component of a commonly used combination for Hodgkin's disease (ABVD—doxorubicin [previously *Adriamycin*®], bleomycin, vinblastine, and dacarbazine).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for solution for infusion

##### ▶ Dacarbazine (Non-proprietary)

- Dacarbazine (as Dacarbazine citrate) 500 mg Dacarbazine 500mg powder for solution for infusion vials | 1 vial PoM £37.50
- Dacarbazine (as Dacarbazine citrate) 1 gram Dacarbazine 1g powder for solution for infusion vials | 1 vial PoM £70.00

#### Powder for solution for injection

##### ▶ Dacarbazine (Non-proprietary)

- Dacarbazine (as Dacarbazine citrate) 100 mg Dacarbazine 100mg powder for solution for injection vials | 10 vial PoM £90.00
- Dacarbazine (as Dacarbazine citrate) 200 mg Dacarbazine 200mg powder for solution for injection vials | 10 vial PoM £160.00

## Estramustine phosphate

10-May-2021

### ● INDICATIONS AND DOSE

#### Prostate cancer

- ▶ BY MOUTH
- ▶ Adult: Initially 560–840 mg daily in divided doses; maintenance 140–1400 mg daily in divided doses

### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **CONTRA-INDICATIONS** Peptic ulceration · severe cardiovascular disease · thromboembolic disorders
- **CAUTIONS** Cardiovascular disease · cerebrovascular disease · conditions which might be aggravated by fluid retention (such as epilepsy or migraine) · congestive heart failure · diabetes · hypercalcaemia · hypertension · metabolic bone disease
- **INTERACTIONS** → Appendix 1: alkylating agents
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Anaemia · congestive heart failure · diarrhoea · embolism · fluid retention · gynaecomastia · headache · hepatic function abnormal · lethargy · leucopenia · myocardial infarction · nausea · thrombocytopenia · vomiting

- ▶ **Frequency not known** Allergic dermatitis · angioedema · confusion · depression · erectile dysfunction · hypertension · muscle weakness · myocardial ischaemia
- **CONCEPTION AND CONTRACEPTION** Men should use effective contraceptive methods during treatment. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution—monitor hepatic function; avoid in severe impairment.
- **RENAL IMPAIRMENT** Manufacturer advises caution.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises each dose should be taken not less than 1 hour before or 2 hours after meals and should not be taken with products containing calcium, magnesium or aluminium, including dairy products and antacid medication.
- **PATIENT AND CARER ADVICE** Patients should be given advice on how to administer estramustine capsules.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Capsule**

CAUTIONARY AND ADVISORY LABELS 5, 23

▶ **Estracyt** (Pfizer Ltd)▶ **Estramustine phosphate (as Estramustine sodium phosphate)**

140 mg Estracyt 140mg capsules | 100 capsule [PoM] £171.28 DT = £171.28

**Ifosfamide**

30-Jan-2022

● **INDICATIONS AND DOSE****Malignant disease**

▶ BY INTRAVENOUS INFUSION

▶ Adult: (consult local protocol)

- **CONTRA-INDICATIONS** Acute infection · cystitis · urinary-tract obstruction · urothelial damage
- **CAUTIONS** Avoid in Acute porphyrias p. 1150 · cardiac disease
- **INTERACTIONS** → Appendix 1: alkylating agents
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Alopecia · appetite decreased · bone marrow disorders · haemorrhage · hepatic disorders · infection · leucopenia · nausea · reactivation of infection · renal impairment · thrombocytopenia · vomiting
  - ▶ **Uncommon** Cardiotoxicity · diarrhoea · hypotension · oral disorders
  - ▶ **Rare or very rare** Skin reactions
  - ▶ **Frequency not known** Abdominal pain · agranulocytosis · amenorrhoea · anaemia · angina pectoris · angioedema · arrhythmias · arthralgia · asterixis · behaviour abnormal · blood disorders · bone disorders · cancer progression · capillary leak syndrome · cardiac arrest · cardiomyopathy · chills · conjunctivitis · constipation · cough · deafness · delirium · delusions · disseminated intravascular coagulation · dysarthria · dyspnoea · electrolyte imbalance · embolism and thrombosis · encephalopathy · eye irritation · fatigue · fever · flushing · gait abnormal · gastrointestinal disorders · growth retardation · haemolytic anaemia · heart failure · hyperglycaemia · hyperhidrosis · hyperphosphaturia · hypertension · hypoxia · immunosuppression · infertility · malaise · mania · memory loss · metabolic acidosis · movement disorders · mucosal ulceration · multi organ failure · muscle complaints · myocardial infarction · nail disorder · neoplasms · nephritis · tubulointerstitial · nephrogenic diabetes insipidus · neurotoxicity · oedema · ovarian and fallopian tube disorders · pain · pancreatitis · panic attack · peripheral neuropathy · polydipsia · premature menopause · psychiatric disorders · pulmonary hypertension · pulmonary oedema · radiation recall reaction · respiratory disorders · rhabdomyolysis · secondary malignancy ·

sensation abnormal · sepsis · severe cutaneous adverse reactions (SCARs) · SIADH · sinusoidal obstruction syndrome · sperm abnormalities · status epilepticus · tinnitus · tumour lysis syndrome · urinary disorders · vasculitis · vertigo · visual impairment

**SIDE-EFFECTS, FURTHER INFORMATION** **Urothelial toxicity** Mesna is routinely given with ifosfamide to reduce urothelial toxicity.

**Secondary malignancy** Use of ifosfamide is associated with an increased incidence of acute leukaemia.

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises adequate contraception during and for at least 6 months after treatment in men or women. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Avoid (teratogenic and carcinogenic in animals). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid.
- **RENAL IMPAIRMENT** [EVR](#) Avoid unless potential benefit outweighs risk (increased risk of toxicity; consult product literature). 
- **MONITORING REQUIREMENTS** Ensure satisfactory electrolyte balance and renal function before each course (risk of tubular dysfunction, Fanconi's syndrome or diabetes insipidus if renal toxicity not treated promptly).
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Powder for solution for injection**▶ **Ifosfamide (Non-proprietary)**

**Ifosfamide 1 gram** Ifosfamide 1g powder for concentrate for solution for injection vials | 1 vial [PoM] £115.79-£119.27

**Ifosfamide 2 gram** Ifosfamide 2g powder for concentrate for solution for injection vials | 1 vial [PoM] £234.94-£273.77

**Lomustine**

10-May-2021

- **DRUG ACTION** Lomustine is a lipid-soluble nitrosourea.

● **INDICATIONS AND DOSE**

**Hodgkin's disease resistant to conventional therapy | Malignant melanoma | Certain solid tumours**

▶ BY MOUTH

▶ Adult: 120–130 mg/m<sup>2</sup> every 6–8 weeks, dose is for when lomustine is used alone

**IMPORTANT SAFETY INFORMATION****RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**

See Cytotoxic drugs p. 962.

- **CONTRA-INDICATIONS** Coeliac disease
- **INTERACTIONS** → Appendix 1: alkylating agents
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Leucopenia
  - ▶ **Frequency not known** Alopecia · anaemia · apathy · appetite decreased · azotaemia · bone marrow failure (delayed) · confusion · coordination abnormal · diarrhoea · hepatic disorders · lethargy · nausea · neoplasms · neurological effects · renal disorders · renal impairment · respiratory disorders · speech impairment · stomatitis · thrombocytopenia · vision loss (irreversible) · vomiting
- SIDE-EFFECTS, FURTHER INFORMATION** Prolonged use of lomustine is associated with an increased incidence of acute leukaemias.
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during and for at least 6 months after treatment in men or women. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **PREGNANCY** Avoid. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **RENAL IMPAIRMENT** **[EvGr]** Avoid in severe impairment. **[M]**
- **PRESCRIBING AND DISPENSING INFORMATION** The brand name CCNU<sup>®</sup> has been used for lomustine capsules.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: capsule  
**Capsule**
  - ▶ **Lomustine (Non-proprietary)**
  - Lomustine 10 mg CeeNU 10mg capsules | 20 capsule **[PoM]** **[X]**
  - Lomustine 40 mg Lomustine 40mg capsules | 20 capsule **[PoM]** **[X]**
  - £780.82
  - Lomustine 100 mg CeeNU 100mg capsules | 20 capsule **[PoM]** **[X]**

## Melphalan

10-Nov-2018

### ● INDICATIONS AND DOSE

#### Multiple myeloma

- ▶ BY MOUTH
- ▶ Adult: 150 micrograms/kg daily for 4 days, dose to be repeated every 6 weeks, dose may vary according to regimen
- ▶ BY INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION
- ▶ Adult: (consult product literature)

#### Polycythaemia vera

- ▶ BY MOUTH
- ▶ Adult: Initially 6–10 mg daily for 5–7 days, then reduced to 2–4 mg daily until satisfactory response, then reduced to 2–6 mg once weekly

#### Localised malignant melanoma of the extremities |

#### Localised soft-tissue sarcoma of the extremities

- ▶ BY REGIONAL ARTERIAL PERFUSION
- ▶ Adult: (consult local protocol)

### IMPORTANT SAFETY INFORMATION

#### RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES

See Cytotoxic drugs p. 962.

- **CAUTIONS** Consider use of prophylactic anti-infective agents · for high-dose intravenous administration establish adequate hydration · haematopoietic stem cell transplantation essential for high dose treatment (consult local treatment protocol for details)
- **INTERACTIONS** → Appendix 1: alkylating agents
- **SIDE-EFFECTS**
- GENERAL SIDE-EFFECTS**
- ▶ **Common or very common** Alopecia · anaemia · bone marrow depression (delayed) · diarrhoea · nausea · stomatitis · thrombocytopenia · vomiting
- ▶ **Rare or very rare** Haemolytic anaemia · hepatic disorders · respiratory disorders · skin reactions
- SPECIFIC SIDE-EFFECTS**
- ▶ **Common or very common**
- ▶ With oral use Leucopenia
- ▶ With parenteral use Feeling hot · myalgia · myopathy · paraesthesia
- ▶ **Rare or very rare**
- ▶ With parenteral use Peripheral vascular disease
- SIDE-EFFECTS, FURTHER INFORMATION** **Secondary malignancy** Use of melphalan is associated with an increased incidence of acute leukaemias.
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises adequate contraception during treatment in men or women. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **PREGNANCY** Avoid. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **RENAL IMPAIRMENT**  
**Dose adjustments** **[EvGr]** Reduce dose initially (consult product literature). **[M]**
- **MONITORING REQUIREMENTS** Monitor full blood count before and throughout treatment.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.  
**Powder and solvent for solution for injection**
  - ▶ **Melphalan (Non-proprietary)**
  - Melphalan (as Melphalan hydrochloride) 50 mg Melphalan 50mg powder and solvent for solution for injection vials | 1 vial **[PoM]** **[X]**
  - £26.64-£137.37 (Hospital only)
- Tablet**
  - ▶ **Melphalan (Non-proprietary)**
  - Melphalan 2 mg Melphalan 2mg tablets | 25 tablet **[PoM]** **[X]**
  - £16.48-£45.38 DT = £30.93

## Streptozocin

09-Oct-2018

- **DRUG ACTION** Streptozocin is an antibiotic antineoplastic nitrosourea.

### ● INDICATIONS AND DOSE

#### Neuroendocrine tumours of pancreatic origin (specialist use only)

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: (consult product literature)

- **CAUTIONS** Antiemetic pre-medication recommended · avoid extravasation (risk of tissue necrosis) · elderly · hyperhydration required (consult product literature)
- **INTERACTIONS** → Appendix 1: streptozocin
- **SIDE-EFFECTS**
- ▶ **Common or very common** Acute kidney injury · diarrhoea · nausea · nephropathy · renal tubular injury · urinary disorder · urine abnormalities · vomiting
- ▶ **Frequency not known** Confusion · depression · extravasation necrosis · fever · glucose tolerance impaired · hepatotoxicity · hypoalbuminaemia · lethargy
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises women of childbearing potential should use effective contraception during treatment and for 30 days after last treatment; male patients should use effective contraception during treatment and for 90 days after last treatment if their partner is of childbearing potential. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—*toxicity in animal studies*. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution.  
**Dose adjustments** Manufacturer advises consider dose reduction.
- **RENAL IMPAIRMENT** Manufacturer advises caution—evaluate benefit/risk ratio if eGFR 30–45 mL/minute/1.73 m<sup>2</sup>; avoid if eGFR less than 30 mL/minute/1.73 m<sup>2</sup>.  
**Dose adjustments** Manufacturer advises reduce dose if eGFR 46–60 mL/minute/1.73 m<sup>2</sup>—consult product literature. See p. 21.
- **MONITORING REQUIREMENTS**
  - ▶ Manufacturer advises monitor renal function (plasma creatinine and eGFR derived from the MDRD formula) immediately before treatment initiation and 2 weeks after

each course of therapy; proteinuria and serum electrolytes should also be monitored before treatment initiation and 2–4 weeks after the last cycle of treatment.

- ▶ Manufacturer advises monitor liver function tests, blood glucose levels and complete blood counts regularly.
- **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator (2–8°C) and protect from light—consult product literature for storage conditions after reconstitution and dilution.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for solution for infusion

- ▶ **Zanosar** (Esteve Pharmaceuticals Ltd)  
**Streptozocin 1 gram** Zanosar 1g powder for concentrate for solution for infusion vials | 1 vial [PoM](#) £570.00 (Hospital only)

## Temozolomide

10-May-2021

- **DRUG ACTION** Temozolomide is structurally related to dacarbazine.

#### ● INDICATIONS AND DOSE

**Newly diagnosed glioblastoma multiforme in adults (in combination with radiotherapy) and subsequently as monotherapy | Second-line treatment of malignant glioma in adults**

- ▶ BY MOUTH
- ▶ Adult: (consult product literature)

#### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **CAUTIONS** *Pneumocystis jirovecii* pneumonia—consult product literature for monitoring and prophylaxis requirements
- **INTERACTIONS** → Appendix 1: alkylating agents
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Alopecia · anaemia · anxiety · appetite decreased · arthralgia · asthenia · cognitive impairment · concentration impaired · confusion · constipation · cough · Cushing's syndrome · decreased leucocytes · depression · diarrhoea · dizziness · drowsiness · dysphagia · dyspnoea · ear pain · embolism and thrombosis · eye pain · fever · gastrointestinal discomfort · haemorrhage · headache · hearing impairment · hemiparesis · hyperglycaemia · hypersensitivity · hypertension · increased risk of infection · influenza like illness · insomnia · level of consciousness decreased · malaise · memory loss · movement disorders · muscle weakness · myalgia · myopathy · nausea · nerve disorders · neutropenia · oedema · oral disorders · pain · peripheral swelling · radiation injuries · seizures · sensation abnormal · skin reactions · speech impairment · taste altered · thrombocytopenia · tinnitus · tremor · urinary disorders · vertigo · vision disorders · vomiting · weight changes
  - ▶ **Uncommon** Altered smell sensation · angioedema · aplastic anaemia (sometimes fatal) · behaviour disorder · breast pain · chills · condition aggravated · diabetes insipidus · dry eye · dry mouth · emotional lability · erectile dysfunction · gait abnormal · gastrointestinal disorders · hallucination · hemiplegia · hepatic disorders · hepatic failure (sometimes fatal) · hepatitis B reactivation (sometimes fatal) · hyperacusia · hyperbilirubinaemia · hyperhidrosis · hypokalaemia · intracranial haemorrhage · meningoencephalitis herpetic (sometimes fatal) · menstrual cycle irregularities · nasal congestion · neoplasms · nervous system disorder · palpitations · pancytopenia (sometimes prolonged) · photosensitivity reaction · reactivation of infections · respiratory disorders ·

respiratory failure (sometimes fatal) · secondary malignancy · sepsis (sometimes fatal) · severe cutaneous adverse reactions (SCARs) · thirst · tongue discolouration · vasodilatation

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises adequate contraception during treatment. Men should avoid fathering a child during and for at least 6 months after treatment. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Avoid (teratogenic and embryotoxic in *animal* studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment (no information available).
- **RENAL IMPAIRMENT** Manufacturer advises caution—no information available.
- **MONITORING REQUIREMENTS**
  - ▶ Monitor liver function before treatment initiation, after each treatment cycle and midway through 42-day treatment cycles—consider the balance of benefits and risks of treatment if results are abnormal at any point (fatal liver injury reported).
  - ▶ Monitor for myelodysplastic syndrome.
  - ▶ Monitor for secondary malignancies.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website
- **NICE decisions**
  - ▶ **Temozolomide for the treatment of recurrent malignant glioma (brain cancer) (April 2001)** NICE TA23 Recommended with restrictions
  - ▶ **Carmustine implants and temozolomide for the treatment of newly diagnosed high-grade glioma (June 2007)** NICE TA121 Recommended with restrictions
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension

#### Capsule

CAUTIONARY AND ADVISORY LABELS 23, 25

#### ▶ Temozolomide (Non-proprietary)

- ▶ **Temozolomide 5 mg** Temozolomide 5mg capsules | 5 capsule [PoM](#) £10.06-£16.00 (Hospital only)
- ▶ **Temozolomide 20 mg** Temozolomide 20mg capsules | 5 capsule [PoM](#) £40.23-£65.00 (Hospital only)
- ▶ **Temozolomide 100 mg** Temozolomide 100mg capsules | 5 capsule [PoM](#) £201.18-£325.00 (Hospital only)

## Thiotepa

16-Nov-2020

### ● INDICATIONS AND DOSE

**Conditioning treatment before haematopoietic stem cell transplantation in the treatment of haematological disease or solid tumours, in combination with other chemotherapy**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: (consult local protocol)

- **CAUTIONS** Avoid in Acute porphyrias p. 1150 · cardiac disease
- **INTERACTIONS** → Appendix 1: alkylating agents
- **SIDE-EFFECTS**
- ▶ **Common or very common** Alopecia · amenorrhoea · anaemia · anxiety · appetite decreased · arrhythmias · arthralgia · asthenia · azoospermia · cataract · chills · cognitive disorder · confusion · conjunctivitis · constipation · cough · cystitis · delirium · diarrhoea · dizziness · dysuria · embolism · encephalopathy · extrapyramidal symptoms · fever · gastrointestinal discomfort · gastrointestinal disorders · generalised oedema · graft versus host disease · haemorrhage · headache · hearing impairment · heart failure · hepatic disorders · hyperglycaemia · hypersensitivity · hypertension · hypopituitarism · increased risk of infection · infertility · intracranial aneurysm · intracranial haemorrhage · leucopenia · lymphoedema · menopausal symptoms · mucositis · multi organ failure · myalgia · nausea · neutropenia · ototoxicity · pain · pancytopenia · paraesthesia · psychiatric disorder · pulmonary oedema · renal impairment · respiratory disorders · secondary malignancy · seizure · sepsis · sinusoidal obstruction syndrome · skin reactions · stomatitis · thrombocytopenia · toxic shock syndrome · vision blurred · vomiting · weight increased
- ▶ **Uncommon** Cardiomyopathy · hallucination · hypoxia · myocarditis
- ▶ **Frequency not known** Severe cutaneous adverse reactions (SCARs)
- **CONCEPTION AND CONTRACEPTION** Contraceptive advice required, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Avoid (teratogenic and embryotoxic in animals). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website
- **Scottish Medicines Consortium (SMC) decisions**
- ▶ **Thiotepa (Tepadina<sup>®</sup>) in combination with other chemotherapy as conditioning treatment in adults or children with haematological diseases, or solid tumours prior to haematopoietic stem cell transplantation (July 2012)**  
SMC No. 790/12 Not recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### **Powder for solution for infusion**

#### ▶ **Thiotepa (Non-proprietary)**

**Thiotepa 15 mg** Thiotepa 15mg powder for concentrate for solution for infusion vials | 1 vial [PoM] £80.00 (Hospital only)

**Thiotepa 100 mg** Thiotepa 100mg powder for concentrate for solution for infusion vials | 1 vial [PoM] £800.00 (Hospital only)

#### ▶ **Tepadina (Adienne Pharma & Biotech)**

**Thiotepa 15 mg** Tepadina 15mg powder for concentrate for solution for infusion vials | 1 vial [PoM] £123.00 (Hospital only)

**Thiotepa 100 mg** Tepadina 100mg powder for concentrate for solution for infusion vials | 1 vial [PoM] £736.00 (Hospital only)

## Treosulfan

24-Sep-2020

### ● INDICATIONS AND DOSE

#### **Ovarian cancer**

- ▶ BY MOUTH, OR BY INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION, OR BY INTRAPERITONEAL INSTILLATION
- ▶ Adult: (consult product literature)

#### **TRECONDI<sup>®</sup>**

**Conditioning treatment before allogeneic haematopoietic stem cell transplantation in patients with malignant disease (in combination with other chemotherapy) (specialist use only)**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: (consult product literature)

**Conditioning treatment before allogeneic haematopoietic stem cell transplantation in patients with non-malignant disease (in combination with other chemotherapy) (specialist use only)**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: (consult product literature)

### **IMPORTANT SAFETY INFORMATION**

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

### ● **CONTRA-INDICATIONS**

**GENERAL CONTRA-INDICATIONS** Concomitant use of live vaccines

#### **SPECIFIC CONTRA-INDICATIONS**

- ▶ When used for conditioning treatment before allogeneic haematopoietic stem cell transplantation Active uncontrolled infection · Fanconi anaemia and other DNA repair disorders · severe concomitant cardiac, lung, liver and renal impairment
- **CAUTIONS** Avoid in Acute porphyrias p. 1150
- **INTERACTIONS** → Appendix 1: alkylating agents
- **SIDE-EFFECTS**
- GENERAL SIDE-EFFECTS**
- ▶ **Common or very common** Alopecia · anaemia · bone marrow disorders · leucopenia · nausea · sepsis · skin reactions · thrombocytopenia · vomiting
- ▶ **Uncommon** Neoplasms · respiratory disorders · treatment related secondary malignancy
- ▶ **Rare or very rare** Addison's disease · cardiomyopathy · hypoglycaemia · influenza like illness · paraesthesia · pneumonia · scleroderma
- SPECIFIC SIDE-EFFECTS**
- ▶ **Common or very common**
- ▶ With intravenous use Appetite decreased · arrhythmia · arthralgia · asthenia · chills · constipation · diarrhoea · dizziness · dysphagia · dyspnoea · febrile neutropenia · fever · flushing · gastrointestinal discomfort · gastrointestinal disorders · haemorrhage · headache · hypersensitivity · hypertension · insomnia · lethargy · myalgia · oedema · oral disorders · pain · renal impairment · weight changes
- ▶ **Uncommon**
- ▶ With intravenous use Confusion · cough · dry mouth · hepatic disorders · hiccups · hyperglycaemia · hyperhidrosis · hypotension · laryngeal pain · oesophageal pain · peripheral neuropathy · sinusoidal obstruction syndrome
- ▶ With oral use Stomatitis
- ▶ **Rare or very rare**
- ▶ With intravenous use Inflammation localised
- ▶ With oral use Cystitis haemorrhagic
- ▶ **Frequency not known**
- ▶ With intravenous use Acidosis · agitation · amenorrhoea · cardiac arrest · cystitis · dry eye · dysphonia · dysuria ·

electrolyte imbalance · embolism · encephalopathy · extrapyramidal symptoms · feeling cold · glucose tolerance impaired · heart failure · hypoxia · intracranial haemorrhage · muscle weakness · myocardial infarction · oropharyngeal pain · ovarian suppression · pericardial effusion · skin ulcer · syncope

**SIDE-EFFECTS, FURTHER INFORMATION** Prolonged use of treosulfan is associated with an increased incidence of acute non-lymphocytic leukaemia.

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises females of childbearing potential and male patients with partners of childbearing potential should use effective contraception during and for 6 months after treatment. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Manufacturer advises avoid—no information available. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT**
  - ▶ When used for conditioning treatment before allogeneic haematopoietic stem cell transplantation. See *Contra-indications* for information relating to severe impairment.
- **RENAL IMPAIRMENT**
  - ▶ When used for conditioning treatment before allogeneic haematopoietic stem cell transplantation. Manufacturer advises caution—treosulfan is excreted renally. See also *Contra-indications* for further information relating to severe impairment.
- **MONITORING REQUIREMENTS** Manufacturer advises monitor full blood counts frequently during treatment.
- **PATIENT AND CARER ADVICE**

**Driving and skilled tasks** Patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of nausea, vomiting or dizziness.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website

#### **CAUTIONARY AND ADVISORY LABELS** 25

**CAUTIONARY AND ADVISORY LABELS** 25

#### ▶ **Treosulfan (Non-proprietary)**

## ANTINEOPLASTIC DRUGS > ANTHRACYCLINES AND RELATED DRUGS

### Daunorubicin

19-Dec-2021

#### ● **INDICATIONS AND DOSE**

##### **Acute myelogenous leukaemia | Acute lymphocytic leukaemia**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: (consult local protocol)

##### **Advanced AIDS-related Kaposi's sarcoma (liposomal formulation only)**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: (consult product literature)

#### **IMPORTANT SAFETY INFORMATION**

##### **MHRA/CHM ADVICE: LIPOSOMAL AND LIPID-COMPLEX FORMULATIONS: NAME CHANGE TO REDUCE MEDICATION ERRORS (JULY 2020)**

Serious harm and fatal overdoses have occurred following confusion between liposomal, pegylated-liposomal, lipid-complex, and conventional formulations of the same drug substance. Medicines with these formulations will explicitly include 'liposomal', 'pegylated-liposomal', or 'lipid-complex' within their name to reduce the risk of potentially fatal medication errors.

The MHRA reminds healthcare professionals that liposomal, pegylated-liposomal, lipid-complex, and conventional formulations containing the same drug substance are **not** interchangeable. Healthcare professionals are advised to make a clear distinction between formulations when prescribing, dispensing, administering, and communicating about daunorubicin. The product name and dose should be verified before administration and the maximum dose should not be exceeded.

- **CONTRA-INDICATIONS** Myocardial insufficiency · previous treatment with maximum cumulative doses of daunorubicin or other anthracycline · recent myocardial infarction · severe arrhythmia
- **CAUTIONS** Caution in handling—irritant to tissues · neutrophil count less than 1500/mm<sup>3</sup>
- **INTERACTIONS** → Appendix 1: anthracyclines
- **SIDE-EFFECTS** Abdominal pain · alopecia · amenorrhoea · anaemia · arrhythmias · ascites · atrioventricular block · azoospermia · bone marrow disorders · cardiac inflammation · cardiomyopathy · chills · congestive heart failure · cyanosis · death · dehydration · diarrhoea · dyspnoea · extravasation necrosis · fever · flushing · gastrointestinal disorders · haemorrhage · hepatomegaly · hyperpyrexia · hyperuricaemia · hypoxia · infection · ischaemic heart disease · leucopenia · mucositis · myocardial infarction · nail discolouration · nausea · nephropathy · neutropenia · oedema · pain · paraesthesia · pleural effusion · radiation injuries · shock · skin reactions · stomatitis · thrombocytopenia · thrombophlebitis · urine discolouration · venous sclerosis · vomiting
- **SIDE-EFFECTS, FURTHER INFORMATION** Cardiotoxicity is cumulative and may be irreversible, however responds to treatment if detected early.
- **CONCEPTION AND CONTRACEPTION** Contraceptive advice required, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Avoid (teratogenic and carcinogenic in animal studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.

- **HEPATIC IMPAIRMENT** For *solution for infusion* manufacturer advises caution. For *powder for solution for infusion* manufacturer advises caution in mild to moderate impairment; avoid in severe impairment.  
**Dose adjustments** Manufacturer advises dose reduction according to serum bilirubin concentration—consult product literature.
- **RENAL IMPAIRMENT** E For *solution for infusion* use with caution. For *powder for solution for infusion* caution in mild to moderate impairment; avoid in severe impairment. M  
**Dose adjustments** E Reduce dose (consult product literature or local protocol). M
- **MONITORING REQUIREMENTS** Cardiac monitoring essential.
- **PRESCRIBING AND DISPENSING INFORMATION**  
Daunorubicin is available as *conventional* and *liposomal* formulations. These different formulations vary in their licensed indications, pharmacokinetics, dosage and administration, and are **not** interchangeable.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.  
**Solution for infusion**  
▶ **DaunoXome** (Galen Ltd)  
Daunorubicin (as Daunorubicin hydrochloride citrate liposomal pegylated) 2 mg per 1 ml DaunoXome 50mg/25ml concentrate for solution for infusion vials | 1 vial PoM £250.00  
**Powder for solution for infusion**  
▶ **Daunorubicin (Non-proprietary)**  
Daunorubicin (as Daunorubicin hydrochloride) 20 mg Daunorubicin 20mg powder for solution for infusion vials | 10 vial PoM £715.00 (Hospital only)

## Daunorubicin with cytarabine

02-Sep-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, daunorubicin p. 974, cytarabine p. 983.

### ● INDICATIONS AND DOSE

#### Acute myeloid leukaemia

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: (consult product literature)

### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: LIPOSOMAL AND LIPID-COMPLEX FORMULATIONS: NAME CHANGE TO REDUCE MEDICATION ERRORS (JULY 2020)

Serious harm and fatal overdoses have occurred following confusion between liposomal, pegylated-liposomal, lipid-complex, and conventional formulations of the same drug substance. Medicines with these formulations will explicitly include 'liposomal', 'pegylated-liposomal', or 'lipid-complex' within their name to reduce the risk of potentially fatal medication errors.

The MHRA reminds healthcare professionals that liposomal, pegylated-liposomal, lipid-complex, and conventional formulations containing the same drug substance are **not** interchangeable. Healthcare professionals are advised to make a clear distinction between formulations when prescribing, dispensing, administering, and communicating about daunorubicin with cytarabine. The product name and dose should be verified before administration and the maximum dose should not be exceeded.

- **CAUTIONS** Wilson's disease or other copper-related disorders (each vial contains 100 mg of copper gluconate, equivalent to 14 mg of elemental copper)
- **INTERACTIONS** → Appendix 1: anthracyclines · cytarabine

- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment.
- **RENAL IMPAIRMENT** Manufacturer advises caution in severe impairment.
- **PRESCRIBING AND DISPENSING INFORMATION**  
Daunorubicin with cytarabine is available as a *liposomal* formulation. This is **not** interchangeable with other daunorubicin- or cytarabine-containing preparations; such preparations differ in their licensed indications, pharmacokinetics, dosage and administration.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website  
**NICE decisions**  
▶ Liposomal cytarabine–daunorubicin for untreated acute myeloid leukaemia (December 2018) NICE TA552 Recommended with restrictions  
**Scottish Medicines Consortium (SMC) decisions**  
▶ Liposomal daunorubicin and cytarabine (*Vyxeos*<sup>®</sup>) for the treatment of adults with newly diagnosed, therapy-related acute myeloid leukaemia (t-AML) or AML with myelodysplasia-related changes (March 2019) SMC No. SMC2130 Recommended
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.  
**Powder for solution for infusion**  
▶ **Vyxeos** (Jazz Pharmaceuticals UK Ltd)  
Daunorubicin 44 mg, Cytarabine 100 mg Vyxeos liposomal 44mg/100mg powder for concentrate for solution for infusion vials | 1 vial PoM £4,581.00 (Hospital only)

## Doxorubicin hydrochloride

05-Oct-2021

### ● INDICATIONS AND DOSE

**Acute leukaemias | Hodgkin's lymphoma | Non-Hodgkin's lymphoma | Some solid tumours including breast cancer | Advanced soft-tissue sarcoma**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: (consult product literature)

**Some papillary bladder tumours (bladder instillation) | Recurrent superficial bladder tumours (bladder instillation) | Transitional cell carcinoma (bladder instillation) | Carcinoma in situ (bladder instillation)**

- ▶ BY INTRAVESICAL INSTILLATION
- ▶ Adult: (consult product literature)

### CAELYX<sup>®</sup>

**For AIDS-related Kaposi's sarcoma in patients with low CD4 count and extensive mucocutaneous or visceral disease | Advanced ovarian cancer when platinum-based chemotherapy has failed | Progressive multiple myeloma (in combination with bortezomib) in patients who have received at least one prior therapy and who have undergone or are unsuitable for bone-marrow transplantation | Monotherapy for metastatic breast cancer in patients with increased cardiac risk**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: (consult product literature)

### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: LIPOSOMAL AND LIPID-COMPLEX FORMULATIONS: NAME CHANGE TO REDUCE MEDICATION ERRORS (JULY 2020)

Serious harm and fatal overdoses have occurred following confusion between liposomal, pegylated-liposomal, lipid-complex, and conventional formulations of the same drug substance. Medicines with these formulations will explicitly include 'liposomal', 'pegylated-liposomal', or 'lipid-complex' within their name to reduce the risk of potentially fatal medication errors.

The MHRA reminds healthcare professionals that liposomal, pegylated-liposomal, lipid-complex, and conventional formulations containing the same drug substance are **not** interchangeable. Healthcare professionals are advised to make a clear distinction between formulations when prescribing, dispensing, administering, and communicating about doxorubicin. The product name and dose should be verified before administration and the maximum dose should not be exceeded.

- **CONTRA-INDICATIONS** Consult product literature
- **CAUTIONS** Cardiac disease · caution in handling—irritant to tissues · consult product literature · elderly · hypertension · previous myocardial irradiation
- **INTERACTIONS** → Appendix 1: anthracyclines
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Alopecia · anaemia · anxiety · appetite decreased · arrhythmias · arthralgia · asthenia · bone marrow depression · breast pain · cachexia · cardiovascular disorder · chest discomfort · chills · constipation · cough · decreased leucocytes · dehydration · depression · diarrhoea · dizziness · drowsiness · dry mouth · dysphagia · dyspnoea · dysuria · electrolyte imbalance · epistaxis · eye inflammation · fever · gastrointestinal discomfort · gastrointestinal disorders · headache · hyperhidrosis · hypersensitivity · hypertension · hyperthermia · hypotension · increased risk of infection · influenza like illness · infusion related reaction · insomnia · malaise · mucosal abnormalities · muscle complaints · muscle tone increased · muscle weakness · nail disorder · nausea · nerve disorders · neutropenia · oedema · oral disorders · pain · scrotal erythema · sensation abnormal · sepsis · skin reactions · skin ulcer · syncope · taste altered · thrombocytopenia · vasodilation · vision blurred · vomiting · weight decreased
  - ▶ **Uncommon** Confusion · embolism and thrombosis
  - ▶ **Rare or very rare** Secondary oral neoplasms · severe cutaneous adverse reactions (SCARs)
  - ▶ **Frequency not known** Asthma · congestive heart failure · secondary malignancy · throat tightness
- SIDE-EFFECTS, FURTHER INFORMATION** Extravasation can cause tissue necrosis.
  - **Cardiomyopathy** Higher cumulative doses are associated with cardiomyopathy and it is usual to limit total cumulative doses to 450 mg/m<sup>2</sup>.
  - **Liposomal formulations** Liposomal formulations of doxorubicin may reduce the incidence of cardiotoxicity and lower the potential for local necrosis, but infusion reactions, sometimes severe, may occur. Hand-foot syndrome (painful, macular reddening skin eruptions) occurs commonly with liposomal doxorubicin and may be dose limiting. It can occur after 2–3 treatment cycles and may be prevented by cooling hands and feet and avoiding socks, gloves, or tight-fitting footwear. It may also occur with non-liposomal formulations.
  - **Elevated bilirubin concentrations** Doxorubicin is largely excreted in the bile and an elevated bilirubin concentration is an indication for reducing the dose.
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during and for at least 6 months after treatment in men or women.
- **PREGNANCY** Avoid (teratogenic and toxic in animal studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** For liposomal formulation, manufacturer advises caution. For solution for injection or infusion, manufacturer advises caution in mild to moderate impairment; avoid in severe impairment.

**Dose adjustments** Manufacturer advises dose reduction according to bilirubin concentration.

- **RENAL IMPAIRMENT** Consult product literature in severe impairment.
- **MONITORING REQUIREMENTS** Patients should be assessed before treatment, by echocardiography. Cardiac monitoring during treatment may assist in determining safe dosage.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises conventional doxorubicin is given by injection into a fast-running infusion, commonly at 21-day intervals.
- **PRESCRIBING AND DISPENSING INFORMATION** Doxorubicin is available as *conventional, liposomal and pegylated liposomal* formulations. These different formulations vary in their licensed indications, pharmacokinetics, dosage and administration, and are **not** interchangeable.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
- NICE decisions**
  - ▶ **Topotecan, pegylated liposomal doxorubicin hydrochloride, paclitaxel, trabectedin and gemcitabine for treating recurrent ovarian cancer (April 2016)** NICE TA389 Recommended
  - ▶ **Olaratumab in combination with doxorubicin for treating advanced soft tissue sarcoma (August 2017)** NICE TA465 Recommended with restrictions
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection, solution for infusion
- Solution for injection**
  - ▶ **Doxorubicin hydrochloride (Non-proprietary)**
    - **Doxorubicin hydrochloride 2 mg per 1 ml** Doxorubicin 50mg/25ml solution for injection Cytosafe vials | 1 vial PoM £103.00 (Hospital only)
    - Doxorubicin 50mg/25ml solution for infusion vials | 1 vial PoM £103.00 (Hospital only)
    - Doxorubicin 10mg/5ml solution for injection Cytosafe vials | 1 vial PoM £20.60 (Hospital only)
    - Doxorubicin 10mg/5ml concentrate for solution for infusion vials | 1 vial PoM £11.55-£19.57 (Hospital only)
    - Doxorubicin 10mg/5ml solution for infusion vials | 1 vial PoM £20.60 (Hospital only)
    - Doxorubicin 50mg/25ml concentrate for solution for infusion vials | 1 vial PoM £54.00-£97.85 (Hospital only)
- Solution for infusion**
  - ▶ **Doxorubicin hydrochloride (Non-proprietary)**
    - **Doxorubicin hydrochloride 2 mg per 1 ml** Doxorubicin 200mg/100ml solution for infusion vials | 1 vial PoM £412.00 (Hospital only)
    - Doxorubicin 20mg/10ml concentrate for solution for infusion vials | 1 vial PoM S (Hospital only)
    - Doxorubicin 100mg/50ml concentrate for solution for infusion vials | 1 vial PoM S (Hospital only)
    - Doxorubicin 200mg/100ml solution for injection Cytosafe vials | 1 vial PoM £412.00 (Hospital only)
    - Doxorubicin 200mg/100ml concentrate for solution for infusion vials | 1 vial PoM £234.66-£391.40 (Hospital only)
  - ▶ **Caelyx** (Baxter Healthcare Ltd)
    - **Doxorubicin hydrochloride (as Doxorubicin hydrochloride liposomal pegylated) 2 mg per 1 ml** Caelyx pegylated liposomal 50mg/25ml concentrate for solution for infusion vials | 1 vial PoM £712.49
    - Caelyx pegylated liposomal 20mg/10ml concentrate for solution for infusion vials | 1 vial PoM £360.23

## Epirubicin hydrochloride

21-May-2021

### ● INDICATIONS AND DOSE

**Breast cancer (specialist use only) | Gastric cancer (specialist use only) | Small cell lung cancer (specialist use only) | Ovarian cancer (specialist use only) | Colorectal cancer (specialist use only) | Lymphoma (specialist use only) | Leukaemia (specialist use only) | Multiple myeloma (specialist use only)**

► BY INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION

► Adult: (consult product literature or local protocols)

**Bladder cancer (specialist use only)**

► BY INTRAVESICAL INSTILLATION

► Adult: (consult product literature or local protocols)

- **CONTRA-INDICATIONS** Bladder inflammation or contraction (when used as a bladder instillation) · catheterisation difficulties (when used as a bladder instillation) · haematuria (when used as a bladder instillation) · invasive tumours penetrating the bladder (when used as a bladder instillation) · myocardiopathy · previous treatment with maximum cumulative doses of epirubicin or other anthracycline · recent myocardial infarction · severe arrhythmia · severe myocardial insufficiency · unstable angina · urinary tract infections (when used as a bladder instillation)

- **CAUTIONS** Caution in handling—irritant to tissues

- **INTERACTIONS** → Appendix 1: anthracyclines

### ● SIDE-EFFECTS

► Common or very common

- With intravesical use Chemical cystitis
- With parenteral use Alopecia · amenorrhoea · anaemia · appetite decreased · arrhythmias · cardiac conduction disorders · chills · congestive heart failure · dehydration · diarrhoea · eye inflammation · fever · gastrointestinal discomfort · gastrointestinal disorders · haemorrhage · increased risk of infection · leucopenia · malaise · mucositis · nail discoloration · nausea · neutropenia · oral disorders · skin reactions · thrombocytopenia · urine discoloration · vasodilation · vomiting

► Uncommon

- With parenteral use Asthenia · embolism and thrombosis · sepsis

► Rare or very rare

- With parenteral use Hyperuricaemia
- Frequency not known
- With parenteral use Bone marrow depression · cardiomyopathy · cardiotoxicity · photosensitivity reaction · radiation injuries · shock

**SIDE-EFFECTS, FURTHER INFORMATION** Manufacturer advises extreme caution with cumulative doses exceeding 900 mg/m<sup>2</sup>—risk of congestive heart failure increased.

- **CONCEPTION AND CONTRACEPTION** Contraceptive advice required, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **PREGNANCY** Avoid (carcinogenic in *animal* studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **BREAST FEEDING** Discontinue breast-feeding.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild to moderate impairment; avoid in severe impairment.

**Dose adjustments** Manufacturer advises dose reduction according to bilirubin level.

- **RENAL IMPAIRMENT**

**Dose adjustments** Manufacturer advises consider dose reduction in severe impairment.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection, solution for infusion

### Solution for injection

- **Epirubicin hydrochloride (Non-proprietary)**

**Epirubicin hydrochloride 2 mg per 1 ml** Epirubicin 50mg/25ml solution for injection vials | 1 vial [PoM] £86.89-£105.00 (Hospital only)

Epirubicin 10mg/5ml solution for injection vials | 1 vial [PoM] £17.38-£20.18 (Hospital only)

- **Pharmorubicin (Pfizer Ltd)**

**Epirubicin hydrochloride 2 mg per 1 ml** Pharmorubicin 50mg/25ml solution for injection Cytosafe vials | 1 vial [PoM] £106.19 (Hospital only)

Pharmorubicin 10mg/5ml solution for injection Cytosafe vials | 1 vial [PoM] £21.24 (Hospital only)

### Solution for infusion

- **Epirubicin hydrochloride (Non-proprietary)**

**Epirubicin hydrochloride 2 mg per 1 ml** Epirubicin 100mg/50ml solution for infusion vials | 1 vial [PoM] £201.76 (Hospital only)

Epirubicin 200mg/100ml solution for infusion vials | 1 vial [PoM] £306.20-£366.85 (Hospital only)

- **Pharmorubicin (Pfizer Ltd)**

**Epirubicin hydrochloride 2 mg per 1 ml** Pharmorubicin 200mg/100ml solution for infusion Cytosafe vials | 1 vial [PoM] £386.16 (Hospital only)

## Idarubicin hydrochloride

25-Jun-2020

### ● INDICATIONS AND DOSE

**Acute non-lymphocytic leukaemias monotherapy**

► BY MOUTH

- Adult: 30 mg/m<sup>2</sup> daily for 3 days; maximum 400 mg/m<sup>2</sup> per course

**Acute non-lymphocytic leukaemia in combination therapy**

► BY MOUTH

- Adult: 15–30 mg/m<sup>2</sup> daily for 3 days; maximum 400 mg/m<sup>2</sup> per course

**Advanced breast cancer after failure of first-line chemotherapy (not including anthracyclines)—monotherapy**

► BY MOUTH

- Adult: 45 mg/m<sup>2</sup> for 1 dose, repeat treatment every 3–4 weeks, alternatively 15 mg/m<sup>2</sup> daily for 3 consecutive days, repeat treatment every 3–4 weeks; maximum 400 mg/m<sup>2</sup> per course

**Acute leukaemias | Advanced breast cancer after failure of first-line chemotherapy (not including anthracyclines)**

► BY INTRAVENOUS INJECTION

- Adult: (consult product literature)

### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **CONTRA-INDICATIONS** Previous treatment with maximum cumulative dose of idarubicin or other anthracycline · recent myocardial infarction · severe arrhythmias · severe myocardial insufficiency

- **CAUTIONS** Caution in handling—irritant to tissues

- **INTERACTIONS** → Appendix 1: anthracyclines

- **SIDE-EFFECTS**

### GENERAL SIDE-EFFECTS

- **Common or very common** Alopecia · anaemia · appetite decreased · arrhythmias · cardiomyopathy · chills · congestive heart failure · diarrhoea · embolism and thrombosis · fever · haemorrhage · headache · increased risk of infection · leucopenia · nausea · neutropenia · skin reactions · stomatitis · thrombocytopenia · urine discoloration · vomiting

- ▶ **Uncommon** Dehydration · gastrointestinal disorders · hyperuricaemia · leukaemia secondary · myocardial infarction · nail discolouration · sepsis · shock · soft tissue necrosis
- ▶ **Rare or very rare** Cardiac conduction disorders · cardiac inflammation · flushing · intracranial haemorrhage
- ▶ **Frequency not known** Bone marrow disorders · tumour lysis syndrome

#### SPECIFIC SIDE-EFFECTS

- ▶ **Common or very common**
- ▶ With intravenous use Abdominal pain · mucosal abnormalities · paraesthesia · radiation injuries
- ▶ With oral use Gastrointestinal discomfort · mucositis · radiation skin sensitivity
- **CONCEPTION AND CONTRACEPTION** Contraceptive advice required, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Avoid (teratogenic and toxic in animal studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild to moderate impairment; avoid in severe impairment. **Dose adjustments** Manufacturer advises consider dose reduction in mild to moderate impairment—consult product literature.
- **RENAL IMPAIRMENT** Avoid in severe impairment. **Dose adjustments** Reduce dose.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Capsule

CAUTIONARY AND ADVISORY LABELS 25

##### ▶ Zavedos (Pfizer Ltd)

**Idarubicin hydrochloride 5 mg** Zavedos 5mg capsules | 1 capsule [PoM] £41.47

**Idarubicin hydrochloride 10 mg** Zavedos 10mg capsules | 1 capsule [PoM] £69.12

#### Powder for solution for injection

##### ▶ Zavedos (Pfizer Ltd)

**Idarubicin hydrochloride 5 mg** Zavedos 5mg powder for solution for injection vials | 1 vial [PoM] £87.36 (Hospital only)

**Idarubicin hydrochloride 10 mg** Zavedos 10mg powder for solution for injection vials | 1 vial [PoM] £174.72 (Hospital only)

## Mitoxantrone

25-Jun-2020

### (Mitoxantrone)

#### ● INDICATIONS AND DOSE

**Metastatic breast cancer | Non-Hodgkin's lymphoma | Adult acute non-lymphocytic leukaemia | Non-resectable primary hepatocellular carcinoma**

##### ▶ BY INTRAVENOUS INFUSION

▶ Adult: (consult local protocol)

- **CAUTIONS** Caution in handling—irritant to tissues · intrathecal administration not recommended
- **INTERACTIONS** → Appendix 1: anthracyclines
- **SIDE-EFFECTS**
- ▶ **Uncommon** Urine discolouration
- ▶ **Frequency not known** Abdominal pain · acute leukaemia · alopecia · amenorrhoea · anxiety · appetite decreased · arrhythmia · asthenia · bone marrow depression · confusion · constipation · diarrhoea · drowsiness · dyspnoea · fever · gastrointestinal haemorrhage · heart failure · mucositis · nail discolouration · nail dystrophy · nausea · neurological effects · paraesthesia · scleral discolouration · skin discolouration · stomatitis · thrombocytopenia · vomiting

**SIDE-EFFECTS, FURTHER INFORMATION** Cardiac examinations are recommended after a cumulative dose of 160mg/m<sup>2</sup>.

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during and for at least 6 months after treatment in men or women. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Avoid. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (limited information available). **Dose adjustments** Manufacturer advises consider dose reduction.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. **Solution for infusion**
- ▶ **Mitoxantrone (Non-proprietary)**
- Mitoxantrone (as Mitoxantrone hydrochloride) 2 mg per 1 ml** Mitoxantrone 20mg/10ml concentrate for solution for infusion vials | 1 vial [PoM] £51.43-£121.85 (Hospital only) | 1 vial [PoM] £51.43
- ▶ **Onkotrone (Baxter Healthcare Ltd)**
- Mitoxantrone (as Mitoxantrone hydrochloride) 2 mg per 1 ml** Onkotrone 20mg/10ml solution for infusion vials | 1 vial [PoM] £103.57 (Hospital only)
- Onkotrone 25mg/12.5ml solution for infusion vials | 1 vial [PoM] £129.48

## Pixantrone

21-May-2021

#### ● INDICATIONS AND DOSE

**Treatment of refractory or multiply relapsed aggressive non-Hodgkin B-cell lymphomas (monotherapy)**

##### ▶ BY INTRAVENOUS INFUSION

▶ Adult: (consult product literature)

- **CONTRA-INDICATIONS** Active severe infection · risk factors for severe infection
- **CAUTIONS** Active cardiovascular disease · cardiac risk factors · caution in handling—irritant to tissues · concurrent radiotherapy to the mediastinal area · history of cardiovascular disease · previous radiotherapy to the mediastinal area · previous therapy with anthracenediones · previous therapy with anthracyclines
- **INTERACTIONS** → Appendix 1: anthracyclines
- **SIDE-EFFECTS**
- ▶ **Common or very common** Alopecia · anaemia · appetite decreased · arrhythmias · asthenia · blood disorder · bundle branch block · cancer progression · cardiac disorder (during or following treatment) · chest pain · congestive heart failure · constipation · cough · decreased leucocytes · diarrhoea · drowsiness · dry mouth · dyspnoea · electrolyte imbalance · eye inflammation · fever · gastrointestinal discomfort · haemorrhage · headache · hypotension · increased risk of infection · left ventricular dysfunction · mucositis · nail disorder · nausea · neutropenia · oedema · oral disorders · pain · paraesthesia · proteinuria · secondary malignancy · skin reactions · taste altered · thrombocytopenia · urine discolouration · vascular disorders · vomiting
- ▶ **Uncommon** Anxiety · arthralgia · arthritis · bone marrow failure · chills · dizziness · dry eye · eosinophilia · hyperbilirubinaemia · hyperuricaemia · local reaction · meningitis · muscle weakness · musculoskeletal stiffness · night sweats · oesophagitis · oliguria · respiratory disorders · rhinorrhoea · septic shock · skin ulcer · sleep disorders · spontaneous penile erection · vertigo · weight decreased

- **CONCEPTION AND CONTRACEPTION** Ensure effective contraception during and for at least 6 months after treatment in men or women.
- **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild to moderate impairment; avoid in severe impairment (no information available).
- **RENAL IMPAIRMENT** Manufacturer advises caution (no information available).
- **MONITORING REQUIREMENTS**
  - ▶ Baseline investigations should include a full blood count, assessment of cardiac function measured by left ventricular ejection fraction, and measurement of serum concentrations of total bilirubin and total creatinine.
  - ▶ Full blood count and cardiac function should be monitored throughout treatment.
- **PATIENT AND CARER ADVICE** Photosensitivity Photosensitivity is a theoretical risk and patients should be advised to follow sun protection strategies.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
  - ◆ **NICE decisions**
    - ▶ **Pixantrone monotherapy for treating multiply relapsed or refractory aggressive non-Hodgkin's B-cell lymphoma (February 2014)** NICE TA306 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for solution for infusion

ELECTROLYTES: May contain Sodium

▶ **Pixuvri** (Servier Laboratories Ltd)

**Pixantrone (as Pixantrone dimaleate) 29 mg** Pixuvri 29mg powder for concentrate for solution for infusion vials | 1 vial (PoM) £553.50 (Hospital only)

## ANTINEOPLASTIC DRUGS > ANTIMETABOLITES

### Azacitidine

10-May-2021

- **DRUG ACTION** Azacitidine is a pyrimidine analogue.

#### ● INDICATIONS AND DOSE

**Treatment of intermediate-2 and high-risk myelodysplastic syndromes, chronic myelomonocytic leukaemia, and acute myeloid leukaemia, in adults who are not eligible for haematopoietic stem cell transplantation**

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Adult: (consult local protocol)

- **CONTRA-INDICATIONS** Advanced malignant hepatic tumour
- **CAUTIONS** History of severe congestive heart failure · unstable cardiac disease (consider cardiopulmonary assessment before and during treatment) · unstable pulmonary disease (consider cardiopulmonary assessment before and during treatment)
- **INTERACTIONS** → Appendix 1: azacitidine
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Alopecia · anaemia · anxiety · appetite decreased · arthralgia · asthenia · bone marrow disorders · chest pain · chills · confusion · constipation · dehydration · diarrhoea · dizziness · drowsiness · dyspnoea · fever · gastrointestinal discomfort · haemorrhage · headache · hypertension · hypokalaemia · hypotension · increased risk of infection · induration · inflammation ·

- insomnia · intracranial haemorrhage · laryngeal pain · leucopenia · malaise · muscle complaints · nausea · neutropenia · pain · renal failure · respiratory disorders · sepsis · skin reactions · stomatitis · syncope · thrombocytopenia · vomiting · weight decreased
- ▶ **Uncommon** Hepatic coma · hepatic failure · pyoderma gangrenosum · renal tubular acidosis
- ▶ **Rare or very rare** Injection site necrosis · tumour lysis syndrome
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during and for 3 months after treatment in men or women.
- **PREGNANCY** Avoid (toxicity in animal studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment (no information available)—monitor for adverse drug reactions.
  - ◆ **Dose adjustments** Manufacturer advises consider dose reduction—consult local protocol.
- **RENAL IMPAIRMENT**
  - ◆ **Dose adjustments** [E<sub>Gr</sub>] Delay next treatment cycle if serum-creatinine or blood urea nitrogen greater than twice baseline value and above the upper level of normal until values return to normal or baseline, and then reduce dose by 50% on the next treatment cycle.
    - ◆ Reduce dose by 50% on the next treatment cycle if serum-bicarbonate concentration less than 20 mmol/litre.

#### ● MONITORING REQUIREMENTS

- ▶ Monitor liver function tests, serum creatinine, and serum bicarbonate before initiation of treatment and before each treatment cycle.
- ▶ Monitor full blood count before initiation of treatment, before each treatment cycle, and as clinically indicated.
- ▶ Monitor for bleeding.

#### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### ◆ NICE decisions

- ▶ **Azacitidine for treating acute myeloid leukaemia with more than 30% bone marrow blasts (July 2016)** NICE TA399 Not recommended
- ▶ **Azacitidine for the treatment of myelodysplastic syndromes, chronic myelomonocytic leukaemia and acute myeloid leukaemia (March 2011)** NICE TA218 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for suspension for injection

▶ **Azacitidine (Non-proprietary)**

**Azacitidine 100 mg** Azacitidine 100mg powder for suspension for injection vials | 1 vial (PoM) £70.00-£321.00 (Hospital only)

▶ **Vidaza** (Bristol-Myers Squibb Pharmaceuticals Ltd)

**Azacitidine 100 mg** Vidaza 100mg powder for suspension for injection vials | 1 vial (PoM) £321.00

## Capecitabine

27-Jul-2021

- **DRUG ACTION** Capecitabine is metabolised to fluorouracil.

#### ● INDICATIONS AND DOSE

**Stage III colon cancer, adjuvant following surgery (monotherapy)**

▶ BY MOUTH

- ▶ Adult: 1.25 g/m<sup>2</sup> twice daily for 14 days, subsequent courses repeated after a 7-day interval, recommended duration of treatment is 6 months, adjust dose according to tolerability—consult product literature

continued →

**Stage III colon cancer, adjuvant following surgery (combination therapy)**

## ▶ BY MOUTH

- ▶ Adult: 0.8–1 g/m<sup>2</sup> twice daily for 14 days, subsequent courses repeated after a 7-day interval, recommended duration of treatment is 6 months, adjust dose according to tolerability—consult product literature

**Metastatic colorectal cancer (monotherapy)**

## ▶ BY MOUTH

- ▶ Adult: 1.25 g/m<sup>2</sup> twice daily for 14 days, subsequent courses repeated after a 7-day interval, adjust dose according to tolerability—consult product literature

**Metastatic colorectal cancer (combination therapy)**

## ▶ BY MOUTH

- ▶ Adult: 0.8–1 g/m<sup>2</sup> twice daily for 14 days, subsequent courses repeated after a 7-day interval, adjust dose according to tolerability—consult product literature

**Advanced gastric cancer (first-line treatment in combination with a platinum based regimen)**

## ▶ BY MOUTH

- ▶ Adult: 0.8–1 g/m<sup>2</sup> twice daily for 14 days, subsequent courses repeated after a 7-day interval, alternatively 625 mg/m<sup>2</sup> twice daily given continuously, adjust dose according to tolerability—consult product literature

**Locally advanced or metastatic breast cancer (second-line treatment as monotherapy after failure of a taxane and anthracycline regimen or where further anthracycline treatment is not indicated) | Locally advanced or metastatic breast cancer (second-line treatment, in combination with docetaxel, where previous therapy included an anthracycline)**

## ▶ BY MOUTH

- ▶ Adult: 1.25 g/m<sup>2</sup> twice daily for 14 days, subsequent courses repeated after a 7-day interval, adjust dose according to tolerability—consult product literature

**IMPORTANT SAFETY INFORMATION**

RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES See Cytotoxic drugs p. 962.

MHRA/CHM ADVICE: 5-FLUOROURACIL (INTRAVENOUS), CAPECITABINE, TEGAFUR: DPD TESTING RECOMMENDED BEFORE INITIATION TO IDENTIFY PATIENTS AT INCREASED RISK OF SEVERE AND FATAL TOXICITY (OCTOBER 2020)

Patients with partial or complete dihydropyrimidine dehydrogenase (DPD) deficiency are at increased risk of severe and fatal toxicity during treatment with fluoropyrimidines. Healthcare professionals are advised to test all patients for DPD deficiency before initiating treatment and confirm their, including family, history of complete or partial DPD deficiency. Capecitabine is contra-indicated in patients with known complete DPD deficiency; in those with partial DPD deficiency, a reduced starting dose is recommended. Patients should be monitored for toxicity, particularly during the first cycle of treatment or after a dose increase; severe toxicity can occur even in those with negative test results for DPD deficiency. Healthcare professionals should also counsel patients on the benefits and risks of their treatment and ensure they are provided with the patient information leaflet.

- **CONTRA-INDICATIONS** Complete dihydropyrimidine dehydrogenase deficiency (increased risk of severe, life-threatening, or fatal toxicity)—consult product literature
- **CAUTIONS** Diabetes mellitus · diarrhoea or dehydration—consult product literature for guidance on dose modification and treatment interruption · electrolyte disturbances · history of angina pectoris · history of arrhythmias · history of significant cardiovascular disease · nervous system disease · partial dihydropyrimidine dehydrogenase deficiency—consult product literature

- **INTERACTIONS** → Appendix 1: capecitabine

● **SIDE-EFFECTS**

- ▶ **Common or very common** Alopecia · anaemia · appetite abnormal · asthenia · chest pain · constipation · cough · dehydration · depression · diarrhoea · dizziness · dry mouth · dyspnoea · embolism and thrombosis · eye disorders · eye inflammation · eye irritation · fever · gastrointestinal discomfort · gastrointestinal disorders · haemorrhage · headache · hyperbilirubinaemia · increased risk of infection · insomnia · joint disorders · lethargy · malaise · nail disorder · nausea · neutropenia · oedema · pain · rhinorrhoea · sensation abnormal · skin reactions · stomatitis · taste altered · vomiting · weight decreased
- ▶ **Uncommon** Acute coronary syndrome · aphasia · arrhythmias · ascites · asthma · chills · confusion · diabetes mellitus · dysphagia · ear pain · facial swelling · haemolytic anaemia · hepatic disorders · hot flush · hydropnephrosis · hypertension · hypertriglyceridaemia · hypokalaemia · hypotension · influenza like illness · ischaemic heart disease · leucopenia · libido decreased · lipoma · malnutrition · memory loss · movement disorders · muscle weakness · musculoskeletal stiffness · palpitations · pancytopenia · panic attack · peripheral coldness · peripheral neuropathy · photosensitivity reaction · pneumothorax · radiation recall reaction · sepsis · skin ulcer · syncope · thrombocytopenia · urinary disorders · vertigo · vision disorders
- ▶ **Rare or very rare** Cutaneous lupus erythematosus · encephalopathy · QT interval prolongation · severe cutaneous adverse reactions (SCARs) · vasospasm
- ▶ **Frequency not known** Cardiomyopathy · heart failure · sudden death

- **CONCEPTION AND CONTRACEPTION** Contraceptive advice required, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **PREGNANCY** Avoid (teratogenic in animal studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **BREAST FEEDING** Discontinue breast-feeding.

- **HEPATIC IMPAIRMENT** Manufacturer advises monitor liver function in mild-to-moderate dysfunction—consult product literature for guidance on treatment interruption; avoid in severe impairment.

- **RENAL IMPAIRMENT** [E<sub>Gr</sub>](#) Avoid if creatinine clearance less than 30 mL/minute. [M](#)  
**Dose adjustments** [E<sub>Gr</sub>](#) Reduce starting dose of 1.25 g/m<sup>2</sup> to 75% if creatinine clearance 30–50 mL/minute. [M](#) See p. 21.

● **MONITORING REQUIREMENTS**

- ▶ Monitor plasma-calcium concentration.
- ▶ Monitor for eye disorders (including keratitis and corneal disorders).
- ▶ Severe skin reactions Monitor for symptoms of severe skin reactions (including Stevens-Johnson syndrome and toxic epidermal necrolysis)—permanently discontinue treatment immediately if symptoms occur.
- ▶ Hand-foot syndrome Monitor for symptoms of hand-foot syndrome—interrupt treatment if significant syndrome occurs and refer to product literature.

● **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

- ▶ **Bevacizumab in combination with capecitabine for the first-line treatment of metastatic breast cancer (August 2012)** NICE TA263 Not recommended
- ▶ **Bevacizumab in combination with oxaliplatin and either fluorouracil plus folinic acid or capecitabine for the treatment of metastatic colorectal cancer (December 2010)** NICE TA212 Not recommended
- ▶ **Capecitabine for the treatment of advanced gastric cancer (July 2010)** NICE TA191 Recommended

- ▶ **Capecitabine and tegafur with uracil for metastatic colorectal cancer (May 2003)** NICE TA61 Recommended
- ▶ **Capecitabine and oxaliplatin in the adjuvant treatment of stage III (Dukes' C) colon cancer (April 2006)** NICE TA100 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Tablet

CAUTIONARY AND ADVISORY LABELS 21

#### ▶ **Capecitabine (Non-proprietary)**

**Capecitabine 150 mg** Capecitabine 150mg tablets | 60 tablet PoM  
 £30.00 DT = £30.00 | 60 tablet PoM £38.02 DT = £30.00 (Hospital only)

**Capecitabine 300 mg** Capecitabine 300mg tablets | 60 tablet PoM  
 £76.04 DT = £76.04 (Hospital only)

**Capecitabine 500 mg** Capecitabine 500mg tablets | 120 tablet PoM £225.72 DT = £225.72 | 120 tablet PoM £240.00 DT = £225.72 (Hospital only)

## Cladribine

22-Apr-2022

- **DRUG ACTION** Cladribine is a nucleoside analogue that is cytotoxic particularly to lymphocytes and monocytes, inhibiting both DNA synthesis and repair. Its effect on B- and T-lymphocytes is thought to interrupt the cascade of immune events central to multiple sclerosis.

#### ● **INDICATIONS AND DOSE**

##### **Hairy cell leukaemia (specialist use only)**

- ▶ BY SUBCUTANEOUS INJECTION, OR BY INTRAVENOUS INFUSION
- ▶ Adult: (consult product literature or local protocols)

##### **B-cell chronic lymphocytic leukaemia (specialist use only)**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: (consult product literature or local protocols)

##### **Highly active relapsing-remitting multiple sclerosis (specialist use only)**

- ▶ BY MOUTH
- ▶ Adult: (consult product literature or local protocols)

#### **IMPORTANT SAFETY INFORMATION**

**MHRA/CHM ADVICE: CLADRIBINE FOR LEUKAEMIA: REPORTS OF PROGRESSIVE MULTIFOCAL ENCEPHALOPATHY (PML); STOP TREATMENT IF PML SUSPECTED (DECEMBER 2017)**

- ▶ With intravenous use or subcutaneous use

The MHRA is aware of 3 confirmed cases of progressive multifocal encephalopathy (PML) that developed 6 months to several years after cladribine treatment for haematological conditions. An association between cladribine and prolonged lymphopenia has been reported. PML should be considered in the differential diagnosis for patients with new or worsening neurological signs or symptoms. Patients should be monitored for signs and symptoms of new neurological dysfunction, and advised to seek urgent medical attention if they experience symptoms—stop treatment immediately if PML is suspected and ensure specialist investigation is received.

**MHRA/CHM ADVICE: CLADRIBINE (MAVENCLAD®): NEW ADVICE TO MINIMISE RISK OF SERIOUS LIVER INJURY (MARCH 2022)**

- ▶ With oral use

A small number of cases of clinically significant liver injury have been reported during cladribine treatment for multiple sclerosis. Time to onset varied but most cases occurred within 8 weeks of starting the first treatment course. Some patients had underlying hepatic disorders or a history of drug-related hepatic injury; a causal mechanism had not been identified. Healthcare professionals are advised to:

- check the patient's history for liver disorders;

- monitor liver function tests (including total bilirubin) before each treatment course in years 1 and 2, and during treatment if clinically indicated;
- urgently check liver function tests (including bilirubin) in patients with signs or symptoms of liver injury;
- discontinue or interrupt treatment in patients with hepatic dysfunction or unexplained increases in liver enzymes.

Patients and carers should be informed of the risk of serious liver injury and advised to seek immediate medical attention if signs of liver problems develop.

#### ● **CONTRA-INDICATIONS**

- ▶ With oral use Active chronic hepatitis · active chronic tuberculosis · active malignancy · HIV infection · immunocompromised patients

#### ● **CAUTIONS**

**GENERAL CAUTIONS** Acute infection · use irradiated blood only (haematology consultation advised)

#### **SPECIFIC CAUTIONS**

- ▶ With intravenous use or subcutaneous use High tumour burden—consult product literature · symptomatic or severe bone marrow depression
- ▶ With oral use No prior exposure to varicella zoster virus · prior malignancy (consider if potential benefit outweighs risks)

#### **CAUTIONS, FURTHER INFORMATION**

- ▶ Immunosuppressive effect of cladribine
- ▶ With intravenous use or subcutaneous use Cladribine has potent and prolonged myelosuppressive and immunosuppressive effects. Patients treated with cladribine are more prone to serious bacterial, opportunistic fungal, and viral infections, and prophylactic therapy should be considered in those at risk. Acute infections should be treated before initiating cladribine. To prevent potentially fatal transfusion-related graft-versus-host reaction, only irradiated blood products should be administered. Prescribers should consult specialist literature when using highly immunosuppressive drugs.
- ▶ Varicella zoster virus
- ▶ With oral use Manufacturer advises vaccination prior to initiation of therapy in patients who have no history of exposure to varicella zoster virus; delay treatment for 4–6 weeks after vaccination.

- **INTERACTIONS** → Appendix 1: cladribine

#### ● **SIDE-EFFECTS**

##### **GENERAL SIDE-EFFECTS**

- ▶ **Common or very common** Increased risk of infection
- SPECIFIC SIDE-EFFECTS**
- ▶ **Common or very common**
- ▶ With intravenous use Anaemia · anxiety · appetite decreased · arrhythmias · arthritis · asthenia · chest pain · chills · confusion · conjunctivitis · constipation · cough · diarrhoea · dizziness · dyspnoea · febrile neutropenia · fever · flatulence · gastrointestinal discomfort · haemolytic anaemia · headache · hyperhidrosis · hypersensitivity · insomnia · joint disorders · malaise · muscle weakness · myalgia · myocardial ischaemia · nausea · neoplasms · oedema · pain · renal impairment · respiratory disorders · secondary malignancy · septic shock · skin reactions · thrombocytopenia · vomiting
- ▶ With oral use Alopecia · lymphopenia · rash
- ▶ With subcutaneous use Anaemia · anxiety · appetite decreased · arrhythmias · arthralgia · arthritis · asthenia · bone marrow disorders · chills · constipation · cough · diarrhoea · dizziness · dyspnoea · fever · gastrointestinal disorders · gastrointestinal pain · haemorrhage · headache · hyperhidrosis · hypotension · immunosuppression · insomnia · lymphopenia · malaise · mucositis · myalgia · myocardial ischaemia · nausea · neutropenia · oedema ·

- pain · respiratory disorders · secondary malignancy · sepsis · skin reactions · thrombocytopenia · vomiting
- ▶ **Uncommon**
  - ▶ With intravenous use Bone marrow disorders · hypereosinophilia · level of consciousness decreased · nerve disorders · neurotoxicity (with high doses) · paralysis · paraparesis · Stevens-Johnson syndrome · tumour lysis syndrome
  - ▶ With oral use Liver injury
  - ▶ With subcutaneous use Ataxia · cachexia · confusion · drowsiness · eye inflammation · haemolytic anaemia · paraesthesia · polyneuropathy
  - ▶ **Rare or very rare**
  - ▶ With intravenous use Heart failure
  - ▶ With subcutaneous use Amyloidosis · cholecystitis · depression · dysphagia · epilepsy · graft versus host disease · heart failure · hepatic failure · hypereosinophilia · pulmonary embolism · renal failure · severe cutaneous adverse reactions (SCARs) · speech disorder · tumour lysis syndrome
  - ▶ **Frequency not known**
  - ▶ With oral use Malignancy
  - **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during treatment and for at least 6 months after the last dose in men and women of childbearing potential.
  - ▶ With oral use Manufacturer advises exclude pregnancy before each treatment course; if using a hormonal contraceptive, a barrier method should also be used for at least 4 weeks after the last dose of each course.
  - **PREGNANCY** Manufacturer advises avoid—teratogenic in animal studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
  - **BREAST FEEDING**
  - ▶ With intravenous use or subcutaneous use Manufacturer advises avoid during treatment and for 6 months after the last dose—no information available.
  - ▶ With oral use Manufacturer advises avoid during treatment and for 1 week after the last dose—no information available.
  - **HEPATIC IMPAIRMENT**
  - ▶ With intravenous use Manufacturer advises caution (limited information available).
  - ▶ With subcutaneous use Manufacturer advises caution in mild impairment; avoid in moderate to severe impairment (no information available).
  - ▶ With oral use Manufacturer advises avoid in moderate to severe impairment (no information available).
  - **RENAL IMPAIRMENT**
  - ▶ With subcutaneous use Manufacturer advises caution in mild impairment; avoid in moderate-to-severe impairment.
  - ▶ With oral use Manufacturer advises avoid in moderate-to-severe impairment—no information available.
  - ▶ With intravenous use Manufacturer advises caution—limited information available.
  - **PRE-TREATMENT SCREENING**
  - ▶ With oral use Manufacturer advises exclude HIV infection, active or latent tuberculosis and active or latent hepatitis before starting each treatment course—delay treatment until infection adequately treated.
  - **MONITORING REQUIREMENTS**
  - ▶ [EvGr](#) Monitor for malignancy—follow routine cancer screening guidelines.
  - ▶ Monitor for progressive multifocal leucoencephalopathy—perform a baseline MRI.
  - ▶ Monitor for haemolysis in patients who are or who become Coombs' positive.
  - ▶ Haematological monitoring required—consult product literature. [M](#)
  - ▶ With intravenous use or subcutaneous use [EvGr](#) Renal and hepatic function should be monitored periodically as clinically indicated. [M](#)
  - ▶ With oral use [EvGr](#) Hepatic function should be monitored [M](#)—see *Important safety information*.
  - **DIRECTIONS FOR ADMINISTRATION** *Litak*<sup>®</sup> for subcutaneous use only—no dilution required; manufacturer advises patients may self-administer, after appropriate training.
    - ▶ *Leustat*<sup>®</sup> for infusion use only.
  - **PRESCRIBING AND DISPENSING INFORMATION**
  - ▶ With oral use The manufacturer of *Mavenclad*<sup>®</sup> has provided a *Prescriber Guide*.
  - **HANDLING AND STORAGE**
  - LITAK**<sup>®</sup> Manufacturer advises store in a refrigerator (2–8°C).
  - LEUSTAT**<sup>®</sup> Manufacturer advises store in a refrigerator (2–8°C).
  - **PATIENT AND CARER ADVICE**
  - ▶ With oral use A patient guide should be provided.
    - Driving and skilled tasks**
      - ▶ With intravenous use or subcutaneous use Patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of dizziness and drowsiness.

## Clofarabine

13-Dec-2021

### ● INDICATIONS AND DOSE

**Relapsed or refractory acute lymphoblastic leukaemia in patients who have received at least two previous regimens**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult 18–20 years: (consult local protocol)

### ● CAUTIONS

Cardiac disease

### ● INTERACTIONS

→ Appendix 1: clofarabine

### ● SIDE-EFFECTS

- ▶ **Common or very common** Alopecia · anxiety · appetite decreased · arthralgia · capillary leak syndrome · chills · cough · dehydration · diarrhoea · dizziness · drowsiness · dyspnoea · fatigue · feeling abnormal · feeling hot · fever · flushing · gastrointestinal discomfort · haemorrhage · headache · hearing impairment · hepatic disorders ·

hyperbilirubinaemia · hyperhidrosis · hypersensitivity · hypotension · increased risk of infection · irritability · mucositis · multi organ failure · myalgia · nausea · neutropenia · oedema · oral disorders · pain · paraesthesia · pericardial effusion · peripheral neuropathy · psychiatric disorder · renal impairment · respiratory disorders · sepsis · sinusoidal obstruction syndrome · skin reactions · systemic inflammatory response syndrome · tachycardia · tremor · tumour lysis syndrome · vomiting · weight decreased

- ▶ **Frequency not known** Antibiotic associated colitis · gastrointestinal disorders · hyponatraemia · pancreatitis · severe cutaneous adverse reactions (SCARs)
- **CONCEPTION AND CONTRACEPTION** Contraceptive advice required, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Manufacturer advises avoid (teratogenic in animal studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises use with caution in mild-to-moderate impairment; avoid in severe impairment—no information available.
- **RENAL IMPAIRMENT** EVG Caution in mild to moderate impairment; avoid in severe impairment. M **Dose adjustments** EVG Reduce dose by 50% if creatinine clearance 30–59 mL/minute. M See p. 21.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for infusion

ELECTROLYTES: May contain Sodium

#### ▶ Clofarabine (Non-proprietary)

Clofarabine 1 mg per 1 ml Clofarabine 20mg/20ml concentrate for solution for infusion vials | 1 vial PoM £1,326.18 (Hospital only)

## Cytarabine

05-Oct-2021

- **DRUG ACTION** Cytarabine acts by interfering with pyrimidine synthesis.

#### ● INDICATIONS AND DOSE

##### Induction of remission of acute myeloblastic leukaemia

- ▶ BY INTRAVENOUS INFUSION, OR BY INTRAVENOUS INJECTION, OR BY SUBCUTANEOUS INJECTION

▶ Adult: (consult local protocol)

##### Lymphomatous meningitis

- ▶ BY INTRATHECAL INJECTION

▶ Adult: (consult local protocol)

#### IMPORTANT SAFETY INFORMATION

Not all cytarabine preparations can be given by intrathecal injection—consult product literature.

- **INTERACTIONS** → Appendix 1: cytarabine
- **SIDE-EFFECTS**
- ▶ **Common or very common** Alopecia · anaemia · appetite decreased · consciousness impaired · diarrhoea · dysarthria · dysphagia · eye disorders · eye inflammation · eye stinging · fever · gastrointestinal discomfort · gastrointestinal disorders · haemorrhagic conjunctivitis (consider prophylactic corticosteroid eye drops) · hyperuricaemia · leucopenia · nausea · oral disorders · renal impairment · skin reactions · thrombocytopenia · urinary retention · vasculitis · vision disorders · vomiting
- ▶ **Uncommon** Arthralgia · dyspnoea · headache · increased risk of infection · myalgia · nerve disorders · pain · paralysis · pericarditis · sepsis · skin ulcer · throat pain
- ▶ **Rare or very rare** Arrhythmias
- ▶ **Frequency not known** Acute respiratory distress syndrome (ARDS) · amenorrhoea · ataxia · azoospermia · bone marrow disorders · cardiomyopathy · cerebellar dysfunction · chest

pain · coma · confusion · cytarabine syndrome · dizziness · drowsiness · haemorrhage · hepatic disorders · hyperbilirubinaemia · neurotoxicity · neurotoxicity rash · neutropenia · pancreatitis · personality change · pulmonary oedema · reticulocytopenia · rhabdomyolysis · seizure · tremor

- **CONCEPTION AND CONTRACEPTION** Contraceptive advice required, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Avoid (teratogenic in animal studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (increased risk of CNS toxicity). **Dose adjustments** Manufacturer advises dose reduction—consult product literature.
- **MONITORING REQUIREMENTS**
  - ▶ Haematological monitoring Cytarabine is a potent myelosuppressant and requires careful haematological monitoring.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

#### Solution for injection

##### ▶ Cytarabine (Non-proprietary)

**Cytarabine 20 mg per 1 ml** Cytarabine 500mg/25ml solution for injection vials | 1 vial PoM £19.50 (Hospital only)

Cytarabine 100mg/5ml solution for injection vials | 5 vial PoM £20.48–£30.00 (Hospital only)

Cytarabine 500mg/25ml solution for injection Cytosafe vials | 1 vial PoM £19.50 (Hospital only)

**Cytarabine 100 mg per 1 ml** Cytarabine 1g/10ml solution for injection Cytosafe vials | 1 vial PoM £39.00 (Hospital only)

Cytarabine 1g/10ml solution for injection vials | 1 vial PoM £37.05–£40.00 (Hospital only)

Cytarabine 500mg/5ml solution for injection vials | 5 vial PoM £89.78–£100.00 (Hospital only)

Cytarabine 100mg/1ml solution for injection vials | 5 vial PoM £26.93 (Hospital only)

Cytarabine 2g/20ml solution for injection Cytosafe vials | 1 vial PoM £77.50 (Hospital only)

Cytarabine 2g/20ml solution for injection vials | 1 vial PoM £73.63–£79.00 (Hospital only)

Combinations available: *Daunorubicin with cytarabine*, p. 975

## Decitabine

13-Aug-2021

- **DRUG ACTION** Decitabine is a pyrimidine analogue.

#### ● INDICATIONS AND DOSE

##### Treatment of newly diagnosed acute myeloid leukaemia in patients over 65 years of age who are not candidates for standard induction chemotherapy

- ▶ BY INTRAVENOUS INFUSION
- ▶ Elderly: (consult local protocol)

- **CAUTIONS** History of severe congestive heart failure · history of unstable cardiac disease
- **INTERACTIONS** → Appendix 1: decitabine
- **SIDE-EFFECTS**
- ▶ **Common or very common** Anaemia · diarrhoea · epistaxis · fever · headache · hypersensitivity · increased risk of infection · leucopenia · nausea · neutropenia · sepsis · stomatitis · thrombocytopenia · vomiting
- ▶ **Uncommon** Acute febrile neutrophilic dermatosis · pancytopenia
- ▶ **Frequency not known** Gastrointestinal disorders · interstitial lung disease
- **CONCEPTION AND CONTRACEPTION** Men must avoid fathering a child during and for 3 months after treatment.

- **PREGNANCY** Avoid (teratogenic in *animal studies*). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution—no information available.
- **RENAL IMPAIRMENT** Manufacturer advises caution if creatinine clearance less than 30 mL/minute—no information available. See p. 21.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Powder for solution for infusion**

ELECTROLYTES: May contain Potassium, sodium

► **Dacogen** (Janssen-Cilag Ltd)

**Decitabine 50 mg** Dacogen 50mg powder for concentrate for solution for infusion vials | 1 vial [PoM] £970.86

## Fludarabine phosphate

13-Aug-2021

### ● INDICATIONS AND DOSE

**Initial treatment of advanced B-cell chronic lymphocytic leukaemia (CLL) or after first line treatment in patients with sufficient bone-marrow reserves**

► BY MOUTH

► Adult: 40 mg/m<sup>2</sup> for 5 days every 28 days, usually given for 6 cycles

► BY INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION

► Adult: (consult product literature)

### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**

See Cytotoxic drugs p. 962.

- **CONTRA-INDICATIONS** Haemolytic anaemia
- **CAUTIONS** Increased susceptibility to skin cancer · worsening of existing skin cancer
- CAUTIONS, FURTHER INFORMATION**
  - Immunosuppression Fludarabine has a potent immunosuppressive effect. Patients treated with fludarabine are more prone to serious bacterial, opportunistic fungal, and viral infections, and prophylactic therapy can be used in those at risk. Co-trimoxazole is licensed for the prevention of pneumocystis infection. To prevent potentially fatal transfusion-related graft-versus-host reaction, manufacturer advises only irradiated blood products should be administered.

- **INTERACTIONS** → Appendix 1: fludarabine

### ● SIDE-EFFECTS

#### GENERAL SIDE-EFFECTS

- **Common or very common** Anaemia · appetite decreased · asthenia · bone marrow depression (may be cumulative) · chills · cough · diarrhoea · fever · increased risk of infection · malaise · mucositis · nausea · neoplasms · nerve disorders · neutropenia · oedema · stomatitis · thrombocytopenia · vision disorders · vomiting
- **Uncommon** Autoimmune disorder · confusion · dyspnoea · haemorrhage · respiratory disorders · tumour lysis syndrome
- **Rare or very rare** Agitation · arrhythmia · coma · heart failure · seizure · severe cutaneous adverse reactions (SCARs)

#### SPECIFIC SIDE-EFFECTS

- **Common or very common**
- With oral use Progressive multifocal leukoencephalopathy (PML) · skin reactions · viral infection reactivation
- With parenteral use Rash

### ► Uncommon

- With oral use Acquired haemophilia · crystalluria · electrolyte imbalance · haemolytic anaemia · hyperuricaemia · metabolic acidosis · renal failure

### ► Frequency not known

- With parenteral use Encephalopathy · intracranial haemorrhage

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during and for at least 6 months after treatment in men or women. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **PREGNANCY** Avoid (embryotoxic and teratogenic in *animal studies*). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **BREAST FEEDING** Discontinue breast-feeding.

- **RENAL IMPAIRMENT** Manufacturer advises avoid if creatinine clearance less than 30 mL/minute.

**Dose adjustments** See p. 21.

Manufacturer advises reduce dose by up to 50% if creatinine clearance 30–70 mL/minute.

### ● MONITORING REQUIREMENTS

- Monitor for signs of haemolysis.
- Monitor for neurological toxicity.
- Assess creatinine clearance in patients over 65 years before treatment initiation.

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises concentrate for intravenous injection or infusion must be diluted before administration (consult product literature).

### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### NICE decisions

- Fludarabine monotherapy for the first-line treatment of chronic lymphocytic leukaemia (February 2007) NICE TA119 Not recommended
- Fludarabine for B-cell chronic lymphocytic leukaemia (September 2001) NICE TA29 Recommended
- Scottish Medicines Consortium (SMC) decisions**
- Fludarabine phosphate (*Fludara*<sup>®</sup>) for B-cell chronic lymphocytic leukaemia (November 2006) SMC No. 176/05 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

► **Fludarabine phosphate (Non-proprietary)**

**Fludarabine phosphate 25 mg per 1 ml** Fludarabine phosphate 50mg/2ml concentrate for solution for injection vials | 1 vial [PoM] £155.00–£156.00 (Hospital only)

#### Tablet

► **Fludara** (Sanofi)

**Fludarabine phosphate 10 mg** Fludara 10mg tablets | 15 tablet [PoM] £302.48 (Hospital only) | 20 tablet [PoM] £403.31 (Hospital only)

#### Powder for solution for injection

► **Fludarabine phosphate (Non-proprietary)**

**Fludarabine phosphate 50 mg** Fludarabine phosphate 50mg powder for solution for injection vials | 1 vial [PoM] £155.00 (Hospital only)

► **Fludara** (Sanofi)

**Fludarabine phosphate 50 mg** Fludara 50mg powder for solution for injection vials | 5 vial [PoM] £735.34 (Hospital only)

## Fluorouracil

19-Jan-2021

### ● INDICATIONS AND DOSE

**Treatment of some solid tumours including gastro-intestinal tract cancers and breast cancer | In combination with folinic acid in advanced colorectal cancer**

- ▶ BY INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION, OR BY INTRA-ARTERIAL INFUSION
- ▶ Adult: (consult product literature)

### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: 5-FLUOROURACIL (INTRAVENOUS), CAPECITABINE, TEGAFUR: DPD TESTING RECOMMENDED BEFORE INITIATION TO IDENTIFY PATIENTS AT INCREASED RISK OF SEVERE AND FATAL TOXICITY (OCTOBER 2020)

▶ With intravenous use  
Patients with partial or complete dihydropyrimidine dehydrogenase (DPD) deficiency are at increased risk of severe and fatal toxicity during treatment with fluoropyrimidines. Healthcare professionals are advised to test all patients for DPD deficiency before initiating treatment and confirm their, including family, history of complete or partial DPD deficiency. Fluorouracil is contra-indicated in patients with known complete DPD deficiency; in those with partial DPD deficiency, a reduced starting dose is recommended. Patients should be monitored for toxicity, particularly during the first cycle of treatment or after a dose increase; severe toxicity can occur even in those with negative test results for DPD deficiency. Therapeutic drug monitoring may improve clinical outcomes in patients receiving continuous fluorouracil infusions. Healthcare professionals should also counsel patients on the benefits and risks of their treatment and ensure they are provided with the patient information leaflet.

- **CONTRA-INDICATIONS** Bone marrow depression (after treatment with radiotherapy or other antineoplastic agents) · complete or near complete absence of dihydropyrimidine dehydrogenase activity (increased risk of severe, life-threatening, or fatal toxicity)—consult product literature · serious infections
- **CAUTIONS** History of heart disease · partial dihydropyrimidine dehydrogenase deficiency—consult product literature
- **INTERACTIONS** → Appendix 1: fluorouracil
- **SIDE-EFFECTS**
- ▶ **Common or very common** Agranulocytosis · alopecia · anaemia · anal inflammation · appetite decreased · asthenia · bone marrow disorders · bronchospasm · diarrhoea · gastrointestinal disorders · haemorrhage · hand and foot syndrome (long term use) · hearing impaired · immunosuppression · increased risk of infection · ischaemic heart disease · leucopenia · malaise · mucositis · nausea · neutropenia · skin reactions · stomatitis · thrombocytopenia · vomiting
- ▶ **Uncommon** Arrhythmias · cardiac inflammation · cardiogenic shock · cardiomyopathy congestive · dehydration · dizziness · drowsiness · euphoric mood · eye disorders · eye inflammation · headache · heart failure · hepatic disorders · hypotension · movement disorders · myocardial infarction · nail discolouration · nail disorders · nerve disorders · ovulation disorder · parkinsonism · photosensitivity reaction · sepsis · spermatogenesis disorder · vision disorders
- ▶ **Rare or very rare** Biliary sclerosis · cardiac arrest · cerebral ischaemia · cholecystitis · coma · confusion · embolism and thrombosis · encephalopathy · fever · muscle weakness · peripheral vascular disease · renal failure · seizure · speech impairment · sudden cardiac death

- ▶ **Frequency not known** Vein discolouration
- ▶ **CONCEPTION AND CONTRACEPTION** Contraceptive advice required, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Avoid (teratogenic). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (increased risk of hyperammonaemia and hyperammonaemic encephalopathy).  
**Dose adjustments** Manufacturer advises consider dose reduction.
- **RENAL IMPAIRMENT** Manufacturer advises caution (increased risk of hyperammonaemia and hyperammonaemic encephalopathy).  
**Dose adjustments** Manufacturer advises consider dose reduction.
- **MONITORING REQUIREMENTS** Manufacturer advises monitor cardiac function regularly
- **HANDLING AND STORAGE** Caution in handling—irritant to tissues.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

### Solution for injection

#### ▶ Fluorouracil (Non-proprietary)

**Fluorouracil (as Fluorouracil sodium) 25 mg per 1 ml** Fluorouracil 500mg/20ml solution for injection vials | 10 vial [PoM] £64.00 (Hospital only)

**Fluorouracil (as Fluorouracil sodium) 50 mg per 1 ml** Fluorouracil 1g/20ml solution for injection vials | 1 vial [PoM] £12.16 (Hospital only) | 1 vial [PoM] £12.80

Fluorouracil 500mg/10ml solution for injection vials | 1 vial [PoM] £6.08-£6.40 (Hospital only) | 5 vial [PoM] £32.00 (Hospital only)

### Solution for infusion

#### ▶ Fluorouracil (Non-proprietary)

**Fluorouracil (as Fluorouracil sodium) 25 mg per 1 ml** Fluorouracil 2.5g/100ml solution for infusion vials | 1 vial [PoM] £32.00 (Hospital only)

**Fluorouracil (as Fluorouracil sodium) 50 mg per 1 ml** Fluorouracil 5g/100ml solution for infusion vials | 1 vial [PoM] £60.80-£64.00 (Hospital only)

Fluorouracil 2.5g/50ml solution for infusion vials | 1 vial [PoM] £30.40-£32.00 (Hospital only)

## Gemcitabine

09-May-2021

### ● INDICATIONS AND DOSE

**First-line treatment for locally advanced or metastatic non-small cell lung cancer (as monotherapy in elderly patients and in palliative treatment; otherwise in combination with cisplatin) | Treatment of locally advanced or metastatic pancreatic cancer | Treatment of advanced or metastatic bladder cancer (in combination with cisplatin) | Treatment of locally advanced or metastatic epithelial ovarian cancer which has relapsed after a recurrence-free interval of at least 6 months following previous platinum-based therapy (in combination with carboplatin) | Treatment of metastatic breast cancer which has relapsed after previous chemotherapy including an anthracycline (in combination with paclitaxel)**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: (consult local protocol)

- **INTERACTIONS** → Appendix 1: gemcitabine

### ● SIDE-EFFECTS

- ▶ **Common or very common** Alopecia · anaemia · appetite decreased · asthenia · back pain · bone marrow depression · chills · constipation · cough · diarrhoea · drowsiness · dyspnoea · fever · haematuria · headache · hyperhidrosis ·

influenza like illness · insomnia · leucopenia · myalgia · nausea · neutropenia · oedema · oral disorders · proteinuria · rinitis · skin reactions · thrombocytopenia · vomiting

► **Uncommon** Respiratory disorders

► **Rare or very rare** Capillary leak syndrome · hypotension · myocardial infarction · posterior reversible encephalopathy syndrome (PRES) · severe cutaneous adverse reactions (SCARs) · skin ulcer · thrombocytosis

► **Frequency not known** Arrhythmias · colitis ischaemic · gangrene · haemolytic uraemic syndrome · heart failure · hepatic disorders · pulmonary oedema · radiation injuries · renal failure · stroke · vasculitis

**SIDE-EFFECTS, FURTHER INFORMATION** Gemcitabine should be discontinued if signs of microangiopathic haemolytic anaemia occur.

● **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during treatment. Men must avoid fathering a child during and for 6 months after treatment.

● **PREGNANCY** Avoid (teratogenic in animal studies). See *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **BREAST FEEDING** Discontinue breast-feeding.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution (limited information available).

● **RENAL IMPAIRMENT** Manufacturer advises caution.

● **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website

**NICE decisions**

- Gemcitabine for the treatment of pancreatic cancer (May 2001) NICE TA25 Recommended
- Gemcitabine for the treatment of metastatic breast cancer (January 2007) NICE TA116 Recommended with restrictions
- Bevacizumab in combination with gemcitabine and carboplatin for treating the first recurrence of platinum-sensitive advanced ovarian cancer (May 2013) NICE TA285 Not recommended
- Topotecan, pegylated liposomal doxorubicin hydrochloride, paclitaxel, trabectedin and gemcitabine for treating recurrent ovarian cancer (April 2016) NICE TA389 Not recommended
- Paclitaxel as albumin-bound nanoparticles with gemcitabine for untreated metastatic pancreatic cancer (September 2017) NICE TA476 Recommended with restrictions

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for infusion**

► **Gemcitabine (Non-proprietary)**

**Gemcitabine (as Gemcitabine hydrochloride) 10 mg per**

1 ml Gemcitabine 1.6g/160ml infusion bags | 1 bag [PoM] £140.00 (Hospital only)

Gemcitabine 2.2g/220ml infusion bags | 1 bag [PoM] £200.00 (Hospital only)

Gemcitabine 2g/200ml infusion bags | 1 bag [PoM] £180.00 (Hospital only)

Gemcitabine 1.2g/120ml infusion bags | 1 bag [PoM] £120.00 (Hospital only)

Gemcitabine 1.8g/180ml infusion bags | 1 bag [PoM] £160.00 (Hospital only)

Gemcitabine 1.4g/140ml infusion bags | 1 bag [PoM] ☒ (Hospital only)

**Gemcitabine (as Gemcitabine hydrochloride) 38 mg per**

1 ml Gemcitabine 1g/26.3ml concentrate for solution for infusion vials | 1 vial [PoM] £175.05 (Hospital only)

Gemcitabine 200mg/5.26ml concentrate for solution for infusion vials | 1 vial [PoM] £33.69 (Hospital only)

Gemcitabine 2g/52.6ml concentrate for solution for infusion vials | 1 vial [PoM] £336.66 (Hospital only)

**Gemcitabine (as Gemcitabine hydrochloride) 100 mg per**

1 ml Gemcitabine 2g/20ml concentrate for solution for infusion vials | 1 vial [PoM] £26.86 (Hospital only)

Gemcitabine 1g/10ml concentrate for solution for infusion vials | 1 vial [PoM] £13.09 (Hospital only)

Gemcitabine 200mg/2ml concentrate for solution for infusion vials | 1 vial [PoM] £6.40 (Hospital only)

**Powder for solution for infusion**

► **Gemcitabine (Non-proprietary)**

**Gemcitabine (as Gemcitabine hydrochloride)**

**200 mg** Gemcitabine 200mg powder for solution for infusion vials | 1 vial [PoM] £32.00-£32.55 (Hospital only)

**Gemcitabine (as Gemcitabine hydrochloride) 1 gram** Gemcitabine 1g powder for solution for infusion vials | 1 vial [PoM] £162.00-£162.76 (Hospital only)

**Gemcitabine (as Gemcitabine hydrochloride) 2 gram** Gemcitabine 2g powder for solution for infusion vials | 1 vial [PoM] £324.00 (Hospital only)

**Mercaptopurine**

(6-Mercaptopurine)

09-May-2021

● **INDICATIONS AND DOSE**

**Severe acute Crohn's disease | Maintenance of remission of Crohn's disease | Ulcerative colitis**

► **BY MOUTH**

► **Adult:** 1–1.5 mg/kg daily, some patients may respond to lower doses

**Acute leukaemias | Chronic myeloid leukaemia**

► **BY MOUTH USING TABLETS**

► **Adult:** Initially 2.5 mg/kg daily, adjusted according to response, alternatively initially 50–75 mg/m<sup>2</sup> daily, adjusted according to response

► **BY MOUTH USING ORAL SUSPENSION**

► **Adult:** Initially 25–75 mg/m<sup>2</sup> daily, adjusted according to response

**DOSE ADJUSTMENTS DUE TO INTERACTIONS**

► Manufacturer advises reduce dose to one-quarter of the usual dose with concurrent use of allopurinol.

**DOSE EQUIVALENCE AND CONVERSION**

► Mercaptopurine tablets and *Xaluprine*® oral suspension are **not** bioequivalent, haematological monitoring is advised when switching formulations.

● **UNLICENSED USE** Not licensed for use in severe ulcerative colitis and Crohn's disease.

**IMPORTANT SAFETY INFORMATION**

**SAFE PRACTICE**

Mercaptopurine has been confused with mercaptamine; care must be taken to ensure the correct drug is prescribed and dispensed.

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**

See Cytotoxic drugs p. 962.

● **CONTRA-INDICATIONS**

► When used for non-cancer indications Absent thiopurine methyltransferase activity

● **CAUTIONS** Reduced thiopurine methyltransferase activity **CAUTIONS, FURTHER INFORMATION**

► Thiopurine methyltransferase (TPMT) metabolises thiopurine drugs (azathioprine, mercaptopurine, tioguanine); the risk of myelosuppression is increased in patients with reduced activity of the enzyme, particularly for the few individuals in whom TPMT activity is undetectable. Those with reduced TPMT activity may be treated under specialist supervision.

● **INTERACTIONS** → Appendix 1: mercaptopurine

● **SIDE-EFFECTS**

► **Common or very common** Anaemia · appetite decreased · bone marrow depression · diarrhoea · hepatic disorders · hepatotoxicity (more common at high doses) · leucopenia · nausea · oral disorders · pancreatitis · thrombocytopenia · vomiting

► **Uncommon** Arthralgia · fever · increased risk of infection · neutropenia · rash

- ▶ **Rare or very rare** Alopecia · face oedema · intestinal ulcer · neoplasms · oligozoospermia
- ▶ **Frequency not known** Photosensitivity reaction
- **CONCEPTION AND CONTRACEPTION** Contraceptive advice required, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Avoid (teratogenic). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (risk of increased exposure).  
**Dose adjustments** Manufacturer advises consider dose reduction.
- **RENAL IMPAIRMENT** EVGR Use with caution. MD  
**Dose adjustments** EVGR Consider dose reduction. MD
- **PRE-TREATMENT SCREENING** Manufacturer advises consider measuring thiopurine methyltransferase (TPMT) activity before starting mercaptopurine therapy.
- **MONITORING REQUIREMENTS** Monitor liver function.
- **PRESCRIBING AND DISPENSING INFORMATION** Flavours of oral liquid formulations may include raspberry.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: tablet, capsule, oral suspension

#### Oral suspension

EXCIPIENTS: May contain Aspartame

- ▶ **Xaluprine** (Nova Laboratories Ltd)

**Mercaptopurine 20 mg per 1 ml** Xaluprine 20mg/ml oral suspension | 100 ml PoM £170.00 DT = £170.00

#### Tablet

- ▶ **Mercaptopurine (Non-proprietary)**

**Mercaptopurine 10 mg** Mercaptopurine 10mg tablets | 100 tablet PoM N DT = £457.52

**Mercaptopurine 50 mg** Mercaptopurine 50mg tablets | 25 tablet PoM £49.15 DT = £10.22

- ▶ **Hanixol** (Fontus Health Ltd)

**Mercaptopurine 50 mg** Hanixol 50mg tablets | 25 tablet PoM £34.39 DT = £10.22

## Methotrexate

19-Oct-2021

- **DRUG ACTION** Methotrexate inhibits the enzyme dihydrofolate reductase, essential for the synthesis of purines and pyrimidines.

### ● INDICATIONS AND DOSE

#### Severe Crohn's disease

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult: Initially 25 mg once weekly until remission induced; maintenance 15 mg once weekly

#### Maintenance of remission of severe Crohn's disease

- ▶ BY MOUTH
- ▶ Adult: 10–25 mg once weekly

#### Moderate to severe active rheumatoid arthritis

- ▶ BY MOUTH
- ▶ Adult: 7.5 mg once weekly, adjusted according to response; maximum 20 mg per week

#### Severe active rheumatoid arthritis

- ▶ BY INTRAMUSCULAR INJECTION, OR BY SUBCUTANEOUS INJECTION
- ▶ Adult: Initially 7.5 mg once weekly, then increased in steps of 2.5 mg once weekly, adjusted according to response; maximum 25 mg per week

### Neoplastic diseases

- ▶ BY MOUTH, OR BY INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION, OR BY INTRA-ARTERIAL INFUSION, OR BY INTRAMUSCULAR INJECTION, OR BY INTRATHECAL INJECTION
- ▶ Adult: (consult product literature)

#### Severe psoriasis unresponsive to conventional therapy (specialist use only)

- ▶ BY MOUTH, OR BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION, OR BY SUBCUTANEOUS INJECTION
- ▶ Adult: Initially 2.5–10 mg once weekly, then increased in steps of 2.5–5 mg, adjusted according to response, dose to be adjusted at intervals of at least 1 week; usual dose 7.5–15 mg once weekly, stop treatment if inadequate response after 3 months at the optimum dose; maximum 30 mg per week

- **UNLICENSED USE** Not licensed for use in severe Crohn's disease.

### IMPORTANT SAFETY INFORMATION

#### NHS NEVER EVENT: OVERDOSE OF METHOTREXATE FOR NON-CANCER TREATMENT (JANUARY 2018)

Patients given methotrexate, by any route, for non-cancer treatment should not be given more than their intended weekly dose.

#### WEEKLY DOSING

Note that the dose is a **weekly** dose. To avoid error with low-dose methotrexate, it is recommended that:

- the patient or their carer is carefully advised of the **dose** and **frequency** and the reason for taking methotrexate and any other prescribed medication (e.g. folic acid);
- only one strength of methotrexate tablet (usually 2.5 mg) is prescribed and dispensed;
- the prescription and the dispensing label clearly show the dose and frequency of methotrexate administration;
- the patient or their carer is warned to report immediately the onset of any feature of blood disorders (e.g. sore throat, bruising, and mouth ulcers), liver toxicity (e.g. nausea, vomiting, abdominal discomfort, and dark urine), and respiratory effects (e.g. shortness of breath).

#### MHRA/CHM ADVICE: METHOTREXATE ONCE-WEEKLY FOR AUTOIMMUNE DISEASES: NEW MEASURES TO REDUCE RISK OF FATAL OVERDOSE DUE TO INADVERTENT DAILY INSTEAD OF WEEKLY DOSING (SEPTEMBER 2020)

- ▶ With oral use
- Methotrexate should be taken **once a week** in autoimmune conditions and, less commonly, in some cancer therapy regimens. A European review highlighted continued reports of inadvertent overdose due to more frequent dosing (including daily administration), which has resulted in some fatalities. Subsequently, new measures have been implemented by the MHRA. Prescribers are advised to:

- ensure patients can understand and comply with once-weekly dosing before prescribing methotrexate, decide with the patient which day of the week they will take their dose, and note this down in full on the prescription;
- consider the patient's overall polypharmacy burden when deciding which formulation to prescribe, especially in those with a high pill burden;
- inform patients and carers of the potentially fatal risk of accidental overdose if methotrexate is taken more frequently than once a week, and reaffirm that it should not be taken daily;
- advise patients and carers to seek immediate medical attention if overdose is suspected.

The MHRA further advises dispensers to remind patients of the once-weekly dosing and the risks of potentially fatal overdose if they take more than directed. Where possible, the day of the week for dosing should be written in full in the space provided on the outer packaging. Patients should be encouraged to write the day of the week for dosing in their patient alert card and carry it with them.

- **CONTRA-INDICATIONS** Active infection · ascites · immunodeficiency syndromes · significant pleural effusion
- **CAUTIONS** Photosensitivity—psoriasis lesions aggravated by UV radiation (skin ulceration reported) · dehydration (increased risk of toxicity) · diarrhoea · extreme caution in blood disorders (avoid if severe) · peptic ulceration (avoid in active disease) · risk of accumulation in pleural effusion or ascites—drain before treatment · ulcerative colitis · ulcerative stomatitis
- CAUTIONS, FURTHER INFORMATION**
  - ▶ Blood count Bone marrow suppression can occur abruptly; factors likely to increase toxicity include advanced age, renal impairment, and concomitant use with another antifolate drug (e.g. trimethoprim). Manufacturer advises a clinically significant drop in white cell count or platelet count calls for immediate withdrawal of methotrexate and introduction of supportive therapy.
  - ▶ Gastro-intestinal toxicity Manufacturer advises withdraw treatment if stomatitis or diarrhoea develops—may be first sign of gastro-intestinal toxicity.
  - ▶ Liver toxicity Liver cirrhosis reported. Manufacturer advises treatment should not be started or should be discontinued if any abnormality of liver function or liver biopsy is present or develops during therapy. Abnormalities can return to normal within 2 weeks after which treatment may be recommenced if judged appropriate. Persistent increases in liver transaminases may necessitate dose reduction or discontinuation.
  - ▶ Pulmonary toxicity Pulmonary toxicity may be a special problem in rheumatoid arthritis. Manufacturer advises patients to seek medical attention if dyspnoea, cough or fever develops; monitor for symptoms at each visit—discontinue if pneumonitis suspected.
- **INTERACTIONS** → Appendix 1: methotrexate
- **SIDE-EFFECTS**
  - ▶ **Common or very common**
    - ▶ With intrathecal use Necrotising demyelinating leukoencephalopathy · neurotoxicity
    - ▶ With oral use Anaemia · appetite decreased · diarrhoea · drowsiness · fatigue · gastrointestinal discomfort · headache · increased risk of infection · leucopenia · nausea · oral disorders · respiratory disorders · skin reactions · throat ulcer · thrombocytopenia · vomiting
    - ▶ With parenteral use Anaemia · appetite decreased · chest pain · cough · diarrhoea · drowsiness · dyspnoea · fatigue · fever · gastrointestinal discomfort · headache · leucopenia · malaise · nausea · oral disorders · respiratory disorders · skin reactions · throat complaints · thrombocytopenia · vomiting
  - ▶ **Uncommon**
    - ▶ With oral use Agranulocytosis · alopecia · arthralgia · bone marrow disorders · chills · confusion · cystitis · depression · diabetes mellitus · dysuria · fever · gastrointestinal disorders · haemorrhage · healing impaired · hepatic disorders · myalgia · neoplasms · nephropathy · osteoporosis · photosensitivity reaction · rheumatoid arthritis aggravated · seizure · severe cutaneous adverse reactions (SCARs) · vasculitis · vertigo · vulvovaginal disorders
    - ▶ With parenteral use Agranulocytosis · alopecia · arthralgia · bone marrow disorders · confusion · cystitis · depression · diabetes mellitus · drug toxicity · dysuria · gastrointestinal

disorders · haemorrhage · healing impaired · hepatic disorders · increased risk of infection · lipatrophy · local reaction · myalgia · neoplasms · osteoporosis · pain · paraesthesia · photosensitivity reaction · rheumatoid arthritis aggravated · seizure · severe cutaneous adverse reactions (SCARs) · sterile abscess · vasculitis · vertigo · vulvovaginal disorders

- ▶ **Rare or very rare**
  - ▶ With oral use Azotaemia · brain oedema · cognitive impairment · conjunctivitis · cough · dyspnoea · eosinophilia · gynaecomastia · hypotension · immune deficiency · infertility · insomnia · lymphadenopathy · meningitis aseptic · menstrual disorder · mood altered · muscle weakness · nail discolouration · neutropenia · oligozoospermia · pain · pancreatitis · paresis · pericardial disorders · pericarditis · proteinuria · psychosis · radiation injuries · renal impairment · retinopathy · sensation abnormal · sepsis · sexual dysfunction · speech impairment · stress fracture · taste metallic · telangiectasia · tinnitus · visual impairment
  - ▶ With parenteral use Apnoea · asthma-like conditions · azotaemia · conjunctivitis · embolism and thrombosis · eosinophilia · gynaecomastia · hypotension · immune deficiency · infertility · influenza like illness · insomnia · lymphadenopathy · meningism · meningitis aseptic · menstrual disorder · mood altered · muscle weakness · nail discolouration · necrosis · neutropenia · paralysis · pericardial disorders · pericarditis · proteinuria · reactivation of infection · renal impairment · retinopathy · sepsis · sexual dysfunction · sperm abnormalities · stress fracture · taste altered · telangiectasia · vision disorders
- ▶ **Frequency not known**
  - ▶ With oral use Encephalopathy
  - ▶ With parenteral use Aphasia · chills · cognitive disorder · defective oogenesis · dizziness · hemiparesis · leukoencephalopathy · metabolic change · mucositis · nephropathy · pancreatitis · pulmonary oedema · skin ulcer · sudden death · tinnitus

**SIDE-EFFECTS, FURTHER INFORMATION** Give folic acid to reduce side-effects. Folic acid decreases mucosal and gastrointestinal side-effects of methotrexate and may prevent hepatotoxicity; there is no evidence of a reduction in haematological side-effects.

Withdraw treatment if ulcerative stomatitis develops—may be first sign of gastro-intestinal toxicity.

Treatment with folic acid (as calcium folinate) may be required in acute toxicity.

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during and for at least 6 months after treatment in men and women.
- **PREGNANCY** Avoid (teratogenic; fertility may be reduced during therapy but this may be reversible).
- **BREAST FEEDING** Discontinue breast-feeding—present in milk.
- **HEPATIC IMPAIRMENT** When used for malignancy, avoid in severe hepatic impairment—consult local treatment protocol for details. Avoid with hepatic impairment in non-malignant conditions—dose-related toxicity.
- **RENAL IMPAIRMENT** Risk of nephrotoxicity at high doses. **EVGr** Use with caution; avoid in severe impairment. **M** **Dose adjustments** **EVGr** Reduce dose (consult product literature). **M**
- **PRE-TREATMENT SCREENING** Exclude pregnancy before treatment.
  - ▶ Patients should have full blood count and renal and liver function tests before starting treatment.
- **MONITORING REQUIREMENTS**
  - ▶ In view of reports of blood dyscrasias (including fatalities) and liver cirrhosis with low-dose methotrexate patients should:

- have full blood count and renal and liver function tests repeated every 1–2 weeks until therapy stabilised, thereafter patients should be monitored every 2–3 months.
- be advised to report all symptoms and signs suggestive of infection, especially sore throat
- ▶ Local protocols for frequency of monitoring may vary.
- ▶ Treatment with folic acid (as calcium folinate) may be required in acute toxicity.

● **PRESCRIBING AND DISPENSING INFORMATION** Folic acid following methotrexate administration helps to prevent methotrexate-induced mucositis and myelosuppression.

The licensed routes of administration for parenteral preparations vary—further information can be found in the product literature for the individual preparations.

● **PATIENT AND CARER ADVICE** Patients and their carers should be warned to report immediately the onset of any feature of blood disorders (e.g. sore throat, bruising, and mouth ulcers), liver toxicity (e.g. nausea, vomiting, abdominal discomfort and dark urine), and respiratory effects (e.g. shortness of breath).

Patients should be advised to avoid self-medication with over-the-counter aspirin or ibuprofen.

Patients should be counselled on the dose, treatment booklet, and the use of NSAIDs.

- ▶ With oral use a patient alert card should be provided to patients on once-weekly dosing—see also *Important safety information*.

**Methotrexate treatment booklets** Methotrexate treatment booklets should be issued where appropriate.

In **England, Wales, and Northern Ireland**, they are available for purchase from:

3M Security Print and Systems Limited  
Gorse Street, Chadderton  
Oldham  
OL9 9QH  
Tel: 0845 610 1112

GP practices can obtain supplies through their Local Area Team stores.

NHS Hospitals can order supplies from [www.nhsforms.co.uk](http://www.nhsforms.co.uk) or by emailing [nhsforms@mmm.com](mailto:nhsforms@mmm.com).

In **Scotland**, treatment booklets can be obtained by emailing stockorders.dpps@theapsgroup.com or by fax on 0131 629 9967.

These booklets include advice for adults taking oral methotrexate for inflammatory conditions, and a section for recording results of blood tests and dosage information.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution, solution for injection

#### Tablet

##### ▶ **Methotrexate (Non-proprietary)**

**Methotrexate 2.5 mg** Methotrexate 2.5mg tablets | 24 tablet [PoM](#)

## Pemetrexed

13-Aug-2021

- ▶ **DRUG ACTION** Pemetrexed inhibits thymidylate transferase and other folate-dependent enzymes.

▶ **INDICATIONS AND DOSE**

**Treatment of unresectable malignant pleural mesothelioma which has not previously been treated with chemotherapy (in combination with cisplatin) | First-line treatment of locally advanced or metastatic non-small cell lung cancer other than predominantly squamous cell histology (in combination with cisplatin) | Second-line treatment of locally advanced or metastatic non-small cell lung cancer other than predominantly squamous cell histology (monotherapy) | Maintenance treatment in locally advanced or metastatic non-small cell lung cancer other than predominantly squamous cell histology that has not progressed immediately following platinum-based chemotherapy (monotherapy)**

- ▶ BY INTRAVENOUS INFUSION

▶ Adult: (consult local protocol)

- ▶ **CAUTIONS** Diabetes · history of cardiovascular disease · prophylactic folic acid supplementation required (consult product literature) · prophylactic vitamin B<sub>12</sub> supplementation required (consult product literature)

- ▶ **INTERACTIONS** → Appendix 1: pemetrexed

▶ **SIDE-EFFECTS**

- ▶ **Common or very common** Appetite decreased · fatigue · mucositis · nausea · neuropathy sensory · oedema · pain · renal disorder · skin reactions · stomatitis · vomiting

- ▶ **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during treatment. Men must avoid fathering a child during and for 6 months after treatment.

- ▶ **PREGNANCY** Avoid (toxicity in *animal studies*). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- ▶ **BREAST FEEDING** Discontinue breast-feeding.

- ▶ **RENAL IMPAIRMENT** Manufacturer advises avoid if creatinine clearance less than 45 ml/minute—no information available. See p. 21.

## Nelarabine

10-Nov-2020

▶ **INDICATIONS AND DOSE**

**T-cell acute lymphoblastic leukaemia and T-cell lymphoblastic lymphoma in patients who have relapsed or who are refractory after receiving at least two previous regimens**

- ▶ BY INTRAVENOUS INFUSION

▶ Adult: (consult local protocol)

- ▶ **CAUTIONS** Previous or concurrent craniospinal irradiation (increased risk of neurotoxicity) · previous or concurrent intrathecal chemotherapy (increased risk of neurotoxicity)

- ▶ **INTERACTIONS** → Appendix 1: nelarabine

▶ **SIDE-EFFECTS**

- ▶ **Common or very common** Abdominal pain · anaemia · appetite decreased · arthralgia · asthenia · confusion · constipation · cough · diarrhoea · dizziness · drowsiness · dyspnoea · electrolyte imbalance · fever · gait abnormal · headache · hyperbilirubinaemia · hypotension · increased risk of infection · leucopenia · memory loss · movement disorders · muscle weakness · myalgia · nausea · neutropenia · oedema · pain · peripheral neuropathy · respiratory disorders · seizures · sensation abnormal · sepsis · stomatitis · taste altered · thrombocytopenia · tremor · tumour lysis syndrome · vision blurred · vomiting
- ▶ **Rare or very rare** Rhabdomyolysis
- ▶ **Frequency not known** Progressive multifocal leukoencephalopathy (PML)

**SIDE-EFFECTS, FURTHER INFORMATION** If neurotoxicity occurs, treatment should be discontinued.

- ▶ **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during and for at least 3 months

## ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

### NICE decisions

- ▶ **Pemetrexed for the treatment of non-small cell lung cancer (August 2007)** NICE TA124 Not recommended
- ▶ **Pemetrexed for the first-line treatment of non-small cell lung cancer (September 2009)** NICE TA181 Recommended with restrictions
- ▶ **Pemetrexed maintenance treatment for non-squamous non-small cell lung cancer after pemetrexed and cisplatin (August 2016)** NICE TA402 Recommended with restrictions
- ▶ **Pemetrexed for the maintenance treatment of non-small-cell lung cancer (updated August 2017)** NICE TA190 Recommended
- ▶ **Pemetrexed for the treatment of malignant pleural mesothelioma (January 2008)** NICE TA135 Recommended with restrictions

### Scottish Medicines Consortium (SMC) decisions

- ▶ **Pemetrexed (*Alimta*®) as monotherapy for the second line treatment of patients with locally advanced or metastatic non-small cell lung cancer other than predominantly squamous cell histology (September 2008)** SMC No. 342/07 Recommended with restrictions
- ▶ **Pemetrexed (*Alimta*®) for the first line treatment of patients with locally advanced or metastatic non-small cell lung cancer (February 2010)** SMC No. 531/09 Recommended with restrictions
- ▶ **Pemetrexed (*Alimta*®) as monotherapy for the maintenance treatment of locally advanced or metastatic non-small cell lung cancer other than predominantly squamous cell histology in patients whose disease has not progressed immediately following platinum-based chemotherapy (December 2014)** SMC No. 770/12 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Solution for infusion

#### ▶ Pemetrexed (Non-proprietary)

**Pemetrexed 25 mg per 1 ml** Pemetrexed 1g/40ml concentrate for solution for infusion vials | 1 vial [PoM](#) £1,280.00-£1,600.00 (Hospital only)

Pemetrexed 100mg/4ml concentrate for solution for infusion vials | 1 vial [PoM](#) £128.00-£160.00 (Hospital only)

Pemetrexed 500mg/20ml concentrate for solution for infusion vials | 1 vial [PoM](#) £640.00-£800.00 (Hospital only)

Pemetrexed 850mg/34ml concentrate for solution for infusion vials | 1 vial [PoM](#) £1,360.00 (Hospital only)

### Powder for solution for infusion

ELECTROLYTES: May contain Sodium

#### ▶ Pemetrexed (Non-proprietary)

**Pemetrexed 100 mg** Pemetrexed 100mg powder for concentrate for solution for infusion vials | 1 vial [PoM](#) £125.00-£160.00 (Hospital only)

**Pemetrexed 500 mg** Pemetrexed 500mg powder for concentrate for solution for infusion vials | 1 vial [PoM](#) £450.00-£800.00 (Hospital only)

**Pemetrexed (as Pemetrexed disodium) 1 gram** Pemetrexed 1g powder for concentrate for solution for infusion vials | 1 vial [PoM](#) £1,600.00 (Hospital only)

#### ▶ *Alimta* (Eli Lilly and Company Ltd)

**Pemetrexed 100 mg** *Alimta* 100mg powder for concentrate for solution for infusion vials | 1 vial [PoM](#) £160.00 (Hospital only)

**Pemetrexed 500 mg** *Alimta* 500mg powder for concentrate for solution for infusion vials | 1 vial [PoM](#) £800.00 (Hospital only)

## Tegafur with gimeracil and oteracil

27-Jul-2021

- **DRUG ACTION** Tegafur is a prodrug of fluorouracil. Gimeracil inhibits the degradation of fluorouracil and oteracil decreases the activity of fluorouracil in normal gastrointestinal mucosa.

### ● INDICATIONS AND DOSE

#### Treatment of advanced gastric cancer when used in combination with cisplatin

- ▶ BY MOUTH
- ▶ Adult: (consult local protocol)

### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

**MHRA/CHM ADVICE: 5-FLUOROURACIL (INTRAVENOUS), CAPECITABINE, TEGAFUR: DPD TESTING RECOMMENDED BEFORE INITIATION TO IDENTIFY PATIENTS AT INCREASED RISK OF SEVERE AND FATAL TOXICITY (OCTOBER 2020)**

Patients with partial or complete dihydropyrimidine dehydrogenase (DPD) deficiency are at increased risk of severe and fatal toxicity during treatment with fluoropyrimidines. Healthcare professionals are advised to test all patients for DPD deficiency before initiating treatment and confirm their, including family, history of complete or partial DPD deficiency. Tegafur with gimeracil and oteracil is contra-indicated in patients with known complete DPD deficiency; in those with partial DPD deficiency, a reduced starting dose is recommended. Patients should be monitored for toxicity, particularly during the first cycle of treatment or after a dose increase; severe toxicity can occur even in those with negative test results for DPD deficiency. Healthcare professionals should also counsel patients on the benefits and risks of their treatment and ensure they are provided with the patient information leaflet.

- **CONTRA-INDICATIONS** Complete dihydropyrimidine dehydrogenase deficiency (increased risk of severe, life-threatening, or fatal toxicity)—consult product literature
- **CAUTIONS** Partial dihydropyrimidine dehydrogenase deficiency
- **INTERACTIONS** → Appendix 1: tegafur
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Anaemia · appetite abnormal · asthenia · constipation · cough · decreased leucocytes · dehydration · diarrhoea · dizziness · dry mouth · dysphagia · dyspnoea · electrolyte imbalance · embolism and thrombosis · eye disorders · eye inflammation · gastrointestinal discomfort · gastrointestinal disorders · haemorrhage · headache · hearing impairment · hiccups · hyperbilirubinaemia · hypertension · hypoproteinaemia · hypotension · insomnia · nausea · nerve disorders · neutropenia · oral disorders · taste altered · thrombocytopenia · vision disorders · vomiting
  - ▶ **Uncommon** Aerophagia · allergic rhinitis · alopecia · angina pectoris · anxiety · aphasia · arrhythmias · ascites · breast abnormalities · burping · cerebrovascular insufficiency · chills · coagulation disorders · confusion · depression · drowsiness · dysphonia · ear discomfort · encephalopathy · eosinophilia · fever · gout · hallucination · heart failure · hemiparesis · hyperaemia · hyperglobulinaemia · hyperglycaemia · hyperlipidaemia · hypertrichosis · hypovolaemic shock · increased leucocytes · increased risk of infection · joint disorders · limb discomfort · loss of consciousness · memory loss · movement disorders · mucositis · muscle complaints · muscle weakness · myocardial infarction · nail disorders · nasal complaints · neoplasm complications · nephrotoxicity · oedema ·

oesophageal spasm · pain · palpitations · pancytopenia · pericardial effusion · personality disorder · renal impairment · seizure · sensation abnormal · sepsis · sexual dysfunction · skin reactions · smell altered · sweat changes · syncope · throat complaints · thrombocytosis · tremor · urinary frequency increased · vasodilation · vertigo · weight changes

- ▶ **Rare or very rare** Acute hepatic failure · chest discomfort · feeling cold · interstitial lung disease · local swelling · malaise · multi organ failure · pancreatitis acute · photosensitivity reaction · rhabdomyolysis · severe cutaneous adverse reactions (SCARs)

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during and for up to 6 months after treatment.

- **PREGNANCY** Avoid. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **BREAST FEEDING** Discontinue breast-feeding.

- **RENAL IMPAIRMENT** [EvGr](#) Avoid if creatinine clearance less than 30 mL/minute. [M](#)

**Dose adjustments** [EvGr](#) Reduce dose if creatinine clearance 30–50 mL/minute—consult product literature. [M](#) See p. 21.

- **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**Scottish Medicines Consortium (SMC) decisions**

- ▶ Tegafur with gimeracil and oteracil (*Teysuno*<sup>®</sup>) for the treatment of advanced gastric cancer when given in combination with cisplatin (September 2012) SMC No. 802/12 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Capsule

CAUTIONARY AND ADVISORY LABELS 23

- ▶ **Teysuno** (Nordic Pharma Ltd)

**Gimeracil 4.35 mg, Oteracil (as Oteracil potassium) 11.8 mg,**

**Tegafur 15 mg** Teysuno 15mg/4.35mg/11.8mg capsules | 126 capsule [PoM](#) £279.72

**Gimeracil 5.8 mg, Oteracil (as Oteracil potassium) 15.8 mg,**

**Tegafur 20 mg** Teysuno 20mg/5.8mg/15.8mg capsules | 84 capsule [PoM](#) £248.40

## Tioguanine

(Thioguanine)

10-May-2021

### ● INDICATIONS AND DOSE

**Acute leukaemia | Chronic myeloid leukaemia**

- ▶ BY MOUTH

- ▶ Adult: 100–200 mg/m<sup>2</sup> daily, can be given at various stages of treatment in short-term cycles

### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **CAUTIONS** Thiopurine methyltransferase status

#### CAUTIONS, FURTHER INFORMATION

- ▶ Thiopurine methyltransferase The enzyme thiopurine methyltransferase (TPMT) metabolises thiopurine drugs (azathioprine, mercaptopurine, tioguanine); the risk of myelosuppression is increased in patients with reduced activity of the enzyme, particularly for the few individuals in whom TPMT activity is undetectable. Those with reduced TPMT activity may be treated under specialist supervision.
- ▶ Long-term therapy Manufacturer advises long-term therapy is no longer recommended because of the high risk of liver toxicity.

- **INTERACTIONS** → Appendix 1: tioguanine

### ● SIDE-EFFECTS

- ▶ **Common or very common** Bone marrow failure · gastrointestinal disorders · hepatic disorders · hyperbilirubinaemia · hyperuricaemia · hyperuricosuria · nodular regenerative hyperplasia · oesophageal varices · sinusoidal obstruction syndrome · splenomegaly · stomatitis · thrombocytopenia · uric acid nephropathy · weight increased

- ▶ **Frequency not known** Photosensitivity reaction

- **CONCEPTION AND CONTRACEPTION** Ensure effective contraception during treatment in men or women. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **PREGNANCY** Avoid (teratogenicity reported when men receiving tioguanine have fathered children). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **BREAST FEEDING** Discontinue breast-feeding.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution. **Dose adjustments** Manufacturer advises consider dose reduction.

- **RENAL IMPAIRMENT**

**Dose adjustments** [EvGr](#) Consider dose reduction. [M](#)

- **PRE-TREATMENT SCREENING** Manufacturer advises consider measuring thiopurine methyltransferase (TPMT) activity before starting tioguanine therapy.

- **MONITORING REQUIREMENTS** Monitor liver function weekly—discontinue if liver toxicity develops.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: capsule

#### Tablet

- ▶ **Tioguanine (Non-proprietary)**

**Tioguanine 40 mg** Tioguanine 40mg tablets | 25 tablet [PoM](#)  
£76.35-£109.57 DT = £76.35

## Trifluridine with tipiracil

29-Jun-2021

- **DRUG ACTION** Trifluridine is an antimetabolite that interferes with cancer cell DNA synthesis and inhibits cell proliferation; tipiracil is a TPase inhibitor that boosts trifluridine concentrations.

### ● INDICATIONS AND DOSE

**Metastatic gastric cancer (specialist use only) | Metastatic colorectal cancer (specialist use only)**

- ▶ BY MOUTH

- ▶ Adult: Initially 35 mg/m<sup>2</sup> twice daily (max. per dose 80 mg), given on days 1 to 5 and days 8 to 12 of each 28-day cycle, for dose adjustments or treatment interruption due to side-effects—consult product literature

### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

### ● SIDE-EFFECTS

- ▶ **Common or very common** Alopecia · anaemia · appetite decreased · asthenia · constipation · decreased leucocytes · diarrhoea · dyspnoea · fever · gastrointestinal discomfort · hyperbilirubinaemia · hypoalbuminaemia · increased risk of infection · malaise · mucositis · nausea · neutropenia · oedema · oral disorders · peripheral neuropathy · skin reactions · taste altered · thrombocytopenia · urine abnormalities · vomiting · weight decreased
- ▶ **Uncommon** Angina pectoris · anxiety · arrhythmia · ascites · bile duct disorders · cancer pain · cataract · conjunctivitis ·

cough · cystitis · dehydration · dizziness · dry eye · dysphonia · ear discomfort · electrolyte imbalance · embolism · erythropenia · feeling of body temperature change · flushing · gastrointestinal disorders · gout · haemorrhage · headache · hepatotoxicity · hyperglycaemia · hyperhidrosis · hypertension · hypotension · increased leucocytes · insomnia · joint disorders · lethargy · menstrual disorder · muscle complaints · muscle weakness · nail disorder · neurotoxicity · neutropenic sepsis · oropharyngeal pain · pain · palpitations · pancreatitis acute · pancytopenia · photosensitivity reaction · pulmonary embolism (including fatal cases) · QT interval prolongation · renal failure · respiratory disorders · rhinorrhoea · sensation abnormal · septic shock (including fatal cases) · syncope · urinary disorder · vertigo · vision disorders

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception in women of child-bearing potential and in men with a partner of child-bearing potential, during treatment and for 6 months after stopping treatment. Manufacturer also advises use of an additional barrier method in women using hormonal contraceptives—effect of trifluridine with tipiracil on hormonal contraception unknown.
- **PREGNANCY** Manufacturer advises avoid unless essential—reproductive toxicity in *animal* studies.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal* studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid in moderate to severe impairment (limited information available).
- **RENAL IMPAIRMENT** E<sub>VG</sub>R Caution in moderate to severe impairment—monitor haematological toxicities more frequently. Avoid in end-stage renal disease—no information available. M
- Dose adjustments** E<sub>VG</sub>R Dose reduction in severe impairment—consult product literature. M
- **MONITORING REQUIREMENTS** Manufacturer advises obtain baseline blood cell counts before and during treatment; monitor closely for myelosuppression. Manufacturer also advises monitoring for proteinuria before and during treatment.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website
- NICE decisions**
  - ▶ Trifluridine with tipiracil for previously treated metastatic colorectal cancer (August 2016) NICE TA405 Recommended with restrictions
  - ▶ Trifluridine with tipiracil for treating metastatic gastric cancer or gastro-oesophageal junction adenocarcinoma after 2 or more therapies (January 2021) NICE TA669 Not recommended
- Scottish Medicines Consortium (SMC) decisions**
  - ▶ Trifluridine / tipiracil (*Lonsurf*<sup>®</sup>) for the treatment of adult patients with metastatic colorectal cancer who have been previously treated with, or are not considered candidates for, available therapies including fluoropyrimidine-, oxaliplatin- and irinotecan-based chemotherapies, anti vascular endothelial growth factor agents, and anti-epidermal growth factor receptor agents (February 2017) SMC No. 1221/17 Recommended
  - ▶ Trifluridine/tipiracil (*Lonsurf*<sup>®</sup>) as monotherapy for the treatment of adult patients with metastatic gastric cancer including adenocarcinoma of the gastroesophageal junction, who have been previously treated with at least two prior systemic treatment regimens for advanced disease (June 2021) SMC No. SMC2329 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Tablet

CAUTIONARY AND ADVISORY LABELS 21

- ▶ **Lonsurf** (Servier Laboratories Ltd)

**Tipiracil (as Tipiracil hydrochloride) 6.14 mg, Trifluridine**

**15 mg** Lonsurf 15mg/6.14mg tablets | 20 tablet PoM £500.00 (Hospital only) | 60 tablet PoM £1,500.00 (Hospital only)

**Tipiracil (as Tipiracil hydrochloride) 8.19 mg, Trifluridine**

**20 mg** Lonsurf 20mg/8.19mg tablets | 20 tablet PoM £666.67 (Hospital only) | 60 tablet PoM £2,000.00 (Hospital only)

## ANTINEOPLASTIC DRUGS > CYTOTOXIC ANTIBIOTICS AND RELATED SUBSTANCES

### Bleomycin

28-Jul-2020

#### ● INDICATIONS AND DOSE

**Squamous cell carcinoma | Metastatic germ cell cancer |**

**Non-Hodgkin's lymphoma**

- ▶ BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION, OR BY INTRA-ARTERIAL INFUSION, OR BY LOCAL INFILTRATION

▶ Adult: (consult product literature or local protocols)

- **CONTRA-INDICATIONS** Acute pulmonary infection · significantly reduced lung function
- **CAUTIONS** Caution in handling—irritant to tissues · risk factors for pulmonary toxicity
- **INTERACTIONS** → Appendix 1: bleomycin
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Alopecia · angular stomatitis · appetite decreased · chills · fever (after administration) · haemorrhage · headache · interstitial pneumonia · leucopenia · malaise · nail discoloration · nail disorder · nausea · pain · pulmonary fibrosis (dose-related) · scleroderma · skin reactions · stomatitis · vomiting · weight decreased
  - ▶ **Uncommon** Diarrhoea · dizziness · hepatocellular injury · oliguria · shock · urinary disorders · vein wall hypertrophy · venous stenosis
- SIDE-EFFECTS, FURTHER INFORMATION** **Progressive pulmonary fibrosis** Progressive pulmonary fibrosis is dose-related, and may occur at lower doses in the elderly. Suspicious chest X-ray changes are an indication to stop therapy with this drug.
  - ▶ **Pulmonary toxicity** Patients who have received bleomycin may be at risk of developing pulmonary toxicity if exposed to high inspired oxygen concentrations, for example peri-operatively, or during lung function testing.
- **CONCEPTION AND CONTRACEPTION** Contraceptive advice required, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Avoid (teratogenic and carcinogenic in *animal* studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962
- **BREAST FEEDING** Discontinue breast feeding.
- **RENAL IMPAIRMENT**
  - Dose adjustments** Reduce dose by half if serum creatinine 177–354 micromol/litre; reduce dose further if serum-creatinine greater than 354 micromol/litre.
- **PRESCRIBING AND DISPENSING INFORMATION** To conform to the European Pharmacopoeia vials previously labelled as containing '15 units' of bleomycin are now labelled as containing 15 000 units. The amount of bleomycin in the vial has not changed.
- **MEDICINAL FORMS** No licensed medicines listed.

## Mitomycin

28-Jul-2020

### ● INDICATIONS AND DOSE

#### Recurrent superficial bladder tumours (bladder instillation)

- ▶ BY INTRAVESICAL INSTILLATION
- ▶ Adult: (consult product literature or local protocols)

#### Upper gastro-intestinal cancer (specialist use only) | Breast cancer (specialist use only) | Non-small cell lung cancer (specialist use only) | Pancreatic cancer (specialist use only)

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: (consult product literature or local protocols)

### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: *MITOMYCIN-C KYOWA*® 40 MG RESTRICTED TO INTRAVESICAL ADMINISTRATION ONLY FOR TREATMENT OF SUPERFICIAL BLADDER CANCER (SEPTEMBER 2019)

Sub-visible particles, at levels above specification limits, have been observed after reconstitution of *Mitomycin-C Kyowa*® 40 mg; healthcare professionals are advised that its use has been restricted to the treatment of superficial bladder cancer via the intravesical route only.

- **CAUTIONS** Caution in handling—irritant to tissues

- **INTERACTIONS** → Appendix 1: mitomycin

### ● SIDE-EFFECTS

#### GENERAL SIDE-EFFECTS

- ▶ **Common or very common** Bone marrow disorders · cough · cystitis · haemorrhage · leucopenia · malaise · nausea · respiratory disorders · skin reactions · thrombocytopenia · vomiting
- ▶ **Uncommon** Alopecia · appetite decreased · diarrhoea · fever
- ▶ **Rare or very rare** Hepatic disorders · increased risk of infection · renal disorder · sepsis
- ▶ **Frequency not known** Anaemia · asthenia · chills · constipation · eosinophilia · erythropania · flushing · hypertension · lethargy · neutropenia · oedema · weight decreased

#### SPECIFIC SIDE-EFFECTS

- ▶ **Common or very common**
- ▶ With intravenous use Dyspnoea · extravasation necrosis · glomerulonephropathy · nephropathy · renal impairment
- ▶ With intravesical use Hypersensitivity · urinary disorders · urinary tract discomfort
- ▶ **Uncommon**
- ▶ With intravenous use Mucositis · oral disorders
- ▶ **Rare or very rare**
- ▶ With intravenous use Haemolytic anaemia · heart failure · pulmonary hypertension · sinusoidal obstruction syndrome
- ▶ With intravesical use Acute kidney injury · bladder disorders · urinary tract stenosis
- ▶ **Frequency not known**
- ▶ With intravenous use Abdominal discomfort · cholecystitis · injection site necrosis · neoplasms · shock · urine abnormalities · vascular pain
- ▶ With intravesical use Pain · penile necrosis · proteinuria · pulmonary oedema · ulcer

**SIDE-EFFECTS, FURTHER INFORMATION** Mitomycin is usually administered at 6-weekly intervals because it causes delayed bone-marrow toxicity. Prolonged use may result in a cumulative effect.

- **CONCEPTION AND CONTRACEPTION** Contraceptive advice required, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **PREGNANCY** Avoid (teratogenic in animal studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **BREAST FEEDING** Discontinue breast-feeding.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for solution for injection

##### ▶ **Mitomycin (Non-proprietary)**

**Mitomycin 5 mg** Mitomycin 5mg powder for solution for injection vials | 1 vial [PoM] Ⓢ (Hospital only)

**Mitomycin 10 mg** Mitomycin 10mg powder for solution for injection vials | 1 vial [PoM] £20.30

**Mitomycin 40 mg** Mitomycin 40mg powder for solution for injection vials | 1 vial [PoM] £75.89 (Hospital only)

##### ▶ **Mitocin (Vygoris Ltd)**

**Mitomycin 20 mg** Mitocin 20mg powder for solution for injection vials | 1 vial [PoM] £39.00 (Hospital only)

#### Powder and solvent for intravesical solution

ELECTROLYTES: May contain Sodium

##### ▶ **Mitomycin (Non-proprietary)**

**Mitomycin 40 mg** Mitomycin 40mg powder and solvent for intravesical solution vials | 1 vial [PoM] £135.00 (Hospital only)

## Pentostatin

02-Aug-2021

### ● INDICATIONS AND DOSE

#### Hairy cell leukaemia (initiated in specialist centres)

- ▶ BY INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION
- ▶ Adult: To be given on alternate weeks (consult product literature)

- **INTERACTIONS** → Appendix 1: pentostatin

### ● SIDE-EFFECTS

- ▶ **Common or very common** Agranulocytosis · alopecia · amenorrhoea · anaemia · angina pectoris · anxiety · appetite decreased · arrhythmias · arthritis · asthenia · asthma · atrioventricular block · blood disorder · bone disorder · bone marrow disorders · breast mass · cardiac arrest · chest pain · chills · confusion · constipation · cough · deafness · death · depersonalisation · depression · diarrhoea · dizziness · drowsiness · dry eye · dry mouth · dysarthria · dysphagia · dyspnoea · ear pain · electrolyte imbalance · embolism and thrombosis · emotional lability · eosinophilia · eye disorders · eye inflammation · eye pain · febrile neutropenia · fever · fluid imbalance · flushing · gastrointestinal discomfort · gastrointestinal disorders · gout · graft versus host disease · haemorrhage · hallucination · hangover · headaches · heart failure · hostility · hyperbilirubinaemia · hyperglycaemia · hyperhidrosis · hypersensitivity · hypertension · hypotension · increased risk of infection · influenza like illness · jaundice · joint disorders · leucopenia · lymphadenopathy · malaise · memory loss · meningism · movement disorders · muscle complaints · nausea · neoplasms · nephrolithiasis · nephropathy · nerve disorders · neurotoxicity (withhold or discontinue) · oedema · oral disorders · pain · paralysis · pericardial effusion · photosensitivity reaction · pulmonary oedema · rash (withhold if severe) · renal impairment · respiratory disorders · retinopathy · seborrhoea · seizures · sensation abnormal · sepsis · sexual dysfunction · skin reactions · sleep disorders · splenomegaly · syncope · taste altered · thinking abnormal · thrombocytopenia · tinnitus · tremor · urinary disorders · urogenital disorder · vasculitis · vertigo · vision disorders · vomiting · weight changes
- ▶ **Uncommon** Angioedema · antibiotic associated colitis · capillary leak syndrome · cardiomyopathy · cystitis · haemolytic anaemia · mucositis · multi organ failure · myocardial infarction · pure red cell aplasia · transplant failure · tumour lysis syndrome
- ▶ **Rare or very rare** Dementia · pericarditis · shock · Stevens-Johnson syndrome · systemic inflammatory response syndrome

**SIDE-EFFECTS, FURTHER INFORMATION** Pentostatin can cause myelosuppression, immunosuppression, and a number of other side-effects that may be severe.

Treatment should be withheld in patients who develop a severe rash, and withheld or discontinued in patients showing signs of neurotoxicity.

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises that men should not father children during and for 6 months after treatment.
- **PREGNANCY** Avoid (teratogenic in animal studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (limited information available).
- **RENAL IMPAIRMENT** EvGr Avoid if creatinine clearance less than 60 mL/minute. M See p. 21.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for solution for injection

▶ **Nipent** (Pfizer Ltd)

Pentostatin 10 mg Nipent 10mg powder for solution for injection vials | 1 vial PoM £734.21 (Hospital only)

## ANTINEOPLASTIC DRUGS > PLANT ALKALOIDS

### Trabectedin

04-Aug-2021

#### ● INDICATIONS AND DOSE

**Treatment of advanced soft-tissue sarcoma when treatment with anthracyclines and ifosfamide has failed or is contra-indicated | Treatment of relapsed platinum-sensitive ovarian cancer (in combination with pegylated liposomal doxorubicin)**

▶ BY INTRAVENOUS INFUSION

▶ Adult: (consult product literature or local protocols)

- **CONTRA-INDICATIONS** Elevated creatine phosphokinase (consult product literature)

- **INTERACTIONS** → Appendix 1: trabectedin

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Alopecia · anaemia · appetite decreased · arthralgia · asthenia · back pain · constipation · cough · dehydration · diarrhoea · dizziness · dyspnoea · fever · flushing · gastrointestinal discomfort · headache · hyperbilirubinaemia · hypersensitivity · hypokalaemia · hypotension · infection · insomnia · leucopenia · mucositis · myalgia · nausea · neutropenia · oedema · paraesthesia · peripheral neuropathy · skin reactions · stomatitis · taste altered · thrombocytopenia · vomiting · weight decreased
- ▶ **Uncommon** Capillary leak syndrome · septic shock
- ▶ **Rare or very rare** Hepatic failure
- ▶ **Frequency not known** Extravasation necrosis · rhabdomyolysis

**SIDE-EFFECTS, FURTHER INFORMATION** A corticosteroid, such as dexamethasone by intravenous infusion, must be given 30 minutes before therapy for its antiemetic and hepatoprotective effects (consult product literature).

- **CONCEPTION AND CONTRACEPTION** Effective contraception recommended during and for at least 3 months after treatment in women and during and for at least 5 months after treatment in men.
  - **PREGNANCY** See *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
  - **BREAST FEEDING** Manufacturer advises avoid breast-feeding during and for 3 months after treatment.
  - **HEPATIC IMPAIRMENT** Manufacturer advises caution (risk of increased exposure).
- Dose adjustments** Manufacturer advises consider dose reduction.

- **RENAL IMPAIRMENT** EvGr Avoid monotherapy if creatinine clearance less than 30 mL/minute. Avoid combination regimens if creatinine clearance less than 60 mL/minute. M See p. 21.

#### ● MONITORING REQUIREMENTS

- ▶ Specific haematological, renal and hepatic parameters must be monitored and within certain ranges prior to starting treatment and repeated weekly during the first 2 cycles and at least once between treatments in subsequent cycles—consult product literature for full details.
- ▶ Monitor for signs and symptoms of rhabdomyolysis (including myelotoxicity, severe liver function disorder, renal failure, muscle weakness or pain)—monitor creatine phosphokinase closely and discontinue treatment (consult product literature).

#### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### NICE decisions

- ▶ **Trabectedin for the treatment of advanced soft tissue sarcoma (updated February 2021)** NICE TA185 Recommended
  - ▶ **Topotecan, pegylated liposomal doxorubicin hydrochloride, paclitaxel, trabectedin and gemcitabine for treating recurrent ovarian cancer (April 2016)** NICE TA389 Not recommended
- Scottish Medicines Consortium (SMC) decisions**
- ▶ **Trabectedin (Yondelis<sup>®</sup>) for the treatment of adult patients with advanced soft tissue sarcoma, after failure of anthracyclines and ifosfamide, or who are unsuited to receive these agents (November 2020)** SMC No. SMC2283 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for solution for infusion

▶ **Yondelis** (Immedica Pharma AB)

**Trabectedin 250 microgram** Yondelis 0.25mg powder for concentrate for solution for infusion vials | 1 vial PoM £363.00 (Hospital only)

**Trabectedin 1mg** Yondelis 1mg powder for concentrate for solution for infusion vials | 1 vial PoM £1,366.00 (Hospital only)

## ANTINEOPLASTIC DRUGS > PLATINUM COMPOUNDS

### Carboplatin

16-Aug-2021

#### ● INDICATIONS AND DOSE

**Advanced ovarian cancer [epithelial origin] | Small cell lung cancer | High risk seminoma (stage I) testicular germ cell tumours [adjuvant treatment]**

▶ BY INTRAVENOUS INFUSION

▶ Adult: (consult product literature)

- **INTERACTIONS** → Appendix 1: platinum compounds

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Alopecia · anaemia · asthenia · cardiovascular disorder · constipation · diarrhoea · gastrointestinal discomfort · haemorrhage · hypersensitivity · increased risk of infection · leucopenia · mucosal abnormalities · musculoskeletal disorder · nausea · neutropenia · ototoxicity · peripheral neuropathy · reflexes decreased · respiratory disorders · sensation abnormal · skin reactions · taste altered · thrombocytopenia · urogenital disorder · vision disorders · vomiting
- ▶ **Rare or very rare** Angioedema

- Cisplatin 50mg/50ml solution for infusion vials | 1 vial [PoM](#) £25.37 DT = £26.72 (Hospital only)
- Cisplatin 10mg/10ml concentrate for solution for infusion vials | 1 vial [PoM](#) £5.36-£5.90 (Hospital only)
- Cisplatin 100mg/100ml concentrate for solution for infusion vials | 1 vial [PoM](#) £52.86-£55.64 (Hospital only) | 1 vial [PoM](#) £52.86

**Oxaliplatin**

26-Aug-2021

● **INDICATIONS AND DOSE**

**Treatment of metastatic colorectal cancer (in combination with fluorouracil and folinic acid) | Treatment of colon cancer after resection of the primary tumour (adjuvant treatment)**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: (consult product literature)

- **CONTRA-INDICATIONS** Peripheral neuropathy with functional impairment

- **INTERACTIONS** → Appendix 1: platinum compounds

● **SIDE-EFFECTS**

- ▶ **Common or very common** Alopecia · anaemia · appetite decreased · arthralgia · asthenia · chills · conjunctivitis · constipation · cough · decreased leucocytes · dehydration · depression · diarrhoea · dizziness · dyspnoea · electrolyte imbalance · embolism and thrombosis · fever · flushing · gastrointestinal discomfort · gastrointestinal disorders · haemorrhage · headache · hiccups · hyperglycaemia · hyperhidrosis · hypersensitivity · hypertension · increased risk of infection · insomnia · meningism · mucositis · nail disorder · nausea · necrosis · nerve disorders · neutropenia · neutropenic sepsis · pain · peripheral neuropathy (dose-limiting) · sensation abnormal · skin reactions · stomatitis ·

**Cisplatin**

07-Feb-2022

● **INDICATIONS AND DOSE**

**Treatment of testicular, lung, cervical, bladder, head and neck, and ovarian cancer (alone or in combination)**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: (consult product literature)

● **CAUTIONS**

- ▶ Hydration Manufacturer advises cisplatin requires intensive intravenous hydration and treatment may be complicated by severe nausea and vomiting.

- **INTERACTIONS** → Appendix 1: platinum compounds

● **SIDE-EFFECTS**

- ▶ **Common or very common** Anaemia · arrhythmias · bone marrow failure · electrolyte imbalance · extravasation necrosis · fever · leucopenia · nephrotoxicity (dose-related and potentially cumulative) · sepsis · thrombocytopenia
- ▶ **Uncommon** Anaphylactoid reaction · ototoxicity (dose-related and potentially cumulative) · spermatogenesis abnormal

taste altered · thrombocytopenia · urinary disorders · vision disorders · vomiting · weight changes

- ▶ **Uncommon** Metabolic acidosis · nervousness · ototoxicity
- ▶ **Rare or very rare** Acute kidney injury · acute tubular necrosis · antibiotic associated colitis · deafness · disseminated intravascular coagulation · dysarthria · haemolytic anaemia · hepatic disorders · immuno-allergic thrombocytopenia · nephritis acute interstitial · nodular regenerative hyperplasia · pancreatitis · posterior reversible encephalopathy syndrome (PRES) (with oxaliplatin combination chemotherapy) · respiratory disorders · sinusoidal obstruction syndrome · vision loss (reversible on discontinuation)
- ▶ **Frequency not known** Autoimmune pancytopenia · chest discomfort · dysphagia · extravasation necrosis · gait abnormal · hypersensitivity vasculitis · movement disorders · muscle complaints · muscle contractions involuntary · QT interval prolongation · rhabdomyolysis · throat complaints

**SIDE-EFFECTS, FURTHER INFORMATION** Neurotoxicity is dose limiting.

**Respiratory symptoms** If unexplained respiratory symptoms occur, oxaliplatin should be discontinued until investigations exclude interstitial lung disease and pulmonary fibrosis.

- **CONCEPTION AND CONTRACEPTION** Effective contraception required during and for 4 months after treatment in women and 6 months after treatment in men.
- **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **RENAL IMPAIRMENT** EVGR Avoid if creatinine clearance less than 30 mL/minute. M See p. 21.  
**Dose adjustments** EVGR Adjust dose if toxicity occurs in mild to moderate impairment (consult product literature).

- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website

#### NICE decisions

- ▶ Capecitabine and oxaliplatin in the adjuvant treatment of stage III (Dukes' C) colon cancer (April 2006) NICE TA100 Recommended
- ▶ Irinotecan, oxaliplatin, and raltitrexed for advanced colorectal cancer (August 2005) NICE TA93 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for infusion

##### ▶ Oxaliplatin (Non-proprietary)

**Oxaliplatin 5 mg per 1 ml** Oxaliplatin 100mg/20ml concentrate for solution for infusion vials | 1 vial PoM £289.50-£358.16 (Hospital only)

Oxaliplatin 50mg/10ml concentrate for solution for infusion vials | 1 vial PoM £146.80-£178.85 (Hospital only)

Oxaliplatin 200mg/40ml concentrate for solution for infusion vials | 1 vial PoM £591.26-£716.27 (Hospital only)

## ANTINEOPLASTIC DRUGS > PODOPHYLLOTOXIN DERIVATIVES

### Etoposide

21-Jun-2021

#### ● INDICATIONS AND DOSE

**Small cell carcinoma of the bronchus, the lymphomas and testicular cancer**

- ▶ **BY MOUTH**
- ▶ **Adult:** 120–240 mg/m<sup>2</sup> daily for 5 days
- ▶ **BY INTRAVENOUS INFUSION**
- ▶ **Adult:** (consult product literature)

#### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **INTERACTIONS** → Appendix 1: etoposide
- **SIDE-EFFECTS**
- **GENERAL SIDE-EFFECTS**
- ▶ **Common or very common** Abdominal pain · acute leukaemia · alopecia · anaemia · appetite decreased · arrhythmia · asthenia · bone marrow depression · constipation · diarrhoea · dizziness · hepatotoxicity · hypertension · leucopenia · malaise · mucositis · myocardial infarction · nausea · neutropenia · skin reactions · thrombocytopenia · vomiting
- ▶ **Uncommon** Nerve disorders
- ▶ **Rare or very rare** Dysphagia · neurotoxicity · radiation recall reaction · respiratory disorders · seizure · severe cutaneous adverse reactions (SCARs) · taste altered · vision loss
- **SPECIFIC SIDE-EFFECTS**
- ▶ **Common or very common**
- ▶ **With intravenous use** Anaphylactic reaction · hypotension · infection
- ▶ **With oral use** Oesophagitis · stomatitis · transient systolic hypotension
- ▶ **Uncommon**
- ▶ **With intravenous use** Haemorrhage
- ▶ **Rare or very rare**
- ▶ **With intravenous use** Fever
- ▶ **With oral use** Drowsiness
- ▶ **Frequency not known**
- ▶ **With intravenous use** Angioedema · extravasation necrosis · infertility · tumour lysis syndrome
- **CONCEPTION AND CONTRACEPTION** Contraceptive advice required, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Avoid (teratogenic in animal studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (increased risk of accumulation).
- **RENAL IMPAIRMENT**  
**Dose adjustments** Manufacturer advises dose reduction may be required (consult product literature).
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises etoposide is given by slow intravenous infusion. It may also be given by mouth, but it is unpredictably absorbed.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for infusion

##### ▶ Etoposide (Non-proprietary)

**Etoposide 20 mg per 1 ml** Etoposide 100mg/5ml concentrate for solution for infusion vials | 1 vial PoM £11.50-£17.78 (Hospital only)  
Etoposide 500mg/25ml concentrate for solution for infusion vials | 1 vial PoM £60.70-£88.91 (Hospital only)

- Docetaxel 160mg/8ml** concentrate for solution for infusion vials | 1 vial PoM £101.25-£958.11 (Hospital only)
- Docetaxel 20mg/1ml** concentrate for solution for infusion vials | 1 vial PoM £15.00-£153.47 (Hospital only)

## Paclitaxel

15-Feb-2022

- **DRUG ACTION** Paclitaxel is a member of the taxane group of drugs.

- **INDICATIONS AND DOSE**

**Treatment of ovarian cancer (advanced or residual disease following laparotomy) in combination with cisplatin (conventional paclitaxel only) | Treatment of metastatic ovarian cancer where platinum-containing therapy has failed (conventional paclitaxel only) | Treatment of locally advanced breast cancer (in combination with other cytotoxics) or metastatic breast cancer (in combination with other cytotoxics or alone if other cytotoxics have failed or are inappropriate) (conventional paclitaxel only) | Adjuvant treatment of node-positive breast cancer following treatment with anthracycline and cyclophosphamide (conventional paclitaxel only) | Treatment of non-small cell lung cancer (in combination with cisplatin) when surgery or radiotherapy not appropriate (conventional paclitaxel only) | Treatment of advanced AIDS-related Kaposi's sarcoma where liposomal anthracycline therapy has failed (conventional paclitaxel only) | Monotherapy of metastatic breast cancer when first-line treatment has failed and standard, anthracycline-containing therapy is not indicated (albumin-bound paclitaxel only) | In combination with gemcitabine for the first-line treatment of metastatic adenocarcinoma of the pancreas (albumin-bound paclitaxel only)**

▶ BY INTRAVENOUS INFUSION

▶ Adult: (consult product literature or local protocols)

- **IMPORTANT SAFETY INFORMATION**

MHRA/CHM ADVICE: PACLITAXEL FORMULATIONS (CONVENTIONAL AND NAB-PACLITAXEL): CAUTION REQUIRED DUE TO POTENTIAL FOR MEDICATION ERROR (JANUARY 2022)

The MHRA reminds healthcare professionals that albumin-bound paclitaxel formulations (nab-paclitaxel; brand names *Abraxane*<sup>®</sup>, *Pazenir*<sup>®</sup>) differ from conventional paclitaxel formulations and are **not** interchangeable. Healthcare professionals are advised to make a clear distinction between formulations when prescribing, dispensing, administering, and communicating about paclitaxel. The use of brand names is advised for albumin-bound paclitaxel formulations to prevent medication errors. The product name and dose should be verified before administration and product literature followed for preparation and administration.

- **CAUTIONS** Avoid in Acute porphyrias p. 1150 · consult product literature · patients aged over 75 years with metastatic adenocarcinoma of the pancreas
- **INTERACTIONS** → Appendix 1: taxanes
- **SIDE-EFFECTS**
- ▶ **Common or very common** Alopecia · anaemia · anxiety · appetite decreased · arrhythmias · arthralgia · asthenia · bone marrow disorders · chest discomfort · chills · constipation · cough · decreased leucocytes · depression · diarrhoea · dizziness · drowsiness · dry eye · dyspnoea · electrolyte imbalance · excessive tearing · extravasation necrosis · eye inflammation · fever · fluid imbalance · gastrointestinal discomfort · gastrointestinal disorders · haemorrhage · headache · hyperpyrexia · hypertension · increased risk of infection · influenza like illness · insomnia · laryngeal pain · lymphoedema · malaise · movement disorders · mucositis · muscle complaints · nail discoloration · nail disorders · nasal complaints · nausea · nerve disorders · neutropenia · oedema · oral disorders · pain · respiratory disorders · sensation abnormal · skin

reactions · taste altered · thrombocytopenia · vasodilation · vertigo · vision disorders · vomiting · weight changes

- ▶ **Uncommon** Allergic rhinitis · breast pain · catheter related infection · dry mouth · dysphagia · ear pain · embolism and thrombosis · eye discomfort · facial swelling · gait abnormal · hepatomegaly · hoarseness · hyperglycaemia · hypoalbuminaemia · hypoglycaemia · hypotension · limb discomfort · muscle weakness · neoplasm complications · peripheral coldness · photosensitivity reaction · polydipsia · reflexes abnormal · sepsis · sweat changes · swelling · syncope · tinnitus · tremor · urinary disorders
- ▶ **Rare or very rare** Atrioventricular block · cardiac arrest · congestive heart failure · left ventricular dysfunction · radiation injuries · severe cutaneous adverse reactions (SCARs)

**SIDE-EFFECTS, FURTHER INFORMATION** Manufacturer advises routine premedication with a corticosteroid, an antihistamine and a histamine H<sub>2</sub>-receptor antagonist is recommended to prevent severe hypersensitivity reactions; hypersensitivity reactions may occur rarely despite premedication.

- **CONCEPTION AND CONTRACEPTION** Ensure effective contraception during and for at least 6 months after treatment in men or women.
- **PREGNANCY** Avoid (toxicity in *animal* studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** (Consult product literature)
- **MONITORING REQUIREMENTS**
  - ▶ Cardiac monitoring should be undertaken, particularly if patients have underlying cardiac disease or previous exposure to anthracyclines.
  - ▶ Patients should be monitored for signs and symptoms of pneumonitis and sepsis.
- **PRESCRIBING AND DISPENSING INFORMATION** Paclitaxel is available as both conventional and albumin-bound formulations. The different formulations vary in their licensed indications, pharmacokinetics, dosage and administration, and are not interchangeable. Prescribers should specify the brand to be dispensed.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
- NICE decisions**
  - ▶ Guidance on the use of paclitaxel in the treatment of ovarian cancer (updated May 2005) NICE TA55 Recommended
  - ▶ Bevacizumab in combination with paclitaxel and carboplatin for the first-line treatment of advanced ovarian cancer (May 2013) NICE TA284 Not recommended
  - ▶ Topotecan, pegylated liposomal doxorubicin hydrochloride, paclitaxel, trabectedin and gemcitabine for treating recurrent ovarian cancer (April 2016) NICE TA389 Recommended
  - ▶ Paclitaxel as albumin-bound nanoparticles with gemcitabine for untreated metastatic pancreatic cancer (September 2017) NICE TA476 Recommended with restrictions
- Scottish Medicines Consortium (SMC) decisions**
  - ▶ Paclitaxel albumin (*Abraxane*<sup>®</sup>) for the treatment of metastatic breast cancer (April 2010) SMC No. 556/09 Recommended with restrictions
  - ▶ Paclitaxel albumin (*Abraxane*<sup>®</sup>) in combination with gemcitabine for the first-line treatment of adult patients with metastatic adenocarcinoma of the pancreas (February 2015) SMC No. 968/14 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for infusion

EXCIPIENTS: May contain Polyoxyl castor oils

#### ▶ Paclitaxel (Non-proprietary)

**Paclitaxel 6 mg per 1 ml** Paclitaxel 150mg/25ml concentrate for solution for infusion vials | 1 vial [PoM] £300.52-£589.22 (Hospital only)

Paclitaxel 30mg/5ml concentrate for solution for infusion vials | 1 vial [PoM] £35.00-£131.07 (Hospital only)

Paclitaxel 100mg/16.7ml concentrate for solution for infusion vials | 1 vial [PoM] £87.50-£392.82 (Hospital only)

Paclitaxel 300mg/50ml concentrate for solution for infusion vials | 1 vial [PoM] £192.50-£1,178.44 (Hospital only)

#### Powder for suspension for infusion

ELECTROLYTES: May contain Sodium

#### ▶ Abraxane (Bristol-Myers Squibb Pharmaceuticals Ltd)

**Paclitaxel albumin 100 mg** Abraxane 100mg powder for suspension for infusion vials | 1 vial [PoM] £246.00 (Hospital only)

## ANTINEOPLASTIC DRUGS > TOPOISOMERASE I INHIBITORS

### Irinotecan hydrochloride

26-Aug-2020

- **DRUG ACTION** Irinotecan inhibits topoisomerase I, an enzyme involved in DNA replication.

#### ● INDICATIONS AND DOSE

**Metastatic colorectal cancer in combination with fluorouracil and folinic acid or as monotherapy when treatment containing fluorouracil has failed | Treatment of epidermal growth factor receptor-expressing metastatic colorectal cancer after failure of chemotherapy that has included irinotecan (in combination with cetuximab) | First-line treatment of metastatic carcinoma of the colon or rectum (in combination with fluorouracil, folinic acid and bevacizumab) | First-line treatment of metastatic colorectal carcinoma (in combination with capecitabine with or without bevacizumab)**

#### ▶ BY INTRAVENOUS INFUSION

▶ Adult: (consult product literature or local protocols)

**Metastatic adenocarcinoma of the pancreas in patients who have progressed following gemcitabine based therapy (in combination with fluorouracil and leucovorin) (specialist use only)**

#### ▶ BY INTRAVENOUS INFUSION USING LIPID FORMULATION

▶ Adult: (consult product literature or local protocols)

#### IMPORTANT SAFETY INFORMATION

**MHRA/CHM ADVICE: ONIVYDE<sup>®</sup> (IRINOTECAN, LIPOSOMAL FORMULATIONS): REPORTS OF SERIOUS AND FATAL THROMBOEMBOLIC EVENTS (MARCH 2019)**

*Onivyde*<sup>®</sup> has been associated with reports of serious thromboembolic events, such as pulmonary embolism, venous thrombosis, and arterial thromboembolism. Healthcare professionals are advised to obtain a thorough medical history to identify patients with multiple risk factors. Patients should be advised to seek medical advice immediately if signs or symptoms of thromboembolism occur, such as sudden pain and swelling in a leg or an arm, sudden onset of coughing, chest pain or difficulty breathing.

**MHRA/CHM ADVICE: LIPOSOMAL AND LIPID-COMPLEX FORMULATIONS: NAME CHANGE TO REDUCE MEDICATION ERRORS (JULY 2020)**

Serious harm and fatal overdoses have occurred following confusion between liposomal, pegylated-liposomal, lipid-complex, and conventional formulations of the same drug substance. Medicines with these formulations will explicitly include 'liposomal', 'pegylated-liposomal', or 'lipid-complex' within their

name to reduce the risk of potentially fatal medication errors.

The MHRA reminds healthcare professionals that liposomal, pegylated-liposomal, lipid-complex, and conventional formulations containing the same drug substance are **not** interchangeable. Healthcare professionals are advised to make a clear distinction between formulations when prescribing, dispensing, administering, and communicating about irinotecan. The product name and dose should be verified before administration and the maximum dose should not be exceeded.

- **CONTRA-INDICATIONS** Bowel obstruction · chronic inflammatory bowel disease
- **CAUTIONS** Raised plasma-bilirubin concentration · risk factors for cardiac disease · risk factors for pulmonary toxicity · underweight patients (increased risk of adverse events)
- **INTERACTIONS** → Appendix 1: irinotecan
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Alopecia · anaemia (dose-limiting) · appetite decreased · asthenia · cholinergic syndrome · constipation · decreased leucocytes · diarrhoea (delayed diarrhoea requires prompt treatment) · dizziness · dysphonia · dyspnoea · electrolyte imbalance · embolism and thrombosis · febrile neutropenia (dose-limiting) · fever · fluid imbalance · gastrointestinal discomfort · gastrointestinal disorders · hypoalbuminaemia · hypoglycaemia · hypotension · increased risk of infection · infusion related reaction · insomnia · mucositis · nausea · neutropenia (dose-limiting) · oedema · renal impairment · sepsis · stomatitis · taste altered · thrombocytopenia (dose-limiting) · vomiting · weight decreased
  - ▶ **Uncommon** Hypersensitivity · hypoxia · nail discolouration · skin reactions
  - ▶ **Frequency not known** Antibiotic associated colitis · circulatory collapse · gastrointestinal haemorrhage · hiccups · hypertension · interstitial lung disease · muscle cramps · paraesthesia · speech disorder · ulcerative colitis
- **CONCEPTION AND CONTRACEPTION** For *conventional* formulations, manufacturer advises effective contraception during treatment and for up to 1 month after treatment in women of child-bearing potential, and up to 3 months after treatment in men. For *liposomal* formulations, manufacturer advises effective contraception during treatment and for up to 1 month after treatment in women of child-bearing potential, and up to 4 months after treatment in men.
- **PREGNANCY** Manufacturer advises avoid unless essential—toxicity in *animal studies*. See also Pregnancy and reproductive function in Cytotoxic drugs p. 962.
- **BREAST FEEDING** For *conventional* formulations, manufacturer advises avoid. For *liposomal* formulations, manufacturer advises avoid until one month after the last dose—no information available.
- **HEPATIC IMPAIRMENT** For *conventional* formulations, manufacturer advises caution if bilirubin concentration 1.5–3 times the upper limit of normal (risk of decreased clearance)—monitor liver function at baseline and before each cycle; avoid if bilirubin concentration greater than 3 times the upper limit of normal (no information available for combination therapy). For *liposomal* formulations, manufacturer advises caution; avoid if bilirubin greater than 2 mg/dL, or if transaminases are greater than 2.5 times the upper limit of normal, or greater than 5 times the upper limit of normal if liver metastasis present (limited information available).  
**Dose adjustments** For *conventional* formulations, manufacturer advises dose reduction—consult product literature.

- **RENAL IMPAIRMENT** For *conventional* formulations, manufacturer advises avoid—no information available. For *liposomal* formulations, manufacturer advises avoid in severe impairment—no information available.
- **MONITORING REQUIREMENTS** Manufacturer advises monitor for respiratory symptoms in patients with risk factors for interstitial lung disease before and during treatment; monitor complete blood count weekly during treatment.
- **PRESCRIBING AND DISPENSING INFORMATION** Irinotecan is available as both *conventional* and *liposomal* formulations. These different formulations vary in their licensed indications, pharmacokinetics, dosage and administration, and are **not** interchangeable.
- **PATIENT AND CARER ADVICE**  
**Driving and skilled tasks** Manufacturer advises patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of dizziness and visual disturbances within 24 hours of administration.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website
- **NICE decisions**
  - ▶ **Pegylated liposomal irinotecan for treating pancreatic cancer after gemcitabine (April 2017)** NICE TA440 Not recommended
- **Scottish Medicines Consortium (SMC) decisions**
  - ▶ **Liposomal irinotecan (*Onivyde*<sup>®</sup>) for treatment of metastatic adenocarcinoma of the pancreas, in combination with fluorouracil (5-FU) and leucovorin (folinic acid), in adult patients who have progressed following gemcitabine based therapy (March 2017)** SMC No. 1217/17 Not recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for infusion

EXCIPIENTS: May contain Sorbitol

#### ▶ Irinotecan hydrochloride (Non-proprietary)

**Irinotecan hydrochloride trihydrate 20 mg per 1 ml** Irinotecan 500mg/25ml concentrate for solution for infusion vials | 1 vial [PoM] £172.50-£837.96 (Hospital only)

Irinotecan 40mg/2ml concentrate for solution for infusion vials | 1 vial [PoM] £15.00-£59.88 (Hospital only)

Irinotecan 300mg/15ml concentrate for solution for infusion vials | 1 vial [PoM] £110.00-£440.45 (Hospital only)

Irinotecan 100mg/5ml concentrate for solution for infusion vials | 1 vial [PoM] £48.00-£146.83 (Hospital only)

#### ▶ Campto (Pfizer Ltd)

**Irinotecan hydrochloride trihydrate 20 mg per 1 ml** Campto 100mg/5ml concentrate for solution for infusion vials | 1 vial [PoM] £130.00 (Hospital only)

Campto 40mg/2ml concentrate for solution for infusion vials | 1 vial [PoM] £53.00 (Hospital only)

Campto 300mg/15ml concentrate for solution for infusion vials | 1 vial [PoM] £390.00 (Hospital only)

#### Dispersion for infusion

ELECTROLYTES: May contain Sodium

#### ▶ Onivyde (Servier Laboratories Ltd)

**Irinotecan (as Irinotecan sucrososfate salt pegylated liposomal)**

**4.3 mg per 1 ml** Onivyde pegylated liposomal 43mg/10ml concentrate for dispersion for infusion vials | 1 vial [PoM] £615.35 (Hospital only)

## Topotecan

17-Sep-2021

- **DRUG ACTION** Topotecan inhibits topoisomerase I, an enzyme involved in DNA replication.

#### ● INDICATIONS AND DOSE

**Metastatic ovarian cancer when first-line or subsequent treatment has failed | Treatment of recurrent carcinoma of the cervix, after radiotherapy, and for patients with stage IVB disease (in combination with cisplatin)**

#### ▶ BY INTRAVENOUS INFUSION

▶ Adult: (consult product literature or local protocols)

continued →

**Relapsed small-cell lung cancer when retreatment with the first-line regimen is considered inappropriate**

- ▶ BY INTRAVENOUS INFUSION, OR BY MOUTH
- ▶ Adult: (consult product literature or local protocols)

**IMPORTANT SAFETY INFORMATION**

RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES  
See Cytotoxic drugs p. 962.

- **INTERACTIONS** → Appendix 1: topotecan
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Alopecia · anaemia · appetite decreased · asthenia · colitis neutropenic · constipation · diarrhoea · fever · gastrointestinal discomfort · hyperbilirubinaemia · hypersensitivity · infection · leucopenia · malaise · mucositis · nausea · neutropenia · pancytopenia · sepsis · skin reactions · thrombocytopenia · vomiting
  - ▶ **Rare or very rare** Angioedema · interstitial lung disease
  - ▶ **Frequency not known** Bone marrow depression (dose-limiting) · haemorrhage
- **CONCEPTION AND CONTRACEPTION** Contraceptive advice required, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Avoid (teratogenicity and fetal loss in animal studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid in severe impairment (limited information available).
- **RENAL IMPAIRMENT** [EvGr](#) Avoid infusion if creatinine clearance less than 20 mL/minute (limited information available). Avoid oral route if creatinine clearance less than 30 mL/minute (limited information available). [M](#) See p. 21.  
**Dose adjustments** [EvGr](#) Reduce dose (consult product literature). [M](#)
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website
- **NICE decisions**
  - ▶ Topotecan for the treatment of recurrent and stage IVB cervical cancer (October 2009) NICE TA183 Recommended
  - ▶ Topotecan for the treatment of relapsed small-cell lung cancer (November 2009) NICE TA184 Recommended
  - ▶ Topotecan, pegylated liposomal doxorubicin hydrochloride, paclitaxel, trabectedin and gemcitabine for treating recurrent ovarian cancer (April 2016) NICE TA389 Not recommended
- **Scottish Medicines Consortium (SMC) decisions**
  - ▶ Topotecan (*Hycamtin*<sup>®</sup>) in combination with cisplatin for patients with carcinoma of the cervix recurrent after radiotherapy and for patients with stage IVB disease (December 2007) SMC No. 421/07 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for infusion**▶ **Topotecan (Non-proprietary)**

Topotecan (as Topotecan hydrochloride) 1 mg per 1 ml Topotecan 4mg/4ml concentrate for solution for infusion vials | 1 vial [PoM](#) £290.00 | 5 vial [PoM](#) £1,453.10 (Hospital only)  
Topotecan 1mg/1ml concentrate for solution for infusion vials | 1 vial [PoM](#) £97.00

**Powder for solution for infusion**▶ **Hycamtin** (Novartis Pharmaceuticals UK Ltd)

Topotecan (as Topotecan hydrochloride) 1 mg Hycamtin 1mg powder for concentrate for solution for infusion vials | 1 vial [PoM](#) £97.65

Topotecan (as Topotecan hydrochloride) 4 mg Hycamtin 4mg powder for concentrate for solution for infusion vials | 1 vial [PoM](#) £348.76 (Hospital only)

**Capsule**

CAUTIONARY AND ADVISORY LABELS 25

▶ **Hycamtin** (Novartis Pharmaceuticals UK Ltd)

Topotecan (as Topotecan hydrochloride)  
250 microgram Hycamtin 0.25mg capsules | 10 capsule [PoM](#) £75.00

**ANTINEOPLASTIC DRUGS > VINCA ALKALOIDS****Vinblastine sulfate**

02-Jul-2020

● **INDICATIONS AND DOSE**

**Variety of cancers including leukaemias, lymphomas, and some solid tumours (e.g. breast and lung cancer)**

- ▶ Adult: (consult product literature)

**IMPORTANT SAFETY INFORMATION**

Vinblastine is for **intravenous administration only**. Inadvertent intrathecal administration can cause severe neurotoxicity, which is usually fatal.

The National Patient Safety Agency has advised (August 2008) that adult and teenage patients treated in an adult or adolescent unit should receive their vinca alkaloid dose in a 50 mL minibag. Teenagers and children treated in a child unit may receive their vinca alkaloid dose in a syringe.

- **CONTRA-INDICATIONS** Intrathecal injection **contra-indicated**.
- **CAUTIONS** Caution in handling—irritant to tissues
- **INTERACTIONS** → Appendix 1: vinca alkaloids
- **SIDE-EFFECTS**
  - ▶ **Rare or very rare** Hearing impairment · nerve disorders · vestibular damage
  - ▶ **Frequency not known** Abdominal pain · alopecia (reversible) · anaemia · appetite decreased · asthenia · balance impaired · cancer pain · constipation · depression · diarrhoea · dizziness · dyspnoea · haemorrhage · headache · hypertension · ileus · increased risk of infection · leucopenia (dose-limiting) · malaise · myalgia · myocardial infarction · nausea · nystagmus · oral blistering · pain · Raynaud's phenomenon · reflexes absent · respiratory disorders · seizure · sensation abnormal · SIADH · skin reactions · stroke · thrombocytopenia · vertigo · vomiting
- **CONCEPTION AND CONTRACEPTION** Contraceptive advice required, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Avoid (limited experience suggests fetal harm; teratogenic in animal studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in significantly impaired hepatic or biliary function.  
**Dose adjustments** Manufacturer advises consider initial dose reduction in significantly impaired hepatic or biliary function.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**▶ **Vinblastine sulfate (Non-proprietary)**

Vinblastine sulfate 1 mg per 1 ml Vinblastine 10mg/10ml solution for injection vials | 5 vial [PoM](#) £85.00 (Hospital only)

## Vincristine sulfate

03-Jul-2020

### ● INDICATIONS AND DOSE

Variety of cancers including leukaemias, lymphomas, and some solid tumours (e.g. breast and lung cancer)

► Adult: (consult local protocol)

### IMPORTANT SAFETY INFORMATION

Vincristine injections are for **intravenous administration only**. Inadvertent intrathecal administration can cause severe neurotoxicity, which is usually fatal.

The National Patient Safety Agency has advised (August 2008) that adult and teenage patients treated in an adult or adolescent unit should receive their vinca alkaloid dose in a 50 mL minibag. Teenagers and children treated in a child unit may receive their vinca alkaloid dose in a syringe.

- **CONTRA-INDICATIONS** Intrathecal injection **contra-indicated**.
- **CAUTIONS** Caution in handling—irritant to tissues · ileus · neuromuscular disease
- **INTERACTIONS** → Appendix 1: vinca alkaloids
- **SIDE-EFFECTS**
  - **Rare or very rare** Hypersensitivity · rash · SIADH
  - **Frequency not known** Abdominal cramps · adrenal disorder · alopecia · anaemia · appetite decreased · azotaemia · bladder atony · bronchospasm · connective tissue disorders · constipation · coronary artery disease · dehydration · diarrhoea · dizziness · dyspnoea · eighth cranial nerve damage · eye disorders · fever · gait abnormalities · gastrointestinal disorders · haemolytic anaemia · headache · hearing impairment · hypertension · hyponatraemia · hypotension · infection · leucopenia · movement disorders · muscle atrophy · myalgia · myocardial infarction · nausea · neuromuscular effects (dose-limiting) · neutropenia · oedema · oral ulceration · pain · paralysis · paresis · reflexes absent · renal disorder · secondary malignancy · sensation abnormal · sepsis · throat pain · thrombocytopenia · urinary disorders · vertigo · vestibular damage · vision loss · vomiting · weight decreased

**SIDE-EFFECTS, FURTHER INFORMATION** **Bronchospasm** Severe bronchospasm following administration is more common when used in combination with mitomycin-C.

**Neurotoxicity** Sensory and motor neuropathies are common and are cumulative. Manufacturer advises monitoring patients for symptoms of neuropathy, such as hypoesthesia, hyperesthesia, paresthesia, hyporeflexia, areflexia, neuralgia, jaw pain, decreased vibratory sense, cranial neuropathy, ileus, burning sensation, arthralgia, myalgia, muscle spasm, or weakness, both before and during treatment—requires dose reduction, treatment interruption or treatment discontinuation, depending on severity.

Motor weakness can also occur and dose reduction or discontinuation of therapy may be appropriate if motor weakness increases. Recovery from neurotoxic effects is usually slow but complete.

- **CONCEPTION AND CONTRACEPTION** Contraceptive advice required, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Avoid (teratogenicity and fetal loss in *animal* studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution. **Dose adjustments** Manufacturer advises dose reduction.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Solution for injection

#### ► Vincristine sulfate (Non-proprietary)

Vincristine sulfate 1 mg per 1 ml Vincristine 1mg/1ml solution for injection vials | 1 vial **[PoM]** £13.47 (Hospital only) | 5 vial **[PoM]** £67.35 (Hospital only)  
 Vincristine 2mg/2ml solution for injection vials | 1 vial **[PoM]** £26.66 (Hospital only) | 5 vial **[PoM]** £133.30 (Hospital only)  
 Vincristine 5mg/5ml solution for injection vials | 5 vial **[PoM]** £329.50 (Hospital only)

## Vindesine sulfate

03-Jul-2020

### ● INDICATIONS AND DOSE

Variety of cancers including leukaemias, lymphomas, and some solid tumours (e.g. breast and lung cancer)

► Adult: (consult product literature)

### IMPORTANT SAFETY INFORMATION

Vindesine injections are for **intravenous administration only**. Inadvertent intrathecal administration can cause severe neurotoxicity, which is usually fatal.

The National Patient Safety Agency has advised (August 2008) that adult and teenage patients treated in an adult or adolescent unit should receive their vinca alkaloid dose in a 50 mL minibag. Teenagers and children treated in a child unit may receive their vinca alkaloid dose in a syringe.

- **CONTRA-INDICATIONS** Intrathecal injection **contra-indicated**.
- **CAUTIONS** Caution in handling—irritant to tissues · neuromuscular disease
- **INTERACTIONS** → Appendix 1: vinca alkaloids
- **SIDE-EFFECTS**
  - **Common or very common** Alopecia
  - **Frequency not known** Anaemia · appetite decreased · asthenia · balance impaired · cellulitis · chills · constipation · depression · diarrhoea · dizziness · dysphagia · fever · gastrointestinal discomfort · gastrointestinal disorders · granulocytopenia (dose-limiting) · headache · hearing impairment · malaise · nausea · nerve disorders · nystagmus · oral disorders · pain · peroneal nerve palsy · rash · maculopapular · reflexes absent · seizure · sensation abnormal · thrombocytopenia · thrombocytosis · vertigo · vestibular damage · vision loss · vomiting
- **SIDE-EFFECTS, FURTHER INFORMATION** Neurotoxicity, usually as peripheral or autonomic neuropathy; it occurs less often with vindesine than with vincristine. Patients with neurotoxicity commonly have peripheral paraesthesia, loss of deep tendon reflexes; and ototoxicity has been reported. There have been instances in which neurotoxicity has made it necessary to reduce the dosage or temporarily discontinue use of vindesine.
- **CONCEPTION AND CONTRACEPTION** Contraceptive advice required, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Avoid (teratogenic in *animal* studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution. **Dose adjustments** Manufacturer advises consider initial dose reduction in significant impairment.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Powder for solution for injection**

- ▶ **Eldisine** (Genus Pharmaceuticals Ltd)  
**Vindesine sulfate 5 mg** Eldisine 5mg powder for solution for injection vials | 1 vial (PoM) £78.30 (Hospital only)

## Vinflunine

08-Oct-2021

- **INDICATIONS AND DOSE**

**Treatment of advanced or metastatic transitional cell carcinoma of the urothelial tract after failure of a platinum-containing regimen (monotherapy)**

- ▶ Adult: (consult local protocol)

**IMPORTANT SAFETY INFORMATION**

Vinflunine injections are for **intravenous administration only**. Inadvertent intrathecal administration can cause severe neurotoxicity, which is usually fatal.

The National Patient Safety Agency has advised (August 2008) that adult and teenage patients treated in an adult or adolescent unit should receive their vinca alkaloid dose in a 50 mL minibag. Teenagers and children treated in a child unit may receive their vinca alkaloid dose in a syringe.

- **CONTRA-INDICATIONS** Intrathecal injection **contra-indicated**.
- **CAUTIONS** Cardiovascular disease · QT-interval prolongation (avoid hypokalaemia)
- **INTERACTIONS** → Appendix 1: vinca alkaloids
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Alopecia · anaemia · appetite decreased · arthralgia · asthenia · chest pain · chills · constipation · cough · dehydration · diarrhoea · dizziness · dyspnoea · ear pain · fever · gastrointestinal discomfort · gastrointestinal disorders · headache · hyperhidrosis · hypersensitivity · hypertension · hyponatraemia · hypotension · increased risk of infection · insomnia · leucopenia · muscle weakness · myalgia · nausea · neutropenia · oedema · oral disorders · pain · peripheral neuropathy · skin reactions · swallowing difficulty · syncope · tachycardia · taste altered · thrombocytopenia · venous thrombosis · vomiting · weight changes
  - ▶ **Uncommon** Acute respiratory distress syndrome (ARDS) · cancer pain · laryngeal pain · myocardial infarction · myocardial ischaemia · neutropenic sepsis · renal failure · SIADH · tinnitus · vertigo · visual impairment
  - ▶ **Rare or very rare** Posterior reversible encephalopathy syndrome (PRES)
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during and for up to 3 months after treatment.
- **PREGNANCY** Avoid unless essential—teratogenicity and embryotoxicity in *animal* studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (no information available in severe impairment).  
**Dose adjustments** Manufacturer advises dose reduction.
- **RENAL IMPAIRMENT**  
**Dose adjustments** (EvGr) Reduce dose if creatinine clearance less than 60 mL/minute (consult product literature). ⚠ See p. 21.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website

**NICE decisions**

- ▶ **Vinflunine for the treatment of advanced or metastatic transitional cell carcinoma of the urothelial tract (January 2013)** NICE TA272 Not recommended

- **MEDICINAL FORMS** No licensed medicines listed.

## Vinorelbine

04-Jul-2020

- **DRUG ACTION** Vinorelbine is a semi-synthetic vinca alkaloid.

- **INDICATIONS AND DOSE**

**Advanced breast cancer | Advanced non-small cell lung cancer**

- ▶ **BY MOUTH**
  - ▶ Adult: 60 mg/m<sup>2</sup> once weekly for 3 weeks, then increased if tolerated to 80 mg/m<sup>2</sup> once weekly (max. per dose 160 mg once weekly)
- ▶ **BY INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION**
  - ▶ Adult: (consult product literature)

**IMPORTANT SAFETY INFORMATION**

Vinorelbine injections are for **intravenous administration only**. Inadvertent intrathecal administration can cause severe neurotoxicity, which is usually fatal.

The National Patient Safety Agency has advised (August 2008) that adult and teenage patients treated in an adult or adolescent unit should receive their vinca alkaloid dose in a 50 mL minibag. Teenagers and children treated in a child unit may receive their vinca alkaloid dose in a syringe.

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **CONTRA-INDICATIONS**  
**GENERAL CONTRA-INDICATIONS** Concurrent radiotherapy if treating the liver  
**SPECIFIC CONTRA-INDICATIONS**
  - ▶ With oral use Long-term oxygen therapy · previous significant surgical resection of small bowel · previous significant surgical resection of stomach
- **CONTRA-INDICATIONS, FURTHER INFORMATION**  
Intrathecal injection **contra-indicated**.
- **CAUTIONS** Caution in handling—irritant to tissues · ischaemic heart disease
- **INTERACTIONS** → Appendix 1: vinca alkaloids
- **SIDE-EFFECTS**  
**GENERAL SIDE-EFFECTS**
  - ▶ **Common or very common** Alopecia · anaemia · appetite decreased · arthralgia · bone marrow depression (dose-limiting) · constipation · diarrhoea · dyspnoea · fever · hypertension · hypotension · increased risk of infection · leucopenia · myalgia · nausea · neutropenia (dose-limiting) · pain · reflexes absent · stomatitis · thrombocytopenia · vomiting
  - ▶ **Uncommon** Flushing · peripheral coldness · respiratory disorders · sepsis
  - ▶ **Rare or very rare** Circulatory collapse · hyponatraemia · myocardial infarction · pancreatitis
  - ▶ **Frequency not known** SIADH
- **SPECIFIC SIDE-EFFECTS**
  - ▶ **Common or very common**
    - ▶ With intravenous use Asthenia · cancer pain · chest pain · muscle weakness in legs · nervous system disorder · vein discoloration
  - ▶ With oral use Abdominal pain · chills · cough · dizziness · dysphagia · dysuria · fatigue · gastrointestinal disorders · headache · insomnia · liver disorder · neuromuscular

disorders · sensory disorder · skin eruption · taste altered · urogenital disorder · vision disorder · weight changes

► **Uncommon**

- With intravenous use Paraesthesia
- With oral use Ataxia
- **Rare or very rare**
- With intravenous use Arrhythmias · ischaemic heart disease · necrosis · palpitations · paralytic ileus · skin reactions
- **Frequency not known**
- With intravenous use Febrile neutropenia
- With oral use Gastrointestinal haemorrhage · hypersensitivity

**SIDE-EFFECTS, FURTHER INFORMATION Bronchospasm**

Severe bronchospasm following administration of the vinca alkaloids is more common when used in combination with mitomycin-C.

**Neurotoxicity** Neurotoxicity reported in clinical trials, most commonly as constipation, paresthesia, hyperesthesia, and hyporeflexia.

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during and for 3 months after treatment; men must avoid fathering a child during and for at least 3 months after treatment.

- **PREGNANCY** Avoid unless essential (teratogenicity, and fetal loss in *animal* studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **BREAST FEEDING** Discontinue breast-feeding.

● **HEPATIC IMPAIRMENT**

- With oral use Manufacturer advises caution in moderate impairment; avoid in severe impairment (no information available).
- With intravenous use Manufacturer advises caution in severe impairment.

**Dose adjustments** ► With oral use Manufacturer advises dose reduction in moderate impairment—consult product literature.

- With intravenous use Manufacturer advises dose reduction in severe impairment.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for infusion**

► **Vinorelbine (Non-proprietary)**

**Vinorelbine (as Vinorelbine tartrate) 10 mg per 1 ml** Vinorelbine 50mg/5ml concentrate for solution for infusion vials | 1 vial [PoM] £139.00 (Hospital only) | 1 vial [PoM] £139.00 | 10 vial [PoM] £1,539.80 (Hospital only)

**Vinorelbine 10mg/1ml concentrate for solution for infusion vials** | 1 vial [PoM] £29.00 (Hospital only) | 10 vial [PoM] £329.50 (Hospital only)

► **Navelbine (Pierre Fabre Ltd)**

**Vinorelbine (as Vinorelbine tartrate) 10 mg per 1 ml** Navelbine 10mg/1ml concentrate for solution for infusion vials | 10 vial [PoM] £297.45 (Hospital only)

**Navelbine 50mg/5ml concentrate for solution for infusion vials** | 10 vial [PoM] £1,399.79 (Hospital only)

**Capsule**

CAUTIONARY AND ADVISORY LABELS 21, 25

► **Vinorelbine (Non-proprietary)**

**Vinorelbine (as Vinorelbine tartrate) 20 mg** Vinorelbine 20mg capsules | 1 capsule [PoM] £43.98 (Hospital only)

**Vinorelbine (as Vinorelbine tartrate) 30 mg** Vinorelbine 30mg capsules | 1 capsule [PoM] £65.98 (Hospital only)

**Vinorelbine (as Vinorelbine tartrate) 80 mg** Vinorelbine 80mg capsules | 1 capsule [PoM] £175.92 (Hospital only)

► **Navelbine (Pierre Fabre Ltd)**

**Vinorelbine (as Vinorelbine tartrate) 20 mg** Navelbine 20mg capsules | 1 capsule [PoM] £43.98 (Hospital only)

**ANTINEOPLASTIC DRUGS > OTHER**

**Amsacrine**

15-Nov-2018

● **INDICATIONS AND DOSE**

**Acute leukaemia (refractory to anthracycline chemotherapy used alone or in combination with other chemotherapy agents) (specialist use only)**

- BY INTRAVENOUS INFUSION
- Adult: (consult product literature)

- **CAUTIONS** Hypokalaemia—increased risk of ventricular fibrillation (correct hypokalaemia before initiating treatment)
- **INTERACTIONS** → Appendix 1: amsacrine
- **SIDE-EFFECTS**
- **Common or very common** Abdominal pain · alopecia · arrhythmias · bone marrow disorders · cardiotoxicity · congestive heart failure · diarrhoea · dyspnoea · emotional lability · fever · generalised tonic-clonic seizure · haemorrhage · hepatic disorders · hypokalaemia · hypotension · infection · nausea · necrosis · skin reactions · stomatitis · thrombocytopenia · vomiting
- **Rare or very rare** Anaemia · cardiomyopathy · confusion · dizziness · granulocytopenia · headache · lethargy · leucopenia · numbness · peripheral neuropathy · proteinuria · renal impairment · visual impairment · weight changes
- **Frequency not known** Cardiac arrest · hyperuricaemia
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during and for 3 months after treatment in women of child-bearing potential, and during and for 6 months after treatment in men.
- **PREGNANCY** Manufacturer advises avoid—*toxicity in animal* studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (increased risk of toxicity).  
**Dose adjustments** Manufacturer advises consider dose reduction (consult product literature).
- **RENAL IMPAIRMENT** Manufacturer advises monitor renal function at baseline and during treatment—increased risk of toxicity.  
**Dose adjustments** Manufacturer advises consider dose reduction in renal impairment.
- **MONITORING REQUIREMENTS**
- Manufacturer advises monitor full blood count, liver function and renal function regularly; electrolytes should be re-evaluated prior to each treatment.
- Manufacturer advises monitor for cardiotoxicity during treatment.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for infusion**

► **Amsidine (Eurocept International bv)**

**Amsacrine 50 mg per 1 ml** Amsidine 75mg/1.5ml solution for infusion ampoules and diluent | 6 ampoule [PoM] £1,200.00 (Hospital only)

## Arsenic trioxide

10-Nov-2021

## ● INDICATIONS AND DOSE

**Acute promyelocytic leukaemia (specialist use only)**

▶ BY INTRAVENOUS INFUSION

▶ Adult: (consult product literature or local protocols)

- **CAUTIONS** Hypokalaemia (correct before treatment) · hypomagnesaemia (correct before treatment) · previous treatment with anthracyclines (increased risk of QT interval prolongation) · vitamin B<sub>1</sub> deficiency (risk of encephalopathy)

● **INTERACTIONS** → Appendix 1: arsenic trioxide● **SIDE-EFFECTS**

- ▶ **Common or very common** Abdominal pain · alveolar haemorrhage · anaemia · arrhythmias · arthralgia · chest pain · chills · diarrhoea · differentiation syndrome · dizziness · dyspnoea · electrolyte imbalance · fatigue · fever · headache · hyperbilirubinaemia · hyperglycaemia · hypotension · hypoxia · increased risk of infection · ketoacidosis · leucocytosis · myalgia · nausea · neutropenia · oedema · pain · pancytopenia · paraesthesia · pericardial effusion · QT interval prolongation · renal failure · respiratory disorders · seizure · skin reactions · thrombocytopenia · vasculitis · vision blurred · vomiting · weight increased
- ▶ **Frequency not known** Confusion · decreased leucocytes · encephalopathy · fluid imbalance · heart failure · hepatotoxicity · peripheral neuropathy · sepsis

**SIDE-EFFECTS, FURTHER INFORMATION** Signs and symptoms of differentiation syndrome (leucocyte activation syndrome) include unexplained fever, dyspnoea, weight gain, pulmonary infiltrates, pleural or pericardial effusions, with or without leucocytosis—treat with high dose corticosteroids, consult product literature.

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during treatment in men and women.
- **PREGNANCY** Avoid (teratogenic and embryotoxic in animal studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises use with caution—no information available.
- **RENAL IMPAIRMENT** [EvGr](#) Caution (limited information available). 
- **MONITORING REQUIREMENTS** ECG required before and during treatment—consult product literature.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website

**NICE decisions**

- ▶ Arsenic trioxide for treating acute promyelocytic leukaemia (June 2018) NICE TA526 Recommended

**Scottish Medicines Consortium (SMC) decisions**

- ▶ Arsenic trioxide (*Trisenox*<sup>®</sup>) for newly diagnosed, low-to-intermediate risk acute promyelocytic leukaemia (July 2019) SMC No. SMC2181 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for infusion**▶ **Arsenic trioxide (Non-proprietary)**

**Arsenic trioxide 1 mg per 1 ml** Arsenic 10mg/10ml concentrate for solution for infusion vials | 10 vial [PoM](#) £2,295.00–£2,700.00 (Hospital only)

Arsenic 10mg/10ml solution for infusion ampoules |

10 ampoule [PoM](#) £2,920.00 (Hospital only)

Arsenic 20mg/20ml concentrate for solution for infusion vials |

5 vial [PoM](#) £945.00 (Hospital only)

Arsenic 10mg/10ml concentrate for solution for infusion ampoules |

10 ampoule [PoM](#) £2,920.00 (Hospital only)

▶ **Trisenox** (Teva UK Ltd)

**Arsenic trioxide 2 mg per 1 ml** Trisenox 12mg/6ml concentrate for solution for infusion vials | 10 vial [PoM](#) £2,480.00 (Hospital only)

## Asparaginase

03-Nov-2020

- **DRUG ACTION** Asparaginase is an enzyme which acts by breaking down L-asparagine to aspartic acid and ammonia, this disrupts protein synthesis of tumour cells.

## ● INDICATIONS AND DOSE

**Acute lymphoblastic leukaemia (in combination with other antineoplastic drugs) (specialist use only)**

▶ BY INTRAVENOUS INFUSION

▶ Adult: 5000 units/m<sup>2</sup> every 3 days

- **CONTRA-INDICATIONS** History of pancreatitis related to asparaginase therapy · history of serious haemorrhage related to asparaginase therapy · history of serious thrombosis related to asparaginase therapy · pancreatitis · pre-existing known coagulopathy

- **CAUTIONS** Diabetes (may raise blood glucose) · hypersensitivity reactions · hypertriglyceridaemia (severe)—increased risk of acute pancreatitis

**CAUTIONS, FURTHER INFORMATION**

- ▶ Hypersensitivity reactions Serious hypersensitivity reactions, including life-threatening anaphylaxis, can occur—*asparaginase should only be administered when appropriately trained staff and resuscitation facilities are immediately available; in the event of a hypersensitivity reaction, treatment should be stopped immediately and appropriate management initiated.* Manufacturer advises an intracutaneous or small intravenous test dose can be used but is of limited value for predicting which patients will experience an allergic reaction.

- **INTERACTIONS** → Appendix 1: asparaginase

● **SIDE-EFFECTS**

- ▶ **Common or very common** Agitation · anaemia · angioedema · appetite decreased · arthralgia · bronchospasm · coagulation disorders · confusion · depression · diarrhoea · dizziness · drowsiness · dyspnoea · embolism and thrombosis · fatigue · flushing · gastrointestinal discomfort · haemorrhage · hallucination · hyperglycaemia · hypersensitivity · hypoalbuminaemia · hypoglycaemia · hypotension · increased risk of infection · leucopenia · nausea · neurological effects · oedema · pain · pancreatitis acute · skin reactions · thrombocytopenia · vomiting · weight decreased
- ▶ **Uncommon** Headache · hyperammonaemia · hyperuricaemia
- ▶ **Rare or very rare** Coma · consciousness impaired · diabetic ketoacidosis · hepatic disorders · hyperparathyroidism · hypoparathyroidism · ischaemic stroke · necrotising pancreatitis · pancreatic pseudocyst · pancreatitis (sometimes fatal) · posterior reversible encephalopathy syndrome (PRES) · secondary hypothyroidism · seizure · tremor

**SIDE-EFFECTS, FURTHER INFORMATION** There have been rare reports of cholestasis, icterus, hepatic cell necrosis and hepatic failure with fatal outcome; manufacturer advises interrupt treatment if these symptoms develop.

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception in men and women of child-bearing potential during treatment and for at least 3 months after last dose; asparaginase may reduce effectiveness of oral contraceptives—additional precautions (e.g. barrier method) are required, see also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **PREGNANCY** Manufacturer advises avoid unless essential—toxicity in *animal* studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid in severe impairment—no information available.
- **MONITORING REQUIREMENTS**
  - ▶ Manufacturer advises monitor trough serum asparaginase levels 3 days after administration; consider switching to a different asparaginase preparation if target levels not reached—seek expert advice.
  - ▶ Manufacturer advises monitor bilirubin, hepatic transaminases, and coagulation parameters before and during treatment; in addition, monitor plasma and urinary glucose, amylase, lipase, triglycerides, cholesterol and serum protein levels during treatment.
- **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator (2–8°C)—consult product literature for storage conditions after reconstitution and dilution.
- **PATIENT AND CARER ADVICE**
  - Driving and skilled tasks Manufacturer advises asparaginase has moderate influence on driving and performance of skilled tasks—increased risk of dizziness and somnolence.
- **NATIONAL FUNDING/ACCESS DECISIONS**
  - For full details see funding body website
  - Scottish Medicines Consortium (SMC) decisions
    - ▶ Asparaginase (*Spectrila*®) as a component of antineoplastic combination therapy for the treatment of acute lymphoblastic leukaemia in paediatric patients from birth to 18 years and adult patients (April 2018) SMC No. 1319/18 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.
  - Powder for solution for infusion**
    - ▶ *Spectrila* (medac UK)
      - Asparaginase 10000 unit Spectrila 10,000unit powder for concentrate for solution for infusion vials | 1 vial (PoM) £450.00 (Hospital only)

## Crisantaspace

07-Aug-2020

- **DRUG ACTION** Crisantaspace is the enzyme asparaginase produced by *Erwinia chrysanthemi*.

### ● INDICATIONS AND DOSE

#### Acute lymphoblastic leukaemia

▶ BY INTRAMUSCULAR INJECTION, OR BY SUBCUTANEOUS INJECTION, OR BY INTRAVENOUS INJECTION

- ▶ Adult: (consult product literature)

- **CONTRA-INDICATIONS** History of pancreatitis related to asparaginase therapy
- **CAUTIONS** Diabetes (may raise blood glucose)
- **INTERACTIONS** → Appendix 1: crisantaspace
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Chills · coagulation disorders · confusion · diarrhoea · dizziness · drowsiness · dyspnoea · face oedema · fever · headache · hepatic disorders · hypersensitivity · limb swelling · lip swelling · neurotoxicity · pain · pallor · pancreatitis · seizures · skin reactions · thrombosis
  - ▶ **Uncommon** Hyperglycaemia · hyperlipidaemia · hypoxia · increased risk of infection · respiratory disorders
  - ▶ **Rare or very rare** Arthritis reactive · coma · diabetic ketoacidosis · dysphagia · dysphasia · encephalopathy · haemorrhage · level of consciousness decreased · myalgia · myocardial infarction · necrotising pancreatitis · neutropenia · paresis · sepsis · thrombocytopenia

- ▶ **Frequency not known** Abdominal pain · flushing · hyperammonaemia · hypertension · hypotension · nausea · pseudocyst · vomiting
- **CONCEPTION AND CONTRACEPTION** Contraceptive advice required, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Avoid. See also, *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises facilities for the management of anaphylaxis should be available.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for solution for injection

- ▶ *Erwinase* (Porton Biopharma Ltd)

Crisantaspace 10000 unit Erwinase 10,000unit powder for solution for injection vials | 5 vial (PoM) £3,822.50

## Eribulin

25-Aug-2021

### ● INDICATIONS AND DOSE

#### Treatment of locally advanced or metastatic breast cancer when the disease has progressed after treatment with at least 1 chemotherapy regimen for advanced disease

▶ BY INTRAVENOUS INJECTION

- ▶ Adult: Give on day 1 and day 8 of a 21-day cycle, previous therapy should have included an anthracycline and a taxane in either the adjuvant or metastatic setting unless the patient is unsuitable for these treatments (consult local protocol)

- **CONTRA-INDICATIONS** Congenital long QT syndrome
- **CAUTIONS** Bradyarrhythmias (increased susceptibility to QT-interval prolongation) · congestive heart failure (increased susceptibility to QT-interval prolongation) · electrolyte disturbances (increased susceptibility to QT-interval prolongation) · susceptibility to QT-interval prolongation
- **INTERACTIONS** → Appendix 1: eribulin
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Alopecia · anaemia · appetite decreased · arthralgia · asthenia · chest pain · chills · conjunctivitis · constipation · cough · decreased leucocytes · dehydration · depression · diarrhoea · dizziness · dry mouth · dyspnoea · dysuria · electrolyte imbalance · embolism and thrombosis · excessive tearing · fever · gastrointestinal discomfort · gastrooesophageal reflux disease · haemorrhage · headache · hot flush · hyperbilirubinaemia · hyperglycaemia · increased risk of infection · influenza like illness · insomnia · lethargy · mucositis · muscle complaints · muscle weakness · nail disorder · nausea · nerve disorders · neurotoxicity · neutropenia · oral disorders · oropharyngeal pain · pain · peripheral oedema · rhinorrhoea · sensation abnormal · skin reactions · sweat changes · tachycardia · taste altered · thrombocytopenia · tinnitus · vertigo · vomiting · weight decreased
  - ▶ **Uncommon** Angioedema · hepatotoxicity · interstitial lung disease · pancreatitis · proteinuria · renal failure · sepsis
  - ▶ **Rare or very rare** Disseminated intravascular coagulation
  - ▶ **Frequency not known** QT interval prolongation · severe cutaneous adverse reactions (SCARs)
- **CONCEPTION AND CONTRACEPTION** Ensure effective contraception during and for up to 3 months after treatment in men or women.
- **PREGNANCY** Avoid unless essential (teratogenic in *animal* studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (increased risk of neutropenia).  
**Dose adjustments** Manufacturer advises dose reduction—consult product literature.
- **RENAL IMPAIRMENT** [EvGr] Use with caution. ⚠  
**Dose adjustments** [EvGr] Consider dose reduction if creatinine clearance less than 50 mL/minute (risk of increased exposure). ⚠ See p. 21.
- **MONITORING REQUIREMENTS**
  - ▶ Monitor for signs of peripheral neuropathy—severe peripheral neurotoxicity requires treatment delay or dose reduction (consult product literature).
  - ▶ ECG monitoring recommended in patients prescribed concomitant use of drugs that prolong the QT-interval or who are susceptible to QT-interval prolongation.
  - ▶ Monitor electrolytes periodically.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website
- **NICE decisions**
  - ▶ Eribulin for treating locally advanced or metastatic breast cancer after 2 or more chemotherapy regimens (December 2016) NICE TA423 Recommended with restrictions
  - ▶ Eribulin for treating locally advanced or metastatic breast cancer after 1 chemotherapy regimen (March 2018) NICE TA515 Not recommended
- **Scottish Medicines Consortium (SMC) decisions**
  - ▶ Eribulin (*Halaven*)<sup>®</sup> for the treatment of adult patients with locally advanced or metastatic breast cancer who have progressed after at least one chemotherapeutic regimen for advanced disease (March 2016) SMC No. 1065/15 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

EXCIPIENTS: May contain Ethanol

- ▶ **Halaven** (Eisai Ltd)

**Eribulin. 44 mg per 1 ml** Halaven 0.88mg/2ml solution for injection vials | 1 vial [PoM] £361.00 (Hospital only)

## Hydroxycarbamide

04-Sep-2020

### (Hydroxyurea)

**● INDICATIONS AND DOSE****Polycythaemia vera (specialist use only)**

- ▶ **BY MOUTH**
- ▶ **Adult:** Initially 15–20 mg/kg daily, adjusted according to response, for information on dose adjustment based on haematocrit and platelet count—consult product literature; usual dose 500–1000 mg daily, dosage should be based on actual or ideal body weight, whichever is less

**Essential thrombocythaemia (specialist use only)**

- ▶ **BY MOUTH**
- ▶ **Adult:** Initially 15 mg/kg daily, adjusted according to response, for information on dose adjustment based on platelet count and white cell count—consult product literature, dosage should be based on actual or ideal body weight, whichever is less

**Chronic myeloid leukaemia (specialist use only)**

- ▶ **BY MOUTH**
- ▶ **Adult:** Initially 40 mg/kg daily, then reduced to 20 mg/kg daily, adjusted according to response, for information on dose adjustment based on white cell count—consult product literature, dosage should be based on actual or ideal body weight, whichever is less

**HYDREA<sup>®</sup>****Chronic myeloid leukaemia (specialist use only) | Cancer of the cervix (specialist use only)**

- ▶ **BY MOUTH**
- ▶ **Adult:** 20–30 mg/kg daily, alternatively 80 mg/kg every 3 days, for information on dose adjustment based on platelet count, white cell count and actual or ideal body weight—consult product literature

**SIKLOS<sup>®</sup>****Sickle-cell disease [prevention of recurrent vaso-occlusive crises] (initiated by a specialist)**

- ▶ **BY MOUTH**
- ▶ **Adult:** Initially 15 mg/kg daily, increased in steps of 2.5–5 mg/kg daily, dose to be increased every 12 weeks according to response; usual dose 15–30 mg/kg daily; maximum 35 mg/kg per day

**XROMI<sup>®</sup>****Sickle-cell disease [prevention of vaso-occlusive complications] (specialist use only)**

- ▶ **BY MOUTH**
- ▶ **Adult:** Initially 15 mg/kg daily, increased in steps of 5 mg/kg daily, dose to be increased every 8 weeks according to response; usual maintenance 20–25 mg/kg daily; maximum 35 mg/kg per day

**IMPORTANT SAFETY INFORMATION****RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**

See Cytotoxic drugs p. 962.

- **CAUTIONS** Leg ulcers (review treatment if cutaneous vasculitic ulcerations develop)
- **INTERACTIONS** → Appendix 1: hydroxycarbamide
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Alopecia · anaemia · appetite decreased · asthenia · bone marrow disorders · chills · constipation · cutaneous vasculitis · dermatomyositis · diarrhoea · disorientation · dizziness · drowsiness · dyspnoea · dysuria · fever · gastrointestinal discomfort · haemorrhage · hallucination · headache · hepatic disorders · leucopenia · malaise · mucositis · nail discolouration · nail disorder · nausea · neoplasms · neutropenia · oral disorders · pancreatitis · peripheral neuropathy · pulmonary oedema · red blood cell abnormalities · respiratory disorders · seizure · skin reactions · skin ulcers · sperm abnormalities · thrombocytopenia · vomiting
  - ▶ **Rare or very rare** Cutaneous lupus erythematosus · gangrene · systemic lupus erythematosus (SLE)
  - ▶ **Frequency not known** Amenorrhoea · gastrointestinal disorders · hypomagnesaemia · Parvovirus B19 infection · vitamin D deficiency · weight increased
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception before and during treatment. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Avoid (teratogenic in *animal* studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild to moderate impairment; avoid in severe impairment (unless used for malignant conditions).
- **RENAL IMPAIRMENT** In sickle-cell disease, avoid if eGFR less than 30 mL/minute/1.73 m<sup>2</sup>. Use with caution in malignant disease.  
**Dose adjustments** In sickle-cell disease, reduce initial dose by 50% if eGFR less than 60 mL/minute/1.73 m<sup>2</sup>.
- **MONITORING REQUIREMENTS**
  - ▶ Monitor renal and hepatic function before and during treatment.

- ▶ Monitor full blood count before treatment, and repeatedly throughout use; in sickle-cell disease monitor every 2 weeks for the first 2 months and then every 2 to 3 months thereafter (or every 2 weeks if on maximum dose).
- ▶ Patients receiving long-term therapy for malignant disease should be monitored for secondary malignancies.
- **PATIENT AND CARER ADVICE** Patients receiving long-term therapy with hydroxycarbamide should be advised to protect skin from sun exposure.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website
- **Scottish Medicines Consortium (SMC) decisions**
- ▶ **Hydroxycarbamide oral solution (*Xromi*<sup>®</sup>) for the prevention of vaso-occlusive complications of sickle-cell disease in patients over 2 years of age (August 2020) SMC No. SMC2271 Recommended with restrictions**
- **All Wales Medicines Strategy Group (AWMSG) decisions**
- ▶ **Hydroxycarbamide oral solution (*Xromi*<sup>®</sup>) for the prevention of vaso-occlusive complications of sickle-cell disease in patients over 2 years of age (August 2020) AWMSG No. 4264 Recommended with restrictions**
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: capsule, oral suspension, oral solution
- Oral solution**  
CAUTIONARY AND ADVISORY LABELS 27  
EXCIPIENTS: May contain Hydroxybenzoates (parabens)
- ▶ **Xromi** (Nova Laboratories Ltd)  
**Hydroxycarbamide 100 mg per 1 ml** Xromi 100mg/ml oral solution sugar-free | 150 ml **[PoM]** £250.00 DT = £250.00
- Tablet**
- ▶ **Siklos** (Masters Pharmaceuticals Ltd)  
**Hydroxycarbamide 100 mg** Siklos 100mg tablets | 60 tablet **[PoM]** £100.00 DT = £100.00
- Hydroxycarbamide 1 gram** Siklos 1000mg tablets | 30 tablet **[PoM]** £500.00 DT = £500.00
- Capsule**
- ▶ **Hydroxycarbamide (Non-proprietary)**  
**Hydroxycarbamide 500 mg** Hydroxycarbamide 500mg capsules | 100 capsule **[PoM]** £86.00 DT = £13.05
- ▶ **Droxia** (Imported (United States))  
**Hydroxycarbamide 300 mg** Droxia 300mg capsules | 60 capsule **[PoM]** **[S]**
- ▶ **Hydrea** (Bristol-Myers Squibb Pharmaceuticals Ltd)  
**Hydroxycarbamide 500 mg** Hydrea 500mg capsules | 100 capsule **[PoM]** £10.47 DT = £13.05
- **INTERACTIONS** → Appendix 1: mitotane
- **SIDE-EFFECTS**
- ▶ **Common or very common** Adrenal insufficiency · anaemia · appetite decreased · asthenia · cognitive impairment · confusion · diarrhoea · dizziness · drowsiness · dyslipidaemia · gastrointestinal discomfort · gynaecomastia · headache · hepatic disorders · leucopenia · movement disorders · mucositis · muscle weakness · nausea · paraesthesia · polyneuropathy · rash · thrombocytopenia · vertigo · vomiting
- ▶ **Frequency not known** Encephalopathy · eye disorders · flushing · fungal infection · generalised pain · growth retardation · haemorrhage · hyperpyrexia · hypersalivation · hypertension · hypothyroidism · hypouricaemia · lens opacity · neuro-psychological retardation · ovarian cyst · postural hypotension · proteinuria · taste altered · thyroid disorder · vision disorders
- **CONCEPTION AND CONTRACEPTION** Contraceptive advice received, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Manufacturer advises avoid. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild to moderate impairment; avoid in severe impairment (limited information available).
- **RENAL IMPAIRMENT** **[EvGr]** Caution in mild to moderate impairment; avoid in severe impairment (no information available). **[M]**
- **MONITORING REQUIREMENTS**
- ▶ Plasma-mitotane concentration for optimum response 14–20 mg/litre.
- ▶ Monitor plasma-mitotane concentration—consult product literature.
- **PRESCRIBING AND DISPENSING INFORMATION**  
Corticosteroid replacement therapy Corticosteroid replacement therapy is necessary with treatment with mitotane. The dose of glucocorticoid should be increased in case of shock, trauma, or infection.
- **PATIENT AND CARER ADVICE** Patients should be warned to contact doctor immediately if injury, infection, or illness occurs (because of risk of acute adrenal insufficiency).  
**Driving and skilled tasks** Central nervous system toxicity may affect performance of skilled tasks (e.g. driving).
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

## Mitotane

09-Sep-2021

- **DRUG ACTION** Mitotane selectively inhibits the activity of the adrenal cortex, necessitating corticosteroid replacement therapy.

### ● INDICATIONS AND DOSE

#### Symptomatic treatment of advanced or inoperable adrenocortical carcinoma

##### ▶ BY MOUTH

- ▶ **Adult:** Initially 2–3 g daily in 2–3 divided doses adjusted according to plasma-concentration monitoring, in severe illness initial dose can be increased up to 6 g daily, reduce dose or interrupt treatment if signs of toxicity, discontinue if inadequate response after 3 months

### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **CAUTIONS** Avoid in Acute porphyrias p. 1150 · risk of accumulation in overweight patients

## Panobinostat

28-Jul-2020

- **DRUG ACTION** Panobinostat is a histone deacetylase inhibitor, which promotes cell-cycle arrest and apoptosis of tumour cells via multiple pathways.

### ● INDICATIONS AND DOSE

**Treatment of relapsed or refractory multiple myeloma (in combination with bortezomib and dexamethasone), in patients who have received at least two prior regimens, including bortezomib and an immunomodulatory agent**

##### ▶ BY MOUTH

- ▶ **Adult 18–74 years:** 20 mg once daily, on days 1, 3, 5, 8, 10 and 12 of a 21-day cycle for 8 cycles. Patients with clinical benefit should continue treatment for 8 additional cycles; total duration 16 cycles continued →

(48 weeks), for doses of dexamethasone and bortezomib, or dose adjustment due to side-effects—consult product literature

- ▶ Adult 75 years and over: 20 mg once daily, on days 1, 3, 5, 8, 10 and 12 of a 21-day cycle for 8 cycles. Patients with clinical benefit should continue treatment for 8 additional cycles; total duration 16 cycles (48 weeks), alternatively initially 15 mg once daily, on days 1, 3, 5, 8, 10 and 12 of a 21-day cycle for 1 cycle, increased if tolerated to 20 mg once daily, on days 1, 3, 5, 8, 10 and 12 of a 21-day cycle for 7 subsequent cycles, patients with clinical benefit should continue treatment for 8 additional cycles; total duration 16 cycles (48 weeks), lower dose may be used for the first cycle depending on patient's condition and co-morbidities, for doses of dexamethasone and bortezomib, or dose adjustment due to side-effects—consult product literature

#### DOSE ADJUSTMENTS DUE TO INTERACTIONS

- ▶ Manufacturer advises reduce dose to 10 mg with concurrent use of potent inhibitors of CYP3A4; if the potent inhibitor of CYP3A4 is to be continued, consider increasing the dose to 15 mg if tolerated.
- ▶ Manufacturer advises avoid potent inhibitors of CYP3A4 if possible in patients taking a reduced panobinostat dose due to side-effects, or in those with hepatic impairment.

#### IMPORTANT SAFETY INFORMATION

RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES  
See Cytotoxic drugs p. 962.

- **CAUTIONS** Coagulation disorders · elderly · QT-interval prolongation · risk factors for QT-interval prolongation
- CAUTIONS, FURTHER INFORMATION**
  - ▶ Risk factors for QT-interval prolongation Patients at risk of developing QT-interval prolongation include those with long QT syndrome, or uncontrolled or significant cardiac disease.
- **INTERACTIONS** → Appendix 1: panobinostat
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Anaemia · antibiotic associated colitis · appetite decreased · arrhythmias · asthenia · cheilitis · chills · cough · decreased leucocytes · diarrhoea · dizziness · dry mouth · dyspnoea · electrolyte imbalance · fever · fluid imbalance · gastrointestinal discomfort · gastrointestinal disorders · haemorrhage · headache · hepatic disorders · hyperbilirubinaemia · hyperglycaemia · hypertension · hyperuricaemia · hypoalbuminaemia · hypotension · hypothyroidism · increased risk of infection · insomnia · intracranial haemorrhage · joint swelling · malaise · nausea · neutropenia · palpitations · pancytopenia · peripheral oedema · QT interval prolongation · renal failure · respiratory disorders · sepsis · skin reactions · syncope · taste altered · thrombocytopenia · tremor · urinary incontinence · vomiting · weight decreased
  - ▶ **Uncommon** Haemorrhagic shock · myocardial infarction
- SIDE-EFFECTS, FURTHER INFORMATION** Side-effects are reported when used in combination with bortezomib and dexamethasone.

**Gastro-intestinal disorders** Manufacturer advises that patients are treated with anti-diarrhoeals, or any additional treatment, in accordance with local treatment guidelines at the first sign of abdominal cramping or onset of diarrhoea.

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises exclude pregnancy before starting treatment in women of child-bearing potential, and ensure highly effective contraception used during treatment and for 3 months after last dose. Women using hormonal contraceptives should also use a barrier method of contraception. Highly

effective contraception also required for men and their female partners during treatment and for 6 months after last dose.

- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—toxicity in *animal* studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild and moderate impairment (risk of increased exposure); avoid in severe impairment (no information available).  
**Dose adjustments** In mild impairment, manufacturer advises dose reduction to 15 mg for the first treatment cycle, dose may be increased to 20 mg based on patient tolerability; in moderate impairment, manufacturer advises dose reduction to 10 mg for the first treatment cycle, dose may be increased to 15 mg based on patient tolerability.
- **MONITORING REQUIREMENTS**
  - ▶ Manufacturer advises monitor full blood count before treatment, then frequently during treatment; reduce dose or interrupt treatment if thrombocytopenia or neutropenia occur—consult product literature.
  - ▶ Manufacturer advises monitor ECG before treatment and repeat periodically before each treatment cycle; QTcF should be <480 milliseconds before treatment initiation—consult product literature.
  - ▶ Manufacturer advises monitor electrolytes before treatment and periodically as clinically indicated, especially in patients with diarrhoea; monitor thyroid and pituitary function (free T4 and TSH) as clinically indicated; monitor hepatic function before treatment and regularly during treatment as clinically indicated.
  - ▶ Manufacturer advises monitor patients over 65 years more frequently, especially for thrombocytopenia and gastrointestinal toxicity.
- **PATIENT AND CARER ADVICE** Manufacturer advises that patients and their carers should be told to seek medical advice if severe gastro-intestinal toxicity occurs.  
**Missed doses** Manufacturer advises if a dose is missed, it can be taken up to 12 hours after the specified dose time.  
**Driving and skilled tasks** Dizziness may affect performance of skilled tasks (e.g. driving).

- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website
- NICE decisions**
  - ▶ **Panobinostat for treating multiple myeloma after at least 2 previous treatments (January 2016)** NICE TA380  
Recommended with restrictions

For full details see funding body website

#### NICE decisions

- ▶ **Panobinostat for treating multiple myeloma after at least 2 previous treatments (January 2016)** NICE TA380  
Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Capsule

CAUTIONARY AND ADVISORY LABELS 25

▶ **Farydak** (Secura Bio (Ireland) Ltd)

**Panobinostat (as Panobinostat lactate anhydrous)**  
10 mg Farydak 10mg capsules | 6 capsule [POM](#) £3,492.00

**Panobinostat (as Panobinostat lactate anhydrous) 15 mg** Farydak 15mg capsules | 6 capsule [POM](#) £3,492.00

**Panobinostat (as Panobinostat lactate anhydrous)**  
20 mg Farydak 20mg capsules | 6 capsule [POM](#) £4,656.00

## Pegaspargase

25-Aug-2020

● **DRUG ACTION** Pegaspargase breaks down the amino acid L-asparagine, thereby interfering with the growth of malignant cells, which are unable to synthesise L-asparagine.

### ● INDICATIONS AND DOSE

#### Acute lymphoblastic leukaemia (in combination with other antineoplastic drugs) (specialist use only)

- ▶ BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INFUSION
- ▶ Adult 18–21 years: 2500 units/m<sup>2</sup> every 14 days
- ▶ Adult 22 years and over: 2000 units/m<sup>2</sup> every 14 days

● **CONTRA-INDICATIONS** History of pancreatitis · history of serious haemorrhagic event with previous L-asparaginase therapy · history of serious thrombosis with previous L-asparaginase therapy

● **CAUTIONS** Concomitant use of other hepatotoxic drugs (particularly in pre-existing hepatic impairment)—monitor hepatic function · diabetes (may raise blood glucose) · hypersensitivity reactions · marked decrease of leukocyte count at start of treatment is possible—may be associated with significant rise in serum uric acid and development of uric acid nephropathy

### CAUTIONS, FURTHER INFORMATION

▶ Hypersensitivity reactions Serious hypersensitivity reactions, including life-threatening anaphylaxis, can occur—pegaspargase should only be administered when appropriately trained staff and resuscitation facilities are immediately available; manufacturer advises patients should be closely monitored for signs of hypersensitivity during treatment and for an hour after administration. In the event of a hypersensitivity reaction, treatment should be stopped immediately and appropriate management initiated.

● **INTERACTIONS** → Appendix 1: pegaspargase

### ● SIDE-EFFECTS

▶ **Common or very common** Abdominal pain · anaemia · appetite decreased · ascites · coagulation disorders · diarrhoea · dyslipidaemia · embolism and thrombosis · febrile neutropenia · hepatic disorders · hyperglycaemia · hypersensitivity · hypoalbuminaemia · hypokalaemia · hypoxia · increased risk of infection · nausea · pain in extremity · pancreatitis (discontinue if suspected and do not restart if confirmed) · peripheral neuropathy · seizure · sepsis · skin reactions · stomatitis · syncope · vomiting · weight decreased

▶ **Rare or very rare** Encephalopathy · haemorrhage · necrotising pancreatitis

▶ **Frequency not known** Acute kidney injury · bone marrow disorders · confusion · diabetic ketoacidosis · drowsiness · fever · hyperammonaemia (monitor if symptoms present) · hyperglycaemic hyperosmolar nonketotic syndrome · hypoglycaemia · pancreatic pseudocyst · stroke · toxic epidermal necrolysis · tremor

**SIDE-EFFECTS, FURTHER INFORMATION** There have been rare reports of cholestasis, icterus, hepatic cell necrosis and hepatic failure with fatal outcome in patients receiving pegaspargase.

● **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception in men and women of child-bearing potential during treatment and for at least 6 months after discontinuing treatment; pegaspargase may reduce effectiveness of oral contraceptives—additional precautions (e.g. barrier method) are required, see also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **PREGNANCY** Manufacturer advises avoid unless essential. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **BREAST FEEDING** Manufacturer advises avoid—no information available.

● **HEPATIC IMPAIRMENT** Manufacturer advises avoid in severe impairment.

### ● MONITORING REQUIREMENTS

▶ Manufacturer advises trough serum asparaginase activity levels may be measured before the next administration of pegaspargase; consider switching to a different asparaginase preparation if target levels not reached—seek expert advice.

▶ Manufacturer advises monitor plasma and urine glucose levels during treatment; monitor coagulation profile at baseline and periodically during and after treatment (particularly with concomitant use of other drugs that inhibit coagulation); monitor serum amylase.

● **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises for intramuscular injection, volumes over 3 mL must be divided between more than one site.

● **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator between 2–8°C.

### ● PATIENT AND CARER ADVICE

Pancreatitis Manufacturer advises patients and carers should be told how to recognise signs and symptoms of pancreatitis and advised to seek medical attention if symptoms such as persistent, severe abdominal pain develop.

**Driving and skilled tasks** Manufacturer advises patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of confusion and somnolence.

### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

### NICE decisions

▶ Pegaspargase for treating acute lymphoblastic leukaemia (September 2016) NICE TA408 Recommended

### Scottish Medicines Consortium (SMC) decisions

▶ Pegaspargase (*Oncaspar*<sup>®</sup>) as a component of antineoplastic combination therapy in acute lymphoblastic leukaemia (ALL) in paediatric patients from birth to 18 years, and adult patients (November 2016) SMC No. 1197/16 Recommended

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Powder for solution for injection

▶ *Oncaspar* (Servier Laboratories Ltd)

Pegaspargase 3750 unit *Oncaspar* 3,750unit powder for solution for injection vials | 1 vial (PoM) £1,296.19 (Hospital only)

## Procarbazine

16-Nov-2021

● **DRUG ACTION** Procarbazine is a mild monoamine-oxidase inhibitor.

### ● INDICATIONS AND DOSE

#### Hodgkin's lymphoma

- ▶ BY MOUTH
- ▶ Adult: (consult local protocol)

### IMPORTANT SAFETY INFORMATION

RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES  
See Cytotoxic drugs p. 962.

● **CONTRA-INDICATIONS** Pre-existing severe leucopenia · pre-existing severe thrombocytopenia

● **CAUTIONS** Cardiovascular disease · cerebrovascular disease · epilepsy · pheochromocytoma · procarbazine is a mild monoamineoxidase inhibitor (dietary restriction is rarely considered necessary)

● **INTERACTIONS** → Appendix 1: procarbazine

**● SIDE-EFFECTS**

- ▶ **Common or very common** Appetite decreased
- ▶ **Frequency not known** Azoospermia · hepatic disorders · infection · lethargy · leucopenia · nausea · neutropenia · ovarian failure · pneumonitis · skin reactions · thrombocytopenia · vomiting
- **CONCEPTION AND CONTRACEPTION** Contraceptive advice required, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Avoid (teratogenic in *animal* studies and isolated reports in humans). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild to moderate impairment; avoid in severe impairment.
- **RENAL IMPAIRMENT** EvGr Caution in mild to moderate impairment; avoid in severe impairment. M

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Capsule**

CAUTIONARY AND ADVISORY LABELS 4

▶ **Procarbazine (Non-proprietary)**

Procarbazine (as Procarbazine hydrochloride)

50 mg Procarbazine 50mg capsules | 50 capsule PoM £411.35-£503.61 DT = £503.61**Raltitrexed**

10-Aug-2021

- **DRUG ACTION** Raltitrexed is a thymidylate synthase inhibitor.

**● INDICATIONS AND DOSE****Palliation of advanced colorectal cancer when fluorouracil and folinic acid cannot be used**

▶ BY INTRAVENOUS INFUSION

▶ Adult: (consult local protocol)

- **INTERACTIONS** → Appendix 1: raltitrexed

**● SIDE-EFFECTS**

- ▶ **Common or very common** Alopecia · anaemia · appetite decreased · arthralgia · asthenia · cellulitis · conjunctivitis · constipation · dehydration · diarrhoea · fever · gastrointestinal discomfort · headache · hyperbilirubinaemia · hyperhidrosis · influenza like illness · leucopenia · malaise · mucositis · muscle cramps · muscle tone increased · nausea · neutropenia · oral disorders · pain · peripheral oedema · sepsis · skin reactions · taste altered · thrombocytopenia · vomiting · weight decreased
- ▶ **Frequency not known** Gastrointestinal haemorrhage
- **CONCEPTION AND CONTRACEPTION** Ensure effective contraception during and for at least 6 months after treatment in men or women.
- **PREGNANCY** See *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild to moderate impairment; avoid in severe impairment, jaundice or decompensated disease (no information available).
- **RENAL IMPAIRMENT** EvGr Avoid if creatinine clearance less than 25 mL/minute. M  
**Dose adjustments** EvGr Reduce dose and increase dosing interval if creatinine clearance less than 65 mL/minute (consult product literature). M See p. 21.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Powder for solution for infusion**▶ **Tomudex** (Pfizer Ltd)**Raltitrexed 2 mg** Tomudex 2mg powder for solution for infusion vials | 1 vial PoM £148.75 (Hospital only)**IMMUNOSTIMULANTS > INTERFERONS****Ropeginterferon alfa-2b**

10-Sep-2021

- **DRUG ACTION** Ropeginterferon alfa-2b is a recombinant interferon alfa-2b conjugated with a two-arm methoxypropyl ethylene glycol, which increases the persistence of interferon alfa in the blood and decreases the mutated JAK2 V617F allele burden in patients with polycythaemia vera.

**● INDICATIONS AND DOSE****Polycythaemia vera (initiated under specialist supervision)**

▶ BY SUBCUTANEOUS INJECTION

▶ Adult: (consult product literature)

- **CONTRA-INDICATIONS** History or presence of autoimmune disease · immunosuppressed transplant patients · severe cardiovascular disease · severe psychiatric disorders (or history of), particularly severe depression, suicidal ideation or attempts · uncontrolled diabetes · uncontrolled thyroid disease

- **INTERACTIONS** → Appendix 1: interferons

**● SIDE-EFFECTS**

- ▶ **Common or very common** Alopecia · anaemia · anxiety · appetite decreased · arthralgia · arthritis · asthenia · atrial fibrillation · chills · constipation · depression · diarrhoea · dizziness · drowsiness · dry eye · dry mouth · dyspnoea · fever · gastrointestinal discomfort · hepatic disorders · hyperhidrosis · hyperthyroidism · hypertriglyceridaemia · hypothyroidism · increased risk of infection · influenza like illness · leucopenia · mood altered · muscle complaints · nausea · neutropenia · pain · pancytopenia · sensation abnormal · Sjögren's syndrome · skin reactions · sleep disorders · thrombocytopenia · thyroiditis
- ▶ **Uncommon** Abdominal wall disorder · aortic valve incompetence · atrioventricular block · cardiovascular disorder · cognitive impairment · coronary thrombosis · cough · deafness · erectile dysfunction · eye discomfort · flushing · gastrointestinal disorders · haematospermia · haemorrhage · hallucination · headaches · hypertension · muscle weakness · nail dystrophy · nerve disorders · odynophagia · photosensitivity reaction · pneumonitis · Raynaud's phenomenon · sarcoidosis · sensitivity to weather change · throat irritation · tinnitus · tremor · urinary disorders · vertigo · vision disorders · weight decreased
- **PREGNANCY** EvGr Avoid—toxicity in *animal* studies. M
- **BREAST FEEDING** EvGr Avoid—no information available. M
- **HEPATIC IMPAIRMENT** EvGr Avoid in severe impairment and decompensated cirrhosis. M  
**Dose adjustments** EvGr Reduce dose if progressive and persistent increases in liver enzyme levels occur—consult product literature. M
- **RENAL IMPAIRMENT** EvGr Avoid in end-stage renal disease. M  
**Dose adjustments** EvGr Reduce dose in severe impairment—consult product literature. M
- **MONITORING REQUIREMENTS**
  - ▶ EvGr Full blood count (including haematocrit level, leucocyte and platelet counts), renal function and liver function should be monitored regularly during treatment.

► Patients should be monitored for signs of visual disturbances—eye examinations are recommended at baseline and during treatment. 

● **DIRECTIONS FOR ADMINISTRATION**  Inject into the thigh or abdomen (except for the 5 cm around the navel); avoid skin that is tender, infected or scarred.  Patients may self-administer *Besremi*<sup>®</sup> after appropriate training in subcutaneous injection technique.

● **PRESCRIBING AND DISPENSING INFORMATION**  
Rogeperferon alfa-2b is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1; record the brand name and batch number after each administration.

● **HANDLING AND STORAGE** Store in a refrigerator (2–8°C) and protect from light—consult product literature for further information regarding storage conditions after first use.

● **PATIENT AND CARER ADVICE**

**Driving and skilled tasks** Patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of dizziness and somnolence.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

EXCIPIENTS: May contain Benzyl alcohol, polysorbates

► *Besremi* (AOP Orphan Ltd) ▼

## RETINOID AND RELATED DRUGS

### Bexarotene

20-Nov-2020

● **DRUG ACTION** Bexarotene is an agonist at the retinoid X receptor, which is involved in the regulation of cell differentiation and proliferation. Bexarotene can cause regression of cutaneous T-cell lymphoma.

● **INDICATIONS AND DOSE**

**Skin manifestations of cutaneous T-cell lymphoma refractory to previous systemic treatment**

► BY MOUTH

► Adult: Initially 300 mg/m<sup>2</sup> once daily, adjusted according to response, to be taken with a meal

**IMPORTANT SAFETY INFORMATION**

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES** See Cytotoxic drugs p. 962.

**MHRA/CHM ADVICE: ORAL RETINOID MEDICINES: REVISED AND SIMPLIFIED PREGNANCY PREVENTION EDUCATIONAL MATERIALS FOR HEALTHCARE PROFESSIONALS AND WOMEN (JUNE 2019)**

Materials to support the Pregnancy Prevention Programme in women and girls of childbearing potential taking oral acitretin, alitretinoin, or isotretinoin have been updated. Oral tretinoin and bexarotene do not have a Pregnancy Prevention Programme in light of their oncology indication and specialist care setting. However, healthcare professionals are advised that these medicines are extremely teratogenic and product information should be consulted for contraceptive and pregnancy testing requirements when used in females of childbearing potential.

Neuropsychiatric reactions have been reported in patients taking oral retinoids. Healthcare professionals are advised to monitor patients for signs of depression or suicidal ideation and refer for appropriate treatment, if necessary; particular care is needed in those with a history of depression. Patients should be advised to speak to their doctor if they experience any changes in

mood or behaviour, and encouraged to ask family and friends to look out for any change in mood.

- **CONTRA-INDICATIONS** History of pancreatitis · hypervitaminosis A · uncontrolled hyperlipidaemia · uncontrolled hypothyroidism
- **CAUTIONS** Avoid in Acute porphyrias p. 1150 · history of depression (risk of neuropsychiatric reactions) · hyperlipidaemia · hypothyroidism
- **INTERACTIONS** → Appendix 1: retinoids
- **SIDE-EFFECTS**
  - **Common or very common** Alopecia · anaemia · appetite decreased · arthralgia · asthenia · chills · constipation · deafness · diarrhoea · dizziness · dry eye · dry mouth · dyslipidaemia · eye disorders · gastrointestinal discomfort · gastrointestinal disorders · headaches · hyperhidrosis · hypersensitivity · hypoproteinaemia · hypothyroidism · increased risk of infection · insomnia · leucopenia · lymphadenopathy · muscle complaints · nausea · oedema · oral disorders · pain · pseudolymphoma · sensation abnormal · skin nodule · skin reactions · skin ulcer · thyroid disorder · vomiting · weight changes
  - **Uncommon** Albuminuria · anxiety · arrhythmias · ataxia · blood disorder · cataract · coagulation disorder · depression · ear disorder · eosinophilia · eye inflammation · fever · gout · haemorrhage · hair disorder · hepatic failure · hyperbilirubinaemia · hypertension · hyperthyroidism · increased leucocytes · mucous membrane disorder · muscle weakness · nail disorder · neoplasms · nerve disorders · pancreatitis · renal impairment · serous drainage · thrombocytopenia · thrombocytosis · varicose veins · vasodilation · vertigo · vision disorders
  - **Frequency not known** Burping · chest pain · confusion · cough aggravated · dehydration · drowsiness · dysphagia · dyspnoea · emotional lability · hypercalcaemia · hyperuricaemia · libido decreased · muscle tone increased · pelvic pain · peripheral vascular disease · red blood cell abnormality · taste altered · thirst · tinnitus · white blood cell abnormalities
- **ALLERGY AND CROSS-SENSITIVITY**  Caution—hypersensitivity to retinoids. 
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during and for at least 1 month after treatment in men and women.
- **PREGNANCY** Avoid. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid in hepatic insufficiency.
- **PATIENT AND CARER ADVICE**  
Risk of neuropsychiatric reactions The MHRA advises patients and carers to seek medical attention if changes in mood or behaviour occur.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website
- **Scottish Medicines Consortium (SMC) decisions**
  - Bexarotene (*Targretin*<sup>®</sup>) for skin manifestations of advanced stage cutaneous T-cell lymphoma (November 2002) SMC No. 14/02 Recommended with restrictions

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Capsule**

► *Targretin* (Eisai Ltd)

*Bexarotene* 75 mg *Targretin* 75mg capsules | 100 capsule  £937.50

## Tretinoin

18-May-2021

### ● INDICATIONS AND DOSE

**Induction of remission in acute promyelocytic leukaemia (used in previously untreated patients as well as in those who have relapsed after standard chemotherapy or who are refractory to it)**

#### ► BY MOUTH

- Adult: 45 mg/m<sup>2</sup> daily in 2 divided doses maximum duration of treatment is 90 days, consult product literature for details of concomitant chemotherapy

### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: ORAL RETINOID MEDICINES: REVISED AND SIMPLIFIED PREGNANCY PREVENTION EDUCATIONAL MATERIALS FOR HEALTHCARE PROFESSIONALS AND WOMEN (JUNE 2019)

Materials to support the Pregnancy Prevention Programme in women and girls of childbearing potential taking oral acitretin, all-tretinoin, or isotretinoin have been updated. Oral tretinoin and bexarotene do not have a Pregnancy Prevention Programme in light of their oncology indication and specialist care setting. However, healthcare professionals are advised that these medicines are extremely teratogenic and product information should be consulted for contraceptive and pregnancy testing requirements when used in females of childbearing potential.

Neuropsychiatric reactions have been reported in patients taking oral retinoids. Healthcare professionals are advised to monitor patients for signs of depression or suicidal ideation and refer for appropriate treatment, if necessary; particular care is needed in those with a history of depression. Patients should be advised to speak to their doctor if they experience any changes in mood or behaviour, and encouraged to ask family and friends to look out for any change in mood.

- **CAUTIONS** History of depression (risk of neuropsychiatric reactions) · increased risk of thromboembolism during first month of treatment

- **INTERACTIONS** → Appendix 1: retinoids

#### ● SIDE-EFFECTS

- **Common or very common** Abdominal pain · alopecia · anxiety · appetite decreased · arrhythmia · asthma · bone pain · cheilitis · chest pain · chills · confusion · constipation · depression · diarrhoea · dizziness · dry mouth · flushing · headache · hearing impairment · hyperhidrosis · insomnia · intracranial pressure increased · malaise · nasal dryness · nausea · pancreatitis · paraesthesia · respiratory disorders · skin reactions · visual impairment · vomiting
- **Frequency not known** Embolism and thrombosis · erythema nodosum · genital ulceration · hepatotoxicity · hypercalcaemia · increased leucocytes · myocardial infarction · myositis · necrotising fasciitis · QT interval prolongation · stroke · thrombocytosis · vasculitis

**SIDE-EFFECTS, FURTHER INFORMATION Retinoic acid syndrome** Fever, dyspnoea, acute respiratory distress, pulmonary infiltrates, pleural effusion, hyperleucocytosis, hypotension, oedema, weight gain, hepatic, renal and multi-organ failure requires immediate treatment—consult product literature.

- **CONCEPTION AND CONTRACEPTION** Effective contraception must be used for at least 1 month before oral treatment, during treatment and for at least 1 month after stopping (oral progestogen-only contraceptives not considered effective). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **PREGNANCY** Teratogenic. See *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **BREAST FEEDING** Avoid (discontinue breast-feeding).

- **HEPATIC IMPAIRMENT** Manufacturer advises caution. **Dose adjustments** Manufacturer advises dose reduction to 25 mg/m<sup>2</sup>.

#### ● RENAL IMPAIRMENT

**Dose adjustments** [E<sub>V</sub>Gr](#) Reduce dose to 25 mg/m<sup>2</sup>. [M](#)

- **MONITORING REQUIREMENTS** Monitor haematological and coagulation profile, liver function, serum calcium and plasma lipids before and during treatment.

- **PRESCRIBING AND DISPENSING INFORMATION** Tretinoin is the acid form of vitamin A.

#### ● PATIENT AND CARER ADVICE

Risk of neuropsychiatric reactions The MHRA advises patients and carers to seek medical attention if changes in mood or behaviour occur.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Capsule**

CAUTIONARY AND ADVISORY LABELS 21, 25

#### ► Tretinoin (Non-proprietary)

**Tretinoin 10 mg** Tretinoin 10mg capsules | 100 capsule [POM](#)  
£325.00 DT = £325.00

## 3.1 Cytotoxic drug-induced side effects

### ANTIDOTES AND CHELATORS > IRON CHELATORS

#### Dexrazoxane

13-Sep-2021

- **DRUG ACTION** Dexrazoxane is an iron chelator.

### ● INDICATIONS AND DOSE

#### CARDIOXANE<sup>®</sup>

**Prevention of chronic cumulative cardiotoxicity caused by doxorubicin or epirubicin treatment in advanced or metastatic breast cancer patients who have received a prior cumulative dose of 300 mg/m<sup>2</sup> of doxorubicin or a prior cumulative dose of 540 mg/m<sup>2</sup> of epirubicin when further anthracycline treatment is required**

#### ► BY INTRAVENOUS INFUSION

- **Adult:** Administer 10 times the doxorubicin-equivalent dose or 10 times the epirubicin-equivalent dose, dose to be given 30 minutes before anthracycline administration

#### SAVENE<sup>®</sup>

#### **Anthracycline extravasation**

#### ► BY INTRAVENOUS INFUSION

- **Adult:** Initially 1 g/m<sup>2</sup> daily (max. per dose 2 g) for 2 days, then 500 mg/m<sup>2</sup> for 1 day, first dose to be given as soon as possible and within 6 hours after injury

- **CAUTIONS** Myelosuppression (effects may be additive to those of chemotherapy)

**CARDIOXANE<sup>®</sup>** Heart failure—no information available · myocardial infarction in previous 12 months—no information available · symptomatic valvular heart disease—no information available · uncontrolled angina—no information available

- **INTERACTIONS** → Appendix 1: iron chelators

#### ● SIDE-EFFECTS

- **Common or very common** Alopecia · anaemia · appetite decreased · asthenia · constipation · cough · diarrhoea · dizziness · drowsiness · dry mouth · dyspnoea · embolism and thrombosis · fever · gastrointestinal discomfort · headache · increased risk of infection · leucopenia · myalgia · nail disorder · nausea · neutropenia · peripheral neuropathy · peripheral oedema · post procedural infection · sensation abnormal · skin reactions · stomatitis · syncope ·

tachycardia · thrombocytopenia · tremor · vaginal haemorrhage · vomiting · weight decreased · wound complications

- ▶ **Uncommon** Acute myeloid leukaemia · lymphoedema · sepsis · thirst · vertigo
- ▶ **Frequency not known** Anaphylactic reaction
- **CONCEPTION AND CONTRACEPTION** Ensure effective contraception during and for at least 3 months after treatment in men and women.
- **PREGNANCY** Avoid unless essential (toxicity in *animal* studies).
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT**  
**CARDIOXANE**® Manufacturer advises caution (no information available).  
**Dose adjustments** Manufacturer advises if anthracycline dose is reduced, reduce the *Cardioxane*® dose by a similar ratio.  
**SAVENE**® Manufacturer advises avoid (no information available).
- **RENAL IMPAIRMENT**  
**Dose adjustments** [EvGr] Reduce dose by 50% if creatinine clearance less than 40 mL/minute. ⚠ See p. 21.
- **MONITORING REQUIREMENTS**
  - ▶ Monitor full blood count.
  - ▶ Monitor for cardiac toxicity.
  - ▶ Monitor liver function.
- **DIRECTIONS FOR ADMINISTRATION**  
**CARDIOXANE**® For *intravenous infusion*, give intermittently in Compound sodium lactate; reconstitute each vial with 25 mL water for injections and dilute each vial with 25–100 mL infusion fluid; give requisite dose over 15 minutes.  
**SAVENE**® For *intravenous infusion*, give intermittently in diluent; reconstitute each 500-mg vial with 25 mL of diluent; dilute requisite dose further in remaining diluent and give over 1–2 hours into a large vein in an area other than the one affected. Local coolants such as ice packs should be removed at least 15 minutes before administration.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for solution for infusion

- ▶ **Cardioxane** (Clinigen Healthcare Ltd)  
**Dexrazoxane 500 mg** *Cardioxane* 500mg powder for solution for infusion vials | 1 vial [PoM] £156.57

#### Powder and solvent for solution for infusion

- ELECTROLYTES: May contain Potassium, sodium
- ▶ **Savene** (Clinigen Healthcare Ltd)  
**Dexrazoxane 500 mg** *Savene* 500mg powder for concentrate and solvent for solution for infusion vials | 10 vial [PoM] £6,750.00 (Hospital only)

## DETOXIFYING DRUGS > UROPROTECTIVE DRUGS

### Mesna

16-Dec-2020

#### ● INDICATIONS AND DOSE

##### Cytotoxic induced urothelial toxicity

- ▶ BY MOUTH, OR BY INTRAVENOUS INJECTION
- ▶ **Adult:** Dose to be calculated according to oxazaphosphorine (cyclophosphamide or ifosfamide) treatment (consult product literature)

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Appetite decreased · arthralgia · asthenia · chest pain · chills · concentration impaired · conjunctivitis · constipation · cough · dehydration · diarrhoea · dizziness · drowsiness · dry mouth · dyspnoea · dysuria · fever · flatulence · flushing · gastrointestinal

discomfort · haemorrhage · headache · hyperhidrosis · influenza like illness · laryngeal discomfort · lymphadenopathy · malaise · mucosal irritation · myalgia · nasal congestion · nausea · oral irritation · pain · palpitations · respiratory disorders · sensation abnormal · skin reactions · sleep disorders · syncope · vision disorders · vomiting

- ▶ **Frequency not known** Acute kidney injury · angioedema · drug reaction with eosinophilia and systemic symptoms (DRESS) · hypotension · hypoxia · oedema · tachycardia · ulcer
- **ALLERGY AND CROSS-SENSITIVITY** [EvGr] Caution if history of hypersensitivity to thiol-containing compounds. ⚠
- **PREGNANCY** Not known to be harmful. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **EFFECT ON LABORATORY TESTS** False positive urinary ketones. False positive or false negative urinary erythrocytes.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises for administration *by mouth*, injection solution may be given in a flavoured drink such as orange juice or cola which may be stored in a refrigerator for up to 24 hours in a sealed container.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral solution

#### Solution for injection

##### ▶ Mesna (Non-proprietary)

**Mesna 100 mg per 1 mL** Mesna 1g/10mL solution for injection ampoules | 15 ampoule [PoM] £441.15-£447.15  
**Mesna 400mg/4mL** solution for injection ampoules | 15 ampoule [PoM] £201.15

#### Tablet

##### ▶ Mesna (Non-proprietary)

**Mesna 400 mg** Mesna 400mg tablets | 10 tablet [PoM] £134.30  
**Mesna 600 mg** Mesna 600mg tablets | 10 tablet [PoM] £190.60

## VITAMINS AND TRACE ELEMENTS > FOLATES

### Folinic acid

17-Feb-2021

#### ● INDICATIONS AND DOSE

##### Prevention of methotrexate-induced adverse effects

- ▶ BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION
- ▶ **Adult:** 15 mg every 6 hours for 24 hours, to be started usually 12–24 hours after start of methotrexate infusion, dose may be continued by mouth, consult local treatment protocol for further information

##### Suspected methotrexate overdose

- ▶ BY INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION
- ▶ **Adult:** Initial dose equal to or exceeding dose of methotrexate, to be given at a maximum rate of 160 mg/minute, consult poisons information centres for advice on continuing management

##### Adjunct to fluorouracil in colorectal cancer

- ▶ BY SLOW INTRAVENOUS INJECTION
- ▶ **Adult:** (consult product literature)

#### SODIOFOLIN®

##### As an antidote to methotrexate

- ▶ BY INTRAVENOUS INFUSION, OR BY INTRAVENOUS INJECTION
- ▶ **Adult:** (consult product literature)

##### Adjunct to fluorouracil in colorectal cancer

- ▶ BY INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION
- ▶ **Adult:** (consult product literature)

- **CONTRA-INDICATIONS** Intrathecal injection

- **CAUTIONS** Avoid simultaneous administration of methotrexate · **not** indicated for pernicious anaemia or

other megaloblastic anaemias caused by vitamin B<sub>12</sub> deficiency

- **INTERACTIONS** → Appendix 1: folates
- **SIDE-EFFECTS**
  - ▶ **Common or very common**
    - ▶ With intravenous use Bone marrow failure · dehydration · diarrhoea · mucositis · nausea · oral disorders · skin reactions · vomiting
  - ▶ **Uncommon** Fever
  - ▶ **Rare or very rare**
    - ▶ With intramuscular use Agitation (with high doses) · depression (with high doses) · epilepsy exacerbated · gastrointestinal disorder · insomnia (with high doses) · urticaria
    - ▶ With intravenous use Agitation (with high doses) · depression (with high doses) · epilepsy exacerbated · gastrointestinal disorder · insomnia (with high doses) · sensitisation
  - ▶ **Frequency not known**
    - ▶ With intravenous use Hyperammonaemia
- **PREGNANCY** Not known to be harmful; benefit outweighs risk.
- **BREAST FEEDING** Presence in milk unknown but benefit outweighs risk.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
- **NICE decisions**
  - ▶ Bevacizumab in combination with oxaliplatin and either fluorouracil plus folinic acid or capecitabine for the treatment of metastatic colorectal cancer (December 2010) NICE TA212 Not recommended
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution
- **Tablet**
  - ▶ **Folinic acid (Non-proprietary)**
    - ▶ **Folinic acid (as Calcium folinate) 15 mg** Calcium folinate 15mg tablets | 10 tablet [PoM] £58.75 DT = £50.23
  - ▶ **Refolinon** (Pfizer Ltd)
    - ▶ **Folinic acid (as Calcium folinate) 15 mg** Refolinon 15mg tablets | 30 tablet [PoM] £85.74
- **Solution for injection**
  - ▶ **Folinic acid (Non-proprietary)**
    - ▶ **Folinic acid (as Calcium folinate) 7.5 mg per 1 ml** Calcium folinate 15mg/2ml solution for injection ampoules | 5 ampoule [PoM] £39.00 DT = £39.00 (Hospital only)
    - ▶ **Folinic acid (as Calcium folinate) 10 mg per 1 ml** Calcium folinate 200mg/20ml solution for injection vials | 1 vial [PoM] £83.93 | 10 vial [PoM] £839.30
    - ▶ **Calcium folinate 300mg/30ml solution for injection vials** | 1 vial [PoM] £100.00 (Hospital only)
    - ▶ **Calcium folinate 350mg/35ml solution for injection vials** | 1 vial [PoM] £139.52 (Hospital only) | 10 vial [PoM] £1,395.20 (Hospital only)
    - ▶ **Calcium folinate 100mg/10ml solution for injection vials** | 1 vial [PoM] £37.50-£44.17 (Hospital only) | 10 vial [PoM] £441.70 (Hospital only)
    - ▶ **Calcium folinate 50mg/5ml solution for injection vials** | 1 vial [PoM] £20.00 (Hospital only) | 1 vial [PoM] £23.65 | 10 vial [PoM] £236.50
  - ▶ **Sodiofolin** (medac UK)
    - ▶ **Folinic acid (as Disodium folinate) 50 mg per 1 ml** Sodiofolin 400mg/8ml solution for injection vials | 1 vial [PoM] £126.25 (Hospital only)
    - ▶ Sodiofolin 100mg/2ml solution for injection vials | 1 vial [PoM] £35.00 (Hospital only)

## Levofolinic acid

17-Feb-2021

- **DRUG ACTION** Levofolinic acid is an isomer of folinic acid.

### ● INDICATIONS AND DOSE

#### Prevention of methotrexate-induced adverse effects

- ▶ BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION
- ▶ **Adult:** Usual dose 7.5 mg every 6 hours for 10 doses, usually started 12–24 hours after beginning of methotrexate infusion

#### Suspected methotrexate overdose

- ▶ BY INTRAVENOUS INFUSION, OR BY INTRAVENOUS INJECTION
- ▶ **Adult:** Initial dose at least 50% of the dose of methotrexate, intravenous infusion to be administered at a maximum rate of 160 mg/minute, consult poisons information centres for advice on continuing management

#### Adjunct to fluorouracil in colorectal cancer

- ▶ BY SLOW INTRAVENOUS INJECTION
- ▶ **Adult:** (consult product literature)

- **CONTRA-INDICATIONS** Intrathecal injection
- **CAUTIONS** Avoid simultaneous administration of methotrexate · **not** indicated for pernicious anaemia or other megaloblastic anaemias caused by vitamin B<sub>12</sub> deficiency
- **INTERACTIONS** → Appendix 1: folates
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Dehydration · diarrhoea · mucosal toxicity · nausea · vomiting
  - ▶ **Uncommon** Fever
  - ▶ **Rare or very rare** Agitation (with high doses) · depression (with high doses) · epilepsy exacerbated · gastrointestinal disorder · insomnia (with high doses) · urticaria
- **PREGNANCY** Not known to be harmful; benefit outweighs risk.
- **BREAST FEEDING** Presence in milk unknown but benefit outweighs risk.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ▶ Levofolinic acid (Non-proprietary)

#### Levofolinic acid (as Disodium levofolinate) 50 mg per

- 1 ml Levofolinic acid 50mg/1ml solution for injection vials | 1 vial [PoM] £24.70 (Hospital only)

- Levofolinic acid 200mg/4ml solution for injection vials | 1 vial [PoM] £80.40 (Hospital only)

##### ▶ Isovorin (Pfizer Ltd)

- ▶ **Levofolinic acid (as Calcium levofolinate) 10 mg per 1 ml** Isovorin 175mg/17.5ml solution for injection vials | 1 vial [PoM] £81.33 (Hospital only)
- ▶ Isovorin 25mg/2.5ml solution for injection vials | 1 vial [PoM] £11.62 (Hospital only)

## 3.1a Hyperuricaemia associated with cytotoxic drugs

**Other drugs used for Hyperuricaemia associated with cytotoxic drugs** Allopurinol, p. 1213 · Febuxostat, p. 1214

## DETOXIFYING DRUGS &gt; URATE OXIDASES

## Rasburicase

21-Nov-2020

## ● INDICATIONS AND DOSE

**Prophylaxis and treatment of acute hyperuricaemia, before and during initiation of chemotherapy, in patients with haematological malignancy and high tumour burden at risk of rapid lysis**

## ▶ BY INTRAVENOUS INFUSION

- Adult: 200 micrograms/kg once daily for up to 7 days according to plasma-uric acid concentration

- **CONTRA-INDICATIONS** G6PD deficiency
- **CAUTIONS** Atopic allergies
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Diarrhoea · fever · headache · nausea · skin reactions · vomiting
  - ▶ **Uncommon** Bronchospasm · haemolysis · haemolytic anaemia · hypersensitivity · hypotension · methaemoglobinaemia · seizure
  - ▶ **Rare or very rare** Rhinitis
  - ▶ **Frequency not known** Muscle contractions involuntary
- **PREGNANCY** Manufacturer advises avoid—no information available.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **MONITORING REQUIREMENTS** Monitor closely for hypersensitivity.
- **EFFECT ON LABORATORY TESTS** May interfere with test for uric acid—consult product literature.
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion (Fasturtec®)*, manufacturer advises give intermittently in Sodium chloride 0.9%; reconstitute with solvent provided; gently swirl vial without shaking to dissolve; dilute requisite dose to 50 mL with infusion fluid and give over 30 minutes.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.
 

**Powder and solvent for solution for infusion**

  - ▶ **Fasturtec** (Sanofi)
 

<b>Rasburicase 1.5 mg</b>	Fasturtec 1.5mg powder and solvent for solution for infusion vials   3 vial	[PoM]	£208.39 (Hospital only)
<b>Rasburicase 7.5 mg</b>	Fasturtec 7.5mg powder and solvent for solution for infusion vials   1 vial	[PoM]	£347.32 (Hospital only)

## 4 Hormone responsive malignancy

### Breast cancer

14-Sep-2020

#### Description of condition

Breast cancer is the most common form of malignancy in women, especially in those aged over 50 years. Established risk factors include age, early onset of menstruation, late menopause, older age at first completed pregnancy, and a family history of breast cancer. The use of oral contraceptives or hormone replacement therapy (HRT) is also associated with an increased risk of breast cancer.

Breast cancer in men is rare. Although risk factors are not fully understood, it may be associated with abnormalities of sex hormone metabolism, including those caused by liver disease or testicular trauma, genetic predisposition, and environmental risk factors such as industrial exposure to chronic heat.

Additional risk factors include obesity and alcohol consumption.

Physical activity and breast-feeding protect against breast cancer.

Non-invasive breast cancer, also known as ductal carcinoma *in situ*, is when the cancer remains localised in the ducts. However, in most cases, the cancer is invasive at the time of diagnosis, which means that malignant cells are liable to spread beyond the immediate area of the tumour. Invasive breast cancer, where malignant cells spread beyond the ducts, can be defined as early breast cancer (stage I/II), locally advanced disease (stage III) and advanced disease (stage IV).

#### Aims of treatment

Reducing mortality, increasing progression-free and disease-free survival and improving quality of life are the main aims of treatment, and are dependent on the stage of the disease.

Surgery and radiotherapy aim to remove the tumour mass, whilst adjuvant drug therapy (drug treatment following surgery) aims to reduce the risk of disease recurrence and the risk of developing invasive disease. Neoadjuvant drug therapy (drug treatment before surgery) aims to reduce the size of the tumour to allow breast-conserving surgery to be possible and to reduce axillary lymph node involvement. Advanced breast cancer is not curable, and treatment aims to prolong survival, relieve symptoms and improve quality of life.

#### Overview

The management of patients with breast cancer involves surgery, radiotherapy, drug therapy, or a combination of these. The course of the disease and the therapeutic approach vary depending on the characteristics of the cancer. Factors such as patient age, menopausal status, tumour size and grade, involvement of axillary lymph nodes or skin, and the presence of hormone receptors within the tumour, may inform the extent and aggressiveness of the disease. [EvGr] The risks and benefits of each therapy should be discussed with the patient before being started. ⚠

#### Early and locally advanced breast cancer

For operable breast cancer, treatment involves surgery to the breast (breast-conserving surgery or mastectomy) and to the axillary lymph nodes, with or without radiotherapy to reduce local recurrence rates. This is often followed by adjuvant drug therapy to eradicate the micro-metastases that cause relapses. [EvGr] In women with invasive breast cancer, radiotherapy is recommended after breast-conserving surgery with clear margins (no cancer cells are found at the edges of the removed tissue), as it reduces local recurrence rates. However, the use of radiotherapy may be omitted if risk of local recurrence is very low and the woman is willing to take adjuvant endocrine therapy for a minimum of 5 years. Radiotherapy is also recommended after mastectomy in patients with node-positive invasive breast cancer or involved resection margins (cancer cells are found at the edges of the removed tissue). It should also be considered in patients with node-negative T3 or T4 invasive breast cancer. ⚠

#### Adjuvant drug therapy

Adjuvant drug therapy may include the use of chemotherapy, endocrine therapy, biological therapy, or bisphosphonate therapy. [EvGr] The decision to use adjuvant drug therapy should be based on the risks and benefits of treatment, disease prognosis and predictive factors such as oestrogen receptor (ER), progesterone receptor (PR), and human epidermal growth receptor 2 (HER2) status of the primary tumour.

In women with invasive breast cancer in only one breast who have not received treatment, including the use of neoadjuvant chemotherapy, NICE clinical guideline 101 recommends the use of the PREDICT tool to estimate

prognosis and the absolute benefits of adjuvant therapy ([www.predict.nhs.uk](http://www.predict.nhs.uk)).  $\blacklozenge$

#### Chemotherapy

**EVGr** Adjuvant anthracycline–taxane combination chemotherapy is recommended in patients with invasive breast cancer who are at sufficient risk of disease recurrence to require chemotherapy.  $\blacklozenge$  The choice of chemotherapy regimen is usually guided by local policy, Cancer Alliances, and the National Cancer Drugs Fund list.

#### Biological therapy

**EVGr** Trastuzumab p. 958 should be offered to patients with tumour size T1c and above HER2-positive invasive breast cancer, in combination with surgery, chemotherapy, or radiotherapy. It should also be considered in patients with a smaller tumour size (T1a or T1b) depending on their comorbidities, prognosis, and possible toxicity with concomitant chemotherapy. Cardiac function should be regularly assessed in patients receiving trastuzumab p. 958, and particular caution should be taken in patients with underlying cardiac disease (consult product literature for further details).  $\blacklozenge$

#### Endocrine therapy

**EVGr** Tamoxifen p. 1028 should be used as initial adjuvant endocrine therapy in men and premenopausal women with oestrogen-receptor-positive invasive breast cancer. In addition, ovarian function suppression with a gonadotropin-releasing hormone (GnRH) should be considered in premenopausal women, taking into account the risk of temporary menopause.  $\blacklozenge$  Ovarian function suppression aims to stop the production of circulating oestrogen, which can stimulate breast cancer progression. It may be most beneficial in women who are at sufficient risk of disease recurrence to have been offered chemotherapy.

**EVGr** In postmenopausal women with oestrogen-receptor positive invasive breast cancer who are at medium or high-risk of disease recurrence, an aromatase inhibitor should be given as first-line therapy. Alternatively, tamoxifen should be given if an aromatase inhibitor is not tolerated or is contra-indicated, or if the risk of disease recurrence is low.  $\blacklozenge$

#### Extended endocrine therapy

**EVGr** Extended endocrine therapy (total duration longer than 5 years) with an aromatase inhibitor [unlicensed indication] should be offered to postmenopausal women with oestrogen-receptor-positive invasive breast cancer at medium or high-risk of disease recurrence who have been taking tamoxifen for 2 to 5 years. Extended therapy should also be considered in postmenopausal women at low risk of disease recurrence.

Extended tamoxifen therapy for longer than 5 years can also be considered in both premenopausal and postmenopausal women with oestrogen-receptor-positive invasive breast cancer.  $\blacklozenge$

#### Endocrine therapy for ductal carcinoma in situ

**EVGr** Following breast-conserving surgery, endocrine therapy should be offered to women with oestrogen-positive ductal carcinoma *in situ*, if radiotherapy is recommended but not given. If radiotherapy is **not** recommended, the use of endocrine therapy should also be considered.  $\blacklozenge$

#### Bisphosphonate therapy

Zoledronic acid p. 732 and sodium clodronate p. 731 have been shown to improve disease-free survival and overall survival in postmenopausal women with node-positive invasive breast cancer. However, there is insufficient evidence to recommend their use in premenopausal women.

**EVGr** Intravenous zoledronic acid [unlicensed indication] or oral sodium clodronate [unlicensed indication] should be offered to postmenopausal women with lymph-node-positive invasive breast cancer. Treatment should be considered in those with lymph-node-negative invasive breast cancer who are at high-risk of recurrence.

Bisphosphonate therapy is also recommended in women at high-risk of osteoporosis due to the use of aromatase inhibitors in postmenopausal women, or in women with treatment-induced premature menopause. For further information, see Guidance for the management of breast cancer treatment-induced bone loss: a consensus position statement from a UK expert group, 2008.  $\blacklozenge$

#### Neoadjuvant drug therapy

Neoadjuvant drug therapy may involve the use of chemotherapy or endocrine therapy.

#### Chemotherapy

**EVGr** Neoadjuvant chemotherapy should be offered to reduce tumour size in patients with oestrogen-receptor-negative invasive breast cancer. In patients with oestrogen-receptor-positive invasive breast cancer, chemotherapy should be considered. In patients with HER2-positive invasive breast cancer, neoadjuvant chemotherapy should be offered in combination with trastuzumab p. 958 and pertuzumab p. 952.

A chemotherapy regimen containing both a platinum [unlicensed indication] and an anthracycline should be considered in patients with triple-negative invasive breast cancer (oestrogen-receptor-negative, progesterone-receptor negative and HER2-negative).  $\blacklozenge$

#### Endocrine therapy

**EVGr** If chemotherapy is not indicated, neoadjuvant endocrine therapy should be considered as an alternative in postmenopausal women with oestrogen-receptor-positive invasive breast cancer.  $\blacklozenge$  Chemotherapy and endocrine therapy are equally effective in postmenopausal women in terms of breast-conservation and shrinking of the tumour. Although chemotherapy is more effective than endocrine therapy at shrinking the tumour in premenopausal women, some tumours may respond to endocrine treatment.

#### Advanced breast cancer

Treatment of advanced breast cancer depends on the patient's treatment history, disease severity, and oestrogen receptor and HER2 status.

#### Endocrine therapy

**EVGr** For the majority of patients with oestrogen-receptor-positive advanced breast cancer, endocrine therapy is recommended as first-line treatment. Aromatase inhibitors should be offered to postmenopausal women with no previous history of endocrine treatment, or to those previously treated with tamoxifen p. 1028.

Tamoxifen in combination with ovarian function suppression should be offered as first-line treatment to pre- and perimenopausal women with oestrogen-receptor-positive advanced breast cancer not previously treated with tamoxifen.

Ovarian function suppression should be offered to pre- and perimenopausal women who have had disease progression despite treatment with tamoxifen.

Tamoxifen should be offered as first-line treatment to men with oestrogen-receptor-positive advanced breast cancer.  $\blacklozenge$

#### Chemotherapy

**EVGr** Chemotherapy should be offered as first-line treatment in patients with oestrogen-receptor-positive advanced breast cancer that is imminently life-threatening or requires early relief of symptoms because of significant visceral organ involvement. Once chemotherapy treatment is completed, endocrine therapy should be offered.  $\blacklozenge$  The choice of chemotherapy regimen is usually guided by local policy, Cancer Alliances, and the National Cancer Drugs Fund list.

#### Biological therapy

**EVGr** Trastuzumab is recommended for the treatment of HER2-positive advanced breast cancer. It is used in combination with paclitaxel p. 999 in those who have not

received chemotherapy for metastatic breast cancer, and as monotherapy for patients who have received at least two chemotherapy regimens for metastatic breast cancer (see [trastuzumab National funding/access decisions](#)). [▲](#)

#### Bisphosphonate therapy

[EvGr](#) The use of bisphosphonates should be considered in patients with metastatic breast cancer to reduce pain and prevent skeletal complications of bone metastases. [▲](#)

#### Familial breast cancer

[EvGr](#) Chemoprevention should be offered to all women who have been identified as being at high-risk of developing breast cancer. Chemoprevention should also be considered in women at moderate-risk. Other strategies to reduce breast cancer risk should also be considered, for example bilateral mastectomy or bilateral oophorectomy. Women who were at high-risk of breast cancer and have undergone a bilateral mastectomy should not receive chemoprevention. [▲](#)

#### Treatment options for chemoprevention

[EvGr](#) Chemoprevention should only be continued for 5 years. Tamoxifen is recommended for premenopausal women who do not have a history of, or increased risk of thromboembolic disease or endometrial cancer.

Anastrozole p. 1029 [unlicensed indication] is recommended in postmenopausal women who do not have severe osteoporosis, see Osteoporosis p. 725. In women who have severe osteoporosis, or who do not wish to take anastrozole, treatment with tamoxifen can be given, provided there is no history, or increased risk of thromboembolic disease or endometrial cancer. Alternatively, raloxifene hydrochloride p. 814 is an option [unlicensed indication] in postmenopausal women with a uterus who do not wish to take tamoxifen, unless there is a history or increased risk of thromboembolic disease. [▲](#)

#### Treatment of menopausal symptoms

[EvGr](#) Some treatments used in the management of breast cancer, such as tamoxifen or ovarian function suppression may lead to menopausal symptoms or early menopause, and women should be counselled about these side-effects prior to starting any of these treatments.

Women diagnosed with breast cancer should discontinue their hormone replacement therapy (HRT) because of possible tumour stimulation and interference with adjuvant endocrine therapy. HRT should not be offered routinely to women with menopausal symptoms if they have a history of breast cancer; however, in exceptional circumstances, HRT can be offered to women with severe menopausal symptoms once the associated risks have been discussed.

Selective serotonin re-uptake inhibitor (SSRIs) antidepressants may be offered to relieve menopausal symptoms such as hot flushes in women with breast cancer who are not taking tamoxifen. [▲](#) Clonidine hydrochloride p. 161, venlafaxine p. 400 [unlicensed indication] and gabapentin p. 343 [unlicensed indication] are sometimes used for the treatment of hot flushes in women with breast cancer after discussion with the patient and information given about side effects. The MHRA/CHM have released important safety information on the use of antiepileptic drugs and the risk of suicidal thoughts and behaviour. For further information, see Epilepsy p. 330.

## Prostate cancer

26-Nov-2021

### Description of condition

Prostate cancer is the most common form of cancer affecting men. It can also affect transgender women, as the prostate is usually conserved after gender-confirming surgery. The main risk factors are age (most cases being diagnosed in men over 70 years of age), ethnicity (more common in black African-Caribbean men), obesity, and a familial component. Prostate cancer is usually slow-growing and asymptomatic at diagnosis, however, the presenting symptoms of advanced disease are usually urinary outflow obstruction, or, pelvic or back pain due to bone metastases. Treatment decisions are guided by baseline prostate specific antigen (PSA) levels, tumour grade (Gleason score), the stage of the tumour, the patient's life expectancy (based on age and comorbid conditions), treatment morbidity, and patient preference.

### Aims of treatment

Reducing mortality, increasing progression-free and disease-free survival and improving quality of life are the main aims of treatment, and are dependent on the stage of disease.

Watchful waiting or active surveillance aim to monitor for disease progression, while radical treatments such as prostatectomy and radiotherapy aim to eliminate the malignancy. Hormone therapy and chemotherapy aim to slow the progression of prostate cancer and to control symptoms. In metastatic disease, treatment is aimed at prolonging survival and relieving symptoms.

### Overview

[EvGr](#) Treatment options for patients with prostate cancer include watchful waiting, active surveillance, prostatectomy, radiotherapy (such as external beam), brachytherapy, hormone therapy, and chemotherapy. The benefits and risks of each option should be discussed with patients. [▲](#)

Watchful waiting is a strategy for 'controlling' rather than 'curing' prostate cancer and is aimed at patients in whom curative treatment is unsuitable or declined. It involves monitoring for disease progression and is often suitable in patients not likely to suffer significant morbidity from their prostate cancer. Active surveillance, a 'curative' strategy, is aimed at patients who do not wish to have immediate treatment. It involves the deferred use of radical treatment until disease progression occurs or until the patient requests treatment. For information on monitoring in watchful waiting or the protocol for active surveillance, see NICE clinical guideline **Prostate cancer** (see *Useful resources*).

[EvGr](#) At any stage of care, when moving from active surveillance to radical treatment, patient preferences, comorbidities and life expectancy should be taken into account. [▲](#)

Hormone therapy includes anti-androgen therapy—to block the effects of androgens, androgen deprivation therapy such as a luteinising hormone-releasing hormone (LHRH) agonist, or a gonadorelin antagonist—to reduce androgen levels, and bilateral orchidectomy—to remove the endogenous supply of androgens.

In patients with localised prostate cancer, the choice of treatment is guided by whether the disease is considered low, intermediate, or high risk according to the Gleason score, the serum PSA level, and the tumour clinical stage. High risk localised prostate cancer is also included in the definition of locally advanced prostate cancer. For further information on risk stratification, see NICE clinical guideline **Prostate cancer** (see *Useful resources*).

#### Localised or locally advanced prostate cancer

**EvGr** In patients with **low-risk localised prostate cancer**, offer a choice between active surveillance, radical prostatectomy or radiotherapy.

Radical treatment should be offered to patients with localised prostate cancer undergoing active surveillance who show evidence of disease progression.

In patients with **intermediate-risk localised prostate cancer**, radical treatments (prostatectomy or radiotherapy) should be offered, and for those who decline them, active surveillance can be considered.

In patients with **high-risk localised prostate cancer** (when there is a realistic prospect of long-term disease control), and in those with **locally advanced disease**, radical prostatectomy or radiotherapy should be offered.

In patients with **intermediate-risk and high-risk localised prostate cancer** who have chosen radical radiotherapy, this should be offered in combination with androgen deprivation therapy. Androgen deprivation therapy should be given for 6 months before, during or after radiotherapy; in patients with **high-risk localised prostate cancer**, consider continuing therapy for up to 3 years. Brachytherapy in combination with radiotherapy can also be considered in these patients.

In patients with newly diagnosed **non-metastatic prostate cancer** discuss the option of chemotherapy with docetaxel p. 998 [unlicensed indication] if they are starting long term androgen deprivation therapy, have no significant co-morbidities and have high-risk disease.

In patients with **hormone-relapsed non-metastatic prostate cancer** who are at high risk of developing metastatic disease, darolutamide p. 1022 or apalutamide p. 1021, with androgen deprivation therapy is recommended as a treatment option. **⚡** If a patient's prostate cancer metastasised while on treatment with darolutamide or apalutamide, it would be expected to be resistant to treatment with enzalutamide or abiraterone for metastatic disease because of the similar way these drugs work.

**EvGr** Pelvic radiotherapy should be considered in those with **locally advanced prostate cancer** who have a higher than 15% risk of pelvic lymph node involvement and are to receive neoadjuvant hormonal therapy and radical radiotherapy. **⚡**

#### Metastatic prostate cancer

**EvGr** Patients with newly diagnosed **metastatic prostate cancer** who do not have significant comorbidities, should be offered chemotherapy with docetaxel.

Bilateral orchidectomy should be offered to all patients with **metastatic prostate cancer** as an alternative to continuous LHRH agonist treatment. Anti-androgen monotherapy with bicalutamide p. 1022 [unlicensed indication] can be offered to those who are willing to accept the adverse impact on overall survival and gynaecomastia, in the hope of retaining sexual function. However, if satisfactory sexual function is not maintained, stop bicalutamide and start androgen deprivation therapy.

Abiraterone acetate p. 1021 (in combination with prednisone or prednisolone p. 747) and enzalutamide

p. 1023 are both recommended as options for the treatment of **hormone-relapsed metastatic prostate cancer** in patients who have no or mild symptoms after androgen deprivation therapy has failed, and before chemotherapy is indicated.

In patients with **hormone-relapsed metastatic prostate cancer**, chemotherapy with docetaxel can be used. It is recommended that treatment with docetaxel is stopped after 10 cycles, or if severe adverse events occur, or if there is evidence of disease progression.

Abiraterone acetate (in combination with prednisone or prednisolone) and enzalutamide are also recommended in **hormone-relapsed metastatic prostate cancer** if disease has progressed during or after treatment with a docetaxel-containing chemotherapy regimen.

In patients with **hormone-relapsed metastatic prostate cancer**, a corticosteroid such as dexamethasone p. 743 can be offered as third line therapy after androgen deprivation therapy and anti-androgen therapy.

In patients with **hormone-relapsed metastatic prostate cancer**, zoledronic acid p. 732 can be considered to prevent or reduce skeletal-related events.

Bisphosphonates can be considered for pain relief in **hormone-relapsed metastatic prostate cancer** when other treatments have failed to give satisfactory pain relief. **⚡**

#### Management of side-effects of treatment

**EvGr** Patients should be informed about the side-effects of treatment; particularly urinary and sexual dysfunction, loss of fertility, radiation-induced enteropathy, osteoporosis, gynaecomastia, fatigue, and hot flushes. **⚡**

Tumour flare due to an initial surge in testosterone concentrations has been reported in the initial stages of treatment with LHRH agonists; the manufacturers advise that the use of prophylactic anti-androgen therapy (such as cyproterone acetate p. 830) should be considered.

**EvGr** Medroxyprogesterone acetate p. 876 [unlicensed indication] can be used, initially for up to 10 weeks, to manage troublesome hot flushes caused by long-term androgen suppression; cyproterone acetate can be considered as an alternative if medroxyprogesterone acetate is not effective or not tolerated. **⚡**

The MHRA/CHM have issued important safety information on the use of cyproterone acetate and risk of meningioma. For further information, see *Important safety information* for cyproterone acetate.

**EvGr** Patients who experience loss of sexual function should have access to specialist erectile dysfunction services and be considered for treatment with a phosphodiesterase type-5 inhibitor.

Patients who are on androgen deprivation therapy should be offered a supervised exercise program (at least twice a week for 12 weeks) to reduce fatigue and improve quality of life.

A bisphosphonate should be offered to patients who have osteoporosis and who are having androgen deprivation therapy; denosumab p. 734 is an alternative if bisphosphonates are not appropriate.

Although there is limited evidence, intermittent therapy may be considered for patients who are having long-term androgen deprivation therapy to reduce side-effects.

Gynaecomastia can occur with long-term (longer than 6 months) bicalutamide p. 1022 treatment. Prophylactic radiotherapy (within the first month of treatment) should be offered; or if radiotherapy is unsuccessful, weekly tamoxifen p. 1028 [unlicensed indication] can be considered. **⚡**

**INDICATIONS AND DOSE**

**Metastatic castration-resistant prostate cancer in patients whose disease has progressed during or after treatment with a docetaxel-containing chemotherapy regimen (in combination with prednisone or prednisolone) | Metastatic castration-resistant prostate cancer in patients who are asymptomatic or mildly symptomatic after failure of androgen deprivation therapy in whom chemotherapy is not yet clinically indicated (in combination with prednisone or prednisolone) | High risk metastatic hormone-sensitive prostate cancer in newly diagnosed patients (in combination with androgen deprivation therapy, and prednisone or prednisolone)**

▶ BY MOUTH

▶ Adult: 1 g once daily, for dose of concurrent prednisone or prednisolone—consult product literature

- **CAUTIONS** Diabetes (increased risk of hyperglycaemia—monitor blood sugar frequently) • history of cardiovascular disease

**CAUTIONS, FURTHER INFORMATION**

- ▶ Cardiovascular disease Manufacturer advises correct hypertension and hypokalaemia before treatment (if significant risk of congestive heart failure, such as history of cardiac failure, uncontrolled hypertension or cardiac events, consult product literature for management and increased monitoring).

- **INTERACTIONS** → Appendix 1: anti-androgens

**SIDE-EFFECTS**

- ▶ **Common or very common** Angina pectoris • arrhythmias • bone fracture • diarrhoea • dyspepsia • haematuria • heart failure • hepatic disorders • hypertension • hypertriglyceridaemia • hypokalaemia • left ventricular dysfunction • osteoporosis • peripheral oedema • rash • sepsis • urinary tract infection
- ▶ **Uncommon** Adrenal insufficiency • myopathy
- ▶ **Rare or very rare** Alveolitis allergic
- ▶ **Frequency not known** Myocardial infarction • QT interval prolongation

- **CONCEPTION AND CONTRACEPTION** Men should use condoms if their partner is pregnant, and use condoms in combination with another effective contraceptive method if their partner is of child-bearing potential—toxicity in animal studies.

- **HEPATIC IMPAIRMENT** Manufacturer advises use with caution in moderate impairment and only if benefit clearly outweighs risk; avoid in severe impairment.

- **RENAL IMPAIRMENT** EvGr Caution in severe impairment (no information available). M

**MONITORING REQUIREMENTS**

- ▶ Monitor blood pressure, serum potassium concentration, and fluid balance before treatment, and at least monthly during treatment—consult product literature for management of hypertension, hypokalaemia and oedema.
- ▶ Monitor liver function before treatment, then every 2 weeks for the first 3 months of treatment, then monthly thereafter—interrupt treatment if serum alanine aminotransferase or aspartate aminotransferase greater than 5 times the upper limit (consult product literature for

details of restarting treatment at a lower dose) and discontinue permanently if 20 times the upper limit.

**NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

- ▶ Abiraterone for castration-resistant metastatic prostate cancer previously treated with a docetaxel-containing regimen (updated July 2016) NICE TA259 Recommended with restrictions
  - ▶ Abiraterone for treating metastatic hormone-relapsed prostate cancer before chemotherapy is indicated (updated July 2016) NICE TA387 Recommended with restrictions
  - ▶ Abiraterone for treating newly diagnosed high-risk hormone-sensitive metastatic prostate cancer (August 2021) NICE TA721 Not recommended
- Scottish Medicines Consortium (SMC) decisions**
- ▶ Abiraterone acetate (Zytiga<sup>®</sup>) with prednisone or prednisolone for the treatment of metastatic castration-resistant prostate cancer (mCRPC) in adult men whose disease has progressed on or after a docetaxel-based chemotherapy regimen (August 2012) SMC No. 764/12 Recommended with restrictions
  - ▶ Abiraterone acetate (Zytiga<sup>®</sup>) is indicated with prednisone or prednisolone for the treatment of metastatic castration-resistant prostate cancer (mCRPC) in adult men who are asymptomatic or mildly symptomatic after failure of androgen deprivation therapy in whom chemotherapy is not yet clinically indicated (October 2015) SMC No. 873/13 Recommended
  - ▶ Abiraterone acetate (Zytiga<sup>®</sup>) with prednisone or prednisolone for the treatment of adult men with newly diagnosed high-risk metastatic hormone-sensitive prostate cancer (mHSPC) in combination with androgen deprivation therapy (ADT) (January 2020) SMC No. SMC2215 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

01-Sep-2020

● **INDICATIONS AND DOSE**

**Locally advanced prostate cancer at high risk of disease progression either alone or as adjunct treatment to prostatectomy or radiotherapy | Locally advanced, non-metastatic prostate cancer when surgical castration or other medical intervention inappropriate**

- ▶ **BY MOUTH**
- ▶ Adult: 150 mg once daily

**Advanced prostate cancer, in combination with gonadorelin analogue or surgical castration**

- ▶ **BY MOUTH**
- ▶ Adult: 50 mg once daily, to be started at the same time as surgical castration or at least 3 days before gonadorelin therapy

**Prostate cancer (metastatic) with the aim of retaining sexual function.**

- ▶ **BY MOUTH**
- ▶ Adult: 150 mg once daily

- **UNLICENSED USE** [EVR](#) Bicalutamide is used in prostate cancer (metastatic) with the aim of retaining sexual function, [A](#) but it is not licensed for this indication.
- **CAUTIONS** Risk of photosensitivity—avoid excessive exposure to UV light and sunlight
- **INTERACTIONS** → Appendix 1: anti-androgens
- **SIDE-EFFECTS**
- ▶ **Common or very common** Alopecia · anaemia · appetite decreased · asthenia · breast tenderness · chest pain · constipation · depression · dizziness · drowsiness · flatulence · gastrointestinal discomfort · gynaecomastia · haematuria · hair changes · hepatic disorders · hot flush · hypertransaminasaemia · nausea · oedema · sexual dysfunction · skin reactions · weight increased
- ▶ **Uncommon** Angioedema · interstitial lung disease
- ▶ **Rare or very rare** Photosensitivity reaction
- ▶ **Frequency not known** QT interval prolongation

- **HEPATIC IMPAIRMENT** Manufacturer advises caution in moderate to severe impairment (increased risk of accumulation).
- **MONITORING REQUIREMENTS** Consider periodic liver function tests.
- **PATIENT AND CARER ADVICE**  
Risk of photosensitivity Patients should be advised to consider the use of sunscreen.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension
- Tablet**
- ▶ **Bicalutamide (Non-proprietary)**

## Enzalutamide

01-Mar-2022

### ● INDICATIONS AND DOSE

#### Prostate cancer (specialist use only)

- ▶ BY MOUTH
- ▶ Adult: 160 mg once daily, for dose adjustments due to side-effects—consult product literature

#### DOSE ADJUSTMENTS DUE TO INTERACTIONS

- ▶ Manufacturer advises if concurrent use of potent inhibitors of CYP2C8 is unavoidable, reduce dose to 80 mg daily.

- **CAUTIONS** History or risk of QT-interval prolongation · history or risk of seizure · recent cardiovascular disease

- **INTERACTIONS** → Appendix 1: anti-androgens

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Acute coronary syndrome · anxiety · asthenia · atherosclerosis coronary artery · bone fracture · concentration impaired · fall · gynaecomastia · headache · hot flush · hypertension · ischaemic heart disease · memory loss · restless legs · skin reactions · taste altered
- ▶ **Uncommon** Cognitive disorder · leucopenia · neutropenia · seizures · visual hallucinations
- ▶ **Frequency not known** Back pain · diarrhoea · face oedema · muscle complaints · muscle weakness · nausea · oral disorders · posterior reversible encephalopathy syndrome (PRES) · QT interval prolongation · second primary malignancy · severe cutaneous adverse reactions (SCARs) · throat oedema · thrombocytopenia · vomiting

- **CONCEPTION AND CONTRACEPTION** EvGr Men should use condoms during treatment and for 3 months after stopping treatment if their partner is pregnant, and use condoms in combination with another effective contraceptive method if their partner is of child-bearing potential—toxicity in *animal* studies. M

- **RENAL IMPAIRMENT** EvGr Caution in severe impairment and end-stage renal disease—no information available. M

- **HANDLING AND STORAGE** Women of childbearing potential should avoid handling enzalutamide tablets.

#### ● PATIENT AND CARER ADVICE

**Missed doses** Manufacturer advises if a dose is not taken at the usual time, the missed dose should be taken as close as possible to the usual time; if a dose is missed entirely for the day, the missed dose should be taken the following day at the usual dose.

**Driving and skilled tasks** Manufacturer advises patients and carers should be counselled on the effects on driving and performance of skilled tasks—risk of psychiatric or neurological events, including seizures.

#### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### NICE decisions

- ▶ Enzalutamide for metastatic hormone-relapsed prostate cancer previously treated with a docetaxel-containing regimen (July 2014) NICE TA316 Recommended with restrictions
- ▶ Enzalutamide for treating metastatic hormone-relapsed prostate cancer before chemotherapy is indicated (January 2016) NICE TA377 Recommended with restrictions

- ▶ Enzalutamide for hormone-relapsed non-metastatic prostate cancer (May 2019) NICE TA580 Not recommended
- ▶ Enzalutamide for treating hormone-sensitive metastatic prostate cancer (July 2021) NICE TA712 Recommended

#### Scottish Medicines Consortium (SMC) decisions

- ▶ Enzalutamide (*Xtandi*<sup>®</sup>) for the treatment of adult men with high-risk non-metastatic castration-resistant prostate cancer (October 2019) SMC No. SMC2195 Not recommended
- ▶ Enzalutamide (*Xtandi*<sup>®</sup>) for the treatment of adult men with metastatic hormone-sensitive prostate cancer in combination with androgen deprivation therapy (February 2022) SMC No. SMC2400 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Tablet

## Flutamide

04-Jun-2020

### ● INDICATIONS AND DOSE

#### Advanced prostate cancer · Metastatic prostate cancer refractory to gonadorelin analogue therapy (monotherapy)

- ▶ BY MOUTH
- ▶ Adult: 250 mg 3 times a day

- **CONTRA-INDICATIONS** Do not initiate if serum transaminases greater than 2–3 times the upper limit of normal

- **CAUTIONS** Avoid excessive alcohol consumption · avoid in Acute porphyrias p. 1150 · cardiac disease (oedema reported) · diabetes (decreased tolerance to glucose)

- **INTERACTIONS** → Appendix 1: anti-androgens

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Appetite abnormal · asthenia · breast abnormalities · diarrhoea · drowsiness · galactorrhoea · gynaecomastia · hepatic function abnormal (sometimes fatal) · hepatitis (sometimes fatal) · insomnia · nausea · vomiting
- ▶ **Rare or very rare** Alopecia · anxiety · breast neoplasm · cardiovascular disorder · chest pain · constipation · cough · depression · dizziness · dyspnoea · gastrointestinal discomfort · gastrointestinal disorders · hair growth abnormal · headache · herpes zoster · hot flush · hypertension · interstitial pneumonitis · libido decreased · lupus-like syndrome · lymphoedema · malaise · muscle cramps · oedema · photosensitivity reaction · skin reactions · thirst · vision blurred
- ▶ **Frequency not known** QT interval prolongation
- **HEPATIC IMPAIRMENT** Manufacturer advises caution.
- **RENAL IMPAIRMENT** Manufacturer advises caution.
- **MONITORING REQUIREMENTS**
  - ▶ Manufacturer advises monitor liver function before starting treatment, monthly for the first 4 months, and thereafter as clinically indicated.
  - ▶ Manufacturer advises monitor bone mineral density before starting treatment, after 1 year of treatment, and thereafter as clinically indicated.
  - ▶ Manufacturer advises monitor for respiratory symptoms during the first few weeks of treatment (interstitial pneumonitis reported).
- **PATIENT AND CARER ADVICE** Manufacturer advises patients and their carers should be told to discontinue treatment and seek immediate medical attention if signs or symptoms of hepatic toxicity occur.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Tablet**▶ **Flutamide (Non-proprietary)**

Flutamide 250 mg Flutamide 250mg tablets | 84 tablet [PoM]  
 £106.23 DT = £106.23

**OESTROGENS****Diethylstilbestrol**

21-May-2020

**(Stilboestrol)**● **INDICATIONS AND DOSE****Breast cancer in postmenopausal women**▶ **BY MOUTH**

▶ Adult: 10–20 mg daily

**Prostate cancer**▶ **BY MOUTH**

▶ Adult: 1–3 mg daily

- **CAUTIONS** Cardiovascular disease

- **SIDE-EFFECTS** Bone pain (in breast cancer) · breast abnormalities · cervical mucus increased · cholelithiasis · contact lens intolerance · depression · erectile dysfunction · erythema nodosum · feminisation · fluid retention · gynaecomastia · headaches · hypercalcaemia (in breast cancer) · hypertension · increased risk of thrombosis · jaundice cholestatic · mood altered · nausea · neoplasms · skin reactions · sodium retention · testicular atrophy · uterine disorders · vomiting · weight changes · withdrawal bleed

- **PREGNANCY** In first trimester, high doses associated with vaginal carcinoma, urogenital abnormalities, and reduced fertility in female offspring. Increased risk of hypospadias in male offspring.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild to moderate impairment; avoid in severe or active impairment.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Tablet**▶ **Diethylstilbestrol (Non-proprietary)**

Diethylstilbestrol 1 mg Diethylstilbestrol 1mg tablets | 28 tablet [PoM] £146.90 DT = £124.99

**PITUITARY AND HYPOTHALAMIC HORMONES AND ANALOGUES** > ANTI-GONADOTROPHIN-RELEASING HORMONES**Degarelix**

22-Apr-2021

● **INDICATIONS AND DOSE****Advanced hormone-dependent prostate cancer**▶ **BY SUBCUTANEOUS INJECTION**

▶ Adult: Initially 240 mg, to be administered as 2 injections of 120 mg, then 80 mg every 28 days, dose to be administered into the abdominal region

- **CAUTIONS** Diabetes · susceptibility to QT-interval prolongation

● **SIDE-EFFECTS**

- ▶ **Common or very common** Anaemia · chills · diarrhoea · dizziness · fatigue · fever · gynaecomastia · headache · hot flush · influenza like illness · insomnia · musculoskeletal discomfort · musculoskeletal pain · nausea · sexual dysfunction · skin reactions · sweat changes · testicular disorders · weight changes
- ▶ **Uncommon** Alopecia · appetite decreased · arrhythmias · bone disorders · breast pain · cognitive impairment · constipation · depression · diabetes mellitus · dry mouth ·

dyspnoea · gastrointestinal discomfort · genital discomfort · hyperglycaemia · hypertension · hypotension · joint disorders · malaise · muscle spasms · muscle weakness · numbness · palpitations · pelvic pain · peripheral oedema · QT interval prolongation · renal impairment · urinary disorders · vision blurred · vomiting

- ▶ **Rare or very rare** Febrile neutropenia · heart failure · injection site necrosis · myocardial infarction

- **HEPATIC IMPAIRMENT** Manufacturer advises caution (limited information available)—monitor liver function.

- **RENAL IMPAIRMENT** Manufacturer advises caution in severe impairment—no information available.

- **MONITORING REQUIREMENTS** Monitor bone density.

- **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

- ▶ **Degarelix for treating advanced hormone-dependent prostate cancer (August 2016)** NICE TA404 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Powder and solvent for solution for injection**▶ **Firmagon** (Ferring Pharmaceuticals Ltd)

**Degarelix (as Degarelix acetate) 80 mg** Firmagon 80mg powder and solvent for solution for injection vials | 1 vial [PoM] £129.37 DT = £129.37

**Degarelix (as Degarelix acetate) 120 mg** Firmagon 120mg powder and solvent for solution for injection vials | 2 vial [PoM] £260.00 DT = £260.00

**PITUITARY AND HYPOTHALAMIC HORMONES AND ANALOGUES** > SOMATOSTATIN ANALOGUES**Somatostatin analogues**

- **CAUTIONS** Diabetes mellitus (antidiabetic requirements may be altered) · growth hormone-secreting pituitary tumours can expand during treatment (causing serious complications) · insulinoma (increased depth and duration of hypoglycaemia may occur—observe patients and monitor blood glucose levels when initiating treatment and changing doses)

● **SIDE-EFFECTS**

- ▶ **Common or very common** Alopecia · appetite decreased · asthenia · cholecystitis · cholelithiasis (following long term use) · cholestasis · constipation · diabetes mellitus · diarrhoea · dizziness · gastrointestinal discomfort · gastrointestinal disorders · glucose tolerance impaired (following long term use) · headache · hyperglycaemia (long term use) · hypoglycaemia · myalgia · nausea · pruritus · sinus bradycardia · vomiting

● **MONITORING REQUIREMENTS**

- ▶ Monitor for signs of tumour expansion (e.g. visual field defects).

- ▶ Ultrasound examination of the gallbladder is recommended before treatment and at intervals of 6–12 months during treatment.

- **DIRECTIONS FOR ADMINISTRATION** Injection sites should be rotated.

F 1024

## Lanreotide

07-Apr-2021

### ● INDICATIONS AND DOSE

#### SOMATULINE AUTOGEL<sup>®</sup>

##### Acromegaly (if somatostatin analogue not given previously)

- ▶ BY DEEP SUBCUTANEOUS INJECTION
- ▶ Adult: Initially 60 mg every 28 days, adjusted according to response, (consult product literature), for patients treated previously with somatostatin analogue, consult product literature for initial dose, dose to be given in the gluteal region

##### Neuroendocrine (particularly carcinoid) tumours

- ▶ BY DEEP SUBCUTANEOUS INJECTION
- ▶ Adult: Initially 60–120 mg every 28 days, adjusted according to response, dose to be given in the gluteal region

##### Unresectable locally advanced or metastatic gastroenteropancreatic neuroendocrine tumours of midgut, pancreatic or unknown origin where hindgut sites of origin have been excluded

- ▶ BY DEEP SUBCUTANEOUS INJECTION
- ▶ Adult: 120 mg every 28 days

#### SOMATULINE LA<sup>®</sup>

##### Acromegaly and neuroendocrine (particularly carcinoid) tumours

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult: Initially 30 mg every 14 days, increased to 30 mg every 7–10 days, adjusted according to response

##### Thyroid tumours

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult: Initially 30 mg every 14 days, increased to 30 mg every 10 days, adjusted according to response

- **CAUTIONS** Cardiac disorders (including bradycardia)
- **INTERACTIONS** → Appendix 1: lanreotide
- **SIDE-EFFECTS**
  - ▶ Common or very common Biliary dilatation · lethargy · musculoskeletal pain · weight decreased
  - ▶ Uncommon Hot flush · insomnia
  - ▶ Frequency not known Pancreatitis
- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk.
- **BREAST FEEDING** Manufacturer advises caution—no information available.
- **MONITORING REQUIREMENTS** Monitor for hypothyroidism when clinically indicated.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
- **All Wales Medicines Strategy Group (AWMSG) decisions**
  - ▶ Lanreotide (*Somatuline<sup>®</sup> Autogel<sup>®</sup>*) for treatment of grade 1 and a subset of grade 2 (Ki67 index up to 10 %) gastroenteropancreatic neuroendocrine tumours (GEP-NETS) of midgut, pancreatic or unknown origin where hindgut sites of origin have been excluded, in adult patients with unresectable locally advanced or metastatic disease (September 2018) AWMSG No. 1988 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Somatuline Autogel** (Ipsen Ltd)  
Lanreotide (as Lanreotide acetate) 240 mg per 1 ml Somatuline Autogel 60mg/0.5ml solution for injection pre-filled syringes with safety system | 1 pre-filled disposable injection [PoM] £551.00 DT = £551.00
- ▶ **Lanreotide (as Lanreotide acetate) 180 mg per 1 ml** Somatuline Autogel 90mg/0.5ml solution for injection pre-filled syringes with safety system | 1 pre-filled disposable injection [PoM] £736.00 DT = £736.00

Lanreotide (as Lanreotide acetate) 240 mg per 1 ml Somatuline Autogel 120mg/0.5ml solution for injection pre-filled syringes with safety system | 1 pre-filled disposable injection [PoM] £937.00 DT = £937.00

#### Powder and solvent for suspension for injection

- ▶ **Somatuline LA** (Ipsen Ltd)  
Lanreotide (as Lanreotide acetate) 30 mg Somatuline LA 30mg powder and solvent for suspension for injection vials | 1 vial [PoM] £323.00 DT = £323.00

F 1024

14-Sep-2020

## Octreotide

### ● INDICATIONS AND DOSE

#### Symptoms associated with carcinoid tumours with features of carcinoid syndrome, VIPomas, glucagonomas

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Adult: Initially 50 micrograms 1–2 times a day, adjusted according to response; increased to 200 micrograms 3 times a day, higher doses may be required exceptionally; maintenance doses are variable; in carcinoid tumours, discontinue after 1 week if no effect, if rapid response required, initial dose may be given by intravenous injection (with ECG monitoring and after dilution)

#### Acromegaly, short-term treatment before pituitary surgery or long-term treatment in those inadequately controlled by other treatment or until radiotherapy becomes fully effective

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Adult: 100–200 micrograms 3 times a day, discontinue if no improvement within 3 months

#### Prevention of complications following pancreatic surgery

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Adult: (consult product literature)

#### Test dose before use of depot preparation

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Adult: Test dose 50–100 micrograms for 1 dose, test dose should be given if subcutaneous octreotide not previously given

#### Acromegaly | Neuroendocrine (particularly carcinoid) tumour adequately controlled by subcutaneous octreotide

- ▶ BY DEEP INTRAMUSCULAR INJECTION USING DEPOT INJECTION
- ▶ Adult: Initially 20 mg every 4 weeks for 3 months then adjusted according to response, increased if necessary up to 30 mg every 4 weeks, to be administered into the gluteal muscle, for *acromegaly*, start depot 1 day after the last dose of subcutaneous octreotide, for *neuroendocrine tumours*, continue subcutaneous octreotide for 2 weeks after first dose of depot octreotide

#### Advanced neuroendocrine tumours of the midgut, or tumours of unknown primary origin where non-midgut sites of origin have been excluded

- ▶ BY DEEP INTRAMUSCULAR INJECTION USING DEPOT INJECTION
- ▶ Adult: 30 mg every 4 weeks

#### Reduce intestinal secretions in palliative care | Reduce vomiting due to bowel obstruction in palliative care

- ▶ BY CONTINUOUS SUBCUTANEOUS INFUSION
- ▶ Adult: 0.25–0.5 mg/24 hours (max. per dose 0.75 mg/24 hours), occasionally doses higher than the maximum are sometimes required

- **INTERACTIONS** → Appendix 1: octreotide
- **SIDE-EFFECTS**
  - ▶ Common or very common Arrhythmias · biliary sludge · dyspnoea · hyperbilirubinaemia · hypothyroidism · skin reactions · thyroid disorder
  - ▶ Uncommon Dehydration
  - ▶ Frequency not known Hepatic disorders · pancreatitis acute (after administration) · thrombocytopenia

**SIDE-EFFECTS, FURTHER INFORMATION** Administering non-depot injections of octreotide between meals and at bedtime may reduce gastrointestinal side-effects.

- **CONCEPTION AND CONTRACEPTION** Effective contraception required during treatment.
- **PREGNANCY** Possible effect on fetal growth; manufacturer advises use only if potential benefit outweighs risk.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal* studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (risk of increased half-life in cirrhosis).  
**Dose adjustments** Manufacturer advises consider dose reduction—consult product literature.
- **MONITORING REQUIREMENTS**
  - ▶ Monitor thyroid function on long-term therapy.
  - ▶ Monitor liver function.
  - ▶ With intravenous use ECG monitoring required with intravenous administration.
- **TREATMENT CESSATION** Avoid abrupt withdrawal of short-acting subcutaneous octreotide (associated with biliary colic and pancreatitis).
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous injection* or *intravenous infusion*, manufacturer advises dilute requisite dose to a ratio of at least 1:1 and up to a maximum of 1:9 by volume with Sodium Chloride 0.9%.

● **PRESCRIBING AND DISPENSING INFORMATION**

**Palliative care** For further information on the use of octreotide in palliative care, see [www.medicinescomplete.com/#/content/palliative/octreotide](http://www.medicinescomplete.com/#/content/palliative/octreotide).

● **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**All Wales Medicines Strategy Group (AWMSG) decisions**

- ▶ Octreotide (*Sandostatin*<sup>®</sup> *LAR*<sup>®</sup>) for the treatment of patients with advanced neuroendocrine tumours of the midgut or of unknown primary origin where non-midgut sites of origin have been excluded (September 2018) AWMSG No. 3732 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

Octreotide (as Octreotide acetate) 10 mg Sandostatin LAR 10mg powder and solvent for suspension for injection vials | 1 vial [PoM] £549.71 DT = £549.71

Octreotide (as Octreotide acetate) 20 mg Sandostatin LAR 20mg powder and solvent for suspension for injection vials | 1 vial [PoM] £799.33 DT = £799.33

Octreotide (as Octreotide acetate) 30 mg Sandostatin LAR 30mg powder and solvent for suspension for injection vials | 1 vial [PoM] £998.41 DT = £998.41

1024

22-Jan-2019

## Pasireotide

● **INDICATIONS AND DOSE**

**Cushing's disease [when surgery has failed or is inappropriate]**

▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: Initially 600 micrograms twice daily for 2 months, then increased if necessary to 900 micrograms twice daily, consider discontinuation if no response after 2 months of treatment, for dose adjustment due to side-effects—consult product literature

▶ BY DEEP INTRAMUSCULAR INJECTION

- ▶ Adult: Initially 10 mg every 4 weeks, increased if necessary up to 40 mg every 4 weeks, dose may be titrated every 2–4 months based on response and tolerability, consider discontinuation if no clinical benefit observed, for dose adjustment due to side-effects—consult product literature

**Acromegaly [when surgery has failed or is inappropriate, and control with another somatostatin analogue is inadequate]**

▶ BY DEEP INTRAMUSCULAR INJECTION

- ▶ Adult: Initially 40 mg every 4 weeks, increased if necessary up to 60 mg every 4 weeks, dose may be increased if levels of growth hormone and/or insulin-like growth factor-1 are not fully controlled after 3 months of initial dosing, for dose adjustment due to side-effects—consult product literature

- **CAUTIONS** Cardiac disorders (including bradycardia) · susceptibility to QT-interval prolongation (including electrolyte disturbances)
- **INTERACTIONS** → Appendix 1: pasireotide
- **SIDE-EFFECTS**
  - ▶ Common or very common Adrenal insufficiency · arthralgia · hypotension · QT interval prolongation
  - ▶ Uncommon Anaemia
- **PREGNANCY** Manufacturer advises avoid—toxicity in *animal* studies.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal* studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in moderate impairment (risk of increased exposure); avoid in severe impairment.  
**Dose adjustments**
  - ▶ With subcutaneous use for Cushing's disease Manufacturer advises reduce initial dose to 300 micrograms twice

daily (max. dose 600 micrograms twice daily) in moderate impairment.

- ▶ With intramuscular use for Cushing's disease Manufacturer advises max. dose 20 mg every four weeks in moderate impairment.
- ▶ When used for Acromegaly Manufacturer advises reduce initial dose to 20 mg every four weeks (max. dose 40 mg every four weeks) in moderate impairment.
- **RENAL IMPAIRMENT** Manufacturer advises caution in severe impairment—increased plasma-pasireotide exposure.
- **MONITORING REQUIREMENTS**
- ▶ Manufacturer advises consider monitoring pituitary function before treatment initiation and periodically thereafter.
- ▶ With subcutaneous use Manufacturer advises monitor liver function before treatment initiation, after 1, 2, 4, 8, and 12 weeks of treatment, and thereafter as clinically indicated. Manufacturer advises assess glycaemic status before treatment initiation, weekly for the first 2–3 months of treatment, over the first 2–4 weeks after any dose increase, periodically thereafter, and 3 months after treatment is complete—if glycaemic control is poor, diabetes management and monitoring should be intensified before and during treatment. Manufacturer advises monitor ECG and electrolytes before treatment initiation, after one week of treatment, and periodically thereafter.
- ▶ With intramuscular use Manufacturer advises monitor liver function before treatment initiation, after the first 2–3 weeks of treatment, then monthly for 3 months, and thereafter as clinically indicated. Manufacturer advises assess glycaemic status before treatment initiation, weekly for the first 3 months of treatment, over the first 4–6 weeks after any dose increase, periodically thereafter, and 3 months after treatment is complete—if glycaemic control is poor, diabetes management and monitoring should be intensified before and during treatment. Manufacturer advises monitor ECG and electrolytes before treatment initiation, after 3 weeks of treatment, and periodically thereafter.

#### ● **PRESCRIBING AND DISPENSING INFORMATION**

Switching between formulations

- ▶ When used for Cushing's disease There are no clinical data available on switching between formulations; if a switch is required, manufacturer advises to maintain an interval of at least 28 days between the last intramuscular injection and the first subcutaneous injection—for further information, consult product literature.
- **PATIENT AND CARER ADVICE** Manufacturer advises patients and their carers should be informed of the signs and symptoms of hypocortisolism (including weakness, fatigue, anorexia, nausea, vomiting, hypotension, hyperkalaemia, hyponatraemia, hypoglycaemia). **Driving and skilled tasks** Manufacturer advises patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of fatigue and dizziness.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Solution for injection**

- ▶ **Signifor** (Recordati Rare Diseases UK Ltd)

**Pasireotide (as Pasireotide diaspertate) 300 microgram per 1 ml** Signifor 0.3mg/1ml solution for injection ampoules | 60 ampoule [PoM] £2,800.00  
**Pasireotide (as Pasireotide diaspertate) 600 microgram per 1 ml** Signifor 0.6mg/1ml solution for injection ampoules | 60 ampoule [PoM] £3,240.00  
**Pasireotide (as Pasireotide diaspertate) 900 microgram per 1 ml** Signifor 0.9mg/1ml solution for injection ampoules | 60 ampoule [PoM] £3,240.00

#### **Powder and solvent for suspension for injection**

- ▶ **Signifor** (Recordati Rare Diseases UK Ltd)  
**Pasireotide (as Pasireotide pamoate) 10 mg** Signifor 10mg powder and solvent for suspension for injection vials | 1 vial [PoM] £2,300.00  
**Pasireotide (as Pasireotide pamoate) 20 mg** Signifor 20mg powder and solvent for suspension for injection vials | 1 vial [PoM] £2,300.00  
**Pasireotide (as Pasireotide pamoate) 30 mg** Signifor 30mg powder and solvent for suspension for injection vials | 1 vial [PoM] £2,300.00  
**Pasireotide (as Pasireotide pamoate) 40 mg** Signifor 40mg powder and solvent for suspension for injection vials | 1 vial [PoM] £2,300.00  
**Pasireotide (as Pasireotide pamoate) 60 mg** Signifor 60mg powder and solvent for suspension for injection vials | 1 vial [PoM] £2,300.00

## PROGESTOGENS

### Megestrol acetate

31-Jan-2020

#### ● **INDICATIONS AND DOSE**

##### **Treatment of breast cancer**

- ▶ **BY MOUTH**
- ▶ **Adult:** 160 mg once daily

- **CONTRA-INDICATIONS** Acute porphyrias p. 1150
- **CAUTIONS** Elderly · history of thrombophlebitis
- **SIDE-EFFECTS**
- ▶ **Common or very common** Adrenal insufficiency · alopecia · appetite increased · asthenia · carpal tunnel syndrome · constipation · Cushing's syndrome · diabetes mellitus · diarrhoea · dyspnoea · embolism and thrombosis · erectile dysfunction · flatulence · glucose tolerance impaired · heart failure · hot flush · hypercalcaemia · hyperglycaemia · hypertension · lethargy · menorrhagia · mood altered · nausea · oedema · pain · skin reactions · tumour flare · urinary frequency increased · vomiting · weight increased
- **PREGNANCY** Avoid. Reversible feminisation of male fetuses reported in *animal* studies. Risk of hypospadias in male fetuses and masculinisation of female fetuses.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: tablet, capsule, oral suspension
- Oral suspension**
- ▶ **Megestrol acetate (Non-proprietary)**  
**Megestrol acetate 40 mg per 1 ml** Megestrol 200mg/5ml oral suspension | 240 ml [PoM] [X]
- Tablet**
- ▶ **Megestrol acetate (Non-proprietary)**  
**Megestrol acetate 40 mg** Megestrol 40mg tablets | 100 tablet [X] DT = £265.72
- ▶ **Megace** (Bausch & Lomb UK Ltd)  
**Megestrol acetate 160 mg** Megace 160mg tablets | 30 tablet [PoM] £19.52 DT = £19.52

## 4.1 Hormone responsive breast cancer

### ANTINEOPLASTIC DRUGS > ANTI-OESTROGENS

#### Fulvestrant

10-Aug-2021

##### ● INDICATIONS AND DOSE

###### Oestrogen-receptor-positive breast cancer

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Adult: 500 mg every 2 weeks for the first 3 doses, then 500 mg every month, to be administered into the buttock

- **INTERACTIONS** → Appendix 1: fulvestrant
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Appetite decreased · arthralgia · asthenia · diarrhoea · headache · hot flush · hypersensitivity · increased risk of infection · nausea · pain · rash · vaginal haemorrhage · venous thromboembolism · vomiting
  - ▶ **Uncommon** Hepatic disorders · vaginal discharge
  - ▶ **Frequency not known** Myalgia
- **PREGNANCY** Manufacturer advises avoid—increased incidence of fetal abnormalities and death in *animal* studies.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal* studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild to moderate impairment—risk of increased exposure; avoid in severe impairment—no information available.
- **RENAL IMPAIRMENT** Manufacturer advises caution if creatinine clearance less than 30 mL/minute—no information available. See p. 21.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises 500 mg dose should be administered as one 250-mg injection (slowly over 1–2 minutes) into each buttock.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
- NICE decisions**
  - ▶ Fulvestrant for untreated locally advanced or metastatic oestrogen-receptor positive breast cancer (January 2018) NICE TA503 Not recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

##### Solution for injection

- ▶ **Fulvestrant (Non-proprietary)**
  - Fulvestrant 50 mg per 1 ml Fulvestrant 250mg/5ml solution for injection pre-filled syringes | 2 pre-filled disposable injection [POM] £522.41 DT = £522.41 (Hospital only)
- ▶ **Faslodex (AstraZeneca UK Ltd)**
  - Fulvestrant 50 mg per 1 ml Faslodex 250mg/5ml solution for injection pre-filled syringes | 2 pre-filled disposable injection [POM] £522.41 DT = £522.41

## Tamoxifen

28-Jul-2020

- **DRUG ACTION** An anti-oestrogen which induces gonadotrophin release by occupying oestrogen receptors in the hypothalamus, thereby interfering with feedback mechanisms; chorionic gonadotrophin is sometimes used as an adjunct in the treatment of female infertility.

##### ● INDICATIONS AND DOSE

###### Pre- and perimenopausal women with oestrogen-receptor-positive breast cancer not previously treated with tamoxifen

- ▶ BY MOUTH
- ▶ Adult: 20 mg daily

###### Anovulatory infertility

- ▶ BY MOUTH
- ▶ Adult: Initially 20 mg daily on days 2, 3, 4 and 5 of cycle, if necessary the daily dose may be increased to 40 mg then 80 mg for subsequent courses; if cycles irregular, start initial course on any day, with subsequent course starting 45 days later or on day 2 of cycle if menstruation occurs

###### Gynaecomastia [prevention in men undergoing long-term bicalutamide treatment, if radiotherapy unsuccessful]

- ▶ BY MOUTH
- ▶ Adult: 20 mg once weekly

###### Breast cancer [chemoprevention in women at moderate-to-high risk]

- ▶ BY MOUTH
- ▶ Adult: 20 mg daily for 5 years

- **UNLICENSED USE** Tamoxifen may be used as detailed below, although these situations are considered outside the scope of its licence:
  - **EVG1** the prevention of gynaecomastia in men 
- **CONTRA-INDICATIONS** Treatment of infertility contra-indicated if personal or family history of idiopathic venous thromboembolism or genetic predisposition to thromboembolism
- **CAUTIONS** Acute porphyrias p. 1150
- **INTERACTIONS** → Appendix 1: tamoxifen
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Alopecia · anaemia · cataract · cerebral ischaemia · constipation · diarrhoea · dizziness · embolism and thrombosis · fatigue · fluid retention · headache · hepatic disorders · hot flush · hypersensitivity · hypertriglyceridaemia · muscle complaints · nausea · neoplasms · retinopathy · sensation abnormal · skin reactions · taste altered · uterine disorders · vaginal haemorrhage · vomiting · vulvovaginal disorders
  - ▶ **Uncommon** Hypercalcaemia · interstitial pneumonia · leucopenia · pancreatitis · thrombocytopenia · vision disorders
  - ▶ **Rare or very rare** Agranulocytosis · angioedema · corneal changes · cutaneous lupus erythematosus · cutaneous vasculitis · cystic ovarian swelling · nerve disorders · neutropenia · radiation recall reaction · Stevens-Johnson syndrome · tumour flare
  - ▶ **Frequency not known** Amenorrhoea

##### ▶ **SIDE-EFFECTS, FURTHER INFORMATION Endometrial changes**

Increased endometrial changes, including hyperplasia, polyps, cancer, and uterine sarcoma reported; prompt investigation required if abnormal vaginal bleeding including menstrual irregularities, vaginal discharge, and pelvic pain or pressure in those receiving (or who have received) tamoxifen.

**Risk of thromboembolism** Tamoxifen can increase the risk of thromboembolism particularly during and immediately after major surgery or periods of immobility (consider interrupting treatment and initiating anticoagulant measures).

- **CONCEPTION AND CONTRACEPTION** Unless being used in the treatment of female infertility, effective contraception must be used during treatment and for 2 months after stopping. Patients being treated for infertility should be warned that there is a risk of multiple pregnancy (*rarely more than twins*).
- **PREGNANCY** Avoid—possible effects on fetal development.
- **BREAST FEEDING** Suppresses lactation. Avoid unless potential benefit outweighs risk.
- **PRESCRIBING AND DISPENSING INFORMATION** Patient decision aids Taking tamoxifen to reduce the chance of developing breast cancer: premenopausal women at moderately increased risk; Taking tamoxifen to reduce the chance of developing breast cancer: premenopausal women at high risk. National Institute for Health and Care Excellence. March 2017.

[www.nice.org.uk/about/what-we-do/our-programmes/nice-guidance/nice-guidelines/shared-decision-making](http://www.nice.org.uk/about/what-we-do/our-programmes/nice-guidance/nice-guidelines/shared-decision-making)

- **PATIENT AND CARER ADVICE** Endometrial changes Patients should be informed of the risk of endometrial cancer and told to report relevant symptoms promptly. Thromboembolism Patients should be made aware of the symptoms of thromboembolism and advised to report sudden breathlessness and any pain in the calf of one leg.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

#### Oral solution

##### ► Tamoxifen (Non-proprietary)

Tamoxifen (as Tamoxifen citrate) 2 mg per 1 ml Tamoxifen 10mg/5ml oral solution sugar free sugar-free | 150 ml [PoM] £74.52 DT = £56.83

#### Tablet

##### ► Tamoxifen (Non-proprietary)

Tamoxifen (as Tamoxifen citrate) 10 mg Tamoxifen 10mg tablets | 30 tablet [PoM] £47.21 DT = £38.01  
 Tamoxifen (as Tamoxifen citrate) 20 mg Tamoxifen 20mg tablets | 30 tablet [PoM] £13.00 DT = £3.35  
 Tamoxifen (as Tamoxifen citrate) 40 mg Tamoxifen 40mg tablets | 30 tablet [PoM] £98.93 DT = £87.60

## Toremifene

25-Aug-2020

### ● INDICATIONS AND DOSE

#### Hormone-dependent metastatic breast cancer in postmenopausal women

- BY MOUTH
- Adult: 60 mg daily

- **CONTRA-INDICATIONS** Bradycardia · electrolyte disturbances (particularly uncorrected hypokalaemia) · endometrial hyperplasia · heart failure with reduced left-ventricular ejection fraction · history of arrhythmias · QT prolongation
- **CAUTIONS** Avoid in Acute porphyrias p. 1150 · history of severe thromboembolic disease
- **INTERACTIONS** → Appendix 1: toremifene
- **SIDE-EFFECTS**
  - **Common or very common** Dizziness · fatigue · hot flush · hyperhidrosis · nausea · oedema · skin reactions · vaginal discharge · vomiting
  - **Uncommon** Appetite decreased · constipation · depression · dyspnoea · headache · insomnia · thromboembolism · uterine disorders · weight increased
  - **Rare or very rare** Alopecia · corneal opacity · endometrial cancer · hepatic disorders · uterine haemorrhage · vertigo
  - **Frequency not known** Anaemia · leucopenia · thrombocytopenia

**SIDE-EFFECTS, FURTHER INFORMATION** Increased endometrial changes, including hyperplasia, polyps and cancer reported.

- **PREGNANCY** Avoid.
- **BREAST FEEDING** Avoid.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution; avoid in severe hepatic failure (risk of decreased elimination).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Tablet

► Fareston (Orion Pharma (UK) Ltd)  
 Toremifene (as Toremifene citrate) 60 mg Fareston 60mg tablets | 30 tablet [PoM] £29.08 DT = £29.08

## HORMONE ANTAGONISTS AND RELATED AGENTS > AROMATASE INHIBITORS

### Anastrozole

29-Jul-2021

#### ● INDICATIONS AND DOSE

**Adjuvant treatment of oestrogen-receptor-positive early invasive breast cancer in postmenopausal women |**

**Adjuvant treatment of oestrogen-receptor-positive early breast cancer in postmenopausal women following 2–3 years of tamoxifen therapy | Advanced breast cancer in postmenopausal women which is oestrogen-receptor-positive or responsive to tamoxifen**

► BY MOUTH  
 ► Adult: 1 mg daily  
**Breast cancer [chemoprevention in postmenopausal women at moderate to high risk] (initiated under specialist supervision)**

- BY MOUTH
- Adult: 1 mg daily for 5 years

- **UNLICENSED USE** [EvGr] Anastrozole is used for chemoprevention of breast cancer,  but it is not licensed for this indication.
- **CONTRA-INDICATIONS** Not for premenopausal women
- **CAUTIONS** Susceptibility to osteoporosis
- **SIDE-EFFECTS**
  - **Common or very common** Alopecia · appetite decreased · arthritis · asthenia · bone pain · carpal tunnel syndrome · diarrhoea · drowsiness · headache · hot flush · hypercholesterolaemia · hypersensitivity · joint disorders · myalgia · nausea · osteoporosis · sensation abnormal · skin reactions · taste altered · vaginal haemorrhage · vomiting · vulvovaginal dryness
  - **Uncommon** Hepatitis · hypercalcaemia · trigger finger
  - **Rare or very rare** Angioedema · Stevens-Johnson syndrome · vasculitis
  - **Frequency not known** Mood altered
- **PREGNANCY** Avoid.
- **BREAST FEEDING** Avoid.
- **HEPATIC IMPAIRMENT** Manufacturer advises use with caution in moderate-to-severe impairment.
- **RENAL IMPAIRMENT** [EvGr] Caution if eGFR less than 30 mL/minute/1.73 m<sup>2</sup> (limited information available).  See p. 21.
- **PRE-TREATMENT SCREENING** Laboratory test for menopause if doubt.
- **MONITORING REQUIREMENTS**
  - Osteoporosis Assess bone mineral density before treatment and at regular intervals.
- **PATIENT AND CARER ADVICE**
  - **Driving and skilled tasks** Asthenia and drowsiness may affect ability to drive or operate machinery.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website

**Scottish Medicines Consortium (SMC) decisions**

- ▶ Anastrozole (*Arimidex*<sup>®</sup>) for the adjuvant treatment of postmenopausal women with oestrogen receptor-positive early invasive breast cancer (September 2005) SMC No. 198/05 Recommended with restrictions
- ▶ Anastrozole (*Arimidex*<sup>®</sup>) for early breast cancer in hormone receptor-positive postmenopausal women who have received 2 to 3 years of adjuvant tamoxifen (November 2006) SMC No. 322/06 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Tablet**▶ **Anastrozole (Non-proprietary)**

Anastrozole 1 mg Anastrozole 1mg tablets | 28 tablet PoM £68.56 DT = £1.18

▶ **Arimidex** (AstraZeneca UK Ltd)

Anastrozole 1 mg Arimidex 1mg tablets | 28 tablet PoM £68.56 DT = £1.18

**Exemestane**

11-Jun-2021

● **INDICATIONS AND DOSE**

**Adjuvant treatment of oestrogen-receptor-positive early breast cancer in postmenopausal women following 2-3 years of tamoxifen therapy | Advanced breast cancer in postmenopausal women in whom anti-oestrogen therapy has failed**

- ▶ BY MOUTH
- ▶ Adult: 25 mg daily

- **CONTRA-INDICATIONS** Not indicated for premenopausal women

- **INTERACTIONS** → Appendix 1: exemestane

● **SIDE-EFFECTS**

- ▶ **Common or very common** Alopecia · appetite decreased · arthralgia · asthenia · bone fracture · carpal tunnel syndrome · constipation · depression · diarrhoea · dizziness · gastrointestinal discomfort · headache · hot flush · hyperhidrosis · insomnia · leucopenia · nausea · osteoporosis · pain · paraesthesia · peripheral oedema · skin reactions · thrombocytopenia · vomiting
- ▶ **Rare or very rare** Acute generalised exanthematous pustulosis (AGEP) · drowsiness · hepatic disorders

- **PREGNANCY** Avoid.

- **BREAST FEEDING** Avoid.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution.

- **RENAL IMPAIRMENT** Manufacturer advises caution.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Tablet**

CAUTIONARY AND ADVISORY LABELS 21

▶ **Exemestane (Non-proprietary)**

Exemestane 25 mg Exemestane 25mg tablets | 30 tablet PoM £88.80 DT = £7.96

▶ **Aromasin** (Pfizer Ltd)

Exemestane 25 mg Aromasin 25mg tablets | 30 tablet PoM £88.80 DT = £7.96

**Letrozole**

20-Jul-2021

● **INDICATIONS AND DOSE**

**First-line treatment in postmenopausal women with hormone-dependent advanced breast cancer | Adjuvant treatment of oestrogen-receptor-positive invasive early breast cancer in postmenopausal women | Advanced breast cancer in postmenopausal women (naturally or artificially induced menopause) in whom other anti-oestrogen therapy has failed | Extended adjuvant treatment of hormone-dependent invasive breast cancer in postmenopausal women who have received standard adjuvant tamoxifen therapy for 5 years | Neo-adjuvant treatment in postmenopausal women with localised hormone-receptor-positive, human epidermal growth factor-2 negative breast cancer where chemotherapy is not suitable and surgery not yet indicated**

- ▶ BY MOUTH
- ▶ Adult: 2.5 mg daily

- **CONTRA-INDICATIONS** Not indicated for premenopausal women

- **CAUTIONS** Susceptibility to osteoporosis

● **SIDE-EFFECTS**

- ▶ **Common or very common** Alopecia · appetite abnormal · arthralgia · asthenia · bone fracture · bone pain · constipation · depression · diarrhoea · dizziness · gastrointestinal discomfort · headache · hot flush · hypercholesterolaemia · hyperhidrosis · hypertension · malaise · myalgia · nausea · oedema · osteoporosis · skin reactions · vaginal haemorrhage · vomiting · weight changes
- ▶ **Uncommon** Anxiety · arthritis · breast pain · cancer pain · carpal tunnel syndrome · cataract · cerebrovascular insufficiency · cough · drowsiness · dry mouth · dysaesthesia · dyspnoea · embolism and thrombosis · eye irritation · fever · insomnia · irritability · ischaemic heart disease · leucopenia · memory loss · mucosal dryness · myocardial infarction · palpitations · stomatitis · tachycardia · taste altered · thirst · urinary frequency increased · urinary tract infection · vision blurred · vulvovaginal disorders
- ▶ **Frequency not known** Angioedema · hepatitis · toxic epidermal necrolysis · trigger finger
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception required until postmenopausal status fully established (return of ovarian function reported in postmenopausal women).
- **PREGNANCY** Avoid (isolated cases of birth defects reported).
- **BREAST FEEDING** Manufacturer advises avoid.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment (increased exposure and half-life).
- **RENAL IMPAIRMENT** EvGr Use with caution if creatinine clearance less than 10 mL/minute (limited information available), ↔ see p. 21.
- **MONITORING REQUIREMENTS**
  - ▶ Osteoporosis Assess bone mineral density before treatment and at regular intervals.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Tablet**▶ **Letrozole (Non-proprietary)**

Letrozole 2.5 mg Letrozole 2.5mg tablets | 14 tablet PoM £49.90 DT = £1.20 | 28 tablet PoM £2.38-£84.86

▶ **Femara** (Novartis Pharmaceuticals UK Ltd)

Letrozole 2.5 mg Femara 2.5mg tablets | 30 tablet PoM £90.92

## 5 Immunotherapy responsive malignancy

### ANTINEOPLASTIC DRUGS

#### Talimogene laherparepvec

25-Jul-2018

- **DRUG ACTION** Talimogene laherparepvec is an oncolytic immunotherapy derived from herpes simplex virus type-1 which causes tumour lysis and the release of tumour-derived antigens.

#### ● INDICATIONS AND DOSE

**Unresectable metastatic melanoma with no bone, brain, or visceral disease**

► BY INTRALESIONAL INJECTION

► Adult: (consult product literature)

- **CONTRA-INDICATIONS** Severely immunocompromised patients

#### CONTRA-INDICATIONS, FURTHER INFORMATION

Manufacturer advises avoid in patients who are severely immunocompromised, for example, those with severe congenital or acquired cellular and/or humoral immune deficiency—may be at increased risk of disseminated herpetic infection.

- **CAUTIONS** Administration of antivirals (may interfere with effectiveness of *Imlygic*<sup>®</sup>) · autoimmune disease · immunocompromised patients · multiple myeloma (risk of plasmacytoma at injection site)

#### CAUTIONS, FURTHER INFORMATION

- Immunocompromised patients Manufacturer advises caution in patients who are immunocompromised, for example, those with HIV/AIDS, leukaemia, lymphoma, common variable immunodeficiency, or in those who require chronic high-dose steroids or other immunosuppressive agents—risk of disseminated herpetic infection.

#### ● SIDE-EFFECTS

- **Common or very common** Anaemia · anxiety · arthralgia · chills · confusion · constipation · cough · deep vein thrombosis · dehydration · depression · diarrhoea · dizziness · dyspnoea · ear pain · fatigue · fever · flushing · gastrointestinal discomfort · headache · hypertension · immune-mediated events · increased risk of infection · influenza like illness · insomnia · malaise · myalgia · nausea · neoplasm complications · oropharyngeal pain · pain · peripheral oedema · procedural pain · secretion discharge · skin reactions · tachycardia · vomiting · weight decreased · wound complications
- **Uncommon** Glomerulonephritis · injection site plasmacytoma · post procedural infection · respiratory disorders · vasculitis

**SIDE-EFFECTS, FURTHER INFORMATION** Necrosis or ulceration of tumour tissue may occur, and impaired healing at the injection site has been reported. Manufacturer advises careful wound care and infection precautions; if persistent infection or delayed healing develops, the risks and benefits of continuing treatment should be considered.

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises use of latex condoms.
- **PREGNANCY** Manufacturer advises avoid—no information available.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **DIRECTIONS FOR ADMINISTRATION** Consult product literature for information on injection technique.

- **HANDLING AND STORAGE** Manufacturer advises caution in handling—risk of accidental exposure; avoid preparation or administration if immunocompromised or pregnant. For further information, see the *Physician's Brochure* provided by the manufacturer. Store and transport frozen at -90°C to -70°C—consult product literature for further information on thawing and storage after thawing.

- **PATIENT AND CARER ADVICE** Manufacturer advises that patients and carers should be informed about the risks of treatment, advised to avoid touching or scratching injection sites, and to keep these sites covered with occlusive dressings. Close contacts should avoid direct contact with injected lesions or body fluids of treated patients during treatment and for up to 30 days after last treatment—if exposed, clean the affected area and seek medical attention if symptoms of herpetic infection develop; close contacts who are immunocompromised or pregnant should not be exposed to potentially contaminated materials. For further information, see the *Information for Patients and Close Contacts* provided by the manufacturer.

Provide patient alert card—record batch number for each administration of *Imlygic*<sup>®</sup>.

**Driving and skilled tasks** Manufacturer advises that patients and their carers should be counselled on the effects on driving and performance of skilled tasks—risk of dizziness and confusion.

- **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

#### NICE decisions

- Talimogene laherparepvec for treating unresectable metastatic melanoma (September 2016) NICE TA410 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

EXCIPIENTS: May contain Sorbitol

ELECTROLYTES: May contain Sodium

- *Imlygic* (Amgen Ltd)

**Talimogene laherparepvec 1 million plaque forming units per**

1 ml *Imlygic* 1million plaque forming units/1ml solution for injection vials | 1 vial [PoM] £1,670.00 (Hospital only)

**Talimogene laherparepvec 100 million plaque forming units per**

1 ml *Imlygic* 100million plaque forming units/1ml solution for injection vials | 1 vial [PoM] £1,670.00 (Hospital only)

### IMMUNOSTIMULANTS > INTERFERONS

#### Interferon gamma-1b

25-May-2021

(Immune interferon)

#### ● INDICATIONS AND DOSE

**To reduce the frequency of serious infection in chronic granulomatous disease**

► BY SUBCUTANEOUS INJECTION

► Adult: 50 micrograms/m<sup>2</sup> 3 times a week

**To reduce the frequency of serious infection in severe malignant osteopetrosis**

► BY SUBCUTANEOUS INJECTION

► Adult: 50 micrograms/m<sup>2</sup> 3 times a week

- **CONTRA-INDICATIONS** Simultaneous administration of foreign proteins including immunological products (such as vaccines)—risk of exaggerated immune response
- **CAUTIONS** Arrhythmias · cardiac disease · congestive heart failure · ischaemia · seizure disorders (including seizures associated with fever)
- **SIDE-EFFECTS**
- **Common or very common** Abdominal pain · arthralgia · back pain · chills · depression · diarrhoea · fatigue · fever · headache · nausea · rash · vomiting

- ▶ **Frequency not known** Atrioventricular block · chest discomfort · confusion · connective tissue disorders · embolism and thrombosis · gait abnormal · gastrointestinal haemorrhage · hallucination · heart failure · hepatic failure · hypertriglyceridaemia · hypoglycaemia · hyponatraemia · hypotension · influenza like illness · myocardial infarction · neutropenia · pancreatitis · parkinsonism · proteinuria · renal failure · respiratory disorders · seizure · syncope · systemic lupus erythematosus (SLE) · tachycardia · thrombocytopenia · transient ischaemic attack

- **CONCEPTION AND CONTRACEPTION** Effective contraception required during treatment—consult product literature.

- **PREGNANCY** Manufacturers recommend avoid unless potential benefit outweighs risk (toxicity in *animal* studies).

- **BREAST FEEDING** Manufacturers advise avoid—no information available.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment (increased risk of accumulation).

- **RENAL IMPAIRMENT** Manufacturer advises caution in severe impairment—risk of accumulation.

- **MONITORING REQUIREMENTS** Monitor before and during treatment: haematological tests (including full blood count, differential white cell count, and platelet count), blood chemistry tests (including renal and liver function tests) and urinalysis.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Immunin** (Clinigen Healthcare Ltd)

Interferon gamma-1b (recombinant human) 200 microgram per 1 ml Immunin 100micrograms/0.5ml solution for injection vials | 6 vial [PoM] £930.00

## IMMUNOSTIMULANTS > INTERLEUKINS

### Aldesleukin

24-Jul-2020

- **DRUG ACTION** Aldesleukin produces tumour shrinkage in a small proportion of patients, but it has not been shown to increase survival.

#### ● INDICATIONS AND DOSE

##### Metastatic renal cell carcinoma (specialist use only)

- ▶ BY SUBCUTANEOUS INJECTION, OR BY INTRAVENOUS INFUSION
- ▶ Adult: (consult product literature)

- **UNLICENSED USE** Aldesleukin is not licensed for use in patients in whom all three of the following prognostic factors are present: performance status of Eastern Co-operative Oncology Group of 1 or greater, more than one organ with metastatic disease sites, and a period of less than 24 months between initial diagnosis of primary tumour and date of evaluation of treatment.

- **CONTRA-INDICATIONS** Consult product literature

- **CAUTIONS** Consult product literature

- **INTERACTIONS** → Appendix 1: aldesleukin

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Acidosis · alopecia · anaemia · anxiety · appetite decreased · arrhythmias · arthralgia · ascites · asthenia · cardiovascular disorders · chest pain · chills · coagulation disorders · confusion · conjunctivitis · constipation · cough · cyanosis · dehydration · depression · diarrhoea · dizziness · drowsiness · dyspepsia · dysphagia · dyspnoea · electrolyte imbalance · eosinophilia · fever · gastrointestinal disorders · haemorrhage · hallucination · headache · heart failure · hepatic disorders · hyperbilirubinaemia · hyperglycaemia · hyperhidrosis · hypertension · hyperthyroidism · hypotension ·

hypothermia · hypothyroidism · hypoxia · increased risk of infection · insomnia · irritability · ischaemic heart disease · leucopenia · malaise · mucositis · myalgia · nasal congestion · nausea · nerve disorders · oedema · oral disorders · pain · palpitations · paraesthesia · pulmonary oedema · renal impairment · respiratory disorders · sepsis · skin reactions · speech disorder · syncope · taste loss · thrombocytopenia · vomiting · weight changes

- ▶ **Uncommon** Angioedema · cardiac arrest · cardiac inflammation · cardiomyopathy · coma · embolism and thrombosis · hypoglycaemia · muscle weakness · myopathy · neutropenia · pancreatitis · paralysis · pericardial disorders · seizure

- ▶ **Rare or very rare** Agranulocytosis · aplastic anaemia · cholecystitis · Crohn's disease aggravated · diabetes mellitus · haemolytic anaemia · injection site necrosis · Stevens-Johnson syndrome · ventricular dysfunction

- ▶ **Frequency not known** Capillary leak syndrome · immune complex RPGN · inflammatory arthritis · intracranial haemorrhage · leukoencephalopathy · myocardial infarction · oculo-bulbar myasthenia gravis · psychiatric disorder · stroke · thyroiditis · vasculitis cerebral

- **CONCEPTION AND CONTRACEPTION** Ensure effective contraception during treatment in men and women.

- **PREGNANCY** Use only if potential benefit outweighs risk (toxicity in *animal* studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **BREAST FEEDING** Discontinue breast-feeding.

- **DIRECTIONS FOR ADMINISTRATION** Intravenous infusion is associated with increased risk of capillary leak syndrome (which can cause pulmonary oedema and hypotension), compared to subcutaneous injection.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for solution for injection

- ▶ **Proleukin** (Clinigen Healthcare Ltd)

Aldesleukin 18 mega unit Proleukin 18million unit powder for solution for injection vials | 1 vial [PoM] £636.00 | 10 vial [PoM] £6,360.00

## IMMUNOSTIMULANTS > OTHER

### Bacillus Calmette-Guérin

16-Mar-2021

- **DRUG ACTION** Bacillus Calmette-Guérin is a live attenuated strain derived from *Mycobacterium bovis*.

#### ● INDICATIONS AND DOSE

##### Bladder instillation for the treatment of primary or recurrent bladder carcinoma and for the prevention of recurrence following transurethral resection

- ▶ BY INTRAVESICAL INSTILLATION
- ▶ Adult: (consult product literature)

- **CONTRA-INDICATIONS** Fever of unknown origin · HIV infection · impaired immune response · severe haematuria · tuberculosis · urinary-tract infection

- **CAUTIONS** Bladder injury (delay administration until mucosal damage healed) · traumatic catheterisation (delay administration until mucosal damage healed) · urethral injury (delay administration until mucosal damage healed)

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Appetite decreased · arthritis · bladder cramps · bladder disorders · cardiovascular event · chills · cystitis · diarrhoea · fatigue · fever · haematuria · hepatic disorders · increased risk of infection · joint disorders · malaise · myalgia · nausea · pain · skin reactions · urinary disorders · vomiting
- ▶ **Uncommon** Abdominal pain · anaemia · coagulation disorder · constipation · dizziness · genital pain · headache · leucopenia · mucositis · nephrotoxicity · stomatitis ·

thrombocytopenia · tissue in urine · ulcer · ureteral obstruction

- ▶ **Frequency not known** Erythema nodosum · eye disorders · eye inflammation · glomerulonephritis · influenza like illness · interstitial lung disease · nephritis · renal abscess · renal failure

- **PREGNANCY** Avoid.
- **BREAST FEEDING** Avoid.
- **PRE-TREATMENT SCREENING** Screen for active tuberculosis (contra-indicated if tuberculosis confirmed).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Powder for reconstitution for instillation**

- ▶ **OncoTICE** (Merck Sharp & Dohme (UK) Ltd)  
**TICE strain Bacillus of Calmette-Guérin 12.5 mg** OncoTICE 12.5mg powder for reconstitution for instillation vials | 1 vial [PoM] £71.61 (Hospital only)

## Mifamurtide

28-Jun-2021

### ● INDICATIONS AND DOSE

**Treatment of high-grade, resectable, non-metastatic osteosarcoma after complete surgical resection (in combination with chemotherapy)**

- ▶ **BY INTRAVENOUS INFUSION**
- ▶ **Adult:** Infusion to be given over 1 hour (consult product literature or local protocols)

- **UNLICENSED USE** Not licensed for use in patients over 30 years of age at initial diagnosis.
- **CAUTIONS** Asthma—consider prophylactic bronchodilator therapy · chronic obstructive pulmonary disease—consider prophylactic bronchodilator therapy · history of autoimmune disease · history of collagen disease · history of inflammatory disease
- **INTERACTIONS** → Appendix 1: mifamurtide
- **SIDE-EFFECTS**
- ▶ **Common or very common** Alopecia · anaemia · anxiety · appetite decreased · arthralgia · asthenia · cancer pain · chest discomfort · chills · confusion · constipation · cough · cyanosis · dehydration · depression · diarrhoea · dizziness · drowsiness · dysmenorrhoea · dyspnoea · feeling cold · fever · flushing · gastrointestinal discomfort · haemorrhage · headache · hearing loss · hepatic pain · hyperhidrosis · hypertension · hypokalaemia · hypotension · hyperthermia · increased risk of infection · insomnia · laryngeal pain · leucopenia · malaise · mucositis · muscle complaints · musculoskeletal stiffness · nasal congestion · nausea · neutropenia · oedema · pain · pallor · palpitations · respiratory disorders · sensation abnormal · sepsis · skin reactions · tachycardia · thrombocytopenia · tinnitus · tremor · urinary disorders · vertigo · vision blurred · vomiting · weight decreased

- **CONCEPTION AND CONTRACEPTION** Effective contraception required.
- **PREGNANCY** Avoid.
- **BREAST FEEDING** Avoid—no information available.
- **HEPATIC IMPAIRMENT** [EvGr] Caution in moderate to severe impairment (limited or no information available). ⚠
- **RENAL IMPAIRMENT** [EvGr] Caution in severe impairment (no information available). ⚠
- **MONITORING REQUIREMENTS**
- ▶ Monitor renal function, hepatic function and clotting parameters.
- ▶ Monitor patients with history of venous thrombosis, vasculitis, or unstable cardiovascular disorders for persistent or worsening symptoms during administration—consult product literature.

### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### **NICE decisions**

- ▶ **Mifamurtide for the treatment of osteosarcoma (October 2011)** NICE TA235 Recommended
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.
- Powder for suspension for infusion**
- ▶ **Mepact** (Takeda UK Ltd)  
**Mifamurtide 4 mg** Mepact 4mg powder for suspension for infusion vials | 1 vial [PoM] £2,375.00 (Hospital only)

## IMMUNOSUPPRESSANTS > THALIDOMIDE AND RELATED ANALOGUES

### Lenalidomide

24-May-2021

- **DRUG ACTION** Lenalidomide is an immunomodulating drug with anti-neoplastic, anti-angiogenic, and pro-erythropoietic properties.

### ● INDICATIONS AND DOSE

**Newly diagnosed multiple myeloma in patients who have undergone autologous stem cell transplantation (specialist use only)**

- ▶ **BY MOUTH**
- ▶ **Adult:** 10 mg once daily for 28 consecutive days of repeated 28-day cycles; increased if tolerated to 15 mg once daily, after 3 cycles, for dose adjustments due to side-effects—consult product literature

**Newly diagnosed multiple myeloma in patients not eligible for transplant (in combination with dexamethasone) (specialist use only) | Multiple myeloma in patients who have received at least one prior therapy (in combination with dexamethasone) (specialist use only)**

- ▶ **BY MOUTH**
- ▶ **Adult:** 25 mg once daily for 21 consecutive days of repeated 28-day cycles, for doses of dexamethasone, and dose adjustments due to side-effects—consult product literature

**Newly diagnosed multiple myeloma in patients not eligible for transplant (in combination with melphalan and prednisone) (specialist use only)**

- ▶ **BY MOUTH**
- ▶ **Adult:** 10 mg once daily for 21 consecutive days of repeated 28-day cycles for up to 9 cycles, patients who complete 9 cycles or are intolerant to combination therapy should continue treatment with lenalidomide as monotherapy, for doses of melphalan and prednisone, and dose adjustments due to side-effects—consult product literature

**Newly diagnosed multiple myeloma in patients not eligible for transplant (in combination with bortezomib and dexamethasone) (specialist use only)**

- ▶ **BY MOUTH**
- ▶ **Adult:** 25 mg once daily for 14 consecutive days of repeated 21-day cycles for up to 8 cycles, followed by 25 mg once daily for 21 consecutive days of repeated 28-day cycles (in combination with dexamethasone alone), for doses of bortezomib and dexamethasone, and dose adjustments due to side-effects—consult product literature

**Myelodysplastic syndromes (specialist use only)**

- ▶ **BY MOUTH**
- ▶ **Adult:** 10 mg once daily for 21 consecutive days of repeated 28-day cycles, for dose adjustments due to side-effects—consult product literature continued →

**Mantle cell lymphoma (specialist use only)**

## ▶ BY MOUTH

- ▶ Adult: 25 mg once daily for 21 consecutive days of repeated 28-day cycles, for dose adjustments due to side-effects—consult product literature

**Follicular lymphoma (in combination with rituximab) (specialist use only)**

## ▶ BY MOUTH

- ▶ Adult: 20 mg once daily for 21 consecutive days of repeated 28-day cycles for up to 12 cycles, for doses of rituximab, and dose adjustments due to side-effects—consult product literature

**IMPORTANT SAFETY INFORMATION****MHRA/CHM ADVICE: IMMUNOMODULATORY DRUGS AND PREGNANCY PREVENTION: TEMPORARY ADVICE FOR MANAGEMENT DURING CORONAVIRUS (COVID-19) (MAY 2020)**

The MHRA has issued temporary guidance for female patients on lenalidomide during the coronavirus (COVID-19) pandemic to support adherence to the Pregnancy Prevention Programme (see *Conception and contraception*), particularly for those who are shielding due to other health conditions, and should be followed until further notice.

- **CAUTIONS** Avoid blood donation during treatment (including during dose interruptions) and for at least 7 days after stopping treatment—teratogenic risk · high tumour burden—risk of tumour lysis syndrome · patients with risk factors for myocardial infarction

**CAUTIONS, FURTHER INFORMATION**

- ▶ Thromboembolism Risk factors for thromboembolism (such as smoking, hypertension, hyperlipidaemia) should be minimised and thromboprophylaxis should be considered in patients with multiple risk factors.
- ▶ Second primary malignancy Patients should be carefully evaluated before and during treatment with lenalidomide using routine cancer screening for occurrence of second primary malignancy and treatment should be instituted as indicated.
- **INTERACTIONS** → Appendix 1: lenalidomide
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Anaemia · appetite decreased · arthralgia · asthenia · atrial fibrillation · chills · constipation · cough · decreased leucocytes · dehydration · diarrhoea · dizziness · dry mouth · dyspnoea · electrolyte imbalance · embolism and thrombosis · fall · fever · gastrointestinal discomfort · haemorrhage · headache · heart failure · hyperglycaemia · hypertension · hyperthyroidism · hypotension · hyperthyroidism · increased risk of infection · influenza like illness · insomnia · iron overload · lethargy · mood altered · muscle complaints · muscle weakness · myocardial infarction · nausea · neoplasms · nerve disorders · neutropenia · night sweats · pain · pancytopenia · paraesthesia · peripheral oedema · renal failure · respiratory disorders · rhinorrhoea · sepsis · skin reactions · taste altered · thrombocytopenia · toothache · tumour flare · vertigo · vomiting · weight decreased
  - ▶ **Uncommon** Angioedema
  - ▶ **Rare or very rare** Hypersensitivity · severe cutaneous adverse reactions (SCARs) · tumour lysis syndrome
  - ▶ **Frequency not known** Acquired haemophilia · gastrointestinal disorders · hepatic disorders · hypersensitivity vasculitis · pancreatitis · progressive multifocal leukoencephalopathy (PML) · reactivation of infections · solid organ transplant rejection
- SIDE-EFFECTS, FURTHER INFORMATION** If rash occurs, treatment should be discontinued and only restarted following appropriate clinical evaluation.

Discontinue permanently if angioedema, exfoliative or bullous rash, or if Stevens-Johnson syndrome or toxic epidermal necrolysis is suspected.

- **CONCEPTION AND CONTRACEPTION** **EvGr** Pregnancy must be excluded in female patients of childbearing potential before starting treatment with lenalidomide. A medically supervised pregnancy test should be performed on, or within 3 days prior to, initiation and repeated every 4 weeks thereafter (including 4 weeks after the last dose), except in the case of confirmed tubal sterilisation. Females of childbearing potential must use effective contraception for at least 4 weeks before, during, and for at least 4 weeks after stopping treatment (including during dose interruptions), unless the patient is committed to absolute and continuous abstinence confirmed on a monthly basis; oral combined hormonal contraceptives and copper-releasing intra-uterine devices are not recommended. As lenalidomide is present in semen, male patients, even after successful vasectomy, must use condoms during treatment (including during dose interruptions) and for at least 1 week after stopping, if their partner is pregnant or is of childbearing potential and not using effective contraception. **M**
- **PREGNANCY Important: teratogenic risk.** Lenalidomide is structurally related to thalidomide and there is a risk of teratogenesis.
- **BREAST FEEDING** Discontinue breast-feeding—no information available.
- **RENAL IMPAIRMENT**  
**Dose adjustments** **EvGr** Reduce dose in moderate to severe impairment—consult product literature. **M**
- **MONITORING REQUIREMENTS**
  - ▶ Monitor full blood count (including differential white cell count, platelet count, haemoglobin, and haematocrit) and liver function before treatment, then every week for the first 8 weeks, then monthly thereafter (reduce dose or interrupt treatment if neutropenia, thrombocytopenia or impaired liver function develop—consult product literature).
  - ▶ Monitor for arterial or venous thromboembolism (if thromboembolic event occurs, discontinue lenalidomide and treat with standard anticoagulation therapy; lenalidomide may be restarted with continued anticoagulation therapy once thromboembolic event resolved—consult product literature).
  - ▶ Monitor thyroid function.
  - ▶ Monitor for signs and symptoms of peripheral neuropathy.
  - ▶ Monitor visual ability regularly (risk of cataract).
  - ▶ Hepatic disorders Liver function should be monitored particularly when there is history of, or concurrent viral liver infection, or when lenalidomide is combined with drugs known to be associated with liver dysfunction (e.g. paracetamol).
- **PRESCRIBING AND DISPENSING INFORMATION** Patients, prescribers, and pharmacists must comply with the manufacturer's Pregnancy Prevention Programme. Every prescription must be accompanied by a completed Prescription Authorisation Form.
  - For females of childbearing potential, each prescription for lenalidomide should be limited to a maximum supply of 4 weeks' treatment. Pregnancy testing should ideally be carried out on the same day as prescription issuing and dispensing.
  - For all other patients, each prescription should be limited to a maximum supply of 12 weeks' treatment.
- **PATIENT AND CARER ADVICE**  
**Thromboembolism** Patients and their carers should be made aware of the symptoms of thromboembolism and advised to report sudden breathlessness, chest pain, or swelling of a limb.

Neutropenia and thrombocytopenia Patients and their carers should be made aware of the symptoms of neutropenia and advised to seek medical advice if symptoms suggestive of neutropenia (such as fever, sore throat) or of thrombocytopenia (such as bleeding) develop.

Patients should be given a patient card and information leaflet about the Pregnancy Prevention Programme. **Conception and contraception** Patient counselling is advised for lenalidomide capsules (pregnancy and contraception).

#### • NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### NICE decisions

- ▶ **Lenalidomide for treating myelodysplastic syndromes associated with an isolated deletion 5q cytogenetic abnormality (updated June 2019)** NICE TA322 Recommended with restrictions
- ▶ **Lenalidomide for the treatment of multiple myeloma in people who have received at least 2 prior therapies (updated June 2019)** NICE TA171 Recommended with restrictions
- ▶ **Ixazomib with lenalidomide and dexamethasone for treating relapsed or refractory multiple myeloma (February 2018)** NICE TA505 Recommended with restrictions
- ▶ **Lenalidomide plus dexamethasone for multiple myeloma after 1 treatment with bortezomib (June 2019)** NICE TA586 Recommended with restrictions
- ▶ **Lenalidomide plus dexamethasone for previously untreated multiple myeloma (June 2019)** NICE TA587 Recommended with restrictions
- ▶ **Lenalidomide with rituximab for previously treated follicular lymphoma (April 2020)** NICE TA627 Recommended
- ▶ **Lenalidomide maintenance treatment after an autologous stem cell transplant for newly diagnosed multiple myeloma (March 2021)** NICE TA680 Recommended with restrictions
- ▶ **Scottish Medicines Consortium (SMC) decisions**
- ▶ **Lenalidomide (*Revlimid*<sup>®</sup>) for third line treatment of multiple myeloma (May 2010)** SMC No. 441/08 Recommended with restrictions
- ▶ **Lenalidomide (*Revlimid*<sup>®</sup>) in combination with dexamethasone, for the treatment of multiple myeloma in adult patients who have received at least one prior therapy (April 2014)** SMC No. 441/08 Recommended with restrictions
- ▶ **Lenalidomide (*Revlimid*<sup>®</sup>) for the treatment of adult patients with previously untreated multiple myeloma who are not eligible for transplant (December 2015)** SMC No. 1096/15 Recommended with restrictions
- ▶ **Lenalidomide (*Revlimid*<sup>®</sup>) as monotherapy for the maintenance treatment of adult patients with newly diagnosed multiple myeloma who have undergone autologous stem cell transplantation (October 2020)** SMC No. SMC2289 Recommended
- ▶ **Lenalidomide (*Revlimid*<sup>®</sup>) in combination with rituximab (anti-CD20 antibody) for the treatment of adult patients with previously treated follicular lymphoma (Grade 1 to 3a) (October 2020)** SMC No. SMC2281 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

## Pomalidomide

25-May-2021

- **DRUG ACTION** Pomalidomide is structurally related to thalidomide and has immunomodulatory properties and direct anti-myeloma tumoricidal activity.

#### • INDICATIONS AND DOSE

**Treatment of relapsed and refractory multiple myeloma in patients who have received at least two prior treatment regimens, including both lenalidomide and bortezomib, and who have had disease progression during the last treatment (in combination with dexamethasone)**

#### ▶ BY MOUTH

- ▶ **Adult:** 4 mg once daily for 21 consecutive days of repeated 28-day cycles, for doses of dexamethasone and dose adjustment due to side effects—consult product literature

#### DOSE ADJUSTMENTS DUE TO INTERACTIONS

- ▶ Manufacturer advises halve dose with concurrent use of potent inhibitors of CYP1A2 and ciprofloxacin.

#### IMPORTANT SAFETY INFORMATION

**MHRA/CHM ADVICE: RISK OF HEPATITIS B REACTIVATION (MAY 2016)**

An EU wide review has concluded that pomalidomide can cause hepatitis B reactivation; the MHRA recommends to establish hepatitis B virus status in all patients before initiation of treatment.

**MHRA/CHM ADVICE: IMMUNOMODULATORY DRUGS AND PREGNANCY PREVENTION: TEMPORARY ADVICE FOR MANAGEMENT DURING CORONAVIRUS (COVID-19) (MAY 2020)**

The MHRA has issued temporary guidance for female patients on pomalidomide during the coronavirus (COVID-19) pandemic to support adherence to the Pregnancy Prevention Programme (see *Conception and contraception*), particularly for those who are shielding due to other health conditions, and should be followed until further notice.

- **CAUTIONS** Avoid blood donation during treatment (including during dose interruptions) and for at least 7 days after stopping treatment—teratogenic risk · cardiac disease · cardiac risk factors · hepatitis B infection · high tumour burden—risk of tumour lysis syndrome · interstitial lung disease—discontinue if suspected · peripheral neuropathy

**CAUTIONS, FURTHER INFORMATION**

- ▶ Thromboembolism Risk factors for thromboembolism (such as smoking, hypertension, hyperlipidaemia) should be minimised. Thromboprophylaxis should be considered, particularly in patients with additional risk factors.
- ▶ Second primary malignancy Patients should be carefully evaluated before and during treatment with pomalidomide using routine cancer screening for occurrence of second primary malignancy and treatment should be instituted as indicated.
- ▶ Hepatitis B infection The MHRA advises that those with a history of hepatitis B infection should be closely monitored for signs and symptoms of active infection throughout treatment; expert advice should be sought for patients who test positive for active infection.

● **INTERACTIONS** → Appendix 1: pomalidomide

● **SIDE-EFFECTS**

- ▶ **Common or very common** Anaemia · angioedema · appetite decreased · atrial fibrillation · cataract · Clostridioides difficile colitis · confusion · constipation · cough · decreased leucocytes · depression · diarrhoea · dizziness · dry mouth · dyspnoea · electrolyte imbalance · embolism and thrombosis · fall · fatigue · fever · gastrointestinal discomfort · haemorrhage · heart failure · hyperglycaemia · hypertension · hyperuricaemia · hypotension · increased risk of infection · insomnia · intracranial haemorrhage · level of consciousness decreased · muscle spasms · muscle weakness · myocardial infarction · nausea · neoplasms · neutropenia · oedema · pain · pancytopenia · paraesthesia · pelvic pain · peripheral neuropathy · renal impairment · respiratory disorders · sepsis · skin reactions · stomatitis · syncope · taste altered · thrombocytopenia · tremor · urinary retention · vertigo · vomiting · weight decreased
- ▶ **Uncommon** Hepatitis · hyperbilirubinaemia · stroke · tumour lysis syndrome
- ▶ **Frequency not known** Hepatitis B reactivation · severe cutaneous adverse reactions (SCARs)

● **CONCEPTION AND CONTRACEPTION** [EvGr](#) Pregnancy must be excluded in female patients of childbearing potential before starting treatment with pomalidomide. A medically supervised pregnancy test should be performed on, or within 3 days prior to, initiation and repeated every 4 weeks thereafter (including 4 weeks after the last dose), except in the case of confirmed tubal sterilisation. Females of childbearing potential must use effective contraception for at least 4 weeks before, during, and for at least 4 weeks after stopping treatment (including during dose interruptions), unless the patient is committed to absolute and continuous abstinence confirmed on a monthly basis; oral combined hormonal contraceptives and copper-releasing intra-uterine devices are not recommended. As pomalidomide is present in semen, male patients, even after successful vasectomy, must use condoms during treatment (including during dose interruptions) and for at least 1 week after stopping, if their partner is pregnant or is of childbearing potential and not using effective contraception. [M](#)

- **PREGNANCY** Important: teratogenic risk.
- **BREAST FEEDING** Avoid—present in milk in *animal* studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (risk of increased exposure).
- **MONITORING REQUIREMENTS**
  - ▶ Manufacturer advises monitor full blood count before treatment, then every week for the first 8 weeks, then monthly thereafter (reduce dose or interrupt treatment if neutropenia or thrombocytopenia develop—consult product literature).
  - ▶ Manufacturer advises monitor for arterial or venous thromboembolism.
  - ▶ Manufacturer advises monitor for signs and symptoms of cardiac failure.

- ▶ Manufacturer advises monitor for acute onset or unexplained worsening of respiratory symptoms.
- ▶ Manufacturer advises monitor liver function for 6 months after initiation, then as clinically indicated.

● **PRESCRIBING AND DISPENSING INFORMATION** Patients, prescribers, and pharmacists must comply with the manufacturer's Pregnancy Prevention Programme. Every prescription must be accompanied by a completed Prescription Authorisation Form.

For females of childbearing potential, each prescription for pomalidomide should be limited to a maximum supply of 4 weeks' treatment. Pregnancy testing should ideally be carried out on the same day as prescription issuing and dispensing.

For all other patients, each prescription should be limited to a maximum supply of 12 weeks' treatment.

● **PATIENT AND CARER ADVICE** Patients and their carers should be made aware of the symptoms of thromboembolism and advised to report sudden breathlessness, chest pain, or swelling of a limb.

Patients and their carers should be made aware of the symptoms of neutropenia and advised to seek medical advice if symptoms suggestive of neutropenia (such as fever, sore throat) or of thrombocytopenia (such as bleeding) develop.

Patients should be given a patient card and information leaflet about the Pregnancy Prevention Programme.

**Conception and contraception** Patient counselling is advised for pomalidomide capsules (pregnancy and contraception).

● **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

- ▶ Pomalidomide for multiple myeloma previously treated with lenalidomide and bortezomib (January 2017) NICE TA427 Recommended with restrictions

**Thalidomide**

24-May-2021

● **DRUG ACTION** Thalidomide has immunomodulatory and anti-inflammatory activity.

● **INDICATIONS AND DOSE**

**First-line treatment for untreated multiple myeloma, in patients aged 65 years and over, or for those not eligible for high-dose chemotherapy (for example, patients with significant co-morbidity such as cardiac risk factors) in combination with melphalan and prednisolone**

▶ **BY MOUTH**

▶ Adult 18–75 years: 200 mg once daily for 6–week cycle for a maximum of 12 cycles, dose to be taken at bedtime

- Adult 76 years and over: 100 mg once daily for 6–week cycle for a maximum of 12 cycles, dose to be taken at bedtime

**IMPORTANT SAFETY INFORMATION****MHRA/CHM ADVICE: IMMUNOMODULATORY DRUGS AND PREGNANCY PREVENTION: TEMPORARY ADVICE FOR MANAGEMENT DURING CORONAVIRUS (COVID-19) (MAY 2020)**

The MHRA has issued temporary guidance for female patients on thalidomide during the coronavirus (COVID-19) pandemic to support adherence to the Pregnancy Prevention Programme (see *Conception and contraception*), particularly for those who are shielding due to other health conditions, and should be followed until further notice.

- **CAUTIONS** Avoid blood donation during treatment (including during dose interruptions) and for at least 7 days after stopping treatment—teratogenic risk · high tumour burden—risk of tumour lysis syndrome · patients aged 76 years and over—increased risk of serious side-effects
- **CAUTIONS, FURTHER INFORMATION**
- **Thromboembolism** Risk factors for thromboembolism (such as smoking, hypertension, hyperlipidaemia) should be minimised. Thromboprophylaxis is recommended for at least the first 5 months of treatment, especially in patients with additional thrombotic risk factors.
- **Second primary malignancy** Patients should be carefully evaluated before and during treatment with thalidomide using routine cancer screening for occurrence of second primary malignancy and treatment should be instituted as indicated.
- **Peripheral neuropathy** Patients with pre-existing peripheral neuropathy should not be treated with thalidomide unless the potential clinical benefits outweigh the risk.
- **INTERACTIONS** → Appendix 1: thalidomide
- **SIDE-EFFECTS**
- **Common or very common** Anaemia · arrhythmias · asthenia · confusion · constipation · decreased leucocytes · depression · dizziness · drowsiness · dry mouth · dyspnoea · embolism and thrombosis · fever · heart failure · increased risk of infection · malaise · movement disorders · neutropenia · peripheral neuropathy · peripheral oedema · respiratory disorders · sensation abnormal · skin reactions · thrombocytopenia · tremor · vomiting
- **Frequency not known** Atrioventricular block · gastrointestinal disorders · gastrointestinal haemorrhage · hearing impairment · hypothyroidism · liver disorder · menstrual cycle irregularities · myocardial infarction · neoplasms · pancreatitis · pancytopenia · posterior reversible encephalopathy syndrome (PRES) · pulmonary hypertension · reactivation of infections · renal failure · seizure · severe cutaneous adverse reactions (SCARs) · sexual dysfunction · tumour lysis syndrome
- **SIDE-EFFECTS, FURTHER INFORMATION** **Rash** If rash occurs, treatment should be discontinued and only restarted following appropriate clinical evaluation.
- **Peripheral neuropathy** If symptoms suggestive of peripheral neuropathy develop (such as paraesthesia, abnormal coordination, or weakness) dose reduction, dose interruption, or treatment discontinuation may be necessary—consult product literature.
- **CONCEPTION AND CONTRACEPTION** **[EvGr]** Pregnancy must be excluded in female patients of childbearing potential before starting treatment with thalidomide. A medically supervised pregnancy test should be performed on, or within 3 days prior to, initiation and repeated every 4 weeks thereafter (including 4 weeks after the last dose), except in the case of confirmed tubal sterilisation. Females of childbearing potential must use effective contraception

for at least 4 weeks before, during, and for at least 4 weeks after stopping treatment (including during dose interruptions), unless the patient is committed to absolute and continuous abstinence confirmed on a monthly basis; oral combined hormonal contraceptives and copper-releasing intra-uterine devices are not recommended. As thalidomide is present in semen, male patients, even after successful vasectomy, must use condoms during treatment (including during dose interruptions) and for at least 1 week after stopping, if their partner is pregnant or is of childbearing potential and not using effective contraception. **⚠**

- **PREGNANCY Important: teratogenic risk.**
- **BREAST FEEDING** Avoid—present in milk in *animal* studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment (no information available).
- **RENAL IMPAIRMENT** **[EvGr]** Use with caution in severe impairment—no information available. **⚠**
- **MONITORING REQUIREMENTS**
- **Monitor white blood cell count** (including differential count) and platelet count (reduce dose or interrupt treatment if neutropenia or thrombocytopenia develop—consult product literature).
- **Monitor for arterial or venous thromboembolism.**
- **Monitor patients for signs and symptoms of peripheral neuropathy.**
- **Hepatic disorder** Liver function should be monitored, particularly when there is history of, or concurrent viral liver infection, or when thalidomide is combined with drugs known to be associated with liver dysfunction (e.g. paracetamol).
- **PRESCRIBING AND DISPENSING INFORMATION** Patients, prescribers, and pharmacists must comply with the manufacturer's Pregnancy Prevention Programme. Every prescription must be accompanied by a completed Prescription Authorisation Form.
- **For females of childbearing potential, each prescription for thalidomide should be limited to a maximum supply of 4 weeks' treatment. Pregnancy testing should ideally be carried out on the same day as prescription issuing and dispensing.**
- **For all other patients, each prescription should be limited to a maximum supply of 12 weeks' treatment.**
- **PATIENT AND CARER ADVICE** Patients and their carers should be made aware of the symptoms of thromboembolism and advised to report sudden breathlessness, chest pain, or swelling of a limb.
- **Patients and their carers should be made aware of the symptoms of neutropenia and advised to seek medical advice if symptoms suggestive of neutropenia (such as fever, sore throat) or of thrombocytopenia (such as bleeding) develop.**
- **Patients and their carers should be advised to seek medical advice if symptoms of peripheral neuropathy such as paraesthesia, abnormal coordination, or weakness develop.**
- **Patients should be given a patient card and information leaflet about the Pregnancy Prevention Programme.**
- **Conception and contraception** Patient counselling advised for thalidomide capsules (pregnancy and contraception).
- **NATIONAL FUNDING/ACCESS DECISIONS**
- **For full details see funding body website**
- **NICE decisions**
- **Bortezomib and thalidomide for the first-line treatment of multiple myeloma (July 2011) NICE TA228 Recommended**

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: tablet, oral suspension, oral solution

**Tablet**

- ▶ **Talidex** (Special Order)

**Talidomide 50 mg** Talidex 25mg tablets | 30 tablet 

**Capsule**

CAUTIONARY AND ADVISORY LABELS 2

- ▶ **Talidomide (Non-proprietary)**

**Talidomide 50 mg** Talidomide Celgene 50mg capsules | 28 capsule  £298.48 DT = £298.48

**Talidomide 50mg capsules** | 28 capsule  £298.48 DT = £298.48 (Hospital only)

## 6 Photodynamic therapy responsive malignancy

### PHOTOSENSITISERS

#### Porfimer sodium

27-May-2020

- **DRUG ACTION** Porfimer sodium accumulates in malignant tissue and is activated by laser light to produce a cytotoxic effect.

#### • INDICATIONS AND DOSE

##### Photodynamic therapy of non-small cell lung cancer and obstructing oesophageal cancer

- ▶ BY SLOW INTRAVENOUS INJECTION

▶ Adult: (consult product literature)

- **CONTRA-INDICATIONS** Acute porphyrias p. 1150 · broncho-oesophageal fistula · tracheo-oesophageal fistula

#### • SIDE-EFFECTS

- ▶ **Common or very common** Anaemia · anxiety · appetite decreased · arrhythmias · asthenia · chest discomfort · confusion · constipation · cough · diarrhoea · dyspnoea · fever · fluid imbalance · gastrointestinal discomfort · gastrointestinal disorders · haemorrhage · heart failure · hypertension · hypotension · increased risk of infection · insomnia · nausea · oedema · oesophageal disorder · pain · photosensitivity reaction (sunscreens ineffective) · respiratory disorders · sepsis · swallowing difficulty · tracheo-oesophageal fistula · vomiting · weight decreased
- ▶ **Frequency not known** Angina pectoris · angioedema · atrioventricular block · bladder spasm · cataract · chills · dizziness · embolism and thrombosis · erythropenia · eye discomfort · eye disorders · hepatic disorders · hiccups · hydronephrosis · hypocalcaemia · laryngotracheal oedema · leucocytosis · malaise · myocardial infarction · numbness · oral disorders · pancreatitis · pulmonary oedema · skin reactions · swelling · syncope · urinary disorders · vision disorders

- **PREGNANCY** Manufacturer advises avoid unless essential.

- **BREAST FEEDING** No information available—manufacturer advises avoid.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild to moderate impairment (may increase duration of photosensitivity); avoid in severe impairment (no information available).

#### • PATIENT AND CARER ADVICE

Photosensitivity Avoid exposure of skin and eyes to direct sunlight or bright indoor light for at least 30 days.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for solution for injection

- ▶ **Photofrin** (Axcan Pharma Inc, Pinnacle Biologics BV)

**Porfimer sodium 15 mg** Photofrin 15mg powder for solution for injection vials | 1 vial   (Hospital only)

**Porfimer sodium 75 mg** Photofrin 75mg powder for solution for injection vials | 1 vial  £1,011.00 (Hospital only)

### Temoporfin

03-Sep-2020

- **DRUG ACTION** Temoporfin accumulates in malignant tissue and is activated by laser light to produce a cytotoxic effect.

#### • INDICATIONS AND DOSE

##### Photodynamic therapy of advanced head and neck squamous cell carcinoma refractory to, or unsuitable for, other treatments

- ▶ BY SLOW INTRAVENOUS INJECTION

▶ Adult: (consult product literature)

- **CONTRA-INDICATIONS** Acute porphyrias p. 1150 · concomitant photosensitising treatment · diseases exacerbated by light · elective surgery · ophthalmic slit-lamp examination for 30 days after administration

#### • SIDE-EFFECTS

- ▶ **Common or very common** Anaemia · constipation · dizziness · dysphagia · fever · haemorrhage · headache · local infection · nausea · oedema · oral disorders · pain · paraesthesia · photosensitivity reaction (sunscreens ineffective) · skin reactions · stomatitis necrotising · sunburn · vomiting
- ▶ **Frequency not known** Fistula · obstructive airway disorder · sepsis · vascular rupture

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises avoid pregnancy for at least 3 months after treatment.

- **PREGNANCY** Toxicity in *animal* studies. See also Pregnancy and reproductive function in Cytotoxic drugs p. 962.

- **BREAST FEEDING** Manufacturer advises avoid breastfeeding for at least 1 month after treatment—no information available.

#### • PATIENT AND CARER ADVICE

Photosensitivity Avoid exposure of skin and eyes to direct sunlight or bright indoor light for at least 15 days after administration.

Avoid prolonged exposure of injection site arm to direct sunlight for 6 months after administration.

If extravasation occurs protect area from light for at least 3 months.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Foscan** (Biolitec Pharma Ltd)

**Temoporfin 1 mg per 1 ml** Foscan 3mg/3ml solution for injection vials | 1 vial  £1,800.00 (Hospital only)

**Foscan 6mg/6ml** solution for injection vials | 1 vial  £3,400.00 (Hospital only)

## 7 Targeted therapy responsive malignancy

### ANTINEOPLASTIC DRUGS > PROTEASOME INHIBITORS

#### Bortezomib

03-Nov-2020

● **DRUG ACTION** Bortezomib is a proteasome inhibitor.

#### ● INDICATIONS AND DOSE

**Multiple myeloma (specialist use only) | Mantle cell lymphoma (specialist use only)**

- ▶ BY INTRAVENOUS INJECTION, OR BY SUBCUTANEOUS INJECTION
- ▶ Adult: (consult product literature or local protocols)

#### IMPORTANT SAFETY INFORMATION

Bortezomib injection is for **intravenous or subcutaneous administration** only. Inadvertent intrathecal administration with fatal outcome has been reported.

- **CONTRA-INDICATIONS** Acute diffuse infiltrative pulmonary disease · pericardial disease
- **CAUTIONS** Amyloidosis · cardiovascular disease · consider antiviral prophylaxis for herpes zoster infection · dehydration · diabetes (may affect blood glucose) · history of syncope · pulmonary disease · risk factors for seizures · risk of neuropathy—consult product literature
- **INTERACTIONS** → Appendix 1: bortezomib
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Anaemia · anxiety · appetite abnormal · arrhythmias · asthenia · chills · constipation · cough · decreased leucocytes · diabetes mellitus · diarrhoea · dizziness · dysphagia · dyspnoea · electrolyte imbalance · encephalopathy · enzyme abnormality · eye inflammation · fever · fluid imbalance · gastrointestinal discomfort · gastrointestinal disorders · haemorrhage · hair disorder · headaches · hearing impairment · heart failure · hepatic disorders · hiccups · hyperbilirubinaemia · hypersensitivity · hypertension · hypotension · increased risk of infection · ischaemic heart disease · lethargy · loss of consciousness · malaise · mood altered · muscle complaints · muscle weakness · nausea · nerve disorders · neuromuscular dysfunction · neutropenia · oedema · oral disorders · oropharyngeal complaints · pain · renal impairment · sensation abnormal · sepsis · skin reactions · sleep disorder · syncope · taste altered · thrombocytopenia · tinnitus · ventricular dysfunction · vertigo · vision disorders · vomiting · weight changes
  - ▶ **Uncommon** Altered smell sensation · angioedema · antibiotic associated colitis · arthritis · azotaemia · cardiac arrest · cardiomyopathy · cardiovascular disorder · cerebrovascular insufficiency · chest discomfort · circulation impaired · circulatory collapse · coagulation disorders · concentration impaired · confusion · Cushing's syndrome · dry eye · dysphonia · ear discomfort · embolism and thrombosis · eye discomfort · eye disorders · failure to thrive · gait abnormal · gas exchange abnormal · genital pain · haemolytic anaemia · hallucination · hyperthyroidism · increased leucocytes · injury · irritable bowel syndrome · joint disorders · lymphadenopathy · memory loss · movement disorders · mucous membrane disorder · myopathy · neurotoxicity · palpitations · pancreatitis · pancytopenia · pericardial disorders · pericarditis · posterior reversible encephalopathy syndrome (PRES) (discontinue) · proteinuria · psychiatric disorders · psychotic disorder · pulmonary hypertension · pulmonary oedema · reflexes abnormal · respiratory

- disorders · rhinorrhoea · seizure · sensation of pressure · severe cutaneous adverse reactions (SCARs) · sexual dysfunction · shock · SIADH · skin mass · skin ulcers · speech disorder · sweat changes · temperature sensation altered · thirst change · tremor · tumour lysis syndrome · urinary disorders · urinary tract disorder · vascular disorders · vasculitis · vasodilation
- ▶ **Rare or very rare** Acidosis · acute coronary syndrome · alcohol intolerance · amyloidosis · apnoea · ascites · atriocervical block · bladder irritation · blood disorders · bone disorder · bone fracture · brain oedema · breast disorder · cardiac valve disorder · cholelithiasis · CNS haemorrhage · cognitive disorder · coma · coronary artery insufficiency · delirium · drooling · ear disorder · erythromelalgia · fistula · gout · healing impaired · hypothyroidism · inflammation · lymphoedema · macrophage activation · mass · meningitis · metabolic disorder · multi organ failure · nail disorder · neoplasm malignant · neoplasms · nervous system disorder · paralysis · paresis · pelvic pain · perforation · photosensitivity reaction · platelet abnormalities · procedural complications · prostatitis · radiation injury · seborrhoea · sudden death · suicidal ideation · testicular disorders · throat complaints · ulcer · vaginal ulceration · venous insufficiency · vitamin deficiencies
- ▶ **Frequency not known** Herpes zoster reactivation · JC virus infection · progressive multifocal leukoencephalopathy (PML)
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during and for 3 months after treatment in men or women.
- **PREGNANCY** Toxicity in *animal* studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in moderate to severe impairment—monitor for toxicity. **Dose adjustments** Manufacturer advises reduce dose in moderate to severe impairment—consult product literature.
- **RENAL IMPAIRMENT** No information available for creatinine clearance less than 20 mL/minute/1.73 m<sup>2</sup>.
- **MONITORING REQUIREMENTS**
  - ▶ Monitor blood-glucose concentration in patients on oral antidiabetics.
  - ▶ Monitor for symptoms of progressive multifocal leukoencephalopathy (presenting as new or worsening neurological signs or symptoms)—discontinue treatment if diagnosed.
  - ▶ Chest x-ray recommended before treatment to monitor for pulmonary disease—discontinue if interstitial lung disease develops.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
- NICE decisions**
  - ▶ Bortezomib for previously untreated mantle cell lymphoma (December 2015) NICE TA370 Recommended
  - ▶ Bortezomib for induction therapy in multiple myeloma before high-dose chemotherapy and autologous stem cell transplantation (April 2014) NICE TA311 Recommended
  - ▶ Bortezomib and thalidomide for the first-line treatment of multiple myeloma (July 2011) NICE TA228 Recommended with restrictions
  - ▶ Bortezomib monotherapy for relapsed multiple myeloma (October 2007) NICE TA129 Recommended with restrictions
- Scottish Medicines Consortium (SMC) decisions**
  - ▶ Bortezomib (*Velcade*<sup>®</sup>) in combination with dexamethasone, or with dexamethasone and thalidomide, for the induction treatment of adult patients with previously untreated multiple myeloma who are eligible for high-dose chemotherapy with haematopoietic stem cell transplantation

(January 2014) SMC No. 927/13 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

#### Solution for injection

##### ▶ Bortezomib (Non-proprietary)

**Bortezomib 2.5 mg per 1 ml** Bortezomib 3.5mg/1.4ml solution for injection vials | 1 vial [PoM] £495.55 (Hospital only)

#### Powder for solution for injection

##### ▶ Bortezomib (Non-proprietary)

**Bortezomib 1 mg** Bortezomib 1mg powder for solution for injection vials | 1 vial [PoM] £217.82 (Hospital only)

**Bortezomib 2.5 mg** Bortezomib 2.5mg powder for solution for injection vials | 1 vial [PoM] £544.56 (Hospital only)

**Bortezomib 3.5 mg** Bortezomib 3.5mg powder for solution for injection vials | 1 vial [PoM] £533.67-£762.38 (Hospital only)

##### ▶ Velcade (Janssen-Cilag Ltd)

**Bortezomib 3.5 mg** Velcade 3.5mg powder for solution for injection vials | 1 vial [PoM] £762.38 (Hospital only)

## Carfilzomib

15-Dec-2021

- **DRUG ACTION** Carfilzomib is an irreversible selective proteasome inhibitor that disrupts tumour cell turnover and induces apoptosis.

#### • INDICATIONS AND DOSE

##### Multiple myeloma (specialist use only)

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: (consult product literature or local protocols)

#### IMPORTANT SAFETY INFORMATION

##### MHRA/CHM ADVICE: CARFILZOMIB (KYPROLIS®): REMINDER OF RISK OF POTENTIALLY FATAL CARDIAC EVENTS (AUGUST 2019)

Cases of cardiac arrest, cardiac failure, and myocardial infarction, including fatalities, have been reported in patients with or without pre-existing cardiac disorders receiving carfilzomib. Healthcare professionals are advised to monitor patients for signs and symptoms of cardiac disorders before and during carfilzomib treatment. Carfilzomib should be discontinued if severe or life-threatening cardiac events occur; restarting treatment may be considered at a lower dose once the condition is controlled and the patient is stable.

##### MHRA/CHM ADVICE: CARFILZOMIB (KYPROLIS®): RISK OF REACTIVATION OF HEPATITIS B VIRUS (NOVEMBER 2019)

An EU review of worldwide data has identified reports of hepatitis B virus (HBV) reactivation in patients treated with carfilzomib. Healthcare professionals are advised to screen all patients for HBV before initiating treatment; those with unknown serology already being treated with carfilzomib should also be screened. Patients with positive serology should be considered for antiviral prophylaxis, and be monitored for signs of HBV reactivation during and after treatment; immediate medical attention should be sought if signs and symptoms of HBV reactivation develop. Experts should be consulted for advice about HBV treatment and the continuation, interruption, or resumption of carfilzomib in patients with HBV reactivation.

- **CAUTIONS** Elderly (over 75 years)—higher incidence of adverse effects · ensure adequate hydration · hepatitis B carriers (consider antiviral prophylaxis) · infusion-related reactions · recent history of myocardial infarction · risk factors for thromboembolism · risk of cardiac failure · risk of herpes zoster reactivation · uncontrolled angina · uncontrolled arrhythmias

#### CAUTIONS, FURTHER INFORMATION

- ▶ Infusion-related reactions [EvGr] Premedication with dexamethasone advised to reduce incidence and severity of infusion-related reactions. ⚠
- ▶ Risk of herpes zoster reactivation [EvGr] Consider antiviral prophylaxis for herpes zoster infection. ⚠
- ▶ Hepatitis B reactivation [EvGr] Hepatitis B reactivation has been reported in patients taking carfilzomib. Patients with positive hepatitis B serology should be considered for prophylactic antiviral therapy, and closely monitored for clinical and laboratory signs of active hepatitis B infection during and after treatment. Experts in the treatment of hepatitis B infection should be consulted as necessary. ⚠

- **INTERACTIONS** → Appendix 1: carfilzomib

#### • SIDE-EFFECTS

- ▶ **Common or very common** Anaemia · anxiety · appetite decreased · arrhythmias · arthralgia · asthenia · cataract · chest pain · chills · confusion · constipation · cough · decreased leucocytes · dehydration · diarrhoea · dizziness · dysphonia · dyspnoea · electrolyte imbalance · embolism and thrombosis · fever · flushing · gastrointestinal discomfort · haemorrhage · headache · heart failure · hyperbilirubinaemia · hyperglycaemia · hyperhidrosis · hypertension · hyperuricaemia · hypoalbuminaemia · hypotension · increased risk of infection · influenza like illness · infusion related reaction · insomnia · malaise · muscle complaints · muscle weakness · myocardial infarction · nausea · neutropenia · oropharyngeal pain · pain · palpitations · peripheral neuropathy · peripheral oedema · pulmonary hypertension · pulmonary oedema · renal impairment · respiratory disorders · sensation abnormal · sepsis · skin reactions · thrombocytopenia · tinnitus · toothache · vision blurred · vomiting
- ▶ **Uncommon** Cardiac arrest · cardiomyopathy · Clostridioides difficile colitis · gastrointestinal perforation · haemolytic uraemic syndrome · hepatic disorders · hepatitis B reactivation · intracranial haemorrhage · multiple organ dysfunction syndrome · myocardial ischaemia · pericardial effusion · pericarditis · stroke · tumour lysis syndrome
- ▶ **Rare or very rare** Angioedema · posterior reversible encephalopathy syndrome (PRES) · thrombotic microangiopathy
- ▶ **Frequency not known** Progressive multifocal leukoencephalopathy (PML) · QT interval prolongation
- **CONCEPTION AND CONTRACEPTION** Manufacturer recommends effective contraception during and for 1 month after treatment in women of childbearing potential; hormonal contraceptives associated with a risk of thrombosis should be avoided. Male patients should use effective contraception during and for 3 months after treatment if their partner is pregnant or of childbearing potential. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—toxicity in animal studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Manufacturer advises avoid during and for at least 2 days after treatment—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (increased risk of side-effects), particularly in moderate to severe impairment (limited information available).
- **RENAL IMPAIRMENT** Manufacturer advises caution—increased incidence of adverse effects.
- **PRE-TREATMENT SCREENING** [EvGr] Patients should be screened for hepatitis B before treatment. ⚠
- **MONITORING REQUIREMENTS** [EvGr] Monitor the following patient parameters: serum potassium concentration at least monthly; signs and symptoms of fluid overload,

especially in those at risk of cardiac failure; renal function at treatment initiation and at least monthly during treatment—consider dose modification; hepatic function at treatment initiation and monthly during treatment—consider dose modification; platelet count; blood pressure at treatment initiation and regularly during treatment. Also monitor for signs and symptoms of thrombotic microangiopathy, tumour lysis syndrome and progressive multifocal leukoencephalopathy—withdraw treatment if suspected. 

● **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator at 2–8°C.

● **PATIENT AND CARER ADVICE** Manufacturer advises that patients and carers are warned to report signs and symptoms of thromboembolism (such as dyspnoea, chest pain, arm or leg swelling or pain).

**Driving and skilled tasks** Patients and their carers should be counselled on the effects on driving and skilled tasks—increased risk of dizziness, hypotension and blurred vision.

● **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

▶ **Carfilzomib** for previously treated multiple myeloma (November 2020) NICE TA657 Recommended with restrictions

▶ **Carfilzomib with dexamethasone and lenalidomide** for previously treated multiple myeloma (April 2021) NICE TA695 Recommended with restrictions

**Scottish Medicines Consortium (SMC) decisions**

▶ **Carfilzomib (Kyprolis<sup>®</sup>)** in combination with lenalidomide and dexamethasone for the treatment of adult patients with multiple myeloma who have received at least one prior therapy [see also SMC2290] (January 2017) SMC No. 1171/16 Not recommended

▶ **Carfilzomib (Kyprolis<sup>®</sup>)** in combination with dexamethasone alone for the treatment of adult patients with multiple myeloma who have received at least one prior therapy (August 2017) SMC No. 1242/17 Recommended

▶ **Carfilzomib (Kyprolis<sup>®</sup>)** in combination with lenalidomide and dexamethasone for the treatment of adult patients with multiple myeloma who have received at least one prior therapy [for patients who have received only one prior therapy] (October 2020) SMC No. SMC2290 Recommended

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Powder for solution for infusion**

EXCIPIENTS: May contain Sulfbutylether beta cyclodextrin sodium

ELECTROLYTES: May contain Sodium

▶ **Kyprolis** (Amgen Ltd)

**Carfilzomib 10 mg** Kyprolis 10mg powder for solution for infusion

vials | 1 vial  £176.00 (Hospital only)

**Carfilzomib 30 mg** Kyprolis 30mg powder for solution for infusion

vials | 1 vial  £528.00 (Hospital only)

**Carfilzomib 60 mg** Kyprolis 60mg powder for solution for infusion

vials | 1 vial  £1,056.00 (Hospital only)

## Ixazomib

01-May-2019

● **DRUG ACTION** Ixazomib is a proteasome inhibitor.

● **INDICATIONS AND DOSE**

**Multiple myeloma in patients who have received at least one prior therapy, in combination with lenalidomide and dexamethasone (specialist use only)**

▶ **BY MOUTH**

▶ **Adult:** 4 mg once weekly on days 1, 8, and 15 of a 28-day treatment cycle, for dose adjustments due to side-effects, consult product literature

**IMPORTANT SAFETY INFORMATION**

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

● **CAUTIONS** Risk of herpes zoster reactivation

**CAUTIONS, FURTHER INFORMATION**

▶ Herpes zoster reactivation Manufacturer advises consider concomitant antiviral prophylaxis to decrease the risk of herpes zoster reactivation.

● **INTERACTIONS** → Appendix 1: ixazomib

● **SIDE-EFFECTS**

▶ **Common or very common** Back pain · constipation · diarrhoea · increased risk of infection · nausea · neutropenia · peripheral neuropathy (monitor for symptoms) · peripheral oedema · skin reactions · thrombocytopenia · vomiting

▶ **Rare or very rare** Posterior reversible encephalopathy syndrome (PRES) (discontinue) · Stevens-Johnson syndrome · thrombotic microangiopathy · transverse myelitis · tumour lysis syndrome

▶ **Frequency not known** Appetite decreased · conjunctivitis · dizziness · dry eye · fatigue · hepatic disorders · hypokalaemia

● **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception in women of child-bearing potential and in men with a partner of child-bearing potential, during treatment and for at least 90 days after stopping treatment; additional barrier method recommended in women using hormonal contraceptives.

● **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **BREAST FEEDING** Manufacturer advises avoid—no information available.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution in moderate to severe impairment (risk of increased exposure).

**Dose adjustments** Manufacturer advises dose reduction to 3 mg in moderate to severe impairment.

● **RENAL IMPAIRMENT**

**Dose adjustments** Manufacturer advises reduce dose to 3 mg in severe impairment (creatinine clearance less than 30 mL/min). See p. 21.

● **MONITORING REQUIREMENTS** Manufacturer advises to monitor hepatic function regularly and adjust dose accordingly—consult product literature.

● **PATIENT AND CARER ADVICE**

**Missed doses** Manufacturer advises if less than 72 hours remain before the next scheduled dose, the missed dose should not be taken and the next dose should be taken at the normal time.

● **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

▶ **Ixazomib with lenalidomide and dexamethasone** for treating relapsed or refractory multiple myeloma (February 2018) NICE TA505 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Capsule**

CAUTIONARY AND ADVISORY LABELS 23, 25

▶ **Ninlaro** (Takeda UK Ltd) ▼**Ixazomib (as ixazomib citrate) 2.3 mg** Ninlaro 2.3mg capsules | 3 capsule [PoM] £6,336.00**Ixazomib (as ixazomib citrate) 3 mg** Ninlaro 3mg capsules | 3 capsule [PoM] £6,336.00**Ixazomib (as ixazomib citrate) 4 mg** Ninlaro 4mg capsules | 3 capsule [PoM] £6,336.00**ANTINEOPLASTIC DRUGS > PROTEIN KINASE INHIBITORS****Abemaciclib**

06-Oct-2021

- **DRUG ACTION** Abemaciclib is a selective inhibitor of cyclin-dependent kinases 4 and 6, which leads to disruption of cancer cell proliferation.

• **INDICATIONS AND DOSE****Locally advanced or metastatic breast cancer (initiated by a specialist)**▶ **BY MOUTH**

- ▶ Adult: 150 mg twice daily, for dose adjustments due to side-effects—consult product literature

**DOSE ADJUSTMENTS DUE TO INTERACTIONS**

- ▶ Manufacturer advises if concomitant use with potent CYP3A4 inhibitors is unavoidable, reduce abemaciclib dose to 100 mg twice daily; in those already taking a reduced dose, consult product literature. If the CYP3A4 inhibitor is stopped, increase the abemaciclib dose (after 3–5 half lives of the inhibitor) to the dose used before starting the CYP3A4 inhibitor.

**IMPORTANT SAFETY INFORMATION****RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.**MHRA/CHM ADVICE: CDK4/6 INHIBITORS (ABEMACICLIB, PALBOCICLIB, RIBOCICLIB): REPORTS OF INTERSTITIAL LUNG DISEASE AND PNEUMONITIS, INCLUDING SEVERE CASES (JUNE 2021)**

Interstitial lung disease and pneumonitis, in some cases severe or fatal, have been reported in patients being treated with CDK4/6 inhibitors, such as abemaciclib. Healthcare professionals are advised to ask patients taking abemaciclib about pulmonary symptoms indicative of interstitial lung disease and pneumonitis, such as cough or dyspnoea. Patients should be advised to seek advice right away if these symptoms occur. Healthcare professionals should ensure patients have a copy of the Patient Information Leaflet (PIL) for abemaciclib.

- **INTERACTIONS** → Appendix 1: abemaciclib
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Alopecia · anaemia · appetite decreased · decreased leucocytes · diarrhoea · dizziness · embolism and thrombosis · excessive tearing · fatigue · fever · infection · muscle weakness · nausea · neutropenia · respiratory disorders · skin reactions · taste altered · thrombocytopenia · vomiting
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises highly effective contraception in women of childbearing potential during treatment and for at least 3 weeks after completing treatment. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment. Temporary or permanent withdrawal may be needed following increases in aminotransferases—consult product literature.
- **Dose adjustments** Manufacturer advises dose reduction to 150 mg once daily in severe impairment.
- **RENAL IMPAIRMENT** Manufacturer advises caution in severe impairment—monitor for signs of toxicity.
- **MONITORING REQUIREMENTS** Manufacturer advises monitor full blood count, and alanine and aspartate aminotransferases before starting treatment, every 2 weeks for the first 2 months, monthly for the following 2 months, and as clinically indicated thereafter.
- **PATIENT AND CARER ADVICE** Patients should be instructed to start an anti-diarrhoeal such as loperamide, increase oral fluids, and seek medical advice at the first sign of loose stools. Patients should also be instructed to seek medical advice if fever occurs.
- **Driving and skilled tasks** Patients should be cautioned on the effects on driving and performance of skilled tasks—increased risk of fatigue and dizziness.

• **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

- ▶ **Abemaciclib with an aromatase inhibitor for previously untreated, hormone receptor-positive, HER2-negative, locally advanced or metastatic breast cancer (February 2019)** NICE TA563 Recommended with restrictions
- ▶ **Abemaciclib with fulvestrant for treating hormone receptor-positive, HER2-negative advanced breast cancer after endocrine therapy (September 2021)** NICE TA725 Recommended with restrictions
- **Scottish Medicines Consortium (SMC) decisions**
  - ▶ **Abemaciclib (Verzenios<sup>®</sup>) for the treatment of women with hormone receptor (HR) positive, human epidermal growth factor receptor 2 (HER2) negative locally advanced or metastatic breast cancer in combination with an aromatase inhibitor as initial endocrine-based therapy, or in women who have received prior endocrine therapy (May 2019)** SMC No. SMC2135 Recommended
  - ▶ **Abemaciclib (Verzenios<sup>®</sup>) for the treatment of women with hormone receptor (HR) positive, human epidermal growth factor receptor 2 (HER2) negative locally advanced or metastatic breast cancer in combination with fulvestrant as initial endocrine-based therapy or in women who have received prior endocrine therapy (May 2019)** SMC No. SMC2179 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

• **INDICATIONS AND DOSE****Chronic lymphocytic leukaemia (specialist use only)**▶ **BY MOUTH**

- ▶ Adult: 100 mg twice daily, doses should be taken approximately 12 hours apart, for dose adjustment,

interruption, or treatment discontinuation due to side-effects—consult product literature

### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **CAUTIONS** Exposure to sun (risk of skin cancer)—protect skin from exposure to sun · patients at high risk for thromboembolic disease—consider alternative treatment options to acalabrutinib · patients at increased risk for opportunistic infections—consider prophylaxis and monitor for signs and symptoms of infection · risk of haemorrhage—consider withholding acalabrutinib treatment for at least 3 days before and after surgery
- **INTERACTIONS** → Appendix 1: acalabrutinib
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Abdominal pain · anaemia · arrhythmias · arthralgia · asthenia · constipation · diarrhoea · dizziness · haemorrhage · headache · increased risk of infection · intracranial haemorrhage · musculoskeletal pain · nausea · neutropenia · second primary malignancy · skin reactions · thrombocytopenia · vomiting
  - ▶ **Uncommon** Hepatitis B reactivation · lymphocytosis · tumour lysis syndrome
  - ▶ **Frequency not known** Cough · leucopenia · progressive multifocal leukoencephalopathy (PML) · sepsis
- **PREGNANCY** [EVGr](#) Avoid unless potential benefit outweighs risk—toxicity in *animal* studies. [⚠](#) See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** [EVGr](#) Avoid breast feeding during treatment and for 2 days after the last dose—present in milk in *animal* studies. [⚠](#)
- **HEPATIC IMPAIRMENT** [EVGr](#) Caution in moderate impairment; avoid in severe impairment (risk of increased exposure). [⚠](#)
- **RENAL IMPAIRMENT** [EVGr](#) Caution in severe impairment (no information available). [⚠](#)
- **PRE-TREATMENT SCREENING** Patients should be evaluated for hepatitis B virus status before starting treatment—consult product literature.
- **PATIENT AND CARER ADVICE**
  - Missed doses** [EVGr](#) If a dose is more than 3 hours late, the missed dose should not be taken and the next dose should be taken at the normal time. [⚠](#)
  - Driving and skilled tasks** [EVGr](#) Patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of dizziness and fatigue. [⚠](#)
- **NATIONAL FUNDING/ACCESS DECISIONS**

## Afatinib

30-Sep-2021

- **DRUG ACTION** Afatinib is a protein kinase inhibitor.

### INDICATIONS AND DOSE

**Treatment of locally advanced or metastatic non-small cell lung cancer with activating epidermal growth factor receptor (EGFR) mutations, in patients who have not previously been treated with EGFR tyrosine kinase inhibitor**

- ▶ **BY MOUTH**
- ▶ **Adult:** 40 mg once daily; increased if tolerated to up to 50 mg once daily, dose increase may be considered after 3 weeks at initial dose; consult product literature for details on dosing and dose adjustment due to side effects

### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **CAUTIONS** Cardiac risk factors · conditions which may affect left ventricular ejection fraction—consider cardiac monitoring, including assessment of left ventricular ejection fraction, at baseline and during treatment · diarrhoea—proactive management recommended (consult product literature) · exposure to sun (protect skin from exposure to sun) · history of keratitis · new pulmonary symptoms (including dyspnoea, cough, fever)—interrupt treatment until interstitial lung disease is excluded · severe dry eyes · signs and symptoms of keratitis— promptly refer to ophthalmologist for assessment · signs and symptoms of skin reaction—treat promptly and interrupt afatinib treatment if severe or if Stevens-Johnson syndrome suspected (consult product literature) · ulcerative keratitis · use of contact lenses · worsening pulmonary symptoms (including dyspnoea, cough, fever)—interrupt treatment until interstitial lung disease is excluded
- **INTERACTIONS** → Appendix 1: afatinib
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Appetite decreased · cystitis · dehydration · diarrhoea · dry eye · dyspepsia · epistaxis · eye inflammation · fever · hypokalaemia · muscle spasms · nausea · oral disorders · paronychia · renal impairment · rhinorrhoea · skin reactions · taste altered · vomiting · weight decreased
  - ▶ **Uncommon** Interstitial lung disease · pancreatitis
  - ▶ **Rare or very rare** Severe cutaneous adverse reactions (SCARs)
- **CONCEPTION AND CONTRACEPTION** Ensure effective contraception during and for at least one month after treatment in women of childbearing potential.

- **PREGNANCY** Manufacturer advises avoid. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal* studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild to moderate impairment; avoid in severe impairment (no information available).  
**Dose adjustments** Manufacturer advises consider dose interruption if hepatic function worsens in mild to moderate impairment—consult product literature.
- **RENAL IMPAIRMENT** EVGR Avoid if eGFR less than 15 mL/minute/1.73 m<sup>2</sup> (no information available). M  
**Dose adjustments** EVGR Caution if eGFR 15–29 mL/minute/1.73 m<sup>2</sup> (risk of increased exposure)—monitor and adjust dose if not tolerated. M See p. 21.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises tablets should be taken whole on an empty stomach. Food should not be consumed for at least 3 hours before and at least 1 hour after each dose.

*Giotrif*<sup>®</sup> tablets may be dispersed in approximately 100 mL of noncarbonated water by stirring occasionally for up to 15 minutes (must not be crushed). The dispersion should be swallowed immediately, and the glass rinsed with the same volume of water which should also be swallowed. The dispersion can also be administered via a gastric tube.

- **PATIENT AND CARER ADVICE** Patient counselling advised (administration).  
**Driving and skilled tasks** Ocular adverse reactions may affect performance of skilled tasks e.g. driving.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website  
**NICE decisions**

**Alectinib**

31-Aug-2020

- **DRUG ACTION** Alectinib is a tyrosine kinase inhibitor.

**INDICATIONS AND DOSE**

**Anaplastic lymphoma kinase (ALK)-positive advanced non-small cell lung cancer (specialist use only)**

▶ BY MOUTH

- ▶ Adult: 600 mg twice daily, for dose adjustments due to side-effects—consult product literature

**IMPORTANT SAFETY INFORMATION**

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **INTERACTIONS** → Appendix 1: alectinib

**SIDE-EFFECTS**

- ▶ **Common or very common** Acute kidney injury · anaemia · arrhythmias · constipation · diarrhoea · eye disorders · eye inflammation · hyperbilirubinaemia · musculoskeletal pain · myalgia · nausea · oedema · oral disorders · photosensitivity reaction · skin reactions · taste altered · vision disorders · vomiting · weight increased
- ▶ **Uncommon** Drug-induced liver injury · respiratory disorders

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises women of child-bearing potential should use effective contraception during and for at least 3 months after stopping treatment.

- **PREGNANCY** Manufacturer advises avoid—toxicity in *animal* studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **BREAST FEEDING** Manufacturer advises avoid—no information available.

**HEPATIC IMPAIRMENT**

**Dose adjustments** Manufacturer advises reduce dose to 450 mg twice daily in severe impairment.

**MONITORING REQUIREMENTS**

- ▶ Manufacturer advises monitor creatine phosphokinase every 2 weeks for the first month and as clinically indicated thereafter in patients reporting symptoms of myalgia.
- ▶ Manufacturer advises monitor heart rate and blood pressure as clinically indicated.
- ▶ Manufacturer advises monitor liver function at baseline then every 2 weeks during the first 3 months of treatment and periodically thereafter as clinically indicated; more frequent monitoring should be performed in patients who develop aminotransferase and bilirubin elevations.
- ▶ Manufacturer advises monitor for symptoms of interstitial lung disease and pneumonitis.

**PATIENT AND CARER ADVICE**

**Photosensitivity** Manufacturer advises patients should use a broad spectrum sunscreen and lip balm and be advised to avoid prolonged sun exposure during treatment, and for 7 days after discontinuation.

**Myalgia** Manufacturer advises patients should be advised to report any unexplained muscle pain, tenderness or weakness.

**Vomiting** Manufacturer advises if vomiting occurs after taking tablets, no additional dose should be taken on that day and the next dose should be taken at the usual time.

**Missed doses** Manufacturer advises if a dose is more than 6 hours late, the missed dose should not be taken and the next dose should be taken at the normal time.

**Driving and skilled tasks** Manufacturer advises patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of symptomatic bradycardia and vision disorders.

- **DRUG ACTION** Apelisib is an alpha-specific class 1 protein kinase inhibitor.

### ● INDICATIONS AND DOSE

**Locally advanced or metastatic breast cancer (in combination with fulvestrant) [in postmenopausal women and men] (initiated by a specialist)**

▶ BY MOUTH

- ▶ Adult: 300 mg once daily, for dose adjustments, treatment interruption, or discontinuation due to side-effects—consult product literature

### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **CONTRA-INDICATIONS** History of severe cutaneous reactions · osteonecrosis of the jaw
- **CAUTIONS** History of diabetes mellitus (risk of hyperglycaemia)
- **INTERACTIONS** → Appendix 1: apelisib
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Acute kidney injury · alopecia · anaemia · appetite decreased · asthenia · dehydration · diarrhoea · dry eye · dry mouth · electrolyte imbalance · eyelid oedema · facial swelling · fever · gastrointestinal discomfort · headache · hypersensitivity · hypertension · increased risk of infection · insomnia · lymphoedema · mucosal abnormalities · muscle complaints · nausea · oedema · oral disorders · osteonecrosis of jaw · respiratory disorders · skin reactions · taste altered · urosepsis · vision blurred · vomiting · vulvovaginal dryness · weight decreased
  - ▶ **Uncommon** Diabetic ketoacidosis · ketoacidosis · pancreatitis · severe cutaneous adverse reactions (SCARs)
  - ▶ **Frequency not known** Hyperglycaemia
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises male patients should use effective contraception during treatment and for one week after last dose if their partner is pregnant or of childbearing potential. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962. The effect on human fertility is not known—impairment of fertility has been observed in *animal* studies.
- **RENAL IMPAIRMENT** Manufacturer advises use with caution in severe renal impairment—no information available.
- **MONITORING REQUIREMENTS** Manufacturer advises assess fasting plasma glucose and HbA1c levels before initiation and monitor frequently in the first 4 weeks of treatment—consult product literature.
- **PATIENT AND CARER ADVICE**

Vomiting Manufacturer advises if vomiting occurs after taking tablets, no additional dose should be taken on that day and the next dose should be taken at the usual time.

Missed doses Manufacturer advises if dose is more than 9 hours late, the missed dose should not be taken and the next dose should be taken at the usual time.

Driving and skilled tasks Manufacturer advises patients and carers should be cautioned on the effects on driving and

performance of skilled tasks—increased risk of fatigue or blurred vision.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**IMPORTANT SAFETY INFORMATION**

MHRA/CHM ADVICE: SYSTEMICALLY ADMINISTERED VEGF PATHWAY INHIBITORS: RISK OF ANEURYSM AND ARTERY DISSECTION (JULY 2020)

A European review of worldwide data concluded that systemically administered VEGF pathway inhibitors may lead to aneurysm and artery dissection in patients with or without hypertension. Some fatal cases have been reported, mainly in relation to aortic aneurysm rupture and aortic dissection. The MHRA advises healthcare professionals to carefully consider the risk of aneurysm and artery dissection in patients with risk factors before initiating treatment with axitinib; any modifiable risk factors (such as smoking and hypertension) should be reduced as much as possible. Patients should be monitored and treated for hypertension as required.

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
 See Cytotoxic drugs p. 962.

- **CONTRA-INDICATIONS** Recent active gastro-intestinal bleeding · untreated brain metastases
- **CAUTIONS** Hypertension · risk factors for aneurysm or artery dissection
- **CAUTIONS, FURTHER INFORMATION**
  - ▶ Monitoring of blood pressure The MHRA advises to monitor blood pressure regularly—consult product literature if hypertension occurs during treatment.
- **INTERACTIONS** → Appendix 1: axitinib
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Alopecia · anaemia · appetite decreased · arthralgia · asthenia · constipation · cough · dehydration · diarrhoea · dizziness · dysphonia · dyspnoea ·

- electrolyte imbalance · embolism and thrombosis · gastrointestinal discomfort · gastrointestinal disorders · haemorrhage · headache · heart failure · hyperbilirubinaemia · hypertension · hyperthyroidism · hypothyroidism · mucositis · myalgia · nausea · oral disorders · oropharyngeal pain · pain in extremity · polycythaemia · proteinuria · renal failure · skin reactions · taste altered · thrombocytopenia · tinnitus · vomiting · weight decreased
- ▶ **Uncommon** Leucopenia · neutropenia · posterior reversible encephalopathy syndrome (PRES)
- ▶ **Frequency not known** Aneurysm · artery dissection
- **CONCEPTION AND CONTRACEPTION** Effective contraception required during and for up to 1 week after treatment.
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk (toxicity in *animal* studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid in severe impairment—no information available.  
**Dose adjustments** Manufacturer advises reduce dose in moderate impairment.
- **MONITORING REQUIREMENTS**
  - ▶ Monitor for thyroid dysfunction.
  - ▶ Monitor haemoglobin or haematocrit before and during treatment.
  - ▶ Monitor for symptoms of gastro-intestinal perforation.
  - ▶ Monitor for symptoms of fistula.
  - ▶ Monitor for proteinuria before and during treatment.
  - ▶ Monitor liver function before and during treatment.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
 For full details see funding body website

**NICE decisions**

- ▶ Axitinib for treating advanced renal cell carcinoma after failure of prior systemic treatment (February 2015) NICE TA333 Recommended with restrictions
- ▶ Avelumab with axitinib for untreated advanced renal cell carcinoma (September 2020) NICE TA645 Recommended
- ▶ Pembrolizumab with axitinib for untreated advanced renal cell carcinoma (September 2020) NICE TA650 Not recommended

## Binimetinib

05-Mar-2019

● **DRUG ACTION** Binimetinib inhibits the mitogen-activated protein kinase (MAPK) pathway, specifically mitogen-activated extracellular kinases MEK 1 and 2, thereby inhibiting BRAF V600 mutation-positive cell growth.

### ● INDICATIONS AND DOSE

**Unresectable or metastatic melanoma with a BRAF V600 mutation (in combination with encorafenib) (specialist use only)**

► BY MOUTH

► Adult: 45 mg twice daily, for dose adjustments due to side-effects, consult product literature

### IMPORTANT SAFETY INFORMATION

RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES  
See Cytotoxic drugs p. 962.

- **CONTRA-INDICATIONS** History of retinal vein occlusion
- **CAUTIONS** Left ventricular dysfunction (ejection fraction below 50%, or below the institutional lower limits of normal) · neuromuscular conditions associated with elevated creatine kinase and rhabdomyolysis · risk factors for retinal vein occlusion · risk factors for venous thromboembolism
- **SIDE-EFFECTS**
  - **Common or very common** Alopecia · anaemia · angioedema · arthralgia · constipation · detachment of retinal pigment epithelium · diarrhoea · dizziness · embolism and thrombosis · eye inflammation · fatigue · fever · fluid retention · gastrointestinal discomfort · gastrointestinal disorders · haemorrhage · headache · heart failure · hypersensitivity · hypersensitivity vasculitis · hypertension · intracranial haemorrhage · left ventricular dysfunction · lip squamous cell carcinoma · muscle complaints · muscle weakness · myopathy · nausea · neoplasms · nerve disorders · oedema · pain · panniculitis · photosensitivity reaction · renal failure · skin reactions · taste altered · ulcerative colitis · vision disorders · vomiting
  - **Uncommon** Facial paralysis · pancreatitis
  - **Frequency not known** Respiratory disorders · retinal occlusion (discontinue permanently)
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises women of child-bearing potential should use effective contraception during and for at least one month after stopping treatment.
- **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid in moderate or severe impairment (increased exposure).
- **MONITORING REQUIREMENTS**
  - Manufacturer advises monitor liver function before treatment, at least monthly during the first 6 months, and thereafter as clinically indicated.
  - Manufacturer advises assess left ventricular ejection fraction before treatment, one month after starting treatment, then every 3 months or more frequently as clinically indicated.
  - Manufacturer advises monitor for visual disturbances.
  - Manufacturer advises monitor blood pressure before and during treatment.
  - Manufacturer advises monitor creatine kinase and creatinine levels monthly during the first 6 months of treatment, and as clinically indicated.

### ● PATIENT AND CARER ADVICE

**Missed doses** Manufacturer advises if a dose is more than 6 hours late, the missed dose should not be taken and the next dose should be taken at the normal time.

**Driving and skilled tasks** Manufacturer advises patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of visual disturbances.

### ● NATIONAL FUNDING/ACCESS DECISIONS

05-Dec-2019

### ● INDICATIONS AND DOSE

**Previously treated chronic, accelerated and blast phase Philadelphia chromosome-positive chronic myeloid leukaemia (specialist use only)**

► BY MOUTH

► Adult: 500 mg once daily, consult product literature for dose adjustment due to side-effects, or incomplete haematologic response by week 8, or incomplete cytogenetic response by week 12

**Newly-diagnosed chronic phase Philadelphia chromosome-positive chronic myeloid leukaemia (specialist use only)**

► BY MOUTH

► Adult: 400 mg once daily, consult product literature for dose adjustment due to side-effects, or failure to demonstrate breakpoint cluster region-Abelson (BCR-ABL) transcripts  $\leq 10\%$  by month 3

### IMPORTANT SAFETY INFORMATION

RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES  
See Cytotoxic drugs p. 962.

MHRA/CHM ADVICE (MAY 2016): RISK OF HEPATITIS B VIRUS REACTIVATION WITH BCR-ABL TYROSINE KINASE INHIBITORS

An EU wide review has concluded that bosutinib can cause hepatitis B reactivation; the MHRA recommends establishing hepatitis B virus status in all patients before initiation of treatment.

- **CAUTIONS** Cardiac disease · hepatitis B infection · history of pancreatitis—withhold treatment if lipase elevated and abdominal symptoms occur · history of QT prolongation—monitor ECG and correct hypokalaemia and hypomagnesaemia before and during treatment · recent cardiac event—monitor ECG and correct hypokalaemia and hypomagnesaemia before and during treatment · risk factors for QT prolongation—monitor ECG and correct hypokalaemia and hypomagnesaemia before and during treatment · significant gastrointestinal disorder
- **CAUTIONS, FURTHER INFORMATION**
  - Hepatitis B infection The MHRA advises that patients who are carriers of hepatitis B virus should be closely monitored for signs and symptoms of active infection throughout treatment and for several months after stopping treatment; expert advice should be sought for

patients who test positive for hepatitis B virus and in those with active infection.

- **INTERACTIONS** → Appendix 1: bosutinib
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Anaemia · appetite decreased · arthralgia · asthenia · chest discomfort · cough · dehydration · diarrhoea · dizziness · dyspnoea · electrolyte imbalance · fever · gastritis · gastrointestinal discomfort · haemorrhage · headache · hepatic disorders · hyperbilirubinaemia · hyperlipasaemia · hypertension · increased risk of infection · leucopenia · long QT syndrome · malaise · myalgia · nausea · neutropenia · oedema · pain · pericardial effusion · QT interval prolongation · renal impairment · respiratory disorders · skin reactions · taste altered · thrombocytopenia · tinnitus · vomiting
  - ▶ **Uncommon** Pancreatitis · pericarditis · pulmonary hypertension · pulmonary oedema · tumour lysis syndrome
  - ▶ **Frequency not known** Hepatitis B reactivation · severe cutaneous adverse reactions (SCARs)
- **CONCEPTION AND CONTRACEPTION** Effective contraception required during treatment in women.
- **PREGNANCY** Avoid—toxicity in *animal* studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **BREAST FEEDING** Manufacturer advises avoid—no information available.

● **HEPATIC IMPAIRMENT** Manufacturer advises avoid.

#### ● **RENAL IMPAIRMENT**

**Dose adjustments** For *chronic, accelerated and blast phase Philadelphia chromosome-positive chronic myeloid leukaemia*, manufacturer advises reduce dose to 400 mg in moderate impairment; reduce dose to 300 mg in severe impairment; consult product literature for dose adjustment due to side-effects, or incomplete haematological, cytogenetic, or molecular response.

For *newly-diagnosed chronic phase Philadelphia chromosome-positive chronic myeloid leukaemia*, manufacturer advises reduce dose to 300 mg in moderate impairment; reduce dose to 200 mg in severe impairment; consult product literature for dose adjustment due to side-effects, or incomplete haematological, cytogenetic, or molecular response.

#### ● **MONITORING REQUIREMENTS**

- ▶ Manufacturer advises monitor liver function before treatment initiation, then monthly for the first 3 months and thereafter as clinically indicated—consult product literature for management of raised transaminases.
- ▶ Manufacturer advises monitor full blood count weekly for the first month and then monthly thereafter or as clinically indicated.
- ▶ Manufacturer advises monitor for signs and symptoms of fluid retention (including pericardial effusion, pleural effusion and pulmonary oedema).

#### ● **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

#### **NICE decisions**

- ▶ **Bosutinib** for previously treated chronic myeloid leukaemia (August 2016) NICE TA401 Recommended with restrictions

## Brigatinib

12-Feb-2021

- **DRUG ACTION** Brigatinib is a tyrosine kinase inhibitor.

#### ● **INDICATIONS AND DOSE**

##### **Anaplastic lymphoma kinase (ALK)-positive advanced non-small cell lung cancer (specialist use only)**

###### ▶ **BY MOUTH**

- ▶ **Adult:** Initially 90 mg once daily for 7 days, then increased to 180 mg once daily, for dose adjustments, treatment interruption, or discontinuation due to side-effects—consult product literature

#### **DOSE ADJUSTMENTS DUE TO INTERACTIONS**

- ▶ Manufacturer advises if concomitant use with potent CYP3A4 inhibitors is unavoidable, reduce brigatinib dose to 90 mg once daily; in those starting treatment or already taking a reduced dose, consult product literature.

#### **IMPORTANT SAFETY INFORMATION**

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **INTERACTIONS** → Appendix 1: brigatinib

#### ● **SIDE-EFFECTS**

- ▶ **Common or very common** Anaemia · appetite decreased · arthralgias · arthralgia · asthenia · cataract · chest discomfort · constipation · cough · diarrhoea · dizziness · dry mouth · dyspnoea · electrolyte imbalance · eye disorders · eye inflammation · facial swelling · fever · flatulence · gastrointestinal discomfort · glaucoma · headaches · hyperbilirubinaemia · hyperglycaemia · hyperinsulinaemia · hypertension · increased risk of infection · insomnia · memory loss · muscle complaints · musculoskeletal discomfort · nausea · nerve disorders · neurotoxicity · oedema · oral disorders · pain · palpitations · peripheral swelling · photosensitivity reaction · QT interval prolongation · respiratory disorders · sensation abnormal · skin reactions · taste altered · vision disorders · vomiting · weight decreased

#### ▶ **Uncommon** Pancreatitis

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective non-hormonal contraception in females of childbearing potential during and for at least 4 months after treatment. Male patients with partners of childbearing potential should use effective contraception during and for at least 3 months after treatment.

- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—toxicity in *animal* studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **BREAST FEEDING** Manufacturer advises avoid—no information available.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment.

**Dose adjustments** Manufacturer advises dose reduction to 60 mg once daily for 7 days, then increase to 120 mg once daily in severe impairment.

- **RENAL IMPAIRMENT** Manufacturer advises caution in severe impairment.

**Dose adjustments** Manufacturer advises dose reduction to 60 mg once daily for 7 days, then increase to 90 mg once daily in severe impairment.

#### ● **MONITORING REQUIREMENTS**

- ▶ Manufacturer advises monitor for new or worsening respiratory symptoms, particularly in the first week of treatment—promptly investigate if pneumonitis suspected (consult product literature).
- ▶ Manufacturer advises monitor blood pressure, heart rate, creatine phosphokinase, amylase, and lipase regularly.

- ▶ Manufacturer advises monitor liver function at baseline, then every 2 weeks during the first 3 months of treatment, and periodically thereafter.
- ▶ Manufacturer advises monitor fasting serum glucose at baseline and periodically thereafter.
- **PATIENT AND CARER ADVICE** Manufacturer advises patients and carers should be told to report symptoms of visual disturbance, or unexplained muscle pain, tenderness, or weakness.

**Driving and skilled tasks** Manufacturer advises patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of visual disturbance, dizziness, or fatigue.

- **NATIONAL FUNDING/ACCESS DECISIONS**

## Cabozantinib

22-Nov-2021

- **DRUG ACTION** Cabozantinib is an inhibitor of several protein kinases.

- **INDICATIONS AND DOSE**

**Progressive, unresectable locally advanced or metastatic medullary thyroid carcinoma (initiated by a specialist)**

- ▶ **BY MOUTH USING CAPSULES**
- ▶ **Adult:** 140 mg once daily, for dose adjustment or treatment interruption due to side-effects, consult product literature (closely monitor for first 8 weeks of therapy)

**Advanced renal cell carcinoma (as monotherapy) (initiated by a specialist) | Hepatocellular carcinoma (initiated by a specialist)**

- ▶ **BY MOUTH USING TABLETS**
- ▶ **Adult:** 60 mg once daily, for dose adjustment or treatment interruption due to side-effects, consult product literature (closely monitor for first 8 weeks of therapy)

**Advanced renal cell carcinoma (in combination with nivolumab) (initiated by a specialist)**

- ▶ **BY MOUTH USING TABLETS**
- ▶ **Adult:** 40 mg once daily, for dose adjustment or treatment interruption due to side-effects, consult product literature (closely monitor for first 8 weeks of therapy)

**DOSE EQUIVALENCE AND CONVERSION**

- ▶ Cabozantinib tablets and capsules are not bioequivalent—consult product literature when switching formulations.

**IMPORTANT SAFETY INFORMATION**

**MHRA/CHM ADVICE: SYSTEMICALLY ADMINISTERED VEGF PATHWAY INHIBITORS: RISK OF ANEURYSM AND ARTERY DISSECTION (JULY 2020)**

A European review of worldwide data concluded that systemically administered VEGF pathway inhibitors may lead to aneurysm and artery dissection in patients with or without hypertension. Some fatal cases have been reported, mainly in relation to aortic aneurysm rupture and aortic dissection. The MHRA advises healthcare professionals to carefully consider the risk of aneurysm and artery dissection in patients with risk factors before initiating treatment with cabozantinib; any modifiable risk factors (such as smoking and hypertension) should be reduced as much as possible. Patients should be monitored and treated for hypertension as required.

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **CONTRA-INDICATIONS** Reversible posterior leucoencephalopathy syndrome
- **CAUTIONS** Hypertension · palmar-plantar erythrodysesthesia syndrome—consider treatment interruption if severe and restart at a lower dose when resolved to grade 1 · patients at increased risk of fistulas—consult product literature · patients at increased risk of gastro-intestinal perforation—consult product literature · patients at increased risk of intra-abdominal abscess—consult product literature · patients at risk of haemorrhage (including tumour involvement of the trachea or bronchi)—discontinue if symptoms develop · patients at risk of thromboembolic events including myocardial infarction—discontinue if symptoms develop · risk factors for aneurysm or artery dissection · risk of osteonecrosis of the jaw · susceptibility to QT-interval prolongation (e.g. cardiac disease, electrolyte disturbances, bradycardia, concomitant use of drugs that prolong the QT interval)
- **CAUTIONS, FURTHER INFORMATION**
- ▶ **Elective surgery** Withhold treatment for at least 28 days before elective surgery and restart only if adequate wound healing—discontinue in patients with wound healing complications requiring medical intervention.
- ▶ **Risk of osteonecrosis of the jaw** Discontinue treatment at least 28 days before elective invasive dental procedures—monitor for symptoms before and during treatment and discontinue if osteonecrosis develops.
- ▶ **Monitoring of blood pressure** The MHRA advises to monitor blood pressure regularly—consult product literature if hypertension occurs during treatment.
- **INTERACTIONS** → Appendix 1: cabozantinib
- **SIDE-EFFECTS**
- ▶ **Common or very common** Abscess · alopecia · anaemia · anxiety · appetite decreased · arrhythmias · arthralgia · asthenia · chills · cholelithiasis · confusion · constipation · cough · dehydration · depression · diarrhoea · dizziness · dry mouth · dyslipidaemia · dysphagia · dysphonia · dyspnoea · dysuria · ear pain · electrolyte imbalance · embolism and thrombosis · encephalopathy · fistula ·

gastrointestinal discomfort · gastrointestinal disorders · haemorrhage · hair changes · headache · healing impaired · hyperbilirubinaemia · hyperglycaemia · hypertension · hypoalbuminaemia · hypoglycaemia · hypotension · hypothyroidism · increased risk of infection · lymphopenia · mucositis · muscle spasms · nausea · nerve disorders · neutropenia · oedema · oral disorders · oropharyngeal pain · osteonecrosis of jaw · pain · pallor · pancreatitis · paraesthesia · peripheral coldness · proteinuria · respiratory disorders · skin reactions · stroke · taste altered · thrombocytopenia · tinnitus · tracheo-oesophageal fistula · tremor · vision blurred · vomiting · weight decreased

- ▶ **Uncommon** Abnormal dreams · acute kidney injury · amenorrhoea · angina pectoris · ataxia · cataract · concentration impaired · conjunctivitis · cyst · delirium · hearing impairment · hepatic disorders · loss of consciousness · rhabdomyolysis · seizure · skin ulcer · speech disorder · telangiectasia · throat oedema · wound complications
- ▶ **Frequency not known** Aneurysm · artery dissection · myocardial infarction
- **CONCEPTION AND CONTRACEPTION** Patients and their sexual partners must use effective contraception (in addition to barrier method) during treatment and for at least 4 months after the last dose.
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—*toxicity in animal studies*. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Manufacturer advises discontinue breast-feeding during treatment and for at least 4 months after the last dose.
- **HEPATIC IMPAIRMENT** For *capsules* manufacturer advises caution in mild to moderate impairment (risk of increased exposure); avoid in severe impairment (no information available). For *tablets* manufacturer advises caution in moderate impairment (limited information available); avoid in severe impairment (no information available). **Dose adjustments** For *capsules* manufacturer advises dose reduction to 60 mg once daily in mild to moderate impairment.
- **RENAL IMPAIRMENT** [EvGr](#) Caution in mild to moderate impairment; avoid in severe impairment (no information available). [M](#)
- **MONITORING REQUIREMENTS**
  - ▶ [EvGr](#) Monitor urine protein regularly and discontinue if nephrotic syndrome develops.
  - ▶ Monitor blood pressure, ECG and electrolytes during treatment.
  - ▶ Measure baseline thyroid function before treatment and monitor during treatment.
  - ▶ Perform liver function tests before starting, and monitor during treatment.
  - ▶ Monitor platelet counts during treatment. [M](#)
- **PATIENT AND CARER ADVICE** Food should not be consumed for at least 2 hours before and at least 1 hour after each dose. **Driving and skilled tasks** Fatigue and weakness may affect performance of skilled tasks e.g. driving.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
- NICE decisions**
  - ▶ Cabozantinib for previously treated advanced renal cell carcinoma (August 2017) NICE TA463 Recommended
  - ▶ Cabozantinib for untreated advanced renal cell carcinoma (October 2018) NICE TA542 Recommended with restrictions
  - ▶ Cabozantinib for treating medullary thyroid cancer (March 2018) NICE TA516 Recommended with restrictions

### Scottish Medicines Consortium (SMC) decisions

- ▶ Cabozantinib (*Cabometyx*<sup>®</sup>) for the treatment of advanced renal cell carcinoma (RCC) in adults following prior vascular endothelial growth factor (VEGF)-targeted therapy (June 2017) SMC No. 1234/17 Recommended
- ▶ Cabozantinib (*Cabometyx*<sup>®</sup>) for treatment of advanced renal cell carcinoma (RCC) in treatment-naïve adults with intermediate or poor risk per IMDC criteria (February 2019) SMC No. SMC2136 Not recommended
- ▶ Cabozantinib (*Cabometyx*<sup>®</sup>) in combination with nivolumab for the first-line treatment of advanced renal cell carcinoma in adults (October 2021) SMC No. SMC2386 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

## Ceritinib

10-Jun-2021

- **DRUG ACTION** Ceritinib is a tyrosine kinase inhibitor, with particular activity against anaplastic lymphoma kinase (ALK).

### ● INDICATIONS AND DOSE

**First-line treatment of anaplastic lymphoma kinase (ALK)-positive advanced non-small cell lung cancer (specialist use only) | Anaplastic lymphoma kinase (ALK)-positive advanced non-small cell lung cancer previously treated with crizotinib (specialist use only)**

#### ▶ BY MOUTH

- ▶ **Adult:** 450 mg once daily, dose interruption, dose reduction or discontinuation may be required based on individual safety and tolerability—consult product literature; discontinue treatment if patient unable to tolerate at least 150 mg daily

#### DOSE ADJUSTMENTS DUE TO INTERACTIONS

- ▶ Manufacturer advises if concurrent use of potent inhibitors of CYP3A4 is unavoidable, reduce the dose by one-third (rounded to the nearest multiple of the 150 mg dosage form).

### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES** See Cytotoxic drugs p. 962.

- **CONTRA-INDICATIONS** Congenital long QT syndrome
- **CAUTIONS** Diabetes mellitus · history or susceptibility to QT-interval prolongation
- CAUTIONS, FURTHER INFORMATION**
  - ▶ QT-interval prolongation QT-interval prolongation has been observed in clinical studies, which may lead to an increased risk for ventricular tachyarrhythmias (e.g.

torsade de pointes) or sudden death. Risk factors include pre-existing bradycardia, other relevant pre-existing cardiac disease or electrolyte disturbances; manufacturer advises to monitor ECG and electrolytes periodically.

● **INTERACTIONS** → Appendix 1: ceritinib

● **SIDE-EFFECTS**

▶ **Common or very common** Anaemia · appetite decreased · arrhythmias · asthenia · azotaemia · constipation · diarrhoea · dysphagia · gastrointestinal discomfort · gastroesophageal reflux disease · hepatic disorders · hyperbilirubinaemia · hyperglycaemia · hypophosphataemia · nausea · oesophageal disorder · pericardial effusion · pericarditis · QT interval prolongation · renal impairment · respiratory disorders · skin reactions · vision disorders · vitreous floater · vomiting · weight decreased

▶ **Uncommon** Pancreatitis

**SIDE-EFFECTS, FURTHER INFORMATION** **Gastro-intestinal effects** Manufacturer advises monitor for signs of gastro-intestinal toxicity and consider dose reduction or discontinuation of treatment.

**Interstitial lung disease** Manufacturer advises monitor patients who exhibit pulmonary symptoms and consider dose reduction or discontinuation of treatment.

● **CONCEPTION AND CONTRACEPTION** Manufacturer recommends effective contraception in women of childbearing potential during treatment and for up to 3 months after discontinuation of treatment.

● **PREGNANCY** Manufacturer advises avoid unless essential—no information available. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **BREAST FEEDING** Manufacturer advises avoid—no information available.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment (limited information available).

**Dose adjustments** Manufacturer advises reduce dose by approx. 33% in severe impairment (round to the nearest multiple of the 150 mg dosage strength).

● **RENAL IMPAIRMENT** [EvGr](#) Caution in severe impairment (no information available). 

● **MONITORING REQUIREMENTS**

▶ Manufacturer advises monitor fasting plasma-glucose concentration, amylase and lipase levels before treatment initiation and periodically thereafter as clinically indicated.

▶ Manufacturer advises measure baseline liver function, then monitor every 2 weeks for the first three months of treatment and monthly thereafter; if transaminases are elevated, more frequent monitoring should be performed as clinically indicated.

▶ Manufacturer advises monitor for pulmonary symptoms indicative of interstitial lung disease and pneumonitis—discontinue treatment if diagnosis confirmed; also monitor heart rate and blood pressure regularly.

● **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises *Zykadia*<sup>®</sup> tablets should be taken with food at the same time each day—consult product literature for dosing information if patients are unable to take tablets with food.

● **PATIENT AND CARER ADVICE** Patients and carers should be counselled on the administration of tablets.

**Missed doses** Manufacturer advises if a patient vomits during a course of treatment or if a dose is more than 12 hours late, the replacement or missed dose should not be taken and the next dose should be taken at the normal time.

**Driving and skilled tasks** Manufacturer advises patients and their carers should be counselled on the effects on driving and skilled tasks—increased risk of fatigue and vision disorders.

● **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

- ▶ **Ceritinib for previously treated anaplastic lymphoma kinase-positive non-small cell lung cancer (June 2016)** NICE TA395 Recommended with restrictions
  - ▶ **Ceritinib for untreated ALK-positive non-small cell lung cancer (January 2018)** NICE TA500 Recommended with restrictions
- Scottish Medicines Consortium (SMC) decisions**
- ▶ **Ceritinib (*Zykadia*<sup>®</sup>) for treatment of adult patients with anaplastic lymphoma kinase (ALK)-positive advanced non-small cell lung cancer (NSCLC) previously treated with crizotinib (December 2015)** SMC No. 1097/15 Recommended

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Tablet**

CAUTIONARY AND ADVISORY LABELS 21, 25

▶ **Zykadia** (Novartis Pharmaceuticals UK Ltd)

**Ceritinib 150 mg** *Zykadia* 150mg tablets | 84 tablet [Pom](#) £2,757.13 (Hospital only)

## Cobimetinib

30-Apr-2019

● **DRUG ACTION** Cobimetinib is a mitogen-activated protein kinase (MAPK) inhibitor.

● **INDICATIONS AND DOSE**

**Treatment of BRAF V600 mutation-positive unresectable or metastatic melanoma (in combination with vemurafenib) (specialist use only)**

▶ **BY MOUTH**

▶ **Adult:** 60 mg once daily for 21 days; subsequent cycles repeated after a 7-day interval, for dose adjustment due to side-effects—consult product literature

### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

● **CAUTIONS** Left ventricular dysfunction · risk factors for bleeding

● **INTERACTIONS** → Appendix 1: cobimetinib

● **SIDE-EFFECTS**

▶ **Common or very common** Anaemia · basal cell carcinoma · chills · dehydration · diarrhoea · electrolyte imbalance · fever · haemorrhage · hyperglycaemia · hypertension · nausea · photosensitivity · pneumonitis · retinal detachment · retinopathy · skin reactions · sunburn · vision disorders · vomiting

▶ **Uncommon** Rhabdomyolysis

▶ **Frequency not known** Intracranial haemorrhage

● **CONCEPTION AND CONTRACEPTION** Manufacturer advises use of two effective contraceptive methods during treatment and for at least 3 months after stopping treatment.

● **PREGNANCY** Manufacturer advises avoid unless essential—toxicity in *animal* studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **BREAST FEEDING** Manufacturer advises avoid—no information available.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution.

● **RENAL IMPAIRMENT** Manufacturer advises caution in severe impairment—limited information available.

● **MONITORING REQUIREMENTS**

▶ Creatine kinase elevation Manufacturer advises baseline creatine kinase and creatinine levels should be measured before starting treatment, and then at monthly intervals during treatment or as clinically indicated—consult product literature if elevated.

- ▶ Left ventricular function Manufacturer advises ejection fraction should be evaluated before initiation of treatment, then after the first month of treatment and at least every 3 months thereafter (or as clinically indicated) until treatment discontinuation.
- ▶ Liver function Manufacturer advises liver function should be evaluated before initiation of treatment and monthly thereafter (or more frequently as clinically indicated).
- ▶ Visual disturbances Manufacturer advises assess for new or worsening visual disturbances at each visit; if symptoms of new or worsening visual disturbances are identified, an ophthalmologic examination is recommended.

#### ● PATIENT AND CARER ADVICE

**Vomiting** Manufacturer advises if vomiting occurs after taking tablets, no additional dose should be taken on that day and the next dose should be taken at the usual time.

**Missed doses** Manufacturer advises if a dose is more than 12 hours late, the missed dose should not be taken and the next dose should be taken at the normal time.

**Driving and skilled tasks** Manufacturer advises patients should be counselled on the effects on driving and performance of skilled tasks—increased risk of visual disturbances.

#### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### NICE decisions

- ▶ Cobimetinib in combination with vemurafenib for treating unresectable or metastatic BRAF V600 mutation-positive melanoma (October 2016) NICE TA414 Not recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Tablet

- ▶ **Cotellic** (Roche Products Ltd)

Cobimetinib (as Cobimetinib hemifumarate) 20 mg Cotellic 20mg tablets | 63 tablet [PoM](#) | £4,275.67

## Crizotinib

30-Jan-2022

- **DRUG ACTION** Crizotinib is a tyrosine kinase inhibitor.

#### ● INDICATIONS AND DOSE

**Anaplastic lymphoma kinase (ALK)-positive advanced non-small cell lung cancer (specialist use only) | ROS1-positive advanced non-small cell lung cancer (specialist use only)**

▶ BY MOUTH

- ▶ Adult: 250 mg twice daily, consult product literature for information on dose adjustments based on individual patient safety and tolerability

#### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES** See Cytotoxic drugs p. 962.

**MHRA/CHM ADVICE (NOVEMBER 2015): RISK OF CARDIAC FAILURE**

Severe, sometimes fatal cases of cardiac failure have been reported in patients treated with crizotinib. The MHRA has issued the following advice:

- monitor all patients for signs and symptoms of heart failure (including dyspnoea, oedema, or rapid weight gain from fluid retention)
- consider reducing the dose, or interrupting or stopping treatment if symptoms of heart failure occur

- **CAUTIONS** History of diverticulitis (risk of gastro-intestinal perforation—discontinue treatment if gastrointestinal perforation occurs) · metastases of gastrointestinal tract (risk of gastro-intestinal perforation—discontinue treatment if gastrointestinal perforation occurs) · patients with susceptibility to QT-prolongation (including bradycardia, history of cardiac

disease, concomitant use of drugs that prolong QT interval, and electrolyte disturbances)—periodic renal monitoring required · risk of gastro-intestinal perforation—discontinue treatment if gastrointestinal perforation occurs · vision disorders reported—consider full ophthalmological evaluation if vision disorder worsens or persists

#### CAUTIONS, FURTHER INFORMATION

- ▶ Fatal interstitial lung disease and pneumonitis Fatal interstitial lung disease and pneumonitis reported (monitor patients with pulmonary symptoms, withdraw treatment if suspected, and permanently discontinue treatment if diagnosed).

- **INTERACTIONS** → Appendix 1: crizotinib

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Anaemia · appetite decreased · arrhythmias · constipation · diarrhoea · dizziness · fatigue · gait abnormal · gastrointestinal discomfort · gastrointestinal disorders · heart failure · hepatic function abnormal · hypogonadism · hypophosphataemia · leucopenia · local swelling · movement disorders · muscle atrophy · muscle tone decreased · muscle weakness · nausea · nerve disorders · neuralgia · neurotoxicity · neutropenia · oedema · periorbital oedema · peroneal nerve palsy · pulmonary oedema · QT interval prolongation · renal abscess · renal cyst · respiratory disorders · sensation abnormal · skin reactions · syncope · taste altered · vision disorders · vitreous floater · vomiting
- ▶ **Uncommon** Gastrointestinal perforation (including fatal cases) · hepatic failure (including fatal cases) · renal impairment

**SIDE-EFFECTS, FURTHER INFORMATION** Consider reducing the dose, or interrupting or stopping treatment if symptoms of cardiac failure occur.

- **CONCEPTION AND CONTRACEPTION** Ensure effective contraception during and for at least 90 days after treatment.

- **PREGNANCY** Avoid (toxicity in animal studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **BREAST FEEDING** Avoid—no information available.

- **HEPATIC IMPAIRMENT** Manufacturer advises use with caution.

**Dose adjustments** Manufacturer advises reduce dose in moderate to severe impairment—consult product literature.

- **RENAL IMPAIRMENT**

**Dose adjustments** [EvGr](#) Reduce dose to 250 mg once daily in severe impairment not requiring peritoneal dialysis or haemodialysis, may be increased to 200 mg twice daily after at least 4 weeks, based on individual assessment of safety and tolerability. [⚠](#)

- **MONITORING REQUIREMENTS** Monitor liver function once a week during the first 2 months of treatment, then at least monthly thereafter and as clinically indicated. Monitor ECG and electrolytes (correct if abnormal) in all patients before starting treatment, then periodically and as clinically indicated thereafter. Monitor for signs and symptoms of treatment emergent bradycardia (including syncope, dizziness and hypotension)—monitor blood pressure and heart rate regularly.

- **PATIENT AND CARER ADVICE** Counsel all patients on the early signs and symptoms of gastrointestinal perforation—advise to seek immediate medical attention.

**Driving and skilled tasks** Symptomatic bradycardia (including syncope, dizziness and hypotension), vision disorder and fatigue may affect performance of skilled tasks (e.g. driving or operating machinery).

- **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

- ▶ **Crizotinib for untreated anaplastic lymphoma kinase-positive advanced non-small-cell lung cancer** (September 2016) NICE TA406 Recommended with restrictions

**Dabrafenib**

21-Aug-2020

- **DRUG ACTION** Dabrafenib is a BRAF kinase inhibitor, which inhibits BRAF V600 mutation-positive melanoma cell growth.

● **INDICATIONS AND DOSE**

**Unresectable or metastatic melanoma with a BRAF V600 mutation (as monotherapy or in combination with trametinib) (specialist use only) | Advanced non-small cell lung cancer with a BRAF V600 mutation (in combination with trametinib) (specialist use only)**

▶ **BY MOUTH**

- ▶ **Adult:** 150 mg every 12 hours, for dose adjustments due to side-effects, consult product literature

**Adjuvant treatment of stage III melanoma with a BRAF V600 mutation following complete resection (in combination with trametinib) (specialist use only)**

▶ **BY MOUTH**

- ▶ **Adult:** 150 mg every 12 hours for 12 months, for dose adjustments due to side-effects, consult product literature

**IMPORTANT SAFETY INFORMATION**

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **CONTRA-INDICATIONS** BRAF wild-type melanoma · BRAF wild-type non-small cell lung cancer
- **CAUTIONS** Elderly (more frequent dose adjustments may be required) · prior or concurrent cancer associated with RAS mutations—risk of secondary or recurrent malignancy
- **INTERACTIONS** → Appendix 1: dabrafenib
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Alopecia · appetite decreased · arthralgia · asthenia · chills · constipation · cough · diarrhoea · fever · headache · hyperglycaemia · hypophosphataemia · influenza like illness · myalgia · nausea · neoplasms · pain in extremity · photosensitivity reaction · skin reactions · vomiting
  - ▶ **Uncommon** Nephritis · pancreatitis · panniculitis · renal impairment · uveitis
- SIDE-EFFECTS, FURTHER INFORMATION** Additional side-effects reported when used in combination with trametinib include dizziness, hyperhidrosis, hyponatraemia,

hypotension, leucopenia, muscle spasms, myocarditis, neutropenia, night sweats, and thrombocytopenia.

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises women of child-bearing potential should use effective non-hormonal contraception during and for 4 weeks after stopping treatment.
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—toxicity in *animal* studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in moderate to severe impairment—no information available.
- **RENAL IMPAIRMENT** Manufacturer advises caution in severe impairment—no information available.
- **MONITORING REQUIREMENTS** Manufacturer advises assess for cutaneous squamous cell carcinoma and new primary melanoma before treatment, monthly during treatment, and for 6 months after discontinuation or until initiation of alternative treatment; assess and monitor for non-cutaneous secondary or recurrent malignancy before, during, and for 6 months after discontinuation or until initiation of alternative treatment—consult product literature; monitor full blood count as clinically indicated; monitor for ophthalmologic reactions including uveitis, iridocyclitis and iritis; monitor serum creatinine.
- **PATIENT AND CARER ADVICE** Manufacturer advises patients should be informed to immediately report new skin lesions—risk of cutaneous squamous cell carcinoma and new primary melanoma.  
**Missed doses** Manufacturer advises if a dose is more than 6 hours late, the missed dose should not be taken and the next dose should be taken at the normal time.  
**Driving and skilled tasks** Manufacturer advises patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of ocular adverse reactions.

For full details see funding body website
- NICE decisions**
  - ▶ **Dabrafenib for treating unresectable or metastatic BRAF V600 mutation-positive melanoma** (October 2014) NICE TA321 Recommended with restrictions
  - ▶ **Trametinib in combination with dabrafenib for treating unresectable or metastatic melanoma** (June 2016) NICE TA396 Recommended with restrictions
  - ▶ **Dabrafenib with trametinib for adjuvant treatment of resected BRAF V600 mutation-positive melanoma** (October 2018) NICE TA544 Recommended with restrictions
- Scottish Medicines Consortium (SMC) decisions**
  - ▶ **Dabrafenib (Tafinlar®) for the monotherapy of adult patients with unresectable or metastatic melanoma with a BRAF V600 mutation** (March 2015) SMC No. 1023/15 Recommended with restrictions
  - ▶ **Dabrafenib (Tafinlar®) in combination with trametinib for the adjuvant treatment of adult patients with Stage III melanoma with a BRAF V600 mutation, following complete resection** (February 2019) SMC No. SMC2131 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Capsule**

CAUTIONARY AND ADVISORY LABELS 3, 23, 25

▶ **Tafinlar** (Novartis Pharmaceuticals UK Ltd)**Dabrafenib (as Dabrafenib mesilate) 50 mg** Tafinlar 50mgcapsules | 28 capsule [PoM](#) £933.33 (Hospital only)**Dabrafenib (as Dabrafenib mesilate) 75 mg** Tafinlar 75mg capsules| 28 capsule [PoM](#) £1,400.00 (Hospital only)

## Dacomitinib

31-Aug-2020

- **DRUG ACTION** Dacomitinib is a tyrosine kinase inhibitor that inhibits epidermal growth factor receptor (EGFR).

### ● INDICATIONS AND DOSE

**Non-small cell lung cancer with activating epidermal growth factor receptor (EGFR) mutations (specialist use only)**

#### ► BY MOUTH

- Adult: 45 mg once daily, for dose adjustments, treatment interruption or discontinuation due to side-effects—consult product literature

- **INTERACTIONS** → Appendix 1: dacomitinib

### ● SIDE-EFFECTS

- **Common or very common** Alopecia · appetite decreased · asthenia · dehydration · diarrhoea · dry eye · dry mouth · eye inflammation · hypertrichosis · hypokalaemia · increased risk of infection · interstitial lung disease (discontinue permanently) · mucositis · nail discolouration · nail disorders · nausea · oral disorders · oropharyngeal pain · pneumonitis (discontinue permanently) · skin reactions · taste altered · vomiting · weight decreased

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises females of childbearing potential should use effective contraception during treatment and for at least 17 days after stopping treatment.

- **PREGNANCY** Manufacturer advises avoid. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **BREAST FEEDING** Manufacturer advises avoid—no information available.

- **HEPATIC IMPAIRMENT** Manufacturer advises avoid in severe impairment (no information available).

- **RENAL IMPAIRMENT** Manufacturer advises caution in severe impairment (no information available).

- **MONITORING REQUIREMENTS** Manufacturer advises monitor liver function periodically—interrupt treatment if severe changes in liver function occur.

### ● PATIENT AND CARER ADVICE

**Photosensitivity** Manufacturer advises patients should wear protective clothing and apply sunscreen before sun exposure.

**Driving and skilled tasks** Manufacturer advises patients and carers should be cautioned on the effects on driving and performance of skilled tasks—increased risk of fatigue and ocular side-effects.

### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### **NICE decisions**

- Dacomitinib for untreated EGFR mutation-positive non-small cell lung cancer (August 2019) NICE TA595 Recommended

#### **Scottish Medicines Consortium (SMC) decisions**

- Dacomitinib (*Vizimpro*<sup>®</sup>) as monotherapy for the first-line treatment of adult patients with locally advanced or metastatic non-small cell lung cancer (NSCLC) with epidermal growth factor receptor (EGFR)-activating mutations (September 2019) SMC No. SMC2184 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Tablet**

- *Vizimpro* (Pfizer Ltd) ▼

**Dacomitinib (as Dacomitinib monohydrate) 15 mg** *Vizimpro* 15mg tablets | 30 tablet [PoM] £2,703.00 (Hospital only)

**Dacomitinib (as Dacomitinib monohydrate) 30 mg** *Vizimpro* 30mg tablets | 30 tablet [PoM] £2,703.00 (Hospital only)

**Dacomitinib (as Dacomitinib monohydrate) 45 mg** *Vizimpro* 45mg tablets | 30 tablet [PoM] £2,703.00 (Hospital only)

## Dasatinib

24-Nov-2020

- **DRUG ACTION** Dasatinib is a tyrosine kinase inhibitor.

### ● INDICATIONS AND DOSE

**Chronic phase chronic myeloid leukaemia (initiated by a specialist)**

#### ► BY MOUTH USING TABLETS

- Adult: 100 mg once daily, then increased if necessary up to 140 mg once daily, for dose adjustment due to side-effects—consult product literature

#### ► BY MOUTH USING ORAL SUSPENSION

- Adult (body-weight 30–44 kg): 105 mg once daily, adjust dose based on changes in body-weight every 3 months or more often if necessary; for dose escalation, or dose adjustment due to side-effects—consult product literature

- Adult (body-weight 45 kg and above): 120 mg once daily, adjust dose based on changes in body-weight every 3 months or more often if necessary; for dose escalation, or dose adjustment due to side-effects—consult product literature

**Accelerated and blast phase chronic myeloid leukaemia [resistant or intolerant to prior therapy] (initiated by a specialist) | Acute lymphoblastic leukaemia [resistant or intolerant to prior therapy] (initiated by a specialist)**

#### ► BY MOUTH USING TABLETS

- Adult: 140 mg once daily, then increased if necessary up to 180 mg once daily, for dose adjustment due to side-effects—consult product literature

### DOSE EQUIVALENCE AND CONVERSION

- *Sprycel*<sup>®</sup> film-coated tablets and *Sprycel*<sup>®</sup> powder for oral suspension are **not** bioequivalent. Follow correct dosing recommendations for the dosage form when switching formulations.

### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES** See Cytotoxic drugs p. 962.

**MHRA/CHM ADVICE (MAY 2016): RISK OF HEPATITIS B VIRUS REACTIVATION WITH BCR-ABL TYROSINE KINASE INHIBITORS**

An EU wide review has concluded that dasatinib can cause hepatitis B reactivation; the MHRA recommends establishing hepatitis B virus status in all patients before initiation of treatment.

- **CAUTIONS** Hepatitis B infection · risk of cardiac dysfunction (monitor closely) · susceptibility to QT-interval prolongation (correct hypokalaemia or hypomagnesaemia before starting treatment)

### CAUTIONS, FURTHER INFORMATION

- Hepatitis B infection The MHRA advises that patients who are carriers of hepatitis B virus should be closely monitored for signs and symptoms of active infection throughout treatment and for several months after stopping treatment; expert advice should be sought for patients who test positive for hepatitis B virus and in those with active infection.

- **INTERACTIONS** → Appendix 1: dasatinib

### ● SIDE-EFFECTS

- **Common or very common** Alopecia · anaemia · appetite abnormal · arrhythmias · arthralgia · asthenia · bone marrow depression · cardiac disorder · cardiomyopathy · chest pain · chills · constipation · cough · depression · diarrhoea · dizziness · drowsiness · dry eye · dyspnoea · eye inflammation · facial swelling · fever · fluid imbalance · flushing · gastrointestinal discomfort · gastrointestinal disorders · genital abnormalities · haemorrhage · headache · heart failure · hypertension · hyperuricaemia · increased risk of infection · insomnia · milia · mucositis · muscle complaints · muscle weakness · musculoskeletal stiffness ·

myocardial dysfunction · nausea · nerve disorders · neutropenia · oedema · oral disorders · pain · palpitations · pericardial effusion · perinephric effusion · peripheral swelling · pulmonary hypertension · pulmonary oedema · respiratory disorders · sepsis · skin reactions · sweat changes · taste altered · thrombocytopenia · tinnitus · vision disorders · vomiting · weight changes

- ▶ **Uncommon** Acute coronary syndrome · anxiety · arthritis · ascites · asthma · cardiac inflammation · cardiomegaly · cerebrovascular insufficiency · cholecystitis · CNS haemorrhage · confusion · dysphagia · embolism and thrombosis · emotional lability · excessive tearing · gynaecomastia · hair disorder · hearing loss · hepatic disorders · hypercholesterolaemia · hypoalbuminaemia · hypotension · hypothyroidism · ischaemic heart disease · libido decreased · lymphadenopathy · lymphopenia · malaise · memory loss · menstrual disorder · movement disorders · myopathy · nail disorder · osteonecrosis · pancreatitis · panniculitis · penile disorders · photosensitivity reaction · proteinuria · QT interval prolongation · renal impairment · scrotal oedema · skin ulcer · syncope · tendinitis · testicular swelling · tremor · tumour lysis syndrome · urinary frequency increased · vertigo · vulvovaginal swelling

- ▶ **Rare or very rare** Cardiac arrest · dementia · diabetes mellitus · epiphyses delayed fusion · facial paralysis · gait abnormal · growth retardation · hypersensitivity vasculitis · hyperthyroidism · pure red cell aplasia · seizure · thyroiditis
- ▶ **Frequency not known** Hepatitis B reactivation · nephrotic syndrome · Stevens-Johnson syndrome · thrombotic microangiopathy

● **CONCEPTION AND CONTRACEPTION** Effective contraception required during treatment. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—*toxicity in animal studies*. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **BREAST FEEDING** Discontinue breast-feeding.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution.

#### ● **MONITORING REQUIREMENTS**

- ▶ Manufacturer advises evaluate for signs and symptoms of underlying cardiopulmonary disease before initiation of therapy—echocardiography should be performed at treatment initiation in patients with symptoms of cardiac disease and considered for patients with risk factors for cardiac or pulmonary disease.
- ▶ Manufacturer advises monitor patients with risk factors or a history of cardiac disease for signs or symptoms of cardiac dysfunction during treatment.
- ▶ When used for Accelerated or blast phase chronic myeloid leukaemia or Acute lymphoblastic leukaemia Manufacturer advises monitor full blood count weekly for the first 2 months, then monthly or as clinically indicated thereafter.
- ▶ When used for Chronic phase chronic myeloid leukaemia Manufacturer advises monitor full blood count every 2 weeks for 3 months, then every 3 months or as clinically indicated thereafter.

#### ● **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

#### **NICE decisions**

- ▶ Dasatinib, nilotinib and imatinib for untreated chronic myeloid leukaemia (CML) (December 2016) NICE TA426 Recommended with restrictions
- ▶ Dasatinib, nilotinib and high-dose imatinib for treating imatinib-resistant or intolerant chronic myeloid leukaemia (CML) (December 2016) NICE TA425 Recommended with restrictions

#### **Scottish Medicines Consortium (SMC) decisions**

- ▶ Dasatinib (Sprycel<sup>®</sup>) tablets for the treatment of adult patients with chronic, accelerated or blast phase chronic myelogenous leukaemia (CML) with resistance or intolerance to prior therapy including imatinib mesilate (September 2016) SMC No. 370/07 Recommended
- ▶ Dasatinib (Sprycel<sup>®</sup>) tablets for the treatment of adult patients with newly diagnosed Philadelphia chromosome positive (Ph+) chronic myelogenous leukaemia (CML) in the chronic phase (September 2016) SMC No. 1170/16 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Oral suspension**

EXCIPIENTS: May contain Benzyl alcohol, sucrose

▶ **Sprycel** (Bristol-Myers Squibb Pharmaceuticals Ltd)

Dasatinib (as Dasatinib monohydrate) 10 mg per 1 ml Sprycel 10mg/ml oral suspension | 99 ml [PoM] £626.74

#### **Tablet**

CAUTIONARY AND ADVISORY LABELS 25

#### ▶ **Dasatinib (Non-proprietary)**

Dasatinib (as Dasatinib monohydrate) 20 mg Dasatinib 20mg

tablets | 60 tablet [PoM] £650.00 DT = £1,252.48

tablets | 30 tablet [PoM] £2,504.96 DT = £2,504.96

Dasatinib (as Dasatinib monohydrate) 140 mg Sprycel 140mg

tablets | 30 tablet [PoM] £2,504.96 DT = £2,504.96

## **Encorafenib**

28-May-2021

- **DRUG ACTION** Encorafenib inhibits the mitogen-activated protein kinase (MAPK) pathway, specifically BRAF kinase, thereby inhibiting BRAF V600 mutation-positive cell growth.

#### ● **INDICATIONS AND DOSE**

**Unresectable or metastatic melanoma with a BRAF V600 mutation (in combination with binimetinib) (specialist use only)**

▶ **BY MOUTH**

▶ Adult: 450 mg once daily, for dose adjustments due to side-effects, consult product literature

**Metastatic colorectal cancer with a BRAF V600E mutation (in combination with cetuximab) (specialist use only)**

▶ **BY MOUTH**

▶ Adult: 300 mg once daily, for dose adjustments due to side-effects, consult product literature

#### **IMPORTANT SAFETY INFORMATION**

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **CONTRA-INDICATIONS** BRAF wild-type colorectal cancer · BRAF wild-type malignant melanoma
- **CAUTIONS** Prior or concurrent cancer associated with RAS mutation · risk factors for QT-interval prolongation
- **INTERACTIONS** → Appendix 1: encorafenib

### ● SIDE-EFFECTS

- ▶ **Common or very common** Alopecia · anaemia · angioedema · appetite decreased · arrhythmias · arthralgia · arthritis · constipation · detachment of retinal pigment epithelium · diarrhoea · dizziness · embolism and thrombosis · eye inflammation · facial paralysis · fatigue · fever · fluid retention · gastrointestinal discomfort · gastrointestinal disorders · haemorrhage · headache · heart failure · hypersensitivity · hypersensitivity vasculitis · hypertension · insomnia · intracranial haemorrhage · left ventricular dysfunction · lip squamous cell carcinoma · muscle complaints · muscle weakness · myopathy · nausea · neoplasms · nerve disorders · oedema · pain · panniculitis · paresis · photosensitivity reaction · renal impairment · skin reactions · taste altered · ulcerative colitis · vision disorders · vomiting

- ▶ **Uncommon** Pancreatitis

- ▶ **Frequency not known** QT interval prolongation

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises women of child-bearing potential should use effective contraception during and for at least one month after stopping treatment; additional barrier method recommended in women using hormonal contraceptives.

- **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **BREAST FEEDING** Manufacturer advises avoid—no information available.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild impairment (increased exposure); avoid in moderate or severe impairment (no information available).

- **Dose adjustments** Manufacturer advises dose reduction to 300 mg once daily in mild impairment.

- **RENAL IMPAIRMENT** Manufacturer advises caution in severe impairment (no information available).

### ● MONITORING REQUIREMENTS

- ▶ Manufacturer advises assess for cutaneous squamous cell carcinoma and new primary melanoma before treatment, every 2 months during treatment, and for up to 6 months after discontinuation; assess for non-cutaneous malignancy and monitor full blood count before, during, and after treatment discontinuation as clinically indicated—consult product literature.
- ▶ Manufacturer advises monitor liver function before treatment, at least monthly during the first 6 months, and thereafter as clinically indicated.
- ▶ Manufacturer advises assess ECG before treatment, one month after starting treatment, then every 3 months or more frequently as clinically indicated.
- ▶ Manufacturer advises monitor blood creatinine levels as clinically indicated.
- ▶ Manufacturer advises monitor for ophthalmologic reactions including uveitis, iridocyclitis, and iritis.

- **PATIENT AND CARER ADVICE** Manufacturer advises patients should be informed to immediately report new skin lesions—risk of cutaneous squamous cell carcinoma and new primary melanoma.

- **Missed doses** Manufacturer advises if a dose is more than 12 hours late, the missed dose should not be taken and the next dose should be taken at the normal time.

- **Driving and skilled tasks** Manufacturer advises patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of visual disturbances.

### ● NATIONAL FUNDING/ACCESS DECISIONS

- For full details see funding body website

### NICE decisions

- ▶ Encorafenib with binimetinib for unresectable or metastatic BRAF V600 mutation-positive melanoma (February 2019) NICE TA562 Recommended with restrictions

- ▶ Encorafenib plus cetuximab for previously treated BRAF V600E mutation-positive metastatic colorectal cancer (January 2021) NICE TA668 Recommended

### Scottish Medicines Consortium (SMC) decisions

- ▶ Encorafenib (*Braftovi*<sup>®</sup>) in combination with binimetinib for the treatment of adult patients with unresectable or metastatic melanoma with a BRAF V600 mutation (February 2020) SMC No. SMC2238 Recommended
- ▶ Encorafenib (*Braftovi*<sup>®</sup>) in combination with cetuximab, for the treatment of adult patients with metastatic colorectal cancer with a BRAF V600E mutation, who have received prior systemic therapy (May 2021) SMC No. SMC2312 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Capsule

CAUTIONARY AND ADVISORY LABELS 3, 25

- ▶ **Braftovi** (Pierre Fabre Ltd) ▼

Encorafenib 50 mg Braftovi 50mg capsules | 28 capsule [PoM]

£622.22 (Hospital only)

Encorafenib 75 mg Braftovi 75mg capsules | 42 capsule [PoM]

£1,400.00 (Hospital only)

## Entrectinib

30-Mar-2021

- **DRUG ACTION** Entrectinib is a tropomyosin receptor kinase inhibitor.

### ● INDICATIONS AND DOSE

#### Solid tumours with neurotrophic tyrosine receptor kinase gene fusion (initiated by a specialist)

- ▶ BY MOUTH

- ▶ Adult: 600 mg once daily, for dose adjustments, treatment interruption, or discontinuation due to side-effects—consult product literature

#### ROS1-positive advanced non-small cell lung cancer (initiated by a specialist)

- ▶ BY MOUTH

- ▶ Adult: 600 mg once daily, for dose adjustments, treatment interruption, or discontinuation due to side-effects—consult product literature

#### DOSE ADJUSTMENTS DUE TO INTERACTIONS

- ▶ Manufacturer advises if concomitant use with potent CYP3A4 inhibitors is unavoidable, reduce entrectinib dose to 100 mg once daily; if concomitant use with moderate CYP3A4 inhibitors is unavoidable, reduce entrectinib dose to 200 mg once daily.

- **CONTRA-INDICATIONS** Congenital long QT syndrome
- **CAUTIONS** Susceptibility to QT-interval prolongation · symptoms or risk factors for congestive heart failure (assess left ventricular ejection fraction before initiation)

### CAUTIONS, FURTHER INFORMATION

- ▶ QT-interval prolongation QT-interval prolongation has been observed in clinical studies. Manufacturer advises avoid in patients with pre-existing risk factors; if potential benefit outweighs risk in this patient group, additional monitoring should be considered. Monitor ECG and electrolytes in all patients before treatment, after 1 month, and periodically as clinically indicated (treatment not recommended if QT interval greater than 450 milliseconds at baseline)—consult product literature if QT-interval prolongation occurs during treatment.

- **INTERACTIONS** → Appendix 1: entrectinib

### ● SIDE-EFFECTS

- ▶ **Common or very common** Abdominal pain · anaemia · anxiety · appetite decreased · arthralgia · asthenia · bone fractures · cognitive disorder · concentration impaired · confusion · constipation · cough · delirium · depression · diarrhoea · dizziness · drowsiness · dysphagia · dyspnoea · fever · fluid imbalance · gait abnormal · hallucinations ·

headache · heart failure · hyperuricaemia · hypotension · increased risk of infection · memory impairment · mood altered · movement disorders · muscle weakness · myalgia · nausea · neutropenia · oedema · pain · peripheral neuropathy · peripheral swelling · photosensitivity reaction · pleural effusion · psychiatric disorders · pulmonary oedema · QT interval prolongation · sensation abnormal · skin reactions · sleep disorders · syncope · taste altered · urinary disorders · vertigo · vision disorders · vomiting · weight increased

▶ **Uncommon** Tumour lysis syndrome

● **CONCEPTION AND CONTRACEPTION** Manufacturer advises females of childbearing potential should use effective contraception during treatment and for 5 weeks after last treatment; male patients should use effective contraception during treatment and for 3 months after last treatment if their partner is of childbearing potential. Additional barrier method recommended in females using hormonal contraceptives. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **PREGNANCY** Manufacturer advises avoid—limited information available. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **BREAST FEEDING** Manufacturer advises avoid—no information available.

● **PATIENT AND CARER ADVICE**

**Missed doses** Manufacturer advises if a dose is more than 12 hours late, the missed dose should not be taken and the next dose should be taken at the normal time. If vomiting occurs immediately after a dose is taken, patients may repeat the dose.

**Driving and skilled tasks** Manufacturer advises patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of cognitive disorders, syncope, blurred vision, or dizziness.

● **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

▶ Entrectinib for treating ROS1-positive advanced non-small-cell lung cancer (August 2020) NICE TA643 Recommended

▶ Entrectinib for treating NTRK fusion-positive solid tumours (August 2020) NICE TA644 Recommended

**Scottish Medicines Consortium (SMC) decisions**

▶ Entrectinib (*Rozlytrek*<sup>®</sup>) for the treatment of adult patients with ROS1-positive, advanced non-small cell lung cancer (NSCLC) not previously treated with ROS-1 inhibitors (January 2021) SMC No. SMC2294 Recommended

▶ Entrectinib (*Rozlytrek*<sup>®</sup>) for the treatment of adult and paediatric patients 12 years of age and older, with solid tumours that have a neurotrophic tyrosine receptor kinase (NTRK) gene fusion (March 2021) SMC No. SMC2295 Recommended

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Capsule**

CAUTIONARY AND ADVISORY LABELS 25

£5,160.00 (Hospital only)

## Erlotinib

18-May-2021

● **DRUG ACTION** Erlotinib is a tyrosine kinase inhibitor.

● **INDICATIONS AND DOSE**

**Treatment of locally advanced or metastatic non-small cell lung cancer after failure of previous chemotherapy | Monotherapy for maintenance treatment of locally advanced or metastatic non-small cell lung cancer with stable disease after four cycles of platinum-based chemotherapy**

▶ **BY MOUTH**  
▶ Adult: 150 mg once daily

**Treatment of metastatic pancreatic cancer (in combination with gemcitabine)**

▶ **BY MOUTH**  
▶ Adult: 100 mg once daily

**DOSE ADJUSTMENTS DUE TO INTERACTIONS**

▶ Manufacturer advises if concurrent use of potent inducers of CYP3A4 is unavoidable, increase dose to 300 mg daily, if well tolerated for more than 2 weeks, further increase to 450 mg daily could be considered with close monitoring.

**IMPORTANT SAFETY INFORMATION**

**MHRA/CHM ADVICE: EPIDERMAL GROWTH FACTOR RECEPTOR (EGFR) INHIBITORS: SERIOUS CASES OF KERATITIS AND ULCERATIVE KERATITIS (MAY 2012)**

Keratitis and ulcerative keratitis have been reported following treatment with epidermal growth factor receptor (EGFR) inhibitors for cancer (cetuximab, erlotinib, gefitinib and panitumumab). In rare cases, this has resulted in corneal perforation and blindness. Patients undergoing treatment with EGFR inhibitors who present with acute or worsening signs and symptoms suggestive of keratitis should be referred promptly to an ophthalmology specialist. Treatment should be interrupted or discontinued if ulcerative keratitis is diagnosed.

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

● **CAUTIONS**

▶ Smoking Dose adjustment may be necessary if smoking started or stopped during treatment.

● **INTERACTIONS** → Appendix 1: erlotinib

● **SIDE-EFFECTS**

▶ **Common or very common** Alopecia · diarrhoea · eye inflammation · haemorrhage · increased risk of infection · renal failure · skin reactions

▶ **Uncommon** Brittle nails · eye disorders · gastrointestinal disorders · hair changes · interstitial lung disease · nephritis · proteinuria

▶ **Rare or very rare** Hepatic failure · severe cutaneous adverse reactions (SCARs)

▶ **Frequency not known** Appetite decreased · chills · cough · depression · dyspnoea · fatigue · fever · gastrointestinal discomfort · headache · nausea · neuropathy sensory · stomatitis · vomiting · weight decreased

● **CONCEPTION AND CONTRACEPTION** Effective contraception required during and for at least 2 weeks after treatment.

● **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **BREAST FEEDING** Manufacturer advises avoid breastfeeding during treatment and for at least 2 weeks after the last dose.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild to moderate impairment—monitor liver function and

interrupt treatment if changes in liver function are severe (increased risk of hepatic failure); avoid in severe impairment—no information available.

**Dose adjustments** Manufacturer advises consider dose reduction or interruption if serious adverse effects occur.

- **RENAL IMPAIRMENT** Manufacturer advises avoid in severe impairment.

- **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

- **NICE decisions**

- ▶ Erlotinib monotherapy for maintenance treatment of non-small-cell lung cancer (June 2011) NICE TA227 Not recommended
- ▶ Erlotinib for the first-line treatment of locally advanced or metastatic EGFR-TK mutation-positive non-small-cell lung cancer (June 2012) NICE TA258 Recommended with restrictions
- ▶ Erlotinib and gefitinib for treating non-small-cell lung cancer that has progressed after prior chemotherapy [in patients with tumours that are EGFR-TK mutation-negative] (December 2015) NICE TA374 Not recommended
- ▶ Erlotinib and gefitinib for treating non-small-cell lung cancer that has progressed after prior chemotherapy [in patients with tumours of unknown EGFR-TK mutation status] (December 2015) NICE TA374 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Tablet**

CAUTIONARY AND ADVISORY LABELS 23

- ▶ **Erlotinib (Non-proprietary)**

**Erlotinib (as Erlotinib hydrochloride) 25 mg** Erlotinib 25mg tablets | 30 tablet [PoM](#) £88.40-£321.58 | 30 tablet [PoM](#) £139.00-£378.33 (Hospital only)

**Erlotinib (as Erlotinib hydrochloride) 100 mg** Erlotinib 100mg tablets | 30 tablet [PoM](#) £418.20-£1,125.52 | 30 tablet [PoM](#) £378.33-£704.00 (Hospital only)

## Everolimus

25-Oct-2021

- **DRUG ACTION** Everolimus is a protein kinase inhibitor.

- **INDICATIONS AND DOSE**

**Neuroendocrine tumours of pancreatic origin | Neuroendocrine tumours of gastro-intestinal origin**

- ▶ **BY MOUTH**

- ▶ **Adult:** 10 mg once daily, for dose interruption or adjustments due to side effects—consult product literature

**AFINITOR®**

**Neuroendocrine tumours of pancreatic origin | Neuroendocrine tumours of lung origin | Neuroendocrine tumours of gastro-intestinal origin | Renal cell carcinoma | Hormone-receptor positive HER2-negative breast cancer [in combination with exemestane]**

- ▶ **BY MOUTH**

- ▶ **Adult:** 10 mg once daily, for dose interruption or adjustments due to side-effects—consult product literature

**CERTICAN®**

**Liver transplantation**

- ▶ **BY MOUTH**

- ▶ **Adult:** Initially 1 mg twice daily, to be started approximately 4 weeks after transplantation; maintenance, dose adjusted according to response and whole blood everolimus concentration; dose adjustments can be made every 4–5 days

**Renal transplantation | Heart transplantation**

- ▶ **BY MOUTH**

- ▶ **Adult:** Initially 750 micrograms twice daily, to be started as soon as possible after transplantation; maintenance, dose adjusted according to response and whole blood everolimus concentration; dose adjustments can be made every 4–5 days

**VOTUBIA® DISPERSIBLE TABLETS**

**Subependymal giant cell astrocytoma associated with tuberous sclerosis complex**

- ▶ **BY MOUTH USING DISPERSIBLE TABLETS**

- ▶ **Adult:** (consult product literature)

**Adjunctive treatment of refractory partial-onset seizures, with or without secondary generalisation, associated with tuberous sclerosis complex**

- ▶ **BY MOUTH USING DISPERSIBLE TABLETS**

- ▶ **Adult:** (consult product literature)

**VOTUBIA® TABLETS**

**Subependymal giant cell astrocytoma associated with tuberous sclerosis complex**

- ▶ **BY MOUTH USING TABLETS**

- ▶ **Adult:** (consult product literature)

**Renal angiomyolipoma associated with tuberous sclerosis complex**

- ▶ **BY MOUTH USING TABLETS**

- ▶ **Adult:** (consult product literature)

**IMPORTANT SAFETY INFORMATION**

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

**MHRA/CHM ADVICE: ANTIPILEPTICS: RISK OF SUICIDAL THOUGHTS AND BEHAVIOUR (AUGUST 2008)**  
See Epilepsy p. 330.

**MHRA/CHM ADVICE: ANTIPILEPTIC DRUGS: UPDATED ADVICE ON SWITCHING BETWEEN DIFFERENT MANUFACTURERS' PRODUCTS (NOVEMBER 2017)**

See Epilepsy p. 330 and see also *Prescribing and dispensing information*.

**MHRA/CHM ADVICE: ANTIPILEPTIC DRUGS IN PREGNANCY: UPDATED ADVICE FOLLOWING COMPREHENSIVE SAFETY REVIEW (JANUARY 2021)**  
See Epilepsy p. 330.

- **CAUTIONS** History of bleeding disorders · peri-surgical period (impaired wound healing)
- **INTERACTIONS** → Appendix 1: everolimus
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Alopecia · anaemia · appetite decreased · arthralgia · asthenia · cough · decreased leucocytes · dehydration · diabetes mellitus · diarrhoea · dry mouth · dyslipidaemia · dysphagia · dyspnoea · electrolyte imbalance · eye inflammation · fever · gastrointestinal discomfort · haemorrhage · headache · hyperglycaemia · hypertension · increased risk of infection · insomnia · menstrual cycle irregularities · mucositis · nail disorders · nausea · neutropenia · oral disorders · peripheral oedema · proteinuria · renal impairment · respiratory disorders · skin reactions · taste altered · thrombocytopenia · vomiting · weight decreased
  - ▶ **Uncommon** Congestive heart failure · embolism and thrombosis · flushing · healing impaired · hepatitis B ·

musculoskeletal chest pain · pancytopenia · sepsis · urinary frequency increased

- ▶ **Rare or very rare** Pure red cell aplasia
- ▶ **Frequency not known** Hepatitis B reactivation · suicidal behaviours

**SIDE-EFFECTS, FURTHER INFORMATION** Reduce dose or discontinue if severe side-effects occur—consult product literature.

- **CONCEPTION AND CONTRACEPTION** Effective contraception must be used during and for up to 8 weeks after treatment. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Manufacturer advises avoid (toxicity in animal studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962. See also *Pregnancy in Epilepsy* p. 330.
- **BREAST FEEDING** Manufacturer advises avoid.
- **HEPATIC IMPAIRMENT** Consult product literature.
- **MONITORING REQUIREMENTS**
  - ▶ For *Votubia*<sup>®</sup> preparations: manufacturer advises everolimus blood concentration monitoring is required—consult product literature.
  - ▶ For *Certican*<sup>®</sup>: manufacturer advises pre-dose ('trough') whole blood everolimus concentration should be 3–8 nanograms/mL; monitoring should be performed every 4–5 days (using **chromatographic** assay) after initiation or dose adjustment until 2 consecutive stable concentrations; monitor patients with hepatic impairment taking concomitant strong CYP3A4 inducers and inhibitors when switching formulation, and/or if concomitant ciclosporin dose is reduced.
  - ▶ Manufacturer advises monitor blood-glucose concentration, complete blood count, serum-triglycerides and serum-cholesterol before treatment and periodically thereafter.
  - ▶ Manufacturer advises monitor renal function before treatment and periodically thereafter.
  - ▶ Manufacturer advises monitor for signs and symptoms of infection before and during treatment.
- **DIRECTIONS FOR ADMINISTRATION**

**VOTUBIA<sup>®</sup> DISPERSIBLE TABLETS** Manufacturer advises tablets must be dispersed in water before administration—consult product literature for details.

**VOTUBIA<sup>®</sup> TABLETS** Manufacturer advises tablets may be dispersed in approximately 30 mL of water by gently stirring, immediately before drinking. After solution has been swallowed, any residue must be re-dispersed in the same volume of water and swallowed.
- **PRESCRIBING AND DISPENSING INFORMATION** *Votubia*<sup>®</sup> is available as both *tablets* and *dispersible tablets*. These formulations vary in their licensed indications and are not interchangeable—consult product literature for information on switching between formulations.
- **PATIENT AND CARER ADVICE**

**Pneumonitis** Non-infectious pneumonitis reported. Manufacturer advises patients and their carers should be informed to seek urgent medical advice if new or worsening respiratory symptoms occur.

**Infections** Manufacturer advises patients and their carers should be informed of the risk of infection.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website

#### NICE decisions

- ▶ Everolimus with exemestane for treating advanced breast cancer after endocrine therapy (December 2016) NICE TA421 Recommended with restrictions
- ▶ Everolimus for advanced renal cell carcinoma after previous treatment (February 2017) NICE TA432 Recommended with restrictions

- ▶ Everolimus and sunitinib for treating unresectable or metastatic neuroendocrine tumours in people with progressive disease (June 2017) NICE TA449 Recommended with restrictions

#### Scottish Medicines Consortium (SMC) decisions

- ▶ Everolimus dispersible tablets (*Votubia*<sup>®</sup>) for the adjunctive treatment of patients aged 2 years and older whose refractory partial-onset seizures, with or without secondary generalisation, are associated with tuberous sclerosis complex (June 2018) SMC No. 1331/18 Recommended

#### All Wales Medicines Strategy Group (AWMSG) decisions

- ▶ Everolimus dispersible tablets (*Votubia*<sup>®</sup>) for the adjunctive treatment of patients aged 2 years and older whose refractory partial-onset seizures, with or without secondary generalisation, are associated with tuberous sclerosis complex (TSC) (September 2021) AWMSG No. 2142 Recommended

**AFINITOR<sup>®</sup>** For full details see funding body website

#### NICE decisions

- ▶ Lenvatinib with everolimus for previously treated advanced renal cell carcinoma (January 2018) NICE TA498 Recommended with restrictions

**CERTICAN<sup>®</sup>** For full details see funding body website

#### NICE decisions

- ▶ Everolimus for preventing organ rejection in liver transplantation (July 2015) NICE TA348 Not recommended
- ▶ Immunosuppressive therapy for kidney transplant in adults (October 2017) NICE TA481 Not recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Dispersible tablet

CAUTIONARY AND ADVISORY LABELS 13

- ▶ **Votubia** (Novartis Pharmaceuticals UK Ltd)

**Everolimus 2 mg** *Votubia* 2mg dispersible tablets sugar-free | 30 tablet [PoM](#) £960.00

**Everolimus 3 mg** *Votubia* 3mg dispersible tablets sugar-free | 30 tablet [PoM](#) £1,440.00

**Everolimus 250 microgram** Certican 0.25mg tablets | 60 tablet [PoM](#) £148.50

**Everolimus 750 microgram** Certican 0.75mg tablets | 60 tablet [PoM](#) £445.20

- ▶ **Votubia** (Novartis Pharmaceuticals UK Ltd)

**Everolimus 2.5 mg** *Votubia* 2.5mg tablets | 30 tablet [PoM](#) £1,200.00

**Everolimus 5 mg** *Votubia* 5mg tablets | 30 tablet [PoM](#) £2,250.00

**Everolimus 10 mg** *Votubia* 10mg tablets | 30 tablet [PoM](#) £2,970.00

## Fedratinib

04-May-2022

- **DRUG ACTION** Fedratinib is a kinase inhibitor with activity against Janus-associated tyrosine kinase JAK2 and FMS-like tyrosine kinase FLT3, thereby reducing the abnormal production of blood cells and associated symptoms.

### ● INDICATIONS AND DOSE

**Disease-related splenomegaly or symptoms [in patients with primary myelofibrosis, post-polycythaemia vera myelofibrosis, or post-essential thrombocythaemia myelofibrosis] (specialist use only)**

#### ► BY MOUTH

- Adult: 400 mg once daily, for dose reduction, interruption, or discontinuation due to side-effects—consult product literature

### DOSE ADJUSTMENTS DUE TO INTERACTIONS

- **EvGr** If concomitant use with potent CYP3A4 inhibitors is unavoidable, reduce fedratinib dose to 200 mg once daily and monitor patients weekly for side-effects. If the potent CYP3A4 inhibitor is stopped, increase the dose to 300 mg once daily for two weeks, then to 400 mg once daily thereafter. **⚠**

- **CONTRA-INDICATIONS** Absolute neutrophil count less than  $1 \times 10^9$  cells/litre (do not initiate) · platelet count less than  $50 \times 10^9$ /litre (do not initiate) · thiamine deficiency

- **CAUTIONS** Patients 75 years of age or older (increased incidence of side-effects—limited information available)

- **INTERACTIONS** → Appendix 1: fedratinib

### ● SIDE-EFFECTS

- **Common or very common** Anaemia · asthenia · constipation · diarrhoea · dizziness · dyspepsia · dysuria · haemorrhage · headache · hypertension · muscle spasms · nausea · neutropenia · pain · thrombocytopenia · urinary tract infection · vomiting · weight increased · Wernicke's encephalopathy

- **Frequency not known** Hepatic failure · pancreatitis

**SIDE-EFFECTS, FURTHER INFORMATION** Nausea is very common, often occurring within 2 days of starting treatment. Nausea can be managed by prescribing concurrent antiemetics (consult product literature), and/or taking doses with a high fat meal.

- **CONCEPTION AND CONTRACEPTION** **EvGr** Females of childbearing potential should use effective contraception during treatment and for at least 1 month after last treatment. **⚠**

- **PREGNANCY** **EvGr** Avoid—toxicity in *animal* studies. **⚠**

- **BREAST FEEDING** **EvGr** Avoid during treatment and for at least 1 month after last treatment. **⚠**

- **HEPATIC IMPAIRMENT** **EvGr** Avoid in severe impairment (no information available). **⚠**

- **RENAL IMPAIRMENT** **EvGr** Caution in moderate and severe impairment (creatinine clearance less than 59 mL/minute); monitor at least weekly and consider dose adjustment if side-effects occur (risk of increased exposure)—consult product literature. **⚠**

**Dose adjustments** **EvGr** Reduce dose to 200 mg once daily in severe impairment (creatinine clearance 15–29 mL/minute). **⚠** See p. 21.

### ● MONITORING REQUIREMENTS

- **EvGr** Monitor transaminases, serum creatinine, amylase, and lipase levels before treatment initiation, then monthly for the first 3 months and periodically during treatment, and as clinically indicated. Monitor patients every 2 weeks until resolution if levels are elevated.
- Monitor full blood count and blood urea nitrogen levels before treatment initiation, periodically during treatment, and as clinically indicated.

- Patients with haemoglobin less than 10 g/dL or platelet count less than  $100 \times 10^9$ /litre at the start of treatment should be monitored weekly for the first month until levels improve.

- Monitor thiamine levels and nutritional status before treatment initiation, then monthly for the first 3 months and then every 3 months thereafter, and as clinically indicated. Correct thiamine levels if low before or during treatment. **⚠**

### ● PATIENT AND CARER ADVICE

**Driving and skilled tasks** Patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of dizziness.

### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### NICE decisions

- Fedratinib for treating disease-related splenomegaly or symptoms in myelofibrosis (December 2021) NICE TA756 Recommended with restrictions

#### Scottish Medicines Consortium (SMC) decisions

- Fedratinib (*Inrebic*<sup>®</sup>) for the treatment of disease-related splenomegaly or symptoms in adult patients with primary myelofibrosis, post-polycythaemia vera myelofibrosis or post-essential thrombocythaemia myelofibrosis who are Janus-associated kinase inhibitor-naïve or who have been treated with ruxolitinib (April 2022) SMC No. SMC2462 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Capsule

CAUTIONARY AND ADVISORY LABELS 25

► **Inrebic** (Bristol-Myers Squibb Pharmaceuticals Ltd) ▼

Fedratinib (as Fedratinib dihydrochloride monohydrate)

100 mg (Inrebic 100mg capsules | 120 capsule **PoM**) £6,119.68 (Hospital only)

## Gefitinib

19-Jul-2021

- **DRUG ACTION** Gefitinib is a tyrosine kinase inhibitor.

### ● INDICATIONS AND DOSE

**Treatment of locally advanced or metastatic non-small cell lung cancer with activating mutations of epidermal growth factor receptor**

#### ► BY MOUTH

- Adult: 250 mg once daily

### IMPORTANT SAFETY INFORMATION

**MHRA/CHM ADVICE: EPIDERMAL GROWTH FACTOR RECEPTOR (EGFR) INHIBITORS: SERIOUS CASES OF KERATITIS AND ULCERATIVE KERATITIS (MAY 2012)**

Keratitis and ulcerative keratitis have been reported following treatment with epidermal growth factor receptor (EGFR) inhibitors for cancer (cetuximab, erlotinib, gefitinib and panitumumab). In rare cases, this has resulted in corneal perforation and blindness. Patients undergoing treatment with EGFR inhibitors who present with acute or worsening signs and symptoms suggestive of keratitis should be referred promptly to an ophthalmology specialist. Treatment should be interrupted or discontinued if ulcerative keratitis is diagnosed.

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**

See Cytotoxic drugs p. 962.

- **INTERACTIONS** → Appendix 1: gefitinib

### ● SIDE-EFFECTS

- **Common or very common** Alopecia · angioedema · appetite decreased · asthenia · cystitis · dehydration · diarrhoea · dry eye · dry mouth · eye inflammation · fever · haemorrhage · hypersensitivity · interstitial lung disease (discontinue) ·

- nail disorder · nausea · proteinuria · rash pustular · skin reactions · stomatitis · vomiting
- ▶ **Uncommon** Corneal erosion · gastrointestinal perforation · hepatic disorders · pancreatitis
  - ▶ **Rare or very rare** Cutaneous vasculitis · severe cutaneous adverse reactions (SCARs)
  - **CONCEPTION AND CONTRACEPTION** Contraceptive advice required, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
  - **PREGNANCY** Manufacturer advises avoid unless essential—toxicity in *animal* studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
  - **BREAST FEEDING** Discontinue breast-feeding.
  - **HEPATIC IMPAIRMENT** Manufacturer advises caution in moderate to severe impairment due to cirrhosis—monitor for adverse events (risk of increased drug plasma concentrations).
  - **RENAL IMPAIRMENT** EvGr Use with caution if creatinine clearance less than 20 mL/minute (limited information available), ⚠ see p. 21.
  - **MONITORING REQUIREMENTS**
    - ▶ Monitor for worsening of dyspnoea, cough and fever—discontinue if interstitial lung disease confirmed.
    - ▶ Monitor liver function—consider discontinuing if severe changes in liver function occur.
  - **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website
  - NICE decisions**
    - ▶ Gefitinib for the first-line treatment of locally advanced or metastatic non-small-cell lung cancer (July 2010) NICE TA192 Recommended with restrictions
    - ▶ Erlotinib and gefitinib for treating non-small-cell lung cancer that has progressed after prior chemotherapy (December 2015) NICE TA374 Not recommended
  - Scottish Medicines Consortium (SMC) decisions**
    - ▶ Gefitinib (*Iressa*®) for the treatment of adult patients with locally advanced or metastatic non-small cell lung cancer with activating mutations of epidermal growth factor receptor tyrosine kinase (December 2015) SMC No. 615/10 Recommended with restrictions
  - **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.
- Tablet**
- ▶ **Gefitinib (Non-proprietary)**  
Gefitinib 250 mg Gefitinib 250mg tablets | 30 tablet PoM  
£1,500.00-£2,167.71 | 30 tablet PoM | £1,781.94 (Hospital only)
  - ▶ **Iressa (AstraZeneca UK Ltd)**  
Gefitinib 250 mg Iressa 250mg tablets | 30 tablet PoM | £2,167.71

## Gilteritinib

06-Nov-2020

- **DRUG ACTION** Gilteritinib is a FMS-like tyrosine kinase-3 (FLT3) inhibitor.
- **INDICATIONS AND DOSE**  
**FLT3 mutation-positive acute myeloid leukaemia (specialist use only)**
  - ▶ **BY MOUTH**
  - ▶ **Adult:** 120 mg once daily, for dose adjustments, treatment interruption, or discontinuation due to side-effects—consult product literature, if no response is observed after 4 weeks, dose may be increased to 200 mg once daily. Up to 6 months treatment may be required before a clinical response is seen
- **CAUTIONS** Risk factors for QT-interval prolongation (including hypokalaemia or hypomagnesaemia)
- **INTERACTIONS** → Appendix 1: gilteritinib

- **SIDE-EFFECTS**
  - ▶ **Common or very common** Acute kidney injury · anaphylactic reaction · arthralgia · asthenia · constipation · cough · diarrhoea · differentiation syndrome · dizziness · dyspnoea · heart failure · hypotension · malaise · myalgia · nausea · pain · pericardial effusion · pericarditis · peripheral oedema · QT interval prolongation
  - ▶ **Uncommon** Posterior reversible encephalopathy syndrome (PRES)
  - ▶ **Frequency not known** Pancreatitis
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises perform pregnancy test in females of childbearing potential within 7 days prior to treatment initiation; effective contraception should be used during treatment and for at least 6 months after last treatment—additional barrier method recommended in those using hormonal contraceptives. Male patients should use effective contraception during treatment and for at least 4 months after last treatment if their partner is of childbearing potential. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Manufacturer advises avoid—toxicity in *animal* studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Manufacturer advises discontinue breast-feeding during treatment and for at least 2 months after stopping—present in milk in *animal* studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid in severe impairment (no information available).
- **MONITORING REQUIREMENTS**
  - ▶ Manufacturer advises monitor blood chemistry, including creatine phosphokinase, before treatment, on day 15 of treatment, and then monthly during treatment.
  - ▶ Manufacturer advises monitor ECG before treatment, on days 8 and 15 of treatment, and then prior to the start of the next three subsequent months of treatment—consult product literature for dose modifications if QT-interval prolonged.
- **PRESCRIBING AND DISPENSING INFORMATION** The manufacturer of *Xospata*® has provided a *Risk minimisation materials* document for healthcare professionals.
- **PATIENT AND CARER ADVICE**
  - ▶ Vomiting Manufacturer advises if vomiting occurs after taking tablets, no additional dose should be taken on that day and the next dose should be taken at the usual time.  
A patient alert card should be provided.
  - ▶ Missed doses Manufacturer advises if a dose is missed or not taken at the usual time, the missed dose should be taken as soon as possible on the same day. The next dose should be taken at the usual time.
  - ▶ Driving and skilled tasks Manufacturer advises patients and their carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of dizziness.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website
- NICE decisions**
  - ▶ Gilteritinib for treating relapsed or refractory acute myeloid leukaemia (August 2020) NICE TA642 Recommended
- Scottish Medicines Consortium (SMC) decisions**
  - ▶ Gilteritinib (*Xospata*®) as monotherapy for the treatment of adult patients who have relapsed or refractory acute myeloid leukaemia with a FLT3 mutation (September 2020) SMC No. SMC2252 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Tablet**

CAUTIONARY AND ADVISORY LABELS 25

- ▶ **Xospata** (Astellas Pharma Ltd) ▼

**Gilteritinib (as Gilteritinib fumarate) 40 mg** Xospata 40mg tablets | 84 tablet **[PoM]** £14,188.00 (Hospital only)

**Ibrutinib**

18-Jan-2022

- **DRUG ACTION** Ibrutinib is a tyrosine kinase inhibitor.

- **INDICATIONS AND DOSE**

**Mantle cell lymphoma (specialist use only)**

- ▶ **BY MOUTH**

▶ **Adult:** 560 mg once daily, for dose adjustments due to side-effects—consult product literature

**Chronic lymphocytic leukaemia (specialist use only) | Waldenström's macroglobulinaemia (specialist use only)**

- ▶ **BY MOUTH**

▶ **Adult:** 420 mg once daily, for dose adjustments due to side-effects—consult product literature

**DOSE ADJUSTMENTS DUE TO INTERACTIONS**

- ▶ Manufacturer advises if concurrent use of moderate inhibitors of CYP3A4, amiodarone or ciprofloxacin is unavoidable, reduce dose to 280 mg once daily.
- ▶ Manufacturer advises if concurrent use of potent inhibitors of CYP3A4 is unavoidable, reduce dose to 140 mg once daily, or withhold ibrutinib for up to 7 days.

**IMPORTANT SAFETY INFORMATION**

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES** See Cytotoxic drugs p. 962.

**MHRA/CHM ADVICE: IBRUTINIB (IMBRUVICA®): REPORTS OF VENTRICULAR TACHYARRHYTHMIA; RISK OF HEPATITIS B REACTIVATION AND OF OPPORTUNISTIC INFECTIONS (AUGUST 2017)**

Cases of ventricular tachyarrhythmia have been reported with the use of ibrutinib. The MHRA advises that ibrutinib should be temporarily discontinued in patients who develop symptoms suggestive of ventricular arrhythmia and to assess benefit-risk before restarting therapy.

Hepatitis B virus status should be established before initiating therapy—for patients with positive hepatitis B serology, consultation with a liver disease expert is recommended before the start of treatment; monitor and manage patients according to local protocols to minimise the risk of hepatitis B virus reactivation. Prophylaxis should be considered for those at an increased risk of opportunistic infections.

- **CAUTIONS** Family history of congenital short QT syndrome · increased lymphocytes—increased risk of leukostasis, consider withholding treatment temporarily and monitor closely · patients at risk from further shortening of QTc interval · personal history of congenital short QT syndrome · risk of haemorrhagic events—withhold ibrutinib treatment for at least 3 to 7 days before and after surgery depending on risk of bleeding
- **INTERACTIONS** → Appendix 1: ibrutinib
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Arrhythmias · arthralgia · broken nails · CNS haemorrhage · constipation · diarrhoea · dizziness · fever · haemorrhage · headache · hypertension · hyperuricaemia · increased leucocytes · increased risk of infection · interstitial lung disease · muscle spasms · musculoskeletal pain · nausea · neoplasms · neutropenia · peripheral neuropathy · peripheral oedema · sepsis · skin

reactions · stomatitis · thrombocytopenia · tumour lysis syndrome · vision blurred · vomiting

- ▶ **Uncommon** Angioedema · hepatitis B reactivation · leukostasis syndrome · panniculitis
- ▶ **Frequency not known** Anaemia · hepatic failure · progressive multifocal leukoencephalopathy (PML) · Stevens-Johnson syndrome
- **CONCEPTION AND CONTRACEPTION** Highly effective contraception (must include a non-hormonal method) required during and for 3 months after stopping treatment.
- **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Manufacturer advises discontinue breastfeeding—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid in severe impairment (risk of increased exposure)—monitor for toxicity.
 

**Dose adjustments** Manufacturer advises dose reduction to 280 mg daily in mild impairment and to 140 mg daily in moderate impairment with further adjustments if necessary—consult product literature.
- **RENAL IMPAIRMENT** **[EvGr]** Maintain adequate hydration in mild to moderate impairment. **[EvGr]** Use in severe impairment only if benefit outweighs risk and with close monitoring for toxicity. **[M]**
- **MONITORING REQUIREMENTS**
  - ▶ Monitor full blood count once a month.
  - ▶ Monitor for atrial fibrillation (increased risk in cardiac risk factors, acute infections and history of atrial fibrillation), monitor all patients periodically and complete ECG if arrhythmic symptoms or dyspnoea develop—consult product literature for treatment options.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
 

**NICE decisions**

  - ▶ ibrutinib for previously treated chronic lymphocytic leukaemia and untreated chronic lymphocytic leukaemia with 17p deletion or TP53 mutation (January 2017) NICE TA429 Recommended with restrictions
  - ▶ ibrutinib for treating Waldenström's macroglobulinaemia (November 2017) NICE TA491 Recommended with restrictions
  - ▶ ibrutinib for treating relapsed or refractory mantle cell lymphoma (January 2018) NICE TA502 Recommended with restrictions

**Scottish Medicines Consortium (SMC) decisions**

  - ▶ ibrutinib (*Imbruvica*®) for the treatment of adult patients with chronic lymphocytic leukaemia who have received at least one prior therapy (April 2017) SMC No. 1151/16 Recommended with restrictions
  - ▶ ibrutinib (*Imbruvica*®) in combination with rituximab for the treatment of adult patients with Waldenström's macroglobulinaemia (October 2020) SMC No. SMC2259 Recommended with restrictions
  - ▶ ibrutinib (*Imbruvica*®) as a single agent for the treatment of adult patients with Waldenström's macroglobulinaemia who have received at least one prior therapy, or in first line treatment for patients unsuitable for chemo-immunotherapy (December 2021) SMC No. SMC2387 Recommended with restrictions
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.
 

**Tablet**

CAUTIONARY AND ADVISORY LABELS 25

## Idelalisib

16-Oct-2020

● **DRUG ACTION** Idelalisib is a protein kinase inhibitor.

### ● INDICATIONS AND DOSE

**Treatment of chronic lymphocytic leukaemia in patients who have received at least one previous therapy, or as first-line treatment in the presence of 17p deletion or TP53 mutation in patients who are not eligible for any other therapies (in combination with rituximab) | Treatment of follicular lymphoma refractory to two lines of treatment (monotherapy)**

▶ BY MOUTH

▶ Adult: 150 mg twice daily, for dose adjustment due to side effects, consult product literature

### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
 See Cytotoxic drugs p. 962.

**MHRA/CHM ADVICE: IDELALISIB (ZYDELIG®): UPDATED INDICATIONS AND ADVICE ON MINIMISING THE RISK OF INFECTION (SEPTEMBER 2016)**

In light of a recent safety review the indications for idelalisib have been updated. Manufacturer recommendations regarding monitoring for infection and prophylaxis of *Pneumocystis jirovecii* pneumonia have also been updated. Patients should be advised on the risk of serious or fatal infections during treatment, and idelalisib should not be initiated in patients with any evidence of infection.

● **CAUTIONS** Active hepatitis · diarrhoea—symptomatic management recommended (consult product literature) · pneumonitis—withhold treatment (consult product literature)

● **INTERACTIONS** → Appendix 1: idelalisib

### ● SIDE-EFFECTS

▶ **Common or very common** Colitis · diarrhoea · fever · infection · neutropenia · pneumonitis · rash  
 ▶ **Rare or very rare** Severe cutaneous adverse reactions (SCARs)

● **CONCEPTION AND CONTRACEPTION** Highly effective contraception (in addition to barrier method) required during and for one month after treatment.

● **PREGNANCY** Manufacturer advises avoid (toxicity in animal studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **BREAST FEEDING** Manufacturer advises avoid—no information available.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution (risk of increased exposure—limited information available in severe impairment)—monitor for adverse reactions.

### ● MONITORING REQUIREMENTS

▶ Manufacturer advises monitor liver function—consult product literature.  
 ▶ Manufacturer advises monitor for signs and symptoms of infection, including *cytomegalovirus* infection and respiratory infections; new symptoms should be reported promptly. Neutrophil count should be monitored in all patients every 2 weeks for the first 6 months of treatment; patients with neutrophil count <1000 per mm<sup>3</sup> should be monitored weekly.

### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

### NICE decisions

- ▶ Idelalisib for treating chronic lymphocytic leukaemia (October 2015) NICE TA359 Recommended
- ▶ Idelalisib for treating refractory follicular lymphoma (October 2019) NICE TA604 Not recommended

### Scottish Medicines Consortium (SMC) decisions

- ▶ Idelalisib (Zydelig®) in combination with rituximab for the treatment of adult patients with chronic lymphocytic leukaemia (CLL): who have received at least one prior therapy, or as first line treatment in the presence of 17p deletion or TP53 mutation in patients unsuitable for chemo-immunotherapy (March 2015) SMC No. 1026/15 Recommended with restrictions
- ▶ Idelalisib (Zydelig®) as monotherapy for the treatment of adult patients with follicular lymphoma (FL) that is refractory to two prior lines of treatment (May 2015) SMC No. 1039/15 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Tablet

CAUTIONARY AND ADVISORY LABELS 25

▶ **Zydelig** (Gilead Sciences Ltd)

**Idelalisib 100 mg** Zydelig 100mg tablets | 60 tablet **[PoM]** £3,114.75 (Hospital only)

**Idelalisib 150 mg** Zydelig 150mg tablets | 60 tablet **[PoM]** £3,114.75 (Hospital only)

## Imatinib

25-Aug-2021

● **DRUG ACTION** Imatinib is a tyrosine kinase inhibitor.

### ● INDICATIONS AND DOSE

**Treatment of chronic myeloid leukaemia in chronic phase after failure with interferon alfa**

▶ BY MOUTH

▶ Adult: 400 mg once daily, increased if necessary up to 800 mg daily in 2 divided doses

**Treatment of chronic myeloid leukaemia in accelerated phase, or in blast crisis**

▶ BY MOUTH

▶ Adult: 600 mg once daily, then increased if necessary up to 800 mg daily in 2 divided doses

**Treatment of newly diagnosed acute lymphoblastic leukaemia (in combination with other chemotherapy) | Monotherapy for relapsed or refractory acute lymphoblastic leukaemia**

▶ BY MOUTH

▶ Adult: 600 mg once daily

**Treatment of c-kit (CD117)-positive unresectable or metastatic malignant gastro-intestinal stromal tumours (GIST) | Adjuvant treatment following resection of c-kit (CD117)-positive GIST, in patients at significant risk of relapse | Treatment of myelodysplastic/myeloproliferative diseases associated with platelet-derived growth factor receptor gene rearrangement**

▶ BY MOUTH

▶ Adult: 400 mg once daily

**Treatment of unresectable dermatofibrosarcoma protuberans | Recurrent or metastatic dermatofibrosarcoma protuberans, in patients who cannot have surgery**

▶ BY MOUTH

▶ Adult: 800 mg daily in 2 divided doses

continued →

**Treatment of advanced hypereosinophilic syndrome and chronic eosinophilic leukaemia**

- ▶ BY MOUTH
- ▶ Adult: 100–400 mg once daily

**IMPORTANT SAFETY INFORMATION**

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

**MHRA/CHM ADVICE (MAY 2016): RISK OF HEPATITIS B VIRUS REACTIVATION WITH BCR-ABL TYROSINE KINASE INHIBITORS**  
An EU wide review has concluded that imatinib can cause hepatitis B reactivation; the MHRA recommends establishing hepatitis B virus status in all patients before initiation of treatment.

- **CAUTIONS** Cardiac disease · hepatitis B infection · history of renal failure · risk factors for heart failure
- CAUTIONS, FURTHER INFORMATION**
  - ▶ Hepatitis B infection The MHRA advises that patients who are carriers of hepatitis B virus should be closely monitored for signs and symptoms of active infection throughout treatment and for several months after stopping treatment; expert advice should be sought for patients who test positive for hepatitis B virus and in those with active infection.
- **INTERACTIONS** → Appendix 1: imatinib
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Alopecia · anaemia · appetite abnormal · asthenia · bone marrow disorders · chills · constipation · cough · diarrhoea · dizziness · dry eye · dry mouth · dyspnoea · excessive tearing · eye inflammation · fever · fluid imbalance · flushing · gastrointestinal discomfort · gastrointestinal disorders · haemorrhage · headaches · insomnia · joint disorders · muscle complaints · nausea · neutropenia · oedema · pain · photosensitivity reaction · sensation abnormal · skin reactions · sweat changes · taste altered · thrombocytopenia · vision blurred · vomiting · weight changes
  - ▶ **Uncommon** Anxiety · arrhythmias · ascites · breast abnormalities · broken nails · burping · chest pain · CNS haemorrhage · congestive heart failure · depression · drowsiness · dysphagia · electrolyte imbalance · eosinophilia · eye discomfort · gout · gynaecomastia · hearing loss · hepatic disorders · hyperbilirubinaemia · hyperglycaemia · hypertension · hyperuricaemia · hypotension · increased risk of infection · laryngeal pain · lymphadenopathy · lymphopenia · malaise · memory loss · menstrual cycle irregularities · nerve disorders · oral disorders · palpitations · pancreatitis · peripheral coldness · pulmonary oedema · Raynaud's phenomenon · renal impairment · renal pain · respiratory disorders · restless legs · scrotal oedema · sepsis · sexual dysfunction · syncope · thrombocytosis · tinnitus · tremor · urinary frequency increased · vertigo
  - ▶ **Rare or very rare** Angina pectoris · angioedema · arthritis · cardiac arrest · cataract · confusion · glaucoma · haemolytic anaemia · haemorrhagic ovarian cyst · hepatic failure (including fatal cases) · hypersensitivity vasculitis · inflammatory bowel disease · intracranial pressure increased · muscle weakness · myocardial infarction · myopathy · nail discolouration · pericardial disorders · pulmonary hypertension · seizure · severe cutaneous adverse reactions (SCARs) · thrombotic microangiopathy · tumour lysis syndrome
  - ▶ **Frequency not known** Embolism and thrombosis · hepatitis B reactivation · neoplasm complications · osteonecrosis · pericarditis
- **CONCEPTION AND CONTRACEPTION** Effective contraception required during treatment. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution.
  - Dose adjustments** Manufacturer advises max. 400 mg once daily; consider further dose reduction if not tolerated—consult product literature.
- **RENAL IMPAIRMENT** Manufacturer advises use with caution.
  - Dose adjustments** Manufacturer advises maximum starting dose 400 mg daily; reduce dose further if not tolerated (consult product literature).
- **MONITORING REQUIREMENTS**
  - ▶ Monitor for gastrointestinal haemorrhage.
  - ▶ Monitor complete blood counts regularly.
  - ▶ Monitor for fluid retention.
  - ▶ Monitor liver function.
  - ▶ Monitor growth in children (may cause growth retardation).
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises tablets may be dispersed in water or apple juice.
- **PATIENT AND CARER ADVICE** Patients or carers should be given advice on how to administer imatinib tablets.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
- NICE decisions**
  - ▶ Imatinib for the adjuvant treatment of gastro-intestinal stromal tumours (November 2014) NICE TA326 Recommended
  - ▶ Imatinib for chronic myeloid leukaemia (updated January 2016) NICE TA70 Recommended
  - ▶ Imatinib for the treatment of unresectable and/or metastatic gastro-intestinal stromal tumours (updated November 2010) NICE TA86 Recommended with restrictions
  - ▶ Imatinib for the treatment of unresectable and/or metastatic gastro-intestinal stromal tumours (November 2010) NICE TA209 Not recommended
  - ▶ Dasatinib, nilotinib and imatinib for untreated chronic myeloid leukaemia (CML) (December 2016) NICE TA426 Recommended
  - ▶ Dasatinib, nilotinib and high-dose imatinib for treating imatinib-resistant or intolerant chronic myeloid leukaemia (CML) (December 2016) NICE TA425 Not recommended
- Scottish Medicines Consortium (SMC) decisions**
  - ▶ Imatinib (Glivec<sup>®</sup>) for chronic myeloid leukaemia (January 2003) SMC No. 26/02 Recommended with restrictions
  - ▶ Imatinib (Glivec<sup>®</sup>) for the adjuvant treatment of gastrointestinal stromal tumours (September 2010) SMC No. 584/09 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Tablet**

CAUTIONARY AND ADVISORY LABELS 21, 27

## Lapatinib

10-Jun-2021

● **DRUG ACTION** Lapatinib is a tyrosine kinase inhibitor.

### ● INDICATIONS AND DOSE

**Treatment of metastatic breast cancer in patients with tumours that overexpress human epidermal growth factor receptor-2 (HER2) with hormone-receptor-negative disease who have had previous treatment with trastuzumab in combination with chemotherapy (in combination with trastuzumab)**

► BY MOUTH

► Adult: 1 g once daily

**Treatment of advanced or metastatic breast cancer in patients with tumours that overexpress human epidermal growth factor receptor-2 (HER2), for patients who have had previous treatment with an anthracycline, a taxane, and trastuzumab (in combination with capecitabine)**

► BY MOUTH

► Adult: 1.25 g once daily

**Treatment of metastatic breast cancer with tumours that overexpress human epidermal growth factor receptor-2 (HER2), for postmenopausal women with hormone-receptor-positive disease (in combination with an aromatase inhibitor)**

► BY MOUTH

► Adult: 1.5 g once daily

### IMPORTANT SAFETY INFORMATION

RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES  
See Cytotoxic drugs p. 962.

● **CAUTIONS** Diarrhoea—withhold treatment if severe (consult product literature) · low gastric pH (reduced absorption) · susceptibility to QT-interval prolongation (including electrolyte disturbances)

● **INTERACTIONS** → Appendix 1: lapatinib

### ● SIDE-EFFECTS

► **Common or very common** Alopecia · appetite decreased · arthralgia · asthenia · constipation · cough · dehydration · diarrhoea (treat promptly) · dyspnoea · epistaxis · gastrointestinal discomfort · headache · hepatotoxicity (discontinue permanently if severe) · hot flush · hyperbilirubinaemia · insomnia · mucositis · nail disorder · nausea · pain · paronychia · skin reactions · stomatitis · vomiting

► **Uncommon** Respiratory disorders

► **Frequency not known** Severe cutaneous adverse reactions (SCARs)

● **CONCEPTION AND CONTRACEPTION** Contraceptive advice required, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **PREGNANCY** Avoid unless potential benefit outweighs risk—toxicity in *animal* studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **BREAST FEEDING** Discontinue breast-feeding.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution in moderate to severe impairment—increased exposure (limited information available).

● **RENAL IMPAIRMENT** <sup>EvGr</sup> Caution in severe impairment (no information available). ☹

### ● MONITORING REQUIREMENTS

► Monitor left ventricular function.  
► Monitor for pulmonary toxicity.  
► Monitor liver function before treatment and at monthly intervals.

● **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises always take at the same time in relation to food: either one hour before or one hour after food.

● **PATIENT AND CARER ADVICE** Counselling advised (administration). Patients should be advised to report any unexpected changes in bowel habit.

● **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website

### NICE decisions

► Lapatinib or trastuzumab in combination with an aromatase inhibitor for the first-line treatment of metastatic hormone-receptor-positive breast cancer that overexpresses HER2 (June 2012) NICE TA257 Not recommended

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Tablet

► **Tyverb** (Novartis Pharmaceuticals UK Ltd)

Lapatinib (as Lapatinib ditosylate monohydrate) 250 mg Tyverb 250mg tablets | 84 tablet <sup>[PoM]</sup> £965.16 | 105 tablet <sup>[PoM]</sup> £1,206.45

## Larotrectinib

03-Jun-2020

● **DRUG ACTION** Larotrectinib is a tropomyosin receptor kinase inhibitor.

### ● INDICATIONS AND DOSE

**Solid tumours with neurotrophic tyrosine receptor kinase gene fusion (initiated by a specialist)**

► BY MOUTH

► Adult: 100 mg twice daily, for dose adjustments, treatment interruption, or discontinuation due to side-effects—consult product literature

### DOSE ADJUSTMENTS DUE TO INTERACTIONS

► Manufacturer advises if concomitant use with potent CYP3A4 inhibitors is unavoidable, reduce dose by 50%.

### IMPORTANT SAFETY INFORMATION

RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES  
See Cytotoxic drugs p. 962.

● **INTERACTIONS** → Appendix 1: larotrectinib

### ● SIDE-EFFECTS

► **Common or very common** Anaemia · constipation · dizziness · fatigue · gait abnormal · leucopenia · muscle weakness · myalgia · nausea · neutropenia · paraesthesia · taste altered · vomiting · weight increased

● **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception in females of childbearing potential and in men with a partner of childbearing potential, during treatment and for 1 month after last treatment; additional barrier method recommended in women using hormonal contraceptives. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **PREGNANCY** Manufacturer advises avoid—limited information available. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **BREAST FEEDING** Manufacturer advises avoid during treatment and for 3 days after last treatment—no information available.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution in moderate to severe impairment (increased risk of exposure).

**Dose adjustments** Manufacturer advises dose reduction by 50 % in moderate to severe impairment.

● **MONITORING REQUIREMENTS** Manufacturer advises monitor liver function (including ALT and AST) at baseline, then monthly during the first 3 months of treatment, and periodically thereafter; more frequent monitoring should be performed in patients who develop transaminase elevations. Treatment should be withheld or

permanently discontinued based on severity—consult product literature.

- **HANDLING AND STORAGE** For oral solution, manufacturer advises store in a refrigerator (2–8°C).
- **PATIENT AND CARER ADVICE**  
**Driving and skilled tasks** Manufacturer advises patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of dizziness and fatigue.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website
- **NICE decisions**  
▶ **Larotrectinib for treating NTRK fusion-positive solid tumours (May 2020)** NICE TA630 Recommended with restrictions
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Oral solution

EXCIPIENTS: May contain Hydroxybenzoates (parabens), potassium sorbate, propylene glycol, sorbitol, sucrose

dose adjustments due to side-effects—consult product literature

#### IMPORTANT SAFETY INFORMATION

**MHRA/CHM ADVICE: SYSTEMICALLY ADMINISTERED VEGF PATHWAY INHIBITORS: RISK OF ANEURYSM AND ARTERY DISSECTION (JULY 2020)**

A European review of worldwide data concluded that systemically administered VEGF pathway inhibitors may lead to aneurysm and artery dissection in patients with or without hypertension. Some fatal cases have been reported, mainly in relation to aortic aneurysm rupture and aortic dissection. The MHRA advises healthcare professionals to carefully consider the risk of aneurysm and artery dissection in patients with risk factors before initiating treatment with lenvatinib; any modifiable risk factors (such as smoking and hypertension) should be reduced as much as possible. Patients should be monitored and treated for hypertension as required.

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **CONTRA-INDICATIONS** Fistulae
- **CAUTIONS** Arterial thromboembolism within the previous 6 months · elderly (75 years and over)—reduced tolerability · hypertension · impaired wound healing—consider temporary interruption of treatment for major surgical procedures · risk factors for aneurysm or artery dissection
- **CAUTIONS, FURTHER INFORMATION**
- ▶ Monitoring of blood pressure The MHRA advises to monitor blood pressure regularly—consult product literature if hypertension occurs during treatment.
- **INTERACTIONS** → Appendix 1: lenvatinib
- **SIDE-EFFECTS**

- ▶ **Common or very common** Alopecia · appetite decreased · arthralgia · asthenia · cerebrovascular insufficiency · cholecystitis · constipation · decreased leucocytes · dehydration · diarrhoea · dizziness · dry mouth · dysphonia · electrolyte imbalance · embolism and thrombosis · encephalopathy · gastrointestinal discomfort · gastrointestinal disorders · haemorrhage · headache · heart failure · hepatic coma · hepatic disorders · hyperbilirubinaemia · hypercholesterolaemia · hypertension · hypoalbuminaemia · hypotension · hypothyroidism · increased risk of infection · insomnia · malaise · mucositis · myalgia · myocardial infarction · nausea · neutropenia · oral disorders · oropharyngeal complaints · pain · peripheral oedema · proteinuria · QT interval prolongation · renal impairment · renal tubular necrosis · skin reactions · taste altered · thrombocytopenia · vomiting · weight decreased
- ▶ **Uncommon** Healing impaired · nephrotic syndrome · pancreatitis · paresis · pneumothorax · splenic infarction
- ▶ **Frequency not known** Aneurysm · artery dissection · cardiac disorder · cardiogenic shock · fistula

**SIDE-EFFECTS, FURTHER INFORMATION** Manufacturer advises gastrointestinal toxicity should be actively managed — dehydration and/or hypovolaemia caused by gastrointestinal toxicity are identified as primary risk factors for renal impairment or failure.

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises women of child-bearing potential should use highly effective contraception during treatment and for 1 month after the last dose, an additional barrier method of contraception should be used in women using oral hormonal contraceptives. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—teratogenic in *animal* studies. See

## Lenvatinib

10-Nov-2020

- **DRUG ACTION** Lenvatinib is a multireceptor tyrosine kinase inhibitor.

#### ● INDICATIONS AND DOSE

##### KISPLIX<sup>®</sup>

**Advanced renal cell carcinoma following one prior vascular endothelial growth factor-targeted therapy (in combination with everolimus) (specialist use only)**

##### ▶ BY MOUTH

- ▶ Adult: 18 mg once daily, dose should be taken at the same time every day, for dose adjustment due to side-effects—consult product literature

##### LENVIMA<sup>®</sup>

**Differentiated thyroid carcinoma (specialist use only)**

##### ▶ BY MOUTH

- ▶ Adult: 24 mg once daily, dose should be taken at the same time every day, for dose adjustments due to side-effects—consult product literature

**Hepatocellular carcinoma (specialist use only)**

##### ▶ BY MOUTH

- ▶ Adult (body-weight up to 60 kg): 8 mg once daily, dose should be taken at the same time every day, for dose adjustments due to side-effects—consult product literature
- ▶ Adult (body-weight 60 kg and above): 12 mg once daily, dose should be taken at the same time every day, for

also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal studies*.

- **HEPATIC IMPAIRMENT**

**KISPLYX**® Manufacturer advises caution in severe impairment (risk of increased exposure).

**Dose adjustments** Manufacturer advises dose reduction to 10 mg once daily in severe impairment.

**LENVIMA**® Manufacturer advises caution.

- ▶ When used for Hepatocellular carcinoma Manufacturer advises avoid in severe impairment (no information available).

**Dose adjustments**

- ▶ When used for Differentiated thyroid carcinoma Manufacturer advises dose reduction to 14 mg once daily in severe impairment; further dose adjustments may be necessary based on tolerability—consult product literature.

- **RENAL IMPAIRMENT**

**KISPLYX**® Manufacturer advises avoid in end-stage renal disease.

**Dose adjustments** Manufacturer advises reduce dose to 10 mg once daily in severe impairment; further dose adjustments may be necessary based on individual tolerability—consult product literature.

**LENVIMA**®

- ▶ When used for Differentiated thyroid carcinoma Manufacturer advises caution in severe impairment; avoid in end-stage renal disease.
- ▶ When used for Hepatocellular carcinoma The available data do not allow for a dosing recommendation in severe impairment—consult product literature.

**Dose adjustments**

- ▶ When used for Differentiated thyroid carcinoma Manufacturer advises dose reduction to 14 mg once daily in severe impairment; further dose adjustments may be necessary based on tolerability—consult product literature.

- **MONITORING REQUIREMENTS**

- ▶ Manufacturer advises monitor for signs and symptoms of cardiac decompensation (adjust dose as necessary—consult product literature).
- ▶ Manufacturer advises monitor liver function before treatment, then every 2 weeks for the first 2 months, and then monthly thereafter; monitor urine protein regularly.
- ▶ Manufacturer advises monitor ECG and electrolytes before and periodically during treatment (calcium levels should be monitored at least monthly), correct electrolyte abnormalities prior to treatment; monitor thyroid function before and regularly during treatment.

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises capsules should be swallowed whole. Alternatively, capsules may be added to a tablespoon of water or apple juice in a small glass (without breaking or crushing), allowed to sit for at least 10 minutes, then stirred for at least 3 minutes to dissolve the capsule shells before swallowing; the same amount of liquid should then be added to the glass, swirled a few times, then swallowed.

- **PATIENT AND CARER ADVICE**

**Missed doses** Manufacturer advises if a dose is more than 12 hours late, the missed dose should not be taken and the next dose should be taken at the normal time.

**Driving and skilled tasks** Manufacturer advises patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of fatigue and dizziness.

- **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

- ▶ Lenvatinib and sorafenib for treating differentiated thyroid cancer after radioactive iodine (August 2018) NICE TA535 Recommended with restrictions

- ▶ Lenvatinib for untreated advanced hepatocellular carcinoma (December 2018) NICE TA551 Recommended with restrictions

**Scottish Medicines Consortium (SMC) decisions**

- ▶ Lenvatinib (*Lenvima*®) as monotherapy for the treatment of adult patients with advanced or unresectable hepatocellular carcinoma (SMC No. HCC who have received no prior systemic therapy (April 2019) SMC No. SMC2138 Recommended
- ▶ Lenvatinib (*Kisplyx*®) in combination with everolimus for the treatment of adult patients with advanced renal cell carcinoma (RCC) following one prior vascular endothelial growth factor (VEGF)-targeted therapy (November 2019) SMC No. SMC2199 Recommended

## Lorlatinib

01-Apr-2022

- **DRUG ACTION** Lorlatinib is a tyrosine kinase inhibitor.

- **INDICATIONS AND DOSE**

**Anaplastic lymphoma kinase (ALK)-positive advanced non-small cell lung cancer (specialist use only)**

- ▶ **BY MOUTH**

- ▶ Adult: 100 mg daily, for dose adjustments due to side-effects—consult product literature

**DOSE ADJUSTMENTS DUE TO INTERACTIONS**

- ▶ Manufacturer advises if concomitant use with potent CYP3A4 inhibitors is unavoidable, reduce starting dose to 75 mg once daily.

### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **CAUTIONS** Cardiac risk factors or conditions which may affect left ventricular ejection fraction—consider cardiac monitoring, including assessment of left ventricular ejection fraction, at baseline and during treatment · lactose intolerance · worsening respiratory symptoms indicative of interstitial lung disease or pneumonitis (including dyspnoea, cough, and fever)—withhold or permanently discontinue treatment based on severity
- **INTERACTIONS** → Appendix 1: lorlatinib
- **SIDE-EFFECTS**
- ▶ **Common or very common** Anaemia · anxiety · arthralgia · asthenia · behaviour abnormal · cognitive disorder ·

concentration impaired · confusion · constipation · delirium · dementia · depression · diarrhoea · dyslipidaemia · gait abnormal · hallucinations · headache · inflammation · learning disability · memory loss · mental impairment (thought disturbance) · mood altered · muscle weakness · myalgia · nausea · nerve disorders · neurotoxicity · oedema · pain · peroneal nerve palsy · respiratory disorders · sensation abnormal · skin reactions · speech impairment · vision disorders · vitreous floater · weight increased

▶ **Frequency not known** Atrioventricular block

● **CONCEPTION AND CONTRACEPTION** Manufacturer advises females of childbearing potential should use effective non-hormonal contraception during treatment and for 35 days after last treatment; male patients should use effective contraception during treatment and for 14 weeks after last treatment if their partner is pregnant or of childbearing potential. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **BREAST FEEDING** Manufacturer advises avoid during treatment and for 7 days after last treatment—no information available.

● **HEPATIC IMPAIRMENT** Manufacturer advises avoid in moderate to severe impairment (no information available).

● **RENAL IMPAIRMENT** Manufacturer advises avoid in severe impairment (limited information available).

● **MONITORING REQUIREMENTS**

▶ Manufacturer advises monitor serum cholesterol and triglycerides before starting treatment, then at weeks 2, 4, and 8, and regularly thereafter.

▶ Manufacturer advises monitor ECG before starting treatment and monthly thereafter, particularly in patients with predisposing conditions.

▶ Manufacturer advises monitor for lipase and amylase elevations before starting treatment, and regularly thereafter as clinically indicated.

● **PATIENT AND CARER ADVICE**

**Missed doses** Manufacturer advises if a dose is more than 20 hours late, the missed dose should not be taken and the next dose should be taken at the normal time.

**Driving and skilled tasks** Manufacturer advises patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of CNS effects.

● **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

▶ Lorlatinib for previously treated ALK-positive advanced non-small-cell lung cancer (May 2020) NICE TA628 Recommended

**Scottish Medicines Consortium (SMC) decisions**

▶ Lorlatinib (Lorviqua<sup>®</sup>) as monotherapy for the treatment of adult patients with anaplastic lymphoma kinase (ALK)-positive advanced non-small cell lung cancer whose disease has progressed after alectinib or ceritinib as the first ALK tyrosine kinase inhibitor (TKI) therapy or crizotinib and at least one other ALK TKI (March 2020) SMC No. SMC2239 Recommended

▶ Lorlatinib (Lorviqua<sup>®</sup>) as monotherapy for the treatment of adult patients with anaplastic lymphoma kinase (ALK)-positive advanced non-small cell lung cancer previously not treated with an ALK inhibitor (March 2022) SMC No. SMC2415 Recommended

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Tablet**

CAUTIONARY AND ADVISORY LABELS 25

▶ **Lorviqua** (Pfizer Ltd) ▼

**Lorlatinib 25 mg** Lorviqua 25mg tablets | 90 tablet [PoM] £5,283.00 (Hospital only) | 120 tablet [PoM] £7,044.00 (Hospital only)

**Lorlatinib 100 mg** Lorviqua 100mg tablets | 30 tablet [PoM] £5,283.00 (Hospital only)

## Midostaurin

01-Oct-2021

● **DRUG ACTION** Midostaurin is an inhibitor of multiple tyrosine kinases.

● **INDICATIONS AND DOSE**

**Acute myeloid leukaemia (specialist use only)**

▶ BY MOUTH

▶ **Adult:** 50 mg twice daily, on days 8–21 of induction and consolidation chemotherapy cycles; for administration following consolidation chemotherapy, and dose adjustment or treatment interruption due to side-effects—consult product literature

**Aggressive systemic mastocytosis (specialist use only) | Systemic mastocytosis with associated haematological neoplasm (specialist use only) | Mast cell leukaemia (specialist use only)**

▶ BY MOUTH

▶ **Adult:** 100 mg twice daily, for dose adjustment or treatment interruption due to side-effects—consult product literature

**IMPORTANT SAFETY INFORMATION**

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

● **CAUTIONS** Active severe infection (control before initiation of monotherapy) · elderly (limited experience) · patients at risk of congestive heart failure · risk factors for QT-interval prolongation

● **INTERACTIONS** → Appendix 1: midostaurin

● **SIDE-EFFECTS**

▶ **Common or very common** Asthenia · bruising · chills · concentration impaired · constipation · cough · cystitis · diarrhoea · dizziness · dyspepsia · dyspnoea · fall · febrile neutropenia · fever · haemorrhage · headache · hyperglycaemia · hypersensitivity · hypotension · increased risk of infection · nausea · oedema · oropharyngeal pain · QT interval prolongation · respiratory disorders · sepsis · tremor · vertigo · vomiting · weight increased

▶ **Frequency not known** Cardiac disorder · congestive heart failure

● **CONCEPTION AND CONTRACEPTION** Manufacturer advises perform pregnancy test in women of childbearing potential within 7 days prior to treatment initiation; effective contraception must be used during treatment and for at least 4 months after stopping treatment—additional barrier method recommended in women using hormonal contraceptives. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **BREAST FEEDING** Manufacturer advises avoid during treatment and for 4 months after stopping treatment—present in milk in animal studies.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment and monitor for toxicity—no information available.

● **RENAL IMPAIRMENT** Manufacturer advises caution in severe impairment and monitor for toxicity—limited information available.

● **MONITORING REQUIREMENTS**

▶ Manufacturer advises monitor white blood cell count regularly, especially at treatment initiation; also monitor for signs and symptoms of infection.

- ▶ Manufacturer advises assess left ventricular ejection fraction in patients at risk of congestive heart failure at baseline and during treatment as clinically indicated; consider performing ECGs if concomitant use with drugs that can prolong QT-interval.
- ▶ Manufacturer advises monitor for pulmonary symptoms indicative of interstitial lung disease or pneumonitis.

#### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### NICE decisions

- ▶ **Midostaurin for untreated acute myeloid leukaemia (June 2018)** NICE TA523 Recommended with restrictions
- ▶ **Midostaurin for treating advanced systemic mastocytosis (September 2021)** NICE TA728 Recommended
- ▶ **Scottish Medicines Consortium (SMC) decisions**
- ▶ **Midostaurin (Rydapt<sup>®</sup>) for treatment of adult patients with newly diagnosed acute myeloid leukaemia who are FLT3 mutation positive in combination with standard daunorubicin and cytarabine induction and high dose cytarabine consolidation chemotherapy, and for patients in complete response followed by midostaurin single agent maintenance therapy (June 2018)** SMC No. 1330/18 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Capable

EXCIPIENTS: May contain Alcohol

- ▶ **Rydapt** (Novartis Pharmaceuticals UK Ltd) ▼

**Midostaurin 25 mg** Rydapt 25mg capsules | 56 capsule [PoM]  
£5,609.94

## Neratinib

11-Feb-2021

- **DRUG ACTION** Neratinib is a tyrosine kinase inhibitor.

#### ● INDICATIONS AND DOSE

##### HER2-overexpressed/amplified breast cancer (specialist use only)

- ▶ BY MOUTH

- ▶ **Adult:** 240 mg once daily for 1 year, dose to be taken with food, preferably in the morning, for dose adjustments due to side-effects—consult product literature

##### DOSE ADJUSTMENTS DUE TO INTERACTIONS

- ▶ [EvGr] If concurrent use of moderate CYP3A4 inhibitors or cyclosporin is unavoidable, reduce neratinib dose to 40 mg once daily. If tolerated, increase dose by 40 mg at least every 7 days; max. dose 160 mg daily.
- ▶ If concurrent use of potent CYP3A4 inhibitors is unavoidable, reduce neratinib dose to 40 mg once daily. 

- **CAUTIONS** Cardiac risk factors or conditions which may affect left ventricular ejection fraction—consider cardiac monitoring, including assessment of left ventricular ejection fraction, as clinically indicated · elderly (increased risk of complications of diarrhoea) · gastro-intestinal disorder (significant, chronic) with diarrhoea as a major symptom—no clinical experience

- **INTERACTIONS** → Appendix 1: neratinib

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Appetite decreased · dehydration · diarrhoea · dry mouth · epistaxis · fatigue · gastrointestinal discomfort · increased risk of infection · mucositis · muscle spasms · nail discolouration · nail disorders · nausea · oral disorders · skin reactions · vomiting · weight decreased
- ▶ **Uncommon** Renal failure

**SIDE-EFFECTS, FURTHER INFORMATION** Diarrhoea may be severe and associated with dehydration. Diarrhoea is more

likely to occur during initiation and may be recurrent. Manufacturer advises prophylactic treatment, with anti-diarrhoeal agent.

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises females of childbearing potential should use highly effective contraception during treatment and for 1 month after last treatment; an additional barrier method of contraception should be used in females using hormonal contraceptives. Male patients should use effective contraception during treatment and for 3 months after last treatment if their partner is of childbearing potential. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—toxicity in *animal* studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid in severe impairment (risk of increased exposure).
- **RENAL IMPAIRMENT** Manufacturer advises caution in mild to moderate impairment (increased risk of complications of dehydration from diarrhoea); avoid in severe impairment (no information available).
- **MONITORING REQUIREMENTS** Manufacturer advises monitor liver function (including ALT, AST, and total bilirubin) at 1 week, then monthly for the first 3 months, and every 6 weeks thereafter, during treatment or as clinically indicated. Treatment should be withheld or permanently discontinued, based on severity, in those who develop hepatotoxicity—consult product literature.
- **PRESCRIBING AND DISPENSING INFORMATION** Prophylactic treatment with an anti-diarrhoeal should be initiated with the first dose, and maintained during the first 1–2 months of treatment—consult product literature.

The manufacturer of *Nerlynx*<sup>®</sup> has provided a *Risk minimisation materials* document for healthcare professionals.

- **PATIENT AND CARER ADVICE** A patient alert card, patient treatment journal, and patient guide should be provided. **Missed doses** Manufacturer advises if a dose is missed, the missed dose should not be taken and the next dose should be taken at the normal time. **Driving and skilled tasks** Manufacturer advises patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of fatigue, dizziness, dehydration, and syncope.

- **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

#### NICE decisions

- ▶ **Neratinib for extended adjuvant treatment of hormone receptor-positive, HER2-positive early stage breast cancer after adjuvant trastuzumab (November 2019)** NICE TA612 Recommended with restrictions

#### Scottish Medicines Consortium (SMC) decisions

- ▶ **Neratinib (*Nerlynx*<sup>®</sup>) for extended adjuvant treatment of adult patients with early-stage hormone receptor positive HER2-overexpressed/amplified breast cancer and who completed adjuvant trastuzumab-based therapy less than one year ago (August 2020)** SMC No. SMC2251 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Tablet

CAUTIONARY AND ADVISORY LABELS 21, 25

- ▶ **Nerlynx** (Pierre Fabre Ltd) ▼

**Neratinib (as Neratinib maleate) 40 mg** Nerlynx 40mg tablets | 180 tablet [PoM] £4,500.00 (Hospital only)

## Nilotinib

22-Feb-2021

● **DRUG ACTION** Nilotinib is a tyrosine kinase inhibitor.

### ● INDICATIONS AND DOSE

**Newly diagnosed chronic phase Philadelphia chromosome-positive chronic myeloid leukaemia (initiated by a specialist)**

▶ BY MOUTH

▶ Adult: 300 mg twice daily, for dose adjustments due to side-effects—consult product literature

**Chronic and accelerated phase Philadelphia chromosome-positive chronic myeloid leukaemia resistant or intolerant to previous therapy, including imatinib (initiated by a specialist)**

▶ BY MOUTH

▶ Adult: 400 mg twice daily, for dose adjustments due to side-effects—consult product literature

### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

**MHRA/CHM ADVICE (MAY 2016): RISK OF HEPATITIS B VIRUS REACTIVATION WITH TYROSINE KINASE INHIBITORS**

An EU wide review has concluded that nilotinib can cause hepatitis B virus reactivation; the MHRA recommends establishing hepatitis B virus status in all patients before initiation of treatment.

● **CAUTIONS** Clinically significant bradycardia · congestive heart failure · hepatitis B infection · history of pancreatitis · recent myocardial infarction · susceptibility to QT-interval prolongation (including electrolyte disturbances) · unstable angina

### CAUTIONS, FURTHER INFORMATION

▶ **Hepatitis B infection** The MHRA advises that patients who are carriers of hepatitis B virus should be closely monitored for signs and symptoms of active infection throughout treatment and for several months after stopping treatment; expert advice should be sought for patients who test positive for hepatitis B virus and in those with active infection.

● **INTERACTIONS** → Appendix 1: nilotinib

### ● SIDE-EFFECTS

▶ **Common or very common** Alopecia · anaemia · angina pectoris · anxiety · appetite abnormal · arrhythmias · arthralgia · asthenia · bone marrow disorders · cardiac conduction disorders · chest discomfort · constipation · cough · decreased leucocytes · depression · diabetes mellitus · diarrhoea · dizziness · dry eye · dyslipidaemia · dyspnoea · electrolyte imbalance · eosinophilia · eye discomfort · eye disorders · eye inflammation · fever · flushing · gastrointestinal discomfort · gastrointestinal disorders · headaches · hepatic disorders · hyperbilirubinaemia · hyperglycaemia · hypertension · increased risk of infection · insomnia · muscle complaints · muscle weakness · myocardial infarction · nausea · neoplasms · neutropenia · oedema · pain · palpitations · peripheral neuropathy · QT interval prolongation · respiratory disorders · sensation abnormal · skin reactions · sweat changes · taste altered · thrombocytopenia · vertigo · vomiting · weight changes

▶ **Uncommon** Atherosclerosis · cerebrovascular insufficiency · chills · cyanosis · erectile dysfunction · gout · haemorrhage · heart failure · hyperaemia · malaise · oral disorders · pancreatitis · peripheral vascular disease · temperature sensation altered · vision disorders

▶ **Frequency not known** Breast abnormalities · chorioretinopathy · diastolic dysfunction · dry mouth · facial swelling · gynaecomastia · hepatitis B reactivation · hyperparathyroidism · hyperuricaemia · hypoglycaemia ·

lethargy · memory loss · menorrhagia · oesophageal pain · oropharyngeal pain · pericardial effusion · pericarditis · restless legs · sebaceous hyperplasia · syncope · tremor · urinary disorders · urine discoloration

● **CONCEPTION AND CONTRACEPTION** Manufacturer advises highly effective contraception in women of childbearing potential during treatment and for up to two weeks after stopping treatment. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—toxicity in *animal* studies; see also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal* studies.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution (risk of increased exposure).

### ● MONITORING REQUIREMENTS

▶ Manufacturer advises monitor lipid profiles before initiating treatment, at 3 and 6 months, and then yearly thereafter; monitor blood glucose before initiating treatment and then periodically during treatment, as clinically indicated.

▶ Manufacturer advises monitor full blood count every 2 weeks for the first 2 months of treatment, then monthly thereafter, or as clinically indicated.

▶ Manufacturer advises perform baseline ECG before treatment and as clinically indicated thereafter; correct any electrolyte disturbances before treatment and monitor periodically during treatment.

▶ Manufacturer advises monitor and actively manage cardiovascular risk factors during treatment.

● **DIRECTIONS FOR ADMINISTRATION** [EvGr](#) Food should not be consumed 2 hours before and for at least one hour after each dose. Capsules should either be swallowed whole or the contents of each capsule may be dispersed in one teaspoon of apple sauce and taken immediately. [M](#)

● **PRESCRIBING AND DISPENSING INFORMATION** All prescribers should be familiar with the *Summary of Key Safety Recommendations for Tasigna<sup>®</sup> (nilotinib)* provided by the manufacturer.

● **PATIENT AND CARER ADVICE** Manufacturer advises patients and carers should seek immediate medical attention if signs or symptoms of cardiovascular events occur.

All patients should be provided with the *Important Information About How to Take Your Medication* leaflet provided by the manufacturer.

● **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website  
**NICE decisions**

▶ **Dasatinib, nilotinib and imatinib for untreated chronic myeloid leukaemia (CML) (December 2016)** NICE TA426 Recommended with restrictions

▶ **Dasatinib, nilotinib and high-dose imatinib for treating imatinib-resistant or intolerant chronic myeloid leukaemia (CML) (December 2016)** NICE TA425 Recommended with restrictions

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

## Nintedanib

23-Nov-2021

- **DRUG ACTION** Nintedanib is a tyrosine protein kinase inhibitor.

### ● INDICATIONS AND DOSE

#### OFEV<sup>®</sup>

**Idiopathic pulmonary fibrosis (initiated by a specialist) | Chronic fibrosing interstitial lung disease with a progressive phenotype (initiated by a specialist) | Systemic sclerosis-associated interstitial lung disease (initiated by a specialist)**

#### ► BY MOUTH

- Adult: 150 mg twice daily, reduced if not tolerated to 100 mg twice daily, for dose adjustments due to side-effects, consult product literature

#### VARGATEF<sup>®</sup>

**Treatment of locally advanced, metastatic or locally recurrent non-small cell lung cancer of adenocarcinoma histology after first-line chemotherapy (in combination with docetaxel) (initiated under specialist supervision)**

#### ► BY MOUTH

- Adult: 200 mg twice daily on days 2–21 of a standard 21 day docetaxel cycle, for treatment following discontinuation of docetaxel and for dose adjustments due to side-effects, consult product literature

### IMPORTANT SAFETY INFORMATION

**MHRA/CHM ADVICE: SYSTEMICALLY ADMINISTERED VEGF PATHWAY INHIBITORS: RISK OF ANEURYSM AND ARTERY DISSECTION (JULY 2020)**

A European review of worldwide data concluded that systemically administered VEGF pathway inhibitors may lead to aneurysm and artery dissection in patients with or without hypertension. Some fatal cases have been reported, mainly in relation to aortic aneurysm rupture and aortic dissection. The MHRA advises healthcare professionals to carefully consider the risk of aneurysm and artery dissection in patients with risk factors before initiating treatment with nintedanib; any modifiable risk factors (such as smoking and hypertension) should be reduced as much as possible. Patients should be monitored and treated for hypertension as required.

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

### ● CONTRA-INDICATIONS

**OFEV<sup>®</sup>** Severe pulmonary hypertension

- **CAUTIONS** History or risk factors for QT prolongation · hypertension · impaired wound healing · increased risk of bleeding · patients at high risk of cardiovascular disease · previous abdominal surgery · recent history of hollow organ perforation · risk factors for aneurysm or artery dissection · theoretical increased risk of gastrointestinal perforation · theoretical increased risk of venous thromboembolism

**OFEV<sup>®</sup>** Mild to moderate pulmonary hypertension

- **INTERACTIONS** → Appendix 1: nintedanib

### ● SIDE-EFFECTS

- **Common or very common** Abdominal pain · abscess · alopecia · appetite decreased · dehydration · diarrhoea · drug-induced liver injury · electrolyte imbalance · haemorrhage · headache · hyperbilirubinaemia · hypertension · mucositis · nausea · neutropenia · peripheral neuropathy · sepsis · skin reactions · stomatitis ·

thrombocytopenia · venous thromboembolism · vomiting · weight decreased

- **Uncommon** Gastrointestinal disorders · myocardial infarction · pancreatitis · renal impairment
- **Frequency not known** Aneurysm · artery dissection
- **ALLERGY AND CROSS-SENSITIVITY**  $\text{EvGr}$  Contra-indicated in patients with peanut or soya hypersensitivity.  $\text{⚠}$
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises exclude pregnancy before treatment and ensure effective contraception (in addition to barrier method) during treatment and for at least 3 months after last dose.
- **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in animal studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild impairment (risk of increased exposure); avoid in moderate to severe impairment (limited information available).
- **OFEV<sup>®</sup> Dose adjustments** Manufacturer advises dose reduction to 100 mg twice daily in mild impairment.
- **RENAL IMPAIRMENT**  $\text{EvGr}$  Caution in severe impairment (no information available).  $\text{⚠}$
- **MONITORING REQUIREMENTS**
  - The MHRA advises to monitor blood pressure regularly.
  - For *Vargatef<sup>®</sup>*, manufacturer advises monitor full blood count before each treatment cycle and regularly thereafter; monitor hepatic function before each treatment cycle during combination therapy and monthly during monotherapy; monitor renal function during treatment; monitor for thromboembolic events; monitor prothrombin time, INR and for bleeding if used concomitantly with anticoagulants; monitor for cerebral bleeding in patients with stable brain metastases.
  - For *Ofev<sup>®</sup>* manufacturer advises monitor hepatic function before treatment initiation and during the first month of treatment, then at regular intervals during the subsequent 2 months and as clinically indicated thereafter; monitor renal function during treatment.

### ● PRESCRIBING AND DISPENSING INFORMATION

**VARGATEF<sup>®</sup>** Not to be taken on the same day as docetaxel therapy.

### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### **NICE decisions**

- Nintedanib for previously treated locally advanced, metastatic, or locally recurrent non-small-cell lung cancer (July 2015) NICE TA347 Recommended with restrictions

## Osimertinib

04-Feb-2022

- **DRUG ACTION** Osimertinib is a tyrosine kinase inhibitor.

### ● INDICATIONS AND DOSE

#### **Non-small cell lung cancer (initiated by a specialist)**

- ▶ BY MOUTH
- ▶ **Adult:** 80 mg once daily, for dose adjustment, interruption or treatment discontinuation due to side-effects—consult product literature

### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **CONTRA-INDICATIONS** Congenital long QT syndrome
- **CAUTIONS** Elderly (more frequent dose adjustments may be required) · history of interstitial lung disease · radiation pneumonitis requiring steroid treatment · risk factors for QTc interval prolongation
- **INTERACTIONS** → Appendix 1: osimertinib
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Diarrhoea · eyelid pruritus · increased risk of infection · nail discolouration · nail disorders · respiratory disorders · skin reactions · stomatitis
  - ▶ **Uncommon** Cutaneous vasculitis · eye disorders · eye inflammation · QT interval prolongation
  - ▶ **Rare or very rare** Stevens-Johnson syndrome
  - ▶ **Frequency not known** Decreased leucocytes · neutropenia · thrombocytopenia
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises use of effective, non-hormonal, contraception during and for 2 months after treatment in women, and 4 months after treatment in men.
- **PREGNANCY** Manufacturer advises avoid unless essential—toxicity in *animal* studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Manufacturer advises avoid—may be present in milk based on *animal* studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid in severe impairment (no information available).
- **RENAL IMPAIRMENT** Manufacturer advises caution in severe and end-stage impairment—limited information available.
- **PRE-TREATMENT SCREENING** [EvGr] Evidence of epidermal growth factor receptor (EGFR) mutation positive status is required before osimertinib treatment is initiated, and should be determined by an experienced laboratory using a validated test method. 
- **MONITORING REQUIREMENTS** Manufacturer advises monitor ECG and electrolytes periodically in patients with risk factors for QTc interval prolongation; dose adjustment is advised if QTc interval is more than 500 milliseconds on at least 2 separate ECGs—consult product literature.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises tablet may be dispersed in 50 mL of non-carbonated water, by stirring until dispersed and swallowed immediately (do not crush). The residue must then be re-dispersed in an additional half a glass of water and immediately swallowed. Manufacturer advises if administration via a nasogastric tube is required, the tablet may be dispersed in 15 mL of non-carbonated water, by stirring until dispersed

and the residue re-dispersed in an additional 15 mL of water (do not crush). The total 30 mL of liquid should then be administered as per the nasogastric tube manufacturer's instructions with appropriate water flushes; the solution should be administered within 30 minutes of adding the tablets to water.

### ● PATIENT AND CARER ADVICE

**Missed doses** Manufacturer advises if a dose is more than 12 hours late, the missed dose should not be taken and the next dose should be taken at the normal time.

### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### **NICE decisions**

- ▶ Osimertinib for treating EGFR T790M mutation-positive advanced non-small-cell lung cancer (October 2020) NICE TA653 Recommended with restrictions
- ▶ Osimertinib for untreated EGFR mutation-positive non-small-cell lung cancer (October 2020) NICE TA654 Recommended
- ▶ Osimertinib for adjuvant treatment of EGFR mutation-positive non-small-cell lung cancer after complete tumour resection (January 2022) NICE TA761 Recommended with restrictions
- Scottish Medicines Consortium (SMC) decisions**
  - ▶ Osimertinib (*Tagrisso*<sup>®</sup>) for the treatment of adult patients with locally advanced or metastatic epidermal growth factor receptor (EGFR) T790M mutation-positive non-small-cell lung cancer (NSCLC) (February 2017) SMC No. 1214/17 Recommended with restrictions
  - ▶ Osimertinib (*Tagrisso*<sup>®</sup>) for adjuvant treatment after complete tumour resection in adult patients with stage IB-IIIa non-small cell lung cancer (NSCLC) whose tumours have epidermal growth factor receptor (EGFR) exon 19 deletions or exon 21 (L858R) substitution mutations (November 2021) SMC No. SMC2383 Recommended with restrictions
  - ▶ Osimertinib (*Tagrisso*<sup>®</sup>) as monotherapy for the first-line treatment of adult patients with locally advanced or metastatic non-small cell lung cancer (NSCLC) with activating epidermal growth factor receptor (EGFR) mutations (January 2022) SMC No. SMC2382 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Tablet**

## Palbociclib

19-Jul-2021

- **DRUG ACTION** Palbociclib is a highly selective inhibitor of cyclin-dependent kinases 4 and 6, which leads to disruption of cancer cell proliferation.

### ● INDICATIONS AND DOSE

#### **Locally advanced or metastatic breast cancer (initiated by a specialist)**

- ▶ BY MOUTH
- ▶ **Adult:** 125 mg once daily for 21 consecutive days of repeated 28 day cycles, for dose adjustments due to side-effects—consult product literature

#### **DOSE ADJUSTMENTS DUE TO INTERACTIONS**

- ▶ Manufacturer advises if concomitant use with potent CYP3A4 inhibitors is unavoidable, reduce palbociclib dose to 75 mg once daily. If the CYP3A4 inhibitor is stopped, increase the palbociclib dose (after 3–5 half

lives of the inhibitor) to the dose used before starting the CYP3A4 inhibitor.

#### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

**MHRA/CHM ADVICE: CDK4/6 INHIBITORS (ABEMACICLIB, PALBOCICLIB, RIBOCICLIB): REPORTS OF INTERSTITIAL LUNG DISEASE AND PNEUMONITIS, INCLUDING SEVERE CASES (JUNE 2021)**

Interstitial lung disease and pneumonitis, in some cases severe or fatal, have been reported in patients being treated with CDK4/6 inhibitors, such as palbociclib. Healthcare professionals are advised to ask patients taking palbociclib about pulmonary symptoms indicative of interstitial lung disease and pneumonitis, such as cough or dyspnoea. Patients should be advised to seek advice right away if these symptoms occur. Healthcare professionals should ensure patients have a copy of the Patient Information Leaflet (PIL) for palbociclib.

- **INTERACTIONS** → Appendix 1: palbociclib
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Alopecia · anaemia · appetite decreased · asthenia · diarrhoea · dry eye · epistaxis · excessive tearing · fever · infection · leucopenia · mucositis · nausea · neutropenia · oral disorders · oropharyngeal complaints · respiratory disorders · skin reactions · taste altered · thrombocytopenia · vision blurred · vomiting
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception in women of childbearing potential during treatment and for at least 3 weeks after completing treatment. Male patients should use effective contraception during treatment and for at least 14 weeks after completing treatment if their partner is of childbearing potential. See also Pregnancy and reproductive function in Cytotoxic drugs p. 962.
- **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies. See also Pregnancy and reproductive function in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in moderate to severe impairment (risk of increased exposure).  
**Dose adjustments** Manufacturer advises dose reduction to 75 mg once daily in severe impairment.
- **RENAL IMPAIRMENT** Manufacturer advises caution and monitor closely for signs of toxicity in moderate-to-severe impairment.
- **MONITORING REQUIREMENTS** Manufacturer advises monitor full blood count prior to starting therapy, at the start of each cycle, on day 14 of the first 2 cycles and as clinically indicated.
- **PATIENT AND CARER ADVICE**  
**Missed doses** Manufacturer advises to take palbociclib at the same time each day; if a dose is missed, the missed dose should not be taken and the next dose should be taken at the usual time.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website
- **NICE decisions**
  - ▶ Palbociclib with an aromatase inhibitor for previously untreated, hormone receptor-positive, HER2-negative, locally advanced or metastatic breast cancer (December 2017) NICE TA495 Recommended with restrictions

## Pazopanib

07-Jul-2021

- **DRUG ACTION** Pazopanib is a tyrosine kinase inhibitor.

#### ● INDICATIONS AND DOSE

**First-line treatment of advanced renal cell carcinoma | Treatment of advanced renal cell carcinoma in patients who have had previous treatment with cytokine therapy**

##### ▶ BY MOUTH

- ▶ Adult: 800 mg daily, adjust dose in steps of 200 mg according to tolerability; maximum 800 mg per day

**Treatment of selective subtypes of advanced soft-tissue sarcoma**

##### ▶ BY MOUTH

- ▶ Adult: (consult product literature)

#### DOSE ADJUSTMENTS DUE TO INTERACTIONS

- ▶ Manufacturer advises if concurrent use of potent inhibitors of CYP3A4 is unavoidable, reduce dose to 400 mg daily.

#### IMPORTANT SAFETY INFORMATION

**MHRA/CHM ADVICE: SYSTEMICALLY ADMINISTERED VEGF PATHWAY INHIBITORS: RISK OF ANEURYSM AND ARTERY DISSECTION (JULY 2020)**

A European review of worldwide data concluded that systemically administered VEGF pathway inhibitors may lead to aneurysm and artery dissection in patients with or without hypertension. Some fatal cases have been reported, mainly in relation to aortic aneurysm rupture and aortic dissection. The MHRA advises healthcare professionals to carefully consider the risk of aneurysm and artery dissection in patients with risk factors before initiating treatment with pazopanib; any modifiable risk factors (such as smoking and hypertension) should be reduced as much as possible. Patients should be monitored and treated for hypertension as required.

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **CAUTIONS** Cardiac disease · hypertension · increased risk of gastro-intestinal fistulas · increased risk of gastro-intestinal perforation · increased risk of haemorrhage ·

increased risk of thrombotic microangiopathy—permanently discontinue if symptoms develop · ischaemic stroke · myocardial infarction · risk factors for aneurysm or artery dissection · risk of thrombotic events · susceptibility to QT-interval prolongation (including electrolyte disturbances) · transient ischaemic attack

#### CAUTIONS, FURTHER INFORMATION

- ▶ Elective surgery Discontinue treatment 7 days before elective surgery and restart only if adequate wound healing.
- ▶ Monitoring of blood pressure The MHRA advises to monitor blood pressure regularly—consult product literature if hypertension occurs during treatment.
- **INTERACTIONS** → Appendix 1: pazopanib
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Alopecia · appetite decreased · arthralgia · asthenia · bradycardia · cancer pain · cardiac disorder · chest pain · chills · cough · dehydration · diarrhoea · dizziness · drowsiness · dry mouth · dysphonia · dyspnoea · electrolyte imbalance · gastrointestinal discomfort · gastrointestinal disorders · haemorrhage · hair colour changes · headache · hepatic disorders · hiccups · hyperbilirubinaemia · hyperhidrosis · hypertension · hypoalbuminaemia · hypothyroidism · increased risk of infection · insomnia · left ventricular dysfunction · leucopenia · mucosal abnormalities · muscle complaints · musculoskeletal pain · nail disorder · nausea · neutropenia · oedema · oral disorders · peripheral neuropathy · proteinuria · respiratory disorders · sensation abnormal · skin reactions · taste altered · thrombocytopenia · vasodilation · venous thromboembolism · vision blurred · vomiting · weight decreased
  - ▶ **Uncommon** Cerebrovascular insufficiency · eye disorders · haemolytic uraemic syndrome · menstrual cycle irregularities · myocardial infarction · myocardial ischaemia · oropharyngeal pain · pancreatitis · photosensitivity reaction · polycythaemia · QT interval prolongation · rhinorrhoea · skin ulcer · thrombotic microangiopathy
  - ▶ **Rare or very rare** Posterior reversible encephalopathy syndrome (PRES)
  - ▶ **Frequency not known** Aneurysm · artery dissection
- **CONCEPTION AND CONTRACEPTION** Effective contraception advised during treatment.
- **PREGNANCY** Avoid unless potential benefit outweighs risk—toxicity in *animal studies*. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Discontinue breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild to moderate impairment; avoid in severe impairment. **Dose adjustments** Manufacturer advises dose reduction to 200 mg daily in moderate impairment.
- **RENAL IMPAIRMENT** **[EvGr]** Use with caution if creatinine clearance less than 30 mL/minute (no information available);  see p. 21.
- **MONITORING REQUIREMENTS**
  - ▶ Monitor liver function before treatment and at weeks 3, 5, 7, and 9, then at months 3 and 4, and periodically thereafter as clinically indicated—consult product literature if elevated liver enzymes observed.
  - ▶ Monitor for signs or symptoms of congestive heart failure—monitor left ventricular ejection fraction in patients at risk of heart failure before and during treatment.
  - ▶ Monitor for proteinuria.
  - ▶ Monitor thyroid function.
  - ▶ Monitor for signs and symptoms of posterior reversible encephalopathy syndrome (including headache, hypertension, seizure, lethargy, confusion, visual and neurological disturbances)—permanently discontinue treatment if symptoms occur.

#### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### NICE decisions

- ▶ **Pazopanib for the first-line treatment of advanced renal cell carcinoma** (updated August 2013) NICE TA215 Recommended with restrictions
- **Scottish Medicines Consortium (SMC) decisions**
  - ▶ **Pazopanib (Votrient®)** for the first-line treatment of advanced renal cell carcinoma (RCC) and for patients who have received prior cytokine therapy for advanced disease (March 2011) SMC No. 676/11 Recommended with restrictions
  - ▶ **Pazopanib (Votrient®)** for the treatment of adult patients with selective subtypes of advanced soft tissue sarcoma (STS) who have received prior chemotherapy for metastatic disease or who have progressed within 12 months after (neo)adjuvant therapy (December 2012) SMC No. 820/12 Not recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Tablet

CAUTIONARY AND ADVISORY LABELS 23, 25

- ▶ **Votrient** (Novartis Pharmaceuticals UK Ltd)

**Pazopanib (as Pazopanib hydrochloride) 200 mg** Votrient 200mg tablets | 30 tablet **[PoM]** £560.50

**Pazopanib (as Pazopanib hydrochloride) 400 mg** Votrient 400mg tablets | 30 tablet **[PoM]** £1,120.00

## Pemigatinib

01-Mar-2022

- **DRUG ACTION** Pemigatinib is a protein kinase inhibitor that inhibits fibroblast growth factor receptors (FGFR).

#### ● INDICATIONS AND DOSE

**Cholangiocarcinoma with fibroblast growth factor receptor 2 (FGFR2) fusion or rearrangement (initiated by a specialist)**

##### ▶ BY MOUTH

- ▶ **Adult:** 13.5 mg once daily for 14 consecutive days of repeated 21-day cycles, to be taken at the same time each day, for dose adjustments, treatment interruption, or discontinuation due to side-effects—consult product literature

#### DOSE ADJUSTMENTS DUE TO INTERACTIONS

- ▶ **[EvGr]** If concomitant use with potent CYP3A4 inhibitors is unavoidable, reduce pemigatinib dose to 9 mg once daily in those taking 13.5 mg once daily, or to 4.5 mg once daily in patients already taking a reduced dose.

#### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES** See Cytotoxic drugs p. 962.

- **CAUTIONS** Clinically significant eye disorders (such as retinal disorders—consult product literature)
- **INTERACTIONS** → Appendix 1: pemigatinib
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Alopecia · arthralgia · constipation · diarrhoea · dry eye · dry mouth · electrolyte imbalance · eye disorders · fatigue · hair growth abnormal · increased risk of infection · nail discoloration · nail disorders · nausea · punctate keratitis · skin reactions · stomatitis · taste altered · vision blurred
  - ▶ **Frequency not known** Soft tissue calcification
- **CONCEPTION AND CONTRACEPTION** **[EvGr]** Females of childbearing potential and male patients with a partner of childbearing potential should use effective contraception during and for 1 week after stopping treatment; additional barrier method recommended in women using hormonal contraceptives. 

- **PREGNANCY** [EvGr](#) Avoid unless essential—toxicity in animal studies. [M](#) See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** [EvGr](#) Avoid during and for 1 week after stopping treatment—no information available. [M](#)
- **HEPATIC IMPAIRMENT** [EvGr](#) Caution in severe impairment. [M](#)  
**Dose adjustments** [EvGr](#) Dose reduction in severe impairment—consult product literature. [M](#)
- **RENAL IMPAIRMENT** [EvGr](#) Caution in severe impairment. [M](#)  
**Dose adjustments** [EvGr](#) Reduce dose in severe impairment—consult product literature. [M](#)
- **MONITORING REQUIREMENTS**
  - ▶ [EvGr](#) Monitor serum phosphate—consult product literature.
  - ▶ Eye examination, including optical coherence tomography, should be performed before treatment, every 2 months for the first 6 months, then every 3 months thereafter, and urgently if visual symptoms occur.
  - ▶ Consider using alternative markers of renal function if serum creatinine is persistently raised—consult product literature. [M](#)
- **PATIENT AND CARER ADVICE**

**Missed doses** If a dose is more than 4 hours late or vomiting occurs after taking a dose, no additional dose should be taken and the next dose should be taken at the normal scheduled time.

**Driving and skilled tasks** Patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of fatigue and visual disturbances.
- **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

  - ▶ Pemigatinib for treating relapsed or refractory advanced cholangiocarcinoma with *FGFR2* fusion or rearrangement (August 2021) NICE TA722 Recommended

**Scottish Medicines Consortium (SMC) decisions**

  - ▶ Pemigatinib (*Pemazyre*<sup>®</sup>) as monotherapy for the treatment of adults with locally advanced or metastatic cholangiocarcinoma with a fibroblast growth factor receptor 2 gene fusion or rearrangement that have progressed after at least one prior line of systemic therapy (February 2022) SMC No. SMC2399 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Tablet

CAUTIONARY AND ADVISORY LABELS 25

 £7,159.00 (Hospital only)

## Ponatinib

19-Jul-2021

### ● INDICATIONS AND DOSE

**Treatment of chronic, accelerated, or blast phase chronic myeloid leukaemia in patients who have the T3151 mutation or who have resistance to or intolerance of dasatinib or nilotinib, and for whom subsequent treatment with imatinib is not clinically appropriate | Treatment of Philadelphia chromosome-positive acute lymphoblastic leukaemia in patients who have the T3151 mutation or who have resistance to or intolerance of dasatinib, and for whom subsequent treatment with imatinib is not clinically appropriate**

#### ▶ BY MOUTH

- ▶ Adult: 45 mg once daily, for dose adjustments due to side-effects or dose reduction due to risk of vascular occlusive events, consult product literature

### DOSE ADJUSTMENTS DUE TO INTERACTIONS

- ▶ Manufacturer advises consider a reduced initial dose of 30 mg daily with concurrent use of potent inhibitors of CYP3A4.

### IMPORTANT SAFETY INFORMATION

**MHRA/CHM ADVICE: RISK OF HEPATITIS B VIRUS REACTIVATION WITH BCR-ABL TYROSINE KINASE INHIBITORS (MAY 2016)**

An EU wide review has concluded that ponatinib can cause hepatitis B reactivation; the MHRA recommends establishing hepatitis B virus status in all patients before initiation of treatment.

**MHRA/CHM ADVICE (UPDATED APRIL 2017): PONATINIB: RISK OF VASCULAR OCCLUSIVE EVENTS—UPDATED ADVICE ON POSSIBLE DOSE REDUCTION**

The benefits and risks of ponatinib were reviewed by the European Medicines Agency's Committee on Medicinal Products for Human Use in 2014, which recommended that strengthened warnings should be added to the product information aimed at minimising the risk of blood clots and blockages in the arteries. Additional long-term follow-up data are now available that support new advice on dose modification to reduce this risk. The MHRA advises that although the recommended starting dose of ponatinib remains unchanged, prescribers should consider reducing the dose for patients with chronic phase chronic myeloid leukaemia (CP-CML) who have achieved a major cytogenetic response while on treatment. The following factors should be taken into account in the individual patient assessment:

- cardiovascular risk;
  - side-effects of ponatinib therapy (including cardiovascular and other dose-related toxicity);
  - time to cytogenetic response;
  - BCR-ABL transcript levels.
- The MHRA recommends close monitoring of response, if dose reduction is undertaken.

**MHRA/CHM ADVICE: PONATINIB (*ICLUSIG*<sup>®</sup>): REPORTS OF POSTERIOR REVERSIBLE ENCEPHALOPATHY SYNDROME (OCTOBER 2018)**

Post-marketing cases of posterior reversible encephalopathy syndrome (PRES) have been reported in patients receiving ponatinib.

Treatment should be interrupted if PRES is confirmed and resumed only once the event is resolved and if the benefit of continued treatment outweighs the risk.

Patients should be advised to contact their healthcare professional immediately if they develop sudden-onset severe headache, confusion, seizures, or vision changes.

**MHRA/CHM ADVICE: SYSTEMICALLY ADMINISTERED VEGF PATHWAY INHIBITORS: RISK OF ANEURYSM AND ARTERY DISSECTION (JULY 2020)**

A European review of worldwide data concluded that systemically administered VEGF pathway inhibitors may

lead to aneurysm and artery dissection in patients with or without hypertension. Some fatal cases have been reported, mainly in relation to aortic aneurysm rupture and aortic dissection. The MHRA advises healthcare professionals to carefully consider the risk of aneurysm and artery dissection in patients with risk factors before initiating treatment with ponatinib; any modifiable risk factors (such as smoking and hypertension) should be reduced as much as possible. Patients should be monitored and treated for hypertension as required.

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **CAUTIONS** Alcohol abuse—increased risk of pancreatitis · current severe hypertriglyceridaemia—increased risk of pancreatitis · discontinue treatment if a complete haematologic response has not occurred within 3 months · hepatitis B infection · history of myocardial infarction—do not use unless potential benefit outweighs potential risk · history of pancreatitis · history of stroke—do not use unless potential benefit outweighs potential risk · hypertension · risk factors for aneurysm or artery dissection

#### CAUTIONS, FURTHER INFORMATION

- ▶ Cardiovascular status Assess cardiovascular status before treatment—manage cardiovascular risk factors before and during treatment.
- ▶ Hepatitis B infection The MHRA advises that patients who are carriers of hepatitis B virus should be closely monitored for signs and symptoms of active infection throughout treatment and for several months after stopping treatment; expert advice should be sought for patients who test positive for hepatitis B virus and in those with active infection.
- ▶ Monitoring of blood pressure The MHRA advises to monitor blood pressure regularly—consult product literature if hypertension occurs during treatment.

- **INTERACTIONS** → Appendix 1: ponatinib

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Acute coronary syndrome · alopecia · anaemia · appetite decreased · arrhythmias · arthralgia · asthenia · cerebrovascular insufficiency · chills · constipation · cough · diarrhoea · dizziness · dry eye · dry mouth · dysphonia · dyspnoea · electrolyte imbalance · embolism and thrombosis · erectile dysfunction · eye inflammation · febrile neutropenia · fever · fluid imbalance · gastrointestinal discomfort · gastrooesophageal reflux disease · haemorrhage · headaches · heart failure · hyperglycaemia · hypertension · hypertriglyceridaemia · hyperuricaemia · hypothyroidism · increased risk of infection · influenza like illness · insomnia · ischaemic heart disease · lethargy · mass · muscle complaints · nausea · oedema · pain · pancreatitis · pancytopenia · pericardial effusion · peripheral neuropathy · peripheral vascular disease · pleural effusion · pulmonary hypertension · sensation abnormal · sepsis · skin reactions · stomatitis · sweat changes · vasodilation · vision disorders · vomiting · weight decreased
- ▶ **Uncommon** Cardiac discomfort · cardiomyopathy ischaemic · coronary vasospasm · hepatic disorders · hepatic failure (including fatal cases) · intracranial haemorrhage · left ventricular dysfunction · posterior reversible encephalopathy syndrome (PRES) · renal artery stenosis · splenic infarction · tumour lysis syndrome
- ▶ **Frequency not known** Aneurysm · artery dissection
- **CONCEPTION AND CONTRACEPTION** Ensure effective contraception during treatment in men and women; effectiveness of hormonal contraception unknown—alternative or additional methods of contraception should be used.

- **PREGNANCY** Avoid—toxicity in *animal* studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Manufacturer advises discontinue breastfeeding—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution.
- **RENAL IMPAIRMENT** [EVR](#) Use with caution if creatinine clearance less than 50 mL/minute (no information available), [M](#) see p. 21.
- **MONITORING REQUIREMENTS**
  - ▶ Manufacturer advises monitor serum lipase every 2 weeks for the first 2 months and periodically thereafter—withhold treatment if lipase elevated and abdominal symptoms occur.
  - ▶ Manufacturer advises a full blood count every 2 weeks for the first 3 months and then monthly thereafter or as clinically indicated.
  - ▶ Manufacturer advises monitor liver function periodically.
  - ▶ Manufacturer advises monitor for vascular occlusion or thromboembolism—interrupt treatment immediately if this occurs.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website
- **NICE decisions**
  - ▶ **Ponatinib for treating chronic myeloid leukaemia and acute lymphoblastic leukaemia (June 2017)** NICE TA451 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

## Regorafenib

22-Oct-2021

- **DRUG ACTION** Regorafenib is an inhibitor of several protein kinases.

#### ● INDICATIONS AND DOSE

**Metastatic colorectal cancer (specialist use only) | Unresectable or metastatic gastrointestinal stromal tumours (specialist use only) | Hepatocellular carcinoma (specialist use only)**

- ▶ BY MOUTH

▶ **Adult:** 160 mg once daily for 21 consecutive days of repeated 28-day cycles, for dose adjustment due to side effects—consult product literature

#### IMPORTANT SAFETY INFORMATION

**MHRA/CHM ADVICE: SYSTEMICALLY ADMINISTERED VEGF PATHWAY INHIBITORS: RISK OF ANEURYSM AND ARTERY DISSECTION (JULY 2020)**

A European review of worldwide data concluded that systemically administered VEGF pathway inhibitors may lead to aneurysm and artery dissection in patients with or without hypertension. Some fatal cases have been reported, mainly in relation to aortic aneurysm rupture and aortic dissection. The MHRA advises healthcare professionals to carefully consider the risk of aneurysm and artery dissection in patients with risk factors before initiating treatment with regorafenib; any modifiable risk factors (such as smoking and hypertension) should be reduced as much as possible. Patients should be monitored and treated for hypertension as required.

#### RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES

See Cytotoxic drugs p. 962.

- **CAUTIONS** Ensure measures to prevent hand-foot skin reaction · Gilbert's syndrome—risk of hyperbilirubinaemia · history of ischaemic heart disease—monitor for signs and symptoms of myocardial ischaemia and interrupt treatment if signs of ischaemia or infarction develop · hypertension · may impair wound healing— withhold treatment for major surgical procedures · predisposition to bleeding · risk factors for aneurysm or artery dissection
- CAUTIONS, FURTHER INFORMATION**
- ▶ Monitoring of blood pressure The MHRA advises to monitor blood pressure regularly—consult product literature if hypertension occurs during treatment.
- **INTERACTIONS** → Appendix 1: regorafenib
- **SIDE-EFFECTS**
- ▶ **Common or very common** Alopecia · anaemia · appetite decreased · asthenia · diarrhoea · dry mouth · dysphonia · electrolyte imbalance · fever · gastroesophageal reflux disease · haemorrhage · headache · hyperbilirubinaemia · hypertension · hyperuricaemia · hypothyroidism · increased risk of infection · leucopenia · mucositis · musculoskeletal stiffness · nausea · pain · proteinuria · skin reactions · stomatitis · taste altered · thrombocytopenia · tremor · vomiting · weight decreased
- ▶ **Uncommon** Gastrointestinal fistula (discontinue) · gastrointestinal perforation (including fatal cases, discontinue) · hepatic disorders · myocardial infarction · myocardial ischaemia · nail disorder
- ▶ **Rare or very rare** Neoplasms · posterior reversible encephalopathy syndrome (PRES) · severe cutaneous adverse reactions (SCARs)
- ▶ **Frequency not known** Aneurysm · artery dissection
- **CONCEPTION AND CONTRACEPTION** Women of childbearing potential and men must use effective contraception during treatment and up to 8 weeks after last dose.
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—toxicity in *animal* studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Avoid—present in milk in *animal* studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in moderate impairment (limited information available); avoid in severe impairment (no information available).
- **MONITORING REQUIREMENTS**
- ▶ Monitor blood count and coagulation parameters and consider permanent discontinuation in event of severe bleeding.
- ▶ Monitor hepatic function before treatment, then at least every two weeks for the first 2 months, then at least monthly thereafter and as clinically indicated—consult product literature if changes in liver function observed.
- ▶ Monitor for signs and symptoms of posterior reversible encephalopathy syndrome (including seizure, headache, altered mental status, visual disturbances or cortical blindness, with or without hypertension)—discontinue treatment if symptoms occur.
- ▶ Monitor biochemical, electrolyte and metabolic parameters during treatment; ensure measures to prevent hand-foot skin reaction—consult product literature if signs or symptoms develop.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises tablets should be taken at the same time each day, swallowed whole with water after a light meal that contains less than 30% fat.
- **PATIENT AND CARER ADVICE** Counselling advised (administration).

#### ● NATIONAL FUNDING/ACCESS DECISIONS

## Ribociclib

19-Jul-2021

- **DRUG ACTION** Ribociclib is an inhibitor of cyclin-dependent kinases 4 and 6, which are involved in cancer cell proliferation; their inhibition results in prevention of cancer cell growth.

#### ● INDICATIONS AND DOSE

**Locally advanced or metastatic breast cancer (specialist use only)**

▶ **BY MOUTH**

- ▶ Adult: 600 mg once daily for 21 consecutive days of repeated 28 day cycles, to be taken at approximately the same time each day, preferably in the morning, for dose adjustments due to side-effects—consult product literature

#### **DOSE ADJUSTMENTS DUE TO INTERACTIONS**

- ▶ Manufacturer advises if concurrent use of potent inhibitors of CYP3A4 is unavoidable, reduce dose to 400 mg once daily; in those already taking 400 mg once daily, reduce dose to 200 mg once daily.

#### **IMPORTANT SAFETY INFORMATION**

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

**MHRA/CHM ADVICE: CDK4/6 INHIBITORS (ABEMACICLIB, PALBOCICLIB, RIBOCICLIB): REPORTS OF INTERSTITIAL LUNG DISEASE AND PNEUMONITIS, INCLUDING SEVERE CASES (JUNE 2021)**

Interstitial lung disease and pneumonitis, in some cases severe or fatal, have been reported in patients being treated with CDK4/6 inhibitors, such as ribociclib.

Healthcare professionals are advised to ask patients taking ribociclib about pulmonary symptoms indicative of interstitial lung disease and pneumonitis, such as cough or dyspnoea. Patients should be advised to seek advice right away if these symptoms occur. Healthcare professionals should ensure patients have a copy of the Patient Information Leaflet (PIL) for ribociclib.

- **CONTRA-INDICATIONS** Pre-existing QTc prolongation · risk factors for QTc prolongation (including concomitant use of drugs known to prolong QTc interval)
- **INTERACTIONS** → Appendix 1: ribociclib
- **SIDE-EFFECTS**
- ▶ **Common or very common** Alopecia · anaemia · appetite decreased · asthenia · back pain · constipation · cough ·

decreased leucocytes · diarrhoea · dizziness · dry eye · dry mouth · dyspnoea · electrolyte imbalance · excessive tearing · fever · gastrointestinal discomfort · headache · hepatic disorders · increased risk of infection · nausea · neutropenia · oropharyngeal pain · peripheral oedema · QT interval prolongation · sepsis · skin reactions · stomatitis · syncope · taste altered · thrombocytopenia · vertigo · vomiting

- ▶ **Frequency not known** Respiratory disorders · toxic epidermal necrolysis
- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with hypersensitivity to peanut or soya products.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in moderate to severe impairment (risk of increased exposure).  
**Dose adjustments** Manufacturer advises initial dose reduction to 400 mg once daily in moderate to severe impairment.
- **RENAL IMPAIRMENT** Manufacturer advises use with caution in severe renal impairment—limited information available.
- **MONITORING REQUIREMENTS**
  - ▶ Manufacturer advises to perform full blood counts and liver function tests before initiating treatment, every 2 weeks for the first 2 cycles, at the beginning of the subsequent 4 cycles, and then as clinically indicated thereafter.
  - ▶ Manufacturer advises to assess ECG before initiating treatment (only initiate treatment in patients with QTcF values <450 milliseconds); ECG should be repeated at approx. day 14 of the first cycle and at the beginning of the second cycle, then as clinically indicated.
  - ▶ Manufacturer advises to monitor serum electrolytes (including potassium, calcium, phosphorus and magnesium) before initiating treatment, at the beginning of the first 6 cycles and then as clinically indicated; any abnormality should be corrected before initiating treatment.

- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website

#### NICE decisions

- ▶ **Ribociclib with an aromatase inhibitor for previously untreated, hormone receptor-positive, HER2-negative, locally advanced or metastatic breast cancer (December 2017)** NICE TA496 Recommended
- ▶ **Ribociclib with fulvestrant for treating hormone receptor-positive, HER2-negative advanced breast cancer after endocrine therapy (March 2021)** NICE TA687 Recommended with restrictions

#### Scottish Medicines Consortium (SMC) decisions

- ▶ **Ribociclib (*Kisqali*<sup>®</sup>) for use in combination with an aromatase inhibitor, for the treatment of postmenopausal women with hormone receptor (HR)-positive, human epidermal growth factor receptor 2 (HER2)-negative locally advanced or metastatic breast cancer as initial endocrine-based therapy (March 2018)** SMC No. 1295/18 Recommended
- ▶ **Ribociclib (*Kisqali*<sup>®</sup>) for the treatment of women with hormone receptor (HR)-positive, human epidermal growth factor receptor 2 (HER2)-negative locally advanced or metastatic breast cancer in combination with fulvestrant as initial endocrine-based therapy, or in women who have received prior endocrine therapy (November 2019)** SMC No. SMC2198 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

## Ruxolitinib

22-Oct-2021

- **DRUG ACTION** Ruxolitinib is a selective inhibitor of the Janus-associated tyrosine kinases JAK1 and JAK2.

### INDICATIONS AND DOSE

**Disease-related splenomegaly or symptoms [in patients with primary myelofibrosis, post-polycythaemia vera myelofibrosis, or post-essential thrombocythaemia myelofibrosis] (specialist use only) | Polycythaemia vera [in patients resistant to, or intolerant of, hydroxyurea] (specialist use only)**

- ▶ BY MOUTH
- ▶ Adult: (consult product literature or local protocols)

### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **CAUTIONS** Assess risk of developing infection before treatment—do not initiate until active serious infections are resolved
- **CAUTIONS, FURTHER INFORMATION**
  - ▶ Tuberculosis Patients should be evaluated for latent and active tuberculosis before starting treatment and monitored for signs and symptoms of tuberculosis during treatment.
- **INTERACTIONS** → Appendix 1: ruxolitinib
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Anaemia · bruising · constipation · dizziness · dyslipidaemia · flatulence · haemorrhage · headache · hypertension · increased risk of infection · intracranial haemorrhage · neutropenia · sepsis · thrombocytopenia · weight increased
- **CONCEPTION AND CONTRACEPTION** Contraceptive advice required, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **PREGNANCY** Avoid—toxicity in *animal* studies.
- **BREAST FEEDING** Avoid—present in milk in *animal* studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution.  
**Dose adjustments** Manufacturer advises initial dose reduction—consult product literature.
- **RENAL IMPAIRMENT**  
**Dose adjustments** [\[EvGr\]](#) Reduce dose in severe impairment (consult product literature). [\[M\]](#)
- **MONITORING REQUIREMENTS**
  - ▶ Monitor full blood count (including differential white cell count) before treatment, then every 2–4 weeks until dose stabilised, then as clinically indicated.
  - ▶ Monitor for infection during treatment.
  - ▶ Monitor for symptoms of progressive multifocal leucoencephalopathy (presenting as new or worsening neurological, cognitive or psychiatric signs or symptoms)—withhold treatment if suspected.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website
- **NICE decisions**
  - ▶ Ruxolitinib for treating disease-related splenomegaly or symptoms in adults with myelofibrosis (March 2016) NICE TA386 Recommended with restrictions
- **Scottish Medicines Consortium (SMC) decisions**
  - ▶ Ruxolitinib (*Jakavi*<sup>®</sup>) for the treatment of adult patients with polycythaemia vera (PV) who are resistant to or intolerant of hydroxyurea (HU) (December 2019) SMC No. SMC2213 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Tablet

- ▶ **Jakavi** (Novartis Pharmaceuticals UK Ltd)  
**Ruxolitinib (as Ruxolitinib phosphate) 5 mg** Jakavi 5mg tablets | 56 tablet **[PoM]** £1,428.00 DT = £1,428.00
- Ruxolitinib (as Ruxolitinib phosphate) 10 mg** Jakavi 10mg tablets | 56 tablet **[PoM]** £2,856.00 DT = £2,856.00
- Ruxolitinib (as Ruxolitinib phosphate) 15 mg** Jakavi 15mg tablets | 56 tablet **[PoM]** £2,856.00 DT = £2,856.00
- Ruxolitinib (as Ruxolitinib phosphate) 20 mg** Jakavi 20mg tablets | 56 tablet **[PoM]** £2,856.00 DT = £2,856.00

## Selpercatinib

26-Jan-2022

- **DRUG ACTION** Selpercatinib is an inhibitor of the rearranged during transfection (RET) receptor tyrosine kinase.

#### • INDICATIONS AND DOSE

**Non-small cell lung cancer [RET fusion-positive] (specialist use only) | Thyroid cancer [RET fusion-positive] (specialist use only) | Thyroid cancer [RET-mutant] (specialist use only)**

##### ▶ BY MOUTH

- ▶ Adult (body-weight up to 50 kg): 120 mg twice daily, dose should be taken at the same time each day, for dose adjustments, treatment interruption, or discontinuation due to side-effects—consult product literature
- ▶ Adult (body-weight 50 kg and above): 160 mg twice daily, dose should be taken at the same time each day, for dose adjustments, treatment interruption, or discontinuation due to side-effects—consult product literature

#### DOSE ADJUSTMENTS DUE TO INTERACTIONS

- ▶ **[EvGr]** Reduce selpercatinib dose by 50% with concurrent use of potent CYP3A4 inhibitors and posaconazole. **[M]**

#### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **CONTRA-INDICATIONS** Uncontrolled hypertension
- **CAUTIONS** Susceptibility to QT-interval prolongation
- **INTERACTIONS** → Appendix 1: selpercatinib
- **SIDE-EFFECTS**
- ▶ Common or very common Abdominal pain · appetite decreased · arthralgia · constipation · diarrhoea · dizziness · dry mouth · fatigue · fever · haemorrhage · headache · hypersensitivity · hypertension · myalgia · nausea · oedema · QT interval prolongation · skin reactions · vomiting
- ▶ Frequency not known Intracranial haemorrhage · thrombocytopenia
- **CONCEPTION AND CONTRACEPTION** **[EvGr]** Females of childbearing potential and men with a partner of childbearing potential should use effective contraception during treatment and for one week after the last dose. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962. **[M]** The effect on human fertility is not known—impairment of fertility has been observed in *animal* studies.
- **PREGNANCY** **[EvGr]** Avoid—toxicity in *animal* studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962. **[M]**
- **BREAST FEEDING** **[EvGr]** Avoid during treatment and for one week after the last dose (no information available). **[M]**

- **HEPATIC IMPAIRMENT** **[EvGr]** Caution (risk of increased exposure). **[M]**  
**Dose adjustments** **[EvGr]** Reduce dose to 80 mg twice daily in severe impairment. **[M]**

#### • MONITORING REQUIREMENTS

- ▶ **[EvGr]** Monitor liver transaminases before initiating treatment, then every 2 weeks during the first 3 months of treatment, then monthly thereafter and as clinically indicated.
- ▶ Monitor blood pressure before initiating and during treatment.
- ▶ Monitor ECG and serum electrolytes after 1 week of treatment, then monthly for the first 6 months of treatment, or as clinically indicated; more frequent monitoring may be required based on risk factors. **[M]**
- **PATIENT AND CARER ADVICE** **[EvGr]** If vomiting occurs after administration, no additional dose should be taken and the next dose should be taken at the normal time. **[M]**  
**Missed doses** **[EvGr]** If a dose is missed, the missed dose should not be taken and the next dose should be taken at the normal time. **[M]**  
**Driving and skilled tasks** **[EvGr]** Patients and their carers should be counselled on the effects on driving and skilled tasks—increased risk of fatigue and dizziness. **[M]**

#### • NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

##### **NICE decisions**

- ▶ Selpercatinib for treating advanced thyroid cancer with RET alterations (November 2021) NICE TA742 Recommended
- ▶ Selpercatinib for previously treated RET fusion-positive advanced non-small-cell lung cancer (January 2022) NICE TA760 Recommended
- Scottish Medicines Consortium (SMC) decisions**
- ▶ Selpercatinib (*Retsevmo*<sup>®</sup>) as monotherapy for the treatment of adults and adolescents 12 years and older with advanced RET-mutant medullary thyroid cancer (MTC) who require systemic therapy following prior treatment with cabozantinib and/or vandetanib (September 2021) SMC No. SMC2370 Recommended
- ▶ Selpercatinib (*Retsevmo*<sup>®</sup>) as monotherapy for the treatment of adults with advanced RET fusion-positive thyroid cancer (TC) who require systemic therapy following prior treatment with sorafenib and/or lenvatinib (September 2021) SMC No. SMC2370 Recommended
- ▶ Selpercatinib (*Retsevmo*<sup>®</sup>) as monotherapy for the treatment of adults with advanced rearranged during transfection (RET) fusion-positive non-small cell lung cancer (NSCLC) who require systemic therapy following prior treatment with immunotherapy and/or platinum-based chemotherapy (November 2021) SMC No. SMC2371 Not recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Capsule

CAUTIONARY AND ADVISORY LABELS 25

EXCIPIENTS: May contain Gelatin

- ▶ **Retsevmo** (Eli Lilly and Company Ltd) ▼

**Selpercatinib 40 mg** Retsevmo 40mg capsules | 56 capsule **[PoM]** £2,184.00 (Hospital only) | 168 capsule **[PoM]** £6,552.00 (Hospital only)

**Selpercatinib 80 mg** Retsevmo 80mg capsules | 56 capsule **[PoM]** £4,368.00 (Hospital only) | 112 capsule **[PoM]** £8,736.00 (Hospital only)

## Sorafenib

13-Nov-2020

- **DRUG ACTION** Sorafenib is an inhibitor of multiple kinases.

### ● INDICATIONS AND DOSE

**Treatment of advanced renal cell carcinoma when treatment with interferon alfa or interleukin-2 has failed or is unsuitable | Treatment of progressive, locally advanced, or metastatic, differentiated thyroid carcinoma that is refractory to radioactive iodine | Treatment of hepatocellular carcinoma**

#### ► BY MOUTH

- Adult: 400 mg twice daily, for dose adjustments due to side effects, consult product literature

### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: SYSTEMICALLY ADMINISTERED VEGF PATHWAY INHIBITORS: RISK OF ANEURYSM AND ARTERY DISSECTION (JULY 2020)

A European review of worldwide data concluded that systemically administered VEGF pathway inhibitors may lead to aneurysm and artery dissection in patients with or without hypertension. Some fatal cases have been reported, mainly in relation to aortic aneurysm rupture and aortic dissection. The MHRA advises healthcare professionals to carefully consider the risk of aneurysm and artery dissection in patients with risk factors before initiating treatment with sorafenib; any modifiable risk factors (such as smoking and hypertension) should be reduced as much as possible. Patients should be monitored and treated for hypertension as required.

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **CAUTIONS** Cardiac ischaemia · hypertension · major surgical procedures · potential risk of bleeding—tracheal, bronchial, or oesophageal infiltration with localised therapy before initiating sorafenib in patients with differentiated thyroid carcinoma (DTC) and consider permanent withdrawal of sorafenib in any patient that requires medical intervention for bleeding · risk factors for aneurysm or artery dissection · susceptibility to QT-interval prolongation

### CAUTIONS, FURTHER INFORMATION

- Monitoring of blood pressure The MHRA advises to monitor blood pressure regularly—consult product literature if hypertension occurs during treatment.

- **INTERACTIONS** → Appendix 1: sorafenib

### ● SIDE-EFFECTS

- **Common or very common** Alopecia · anaemia · appetite decreased · arthralgia · asthenia · congestive heart failure · constipation · decreased leucocytes · depression · diarrhoea · dry mouth · dysphagia · dysphonia · electrolyte imbalance · erectile dysfunction · fever · flushing · gastrointestinal discomfort · gastrointestinal disorders · haemorrhage · headache · hypertension · hypothyroidism · increased risk of infection · influenza like illness · intracranial haemorrhage · mucositis · muscle complaints · myocardial infarction · myocardial ischaemia · nausea · neoplasms · neutropenia · oral disorders · pain · peripheral neuropathy · proteinuria · renal failure · rhinorrhoea · skin reactions · taste altered · thrombocytopenia · tinnitus · vomiting · weight decreased
- **Uncommon** Cholangitis · cholecystitis · dehydration · encephalopathy · gynaecomastia · hepatic disorders · hyperthyroidism · pancreatitis · radiation injuries · respiratory disorders
- **Rare or very rare** Angioedema · hypersensitivity vasculitis · nephrotic syndrome · QT interval prolongation · rhabdomyolysis · severe cutaneous adverse reactions (SCARs)

- **Frequency not known** Aneurysm · artery dissection
- **CONCEPTION AND CONTRACEPTION** Contraceptive advice required, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **PREGNANCY** Manufacturer advises avoid unless essential—toxicity in animal studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **BREAST FEEDING** Discontinue breast-feeding.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment (no information available).

### ● MONITORING REQUIREMENTS

- Consider periodic monitoring of ECG and electrolytes in patients susceptible to QT-interval prolongation.
- Monitor plasma-calcium concentration (increased risk of hypocalcaemia if history of hypoparathyroidism).
- Monitor thyroid stimulating hormone in patients with differentiated thyroid carcinoma.

### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### NICE decisions

- Bevacizumab (first-line), sorafenib (first- and second-line), sunitinib (second-line) and temsirolimus (first-line) for the treatment of advanced and/or metastatic renal cell carcinoma (August 2009) NICE TA178 Not recommended
- Sorafenib for treating advanced hepatocellular carcinoma (September 2017) NICE TA474 Recommended with restrictions
- Lenvatinib and sorafenib for treating differentiated thyroid cancer after radioactive iodine (August 2018) NICE TA535 Recommended with restrictions

#### Scottish Medicines Consortium (SMC) decisions

- Sorafenib (*Nexavar*<sup>®</sup>) for the treatment of hepatocellular carcinoma (January 2016) SMC No. 482/08 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Tablet

CAUTIONARY AND ADVISORY LABELS 23

#### ► Sorafenib (Non-proprietary)

Sorafenib (as Sorafenib tosylate) 200 mg Sorafenib 200mg tablets | 112 tablet (POM) £2,567.00–£3,218.00 (Hospital only)

#### ► Nexavar (Bayer Plc)

Sorafenib (as Sorafenib tosylate) 200 mg Nexavar 200mg tablets | 112 tablet (POM) £3,576.56

## Sunitinib

26-Nov-2020

- **DRUG ACTION** Sunitinib is a tyrosine kinase inhibitor.

### ● INDICATIONS AND DOSE

**Treatment of unresectable or metastatic malignant gastro-intestinal stromal tumours, after failure of imatinib | Treatment of advanced or metastatic renal cell carcinoma**

#### ► BY MOUTH

- Adult: 50 mg once daily for 4 weeks, followed by a 2-week treatment-free period to complete 6-week cycle, adjusted in steps of 12.5 mg, doses adjusted according to tolerability; usual dose 25–75 mg daily

**Treatment of unresectable or metastatic pancreatic neuroendocrine tumours**

#### ► BY MOUTH

- Adult: 37.5 mg once daily without treatment-free period; adjusted in steps of 12.5 mg, doses adjusted according to tolerability; maximum 50 mg per day

### DOSE ADJUSTMENTS DUE TO INTERACTIONS

- Manufacturer advises if concurrent use of potent inducers of CYP3A4 is unavoidable, dose may need to be increased in steps of 12.5 mg to a max. dose of

87.5 mg per day for gastro-intestinal stromal tumours or renal cell carcinoma, or to a max. dose of 62.5 mg per day for pancreatic neuroendocrine tumours.

- ▶ Manufacturer advises if concurrent use of potent inhibitors of CYP3A4 is unavoidable, dose may need to be decreased to a minimum of 37.5 mg per day for gastrointestinal stromal tumours or renal cell carcinoma, or to a minimum of 25 mg per day for pancreatic neuroendocrine tumours.

#### IMPORTANT SAFETY INFORMATION

##### MHRA/CHM ADVICE: BEVACIZUMAB AND SUNITINIB: RISK OF OSTEOECROSIS OF THE JAW (JANUARY 2011)

Treatment with bevacizumab or sunitinib may be a risk factor for the development of osteonecrosis of the jaw.

Patients treated with bevacizumab or sunitinib, who have previously received bisphosphonates, or are treated concurrently with bisphosphonates, may be particularly at risk.

Dental examination and appropriate preventive dentistry should be considered before treatment with bevacizumab or sunitinib.

If possible, invasive dental procedures should be avoided in patients treated with bevacizumab or sunitinib who have previously received, or who are currently receiving, intravenous bisphosphonates.

##### MHRA/CHM ADVICE: SYSTEMICALLY ADMINISTERED VEGF PATHWAY INHIBITORS: RISK OF ANEURYSM AND ARTERY DISSECTION (JULY 2020)

A European review of worldwide data concluded that systemically administered VEGF pathway inhibitors may lead to aneurysm and artery dissection in patients with or without hypertension. Some fatal cases have been reported, mainly in relation to aortic aneurysm rupture and aortic dissection. The MHRA advises healthcare professionals to carefully consider the risk of aneurysm and artery dissection in patients with risk factors before initiating treatment with sunitinib; any modifiable risk factors (such as smoking and hypertension) should be reduced as much as possible. Patients should be monitored and treated for hypertension as required.

##### RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES

See Cytotoxic drugs p. 962.

- **CAUTIONS** Cardiovascular disease—discontinue if congestive heart failure develops · hypertension · increased risk of bleeding · risk factors for aneurysm or artery dissection · susceptibility to QT-interval prolongation

#### CAUTIONS, FURTHER INFORMATION

- ▶ Monitoring of blood pressure. The MHRA advises to monitor blood pressure regularly—consult product literature if hypertension occurs during treatment.
- **INTERACTIONS** → Appendix 1: sunitinib
- **SIDE-EFFECTS**
- ▶ **Common or very common** Abscess · alopecia · anaemia · appetite decreased · arthralgia · burping · chest pain · chills · constipation · cough · dehydration · depression · diarrhoea · dizziness · dry mouth · dysphagia · dyspnoea · embolism and thrombosis · excessive tearing · eye inflammation · fatigue · fever · gastrointestinal discomfort · gastrointestinal disorders · haemorrhage · hair colour changes · headache · hypertension · hypoglycaemia · hypothyroidism · increased risk of infection · influenza like illness · insomnia · leucopenia · mucositis · muscle complaints · muscle weakness · myocardial ischaemia · nail disorder · nasal complaints · nausea · neutropenia · oedema · oral disorders · oropharyngeal pain · pain · peripheral neuropathy · proteinuria · renal impairment · respiratory disorders · sensation abnormal · sepsis · skin reactions · taste altered · thrombocytopenia · urine discolouration · vasodilation · vomiting · weight decreased

- ▶ **Uncommon** Anal fistula (interrupt treatment) · cardiomyopathy · cerebrovascular insufficiency · cholecystitis · fistula (interrupt treatment) · healing impaired · heart failure · hepatic disorders · hypersensitivity · hyperthyroidism · intracranial haemorrhage · myocardial infarction · osteonecrosis of jaw · pancreatitis · pancytopenia · pericardial effusion · QT interval prolongation · tumour haemorrhage
- ▶ **Rare or very rare** Angioedema · myopathy · nephrotic syndrome · posterior reversible encephalopathy syndrome (PRES) · pyoderma gangrenosum · severe cutaneous adverse reactions (SCARs) · thrombotic microangiopathy · thyroiditis · torsade de pointes · tumour lysis syndrome
- ▶ **Frequency not known** Aneurysm · aortic dissection · artery dissection

- **CONCEPTION AND CONTRACEPTION** Effective contraception required during treatment.

- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—toxicity in *animal* studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **BREAST FEEDING** Discontinue breast-feeding.

- **MONITORING REQUIREMENTS** Monitor for thyroid dysfunction.

- **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

#### NICE decisions

- ▶ Sunitinib for the first-line treatment of advanced and/or metastatic renal cell carcinoma (March 2009) NICE TA169 Recommended
- ▶ Sunitinib for the treatment of gastrointestinal stromal tumours (September 2009) NICE TA179 Recommended with restrictions
- ▶ Bevacizumab (first-line), sorafenib (first- and second-line), sunitinib (second-line) and temsirolimus (first-line) for the treatment of advanced and/or metastatic renal cell carcinoma (August 2009) NICE TA178 Not recommended
- ▶ Everolimus and sunitinib for treating unresectable or metastatic neuroendocrine tumours in people with progressive disease (June 2017) NICE TA449 Recommended
- ▶ **Scottish Medicines Consortium (SMC) decisions**
- ▶ Sunitinib (*Sutent*<sup>®</sup>) for unresectable and/or metastatic malignant gastrointestinal stromal tumour (GIST) after failure of imatinib mesylate treatment due to resistance or intolerance (November 2009) SMC No. 275/06 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Capsule

##### CAUTIONARY AND ADVISORY LABELS 14

#### ▶ Sunitinib (Non-proprietary)

**Sunitinib (as Sunitinib malate) 12.5 mg** Sunitinib 12.5mg capsules | 28 capsule [PoM] £627.76-£784.70 (Hospital only) | 28 capsule [PoM] £706.23

**Sunitinib (as Sunitinib malate) 25 mg** Sunitinib 25mg capsules | 28 capsule [PoM] £1,224.13-£1,569.40 (Hospital only) | 28 capsule [PoM] £1,412.46

## Temsirolimus

11-Jun-2021

● **DRUG ACTION** Temsirolimus is a protein kinase inhibitor.

### ● INDICATIONS AND DOSE

**First-line treatment of advanced renal cell carcinoma | Treatment of relapsed or refractory mantle cell lymphoma**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: (consult product literature or local protocols)

● **INTERACTIONS** → Appendix 1: temsirolimus

### ● SIDE-EFFECTS

- ▶ **Common or very common** Abscess · anaemia · anxiety · appetite decreased · arthralgia · asthenia · chest pain · chills · conjunctivitis · constipation · cough · cystitis · decreased leucocytes · dehydration · depression · diabetes mellitus · diarrhoea · dizziness · drowsiness · dyslipidaemia · dysphagia · dyspnoea · electrolyte imbalance · embolism and thrombosis · fever · gastrointestinal discomfort · gastrointestinal disorders · genital oedema · haemorrhage · headache · hypersensitivity · hypertension · increased risk of infection · insomnia · lacrimation disorder · mucositis · myalgia · nail disorder · nausea · neutropenia · oedema · oral disorders · pain · paraesthesia · post procedural infection · renal failure · respiratory disorders · scrotal oedema · sepsis · skin reactions · taste altered · thrombocytopenia · vomiting
- ▶ **Uncommon** Healing impaired · intracranial haemorrhage · pericardial effusion

**SIDE-EFFECTS, FURTHER INFORMATION** Hypersensitivity reactions, including some life-threatening and rare fatal reactions, are associated with temsirolimus therapy. Symptoms include flushing, chest pain, dyspnoea, apnoea, hypotension, loss of consciousness, and anaphylaxis. Patients should receive an intravenous dose of antihistamine 30 minutes before starting the temsirolimus infusion. The infusion may have to be stopped temporarily for the treatment of infusion-related effects—consult product literature for appropriate management. If adverse reactions are not managed with dose delays, a dose reduction should be considered—consult product literature.

● **CONCEPTION AND CONTRACEPTION** Ensure effective contraception during treatment in men and women.

● **PREGNANCY** Manufacturer advises avoid (toxicity in animal studies). See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **BREAST FEEDING** Manufacturer advises discontinue breast-feeding.

### ● HEPATIC IMPAIRMENT

- ▶ When used for Renal cell carcinoma Manufacturer advises caution.
- ▶ When used for Mantle cell lymphoma Manufacturer advises caution in mild impairment; avoid in moderate to severe impairment.

#### Dose adjustments

- ▶ When used for Renal cell carcinoma Manufacturer advises dose reduction in severe impairment—consult product literature.

● **RENAL IMPAIRMENT** [EvGr](#) Caution in severe impairment (no information available). [M](#)

### ● MONITORING REQUIREMENTS

- ▶ Monitor respiratory function.
- ▶ Monitor blood lipids.

### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### NICE decisions

- ▶ Bevacizumab (first-line), sorafenib (first- and second-line), sunitinib (second-line) and temsirolimus (first-line) for the

treatment of advanced and/or metastatic renal cell carcinoma (August 2009) NICE TA178 Not recommended

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for infusion

EXCIPIENTS: May contain Ethanol, propylene glycol

▶ **Torisel** (Pfizer Ltd)

**Temsirolimus 25 mg per 1 ml** Torisel 30mg/1.2ml concentrate for solution for infusion vials and diluent | 1 vial [PoM](#) £620.00 (Hospital only)

## Tepotinib

30-Nov-2021

● **DRUG ACTION** Tepotinib is a kinase inhibitor which targets mesenchymal-epithelial transition (*MET*) factor gene including variants with exon 14 skipping alterations, thereby inhibiting tumour cell proliferation.

### ● INDICATIONS AND DOSE

**Non-small cell lung cancer with mesenchymal-epithelial transition factor gene (MET) exon 14 skipping alterations (specialist use only)**

▶ BY MOUTH

- ▶ Adult: 450 mg once daily, for dose adjustment, interruption, or treatment discontinuation due to side-effects—consult product literature, discontinue treatment if patient unable to tolerate at least 225 mg once daily

### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**

See Cytotoxic drugs p. 962.

● **INTERACTIONS** → Appendix 1: tepotinib

### ● SIDE-EFFECTS

- ▶ **Common or very common** Asthenia · constipation · diarrhoea · gastrointestinal discomfort · hepatic disorders · hypoalbuminaemia · nausea · oedema · respiratory disorders · vomiting
- ▶ **Frequency not known** Dyspnoea · musculoskeletal pain · pneumonia · pulmonary embolism
- **CONCEPTION AND CONTRACEPTION** [EvGr](#) Females of childbearing potential and male patients with female partners of childbearing potential should use effective contraception during treatment and for at least 1 week after last treatment. [M](#)
- **PREGNANCY** [EvGr](#) Avoid—toxicity in animal studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962. [M](#)
- **BREAST FEEDING** [EvGr](#) Discontinue breast-feeding during treatment and for at least 1 week after last treatment—no information available. [M](#)
- **HEPATIC IMPAIRMENT** [EvGr](#) Caution in severe impairment (no information available). [M](#)
- **RENAL IMPAIRMENT** [EvGr](#) Caution in severe impairment (no information available).

Tepotinib may inhibit renal tubular transporter proteins leading to an increase in creatinine levels that is due to inhibition of active tubular secretion rather than renal injury. Caution is required when interpreting creatinine clearance or estimated glomerular filtration rate and further assessment of renal function is required—consult product literature. [M](#)

### ● MONITORING REQUIREMENTS

- ▶ [EvGr](#) Monitor liver enzymes and bilirubin before treatment initiation, then every 2 weeks for first three months and then once a month thereafter.
- ▶ Monitor for new or worsening pulmonary symptoms of dyspnoea, cough and fever which may develop during

treatment—increased risk of interstitial lung disease-like reactions. 

#### ● PATIENT AND CARER ADVICE

**Missed doses** If a dose is more than 16 hours late, the missed dose should not be taken and the next dose should be taken at the normal time.

**Driving and skilled tasks** Patients and carers should be cautioned on the effects on driving and performance of skilled tasks—increased risk of fatigue or asthenia.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Tablet

CAUTIONARY AND ADVISORY LABELS 21, 25

11-Nov-2020

● **DRUG ACTION** Toivozanib is a tyrosine kinase inhibitor.

#### ● INDICATIONS AND DOSE

**Advanced renal cell carcinoma (specialist use only)**

▶ BY MOUTH

▶ **Adult:** 1340 micrograms once daily for 21 consecutive days of repeated 28 day cycles, for dose adjustments due to side effects—consult product literature

#### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: SYSTEMICALLY ADMINISTERED VEGF PATHWAY INHIBITORS: RISK OF ANEURYSM AND ARTERY DISSECTION (JULY 2020)

A European review of worldwide data concluded that systemically administered VEGF pathway inhibitors may lead to aneurysm and artery dissection in patients with or without hypertension. Some fatal cases have been reported, mainly in relation to aortic aneurysm rupture and aortic dissection. The MHRA advises healthcare professionals to carefully consider the risk of aneurysm and artery dissection in patients with risk factors before initiating treatment with toivozanib; any modifiable risk factors (such as smoking and hypertension) should be reduced as much as possible. Patients should be monitored and treated for hypertension as required.

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

● **CAUTIONS** History of arterial thromboembolic events · history of bleeding disorders · history of posterior reversible encephalopathy syndrome following toivozanib treatment · history of QT-interval prolongation · history of venous thromboembolic events · hypertension · major surgical procedures—interrupt treatment · patients aged over 65 years—increased risk of adverse effects · pre-existing cardiac disease · risk factors for aneurysm or artery dissection · risk factors for arterial thromboembolic events · risk factors for gastro-intestinal fistula · risk factors for gastro-intestinal perforation · risk factors for venous thromboembolic events · risk of bleeding

#### CAUTIONS, FURTHER INFORMATION

▶ **Monitoring of blood pressure** The MHRA advises to monitor blood pressure regularly—consult product literature if hypertension occurs during treatment.

● **INTERACTIONS** → Appendix 1: toivozanib

#### ● SIDE-EFFECTS

▶ **Common or very common** Alopecia · anaemia · angina pectoris · appetite decreased · arrhythmias · arthralgia · asthenia · cancer pain · cerebrovascular insufficiency · chest pain · chills · constipation · cough · diarrhoea · dizziness · dry mouth · dysphonia · dyspnoea · embolism

and thrombosis · fever · gastrointestinal discomfort · gastrointestinal disorders · haemorrhage · headache · hypertension · hypothermia · hypothyroidism · increased risk of infection · insomnia · ischaemia · myalgia · myocardial infarction · nasal complaints · nausea · nerve disorders · oral disorders · oropharyngeal pain · pain · pancreatitis · peripheral oedema · proteinuria · sensation abnormal · skin reactions · swallowing difficulty · taste altered · tinnitus · vasodilation · vertigo · vision disorders · vomiting · weight decreased

- ▶ **Uncommon** Coronary artery insufficiency · ear congestion · excessive tearing · goitre · hyperhidrosis · hyperthyroidism · memory loss · mucositis · muscle weakness · pulmonary oedema · QT interval prolongation · thrombocytopenia · toxic nodular goitre
- ▶ **Rare or very rare** Posterior reversible encephalopathy syndrome (PRES)
- ▶ **Frequency not known** Aneurysm · artery dissection · heart failure

● **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception in men, women of childbearing potential, and their partners during treatment and for at least one month after the last dose; an additional barrier method of contraception should be used in women using hormonal contraceptives. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **BREAST FEEDING** Manufacturer advises avoid—no information available.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild-to-moderate impairment—monitor patients for tolerability; avoid in severe impairment.

**Dose adjustments** Manufacturer advises reduce dose to 1340 micrograms on alternate days in moderate impairment—increased risk of adverse effects due to increased exposure.

● **RENAL IMPAIRMENT** Manufacturer advises caution in severe impairment—limited information available.

#### ● MONITORING REQUIREMENTS

- ▶ Manufacturer advises perform liver function tests (including ALT, AST and AP) before and during treatment; monitor for proteinuria before treatment and periodically thereafter.
- ▶ Manufacturer advises monitor for signs or symptoms of cardiac failure during treatment.
- ▶ Manufacturer advises perform baseline ECG and monitor electrolytes before treatment and as clinically indicated thereafter.
- ▶ Manufacturer advises monitor thyroid function before treatment and periodically thereafter.
- ▶ Manufacturer advises monitor for symptoms of gastrointestinal perforation or fistula.

#### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### NICE decisions

▶ **Toivozanib for treating advanced renal cell carcinoma (March 2018)** NICE TA512 Recommended with restrictions

#### Scottish Medicines Consortium (SMC) decisions

▶ **Toivozanib (Fotivda<sup>®</sup>) for the first-line treatment of adult patients with advanced renal cell carcinoma (RCC) and for adult patients who are vascular endothelial growth factor receptor and mammalian target of rapamycin pathway inhibitor-naïve following disease progression after one prior treatment with cytokine therapy for advanced RCC (July 2018)** SMC No. 1335/18 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Tivozanib (as Tivozanib hydrochloride monohydrate)**.89 mg Fotivda 890microgram capsules | 21 capsule [PoM] £2,052.00 (Hospital only)

**Tivozanib (as Tivozanib hydrochloride monohydrate)** 1.34 mg Fotivda 1340microgram capsules | 21 capsule [PoM] £2,052.00 (Hospital only)

## Trametinib

30-Mar-2021

- **DRUG ACTION** Trametinib is a protein kinase inhibitor.

### • INDICATIONS AND DOSE

**Unresectable or metastatic melanoma with a BRAF V600 mutation (as monotherapy or in combination with dabrafenib) (specialist use only) | Advanced non-small cell lung cancer with a BRAF V600 mutation (in combination with dabrafenib) (specialist use only)**

#### ▶ BY MOUTH

- ▶ Adult: 2 mg once daily, when used in combination with dabrafenib, the dose should be taken at the same time each day with *either* the morning or evening dose of dabrafenib, for dose adjustments due to side-effects, consult product literature

**Adjuvant treatment of stage III melanoma with a BRAF V600 mutation following complete resection (in combination with dabrafenib) (specialist use only)**

#### ▶ BY MOUTH

- ▶ Adult: 2 mg once daily for 12 months, the dose should be taken at the same time each day with *either* the morning or evening dose of dabrafenib, for dose adjustments due to side-effects, consult product literature

### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE (MARCH 2016): TRAMETINIB: RISK OF GASTROINTESTINAL PERFORATION AND COLITIS

A review by EU medicines regulators has concluded that trametinib can cause gastrointestinal perforation or colitis.

Trametinib should be used with caution in patients with risk factors for gastrointestinal perforation, such as gastrointestinal metastases, diverticulitis, or use of concomitant medicines that can cause gastrointestinal perforation. Prescribers should be vigilant for signs and symptoms of gastrointestinal perforation and should advise patients to seek urgent medical attention if they develop severe abdominal pain.

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **CONTRA-INDICATIONS** History of retinal vein occlusion
- **CAUTIONS** Concomitant antiplatelet or anticoagulant therapy—increased risk of haemorrhage · conditions that could impair left ventricular function · elderly (more frequent dose adjustments may be required) · impaired left ventricular function · predisposing factors for retinal vein occlusion · risk factors for gastrointestinal perforation
- **INTERACTIONS** → Appendix 1: trametinib
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Abdominal pain · alopecia · anaemia · asthenia · bradycardia · constipation · cough · dehydration · diarrhoea · dry mouth · dyspnoea · eye inflammation · fever · haemorrhage · hypersensitivity · hypertension · increased risk of infection · intracranial haemorrhage · left ventricular dysfunction · lymphoedema

- mucositis · nausea · oedema · respiratory disorders · skin reactions · stomatitis · vision disorders · vomiting
- ▶ **Uncommon** Chorioretinopathy · gastrointestinal disorders · heart failure · retinal detachment · retinal occlusion · rhabdomyolysis

**SIDE-EFFECTS, FURTHER INFORMATION** Additional side-effects reported when used in combination with dabrafenib include dizziness, hyperhidrosis, hyponatraemia, hypotension, leucopenia, muscle spasms, myocarditis, neutropenia, night sweats, and thrombocytopenia.

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises women of child-bearing potential should use highly effective non-hormonal contraception during, and for 4 months after stopping treatment.
- **PREGNANCY** Manufacturer advises avoid—*toxicity in animal studies*. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in moderate to severe impairment (no information available).
- **RENAL IMPAIRMENT** Manufacturer advises caution in severe impairment—no information available.
- **MONITORING REQUIREMENTS** Manufacturer advises measure blood pressure at baseline and monitor during treatment; evaluate left ventricular ejection fraction before treatment, after one month of treatment, and then approximately every 3 months thereafter; monitor liver function every 4 weeks for 6 months after treatment initiation, and thereafter as clinically indicated.
- **HANDLING AND STORAGE** Manufacturer advises store in refrigerator (2–8 °C); once opened, bottle may be stored for 30 days at not more than 30 °C.
- **PATIENT AND CARER ADVICE** Manufacturer advises patients and their carers should be told to seek immediate medical attention if symptoms of pulmonary embolism or deep vein thrombosis occur; patients and their carers should also be advised to report new visual disturbances.  
**Missed doses** Manufacturer advises if a dose is more than 12 hours late, the missed dose should not be taken and the next dose should be taken at the normal time.  
**Driving and skilled tasks** Manufacturer advises patients and carers should be counselled on the effects on driving and performance of skilled tasks—risk of dizziness and visual disturbances.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website  
**NICE decisions**
  - ▶ Trametinib in combination with dabrafenib for treating unresectable or metastatic melanoma (June 2016) NICE TA396 Recommended with restrictions
  - ▶ Dabrafenib with trametinib for adjuvant treatment of resected BRAF V600 mutation-positive melanoma (October 2018) NICE TA544 Recommended with restrictions
- **Scottish Medicines Consortium (SMC) decisions**
  - ▶ Trametinib (*Mekinist*<sup>®</sup>) in combination with dabrafenib for the treatment of adult patients with unresectable or metastatic melanoma with a BRAF V600 mutation [for first-line treatment] (September 2016) SMC No. 1161/16 Recommended with restrictions
  - ▶ Trametinib (*Mekinist*<sup>®</sup>) in combination with dabrafenib for the treatment of adult patients with unresectable or metastatic melanoma with a BRAF V600 mutation [after first-line treatment] (March 2021) SMC No. SMC2328 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Tablet**

CAUTIONARY AND ADVISORY LABELS 3, 23, 25

**Vandetanib**

10-Aug-2021

- **DRUG ACTION** Vandetanib is a tyrosine kinase inhibitor.

- **INDICATIONS AND DOSE**

**Treatment of aggressive and symptomatic medullary thyroid cancer in patients with unresectable locally advanced or metastatic disease**► **BY MOUTH**

- **Adult:** 300 mg once daily, for dose adjustment due to side effects—consult product literature

**IMPORTANT SAFETY INFORMATION**

**MHRA/CHM ADVICE: SYSTEMICALLY ADMINISTERED VEGF PATHWAY INHIBITORS: RISK OF ANEURYSM AND ARTERY DISSECTION (JULY 2020)**

A European review of worldwide data concluded that systemically administered VEGF pathway inhibitors may lead to aneurysm and artery dissection in patients with or without hypertension. Some fatal cases have been reported, mainly in relation to aortic aneurysm rupture and aortic dissection. The MHRA advises healthcare professionals to carefully consider the risk of aneurysm and artery dissection in patients with risk factors before initiating treatment with vandetanib; any modifiable risk factors (such as smoking and hypertension) should be reduced as much as possible. Patients should be monitored and treated for hypertension as required.

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **CONTRA-INDICATIONS** Congenital long QT syndrome · QT interval greater than 480 milliseconds
- **CAUTIONS** Brain metastases (intracranial haemorrhage reported) · electrolyte disturbances · history of torsades de pointes · hypertension · phototoxicity reactions reported (wear protective clothing and/or sunscreen) · risk factors for aneurysm or artery dissection · susceptibility to QT-prolongation
- CAUTIONS, FURTHER INFORMATION**
- Monitoring of blood pressure The MHRA advises to monitor blood pressure regularly—consult product literature if hypertension occurs during treatment.
- **INTERACTIONS** → Appendix 1: vandetanib
- **SIDE-EFFECTS**
- **Common or very common** Alopecia · anxiety · appetite decreased · asthenia · cerebral ischaemia · cholelithiasis · constipation · corneal deposits · cystitis · dehydration · depression · diarrhoea · dizziness · dry eye · dry mouth · dysphagia · electrolyte imbalance · eye disorders · eye inflammation · fever · gastrointestinal discomfort · gastrointestinal disorders · glaucoma · haemorrhage · headache · hyperglycaemia · hypertension · hypothyroidism · increased risk of infection · insomnia ·

lethargy · loss of consciousness · movement disorders · nail disorder · nausea · nephrolithiasis · oedema · pain · photosensitivity reaction · proteinuria · QT interval prolongation · renal impairment · respiratory disorders · sensation abnormal · sepsis · skin reactions · stomatitis · taste altered · tremor · urinary disorders · vision disorders · vomiting · weight decreased

- ▶ **Uncommon** Arrhythmias · brain oedema · cardiac arrest · cardiac conduction disorder · cataract · healing impaired · heart failure · malnutrition · pancreatitis · posterior reversible encephalopathy syndrome (PRES) · seizure · urine discolouration

- ▶ **Frequency not known** Aneurysm · artery dissection · Stevens-Johnson syndrome

- **CONCEPTION AND CONTRACEPTION** Effective contraception required during and for at least 4 months after treatment.

- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk. Most cytotoxic drugs are teratogenic and should not be administered during pregnancy, especially during the first trimester. Considerable caution is necessary if a pregnant woman presents with cancer requiring chemotherapy, and specialist advice should always be sought.

- **BREAST FEEDING** Avoid—no information available.

- **HEPATIC IMPAIRMENT** Manufacturer advises avoid if liver function tests exceed specific limits—consult product literature.

- **RENAL IMPAIRMENT** EVGr Avoid if creatinine clearance less than 30 mL/minute (limited information available).

**Dose adjustments** EVGr Consider reducing starting dose to 200 mg if creatinine clearance 30–49 mL/minute (limited information available; consult product literature). See p. 21.

- **MONITORING REQUIREMENTS** Monitor ECG, serum potassium, calcium, magnesium and thyroid stimulating hormone before treatment, then 1, 3, 6 and 12 weeks after starting treatment and following dose adjustment or interruption, then every 3 months for at least 1 year.

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises tablets may be dispersed in half a glass of water by stirring until dispersed (approximately 10 minutes), immediately before drinking (do not crush). After solution has been swallowed, any residue must be re-dispersed in the same volume of water and swallowed. The solution can also be administered via nasogastric or gastrostomy tubes.

- **PATIENT AND CARER ADVICE** Patients or carers should be given advice on how to administer vandetanib tablets. Phototoxicity reactions Patients should be advised to wear protective clothing and/or sunscreen. Alert card An alert card should be provided.

- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website

#### NICE decisions

- ▶ Vandetanib for treating medullary thyroid cancer (December 2018) NICE TA550 Not recommended

£5,000.00

## Vemurafenib

10-Jun-2021

- **DRUG ACTION** Vemurafenib is a BRAF kinase inhibitor.

#### INDICATIONS AND DOSE

##### Monotherapy for the treatment of BRAF V600 mutation-positive unresectable or metastatic melanoma

- ▶ BY MOUTH

- ▶ Adult: 960 mg twice daily, for dose adjustment due to side effects—consult product literature

#### IMPORTANT SAFETY INFORMATION

##### DRUG RASH WITH EOSINOPHILIA AND SYSTEMIC SYMPTOMS (DRESS SYNDROME)

DRESS syndrome has been reported in patients taking vemurafenib. DRESS syndrome starts with rash, fever, swollen glands, and increased white cell count, and it can affect the liver, kidneys and lungs; DRESS can also be fatal.

Patients should be advised to stop taking vemurafenib and consult their doctor immediately if skin rash develops. Treatment with vemurafenib should not be restarted.

##### MHRA/CHM ADVICE (NOVEMBER 2015): RISK OF POTENTIATION OF RADIATION TOXICITY

Potential of radiation toxicity has been reported in patients treated with vemurafenib before, during, or after radiotherapy— use with caution.

##### RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES

See Cytotoxic drugs p. 962.

- **CONTRA-INDICATIONS** Wild-type BRAF malignant melanoma

- **CAUTIONS** Electrolyte disturbances · prior or concurrent cancer associated with RAS mutation—increased risk of tumour progression · susceptibility to QT-prolongation

- **INTERACTIONS** → Appendix 1: vemurafenib

#### SIDE-EFFECTS

- ▶ **Common or very common** 7th nerve paralysis · alopecia · appetite decreased · arthralgia · arthritis · asthenia · connective tissue disorders · constipation · cough · diarrhoea · dizziness · eye inflammation · fever · folliculitis · headache · myalgia · nausea · neoplasms · pain · panniculitis · peripheral oedema · photosensitivity reaction · QT interval prolongation · radiation injuries · skin reactions · taste altered · vomiting · weight decreased

- ▶ **Uncommon** Liver injury · neutropenia · pancreatitis · peripheral neuropathy · retinal occlusion · severe cutaneous adverse reactions (SCARs) · vasculitis

- ▶ **Rare or very rare** Acute tubular necrosis · nephritis acute interstitial

- ▶ **Frequency not known** Acute kidney injury

- **CONCEPTION AND CONTRACEPTION** Effective contraception required during for at least 6 months after treatment.

- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **BREAST FEEDING** Avoid—no information available.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution in moderate to severe impairment (risk of increased exposure)—monitor ECG monthly during the first 3 months of treatment, followed by at least every 3 months thereafter (if QTc interval is prolonged, consult product literature).

- **RENAL IMPAIRMENT** EVGr Caution in severe impairment (limited information available).

#### MONITORING REQUIREMENTS

- ▶ Monitor ECG and electrolytes before treatment, after one month and following dose adjustment (treatment not

recommended if QT interval greater than 500 milliseconds at baseline).

- ▶ Monitor liver function before treatment and periodically thereafter.
- ▶ Monitor for uveitis, iritis and retinal vein occlusion.
- ▶ Monitor for cutaneous and non-cutaneous squamous cell carcinoma and new primary melanoma before, during and for up to 6 months after treatment—consult product literature.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises may be taken with or without food; avoid consistent intake of both daily doses on an empty stomach (may affect absorption).
- **PATIENT AND CARER ADVICE** Counselling advised (administration).  
Drug rash with eosinophilia and systemic symptoms (DRESS syndrome) Patients should be advised to stop taking vemurafenib and consult their doctor immediately if skin rash develops.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website
- **NICE decisions**  
▶ Vemurafenib for treating locally advanced or metastatic BRAF V600 mutation-positive malignant melanoma (updated January 2015) NICE TA269 Recommended with restrictions
- **Scottish Medicines Consortium (SMC) decisions**  
▶ Vemurafenib (Zelboraf<sup>®</sup>) as monotherapy for the treatment of adult patients with BRAF V600 mutation-positive unresectable or metastatic melanoma (December 2013) SMC No. 792/12 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Tablet

CAUTIONARY AND ADVISORY LABELS 25

- ▶ **Zelboraf** (Roche Products Ltd)

Vemurafenib 240 mg Zelboraf 240mg tablets | 56 tablet [PoM]  
£1,750.00 (Hospital only)

## ANTINEOPLASTIC DRUGS > OTHER

### Glasdegib

02-Mar-2022

- **DRUG ACTION** Glasdegib is a hedgehog pathway inhibitor.

#### ● INDICATIONS AND DOSE

**Acute myeloid leukaemia [in combination with low-dose cytarabine] (specialist use only)**

##### ▶ BY MOUTH

- ▶ Adult: 100 mg once daily, for dose adjustments, treatment interruption, or discontinuation due to side-effects—consult product literature

#### DOSE ADJUSTMENTS DUE TO INTERACTIONS

- ▶ Manufacturer advises if concurrent use of moderate CYP3A4 inducers, etravirine, or modafinil is unavoidable, double the once-daily dose.

#### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

- **INTERACTIONS** → Appendix 1: glasdegib

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Alopecia · anaemia · appetite decreased · arrhythmias · arthralgia · CNS haemorrhage · constipation · diarrhoea · dyspnoea · eye contusion · fatigue · fever · gastrointestinal discomfort · haemorrhage · increased risk of infection · muscle complaints · muscle contractions involuntary · musculoskeletal pain · nausea · neutropenia · peripheral oedema · QT interval

prolongation · sepsis · skin reactions · stomatitis · taste altered · thrombocytopenia · vomiting · weight decreased

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises females of childbearing potential and male patients with a partner who is pregnant or of childbearing potential should use effective contraception (including condoms in males) during treatment and for at least 30 days after last dose. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962. Fertility may be impaired in males and females—consult product literature.
- **PREGNANCY** Manufacturer advises avoid—embryotoxicity in animal studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** Manufacturer advises avoid during treatment and for at least one week after last dose—no information available.
- **RENAL IMPAIRMENT** Manufacturer advises use with caution.  
**Monitoring** Manufacturer advises monitor renal function in patients with pre-existing renal impairment or risk factors for renal dysfunction; assess before initiation and at least once weekly for the first month of treatment. Monitor electrolytes and renal function once monthly thereafter during treatment.
- **PATIENT AND CARER ADVICE**  
**Vomiting** Manufacturer advises if vomiting occurs after taking tablets, no additional dose should be taken on that day and the next dose should be taken at the usual time.  
**Missed doses** Manufacturer advises if a dose is more than 10 hours late, the missed dose should not be taken and the next dose should be taken at the usual time.  
**Driving and skilled tasks** Manufacturer advises patients and carers should be cautioned on the effects on driving and performance of skilled tasks—increased risk of fatigue, muscle cramps, pain, or nausea.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Tablet

- ▶ **Daurismo** (Pfizer Ltd) ▼

**Glasdegib (as Glasdegib maleate) 25 mg** Daurismo 25mg tablets | 60 tablet [PoM] £10,517.00 (Hospital only)

**Glasdegib (as Glasdegib maleate) 100 mg** Daurismo 100mg tablets | 30 tablet [PoM] £10,517.00 (Hospital only)

### Niraparib

04-May-2022

- **DRUG ACTION** Niraparib is an inhibitor of PARP enzymes which are involved in DNA repair. PARP inhibition results in disruption of cellular homeostasis and cell death.

#### ● INDICATIONS AND DOSE

**Advanced ovarian cancer (initiated by a specialist) | Advanced fallopian tube cancer (initiated by a specialist) | Advanced peritoneal cancer (initiated by a specialist)**

##### ▶ BY MOUTH

- ▶ Adult (body-weight up to 77 kg): 200 mg once daily, for dose adjustments due to side-effects—consult product literature
- ▶ Adult (body-weight 77 kg and above): 300 mg once daily, baseline platelet count should be  $150 \times 10^9$ /litre or above for this dose schedule, for dose adjustments due to side-effects—consult product literature

**Relapsed ovarian cancer (initiated by a specialist) | Relapsed fallopian tube cancer (initiated by a specialist) | Relapsed peritoneal cancer (initiated by a specialist)**

##### ▶ BY MOUTH

- ▶ Adult: 300 mg once daily, consider initial dose of 200 mg in patients with body-weight less than 58 kg,

continued →

for dose adjustments due to side-effects—consult product literature

#### IMPORTANT SAFETY INFORMATION

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

**MHRA/CHM ADVICE: NIRAPARIB (ZEJULA®): REPORTS OF SEVERE HYPERTENSION AND POSTERIOR REVERSIBLE ENCEPHALOPATHY SYNDROME (PRES), PARTICULARLY IN EARLY TREATMENT (OCTOBER 2020)**

A European review of niraparib safety data identified worldwide reports of severe hypertension, including rare cases of hypertensive crisis, some with onset in the first month of treatment. Rare cases of PRES have also been reported, mostly associated with hypertension and within the first month of treatment.

Healthcare professionals are advised to control pre-existing hypertension before starting niraparib. Blood pressure should be monitored at least weekly for the first 2 months of treatment, then monthly for the first year, and periodically thereafter. Home blood pressure monitoring may be considered if appropriate; patients should be trained and advised to contact their doctor in case of an increase in blood pressure.

Hypertension during treatment should be managed with antihypertensives; treatment interruption or dose adjustment of niraparib may be required—consult product literature. Niraparib should be discontinued in case of hypertensive crisis or medically significant hypertension that cannot be adequately controlled with antihypertensive therapy. In cases of PRES, niraparib should also be discontinued and patients treated for specific symptoms (including hypertension).

- **CAUTIONS** Pre-existing hypertension (control before treatment initiation)
- **INTERACTIONS** → Appendix 1: niraparib
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Anaemia · angioedema · anxiety · appetite decreased · arthralgia · asthenia · back pain · cognitive impairment · concentration impaired · conjunctivitis · constipation · cough · depression · diarrhoea · dizziness · dry mouth · dyspnoea · epistaxis · gastrointestinal discomfort · headache · hypersensitivity · hypertension · hypokalaemia · increased risk of infection · insomnia · leucopenia · memory impairment · mucositis · myalgia · nausea · neutropenia · palpitations · peripheral oedema · photosensitivity reaction · skin reactions · stomatitis · tachycardia · taste altered · thrombocytopenia · vomiting · weight decreased
  - ▶ **Uncommon** Confusion · pancytopenia · pneumonitis
  - ▶ **Rare or very rare** Posterior reversible encephalopathy syndrome (PRES)
  - ▶ **Frequency not known** Acute myeloid leukaemia (discontinue permanently) · hot flush · myelodysplastic syndrome (discontinue permanently)
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception in women of childbearing potential during treatment and for 1 month after receiving the last dose.
- **PREGNANCY** Manufacturer advises avoid—limited information available.
- **BREAST FEEDING** Manufacturer advises avoid during treatment and for 1 month after last dose—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment (no information available).
- **RENAL IMPAIRMENT** Manufacturer advises caution in severe impairment—no information available.

#### ● MONITORING REQUIREMENTS

- ▶ Manufacturer advises monitor full blood count weekly for the first month of treatment, then monthly for the next 10 months and periodically thereafter.
- ▶ Manufacturer advises monitor blood pressure weekly for the first 2 months of treatment, then monthly for the first year, and periodically thereafter.

#### ● PATIENT AND CARER ADVICE

**Driving and skilled tasks** Manufacturer advises patients and their carers should be counselled on the effects on driving and skilled tasks—increased risk of dizziness and fatigue.

#### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### **NICE decisions**

- ▶ Niraparib for maintenance treatment of advanced ovarian, fallopian tube and peritoneal cancer after response to first-line platinum-based chemotherapy (February 2021) NICE TA673 Recommended

- ▶ Niraparib for maintenance treatment of relapsed, platinum-sensitive ovarian, fallopian tube and peritoneal cancer (April 2022) NICE TA784 Recommended with restrictions

#### **Scottish Medicines Consortium (SMC) decisions**

- ▶ Niraparib tosylate monohydrate (Zejula®) as monotherapy for the maintenance treatment of adult patients with platinum-sensitive relapsed high grade serous epithelial ovarian, fallopian tube, or primary peritoneal cancer who are in response (complete or partial) to platinum-based chemotherapy (August 2018) SMC No. 1341/18 Recommended with restrictions
- ▶ Niraparib (Zejula®) as monotherapy for the maintenance treatment of adult patients with advanced epithelial (FIGO Stages III and IV) high-grade ovarian, fallopian tube or primary peritoneal cancer who are in response (complete or partial) following completion of first-line platinum-based chemotherapy (May 2021) SMC No. SMC2338 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Capsule**

CAUTIONARY AND ADVISORY LABELS 25

## Olaparib

21-Jan-2022

- **DRUG ACTION** Olaparib is a PARP inhibitor. PARP are enzymes that repair damaged DNA in cancer cells and, in the absence of functional BRCA, inhibition of PARP results in an inability of cancer cells to repair. Therefore inhibition of PARP results in an antineoplastic effect.

#### ● INDICATIONS AND DOSE

**Ovarian cancer (specialist use only) | Fallopian tube cancer (specialist use only) | Peritoneal cancer (specialist use only)**

- ▶ **BY MOUTH USING CAPSULES**

▶ **Adult:** 400 mg twice daily, patients should start treatment no later than 8 weeks after completion of their final dose of a platinum-containing regimen, for dose adjustments due to side-effects—consult product literature

- ▶ **BY MOUTH USING TABLETS**

▶ **Adult:** 300 mg twice daily, when using olaparib monotherapy, patients should start treatment no later than 8 weeks after completion of their final dose of a platinum-containing regimen, for dose adjustments due to side-effects—consult product literature

**Breast cancer (specialist use only) | Adenocarcinoma of the pancreas (specialist use only) | Prostate cancer (specialist use only)**

## ▶ BY MOUTH USING TABLETS

- ▶ Adult: 300 mg twice daily, for dose adjustments due to side-effects—consult product literature

**DOSE ADJUSTMENTS DUE TO INTERACTIONS**

- ▶ Manufacturer advises if concurrent use of moderate inhibitors of CYP3A4 is unavoidable, reduce dose of *capsules* to 200 mg twice daily and *tablets* to 150 mg twice daily.
- ▶ Manufacturer advises if concurrent use of potent inhibitors of CYP3A4 is unavoidable, reduce dose of *capsules* to 150 mg twice daily and *tablets* to 100 mg twice daily.

**DOSE EQUIVALENCE AND CONVERSION**

- ▶ Manufacturer advises capsules and tablets are not interchangeable on a milligram-for-milligram basis due to differences in dosing and bioavailability.

**IMPORTANT SAFETY INFORMATION****RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.**MHRA/CHM ADVICE: LYNPARZA® (OLAPARIB): RISK OF MEDICATION ERRORS WITH NEW PHARMACEUTICAL FORM (MAY 2018)**

A tablet formulation of olaparib was approved by the European Commission in May 2018. Capsules and tablets are not to be substituted on a milligram-to-milligram basis due to differences in dosing and bioavailability of each formulation. Prescribers should specify the formulation and dosage of olaparib on each prescription and pharmacists should ensure that the correct formulation and dose is dispensed. Patients should be instructed on the correct dose they should take for their capsules or tablets and if switched, informed of the difference in dosing.

- **INTERACTIONS** → Appendix 1: olaparib

● **SIDE-EFFECTS**

- ▶ **Common or very common** Agranulocytosis · anaemia · appetite decreased · asthenia · cough · decreased leucocytes · diarrhoea · dizziness · dyspnoea · erythropania · gastrointestinal discomfort · headache · nausea · neutropenia · neutropenic infection · neutropenic sepsis · oral disorders · skin reactions · taste altered · thrombocytopenia · vomiting
- ▶ **Uncommon** Angioedema
- ▶ **Rare or very rare** Erythema nodosum
- ▶ **Frequency not known** Haematotoxicity · neoplasms · pneumonitis

**SIDE-EFFECTS, FURTHER INFORMATION Haematological**

**toxicity** Withhold treatment if severe haematological toxicity develops; further analysis recommended if toxicity still present 4 weeks after treatment withdrawal.

**Pneumonitis** If dyspnoea, cough and fever, or radiological abnormalities develop, withhold treatment and investigate; if pneumonitis confirmed, discontinue.

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises females of childbearing potential should use 2 methods of effective contraception during treatment and for 1 month after last treatment; male patients should use effective contraception during treatment and for 3 months after last treatment if their partner is pregnant or of childbearing potential. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

- **BREAST FEEDING** Manufacturer advises avoid during treatment and for 1 month after last dose—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid in severe impairment (no information available).
- **RENAL IMPAIRMENT** Manufacturer advises avoid in severe impairment unless benefit outweighs potential risk—no information available.  
**Dose adjustments** For *capsules*, manufacturer advises reduce dose to 300 mg twice daily in moderate impairment. For *tablets*, manufacturer advises reduce dose to 200 mg twice daily in moderate impairment.
- **MONITORING REQUIREMENTS** Manufacturer advises monitor full blood count before treatment initiation, then every month for the first 12 months of treatment and periodically thereafter.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises *capsules* should be taken at least 1 hour after food, and food should preferably be avoided for up to 2 hours after administration.

● **PATIENT AND CARER ADVICE**

Driving and skilled tasks Manufacturer advises patients should be counselled on the effects on driving and performance of skilled tasks—increased risk of malaise and dizziness.

● **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

- ▶ Olaparib for maintenance treatment of BRCA mutation-positive advanced ovarian, fallopian tube or peritoneal cancer after response to first-line platinum-based chemotherapy (August 2019) NICE TA598 Recommended with restrictions
- ▶ Olaparib for maintenance treatment of relapsed platinum-sensitive ovarian, fallopian tube or peritoneal cancer (January 2020) NICE TA620 Recommended with restrictions
- ▶ Olaparib plus bevacizumab for maintenance treatment of advanced ovarian, fallopian tube or primary peritoneal cancer (April 2021) NICE TA693 Recommended with restrictions

**Scottish Medicines Consortium (SMC) decisions**

- ▶ Olaparib (*Lynparza*®) capsules as monotherapy for the maintenance treatment of adult patients with platinum-sensitive relapsed BRCA-mutated (germline and/or somatic) high grade serous epithelial ovarian, fallopian tube, or primary peritoneal cancer who are in response (complete response or partial response) to platinum-based chemotherapy (November 2016) SMC No. 1047/15 Recommended
- ▶ Olaparib (*Lynparza*®) tablets as monotherapy for the maintenance treatment of adult patients with newly diagnosed advanced (FIGO stages III and IV) BRCA1/2-mutated (germline and/or somatic) high-grade epithelial ovarian, fallopian tube or primary peritoneal cancer who are in response (complete or partial) following completion of first line platinum-based chemotherapy (December 2019) SMC No. SMC2209 Recommended
- ▶ Olaparib (*Lynparza*®) tablets as monotherapy for the maintenance treatment of adult patients with platinum-sensitive relapsed high-grade epithelial ovarian, fallopian tube, or primary peritoneal cancer who are in response (complete or partial) to platinum-based chemotherapy (August 2021) SMC No. SMC2367 Recommended with restrictions
- ▶ Olaparib (*Lynparza*®) tablets in combination with bevacizumab for the maintenance treatment of adults with advanced high-grade epithelial ovarian, fallopian tube or primary peritoneal cancer who are in response (complete or partial) following completion of first-line platinum-based chemotherapy in combination with bevacizumab, and whose cancer is associated with homologous recombination deficiency (December 2021) SMC No. SMC2368 Recommended

- ▶ Olaparib (*Lynparza*®) as monotherapy for the treatment of adult patients with metastatic castration-resistant prostate cancer and BRCA1/2-mutations (germline and/or somatic) who have progressed following prior therapy that included a new hormonal agent (October 2021) SMC No. SMC2366 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Tablet**

CAUTIONARY AND ADVISORY LABELS 25

- ▶ **Lynparza** (AstraZeneca UK Ltd)

**Olaparib 100 mg** Lynparza 100mg tablets | 56 tablet PoM  
 £2,317.50 DT = £2,317.50

**Olaparib 150 mg** Lynparza 150mg tablets | 56 tablet PoM  
 £2,317.50 DT = £2,317.50

**Rucaparib**

11-Nov-2020

- **DRUG ACTION** Rucaparib is a PARP inhibitor. PARP are enzymes that repair damaged DNA in cancer cells and, in the absence of functional BRCA, inhibition of PARP results in an inability of cancer cells to repair. Therefore inhibition of PARP results in an antineoplastic effect.

● **INDICATIONS AND DOSE**

**Ovarian cancer (initiated by a specialist) | Fallopian tube cancer (initiated by a specialist) | Peritoneal cancer (initiated by a specialist)**

▶ **BY MOUTH**

- ▶ Adult: 600 mg twice daily, for dose adjustments due to side-effects—consult product literature

**IMPORTANT SAFETY INFORMATION**

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
 See Cytotoxic drugs p. 962.

- **INTERACTIONS** → Appendix 1: rucaparib
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Anaemia · appetite decreased · asthenia · decreased leucocytes · diarrhoea · dizziness · dyspepsia · dyspnoea · fever · hypercholesterolaemia · nausea · neutropenia · photosensitivity reaction · skin reactions · taste altered · thrombocytopenia · vomiting
  - ▶ **Uncommon** Acute myeloid leukaemia (discontinue) · myelodysplastic syndrome (discontinue)
  - ▶ **Frequency not known** Memory loss
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception in women of childbearing potential during treatment and for 6 months after receiving the last dose.
- **PREGNANCY** Manufacturer advises avoid—toxicity in *animal* studies.
- **BREAST FEEDING** Manufacturer advises avoid during treatment and for 2 weeks after last dose—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid in moderate to severe impairment (limited information available).
- **RENAL IMPAIRMENT** Manufacturer advises avoid in severe impairment unless benefit outweighs potential risk—no information available.
- **MONITORING REQUIREMENTS** Manufacturer advises monitor full blood count before treatment initiation, then monthly thereafter.
- **PATIENT AND CARER ADVICE**

**Driving and skilled tasks** Manufacturer advises patients and their carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of dizziness and fatigue.

● **NATIONAL FUNDING/ACCESS DECISIONS**

**Rucaparib (as Rucaparib camsilate) 300 mg** Rubraca 300mg tablets | 60 tablet PoM H (Hospital only)

**Sotorasib**

31-Mar-2022

- **DRUG ACTION** Sotorasib is a selective Kirsten rat sarcoma viral oncogene homolog (KRAS<sup>G12C</sup>) inhibitor, which blocks tumour cell signalling and survival, inhibits cell growth, and promotes apoptosis in tumour cells with a KRAS G12C mutation.

● **INDICATIONS AND DOSE**

**Non-small cell lung cancer with KRAS G12C mutation (initiated by a specialist)**

▶ **BY MOUTH**

- ▶ Adult: 960 mg once daily, for dose adjustments, treatment interruption, or discontinuation due to side-effects—consult product literature

**IMPORTANT SAFETY INFORMATION**

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
 See Cytotoxic drugs p. 962.

- **INTERACTIONS** → Appendix 1: sotorasib
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Anaemia · appetite decreased · arthralgia · constipation · cough · diarrhoea · dyspnoea · electrolyte imbalance · fatigue · fever · gastrointestinal discomfort · headache · hepatic disorders · hypertension · increased risk of infection · myalgia · nausea · pain · peripheral oedema · rash · vomiting
  - ▶ **Frequency not known** Respiratory disorders
- **PREGNANCY** EvGr Avoid unless potential benefit outweighs risk—toxicity in *animal* studies. H See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.
- **BREAST FEEDING** EvGr Avoid—no information available. H
- **MONITORING REQUIREMENTS** EvGr Monitor liver function before treatment, then every 3 weeks for 3 months, then every 4 weeks or as clinically indicated. H
- **DIRECTIONS FOR ADMINISTRATION** EvGr Tablets may be dispersed in 120 mL of non-carbonated, room temperature water, by stirring until dispersed into small pieces and swallowed immediately (do not crush). Any residue must be re-dispersed in the same volume of water and immediately swallowed. If not consumed immediately, stir again to ensure dispersal and administer within 2 hours. H

● **PATIENT AND CARER ADVICE** Patients and carers should be given advice on how to administer *Lumykras*® tablets. Vomiting If vomiting occurs after taking tablets, no additional dose should be taken on that day and the next dose should be taken at the usual time.

**Missed doses** If a dose is more than 6 hours late, the missed dose should not be taken and the next dose should be taken at the normal time.

● **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

▶ **Sotorasib** for previously treated **KRAS G12C mutation-positive advanced non-small-cell lung cancer** (March 2022) NICE TA781 Recommended

## Talazoparib

22-Apr-2021

● **DRUG ACTION** Talazoparib is a PARP inhibitor. PARP are enzymes that repair damaged DNA in cancer cells and, in the absence of functional BRCA, inhibition of PARP results in an inability of cancer cells to repair. Therefore inhibition of PARP results in an antineoplastic effect.

● **INDICATIONS AND DOSE**

**Breast cancer (initiated by a specialist)**

▶ BY MOUTH

▶ Adult: 1 mg once daily, for dose adjustments due to side-effects—consult product literature

**DOSE ADJUSTMENTS DUE TO INTERACTIONS**

▶ **EvGr** If concomitant use with P-glycoprotein inhibitors, carvedilol, cobicistat, darunavir, propafenone, or tipranavir is unavoidable, reduce daily dose by 250 micrograms. 

**IMPORTANT SAFETY INFORMATION**

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

● **INTERACTIONS** → Appendix 1: talazoparib

● **SIDE-EFFECTS**

▶ **Common or very common** Alopecia · anaemia · appetite decreased · asthenia · decreased leucocytes · diarrhoea · dizziness · gastrointestinal discomfort · headache · nausea · neutropenia · stomatitis · taste altered · thrombocytopenia · vomiting

▶ **Frequency not known** Bone marrow depression · neoplasms

● **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception in women of childbearing potential during treatment and for 7 months after receiving the last dose. Male patients should use effective contraception during and for at least 4 months after treatment if their partner is pregnant or of childbearing potential. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **BREAST FEEDING** Manufacturer advises avoid during treatment and for 1 month after last dose—no information available.

● **HEPATIC IMPAIRMENT** Manufacturer advises avoid in moderate or severe impairment unless benefit outweighs risk (no information available).

● **RENAL IMPAIRMENT** Manufacturer advises avoid if creatinine clearance less than 30 mL/minute unless benefit outweighs risk (no information available).

**Dose adjustments** Manufacturer advises reduce starting dose to 750 micrograms once daily if creatinine clearance 30–60 mL/minute. See p. 21.

● **MONITORING REQUIREMENTS** Manufacturer advises monitor full blood count before treatment initiation, then monthly thereafter and as clinically indicated.

● **PATIENT AND CARER ADVICE**

**Driving and skilled tasks** Manufacturer advises patients and their carers should be counselled on the effects on driving and skilled tasks—increased risk of fatigue and dizziness.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Capsule**

CAUTIONARY AND ADVISORY LABELS 25

▶ **Talzenna** (Pfizer Ltd) ▼

**Talazoparib (as Talazoparib tosylate) 250 microgram** Talzenna 0.25mg capsules | 30 capsule (POM) £1,655.00 (Hospital only)

## Venetoclax

04-May-2022

● **DRUG ACTION** Venetoclax is a selective inhibitor of B-cell lymphoma-2 (BCL-2), an anti-apoptotic protein which is overexpressed in tumour cells, thereby initiating programmed cell death.

● **INDICATIONS AND DOSE**

**Chronic lymphocytic leukaemia (specialist use only) |**

**Acute myeloid leukaemia (specialist use only)**

▶ BY MOUTH

▶ Adult: (consult product literature)

**IMPORTANT SAFETY INFORMATION**

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**  
See Cytotoxic drugs p. 962.

**MHRA/CHM ADVICE: VENETOCLAX (VENCLYXTO®); UPDATED RECOMMENDATIONS ON TUMOUR LYSIS SYNDROME (TLS) (DECEMBER 2021)**

The MHRA reminds healthcare professionals about the risk of tumour lysis syndrome (TLS) associated with venetoclax, with fatal cases reported, some in patients with chronic lymphocytic leukaemia (CLL) receiving the lowest dose (a single dose of venetoclax 20 mg) used in the dose-titration phase and in patients with low-to-medium TLS risk. All patients prescribed venetoclax should have a TLS risk assessment. Healthcare professionals should adhere to guidance on appropriate prophylactic measures, routine laboratory tests, dose titration, and drug interactions—consult product literature.

A patient alert card should be provided to each patient being treated for CLL. Patients should be advised about TLS including:

● the risk of developing TLS occurs in the first days or weeks of treatment with venetoclax, as the dose is increased;

- the importance of drinking plenty of water, having frequent blood tests, and taking medicines to prevent the build-up of uric acid;
- if they experience any symptoms of TLS listed in the patient information leaflet they should stop taking their tablets and contact a healthcare professional immediately.

● **CAUTIONS** Ensure adequate hydration

● **INTERACTIONS** → Appendix 1: venetoclax

● **SIDE-EFFECTS**

▶ **Common or very common** Abdominal pain · anaemia · appetite decreased · arthralgia · asthenia · constipation · diarrhoea · dizziness · dyspnoea · electrolyte imbalance · gallbladder disorders · haemorrhage · headache · hyperuricaemia · hypotension · increased risk of infection · lymphopenia · nausea · neutropenia · sepsis (sometimes fatal) · stomatitis · syncope · thrombocytopenia · tumour lysis syndrome (sometimes fatal) · vomiting · weight decreased

● **CONCEPTION AND CONTRACEPTION** Manufacturer advises ensure effective, non-hormonal contraception during and for 30 days after treatment in women of child-bearing potential. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies. See also *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **BREAST FEEDING** Manufacturer advises avoid—no information available.

● **HEPATIC IMPAIRMENT** [EvGr](#) Caution in moderate and severe impairment (increased risk of toxicity). [M](#)

**Dose adjustments** [EvGr](#) Dose reduction of at least 50% in severe impairment—consult product literature. [M](#)

● **RENAL IMPAIRMENT** Manufacturer advises close monitoring (increased risk of tumour lysis syndrome); use only if potential benefit outweighs risk in severe impairment—no information available.

● **MONITORING REQUIREMENTS** [EvGr](#) Monitor blood chemistry before starting treatment and after each dose increase—consult product literature. [M](#)

● **PATIENT AND CARER ADVICE**

**Hydration** Patients should be advised to drink 1.5–2 L of water daily, starting 2 days before and throughout the dose-titration phase; intravenous fluids should be administered for those who cannot maintain an adequate level of oral hydration with consideration of overall risk of tumour lysis syndrome.

**Vomiting** If vomiting occurs following dose administration, no additional doses should be taken on that day and the next dose should be taken at the normal time.

**Chronic lymphocytic leukaemia (CLL)** Patients should be provided with a patient alert card—see also *Important safety information*.

**Missed doses** If a dose is more than 8 hours late, the missed dose should not be taken and the next dose should be taken at the normal time.

**Driving and skilled tasks** Patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of dizziness and fatigue.

● **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

▶ Venetoclax for treating chronic lymphocytic leukaemia (November 2017) NICE TA487 Recommended with restrictions

▶ Venetoclax with rituximab for previously treated chronic lymphocytic leukaemia (February 2019) NICE TA561 Recommended with restrictions

▶ Venetoclax with obinutuzumab for untreated chronic lymphocytic leukaemia (December 2020) NICE TA663 Recommended with restrictions

▶ Venetoclax with azacitidine for untreated acute myeloid leukaemia when intensive chemotherapy is unsuitable (February 2022) NICE TA765 Recommended

▶ Venetoclax with low dose cytarabine for untreated acute myeloid leukaemia when intensive chemotherapy is unsuitable (April 2022) NICE TA787 Recommended with restrictions

**Scottish Medicines Consortium (SMC) decisions**

▶ Venetoclax (*Venclyxto*<sup>®</sup>) as monotherapy for the treatment of chronic lymphocytic leukaemia in the presence of 17p deletion or TP53 mutation in adult patients who are unsuitable for or have failed a B-cell receptor pathway inhibitor, or in the absence of 17p deletion or TP53 mutation in adult patients who have failed both chemoimmunotherapy and a B-cell receptor pathway inhibitor (August 2017) SMC No. 1249/17 Recommended

▶ Venetoclax (*Venclyxto*<sup>®</sup>) in combination with rituximab for the treatment of adult patients with chronic lymphocytic leukaemia (CLL) who have received at least one prior therapy (August 2019) SMC No. SMC2166 Recommended

▶ Venetoclax (*Venclyxto*<sup>®</sup>) in combination with obinutuzumab for the treatment of adult patients with previously untreated chronic lymphocytic leukaemia (CLL) (December 2020) SMC No. SMC2293 Recommended with restrictions

▶ Venetoclax (*Venclyxto*<sup>®</sup>) in combination with a hypomethylating agent for the treatment of adult patients with newly diagnosed acute myeloid leukaemia who are ineligible for intensive chemotherapy (April 2022) SMC No. SMC2412 Recommended

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Tablet**

CAUTIONARY AND ADVISORY LABELS 21, 25

▶ *Venclyxto* (AbbVie Ltd) ▼

**Venetoclax 10 mg** *Venclyxto* 10mg tablets | 14 tablet [PoM](#) £59.87 (Hospital only)

**Venetoclax 50 mg** *Venclyxto* 50mg tablets | 7 tablet [PoM](#) £149.67 (Hospital only)

**Venetoclax 100 mg** *Venclyxto* 100mg tablets | 7 tablet [PoM](#) £299.34 (Hospital only) | 14 tablet [PoM](#) £598.68 (Hospital only) | 112 tablet [PoM](#) £4,789.47 (Hospital only)

## Vismodegib

25-Jun-2021

● **DRUG ACTION** Vismodegib is a hedgehog pathway inhibitor.

● **INDICATIONS AND DOSE**

**Symptomatic metastatic basal cell carcinoma | Locally advanced basal cell carcinoma not appropriate for surgery or radiotherapy**

▶ BY MOUTH

▶ Adult: 150 mg once daily

**IMPORTANT SAFETY INFORMATION**

**RISKS OF INCORRECT DOSING OF ORAL ANTI-CANCER MEDICINES**

See Cytotoxic drugs p. 962.

● **INTERACTIONS** → Appendix 1: vismodegib

● **SIDE-EFFECTS**

▶ **Common or very common** Alopecia · amenorrhoea · appetite decreased · arthralgia · asthenia · constipation · dehydration · diarrhoea · gastrointestinal discomfort · hair growth abnormal · muscle complaints · nausea · pain · skin reactions · taste altered · vomiting · weight decreased

▶ **Frequency not known** Epiphyses premature fusion

● **CONCEPTION AND CONTRACEPTION** For women of child-bearing potential, pregnancy must be excluded before

initiation of treatment, and monthly during treatment. Women must use two contraceptive methods (including one highly effective method and one barrier method) during treatment and for 24 months after the final dose of vismodegib. Men must use a condom during treatment and for 2 months after the final dose.

- **PREGNANCY Important: teratogenic risk**—may cause severe birth defects and embryo-fetal death.
- **BREAST FEEDING** Avoid during treatment and for 24 months after final dose.
- **RENAL IMPAIRMENT** EvGr Use with caution in severe impairment (limited information available). M
- **PRESCRIBING AND DISPENSING INFORMATION** Prescribers and pharmacists must comply with prescribing and dispensing restrictions as specified in the manufacturer's Pregnancy Prevention Programme, and ensure that the patient fully acknowledges the programme's pregnancy prevention measures—consult product literature for further information.
- **PATIENT AND CARER ADVICE**  
**Conception and contraception** Counselling on pregnancy and contraception advised. Patients must comply with the manufacturer's pregnancy prevention programme.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
 For full details see funding body website  
**NICE decisions**  
 ▶ Vismodegib for treating basal cell carcinoma (November 2017)  
 NICE TA489 Not recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Capsule

CAUTIONARY AND ADVISORY LABELS 25

Vismodegib 150 mg Erivedge 150mg capsules | 28 capsule PoM  
 £6,285.00 (Hospital only)

## ANTINEOVASCULARISATION DRUGS > VASCULAR ENDOTHELIAL GROWTH FACTOR INHIBITORS

### Aflibercept

28-Jun-2021

- **DRUG ACTION** Aflibercept is a recombinant fusion protein that acts as a soluble decoy receptor and binds to vascular endothelial growth factors A and B (VEGF-A, VEGF-B) and placental growth factor (PlGF). Aflibercept inhibits the activation of VEGF receptors and the proliferation of endothelial cells, thereby inhibiting the growth of new vessels that supply tumours with oxygen and nutrients.

#### ● INDICATIONS AND DOSE

**In combination with irinotecan, fluorouracil and folinic acid (FOLFIRI) chemotherapy, in metastatic colorectal cancer that is resistant to, or has progressed after, an oxaliplatin-containing regimen**

▶ BY INTRAVENOUS INFUSION

▶ Adult: (consult local protocol)

#### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: SYSTEMICALLY ADMINISTERED VEGF PATHWAY INHIBITORS: RISK OF ANEURYSM AND ARTERY DISSECTION (JULY 2020)

A European review of worldwide data concluded that systemically administered VEGF pathway inhibitors may lead to aneurysm and artery dissection in patients with or without hypertension. Some fatal cases have been reported, mainly in relation to aortic aneurysm rupture and aortic dissection. The MHRA advises healthcare professionals to carefully consider the risk of aneurysm and artery dissection in patients with risk factors before

initiating treatment with aflibercept; any modifiable risk factors (such as smoking and hypertension) should be reduced as much as possible. Patients should be monitored and treated for hypertension as required.

- **CONTRA-INDICATIONS** Moderate or severe congestive heart failure · uncontrolled hypertension
- **CAUTIONS** Febrile neutropenia · history of cardiovascular disease (may be exacerbated by hypertension) · increased risk of haemorrhage (including fatal events) · increased risk of hypertension · increased risk of thromboembolic events (consult product literature if event occurs) · may impair wound healing—without treatment for at least 4 weeks before elective surgery and for at least 4 weeks after major surgery, or until wound fully healed · neutropenic infection · risk factors for aneurysm or artery dissection · risk of fistula formation (discontinue if fistula develops) · risk of neutropenia · risk of thrombocytopenia  
**CAUTIONS, FURTHER INFORMATION**  
 ▶ Monitoring of blood pressure The MHRA advises to monitor blood pressure regularly—consult product literature if hypertension occurs during treatment.
- **INTERACTIONS** → Appendix 1: aflibercept
- **SIDE-EFFECTS**  
 ▶ **Common or very common** Appetite decreased · asthenic conditions · dehydration · diarrhoea · dysphonia · dyspnoea · embolism and thrombosis · fistula · gastrointestinal discomfort · gastrointestinal disorders · haemorrhage · headache · hypersensitivity · hypertension · increased risk of infection · leucopenia · neutropenia · neutropenic sepsis · oral disorders · oropharyngeal pain · proteinuria · rhinorrhoea · skin reactions · thrombocytopenia · weight decreased  
 ▶ **Uncommon** Healing impaired · heart failure · nephrotic syndrome · osteonecrosis of jaw · posterior reversible encephalopathy syndrome (PRES) · thrombotic microangiopathy  
 ▶ **Frequency not known** Alopecia · anaemia · aneurysm · angina pectoris · artery dissection · cerebrovascular insufficiency · constipation · hyperbilirubinaemia · myocardial infarction · nausea · vomiting · wound complications
- **CONCEPTION AND CONTRACEPTION** Exclude pregnancy before treatment. Effective contraception required during and for at least 6 months after treatment in men and women. Contraceptive advice should be given to men and women before therapy begins (and should cover the duration of contraception required after therapy has ended).
- **PREGNANCY** Manufacturer advises avoid—toxicity in *animal* studies. Considerable caution is necessary if a pregnant woman presents with cancer requiring chemotherapy, and specialist advice should always be sought.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment (no information available).
- **RENAL IMPAIRMENT** EvGr Caution in severe impairment (limited information available). M
- **MONITORING REQUIREMENTS**  
 ▶ Monitor for signs and symptoms of gastro-intestinal perforation—discontinue if perforation develops.  
 ▶ Monitor full blood count, including differential count and platelets at baseline and before each treatment cycle.  
 ▶ Monitor for proteinuria before each treatment administration—consult product literature if symptoms develop.

- ▶ Monitor for signs and symptoms of diarrhoea and dehydration, particularly in elderly—consult product literature if severe diarrhoea occurs.
- ▶ Monitor for posterior reversible encephalopathy syndrome (presenting as seizures, altered mental status, nausea, vomiting, headache, or visual disturbance).
- ▶ Monitor for signs and symptoms of cardiac failure and decreased ejection fraction—consider baseline and periodic evaluations of left ventricular function during treatment; discontinue if cardiac failure or decreased ejection fraction develops.

- **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

- ▶ **Aflibercept in combination with irinotecan and fluorouracil-based therapy for treating metastatic colorectal cancer that has progressed following prior oxaliplatin-based chemotherapy (March 2014) NICE TA307 Not recommended**

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for infusion**

- ▶ **Zaltrap** (Sanofi)

**Aflibercept 25 mg per 1 ml** Zaltrap 200mg/8ml concentrate for solution for infusion vials | 1 vial (PoM) £591.30 (Hospital only)  
**Zaltrap 100mg/4ml** concentrate for solution for infusion vials | 1 vial (PoM) £295.65 (Hospital only)

## Blood and blood-forming organs

### 1 Anaemias

#### Anaemias

15-Dec-2021

#### Anaemia treatment considerations

Before initiating treatment for anaemia, it is essential to determine which type is present. Iron salts may be harmful if given to patients with anaemias other than those due to iron deficiency.

#### Sickle-cell anaemia

Sickle-cell disease is caused by a structural abnormality of haemoglobin resulting in deformed, less flexible red blood cells. Acute complications in the more severe forms include sickle-cell crisis, where infarction of the microvasculature and restricted blood supply to organs results in severe pain. [EvGr](#) Sickle-cell crisis usually requires hospitalisation, fluid replacement, analgesia, and treatment of any concurrent

infection. Patients who can be managed at home are often provided with a management plan from their secondary care team that should be followed, including when to seek medical advice. [⚠](#) Complications include anaemia, leg ulcers, renal failure, and increased susceptibility to infection. [EvGr](#) Pneumococcal vaccine, haemophilus influenzae type b vaccine, an annual influenza vaccine, and lifelong prophylactic penicillin reduce the risk of infection. Hepatitis B vaccine should also be given if the patient is not immune.

In most forms of sickle-cell disease, varying degrees of haemolytic anaemia are present which is accompanied by increased erythropoiesis; this may increase folate requirements and supplementation with folic acid is recommended. The optimum dose should be discussed with a specialist. [⚠](#)

Hydroxycarbamide p. 1108 can prevent acute chest syndrome, reduce the frequency of painful crises, and reduce transfusion requirements in sickle-cell disease. The beneficial effects of hydroxycarbamide may not become evident for several months.

[EvGr](#) Crizanlizumab p. 1106 is an option for preventing recurrent sickle cell crises (vaso-occlusive crises). [⚠](#) For further guidance, see NICE pathway: **Blood and immune system conditions** (available at: [pathways.nice.org.uk/pathways/blood-and-immune-system-conditions/](https://pathways.nice.org.uk/pathways/blood-and-immune-system-conditions/)).

### G6PD deficiency

Glucose 6-phosphate dehydrogenase (G6PD) deficiency is common in individuals originating from Africa, Asia, the Mediterranean region, and the Middle East; it can also occur less frequently in all other individuals. G6PD deficiency is more common in males than it is in females.

Individuals with G6PD deficiency are susceptible to developing acute haemolytic anaemia when they take a number of common drugs or when they have an infection. They are also susceptible to developing acute haemolytic anaemia when they eat fava beans (broad beans); this is termed *favism*.

When prescribing drugs for patients with G6PD deficiency, the following three points should be kept in mind:

- G6PD deficiency is genetically heterogeneous; susceptibility to the haemolytic risk from drugs varies; thus, a drug found to be safe in some G6PD-deficient individuals may not be equally safe in others;
- manufacturers do not routinely test drugs for their effects in G6PD-deficient individuals;
- the risk and severity of haemolysis is almost always dose-related.

The lists below should be read with these points in mind. Ideally, information about G6PD deficiency should be available before prescribing drugs that are associated with a risk of haemolysis in G6PD-deficient patients, including those listed below. However, in the absence of this information, the possibility of haemolysis should be considered, especially if the patient belongs to a group in which G6PD deficiency is common.

Very few G6PD-deficient individuals with chronic non-spherocytic haemolytic anaemia have haemolysis even in the absence of an exogenous trigger. In these patients, exacerbation of haemolysis following oxidative stress, such as the administration of any of the drugs listed below, will occur.

#### Drugs with definite risk of haemolysis in most G6PD-deficient individuals

- Dapsone and other sulfones
- Fluoroquinolones (including ciprofloxacin, moxifloxacin, norfloxacin, and ofloxacin)
- Methylthioninium chloride
- Niridazole [not on UK market]
- Nitrofurantoin
- Pamaquin [not on UK market]
- Primaquine
- Quinolones
- Rasburicase
- Sulfonamides (including co-trimoxazole)

#### Drugs with possible risk of haemolysis in some G6PD-deficient individuals

- Aspirin
- Chloroquine
- Menadione, water-soluble derivatives (e.g. menadiol sodium phosphate)
- Quinine (may be acceptable in acute malaria)
- Sulfonylureas

Naphthalene in mothballs also causes haemolysis in individuals with G6PD deficiency.

### Aplastic and renal anaemias

Intravenous horse antithymocyte globulin in combination with ciclosporin, may be used as immunosuppressive treatment for aplastic anaemia. The response rate for non-severe aplastic anaemia is higher with this combination than with ciclosporin alone. Prednisolone is used for the prevention of adverse effects associated with antithymocyte globulin treatment. Early reactions that may occur include fever, rash, fluid retention, rigors, acute respiratory distress syndrome, and anaphylaxis; serum sickness may occur

7–14 days later. Antithymocyte globulin should be given under specialist supervision with appropriate resuscitation facilities. Other treatment options for aplastic anaemia include ciclosporin alone or oxymetholone.

Pyridoxine hydrochloride p. 1175 is licensed for the treatment of idiopathic sideroblastic anaemia; the dose required is usually high.

Corticosteroids have an important place in the management of haematological disorders. For further information, see Corticosteroids, general use p. 737.

### Erythropoietins

Epoetins (recombinant human erythropoietins) are used to treat anaemia associated with erythropoietin deficiency in chronic renal failure, to increase the yield of autologous blood in normal individuals and to shorten the period of symptomatic anaemia in patients receiving cytotoxic chemotherapy.

Epoetin beta p. 1100 is also licensed for the prevention of anaemia in preterm neonates of low birth-weight; a therapeutic response may take several weeks.

Darbepoetin alfa p. 1097 is a hyperglycosylated derivative of epoetin; it has a longer half-life and can be administered less frequently than epoetin.

Methoxy polyethylene glycol-epoetin beta p. 1101 is a continuous erythropoietin receptor activator that is licensed for the treatment of symptomatic anaemia associated with chronic kidney disease. It has a longer duration of action than epoetin.

For further guidance on the use of erythropoietins in patients with chronic kidney disease and anaemia, see NICE guideline: **Chronic kidney disease: assessment and management** (available at: [www.nice.org.uk/guidance/ng203](http://www.nice.org.uk/guidance/ng203)).

### ANABOLIC STEROIDS > ANDROSTAN DERIVATIVES

#### Oxymetholone

##### • INDICATIONS AND DOSE

##### Aplastic anaemia

► BY MOUTH

► Adult: 1–5 mg/kg daily for 3 to 6 months

• INTERACTIONS → Appendix 1: oxymetholone

• MEDICINAL FORMS There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension

##### Capsule

► Oxymetholone (Non-proprietary)

Oxymetholone 50 mg Oxymetholone 50mg capsules | 50 capsule [P<sub>o</sub>M] £475.00 [CD4-2]

### EPOETINS

#### Epoetins

##### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: RECOMBINANT HUMAN ERYTHROPOIETINS: VERY RARE RISK OF SEVERE CUTANEOUS ADVERSE REACTIONS (UPDATED JANUARY 2018)

The MHRA is aware of very rare cases of severe cutaneous adverse reactions, including Stevens-Johnson

syndrome and toxic epidermal necrolysis, in patients treated with erythropoietins; some cases were fatal. More severe cases were recorded with long-acting agents (darbepoetin alfa and methoxy polyethylene glycol-epoetin beta).

Patients and their carers should be advised of the signs and symptoms of severe skin reactions when starting treatment and instructed to stop treatment and seek immediate medical attention if they develop widespread rash and blistering; these rashes often follow fever or flu-like symptoms—discontinue treatment permanently if such reactions occur.

#### MHRA/CHM ADVICE (DECEMBER 2007) ERYTHROPOIETINS—HAEMOGLOBIN CONCENTRATION

Overcorrection of haemoglobin concentration in patients with chronic kidney disease may increase the risk of death and serious cardiovascular events, and in patients with cancer may increase the risk of thrombosis and related complications:

- patients should not be treated with erythropoietins for the licensed indications in chronic kidney disease or cancer in patients receiving chemotherapy *unless* symptoms of anaemia are present
- the haemoglobin concentration should be maintained within the range 10–12 g/100 mL
- haemoglobin concentrations higher than 12 g/100 mL should be avoided
- the aim of treatment is to relieve symptoms of anaemia, and in patients with chronic kidney disease to avoid the need for blood transfusion; the haemoglobin concentration should not be increased beyond that which provides adequate control of symptoms of anaemia (in some patients, this may be achieved at concentrations lower than the recommended range)

#### MHRA/CHM ADVICE (DECEMBER 2007 AND AUGUST 2008) ERYTHROPOIETINS—TUMOUR PROGRESSION AND SURVIVAL IN PATIENTS WITH CANCER

Clinical trial data show an unexplained excess mortality and increased risk of tumour progression in patients with anaemia associated with cancer who have been treated with erythropoietins. Many of these trials used erythropoietins outside of the licensed indications (i.e. overcorrected haemoglobin concentration or given to patients who have not received chemotherapy):

- erythropoietins licensed for the treatment of *symptomatic* anaemia associated with cancer, are licensed only for patients who are receiving chemotherapy
- the decision to use erythropoietins should be based on an assessment of the benefits and risks for individual patients; blood transfusion may be the preferred treatment for anaemia associated with cancer chemotherapy, particularly in those with a good cancer prognosis

- **CONTRA-INDICATIONS** Patients unable to receive thromboprophylaxis · pure red cell aplasia following erythropoietin therapy · uncontrolled hypertension
- **CAUTIONS** Aluminium toxicity (can impair the response to erythropoietin) · concurrent infection (can impair the response to erythropoietin) · correct factors that contribute to the anaemia of chronic renal failure, such as iron or folate deficiency, before treatment · during dialysis (increase in unfractionated or low molecular weight heparin dose may be needed) · epilepsy · inadequately treated or poorly controlled blood pressure—interrupt treatment if blood pressure uncontrolled · ischaemic vascular disease · malignant disease · other inflammatory disease (can impair the response to erythropoietin) · risk of thrombosis may be increased when used for anaemia before orthopaedic surgery—avoid in cardiovascular

disease including recent myocardial infarction or cerebrovascular accident · risk of thrombosis may be increased when used for anaemia in adults receiving cancer chemotherapy · sickle-cell disease (lower target haemoglobin concentration may be appropriate) · sudden stabbing migraine-like pain (warning of a hypertensive crisis) · thrombocytosis (monitor platelet count for first 8 weeks)

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Arthralgia · embolism and thrombosis · headache · hypertension (dose-dependent) · influenza like illness · skin reactions · stroke
- ▶ **Uncommon** Hypertensive crisis (in isolated patients with normal or low blood pressure) · respiratory tract congestion · seizure
- ▶ **Rare or very rare** Thrombocytosis
- ▶ **Frequency not known** Pure red cell aplasia (more common following subcutaneous administration in patients with chronic renal failure) · severe cutaneous adverse reactions (SCARs)

**SIDE-EFFECTS, FURTHER INFORMATION Hypertensive crisis** In isolated patients with normal or low blood pressure, hypertensive crisis with encephalopathy-like symptoms and generalised tonic-clonic seizures requiring immediate medical attention has occurred with epoetin.

**Pure red cell aplasia** There have been very rare reports of pure red cell aplasia in patients treated with erythropoietins. In patients who develop a lack of efficacy with erythropoietin therapy and with a diagnosis of pure red cell aplasia, treatment with erythropoietins must be discontinued and testing for erythropoietin antibodies considered. Patients who develop pure red cell aplasia should not be switched to another form of erythropoietin.

#### ● MONITORING REQUIREMENTS

- ▶ Monitor closely blood pressure, reticulocyte counts, haemoglobin, and electrolytes—interrupt treatment if blood pressure uncontrolled.
- ▶ Other factors, such as iron or folate deficiency, that contribute to the anaemia of chronic renal failure should be corrected before treatment and monitored during therapy. Supplemental iron may improve the response in resistant patients.

1096

## Darbepoetin alfa

30-Apr-2019

### ● INDICATIONS AND DOSE

#### Symptomatic anaemia associated with chronic renal failure in patients on dialysis

- ▶ BY SUBCUTANEOUS INJECTION, OR BY INTRAVENOUS INJECTION
- ▶ **Adult:** Initially 450 nanograms/kg once weekly, dose to be adjusted according to response by approximately 25% at intervals of at least 4 weeks, maintenance dose to be given once weekly or once every 2 weeks, reduce dose by approximately 25% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks or if haemoglobin concentration exceeds 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose, when changing route give same dose then adjust according to weekly or fortnightly haemoglobin measurements, adjust doses not more frequently than every 2 weeks during maintenance treatment

#### Symptomatic anaemia associated with chronic renal failure in patients not on dialysis

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ **Adult:** Initially 450 nanograms/kg once weekly, alternatively initially 750 nanograms/kg every 2 weeks, dose to be adjusted according to response by continued →

approximately 25% at intervals of at least 4 weeks, maintenance dose can be given once weekly, every 2 weeks, or once a month, subcutaneous route preferred in patients not on haemodialysis, reduce dose by approximately 25% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks or if haemoglobin concentration exceeds 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose, when changing route give same dose then adjust according to weekly or fortnightly haemoglobin measurements, adjust doses not more frequently than every 2 weeks during maintenance treatment

#### Symptomatic anaemia associated with chronic renal failure in patients not on dialysis

##### ► BY INTRAVENOUS INJECTION

► **Adult:** Initially 450 nanograms/kg once weekly, dose to be adjusted according to response by approximately 25% at intervals of at least 4 weeks, maintenance dose given once weekly, subcutaneous route preferred in patients not on haemodialysis, reduce dose by approximately 25% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks or if haemoglobin concentration exceeds 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose, when changing route give same dose then adjust according to weekly or fortnightly haemoglobin measurements, adjust doses not more frequently than every 2 weeks during maintenance treatment

#### Symptomatic anaemia in adults with non-myeloid malignancies receiving chemotherapy

##### ► BY SUBCUTANEOUS INJECTION

► **Adult:** Initially 6.75 micrograms/kg every 3 weeks, alternatively initially 2.25 micrograms/kg once weekly, if response inadequate after 9 weeks further treatment may not be effective; if adequate response obtained then reduce dose by 25–50%, reduce dose by approximately 25–50% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks or if haemoglobin concentration exceeds 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and restart at a dose approximately 25% lower than the previous dose. Discontinue approximately 4 weeks after ending chemotherapy

● **INTERACTIONS** → Appendix 1: darbepoetin alfa

#### ● **SIDE-EFFECTS**

► **Common or very common** Hypersensitivity · oedema

● **PREGNANCY** No evidence of harm in *animal* studies—manufacturer advises caution.

● **BREAST FEEDING** Manufacturer advises avoid—no information available.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution (no information available).

## Epoetin alfa

1096

30-Apr-2019

#### ● **INDICATIONS AND DOSE**

##### EPREX<sup>®</sup> PRE-FILLED SYRINGES

#### Symptomatic anaemia associated with chronic renal failure in patients on haemodialysis

##### ► BY INTRAVENOUS INJECTION, OR BY SUBCUTANEOUS INJECTION

► **Adult:** Initially 50 units/kg 3 times a week, adjusted in steps of 25 units/kg 3 times a week, dose adjusted according to response at intervals of at least 4 weeks; maintenance 75–300 units/kg once weekly, intravenous route preferred, intravenous injection to be given over 1–5 minutes, subcutaneous injection, maximum 1 mL per injection site, maintenance dose can be given as a single dose or in divided doses, reduce dose by approximately 25% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks or if haemoglobin concentration exceeds 12 g/100 mL; if haemoglobin concentration continues to rise, despite

dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose

#### Symptomatic anaemia associated with chronic renal failure in adults on peritoneal dialysis

- ▶ BY INTRAVENOUS INJECTION, OR BY SUBCUTANEOUS INJECTION
- Adult: Initially 50 units/kg twice weekly; maintenance 25–50 units/kg twice weekly, intravenous route preferred, intravenous injection to be given over 1–5 minutes, subcutaneous injection, maximum 1 mL per injection site, reduce dose by approximately 25% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks or if haemoglobin concentration exceeds 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose

#### Severe symptomatic anaemia of renal origin in adults with renal insufficiency not yet on dialysis

- ▶ BY INTRAVENOUS INJECTION, OR BY SUBCUTANEOUS INJECTION
- Adult: Initially 50 units/kg 3 times a week, increased in steps of 25 units/kg 3 times a week, adjusted according to response, dose to be increased at intervals of at least 4 weeks; maintenance 17–33 units/kg 3 times a week (max. per dose 200 units/kg 3 times a week), intravenous route preferred, intravenous injection to be given over 1–5 minutes, subcutaneous injection, maximum 1 mL per injection site, reduce dose by approximately 25% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks or if haemoglobin concentration exceeds 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose

#### Symptomatic anaemia in adults receiving cancer chemotherapy

- ▶ BY SUBCUTANEOUS INJECTION
- Adult: Initially 150 units/kg 3 times a week, alternatively initially 450 units/kg once weekly, increased to 300 units/kg 3 times a week, increased if appropriate rise in haemoglobin (or reticulocyte count) not achieved after 4 weeks; discontinue if inadequate response after 4 weeks at higher dose, subcutaneous injection maximum 1 mL per injection site, reduce dose by approximately 25–50% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks or if haemoglobin concentration exceeds 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose. Discontinue approximately 4 weeks after ending chemotherapy

#### To increase yield of autologous blood (to avoid homologous blood) in predonation programme in moderate anaemia either when large volume of blood required or when sufficient blood cannot be saved for elective major surgery

- ▶ BY INTRAVENOUS INJECTION
- Adult: 600 units/kg twice weekly for 3 weeks before surgery, consult product literature for details and advice on ensuring high iron stores, intravenous injection to be given over 1–5 minutes

#### Moderate anaemia (haemoglobin concentration 10–13 g/100 mL) before elective orthopaedic surgery in adults with expected moderate blood loss to reduce exposure to allogeneic blood transfusion or if autologous transfusion unavailable

- ▶ BY SUBCUTANEOUS INJECTION
- Adult: 600 units/kg once weekly for 3 weeks before surgery and on day of surgery, alternatively 300 units/kg daily for 15 days starting 10 days before surgery, consult product literature for details, subcutaneous injection maximum 1 mL per injection site

- **INTERACTIONS** → Appendix 1: epoetin alfa
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Chills · cough · diarrhoea · fever · myalgia · nausea · pain · peripheral oedema · vomiting
  - ▶ **Uncommon** Hyperkalaemia
- **PREGNANCY** No evidence of harm. Benefits probably outweigh risk of anaemia and of blood transfusion in pregnancy.
- **BREAST FEEDING** Unlikely to be present in milk. Minimal effect on infant.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in chronic hepatic failure.
- **PRESCRIBING AND DISPENSING INFORMATION** Epoetin alfa is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website

## Epoetin beta

### ● INDICATIONS AND DOSE

#### Symptomatic anaemia associated with chronic renal failure

##### ► BY SUBCUTANEOUS INJECTION

► Adult: Initially 20 units/kg 3 times a week for 4 weeks, increased in steps of 20 units/kg 3 times a week, according to response at intervals of 4 weeks, total weekly dose may be divided into daily doses; maintenance dose, initially reduce dose by half then adjust according to response at intervals of 1–2 weeks, total weekly maintenance dose may be given as a single dose or in 3 or 7 divided doses. Subcutaneous route preferred in patients not on haemodialysis. Reduce dose by approximately 25% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks or if haemoglobin concentration approaches or exceeds 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose; maximum 720 units/kg per week

##### ► BY INTRAVENOUS INJECTION

► Adult: Initially 40 units/kg 3 times a week for 4 weeks, then increased to 80 units/kg 3 times a week, then increased in steps of 20 units/kg 3 times a week if required, at intervals of 4 weeks; maintenance dose, initially reduce dose by half then adjust according to response at intervals of 1–2 weeks. Intravenous injection to be administered over 2 minutes. Subcutaneous route preferred in patients not on haemodialysis. Reduce dose by approximately 25% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks or if haemoglobin concentration approaches or exceeds 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose; maximum 720 units/kg per week

#### Symptomatic anaemia in adults with non-myeloid malignancies receiving chemotherapy

##### ► BY SUBCUTANEOUS INJECTION

► Adult: Initially 450 units/kg once weekly for 4 weeks, dose to be given weekly as a single dose or in 3–7 divided doses, increase dose after 4 weeks (if a rise in haemoglobin of at least 1 g/100 mL not achieved), increased to 900 units/kg once weekly, dose to be given weekly as a single dose or in 3–7 divided doses, if adequate response obtained reduce dose by 25–50%, discontinue treatment if haemoglobin concentration does not increase by at least 1 g/100 mL after 8 weeks of therapy (response unlikely). Reduce dose by approximately 25–50% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks or if haemoglobin concentration exceeds 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose. Discontinue approximately 4 weeks after ending chemotherapy; maximum 60 000 units per week

#### To increase yield of autologous blood (to avoid homologous blood) in predonation programme in moderate anaemia when blood-conserving procedures are insufficient or unavailable

##### ► BY INTRAVENOUS INJECTION, OR BY SUBCUTANEOUS INJECTION

► Adult: (consult product literature)

● **INTERACTIONS** → Appendix 1: epoetin beta

- **PREGNANCY** No evidence of harm. Benefits probably outweigh risk of anaemia and of blood transfusion in pregnancy.
- **BREAST FEEDING** Unlikely to be present in milk. Minimal effect on infant.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in chronic hepatic failure.

## Epoetin zeta

### ● INDICATIONS AND DOSE

#### Symptomatic anaemia associated with chronic renal failure in patients on haemodialysis

##### ► BY INTRAVENOUS INJECTION, OR BY SUBCUTANEOUS INJECTION

► Adult: Initially 50 units/kg 3 times a week, adjusted according to response, adjusted in steps of 25 units/kg 3 times a week, dose to be adjusted at intervals of at least 4 weeks; maintenance 25–100 units/kg 3 times a week, intravenous injection to be given over 1–5 minutes, if given by subcutaneous injection, a maximum of 1 mL can be given per injection site, avoid increasing haemoglobin concentration at a rate exceeding 2 g/100 mL over 4 weeks

#### Symptomatic anaemia associated with chronic renal failure in adults on peritoneal dialysis

##### ► BY INTRAVENOUS INJECTION, OR BY SUBCUTANEOUS INJECTION

► Adult: Initially 50 units/kg twice weekly; maintenance 25–50 units/kg twice weekly, intravenous injection to be given over 1–5 minutes, if given by subcutaneous injection, a maximum of 1 mL can be given per injection site, avoid increasing haemoglobin concentration at a rate exceeding 2 g/100 mL over 4 weeks

**Severe symptomatic anaemia of renal origin in adults with renal insufficiency not yet on dialysis**

- ▶ BY INTRAVENOUS INJECTION, OR BY SUBCUTANEOUS INJECTION
- ▶ Adult: Initially 50 units/kg 3 times a week, adjusted according to response, adjusted in steps of 25 units/kg 3 times a week, dose to be increased at intervals of at least 4 weeks; maintenance 17–33 units/kg 3 times a week (max. per dose 200 units/kg 3 times a week), intravenous injection to be given over 1–5 minutes, if given by subcutaneous injection, a maximum of 1 mL can be given per injection site, avoid increasing haemoglobin concentration at a rate exceeding 2 g/100 mL over 4 weeks

**Symptomatic anaemia in adults receiving cancer chemotherapy**

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Adult: Initially 150 units/kg 3 times a week, alternatively initially 450 units/kg once weekly, increased to 300 units/kg 3 times a week, only increase dose if appropriate rise in haemoglobin (or reticulocyte count) not achieved after 4 weeks; discontinue if inadequate response after 4 weeks at higher dose, maximum 1 mL per injection site, reduce dose by approximately 25–50% if rise in haemoglobin concentration exceeds 2 g/100 mL over 4 weeks or if haemoglobin concentration exceeds 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose. Discontinue approximately 4 weeks after ending chemotherapy

**To increase yield of autologous blood (to avoid homologous blood) in predonation programme in moderate anaemia either when large volume of blood required or when sufficient blood cannot be saved for elective major surgery**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: 600 units/kg twice weekly for 3 weeks before surgery, intravenous injection to be given over 1–5 minutes, consult product literature for details and advice on ensuring high iron stores

**Moderate anaemia (haemoglobin concentration 10–13 g/100 mL) before elective orthopaedic surgery in adults with expected moderate blood loss to reduce exposure to allogeneic blood transfusion or if autologous transfusion unavailable**

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Adult: 600 units/kg every week for 3 weeks before surgery and on day of surgery, alternatively 300 units/kg daily for 15 days starting 10 days before surgery, maximum 1 mL per injection site, consult product literature for details

- **INTERACTIONS** → Appendix 1: epoetin zeta
- **SIDE-EFFECTS**
  - ▶ Common or very common Asthenia · dizziness
  - ▶ Uncommon Intracranial haemorrhage
  - ▶ Rare or very rare Angioedema
  - ▶ Frequency not known Aneurysm · cerebrovascular insufficiency · hypertensive encephalopathy · myocardial infarction · myocardial ischaemia
- **PREGNANCY** No evidence of harm. Benefits probably outweigh risk of anaemia and of blood transfusion in pregnancy.
- **BREAST FEEDING** Unlikely to be present in milk. Minimal effect on infant.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in chronic hepatic failure.
- **PRESCRIBING AND DISPENSING INFORMATION** Epoetin zeta is a biological medicine. Biological medicines must be

prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1.

● **NATIONAL FUNDING/ACCESS DECISIONS**

**Methoxy polyethylene glycol-epoetin beta**

05-Oct-2021

● **INDICATIONS AND DOSE****Symptomatic anaemia associated with chronic kidney disease in patients on dialysis and not currently treated with erythropoietins**

- ▶ BY SUBCUTANEOUS INJECTION, OR BY INTRAVENOUS INJECTION
- ▶ Adult: Initially 600 nanograms/kg every 2 weeks, subcutaneous route preferred in patients not on haemodialysis, dose to be adjusted according to response at intervals of at least 1 month, maintenance dose of double the previous fortnightly dose may be given once a month if haemoglobin concentration is above 10 g/100 mL, reduce dose by approximately 25% if rate of rise in haemoglobin concentration exceeds 2 g/100 mL in 1 month or if haemoglobin concentration is increasing or approaching 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose, dose may be increased by approximately 25% if the rate of rise in haemoglobin concentration is less than 1 g/100 mL over 1 month; further increases of approximately 25% may be made at monthly intervals until the individual target haemoglobin concentration is obtained

continued →

**Symptomatic anaemia associated with chronic kidney disease in patients not on dialysis and not currently treated with erythropoietins**

## ▶ INITIALLY BY SUBCUTANEOUS INJECTION

- ▶ **Adult:** Initially 1.2 micrograms/kg every month, alternatively (by subcutaneous injection or by intravenous injection) initially 600 nanograms/kg every 2 weeks, subcutaneous route preferred in patients not on haemodialysis, dose to be adjusted according to response at intervals of at least 1 month, patients treated once every 2 weeks may be given a maintenance dose of double the previous fortnightly dose once a month if haemoglobin concentration is above 10 g/100 mL, reduce dose by approximately 25% if rate of rise in haemoglobin concentration exceeds 2 g/100 mL in 1 month or if haemoglobin concentration is increasing or approaching 12 g/100 mL; if haemoglobin concentration continues to rise, despite dose reduction, suspend treatment until haemoglobin concentration decreases and then restart at a dose approximately 25% lower than the previous dose, dose may be increased by approximately 25% if the rate of rise in haemoglobin concentration is less than 1 g/100 mL over 1 month; further increases of approximately 25% may be made at monthly intervals until the individual target haemoglobin concentration is obtained

**Symptomatic anaemia associated with chronic kidney disease in patients currently treated with erythropoietins**

## ▶ BY SUBCUTANEOUS INJECTION, OR BY INTRAVENOUS INJECTION

- ▶ **Adult:** (consult product literature)

**IMPORTANT SAFETY INFORMATION****MHRA/CHM ADVICE: RECOMBINANT HUMAN ERYTHROPOIETINS: VERY RARE RISK OF SEVERE CUTANEOUS ADVERSE REACTIONS (UPDATED JANUARY 2018)**

The MHRA is aware of very rare cases of severe cutaneous adverse reactions, including Stevens-Johnson syndrome and toxic epidermal necrolysis, in patients treated with erythropoietins; some cases were fatal. More severe cases were recorded with long-acting agents (darbepoetin alfa and methoxy polyethylene glycol-epoetin beta).

Patients and their carers should be advised of the signs and symptoms of severe skin reactions when starting treatment and instructed to stop treatment and seek immediate medical attention if they develop widespread rash and blistering; these rashes often follow fever or flu-like symptoms—discontinue treatment permanently if such reactions occur.

**MHRA/CHM ADVICE (DECEMBER 2007) ERYTHROPOIETINS—HAEMOGLOBIN CONCENTRATION**

Overcorrection of haemoglobin concentration in patients with chronic kidney disease may increase the risk of death and serious cardiovascular events, and in patients with cancer may increase the risk of thrombosis and related complications:

- patients should not be treated with erythropoietins for the licensed indications in chronic kidney disease or cancer in patients receiving chemotherapy *unless* symptoms of anaemia are present
- the haemoglobin concentration should be maintained within the range 10–12 g/100 mL
- haemoglobin concentrations higher than 12 g/100 mL should be avoided
- the aim of treatment is to relieve symptoms of anaemia, and in patients with chronic kidney disease to avoid the need for blood transfusion; the haemoglobin concentration should not be increased beyond that which provides adequate control of

symptoms of anaemia (in some patients, this may be achieved at concentrations lower than the recommended range)

- **CONTRA-INDICATIONS** Pure red cell aplasia following erythropoietin therapy · uncontrolled hypertension
- **CAUTIONS** Bone marrow fibrosis (can impair the response to erythropoietin) · concurrent infection (can impair the response to erythropoietin) · haematological disease (can impair the response to erythropoietin) · haemolysis (can impair the response to erythropoietin) · inflammatory or traumatic episodes (can impair the response to erythropoietin) · malignant disease · occult blood loss (can impair the response to erythropoietin) · severe aluminium toxicity (can impair the response to erythropoietin)
- **INTERACTIONS** → Appendix 1: methoxy polyethylene glycol-epoetin beta
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Hypertension (dose-dependent)
  - ▶ **Uncommon** Embolism and thrombosis · headache
  - ▶ **Rare or very rare** Hot flush · hypertensive encephalopathy · rash maculopapular
  - ▶ **Frequency not known** Pure red cell aplasia (discontinue) · severe cutaneous adverse reactions (SCARs) · thrombocytopenia
- **PREGNANCY** No evidence of harm in *animal* studies—manufacturer advises caution.
- **BREAST FEEDING** Manufacturer advises use only if potential benefit outweighs risk—present in milk in *animal* studies.
- **RENAL IMPAIRMENT** Manufacturer advises caution with escalation of doses in chronic renal failure.
- **MONITORING REQUIREMENTS**
  - ▶ Manufacturer advises monitor haemoglobin concentration every 2 weeks until stabilised and periodically thereafter—if patient fails to respond, check reticulocyte count, and search for causative factors such as deficiencies of iron, folic acid or vitamin B12, and correct if necessary. Monitor iron status before and during treatment.
  - ▶ Manufacturer advises monitor blood pressure before and during treatment—if inadequately controlled, reduce dose or discontinue treatment.
- **PRESCRIBING AND DISPENSING INFORMATION** Methoxy polyethylene glycol-epoetin beta is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1.
 

The manufacturer of *Mircera*<sup>®</sup> has provided a *Physician's Guide* which includes important safety information to minimise the risk of pure red cell aplasia.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.
 

**Solution for injection**

  - ▶ *Mircera* (Roche Products Ltd)

**Methoxy polyethylene glycol-epoetin beta 833.333 microgram per 1 ml** Mircera 250micrograms/0.3ml solution for injection pre-filled syringes | 1 pre-filled disposable injection **[PoM]** £367.03 DT = £367.03

## HYPOXIA-INDUCIBLE FACTOR PROLYL HYDROXYLASE INHIBITORS

### Roxadustat

06-Oct-2021

- **DRUG ACTION** Roxadustat is a hypoxia-inducible factor, prolyl hydroxylase inhibitor (HIF-PHI), which stimulates a coordinated erythropoietic response, thereby increasing haemoglobin production and improving iron bioavailability.

#### • INDICATIONS AND DOSE

**Symptomatic anaemia associated with chronic kidney disease in patients not currently treated with an erythropoiesis-stimulating agent (initiated by a specialist)**

► BY MOUTH

- **Adult (body-weight up to 100 kg):** Initially 70 mg 3 times a week, adjusted according to response; usual maintenance 20–400 mg 3 times a week, doses should not be taken on consecutive days, dose adjusted at intervals of 4 weeks to achieve haemoglobin concentration of 10 to 12 g/dL. For dose adjustments and maximum recommended dose—consult product literature, consider discontinuation of treatment if adequate increase in haemoglobin concentration not achieved in 24 weeks
- **Adult (body-weight 100 kg and above):** Initially 100 mg 3 times a week, adjusted according to response; usual maintenance 20–400 mg 3 times a week, doses should not be taken on consecutive days, dose adjusted at intervals of 4 weeks to achieve haemoglobin concentration of 10 to 12 g/dL. For dose adjustments and maximum recommended dose—consult product literature, consider discontinuation of treatment if adequate increase in haemoglobin concentration not achieved in 24 weeks

**Symptomatic anaemia associated with chronic kidney disease in patients currently treated with an erythropoiesis-stimulating agent (initiated by a specialist)**

► BY MOUTH

► **Adult:** (consult product literature)

- **CAUTIONS** Active infection · history of seizures, epilepsy and other medical conditions associated with a predisposition to seizures · risk factors for venous thromboembolism
- **INTERACTIONS** → Appendix 1: roxadustat
- **SIDE-EFFECTS**
- **Common or very common** Constipation · diarrhoea · embolism and thrombosis · headache · hyperkalaemia · hypertension · insomnia · nausea · peripheral oedema · seizure · sepsis · vomiting
- **Uncommon** Hyperbilirubinaemia
- **Frequency not known** Increased risk of infection

- **CONCEPTION AND CONTRACEPTION** **[EvGr]** Females of childbearing potential should use highly effective contraception during treatment and for at least 1 week after last treatment. **[M]**
- **PREGNANCY** **[EvGr]** Avoid—toxicity in *animal* studies. **[M]**
- **BREAST FEEDING** **[EvGr]** Avoid—present in milk in *animal* studies. **[M]**
- **HEPATIC IMPAIRMENT** **[EvGr]** Caution in moderate impairment; avoid in severe impairment (no information available). **[M]**  
**Dose adjustments** **[EvGr]** Use half the normal starting dose in moderate impairment. **[M]**
- **PRE-TREATMENT SCREENING** **[EvGr]** Ensure adequate iron stores before treatment. **[M]**
- **MONITORING REQUIREMENTS** **[EvGr]** Monitor haemoglobin concentration every 2 weeks until the desired haemoglobin concentration is achieved and stabilised, then every 4 weeks thereafter or as clinically indicated. **[M]**
- **PATIENT AND CARER ADVICE** Patients and their carers should be advised to seek medical attention if symptoms of infection or venous thromboembolism develop during treatment.  
**Missed doses** If a dose is missed, it should be administered as soon as possible only if there is more than 1 day until the next scheduled dose; if one day or less remains before the next scheduled dose, the missed dose should not be taken and the next dose should be taken on the next scheduled day.  
**Driving and skilled tasks** Patients and carers should be cautioned on the effects on driving and performance of skilled tasks—increased risk of seizures.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

## 1.1a Atypical haemolytic uraemic syndrome and paroxysmal nocturnal haemoglobinuria

### IMMUNOSUPPRESSANTS > IMMUNOMODULATING DRUGS

#### Pegcetacoplan

31-Mar-2022

- **DRUG ACTION** Pegcetacoplan is a pegylated peptide molecule, which binds to C3 and C3b complement proteins, thereby inhibiting the complement cascade that leads to haemolysis.

#### • INDICATIONS AND DOSE

**Paroxysmal nocturnal haemoglobinuria (initiated by a specialist)**

► BY SUBCUTANEOUS INFUSION

- **Adult:** 1080 mg twice weekly, administer on day 1 and day 4 of each treatment week, continue current dose of C5 inhibitor for the first 4 weeks of treatment, for dose adjustments due to lactate dehydrogenase levels—consult product literature

- **CONTRA-INDICATIONS** Patients unvaccinated against *Neisseria meningitidis*, *Streptococcus pneumoniae*, and *Haemophilus influenzae* · unresolved infection caused by encapsulated bacteria (including *Neisseria meningitidis*, *Streptococcus pneumoniae*, and *Haemophilus influenzae*)
- **CONTRA-INDICATIONS, FURTHER INFORMATION**
- ▶ Vaccination against serious infection [EvGr] To reduce the risk of serious infection, it is advised that patients are vaccinated against *Neisseria meningitidis*, *Streptococcus pneumoniae*, and *Haemophilus influenzae* according to local guidelines, at least 2 weeks, but no longer than 2 years, prior to starting treatment, unless the risk of delaying treatment outweighs the risk of developing an infection. If immediate treatment is needed, administer the required vaccines as soon as possible; treat with prophylactic antibiotics until 2 weeks after vaccination. ⚡
- **SIDE-EFFECTS**
- ▶ **Common or very common** Asthenia · diarrhoea · dizziness · epistaxis · fever · gastrointestinal discomfort · headache · increased risk of infection · myalgia · nausea · pain · sepsis · skin reactions · thrombocytopenia
- **CONCEPTION AND CONTRACEPTION** [EvGr] Females of childbearing potential should use effective contraception during and for at least 8 weeks after treatment. ⚡
- **PREGNANCY** [EvGr] Avoid—toxicity in *animal studies*. ⚡
- **BREAST FEEDING** [EvGr] Avoid—no information available. ⚡
- **MONITORING REQUIREMENTS**
- ▶ [EvGr] Monitor for early signs of infection caused by encapsulated bacteria (including *Neisseria meningitidis*, *Streptococcus pneumoniae*, and *Haemophilus influenzae*).
- ▶ Monitor for signs and symptoms of haemolysis including lactate dehydrogenase levels during treatment, and for at least 8 weeks after treatment discontinuation—consult product literature.
- ▶ Regularly monitor renal function (risk of polyethylene glycol (PEG) accumulation in kidneys). ⚡
- **EFFECT ON LABORATORY TESTS** [EvGr] Pegcetacoplan may interfere with silica reagents in coagulation panels, resulting in artificially prolonged activated partial thromboplastin time (aPTT). ⚡
- **TREATMENT CESSATION** Slow weaning and alternative therapy should be considered if treatment is to be discontinued due to the risk of serious intravascular haemolysis—consult product literature. Patients must be closely monitored for at least 8 weeks after treatment discontinuation.
- **DIRECTIONS FOR ADMINISTRATION** For *subcutaneous infusion*, administer into the abdomen, thighs, hips or upper arms over approximately 30 minutes if using two sites (ensuring sites are at least 7.5 cm apart), or approximately 60 minutes if using one site; rotate infusion sites. Patients may self-administer *Aspaveli*®, after appropriate training in subcutaneous infusion technique.
- **PRESCRIBING AND DISPENSING INFORMATION** The manufacturer of *Aspaveli*® has provided a *Guide for Healthcare Professionals*.
- **HANDLING AND STORAGE** Store in a refrigerator (2–8 °C) and protect from light.
- **PATIENT AND CARER ADVICE** If appropriate, patients and carers should be given training on how to administer pegcetacoplan subcutaneous infusion. Patients and carers should be informed of the signs and symptoms of serious infection and advised to seek immediate medical care if they occur.  
Patient card and guide A patient card and guide for patients and caregivers should be provided.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website

**NICE decisions**

- ▶ Pegcetacoplan for treating paroxysmal nocturnal haemoglobinuria (March 2022) NICE TA778 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**IMMUNOSUPPRESSANTS > MONOCLONAL ANTIBODIES****Eculizumab**

10-Feb-2022

- **DRUG ACTION** Eculizumab is a recombinant monoclonal antibody that inhibits terminal complement activation at the C5 protein and thereby reduces complement-mediated cell damage.

**INDICATIONS AND DOSE****Paroxysmal nocturnal haemoglobinuria (under expert supervision)**

- ▶ BY INTRAVENOUS INFUSION
- ▶ **Adult:** Initially 600 mg once weekly for 4 weeks, then increased to 900 mg once weekly for 1 week, followed by maintenance 900 mg every 12–16 days

**Atypical haemolytic uraemic syndrome (under expert supervision)**

- ▶ BY INTRAVENOUS INFUSION
- ▶ **Adult:** Initially 900 mg once weekly for 4 weeks, then increased to 1.2 g once weekly for 1 week, followed by maintenance 1.2 g every 12–16 days

**Myasthenia gravis (under expert supervision)**

- ▶ BY INTRAVENOUS INFUSION
- ▶ **Adult:** Initially 900 mg once weekly for 4 weeks, then increased to 1.2 g once weekly for 1 week, followed by maintenance 1.2 g every 12–16 days, consider discontinuation if no response within 12 weeks after initial infusion

**Neuromyelitis optica spectrum disorder (under expert supervision)**

- ▶ BY INTRAVENOUS INFUSION
- ▶ **Adult:** Initially 900 mg once weekly for 4 weeks, then increased to 1.2 g once weekly for 1 week, followed by maintenance 1.2 g every 12–16 days

- **CONTRA-INDICATIONS** Patients unvaccinated against *Neisseria meningitidis* · unresolved *Neisseria meningitidis* infection
- **CAUTIONS** Active systemic infection
- **CAUTIONS, FURTHER INFORMATION**
- ▶ Meningococcal infection Manufacturer advises vaccinate against *Neisseria meningitidis* at least 2 weeks before treatment (vaccines against serotypes A, C, Y, W135 and B where available, are recommended); revaccinate according to current medical guidelines. Patients receiving eculizumab less than 2 weeks after receiving meningococcal vaccine must be given prophylactic antibiotics until 2 weeks after vaccination. Advise patient to report promptly any signs of meningococcal infection. Other immunisations should also be up to date.
- **INTERACTIONS** → Appendix 1: monoclonal antibodies
- **SIDE-EFFECTS**
- ▶ **Common or very common** Alopecia · asthenia · cough · decreased leucocytes · diarrhoea · dizziness · fever · gastrointestinal discomfort · headache · hypertension · increased risk of infection · influenza like illness · joint disorders · muscle complaints · nausea · oropharyngeal

pain · skin reactions · sleep disorders · taste altered · vomiting

- ▶ **Uncommon** Abscess · anxiety · appetite decreased · chest discomfort · chills · constipation · cystitis · depression · dysuria · haemorrhage · hepatosplenic abscess · hot flush · hyperhidrosis · hypersensitivity · hypotension · infusion related reaction · limb abscess · meningitis meningococcal · mood swings · nasal complaints · oedema · pain · palpitations · paraesthesia · renal abscess · sepsis · spontaneous penile erection · throat irritation · tinnitus · tremor · vascular disorders · vertigo · vision blurred
- ▶ **Rare or very rare** Abnormal clotting factor · conjunctival irritation · feeling hot · gastroesophageal reflux disease · gingival discomfort · Grave's disease · jaundice · malignant melanoma · menstrual disorder · syncope · urogenital tract gonococcal infection
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during and for 5 months after treatment.
- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk—limited information available. Eculizumab is an immunoglobulin G (IgG) monoclonal antibody; human IgG antibodies are known to cross the placenta.
- **BREAST FEEDING** Manufacturer advises use with caution—limited information available; unlikely to be present in milk.
- **MONITORING REQUIREMENTS**
  - ▶ Monitor for 1 hour after infusion.
  - ▶ For *paroxysmal nocturnal haemoglobinuria*, monitor for intravascular haemolysis (including serum-lactate dehydrogenase concentration) during treatment and for at least 8 weeks after discontinuation.
  - ▶ For *atypical haemolytic uraemic syndrome*, monitor for thrombotic microangiopathy (measure platelet count, serum-lactate dehydrogenase concentration, and serum creatinine) during treatment and for at least 12 weeks after discontinuation.
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion* (*Soliris*®), manufacturer advises give intermittently in Glucose 5% or Sodium chloride 0.9%. Dilute requisite dose to a concentration of 5 mg/mL and mix gently; give over 25–45 minutes (infusion time may be increased to 2 hours if infusion-related reactions occur).
- **PRESCRIBING AND DISPENSING INFORMATION** Eculizumab is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1.
 

Consult product literature for details of supplemental doses with concomitant plasmapheresis, plasma exchange, or plasma infusion.

The manufacturer of *Soliris*® has provided a *Physician's guide* and user manual for healthcare professionals.
- **HANDLING AND STORAGE** Store in a refrigerator (2–8°C) and protect from light—consult product literature for further information regarding storage outside refrigerator.
- **PATIENT AND CARER ADVICE** Patients or carers should be advised to report promptly any signs of meningococcal infection. Advice about prevention of gonorrhoea should also be given.
 

A patient information card and a patient safety card should be provided.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
- **NICE decisions**
  - ▶ Eculizumab for treating atypical haemolytic uraemic syndrome (January 2015) NICE HS11 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for infusion

EXCIPIENTS: May contain Polysorbates

ELECTROLYTES: May contain Sodium

▶ **Soliris** (Alexion Pharma UK Ltd)

Eculizumab 10 mg per 1 ml Soliris 300mg/30ml concentrate for solution for infusion vials | 1 vial [PoM] £3,150.00 (Hospital only)

## Ravulizumab

17-May-2022

- **DRUG ACTION** Ravulizumab is a recombinant monoclonal antibody that inhibits terminal complement activation at the C5 protein, thereby reducing haemolysis and thrombotic microangiopathy.

#### ● INDICATIONS AND DOSE

**Atypical haemolytic uraemic syndrome (under expert supervision) | Paroxysmal nocturnal haemoglobinuria (under expert supervision)**

▶ BY INTRAVENOUS INFUSION

- ▶ Adult (body-weight 40–59 kg): Loading dose 2.4 g for 1 dose, then maintenance 3 g every 8 weeks, start maintenance dosing 2 weeks after the loading dose, a maintenance dose (except for the first maintenance dose) may be given up to 7 days before or after the scheduled date; the subsequent dose should be given according to the original schedule, for duration of infusion—consult product literature
- ▶ Adult (body-weight 60–99 kg): Loading dose 2.7 g for 1 dose, then maintenance 3.3 g every 8 weeks, start maintenance dosing 2 weeks after the loading dose, a maintenance dose (except for the first maintenance dose) may be given up to 7 days before or after the scheduled date; the subsequent dose should be given according to the original schedule, for duration of infusion—consult product literature
- ▶ Adult (body-weight 100 kg and above): Loading dose 3 g for 1 dose, then maintenance 3.6 g every 8 weeks, start maintenance dosing 2 weeks after the loading dose, a maintenance dose (except for the first maintenance dose) may be given up to 7 days before or after the scheduled date; the subsequent dose should be given according to the original schedule, for duration of infusion—consult product literature

#### DOSE EQUIVALENCE AND CONVERSION

- ▶ For patients switching from eculizumab to ravulizumab, the initial loading dose of ravulizumab should be administered 2 weeks after the last eculizumab infusion.

- **CONTRA-INDICATIONS** Patients unvaccinated against *Neisseria meningitidis* · unresolved *Neisseria meningitidis* infection
- **CAUTIONS** Active systemic infection
- **CAUTIONS, FURTHER INFORMATION**
  - ▶ Meningococcal infection [EVGr] Vaccinate against *Neisseria meningitidis* at least 2 weeks before treatment (vaccines against serotypes A, C, Y, W135 and B where available, are recommended); revaccinate according to current medical guidelines. Patients receiving ravulizumab less than 2 weeks after receiving meningococcal vaccine must be given prophylactic antibiotics until 2 weeks after vaccination. Other immunisations should also be up to date for all age groups. ⚠
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Arthralgia · asthenia · back pain · diarrhoea · dizziness · fever · gastrointestinal discomfort · headache · increased risk of infection · influenza like illness · infusion related reaction · muscle complaints · nausea · skin reactions · vomiting
  - ▶ **Uncommon** Chills · hypersensitivity · meningococcal sepsis

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during and for up to 8 months after treatment.
- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk—no information available. Ravulizumab is an immunoglobulin G (IgG) monoclonal antibody; human IgG antibodies are known to cross the placenta.
- **BREAST FEEDING** Manufacturer advises avoid breast-feeding during and for up to 8 months after treatment—no information available.
- **MONITORING REQUIREMENTS**
  - ▶ When used for paroxysmal nocturnal haemoglobinuria [EvGr](#) Monitor for intravascular haemolysis (including serum-lactate dehydrogenase concentration) for at least 16 weeks after stopping treatment; consider restarting ravulizumab if haemolysis occurs. [M](#)
  - ▶ When used for atypical haemolytic uraemic syndrome [EvGr](#) Monitor for thrombotic microangiopathy (measure platelet count, serum-lactate dehydrogenase concentration, and serum creatinine) after stopping treatment; consider restarting ravulizumab if thrombotic microangiopathy occurs. [M](#)
- **DIRECTIONS FOR ADMINISTRATION** [EvGr](#) For intravenous infusion using *Ultomiris*® 300 mg/3 mL, 1100 mg/11 mL concentrate for infusion, give intermittently in Sodium Chloride 0.9%. Dilute requisite dose with infusion fluid to a final concentration of 50 mg/mL and administer through an in-line filter (0.2 micron). For intravenous infusion using *Ultomiris*® 300 mg/30 mL concentrate for infusion, give intermittently in Sodium Chloride 0.9%. Dilute requisite dose with infusion fluid to a final concentration of 5 mg/mL and administer through an in-line filter (0.2 micron). [M](#)
- **PRESCRIBING AND DISPENSING INFORMATION** Ravulizumab is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1; record the brand name and batch number after each administration.
 

The manufacturer of *Ultomiris*® has provided a *Physician's guide* for healthcare professionals.
- **HANDLING AND STORAGE** Store in a refrigerator (2–8°C) and protect from light—consult product literature for further information regarding storage outside refrigerator.
- **PATIENT AND CARER ADVICE** Patients or carers should be advised to report promptly any signs of meningococcal infection. Advice about prevention of gonorrhoea should also be given.
 

A patient information card and a patient safety card should be provided.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
- **NICE decisions**
  - ▶ Ravulizumab for treating paroxysmal nocturnal haemoglobinuria (May 2021) NICE TA698 Recommended
  - ▶ Ravulizumab for treating atypical haemolytic uraemic syndrome (June 2021) NICE TA710 Recommended
- **Scottish Medicines Consortium (SMC) decisions**
  - ▶ Ravulizumab (*Ultomiris*®) for the treatment of adult patients with paroxysmal nocturnal haemoglobinuria (February 2021) SMC No. SMC2305 Recommended with restrictions
  - ▶ Ravulizumab (*Ultomiris*®) for the treatment of patients with a body weight of 10 kg or above with atypical haemolytic uraemic syndrome who are complement inhibitor treatment-naïve or have received eculizumab for at least 3 months and have evidence of response to eculizumab (May 2021) SMC No. SMC2330 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for infusion**

EXCIPIENTS: May contain Polysorbates

ELECTROLYTES: May contain Sodium

## 1.1b Sickle-cell disease

**Other drugs used for Sickle-cell disease**

Hydroxycarbamide, p. 1008

**P-SELECTIN INHIBITORS****Crizanlizumab**

17-Nov-2021

- **DRUG ACTION** Crizanlizumab is a humanised monoclonal antibody that binds to P-selectin and blocks the interaction between endothelial cells, leucocytes, platelets, and red blood cells, thereby preventing vaso-occlusion.

**INDICATIONS AND DOSE****Sickle-cell disease [prevention of recurrent vaso-occlusive crises] (initiated by a specialist)**

▶ BY INTRAVENOUS INFUSION

- **Adult:** Initially 5 mg/kg for 1 dose, followed by 5 mg/kg after 2 weeks, then maintenance 5 mg/kg every 4 weeks, if a maintenance dose is late, the missed dose should be given as soon as possible; if this is within 2 weeks of the usual scheduled time then continue with the original schedule. If the dose is more than 2 weeks late, dosing should be continued every 4 weeks thereafter

**SIDE-EFFECTS**

- **Common or very common** Arthralgia · diarrhoea · fever · gastrointestinal discomfort · infusion related reaction · myalgia · nausea · oropharyngeal pain · pain · pruritus · vomiting · vulvovaginal pruritus
- **PREGNANCY** [EvGr](#) Avoid—toxicity in animal studies. [M](#)
- **BREAST FEEDING** Specialist sources indicate use with caution—no information available. Large molecular weight suggests limited excretion into milk; monitor breast-fed infants for adverse reactions such as nausea, back pain, arthralgia and pyrexia.
- **MONITORING REQUIREMENTS** [EvGr](#) Monitor for signs and symptoms of infusion-related reactions—discontinue treatment if severe. [M](#)
- **EFFECT ON LABORATORY TESTS** [EvGr](#) May interfere with automated platelet counts—consult product literature. [M](#)
- **DIRECTIONS FOR ADMINISTRATION** [EvGr](#) For intermittent intravenous infusion (*Adakveo*®), dilute requisite dose up to 100 mL with Glucose 5% or Sodium Chloride 0.9% to give a final concentration of 1–9.6 mg/mL (gently invert to mix, do not shake); give over 30 minutes through a 0.2 micron in-line filter. [M](#)
- **PRESCRIBING AND DISPENSING INFORMATION** Crizanlizumab is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1; record the brand name and batch number after each administration.

- **HANDLING AND STORAGE** Store in a refrigerator (2°C–8°C) and protect from light—consult product literature about storage after preparation of the infusion.
- **PATIENT AND CARER ADVICE**  
**Driving and skilled tasks** Patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of dizziness, fatigue, or somnolence.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website  
**NICE decisions**  
▶ Crizanlizumab for preventing sickle cell crises in sickle cell disease (November 2021) NICE TA743 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for infusion**

EXCIPIENTS: May contain Polysorbates

## 1.2 Iron deficiency anaemia

### Anaemia, iron deficiency

01-Sep-2020

#### Iron deficiency, treatment and prophylaxis

*Treatment* with an iron preparation is justified only in the presence of a demonstrable iron-deficiency state. Before starting treatment, it is important to exclude any serious underlying cause of the anaemia (e.g. gastric erosion, gastrointestinal cancer).

*Prophylaxis* with an iron preparation may be appropriate in malabsorption, menorrhagia, pregnancy, after subtotal or total gastrectomy, in haemodialysis patients, and in the management of low birth-weight infants such as preterm neonates.

For information on oral and intravenous iron use before and after surgery in patients with iron-deficiency anaemia, see NICE guideline: **Blood transfusion** (available from: [www.nice.org.uk/guidance/ng24](http://www.nice.org.uk/guidance/ng24)).

#### Oral iron

Iron salts should be given by mouth unless there are good reasons for using another route.

Ferrous salts show only marginal differences between one another in efficiency of absorption of iron. Haemoglobin regeneration rate is little affected by the type of salt used provided sufficient iron is given, and in most patients the speed of response is not critical. Choice of preparation is thus usually decided by the incidence of side-effects and cost.

The oral dose of elemental iron for iron-deficiency anaemia should be 100 to 200 mg daily. It is customary to give this as dried ferrous sulfate; for prophylaxis of iron-deficiency anaemia, ferrous sulfate may be effective.

Iron content of different iron salts	
Iron salt/amount	Content of ferrous iron
ferrous fumarate 200 mg	65 mg
ferrous gluconate 300 mg	35 mg
ferrous sulfate 300 mg	60 mg
ferrous sulfate, dried 200 mg	65 mg

#### Compound preparations

Preparations containing iron and folic acid p. 1112 are used during pregnancy in women who are at high risk of developing iron and folic acid deficiency; they should be

distinguished from those used for the prevention of neural tube defects in women planning a pregnancy.

It is important to note that the small doses of folic acid contained in these preparations are inadequate for the treatment of megaloblastic anaemias.

Some oral preparations contain ascorbic acid p. 1177 to aid absorption of the iron but the therapeutic advantage of such preparations is minimal and cost may be increased.

There is no justification for the inclusion of other ingredients, such as the **B group of vitamins** (except folic acid for pregnant women).

#### Modified-release preparations

Modified-release preparations of iron are licensed for once-daily dosage, but have no therapeutic advantage and should not be used. These preparations are formulated to release iron gradually; the low incidence of side-effects may reflect the small amounts of iron available for absorption as the iron is carried past the first part of the duodenum into an area of the gut where absorption may be poor.

#### Parenteral iron

Iron can be administered parenterally as iron dextran p. 1109, iron sucrose p. 1109, ferric carboxymaltose p. 1108, or ferric derisomaltose p. 1108. Parenteral iron is generally reserved for use when oral therapy is unsuccessful because the patient cannot tolerate oral iron, or does not take it reliably, or if there is continuing blood loss, or in malabsorption. Parenteral iron may also have a role in the management of chemotherapy-induced anaemia, when given with erythropoietins, in specific patient groups (see NICE guidance).

Many patients with chronic renal failure who are receiving haemodialysis (and some who are receiving peritoneal dialysis) also require iron by the intravenous route on a regular basis.

With the exception of patients with severe renal failure receiving haemodialysis, parenteral iron does not produce a faster haemoglobin response than oral iron provided that the oral iron preparation is taken reliably and is absorbed adequately. Depending on the preparation used, parenteral iron is given as a total dose or in divided doses. Further treatment should be guided by monitoring haemoglobin and serum iron concentrations.

### MINERALS AND TRACE ELEMENTS > IRON, INJECTABLE

## Iron (injectable)

#### IMPORTANT SAFETY INFORMATION

**MHRA/CHM ADVICE: SERIOUS HYPERSENSITIVITY REACTIONS WITH INTRAVENOUS IRON (AUGUST 2013)**

Serious hypersensitivity reactions, including life-threatening and fatal anaphylactic reactions, have been reported in patients receiving intravenous iron. These reactions can occur even when a previous administration has been tolerated (including a negative test dose). Test doses are no longer recommended and caution is needed with every dose of intravenous iron.

Intravenous iron products should only be administered when appropriately trained staff and resuscitation facilities are immediately available; patients should be closely monitored for signs of hypersensitivity during and for at least 30 minutes after every administration. In the event of a hypersensitivity reaction, treatment should be stopped immediately and appropriate management initiated.

The risk of hypersensitivity is increased in patients with known allergies, immune or inflammatory conditions, or those with a history of severe asthma, eczema, or other atopic allergy; in these patients,

intravenous iron should only be used if the benefits outweigh the risks.

Intravenous iron should be avoided in the first trimester of pregnancy and used in the second or third trimesters only if the benefit outweighs the potential risks for both mother and fetus.

- **CONTRA-INDICATIONS** Disturbances in utilisation of iron · iron overload
- **CAUTIONS** Allergic disorders · eczema · hepatic dysfunction · immune conditions · infection (discontinue if ongoing bacteraemia) · inflammatory conditions · oral iron should not be given until 5 days after the last injection · severe asthma
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Dizziness · flushing · headache · hypertension · hypophosphataemia · hypotension · nausea · skin reactions · taste altered
  - ▶ **Uncommon** Arrhythmias · arthralgia · bronchospasm · chest pain · chills · constipation · diarrhoea · dyspnoea · fatigue · fever · gastrointestinal discomfort · hyperhidrosis · hypersensitivity · loss of consciousness · muscle complaints · pain · peripheral oedema · sensation abnormal · vision blurred · vomiting
  - ▶ **Rare or very rare** Angioedema · anxiety · circulatory collapse · influenza like illness · malaise · pallor · palpitations · psychiatric disorder · seizure · syncope · tremor
  - ▶ **Frequency not known** Kounis syndrome
- **SIDE-EFFECTS, FURTHER INFORMATION** Anaphylactic reactions can occur with parenteral administration of iron complexes and facilities for cardiopulmonary resuscitation must be available.

**Overdose** For details on the management of poisoning, see Iron salts, under Emergency treatment of poisoning p. 1473.

- **PREGNANCY** Monitoring in pregnancy [EvGr](#) Fetal monitoring is recommended during administration due to the risk of fetal bradycardia. [⚠](#)

## Ferric carboxymaltose

27-Nov-2020

### ● INDICATIONS AND DOSE

#### Iron-deficiency anaemia

- ▶ BY SLOW INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION
- ▶ **Adult:** Dose calculated according to body-weight and iron deficit (consult product literature)

### IMPORTANT SAFETY INFORMATION

**MHRA/CHM ADVICE: FERRIC CARBOXYMALTOSIDE (FERINJECT®): RISK OF SYMPTOMATIC HYPOPHOSPHATAEMIA LEADING TO OSTEOMALACIA AND FRACTURES (NOVEMBER 2020)**

A European review of worldwide data concluded that ferric carboxymaltose is associated with hypophosphataemia, resulting in hypophosphataemic osteomalacia and fractures, particularly in patients with existing risk factors and following prolonged exposure to high doses—some cases required clinical intervention, including surgery. The risk of persistent hypophosphatemia and osteomalacia may be higher with ferric carboxymaltose than with other intravenous iron formulations.

Healthcare professionals are advised to monitor serum phosphate levels in patients requiring multiple high-dose administrations, on long-term treatment, or with pre-existing risk factors for hypophosphataemia. Patients experiencing symptoms of hypophosphataemia (including new musculoskeletal symptoms or worsening

tiredness) should seek medical advice—be aware that these symptoms may be confused with those of iron deficiency anaemia. If hypophosphataemia persists, ferric carboxymaltose treatment should be re-evaluated.

- **INTERACTIONS** → Appendix 1: iron
- **SIDE-EFFECTS**
  - ▶ **Rare or very rare** Face oedema · flatulence
- **PREGNANCY** Avoid in first trimester; crosses the placenta in animal studies. May influence skeletal development.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution—monitor iron status to avoid iron overload; avoid where iron overload increases risk of impairment (particularly porphyria cutanea tarda).
- **DIRECTIONS FOR ADMINISTRATION** For intravenous infusion (Ferinject®), manufacturer advises give intermittently in Sodium chloride 0.9%, dilute 200–500 mg in up to 100 mL infusion fluid and give over at least 6 minutes; dilute 0.5–1 g in up to 250 mL infusion fluid and give over at least 15 minutes.
- **PRESCRIBING AND DISPENSING INFORMATION** A ferric carboxymaltose complex containing 5% (50 mg/mL) of iron.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

29-Nov-2019

## Iron sucrose

### ● INDICATIONS AND DOSE

#### Iron-deficiency anaemia

- ▶ **BY SLOW INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION**
- ▶ **Adult:** Doses calculated according to body-weight and iron deficit (consult product literature)

- **INTERACTIONS** → Appendix 1: iron

#### ● SIDE-EFFECTS

- ▶ **Uncommon** Asthenia
- ▶ **Rare or very rare** Drowsiness · urine discolouration
- ▶ **Frequency not known** Cold sweat · confusion · level of consciousness decreased · thrombophlebitis

- **PREGNANCY** Avoid in first trimester.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution—monitor iron status to avoid iron overload; avoid where

iron overload is a precipitating factor (particularly porphyria cutanea tarda).

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises for *intermittent intravenous infusion (Venofer<sup>®</sup>)*, dilute to a concentration of 1 mg/mL with Sodium Chloride 0.9%; give at a rate not exceeding 6.67 mg/minute (consult product literature). Manufacturer advises for *slow intravenous injection (Venofer<sup>®</sup>)*, give undiluted at a rate of 1 mL/minute; do not exceed 10 mL (200 mg iron) per injection.

- **PRESCRIBING AND DISPENSING INFORMATION** A complex of ferric hydroxide with sucrose containing 2% (20 mg/mL) of iron.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Venofer** (Vifor Pharma UK Ltd, Imported (United States)) ▼  
**Iron (as iron sucrose) 20 mg per 1 ml** Venofer 100mg/5ml solution for injection vials | 5 vial [PoM](#) £51.20 DT = £51.20  
 Venofer 50mg/2.5ml solution for injection vials | 5 vial [PoM](#) [X](#)

## MINERALS AND TRACE ELEMENTS > IRON, ORAL

## Iron (oral)

- **CAUTIONS** High doses in elderly

#### CAUTIONS, FURTHER INFORMATION

- ▶ **Elderly** Prescription potentially inappropriate (STOPP criteria) at oral doses greater than 200 mg elemental iron daily (no evidence of enhanced iron absorption above these doses). See also Prescribing in the elderly p. 29.

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Constipation · diarrhoea · gastrointestinal discomfort · nausea
- ▶ **Uncommon** Vomiting
- ▶ **Frequency not known** Appetite decreased · gastrointestinal disorders

#### SIDE-EFFECTS, FURTHER INFORMATION

Iron can be constipating and occasionally lead to faecal impaction. Oral iron, particularly modified-release preparations, can exacerbate diarrhoea in patients with inflammatory bowel disease; care is also needed in patients with intestinal strictures and diverticular disease.

**Overdose** For details on the management of poisoning, see Iron salts, under Emergency treatment of poisoning p. 1473.

#### ● MONITORING REQUIREMENTS

- ▶ **Therapeutic response** The haemoglobin concentration should rise by about 100–200 mg/100 mL (1–2 g/litre) per day or 2 g/100 mL (20 g/litre) over 3–4 weeks. When the haemoglobin is in the normal range, treatment should be continued for a further 3 months to replenish the iron stores. Epithelial tissue changes such as atrophic glossitis and koilonychia are usually improved, but the response is often slow.

#### ● PRESCRIBING AND DISPENSING INFORMATION

- ▶ In children Express the dose in terms of elemental iron and iron salt and select the most appropriate preparation; specify both the iron salt and formulation on the prescription. The iron content of artificial formula feeds should also be considered. The most common reason for lack of response in children is poor compliance; poor absorption is rare in children.

- **PATIENT AND CARER ADVICE** Although iron preparations are best absorbed on an empty stomach they can be taken after food to reduce gastro-intestinal side-effects. May discolour stools.

F 1109

20-Nov-2020

## Ferric maltol

### ● INDICATIONS AND DOSE

#### Iron-deficiency anaemia

##### ► BY MOUTH

- Adult: 30 mg twice daily continued until iron stores are replenished; usual duration at least 12 weeks

- **CONTRA-INDICATIONS** Exacerbation of inflammatory bowel disease · haemochromatosis · inflammatory bowel disease with haemoglobin less than 9.5 g/dL · iron overload syndromes · repeated blood transfusions

- **INTERACTIONS** → Appendix 1: iron

### ● SIDE-EFFECTS

- **Uncommon** Headache · joint stiffness · pain in extremity · skin reactions · small intestinal bacterial overgrowth · thirst

### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### Scottish Medicines Consortium (SMC) decisions

- Ferric maltol (*Feraccru*<sup>®</sup>) for the treatment of iron deficiency anaemia in adults with inflammatory bowel disease (December 2016) SMC No. 1202/16 Not recommended

#### All Wales Medicines Strategy Group (AWMSG) decisions

- Ferric maltol (*Feraccru*<sup>®</sup>) for the treatment of iron deficiency anaemia in adults with inflammatory bowel disease (January 2017) AWMSG No. 2631 Not recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Capsule

## Ferrous fumarate

### ● INDICATIONS AND DOSE

#### Iron-deficiency anaemia (prophylactic)

##### ► BY MOUTH USING TABLETS

- Child 12-17 years: 210 mg 1-2 times a day
- Adult: 210 mg 1-2 times a day

##### ► BY MOUTH USING SYRUP

- Child 12-17 years: 140 mg twice daily
- Adult: 140 mg twice daily

#### Iron-deficiency anaemia (therapeutic)

##### ► BY MOUTH USING TABLETS

- Child 12-17 years: 210 mg 2-3 times a day
- Adult: 210 mg 2-3 times a day

##### ► BY MOUTH USING SYRUP

- Child 12-17 years: 280 mg twice daily
- Adult: 280 mg twice daily

#### GALFER<sup>®</sup> CAPSULES

#### Iron-deficiency anaemia (prophylactic)

##### ► BY MOUTH

- Child 12-17 years: 305 mg daily
- Adult: 305 mg daily

#### Iron-deficiency anaemia (therapeutic)

##### ► BY MOUTH

- Child 12-17 years: 305 mg twice daily
- Adult: 305 mg twice daily

#### GALFER<sup>®</sup> SYRUP

#### Iron-deficiency anaemia (prophylaxis)

##### ► BY MOUTH

- Child 1 month-11 years: 0.25 mL/kg twice daily, the total daily dose may alternatively be given in 3 divided doses, prophylactic iron supplementation

may be required in babies of low birth-weight who are solely breast-fed; supplementation is started 4-6 weeks after birth and continued until mixed feeding is established; maximum 20 mL per day

- Child 12-17 years: 10 mL once daily

- Adult: 10 mL once daily

#### Iron-deficiency anaemia (therapeutic)

##### ► BY MOUTH

- Child 1 month-11 years: 0.25 mL/kg twice daily, the total daily dose may alternatively be given in 3 divided doses; maximum 20 mL per day

- Child 12-17 years: 10 mL 1-2 times a day

- Adult: 10 mL 1-2 times a day

- **INTERACTIONS** → Appendix 1: iron

- **SIDE-EFFECTS** Haemosiderosis

- **PRESCRIBING AND DISPENSING INFORMATION** Non-proprietary ferrous fumarate tablets may contain 210 mg (68 mg iron), syrup may contain approx. 140 mg (45 mg iron)/5 mL; *Galfer*<sup>®</sup> capsules contain ferrous fumarate 305 mg (100 mg iron).

## Ferrous gluconate

10-Nov-2021

### ● INDICATIONS AND DOSE

#### Prophylaxis of iron-deficiency anaemia

- ▶ BY MOUTH USING TABLETS
- ▶ Child 6–11 years: 300–900 mg daily
- ▶ Child 12–17 years: 600 mg daily
- ▶ Adult: 600 mg daily

#### Treatment of iron-deficiency anaemia

- ▶ BY MOUTH USING TABLETS
- ▶ Child 6–11 years: 300–900 mg daily
- ▶ Child 12–17 years: 1.2–1.8 g daily in divided doses
- ▶ Adult: 1.2–1.8 g daily in divided doses

- **INTERACTIONS** → Appendix 1: iron
- **PRESCRIBING AND DISPENSING INFORMATION** Ferrous gluconate 300 mg contains 35 mg iron.
- **PATIENT AND CARER ADVICE** Medicines for Children leaflet: Ferrous gluconate for iron-deficiency anaemia [www.medicinesforchildren.org.uk/medicines/ferrous-gluconate-for-iron-deficiency-anaemia/](http://www.medicinesforchildren.org.uk/medicines/ferrous-gluconate-for-iron-deficiency-anaemia/)

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Tablet

- ▶ **Ferrous gluconate (Non-proprietary)**  
Ferrous gluconate 300 mg Ferrous gluconate 300mg tablets | 28 tablet [P] £3.35 DT = £0.92 | 1000 tablet [P] £31.07-£119.64

F 1109

## Ferrous sulfate

10-Nov-2021

### ● INDICATIONS AND DOSE

#### Iron-deficiency anaemia (prophylactic)

- ▶ BY MOUTH USING TABLETS
- ▶ Child 6–17 years: 200 mg daily
- ▶ Adult: 200 mg daily

#### Iron-deficiency anaemia (therapeutic)

- ▶ BY MOUTH USING TABLETS
- ▶ Child 6–17 years: 200 mg 2–3 times a day
- ▶ Adult: 200 mg 2–3 times a day

#### FEOSPAN<sup>®</sup>

#### Iron-deficiency anaemia

- ▶ BY MOUTH
- ▶ Child 1–17 years: 1 capsule daily, capsule can be opened and sprinkled on food
- ▶ Adult: 1–2 capsules daily, capsule can be opened and sprinkled on food

#### FERROGRAD<sup>®</sup>

#### Iron-deficiency anaemia (prophylactic and therapeutic)

- ▶ BY MOUTH
- ▶ Child 12–17 years: 1 tablet daily
- ▶ Adult: 1 tablet daily

#### IRONORM<sup>®</sup> DROPS

#### Iron-deficiency anaemia (prophylactic)

- ▶ BY MOUTH
- ▶ Adult: 2.4–4.8 mL daily

#### Iron-deficiency anaemia (therapeutic)

- ▶ BY MOUTH
- ▶ Adult: 4 mL 1–2 times a day

- **INTERACTIONS** → Appendix 1: iron
- **SIDE-EFFECTS** Tooth discolouration
- **PRESCRIBING AND DISPENSING INFORMATION** Iron content Ferrous sulfate 200 mg is equivalent to 65 mg iron; *Ironorm*<sup>®</sup> drops contain ferrous sulfate 125 mg (equivalent to 25 mg iron/mL); *Feospan*<sup>®</sup> spansules contain ferrous sulfate 150 mg (47 mg iron) (spansule (=

modified-release capsules)); *Ferrograd*<sup>®</sup> tablets contain ferrous sulfate 325 mg (105 mg iron).

Modified-release preparations of iron are licensed for once-daily dosage, but have no therapeutic advantage and should not be used. These preparations are formulated to release iron gradually; the low incidence of side-effects may reflect the small amounts of iron available for absorption as the iron is carried past the first part of the duodenum into an area of the gut where absorption may be poor.

- **PATIENT AND CARER ADVICE** Medicines for Children leaflet: Ferrous sulfate for iron-deficiency anaemia [www.medicinesforchildren.org.uk/medicines/ferrous-sulfate-for-iron-deficiency-anaemia/](http://www.medicinesforchildren.org.uk/medicines/ferrous-sulfate-for-iron-deficiency-anaemia/)
- **NATIONAL FUNDING/ACCESS DECISIONS** NHS restrictions *Feospan*<sup>®</sup> is not prescribable in NHS primary care.
- **LESS SUITABLE FOR PRESCRIBING** *Feospan*<sup>®</sup> is less suitable for prescribing. *Ferrograd*<sup>®</sup> is less suitable for prescribing.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Modified-release tablet

## Sodium feredetate 11-Nov-2021

### (Sodium ironedetate)

### ● INDICATIONS AND DOSE

#### Iron-deficiency anaemia (therapeutic)

- ▶ BY MOUTH USING ORAL SOLUTION
- ▶ Child 1-11 months: Up to 2.5 mL twice daily, smaller doses to be used initially
- ▶ Child 1-4 years: 2.5 mL 3 times a day
- ▶ Child 5-11 years: 5 mL 3 times a day
- ▶ Child 12-17 years: 5 mL 3 times a day, increased to 10 mL 3 times a day, dose to be increased gradually
- ▶ Adult: 5 mL 3 times a day, increased to 10 mL 3 times a day, dose to be increased gradually

- INTERACTIONS → Appendix 1: iron
- PRESCRIBING AND DISPENSING INFORMATION *Sytron*® contains 207.5 mg sodium feredetate trihydrate, which is equivalent to 27.5 mg of iron/5 mL.
- PATIENT AND CARER ADVICE  
Medicines for Children leaflet: Sodium feredetate for the treatment of anaemia [www.medicinesforchildren.org.uk/medicines/sodium-feredetate-for-the-treatment-of-anaemia/](http://www.medicinesforchildren.org.uk/medicines/sodium-feredetate-for-the-treatment-of-anaemia/)

- MEDICINAL FORMS There can be variation in the licensing of different medicines containing the same drug.

#### Oral solution

EXCIPIENTS: May contain Ethanol, hydroxybenzoates (parabens), sorbitol

- ▶ **Sytron** (Forum Health Products Ltd)  
Iron (as Sodium feredetate) 5.5 mg per 1 mL Sytron oral solution sugar-free | 500 mL [P] £14.95 DT = £14.95

Normally, however, appropriate treatment should not be instituted until the results of tests are available.

One cause of megaloblastic anaemia in the UK is *pernicious anaemia* in which lack of gastric intrinsic factor resulting from an autoimmune gastritis causes malabsorption of vitamin B<sub>12</sub>.

Vitamin B<sub>12</sub> is also needed in the treatment of megaloblastosis caused by *prolonged nitrous oxide anaesthesia*, which inactivates the vitamin, and in the rare syndrome of *congenital transcobalamin II deficiency*.

Vitamin B<sub>12</sub> should be given prophylactically after *total gastrectomy* or *total ileal resection* (or after *partial gastrectomy* if a vitamin B<sub>12</sub> absorption test shows vitamin B<sub>12</sub> malabsorption).

Apart from dietary deficiency, all other causes of vitamin B<sub>12</sub> deficiency are attributable to malabsorption. There is little place for the use of low-dose vitamin B<sub>12</sub> orally and none for vitamin B<sub>12</sub> intrinsic factor complexes given by mouth. Vitamin B<sub>12</sub> in larger oral doses [unlicensed] may be effective.

Hydroxocobalamin p. 1114 has completely replaced cyanocobalamin p. 1113 as the form of vitamin B<sub>12</sub> of choice for therapy; it is retained in the body longer than cyanocobalamin and thus for maintenance therapy can be given at intervals of up to 3 months. Treatment is generally initiated with frequent administration of intramuscular injections to replenish the depleted body stores. Thereafter, maintenance treatment, which is usually for life, can be instituted. There is no evidence that doses larger than those recommended provide any additional benefit in vitamin B<sub>12</sub> neuropathy.

Folic acid below has few indications for long-term therapy since most causes of folate deficiency are self-limiting or will yield to a short course of treatment. It should not be used in undiagnosed megaloblastic anaemia unless vitamin B<sub>12</sub> is administered concurrently otherwise neuropathy may be precipitated.

In *folate-deficient megaloblastic anaemia* (e.g. because of poor nutrition, pregnancy, or antiepileptic drugs), daily folic acid supplementation for 4 months brings about haematological remission and replenishes body stores.

For prophylaxis in *chronic haemolytic states, malabsorption, or in renal dialysis*, folic acid is given daily or sometimes weekly, depending on the diet and the rate of haemolysis.

Folic acid is also used for the prevention of methotrexate-induced side-effects in severe Crohn's disease, rheumatic disease, and severe psoriasis.

Folic acid p. 1015 is also effective in the treatment of folate deficient megaloblastic anaemia but it is generally used in association with cytotoxic drugs; it is given as calcium folinate.

There is **no** justification for prescribing multiple ingredient vitamin preparations containing vitamin B<sub>12</sub> or folic acid.

For the use of folic acid before and during pregnancy, see Neural tube defects (prevention in pregnancy) p. 1185.

## VITAMINS AND TRACE ELEMENTS > FOLATES

### Folic acid 10-Nov-2021

### ● INDICATIONS AND DOSE

#### Folate-deficient megaloblastic anaemia

- ▶ BY MOUTH
- ▶ Child 1-11 months: Initially 500 micrograms/kg once daily (max. per dose 5 mg) for up to 4 months, doses up to 10 mg daily may be required in malabsorption states
- ▶ Child 1-17 years: 5 mg daily for 4 months (until term in pregnant women), doses up to 15 mg daily may be required in malabsorption states

## 1.3 Megaloblastic anaemia

### Anaemia, megaloblastic

#### Overview

Most megaloblastic anaemias result from a lack of either vitamin B<sub>12</sub> or folate, and it is essential to establish in every case which deficiency is present and the underlying cause. In emergencies, when delay might be dangerous, it is sometimes necessary to administer both substances after the bone marrow test while plasma assay results are awaited.

- ▶ Adult: 5 mg daily for 4 months (until term in pregnant women), doses up to 15 mg daily may be required in malabsorption states

**Prevention of neural tube defects (in those at a low risk of conceiving a child with a neural tube defect see Neural tube defects (prevention in pregnancy) p. 1185)**

- ▶ BY MOUTH
- ▶ Females of childbearing potential: 400 micrograms daily, to be taken before conception and until week 12 of pregnancy

**Prevention of neural tube defects (in those in the high-risk group who wish to become pregnant or who are at risk of becoming pregnant see Neural tube defects (prevention in pregnancy) p. 1185)**

- ▶ BY MOUTH
- ▶ Females of childbearing potential: 5 mg daily, to be taken before conception and until week 12 of pregnancy

**Prevention of neural tube defects (in those with sickle-cell disease)**

- ▶ BY MOUTH
- ▶ Females of childbearing potential: 5 mg daily, patient should continue taking their normal dose of folic acid 5 mg daily (or increase the dose to 5 mg daily) before conception and continue this throughout pregnancy

**Prevention of methotrexate-induced side-effects in rheumatic disease**

- ▶ BY MOUTH
- ▶ Adult: 5 mg once weekly, dose to be taken on a different day to methotrexate dose

**Prevention of methotrexate side-effects in severe Crohn's disease | Prevention of methotrexate side-effects in severe psoriasis**

- ▶ BY MOUTH
- ▶ Adult: 5 mg once weekly, dose to be taken on a different day to methotrexate dose

**Prophylaxis in chronic haemolytic states**

- ▶ BY MOUTH
- ▶ Adult: 5 mg every 1–7 days, frequency dependent on underlying disease

**Prophylaxis of folate deficiency in dialysis**

- ▶ BY MOUTH
- ▶ Child 1 month–11 years: 250 micrograms/kg once daily (max. per dose 10 mg)
- ▶ Child 12–17 years: 5–10 mg once daily
- ▶ Adult: 5 mg every 1–7 days

**Prophylaxis of folate deficiency in patients receiving parenteral nutrition**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: 15 mg 1–2 times a week, usually given by intravenous infusion in the parenteral nutrition solution

#### ● UNLICENSED USE

- ▶ In adults Not licensed for prevention of methotrexate-induced side-effects in severe Crohn's disease. Not licensed for prevention of methotrexate-induced side-effects in rheumatic disease. Not licensed for prevention of methotrexate-induced side-effects in severe psoriasis.

- **CAUTIONS** Should never be given alone for pernicious anaemia or other megaloblastic anaemias caused by vitamin B<sub>12</sub> deficiency (may precipitate subacute combined degeneration of the spinal cord)

- **INTERACTIONS** → Appendix 1: folates

- **SIDE-EFFECTS** Abdominal distension · appetite decreased · flatulence · nausea · vitamin B12 deficiency exacerbated

#### ● PATIENT AND CARER ADVICE

Medicines for Children leaflet: Folic acid for megaloblastic anaemia caused by folate deficiency and haemolytic anaemia

## VITAMINS AND TRACE ELEMENTS > VITAMIN B GROUP

### Cyanocobalamin

29-Mar-2019

#### ● INDICATIONS AND DOSE

**Vitamin B<sub>12</sub> deficiency of dietary origin**

- ▶ BY MOUTH
- ▶ Adult: 50–150 micrograms daily, dose to be taken between meals
- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult: Initially 1 mg every 2–3 days for 11 doses; maintenance 1 mg every month

- **PRESCRIBING AND DISPENSING INFORMATION** Currently available brands of the tablet may not be suitable for vegans.

The BP directs that when vitamin B<sub>12</sub> injection is prescribed or demanded hydroxocobalamin injection shall be dispensed or supplied.

- **NATIONAL FUNDING/ACCESS DECISIONS**

**NHS restrictions** *Cyanocobalamin* solution and *Cytamen*® injection are not prescribable in NHS primary care.

- **LESS SUITABLE FOR PRESCRIBING** *Cyanocobalamin* is less suitable for prescribing.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ▶ *Cytamen* (RPH Pharmaceuticals AB)

**Cyanocobalamin 1 mg per 1 ml** *Cytamen* 1000micrograms/1ml solution for injection ampoules | 5 ampoule [PoM](#) £14.50 DT = £14.50

#### Tablet

## Hydroxocobalamin

10-Feb-2021

### • INDICATIONS AND DOSE

#### Prophylaxis of macrocytic anaemias associated with vitamin B<sub>12</sub> deficiency

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult: 1 mg every 2–3 months

#### Pernicious anaemia and other macrocytic anaemias without neurological involvement

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult: Initially 1 mg 3 times a week for 2 weeks, then 1 mg every 2–3 months

#### Pernicious anaemia and other macrocytic anaemias with neurological involvement

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult: Initially 1 mg once daily on alternate days until no further improvement, then 1 mg every 2 months

#### Tobacco amblyopia

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult: Initially 1 mg daily for 2 weeks, then 1 mg twice weekly until no further improvement, then 1 mg every 1–3 months

#### Leber's optic atrophy

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult: Initially 1 mg daily for 2 weeks, then 1 mg twice weekly until no further improvement, then 1 mg every 1–3 months

#### CYANOKIT®

#### Poisoning with cyanides

- ▶ BY INTRAVENOUS INFUSION
- ▶ Child (body-weight 5 kg and above): Initially 70 mg/kg (max. per dose 5 g), to be given over 15 minutes, then 70 mg/kg (max. per dose 5 g) if required, this second dose can be given over 15 minutes–2 hours depending on severity of poisoning and patient stability
- ▶ Adult: Initially 5 g, to be given over 15 minutes, then 5 g if required, this second dose can be given over 15 minutes–2 hours depending on severity of poisoning and patient stability

- **CAUTIONS** Diagnosis of Vitamin B<sub>12</sub> deficiency should be confirmed before giving hydroxocobalamin

#### • SIDE-EFFECTS

**GENERAL SIDE-EFFECTS** Diarrhoea · dizziness · headache · hot flush · nausea · skin reactions · urine discolouration

**SPECIFIC SIDE-EFFECTS**

- ▶ With intramuscular use Arrhythmia · chills · drug fever · hypokalaemia · malaise · pain · thrombocytosis · tremor · vomiting
- ▶ With intravenous use Angioedema · dysphagia · extrasystole · gastrointestinal discomfort · memory loss · mucosal discolouration red · peripheral oedema · pleural effusion · rash pustular · red discolouration of plasma · restlessness · swelling · throat complaints
- **BREAST FEEDING** Present in milk but not known to be harmful.
- **EFFECT ON LABORATORY TESTS**
  - ▶ With intravenous use Deep red colour of hydroxocobalamin may interfere with laboratory tests.
- **DIRECTIONS FOR ADMINISTRATION**
  - ▶ With intravenous use For *intravenous infusion (Cyanokit®)*, give intermittently in Sodium Chloride 0.9%, reconstitute 5 g vial with 200 mL Sodium Chloride 0.9%; gently invert vial for at least 1 minute to mix (do not shake).
- **PRESCRIBING AND DISPENSING INFORMATION**
  - ▶ With intramuscular use The BP directs that when vitamin B<sub>12</sub> injection is prescribed or demanded, hydroxocobalamin injection shall be dispensed or supplied.

Poisoning by cyanides

- ▶ With intravenous use *Cyanokit®* is the only preparation of hydroxocobalamin that is suitable for use in victims of smoke inhalation who show signs of significant cyanide poisoning.
- **NATIONAL FUNDING/ACCESS DECISIONS**
  - ▶ NHS restrictions *Cobalin-H®* is not prescribable in NHS primary care.
  - ▶ *Neo-Cytamen®* is not prescribable in NHS primary care.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ▶ Hydroxocobalamin (Non-proprietary)

**Hydroxocobalamin 1 mg per 1 ml** Hydroxocobalamin 1mg/1ml solution for injection ampoules | 5 ampoule [PoM] £13.65 DT = £4.45

**Hydroxocobalamin 2.5 mg per 1 ml** Hepavit 5mg/2ml solution for injection ampoules | 2 ampoule [PoM] ☒ (Hospital only)

##### ▶ Cobalin (Advanz Pharma)

**Hydroxocobalamin 1 mg per 1 ml** Cobalin-H 1mg/1ml solution for injection ampoules | 5 ampoule [PoM] DT = £4.45

##### ▶ Neo-Cytamen (RPH Pharmaceuticals AB)

**Hydroxocobalamin 1 mg per 1 ml** Neo-Cytamen 1000micrograms/1ml solution for injection ampoules | 5 ampoule [PoM] £12.49 DT = £4.45

#### Powder for solution for infusion

##### ▶ Cyanokit (SERB)

**Hydroxocobalamin 5 gram** Cyanokit 5g powder for solution for infusion vials | 1 vial [PoM] £772.00 (Hospital only)

## 2 Iron overload

### Iron overload

#### Overview

Severe tissue iron overload can occur in aplastic and other refractory anaemias, mainly as the result of repeated blood transfusions. It is a particular problem in refractory anaemias with hyperplastic bone marrow, especially *thalassaemia major*, where excessive iron absorption from the gut and inappropriate iron therapy can add to the tissue siderosis.

Iron overload associated with haemochromatosis can be treated with repeated venesection. Venesection may also be used for patients who have received multiple transfusions and whose bone marrow has recovered. Where venesection is contra-indicated, the long-term administration of the iron chelating compound desferrioxamine mesilate p. 1116 is useful. Desferrioxamine mesilate (up to 2 g per unit of blood) may also be given at the time of blood transfusion, provided that the desferrioxamine mesilate is **not** added to the blood and is **not** given through the same line as the blood (but the two may be given through the same cannula).

Iron excretion induced by desferrioxamine mesilate is enhanced by administration of ascorbic acid p. 1177 (vitamin C) daily by mouth; it should be given separately from food since it also enhances iron absorption. Ascorbic acid should not be given to patients with cardiac dysfunction; in patients with normal cardiac function ascorbic acid should be introduced 1 month after starting desferrioxamine mesilate.

Desferrioxamine mesilate infusion can be used to treat *aluminium overload* in dialysis patients; theoretically 100 mg of desferrioxamine binds with 4.1 mg of aluminium.

## ANTIDOTES AND CHELATORS &gt; IRON CHELATORS

## Deferasirox

23-Nov-2020

- **DRUG ACTION** Deferasirox is an oral iron chelator.

- **INDICATIONS AND DOSE**

**Transfusion-related chronic iron overload in patients with beta thalassaemia major who receive frequent blood transfusions (7 mL/kg/month or more of packed red blood cells) (specialist use only)**

- ▶ BY MOUTH

- ▶ **Adult:** Initially 7–21 mg/kg once daily, dose adjusted according to serum-ferritin concentration and amount of transfused blood—consult product literature, then adjusted in steps of 3.5–7 mg/kg every 3–6 months, maintenance dose adjusted according to serum-ferritin concentration; maximum 28 mg/kg per day; Usual maximum 21 mg/kg

**Transfusion-related chronic iron overload when desferrioxamine is contra-indicated or inadequate in patients with beta thalassaemia major who receive infrequent blood transfusions (less than 7 mL/kg/month of packed red blood cells) (specialist use only)**

**Transfusion-related chronic iron overload when desferrioxamine is contra-indicated or inadequate in patients with other anaemias (specialist use only)**

- ▶ BY MOUTH

- ▶ **Adult:** Initially 7–21 mg/kg once daily, dose adjusted according to serum-ferritin concentration and amount of transfused blood—consult product literature, then adjusted in steps of 3.5–7 mg/kg every 3–6 months, maintenance dose adjusted according to serum-ferritin concentration; maximum 28 mg/kg per day; Usual maximum 21 mg/kg

**Chronic iron overload when desferrioxamine is contra-indicated or inadequate in non-transfusion-dependent thalassaemia syndromes (specialist use only)**

- ▶ BY MOUTH

- ▶ **Adult:** Initially 7 mg/kg once daily, then adjusted in steps of 3.5–7 mg/kg every 3–6 months, maintenance dose adjusted according to serum-ferritin concentration and liver-iron concentration (consult product literature); maximum 14 mg/kg per day

- **CAUTIONS** Elderly (increased risk of side-effects) · history of liver cirrhosis · not recommended in conditions which may reduce life expectancy (e.g. high-risk myelodysplastic syndromes) · platelet count less than  $50 \times 10^9$ /litre · risk of gastro-intestinal ulceration and haemorrhage · unexplained cytopenia—consider treatment interruption

- **INTERACTIONS** → Appendix 1: iron chelators

- **SIDE-EFFECTS**

- ▶ **Common or very common** Constipation · diarrhoea · gastrointestinal discomfort · headache · nausea · skin reactions · urine abnormalities · vomiting
- ▶ **Uncommon** Anxiety · cataract · cholelithiasis · dizziness · fatigue · fever · gastrointestinal disorders · gastrointestinal haemorrhage (including fatal cases) · hearing impairment · hepatic disorders · laryngeal pain · maculopathy · oedema · renal tubular disorders · sleep disorder
- ▶ **Rare or very rare** Optic neuritis · severe cutaneous adverse reactions (SCARs)
- ▶ **Frequency not known** Acute kidney injury · alopecia · anaemia aggravated · hyperammonaemic encephalopathy · hypersensitivity vasculitis · lens opacity · leucopenia · metabolic acidosis · nephritis tubulointerstitial · nephrolithiasis · neutropenia · pancreatitis acute · pancytopenia · renal tubular necrosis · thrombocytopenia

- **PREGNANCY** Manufacturer advises avoid unless essential— toxicity in *animal* studies.

- **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal* studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in moderate impairment; avoid in severe impairment. **Dose adjustments** Manufacturer advises reduce initial dose considerably then gradually increase to max. 50% of normal dose in moderate impairment.
- **RENAL IMPAIRMENT** Manufacturer advises avoid if estimated creatinine clearance less than 60 mL/minute. **Dose adjustments** See p. 21. Manufacturer advises reduce dose if creatinine clearance less than 90 mL/minute and serum creatinine increased by more than 33% of baseline measurement on 2 consecutive occasions—consult product literature.
- **MONITORING REQUIREMENTS** Manufacturer advises monitoring of the following patient parameters: baseline serum creatinine twice and creatinine clearance once before initiation of treatment, weekly in the first month after treatment initiation or modification, then monthly thereafter; proteinuria before treatment initiation then monthly thereafter, and other markers of renal tubular function as needed; liver function before treatment initiation, every 2 weeks during the first month of treatment, then monthly thereafter; eye and ear examinations before treatment and annually during treatment; serum-ferritin concentration monthly.
- **DIRECTIONS FOR ADMINISTRATION** For film-coated tablets, manufacturer advises tablets may be crushed and sprinkled on to soft food (yoghurt or apple sauce), then administered immediately.
- **PATIENT AND CARER ADVICE** Patient or carers should be given advice on how to administer deferasirox tablets.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
- **Scottish Medicines Consortium (SMC) decisions**
  - ▶ Deferasirox (*Exjade*®) for the treatment of chronic iron overload due to blood transfusions when deferoxamine therapy is contra-indicated or inadequate, in adult and paediatric patients aged 2 years and older with rare acquired or inherited anaemias (January 2017) SMC No. 347/07 Recommended with restrictions
  - ▶ Deferasirox (*Exjade*®) for the treatment of chronic iron overload: due to frequent blood transfusions in patients with beta thalassaemia major aged 6 years and over; due to blood transfusions when deferoxamine therapy is contra-indicated or inadequate in other patient groups (June 2017) SMC No. 1246/17 Recommended with restrictions
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Tablet**

## CAUTIONARY AND ADVISORY LABELS 25

▶ **Deferasirox (Non-proprietary)**

**Deferasirox 90 mg** Deferasirox 90mg tablets | 30 tablet [PoM] £107.10-£126.00 DT = £126.00 | 30 tablet [PoM] £107.00-£126.00 DT = £126.00 (Hospital only)

## Deferiprone

28-Jun-2021

- **DRUG ACTION** Deferiprone is an oral iron chelator.

### ● INDICATIONS AND DOSE

**Treatment of iron overload in patients with thalassaemia major in whom desferrioxamine is contra-indicated or is inadequate**

- ▶ BY MOUTH
- ▶ Adult: 25 mg/kg 3 times a day; maximum 100 mg/kg per day

- **CONTRA-INDICATIONS** History of agranulocytosis or recurrent neutropenia
- **INTERACTIONS** → Appendix 1: iron chelators
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Abdominal pain (reducing dose and increasing gradually may improve tolerance) · agranulocytosis · appetite increased · arthralgia · diarrhoea (reducing dose and increasing gradually may improve tolerance) · fatigue · headache · nausea (reducing dose and increasing gradually may improve tolerance) · neutropenia · urine discolouration · vomiting (reducing dose and increasing gradually may improve tolerance)
  - ▶ **Frequency not known** Skin reactions · zinc deficiency
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises avoid before intended conception—teratogenic and embryotoxic in *animal* studies. Contraception advised in females of child-bearing potential.
- **PREGNANCY** Manufacturer advises avoid during pregnancy—teratogenic and embryotoxic in *animal* studies.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (no information available)—monitor hepatic function and consider interrupting treatment if persistent elevation in serum alanine aminotransferase. Manufacturer advises caution in patients with hepatitis C (ensure iron chelation is optimal)—monitor liver histology.
- **RENAL IMPAIRMENT** [EvGr](#) Caution in end-stage renal disease (no information available). [M](#)
- **MONITORING REQUIREMENTS**
  - ▶ Monitor neutrophil count weekly and discontinue treatment if neutropenia develops.
  - ▶ Monitor plasma-zinc concentration.
- **PATIENT AND CARER ADVICE**

**Blood disorders** Patients or their carers should be told how to recognise signs of neutropenia and advised to seek immediate medical attention if symptoms such as fever or sore throat develop.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: capsule, oral suspension, oral solution

### Oral solution

CAUTIONARY AND ADVISORY LABELS 14

- ▶ **Ferriprox** (Chiesi Ltd)

**Deferiprone 100 mg per 1 ml** Ferriprox 100mg/ml oral solution sugar-free | 500 ml [PoM](#) £152.39 DT = £152.39

### Tablet

CAUTIONARY AND ADVISORY LABELS 14

- ▶ **Deferiprone (Non-proprietary)**

**Deferiprone 500 mg** Deferiprone 500mg tablets | 100 tablet [PoM](#) £117.00-£130.00 DT = £130.00

- ▶ **Ferriprox** (Chiesi Ltd)

**Deferiprone 500 mg** Ferriprox 500mg tablets | 100 tablet [PoM](#) £130.00 DT = £130.00

**Deferiprone 1 gram** Ferriprox 1000mg tablets | 50 tablet [PoM](#) £130.00 DT = £130.00

## Desferrioxamine mesilate

09-Jun-2021

### (Deferoxamine Mesilate)

### ● INDICATIONS AND DOSE

#### Iron poisoning

- ▶ BY CONTINUOUS INTRAVENOUS INFUSION
- ▶ Adult: Initially up to 15 mg/kg/hour, max. 80 mg/kg in 24 hours, dose to be reduced after 4–6 hours, in severe cases, higher doses may be given on advice from the National Poisons Information Service

#### Aluminium overload in dialysis patients

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: (consult product literature or local protocols)

#### Chronic iron overload (low iron overload)

- ▶ BY SUBCUTANEOUS INFUSION
- ▶ Adult: The dose should reflect the degree of iron overload

#### Chronic iron overload (established overload)

- ▶ BY SUBCUTANEOUS INFUSION
- ▶ Adult: 20–50 mg/kg daily

- **CAUTIONS** Aluminium-related encephalopathy (may exacerbate neurological dysfunction)
- **INTERACTIONS** → Appendix 1: iron chelators
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Arthralgia · bone disorder · fever · growth retardation · headache · muscle complaints · nausea · skin reactions
  - ▶ **Uncommon** Abdominal pain · asthma · deafness · neurosensory · tinnitus · vomiting
  - ▶ **Rare or very rare** Angioedema · blood disorder · cataract · diarrhoea · dizziness · encephalopathy · eye disorders · hypersensitivity · hypotension (more common when given too rapidly by intravenous injection) · increased risk of infection · nerve disorders · nervous system disorder · paraesthesia · respiratory disorders · shock · tachycardia · thrombocytopenia · vision disorders
  - ▶ **Frequency not known** Acute kidney injury · hypocalcaemia · leucopenia · renal tubular disorder · seizure · urine discolouration
- **PREGNANCY** Teratogenic in *animal* studies. Manufacturer advises use only if potential benefit outweighs risk.
- **BREAST FEEDING** Manufacturer advises use only if potential benefit outweighs risk—no information available.
- **RENAL IMPAIRMENT** [EvGr](#) Use with caution. [M](#)
- **MONITORING REQUIREMENTS** Eye and ear examinations before treatment and at 3-month intervals during treatment.
- **DIRECTIONS FOR ADMINISTRATION** For full details and warnings relating to administration, consult product literature.
 

For *intravenous or subcutaneous infusion (Desferal®)*, give continuously or intermittently in Glucose 5% or Sodium chloride 0.9%. Reconstitute with water for injections to a concentration of 100 mg/mL; dilute with infusion fluid.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Powder for solution for injection

- ▶ **Desferrioxamine mesilate (Non-proprietary)**

**Desferrioxamine mesilate 500 mg** Desferrioxamine 500mg powder for solution for injection vials | 10 vial [PoM](#) £46.63 DT = £46.63

**Desferrioxamine mesilate 2 gram** Desferrioxamine 2g powder for solution for injection vials | 10 vial [PoM](#) £186.60

- ▶ **Desferal** (Novartis Pharmaceuticals UK Ltd)

**Desferrioxamine mesilate 500 mg** Desferal 500mg powder for solution for injection vials | 10 vial [PoM](#) £46.63 DT = £46.63

## 3 Neutropenia and stem cell mobilisation

### 3.1 Neutropenia

#### Neutropenia

05-Mar-2021

##### Management

Neutropenia is characterised by a low neutrophil count (absolute neutrophil count less than  $1.5 \times 10^9$ /litre). Neutropenia is a risk factor for the development of infection and sepsis, especially in patients receiving high-intensity chemotherapy regimens. Recombinant human granulocyte-colony stimulating factor (rhG-CSF) stimulates the production of neutrophils and may reduce the duration of chemotherapy-induced neutropenia and thereby reduce the incidence of associated febrile neutropenia; there is as yet no evidence that it improves overall survival. Granulocyte-colony stimulating factors include filgrastim below, lenograstim p. 1118, pegfilgrastim p. 1119 and lipegfilgrastim p. 1119.

Filgrastim (unglycosylated rhG-CSF) and lenograstim (glycosylated rhG-CSF) have similar effects; both have been used in a variety of clinical settings for the treatment of neutropenia. Pegfilgrastim and lipegfilgrastim are polyethylene glycol-conjugated ('pegylated') derivatives of filgrastim, which are longer-acting forms of filgrastim due to decreased renal clearance.

Granulocyte-colony stimulating factors should only be prescribed by those experienced in their use.

#### IMMUNOSTIMULANTS > GRANULOCYTE-COLONY STIMULATING FACTORS

### Granulocyte-colony stimulating factors

- **DRUG ACTION** Recombinant human granulocyte-colony stimulating factor (rhG-CSF) stimulates the production of neutrophils.
- **CAUTIONS** Malignant myeloid conditions · pre-malignant myeloid conditions · risk of splenomegaly and rupture—spleen size should be monitored · sickle-cell disease
- CAUTIONS, FURTHER INFORMATION**
  - ▶ Acute respiratory distress syndrome There have been reports of pulmonary infiltrates leading to acute respiratory distress syndrome—patients with a recent history of pulmonary infiltrates or pneumonia may be at higher risk.
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Arthralgia · cutaneous vasculitis · dyspnoea · haemoptysis · headache · hypersensitivity · leucocytosis · pain · spleen abnormalities · thrombocytopenia
  - ▶ **Uncommon** Acute febrile neutrophilic dermatosis · capillary leak syndrome · hypoxia · pulmonary oedema · respiratory disorders · sickle cell anaemia with crisis
- SIDE-EFFECTS, FURTHER INFORMATION** Treatment should be withdrawn in patients who develop signs of pulmonary infiltration.
- **PREGNANCY** Manufacturers advise avoid—toxicity in animal studies.
- **BREAST FEEDING** There is no evidence for the use of granulocyte-colony stimulating factors during breast-feeding and manufacturers advise avoiding their use.

#### ● MONITORING REQUIREMENTS

- ▶ Full blood counts including differential white cell and platelet counts should be monitored.
- ▶ Spleen size should be monitored during treatment—risk of splenomegaly and rupture.

### Filgrastim

above

24-Jul-2020

#### (Recombinant human granulocyte-colony stimulating factor; G-CSF)

#### ● INDICATIONS AND DOSE

##### Reduction in duration of neutropenia and incidence of febrile neutropenia in cytotoxic chemotherapy for malignancy (except chronic myeloid leukaemia and myelodysplastic syndromes) (specialist use only)

- ▶ BY SUBCUTANEOUS INJECTION, OR BY INTRAVENOUS INFUSION
- ▶ Adult: 5 micrograms/kg daily until neutrophil count in normal range, usually for up to 14 days (up to 38 days in acute myeloid leukaemia), to be started at least 24 hours after cytotoxic chemotherapy. Preferably given by subcutaneous injection; if given by intravenous infusion, administer over 30 minutes

##### Reduction in duration of neutropenia (and associated sequelae) in myeloablative therapy followed by bone-marrow transplantation (specialist use only)

- ▶ BY SUBCUTANEOUS INFUSION, OR BY INTRAVENOUS INFUSION
- ▶ Adult: 10 micrograms/kg daily, to be started at least 24 hours following cytotoxic chemotherapy and within 24 hours of bone-marrow infusion, then adjusted according to neutrophil count—consult product literature, doses administered over 30 minutes or 24 hours via intravenous route and over 24 hours via subcutaneous route

##### Mobilisation of peripheral blood progenitor cells for autologous infusion, used alone (specialist use only)

- ▶ BY SUBCUTANEOUS INFUSION, OR BY SUBCUTANEOUS INJECTION
- ▶ Adult: 10 micrograms/kg daily for 5–7 days, to be administered over 24 hours if given by subcutaneous infusion

##### Mobilisation of peripheral blood progenitor cells for autologous infusion, used following adjunctive myelosuppressive chemotherapy—to improve yield (specialist use only)

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Adult: 5 micrograms/kg daily until neutrophil count in normal range, to be started the day after completing chemotherapy, for timing of leucopheresis, consult product literature

##### Mobilisation of peripheral blood progenitor cells in normal donors for allogeneic infusion (specialist use only)

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Adult 18–59 years: 10 micrograms/kg daily for 4–5 days, for timing of leucopheresis, consult product literature

##### Severe congenital neutropenia and history of severe or recurrent infections (distinguish carefully from other haematological disorders) (specialist use only)

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Adult: Initially 12 micrograms/kg daily, adjusted according to response, can be given in single or divided doses, consult product literature and local protocol

continued →

**Severe cyclic neutropenia, or idiopathic neutropenia and history of severe or recurrent infections (distinguish carefully from other haematological disorders) (specialist use only)**

► BY SUBCUTANEOUS INJECTION

- Adult: Initially 5 micrograms/kg daily, adjusted according to response, can be given in single or divided doses, consult product literature and local protocol

**Persistent neutropenia in HIV infection (specialist use only)**

► BY SUBCUTANEOUS INJECTION

- Adult: Initially 1 microgram/kg daily, subsequent doses increased as necessary until neutrophil count in normal range, then adjusted to maintain neutrophil count in normal range—consult product literature; maximum 4 micrograms/kg per day

- **CONTRA-INDICATIONS** Severe congenital neutropenia who develop leukaemia or have evidence of leukaemic evolution

- **CAUTIONS** Osteoporotic bone disease (monitor bone density if given for more than 6 months) · secondary acute myeloid leukaemia

● **SIDE-EFFECTS**

- **Common or very common** Anaemia · diarrhoea · dysuria · haemorrhage · hepatomegaly · hyperuricaemia · hypotension · osteoporosis · rash
- **Uncommon** Fluid imbalance · graft versus host disease · peripheral vascular disease · pseudogout · rheumatoid arthritis aggravated · urine abnormalities

- **MONITORING REQUIREMENTS** Regular morphological and cytogenetic bone-marrow examinations recommended in severe congenital neutropenia (possible risk of myelodysplastic syndromes or leukaemia).

● **DIRECTIONS FOR ADMINISTRATION**

- With intravenous use or subcutaneous use For *subcutaneous or intravenous infusion*, manufacturer advises give continuously or intermittently in Glucose 5%; for a filgrastim concentration of less than 1 500 000 units/mL (15 micrograms/mL) albumin solution (human albumin solution) is added to produce a final albumin concentration of 2 mg/mL; should not be diluted to a filgrastim concentration of less than 200 000 units/mL (2 micrograms/mL) and should not be diluted with sodium chloride solution.

- **PRESCRIBING AND DISPENSING INFORMATION** Filgrastim is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1.

1 million units of filgrastim solution for injection contains 10 micrograms filgrastim.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

- **Accofi** (Accord Healthcare Ltd)

**Filgrastim 60 mega unit per 1 ml** Accofi 30million units/0.5ml solution for injection pre-filled syringes | 5 pre-filled disposable injection [PoM] £284.20 DT = £250.75 (Hospital only) | 7 pre-filled disposable injection [PoM] £397.60 (Hospital only)

**Filgrastim 96 mega unit per 1 ml** Accofi 48million units/0.5ml solution for injection pre-filled syringes | 5 pre-filled disposable injection [PoM] £455.70 DT = £399.50 (Hospital only) | 7 pre-filled disposable injection [PoM] £637.98 (Hospital only)

## Lenograstim

### (Recombinant human granulocyte-colony stimulating factor; rHuG-CSF)

● **INDICATIONS AND DOSE**

**Reduction in the duration of neutropenia and associated complications following bone-marrow transplantation for non-myeloid malignancy (specialist use only)** |

**Reduction in the duration of neutropenia and associated complications following peripheral stem cells transplantation for non-myeloid malignancy (specialist use only)**

- BY INTRAVENOUS INFUSION, OR BY SUBCUTANEOUS INJECTION

- Adult: 150 micrograms/m<sup>2</sup> daily until neutrophil count stable in acceptable range (max. 28 days), to be started the day after transplantation. Intravenous infusion to be given over 30 minutes

**Reduction in the duration of neutropenia and associated complications following treatment with cytotoxic chemotherapy associated with a significant incidence of febrile neutropenia (specialist use only)**

- BY SUBCUTANEOUS INJECTION

- Adult: 150 micrograms/m<sup>2</sup> daily until neutrophil count stable in acceptable range (max. 28 days), to be started on the day after completion of chemotherapy

**Mobilisation of peripheral blood progenitor cells for harvesting and subsequent infusion, used alone (specialist use only)**

- BY SUBCUTANEOUS INJECTION

- Adult: 10 micrograms/kg daily for 4–6 days (5–6 days in healthy donors)

**Mobilisation of peripheral blood progenitor cells, used following adjunctive myelosuppressive chemotherapy (to improve yield) (specialist use only)**

- BY SUBCUTANEOUS INJECTION

- Adult: 150 micrograms/m<sup>2</sup> daily until neutrophil count stable in acceptable range, to be started 1–5 days after completion of chemotherapy, for timing of leucopheresis, consult product literature

● **SIDE-EFFECTS**

- **Common or very common** Abdominal pain · asthenia

- **Rare or very rare** Erythema nodosum · pyoderma gangrenosum · toxic epidermal necrolysis

● **DIRECTIONS FOR ADMINISTRATION**

- With intravenous use For *intravenous infusion (Granocyte<sup>®</sup>)*, manufacturer advises give intermittently in Glucose 5% or Sodium chloride 0.9%; initially reconstitute with 1 mL water for injection provided (do not shake vigorously) then dilute with up to 50 mL infusion fluid for each vial of *Granocyte-13* or up to 100 mL infusion fluid for *Granocyte-34*; give over 30 minutes.

- **PRESCRIBING AND DISPENSING INFORMATION** *Granocyte*<sup>®</sup> solution for injection contains 105 micrograms of lenograstim per 13.4 mega unit vial and 263 micrograms lenograstim per 33.6 mega unit vial.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Powder and solvent for solution for injection**

EXCIPIENTS: May contain Phenylalanine

- ▶ **Granocyte** (Chugai Pharma UK Ltd)

**Lenograstim 13.4 mega unit** Granocyte 13million unit powder and solvent for solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £40.11 DT = £40.11 | 5 pre-filled disposable injection [PoM] £200.55

**Lenograstim 33.6 mega unit** Granocyte 34million unit powder and solvent for solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £62.54 DT = £62.54 | 5 pre-filled disposable injection [PoM] £312.69

## Lipegfilgrastim

10-Jun-2020

### (Glycopegylated recombinant methionyl human granulocyte-colony stimulating factor)

#### ● INDICATIONS AND DOSE

**Reduction in duration of neutropenia and incidence of febrile neutropenia in cytotoxic chemotherapy for malignancy (except chronic myeloid leukaemia and myelodysplastic syndromes)**

▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult (specialist use only): 6 mg, for each chemotherapy cycle, given approximately 24 hours after chemotherapy, dose expressed as filgrastim

- **CAUTIONS** Myelosuppressive chemotherapy

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Chest pain · hypokalaemia · skin eruption

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Solution for injection**

▶ **Lonquex** (Teva UK Ltd)

**Filgrastim (as Lipegfilgrastim) 10 mg per 1 ml** Lonquex 6mg/0.6ml solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £652.06

1117

## Pegfilgrastim

10-Jun-2020

### (Pegylated recombinant methionyl human granulocyte-colony stimulating factor)

#### ● INDICATIONS AND DOSE

**Reduction in duration of neutropenia and incidence of febrile neutropenia in cytotoxic chemotherapy for malignancy (except chronic myeloid leukaemia and myelodysplastic syndromes) (specialist use only)**

▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: 6 mg for each chemotherapy cycle, to be given at least 24 hours after chemotherapy, dose is expressed as filgrastim

- **CAUTIONS** Acute leukaemia · myelosuppressive chemotherapy

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Myalgia · nausea
- ▶ **Uncommon** Glomerulonephritis

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Solution for injection**

▶ **Neulasta** (Amgen Ltd)

**Filgrastim (as Pegfilgrastim) 10 mg per 1 ml** Neulasta 6mg/0.6ml solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £686.38

Neulasta 6mg/0.6ml solution for injection pre-filled syringes with Onpro kit | 1 pre-filled disposable injection [PoM] £686.38 (Hospital only)

## 3.2 Stem cell mobilisation

### IMMUNOSTIMULANTS > CHEMOKINE RECEPTOR ANTAGONISTS

## Plerixafor

22-Oct-2020

- **DRUG ACTION** Plerixafor is a chemokine receptor antagonist.

#### ● INDICATIONS AND DOSE

**Mobilise haematopoietic stem cells to peripheral blood for collection and subsequent autologous transplantation in patients with lymphoma or multiple myeloma (specialist use only)**

▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult (body-weight up to 84 kg): 240 micrograms/kg daily, alternatively 20 mg daily usually for 2–4 days (and up to 7 days), to be administered 6–11 hours before initiation of apheresis, dose to be given following 4 days treatment with a granulocyte-colony stimulating factor; maximum 40 mg per day
- ▶ Adult (body-weight 84 kg and above): 240 micrograms/kg daily usually for 2–4 days (and up to 7 days), to be administered 6–11 hours before initiation of apheresis, dose to be given following 4 days treatment with a granulocyte-colony stimulating factor; maximum 40 mg per day

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Arthralgia · constipation · diarrhoea · dizziness · dry mouth · erythema · fatigue · flatulence · gastrointestinal discomfort · headache · hyperhidrosis · malaise · musculoskeletal pain · nausea · oral hypoaesthesia · sleep disorders · vomiting
- ▶ **Frequency not known** Postural hypotension · splenomegaly · syncope

- **CONCEPTION AND CONTRACEPTION** Use effective contraception during treatment— teratogenic in *animal* studies.

- **PREGNANCY** Manufacturer advises avoid unless essential— teratogenic in *animal* studies.

- **BREAST FEEDING** Manufacturer advises avoid—no information available.

- **RENAL IMPAIRMENT** No information available if creatinine clearance less than 20 mL/minute.

**Dose adjustments** Manufacturer advises reduce dose to 160 micrograms/kg (maximum 27 mg) daily if creatinine clearance 20–50 mL/minute. See p. 21.

- **MONITORING REQUIREMENTS** Monitor platelets and white blood cell count.

- **PATIENT AND CARER ADVICE**

**Driving and skilled tasks** Manufacturer advises patients and carers should be cautioned on the effects on driving and performance of skilled tasks—increased risk of dizziness, fatigue, or vasovagal reactions.

- **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**Scottish Medicines Consortium (SMC) decisions**

- ▶ Plerixafor (*Mozobil*<sup>®</sup>) combined with G-CSF to enhance mobilisation of haematopoietic stem cells to the peripheral blood for collection & subsequent autologous transplantation in patients with lymphoma and multiple myeloma (January 2010) SMC No. 594/09 Recommended

**All Wales Medicines Strategy Group (AWMSG) decisions**

- ▶ Plerixafor (*Mozobil*<sup>®</sup>) in combination with G-CSF to enhance mobilisation of haematopoietic stem cells to the peripheral blood for collection and subsequent autologous transplantation in patients with lymphoma and multiple myeloma whose cells mobilise poorly (April 2010) AWMSG No. 249 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

- ▶ *Mozobil* (Sanofi)

Plerixafor 20 mg per 1 mL *Mozobil* 24mg/1.2ml solution for injection vials | 1 vial [PoM] £4,882.77

## 4 Platelet disorders

### 4.1 Essential thrombocythaemia

**Other drugs used for Essential thrombocythaemia**

Hydroxycarbamide, p. 1008

#### ANTITHROMBOTIC DRUGS > CYCLIC AMP PHOSPHODIESTERASE III INHIBITORS

### Anagrelide

07-Jul-2021

- **INDICATIONS AND DOSE**

**Essential thrombocythaemia in patients at risk of thrombo-haemorrhagic events who have not responded adequately to other drugs or who cannot tolerate other drugs (initiated under specialist supervision)**

- ▶ BY MOUTH

- ▶ Adult: Initially 500 micrograms twice daily, dose to be adjusted at weekly intervals according to response, increased in steps of 500 micrograms daily; usual dose 1–3 mg daily in divided doses (max. per dose 2.5 mg); maximum 10 mg per day

- **CAUTIONS** Cardiovascular disease—assess cardiac function before and regularly during treatment · concomitant use of drugs that prolong QT-interval—assess cardiac function before and regularly during treatment · risk factors for QT-interval prolongation—assess cardiac function before and regularly during treatment

- **INTERACTIONS** → Appendix 1: anagrelide

- **SIDE-EFFECTS**

- ▶ **Common or very common** Anaemia · arrhythmias · asthenia · diarrhoea · dizziness · fluid retention · gastrointestinal discomfort · gastrointestinal disorders · headaches · nausea · palpitations · skin reactions · vomiting

- ▶ **Uncommon** Alopecia · appetite decreased · arthralgia · chest pain · chills · confusion · congestive heart failure · constipation · depression · dry mouth · dyspnoea · erectile dysfunction · fever · haemorrhage · hypertension · insomnia · malaise · memory loss · myalgia · nervousness · oedema · pain · pancreatitis · pancytopenia · pneumonia · pulmonary hypertension · respiratory disorders · sensation abnormal · syncope · thrombocytopenia · weight changes
- ▶ **Rare or very rare** Angina pectoris · cardiomegaly · cardiomyopathy · coordination abnormal · drowsiness · dysarthria · influenza like illness · myocardial infarction · nocturia · pericardial effusion · postural hypotension · renal failure · tinnitus · vasodilation · vision disorders
- ▶ **Frequency not known** Hepatitis · nephritis tubulointerstitial

- **CONCEPTION AND CONTRACEPTION** Effective contraception required during treatment.

- **PREGNANCY** Manufacturer advises avoid (toxicity in animal studies).

- **BREAST FEEDING** Manufacturer advises avoid—present in milk in animal studies.

- **HEPATIC IMPAIRMENT** Manufacturer advises use with caution in mild impairment; avoid in moderate-to-severe impairment or if serum transaminases exceed 5 times the upper limit of normal.

- **RENAL IMPAIRMENT** [EvGr] Avoid if creatinine clearance less than 50 mL/minute, ⚠ see p. 21.

- **MONITORING REQUIREMENTS**

- ▶ Monitor full blood count (monitor platelet count every 2 days for 1 week, then weekly until maintenance dose established).

- ▶ Monitor liver function.

- ▶ Monitor serum creatinine.

- ▶ Monitor urea.

- ▶ Monitor electrolytes (including potassium, magnesium and calcium) before and during treatment.

- **PATIENT AND CARER ADVICE**

**Driving and skilled tasks** Dizziness may affect performance of skilled tasks (e.g. cycling, driving).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Capsule**

- ▶ *Anagrelide* (Non-proprietary)

Anagrelide (as Anagrelide hydrochloride)

500 microgram Anagrelide 500microgram capsules |

100 capsule [PoM] £404.57 DT = £404.57

- ▶ *Xagrid* (Takeda UK Ltd)

Anagrelide (as Anagrelide hydrochloride) 500 microgram Xagrid

500microgram capsules | 100 capsule [PoM] £404.57 DT = £404.57

### 4.2 Thrombocytopenias

#### ANTIHAEMORRHAGICS > THROMBOPOIETIN RECEPTOR AGONISTS

### Avatrombopag

10-Sep-2021

- **DRUG ACTION** Avatrombopag is a thrombopoietin receptor agonist that binds to and activates the thrombopoietin (TPO) receptor, thereby increasing platelet production.

- **INDICATIONS AND DOSE**

**Thrombocytopenia [in patients with chronic liver disease undergoing invasive procedures and platelet count less than 40x10<sup>9</sup>/litre] (under expert supervision)**

- ▶ BY MOUTH

- ▶ Adult: 60 mg once daily for 5 days, treatment to be started 10 to 13 days before procedure; procedures to

be carried out 5 to 8 days after the last dose of avatrombopag

**Thrombocytopenia [in patients with chronic liver disease undergoing invasive procedures and platelet count between 40 to 50x10<sup>9</sup>/litre] (under expert supervision)**

► BY MOUTH

- Adult: 40 mg once daily for 5 days, treatment to be started 10 to 13 days before procedure; procedures to be carried out 5 to 8 days after the last dose of avatrombopag

**Chronic immune (idiopathic) thrombocytopenic purpura in patients refractory to other treatments (such as corticosteroids or immunoglobulins) (under expert supervision)**

► BY MOUTH

- Adult: 20 mg once daily, dose to be adjusted to achieve a platelet count of 50x10<sup>9</sup>/litre or more—consult product literature for dose adjustments, discontinue if inadequate response after 4 weeks treatment at maximum dose, or if platelet count more than 250x10<sup>9</sup>/litre after 2 weeks of dosing at 20 mg once weekly; maximum 40 mg per day

**DOSE ADJUSTMENTS DUE TO INTERACTIONS**

- When used for chronic immune (idiopathic) thrombocytopenic purpura [\[EvGr\]](#) Increase initial avatrombopag dose to 40 mg once daily in those already taking moderate CYP2C9 inducers. In those already taking avatrombopag, monitor platelet counts and adjust the avatrombopag dose as necessary when starting moderate CYP2C9 inducers. Decrease initial avatrombopag dose to 20 mg three times weekly in those already taking moderate CYP2C9 inhibitors. In those already taking avatrombopag, monitor platelet counts and adjust the avatrombopag dose as necessary when starting moderate CYP2C9 inhibitors. [M](#)

● **CAUTIONS**

**GENERAL CAUTIONS** Known genetic polymorphisms—consult product literature · risk factors for thromboembolism

**SPECIFIC CAUTIONS**

- When used for thrombocytopenia in patients with chronic liver disease undergoing invasive procedures Administration before laparotomy, thoracotomy, open-heart surgery, craniotomy, or excision of organs (no clinical experience)

- **INTERACTIONS** → Appendix 1: avatrombopag

● **SIDE-EFFECTS**

- **Common or very common** Fatigue
- **Uncommon** Anaemia · bone pain · fever · myalgia · portal vein thrombosis
- **PREGNANCY** [\[EvGr\]](#) Avoid—limited information available. [M](#)

- **BREAST FEEDING** [\[EvGr\]](#) Avoid—present in milk in animal studies. [M](#)

- **HEPATIC IMPAIRMENT** [\[EvGr\]](#) Caution in severe impairment (limited information available). [M](#)

● **MONITORING REQUIREMENTS**

- [\[EvGr\]](#) Peripheral blood smear and complete blood counts are recommended before starting, and during, treatment. [M](#)
- When used for thrombocytopenia in patients with chronic liver disease undergoing invasive procedures [\[EvGr\]](#) Monitor platelet count before starting treatment and on the day of procedure. [M](#)
- When used for chronic immune (idiopathic) thrombocytopenic purpura [\[EvGr\]](#) Monitor platelet count at least once weekly until a stable platelet count of 50–150x10<sup>9</sup>/litre achieved; monitor twice weekly during the first weeks of treatment in patients receiving once or twice weekly dosing, or after dose adjustments. After platelet count has stabilised,

monitor platelet count at least monthly. After stopping treatment, monitor platelet counts weekly for at least 4 weeks (recurrence of thrombocytopenia likely). [M](#)

● **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

- **Avatrombopag for treating thrombocytopenia in people with chronic liver disease needing a planned invasive procedure (June 2020)** NICE TA626 Recommended
- **Scottish Medicines Consortium (SMC) decisions**
- **Avatrombopag (Doptelet<sup>®</sup>) for the treatment of severe thrombocytopenia in adult patients with chronic liver disease who are scheduled to undergo an invasive procedure (December 2020)** SMC No. SMC2296 Recommended
- **Avatrombopag (Doptelet<sup>®</sup>) for the treatment of primary chronic immune thrombocytopenia in adult patients who are refractory to other treatments (such as corticosteroids or immunoglobulins) (August 2021)** SMC No. SMC2345 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Tablet**

CAUTIONARY AND ADVISORY LABELS 21

- **Doptelet** (Swedish Orphan Biovitrum Ltd) ▼  
**Avatrombopag (as Avatrombopag maleate) 20 mg** Doptelet 20mg tablets | 10 tablet [\[PoM\]](#) £640.00 (Hospital only) | 15 tablet [\[PoM\]](#) £960.00 (Hospital only) | 30 tablet [\[PoM\]](#) £1,920.00 (Hospital only)

## Lusutrombopag

27-Aug-2020

- **DRUG ACTION** Lusutrombopag is a thrombopoietin receptor agonist that binds to and activates the thrombopoietin (TPO) receptor, thereby increasing platelet production.

● **INDICATIONS AND DOSE**

**Thrombocytopenia [in patients with chronic liver disease undergoing invasive procedures] (under expert supervision)**

► BY MOUTH

- Adult: 3 mg once daily for 7 days, treatment to be started at least 8 days before procedure; in clinical trials procedures were carried out between 9 to 14 days after starting lusutrombopag

- **CAUTIONS** Administration before laparotomy, thoracotomy, open-heart surgery, craniotomy, or excision of organs (no clinical experience) · body-weight less than 45kg (limited information available) · history of splenectomy (no clinical experience) · risk factors for thromboembolism

**CAUTIONS, FURTHER INFORMATION**

- **Body-weight less than 45kg** Monitor platelet count approximately 5 days after the first dose and as necessary thereafter; stop treatment if the platelet count reaches 50x10<sup>9</sup>/litre or more and has increased 20x10<sup>9</sup>/litre from baseline.
- **SIDE-EFFECTS**
- **Common or very common** Headache · nausea · rash
- **Frequency not known** Embolism and thrombosis
- **PREGNANCY** Manufacturer advises avoid—no information available.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in animal studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment (limited information available)—monitor platelet count approximately 5 days after the first dose and as necessary thereafter. Stop treatment if the platelet count reaches 50x10<sup>9</sup>/litre or more and has increased 20x10<sup>9</sup>/litre from baseline.

- **MONITORING REQUIREMENTS** Manufacturer advises monitor platelet count prior to procedure; more frequent monitoring may be required in some patients—see *Cautions* and *Hepatic Impairment* for further information.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website
- **NICE decisions**
  - ▶ Lusutrombopag for treating thrombocytopenia in people with chronic liver disease needing a planned invasive procedure (January 2020) NICE TA617 Recommended
- **Scottish Medicines Consortium (SMC) decisions**
  - ▶ Lusutrombopag (*Mulpleo*<sup>®</sup>) for the treatment of severe thrombocytopenia in adult patients with chronic liver disease undergoing invasive procedures (December 2019) SMC No. SMC2227 Recommended
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.
 

<b>Tablet</b>
▶ <b>Mulpleo</b> (Shionogi BV) ▼
Lusutrombopag 3 mg   Mulpleo 3mg tablets   7 tablet [PoM] £800.00

- **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator (2–8°C) and protect from light—consult product literature for further information regarding storage outside refrigerator.
- **PATIENT AND CARER ADVICE**  
**Missed doses** Manufacturer advises if a dose is more than 12 hours late, the missed dose should not be given and the next dose should be given at the normal time.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website
- **NICE decisions**
  - ▶ Caplacizumab with plasma exchange and immunosuppression for treating acute acquired thrombotic thrombocytopenic purpura (December 2020) NICE TA667 Recommended
- **Scottish Medicines Consortium (SMC) decisions**
  - ▶ Caplacizumab (*Cablivi*<sup>®</sup>) for the treatment of adults experiencing an episode of acquired thrombotic thrombocytopenic purpura (aTTP), in conjunction with plasma exchange and immunosuppression (September 2020) SMC No. SMC2266 Recommended

## 4.2a Acquired thrombotic thrombocytopenic purpura

### ANTITHROMBOTIC DRUGS

#### Caplacizumab

12-Jan-2021

- **DRUG ACTION** Caplacizumab is a monoclonal antibody fragment (nanobody) that binds to von Willebrand factor, thereby inhibiting platelet adhesion.

#### ● INDICATIONS AND DOSE

##### Acquired thrombotic thrombocytopenic purpura (specialist use only)

- ▶ INITIALLY BY INTRAVENOUS INJECTION
- ▶ Adult (body-weight 40 kg and above): Initially 10 mg for 1 dose, given before plasma exchange, followed by (by subcutaneous injection) 10 mg once daily given after each plasma exchange during, and for 30 days after finishing, daily plasma exchange therapy, treatment may be continued after this if there is evidence of unresolved immunological disease

- **CONTRA-INDICATIONS** Active bleeding (interrupt treatment)
- **CAUTIONS** Increased risk of bleeding
- **INTERACTIONS** → Appendix 1: caplacizumab
- **SIDE-EFFECTS**
- ▶ **Common or very common** Cerebral infarction · dyspnoea · fatigue · fever · haemorrhage · headache · menorrhagia · myalgia · subarachnoid haemorrhage · urticaria
- **PREGNANCY** Manufacturer advises avoid—no information available.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment (no information available).
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises injection into the abdomen. Patients may self-administer *Cablivi*<sup>®</sup> after appropriate training in subcutaneous injection technique.
- **PRESCRIBING AND DISPENSING INFORMATION**  
Caplacizumab is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Powder and solvent for solution for injection**

EXCIPIENTS: May contain Polysorbates

- ▶ **Cablivi** (Sanofi Genzyme) ▼
- Caplacizumab 10 mg | Cablivi 10mg powder and solvent for solution for injection vials | 1 vial [PoM] £4,143.00 (Hospital only)

## 4.2b Immune thrombocytopenia

### Immune thrombocytopenic purpura

12-Apr-2021

#### Overview

[\[EvGr\]](#) In adults with immune thrombocytopenic purpura, initial treatment is usually with a **corticosteroid**, such as prednisolone p. 747.

Intravenous normal immunoglobulin p. 1387, or intravenous anti-D (Rh<sub>0</sub>) immunoglobulin [unlicensed use] may be appropriate in patients with immune thrombocytopenic purpura who are bleeding or at high-risk of bleeding, who require a surgical procedure, or who are unresponsive to corticosteroids. Immunoglobulin preparations may also be considered where a temporary rapid rise in platelets is needed, for example in pregnancy.

Treatment options for *persistent or chronic* immune thrombocytopenic purpura include thrombopoietin receptor agonists (avatrombopag p. 1120, eltrombopag p. 1123, and romiplostim p. 1125), rituximab [unlicensed use], or fostamatinib p. 1123. [\[A\]](#)

Other therapies that have been tried in refractory immune thrombocytopenic purpura include: azathioprine, ciclosporin, cyclophosphamide, danazol, dapsone, mycophenolate mofetil, and vincristine sulfate.

[\[EvGr\]](#) Splenectomy can be considered as a treatment option only if drug therapy has failed; the patients age and co-morbidities should also be taken into account. [\[A\]](#)

## ANTIHAEMORRHAGICS &gt; HAEMOSTATICS

## Fostamatinib

28-Jan-2022

● **DRUG ACTION** Fostamatinib, through its metabolite R406, blocks the activity of the spleen tyrosine kinase (SYK) enzyme, thereby reducing immune-mediated destruction of platelets.

● **INDICATIONS AND DOSE****Chronic immune thrombocytopenia in patients refractory to other treatments (under expert supervision)**

## ▶ BY MOUTH

▶ **Adult:** Initially 100 mg twice daily; increased if tolerated to 150 mg twice daily after 4 weeks, dose to be adjusted to achieve a platelet count of  $50 \times 10^9$ /litre or more, discontinue if inadequate response after 12 weeks of treatment, for dose reduction, interruption or treatment discontinuation due to side-effects—consult product literature

● **INTERACTIONS** → Appendix 1: fostamatinib

● **SIDE-EFFECTS**

▶ **Common or very common** Chest pain · diarrhoea · dizziness · fatigue · frequent bowel movements · gastrointestinal discomfort · hypertension · increased risk of infection · influenza like illness · nausea · neutropenia · skin reactions · taste altered

▶ **Frequency not known** Hyperbilirubinaemia · hypoxia · nephrolythiasis · pain in extremity · syncope · toothache

● **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during and for at least 1 month after stopping treatment in females of childbearing potential.

● **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies.

● **BREAST FEEDING** Manufacturer advises avoid during and for at least 1 month after stopping treatment—metabolites present in milk in animal studies.

● **HEPATIC IMPAIRMENT** Manufacturer advises avoid in severe impairment; caution in mild to moderate impairment—monitor liver function monthly during treatment.

**Dose adjustments** Manufacturer advises consider dose reduction, interruption or treatment discontinuation in mild to moderate impairment—consult product literature.

● **MONITORING REQUIREMENTS**

▶ Manufacturer advises monitor blood pressure every 2 weeks until stable, then monthly thereafter; antihypertensive therapy can be initiated or adjusted during treatment. If increased blood pressure persists, consider fostamatinib dose reduction, interruption or discontinuation—consult product literature.

▶ Manufacturer advises monitor full blood count, including neutrophils and platelet counts, monthly until a stable platelet count of at least  $50 \times 10^9$ /litre is reached; monitor full blood counts regularly thereafter.

▶ Manufacturer advises monitor for any effects on bone remodelling or formation, especially in patients with osteoporosis, fractures or young adults where epiphyseal fusion has not yet occurred—limited information available.

● **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

▶ Fostamatinib for treating refractory chronic immune thrombocytopenia (January 2022) NICE TA759 Not recommended

**Scottish Medicines Consortium (SMC) decisions**

▶ Fostamatinib (*Tavlesse*<sup>®</sup>) for the treatment of chronic immune thrombocytopenia in adult patients who are

refractory to other treatments (January 2021)

SMC No. SMC2300 Recommended with restrictions

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Tablet**

▶ **Tavlesse** (Grifols UK Ltd) ▼

100 mg Tavlesse 100mg tablets | 60 tablet [PoM] £3,090.00 (Hospital only)

Fostamatinib (as Fostamatinib disodium hexahydrate)

150 mg Tavlesse 150mg tablets | 60 tablet [PoM] £4,635.00 (Hospital only)

## ANTIHAEMORRHAGICS &gt; THROMBOPOIETIN RECEPTOR AGONISTS

## Eltrombopag

29-Mar-2022

● **DRUG ACTION** Eltrombopag is a thrombopoietin receptor agonist that binds to and activates the thrombopoietin (TPO) receptor, thereby increasing platelet production.

● **INDICATIONS AND DOSE****Chronic immune (idiopathic) thrombocytopenic purpura in patients of East or Southeast Asian origin refractory to other treatments (such as corticosteroids or immunoglobulins) (under expert supervision)**

## ▶ BY MOUTH

▶ **Adult:** Initially 25 mg once daily, dose to be adjusted to achieve a platelet count of  $50 \times 10^9$ /litre or more—consult product literature for dose adjustments, discontinue if inadequate response after 4 weeks treatment at maximum dose; maximum 75 mg per day

**Chronic immune (idiopathic) thrombocytopenic purpura in patients refractory to other treatments (such as corticosteroids or immunoglobulins) (under expert supervision)**

## ▶ BY MOUTH

▶ **Adult:** Initially 50 mg once daily, dose to be adjusted to achieve a platelet count of  $50 \times 10^9$ /litre or more—consult product literature for dose adjustments, discontinue if inadequate response after 4 weeks treatment at maximum dose; maximum 75 mg per day

**Treatment of thrombocytopenia associated with chronic hepatitis C infection, where the degree of thrombocytopenia is the main factor preventing the initiation or limiting the ability to maintain optimal interferon-based therapy (under expert supervision)**

## ▶ BY MOUTH

▶ **Adult:** Initially 25 mg once daily, dose to be adjusted to achieve a platelet count sufficient to initiate antiviral therapy then a platelet count of  $50\text{--}75 \times 10^9$ /litre during antiviral therapy—consult product literature for dose adjustments, discontinue if inadequate response after 2 weeks treatment at maximum dose; maximum 100 mg per day

**Acquired severe aplastic anaemia in patients of East or Southeast Asian origin either refractory to or heavily pretreated with prior immunosuppressive therapy and are unsuitable for haematopoietic stem cell transplantation (under expert supervision)**

## ▶ BY MOUTH

▶ **Adult:** Initially 25 mg once daily, dose to be adjusted to achieve a platelet count of  $50 \times 10^9$ /litre or more—consult product literature for dose adjustments, discontinue if no haematological response after 16 weeks treatment; maximum 150 mg per day

continued →

**Acquire severe aplastic anaemia in patients either refractory to or heavily pretreated with prior immunosuppressive therapy and are unsuitable for haematopoietic stem cell transplantation (under expert supervision)**

▶ BY MOUTH

- ▶ Adult: Initially 50 mg once daily, dose to be adjusted to achieve a platelet count of  $50 \times 10^9$ /litre or more—consult product literature for dose adjustments, discontinue if no haematological response after 16 weeks treatment; maximum 150 mg per day

**DOSE EQUIVALENCE AND CONVERSION**

- ▶ Powder for oral suspension may lead to higher eltrombopag exposure than oral tablet; platelet counts should be monitored weekly for 2 weeks when switching between preparations.

**IMPORTANT SAFETY INFORMATION**

**MHRA/CHM ADVICE: ELTROMBOPAG (REVLADE®): REPORTS OF INTERFERENCE WITH BILIRUBIN AND CREATININE TEST RESULTS (JULY 2018)**

See *Effect on laboratory tests*.

- **CAUTIONS** Patients of East or Southeast Asian origin · risk factors for thromboembolism
- **INTERACTIONS** → Appendix 1: eltrombopag
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Abnormal loss of weight · alopecia · anaemia · anxiety · appetite abnormal · arthralgia · asthenia · cataract · chest discomfort · chills · concentration impaired · constipation · cough · depression · diarrhoea · dizziness · drowsiness · dry eye · dry mouth · dysphagia · dyspnoea · ear pain · electrolyte imbalance · embolism and thrombosis · eosinophilia · eye disorders · eye pain · fever · gastrointestinal discomfort · gastrointestinal disorders · haemorrhage · headaches · hepatic disorders · hyperbilirubinaemia · hyperglycaemia · hypoglycaemia · increased leucocytes · increased risk of infection · influenza like illness · iron overload · lymphopenia · malaise · memory impairment · menorrhagia · mood altered · muscle complaints · nasal complaints · nausea · neutropenia · oedema · oral disorders · oropharyngeal complaints · pain · palpitations · renal impairment · renal thrombotic microangiopathy · sensation abnormal · skin reactions · sleep disorder · splenic infarction · sweat changes · syncope · taste altered · urine abnormalities · urine discolouration · vasodilation · vertigo · vision disorders · vomiting · weight decreased
  - ▶ **Uncommon** Anisocytosis · arrhythmias · balance impaired · cardiovascular disorder · confusion · cyanosis · eye inflammation · feeling hot · feeling jittery · food poisoning · gout · haemolytic anaemia · hemiparesis · lens opacity · muscle weakness · myocardial infarction · nephritis lupus · nerve disorders · QT interval prolongation · rectosigmoid cancer · retinal pigment epitheliopathy · sinus disorder · sleep apnoea · speech disorder · sunburn · tremor · urinary disorders · wound inflammation
  - ▶ **Frequency not known** Cerebral infarction · sepsis
- **CONCEPTION AND CONTRACEPTION** Ensure effective contraception during treatment.
- **PREGNANCY** Avoid—toxicity in *animal* studies.
- **BREAST FEEDING** Manufacturer advises avoid.
- **HEPATIC IMPAIRMENT**
  - ▶ When used for Idiopathic thrombocytopenic purpura Manufacturer advises consider avoiding.
  - ▶ When used for Severe aplastic anaemia Manufacturer advises caution.
  - ▶ When used for Thrombocytopenia associated with chronic hepatitis C infection Manufacturer advises caution (increased risk of hepatic decompensation and thromboembolic events).

**Dose adjustments**

- ▶ When used for Idiopathic thrombocytopenic purpura Manufacturer advises initial dose reduction to 25 mg once daily and wait at least 3 weeks before upwards titration of dose.
- ▶ When used for Severe aplastic anaemia Manufacturer advises initial dose reduction to 25 mg once daily and wait at least 2 weeks before upwards titration of dose.
- ▶ When used for Thrombocytopenia associated with chronic hepatitis C infection Manufacturer advises initial dose reduction to 25 mg once daily in moderate to severe impairment and wait at least 2 weeks before upwards titration of dose.
- **RENAL IMPAIRMENT** [EVR](#) Use with caution. 
- **PRE-TREATMENT SCREENING** For *severe aplastic anaemia*, manufacturer advises do not initiate if patients have existing cytogenetic abnormalities of chromosome 7.
- **MONITORING REQUIREMENTS**
  - ▶ Manufacturer advises monitor liver function before treatment, every two weeks when adjusting the dose, and monthly thereafter.
  - ▶ Manufacturer advises regular ophthalmological examinations for cataract formation.
  - ▶ Manufacturer advises peripheral blood smear prior to initiation to establish baseline level of cellular morphologic abnormalities; once stabilised, full blood count with white blood cell count differential should be performed monthly.
  - ▶ For *idiopathic thrombocytopenic purpura*, manufacturer advises monitor full blood count including platelet count and peripheral blood smears every week during treatment until a stable platelet count is reached ( $50 \times 10^9$ /litre or more for at least 4 weeks), then monthly thereafter; monitor platelet count weekly for 4 weeks following treatment discontinuation.
  - ▶ For *severe aplastic anaemia*, manufacturer advises bone marrow examination with aspirations for cytogenetics prior to initiation, at 3 months of treatment and 6 months thereafter.
  - ▶ For *thrombocytopenia associated with chronic hepatitis C infection*, manufacturer advises monitor platelet count every week before and during antiviral treatment until a stable platelet count is reached ( $50-75 \times 10^9$ /litre), then monitor full blood count including platelet count and peripheral blood smears monthly thereafter.
- **EFFECT ON LABORATORY TESTS** Eltrombopag is highly coloured and can cause serum discolouration and interference with total bilirubin and creatinine testing. If laboratory results are inconsistent with clinical observations, manufacturer advises re-testing using another method to help determine the validity of the result.
- **DIRECTIONS FOR ADMINISTRATION** [EVR](#) Each dose should be taken at least 2 hours before or 4 hours after any dairy products (or foods containing calcium), indigestion remedies, or medicines containing aluminium, calcium, iron, magnesium, zinc, or selenium to reduce possible interference with absorption. For *powder for oral suspension*, disperse dose in 20 mL of water and administer using an oral syringe. Discard suspension if not administered within 30 minutes of preparation. 
- **PATIENT AND CARER ADVICE** Patients or carers should be given advice on how to administer eltrombopag tablets and powder for oral suspension.

**Romiplostim**

22-Oct-2020

- **DRUG ACTION** Romiplostim is an Fc-peptide fusion protein that binds to and activates the thrombopoietin (TPO) receptor, thereby increasing platelet production.

● **INDICATIONS AND DOSE**

**Chronic immune (idiopathic) thrombocytopenic purpura in patients refractory to other treatments (such as corticosteroids or immunoglobulins) (under expert supervision)**

- ▶ **BY SUBCUTANEOUS INJECTION**

- ▶ **Adult:** Initially 1 microgram/kg once weekly, adjusted in steps of 1 microgram/kg once weekly (max. per dose 10 micrograms/kg once weekly) until a stable platelet count of  $50 \times 10^9$ /litre or more is reached, consult product literature for further details of dose adjustments, discontinue treatment if inadequate response after 4 weeks at maximum dose

- **CAUTIONS** Risk factors for thromboembolism

● **SIDE-EFFECTS**

- ▶ **Common or very common** Anaemia · angioedema · arthralgia · asthenia · bone marrow disorders · chills · constipation · diarrhoea · dizziness · embolism and thrombosis · fever · flushing · gastrointestinal discomfort · headaches · hypersensitivity · increased risk of infection · influenza like illness · muscle complaints · nausea · pain · palpitations · peripheral oedema · sensation abnormal · skin reactions · sleep disorders
- ▶ **Uncommon** Alopecia · appetite decreased · chest pain · clonus · cough · dehydration · depression · dry throat · dysphagia · dyspnoea · erythromelalgia · eye disorders · eye pruritus · feeling hot · feeling jittery · gastrooesophageal reflux disease · gout · haemorrhage · hair growth abnormal · hypotension · irritability · leucocytosis · malaise · muscle weakness · myocardial infarction · nasal complaints · neoplasms · oral disorders · papilloedema · peripheral ischaemia · peripheral neuropathy · photosensitivity reaction · pleuritic pain · portal vein thrombosis · skin nodule · splenomegaly · taste altered · thrombocytosis · tooth discolouration · vertigo · vision disorders · vomiting · weight changes

- **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies.

- **BREAST FEEDING** Manufacturer advises avoid—no information available.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution; consider avoiding in moderate to severe impairment (risk of thromboembolic complications).

- **RENAL IMPAIRMENT** Manufacturer advises caution—no information available.

● **MONITORING REQUIREMENTS**

- ▶ Manufacturer advises monitor full blood count and peripheral blood smears for morphological abnormalities before and during treatment.
- ▶ Manufacturer advises monitor platelet count weekly until platelet count reaches  $50 \times 10^9$ /litre or more for at least 4 weeks without dose adjustment, then monthly thereafter.
- ▶ Manufacturer advises monitor platelet count following treatment discontinuation—risk of bleeding.

● **PATIENT AND CARER ADVICE**

- ▶ **Driving and skilled tasks** Manufacturer advises that patients and their carers should be counselled on the effects on driving and the performance of skilled tasks—increased risk of dizziness.

● **NATIONAL FUNDING/ACCESS DECISIONS**

**Romiplostim 125 microgram** Nplate 125microgram powder for solution for injection vials | 1 vial [PoM] £241.00 (Hospital only)

## Nutrition and metabolic disorders

### 1 Fluid and electrolyte imbalances

#### Fluids and electrolytes

04-Feb-2022

##### Electrolyte replacement therapy

The electrolyte concentrations (intravenous fluid) table and the electrolyte content (gastro-intestinal secretions) table may be helpful in planning replacement electrolyte therapy; faeces, vomit, or aspiration should be saved and analysed where possible if abnormal losses are suspected.

##### Oral preparations for fluid and electrolyte imbalance

Sodium and potassium salts, may be given by mouth to prevent deficiencies or to treat established deficiencies of mild or moderate degree.

##### Oral potassium

Compensation for potassium loss is especially necessary:

- in those taking digoxin or anti-arrhythmic drugs, where potassium depletion may induce arrhythmias;
- in patients in whom secondary hyperaldosteronism occurs, e.g. renal artery stenosis, cirrhosis of the liver, the nephrotic syndrome, and severe heart failure;
- in patients with excessive losses of potassium in the faeces, e.g. chronic diarrhoea associated with intestinal malabsorption or laxative abuse.

Measures to compensate for potassium loss may also be required in the elderly since they frequently take inadequate amounts of potassium in the diet (but see **warning on renal insufficiency**). Measures may also be required during long-term administration of drugs known to induce potassium loss (e.g. corticosteroids). Potassium supplements are **seldom required** with the small doses of diuretics given to treat hypertension; **potassium-sparing diuretics** (rather than potassium supplements) are recommended for prevention of hypokalaemia due to diuretics such as furosemide p. 247 or the thiazides when these are given to eliminate oedema.

If potassium salts are used for the prevention of hypokalaemia, then doses of potassium chloride daily (in divided doses) by mouth are suitable in patients taking a normal diet. *Smaller doses* must be used if there is *renal insufficiency (common in the elderly)* to reduce the **risk of hyperkalaemia**.

Potassium salts cause nausea and vomiting and poor compliance is a major limitation to their effectiveness; when appropriate, potassium-sparing diuretics are preferable.

When there is *established potassium depletion* larger doses may be necessary, the quantity depending on the severity of any continuing potassium loss (monitoring of plasma-potassium concentration and specialist advice would be required). Potassium depletion is frequently associated with chloride depletion and with metabolic alkalosis, and these disorders require correction.

#### Management of hyperkalaemia

**Acute severe hyperkalaemia** (plasma-potassium concentration 6.5 mmol/litre or greater, or in the presence of ECG changes) calls for urgent treatment with intravenous calcium chloride 10% p. 1138 [unlicensed] or calcium gluconate 10% p. 1139 [unlicensed], to temporarily protect against myocardial excitability. An intravenous injection of soluble insulin (5–10 units) with 50 mL glucose 50% p. 1132 given over 5–15 minutes, reduces serum-potassium concentration; this is repeated if necessary or a continuous infusion instituted. Salbutamol p. 273 [unlicensed indication], by nebulisation or slow intravenous injection may also reduce plasma-potassium concentration; it should be used with caution in patients with cardiovascular disease. The correction of causal or compounding acidosis with sodium bicarbonate infusion p. 1128 should be considered (**important**: preparations of sodium bicarbonate and calcium salts should not be administered in the same line—risk of precipitation). Drugs exacerbating hyperkalaemia should be reviewed and stopped as appropriate; occasionally haemodialysis is needed.

Ion-exchange resins may be used to remove excess potassium in *mild hyperkalaemia* or in *moderate hyperkalaemia* when there are no ECG changes.

#### Oral sodium and water

Sodium chloride p. 1131 is indicated in states of sodium depletion and usually needs to be given intravenously. In chronic conditions associated with mild or moderate degrees of sodium depletion, e.g. in salt-losing bowel or renal disease, oral supplements of sodium chloride or sodium bicarbonate, according to the acid-base status of the patient, may be sufficient.

#### Oral rehydration therapy (ORT)

As a worldwide problem *diarrhoea* is by far the most important indication for fluid and electrolyte replacement.

Intestinal absorption of sodium and water is enhanced by glucose (and other carbohydrates). Replacement of fluid and electrolytes lost through diarrhoea can therefore be achieved by giving solutions containing sodium, potassium, and glucose or another carbohydrate such as rice starch.

Oral rehydration solutions should:

- enhance the absorption of water and electrolytes;
- replace the electrolyte deficit adequately and safely;
- contain an alkalinising agent to counter acidosis;
- be slightly hypo-osmolar (about 250 mmol/litre) to prevent the possible induction of osmotic diarrhoea;
- be simple to use in hospital and at home;
- be palatable and acceptable, especially to children;
- be readily available.

It is the policy of the World Health Organization (WHO) to promote a single oral rehydration solution but to use it flexibly (e.g. by giving extra water between drinks of oral rehydration solution to moderately dehydrated infants).

The WHO oral rehydration salts formulation contains sodium chloride 2.6 g, potassium chloride 1.5 g, sodium citrate 2.9 g, anhydrous glucose 13.5 g. It is dissolved in sufficient water to produce 1 litre (providing Na<sup>+</sup> 75 mmol, K<sup>+</sup> 20 mmol, Cl<sup>-</sup> 65 mmol, citrate 10 mmol, glucose 75 mmol/litre). This formulation is recommended by the WHO and the United Nations Children's fund, but it is not commonly used in the UK.

Oral rehydration solutions used in the UK are lower in sodium (50–60 mmol/litre) than the WHO formulation since, in general, patients suffer less severe sodium loss.

Rehydration should be rapid over 3 to 4 hours (except in hypernatraemic dehydration in which case rehydration should occur more slowly over 12 hours). The patient should be reassessed after initial rehydration and if still dehydrated rapid fluid replacement should continue.

Once rehydration is complete further dehydration is prevented by encouraging the patient to drink normal volumes of an appropriate fluid and by replacing continuing losses with an oral rehydration solution; in infants, breastfeeding or formula feeds should be offered between oral rehydration drinks.

#### Oral bicarbonate

Sodium bicarbonate is given by mouth for *chronic acidotic states* such as uraemic acidosis or renal tubular acidosis. The dose for correction of metabolic acidosis is not predictable and the response must be assessed. For severe *metabolic acidosis*, sodium bicarbonate can be given intravenously.

Sodium bicarbonate may also be used to increase the pH of the urine; it is also used in dyspepsia.

Sodium supplements may increase blood pressure or cause fluid retention and pulmonary oedema in those at risk; hypokalaemia may be exacerbated.

Where *hyperchloraemic acidosis* is associated with potassium deficiency, as in some renal tubular and gastrointestinal disorders it may be appropriate to give oral **potassium bicarbonate**, although acute or severe deficiency should be managed by intravenous therapy.

### Parenteral preparations for fluid and electrolyte imbalance

#### Electrolytes and water

Solutions of electrolytes are given intravenously, to meet normal fluid and electrolyte requirements or to replenish substantial deficits or continuing losses, when the patient is nauseated or vomiting and is unable to take adequate amounts by mouth. When intravenous administration is not possible, fluid (as sodium chloride 0.9% p. 1131 or glucose 5% p. 1132) can also be given by subcutaneous infusion (hypodermoclysis).

The nature and severity of the electrolyte imbalance must be assessed from the history and clinical and biochemical investigations. Sodium, potassium, chloride, magnesium,

## Fluids and electrolytes

### Electrolyte concentrations—intravenous fluids

Intravenous infusion	Millimoles per litre				
	Na <sup>+</sup>	K <sup>+</sup>	HCO <sub>3</sub> <sup>-</sup>	Cl <sup>-</sup>	Ca <sup>2+</sup>
<b>Normal plasma values</b>	<b>142</b>	<b>4.5</b>	<b>26</b>	<b>103</b>	<b>2.5</b>

Sodium Lactate (m/6)	167	-	167	-	-

### Electrolyte content—gastro-intestinal secretions

Type of fluid	Millimoles per litre				
	H <sup>+</sup>	Na <sup>+</sup>	K <sup>+</sup>	HCO <sub>3</sub> <sup>-</sup>	Cl <sup>-</sup>
Gastric	40–60	20–80	5–20	-	100–150
Biliary	-	120–140	5–15	30–50	80–120
Pancreatic	-	120–140	5–15	70–110	40–80
Small bowel	-	120–140	5–15	20–40	90–130

phosphate, and water depletion can occur singly and in combination with or without disturbances of acid-base balance.

Isotonic solutions may be infused safely into a peripheral vein. Solutions more concentrated than plasma, e.g. 20% glucose, are best given through an indwelling catheter positioned in a large vein.

#### Intravenous sodium

Sodium chloride in isotonic solution provides the most important extracellular ions in near physiological concentrations and is indicated in *sodium depletion*, which can arise from such conditions as gastro-enteritis, diabetic ketoacidosis, ileus, and ascites. In a severe deficit of 4 to 8 litres, 2 to 3 litres of isotonic sodium chloride may be given over 2 to 3 hours; thereafter the infusion can usually be at a slower rate.

Chronic hyponatraemia arising from inappropriate secretion of antidiuretic hormone should ideally be corrected by fluid restriction. However, if sodium chloride is required for acute or chronic hyponatraemia, regardless of the cause, the deficit should be corrected slowly to avoid the risk of osmotic demyelination syndrome and the rise in plasma-sodium concentration should not exceed 10 mmol/litre in 24 hours. In severe hyponatraemia, sodium chloride 1.8% may be used cautiously.

**Compound sodium lactate** (Hartmann's solution) can be used instead of isotonic sodium chloride solution during or after surgery, or in the initial management of the injured or wounded; it may reduce the risk of hyperchloraemic acidosis.

Sodium chloride with glucose p. 1132 solutions are indicated when there is combined *water and sodium depletion*. A 1:1 mixture of isotonic sodium chloride and 5%

glucose allows some of the water (free of sodium) to enter body cells which suffer most from dehydration while the sodium salt with a volume of water determined by the normal plasma Na<sup>+</sup> remains extracellular.

Combined sodium, potassium, chloride, and water depletion may occur, for example, with severe diarrhoea or persistent vomiting; replacement is carried out with sodium chloride intravenous infusion 0.9% and glucose intravenous infusion 5% with potassium as appropriate.

#### Intravenous glucose

Glucose solutions (5%) are used mainly to replace water deficit. Average water requirements in a healthy adult are 1.5 to 2.5 litres daily and this is needed to balance unavoidable losses of water through the skin and lungs and to provide sufficient for urinary excretion. Water depletion (dehydration) tends to occur when these losses are not matched by a comparable intake, as may occur in coma or dysphagia or in the elderly or apathetic who may not drink enough water on their own initiative.

Excessive loss of water without loss of electrolytes is uncommon, occurring in fevers, hyperthyroidism, and in uncommon water-losing renal states such as diabetes insipidus or hypercalcaemia. The volume of glucose solution needed to replace deficits varies with the severity of the disorder, but usually lies within the range of 2 to 6 litres.

Glucose solutions are also used to correct and prevent hypoglycaemia and to provide a source of energy in those too ill to be fed adequately by mouth; glucose solutions are a key component of parenteral nutrition.

Glucose solutions are given in regimens with calcium and insulin for the emergency management of *hyperkalaemia*. They are also given, after correction of hyperglycaemia,

during treatment of diabetic ketoacidosis, when they must be accompanied by continuing insulin infusion.

#### Intravenous potassium

Potassium chloride with sodium chloride intravenous infusion p. 1131 is the initial treatment for the correction of severe hypokalaemia and when sufficient potassium cannot be taken by mouth.

Repeated measurement of plasma-potassium concentration is necessary to determine whether further infusions are required and to avoid the development of hyperkalaemia, which is especially likely in renal impairment.

Initial potassium replacement therapy should **not** involve glucose infusions, because glucose may cause a further decrease in the plasma-potassium concentration.

#### Bicarbonate and lactate

Sodium bicarbonate below is used to control severe *metabolic acidosis* (pH<7.1) particularly that caused by loss of bicarbonate (as in renal tubular acidosis or from excessive gastro-intestinal losses). Mild metabolic acidosis associated with volume depletion should first be managed by appropriate fluid replacement because acidosis usually resolves as tissue and renal perfusion are restored. In more severe metabolic acidosis or when the acidosis remains unresponsive to correction of anaemia or hypovolaemia, sodium bicarbonate (1.26%) can be infused over 3–4 hours with plasma-pH and electrolyte monitoring. In severe shock, metabolic acidosis can develop without sodium or volume depletion; in these circumstances sodium bicarbonate is best given as a small volume of hypertonic solution, such as 50 mL of 8.4% solution intravenously.

Sodium lactate intravenous infusion is no longer used in metabolic acidosis because of the risk of producing lactic acidosis, particularly in seriously ill patients with poor tissue perfusion or impaired hepatic function.

For *chronic acidotic states*, sodium bicarbonate can be given by mouth.

#### Plasma and plasma substitutes

Plasma and plasma substitutes ('colloids') contain large molecules that do not readily leave the intravascular space where they exert osmotic pressure to maintain circulatory volume. Compared to fluids containing electrolytes such as sodium chloride and glucose ('crystalloids'), a smaller volume of colloid is required to produce the same expansion of blood volume, thereby shifting salt and water from the extravascular space. If resuscitation requires a volume of fluid that exceeds the maximum dose of the colloid then crystalloids can be given; packed red cells may also be required.

Albumin solution p. 1140, prepared from whole blood, contain soluble proteins and electrolytes but no clotting factors, blood group antibodies, or plasma cholinesterases; they may be given without regard to the recipient's blood group.

Albumin is usually used after the acute phase of illness, to correct a plasma-volume deficit; hypoalbuminaemia itself is not an appropriate indication. The use of albumin solution in acute plasma or blood loss may be wasteful; plasma substitutes are more appropriate. Concentrated albumin solution (20%) can be used under specialist supervision in patients with an intravascular fluid deficit and oedema because of interstitial fluid overload, to restore intravascular plasma volume with less exacerbation of the salt and water overload than isotonic solutions. Concentrated albumin solution p. 1140 may also be used to obtain a diuresis in hypoalbuminaemic patients (e.g. in hepatic cirrhosis).

Recent evidence does not support the previous view that the use of albumin increases mortality.

#### Plasma substitutes

Dextran, gelatin p. 1140, and the hydroxyethyl starch, tetra starch, are macromolecular substances which are

metabolised slowly. Dextran and gelatin may be used at the outset to expand and maintain blood volume in shock arising from conditions such as burns or septicemia; they may also be used as an immediate short-term measure to treat haemorrhage until blood is available. Dextran and gelatin are rarely needed when shock is due to sodium and water depletion because, in these circumstances, the shock responds to water and electrolyte repletion.

Hydroxyethyl starches should only be used for the treatment of hypovolaemia due to acute blood loss when crystalloids alone are not sufficient; they should be used at the lowest effective dose for the first 24 hours of fluid resuscitation.

Plasma substitutes should **not** be used to maintain plasma volume in conditions such as burns or peritonitis where there is loss of plasma protein, water, and electrolytes over periods of several days or weeks. In these situations, plasma or plasma protein fractions containing large amounts of albumin should be given.

Large volumes of *some* plasma substitutes can increase the risk of bleeding through depletion of coagulation factors.

## BICARBONATE

### Sodium bicarbonate

19-Apr-2022

#### ● INDICATIONS AND DOSE

##### Alkalinisation of urine | Relief of discomfort in mild urinary-tract infections

###### ► BY MOUTH

- Adult: 3 g every 2 hours until urinary pH exceeds 7, to be dissolved in water

##### Maintenance of alkaline urine

###### ► BY MOUTH

- Adult: 5–10 g daily, to be dissolved in water

##### Chronic acidotic states such as uraemic acidosis or renal tubular acidosis

###### ► BY MOUTH

- Adult: 4.8 g daily, (57 mmol each of Na<sup>+</sup> and HCO<sub>3</sub><sup>-</sup>), higher doses may be required and should be adjusted according to response

##### Severe metabolic acidosis

###### ► BY SLOW INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION

- Adult: Administer an amount appropriate to the body base deficit, to be given by slow intravenous injection of a strong solution (up to 8.4%), or by continuous intravenous infusion of a weaker solution (usually 1.26%)

#### NEPHROTRANS<sup>®</sup>

##### Metabolic acidosis in patients with chronic renal impairment

###### ► BY MOUTH

- Adult: 3–5 g daily in divided doses, adjusted according to response

#### ● CONTRA-INDICATIONS

- With systemic use Hypokalaemia · salt restricted diet
- With intravenous use for metabolic acidosis Conditions associated with sodium retention · history of urinary calculi
- With systemic use for metabolic acidosis Hypernatraemia · hypocalcaemia · hypochlorhydria · metabolic or respiratory alkalosis

#### ● CAUTIONS

- With intravenous use Respiratory acidosis
- With oral use for metabolic acidosis Conditions associated with sodium retention
- With systemic use for metabolic acidosis Hypoventilation

- INTERACTIONS → Appendix 1: sodium bicarbonate

### ● SIDE-EFFECTS

- ▶ With intravenous use Skin exfoliation · soft tissue necrosis · ulcer
- ▶ With oral use Anxiety · appetite decreased · asthenia · dizziness · dyspnoea · flatulence · fluid retention · gastrointestinal discomfort · headache · hypertension · hypokalaemia · inflammation · metabolic alkalosis · mood altered · muscle complaints · nausea · nephrolithiasis (long term use) · pulmonary oedema · taste unpleasant · urinary frequency increased · vomiting

### ● ALLERGY AND CROSS-SENSITIVITY

**NEPHROTRANS**® Contra-indicated in patients with hypersensitivity or allergy to peanuts or soya (contains soya lecithin and soya-bean oil).

- **PREGNANCY** EvGr Use with caution. M

### ● HEPATIC IMPAIRMENT

- ▶ With oral use Manufacturer advises caution in cirrhosis.

### ● RENAL IMPAIRMENT

- ▶ With oral use EvGr Caution (risk of metabolic alkalosis, hypokalaemia and sodium retention). M

- **MONITORING REQUIREMENTS** EvGr Monitor plasma-pH and electrolytes regularly during treatment. M

### ● DIRECTIONS FOR ADMINISTRATION

- ▶ With intravenous use For *slow intravenous injection* use a small volume of hypertonic solution (such as 50 mL of 8.4%). For *continuous intravenous infusion* a weaker solution of 1.26% solution can be infused over 3–4 hours.
- ▶ With oral use Sodium bicarbonate may affect the stability or absorption of other drugs if administered at the same time. If possible, allow 1–2 hours before administering other drugs orally.

### ● PRESCRIBING AND DISPENSING INFORMATION

- ▶ With oral use *Sodium bicarbonate* 500mg capsules contain approximately 6 mmol each of Na<sup>+</sup> and HCO<sub>3</sub><sup>-</sup>; *Sodium bicarbonate* 600mg capsules contain approximately 7 mmol each of Na<sup>+</sup> and HCO<sub>3</sub><sup>-</sup>. Oral solutions of sodium bicarbonate are required occasionally; these are available from 'special-order' manufacturers or specialist importing companies; the strength of sodium bicarbonate should be stated on the prescription.
- ▶ With intravenous use Usual strength Sodium bicarbonate 1.26% (12.6 g, 150 mmol each of Na<sup>+</sup> and HCO<sub>3</sub><sup>-</sup>/litre), various other strengths available.

### ● PATIENT AND CARER ADVICE

- ▶ With oral use Patients or carers should be given advice on the administration of sodium bicarbonate oral medicines.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: capsule, oral suspension, oral solution, solution for injection

#### Gastro-resistant capsule

EXCIPIENTS: May contain Gelatin, polysorbates, propylene glycol, sorbitol

- ▶ **Nephrotrans** (Stanningley Pharma Ltd)

**Sodium bicarbonate 500 mg** Nephrotrans 500mg gastro-resistant capsules | 100 capsule PoM £18.75 DT = £18.75

#### Tablet

- ▶ **Sodium bicarbonate (Non-proprietary)**

**Sodium bicarbonate 600 mg** Sodium bicarbonate 600mg tablets | 100 tablet GSL £29.75 DT = £26.79

#### Solution for injection

- ▶ **Sodium bicarbonate (Non-proprietary)**

**Sodium bicarbonate 84 mg per 1 ml** Sodium bicarbonate 8.4% (1mmol/ml) solution for infusion 100ml bottles | 10 bottle PoM £104.04 DT = £102.00

## ELECTROLYTES AND MINERALS > POTASSIUM

### Potassium chloride with calcium chloride dihydrate and sodium chloride

(Ringer's solution)

The properties listed below are those particular to the combination only. For the properties of the components please consider, potassium chloride p. 1149, sodium chloride p. 1131.

#### ● INDICATIONS AND DOSE

##### Electrolyte imbalance

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: Dosed according to the deficit or daily maintenance requirements (consult product literature)

- **INTERACTIONS** → Appendix 1: potassium chloride

- **PRESCRIBING AND DISPENSING INFORMATION** Ringer's solution for injection provides the following ions (in mmol/litre), Ca<sup>2+</sup> 2.2, K<sup>+</sup> 4, Na<sup>+</sup> 147, Cl<sup>-</sup> 156.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Infusion

- ▶ **Potassium chloride with calcium chloride dihydrate and sodium chloride (Non-proprietary)**

**Potassium chloride 300 microgram per 1 ml, Calcium chloride 320 microgram per 1 ml, Sodium chloride 8.6 mg per 1 ml** Steriflex No.9 ringers infusion 1litre bags | 1 bag PoM £2.22 | 10 bag PoM £22.20

**Steriflex No.9 ringers infusion** 500ml bags | 1 bag PoM £1.96 | 15 bag PoM £29.40 | 20 bag PoM £39.20

## Potassium chloride with calcium chloride, sodium chloride and sodium lactate

(Sodium Lactate Intravenous Infusion, Compound; Compound, Hartmann's Solution for Injection; Ringer-Lactate Solution for Injection)

The properties listed below are those particular to the combination only. For the properties of the components please consider, potassium chloride p. 1149, sodium chloride p. 1131, calcium chloride p. 1138.

### ● INDICATIONS AND DOSE

**For prophylaxis, and replacement therapy, requiring the use of sodium chloride and lactate, with minimal amounts of calcium and potassium**

► BY INTRAVENOUS INFUSION

► Adult: (consult product literature)

- **INTERACTIONS** → Appendix 1: calcium salts · potassium chloride
- **PRESCRIBING AND DISPENSING INFORMATION** Compound sodium lactate intravenous infusion contains Na<sup>+</sup> 131 mmol, K<sup>+</sup> 5 mmol, Ca<sup>2+</sup> 2 mmol, HCO<sub>3</sub><sup>-</sup> (as lactate) 29 mmol, Cl<sup>-</sup> 111 mmol/litre.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Infusion

► Potassium chloride with calcium chloride, sodium chloride and sodium lactate (Non-proprietary)

Calcium chloride 270 microgram per 1 ml, Potassium chloride 400 microgram per 1 ml, Sodium lactate 3.17 mg per 1 ml, Sodium chloride 6 mg per 1 ml Sodium lactate compound infusion (Hartmann's Solution) 1litre Macoflex N bags | 1 bag [PoM] [X]  
Sodium lactate compound (Hartmann's Solution) infusion 1litre Viaflo bags | 1 bag [PoM] [X]

Sodium lactate compound (Hartmann's Solution) infusion 1litre Freeflex bags | 1 bag [PoM] £2.21 | 10 bag [PoM] £22.10

Sodium lactate compound (Hartmann's Solution) infusion 1litre Macoflex bags | 1 bag [PoM] [X]

Ringer lactate (Hartmann's Solution) infusion 1litre Viaflo bags | 1 bag [PoM] [X]

## Potassium chloride with glucose

The properties listed below are those particular to the combination only. For the properties of the components please consider, potassium chloride p. 1149, glucose p. 1132.

### ● INDICATIONS AND DOSE

#### Electrolyte imbalance

► BY INTRAVENOUS INFUSION

► Adult: Dosed according to the deficit or daily maintenance requirements

- **INTERACTIONS** → Appendix 1: potassium chloride
- **PRESCRIBING AND DISPENSING INFORMATION** Potassium chloride 0.3% contains 40 mmol each of K<sup>+</sup> and Cl<sup>-</sup>/litre or 0.15% contains 20 mmol each of K<sup>+</sup> and Cl<sup>-</sup>/litre with 5% of anhydrous glucose.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: infusion, solution for infusion

### Infusion

► Potassium chloride with glucose (Non-proprietary)

Potassium chloride 3 mg per 1 ml, Glucose anhydrous 50 mg per 1 ml Potassium chloride 0.3% (potassium 20mmol/500ml) / Glucose 5% infusion 500ml bags | 1 bag [PoM] [X]  
Potassium chloride 0.3% (potassium 40mmol/1litre) / Glucose 5% infusion 1litre bags | 1 bag [PoM] £1.59

Potassium chloride 1.5 mg per 1 ml, Glucose anhydrous 50 mg per 1 ml Potassium chloride 0.15% (potassium 20mmol/1litre) / Glucose 5% infusion 1litre bags | 1 bag [PoM] [X]  
Potassium chloride 0.15% (potassium 10mmol/500ml) / Glucose 5% infusion 500ml bags | 1 bag [PoM] £1.59

Potassium chloride 2 mg per 1 ml, Glucose anhydrous 50 mg per 1 ml Steriflex No.29 potassium chloride 0.2% (potassium 13.3mmol/500ml) / glucose 5% infusion 500ml bags | 1 bag [PoM] £1.67 | 15 bag [PoM] £25.05

Potassium chloride 3 mg per 1 ml, Glucose (as Glucose monohydrate) 50 mg per 1 ml Potassium chloride 0.3% (potassium 20mmol/500ml) / Glucose 5% infusion 500ml polyethylene bottles | 10 bottle [PoM] £15.90 (Hospital only)

Potassium chloride 0.3% (potassium 40mmol/1litre) / Glucose 5% infusion 1litre polyethylene bottles | 10 bottle [PoM] £15.90 (Hospital only)

Potassium chloride 1.5 mg per 1 ml, Glucose (as Glucose monohydrate) 50 mg per 1 ml Potassium chloride 0.15% (potassium 20mmol/1litre) / Glucose 5% infusion 1litre polyethylene bottles | 10 bottle [PoM] £15.90 (Hospital only)

Potassium chloride 0.15% (potassium 10mmol/500ml) / Glucose 5% infusion 500ml polyethylene bottles | 10 bottle [PoM] £15.90 (Hospital only)

## Potassium chloride with glucose and sodium chloride

The properties listed below are those particular to the combination only. For the properties of the components please consider, potassium chloride p. 1149, glucose p. 1132, sodium chloride p. 1131.

### ● INDICATIONS AND DOSE

#### Electrolyte imbalance

► BY INTRAVENOUS INFUSION

► Adult: Dosed according to the deficit or daily maintenance requirements

- **INTERACTIONS** → Appendix 1: potassium chloride
- **PRESCRIBING AND DISPENSING INFORMATION** Concentration of potassium chloride to be specified by the prescriber (usually K<sup>+</sup> 10–40 mmol/litre).
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: infusion, solution for infusion

### Infusion

► Potassium chloride with glucose and sodium chloride (Non-proprietary)

Potassium chloride 1.5 mg per 1 ml, Sodium chloride 1.8 mg per 1 ml, Glucose anhydrous 40 mg per 1 ml Potassium chloride 0.15% (potassium 20mmol/1litre) / Glucose 4% / Sodium chloride 0.18% infusion 1litre bags | 1 bag [PoM] [X]

Potassium chloride 0.15% (potassium 10mmol/500ml) / Glucose 4% / Sodium chloride 0.18% infusion 500ml bags | 1 bag [PoM] [X]

Sodium chloride 1.8 mg per 1 ml, Potassium chloride 2 mg per 1 ml, Glucose anhydrous 40 mg per 1 ml Steriflex No.30 potassium chloride 0.2% (potassium 13.3mmol/500ml) / glucose 4% / sodium chloride 0.18% infusion 500ml bags | 1 bag [PoM] £1.67 | 15 bag [PoM] £25.05

Steriflex No.30 potassium chloride 0.2% (potassium 27mmol/1litre) / glucose 4% / sodium chloride 0.18% infusion 1litre bags | 1 bag [PoM] £2.20 | 10 bag [PoM] £22.00

Sodium chloride 1.8 mg per 1 ml, Potassium chloride 3 mg per 1 ml, Glucose anhydrous 40 mg per 1 ml Potassium chloride 0.3% (potassium 20mmol/500ml) / Glucose 4% / Sodium chloride 0.18% infusion 500ml bags | 1 bag [PoM] [X]

Potassium chloride 0.3% (potassium 40mmol/1litre) / Glucose 4% / Sodium chloride 0.18% infusion 1litre bags | 1 bag [PoM] [X]

Potassium chloride 1.5 mg per 1 ml, Sodium chloride 1.8 mg per 1 ml, Glucose (as Glucose monohydrate) 40 mg per

1 ml Potassium chloride 0.15% (potassium 20mmol/1litre) / Glucose 4% / Sodium chloride 0.18% infusion 1litre polyethylene bottles | 10 bottle [PoM] £15.90 (Hospital only)

Potassium chloride 0.15% (potassium 10mmol/500ml) / Glucose 4% / Sodium chloride 0.18% infusion 500ml polyethylene bottles | 10 bottle [PoM] £15.90 (Hospital only)

Potassium chloride 1.5 mg per 1 ml, Sodium chloride 4.5 mg per 1 ml, Glucose anhydrous 50 mg per 1 ml Intravenous potassium chloride 0.15% (potassium 10mmol/500ml) / glucose 5% / sodium chloride 0.45% infusion 500ml bags | 1 bag [PoM] £3.76

## Potassium chloride with potassium bicarbonate

10-Mar-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, potassium chloride p. 1149.

### ● INDICATIONS AND DOSE

#### Potassium depletion

- ▶ BY MOUTH
- ▶ Adult: Dosed according to the deficit or daily maintenance requirements (consult product literature)

- INTERACTIONS → Appendix 1: potassium chloride

- PRESCRIBING AND DISPENSING INFORMATION Each *Sando-K*<sup>®</sup> tablet contains potassium 470 mg (12 mmol of K<sup>+</sup>) and chloride 285mg (8 mmol of Cl<sup>-</sup>).

- MEDICINAL FORMS There can be variation in the licensing of different medicines containing the same drug.

#### Effervescent tablet

CAUTIONARY AND ADVISORY LABELS 13, 21

- ▶ *Sando-K* (Alturix Ltd)

Potassium bicarbonate 400 mg, Potassium chloride 600 mg *Sando-K* effervescent tablets | 100 tablet [P] £9.95 DT = £9.95

## Potassium chloride with sodium chloride

The properties listed below are those particular to the combination only. For the properties of the components please consider, potassium chloride p. 1149, sodium chloride below.

### ● INDICATIONS AND DOSE

#### Electrolyte imbalance

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: Depending on the deficit or the daily maintenance requirements (consult product literature)

- INTERACTIONS → Appendix 1: potassium chloride

- PRESCRIBING AND DISPENSING INFORMATION Potassium chloride 0.15% with sodium chloride 0.9% contains K<sup>+</sup> 20 mmol, Na<sup>+</sup> 150 mmol, and Cl<sup>-</sup> 170 mmol/litre or potassium chloride 0.3% with sodium chloride 0.9% contains K<sup>+</sup> 40 mmol, Na<sup>+</sup> 150 mmol, and Cl<sup>-</sup> 190 mmol/litre.

- MEDICINAL FORMS There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: infusion, solution for infusion

#### Infusion

- ▶ Potassium chloride with sodium chloride (Non-proprietary)

Potassium chloride 3 mg per 1 ml, Sodium chloride 9 mg per 1 ml Potassium chloride 0.3% (potassium 20mmol/500ml) / Sodium chloride 0.9% infusion 500ml bags | 1 bag [PoM] [S]  
Potassium chloride 0.3% (potassium 20mmol/500ml) / Sodium chloride 0.9% infusion 500ml polyethylene bottles | 10 bottle [PoM] £15.90 (Hospital only)  
Potassium chloride 0.3% (potassium 40mmol/litre) / Sodium chloride 0.9% infusion 1litre polyethylene bottles | 10 bottle [PoM] £15.90 (Hospital only)  
Potassium chloride 0.3% (potassium 40mmol/litre) / Sodium chloride 0.9% infusion 1litre bags | 1 bag [PoM] [S]  
Potassium chloride 1.5 mg per 1 ml, Sodium chloride 9 mg per 1 ml Potassium chloride 0.15% (potassium 20mmol/litre) / Sodium

chloride 0.9% infusion 1litre polyethylene bottles | 10 bottle [PoM] £15.90 (Hospital only)

Potassium chloride 0.15% (potassium 10mmol/500ml) / Sodium chloride 0.9% infusion 500ml bags | 1 bag [PoM] [S]  
Potassium chloride 0.15% (potassium 20mmol/litre) / Sodium chloride 0.9% infusion 1litre bags | 1 bag [PoM] [S]  
Potassium chloride 0.15% (potassium 10mmol/500ml) / Sodium chloride 0.9% infusion 500ml polyethylene bottles | 10 bottle [PoM] £15.90 (Hospital only)

Potassium chloride 2 mg per 1 ml, Sodium chloride 9 mg per 1 ml Sterifix No.28 potassium chloride 0.2% (potassium 13.3mmol/500ml) / sodium chloride 0.9% infusion 500ml bags | 1 bag [PoM] £1.67 | 15 bag [PoM] £25.05  
Sterifix No.28 potassium chloride 0.2% (potassium 27mmol/litre) / sodium chloride 0.9% infusion 1litre bags | 1 bag [PoM] £2.20 | 10 bag [PoM] £22.00

## ELECTROLYTES AND MINERALS > SODIUM CHLORIDE

### Sodium chloride

25-Apr-2022

### ● INDICATIONS AND DOSE

#### Prophylaxis of sodium chloride deficiency

- ▶ BY MOUTH
- ▶ Adult: 4–8 tablets daily, to be taken with water, up to maximum 20 tablets daily in severe depletion

#### Chronic renal salt wasting

- ▶ BY MOUTH
- ▶ Adult: Up to 20 tablets daily, to be taken with appropriate fluid intake

#### Fluid and electrolyte replacement

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: The volume of sodium chloride solution needed to replace deficits may vary (consult product literature)

#### Diabetic ketoacidosis (when systolic blood pressure below 90 mmHg)

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: Initially 500 mL, sodium chloride 0.9% to be given over 10–15 minutes, repeat if blood pressure remains below 90 mmHg. Seek specialist or senior medical advice and consult local protocol for guidance on further management

### ● CAUTIONS

- ▶ With intravenous use Avoid excessive administration · cardiac failure · dilutional hyponatraemia especially in the elderly · hypertension · peripheral oedema · pulmonary oedema · restrict intake in impaired renal function · toxæmia of pregnancy

### ● SIDE-EFFECTS

- ▶ With intravenous use Chills · fever · hypervolaemia · hypotension · local reaction · localised pain · paraesthesia · skin reactions · tremor · vascular irritation · venous thrombosis
- ▶ With oral use Abdominal cramps · acidosis hyperchloraemic · diarrhoea · generalised oedema · hypertension · hypotension · irritability · muscle complaints · nausea · vomiting

### ● MONITORING REQUIREMENTS

- ▶ With intravenous use The jugular venous pressure should be assessed, the bases of the lungs should be examined for crepitations, and in elderly or seriously ill patients it is often helpful to monitor the right atrial (central) venous pressure.

### ● PRESCRIBING AND DISPENSING INFORMATION

- ▶ With intravenous use Sodium chloride 0.9% intravenous infusion contains Na<sup>+</sup> and Cl<sup>-</sup> each 150 mmol/litre. The term 'normal saline' should not be used to describe sodium chloride intravenous infusion 0.9%; the term 'physiological saline' is acceptable but it is preferable to give the composition (i.e. sodium chloride intravenous infusion 0.9%).

- ▶ With oral use Each *Slow Sodium*<sup>®</sup> tablet contains approximately 10 mmol each of Na<sup>+</sup> and Cl<sup>-</sup>.

#### • PROFESSION SPECIFIC INFORMATION

**Dental practitioners' formulary** Compound Sodium Chloride Mouthwash may be prescribed—see sodium bicarbonate with sodium chloride p. 1304.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: capsule, solution for injection, infusion, solution for infusion

#### Modified-release tablet

CAUTIONARY AND ADVISORY LABELS 25

- ▶ **Slow Sodium** (Alturix Ltd)

**Sodium chloride 600 mg** Slow Sodium 600mg tablets | 100 tablet [GS1] £9.20 DT = £9.20

#### Solution for injection

- ▶ **Sodium chloride (Non-proprietary)**

**Sodium chloride 9 mg per 1 ml** Sodium chloride 0.9% solution for injection 50ml vials | 25 vial [PoM] £85.00-£93.50 DT = £85.01  
Sodium chloride 0.9% solution for injection 10ml ampoules | 10 ampoule [PoM] £3.66-£4.70 DT = £3.88 | 20 ampoule [PoM] £10.21 | 50 ampoule [PoM] £25.50 | 100 ampoule [PoM] £51.00-£54.67  
Sodium chloride 0.9% solution for injection 20ml ampoules | 20 ampoule [PoM] £18.93 DT = £19.87 | 20 ampoule [PoM] £103.39 DT = £19.87 (Hospital only)  
Sodium chloride 0.9% solution for injection 2ml ampoules | 10 ampoule [PoM] £3.00-£3.35 DT = £3.00  
Sodium chloride 0.9% solution for injection 5ml ampoules | 10 ampoule [PoM] £3.28-£3.63 DT = £3.28 | 20 ampoule [PoM] £48.95 (Hospital only) | 50 ampoule [PoM] £22.00

**Sodium chloride 50 mg per 1 ml** Polyfusor sodium chloride 5% infusion 500ml bottles | 1 bottle [PoM] £4.57 | 12 bottle [PoM] £54.84

**Combinations available:** *Potassium chloride with calcium chloride dihydrate and sodium chloride*, p. 1129 • *Potassium chloride with calcium chloride, sodium chloride and sodium lactate*, p. 1130 • *Potassium chloride with glucose and sodium*

*chloride*, p. 1130 • *Potassium chloride with sodium chloride*, p. 1131

## Sodium chloride with glucose

The properties listed below are those particular to the combination only. For the properties of the components please consider, sodium chloride p. 1131, glucose below.

#### • INDICATIONS AND DOSE

##### Combined water and sodium depletion

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: (consult product literature)

- **MONITORING REQUIREMENTS** Maintenance fluid should accurately reflect daily requirements and close monitoring is required to avoid fluid and electrolyte imbalance.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: infusion, solution for infusion

#### Infusion

- ▶ **Sodium chloride with glucose (Non-proprietary)**

**Sodium chloride 4.5 mg per 1 ml, Glucose anhydrous 25 mg per 1 ml** Sodium chloride 0.45% / Glucose 2.5% infusion 500ml Viaflo bags | 1 bag [PoM] £5

**Sodium chloride 1.8 mg per 1 ml, Glucose anhydrous 40 mg per 1 ml** Polyfusor T glucose 4% / sodium chloride 0.18% infusion 500ml bottles | 1 bottle [PoM] £2.40 DT = £2.40 | 12 bottle [PoM] £28.80  
Sodium chloride 0.18% / Glucose 4% infusion 500ml bags | 1 bag [PoM] £5

Sodium chloride 0.18% / Glucose 4% infusion 1litre bags | 1 bag [PoM] £5

**Sodium chloride 9 mg per 1 ml, Glucose 50 mg per 1 ml** Steriflex No.3 glucose 5% / sodium chloride 0.9% infusion 500ml bags | 1 bag [PoM] £1.47 | 20 bag [PoM] £29.40

**Sodium chloride 4.5 mg per 1 ml, Glucose anhydrous 50 mg per 1 ml** Steriflex No.45 glucose 5% / sodium chloride 0.45% infusion 500ml bags | 1 bag [PoM] £2.68 | 15 bag [PoM] £40.20

**Sodium chloride 1.8 mg per 1 ml, Glucose anhydrous 100 mg per 1 ml** Steriflex No.19 glucose 10% / sodium chloride 0.18% infusion 500ml bags | 1 bag [PoM] £2.68

## NUTRIENTS > SUGARS

### Glucose

#### (Dextrose Monohydrate)

15-Sep-2021

#### • INDICATIONS AND DOSE

##### Establish presence of gestational diabetes

- ▶ BY MOUTH
- ▶ Adult: Test dose 75 g, anhydrous glucose to be given to the fasting patient and blood-glucose concentrations measured at intervals, to be given with 200–300 mL fluid

##### Oral glucose tolerance test

- ▶ BY MOUTH
- ▶ Adult: Test dose 75 g, anhydrous glucose to be given to the fasting patient and blood-glucose concentrations measured at intervals, to be given with 200–300 mL fluid

##### Hypoglycaemia

- ▶ BY MOUTH
- ▶ Child up to 5 years: 5 g, repeated after 15 minutes if necessary, 5 g is available from 20 mL oral glucose liquid, 1.5 glucose tablets, or half a tube of glucose 40% oral gel. If oral glucose formulations are not available, the dose may be given using another fast-acting carbohydrate; 5 g is available from approximately 1 teaspoonful of sugar dissolved in an appropriate volume of water

- Child 5–11 years: 10 g, repeated after 15 minutes if necessary, 10 g is available from 40 mL oral glucose liquid, 3 glucose tablets, or 1 tube of glucose 40% oral gel. If oral glucose formulations are not available, the dose may be given using another fast-acting carbohydrate; 10 g is available from approximately 2 teaspoonfuls of sugar dissolved in an appropriate volume of water
- Child 12–17 years: 15 g, repeated after 15 minutes if necessary, 15 g is available from 60 mL oral glucose liquid, 4 glucose tablets, or 1.5 tubes of glucose 40% oral gel. If oral glucose formulations are not available, the dose may be given using another fast-acting carbohydrate; 15 g is available from approximately 3 teaspoonfuls of sugar dissolved in an appropriate volume of water
- Adult: 15–20 g, repeated after 15 minutes if necessary, 15–20 g is available from 60–80 mL oral glucose liquid, 4–5 glucose tablets, or 1.5–2 tubes of glucose 40% oral gel. If oral glucose formulations are not available, the dose may be given using another fast-acting carbohydrate; 15–20 g is available from approximately 3–4 teaspoonfuls of sugar dissolved in an appropriate volume of water, or 150–200 mL of pure fruit juice
- ▶ BY INTRAVENOUS INFUSION
- Child: 500 mg/kg, to be administered as Glucose 10% intravenous infusion into a large vein through a large-gauge needle; care is required since this concentration is irritant
- Adult: 15–20 g, to be administered over 15 minutes as Glucose 10% or 20% intravenous infusion into a large vein through a large-gauge needle; care is required since these concentrations are irritant

#### Hypoglycaemia [in conscious but uncooperative patients]

- ▶ BY BUCCAL ADMINISTRATION
- Child up to 5 years: 5 g, repeated after 15 minutes if necessary, to be given as half a tube of glucose 40% oral gel
- Child 5–11 years: 10 g, repeated after 15 minutes if necessary, to be given as 1 tube of glucose 40% oral gel
- Child 12–17 years: 15 g, repeated after 15 minutes if necessary, to be given as 1.5 tubes of glucose 40% oral gel
- Adult: 15–20 g, repeated after 15 minutes if necessary, to be given as 1.5–2 tubes of glucose 40% oral gel

#### Energy source

- ▶ BY INTRAVENOUS INFUSION
- Adult: 1–3 litres daily, solution concentration of 20–50% to be administered

#### Fluid and carbohydrate replacement

- ▶ BY INTRAVENOUS INFUSION
- Adult: The volume of glucose solution needed to replace deficits may vary (consult product literature)

#### Persistent cyanosis (in combination with propranolol) when blood glucose less than 3 mmol/litre (followed by morphine)

- ▶ BY INTRAVENOUS INFUSION
- Child: 200 mg/kg, to be administered as Glucose 10% intravenous infusion over 10 minutes

#### Diabetic ketoacidosis

- ▶ BY INTRAVENOUS INFUSION
- Adult: (consult local protocol)

#### DOSE EQUIVALENCE AND CONVERSION

- 75 g anhydrous glucose is equivalent to Glucose BP 82.5 g.
- For hypoglycaemia, examples of glucose preparations which can be used to give oral doses are based on the use of oral liquid containing glucose 250 mg/mL and tablets containing glucose 4 g per tablet. Buccal dosing is based on tubes of 40% oral gel containing glucose 10 g per tube.

- **CAUTIONS** Do not give alone except when there is no significant loss of electrolytes · prolonged administration of glucose solutions without electrolytes can lead to hyponatraemia and other electrolyte disturbances
- **SIDE-EFFECTS** Chills · electrolyte imbalance · fever · fluid imbalance · hypersensitivity · local reaction · localised pain · polyuria · rash · venous thrombosis
- **DIRECTIONS FOR ADMINISTRATION**
- ▶ With intravenous use in children [EvGr](#) Injections containing more than 10% glucose can be irritant and should generally be given into a central venous line. [M](#)
- **PRESCRIBING AND DISPENSING INFORMATION** Glucose BP is the monohydrate but Glucose Intravenous Infusion BP is a sterile solution of anhydrous glucose or glucose monohydrate, potency being expressed in terms of anhydrous glucose.
- **EXCEPTIONS TO LEGAL CATEGORY**
- ▶ With intravenous use Prescription only medicine restriction does not apply to 50% solution where administration is for saving life in emergency.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral solution, solution for injection, solution for infusion

#### Solution for infusion

##### ▶ Glucose (Non-proprietary)

**Glucose anhydrous 200 mg per 1 ml** Glucose 20% solution for infusion 100ml vials | 1 vial [PoM](#) £8.26

**Glucose anhydrous 500 mg per 1 ml** Glucose 50% solution for infusion 20ml ampoules | 10 ampoule [PoM](#) £14.00–£16.94 DT = £14.00

Glucose 50% solution for infusion 50ml vials | 25 vial [PoM](#) £60.00–£72.60 DT = £60.00

#### Oral solution

##### ▶ Rapilose OGT (Galen Ltd)

**Glucose 250 mg per 1 ml** Rapilose OGT solution | 300 ml £3.48

#### Oral gel

## ORAL REHYDRATION SALTS

### Disodium hydrogen citrate with glucose, potassium chloride and sodium chloride

19-Oct-2020

(Formulated as oral rehydration salts)

#### ● INDICATIONS AND DOSE

##### Fluid and electrolyte loss in diarrhoea

###### ► BY MOUTH

- Child 1-11 months: 1–1½ times usual feed volume to be given
- Child 1-11 years: 200 mL, to be given after every loose motion
- Child 12-17 years: 200–400 mL, to be given after every loose motion, dose according to fluid loss
- Adult: 200–400 mL, to be given after every loose motion, dose according to fluid loss

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises reconstitute 1 sachet with 200mL of water (freshly boiled and cooled for infants); 5 sachets reconstituted with 1 litre of water provide Na<sup>+</sup> 60 mmol, K<sup>+</sup> 20 mmol, Cl<sup>-</sup> 60 mmol, citrate 10 mmol, and glucose 90 mmol.

- **PRESCRIBING AND DISPENSING INFORMATION** Flavours of oral powder formulations may include black currant, citrus, or natural.

- **PATIENT AND CARER ADVICE** After reconstitution any unused solution should be discarded no later than 1 hour after preparation unless stored in a refrigerator when it may be kept for up to 24 hours.

Medicines for Children leaflet: Oral rehydration salts

[www.medicinesforchildren.org.uk/medicines/oral-rehydration-salts/](http://www.medicinesforchildren.org.uk/medicines/oral-rehydration-salts/)

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder

##### ► Dioralyte (Sanofi)

**Potassium chloride 300 mg, Sodium chloride 470 mg, Disodium hydrogen citrate 530 mg, Glucose 3.56 gram** Dioralyte oral powder sachets citrus | 20 sachet [P] £6.72

Dioralyte oral powder sachets plain | 20 sachet [P] £6.72

Dioralyte oral powder sachets blackcurrant | 20 sachet [P] £6.72

## Potassium chloride with rice powder, sodium chloride and sodium citrate

21-Dec-2020

(Formulated as oral rehydration salts)

#### ● INDICATIONS AND DOSE

##### Fluid and electrolyte loss in diarrhoea

###### ► BY MOUTH

- Adult: 200–400 mL, to be given after every loose motion, dose according to fluid loss

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises reconstitute 1 sachet with 200 mL of water (freshly boiled and cooled for infants); 5 sachets when reconstituted with 1 litre of water provide Na<sup>+</sup> 60 mmol, K<sup>+</sup> 20 mmol, Cl<sup>-</sup> 50 mmol and citrate 10 mmol.

- **PRESCRIBING AND DISPENSING INFORMATION** Flavours of oral powder formulations may include apricot, black currant, or raspberry.

- **PATIENT AND CARER ADVICE** Patients and carers should be advised how to reconstitute *Dioralyte*® Relief oral powder. After reconstitution any unused solution should be discarded no later than 1 hour after preparation unless stored in a refrigerator when it may be kept for up to 24 hours.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder

EXCIPIENTS: May contain Aspartame

##### ► Dioralyte Relief (Sanofi)

**Potassium chloride 300 mg, Sodium chloride 350 mg, Sodium citrate 580 mg, Rice powder pre-cooked 6 gram** Dioralyte Relief oral powder sachets blackcurrant sugar-free | 20 sachet [P] £7.13

## 1.1 Calcium imbalance

### Calcium imbalance

21-Mar-2022

#### Calcium supplements

Calcium supplements are usually only required where dietary calcium intake is deficient. This dietary requirement varies with age and is relatively greater in childhood, pregnancy, and lactation, due to an increased demand, and in old age, due to impaired absorption. In osteoporosis, a calcium intake which is double the recommended amount reduces the rate of bone loss. If the actual dietary intake is less than the recommended amount, a supplement of as much as 40 mmol is appropriate.

In severe acute hypocalcaemia or hypocalcaemic tetany, an initial slow intravenous injection of calcium gluconate injection 10% p. 1139 should be given, with plasma-calcium and ECG monitoring (risk of arrhythmias if given too rapidly), and either repeated as required or, if only temporary improvement, followed by a continuous intravenous infusion to prevent recurrence. Calcium chloride injection p. 1138 is also available, but is more irritant; care should be taken to prevent extravasation. Oral supplements of calcium and vitamin D may also be required in persistent hypocalcaemia. Concurrent hypomagnesaemia should be corrected with magnesium sulfate p. 1142.

For guidance on the role of calcium gluconate 10% injection [unlicensed] or calcium chloride 10% injection [unlicensed] in temporarily protecting the heart against the toxic effects of hyperkalaemia, see Fluids and electrolytes p. 1125.

## Severe hypercalcaemia

Severe hypercalcaemia calls for urgent treatment before detailed investigation of the cause. Dehydration should be corrected first with intravenous infusion of sodium chloride 0.9% p. 1131. Drugs (such as thiazides and vitamin D compounds) which promote hypercalcaemia, should be discontinued and dietary calcium should be restricted.

If *severe hypercalcaemia persists* drugs which inhibit mobilisation of calcium from the skeleton may be required. The **bisphosphonates** are useful and pamidronate disodium p. 730 is probably the most effective.

**Corticosteroids** are widely given, but may only be useful where hypercalcaemia is due to sarcoidosis or vitamin D intoxication; they often take several days to achieve the desired effect.

Calcitonin (salmon) p. 733 can be used for the treatment of hypercalcaemia associated with malignancy; it is rarely effective where bisphosphonates have failed to reduce serum calcium adequately.

After treatment of severe hypercalcaemia the underlying cause must be established. *Further treatment* is governed by the same principles as for initial therapy. Salt and water depletion and drugs promoting hypercalcaemia should be avoided; oral administration of a bisphosphonate may be useful.

## Hypercalciuria

Hypercalciuria should be investigated for an underlying cause, which should be treated. Where a cause is not identified (idiopathic hypercalciuria), the condition is managed by increasing fluid intake and giving bendroflumethiazide p. 181. Reducing dietary calcium intake may be beneficial but severe restriction of calcium intake has not proved beneficial and may even be harmful.

## Hyperparathyroidism

07-Jul-2020

### Hyperparathyroidism, primary

Primary hyperparathyroidism is a disorder of the parathyroid glands—most commonly caused by a non-cancerous tumour (adenoma) in one of the glands. The resulting excess secretion of parathyroid hormone leads to hypercalcaemia, hypophosphataemia and hypercalciuria. The main symptoms are a result of hypercalcaemia and include thirst, increased urine output, constipation, fatigue and memory impairment. Long term effects include cardiovascular disease, kidney stones, osteoporosis, and fractures.

Primary hyperparathyroidism is one of the leading causes of hypercalcaemia, and one of the most common endocrine disorders. It affects twice as many women than men and can develop at any age—with diagnosis most common in women aged 50 to 60 years.

### Aims of treatment

Treatment is focused on cure through surgery; other treatment options aim to reduce long-term complications and improve quality of life.

### Non-drug treatment

**EvGr** Information regarding the advantages and disadvantages of available treatments, ongoing monitoring, and advice on how to reduce the symptoms of primary hyperparathyroidism, should be given to all patients.

Parathyroidectomy surgery is the recommended first-line treatment of primary hyperparathyroidism, with unsuccessful surgery requiring multidisciplinary team review at a specialist centre.

For all patients with primary hyperparathyroidism, Cardiovascular disease risk assessment and prevention p. 206, and assessment of Osteoporosis p. 725 and fracture

risk should be carried out. **EvGr** For further information on fracture risk assessment, see NICE clinical guideline:

**Osteoporosis** (see *Useful resources*).

### Women of childbearing age

**EvGr** For women with primary hyperparathyroidism who are considering pregnancy, parathyroid surgery should be offered; and for pregnant women the management and monitoring of primary hyperparathyroidism should be discussed with a multidisciplinary team at a specialist centre.

Women with primary hyperparathyroidism are at increased risk of hypertensive disease in pregnancy. **EvGr** For information on diagnosis and management, see *Hypertension in pregnancy* in *Hypertension* p. 155.

### Drug treatment

**EvGr** Treatment with cinacalcet below may be considered for patients with primary hyperparathyroidism if surgery has been unsuccessful [unlicensed indication], is unusable, or has been declined; and they have an elevated albumin-adjusted serum calcium level with or without symptoms of hypercalcaemia.

In secondary care, vitamin D levels should be measured and supplementation with vitamin D (see *Vitamins* p. 1172) offered for people with a probable diagnosis of primary hyperparathyroidism if needed.

To reduce fracture risk for people with primary hyperparathyroidism who have an increased fracture risk, a bisphosphonate can be considered. Do not offer bisphosphonates for chronic hypercalcaemia of primary hyperparathyroidism. **EvGr**

## 1.1a Hypercalcaemia and hypercalciuria

### CALCIUM REGULATING DRUGS > BONE RESORPTION INHIBITORS

#### Cinacalcet

22-Jan-2020

- **DRUG ACTION** Cinacalcet reduces parathyroid hormone which leads to a decrease in serum calcium concentrations.

#### ● INDICATIONS AND DOSE

**Secondary hyperparathyroidism [in patients with end-stage renal disease on dialysis] (under expert supervision)**

- ▶ BY MOUTH
- ▶ Adult: Initially 30 mg once daily, dose to be adjusted every 2–4 weeks according to response; maximum 180 mg per day

**Hypercalcaemia in parathyroid carcinoma | Primary hyperparathyroidism [in patients where parathyroidectomy is inappropriate]**

- ▶ BY MOUTH
- ▶ Adult: Initially 30 mg twice daily (max. per dose 90 mg 4 times a day), dose to be adjusted every 2–4 weeks according to response

- **CONTRA-INDICATIONS** Hypocalcaemia

- **CAUTIONS** Conditions that may worsen with a decrease in serum-calcium concentrations · switching from etelcalcetide

#### CAUTIONS, FURTHER INFORMATION

- ▶ Conditions that may worsen with a decrease in serum-calcium concentrations Manufacturer advises caution with use in patients with conditions that may worsen with a decrease in serum-calcium concentrations, including predisposition to QT-interval prolongation, history of seizures, and history of impaired cardiac function—serum-calcium concentration should be closely monitored.
- ▶ Switching from etelcalcetide Manufacturer advises that in patients who have discontinued etelcalcetide, do not initiate cinacalcet until at least three subsequent haemodialysis sessions are completed, and serum-calcium concentration is confirmed within normal range.

- **INTERACTIONS** → Appendix 1: cinacalcet

#### ● SIDE-EFFECTS

- **Common or very common** Appetite decreased · asthenia · back pain · constipation · cough · diarrhoea · dizziness · dyspnoea · electrolyte imbalance · gastrointestinal discomfort · headache · hypersensitivity · hypotension · muscle complaints · nausea · paraesthesia · rash · seizure · upper respiratory tract infection · vomiting
- ▶ **Frequency not known** Heart failure aggravated · QT interval prolongation · ventricular arrhythmia
- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk—no information available.

- **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal* studies.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution in moderate to severe impairment.

#### ● MONITORING REQUIREMENTS

- ▶ When used for Secondary hyperparathyroidism Manufacturer advises measure serum-calcium concentration before initiation of treatment and within 1 week after starting treatment or adjusting dose, then monthly thereafter. Measure parathyroid hormone concentration 1–4 weeks after starting treatment or adjusting dose, then every 1–3 months.
- ▶ When used for Primary hyperparathyroidism and parathyroid carcinoma Manufacturer advises measure serum-calcium concentration before initiation of treatment and within 1 week after starting treatment or adjusting dose, then every 2–3 months.

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises capsules containing granules should be opened and the granules sprinkled on to a small amount of soft food (apple sauce or yogurt) or liquid, then administered immediately. Capsules should not be swallowed whole. For administration advice via nasogastric or gastrostomy tube—consult product literature.

- **PATIENT AND CARER ADVICE** Manufacturer advises patients and their carers should be counselled on the symptoms of hypocalcaemia and importance of serum-calcium monitoring.

**Driving and skilled tasks** Manufacturer advises patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of dizziness and seizures.

#### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### NICE decisions

- ▶ Cinacalcet for the treatment of secondary hyperparathyroidism in patients with end-stage renal disease on maintenance dialysis therapy (January 2007) NICE TA117 Not recommended
- ▶ Cinacalcet for the treatment of secondary hyperparathyroidism in patients with end-stage renal disease

on maintenance dialysis therapy (January 2007) NICE TA117 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Granules

CAUTIONARY AND ADVISORY LABELS 21

##### ▶ Mimpara (Amgen Ltd)

**Cinacalcet (as Cinacalcet hydrochloride) 1 mg** Mimpara 1mg granules in capsules for opening | 30 capsule [PoM] £161.16 (Hospital only)

**Cinacalcet (as Cinacalcet hydrochloride) 2.5 mg** Mimpara 2.5mg granules in capsules for opening | 30 capsule [PoM] £161.16 (Hospital only)

**Cinacalcet (as Cinacalcet hydrochloride) 5 mg** Mimpara 5mg granules in capsules for opening | 30 capsule [PoM] £161.16 (Hospital only)

#### Tablet

CAUTIONARY AND ADVISORY LABELS 21

##### ▶ Cinacalcet (Non-proprietary)

**Cinacalcet (as Cinacalcet hydrochloride) 30 mg** Cinacalcet 30mg tablets | 28 tablet [PoM] £125.75 DT = £25.23

**Cinacalcet (as Cinacalcet hydrochloride) 60 mg** Cinacalcet 60mg tablets | 28 tablet [PoM] £231.97 DT = £44.83

**Cinacalcet (as Cinacalcet hydrochloride) 90 mg** Cinacalcet 90mg tablets | 28 tablet [PoM] £347.96 DT = £67.24

##### ▶ Mimpara (Amgen Ltd)

**Cinacalcet (as Cinacalcet hydrochloride) 30 mg** Mimpara 30mg tablets | 28 tablet [PoM] £125.75 DT = £25.23

**Cinacalcet (as Cinacalcet hydrochloride) 60 mg** Mimpara 60mg tablets | 28 tablet [PoM] £231.97 DT = £44.83

**Cinacalcet (as Cinacalcet hydrochloride) 90 mg** Mimpara 90mg tablets | 28 tablet [PoM] £347.96 DT = £67.24

## Etelcalcetide

26-Aug-2020

- **DRUG ACTION** Etelcalcetide reduces parathyroid hormone secretion, which leads to a decrease in serum calcium concentrations.

#### ● INDICATIONS AND DOSE

**Secondary hyperparathyroidism in patients with chronic kidney disease on haemodialysis**

##### ▶ BY INTRAVENOUS INJECTION

- ▶ **Adult.** Initially 5 mg 3 times a week, then increased in steps of 2.5–5 mg if required, dose to be increased at intervals of at least 4 weeks; usual maintenance 2.5–15 mg 3 times a week, max. dose 15 mg 3 times a week; consult product literature for information on missed doses, and for dose adjustment due to parathyroid hormone levels or serum-calcium concentrations

- **CAUTIONS** Conditions that may worsen with hypocalcaemia · hypocalcaemia (do not initiate if serum-calcium concentration is less than the lower limit of normal range) · switching from cinacalcet (do not initiate until 7 days after the last dose of cinacalcet)

#### CAUTIONS, FURTHER INFORMATION

- ▶ Conditions that may worsen with hypocalcaemia Manufacturer advises caution with use in patients with conditions that may worsen with hypocalcaemia, including predisposition to QT-interval prolongation, history of seizures, and history of congestive heart failure—serum-calcium concentration should be closely monitored.
- **INTERACTIONS** → Appendix 1: etelcalcetide
- **SIDE-EFFECTS**
- **Common or very common** Diarrhoea · electrolyte imbalance · headache · heart failure aggravated · hypotension · muscle complaints · nausea · QT interval prolongation · sensation abnormal · vomiting
- ▶ **Uncommon** Seizure
- ▶ **Frequency not known** Anaphylactic reaction

**SIDE-EFFECTS, FURTHER INFORMATION** Manufacturer advises if formation of anti-etelcalcetide antibodies with a clinically significant effect is suspected, contact manufacturer to discuss antibody testing.

- **PREGNANCY** Manufacturer advises avoid—limited information available.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal* studies.
- **MONITORING REQUIREMENTS** Manufacturer advises monitor parathyroid hormone level 4 weeks after treatment initiation or dose adjustment and approximately every 1–3 months during maintenance treatment; monitor serum-calcium concentration before treatment initiation, within 1 week of initiation or dose adjustment, and then approximately every 4 weeks during maintenance treatment.
- **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator (2–8°C)—consult product literature for further information regarding storage outside refrigerator.
- **PATIENT AND CARER ADVICE** Manufacturer advises patients and their carers should be told to seek medical advice if symptoms of hypocalcaemia occur.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
  - **NICE decisions**
    - ▶ Etelcalcetide for treating secondary hyperparathyroidism (June 2017) NICE TA448 Recommended with restrictions
    - **Scottish Medicines Consortium (SMC) decisions**
      - ▶ Etelcalcetide (*Parsabiv*<sup>®</sup>) for the treatment of secondary hyperparathyroidism (HPT) in adult patients with chronic kidney disease (CKD) on haemodialysis therapy (September 2017) SMC No. 1262/17 Not recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ▶ *Parsabiv* (Amgen Ltd)

- Etelcalcetide (as Etelcalcetide hydrochloride) 5 mg per 1 ml *Parsabiv* 2.5mg/0.5ml solution for injection vials | 6 vial [PoM] £136.87 (Hospital only)
- Parsabiv* 10mg/2ml solution for injection vials | 6 vial [PoM] £327.84 (Hospital only)
- Parsabiv* 5mg/1ml solution for injection vials | 6 vial [PoM] £163.92 (Hospital only)

## 1.1b Hypocalcaemia

### CALCIUM REGULATING DRUGS > PARATHYROID HORMONES AND ANALOGUES

#### Parathyroid hormone

27-Feb-2019

##### (Human recombinant parathyroid hormone)

- **DRUG ACTION** Parathyroid hormone is produced by recombinant DNA technology; endogenous parathyroid hormone is involved in modulating serum calcium and phosphate levels, regulating renal calcium and phosphate excretion, activating vitamin D, and maintaining normal bone turnover.

#### ● INDICATIONS AND DOSE

##### Chronic hypoparathyroidism (specialist use only)

###### ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: (consult product literature)

- **CONTRA-INDICATIONS** Bone metastases · current or previous radiation therapy to skeleton · increased risk factors for osteosarcoma (including Paget's disease or hereditary disorders) · pseudohypoparathyroidism ·

skeletal malignancy · unexplained raised levels of bone-specific alkaline phosphatase

- **CAUTIONS** Concomitant use of cardiac glycosides (hypercalcaemia may predispose to digitalis toxicity)—monitor cardiac glycoside levels and check for signs and symptoms of digitalis toxicity · concomitant use of drugs that affect calcium levels · young adults with open epiphyses—increased risk of osteosarcoma
- **INTERACTIONS** → Appendix 1: parathyroid hormone
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Abdominal pain upper · anxiety · arthralgia · asthenia · chest pain · cough · diarrhoea · drowsiness · electrolyte imbalance · headache · hypercalcaemia · hypertension · insomnia · muscle complaints · nausea · pain · palpitations · sensation abnormal · tetany · thirst · urinary frequency increased · vomiting
- **SIDE-EFFECTS, FURTHER INFORMATION** Hypercalcaemia is more likely during initial dose titration; if severe hypercalcaemia develops, hydrate and consider suspending treatment (including calcium supplement and active vitamin D).
- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk—no information available.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal* studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment (no information available).
- **RENAL IMPAIRMENT** Manufacturer advises caution in severe impairment—no information available.
- **PRE-TREATMENT SCREENING** Manufacturer advises confirm sufficient 25-hydroxyvitamin D stores and normal serum magnesium before treatment.

#### ● MONITORING REQUIREMENTS

- ▶ Manufacturer advises monitor serum calcium and assess for signs and symptoms of hypocalcaemia and hypercalcaemia—adjust active vitamin D and calcium supplement as necessary; consult product literature.
- ▶ Manufacturer advises periodic monitoring of the response of serum calcium to treatment (response may decrease over time—if 25-hydroxyvitamin D is low, supplementation may restore serum calcium response).
- **TREATMENT CESSATION** Abrupt interruption or discontinuation can result in severe hypocalcaemia—manufacturer advises to monitor serum calcium and adjust calcium supplement and active vitamin D treatment.
- **PRESCRIBING AND DISPENSING INFORMATION** Manufacturer advises record the brand name and batch number after each administration.
- **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator (2–8°C); reconstituted solution may be stored for up to 14 days in a refrigerator, and up to 3 days outside of a refrigerator (below 25°C), during the 14-day use period.
- **PATIENT AND CARER ADVICE** Patients may self-administer *Natpar*<sup>®</sup>, after appropriate training in subcutaneous injection technique.
  - **Missed doses** Manufacturer advises missed doses should be administered as soon as possible, and additional treatment with calcium and/or active vitamin D must be taken, based on symptoms of hypocalcaemia.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder and solvent for solution for injection

ELECTROLYTES: May contain Sodium

##### ▶ *Natpar* (Takeda UK Ltd) ▼

- **Parathyroid hormone 25 microgram** *Natpar* 25micrograms/dose powder and solvent for solution for injection cartridges | 2 cartridge [PoM] £4,880.00 (Hospital only)

**Parathyroid hormone 50 microgram** Natpar 50micrograms/dose powder and solvent for solution for injection cartridges | 2 cartridge [PoM] £4,880.00 (Hospital only)

**Parathyroid hormone 75 microgram** Natpar 75micrograms/dose powder and solvent for solution for injection cartridges | 2 cartridge [PoM] £4,880.00 (Hospital only)

**Parathyroid hormone 100 microgram** Natpar 100micrograms/dose powder and solvent for solution for injection cartridges | 2 cartridge [PoM] £4,880.00 (Hospital only)

## ELECTROLYTES AND MINERALS > CALCIUM

### Calcium salts

- **CONTRA-INDICATIONS** Conditions associated with hypercalcaemia (e.g. some forms of malignant disease) · conditions associated with hypercalciuria (e.g. some forms of malignant disease)
- **CAUTIONS** History of nephrolithiasis · sarcoidosis
- **SIDE-EFFECTS**
  - ▶ **Uncommon** Constipation · diarrhoea · hypercalcaemia · nausea
- **RENAL IMPAIRMENT** [EvGr] Use with caution. ⚠

### Calcium chloride

25-Jan-2022

#### ● INDICATIONS AND DOSE

##### Severe acute hypocalcaemia or hypocalcaemic tetany

- ▶ BY SLOW INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION

- ▶ Adult: Dose according to requirements

##### Acute severe hyperkalaemia (plasma-potassium concentration 6.5 mmol/litre or greater, or in the presence of ECG changes)

- ▶ BY SLOW INTRAVENOUS INJECTION

- ▶ Adult: 10 mL, calcium chloride 10% (providing approximately 6.8 mmol of calcium) should be administered as a single dose, repeat dose if no improvement in ECG within 5 to 10 minutes

- **UNLICENSED USE** [EvGr] Calcium chloride is used for the treatment of acute severe hyperkalaemia, ⚠ but is not licensed for this indication.

- **CAUTIONS** Avoid in respiratory acidosis · avoid in respiratory failure

- **INTERACTIONS** → Appendix 1: calcium salts

- **SIDE-EFFECTS** Soft tissue calcification · taste unpleasant · vasodilation

- **DIRECTIONS FOR ADMINISTRATION** Care should be taken to avoid extravasation. Incompatible with bicarbonates, phosphates, or sulfates.

For *slow intravenous injection*, may be given undiluted over 3 to 5 minutes.

- **PRESCRIBING AND DISPENSING INFORMATION** Non-proprietary *Calcium chloride dihydrate* 7.35% (calcium 20 mg or Ca<sup>2+</sup> 500 micromol/mL); *Calcium chloride dihydrate* 10% (calcium 27.3 mg or Ca<sup>2+</sup> 680 micromol/mL);

Calcium chloride dihydrate 14.7% (calcium 40.1 mg or Ca<sup>2+</sup> 1000 micromol/mL).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for infusion

#### Solution for injection

##### ▶ Calcium chloride (Non-proprietary)

**Calcium chloride dihydrate 100 mg per 1 mL** Calcium chloride 10% solution for injection 10mL pre-filled syringes | 1 pre-filled disposable injection [PoM] £9.89 DT = £9.89

**Calcium chloride dihydrate 147 mg per 1 mL** Calcium chloride 14.7% solution for injection 5mL ampoules | 10 ampoule [PoM] £146.72

Calcium chloride 14.7% solution for injection 10mL ampoules | 10 ampoule [PoM] £107.06 DT = £107.06

F 1138

## Calcium gluconate

07-Dec-2021

### ● INDICATIONS AND DOSE

#### Severe acute hypocalcaemia or hypocalcaemic tetany

##### ▶ INITIALLY BY SLOW INTRAVENOUS INJECTION

- ▶ Adult: Initially 10–20 mL, calcium gluconate injection 10% (providing approximately 2.25–4.5 mmol of calcium) should be administered with plasma-calcium and ECG monitoring, and either repeated as required or, if only temporary improvement, followed by a continuous intravenous infusion to prevent recurrence, alternatively (by continuous intravenous infusion), initially 50 mL/hour, adjusted according to response, infusion to be administered using 100 mL of calcium gluconate 10% diluted in 1 litre of glucose 5% or sodium chloride 0.9%

#### Acute severe hyperkalaemia (plasma-potassium concentration 6.5 mmol/litre or greater, or in the presence of ECG changes)

##### ▶ BY SLOW INTRAVENOUS INJECTION

- ▶ Adult: 30 mL, calcium gluconate 10% (providing approximately 6.8 mmol of calcium) should be administered as a single dose, repeat dose if no improvement in ECG within 5 to 10 minutes

#### Calcium deficiency | Mild asymptomatic hypocalcaemia

##### ▶ BY MOUTH

- ▶ Adult: Dose according to requirements

- **UNLICENSED USE** [EvG] Calcium gluconate is used for the treatment of acute severe hyperkalaemia, ⚠ but is not licensed for this indication.

### IMPORTANT SAFETY INFORMATION

The MHRA has advised that repeated or prolonged administration of calcium gluconate injection packaged in 10 mL glass containers is contra-indicated in children under 18 years and in patients with renal impairment owing to the risk of aluminium accumulation; in these patients the use of calcium gluconate injection packaged in plastic containers is recommended.

- **INTERACTIONS** → Appendix 1: calcium salts

#### ● SIDE-EFFECTS

##### GENERAL SIDE-EFFECTS

##### SPECIFIC SIDE-EFFECTS

- ▶ With intravenous use Circulatory collapse · feeling hot · hyperhidrosis · hypotension · vasodilation · vomiting
- ▶ With oral use Gastrointestinal disorder

#### ● MONITORING REQUIREMENTS

- ▶ With intravenous use Plasma-calcium and ECG monitoring required for administration by slow intravenous injection (risk of arrhythmias if given too rapidly).

#### ● DIRECTIONS FOR ADMINISTRATION

- ▶ With intravenous use For continuous intravenous infusion, dilute 100 mL of calcium gluconate 10% in 1 litre of

glucose 5% or sodium chloride 0.9% and give at an initial rate of 50 mL/hour adjusted according to response. Incompatible with bicarbonates, phosphates, or sulfates. May be given undiluted (10% calcium gluconate) by slow intravenous injection; rate of administration should not exceed 2 mL per minute (equivalent to 10 mL of undiluted injection over 5 minutes).

- **PRESCRIBING AND DISPENSING INFORMATION** Calcium gluconate 1 g contains calcium 89 mg or Ca<sup>2+</sup> 2.23 mmol.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: tablet, capsule, oral suspension, oral solution, solution for injection, solution for infusion

#### Solution for injection

##### ▶ Calcium gluconate (Non-proprietary)

**Calcium gluconate 100 mg per 1 mL** Calcium gluconate 10% solution for injection 10mL ampoules | 10 ampoule [PoM] £12.00-£24.17 DT = £24.17 | 20 ampoule [PoM] £30.00-£163.86

#### Effervescent tablet

##### CAUTIONARY AND ADVISORY LABELS 13

##### ELECTROLYTES: May contain Sodium

### ● INDICATIONS AND DOSE

#### Indications listed in combination monographs (available in the UK only in combination with other drugs)

##### ▶ BY MOUTH

- ▶ Adult: Doses listed in combination monographs

- **INTERACTIONS** → Appendix 1: calcium salts

- **SIDE-EFFECTS** Epigastric pain · gastrointestinal disorder · hypercalcaemia

- **MEDICINAL FORMS** No licensed medicines listed.

## 1.2 Low blood volume

### BLOOD AND RELATED PRODUCTS > PLASMA PRODUCTS

#### Albumin solution

09-Feb-2022

##### (Human Albumin Solution)

###### ● INDICATIONS AND DOSE

**Acute or sub-acute loss of plasma volume e.g. in burns, pancreatitis, trauma, and complications of surgery (with isotonic solutions) | Plasma exchange (with isotonic solutions) | Severe hypalbuminaemia associated with low plasma volume and generalised oedema where salt and water restriction with plasma volume expansion are required (with concentrated solutions 20%) | Paracentesis of large volume ascites associated with portal hypertension (with concentrated solutions 20%)**

▶ BY INTRAVENOUS INFUSION

▶ Adult: (consult product literature)

- **CAUTIONS** Correct dehydration when administering concentrated solution · history of cardiovascular disease · increased capillary permeability · risk of haemodilution (e.g. severe anaemia or haemorrhagic disorders) · risk of hypervolaemia (e.g. oesophageal varices or pulmonary oedema) · vaccination against hepatitis A and hepatitis B may be required

###### CAUTIONS, FURTHER INFORMATION

- ▶ Volume status · Manufacturer advises adjust dose and rate of infusion to avoid fluid overload.
- **SIDE-EFFECTS**
- ▶ Rare or very rare Fever · flushing · nausea · shock · urticaria
- **MONITORING REQUIREMENTS** Plasma and plasma substitutes are often used in very ill patients whose condition is unstable. Therefore, close monitoring is required and fluid and electrolyte therapy should be adjusted according to the patient's condition at all times.
- **PRESCRIBING AND DISPENSING INFORMATION** A solution containing protein derived from plasma, serum, or normal placentas; at least 95% of the protein is albumin. The solution may be isotonic (containing 3.5–5% protein) or concentrated (containing 15–25% protein).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

###### Solution for infusion

###### ▶ Albumin solution (Non-proprietary)

**Albumin solution human 200 mg per 1 ml** Human Albumin Grifols 20% solution for infusion 50ml vials | 1 vial [PoM](#) £27.00 (Hospital only)

Albumnorm 20% solution for infusion 50ml bottles | 1 bottle [PoM](#) £27.00

###### ▶ Alburex (CSL Behring UK Ltd)

**Albumin solution human 50 mg per 1 ml** Alburex 5% solution for infusion 500ml vials | 1 vial [PoM](#) £67.50 (Hospital only)

**Albumin solution human 200 mg per 1 ml** Alburex 20% solution for infusion 100ml vials | 1 vial [PoM](#) £54.00 (Hospital only)

###### ▶ Albutein (Grifols UK Ltd)

**Albumin solution human 50 mg per 1 ml** Albutein 5% solution for infusion 500ml vials | 1 vial [PoM](#) £67.50 (Hospital only)

Albutein 5% solution for infusion 250ml vials | 1 vial [PoM](#) £33.75 (Hospital only)

**Albumin solution human 200 mg per 1 ml** Albutein 20% solution for infusion 100ml vials | 1 vial [PoM](#) £54.00 (Hospital only)

Albutein 20% solution for infusion 50ml vials | 1 vial [PoM](#) £27.00 (Hospital only)

###### ▶ Biotest (Biotest (UK) Ltd)

**Albumin solution human 50 mg per 1 ml** Human Albumin Biotest 5% solution for infusion 250ml vials | 1 vial [PoM](#) [NS](#) (Hospital only)

**Albumin solution human 200 mg per 1 ml** Human Albumin Biotest 20% solution for infusion 50ml vials | 1 vial [PoM](#) [NS](#) (Hospital only)

Human Albumin Biotest 20% solution for infusion 100ml vials | 1 vial [PoM](#) [NS](#) (Hospital only)

###### ▶ Grifols (Grifols UK Ltd)

**Albumin solution human 50 mg per 1 ml** Human Albumin Grifols 5% solution for infusion 250ml bottles | 1 bottle [PoM](#) £33.75

Human Albumin Grifols 5% solution for infusion 500ml bottles | 1 bottle [PoM](#) £67.50

###### ▶ Zenalb (Bio Products Laboratory Ltd)

**Albumin solution human 45 mg per 1 ml** Zenalb 4.5% solution for infusion 250ml bottles | 1 bottle [PoM](#) £30.37

Zenalb 4.5% solution for infusion 500ml bottles | 1 bottle [PoM](#) £60.75

**Albumin solution human 200 mg per 1 ml** Zenalb 20% solution for infusion 100ml bottles | 1 bottle [PoM](#) £54.00

Zenalb 20% solution for infusion 50ml bottles | 1 bottle [PoM](#) £27.00

###### ▶ Zenbumin (Bio Products Laboratory Ltd)

**Albumin solution human 200 mg per 1 ml** Zenbumin 20% solution for infusion 50ml vials | 1 vial [PoM](#) £27.00 (Hospital only)

### PLASMA SUBSTITUTES

#### Gelatin

19-Apr-2021

###### ● INDICATIONS AND DOSE

**Low blood volume in hypovolaemic shock, burns and cardiopulmonary bypass**

▶ BY INTRAVENOUS INFUSION

▶ Adult: Initially 500–1000 mL, use 3.5–4% solution

- **CAUTIONS** Cardiac disease · severe liver disease
- **SIDE-EFFECTS**
- ▶ Rare or very rare Chills · dyspnoea · fever · hyperhidrosis · hypersensitivity · hypertension · hypotension · hypoxia · tachycardia · tremor · urticaria · wheezing
- **PREGNANCY** Manufacturer of *Geloplasma*<sup>®</sup> advises avoid at the end of pregnancy.
- **HEPATIC IMPAIRMENT** Manufacturers advise avoid preparations that contain lactate (risk of impaired lactate metabolism).
- **RENAL IMPAIRMENT** [EvGr](#) Use with caution. [⚠](#)
- **MONITORING REQUIREMENTS**
- ▶ Urine output should be monitored. Care should be taken to avoid haematocrit concentration from falling below 25–30% and the patient should be monitored for hypersensitivity reactions.
- ▶ Plasma and plasma substitutes are often used in very ill patients whose condition is unstable. Therefore, close monitoring is required and fluid and electrolyte therapy should be adjusted according to the patient's condition at all times.
- **PRESCRIBING AND DISPENSING INFORMATION** The gelatin is partially degraded.
  - Gelaspan*<sup>®</sup> contains succinylated gelatin (modified fluid gelatin, average molecular weight 26 500) 40 g, Na<sup>+</sup> 151 mmol, K<sup>+</sup> 4 mmol, Mg<sup>2+</sup> 1 mmol, Cl<sup>-</sup> 103 mmol, Ca<sup>2+</sup> 1 mmol, acetate 24 mmol/litre; *Gelofusine*<sup>®</sup> contains succinylated gelatin (modified fluid gelatin, average molecular weight 30 000) 40 g (4%), Na<sup>+</sup> 154 mmol, Cl<sup>-</sup> 124 mmol/litre; *Geloplasma*<sup>®</sup> contains partially hydrolysed and succinylated gelatin (modified liquid gelatin) (as anhydrous gelatin) 30 g (3%), Na<sup>+</sup> 150 mmol, K<sup>+</sup> 5 mmol, Mg<sup>2+</sup> 1.5 mmol, Cl<sup>-</sup> 100 mmol, lactate 30 mmol/litre; *Isoplex*<sup>®</sup> contains succinylated gelatin (modified fluid

gelatin, average molecular weight 30 000) 40g (4%), Na<sup>+</sup> 145 mmol, K<sup>+</sup> 4 mmol, Mg<sup>2+</sup> 0.9 mmol, Cl<sup>-</sup> 105 mmol, lactate 25mmol/litre; *Volplex*<sup>®</sup> contains succinylated gelatin (modified fluid gelatin, average molecular weight 30 000) 40 g (4%), Na<sup>+</sup> 154 mmol, Cl<sup>-</sup> 125 mmol/litre.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Infusion

- ▶ **Gelaspan** (B.Braun Medical Ltd)  
**Gelatin 40 mg per 1 ml** Gelaspan 4% infusion 500ml Ecobags | 1 bag [PoM] £6.07 (Hospital only) | 20 bag [PoM] £121.45 (Hospital only)
- ▶ **Gelofusine** (B.Braun Medical Ltd)  
**Gelatin 40 mg per 1 ml** Gelofusine 4% infusion 1litre Ecobags | 1 bag [PoM] £9.50 (Hospital only)  
Gelofusine 4% infusion 500ml Ecobags | 1 bag [PoM] £5.07 (Hospital only)
- ▶ **Geloplasma** (Fresenius Kabi Ltd)  
**Gelatin 30 mg per 1 ml** Geloplasma 3% infusion 500ml Freeflex bags | 20 bag [PoM] £85.50 (Hospital only)
- ▶ **Isoplex** (Kent Pharma (UK) Ltd)  
**Gelatin 40 mg per 1 ml** Isoplex 4% infusion 500ml bags | 10 bag [PoM] £75.00 (Hospital only)
- ▶ **Volplex** (Kent Pharma (UK) Ltd)  
**Gelatin 40 mg per 1 ml** Volplex 4% infusion 500ml bags | 10 bag [PoM] £47.00 (Hospital only)

## 1.3 Magnesium imbalance

### Magnesium imbalance

05-May-2021

#### Overview

Magnesium is an essential constituent of many enzyme systems, particularly those involved in energy generation; the largest stores are in the skeleton.

Magnesium salts are not well absorbed from the gastrointestinal tract, which explains the use of magnesium sulfate p. 1142 as an osmotic laxative.

[EvGr] Magnesium is excreted mainly by the kidneys and is therefore retained in renal failure, which can result in *hypermagnesaemia* (causing muscle weakness and arrhythmias). Calcium gluconate injection is used for the management of magnesium toxicity. 

#### Hypomagnesaemia

Since magnesium is secreted in large amounts in the gastrointestinal fluid, excessive losses in diarrhoea, stoma or fistula can cause *hypomagnesaemia*; deficiency may also occur in alcoholism or as a result of treatment with certain drugs. Hypomagnesaemia often causes secondary hypocalcaemia, and also hypokalaemia.

Symptomatic hypomagnesaemia is usually associated with severe magnesium depletion. Magnesium can be given by intravenous infusion or by intramuscular injection of magnesium sulfate; the intramuscular injection is painful.

Patients with mild magnesium depletion are usually asymptomatic. Oral magnesium glycerophosphate below is licensed for hypomagnesaemia. Oral magnesium aspartate below is licensed for the treatment and prevention of magnesium deficiency.

## 1.3a Hypomagnesaemia

### ELECTROLYTES AND MINERALS > MAGNESIUM

#### Magnesium aspartate

10-Aug-2021

##### ● INDICATIONS AND DOSE

##### Treatment and prevention of magnesium deficiency

##### ▶ BY MOUTH

- ▶ Adult: 10–20 mmol daily, taken as 1–2 sachets of *Magnaspartate*<sup>®</sup> powder.

- **CONTRA-INDICATIONS** Disorders of cardiac conduction

- **INTERACTIONS** → Appendix 1: magnesium

##### ● SIDE-EFFECTS

- ▶ **Uncommon** Diarrhoea · faeces soft
- ▶ **Rare or very rare** Fatigue · hypermagnesaemia
- ▶ **Frequency not known** Gastrointestinal irritation

**SIDE-EFFECTS, FURTHER INFORMATION** Side-effects generally occur at higher doses; if side-effects (such as diarrhoea) occur, consider interrupting treatment and restarting at a reduced dose.

**Overdose** Symptoms of hypermagnesaemia may include nausea, vomiting, flushing, thirst, hypotension, drowsiness, confusion, reflexes absent (due to neuromuscular blockade), respiratory depression, speech slurred, diplopia, muscle weakness, arrhythmias, coma, and cardiac arrest.

- **RENAL IMPAIRMENT** See p. 21. [EvGr] Avoid if eGFR less than 30 mL/minute/1.73 m<sup>2</sup>. 

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises dissolve sachet contents in 50–200 mL water, tea or orange juice and take immediately.

##### ● PRESCRIBING AND DISPENSING INFORMATION

*Magnaspartate*<sup>®</sup> contains magnesium aspartate 6.5 g (10 mmol Mg<sup>2+</sup>)/sachet.

- **PATIENT AND CARER ADVICE** Patients and carers should be given advice on how to administer magnesium aspartate powder.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: powder

##### Powder

EXCIPIENTS: May contain Sucrose

- ▶ **Magnaspartate** (Kora Healthcare)

**Magnesium (as Magnesium aspartate) 243 mg** Magnaspartate 243mg (magnesium 10mmol) oral powder sachets | 10 sachet [PoM] £9.45 DT = £9.45

### Magnesium glycerophosphate

15-Dec-2021

##### ● INDICATIONS AND DOSE

##### Prevent recurrence of magnesium deficit

##### ▶ BY MOUTH

- ▶ Adult: 24 mmol daily in divided doses, dose expressed as Mg<sup>2+</sup>

##### DOSE EQUIVALENCE AND CONVERSION

- ▶ Magnesium glycerophosphate 1 g is approximately equivalent to Mg<sup>2+</sup> 4 mmol or magnesium 97 mg.

##### NEOMAG<sup>®</sup> CHEWABLE TABLETS

##### Hypomagnesaemia

##### ▶ BY MOUTH

- ▶ Adult: Initially 1–2 tablets 3 times a day, dose to be adjusted according to the serum total magnesium level

##### DOSE EQUIVALENCE AND CONVERSION

- ▶ Each *Neomag*<sup>®</sup> chewable tablet contains Mg<sup>2+</sup> 4 mmol or magnesium 97 mg.

- **UNLICENSED USE** Preparations other than *Neomag*<sup>®</sup> are not licensed for use.
- **INTERACTIONS** → Appendix 1: magnesium
- **SIDE-EFFECTS** Diarrhoea · hypermagnesaemia  
**Overdose** Symptoms of hypermagnesaemia may include nausea, vomiting, flushing, thirst, hypotension, drowsiness, confusion, reflexes absent (due to neuromuscular blockade), respiratory depression, speech slurred, diplopia, muscle weakness, arrhythmias, coma, and cardiac arrest.
- **RENAL IMPAIRMENT** E<sub>VG</sub> Caution (risk of hypermagnesaemia); avoid if creatinine clearance less than 30 mL/minute. ◀ See p. 21.
- **MONITORING REQUIREMENTS** Manufacturer advises to monitor serum magnesium levels every 3–6 months.
- **DIRECTIONS FOR ADMINISTRATION**  
**NEOMAG<sup>®</sup> CHEWABLE TABLETS** Manufacturer advises that tablets may be broken into quarters and chewed or swallowed with water.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
**NEOMAG<sup>®</sup> CHEWABLE TABLETS** For full details see funding body website  
**Scottish Medicines Consortium (SMC) decisions**  
▶ **Magnesium glycerophosphate (*Neomag*<sup>®</sup>)** as an oral magnesium supplement for the treatment of patients with chronic magnesium loss, hypomagnesaemia, or drug-induced hypomagnesaemia (September 2017) SMC No. 1267/17 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: tablet, capsule, oral suspension, oral solution, powder

**Tablet**

- ▶ **Magnesium glycerophosphate (Non-proprietary)**  
**Magnesium (as Magnesium glycerophosphate) 97.2 mg** Mag-4 (magnesium 97.2mg (4mmol)) tablets | 30 tablet £84.50

**Oral solution**

- ▶ **LiquaMag GP** (Fontus Health Ltd)  
**Magnesium (as Magnesium glycerophosphate) 24.25 mg** per 1 mL. LiquaMag GP (magnesium 121.25mg/5ml (5mmol/5ml)) oral solution sugar-free | 200 mL £49.99
- ▶ **MagnEss Gly** (Essential-Healthcare Ltd)  
**Magnesium (as Magnesium glycerophosphate) 19.44 mg** per 1 mL MagnEss Gly 97.2mg/5ml (4mmol/5ml) oral solution sugar-free | 200 mL £29.97
- Magnesium (as Magnesium glycerophosphate) 24.25 mg** per 1 mL MagnEss Gly 121.25mg/5ml (5mmol/5ml) oral solution sugar-free | 200 mL £31.97
- ▶ **MagnaPhos** (TriOn Pharma Ltd)  
**Magnesium (as Magnesium glycerophosphate) 19.44 mg** per 1 mL MagnaPhos 97.2mg/5ml (4mmol/5ml) oral solution | 200 mL £25.64 DT = £14.20
- Magnesium (as Magnesium glycerophosphate) 24.25 mg** per 1 mL MagnaPhos 121.25mg/5ml (5mmol/5ml) oral solution | 200 mL £37.87 DT = £37.87

**Chewable tablet**

EXCIPIENTS: May contain Aspartame

- ▶ **Magnesium glycerophosphate (Non-proprietary)**  
**Magnesium (as Magnesium glycerophosphate) 97.2 mg** Magnesium glycerophosphate (magnesium 97.2mg (4mmol)) chewable tablets | 50 tablet PoM £22.77  
Neomag (magnesium 97mg (4mmol)) chewable tablets sugar-free | 50 tablet PoM £22.77 DT = £22.77

**Capsule**

- ▶ **Magnesium glycerophosphate (Non-proprietary)**  
**Magnesium (as Magnesium glycerophosphate) 48.6 mg** Mag-4 (magnesium 48.6mg (2mmol)) capsules | 30 capsule £85.70
- Magnesium (as Magnesium glycerophosphate) 97.2 mg** Mag-4 (magnesium 97.2mg (4mmol)) capsules | 30 capsule £89.30
- ▶ **MagnEss Gly** (Essential-Healthcare Ltd)  
**Magnesium (as Magnesium glycerophosphate) 39.5 mg** MagnEss Gly 39.5mg (1.6mmol) capsules | 50 capsule £28.17

- Magnesium (as Magnesium glycerophosphate) 48.6 mg** MagnEss Gly 48.6mg (2mmol) capsules | 50 capsule £35.87
- Magnesium (as Magnesium glycerophosphate) 97.2 mg** MagnEss Gly 97.2mg (4mmol) capsules | 50 capsule £37.87
- ▶ **MagnaPhos** (TriOn Pharma Ltd)  
**Magnesium (as Magnesium glycerophosphate) 48.6 mg** MagnaPhos 48.6mg (2mmol) capsules | 50 capsule £35.87
- Magnesium (as Magnesium glycerophosphate) 97.2 mg** MagnaPhos 97.2mg (4mmol) capsules | 50 capsule £37.87

**Magnesium sulfate**

16-Nov-2021

● **INDICATIONS AND DOSE****Severe acute asthma | Continuing respiratory deterioration in anaphylaxis**

## ▶ BY INTRAVENOUS INFUSION

- ▶ Child 2–17 years: 40 mg/kg (max. per dose 2 g), to be given over 20 minutes
- ▶ Adult: 1.2–2 g, to be given over 20 minutes

**Prevention of seizures in pre-eclampsia**

## ▶ INITIALLY BY INTRAVENOUS INJECTION

- ▶ Adult: Initially 4 g, to be given over 5–15 minutes, followed by (by intravenous infusion) 1 gram/hour for 24 hours, if seizure occurs, give an additional dose of 2–4 g by intravenous injection over 5–15 minutes

**Treatment of seizures and prevention of seizure recurrence in eclampsia**

## ▶ INITIALLY BY INTRAVENOUS INJECTION

- ▶ Adult: Initially 4 g, to be given over 5–15 minutes, followed by (by intravenous infusion) 1 gram/hour for 24 hours after seizure or delivery (whichever is later), if seizure recurs, give an additional dose of 2–4 g by intravenous injection over 5–15 minutes

**Hypomagnesaemia**

## ▶ BY INTRAVENOUS INFUSION, OR BY INTRAMUSCULAR INJECTION

- ▶ Adult: Up to 40 g, given over a period of up to 5 days, dose given depends on the amount required to replace the deficit (allowing for urinary losses)

**Hypomagnesaemia maintenance (e.g. in intravenous nutrition)**

## ▶ BY INTRAVENOUS INFUSION, OR BY INTRAMUSCULAR INJECTION

- ▶ Adult: 2.5–5 g daily, usual dose 3 g daily

**Emergency treatment of serious arrhythmias**

## ▶ BY INTRAVENOUS INJECTION

- ▶ Adult: 2 g, to be given over 10–15 minutes, dose may be repeated once if necessary

**Rapid bowel evacuation (acts in 2–4 hours)**

## ▶ BY MOUTH

- ▶ Adult: 5–10 g, dose to be mixed in a glass of water, taken preferably before breakfast

**DOSE EQUIVALENCE AND CONVERSION**

- ▶ Magnesium sulfate heptahydrate 1 g equivalent to Mg<sup>2+</sup>: approx. 4 mmol.

- **UNLICENSED USE** Unlicensed indication in severe acute asthma and continuing respiratory deterioration in anaphylaxis.

**IMPORTANT SAFETY INFORMATION**

**MHRA/CHM ADVICE: MAGNESIUM SULFATE: RISK OF SKELETAL ADVERSE EFFECTS IN THE NEONATE FOLLOWING PROLONGED OR REPEATED USE IN PREGNANCY (MAY 2019)**

Maternal administration of magnesium sulfate for longer than 5–7 days in pregnancy has been associated with hypocalcaemia, hypermagnesaemia, and skeletal side-effects in neonates. Healthcare professionals are advised to consider monitoring neonates for abnormal calcium and magnesium levels, and skeletal side-effects if maternal treatment with magnesium sulfate during

pregnancy is prolonged or repeated beyond current recommendations.

#### ● CONTRA-INDICATIONS

- With oral use In rapid bowel evacuation—acute gastro-intestinal conditions

#### ● CAUTIONS

- With oral use In rapid bowel evacuation—elderly and debilitated patients

#### ● INTERACTIONS → Appendix 1: magnesium

#### ● SIDE-EFFECTS

##### ► Rare or very rare

- With oral use Paralytic ileus

##### ► Frequency not known

- With intravenous use Bone demineralisation (reported in neonates following prolonged or repeated use in pregnancy) · electrolyte imbalance · osteopenia (reported in neonates following prolonged or repeated use in pregnancy)
- With oral use Diarrhoea · gastrointestinal discomfort · hypermagnesaemia

**Overdose** Symptoms of hypermagnesaemia may include nausea, vomiting, flushing, thirst, hypotension, drowsiness, confusion, reflexes absent (due to neuromuscular blockade), respiratory depression, speech slurred, diplopia, muscle weakness, arrhythmias, coma, and cardiac arrest.

#### ● PREGNANCY

For information on the risk of side-effects in neonates following prolonged or repeated maternal use of magnesium sulfate during pregnancy, see *Important Safety Information*.

- When used for Hypomagnesaemia or Arrhythmias or Prevention of seizures in pre-eclampsia or Treatment of seizures and prevention of seizure recurrence in eclampsia or Severe acute asthma or Continuing respiratory deterioration in anaphylaxis in adults Not known to be harmful for short-term intravenous administration in eclampsia, but excessive doses in third trimester cause neonatal respiratory depression. Sufficient amount may cross the placenta in mothers treated with high doses e.g. in pre-eclampsia, causing hypotonia and respiratory depression in newborns.

#### ● HEPATIC IMPAIRMENT

Avoid in hepatic coma if risk of renal failure.

#### ● RENAL IMPAIRMENT

- With intramuscular use or intravenous use [EvGr](#) Caution in mild to moderate impairment; avoid in severe impairment (increased risk of toxicity). [M](#)
- With oral use in adults [EvGr](#) Avoid. [M](#)

**Dose adjustments** ► With intramuscular use or intravenous use [EvGr](#) Reduce dose (consult product literature). [M](#)

#### ● MONITORING REQUIREMENTS

Monitor blood pressure, respiratory rate, urinary output and for signs of overdosage (loss of patellar reflexes, weakness, nausea, sensation of warmth, flushing, drowsiness, double vision, and slurred speech).

#### ● DIRECTIONS FOR ADMINISTRATION

- With intravenous use In severe hypomagnesaemia administer initially via controlled infusion device (preferably syringe pump). For *intravenous injection*, in arrhythmias, hypomagnesaemia, eclampsia, and pre-eclampsia, give continuously in Glucose 5% or Sodium chloride 0.9%. Concentration of magnesium sulfate heptahydrate should not exceed 20% (200 mg/mL or 0.8 mmol/mL  $Mg^{2+}$ ); dilute 1 part of magnesium sulfate injection 50% with at least 1.5 parts of water for injections. Max. rate 150 mg/minute (0.6 mmol/minute  $Mg^{2+}$ ).

#### ● PRESCRIBING AND DISPENSING INFORMATION

- With intramuscular use or intravenous use The BP directs that the label states the strength as the % w/v of magnesium sulfate heptahydrate and as the approximate

concentration of magnesium ions ( $Mg^{2+}$ ) in mmol/mL. Magnesium Sulfate Injection BP is a sterile solution of Magnesium Sulfate Heptahydrate.

- When used for Asthma For choice of therapy, see Asthma, acute p. 260 and Asthma, chronic p. 256.

#### ● EXCEPTIONS TO LEGAL CATEGORY

- With oral use Magnesium sulfate is on sale to the public as Epsom Salts.

#### ● MEDICINAL FORMS

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: capsule, solution for injection, infusion, solution for infusion

##### Solution for injection

###### ► Magnesium sulfate (Non-proprietary)

**Magnesium sulfate heptahydrate 500 mg per 1 ml** Magnesium sulfate 50% (magnesium 2mmol/ml) solution for injection 10ml ampoules | 10 ampoule [POM](#) £21.71-£56.70 DT = £21.71 | 50 ampoule [POM](#) £21.71  
**Magnesium sulfate 50% (magnesium 2mmol/ml) solution for injection 20ml vials** | 10 vial [POM](#) £63.00  
**Magnesium sulfate 50% (magnesium 2mmol/ml) solution for injection 5ml ampoules** | 10 ampoule [POM](#) £46.00-£67.39  
**Magnesium sulfate 50% (magnesium 2mmol/ml) solution for injection 2ml ampoules** | 10 ampoule [POM](#) £17.35-£22.70 DT = £17.35

##### Solution for infusion

###### ► Magnesium sulfate (Non-proprietary)

**Magnesium sulfate heptahydrate 100 mg per 1 ml** Magnesium sulfate 10% (magnesium 0.4mmol/ml) solution for injection 10ml ampoules | 10 ampoule [POM](#) £66.26-£97.23 DT = £90.71  
**Magnesium sulfate 10% (magnesium 0.4mmol/ml) solution for infusion 10ml ampoules** | 10 ampoule [POM](#) £54.00 DT = £90.71 (Hospital only)

**Magnesium sulfate heptahydrate 200 mg per 1 ml** Magnesium sulfate 20% (magnesium 0.8mmol/ml) solution for infusion 10ml ampoules | 10 ampoule [POM](#) [X](#) (Hospital only)

**Magnesium sulfate heptahydrate 500 mg per 1 ml** Magnesium sulfate 50% (magnesium 2mmol/ml) solution for infusion 100ml vials | 10 vial [POM](#) £83.10  
**Magnesium sulfate 50% (magnesium 2mmol/ml) solution for infusion 50ml vials** | 10 vial [POM](#) £89.00

##### Powder

###### ► Magnesium sulfate (Non-proprietary)

**Magnesium sulfate dried 1 mg per 1 mg** Magnesium sulfate powder | 300 gram [GSL](#) £2.09-£2.23 | 500 gram [GSL](#) £4.03 DT = £4.03 | 2000 gram [GSL](#) £7.75 | 5000 gram [GSL](#) £11.95

## 1.4 Phosphate imbalance

### Phosphate imbalance

15-Dec-2021

#### Phosphate supplements

Oral phosphate supplements p. 1146 are licensed for the treatment of patients with vitamin D-resistant hypophosphataemic osteomalacia.

Phosphate deficiency may arise in patients with alcohol dependence. [EvGr](#) Phosphate depletion may also occur in patients with severe diabetic ketoacidosis, however phosphate replacement is not routinely recommended. [A](#)

Phosphate depletion in patients on total parenteral nutrition is common; for phosphate requirements in total parenteral nutrition regimens, see Intravenous nutrition p. 1167.

#### Phosphate-binding agents

[EvGr](#) For the management of hyperphosphataemia in patients with stage 4 or 5 chronic kidney disease (CKD), dietary management and dialysis (for patients who are having this) should be optimised prior to starting phosphate-binding agents. Both calcium-based and non-calcium-based preparations are used as phosphate-binding agents.

Calcium acetate p. 1144 should be offered as the first-line phosphate binder. If calcium acetate is not tolerated or is

unsuitable (e.g. because of hypercalcaemia or low serum parathyroid hormone levels), sevelamer p. 1145 (a non-calcium-based phosphate binder) should be offered. For patients in whom sevelamer is unsuitable, consider calcium carbonate p. 1138 as an alternative if a calcium-based phosphate binder is needed, or sucroferric oxyhydroxide p. 1146 for patients who are on dialysis and do not need a calcium-based phosphate binder. Lanthanum p. 1145 (a non-calcium-based phosphate binder) should only be considered if other phosphate binders cannot be used.

For patients with stage 4 or 5 CKD who are on the maximum tolerated dose of a calcium-based phosphate binder but remain hyperphosphataemic, consider combining treatment with a non-calcium-based phosphate binder. 

For further guidance on the management of hyperphosphataemia in patients with CKD, see NICE guideline: **Chronic kidney disease: assessment and management** (available at: [www.nice.org.uk/guidance/ng203](http://www.nice.org.uk/guidance/ng203)).

## 1.4a Hyperphosphataemia

### ELECTROLYTES AND MINERALS > CALCIUM

F 1138

02-Dec-2021

#### Calcium acetate

##### ● INDICATIONS AND DOSE

###### PHOSEX<sup>®</sup> TABLETS

###### Hyperphosphataemia in patients with chronic renal failure on dialysis

###### ▶ BY MOUTH

- ▶ Adult: Initially 1 tablet 3 times a day, to be taken with meals, dose to be adjusted according to serum-phosphate concentration, usual dose 4–6 tablets daily in divided doses, (1 or 2 tablets with each meal); maximum 12 tablets per day

###### RENACET<sup>®</sup> TABLETS

###### Hyperphosphataemia in patients with chronic renal failure on dialysis

###### ▶ BY MOUTH

- ▶ Adult: 475–950 mg, to be taken with breakfast and with a snack, 0.95–2.85 g, to be taken with a main meal and 0.95–1.9 g, to be taken with supper, dose to be adjusted according to serum-phosphate concentration; maximum 6.65 g per day

- **INTERACTIONS** → Appendix 1: calcium salts

##### ● **SIDE-EFFECTS**

- ▶ **Uncommon** Vomiting

##### ● **DIRECTIONS FOR ADMINISTRATION**

**PHOSEX<sup>®</sup> TABLETS** Manufacturer advises *Phosex<sup>®</sup>* tablets are taken with meals.

Tablets can be broken to aid swallowing, but not chewed (bitter taste).

**RENACET<sup>®</sup> TABLETS** Manufacturer advises that other drugs should be taken 1 to 2 hours before or after *Renacet<sup>®</sup>* to reduce the possible interference with absorption of other drugs.

*Renacet<sup>®</sup>* tablets are taken with meals.

##### ● **PRESCRIBING AND DISPENSING INFORMATION**

**PHOSEX<sup>®</sup> TABLETS** *Phosex<sup>®</sup>* tablets contain calcium acetate 1 g (equivalent to calcium 250 mg or Ca<sup>2+</sup> 6.2 mmol).

**RENACET<sup>®</sup> TABLETS** *Renacet<sup>®</sup>* tablets contain calcium acetate 475 mg (equivalent to calcium 120.25 mg or Ca<sup>2+</sup> 3 mmol).

##### ● **PATIENT AND CARER ADVICE**

**PHOSEX<sup>®</sup> TABLETS** Patients or carers should be given advice on how to administer *Phosex<sup>®</sup>* tablets.

**RENACET<sup>®</sup> TABLETS** Patients or carers should be given advice on how to administer *Renacet<sup>®</sup>* tablets.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

###### Tablet

CAUTIONARY AND ADVISORY LABELS 25

- ▶ **Phosex** (Pharmacocosmos UK Ltd)

**Calcium acetate 1 gram** Phosex 1g tablets | 180 tablet [PoM] £19.79 DT = £19.79

- ▶ **Renacet** (Stanningley Pharma Ltd)

**Calcium acetate 475 mg** Renacet 475mg tablets | 200 tablet [P] £11.50 DT = £11.50

**Calcium acetate 950 mg** Renacet 950mg tablets | 200 tablet [P] £19.75 DT = £19.75

Combinations available: *Calcium acetate with magnesium carbonate*, below

### PHOSPHATE BINDERS

#### Calcium acetate with magnesium carbonate

04-Sep-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, calcium acetate above, magnesium carbonate p. 75.

##### ● **INDICATIONS AND DOSE**

###### Hyperphosphataemia

###### ▶ BY MOUTH

- ▶ Adult: Initially 1 tablet 3 times a day, adjusted according to serum-phosphate concentration, to be taken with food; usual dose 3–10 tablets daily; maximum 12 tablets per day

- **CONTRA-INDICATIONS** Hypercalcaemia · hypermagnesaemia · myasthenia gravis · third-degree AV block

- **INTERACTIONS** → Appendix 1: calcium salts · magnesium

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises that other drugs should be taken at least 2 hours before or 3 hours after calcium acetate with magnesium carbonate to reduce possible interference with absorption of other drugs.

- **PATIENT AND CARER ADVICE** Patients or carers should be given advice on how to administer calcium acetate with magnesium carbonate tablets.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

###### Tablet

CAUTIONARY AND ADVISORY LABELS 25

- ▶ **Rephoren** (Vifor Fresenius Medical Care Renal Pharma UK Ltd)

**Magnesium carbonate heavy 235 mg, Calcium acetate 435 mg** Osvaren 435mg/235mg tablets | 180 tablet [PoM] £24.00 DT = £24.00

## Lanthanum

09-Nov-2020

### ● INDICATIONS AND DOSE

**Hyperphosphataemia in patients with chronic renal failure on haemodialysis or continuous ambulatory peritoneal dialysis (CAPD) | Hyperphosphataemia in patients with chronic kidney disease not on dialysis who have a serum-phosphate concentration of 1.78 mmol/litre or more that cannot be controlled by a low-phosphate diet**

#### ► BY MOUTH

- Adult: 1.5–3 g daily in divided doses, dose to be adjusted according to serum-phosphate concentration every 2–3 weeks, to be taken with or immediately after meals

● **CAUTIONS** Gastro-intestinal disorders

● **INTERACTIONS** → Appendix 1: lanthanum

### ● SIDE-EFFECTS

- **Common or very common** Constipation · diarrhoea · electrolyte imbalance · gastrointestinal discomfort · gastrointestinal disorders · headache · nausea · vomiting
- **Uncommon** Alopecia · appetite abnormal · arthralgia · asthenia · burping · chest pain · dizziness · dry mouth · eosinophilia · hyperglycaemia · hyperhidrosis · hyperparathyroidism · increased risk of infection · irritable bowel syndrome · malaise · myalgia · oral disorders · osteoporosis · pain · peripheral oedema · taste altered · thirst · vertigo · weight decreased

● **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies.

● **BREAST FEEDING** Manufacturer advises caution—no information available.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution (may be excreted in bile—possible risk of slower elimination and increased plasma concentrations in patients with reduced bile flow)—monitor liver function tests.

● **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises tablets are to be chewed. Manufacturer advises each sachet of powder to be mixed with soft food and consumed within 15 minutes.

● **PATIENT AND CARER ADVICE** Patient and carers should be given advice on how to administer lanthanum tablets and powder.

### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### Scottish Medicines Consortium (SMC) decisions

- Lanthanum carbonate chewable tablets (*Fosrenol*<sup>®</sup>) for the control of hyperphosphataemia in chronic renal failure patients (May 2007) SMC No. 286/06 Recommended with restrictions
- Lanthanum carbonate chewable tablets (*Fosrenol*<sup>®</sup>) for the control of hyperphosphataemia in adult patients with chronic renal failure not on dialysis with serum phosphate levels  $\geq 1.78$  mmol/L (October 2010) SMC No. 640/10 Not recommended
- Lanthanum carbonate oral powder (*Fosrenol*<sup>®</sup>) for the treatment of hyperphosphataemia in chronic renal failure patients (December 2012) SMC No. 821/12 Recommended with restrictions

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder

CAUTIONARY AND ADVISORY LABELS 21

#### ► Fosrenol (Takeda UK Ltd)

## Sevelamer

12-Nov-2020

### ● INDICATIONS AND DOSE

#### RENAGEL<sup>®</sup>

**Hyperphosphataemia in patients on haemodialysis or peritoneal dialysis**

#### ► BY MOUTH

- Adult: Initially 2.4–4.8 g daily in 3 divided doses, dose to be given with meals and adjusted according to serum-phosphate concentration; usual dose 2.4–12 g daily in 3 divided doses

#### RENVELA<sup>®</sup> 2.4G ORAL POWDER SACHETS

**Hyperphosphataemia in patients on haemodialysis or peritoneal dialysis | Hyperphosphataemia in patients with chronic kidney disease not on dialysis who have a serum-phosphate concentration of 1.78 mmol/litre or more**

#### ► BY MOUTH

- Adult: Initially 2.4–4.8 g daily in 3 divided doses, dose to be taken with meals and adjusted according to serum-phosphate concentration every 2–4 weeks—consult product literature; usual dose 6 g daily in 3 divided doses

#### RENVELA<sup>®</sup> 800MG TABLETS

**Hyperphosphataemia in patients on haemodialysis or peritoneal dialysis | Hyperphosphataemia in patients with chronic kidney disease not on dialysis who have a serum-phosphate concentration of 1.78 mmol/litre or more**

#### ► BY MOUTH

- Adult: Initially 2.4–4.8 g daily in 3 divided doses, dose to be taken with meals and adjusted according to serum-phosphate concentration every 2–4 weeks; usual dose 6 g daily in 3 divided doses

● **CONTRA-INDICATIONS** Bowel obstruction

● **CAUTIONS** Gastro-intestinal disorders

● **INTERACTIONS** → Appendix 1: sevelamer

### ● SIDE-EFFECTS

- **Common or very common** Constipation · diarrhoea · gastrointestinal discomfort · gastrointestinal disorders · nausea · vomiting
- **Frequency not known** Skin reactions

● **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk.

### ● BREAST FEEDING

**RENAGEL<sup>®</sup>** Manufacturer advises use only if potential benefit outweighs risk.

**RENAGEL<sup>®</sup>** Manufacturer advises use only if potential benefit outweighs risk.

**RENVELA® 800MG TABLETS, 2.4G ORAL POWDER**

**SACHETS** Unlikely to be present in milk (however, manufacturer advises avoid).

**• DIRECTIONS FOR ADMINISTRATION**

**RENVELA® 2.4G ORAL POWDER SACHETS** Manufacturer advises each sachet should be dispersed in 60 mL water, or mixed with a small amount of cool food (100 g), prior to administration and discarded if unused after 30 minutes.

**• PATIENT AND CARER ADVICE**

**RENVELA® 2.4G ORAL POWDER SACHETS** Patients and carers should be advised on how to administer powder for oral suspension.

**• NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**Scottish Medicines Consortium (SMC) decisions**

**Sucoferric oxyhydroxide**

24-Jul-2020

**• INDICATIONS AND DOSE**

**Hyperphosphataemia in patients with chronic kidney disease on haemodialysis or peritoneal dialysis**

**▶ BY MOUTH**

- ▶ **Adult:** Initially 1.5 g daily in 3 divided doses, dose to be taken with meals, then adjusted in steps of 500 mg every 2–4 weeks, dose adjusted according to serum-phosphate concentration; maintenance 1.5–2 g daily in divided doses; maximum 3 g per day

- **CONTRA-INDICATIONS** Haemochromatosis · iron accumulation disorders

- **CAUTIONS** Gastric disorders · hepatic disorders · major gastrointestinal surgery · peritonitis in the last 3 months

- **INTERACTIONS** → Appendix 1: sucoferric oxyhydroxide

**• SIDE-EFFECTS**

- ▶ **Common or very common** Constipation · diarrhoea · gastrointestinal discomfort · gastrointestinal disorders · nausea · product taste abnormal · tooth discolouration · vomiting
  - ▶ **Uncommon** Dysphagia · dyspnoea · electrolyte imbalance · fatigue · headache · skin reactions · tongue discolouration
- SIDE-EFFECTS, FURTHER INFORMATION** Discoloured faeces may mask the visual signs of gastrointestinal bleeding.

- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk—no information available.

- **BREAST FEEDING** Manufacturer advises avoid—no information available.

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises *Velphoro®* tablets must be chewed or crushed, not swallowed whole.

- **PATIENT AND CARER ADVICE** Patients or carers should be counselled on administration of sucoferric oxyhydroxide tablets and advised that this medication can cause discoloured black stools.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Chewable tablet**

- ▶ **Velphoro** (Vifor Fresenius Medical Care Renal Pharma UK Ltd)

**Iron (as Sucoferric oxyhydroxide) 500 mg** Velphoro 500mg chewable tablets | 90 tablet [PoM] £179.00 DT = £179.00

**1.4b Hypophosphataemia****ELECTROLYTES AND MINERALS > PHOSPHATE**

05-Oct-2021

**Phosphate****• INDICATIONS AND DOSE**

**Treatment of moderate to severe hypophosphatemia**

**▶ BY INTRAVENOUS INFUSION**

- ▶ **Adult:** (consult product literature)

**Established hypophosphataemia (with monobasic potassium phosphate)**

**▶ BY INTRAVENOUS INFUSION**

- ▶ **Adult:** 9 mmol every 12 hours, increased if necessary up to 0.5 mmol/kg (max. per dose 50 mmol), increased dose to be used in critically ill patients; dose to be infused over 6–12 hours, according to severity

**Vitamin D-resistant hypophosphataemic osteomalacia**

**▶ BY MOUTH USING EFFERVESCENT TABLETS**

- ▶ **Adult:** 4–6 tablets daily, using *Phosphate Sandoz®*.

**IMPORTANT SAFETY INFORMATION**

- ▶ With intravenous use

Some phosphate injection preparations also contain potassium. Expert sources advise for peripheral intravenous administration the *concentration* of potassium should not usually exceed 40 mmol/litre; the infusion solution should be **thoroughly mixed**. Local policies on avoiding inadvertent use of potassium concentrate should be followed. The potassium content of some phosphate preparations may also limit the *rate* at which they may be administered.

**• CAUTIONS**

**GENERAL CAUTIONS** Cardiac disease · dehydration · diabetes mellitus · sodium and potassium concentrations of preparations

**SPECIFIC CAUTIONS**

- ▶ With intravenous use Avoid extravasation · severe tissue necrosis

- **INTERACTIONS** → Appendix 1: phosphate

**• SIDE-EFFECTS**

- ▶ With intravenous use Electrolyte imbalance
- ▶ With oral use Abdominal distress · diarrhoea · nausea

**SIDE-EFFECTS, FURTHER INFORMATION** Diarrhoea is a common side-effect and should prompt a reduction in dosage.

**• RENAL IMPAIRMENT**

**Dose adjustments** Reduce dose.

**Monitoring** Monitor closely in renal impairment.

- **MONITORING REQUIREMENTS** It is essential to monitor closely plasma concentrations of calcium, phosphate, potassium, and other electrolytes—excessive doses of phosphates may cause hypocalcaemia and metastatic calcification.

- **PRESCRIBING AND DISPENSING INFORMATION** *Phosphate Sandoz®* contains sodium dihydrogen phosphate

anhydrous (anhydrous sodium acid phosphate) 1.936 g, sodium bicarbonate 350 mg, potassium bicarbonate 315 mg, equivalent to phosphorus 500 mg (phosphate 16.1 mmol), sodium 468.8 mg ( $\text{Na}^+$  20.4 mmol), potassium 123 mg ( $\text{K}^+$  3.1 mmol); *Polyfusor NA*<sup>®</sup> contains  $\text{Na}^+$  162 mmol/litre,  $\text{K}^+$  19 mmol/litre,  $\text{PO}_4^{3-}$  100 mmol/litre; non-proprietary *potassium dihydrogen phosphate injection* (potassium acid phosphate) 13.6% may contain 1 mmol/mL phosphate, 1 mmol/mL potassium.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: infusion, solution for infusion

#### Effervescent tablet

CAUTIONARY AND ADVISORY LABELS 13

- ▶ **Phosphate Sandoz** (Alturix Ltd)

#### Infusion

- ▶ **Phosphate (Non-proprietary)**

Potassium dihydrogen phosphate 1.295 gram per 1 litre, Disodium hydrogen phosphate anhydrous 5.75 gram per 1 litre Polyfusor NA phosphates infusion 500ml bottles | 1 bottle [PoM] £7.54 (Hospital only) | 12 bottle [PoM] £90.48 (Hospital only)

## 1.5 Potassium imbalance

### 1.5a Hyperkalaemia

**Other drugs used for Hyperkalaemia** Calcium chloride, p. 1138 · Calcium gluconate, p. 1139

#### ANTIDOTES AND CHELATORS > CATION EXCHANGE COMPOUNDS

### Calcium polystyrene sulfonate 05-Oct-2021

#### ● INDICATIONS AND DOSE

**Hyperkalaemia associated with anuria or severe oliguria, and in dialysis patients**

- ▶ BY MOUTH
  - ▶ Adult: 15 g 3–4 times a day
- ▶ BY RECTUM
  - ▶ Adult: 30 g, retained for 9 hours followed by irrigation to remove resin from colon

- **CONTRA-INDICATIONS** Hyperparathyroidism · metastatic carcinoma · multiple myeloma · obstructive bowel disease · sarcoidosis
- **INTERACTIONS** → Appendix 1: polystyrene sulfonate
- **SIDE-EFFECTS** Appetite decreased · constipation (discontinue—avoid magnesium-containing laxatives) · diarrhoea · electrolyte imbalance · epigastric discomfort · gastrointestinal disorders · gastrointestinal necrosis (in combination with sorbitol) · hypercalcaemia (in dialysed patients and occasionally in those with renal impairment) · increased risk of infection · nausea · vomiting
- **PREGNANCY** Manufacturers advise use only if potential benefit outweighs risk—no information available.
- **BREAST FEEDING** Manufacturers advise use only if potential benefit outweighs risk—no information available.

- **MONITORING REQUIREMENTS** Monitor for electrolyte disturbances (stop if plasma-potassium concentration below 5 mmol/litre).
- **DIRECTIONS FOR ADMINISTRATION**
  - ▶ With rectal use Manufacturer advises mix each 30 g of resin with 150 mL of water or 10% glucose.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: enema

#### Powder

CAUTIONARY AND ADVISORY LABELS 13

- ▶ **Calcium polystyrene sulfonate (Non-proprietary)**

Calcium polystyrene sulfonate 999 mg per 1 gram Calcium polystyrene sulfonate powder sugar free sugar-free | 300 gram [PoM] £77.58-£82.16 DT = £82.16

- ▶ **Calcium Resonium** (Sanofi)

Calcium polystyrene sulfonate 999 mg per 1 gram Calcium Resonium powder sugar-free | 300 gram [P] £82.16 DT = £82.16

### Patiomer calcium

21-Sep-2021

- **DRUG ACTION** Patiomer is a non-absorbed cation-exchange polymer that acts as a potassium binder in the gastro-intestinal tract.

#### ● INDICATIONS AND DOSE

##### Hyperkalaemia

- ▶ BY MOUTH

▶ Adult: Initially 8.4 g once daily; adjusted in steps of 8.4 g as required, dose adjustments should be made at intervals of at least one week; maximum 25.2 g per day

##### PHARMACOKINETICS

- ▶ Onset of action 4–7 hours.

- **CAUTIONS** Risk factors for hypercalcaemia (calcium partially released from counterion complex) · severe gastro-intestinal disorders (ischaemia, necrosis, and intestinal perforation reported with other potassium binders)
  - **INTERACTIONS** → Appendix 1: patiomer
  - **SIDE-EFFECTS**
    - ▶ Common or very common Abdominal pain · constipation · diarrhoea · flatulence · hypomagnesaemia
    - ▶ Uncommon Nausea · vomiting
  - **PREGNANCY** Manufacturer advises avoid—no information available.
  - **BREAST FEEDING** Manufacturer advises avoid—no information available (although no effects on the infant are anticipated).
  - **MONITORING REQUIREMENTS** Manufacturer advises monitor for electrolyte disturbances, particularly plasma-potassium (as clinically indicated) and plasma-magnesium (continue to monitor for at least 1 month after initiation of treatment).
  - **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises *Veltassa*<sup>®</sup> should be mixed with approx. 40 mL of water, then stirred and mixed with a further approx. 40 mL of water; the powder will not dissolve. More water may be added as needed. The mixture should be taken within 1 hour of preparation. Apple juice or cranberry juice may be used instead of water, other liquids should be avoided as they may contain high amounts of potassium.
  - **HANDLING AND STORAGE** Store in a refrigerator (2–8°C) prior to dispensing; once dispensed, patient may store below 25°C for up to 6 months.
  - **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
  - **NICE decisions**
    - ▶ Patiomer for treating hyperkalaemia (February 2020)

**16.8 gram** Veltassa 16.8g oral powder sachets | 30 sachet [PoM]  
£172.50 DT = £172.50

**Sodium polystyrene sulfonate**

05-Oct-2021

● **INDICATIONS AND DOSE**

**Hyperkalaemia associated with anuria or severe oliguria, and in dialysis patients**

▶ BY MOUTH

▶ Adult: 15 g 3–4 times a day

▶ BY RECTUM

▶ Adult: 30 g, retain for 9 hours followed by irrigation to remove resin from colon

- **CONTRA-INDICATIONS** Obstructive bowel disease

- **CAUTIONS** Congestive heart failure · hypertension · oedema

- **INTERACTIONS** → Appendix 1: polystyrene sulfonate

- **SIDE-EFFECTS** Appetite decreased · bezoar · constipation (discontinue—avoid magnesium-containing laxatives) · diarrhoea · electrolyte imbalance · epigastric discomfort · gastrointestinal disorders · increased risk of infection · nausea · necrosis (in combination with sorbitol) · vomiting

- **PREGNANCY** Manufacturers advise use only if potential benefit outweighs risk—no information available.

- **BREAST FEEDING** Manufacturers advise use only if potential benefit outweighs risk—no information available.

- **RENAL IMPAIRMENT** [EvGr] Use with caution. [M]

- **MONITORING REQUIREMENTS** Monitor for electrolyte disturbances (stop if plasma-potassium concentration below 5 mmol/litre).

● **DIRECTIONS FOR ADMINISTRATION**

▶ With rectal use Manufacturer advises mix each 30 g of resin with 150 mL of water or 10% glucose.

▶ With oral use Manufacturer advises administer dose (powder) in a small amount of water or honey—do not give with fruit juice or squash, which have a high potassium content.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension

**Powder**

CAUTIONARY AND ADVISORY LABELS 13

- ▶ **Resonium A** (Sanofi)

**Sodium polystyrene sulfonate 999.34 mg per 1 gram** Resonium A powder sugar-free | 454 gram [P] £81.11 DT = £81.11

**Sodium zirconium cyclosilicate**

04-Feb-2022

- **DRUG ACTION** Sodium zirconium cyclosilicate is a non-absorbed cation-exchange compound that acts as a selective potassium binder in the gastro-intestinal tract.

● **INDICATIONS AND DOSE****Hyperkalaemia**

▶ BY MOUTH

▶ Adult: Initially 10 g 3 times a day, for up to 72 hours, followed by maintenance 5 g once daily, adjusted according to serum-potassium concentrations. The usual maintenance dose range is 5 g once every other day to 10 g once daily

**PHARMACOKINETICS**

▶ Onset of action about 1 hour.

- **CAUTIONS** Abdominal X-ray (sodium zirconium cyclosilicate may be opaque to X-rays)

- **INTERACTIONS** → Appendix 1: sodium zirconium cyclosilicate

● **SIDE-EFFECTS**

▶ **Common or very common** Fluid imbalance · oedema · peripheral swelling

▶ **Frequency not known** Constipation · nausea

- **PREGNANCY** Manufacturer advises avoid—limited information; *animal* studies do not indicate toxicity.

- **MONITORING REQUIREMENTS** Manufacturer advises monitor serum potassium as clinically indicated.

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises mix the contents of each 5- or 10-g sachet of powder with approx. 45 mL of water and stir well. The powder will not dissolve and the suspension should be taken while it is cloudy; if the powder settles it should be stirred again.

- **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

## 1.5b Hypokalaemia

**ELECTROLYTES AND MINERALS > POTASSIUM****Potassium bicarbonate with potassium acid tartrate**

03-Aug-2020

● **INDICATIONS AND DOSE**

**Hyperchloraemic acidosis associated with potassium deficiency (as in some renal tubular and gastrointestinal disorders)**

▶ BY MOUTH

▶ Adult: (consult product literature)

- **CONTRA-INDICATIONS** Hypochlorhaemia · plasma-potassium concentration above 5 mmol/litre
- **CAUTIONS** Cardiac disease · elderly
- **SIDE-EFFECTS** Diarrhoea · flatulence · gastrointestinal discomfort · nausea · vomiting
- **RENAL IMPAIRMENT** Avoid in severe impairment. **Monitoring** Close monitoring required in renal impairment—high risk of hyperkalaemia.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises tablets to be dissolved in water before administration.
- **PRESCRIBING AND DISPENSING INFORMATION** These tablets do not contain chloride.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Effervescent tablet

CAUTIONARY AND ADVISORY LABELS 13, 21

- ▶ **Potassium bicarbonate with potassium acid tartrate (Non-proprietary)**

**Potassium acid tartrate 300 mg, Potassium bicarbonate**

**500 mg** Potassium (potassium 6.5mmol) effervescent tablets BPC

1968 | 56 tablet [GSL](#) | £91.91

## Potassium chloride

29-Mar-2021

### ● INDICATIONS AND DOSE

#### Prevention of hypokalaemia (patients with normal diet)

##### ▶ BY MOUTH

- ▶ Adult: 2–4 g daily in divided doses

#### Electrolyte imbalance

##### ▶ BY INTRAVENOUS INFUSION

- ▶ Adult: Dose dependent on deficit or the daily maintenance requirements

### IMPORTANT SAFETY INFORMATION

#### SAFE PRACTICE

Potassium overdose can be fatal. Ready-mixed infusion solutions containing potassium should be used. Exceptionally, if potassium chloride concentrate is used for preparing an infusion, the infusion solution should be **thoroughly mixed**. Local policies on avoiding inadvertent use of potassium chloride concentrate should be followed.

#### NHS NEVER EVENT: MIS-SELECTION OF A STRONG POTASSIUM SOLUTION (JANUARY 2018)

Patients should not be inadvertently given a strong potassium solution ( $\geq 10\%$  potassium w/v) intravenously, rather than the intended medication.

- **CONTRA-INDICATIONS** Plasma-potassium concentration above 5 mmol/litre
- **CAUTIONS**
  - ▶ With intravenous use Seek specialist advice in very severe potassium depletion or difficult cases
  - ▶ With oral use Cardiac disease · elderly · hiatus hernia (*with modified-release preparations*) · history of peptic ulcer (*with modified-release preparations*) · intestinal stricture (*with modified-release preparations*)
- **INTERACTIONS** → Appendix 1: potassium chloride
- **SIDE-EFFECTS**

**GENERAL SIDE-EFFECTS** Hyperkalaemia

**SPECIFIC SIDE-EFFECTS**

  - ▶ With oral use Abdominal cramps · diarrhoea · gastrointestinal disorders · nausea · vomiting
- **RENAL IMPAIRMENT** Avoid in severe impairment. **Dose adjustments** Smaller doses must be used in the prevention of hypokalaemia, to reduce the risk of hyperkalaemia.

**Monitoring** Close monitoring required in renal impairment—high risk of hyperkalaemia.

### ● MONITORING REQUIREMENTS

- ▶ Regular monitoring of plasma-potassium concentration is essential in those taking potassium supplements.
- ▶ With intravenous use ECG monitoring should be performed in difficult cases.

### ● DIRECTIONS FOR ADMINISTRATION

- ▶ With intravenous use Ready-mixed infusion solutions should be used where possible. [Evgri](#) If potassium chloride concentrate is used, it must be diluted and **thoroughly mixed** with Sodium Chloride 0.9% intravenous infusion, and given slowly. The maximum infusion rate is 20 mmol/hour. [M](#) For *peripheral intravenous infusion*, [Evgri](#) the concentration of potassium should not usually exceed 40 mmol/L. [M](#) Expert sources advise higher concentrations of potassium chloride may be given in very severe depletion, but require specialist advice.

- **PRESCRIBING AND DISPENSING INFORMATION** Kay-Cee-L<sup>®</sup> contains 1 mmol/mL each of K<sup>+</sup> and Cl<sup>-</sup>.

#### Potassium Tablets

- ▶ With oral use Do not confuse Effervescent Potassium Tablets BPC 1968 with effervescent potassium chloride tablets. Effervescent Potassium Tablets BPC 1968 do not contain chloride ions and their use should be restricted to hyperchloraemic states.

- **PATIENT AND CARER ADVICE** Patient or carers should be given advice on how to administer potassium chloride modified-release tablets.

Salt substitutes A number of salt substitutes which contain significant amounts of potassium chloride are readily available as health food products (e.g. *LoSalt*<sup>®</sup> and *Ruthmol*<sup>®</sup>). These should not be used by patients with renal failure as potassium intoxication may result.

- **LESS SUITABLE FOR PRESCRIBING** Modified-release tablets are less suitable for prescribing. Modified-release preparations should be avoided unless effervescent tablets or liquid preparations inappropriate.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: modified-release tablet, oral solution, solution for injection, infusion, solution for infusion

#### Modified-release tablet

Potassium chloride 3% (potassium 20mmol/50ml) infusion 50ml bags | 1 bag [PoM](#) [X](#) (Hospital only)

## 2 Metabolic disorders

### 2.1 Acute porphyrias

#### Acute porphyrias

05-May-2022

##### Overview

The acute porphyrias (acute intermittent porphyria, variegate porphyria, hereditary coproporphyria, and 5-aminolaevulinic acid dehydratase deficiency porphyria) are hereditary disorders of haem biosynthesis; they have a prevalence of about 1 in 75 000 of the population.

Great care must be taken when prescribing for patients with acute porphyria, since certain drugs can induce acute porphyric crises. Since acute porphyrias are hereditary, relatives of affected individuals should be screened and advised about the potential danger of certain drugs.

**EvGr** Where there is no safe alternative, drug treatment for serious or life-threatening conditions should not be withheld from patients with acute porphyria. Where possible, the clinical situation should be discussed with a porphyria specialist for advice on how to proceed and monitor the patient. In the UK clinical advice can be obtained from the National Acute Porphyria Service or from the UK Porphyria Medicines Information Service (UKPMIS) (see *Useful resources*). 

Haem arginate p. 1151 is administered by short intravenous infusion as haem replacement in moderate, severe, or unremitting acute porphyria crises.

In the United Kingdom the National Acute Porphyria Service (NAPS) provides clinical support and treatment with haem arginate from two centres (Cardiff and Vale University Health Board and King's College Hospital) (see *Useful resources*).

##### Drugs unsafe for use in acute porphyrias

**EvGr** The following list contains drugs that have been classified as 'unsafe' in porphyria because they have been shown to be porphyrinogenic in animals or in vitro, or have been associated with acute attacks in patients. Absence of a drug from the following lists does not necessarily imply that the drug is safe. For many drugs no information about porphyria is available. 

An up-to-date list of drugs considered safe in acute porphyrias is available from the UKPMIS (see *Useful resources*).

Further information may be obtained from the European Porphyria Network (available at: [porphyria.eu/](http://porphyria.eu/)) and UKPMIS (see *Useful resources*).

Quite modest changes in chemical structure can lead to changes in porphyrinogenicity but where possible general statements have been made about groups of drugs; these should be checked first.

##### Unsafe Drug Groups (check first)

- Anabolic steroids
- Antidepressants, MAOIs (contact UKPMIS for advice)
- Antidepressants, Tricyclic and related (contact UKPMIS for advice)
- Barbiturates (includes primidone and thiopental)
- Contraceptives, hormonal (for detailed advice contact UKPMIS or a porphyria specialist)
- Hormone replacement therapy (for detailed advice contact UKPMIS or a porphyria specialist)
- Imidazole antifungals (applies to oral and intravenous use; topical antifungals are thought to be safe due to low systemic exposure)
- Non-nucleoside reverse transcriptase inhibitors (contact UKPMIS for advice)

- Progestogens (for detailed advice contact UKPMIS or a porphyria specialist)
- Protease inhibitors (contact UKPMIS for advice)
- Sulfonamides (includes co-trimoxazole and sulfasalazine)
- Sulfonylureas (glipizide and glimepiride are thought to be safe)
- Taxanes (contact UKPMIS for advice)
- Triazole antifungals (applies to oral and intravenous use; topical antifungals are thought to be safe due to low systemic exposure)

##### Unsafe Drugs (check groups above first)

- Aceclofenac
- Alcohol
- Amiodarone
- Aprepitant
- Artemether with lumefantrine
- Bexarotene
- Bosentan
- Busulfan
- Carbamazepine
- Chloral hydrate (although evidence of hazard is uncertain, manufacturer advises avoid)
- Chloramphenicol
- Chloroform (small amounts in medicines probably safe)
- Clemastine
- Clindamycin
- Cocaine
- Danazol
- Dapsone
- Diltiazem
- Disopyramide
- Disulfiram
- Ergometrine
- Ergotamine
- Erythromycin
- Etamsylate
- Ethosuximide
- Etomidate
- Flutamide
- Fosaprepitant
- Fosphenytoin
- Griseofulvin
- Hydralazine
- Ifosfamide
- Indapamide
- Isometheptene mucate
- Isoniazid (safety uncertain, contact UKPMIS for advice)
- Ketamine
- Mefenamic acid (safety uncertain, contact UKPMIS for advice)
- Meprobamate
- Methyl dopa
- Metolazone
- Metyrapone
- Mifepristone
- Minoxidil (safety uncertain, contact UKPMIS for advice)
- Mitotane
- Nalidixic acid
- Nitrazepam
- Nitrofurantoin
- Orphenadrine
- Oxcarbazepine
- Oxybutynin
- Pentazocine
- Pentoxifylline
- Pergolide
- Phenoxylbenzamine
- Phenytoin
- Pivmecillinam
- Pizotifen
- Porfimer

- Raloxifene
- Rifabutin (safety uncertain, contact UKPMIS for advice)
- Rifampicin
- Riluzole
- Risperidone
- Spironolactone
- Sulfinpyrazone
- Tamoxifen
- Temoporfin
- Thiotepa
- Tiagabine
- Tibolone
- Topiramate
- Toremifene
- Trimethoprim
- Valproate
- Verapamil
- Xipamide

## BLOOD AND RELATED PRODUCTS > HAEM DERIVATIVES

### Haem arginate

05-Oct-2021

(Human hemin)

#### ● INDICATIONS AND DOSE

**Acute porphyrias | Acute intermittent porphyria | Porphyria variegata | Hereditary coproporphyria**

▶ BY INTRAVENOUS INFUSION

- ▶ Adult: Initially 3 mg/kg once daily for 4 days, if response inadequate, repeat 4-day course with close biochemical monitoring; maximum 250 mg per day

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Poor venous access
- ▶ **Rare or very rare** Fever
- ▶ **Frequency not known** Headache · injection site necrosis · skin discolouration · venous thrombosis
- **PREGNANCY** Manufacturer advises avoid unless essential.
- **BREAST FEEDING** Manufacturer advises avoid unless essential—no information available.
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion* (Normosang<sup>®</sup>), manufacturer advises give intermittently in Sodium chloride 0.9%; dilute requisite dose in 100 mL infusion fluid in glass bottle and give over at least 30 minutes through a filter *via* large antebraclial or central vein; administer within 1 hour after dilution.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for infusion

▶ **Normosang** (Recordati Rare Diseases UK Ltd)

**Haem arginate 25 mg per 1 mL** Normosang 250mg/10ml solution for infusion ampoules | 4 ampoule [PoM] £1,737.00

## DRUGS FOR METABOLIC DISORDERS > SMALL INTERFERING RIBONUCLEIC ACID

### Givosiran

13-May-2022

- **DRUG ACTION** Givosiran is a small interfering RNA, which reduces production of the enzyme ALAS1 involved in haem synthesis in the liver, thereby reducing accumulation of neurotoxic intermediates that cause acute porphyria attacks and symptoms.

#### ● INDICATIONS AND DOSE

**Acute hepatic porphyria (initiated under specialist supervision)**

▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: 2.5 mg/kg once a month, dosage based on actual body-weight

- **INTERACTIONS** → Appendix 1: givosiran

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Fatigue · hypersensitivity · nausea · renal impairment · skin reactions

- **PREGNANCY** [EvGr] Use only if potential benefit outweighs risk—toxicity in *animal* studies. ⚠

- **BREAST FEEDING** [EvGr] Avoid—present in milk in *animal* studies. ⚠

- **RENAL IMPAIRMENT** [EvGr] Monitor renal function during treatment—progression of impairment reported. ⚠

- **MONITORING REQUIREMENTS** [EvGr] Monitor liver function before treatment, every 4 weeks for the first 6 months of treatment, then as clinically indicated thereafter. For transaminase elevations consider discontinuing or interrupting treatment; restarting treatment at a reduced dose may be considered—consult product literature. ⚠

- **DIRECTIONS FOR ADMINISTRATION** [EvGr] Maximum 1.5 mL per injection site; inject into the abdomen, thigh or upper arm and rotate injection site. Avoid injecting into scar tissue or skin that is reddened, inflamed or swollen. ⚠

- **PRESCRIBING AND DISPENSING INFORMATION** [EvGr] The efficacy and safety data in acute hepatic porphyria (AHP) subtypes other than acute intermittent porphyria (hereditary coproporphyria, variegate porphyria and 5-aminolaevulinic acid dehydratase-deficient porphyria) are limited; this should be taken into consideration when assessing the individual benefit-risk in these rare AHP subtypes. ⚠

#### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### NICE decisions

- ▶ Givosiran for treating acute hepatic porphyria (November 2021) NICE HST16 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

▶ **Givosiran (non-proprietary)** ▼

**Givosiran (as Givosiran sodium) 189 mg per 1 mL** Givlaari 189mg/1ml solution for injection vials | 1 vial [PoM] £41,884.43 (Hospital only)

## 2.2 Amyloidosis

### NEUROPROTECTIVE DRUGS

#### Inotersen

27-Aug-2020

- **DRUG ACTION** Inotersen is an antisense oligonucleotide inhibitor which inhibits transthyretin production.

#### ● INDICATIONS AND DOSE

**Stage 1 or stage 2 polyneuropathy in patients with hereditary transthyretin amyloidosis (hATTR) (initiated by a specialist)**

- ▶ BY SUBCUTANEOUS INJECTION
  - ▶ Adult: 284 mg once weekly, for dose adjustments due to side-effects and information on Vitamin A supplementation—consult product literature
- **CONTRA-INDICATIONS** Patients undergoing liver transplantation (no information available) · platelet count less than  $100 \times 10^9$ /litre before starting treatment · urine protein to creatinine ratio (UPCR) greater than or equal to 113 mg/mmol before starting treatment
- **CAUTIONS** Concomitant administration with nephrotoxic drugs · elderly · history of major bleeding
- **INTERACTIONS** → Appendix 1: inotersen
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Anaemia · appetite decreased · chills · eosinophilia · fever · glomerulonephritis · haematoma · headache · hypotension · influenza like illness · nausea · peripheral oedema · peripheral swelling · proteinuria · renal impairment · skin reactions · thrombocytopenia · vomiting
  - ▶ **Frequency not known** Intracranial haemorrhage · vitamin A deficiency
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises women of childbearing potential should use effective contraception during treatment; if conception is planned, inotersen and vitamin A supplementation should be stopped and vitamin A levels monitored—consult product literature.
- **PREGNANCY** Manufacturer advises avoid unless essential (limited information available)—potential teratogenic risk due to unbalanced vitamin A levels, consult product literature.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal* studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid in severe impairment (no information available).
- **RENAL IMPAIRMENT** Manufacturer advises avoid if eGFR less than 45 mL/minute/1.73 m<sup>2</sup>. See p. 21.
- **PRE-TREATMENT SCREENING** Manufacturer advises plasma vitamin A levels below the lower limit of normal should be corrected and any ocular symptoms or signs of vitamin A deficiency should have resolved before starting treatment.
- **MONITORING REQUIREMENTS**
  - ▶ Manufacturer advises monitor platelet count before starting treatment, every 2 weeks during treatment, and for 8 weeks after stopping treatment—consult product literature.
  - ▶ Manufacturer advises monitor UPCR and eGFR before starting treatment, every 3 months or more frequently as clinically indicated during treatment, and for 8 weeks after stopping treatment—consult product literature.
  - ▶ Manufacturer advises monitor hepatic enzymes before starting treatment, then 4 months after starting treatment, and annually thereafter or more frequently as clinically indicated.

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises to take the syringe out of the refrigerator at least 30 minutes before administration. Patients may self-administer *Tegsedi*<sup>®</sup> after appropriate training in subcutaneous injection technique.
- **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator (2–8°C) and protect from light—consult product literature for further information regarding storage outside refrigerator.
- **PATIENT AND CARER ADVICE** Manufacturer advises patients should immediately report any signs of unusual or prolonged bleeding, neck stiffness, or atypical severe headache. Self-administration Manufacturer advises patients and carers should be given training in subcutaneous injection technique.
  - Missed doses** If a dose is missed, the next dose should be administered as soon as possible, unless the next scheduled dose is within 2 days, in which case the missed dose should not be taken and the next dose should be taken at the normal time.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
  - NICE decisions**
    - ▶ Inotersen for treating hereditary transthyretin amyloidosis (May 2019) NICE HST9 Recommended
    - Scottish Medicines Consortium (SMC) decisions**
      - ▶ Inotersen (*Tegsedi*<sup>®</sup>) for the treatment of stage 1 or stage 2 polyneuropathy in adult patients with hereditary transthyretin amyloidosis (hATTR) (August 2019) SMC No. SMC2188 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ *Tegsedi* (Swedish Orphan Biovitrum Ltd) ▼
  - Inotersen (as inotersen sodium) 189.33 mg per 1 ml *Tegsedi* 284mg/1.5ml solution for injection pre-filled syringes | 4 pre-filled disposable injection (PoM) £23,700.00 (Hospital only)

#### Patisiran

31-Aug-2020

- **DRUG ACTION** Patisiran is a double-stranded small interfering RNA which reduces transthyretin production.

#### ● INDICATIONS AND DOSE

**Stage 1 or stage 2 polyneuropathy in patients with hereditary transthyretin amyloidosis (hATTR) (initiated under specialist supervision)**

- ▶ BY INTRAVENOUS INFUSION
  - ▶ Adult: 300 micrograms/kg every 3 weeks (max. per dose 30 mg), dosage is based on actual body weight, for information on premedication, vitamin A supplementation, and missed doses—consult product literature
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Arthralgia · dyspepsia · dyspnoea · erythema · increased risk of infection · infusion related reaction · muscle spasms · peripheral oedema · vertigo
  - ▶ **Frequency not known** Vitamin A deficiency
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises women of childbearing potential should use effective contraception during treatment; if conception is planned, patisiran and vitamin A supplementation should be stopped and vitamin A levels monitored—consult product literature.
- **PREGNANCY** Manufacturer advises avoid unless essential (limited information available)—potential teratogenic risk due to unbalanced vitamin A levels, consult product literature.

- **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal* studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in moderate or severe impairment (no information available).
- **RENAL IMPAIRMENT** Manufacturer advises caution in severe impairment (no information available).
- **PRE-TREATMENT SCREENING** Manufacturer advises plasma vitamin A levels below the lower limit of normal should be corrected and any ocular symptoms or signs of vitamin A deficiency should be evaluated before starting treatment.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises for *intravenous infusion* (*Onpattro*<sup>®</sup>), filter through 0.45-micron syringe filter and dilute requisite dose with Sodium Chloride 0.9% to final volume of 200 mL; use a DEHP-free infusion set and give over about 80 minutes through an in-line filter (1.2 micron) at a rate of about 1 mL/minute for the first 15 minutes, then increase to about 3 mL/minute for the remainder of the infusion.
- **PRESCRIBING AND DISPENSING INFORMATION** Manufacturer advises patients should receive pre-medication (to reduce the risk of infusion-related reactions)—consult product literature.
- **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator (2–8°C)—consult product literature for further information regarding storage outside refrigerator.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
  - **NICE decisions**
    - ▶ *Patisiran* for treating hereditary transthyretin amyloidosis (August 2019) NICE HST10 Recommended
    - **Scottish Medicines Consortium (SMC) decisions**
      - ▶ *Patisiran* (*Onpattro*<sup>®</sup>) for the treatment of hereditary transthyretin-mediated amyloidosis (hATTR amyloidosis) in adult patients with stage 1 or stage 2 polyneuropathy (June 2019) SMC No. SMC2157 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for infusion

ELECTROLYTES: May contain Sodium

▶ *Onpattro* (Alnylam UK Ltd) ▼

*Patisiran* (as *Patisiran sodium*) 2 mg per 1 ml *Onpattro* 10mg/5ml concentrate for solution for infusion vials | 1 vial [PoM] £7,676.47 (Hospital only)

## Tafamidis

17-Jan-2022

- **DRUG ACTION** Tafamidis is a transthyretin stabiliser which inhibits amyloid formation, thereby delaying the development of nerve and cardiac muscle damage caused by transthyretin amyloidosis.

#### ● INDICATIONS AND DOSE

**Treatment of transthyretin amyloidosis in patients with stage 1 symptomatic polyneuropathy (ATTR-PN) [using 20 mg capsules] (initiated under specialist supervision)**

▶ BY MOUTH

▶ Adult: 20 mg once daily

**Treatment of wild-type transthyretin amyloidosis in patients with cardiomyopathy (ATTR-CM) [using 61 mg capsules] (initiated under specialist supervision) | Treatment of hereditary transthyretin amyloidosis in patients with cardiomyopathy (ATTR-CM) [using 61 mg capsules] (initiated under specialist supervision)**

▶ BY MOUTH

▶ Adult: 61 mg once daily

#### DOSE EQUIVALENCE AND CONVERSION

- ▶ Each 20 mg capsule contains tafamidis meglumine equivalent to 12.2 mg tafamidis.

- ▶ Each 61 mg capsule contains tafamidis equivalent to 80 mg tafamidis meglumine.
- ▶ Tafamidis and tafamidis meglumine are not interchangeable on a milligram-for-milligram basis.

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Abdominal pain upper · diarrhoea · increased risk of infection
- ▶ **Frequency not known** Flatulence
- ▶ **CONCEPTION AND CONTRACEPTION** Exclude pregnancy before treatment and ensure effective contraception during and for one month after stopping treatment.
- **PREGNANCY** Avoid (toxicity in *animal* studies).
- **BREAST FEEDING** Avoid—present in milk in *animal* studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment (no information available).
- **PRESCRIBING AND DISPENSING INFORMATION** Manufacturer advises tafamidis should be prescribed in addition to standard treatment, but before organ transplantation; it should be discontinued in patients who undergo organ transplantation.  
The manufacturer of *Vyndaqel*<sup>®</sup> has provided a *Guide for Healthcare Professionals*.

#### ● PATIENT AND CARER ADVICE

- **Missed doses** Manufacturer advises if vomiting occurs after a dose is taken and the intact capsule is identified, another dose can be taken if possible; otherwise the next dose should be taken at the normal time.

#### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### NICE decisions

- ▶ *Tafamidis* for treating transthyretin amyloidosis with cardiomyopathy (May 2021) NICE TA696 Not recommended
- **Scottish Medicines Consortium (SMC) decisions**
  - ▶ *Tafamidis* (*Vyndaqel*<sup>®</sup>) for the treatment of wild type or hereditary transthyretin amyloidosis in adult patients with cardiomyopathy (December 2021) SMC No. SMC2426 Not recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Capsule

CAUTIONARY AND ADVISORY LABELS 25

EXCIPIENTS: May contain Sorbitol

## 2.3 Carnitine deficiency

### AMINO ACIDS AND DERIVATIVES

## Levocarnitine

29-Jun-2021

### (Carnitine)

#### ● INDICATIONS AND DOSE

**Primary carnitine deficiency due to inborn errors of metabolism**

▶ BY MOUTH

▶ Adult: Up to 200 mg/kg daily in 2–4 divided doses; maximum 3 g per day

▶ BY SLOW INTRAVENOUS INJECTION

▶ Adult: Up to 100 mg/kg daily in 2–4 divided doses, to be administered over 2–3 minutes

continued →

**Secondary carnitine deficiency in haemodialysis patients**

- ▶ INITIALLY BY SLOW INTRAVENOUS INJECTION
- ▶ Adult: 20 mg/kg, to be administered over 2–3 minutes, after each dialysis session, dosage adjusted according to plasma-carnitine concentration, then (by mouth) maintenance 1 g daily, administered if benefit is gained from first intravenous course

- **CAUTIONS** Diabetes mellitus

● **SIDE-EFFECTS**

- ▶ Rare or very rare Abdominal cramps · diarrhoea · nausea · skin odour abnormal · vomiting

**SIDE-EFFECTS, FURTHER INFORMATION** Side-effects may be dose-related—monitor tolerance during first week and after any dose increase.

- **PREGNANCY** Appropriate to use; no evidence of teratogenicity in *animal* studies.
- **RENAL IMPAIRMENT** Accumulation of metabolites may occur with chronic oral administration of high doses in severe impairment.
- **MONITORING REQUIREMENTS**
  - ▶ Monitoring of free and acyl carnitine in blood and urine recommended.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: capsule

**Solution for injection**

- ▶ **Carnitor** (Logixx Pharma Solutions Ltd)  
L-Carnitine 200 mg per 1 ml Carnitor 1g/5ml solution for injection ampoules | 5 ampoule [PoM] £59.50 DT = £59.50

**Oral solution**

- ▶ **Levocarnitine (Non-proprietary)**  
L-Carnitine 300 mg per 1 ml Levocarnitine 1.5g/5ml (30%) oral solution paediatric | 20 ml [PoM] £71.40 DT = £71.40 | 40 ml [PoM] £118.00

- ▶ **Carnitor** (Logixx Pharma Solutions Ltd)  
L-Carnitine 100 mg per 1 ml Carnitor oral single dose 1g solution sugar-free | 10 unit dose [PoM] £35.00 DT = £35.00

**Chewable tablet**

- ▶ **Carnitor** (Logixx Pharma Solutions Ltd)  
L-Carnitine 1 gram Carnitor 1g chewable tablets | 10 tablet [PoM] £35.00 DT = £35.00

**Capsule**

- ▶ **Levocarnitine (Non-proprietary)**  
L-Carnitine 250 mg Bio-Carnitine 250mg capsules | 125 capsule £11.06

## 2.4 Cystinosis

### 2.4a Nephropathic cystinosis

#### AMINO ACIDS AND DERIVATIVES

### Mercaptamine

01-Oct-2021

**(Cysteamine)**● **INDICATIONS AND DOSE****Corneal cystine crystal deposits in patients with cystinosis (specialist use only)**

- ▶ TO THE EYE
- ▶ Adult: Apply 1 drop 4 times a day, to be applied to both eyes (minimum 4 hours between doses); dose may be reduced according to response (minimum daily dose 1 drop in each eye)

**CYSTAGON®****Nephropathic cystinosis (specialist use only)**

## ▶ BY MOUTH

- ▶ Adult (body-weight 50 kg and above): Initially one-sixth to one-quarter of the expected maintenance dose, increased gradually over 4–6 weeks to avoid intolerance, dose increased if there is adequate tolerance and the leucocyte-cystine concentration remains above 1 nanomol hemicycstine/mg protein, maintenance 500 mg 4 times a day; maximum 1.95 g/m<sup>2</sup> per day

**PROCYSBI®****Nephropathic cystinosis (specialist use only)**

## ▶ BY MOUTH

- ▶ Adult: Initially one-sixth to one-quarter of the expected maintenance dose, increased if there is adequate tolerance and the leucocyte-cystine concentration remains above 1 nanomol hemicycstine/mg protein (measured using the mixed leucocyte assay), maintenance 650 mg/m<sup>2</sup> twice daily, administered every 12 hours; maximum 1.95 g/m<sup>2</sup> per day

**IMPORTANT SAFETY INFORMATION****SAFE PRACTICE**

Mercaptamine has been confused with mercaptopurine; care must be taken to ensure the correct drug is prescribed and dispensed.

● **CAUTIONS**

- ▶ When used by eye Contact lens wearers
- ▶ With oral use Dose of phosphate supplement may need to be adjusted if transferring from phosphocysteamine to mercaptamine

● **SIDE-EFFECTS**▶ **Common or very common**

- ▶ When used by eye Dry eye · eye discomfort · eye disorders · vision blurred
- ▶ With oral use Appetite decreased · asthenia · breath odour · diarrhoea · drowsiness · encephalopathy · fever · gastroenteritis · gastrointestinal discomfort · headache · nausea · skin reactions · vomiting
- ▶ **Uncommon**
- ▶ With oral use Compression fracture · gastrointestinal ulcer · hair colour changes · hallucination · joint hyperextension · leg pain · leucopenia · musculoskeletal disorders · nephrotic syndrome · nervousness · osteopenia · seizure
- ▶ **Frequency not known**
- ▶ With oral use Depression · intracranial pressure increased · papilloedema

- **ALLERGY AND CROSS-SENSITIVITY** [EvGr] Contra-indicated if history of hypersensitivity to penicillamine. ⚠

● **PREGNANCY**

- ▶ With oral use Manufacturer advises avoid—teratogenic and toxic in *animal* studies.

● **BREAST FEEDING**

- ▶ With oral use Manufacturer advises avoid—no information available.

● **MONITORING REQUIREMENTS**

- ▶ With oral use Manufacturer advises leucocyte-cystine concentration, liver function, and haematological monitoring required—consult product literature. Manufacturer advises monitor for skin and bone abnormalities; dose reduction or treatment discontinuation may be required—consult product literature.

● **DIRECTIONS FOR ADMINISTRATION**

- ▶ **PROCYSBI®** Manufacturer advises capsules can be opened and contents sprinkled on food, water, acidic fruit juice or administered via an enteral feeding tube—consult product

literature. Avoid dairy products and meals (rich in fats and protein) at least 1 hour before and after taking a dose.

#### ● **PRESCRIBING AND DISPENSING INFORMATION**

Mercaptamine has a very unpleasant taste and smell, which can affect compliance.

#### ● **HANDLING AND STORAGE**

When used by eye Manufacturer advises store in a refrigerator (2–8°C)—after opening store at room temperature up to 25°C for up to 7 days; protect from light.

**PROCYSBI®** Manufacturer advises store in a refrigerator (2–8°C).

#### ● **PATIENT AND CARER ADVICE**

**Driving and skilled tasks** ▶ With oral use Manufacturer advises patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of drowsiness.

When used by eye Manufacturer advises patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of blurred vision and visual disturbances.

**PROCYSBI® Missed doses** Manufacturer advises if a dose is within 4 hours of the next dose, the missed dose should not be taken and the next dose should be taken at the normal time.

#### ● **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

#### **Scottish Medicines Consortium (SMC) decisions**

▶ **Mercaptamine (Procysbi®)** for the treatment of **non-nephropathic cystinosis (September 2021)** SMC No. SMC2374 Not recommended

#### ● **MEDICINAL FORMS**

There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

#### **Gastro-resistant capsule**

CAUTIONARY AND ADVISORY LABELS 25

▶ **Procysbi** (Chiesi Ltd)

**Mercaptamine (as Mercaptamine bitartrate) 25 mg** Procysbi 25mg gastro-resistant capsules | 60 capsule [PoM](#) £335.97 DT = £335.97

**Mercaptamine (as Mercaptamine bitartrate) 75 mg** Procysbi 75mg gastro-resistant capsules | 250 capsule [PoM](#) £4,199.65 DT = £4,199.65

#### **Eye drops**

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

▶ **Mercaptamine (Non-proprietary)**

**Mercaptamine (as Mercaptamine hydrochloride) 4.4 mg per 1 ml** Cystaran 0.44% eye drops | 15 ml [PoM](#) [S](#) (Hospital only)

▶ **Cystadrops** (Recordati Rare Diseases UK Ltd)

**Mercaptamine (as Mercaptamine hydrochloride) 3.8 mg per 1 ml** Cystadrops 3.8mg/ml eye drops | 5 ml [PoM](#) £865.00 DT = £865.00

#### **Capsule**

CAUTIONARY AND ADVISORY LABELS 21

▶ **Cystagon** (Recordati Rare Diseases UK Ltd)

**Mercaptamine (as Mercaptamine bitartrate) 50 mg** Cystagon 50mg capsules | 100 capsule [PoM](#) £70.00 DT = £70.00

**Mercaptamine (as Mercaptamine bitartrate) 150 mg** Cystagon 150mg capsules | 100 capsule [PoM](#) £190.00 DT = £190.00

## 2.5 Fabry's disease

### ENZYMES

#### Agalsidase alfa

27-Jul-2020

● **DRUG ACTION** Agalsidase alfa, an enzyme produced by recombinant DNA technology are licensed for long-term enzyme replacement therapy in Fabry's disease (a lysosomal storage disorder caused by deficiency of alpha-galactosidase A).

#### ● **INDICATIONS AND DOSE**

##### **Fabry's disease (specialist use only)**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: 200 micrograms/kg every 2 weeks

● **INTERACTIONS** → Appendix 1: agalsidase alfa

#### ● **SIDE-EFFECTS**

- ▶ **Common or very common** Arrhythmias · asthenia · chest discomfort · chills · cough · diarrhoea · dizziness · dyspnoea · excessive tearing · fever · flushing · gastrointestinal discomfort · headache · hoarseness · hypersomnia · hypertension · increased risk of infection · influenza like illness · joint disorders · malaise · musculoskeletal discomfort · myalgia · nausea · ototoxicity · pain · palpitations · peripheral oedema · peripheral swelling · rhinorrhoea · sensation abnormal · skin reactions · taste altered · temperature sensation altered · throat complaints · tremor · vomiting
- ▶ **Uncommon** Altered smell sensation · angioedema · hypersensitivity · sensation of pressure
- ▶ **Frequency not known** Heart failure · hyperhidrosis · hypotension · myocardial ischaemia

**SIDE-EFFECTS, FURTHER INFORMATION** Infusion-related reactions; manage by interrupting the infusion, or minimise by pre-treatment with an antihistamine or corticosteroid — consult product literature.

● **PREGNANCY** Use with caution.

● **BREAST FEEDING** Use with caution—no information available.

● **DIRECTIONS FOR ADMINISTRATION** Administration for *intravenous infusion*, manufacturer advises give intermittently in sodium chloride 0.9%; dilute requisite dose with 100 mL infusion fluid and give over 40 minutes using an in-line filter.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Solution for infusion**

▶ **Replagal** (Takeda UK Ltd)

**Agalsidase alfa 1 mg per 1 ml** Replagal 3.5mg/3.5ml solution for infusion vials | 1 vial [PoM](#) £1,049.94 (Hospital only)

#### Agalsidase beta

27-Jul-2020

● **DRUG ACTION** Agalsidase beta, an enzyme produced by recombinant DNA technology are licensed for long-term enzyme replacement therapy in Fabry's disease (a lysosomal storage disorder caused by deficiency of alpha-galactosidase A).

#### ● **INDICATIONS AND DOSE**

##### **Fabry's disease (specialist use only)**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: 1 mg/kg every 2 weeks

● **INTERACTIONS** → Appendix 1: agalsidase beta

#### ● **SIDE-EFFECTS**

- ▶ **Common or very common** Angioedema · arrhythmias · arthralgia · asthenia · chest discomfort · chills · cough ·

diarrhoea · dizziness · drowsiness · dyspnoea · eye disorders · fever · gastrointestinal discomfort · headache · hypertension · hyperthermia · hypotension · increased risk of infection · muscle complaints · musculoskeletal stiffness · nasal complaints · nausea · oedema · oral hypoaesthesia · pain · pallor · palpitations · respiratory disorders · sensation abnormal · skin reactions · syncope · temperature sensation altered · throat complaints · tinnitus · vasodilation · vertigo · vomiting

- ▶ **Uncommon** Dysphagia · ear discomfort · eye pruritus · influenza like illness · malaise · peripheral coldness · tremor
- ▶ **Frequency not known** Anaphylactoid reaction · hypersensitivity vasculitis · hypoxia

**SIDE-EFFECTS, FURTHER INFORMATION** Infusion-related reactions; manage by slowing the infusion rate, or minimise by pre-treatment with an antihistamine, antipyretic, or corticosteroid — consult product literature.

- **PREGNANCY** Use with caution.
- **BREAST FEEDING** Use with caution—no information available.
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion*, manufacturer advises give intermittently in Sodium chloride 0.9%, reconstitute initially with Water for Injections (5 mg in 1.1 mL, 35 mg in 7.2 mL) to produce a solution containing 5 mg/mL. Dilute with Sodium Chloride 0.9% (for doses less than 35 mg dilute with at least 50 mL; doses 35–70 mg dilute with at least 100 mL; doses 70–100 mg dilute with at least 250 mL; doses greater than 100 mg dilute with 500 mL) and give through an in-line low protein-binding 0.2 micron filter at an initial rate of no more than 15 mg/hour; for subsequent infusions, infusion rate may be increased gradually once tolerance has been established.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for solution for infusion

- ▶ **Fabrazyme** (Sanofi Genzyme)
  - **Galactosidase beta 5 mg** Fabrazyme 5mg powder for concentrate for solution for infusion vials | 1 vial [PoM](#) £315.08
  - **Galactosidase beta 35 mg** Fabrazyme 35mg powder for concentrate for solution for infusion vials | 1 vial [PoM](#) £2,196.59

## ENZYME STABILISER

### Migalastat

09-Sep-2020

- **DRUG ACTION** Migalastat is a pharmacological chaperone that binds to the active sites of certain mutant forms of alpha-galactosidase A, thereby stabilising these mutant forms in the endoplasmic reticulum, and facilitating normal trafficking to lysosomes.

#### ● INDICATIONS AND DOSE

##### Fabry's disease (specialist use only)

- ▶ **BY MOUTH**
- ▶ **Adult:** 123 mg once daily on alternate days, take at the same time of day, food should not be consumed at least 2 hours before and after taking migalastat to give a minimum 4 hours fast

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Constipation · defaecation urgency · depression · diarrhoea · dizziness · dry mouth · dyspnoea · epistaxis · fatigue · gastrointestinal discomfort · headache · muscle complaints · nausea · pain · palpitations · proteinuria · sensation abnormal · skin reactions · torticollis · vertigo · weight increased
- **PREGNANCY** Manufacturer advises avoid—toxicity in *animal* studies.

- **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal* studies.
- **RENAL IMPAIRMENT** See p. 21. Manufacturer advises avoid if eGFR less than 30 mL/minute/1.73 m<sup>2</sup>.
- **MONITORING REQUIREMENTS** Manufacturer advises monitor renal function, echocardiographic parameters and biochemical markers every 6 months.
- **PATIENT AND CARER ADVICE**
  - **Missed doses** Manufacturer advises if a dose is more than 12 hours late or missed entirely for the day, the missed dose should not be taken and the next dose should be taken on the normal day and at the normal time (not to be taken on 2 consecutive days).
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
  - **NICE decisions**
    - ▶ **Migalastat for treating Fabry disease (February 2017)** NICE HST4 Recommended with restrictions
    - **Scottish Medicines Consortium (SMC) decisions**
      - ▶ **Migalastat (*GalafoId*<sup>®</sup>) for long-term treatment of adults and adolescents aged 16 years and older with a confirmed diagnosis of Fabry disease ( $\alpha$ -galactosidase A deficiency) and who have an amenable mutation (November 2016)** SMC No. 1196/16 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Capsule

CAUTIONARY AND ADVISORY LABELS 25

- ▶ **GalafoId** (Amicus UK Operations Ltd)
  - **Migalastat (as Migalastat hydrochloride) 123 mg** GalafoId 123mg capsules | 14 capsule [PoM](#) £16,153.85

## 2.6 Gaucher's disease

Other drugs used for Gaucher's disease Miglustat, p. 1161

## ENZYME INHIBITORS > GLUCOSYL CERAMIDE SYNTHASE INHIBITORS

### Eliglustat

26-Aug-2020

- **DRUG ACTION** Eliglustat is an inhibitor of glucosylceramide synthase.

#### ● INDICATIONS AND DOSE

##### Type 1 Gaucher disease (CYP2D6 poor metabolisers) (under expert supervision)

- ▶ **BY MOUTH**
- ▶ **Adult:** 84 mg once daily

##### Type 1 Gaucher disease (CYP2D6 intermediate or extensive metabolisers) (under expert supervision)

- ▶ **BY MOUTH**
- ▶ **Adult:** 84 mg twice daily

- **CONTRA-INDICATIONS** Cardiac disease (no information available) · concurrent use of Class IA and Class III antiarrhythmics · long QT syndrome (no information available)
- **INTERACTIONS** → Appendix 1: eliglustat
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Arthralgia · constipation · dry mouth · dry skin · dyspepsia · dysphagia · fatigue · gastrointestinal disorders · nausea · palpitations · taste altered · throat irritation
- **PREGNANCY** Manufacturer advises avoid—limited information available.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal* studies.

- **PRE-TREATMENT SCREENING** Manufacturer advises CYP2D6 metaboliser status should be determined before initiation of treatment.
- **MONITORING REQUIREMENTS**
  - ▶ For treatment-naïve patients showing less than 20% spleen volume reduction after 9 months of treatment, manufacturer advises monitor for further improvement or consider an alternative treatment.
  - ▶ For patients with stable disease who have switched from enzyme replacement therapy, manufacturer advises monitor for disease progression—consider reinstatement of enzyme replacement therapy or an alternative treatment if response sub-optimal.
- **PRESCRIBING AND DISPENSING INFORMATION** The manufacturer of *Cerdelga*® has provided a *Prescriber Guide*, which includes a prescriber checklist.
- **PATIENT AND CARER ADVICE** A patient alert card should be provided.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
- **NICE decisions**
  - ▶ Eliglustat for treating type I Gaucher disease (June 2017) NICE HST5 Recommended
- **Scottish Medicines Consortium (SMC) decisions**
  - ▶ Eliglustat (*Cerdelga*®) for the long-term treatment of adult patients with Gaucher disease type 1 (GD1) who are CYP2D6 poor metabolisers, intermediate metabolisers or extensive metabolisers (December 2017) SMC No. 1277/17 Recommended
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Capsule**

CAUTIONARY AND ADVISORY LABELS 10

- ▶ *Cerdelga* (Sanofi Genzyme) ▼
- ▶ *Eliglustat* (as *Eliglustat tartrate*) 84.4 mg *Cerdelga* 84mg capsules | 56 capsule [PoM] £19,164.96

**ENZYMES****Imiglucerase**

21-Jul-2020

- **DRUG ACTION** Imiglucerase is an enzyme produced by recombinant DNA technology that is administered as enzyme replacement therapy for non-neurological manifestations of type I or type III Gaucher's disease, a familial disorder affecting principally the liver, spleen, bone marrow, and lymph nodes.

**● INDICATIONS AND DOSE**

**Non-neurological manifestations of type I Gaucher's disease (specialist use only) | Non-neurological manifestations of type III Gaucher's disease (specialist use only)**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: Initially 60 units/kg every 2 weeks; maintenance, adjusted according to response, doses as low as 15 units/kg once every 2 weeks may improve haematological parameters and organomegaly

**● SIDE-EFFECTS**

- ▶ **Common or very common** Angioedema · cough · dyspnoea · hypersensitivity · skin reactions
- ▶ **Uncommon** Abdominal cramps · arthralgia · back pain · chest discomfort · chills · cyanosis · diarrhoea · dizziness · fatigue · fever · flushing · headache · hypotension · nausea · paraesthesia · tachycardia · vomiting
- **PREGNANCY** Manufacturer advises use with caution—limited information available.
- **BREAST FEEDING** No information available.
- **MONITORING REQUIREMENTS**
  - ▶ Monitor for immunoglobulin G (IgG) antibodies to imiglucerase.

- ▶ When stabilised, monitor all parameters and response to treatment at intervals of 6–12 months.
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion* (*Cerezyme*®), manufacturer advises give intermittently in Sodium chloride 0.9%; initially reconstitute with water for injections (400 units in 10.2 mL) to give 40 units/mL solution; dilute requisite dose with infusion fluid to a final volume of 100–200 mL and give initial dose at a rate not exceeding 0.5 units/kg/minute, subsequent doses to be given at a rate not exceeding 1 unit/kg/minute; administer within 3 hours after reconstitution.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Powder for solution for infusion**

ELECTROLYTES: May contain Sodium

- ▶ *Cerezyme* (Sanofi Genzyme)

**Imiglucerase 400 unit** *Cerezyme* 400unit powder for concentrate for solution for infusion vials | 1 vial [PoM] £1,071.29 (Hospital only)

**Velaglucerase alfa**

29-Jul-2020

- **DRUG ACTION** Velaglucerase alfa is an enzyme produced by recombinant DNA technology that is administered as enzyme replacement therapy for the treatment of type I Gaucher's disease.

**● INDICATIONS AND DOSE****Type I Gaucher's disease (specialist use only)**

- ▶ BY INTRAVENOUS INFUSION

- ▶ Adult: Initially 60 units/kg every 2 weeks; adjusted according to response to 15–60 units/kg every 2 weeks

**● SIDE-EFFECTS**

- ▶ **Common or very common** Arthralgia · asthenia · chest discomfort · dizziness · dyspnoea · fever · flushing · gastrointestinal discomfort · headache · hypersensitivity · hypertension · hypotension · infusion related reaction · nausea · pain · skin reactions · tachycardia

**SIDE-EFFECTS, FURTHER INFORMATION**

Infusion-related reactions are very common; manage by slowing the infusion rate, or interrupting the infusion, or minimise by pre-treatment with an antihistamine, antipyretic, or corticosteroid—consult product literature.

- **PREGNANCY** Manufacturer advises use with caution—limited information available.
- **BREAST FEEDING** Manufacturer advises use with caution—no information available.
- **MONITORING REQUIREMENTS** Monitor immunoglobulin G (IgG) antibody concentration in severe infusion-related reactions or if there is a lack or loss of effect with velaglucerase alfa.
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion* (*VPRIV*®), manufacturer advises give intermittently in Sodium chloride 0.9%; reconstitute each 400-unit vial with 4.3 mL water for injections to produce a 100 units/mL solution; dilute requisite dose in 100 mL infusion fluid; give over 60 minutes through a 0.22 micron filter; start infusion within 24 hours of reconstitution.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Powder for solution for infusion**

ELECTROLYTES: May contain Sodium

- ▶ *VPRIV* (Takeda UK Ltd)

**Velaglucerase alfa 400 unit** *VPRIV* 400units powder for solution for infusion vials | 1 vial [PoM] £1,410.20 (Hospital only)

## 2.7 Homocystinuria

### METHYL DONORS

#### Betaine

03-Nov-2020

##### ● INDICATIONS AND DOSE

**Adjunctive treatment of homocystinuria involving deficiencies or defects in cystathionine beta-synthase, 5,10-methylene-tetrahydrofolate reductase, or cobalamin cofactor metabolism (specialist use only)**

##### ▶ BY MOUTH

- ▶ Adult: 3 g twice daily (max. per dose 10 g), adjusted according to response; maximum 20 g per day

##### ● SIDE-EFFECTS

- ▶ **Uncommon** Abdominal discomfort · agitation · alopecia · appetite decreased · brain oedema · diarrhoea · glossitis · irritability · nausea · skin reactions · urinary incontinence · vomiting

- **PREGNANCY** Manufacturer advises avoid unless essential—limited information available.

- **BREAST FEEDING** Manufacturer advises caution—no information available.

- **MONITORING REQUIREMENTS** Monitor plasma-methionine concentration before and during treatment—interrupt treatment if symptoms of cerebral oedema occur.

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises powder should be mixed with water, juice, milk, formula, or food until completely dissolved and taken immediately; measuring spoons are provided to measure 1 g, 150 mg, and 100 mg of *Cystadane*<sup>®</sup> powder.

- **PRESCRIBING AND DISPENSING INFORMATION** Betaine should be used in conjunction with dietary restrictions and may be given with supplements of Vitamin B<sub>12</sub>, pyridoxine, and folate under specialist advice.

##### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

##### Scottish Medicines Consortium (SMC) decisions

- ▶ Betaine anhydrous (*Cystadane*<sup>®</sup>) for the adjunctive treatment of homocystinuria involving deficiencies or defects in cystathionine beta-synthase (CBS), 5,10-methylene-tetrahydrofolate reductase (MTHFR) or cobalamin cofactor metabolism (cbI) (August 2010) SMC No. 407/07 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: tablet, oral solution

##### Powder

- ▶ *Cystadane* (Recordati Rare Diseases UK Ltd)

- ▶ Betaine 1 gram per 1 gram *Cystadane* oral powder | 180 gram [PoM] £347.00 DT = £347.00

## 2.8 Hypophosphatasia

### ENZYMES

#### Asfotase alfa

04-Dec-2017

- **DRUG ACTION** Asfotase alfa is a human recombinant tissue-nonspecific alkaline phosphatase that promotes mineralisation of the skeleton.

##### ● INDICATIONS AND DOSE

**Paediatric-onset hypophosphatasia (initiated by a specialist)**

##### ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: 2 mg/kg 3 times a week, alternatively 1 mg/kg 6 times a week, dosing frequency depends on body-weight—consult product literature for further information

- **CAUTIONS** Hypersensitivity reactions

##### CAUTIONS, FURTHER INFORMATION

- ▶ Hypersensitivity reactions Reactions, including signs and symptoms consistent with anaphylaxis, have occurred within minutes of administration and can occur in patients on treatment for more than one year; if these reactions occur, manufacturer advises immediate discontinuation of treatment and initiation of appropriate medical treatment. For information on re-administration, consult product literature.

##### ● SIDE-EFFECTS

- ▶ **Common or very common** Bruising tendency · chills · cough · cutis laxa · fever · headache · hypersensitivity · hypocalcaemia · irritability · myalgia · nausea · nephrolithiasis · oral hypoesthesia · pain · skin reactions · tachycardia · vasodilation · vomiting

##### SIDE-EFFECTS, FURTHER INFORMATION

- ▶ Injection-site reactions including hypertrophy, induration, skin discolouration, and cellulitis may occur, particularly in patients receiving treatment 6 times a week. Manufacturer advises rotation of injection sites to manage these reactions; interrupt treatment if severe reactions occur and administer appropriate medical therapy.

- **PREGNANCY** Manufacturer advises avoid—no information available.

- **BREAST FEEDING** Manufacturer advises avoid—no information available.

##### ● MONITORING REQUIREMENTS

- ▶ Manufacturer advises monitor serum parathyroid hormone and calcium concentrations—supplements of calcium and oral vitamin D may be required.
- ▶ Manufacturer advises periodic ophthalmological examination and renal ultrasounds.

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises max. 1 mL per injection site; administer multiple injections if more than 1 mL is required—consult product literature.

- **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator (2–8 °C).

##### ● PATIENT AND CARER ADVICE

- ▶ Injection guides The manufacturer has produced injection guides for patients and carers to support training given by health care professionals.

##### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

##### NICE decisions

- ▶ Asfotase alfa for treating paediatric-onset hypophosphatasia (August 2017) NICE HST6 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Strensiq** (Alexion Pharma UK Ltd) ▼  
**Astofase alfa 40 mg per 1 ml** Strensiq 18mg/0.45ml solution for injection vials | 12 vial [PoM] £12,700.80 (Hospital only)  
 Strensiq 28mg/0.7ml solution for injection vials | 12 vial [PoM] £19,756.80 (Hospital only)  
 Strensiq 40mg/1ml solution for injection vials | 12 vial [PoM] £28,224.00 (Hospital only)  
**Astofase alfa 100 mg per 1 ml** Strensiq 80mg/0.8ml solution for injection vials | 12 vial [PoM] £56,448.00 (Hospital only)

## 2.9 Leptin deficiency

### DRUGS FOR METABOLIC DISORDERS > LEPTIN ANALOGUES

#### Metreleptin

16-Mar-2021

- **DRUG ACTION** Metreleptin is a recombinant human leptin analogue which binds to, and activates the leptin receptor to increase fat breakdown in the blood, muscles and liver, thereby correcting some abnormalities in patients with lipodystrophy.

#### INDICATIONS AND DOSE

##### Leptin deficiency in lipodystrophy (specialist use only)

###### ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: (consult product literature)

- **CAUTIONS** Autoimmune disease · elderly (limited information available) · haematological abnormalities · severe infection
- **INTERACTIONS** → Appendix 1: metreleptin
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Alopecia · appetite abnormal · fatigue · gastrointestinal discomfort · headache · hypoglycaemia · menorrhagia · nausea · weight changes
  - ▶ **Frequency not known** Arthralgia · cough · deep vein thrombosis · diabetes mellitus · diarrhoea · dyspnoea · increased risk of infection · insulin resistance · malaise · myalgia · pancreatitis · peripheral swelling · pleural effusion · skin reactions · tachycardia · vomiting
- **CONCEPTION AND CONTRACEPTION** [EvGr] May increase fertility due to restoration of luteinising hormone release. Females of childbearing potential should use additional, effective non-hormonal contraception during treatment.
  - ◆
- **PREGNANCY** [EvGr] Avoid—toxicity in *animal* studies. ◆
- **BREAST FEEDING** Specialist sources indicate use with caution—no information available. Large molecular weight and short half-life suggest limited excretion into milk, but monitor breast-fed infants for adverse reactions such as hypoglycaemia, decreased weight and abdominal pain.
- **TREATMENT CESSATION** [EvGr] Treatment should be withdrawn gradually over 2 weeks in conjunction with a low fat diet, to reduce the risk of increased hypertriglyceridaemia and pancreatitis—monitor triglyceride levels and consider the initiation or adjustment of lipid-lowering therapies as needed. ◆
- **DIRECTIONS FOR ADMINISTRATION** [EvGr] Inject into the thigh, abdomen, or upper arm; rotate injection site—max. 1 mL per injection site. ◆ Patients may self-administer *Myalepta*® after appropriate training in reconstitution and subcutaneous injection technique.
- **PRESCRIBING AND DISPENSING INFORMATION** The manufacturer of *Myalepta*® has provided a *Healthcare Professional Guide* and a *Specialist Prescriber Guide*.

- [EvGr] Prescribe the appropriate dose in milligrams and in millilitres—dosage should be based on actual body-weight. ◆

- **HANDLING AND STORAGE** Store in a refrigerator (2–8°C) and protect from light—consult product literature about storage after reconstitution.
- **PATIENT AND CARER ADVICE**
  - Self-administration Patients and their carers should be given training on reconstitution and subcutaneous injection technique if appropriate—a review of technique is recommended every 6 months.
  - Information for patients The manufacturer of *Myalepta*® has provided a *Patient Care Guide* and a *Patient Dose Information Card*.
  - Missed doses** If a dose is missed, it should be injected when remembered and the next dose should be injected at the normal time.
  - Driving and skilled tasks** Patients and their carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of fatigue and dizziness.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
- **NICE decisions**
  - ▶ **Metreleptin for treating lipodystrophy [in patients aged 2 years and over with generalised lipodystrophy]** (February 2021) NICE HST14 Recommended
  - ▶ **Metreleptin for treating lipodystrophy [in patients aged 12 years and over with partial lipodystrophy]** (February 2021) NICE HST14 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for solution for injection

##### CAUTIONARY AND ADVISORY LABELS 10

##### EXCIPIENTS: May contain Polysorbates

- ▶ **Myalepta** (Amryt Pharma (UK) Ltd) ▼
  - Metreleptin 3 mg** Myalepta 3mg powder for solution for injection vials | 30 vial [PoM] £17,512.50 (Hospital only)
  - Metreleptin 5.8 mg** Myalepta 5.8mg powder for solution for injection vials | 30 vial [PoM] £35,025.00 (Hospital only)
  - Metreleptin 11.3 mg** Myalepta 11.3mg powder for solution for injection vials | 30 vial [PoM] £70,050.00 (Hospital only)

## 2.10 Mucopolysaccharidosis

### ENZYMES

#### Elosulfase alfa

04-May-2022

- **DRUG ACTION** Elosulfase alfa is an enzyme produced by recombinant DNA technology that provides replacement therapy in conditions caused by N-acetylgalactosamine-6-sulfatase (GALNS) deficiency.

#### INDICATIONS AND DOSE

##### Mucopolysaccharidosis IVA (specialist use only)

###### ▶ BY INTRAVENOUS INFUSION

- ▶ Adult: 2 mg/kg once weekly

- **CAUTIONS** Elderly—no information available · infusion-related reactions

#### CAUTIONS, FURTHER INFORMATION

- ▶ **Infusion-related reactions** Infusion-related reactions can occur; manufacturer advises these may be minimised by pre-treatment with an antihistamine and antipyretic, given 30–60 minutes before treatment. If reaction is severe, stop infusion and start appropriate treatment. Caution and close monitoring is advised during re-administration following a severe reaction.

### ● SIDE-EFFECTS

- ▶ **Common or very common** Chills · diarrhoea · dizziness · dyspnoea · fever · gastrointestinal discomfort · headache · hypersensitivity · myalgia · nausea · oropharyngeal pain · vomiting
- ▶ **Frequency not known** Infusion related reaction
- **PREGNANCY** Manufacturer advises avoid unless essential—limited information available.
- **BREAST FEEDING** Manufacturer advises use only if potential benefit outweighs risk—present in milk in *animal* studies.

- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion* (*Vimizim*®), manufacturer advises give intermittently in Sodium chloride 0.9%; body-weight under 25 kg, dilute requisite dose to final volume of 100 mL infusion fluid and mix gently, give over 4 hours through in-line filter (0.2 micron) initially at a rate of 3 mL/hour, then increase to a rate of 6 mL/hour after 15 minutes, then increase gradually if tolerated every 15 minutes by 6 mL/hour to max. 36 mL/hour; body-weight 25 kg or over, dilute requisite dose to final volume of 250 mL and mix gently, give over 4 hours through in-line filter (0.2 micron) initially at a rate of 6 mL/hour, then increase to a rate of 12 mL/hour after 15 minutes, then increase gradually if tolerated every 15 minutes by 12 mL/hour to max. 72 mL/hour.

- **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator at 2–8°C. After dilution use immediately or, if necessary, store at 2–8°C for max. 24 hours, followed by up to 24 hours at 23–27°C.

### ● PATIENT AND CARER ADVICE

**Driving and skilled tasks** Manufacturer advises patients and carers should be counselled about the effects on driving and performance of skilled tasks—increased risk of dizziness.

### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### NICE decisions

- ▶ **Elosulfase alfa for treating mucopolysaccharidosis type 4A** (April 2022) NICE HST19 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for infusion

EXCIPIENTS: May contain Polysorbates, sorbitol

ELECTROLYTES: May contain Sodium

- ▶ **Vimizim** (BioMarin (U.K.) Ltd) ▼

**Elosulfase alfa 1 mg per 1 ml** Vimizim 5mg/5ml concentrate for solution for infusion vials | 1 vial [PoM] £750.00

disorders · skin reactions · tremor · umbilical hernia · vomiting

- ▶ **Frequency not known** Arrhythmias · cyanosis · hypoxia · infusion related reaction · nerve disorders · pallor · paraesthesia · shock

**SIDE-EFFECTS, FURTHER INFORMATION** Infusion-related reactions often occur, they can be managed by slowing the infusion rate or interrupting the infusion, and can be minimised by pre-treatment with an antihistamine and an antipyretic. Recurrent infusion-related reactions may require pre-treatment with a corticosteroid—consult product literature for details.

- **PREGNANCY** Manufacturer advises avoid unless essential.

- **BREAST FEEDING** Manufacturer advises avoid—no information available.

- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion* (*Naglazyme*®), manufacturer advises give intermittently in Sodium chloride 0.9%; dilute requisite dose with infusion fluid to final volume of 250 mL and mix gently; infuse through a 0.2 micron in-line filter; give approx. 2.5% of the total volume over 1 hour, then infuse remaining volume over next 3 hours; if body-weight under 20 kg and at risk of fluid overload, dilute requisite dose in 100 mL infusion fluid and give over at least 4 hours.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for infusion

- ▶ **Naglazyme** (BioMarin (U.K.) Ltd) ▼

**Galsulfase 1 mg per 1 ml** Naglazyme 5mg/5ml solution for infusion vials | 1 vial [PoM] £982.00

## Idursulfase

16-Jul-2020

- **DRUG ACTION** Idursulfase is an enzyme produced by recombinant DNA technology licensed for long-term replacement therapy in mucopolysaccharidosis II (Hunter syndrome), a lysosomal storage disorder caused by deficiency of iduronate-2-sulfatase.

### ● INDICATIONS AND DOSE

#### Mucopolysaccharidosis II (specialist use only)

- ▶ BY INTRAVENOUS INFUSION

- ▶ Adult: 500 micrograms/kg once weekly

- **CAUTIONS** Acute febrile respiratory illness (consider delaying treatment) · infusion-related reactions can occur · severe respiratory disease

### ● SIDE-EFFECTS

- ▶ **Common or very common** Arrhythmias · arthralgia · chest pain · cough · cyanosis · diarrhoea · dizziness · dyspnoea · fever · flushing · gastrointestinal discomfort · headache · hypertension · hypotension · hypoxia · infusion related reaction · nausea · oedema · respiratory disorders · skin reactions · tongue swelling · tremor · vomiting
- ▶ **Frequency not known** Hypersensitivity

**SIDE-EFFECTS, FURTHER INFORMATION** Infusion-related reactions often occur, they can be managed by slowing the infusion rate or interrupting the infusion, and can be minimised by pre-treatment with an antihistamine and an antipyretic. Recurrent infusion-related reactions may require pre-treatment with a corticosteroid—consult product literature for details.

- **CONCEPTION AND CONTRACEPTION** Contra-indicated in women of child-bearing potential.

- **PREGNANCY** Manufacturer advises avoid.

- **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal* studies.

- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion* (*Elapraxe*®), manufacturer advises give intermittently in Sodium chloride 0.9%; dilute requisite dose in 100 mL

## Galsulfase

16-Jul-2020

- **DRUG ACTION** Galsulfase is a recombinant form of human N-acetylgalactosamine-4-sulfatase.

### ● INDICATIONS AND DOSE

#### Mucopolysaccharidosis VI (specialist use only)

- ▶ BY INTRAVENOUS INFUSION

- ▶ Adult: 1 mg/kg once weekly

- **CAUTIONS** Acute febrile illness (consider delaying treatment) · acute respiratory illness (consider delaying treatment) · infusion-related reactions can occur · respiratory disease

### ● SIDE-EFFECTS

- ▶ **Common or very common** Abdominal pain · angioedema · apnoea · arthralgia · asthma · chest pain · chills · conjunctivitis · corneal opacity · cough · dyspnoea · ear pain · fever · headache · hearing impairment · hypertension · hypotension · increased risk of infection · malaise · nasal congestion · nausea · pain · reflexes absent · respiratory

infusion fluid and mix gently (do not shake); give over 3 hours (gradually reduced to 1 hour if no infusion-related reactions).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for infusion

- ▶ **Elaprase** (Takeda UK Ltd) ▼  
**Idursulfate 2 mg per 1 ml** Elaprase 6mg/3ml concentrate for solution for infusion vials | 1 vial **[PoM]** £1,985.00 (Hospital only)

## Laronidase

27-Jul-2020

- **DRUG ACTION** Laronidase is an enzyme produced by recombinant DNA technology licensed for long-term replacement therapy in the treatment of non-neurological manifestations of mucopolysaccharidosis I, a lysosomal storage disorder caused by deficiency of alpha-L-iduronidase.

#### INDICATIONS AND DOSE

##### Non-neurological manifestations of mucopolysaccharidosis I (specialist use only)

- ▶ **BY INTRAVENOUS INFUSION**
- ▶ Adult: 100 units/kg once weekly

- **CAUTIONS** Infusion-related reactions can occur

- **INTERACTIONS** → Appendix 1: laronidase

#### SIDE-EFFECTS

- ▶ **Common or very common** Abdominal pain · alopecia · anaphylactic reaction · angioedema · chills · cough · diarrhoea · dizziness · dyspnoea · fatigue · fever · flushing · headache · hypotension · influenza like illness · joint disorders · nausea · pain · pallor · paraesthesia · peripheral coldness · respiratory disorders · restlessness · skin reactions · sweat changes · tachycardia · temperature sensation altered · vomiting

- ▶ **Frequency not known** Cyanosis · hypoxia · oedema

**SIDE-EFFECTS, FURTHER INFORMATION** Infusion-related reactions often occur, they can be managed by slowing the infusion rate or interrupting the infusion, and can be minimised by pre-treatment with an antihistamine and an antipyretic. Recurrent infusion-related reactions may require pre-treatment with a corticosteroid—consult product literature for details.

- **PREGNANCY** Manufacturer advises avoid unless essential—no information available.

- **BREAST FEEDING** Manufacturer advises avoid—no information available.

- **MONITORING REQUIREMENTS** Monitor immunoglobulin G (IgG) antibody concentration.

- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion* (**Aldurazyme**®), manufacturer advises give intermittently in Sodium chloride 0.9%; body-weight under 20 kg, use 100 mL infusion fluid; body-weight over 20 kg use 250 mL infusion fluid; withdraw volume of infusion fluid equivalent to volume of laronidase concentrate being added; give through in-line filter (0.2 micron) initially at a rate of 2 units/kg/hour then increase gradually every 15 minutes to max. 43 units/kg/hour.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for infusion

**ELECTROLYTES:** May contain Sodium

- ▶ **Aldurazyme** (Sanofi Genzyme)  
**Laronidase 100 unit per 1 ml** Aldurazyme 500units/5ml concentrate for solution for infusion vials | 1 vial **[PoM]** £444.70

## 2.11 Niemann-Pick type C disease

### ENZYME INHIBITORS > GLUCOSYLCERAMIDE SYNTHASE INHIBITORS

#### Miglustat

22-Jan-2019

- **DRUG ACTION** Miglustat is an inhibitor of glucosylceramide synthase.

#### INDICATIONS AND DOSE

- **Mild to moderate type I Gaucher's disease for whom enzyme replacement therapy is unsuitable (under expert supervision)**

- ▶ **BY MOUTH**
- ▶ Adult: 100 mg 3 times a day, reduced if not tolerated to 100 mg 1–2 times a day

- **Treatment of progressive neurological manifestations of Niemann-Pick type C disease (under expert supervision)**

- ▶ **BY MOUTH**
- ▶ Adult: 200 mg 3 times a day

#### SIDE-EFFECTS

- ▶ **Common or very common** Appetite decreased · asthenia · chills · constipation · depression · diarrhoea · dizziness · flatulence · gastrointestinal discomfort · headache · insomnia · libido decreased · malaise · muscle spasms · muscle weakness · nausea · peripheral neuropathy · sensation abnormal · thrombocytopenia · tremor · vomiting · weight decreased

- **CONCEPTION AND CONTRACEPTION** Effective contraception must be used during treatment. Men should avoid fathering a child during and for 3 months after treatment.

- **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies.

- **BREAST FEEDING** Manufacturer advises avoid—no information available.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution (no information available).

- **RENAL IMPAIRMENT** Avoid if eGFR less than 30 mL/minute/1.73 m<sup>2</sup>.

**Dose adjustments** For Gaucher's disease initially 100 mg twice daily if eGFR 50–70 mL/minute/1.73 m<sup>2</sup>. Initially 100 mg once daily if eGFR 30–50 mL/minute/1.73 m<sup>2</sup>.

For Niemann-Pick type C disease, initially 200 mg twice daily if eGFR 50–70 mL/minute/1.73 m<sup>2</sup>. Initially 100 mg twice daily if eGFR 30–50 mL/minute/1.73 m<sup>2</sup>

#### MONITORING REQUIREMENTS

- ▶ Monitor cognitive and neurological function.
- ▶ Monitor growth and platelet count in Niemann-Pick type C disease.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Capsule

- ▶ **Miglustat (Non-proprietary)**

**Miglustat 100 mg** Miglustat 100mg capsules | 84 capsule **[PoM]** £3,392.00–£3,934.00 (Hospital only) | 84 capsule **[PoM]** £3,442.00

- ▶ **Yargesa** (Piramal Critical Care Ltd)

**Miglustat 100 mg** Yargesa 100mg capsules | 84 capsule **[PoM]** £3,500.00 (Hospital only)

- ▶ **Zavesca** (Janssen-Cilag Ltd)

**Miglustat 100 mg** Zavesca 100mg capsules | 84 capsule **[PoM]** £3,934.17 (Hospital only)

## 2.12 Pompe disease

### ENZYMES

#### Alglucosidase alfa

17-Jul-2020

- **DRUG ACTION** Alglucosidase alfa is an enzyme produced by recombinant DNA technology licensed for long-term replacement therapy in Pompe disease, a lysosomal storage disorder caused by deficiency of acid alpha-glucosidase.

#### ● INDICATIONS AND DOSE

##### Pompe disease (specialist use only)

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: 20 mg/kg every 2 weeks

- **CAUTIONS** Cardiac dysfunction · infusion-related reactions—consult product literature · respiratory dysfunction
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Anxiety · arrhythmias · chest discomfort · chills · cough · cyanosis · diarrhoea · dizziness · fatigue · feeling hot · fever · flushing · hyperhidrosis · hypersensitivity · hypertension · irritability · local swelling · muscle complaints · nausea · oedema · pallor · paraesthesia · respiratory disorders · skin reactions · throat complaints · tremor · vomiting
  - ▶ **Frequency not known** Abdominal pain · angioedema · apnoea · arthralgia · cardiac arrest · dyspnoea · excessive tearing · eye inflammation · headache · hypotension · nephrotic syndrome · peripheral coldness · proteinuria · vasoconstriction

**SIDE-EFFECTS, FURTHER INFORMATION** Infusion-related reactions are very common, calling for use of antihistamine, antipyretic, or corticosteroid; consult product literature for details.

- **PREGNANCY** Toxicity in *animal* studies, but treatment should not be withheld.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **MONITORING REQUIREMENTS**
  - ▶ Monitor closely if cardiac dysfunction.
  - ▶ Monitor closely if respiratory dysfunction.
  - ▶ Monitor immunoglobulin G (IgG) antibody concentration.
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion* (Myozyme<sup>®</sup>), manufacturer advises give intermittently in Sodium chloride 0.9%; reconstitute 50 mg with 10.3 mL water for injections to produce 5 mg/mL solution; gently rotate vial without shaking; dilute requisite dose with infusion fluid to give a final concentration of 0.5–4 mg/mL; give through a low protein-binding in-line filter (0.2 micron) at an initial rate of 1 mg/kg/hour increased by 2 mg/kg/hour every 30 minutes to max. 7 mg/kg/hour.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Power for solution for infusion

- ▶ **Myozyme** (Sanofi Genzyme)  
Alglucosidase alfa 50 mg Myozyme 50mg powder for concentrate for solution for infusion vials | 1 vial  £356.06 (Hospital only)

## 2.13 Tyrosinaemia type I

### ENZYM INHIBITORS > 4-HYDROXYPHENYLPYRUVATE DIOXYGENASE INHIBITORS

#### Nitisinone

(NTBC)

25-Oct-2021

- **DRUG ACTION** Nitisinone is a competitive inhibitor of 4-hydroxyphenylpyruvate dioxygenase which inhibits catabolism of tyrosine and thereby prevents accumulation of harmful metabolites.

#### ● INDICATIONS AND DOSE

##### Hereditary tyrosinaemia type I (in combination with dietary restriction of tyrosine and phenylalanine) (specialist use only)

- ▶ BY MOUTH
- ▶ Adult: Initially 1 mg/kg once daily, adjusted according to response; maximum 2 mg/kg per day

#### ORFADIN<sup>®</sup> CAPSULES

##### Hereditary tyrosinaemia type I (in combination with dietary restriction of tyrosine and phenylalanine) (specialist use only)

- ▶ BY MOUTH USING CAPSULES
- ▶ Adult: Initially 1 mg/kg once daily, adjusted according to response; maximum 2 mg/kg per day

##### Alkaptonuria (specialist use only)

- ▶ BY MOUTH USING CAPSULES
- ▶ Adult: 10 mg once daily

#### ORFADIN<sup>®</sup> ORAL SUSPENSION

##### Hereditary tyrosinaemia type I (in combination with dietary restriction of tyrosine and phenylalanine) (specialist use only)

- ▶ BY MOUTH USING ORAL SUSPENSION
- ▶ Adult: Initially 1 mg/kg once daily, adjusted according to response; maximum 2 mg/kg per day

##### Alkaptonuria (specialist use only)

- ▶ BY MOUTH USING ORAL SUSPENSION
- ▶ Adult: 10 mg once daily

- **INTERACTIONS** → Appendix 1: nitisinone
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Corneal opacity · eye inflammation · eye pain · granulocytopenia · increased risk of infection · leucopenia · photophobia · skin reactions · thrombocytopenia
  - ▶ **Uncommon** Leucocytosis
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—toxicity in *animal* studies.
- **BREAST FEEDING** Manufacturer advises avoid—adverse effects in *animal* studies.
- **MONITORING REQUIREMENTS**
  - ▶ When used for Hereditary tyrosinaemia type I (in combination with dietary restriction of tyrosine and phenylalanine)  Slit-lamp examination of eyes is recommended before treatment and at least once a year thereafter. Monitor plasma tyrosine levels—consult product literature. Monitor platelet and white blood cell count every 6 months. Monitor liver function regularly. 
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises capsules can be opened and the contents suspended in a small amount of water or formula diet and taken immediately.
- **HANDLING AND STORAGE** Store in a refrigerator (2–8°C).

- **PATIENT AND CARER ADVICE** Patients and carers should be advised to seek immediate medical attention if symptoms of visual disorders develop during treatment.  
**Driving and skilled tasks** Patients and carers should be cautioned on the effects on driving and performance of skilled tasks—increased risk of visual disorders.  
**ORFADIN® ORAL SUSPENSION** Patients or carers should be given advice on how to administer *Orfadin*® oral suspension.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website  
**All Wales Medicines Strategy Group (AWMSG) decisions**  
▶ **Nitisinone 10 mg capsules (*Orfadin*®) for the treatment of adult patients with alkaptonuria (September 2021)** AWMSG No. 2322 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Oral suspension**

CAUTIONARY AND ADVISORY LABELS 21

**DRUGS FOR METABOLIC DISORDERS >**  
**AMMONIA LOWERING DRUGS****Glycerol phenylbutyrate**

18-Nov-2020

- **DRUG ACTION** Glycerol phenylbutyrate is a nitrogen-binding agent that provides an alternative vehicle for waste nitrogen excretion.

**● INDICATIONS AND DOSE****Urea cycle disorders (specialist use only)**

- ▶ **BY MOUTH, OR BY GASTROSTOMY TUBE, OR BY NASOGASTRIC TUBE**
- ▶ **Adult (body surface area up to 1.3 m<sup>2</sup>):** Initially 9.4 g/m<sup>2</sup> daily in divided doses, usual maintenance 5.3–12.4 g/m<sup>2</sup> daily in divided doses, each dose should be rounded up to the nearest 0.5 mL and given with each meal. For dose adjustments based on individual requirements—consult product literature
- ▶ **Adult (body surface area 1.3 m<sup>2</sup> and above):** Initially 8 g/m<sup>2</sup> daily in divided doses, usual maintenance 5.3–12.4 g/m<sup>2</sup> daily in divided doses, each dose should be rounded up to the nearest 0.5 mL and given with each meal. For dose adjustments based on individual requirements—consult product literature

**DOSE EQUIVALENCE AND CONVERSION**

- ▶ 1 mL of liquid contains 1.1 g of glycerol phenylbutyrate.
- ▶ For patients switching from sodium phenylbutyrate or sodium benzoate—consult product literature.

**IMPORTANT SAFETY INFORMATION****EMERGENCY MANAGEMENT OF UREA CYCLE DISORDERS**

For further information on the emergency management of urea cycle disorders consult the British Inherited Metabolic Disease Group (BIMDG) website at [www.bimdg.org.uk](http://www.bimdg.org.uk).

- **CONTRA-INDICATIONS** Treatment of acute hyperammonaemia

## 2.14 Urea cycle disorders

### AMINO ACIDS AND DERIVATIVES

#### Carglumic acid

24-Jul-2020

**● INDICATIONS AND DOSE****Hyperammonaemia due to N-acetylglutamate synthase deficiency (under expert supervision)**

- ▶ **BY MOUTH**

- ▶ **Adult:** Initially 50–125 mg/kg twice daily, to be taken immediately before food, dose adjusted according to plasma-ammonia concentration; maintenance 5–50 mg/kg twice daily, the total daily dose may alternatively be given in 3–4 divided doses

**Hyperammonaemia due to organic acidaemia (under expert supervision)**

- ▶ **BY MOUTH**

- ▶ **Adult:** Initially 50–125 mg/kg twice daily, to be taken immediately before food, dose adjusted according to plasma-ammonia concentration, the total daily dose may alternatively be given in 3–4 divided doses

**IMPORTANT SAFETY INFORMATION****EMERGENCY MANAGEMENT OF UREA CYCLE DISORDERS**

For further information on the emergency management of urea cycle disorders consult the British Inherited

- **CAUTIONS** Elderly—limited information available · intestinal malabsorption · pancreatic insufficiency
- **INTERACTIONS** → Appendix 1: glycerol phenylbutyrate
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Appetite abnormal · constipation · diarrhoea · dizziness · fatigue · food aversion · gastrointestinal discomfort · gastrointestinal disorders · headache · menstrual cycle irregularities · nausea · oral disorders · peripheral oedema · skin reactions · tremor · vomiting
  - ▶ **Uncommon** Akathisia · alopecia · biliary colic · bladder pain · burping · confusion · depressed mood · drowsiness · dry mouth · dysphonia · epistaxis · fever · gastrointestinal infection viral · hot flush · hyperhidrosis · hypoalbuminaemia · hypokalaemia · hypothyroidism · joint swelling · muscle spasms · nasal congestion · oropharyngeal pain · pain · paraesthesia · plantar fasciitis · speech disorder · taste altered · throat irritation · ventricular arrhythmia · weight changes
- **PREGNANCY** Manufacturer advises avoid unless essential—toxicity in *animal* studies.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (risk of increased exposure).  
**Dose adjustments** Manufacturer advises use lowest possible dose—consult product literature.
- **RENAL IMPAIRMENT** Manufacturer advises use with caution in severe impairment—no information available.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises may be added to a small amount of apple sauce, ketchup, or squash puree and used within 2 hours. For administration advice via nasogastric or gastrostomy tube—consult product literature.
- **HANDLING AND STORAGE** Manufacturer advises discard contents of bottle 14 days after opening.
- **PATIENT AND CARER ADVICE**  
**Driving and skilled tasks** Manufacturer advises patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of dizziness.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website
- **Scottish Medicines Consortium (SMC) decisions**
  - ▶ Glycerol phenylbutyrate (*Ravicti*<sup>®</sup>) as adjunctive therapy for chronic management of adult and paediatric patients aged 2 months and older with urea cycle disorders who cannot be managed by dietary protein restriction and/or amino acid supplementation alone (August 2018) SMC No. 1342/18 Recommended
- **All Wales Medicines Strategy Group (AWMSG) decisions**
  - ▶ Glycerol phenylbutyrate (*Ravicti*<sup>®</sup>) as adjunctive therapy for chronic management of patients with urea cycle disorders who cannot be managed by dietary protein restriction and/or amino acid supplementation alone (December 2019) AWMSG No. 2127 Recommended
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Sodium phenylbutyrate**

05-Oct-2021

**INDICATIONS AND DOSE**

**Long-term treatment of urea cycle disorders (as adjunctive therapy in all patients with neonatal-onset disease and in those with late-onset disease who have a history of hyperammonaemic encephalopathy) (under expert supervision)**

- ▶ BY MOUTH
- ▶ **Adult:** 9.9–13 g/m<sup>2</sup> daily in divided doses, with meals; maximum 20 g per day

**IMPORTANT SAFETY INFORMATION****EMERGENCY MANAGEMENT OF UREA CYCLE DISORDERS**

For further information on the emergency management of urea cycle disorders consult the British Inherited Metabolic Disease Group (BIMDG) website at [www.bimdg.org.uk](http://www.bimdg.org.uk).

- **CAUTIONS** Conditions involving sodium retention with oedema (preparations contain significant amounts of sodium) · congestive heart failure (preparations contain significant amounts of sodium)
- **INTERACTIONS** → Appendix 1: sodium phenylbutyrate
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Abdominal pain · anaemia · appetite decreased · constipation · depression · headache · irritability · leucocytosis · leucopenia · menstrual cycle irregularities · metabolic acidosis · metabolic alkalosis · nausea · oedema · renal tubular acidosis · skin reactions · syncope · taste altered · thrombocytopenia · thrombocytosis · vomiting · weight increased
  - ▶ **Uncommon** Anorectal haemorrhage · aplastic anaemia · arrhythmia · gastrointestinal disorders · pancreatitis
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises adequate contraception during administration in women of child-bearing potential.
- **PREGNANCY** Avoid—toxicity in *animal* studies.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution.
- **RENAL IMPAIRMENT** Manufacturer advises use with caution (preparations contain significant amounts of sodium).
- **DIRECTIONS FOR ADMINISTRATION** [EvGr] *Pheburane*<sup>®</sup> granules may be directly swallowed with a drink or sprinkled on a spoonful of food, during feeds or mealtimes. Granules must not be administered by nasogastric or gastrostomy tubes. 
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: capsule, oral suspension, oral solution

**Granules**

- ▶ *Pheburane* (Eurocept International bv)  
Sodium phenylbutyrate 483 mg per 1 gram *Pheburane* 483mg/g granules | 174 gram [PoM] £331.00

**Tablet**

- ▶ *Ammonaps* (Immedica Pharma AB)  
Sodium phenylbutyrate 500 mg *Ammonaps* 500mg tablets | 250 tablet [PoM] £493.00 DT = £493.00

## 2.15 Wilson's disease

**Other drugs used for Wilson's disease** Penicillamine, p. 1192

### ANTIDOTES AND CHELATORS > COPPER ABSORPTION INHIBITORS

#### Zinc acetate

23-Jul-2020

- **DRUG ACTION** Zinc prevents the absorption of copper in Wilson's disease.

#### ● INDICATIONS AND DOSE

##### Wilson's disease (initiated under specialist supervision)

###### ▶ BY MOUTH

- ▶ Adult: 50 mg 3 times a day (max. per dose 50 mg 5 times a day), adjusted according to response

#### DOSE EQUIVALENCE AND CONVERSION

- ▶ Doses expressed as elemental zinc.

#### PHARMACOKINETICS

- ▶ Symptomatic Wilson's disease patients should be treated initially with a chelating agent because zinc has a slow onset of action. When transferring from chelating treatment to zinc maintenance therapy, chelating treatment should be co-administered for 2–3 weeks until zinc produces its maximal effect.

- **CAUTIONS** Portal hypertension (risk of hepatic decompensation when switching from chelating agent)
- **INTERACTIONS** → Appendix 1: zinc
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Epigastric discomfort (usually transient)
  - ▶ **Uncommon** Leucopenia · sideroblastic anaemia
  - ▶ **Frequency not known** Condition aggravated
- **SIDE-EFFECTS, FURTHER INFORMATION** Transient gastric irritation may be reduced if first dose is taken mid-morning or with a little protein.
- **PREGNANCY**
  - Dose adjustments** Reduce dose to 25 mg 3 times daily adjusted according to plasma-copper concentration and urinary copper excretion.
- **BREAST FEEDING** Manufacturer advises avoid; present in milk—may cause zinc-induced copper deficiency in infant.
- **MONITORING REQUIREMENTS** Monitor full blood count and serum cholesterol.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Capsule

##### CAUTIONARY AND ADVISORY LABELS 23

- ▶ **Wilzin** (Recordati Rare Diseases UK Ltd)

**Zinc (as Zinc acetate) 25 mg** Wilzin 25mg capsules | 250 capsule [PoM] £132.00 DT = £132.00

**Zinc (as Zinc acetate) 50 mg** Wilzin 50mg capsules | 250 capsule [PoM] £242.00 DT = £242.00

### ANTIDOTES AND CHELATORS > COPPER CHELATORS

#### Trientine

17-Sep-2021

- **DRUG ACTION** Trientine is a chelating agent that binds to copper, forming a complex that is readily excreted by the kidneys; it may also inhibit the absorption of copper from the gastro-intestinal tract.

#### ● INDICATIONS AND DOSE

##### Wilson's disease in patients intolerant of penicillamine [using Tillomed generic capsules] (initiated by a specialist)

###### ▶ BY MOUTH

- ▶ Adult: Initially 1000–2000 mg daily in 2–4 divided doses, dose should then be adjusted according to response and serum-copper concentrations

#### DOSE EQUIVALENCE AND CONVERSION

- ▶ For Tillomed generic: each capsule contains trientine base equivalent to 250 mg trientine dihydrochloride; doses expressed as trientine dihydrochloride.
- ▶ Preparations are not interchangeable on a milligram-for-milligram basis due to differences in bioavailability.

#### CUFENCE®

##### Wilson's disease in patients intolerant of penicillamine (initiated by a specialist)

###### ▶ BY MOUTH

- ▶ Adult: Initially 800–1600 mg daily in 2–4 divided doses, dose should then be adjusted according to response and serum-copper concentrations

#### DOSE EQUIVALENCE AND CONVERSION

- ▶ For Cufence®: each capsule contains trientine dihydrochloride equivalent to 200 mg trientine base; doses expressed as trientine base.
- ▶ Preparations are not interchangeable on a milligram-for-milligram basis due to differences in bioavailability.

#### CUPRIOR®

##### Wilson's disease in patients intolerant of penicillamine (initiated by a specialist)

###### ▶ BY MOUTH

- ▶ Adult: Initially 450–975 mg daily in 2–4 divided doses, dose should then be adjusted according to response and serum-copper concentrations

#### DOSE EQUIVALENCE AND CONVERSION

- ▶ For Cuprior®: each tablet contains trientine tetrahydrochloride equivalent to 150 mg of trientine base; doses expressed as trientine base.
- ▶ Preparations are not interchangeable on a milligram-for-milligram basis due to differences in bioavailability.

- **INTERACTIONS** → Appendix 1: trientine
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Nausea
  - ▶ **Uncommon** Anaemia · aplastic anaemia · skin reactions
  - ▶ **Frequency not known** Gastrointestinal disorders · neurological deterioration in Wilson's Disease
- **PREGNANCY** [EvGr] Teratogenic in *animal studies*—use only if benefit outweighs risk. Monitor maternal and neonatal serum-copper concentrations. ⚠
- **BREAST FEEDING** [EvGr] Specialist sources indicate caution—limited information available; effect on copper levels in milk conflicting and impact on infant unknown. ⚠
- **DIRECTIONS FOR ADMINISTRATION**
  - CUPRIOR® Tablets can be divided into 2 equal halves.
- **PRESCRIBING AND DISPENSING INFORMATION** Trientine is not an alternative to penicillamine for rheumatoid arthritis or cystinuria. Penicillamine-induced systemic

lupus erythematosus may not resolve on transfer to trientine.

#### ● HANDLING AND STORAGE

**CUFENCE®** After opening, store in a refrigerator (2–8°C).

#### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### Scottish Medicines Consortium (SMC) decisions

- ▶ **Trientine dihydrochloride (Cuprior®)** for the treatment of Wilson's disease in adults, adolescents and children aged 5 years and older, intolerant to D-penicillamine therapy (November 2019) SMC No. SMC2222 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Tablet

CAUTIONARY AND ADVISORY LABELS 7, 23

- ▶ **Cuprior** (Orphalan UK Ltd)

**Trientine (as Trientine tetrahydrochloride) 150 mg** Cuprior 150mg tablets | 72 tablet [PoM] £2,725.00 (Hospital only)

#### Capsule

CAUTIONARY AND ADVISORY LABELS 7, 23, 25

- ▶ **Trientine (Non-proprietary)**

**Trientine dihydrochloride 250mg capsules** | 100 capsule [PoM] £1,498.00 (Hospital only)

**Trientine dihydrochloride 300 mg** Trientine dihydrochloride 300mg capsules | 100 capsule [PoM] £2,998.46 DT = £3,075.13

- ▶ **Cufence** (Univar Solutions B.V.)

**Trientine dihydrochloride 300 mg** Cufence 200mg capsules | 100 capsule [PoM] £3,075.13 DT = £3,075.13

## 3 Mineral and trace elements deficiencies

### 3.1 Selenium deficiency

#### Selenium deficiency

05-May-2021

##### Overview

Selenium deficiency can occur as a result of inadequate diet or prolonged parenteral nutrition. A selenium supplement should not be given unless there is good evidence of deficiency.

#### VITAMINS AND TRACE ELEMENTS

### Selenium

#### ● INDICATIONS AND DOSE

##### Selenium deficiency

- ▶ BY MOUTH, OR BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION
- ▶ Adult: 100–500 micrograms daily

- **INTERACTIONS** → Appendix 1: selenium

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for infusion

#### Tablet

- ▶ **Selenium (Non-proprietary)**

**L-Selenomethionine 200 microgram** EN-Selenium 200microgram tablets | 30 tablet £88.60

- ▶ **200-SEL** (TriOn Pharma Ltd)

**L-Selenomethionine 200 microgram** 200-SEL tablets | 30 tablet £2.31

- ▶ **Abselen** (Essential-Healthcare Ltd)

**L-Selenomethionine 200 microgram** Abselen 200microgram tablets | 30 tablet £2.31

- ▶ **SelenoPrecise** (Pharma Nord (UK) Ltd)

**Selenium (as L-Selenomethionine) 100 microgram** SelenoPrecise 100microgram tablets | 60 tablet £4.02

**L-Selenomethionine 200 microgram** SelenoPrecise 200microgram tablets | 60 tablet £4.41 | 150 tablet £8.01

#### Solution for injection

- ▶ **Selenase** (Kora Healthcare)

**Selenium (as Sodium selenite) 50 microgram per 1 ml** Selenase 100micrograms/2ml solution for injection ampoules |

10 ampoule [PoM] £15.00

**Selenase 500micrograms/10ml solution for injection vials** | 10 vial [PoM] £42.50

#### Solution for infusion

**Selenium (as Sodium selenite) 10 microgram per 1 ml** Selenium 100micrograms/10ml solution for infusion vials | 10 vial [PoM] ☒

#### Oral solution

- ▶ **Selenase** (Kora Healthcare)

**Selenium (as Sodium selenite) 50 microgram per 1 ml** Selenase 100micrograms/2ml oral solution 2ml unit dose ampoules | 20 unit dose [PoM] £20.60 DT = £20.60

**Selenase 500micrograms/10ml oral solution unit dose vials** | 10 unit dose [PoM] £40.50

#### Capsule

- ▶ **Selenium (Non-proprietary)**

**L-Selenomethionine 200 microgram** Selenium 200microgram capsules | 30 capsule £3.20 | 60 capsule £5.79

## 3.2 Zinc deficiency

### Zinc deficiency

22-Mar-2021

#### Overview

Zinc is an essential trace element, involved in a number of body enzyme systems, and is found in a variety of foods. Patients with malnutrition, alcoholism, inflammatory bowel disease, and malabsorption syndromes are at an increased risk of zinc deficiency.

Zinc supplements can be given for zinc deficiency or in zinc-losing conditions. Continuous zinc supplementation is generally safe, however higher doses should be limited to short-term use due to an increased risk of gastro-intestinal adverse effects, copper deficiency, reduced immunity, anaemia, and genitourinary complications with long-term use.

Zinc is used in the treatment of Wilson's disease, and in acrodermatitis enteropathica—a rare inherited disorder characterised by impaired zinc absorption.

Parenteral nutrition regimens usually include trace amounts of zinc, see also Intravenous nutrition p. 1167.

Further zinc can be added to intravenous feeding regimens if required.

#### ELECTROLYTES AND MINERALS > ZINC

### Zinc sulfate

21-Apr-2021

#### ● INDICATIONS AND DOSE

##### Zinc deficiency or supplementation in zinc-losing conditions

- ▶ BY MOUTH USING EFFERVESCENT TABLETS

▶ **Child (body-weight up to 10 kg):** 22.5 mg daily, dose to be adjusted as necessary, to be dissolved in water and taken after food, dose expressed as elemental zinc

▶ **Child (body-weight 10–30 kg):** 22.5 mg 1–3 times a day, dose to be adjusted as necessary, to be dissolved in water and taken after food, dose expressed as elemental zinc

▶ **Child (body-weight 31 kg and above):** 45 mg 1–3 times a day, dose to be adjusted as necessary, to be dissolved in

water and taken after food, dose expressed as elemental zinc

- Adult (body-weight 31 kg and above): 45 mg 1–3 times a day, dose to be adjusted as necessary, to be dissolved in water and taken after food, dose expressed as elemental zinc

#### Additional elemental zinc for intravenous nutrition

► BY INTRAVENOUS INJECTION

- Adult: 6.5 mg daily (Zn<sup>2+</sup> 100 micromol)

- **INTERACTIONS** → Appendix 1: zinc
- **SIDE-EFFECTS** Diarrhoea · gastritis · gastrointestinal discomfort · nausea · vomiting
- **PREGNANCY** Crosses placenta; risk theoretically minimal, but no information available.
- **BREAST FEEDING** Present in milk; risk theoretically minimal, but no information available.
- **RENAL IMPAIRMENT** [E<sub>6</sub>Gr](#) Use with caution (accumulation may occur in renal failure). [M](#)
- **PRESCRIBING AND DISPENSING INFORMATION** Each *Solvazinc*<sup>®</sup> tablet contains zinc sulfate monohydrate 125 mg (45 mg zinc).
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

#### Effervescent tablet

CAUTIONARY AND ADVISORY LABELS 13, 21

► *AadZinc* (Essential-Healthcare Ltd)

Zinc sulfate monohydrate 125 mg *AadZinc* 125mg effervescent tablets sugar-free | 90 tablet £13.97 DT = £17.72

Zinc sulfate monohydrate 125 mg *Solvazinc* 125mg effervescent tablets sugar-free | 90 tablet [P](#) £17.72 DT = £17.72

## 4 Nutrition (intravenous)

### Intravenous nutrition

#### Overview

When adequate feeding through the alimentary tract is not possible, nutrients may be given by intravenous infusion. This may be in addition to ordinary oral or tube feeding—**supplemental parenteral nutrition**, or may be the sole source of nutrition—**total parenteral nutrition** (TPN). Indications for this method include preparation of undernourished patients for surgery, chemotherapy, or radiation therapy; severe or prolonged disorders of the gastro-intestinal tract; major surgery, trauma, or burns; prolonged coma or refusal to eat; and some patients with renal or hepatic failure. The composition of proprietary preparations available is given under Proprietary Infusion Fluids for Parenteral Feeding p. 1169.

Parenteral nutrition requires the use of a solution containing amino acids, glucose, fat, electrolytes, trace elements, and vitamins. This is now commonly provided by the pharmacy in the form of a 3-litre bag. A single dose of vitamin B<sub>12</sub>, as hydroxocobalamin p. 1114, is given by intramuscular injection; regular vitamin B<sub>12</sub> injections are not usually required unless total parenteral nutrition continues for many months. Folic acid p. 1112 is given in a dose of 15 mg once or twice each week, usually in the nutrition solution. Other vitamins are usually given daily; they are generally introduced in the parenteral nutrition solution. Alternatively, if the patient is able to take small amounts by mouth, vitamins may be given orally.

The nutrition solution is infused through a central venous catheter inserted under full surgical precautions. Alternatively, infusion through a peripheral vein may be

used for supplementary as well as total parenteral nutrition for periods of up to a month, depending on the availability of peripheral veins; factors prolonging cannula life and preventing thrombophlebitis include the use of soft polyurethane paediatric cannulas and use of feeds of low osmolality and neutral pH. Only nutritional fluids should be given by the dedicated intravenous line.

Before starting, the patient should be well oxygenated with a near normal circulating blood volume and attention should be given to renal function and acid-base status. Appropriate biochemical tests should have been carried out beforehand and serious deficits corrected. Nutritional and electrolyte status must be monitored throughout treatment.

Complications of long-term parenteral nutrition include gall bladder sludging, gall stones, cholestasis and abnormal liver function tests. For details of the prevention and management of parenteral nutrition complications, specialist literature should be consulted.

**Protein** is given as mixtures of essential and non-essential synthetic L-amino acids. Ideally, all essential amino acids should be included with a wide variety of nonessential ones to provide sufficient nitrogen together with electrolytes. Solutions vary in their composition of amino acids; they often contain an energy source (usually glucose p. 1132) and electrolytes.

**Energy** is provided in a ratio of 0.6 to 1.1 megajoules (150–250 kcal) per gram of protein nitrogen. Energy requirements must be met if amino acids are to be utilised for tissue maintenance. A mixture of carbohydrate and fat energy sources (usually 30–50% as fat) gives better utilisation of amino acids than glucose alone.

Glucose is the preferred source of carbohydrate, but if more than 180 g is given per day frequent monitoring of blood glucose is required, and insulin may be necessary. Glucose in various strengths from 10 to 50% must be infused through a central venous catheter to avoid thrombosis.

In parenteral nutrition regimens, it is necessary to provide adequate **phosphate** in order to allow phosphorylation of glucose and to prevent hypophosphataemia; between 20 and 30 mmol of phosphate is required daily.

Fructose and sorbitol have been used in an attempt to avoid the problem of hyperosmolar hyperglycaemic non-ketotic acidosis but other metabolic problems may occur, as with xylitol and ethanol which are now rarely used.

**Fat** emulsions have the advantages of a high energy to fluid volume ratio, neutral pH, and iso-osmolality with plasma, and provide essential fatty acids. Several days of adaptation may be required to attain maximal utilisation. Reactions include occasional febrile episodes (usually only with 20% emulsions) and rare anaphylactic responses. Interference with biochemical measurements such as those for blood gases and calcium may occur if samples are taken before fat has been cleared. Daily checks are necessary to ensure complete clearance from the plasma in conditions where fat metabolism may be disturbed. **Additives should not be mixed with fat emulsions unless compatibility is known.**

#### Administration

Because of the complex requirements relating to parenteral nutrition full details relating to administration have been omitted. In all cases *product literature and other specialist literature should be consulted.*

## NUTRIENTS &gt; PARENTERAL NUTRITION

## Parenteral nutrition supplements

26-May-2021

## ● INDICATIONS AND DOSE

**Supplement in intravenous nutrition**

- ▶ BY INTRAVENOUS INFUSION, OR BY SLOW INTRAVENOUS INJECTION
- ▶ Adult: (consult product literature)

**DIPEPTIVEN 20G/100ML CONCENTRATE FOR SOLUTION FOR INFUSION BOTTLES****Amino acid supplement for hypercatabolic or hypermetabolic states**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: 300–400 mg/kg daily, dose not to exceed 20% of total amino acid intake

- **DIRECTIONS FOR ADMINISTRATION** Because of the complex requirements relating to parenteral nutrition, full details relating to administration have been omitted. In all cases *specialist pharmacy advice, product literature, and other specialist literature should be consulted*. Compatibility with the infusion solution must be ascertained before adding supplementary preparations. **Additives should not be mixed with fat emulsions unless compatibility is known.**

**ADDITRACE SOLUTION FOR INFUSION 10ML AMPOULES** For addition to *Vamin*<sup>®</sup> solutions and glucose intravenous infusions.

**DIPEPTIVEN 20G/100ML CONCENTRATE FOR SOLUTION FOR INFUSION BOTTLES** For addition to infusion solutions containing amino acids.

**ADDIPHOS<sup>®</sup> VIALS** For addition to *Vamin*<sup>®</sup> solutions and glucose intravenous infusions.

**DECAN CONCENTRATE FOR SOLUTION FOR INFUSION 40ML BOTTLES** For addition to infusion solutions.

**TRACUTIL<sup>®</sup> AMPOULES** For addition to infusion solutions.

**SOLIVITO N POWDER FOR SOLUTION FOR INFUSION VIALS** Dissolve in water for injections or glucose intravenous infusion for adding to glucose intravenous infusion or *Intralipid*<sup>®</sup>; dissolve in *Vitlipid N*<sup>®</sup> or *Intralipid*<sup>®</sup> for adding to *Intralipid*<sup>®</sup> only.

**CERNEVIT<sup>®</sup> POWDER FOR SOLUTION FOR INJECTION VIALS** Dissolve in 5 mL water for injections or Glucose 5% or Sodium Chloride 0.9% for adding to infusion solutions.

## ● PRESCRIBING AND DISPENSING INFORMATION

**ADDITRACE SOLUTION FOR INFUSION 10ML AMPOULES** For patients over 40 kg.

*Additrac*<sup>®</sup> solution contains traces of Fe<sup>3+</sup>, Zn<sup>2+</sup>, Mn<sup>2+</sup>, Cu<sup>2+</sup>, Cr<sup>3+</sup>, Se<sup>4+</sup>, Mo<sup>6+</sup>, F<sup>-</sup>, I<sup>-</sup>.

**DIPEPTIVEN 20G/100ML CONCENTRATE FOR SOLUTION FOR INFUSION BOTTLES** *Dipeptiven*<sup>®</sup> solution contains N(2)-L-alanyl-L-glutamine 200 mg/mL (providing L-alanine 82 mg, L-glutamine 134.6 mg).

**ADDIPHOS<sup>®</sup> VIALS** *Addiphos*<sup>®</sup> sterile solution contains phosphate 40 mmol, K<sup>+</sup> 30 mmol, Na<sup>+</sup> 30 mmol/20 mL.

**DECAN CONCENTRATE FOR SOLUTION FOR INFUSION 40ML BOTTLES** For patients over 40 kg.

*Decan*<sup>®</sup> solution contains trace elements Fe<sup>2+</sup>, Zn<sup>2+</sup>, Cu<sup>2+</sup>, Mn<sup>2+</sup>, F<sup>-</sup>, Co<sup>2+</sup>, I<sup>-</sup>, Se<sup>4+</sup>, Mo<sup>6+</sup>, Cr<sup>3+</sup>.

**TRACUTIL<sup>®</sup> AMPOULES** *Tracutil*<sup>®</sup> solution contains trace elements Fe<sup>2+</sup>, Zn<sup>2+</sup>, Mn<sup>2+</sup>, Cu<sup>2+</sup>, Cr<sup>3+</sup>, Se<sup>4+</sup>, Mo<sup>6+</sup>, I<sup>-</sup>, F<sup>-</sup>.

**SOLIVITO N POWDER FOR SOLUTION FOR INFUSION VIALS** *Solvitvo N*<sup>®</sup> powder for reconstitution contains biotin 60 micrograms, cyanocobalamin 5 micrograms, folic acid 400 micrograms, glycine 300 mg, nicotinamide 40 mg, pyridoxine hydrochloride 4.9 mg, riboflavin sodium

phosphate 4.9 mg, sodium ascorbate 113 mg, sodium pantothenate 16.5 mg, thiamine mononitrate 3.1 mg.

**CERNEVIT<sup>®</sup> POWDER FOR SOLUTION FOR INJECTION VIALS** *Cernevit*<sup>®</sup> powder for reconstitution contains dl-alpha tocopherol 10.2 mg, ascorbic acid 125 mg, biotin 69 micrograms, coalfaciferol 220 units, cyanocobalamin 6 micrograms, folic acid 414 micrograms, nicotinamide 46 mg, pantothenic acid (as dextranthenol) 17.25 mg, pyridoxine hydrochloride 5.5 mg, retinol (as palmitate) 3500 units, riboflavin (as dihydrated sodium phosphate) 4.14 mg, thiamine (as cocarboxylase tetrahydrate) 3.51 mg. For adults and children over 11 years.

## 5 Nutrition (oral)

### Enteral nutrition

#### Overview

The body's reserves of protein rapidly become exhausted in severely ill patients, especially during chronic illness or in those with severe burns, extensive trauma, pancreatitis, or intestinal fistula. Much can be achieved by frequent meals and by persuading the patient to take supplementary snacks of ordinary food between the meals.

However, extra calories, protein, other nutrients, and vitamins are often best given by supplementing ordinary meals with enteral sip or tube feeds.

When patients cannot feed normally, for example, patients with severe facial injury, oesophageal obstruction, or coma, a nutritionally complete diet of enteral feeds must be given. The advice of a dietitian should be sought to determine the protein and total energy requirement of the patient and the form and relative contribution of carbohydrate and fat to the energy requirements.

Most enteral feeds contain protein derived from cows' milk or soya. Elemental feeds containing protein hydrolysates or free amino acids can be used for patients who have

diminished ability to break down protein, for example in inflammatory bowel disease or pancreatic insufficiency.

Even when nutritionally complete feeds are given, water and electrolyte balance should be monitored. Haematological and biochemical parameters should also be monitored, particularly in clinically unstable patients. Extra minerals (e.g. magnesium and zinc) may be needed in patients where gastro-intestinal secretions are being lost. Additional vitamins may also be needed.

#### Enteral nutrition in children

Children have special requirements and in most situations liquid feeds prepared for adults are totally unsuitable—the advice of a paediatric dietitian should be sought.

## 5.1 Special diets

### Nutrition in special diets

06-Apr-2021

#### Overview

In certain clinical conditions, some food preparations are regarded as drugs and can be prescribed within the NHS if they have been approved by the Advisory Committee on Borderline Substances (ACBS).

**Coeliac disease**

Coeliac disease is caused by an abnormal immune response to gluten. For further information, see Coeliac disease p. 37.

**Phenylketonuria**

Phenylketonuria results from the inability to metabolise phenylalanine. [EvoGr](#) The treatment of phenylketonuria usually involves restricting dietary intake of phenylalanine to a small amount sufficient for tissue building and repair, in addition to phenylalanine-free L-amino acid supplementation.

A subset of patients with phenylketonuria may be responsive to sapropterin dihydrochloride below [A](#), a synthetic form of tetrahydrobiopterin. It is licensed as an adjunct to dietary restriction of phenylalanine in the management of patients with phenylketonuria and tetrahydrobiopterin deficiency.

**Aspartame** (used as a sweetener in some foods and medicines) contributes to phenylalanine intake and may affect control of phenylketonuria. Where the presence of aspartame in a preparation is specified in the product literature, it is listed as an excipient against the preparation in individual drug monographs. The patient should be informed the preparation contains aspartame.

## 5.1a Phenylketonuria

### DRUGS FOR METABOLIC DISORDERS > TETRAHYDROBIOPTERIN AND DERIVATIVES

#### Sapropterin dihydrochloride

18-Oct-2021

- **DRUG ACTION** Sapropterin is synthetic 6R-tetrahydrobiopterin (6R-BH4), a cofactor for phenylalanine hydroxylase, and therefore restores the activity of phenylalanine hydroxylase and reduces phenylalanine concentration in the blood.

**● INDICATIONS AND DOSE****Phenylketonuria (adjunct to dietary restriction of phenylalanine) (specialist use only)****▶ BY MOUTH**

- ▶ Adult: Initially 10 mg/kg once daily, adjusted according to response; usual dose 5–20 mg/kg once daily, dose to be taken preferably in the morning

**Tetrahydrobiopterin deficiency (adjunct to dietary restriction of phenylalanine) (specialist use only)****▶ BY MOUTH**

- ▶ Adult: Initially 2–5 mg/kg daily in 2–3 divided doses, adjusted according to response; maximum 20 mg/kg per day

- **CAUTIONS** History of convulsions
- **INTERACTIONS** → Appendix 1: sapropterin
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Cough · diarrhoea · gastrointestinal discomfort · headache · laryngeal pain · nasal complaints · nausea · vomiting
  - ▶ **Frequency not known** Gastrointestinal disorders · rash
- **PREGNANCY** Manufacturer advises caution—consider only if strict dietary management inadequate.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (no information available).
- **RENAL IMPAIRMENT** Manufacturer advises caution—no information available.
- **MONITORING REQUIREMENTS**
  - ▶ Monitor blood-phenylalanine concentration before and after first week of treatment—if unsatisfactory response

increase dose at weekly intervals to max. dose and monitor blood-phenylalanine concentration weekly; discontinue treatment if unsatisfactory response after 1 month.

- ▶ Monitor blood-phenylalanine and tyrosine concentrations 1–2 weeks after dose adjustment and during treatment.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises tablets should be dissolved in water and taken within 20 minutes.
- **PATIENT AND CARER ADVICE** Patient or carers should be given advice on how to administer sapropterin dihydrochloride dispersible tablets.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
  - NICE decisions**
    - ▶ Sapropterin for treating hyperphenylalaninaemia in phenylketonuria (September 2021) NICE TA729 Recommended with restrictions
  - Scottish Medicines Consortium (SMC) decisions**
    - ▶ Sapropterin (*Kuvan*®) for the treatment of hyperphenylalaninaemia (HPA) in adults and paediatric patients of all ages with phenylketonuria (PKU) who have been shown to be responsive to such treatment (August 2018) SMC No. 558/09 Not recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Soluble tablet**

CAUTIONARY AND ADVISORY LABELS 13, 21

▶ **Sapropterin dihydrochloride (Non-proprietary)**

**Sapropterin dihydrochloride 100 mg** Sapropterin 100mg soluble tablets sugar free sugar-free | 120 tablet [PoM](#) £2,150.00

▶ **Kuvan (BioMarin (U.K.) Ltd)**

**Sapropterin dihydrochloride 100 mg** Kuvan 100mg soluble tablets sugar-free | 30 tablet [PoM](#) £597.22

## 6 Vitamin deficiency

### Vitamins

21-May-2021

**Overview**

Vitamins are used for the prevention and treatment of specific deficiency states or where the diet is known to be inadequate; they may be prescribed in the NHS to prevent or treat deficiency but not as dietary supplements.

Their use as general 'pick-me-ups' is of unproven value and, in the case of preparations containing vitamin A or D, may actually be harmful if patients take more than the prescribed dose. The 'fad' for mega-vitamin therapy with water-soluble vitamins, such as ascorbic acid p. 1177 and pyridoxine hydrochloride p. 1175, is unscientific and can be harmful.

Dietary reference values for vitamins are available in the Department of Health publication:

Dietary Reference Values for Food Energy and Nutrients for the United Kingdom: Report of the Panel on Dietary Reference Values of the Committee on Medical Aspects of Food Policy. *Report on Health and Social Subjects* 41. London: HMSO, 1991.

**Dental patients**

It is unjustifiable to treat stomatitis or glossitis with mixtures of vitamin preparations; this delays diagnosis and correct treatment.

Most patients who develop a nutritional deficiency despite an adequate intake of vitamins have malabsorption and if this is suspected the patient should be referred to a medical practitioner.

## Vitamin A

Deficiency of vitamin A p. 1174 (retinol) is associated with ocular defects (particularly xerophthalmia) and an increased susceptibility to infections, but deficiency is rare in the UK (even in disorders of fat absorption).

## Vitamin B group

Deficiency of the B vitamins, other than vitamin B<sub>12</sub>, is rare in the UK and is usually treated by preparations containing thiamine p. 1175 (B<sub>1</sub>), riboflavin (B<sub>2</sub>), and nicotinamide, which is used in preference to nicotinic acid p. 218, as it does not cause vasodilatation. Other members (or substances traditionally classified as members) of the vitamin B complex such as aminobenzoic acid, biotin, choline, inositol nicotinate p. 252, and pantothenic acid or panthenol may be included in vitamin B preparations but there is no evidence of their value.

The severe deficiency states Wernicke's encephalopathy and Korsakoff's psychosis, especially as seen in chronic alcoholism, are best treated initially by the parenteral administration of B vitamins (*Pabrinex*®), followed by oral administration of thiamine in the longer term. Anaphylaxis has been reported with parenteral B vitamins.

As with other vitamins of the B group, pyridoxine hydrochloride (B<sub>6</sub>) deficiency is rare, but it may occur during isoniazid p. 639 therapy or penicillamine p. 1192 treatment in Wilson's disease and is characterised by peripheral neuritis. High doses of pyridoxine hydrochloride are given in some metabolic disorders, such as hyperoxaluria, and it is also used in sideroblastic anaemia. There is evidence to suggest that pyridoxine hydrochloride may provide some benefit in premenstrual syndrome. It has been tried for a wide variety of other disorders, but there is little sound evidence to support the claims of efficacy.

Nicotinic acid inhibits the synthesis of cholesterol and triglyceride. Folic acid p. 1112 and vitamin B<sub>12</sub> are used in the treatment of megaloblastic anaemia. Folic acid p. 1015 (available as calcium folinate) is used in association with cytotoxic therapy.

## Vitamin C

Vitamin C (ascorbic acid) therapy is essential in scurvy, but less florid manifestations of vitamin C deficiency are commonly found, especially in the elderly.

Severe scurvy causes gingival swelling and bleeding margins as well as petechiae on the skin. This is, however, exceedingly rare and a patient with these signs is more likely to have leukaemia. Investigation should not be delayed by a trial period of vitamin treatment.

Claims that vitamin C ameliorates colds or promotes wound healing have not been proven.

## Vitamin D

The term Vitamin D is used for a range of compounds which possess the property of preventing or curing rickets. They include ergocalciferol p. 1182 (calciferol, vitamin D<sub>2</sub>), colecalciferol p. 1179 (vitamin D<sub>3</sub>), dihydrotachysterol, alfalcidol p. 1178 (1 $\alpha$ -hydroxycholecalciferol), and calcitriol p. 1178 (1,25-dihydroxycholecalciferol).

Vitamin D deficiency can occur in people whose exposure to sunlight is limited and in those whose diet is deficient in vitamin D. Specific populations at risk of vitamin D deficiency may include individuals with dark skin (such as those of African, African-Caribbean or South Asian origin) as their skin is less efficient at synthesising vitamin D, individuals aged over 65 years, individuals who have low or no exposure to the sun (such as those who are housebound or confined indoors, or who cover their skin for cultural reasons), pregnant and breastfeeding women (particularly teenagers and young women), and children aged under 4 years. Simple vitamin D deficiency can be prevented by taking an oral supplement of ergocalciferol (calciferol,

vitamin D<sub>2</sub>) or colecalciferol (vitamin D<sub>3</sub>) daily. [EVGr](#)  
Supplements containing vitamin D (e.g. *Healthy Start*) should be considered for all pregnant and breastfeeding women, and children aged under 4 years, to prevent vitamin D deficiency (if clinically appropriate); [A](#) information on the Healthy Start scheme can be found at: [www.healthystart.nhs.uk/](http://www.healthystart.nhs.uk/).

Ergocalciferol or colecalciferol daily by mouth may be given to treat vitamin D deficiency; higher doses may be necessary for severe deficiency. Patients who do not respond should be referred to a specialist.

Preparations containing colecalciferol with calcium carbonate p. 1181 are available for the management of combined calcium and vitamin D deficiency, or for those at high risk of deficiency.

Vitamin D deficiency caused by *intestinal malabsorption* or *chronic liver disease* usually requires vitamin D in pharmacological doses.

Vitamin D requires hydroxylation by the kidney to its active form, therefore the hydroxylated derivatives alfalcidol or calcitriol should be prescribed if patients with *severe renal impairment* require vitamin D therapy. Calcitriol is also licensed for the management of postmenopausal osteoporosis.

Paricalcitol p. 1182, a synthetic vitamin D analogue, is licensed for the prevention and treatment of secondary hyperparathyroidism associated with chronic kidney disease.

For recommendations on the use of vitamin D during the COVID-19 pandemic, see the National Institute for Health and Care Excellence rapid guideline: **Vitamin D** (available at: [www.nice.org.uk/guidance/ng187](http://www.nice.org.uk/guidance/ng187)).

## Vitamin E

The daily requirement of vitamin E (tocopherol) has not been well defined but is probably 3 to 15 mg daily. There is little evidence that oral supplements of vitamin E are essential in adults, even where there is fat malabsorption secondary to cholestasis. In young children with congenital cholestasis, abnormally low vitamin E concentrations may be found in association with neuromuscular abnormalities, which usually respond only to the parenteral administration of vitamin E.

Vitamin E has been tried for various other conditions but there is little scientific evidence of its value.

## Vitamin K

Vitamin K is necessary for the production of blood clotting factors and proteins necessary for the normal calcification of bone.

Because vitamin K is fat soluble, patients with fat malabsorption, especially in biliary obstruction or hepatic disease, may become deficient. Menadiol sodium phosphate p. 1184 is a water-soluble synthetic vitamin K derivative that can be given orally to prevent vitamin K deficiency in malabsorption syndromes.

Oral coumarin anticoagulants act by interfering with vitamin K metabolism in the hepatic cells and their effects can be antagonised by giving vitamin K.

## Other compounds

Potassium aminobenzoate p. 1175 has been used in the treatment of various disorders associated with excessive fibrosis such as scleroderma and Peyronie's disease. In Peyronie's disease there is some evidence to support efficacy in reducing progression when given early in the disease; however, there is no evidence for reversal of the condition. The therapeutic value of potassium aminobenzoate in scleroderma is doubtful.

## VITAMINS AND TRACE ELEMENTS > MULTIVITAMINS

### Vitamins A and D

07-Sep-2021

The properties listed below are those particular to the combination only. For the properties of the components please consider, vitamin A below, colecalciferol p. 1179.

#### ● INDICATIONS AND DOSE

##### Prevention of vitamin A and D deficiency (using 4500 units vitamin A/450 units vitamin D<sub>3</sub> capsules)

###### ► BY MOUTH

- Child 7-17 years: 1 capsule daily, increased if necessary to 2 capsules daily, dose increase to be guided by serum values
- Adult: 1 capsule daily, increased if necessary to 2 capsules daily, dose increase to be guided by serum values

##### Prevention of vitamin A and D deficiency (using 4000 units vitamin A/400 units vitamin D capsules)

###### ► BY MOUTH

- Child 1-17 years: 1 capsule daily
- Adult: (consult product literature or local protocols)

#### DOSE EQUIVALENCE AND CONVERSION

- Each 4500 units vitamin A/450 units vitamin D<sub>3</sub> capsule contains the equivalent of 11 micrograms vitamin D<sub>3</sub>.
- Each 4000 units vitamin A/400 units vitamin D capsule (vitamins A and D capsules BPC 1973) contains the equivalent of 10 micrograms vitamin D.

- **INTERACTIONS** → Appendix 1: vitamin A · vitamin D substances
- **SIDE-EFFECTS**  
**Overdose** Prolonged excessive ingestion of vitamins A and D can lead to hypervitaminosis.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk.
- **PRESCRIBING AND DISPENSING INFORMATION** This drug contains vitamin D; consult individual vitamin D monographs.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.  
**Capsule**  
EXCIPIENTS: May contain Gelatin  
► **Vitamins a and d (Non-proprietary)**  
**Vitamin D 400 unit, Vitamin A 4000 unit** Vitamins A and D capsules BPC 1973 | 28 capsule £2.81 | 84 capsule £6.75-£8.42 DT = £8.42  
**Colecalciferol 450 unit, Retinol palmitate 4500 unit** Retinol 4,500unit / Colecalciferol 450unit capsules | 84 capsule [P] £25.95

### Vitamins A, C and D

05-May-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, vitamin A below, ascorbic acid p. 1177.

#### ● INDICATIONS AND DOSE

##### Prevention of vitamin deficiency

###### ► BY MOUTH

- Child 1 month-4 years: 5 drops daily, 5 drops contain vitamin A approx. 700 units, vitamin D approx. 300 units (7.5 micrograms), ascorbic acid approx. 20 mg

- **INTERACTIONS** → Appendix 1: ascorbic acid · vitamin A
- **PRESCRIBING AND DISPENSING INFORMATION** This drug contains vitamin D; consult individual vitamin D monographs.  
Available free of charge to children under 4 years in families on the Healthy Start Scheme, or alternatively may

be available direct to the public—further information for healthcare professionals can be accessed at [www.healthystart.nhs.uk](http://www.healthystart.nhs.uk). Beneficiaries can contact their midwife or health visitor for further information on where to obtain supplies.

*Healthy Start Vitamins for women* (containing ascorbic acid, vitamin D, and folic acid) are also available free of charge to women on the Healthy Start Scheme during pregnancy and until their baby is one year old, or alternatively may be available direct to the public—further information for healthcare professionals can be accessed at [www.healthystart.nhs.uk](http://www.healthystart.nhs.uk). Beneficiaries can contact their midwife or health visitor for further information on where to obtain supplies.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Oral drops

- **Healthy Start Children's Vitamin** (Secretary of State for Health)  
Vitamin A and D3 concentrate.55 mg per 1 ml, Sodium ascorbate 18.58 mg per 1 ml, Ascorbic acid 150 mg per 1 ml, Vitamin D 2000 iu per 1 ml, Vitamin A 5000 iu per 1 ml Healthy Start Children's Vitamin drops | 10 ml [X]

## VITAMINS AND TRACE ELEMENTS > VITAMIN A

### Vitamin A

#### (Retinol)

#### ● INDICATIONS AND DOSE

##### Vitamin A deficiency

###### ► BY MOUTH

- Child 1-11 months: 5000 units daily, to be taken with or after food, higher doses may be used initially for treatment of severe deficiency
- Child 1-17 years: 10 000 units daily, to be taken with or after food, higher doses may be used initially for treatment of severe deficiency

- **UNLICENSED USE** Preparations containing only vitamin A are not licensed.
- **INTERACTIONS** → Appendix 1: vitamin A
- **SIDE-EFFECTS**  
**Overdose** Massive overdose can cause rough skin, dry hair, an enlarged liver, and increases in erythrocyte sedimentation rate, serum calcium and serum alkaline phosphatase concentration.
- **PREGNANCY** Excessive doses may be teratogenic. In view of evidence suggesting that high levels of vitamin A may cause birth defects, women who are (or may become) pregnant are advised not to take vitamin A supplements (including tablets and fish liver oil drops), except on the advice of a doctor or an antenatal clinic; nor should they eat liver or products such as liver pâté or liver sausage.
- **BREAST FEEDING** Theoretical risk of toxicity in infants of mothers taking large doses.
- **MONITORING REQUIREMENTS** Treatment is sometimes initiated with very high doses of vitamin A and the child should be monitored closely; very high doses are associated with acute toxicity.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral drops

#### Oral drops

##### ► Vitamin a (Non-proprietary)

- Vitamin A 150000 unit per 1 ml Arovit 150,000units/ml drops | 7.5 ml [PoM] [X]

Combinations available: *Vitamins A and D*, above · *Vitamins A, C and D*, above

## VITAMINS AND TRACE ELEMENTS > VITAMIN B GROUP

### Potassium aminobenzoate

09-Aug-2021

#### ● INDICATIONS AND DOSE

##### **Peyronie's disease | Scleroderma**

► BY MOUTH

► Adult: 12 g daily in divided doses, to be taken after food

- **CONTRA-INDICATIONS** Hyperkalaemia · severe liver damage
- **CAUTIONS** Interrupt treatment during periods of low food intake (such as fasting, anorexia and nausea)—increased risk of hypoglycaemia
- **INTERACTIONS** → Appendix 1: potassium aminobenzoate
- **SIDE-EFFECTS** Hepatitis · hypoglycaemia
- **PREGNANCY** Manufacturer advises avoid—limited information available.
- **BREAST FEEDING** Manufacturer advises unknown if excreted in milk—risk to infant cannot be excluded.
- **RENAL IMPAIRMENT** EVGr Caution (increased risk of hyperkalaemia); avoid if eGFR less than 45 mL/minute/1.73 m<sup>2</sup>. ⚠ See p. 21.
- **MONITORING REQUIREMENTS** Manufacturer advises liver function tests should be performed monthly—discontinue immediately if elevated.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Powder**

CAUTIONARY AND ADVISORY LABELS 13, 21

► **Potaba** (Neon Healthcare Ltd)

Potassium aminobenzoate 3 gram Potaba 3g sachets | 40 sachet PoM £34.31 DT = £34.31

### Pyridoxine hydrochloride

05-Oct-2021

#### (Vitamin B<sub>6</sub>)

#### ● INDICATIONS AND DOSE

##### **Deficiency states**

► BY MOUTH

► Adult: 20–50 mg 1–3 times a day

##### **Isoniazid-induced neuropathy (prophylaxis)**

► BY MOUTH

► Adult: 10–20 mg daily

##### **Isoniazid-induced neuropathy (treatment)**

► BY MOUTH

► Adult: 50 mg 3 times a day

##### **Idiopathic sideroblastic anaemia**

► BY MOUTH

► Adult: 100–400 mg daily in divided doses

##### **Prevention of penicillamine-induced neuropathy in Wilson's disease**

► BY MOUTH

► Adult: 20 mg daily

##### **Premenstrual syndrome**

► BY MOUTH

► Adult: 50–100 mg daily

- **UNLICENSED USE** Not licensed for prophylaxis of penicillamine-induced neuropathy in Wilson's disease. Not licensed for treatment of premenstrual syndrome.

#### **IMPORTANT SAFETY INFORMATION**

Prolonged use of pyridoxine in a dose of 10 mg daily is considered safe but the long-term use of pyridoxine in a dose of 200 mg or more daily has been associated with neuropathy. The safety of long-term pyridoxine

supplementation with doses above 10 mg daily has not been established.

- **SIDE-EFFECTS** Peripheral neuritis
- Overdose** Overdosage induces toxic effects.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: capsule, oral suspension, oral solution

#### **Tablet**

##### ► **Pyridoxine hydrochloride (Non-proprietary)**

**Pyridoxine hydrochloride 10 mg** Pyridoxine 10mg tablets | 28 tablet PoM £18.25–£19.90 DT = £18.63

**Pyridoxine hydrochloride 20 mg** Pyridoxine 20mg tablets | 500 tablet GS1 S

**Pyridoxine hydrochloride 50 mg** Pyridoxine 50mg tablets | 28 tablet PoM £31.02 DT = £24.56

#### **Oral solution**

► **Apyrid** (Essential-Healthcare Ltd)

### Thiamine

04-Feb-2021

#### (Vitamin B<sub>1</sub>)

#### ● INDICATIONS AND DOSE

##### **Mild deficiency**

► BY MOUTH

► Adult: 25–100 mg daily

##### **Severe deficiency**

► BY MOUTH

► Adult: 200–300 mg daily in divided doses

#### **IMPORTANT SAFETY INFORMATION**

##### **MHRA/CHM ADVICE (SEPTEMBER 2007)**

Although potentially serious allergic adverse reactions may rarely occur during, or shortly after, parenteral administration, the CHM has recommended that:

- This should not preclude the use of parenteral thiamine in patients where this route of administration is required, particularly in patients at risk of Wernicke-Korsakoff syndrome where treatment with thiamine is essential;
- Intravenous administration should be by infusion over 30 minutes;
- Facilities for treating anaphylaxis (including resuscitation facilities) should be available when parenteral thiamine is administered.

- **CAUTIONS** Anaphylaxis may occasionally follow injection, see *Important safety information*
- **BREAST FEEDING** Severely thiamine-deficient mothers should avoid breast-feeding as toxic methyl-glyoxal present in milk.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

#### **Modified-release tablet**

► **Athiam** (Essential-Healthcare Ltd)

**Vitamin B complex**

21-May-2021

**● INDICATIONS AND DOSE****Treatment of deficiency**

- ▶ BY MOUTH USING TABLETS
- ▶ Adult: 1–2 tablets 3 times a day, this dose is for vitamin B compound **strong** tablets

**Prophylaxis of deficiency**

- ▶ BY MOUTH USING TABLETS
- ▶ Adult: 1–3 tablets daily, this dose is for vitamin B compound tablets

- **LESS SUITABLE FOR PRESCRIBING** Vitamin B compound tablets and vitamin B compound strong tablets are less suitable for prescribing.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Tablet**

- ▶ **Vitamin b complex (Non-proprietary)**  
Riboflavin 1 mg, Thiamine hydrochloride 1 mg, Nicotinamide 15 mg Vitamin B compound tablets | 28 tablet [P] £21.30 DT = £26.63  
Pyridoxine hydrochloride 2 mg, Riboflavin 2 mg, Thiamine hydrochloride 5 mg, Nicotinamide 20 mg Vitamin B compound strong tablets | 28 tablet [P] [S] DT = £1.20

**Vitamin B substances with ascorbic acid**

29-Jul-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, thiamine p. 1175, ascorbic acid p. 1177.

**● INDICATIONS AND DOSE****Severe depletion or malabsorption of vitamins B and C postoperatively**

- ▶ BY INTRAVENOUS INFUSION, OR BY DEEP INTRAMUSCULAR INJECTION
- ▶ Adult: (consult product literature)

**Treatment of suspected or established Wernicke's encephalopathy**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: 2–3 pairs 3 times a day for 3–5 days, followed by 1 pair once daily for a further 3–5 days or for as long as improvement continues

**Prophylaxis of Wernicke's encephalopathy [assisted alcohol withdrawal in an inpatient setting]**

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Adult: 1 pair once daily for at least 5 days and up to 7 days if required, give into the gluteal muscle

**Severe depletion or malabsorption of vitamins B and C in psychosis following narcosis or electroconvulsive therapy | Severe depletion or malabsorption of vitamins B and C following toxicity from acute infections**

- ▶ BY INTRAVENOUS INFUSION, OR BY DEEP INTRAMUSCULAR INJECTION

- ▶ Adult: 1 pair twice daily for up to 7 days, give deep intramuscular injection into the gluteal muscle

**Severe depletion or malabsorption of vitamins B and C in haemodialysis**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: 1 pair every 2 weeks

**DOSE EQUIVALENCE AND CONVERSION**

- ▶ Dose is expressed in pairs of ampoules.
- ▶ For *intravenous* administration, 1 pair is one 5 mL ampoule containing thiamine 250 mg, riboflavin 4 mg and pyridoxine 50 mg, and one 5 mL ampoule containing ascorbic acid 500 mg, nicotinamide 160 mg and glucose 1000 mg.
- ▶ For *intramuscular* administration, 1 pair is one 5 mL ampoule containing thiamine 250 mg, riboflavin 4 mg and pyridoxine 50 mg, and one 2 mL ampoule containing ascorbic acid 500 mg and nicotinamide 160 mg.

- **UNLICENSED USE** Vitamin B substances with ascorbic acid may be used as detailed below, although these situations are considered outside the scope of its licence:

- [EvG] durations and further dosing for treatment of suspected or established Wernicke's encephalopathy
- prophylaxis of Wernicke's encephalopathy [D]

- **INTERACTIONS** → Appendix 1: ascorbic acid

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises give (*Pabrinex*® *I/V High Potency*) intermittently or *via* drip tubing in Glucose 5% or Sodium chloride 0.9%. Manufacturer advises ampoules contents should be mixed, diluted, and administered without delay; give over 30 minutes. See MHRA/CHM advice in thiamine p. 1175.

- **PRESCRIBING AND DISPENSING INFORMATION** *Pabrinex*® I/M High Potency injection is for intramuscular use only. *Pabrinex*® I/V High Potency injection is for intravenous use only.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Form unstacked**

EXCIPIENTS: May contain Benzyl alcohol

- ▶ **Pabrinex Intramuscular High Potency** (Kyowa Kirin Ltd)  
Pabrinex Intramuscular High Potency solution for injection 5ml and 2ml ampoules | 20 ampoule [PoM] £22.53 DT = £22.53
- ▶ **Pabrinex Intravenous High Potency** (Kyowa Kirin Ltd)  
Pabrinex Intravenous High Potency solution for injection 5ml and 5ml ampoules | 12 ampoule [PoM] £16.23

**Vitamins with minerals and trace elements**

13-May-2020

**● INDICATIONS AND DOSE****FORCEVAL**® CAPSULES**Vitamin and mineral deficiency and as adjunct in synthetic diets**

- ▶ BY MOUTH
- ▶ Adult: 1 capsule daily, one hour after a meal

**KETOVITE® LIQUID**

**Prevention of vitamin deficiency in disorders of carbohydrate or amino-acid metabolism | Adjunct in restricted, specialised, or synthetic diets**

► BY MOUTH

Adult: 5 mL daily, use with *Ketovite® Tablets* for complete vitamin supplementation.

**KETOVITE® TABLETS**

**Prevention of vitamin deficiency in disorders of carbohydrate or amino-acid metabolism | Adjunct in restricted, specialised, or synthetic diets**

► BY MOUTH

Adult: 1 tablet 3 times a day, use with *Ketovite® Liquid* for complete vitamin supplementation.

- **PRESCRIBING AND DISPENSING INFORMATION** To avoid potential toxicity, the content of all vitamin preparations, particularly vitamin A, should be considered when used together with other supplements.

- **PATIENT AND CARER ADVICE**

**KETOVITE® LIQUID** *Ketovite® liquid* may be mixed with milk, cereal, or fruit juice.

**KETOVITE® TABLETS** Tablets may be crushed immediately before use.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Oral emulsion**

► **Vitamins with minerals and trace elements (Non-proprietary)**

**Ascorbic acid 500 mg** BioCare Vitamin C 500mg capsules |

60 capsule £8.15 | 180 capsule £20.82

Combinations available: *Vitamin B substances with ascorbic acid*, p. 1176 · *Vitamins A, C and D*, p. 1174

**VITAMINS AND TRACE ELEMENTS > VITAMIN D AND ANALOGUES****Vitamin D and analogues (systemic)**

- **CONTRA-INDICATIONS** Hypercalcaemia · metastatic calcification
- **SIDE-EFFECTS**
  - **Common or very common** Abdominal pain · headache · hypercalcaemia · hypercalcaemia · nausea · skin reactions
  - **Uncommon** Appetite decreased · arrhythmia (frequency not known in children) · asthma · constipation · diarrhoea · myalgia · vomiting · weight decreased (frequency not known in children)
- **Overdose** Symptoms of overdose include anorexia, lassitude, nausea and vomiting, diarrhoea, constipation, weight loss, polyuria, sweating, headache, thirst, vertigo, and raised concentrations of calcium and phosphate in plasma and urine.
- **PREGNANCY** High doses teratogenic in *animals* but therapeutic doses unlikely to be harmful.
- **BREAST FEEDING** Caution with high doses; may cause hypercalcaemia in infant—monitor serum-calcium concentration.
- **MONITORING REQUIREMENTS** **Important:** all patients receiving pharmacological doses of vitamin D should have their plasma-calcium concentration checked at intervals (initially once or twice weekly) and whenever nausea or vomiting occur.

F 1177

## Alfacalcidol

16-Feb-2021

### (1 $\alpha$ -Hydroxycholecalciferol)

#### ● INDICATIONS AND DOSE

##### Patients with severe renal impairment requiring vitamin D therapy

- ▶ BY MOUTH, OR BY INTRAVENOUS INJECTION
- ▶ Adult: Initially 1 microgram daily, dose to be adjusted to avoid hypercalcaemia; maintenance 0.25–1 microgram daily
- ▶ Elderly: Initially 500 nanograms daily, dose adjusted to avoid hypercalcaemia; maintenance 0.25–1 microgram daily

##### Hypophosphataemic rickets | Persistent hypocalcaemia due to hypoparathyroidism or pseudohypoparathyroidism

- ▶ BY MOUTH, OR BY INTRAVENOUS INJECTION
- ▶ Child 1 month–11 years: 25–50 nanograms/kg once daily, dose to be adjusted as necessary; maximum 1 microgram per day
- ▶ Child 12–17 years: 1 microgram once daily, dose to be adjusted as necessary

##### Prevention of vitamin D deficiency in renal or cholestatic liver disease

- ▶ BY MOUTH, OR BY INTRAVENOUS INJECTION
- ▶ Child 1 month–11 years (body-weight up to 20 kg): 15–30 nanograms/kg once daily (max. per dose 500 nanograms)
- ▶ Child 1 month–11 years (body-weight 20 kg and above): 250–500 nanograms once daily, dose to be adjusted as necessary
- ▶ Child 12–17 years: 250–500 nanograms once daily, dose to be adjusted as necessary

#### DOSE EQUIVALENCE AND CONVERSION

- ▶ One drop of alfacalcidol 2 microgram/mL oral drops contains approximately 100 nanograms alfacalcidol.

- **CAUTIONS** Granulomatous diseases (risk of increased sensitivity to vitamin D) · nephrolithiasis · take care to ensure correct dose in infants
- **INTERACTIONS** → Appendix 1: vitamin D substances
- **SIDE-EFFECTS**
  - ▶ Common or very common Abdominal discomfort · hyperphosphataemia · rash pustular
  - ▶ Uncommon Malaise · urolithiasis
  - ▶ Rare or very rare Dizziness
  - ▶ Frequency not known Confusion · renal impairment
- **RENAL IMPAIRMENT**

##### Monitoring

 Monitor plasma-calcium concentration in renal impairment.
- **MONITORING REQUIREMENTS** Monitor plasma-calcium concentration in patients receiving high doses.
- **DIRECTIONS FOR ADMINISTRATION**
  - ▶ With intravenous use For *injection*, manufacturer advises shake ampoule for at least 5 seconds before use, and give over 30 seconds.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

#### Solution for injection

EXCIPIENTS: May contain Alcohol, propylene glycol

- ▶ **One-Alpha** (Neon Healthcare Ltd)

Alfacalcidol 2 microgram per 1 ml One-Alpha 2micrograms/1ml solution for injection ampoules | 10 ampoule [PoM] £41.13 DT = £41.13

## Calcitriol

16-Feb-2021

### (1,25-Dihydroxycholecalciferol)

#### ● INDICATIONS AND DOSE

##### Renal osteodystrophy

- ▶ BY MOUTH
- ▶ Adult: Initially 250 nanograms daily, adjusted in steps of 250 nanograms every 2–4 weeks if required; usual dose 0.5–1 microgram daily

##### Renal osteodystrophy (in patients with normal or only slightly reduced plasma-calcium concentration)

- ▶ BY MOUTH
- ▶ Adult: Initially 250 nanograms once daily on alternate days, adjusted in steps of 250 nanograms every 2–4 weeks if required; usual dose 0.5–1 microgram daily

##### Established postmenopausal osteoporosis

- ▶ BY MOUTH
- ▶ Adult: 250 nanograms twice daily, plasma-calcium concentration and creatinine to be monitored (consult product literature)

- **INTERACTIONS** → Appendix 1: vitamin D substances
- **SIDE-EFFECTS**
  - ▶ Common or very common Urinary tract infection
  - ▶ Frequency not known Abdominal pain upper · apathy · dehydration · drowsiness · fever · growth retardation · muscle weakness · paralytic ileus · polydipsia · psychiatric disorder · sensory disorder · thirst · urinary disorders
- **RENAL IMPAIRMENT** Manufacturer advises avoid—no information available.
 

##### Monitoring

 Monitor plasma-calcium concentration in renal impairment.
- **MONITORING REQUIREMENTS**
  - ▶ Monitor plasma calcium, phosphate, and creatinine during dosage titration.
  - ▶ Monitor plasma-calcium concentration in patients receiving high doses.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

#### Oral solution

- ▶ **Calcitriol (Non-proprietary)**

Calcitriol 1 microgram per 1 ml Rocaltrol 1micrograms/ml oral solution sugar-free | 10 ml [PoM] [X]

#### Capsule

- ▶ **Calcitriol (Non-proprietary)**

Calcitriol 250 nanogram Calcitriol 250nanogram capsules | 30 capsule [PoM] £5.41-£18.04

- Calcitriol 500 nanogram** Calcitriol 500nanogram capsules | 30 capsule [PoM](#) £11.80-£32.25
- ▶ **Rocaltrol** (Atrahs Pharma UK Ltd)
- Calcitriol 250 nanogram** Rocaltrol 250nanogram capsules | 100 capsule [PoM](#) £18.04 DT = £18.04
- Calcitriol 500 nanogram** Rocaltrol 500nanogram capsules | 100 capsule [PoM](#) £32.25 DT = £32.25

05-May-2022

## Colecalciferol

### (Cholecalciferol; Vitamin D<sub>3</sub>)

#### ● INDICATIONS AND DOSE

##### Prevention of vitamin D deficiency

- ▶ BY MOUTH
- ▶ Adult: 400 units daily

##### Treatment of vitamin D deficiency

- ▶ BY MOUTH
- ▶ Adult: 800 units daily, higher doses may be necessary for severe deficiency; maximum 4000 units per day

- **CAUTIONS** Sarcoidosis
- **INTERACTIONS** → Appendix 1: vitamin D substances
- **RENAL IMPAIRMENT**  
**Monitoring** Monitor plasma-calcium concentration in renal impairment.
- **MONITORING REQUIREMENTS** Monitor plasma-calcium concentration in patients receiving high doses.
- **DIRECTIONS FOR ADMINISTRATION**  
**INVITA D3<sup>®</sup> ORAL SOLUTION** Manufacturer advises may be mixed with a small amount of cold or lukewarm food immediately before administration.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: tablet, capsule, oral suspension, oral solution, oral drops

#### Tablet

- ▶ **Colecalciferol (Non-proprietary)**
- Colecalciferol 400 unit** Colecalciferol 400unit tablets | 60 tablet £15.50
- FSC Vitamin D3 400unit tablets | 60 tablet £1.70

## Ergocalciferol

(Calciferol; Vitamin D<sub>2</sub>)

F 1177

06-May-2022

### ● INDICATIONS AND DOSE

#### Prevention of vitamin D deficiency

- ▶ BY MOUTH
- ▶ Adult: 400 units daily

#### Treatment of vitamin D deficiency

- ▶ BY MOUTH
- ▶ Adult: 800 units daily, higher doses may be necessary for severe deficiency; maximum 4000 units per day

#### Vitamin D deficiency caused by intestinal malabsorption or chronic liver disease

- ▶ BY MOUTH
- ▶ Adult: Up to 40 000 units daily

#### Hypocalcaemia of hypoparathyroidism to achieve normocalcaemia

- ▶ BY MOUTH
- ▶ Adult: Up to 100 000 units daily

- **INTERACTIONS** → Appendix 1: vitamin D substances

#### ● RENAL IMPAIRMENT

**Monitoring** Monitor plasma-calcium concentration in renal impairment.

- **MONITORING REQUIREMENTS** Monitor plasma-calcium concentration in patients receiving high doses.

- **PRESCRIBING AND DISPENSING INFORMATION** The BP directs that when calciferol is prescribed or demanded, colecalciferol or ergocalciferol should be dispensed or supplied.

When the strength of the tablets ordered or prescribed is not clear, the intention of the prescriber with respect to the strength (expressed in micrograms or milligrams per tablet) should be ascertained.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: tablet, capsule, oral suspension, oral solution

#### Tablet

- ▶ **Ergocalciferol (Non-proprietary)**  
Ergocalciferol 12.5 microgram Ergo-D2 12.5microgram tablets | 30 tablet 
- ▶ **Ergoral** (Cubic Pharmaceuticals Ltd)  
Ergocalciferol 250 microgram Ergoral D2 10,000unit tablets | 30 tablet £10.95

#### Oral solution

- ▶ **Ergocalciferol (Non-proprietary)**  
Ergocalciferol 1500 unit per 1 ml Uvesteral D 1,500units/ml oral solution sugar-free | 20 ml  
- ▶ **Eciferol** (Rhodes Pharma Ltd)  
Ergocalciferol 3000 unit per 1 ml Eciferol D2 3,000units/ml liquid | 60 ml £55.00 DT = £39.38

#### Capsule

- ▶ **Ergocalciferol (Non-proprietary)**  
Ergocalciferol 1.25 mg Ergo-D2 1.25mg capsules | 30 capsule £96.80
- ▶ **Eciferol** (Rhodes Pharma Ltd)  
Ergocalciferol 1.25 mg Eciferol D2 50,000unit capsules | 10 capsule £29.99
- ▶ **Ergoral** (Cubic Pharmaceuticals Ltd)  
Ergocalciferol 1.25 mg Ergoral D2 50,000unit capsules | 10 capsule £12.95

## Ergocalciferol with calcium lactate and calcium phosphate

(Calcium and vitamin D)

06-Aug-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, ergocalciferol above, calcium lactate p. 1139.

### ● INDICATIONS AND DOSE

#### Prevention of calcium and vitamin D deficiency | Treatment of calcium and vitamin D deficiency

- ▶ BY MOUTH
- ▶ Adult: (consult product literature)

- **INTERACTIONS** → Appendix 1: calcium salts · vitamin D substances
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises tablets may be crushed before administration, or may be chewed.
- **PRESCRIBING AND DISPENSING INFORMATION** Each tablet contains calcium lactate 300 mg, calcium phosphate 150 mg (calcium 97 mg or Ca<sup>2+</sup> 2.4 mmol), ergocalciferol 10 micrograms (400 units).
- **PATIENT AND CARER ADVICE** Patient or carers should be given advice on how to administer calcium and ergocalciferol tablets.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Tablet

- ▶ **Ergocalciferol with calcium lactate and calcium phosphate (Non-proprietary)**  
Ergocalciferol 10 microgram, Calcium phosphate 150 mg, Calcium lactate 300 mg Calcium and Ergocalciferol tablets | 28 tablet  £49.88 DT = £34.29

## Paricalcitol

24-Jul-2018

F 1177

### ● INDICATIONS AND DOSE

#### Prevention and treatment of secondary hyperparathyroidism associated with chronic kidney disease

- ▶ BY MOUTH
- ▶ Adult: (consult product literature)

#### Prevention and treatment of secondary hyperparathyroidism associated with chronic renal failure in patients on haemodialysis

- ▶ Adult: To be administered via haemodialysis access (consult product literature)

- **INTERACTIONS** → Appendix 1: vitamin D substances

- **SIDE-EFFECTS**

#### GENERAL SIDE-EFFECTS

- ▶ **Common or very common** Electrolyte imbalance · hypoparathyroidism · taste altered
- ▶ **Uncommon** Dizziness · dry mouth · malaise · pain
- ▶ **Frequency not known** Angioedema · laryngeal oedema

#### SPECIFIC SIDE-EFFECTS

- ▶ **Uncommon**
- ▶ With oral use Breast tenderness · gastrointestinal discomfort · gastrooesophageal reflux disease · muscle spasms · palpitations · peripheral oedema · pneumonia
- ▶ With parenteral use Alopecia · anaemia · anxiety · asthma · atrial flutter · breast cancer · breast pain · cardiac arrest · cerebrovascular insufficiency · chest pain · coma · condition aggravated · confusion · conjunctivitis · cough · delirium · depersonalisation · dyspepsia · dysphagia · dyspnoea · ear disorder · erectile dysfunction · fever · gait abnormal · gastrointestinal disorders · glaucoma ·

haemorrhage · hirsutism · hyperhidrosis · hyperparathyroidism · hypertension · hypotension · increased risk of infection · insomnia · joint disorders · leucopenia · lymphadenopathy · muscle twitching · myoclonus · oedema · pulmonary oedema · sensation abnormal · sepsis · syncope · thirst

- **PREGNANCY** Manufacturer advises avoid—toxicity in *animal* studies.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **MONITORING REQUIREMENTS**
  - ▶ Monitor plasma calcium and phosphate during dose titration and at least monthly when stabilised.
  - ▶ Monitor parathyroid hormone concentration.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.
 

**Solution for injection**  
EXCIPIENTS: May contain Ethanol, propylene glycol

  - ▶ **Zemplar** (AbbVie Ltd)  
Paricalcitol 5 microgram per 1 ml Zemplar 5micrograms/1ml solution for injection vials | 5 vial [PoM] £62.00 (Hospital only)

**Capsule**  
EXCIPIENTS: May contain Ethanol

  - ▶ **Zemplar** (AbbVie Ltd)  
Paricalcitol 1 microgram Zemplar 1microgram capsules | 28 capsule [PoM] £69.44 DT = £69.44  
Paricalcitol 2 microgram Zemplar 2microgram capsules | 28 capsule [PoM] £138.88 DT = £138.88

## VITAMINS AND TRACE ELEMENTS > VITAMIN E

### Alpha tocopherol (Tocopherol)

04-Feb-2021

#### ● INDICATIONS AND DOSE

**Vitamin E deficiency because of malabsorption in congenital or hereditary chronic cholestasis**

- ▶ BY MOUTH USING ORAL SOLUTION
- ▶ Child: 17 mg/kg daily, dose to be adjusted as necessary

- **CAUTIONS** Predisposition to thrombosis
- **INTERACTIONS** → Appendix 1: vitamin E substances
- **SIDE-EFFECTS**
  - ▶ Common or very common Diarrhoea
  - ▶ Uncommon Alopecia · asthenia · headache · skin reactions
  - ▶ Frequency not known Abdominal pain
- **PREGNANCY** Manufacturer advises caution, no evidence of harm in *animal* studies.
- **BREAST FEEDING** Manufacturer advises use only if potential benefit outweighs risk—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution.
- **RENAL IMPAIRMENT** Manufacturer advises caution. Risk of renal toxicity due to polyethylene glycol content. **Monitoring** Manufacturer advises monitor closely in renal impairment.
- **PRESCRIBING AND DISPENSING INFORMATION**  
Tocofersolan is a water-soluble form of D-alpha tocopherol.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.
 

**Oral solution**

  - ▶ **Vedrop** (Recordati Rare Diseases UK Ltd) ▼  
D-alpha tocopherol (as Tocofersolan) 50 mg per 1 ml Vedrop 50mg/ml oral solution sugar-free | 20 ml [PoM] £54.55 DT = £54.55 sugar-free | 60 ml [PoM] £163.65

### Alpha tocopheryl acetate (Tocopherol)

04-Feb-2021

#### ● INDICATIONS AND DOSE

**Vitamin E deficiency**

- ▶ BY MOUTH
- ▶ Child: 2–10 mg/kg daily, increased if necessary up to 20 mg/kg daily

**Malabsorption in cystic fibrosis**

- ▶ BY MOUTH
- ▶ Child 1-11 months: 50 mg once daily, dose to be adjusted as necessary, to be taken with food and pancreatic enzymes
- ▶ Child 1-11 years: 100 mg once daily, dose to be adjusted as necessary, to be taken with food and pancreatic enzymes
- ▶ Child 12-17 years: 100–200 mg once daily, dose to be adjusted as necessary, to be taken with food and pancreatic enzymes
- ▶ Adult: 100–200 mg once daily, dose to be adjusted as necessary, to be taken with food and pancreatic enzymes

**Vitamin E deficiency in cholestasis and severe liver disease**

- ▶ BY MOUTH
- ▶ Child 1 month-11 years: Initially 100 mg daily, adjusted according to response, increased if necessary up to 200 mg/kg daily
- ▶ Child 12-17 years: Initially 200 mg daily, adjusted according to response, increased if necessary up to 200 mg/kg daily

**Malabsorption in abetalipoproteinaemia**

- ▶ BY MOUTH
- ▶ Adult: 50–100 mg/kg once daily

- **CAUTIONS** Predisposition to thrombosis
- **INTERACTIONS** → Appendix 1: vitamin E substances
- **SIDE-EFFECTS** Abdominal pain (more common at high doses) · bleeding tendency · diarrhoea (more common at high doses) · increased risk of thrombosis
- **PREGNANCY** No evidence of safety of high doses.
- **BREAST FEEDING** Excreted in milk; minimal risk, although caution with large doses.
- **MONITORING REQUIREMENTS** Increased bleeding tendency in vitamin-K deficient patients or those taking anticoagulants (prothrombin time and INR should be monitored).
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: chewable tablet
 

**Oral suspension**  
EXCIPIENTS: May contain Sucrose

  - ▶ **Alpha tocopheryl acetate (Non-proprietary)**  
Alpha tocopheryl acetate 100 mg per 1 ml AlphaToc-E 500mg/5ml oral suspension sugar-free | 100 ml £47.19  
Alpha tocopheryl acetate 500mg/5ml oral suspension | 100 ml [GS] £73.15 DT = £73.15

**Chewable tablet**

  - ▶ **Alpha-E** (TriOn Pharma Ltd)  
Alpha tocopheryl acetate 100 mg Alpha-E 100mg chewable tablets | 30 tablet £37.33
  - ▶ **AlphaToc-E** (Essential-Healthcare Ltd)  
Alpha tocopheryl acetate 100 mg AlphaToc-E 100mg chewable tablets | 30 tablet £29.67
  - ▶ **E-Tabs** (Ennogen Healthcare Ltd)  
Alpha tocopheryl acetate 100 mg E-Tabs 100mg chewable tablets | 30 tablet £87.30
  - ▶ **Ephynal** (Imported (Italy))  
Alpha tocopheryl acetate 100 mg Ephynal 100mg chewable tablets | 30 tablet [X]

**Capsule**▶ **Alpha tocopheryl acetate (Non-proprietary)**

**Alpha tocopherol 75 unit** Vitamin E 75unit capsules | 100 capsule  
£13.05

**Alpha tocopherol 200 unit** Vitamin E 200unit capsules | 30 capsule  
£10.05

Bio-E-Vitamin 200unit capsules | 150 capsule £9.40

**Alpha tocopherol 75 unit** E-Caps 75unit capsules | 100 capsule  
£109.50

**Alpha tocopherol 100 unit** E-Caps 100unit capsules | 30 capsule  
£84.40

**Alpha tocopherol 200 unit** E-Caps 200unit capsules | 30 capsule  
£89.50

**Alpha tocopherol 400 unit** E-Caps 400unit capsules | 30 capsule  
£128.50

**Alpha tocopherol 1000 unit** E-Caps 1,000unit capsules | 30 capsule  
£130.20

▶ **Nutra-E** (TriOn Pharma Ltd)

**Alpha tocopherol 75 unit** Nutra-E 75unit capsules | 100 capsule  
£5.86

**Alpha tocopherol 200 unit** Nutra-E 200unit capsules | 100 capsule  
£12.88

**Alpha tocopherol 400 unit** Nutra-E 400unit capsules | 100 capsule  
£19.82

▶ **Vita-E** (Typharm Ltd)

**Alpha tocopherol 75 unit** Vita-E 75unit capsules | 100 capsule £8.04

**Alpha tocopherol 200 unit** Vita-E 200unit capsules | 30 capsule  
£6.15 | 100 capsule £17.24

**Alpha tocopherol 400 unit** Vita-E 400unit capsules | 30 capsule  
£9.19 | 100 capsule £25.13

**VITAMINS AND TRACE ELEMENTS > VITAMIN K****Menadiol sodium phosphate**

24-May-2021

**INDICATIONS AND DOSE****Prevention of Vitamin K deficiency in malabsorption syndromes**▶ **BY MOUTH**

▶ Adult: 10–40 mg daily, dose to be adjusted as necessary

● **CAUTIONS** G6PD deficiency (risk of haemolysis) · vitamin E deficiency (risk of haemolysis)

● **PREGNANCY** Avoid in late pregnancy and labour unless benefit outweighs risk of neonatal haemolytic anaemia, hyperbilirubinaemia, and kernicterus in neonate.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Tablet**▶ **Menadiol sodium phosphate (Non-proprietary)**

**Menadiol phosphate (as Menadiol sodium phosphate)**

10 mg Menadiol 10mg tablets | 100 tablet [P] £225.45 DT = £225.45

**Phytomenadione**

04-Feb-2021

**(Vitamin K<sub>1</sub>)****INDICATIONS AND DOSE****Major bleeding in patients on warfarin (in combination with dried prothrombin complex or fresh frozen plasma)**▶ **BY SLOW INTRAVENOUS INJECTION**

▶ Adult: 5 mg for 1 dose, stop warfarin treatment

**INR > 8.0 with minor bleeding in patients on warfarin**▶ **BY SLOW INTRAVENOUS INJECTION**

▶ Adult: 1–3 mg, stop warfarin treatment, dose may be repeated if INR still too high after 24 hours, restart warfarin treatment when INR <5

**INR > 8.0 with no bleeding in patients on warfarin**▶ **BY MOUTH**

▶ Adult: 1–5 mg, intravenous preparation to be used orally, stop warfarin treatment, repeat dose if INR still too high after 24 hours, restart warfarin treatment when INR <5

**INR 5.0–8.0 with minor bleeding in patients on warfarin**▶ **BY SLOW INTRAVENOUS INJECTION**

▶ Adult: 1–3 mg, stop warfarin treatment, restart warfarin treatment when INR <5

**Reversal of anticoagulation prior to elective surgery (after warfarin stopped)**▶ **BY MOUTH**

▶ Adult: 1–5 mg, intravenous preparation to be used orally, dose to be given the day before surgery if INR ≥1.5

**Reversal of anticoagulation prior to emergency surgery (when surgery can be delayed 6–12 hours)**▶ **BY INTRAVENOUS INJECTION**

▶ Adult: 5 mg as a single dose, if surgery cannot be delayed, dried prothrombin complex can be given in addition to phytomenadione and the INR checked before surgery

● **UNLICENSED USE** Oral use of intravenous preparations is unlicensed.

● **CAUTIONS** Intravenous injections should be given very slowly—reports of anaphylactoid reactions

**KONAKION<sup>®</sup> MM** Reduce dose in elderly

● **PREGNANCY** Use if potential benefit outweighs risk.

● **BREAST FEEDING** Present in milk.

● **HEPATIC IMPAIRMENT**

**KONAKION<sup>®</sup> MM** Manufacturer advises caution—monitor INR in patients with severe impairment (contains glycocholic acid which may displace bilirubin).

**DIRECTIONS FOR ADMINISTRATION**

**KONAKION<sup>®</sup> MM** *Konakion<sup>®</sup> MM* may be administered by slow intravenous injection or by intravenous infusion in glucose 5%; **not** for intramuscular injection. For *intravenous infusion (Konakion<sup>®</sup> MM)*, give intermittently in Glucose 5%; dilute with 55 mL; may be injected into lower part of infusion apparatus.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: capsule, oral suspension, oral solution

**Solution for injection**

EXCIPIENTS: May contain Glycocholic acid, lecithin

▶ **Phytomenadione (Non-proprietary)**

**Phytomenadione 10 mg per 1 ml** Phytomenadione 2mg/0.2ml solution for injection ampoules | 5 ampoule [PoM] £10.49 DT = £10.49  
Phytomenadione 10mg/1ml solution for injection ampoules | 10 ampoule [PoM] £10.49 DT = £10.49

## 6.1 Neural tube defects (prevention in pregnancy)

### Neural tube defects (prevention in pregnancy)

01-Oct-2021

#### Description of condition

Neural tube defects represent a group of congenital defects, caused by incomplete closure of the neural tube within 28 days of conception. The most common forms are anencephaly, spina bifida and encephalocele.

The main risk factors are maternal folate deficiency, maternal vitamin B<sub>12</sub> deficiency, previous history of having an infant with a neural tube defect, smoking, diabetes, obesity, and use of antiepileptic drugs. For information on smoking cessation see Smoking cessation p. 531.

#### Prevention in pregnancy

**EvGr** Pregnant women or women who wish to become pregnant should be advised to take supplementation with folic acid p. 1112 before conception and until week 12 of pregnancy.

A higher daily dose (see folic acid) is recommended for women at a high risk of conceiving a child with a neural tube defect, including women who have previously had an infant with a neural tube defect, who are receiving antiepileptic medication (see Epilepsy p. 330), or who have diabetes or sickle-cell disease. **A**

*Healthy Start* vitamins for women (containing folic acid, ascorbic acid, and vitamin D) are available for pregnant women through the *Healthy Start* scheme. For further information, see [www.healthystart.nhs.uk/](http://www.healthystart.nhs.uk/). Vitamins for children are also available through the scheme.

### Osteoarthritis

05-Jan-2021

#### Overview

**EvGr** Patients diagnosed with osteoarthritis should receive an individualised management plan that may include self-care strategies and drug treatment options for symptom relief.

For pain relief in osteoarthritis, simple analgesia such as paracetamol p. 477 or a topical NSAID (particularly for hand or knee involvement) is first-line treatment and may need to be used regularly if pain remains uncontrolled. If treatment with simple analgesia is ineffective, consider use of an oral NSAID when required (topical NSAID use should be discontinued), or a weak opioid analgesic (such as codeine phosphate p. 487) when required, or topical capsaicin 0.025% p. 516, particularly in knee or hand osteoarthritis. In patients taking low-dose aspirin, other analgesic treatment options should be considered before using a NSAID.

Intra-articular corticosteroid injections can be considered as an adjunctive treatment for relief of moderate to severe pain associated with osteoarthritis.

Non-drug measures, such as weight reduction (in overweight or obese patients) and exercise including local muscle strengthening and aerobic exercise, should also be encouraged.

If self-management and drug treatment strategies are ineffective or unsuitable, consider referral to a specialist multidisciplinary team.

Glucosamine p. 1190, chondroitin, and topical rubefacients (which may contain nicotinate compounds, salicylate compounds, essential oils, and camphor) are not recommended for the treatment of osteoarthritis. Intra-articular preparations of hyaluronic acid and its derivatives are also available for osteoarthritis of the knee, but are not recommended. **A**

### Rheumatoid arthritis

12-Nov-2021

#### Description of condition

Rheumatoid arthritis is a chronic systemic inflammatory disease that causes persistent symmetrical joint synovitis (inflammation of the synovial membrane) typically of the small joints of the hands and feet, although any synovial joint can be affected. Synovitis presents as pain and prolonged stiffness that tends to be worse at rest or

following periods of inactivity, swelling, tenderness, and heat in the affected joints. Other symptoms of rheumatoid arthritis include rheumatoid nodules and non-specific symptoms such as malaise, fatigue, fever, and weight loss.

As the disease progresses, it can cause joint deformity and affect different organs of the body, such as the heart, lungs, and eyes; therefore early diagnosis and treatment of rheumatoid arthritis is essential to reduce the impact of the disease.

Palindromic rheumatism is a rare form of inflammatory arthritis which causes attacks of joint pain and swelling similar to rheumatoid arthritis, but the joints return to normal in between attacks. Patients with palindromic rheumatism may later develop rheumatoid arthritis.

#### Aims of treatment

The aims of treatment are to relieve the symptoms of rheumatoid arthritis, achieve disease remission or low disease activity if remission cannot be achieved, and to improve the patient's ability to perform daily activities.

#### Non-drug treatment

**EvGr** Patients with rheumatoid arthritis should have access to a multidisciplinary team, and may benefit from physiotherapy to encourage exercise, enhance flexibility of joints and strengthen muscles. Psychological interventions such as relaxation, stress management, and cognitive coping skills to support patients with their perception and management of their disease can also be offered. **A**

#### Drug treatment

**EvGr** All patients with suspected persistent synovitis of unknown cause should be referred to a specialist for advice as soon as possible to confirm diagnosis and evaluate disease activity.

In patients with newly diagnosed active rheumatoid arthritis, monotherapy with a conventional disease-modifying antirheumatic drug (DMARD) (oral methotrexate p. 987, leflunomide p. 1191, or sulfasalazine p. 44) should be given as first-line treatment; hydroxychloroquine sulfate p. 1190, a weak conventional DMARD, is an alternative in patients with mild rheumatoid arthritis or those with palindromic rheumatism. Treatment should be started as soon as possible, ideally within 3 months of onset of persistent symptoms, and the dose should be titrated to the maximum tolerated effective dose. **A**

Conventional DMARDs have a slow onset of action and can take 2–3 months to take effect. **EvGr** Consider short-term bridging treatment with a corticosteroid (by oral, intramuscular, or intra-articular administration) when starting treatment with a new conventional DMARD to

provide rapid symptomatic control, while waiting for the new DMARD to take effect. Short-term corticosteroids should also be given to rapidly decrease inflammation during flare-ups.

If the treatment target (remission or low disease activity) has not been achieved despite dose escalation on conventional DMARD monotherapy, offer combination therapy with additional conventional DMARDs (oral methotrexate p. 987, leflunomide p. 1191, sulfasalazine p. 44, or hydroxychloroquine sulfate p. 1190).

Treatment with a tumour necrosis factor (TNF) alpha inhibitor (adalimumab p. 1204, certolizumab pegol p. 1205, etanercept p. 1206, golimumab p. 1208, or infliximab p. 1209), other biological DMARD (abatacept p. 1203, sarilumab p. 1193, or tocilizumab p. 1195), or targeted synthetic DMARD (baricitinib p. 1198, filgotinib p. 1199, tofacitinib p. 1200, or upadacitinib p. 1202) is recommended if there has been an inadequate response to combination therapy with conventional DMARDs.  For further information on their use, see NICE pathway: **Rheumatoid arthritis** (available at: [pathways.nice.org.uk/pathways/rheumatoid-arthritis](https://pathways.nice.org.uk/pathways/rheumatoid-arthritis)).

**EvGr** Rituximab p. 955 in combination with methotrexate p. 987 is an option for patients with severe active rheumatoid arthritis who have had an inadequate response to, or are intolerant of other DMARDs, including at least one TNF alpha inhibitor.  For guidance on treatment options if rituximab is unsuitable, or there is an inadequate response to rituximab and other biological DMARDs, see NICE pathway: **Rheumatoid arthritis** (available at: [pathways.nice.org.uk/pathways/rheumatoid-arthritis](https://pathways.nice.org.uk/pathways/rheumatoid-arthritis)).

**EvGr** In patients with established rheumatoid arthritis, the long-term use of corticosteroids should only be continued if all other treatments options (including biological and targeted synthetic DMARDs) have been offered.

Patients with active rheumatoid arthritis should be monitored monthly until the treatment target (either remission or low disease activity) has been achieved, and all patients with rheumatoid arthritis should be reviewed annually. In patients who have maintained the treatment target for at least 1 year without corticosteroids, cautiously reducing drug doses to the lowest that are clinically effective, or tapering and stopping at least one drug if the patient is being treated with two or more DMARDs should be considered. 

Older conventional DMARDs such as sodium aurothiomalate (gold), azathioprine p. 902, ciclosporin p. 904 and penicillamine p. 1192 are no longer commonly used in practice due to the availability of newer, more effective drugs.

### Pain relief

**EvGr** Short-term use of an oral non-steroidal anti-inflammatory drug (NSAID) or a selective cyclo-oxygenase-2 inhibitor should be considered for additional control of pain and stiffness associated with rheumatoid arthritis. Patients should be offered a proton pump inhibitor to minimise associated gastrointestinal adverse effects. In patients already taking low-dose aspirin p. 133, other treatments should be considered before giving a NSAID. NSAIDs should be used at the lowest effective dose, and if possible, withdrawn when a good response to DMARDs is achieved. 

### Surgery

**EvGr** Surgery may be an option for some patients if drug treatment has failed to adequately manage persistent pain due to joint damage or other identifiable soft tissue causes, if there is worsening of joint function, progressive deformity, or persistent localised synovitis. 

### Useful Resources

Rheumatoid arthritis in adults: management. National Institute for Health and Care Excellence. NICE guideline 100. October 2020.  
[www.nice.org.uk/guidance/ng100](https://www.nice.org.uk/guidance/ng100)

## Spondyloarthritis

05-Aug-2021

### Description of condition

Spondyloarthritis refers to a group of inflammatory musculoskeletal conditions with shared features which affect both axial and peripheral joints. Most people with these conditions have either axial spondyloarthritis (which includes ankylosing spondylitis and non-radiographic axial spondyloarthritis) or psoriatic arthritis. Axial spondyloarthritis primarily affects the spine, in particular the sacroiliac joint.

Psoriatic arthritis may present in several forms, including involvement of small joints (in the hands and feet), large joints (particularly in the knees), or combinations of both. Psoriatic arthritis may also involve the axial joints, finger and toe joints, and inflammation of the connective tissue between tendon/ligament and bone.

Less common subgroups are enteropathic spondyloarthritis, which is associated with inflammatory bowel disease (Crohn's disease p. 38 and Ulcerative colitis p. 39), and reactive arthritis (a form of peripheral arthritis), which can occur following gastro-intestinal or genito-urinary infections.

### Aims of treatment

The aims of treatment are to relieve symptoms, slow the progression of the condition, and improve quality of life.

### Non-drug treatment

**EvGr** Patients who have difficulties with everyday activities should be referred to a specialist therapist (such as a physiotherapist, occupational therapist, hand therapist, orthotist or podiatrist). Hydrotherapy can be considered as an adjunctive therapy to manage pain and maintain or improve function for people with axial spondyloarthritis. 

### Drug treatment

#### Axial spondyloarthritis

**EvGr** For pain associated with axial spondyloarthritis, start one of the Non-steroidal anti-inflammatory drugs p. 1222 (NSAIDs) at the lowest effective dose. Clinical assessment, monitoring of risk factors, and the use of gastroprotective treatment should be considered. If an NSAID taken at the maximum tolerated dose for 2–4 weeks does not provide adequate pain relief, consider switching to a different NSAID.

A tumour necrosis factor (TNF) alpha inhibitor is recommended as an option for treating severe active **ankylosing spondylitis** or severe **non-radiographic axial spondyloarthritis** in patients whose disease has responded inadequately to, or who are intolerant of, NSAIDs. The choice of treatment should depend on factors such as patient preference and extra-articular involvement.

Treatment with another TNF-alpha inhibitor is recommended in those who cannot tolerate, or whose disease has not responded to, treatment with the first TNF-alpha inhibitor, or in those whose disease has stopped responding after an initial response.

Ixekizumab p. 1351 and secukinumab p. 1194 are recommended as options for treating active **ankylosing spondylitis** or **non-radiographic axial spondyloarthritis** in patients who have responded inadequately to NSAIDs and/or TNF-alpha inhibitors.

The response to treatment should be assessed after 12 to 20 weeks (depending on the treatment used) and should only be continued if there is clear evidence of response. [▲](#)

For further guidance on biological therapies for the treatment of axial spondyloarthritis, see NICE pathway: **Spondyloarthritis** (available at: [pathways.nice.org.uk/pathways/spondyloarthritis](http://pathways.nice.org.uk/pathways/spondyloarthritis)).

#### Psoriatic arthritis and other peripheral spondyloarthritis

[EvGr](#) Monotherapy with local corticosteroid injections should be considered for non-progressive **monoarthritis** (see Corticosteroids, inflammatory disorders p. 1245).

Standard disease-modifying antirheumatic drugs (DMARDs), such as methotrexate p. 987, leflunomide p. 1191 or sulfasalazine p. 44, can be used for patients with peripheral **polyarthritis**, **oligoarthritis**, or persistent or progressive **monoarthritis** associated with peripheral spondyloarthritis.

Standard DMARDs, such as methotrexate p. 987 or leflunomide p. 1191 can also be used for patients with **psoriatic arthritis**.

The choice of DMARD will depend on numerous factors such as the patient's circumstances (such as pregnancy planning and alcohol consumption), comorbidities (such as uveitis, psoriasis and inflammatory bowel disease), and potential side-effects.

If a standard DMARD taken at the maximum tolerated dose for at least 3 months does not provide adequate relief from symptoms, a switch to, or the addition of, another standard DMARD can be considered.

An NSAID can be used as an adjunct to standard DMARDs or biological DMARDs to manage symptoms. If NSAIDs do not provide adequate relief from symptoms, consider corticosteroid injections or short-term oral corticosteroid therapy as an adjunct to standard DMARDs or biological DMARDs to manage symptoms.

If extra-articular disease is adequately controlled by an existing standard DMARD but peripheral spondyloarthritis is not, consider adding another standard DMARD. [▲](#)

#### Further options for psoriatic arthritis

For guidance on further treatment options for patients with active or active and progressive psoriatic arthritis, such as targeted synthetic DMARDs and biological DMARDs, see NICE pathway: **Spondyloarthritis** (available at: [pathways.nice.org.uk/pathways/spondyloarthritis](http://pathways.nice.org.uk/pathways/spondyloarthritis)).

#### Reactive arthritis

[EvGr](#) After treating the initial infection, do not offer long-term (4 weeks or longer) treatment with an antibacterial solely to manage reactive arthritis caused by a gastro-intestinal or genito-urinary infection. [▲](#)

#### Useful Resources

Spondyloarthritis in over 16s: diagnosis and management. National Institute for Health and Care Excellence. Clinical Guideline NG65. February 2017.

## Rheumatic disease, suppressing drugs

12-Nov-2021

### Overview

Certain drugs such as those affecting the immune response can suppress the disease process in *rheumatoid arthritis* and *psoriatic arthritis*, see Rheumatoid arthritis p. 1186 or Spondyloarthritis p. 1187. *Systemic and discoid lupus erythematosus* are sometimes treated with chloroquine p. 669 or hydroxychloroquine sulfate p. 1190.

The choice of a disease-modifying antirheumatic drug (DMARD) should take into account co-morbidity and patient preference. Methotrexate p. 987, sulfasalazine p. 44,

intramuscular gold, and penicillamine p. 1192 are similar in efficacy. However, methotrexate or sulfasalazine may be better tolerated.

### Gold

**Gold**, given as sodium aurothiomalate, is licensed for active progressive rheumatoid arthritis; it must be given by deep intramuscular injection and the area gently massaged. A test dose must be given followed by doses at weekly intervals until there is definite evidence of remission. In patients who do respond, the interval between injections is then gradually increased to 4 weeks and treatment is continued for up to 5 years after complete remission. If relapse occurs the dosage frequency may be immediately increased and only once control has been obtained again should the dosage frequency be decreased; if no response is seen within 2 months, alternative treatment should be sought. It is important to avoid complete relapse since second courses of gold are not usually effective.

### Penicillamine

Penicillamine has a similar action to gold. More patients are able to continue treatment than with gold but side-effects are common.

Patients should be warned not to expect improvement for at least 6 to 12 weeks after treatment is initiated. Penicillamine should be discontinued if there is no improvement within 1 year.

### Sulfasalazine

Sulfasalazine has a beneficial effect in suppressing the inflammatory activity of rheumatoid arthritis. Sulfasalazine may also be used by specialists, in the management of psoriatic arthritis affecting peripheral joints [unlicensed]. Haematological abnormalities occur usually in the first 3 to 6 months of treatment and are reversible on cessation of treatment.

### Antimalarials

The antimalarial hydroxychloroquine sulfate is used to treat rheumatoid arthritis of mild inflammatory activity; chloroquine is also licensed for treating inflammatory disorders but is used much less frequently and is generally reserved for use if other drugs have failed.

Chloroquine and hydroxychloroquine sulfate are effective for mild systemic lupus erythematosus, particularly involving the skin and joints. These drugs should not be used for psoriatic arthritis. Chloroquine and hydroxychloroquine sulfate are better tolerated than gold or penicillamine. Retinopathy rarely occurs provided that the recommended doses are not exceeded; in the elderly it is difficult to distinguish drug-induced retinopathy from changes of ageing.

Mepacrine hydrochloride p. 540 is sometimes used in discoid lupus erythematosus [unlicensed].

### Drugs affecting the immune response

Methotrexate is a DMARD used in active rheumatoid arthritis. Methotrexate is usually given by mouth once a week, adjusted according to response. In patients who experience mucosal or gastro-intestinal side-effects with methotrexate, folic acid p. 1112 given every week [unlicensed], on a different day from the methotrexate, may help to reduce the frequency of such side-effects.

Leflunomide p. 1191 acts on the immune system as a DMARD. Its therapeutic effect starts after 4–6 weeks and improvement may continue for a further 4–6 months.

Drugs that affect the immune response are also used in the management of severe cases of *systemic lupus erythematosus* and other connective tissue disorders. They are often given in conjunction with corticosteroids for patients with severe or progressive renal disease. They may be used in cases of

*polymyositis* that are resistant to corticosteroids. They are used for their corticosteroid-sparing effect in patients whose corticosteroid requirements are excessive. Azathioprine p. 902 is usually used.

In the specialist management of psoriatic arthritis affecting peripheral joints, leflunomide, methotrexate, or azathioprine [unlicensed] may be used.

## Cytokine modulators

Cytokine modulators should be used under specialist supervision.

Adalimumab p. 1204, certolizumab pegol p. 1205, etanercept p. 1206, golimumab p. 1208, and infliximab p. 1209 inhibit the activity of tumour necrosis factor alpha (TNF- $\alpha$ ).

Adalimumab is licensed for moderate to severe active *rheumatoid arthritis* when response to other DMARDs (including methotrexate) has been inadequate; it is also licensed for severe, active, and progressive disease in adults not previously treated with methotrexate. In the treatment of *rheumatoid arthritis*, adalimumab should be used in combination with methotrexate, but it can be given alone if methotrexate is inappropriate. Adalimumab is also licensed for the treatment of active and progressive *psoriatic arthritis* and severe active *ankylosing spondylitis* that have not responded adequately to other DMARDs. It is also licensed for the treatment of severe axial spondyloarthritis without radiographic evidence of ankylosing spondylitis but with objective signs of inflammation, in patients who have had an inadequate response to, or are intolerant of NSAIDs. Adalimumab also has a role in inflammatory bowel disease and plaque psoriasis.

Certolizumab pegol is licensed for use in patients with moderate to severe active *rheumatoid arthritis* when response to DMARDs (including methotrexate) has been inadequate. Certolizumab pegol can be used in combination with methotrexate, or as a monotherapy if methotrexate is not tolerated or is contra-indicated. Certolizumab pegol is also licensed for the treatment of severe active *ankylosing spondylitis* in patients who have had an inadequate response to, or are intolerant of NSAIDs. It is also licensed for the treatment of severe active *axial spondyloarthritis*, without radiographic evidence of ankylosing spondylitis but with objective signs of inflammation, in patients who have had an inadequate response to, or are intolerant of NSAIDs.

Etanercept is licensed for the treatment of moderate to severe active *rheumatoid arthritis* either alone or in combination with methotrexate when the response to other DMARDs is inadequate and in severe, active and progressive *rheumatoid arthritis* in patients not previously treated with methotrexate. It is also licensed for the treatment of active and progressive *psoriatic arthritis* inadequately responsive to other DMARDs, and for severe *ankylosing spondylitis* inadequately responsive to conventional therapy. Etanercept also has a role in plaque psoriasis.

Golimumab is licensed in combination with methotrexate for the treatment of moderate to severe active *rheumatoid arthritis* when response to DMARD therapy (including methotrexate) has been inadequate; it is also licensed in combination with methotrexate for patients with severe, active, and progressive *rheumatoid arthritis* not previously treated with methotrexate. Golimumab is also licensed for the treatment of active and progressive *psoriatic arthritis*, as monotherapy or in combination with methotrexate, when response to DMARD therapy has been inadequate; it is also licensed for the treatment of severe active *ankylosing spondylitis* when there is an inadequate response to conventional treatment.

Infliximab p. 1209 is licensed for the treatment of active *rheumatoid arthritis* in combination with methotrexate p. 987 when the response to other DMARDs, including methotrexate, is inadequate; it is also licensed in

combination with methotrexate for patients not previously treated with methotrexate or other DMARDs who have severe, active, and progressive *rheumatoid arthritis*. Infliximab is also licensed for the treatment of *ankylosing spondylitis*, in patients with severe axial symptoms who have not responded adequately to conventional therapy, and in combination with methotrexate (or alone if methotrexate is not tolerated or is contra-indicated) for the treatment of active and progressive *psoriatic arthritis* which has not responded adequately to DMARDs.

Rituximab p. 955 is licensed in combination with methotrexate for the treatment of severe active *rheumatoid arthritis* in patients whose condition has not responded adequately to other DMARDs (including one or more tumour necrosis factor inhibitors) or who are intolerant of them. Rituximab has a role in malignant disease.

Abatacept p. 1203 prevents the full activation of T-lymphocytes. It is licensed for moderate to severe active *rheumatoid arthritis* in combination with methotrexate, in patients unresponsive to other DMARDs (including methotrexate or a tumour necrosis factor (TNF) inhibitor). Abatacept is not recommended for use in combination with TNF inhibitors.

Anakinra p. 1193 inhibits the activity of interleukin-1. Anakinra (in combination with methotrexate) is licensed for the treatment of *rheumatoid arthritis* which has not responded to methotrexate alone. Anakinra is not recommended for the treatment of *rheumatoid arthritis* except when used in a controlled long-term clinical study. Patients who are already receiving anakinra for *rheumatoid arthritis* should continue treatment until they and their specialist consider it appropriate to stop. Anakinra may also be appropriate for the treatment of systemic juvenile idiopathic arthritis and adult-onset Still's disease in certain individuals.

The Janus kinase inhibitors baricitinib p. 1198, filgotinib p. 1199, tofacitinib p. 1200, and upadacitinib p. 1202 are licensed for use as monotherapy or in combination with methotrexate for the treatment of moderate to severe active *rheumatoid arthritis* in patients who have had an inadequate response to, or who are intolerant to, one or more DMARDs.

Belimumab p. 911 inhibits the activity of B-lymphocyte stimulator. Belimumab is licensed as adjunctive therapy in patients with active, autoantibody-positive systemic lupus erythematosus with a high degree of disease activity despite standard therapy.

Sarilumab p. 1193 is a recombinant human monoclonal antibody that specifically binds to interleukin-6 receptors and blocks the activity of pro-inflammatory cytokines; it is licensed alone or in combination with methotrexate for the treatment of moderate to severe active *rheumatoid arthritis* in patients who have had an inadequate response to, or are intolerant to one or more DMARDs.

Secukinumab p. 1194 inhibits the activity of interleukin-17A. Secukinumab is licensed for the treatment of active *psoriatic arthritis*, in combination with methotrexate or alone, which has not responded adequately to DMARDs; it is also licensed for the treatment of *ankylosing spondylitis*, in patients who have not responded adequately to conventional therapy. Secukinumab also has a role in plaque psoriasis.

Tocilizumab p. 1195 antagonises the actions of interleukin-6. Tocilizumab is licensed for use in patients with moderate to severe active *rheumatoid arthritis* when response to at least one DMARD or tumour necrosis factor inhibitor has been inadequate, or in those who are intolerant of these drugs. Tocilizumab can be used in combination with methotrexate, or as monotherapy if methotrexate is not tolerated or is contra-indicated.

Ustekinumab p. 1197 inhibits the activity of interleukins 12 and 23. It is licensed for the treatment of active *psoriatic arthritis* (in combination with methotrexate or alone) in

patients who have had an inadequate response to one or more DMARDs.

### Juvenile idiopathic arthritis

Some children with *juvenile idiopathic arthritis* (juvenile chronic arthritis) do not require DMARDs. Methotrexate is effective; sulfasalazine [unlicensed] is an alternative but it should be avoided in *systemic-onset juvenile idiopathic arthritis*. Gold and penicillamine are no longer used. Cytokine modulators have a role in some forms of *juvenile idiopathic arthritis*.

**Other drugs used for Arthritis** Aceclofenac, p. 1224 · Celecoxib, p. 1225 · Cyclophosphamide, p. 968 · Diclofenac potassium, p. 1226 · Diclofenac sodium, p. 1227 · Etodolac, p. 1230 · Etoricoxib, p. 1230 · Flurbiprofen, p. 1231 · Guselkumab, p. 1350 · Ibuprofen, p. 1232 · Indometacin, p. 1235 · Ixekizumab, p. 1351 · Ketoprofen, p. 1236 · Mefenamic acid, p. 1238 · Meloxicam, p. 1238 · Nabumetone, p. 1239 · Naproxen, p. 1240 · Piroxicam, p. 1241 · Risankizumab, p. 1352 · Sulindac, p. 1242 · Tenoxicam, p. 1243 · Tiaprofenic acid, p. 1244

## CHONDROPROTECTIVE DRUGS

### Glucosamine

24-Nov-2020

- **DRUG ACTION** Glucosamine is a natural substance found in mucopolysaccharides, mucoproteins, and chitin.

#### ● INDICATIONS AND DOSE

##### ALATERIS®

**Symptomatic relief of mild to moderate osteoarthritis of the knee**

- ▶ BY MOUTH
- ▶ Adult: 1250 mg once daily, review treatment if no benefit after 2–3 months

##### DOLENIO®

**Symptomatic relief of mild to moderate osteoarthritis of the knee**

- ▶ BY MOUTH
- ▶ Adult: 1500 mg once daily, review treatment if no benefit after 2–3 months

##### GLUSARTEL®

**Symptomatic relief of mild to moderate osteoarthritis of the knee**

- ▶ BY MOUTH
- ▶ Adult: 1500 mg once daily, dose to be dissolved in at least 250 mL of water, review treatment if no benefit after 2–3 months

- **CAUTIONS** Asthma · impaired glucose tolerance · predisposition to cardiovascular disease
- **INTERACTIONS** → Appendix 1: glucosamine
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Constipation · diarrhoea · fatigue · gastrointestinal discomfort · headache · nausea
  - ▶ **Uncommon** Flushing · skin reactions
  - ▶ **Rare or very rare** Jaundice
  - ▶ **Frequency not known** Angioedema · asthma · diabetes mellitus · dizziness · hypercholesterolaemia · oedema · vomiting
- **ALLERGY AND CROSS-SENSITIVITY** <sup>[EVGR]</sup> Contra-indicated if patient has a shellfish allergy. 
- **PREGNANCY** Manufacturers advise avoid—no information available.
- **BREAST FEEDING** Manufacturers advise avoid—no information available.

#### ● MONITORING REQUIREMENTS

- ▶ Monitor blood-glucose concentration before treatment and periodically thereafter in patients with impaired glucose tolerance.
- ▶ Monitor cholesterol in patients with predisposition to cardiovascular disease.

#### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

##### Scottish Medicines Consortium (SMC) decisions

- ▶ **Glucosamine (Alateris®)** for relief of symptoms in mild to moderate osteoarthritis of the knee (June 2008) SMC No. 471/08 Not recommended
- ▶ **Glucosamine (Glusartel®)** for the relief of symptoms in mild to moderate osteoarthritis of the knee (August 2011) SMC No. 647/10 Not recommended
- **LESS SUITABLE FOR PRESCRIBING** Less suitable for prescribing—the mechanism of action is not understood and there is limited evidence to show it is effective.

- **MEDICINAL FORMS** No licensed medicines listed.

## DISEASE-MODIFYING ANTI-RHEUMATIC DRUGS

### Hydroxychloroquine sulfate

16-Mar-2022

#### ● INDICATIONS AND DOSE

**Active rheumatoid arthritis (administered on expert advice) | Systemic and discoid lupus erythematosus (administered on expert advice) | Dermatological conditions caused or aggravated by sunlight (administered on expert advice)**

- ▶ BY MOUTH
- ▶ Adult: 200–400 mg daily, daily maximum dose to be based on ideal body-weight; maximum 6.5 mg/kg per day

#### IMPORTANT SAFETY INFORMATION

**MHRA/CHM ADVICE: HYDROXYCHLOROQUINE, CHLOROQUINE: INCREASED RISK OF CARDIOVASCULAR EVENTS WHEN USED WITH MACROLIDE ANTIBIOTICS; REMINDER OF PSYCHIATRIC REACTIONS (FEBRUARY 2022)**

An observational study has shown that co-administration of azithromycin with hydroxychloroquine in patients with rheumatoid arthritis was associated with an increased risk of cardiovascular events (including angina or chest pain and heart failure) and mortality. Healthcare professionals are reminded to consider the benefits and risks of co-prescribing systemic azithromycin, or other systemic macrolides, with hydroxychloroquine. If such use cannot be avoided, caution is recommended in patients with risk factors for cardiac events and they should be advised to seek urgent medical attention if any signs or symptoms develop.

A European safety review has reported that psychiatric reactions associated with hydroxychloroquine (including rare cases of suicidal behaviour) typically occurred within the first month of treatment; events have been reported in patients with no history of psychiatric disorders. Healthcare professionals are reminded to be vigilant for psychiatric reactions, and counsel patients and carers to seek medical advice if any new or worsening mental health symptoms develop.

- **CAUTIONS** Acute porphyrias p. 1150 · diabetes (may lower blood glucose) · G6PD deficiency · maculopathy · may aggravate myasthenia gravis · may exacerbate psoriasis · neurological disorders (especially in those with a history of epilepsy—may lower seizure threshold) · severe gastrointestinal disorders
- **INTERACTIONS** → Appendix 1: hydroxychloroquine

### ● SIDE-EFFECTS

- ▶ **Common or very common** Abdominal pain · appetite decreased · diarrhoea · headache · mood altered · nausea · skin reactions · vision disorders · vomiting
- ▶ **Uncommon** Alopecia · anxiety · corneal oedema · dizziness · eye disorders · hair colour changes · neuromuscular dysfunction · retinopathy · seizure · tinnitus · vertigo
- ▶ **Frequency not known** Acute hepatic failure · agranulocytosis · anaemia · angioedema · bone marrow disorders · bronchospasm · cardiac conduction disorders · cardiomyopathy · confusion · delusions · depression · hallucination · hearing loss · hypoglycaemia · leucopenia · movement disorders · muscle weakness · myopathy · photosensitivity reaction · psychiatric disorder · psychosis · QT interval prolongation · reflexes absent · severe cutaneous adverse reactions (SCARs) · sleep disorder · suicidal behaviour · thrombocytopenia · tremor · ventricular hypertrophy

**Overdose** Hydroxychloroquine is very toxic in overdose; overdose is extremely hazardous and difficult to treat. Urgent advice from the National Poisons Information Service is essential. Life-threatening features include arrhythmias (which can have a very rapid onset) and convulsions (which can be intractable).

- **PREGNANCY** It is not necessary to withdraw an antimalarial drug during pregnancy if the rheumatic disease is well controlled; however, the manufacturer of hydroxychloroquine advises avoiding use.
- **BREAST FEEDING** Manufacturer advises use with caution—present in milk in small amounts. Specialist sources indicate risk of accumulation in infant due to long half-life; monitor infant for symptoms of uveitis e.g. eye redness or sensitivity to light.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution. **Dose adjustments** Manufacturer advises consider dose adjustment in severe impairment.
- **RENAL IMPAIRMENT** [EvGr](#) Caution—monitor plasma-hydroxychloroquine concentration in severe impairment. [M](#)  
**Dose adjustments** [EvGr](#) Consider dose adjustment in severe impairment. [M](#)
- **MONITORING REQUIREMENTS**
  - ▶ A review group convened by the Royal College of Ophthalmologists has updated guidelines on monitoring for chloroquine and hydroxychloroquine retinopathy (*Hydroxychloroquine and Chloroquine Retinopathy: Recommendations on Monitoring* 2020). Recent data has highlighted that hydroxychloroquine retinopathy is more common than previously reported. Annual monitoring (including fundus autofluorescence and spectral domain optical coherence tomography) is recommended in all patients who have taken hydroxychloroquine for longer than 5 years.
  - ▶ Annual monitoring may be started before 5 years of treatment if additional risk factors for retinotoxicity exist, such as concomitant tamoxifen therapy, impaired renal function (eGFR less than 60 mL/minute/1.73 m<sup>2</sup>), or high-dose therapy (more than 5 mg/kg/day of hydroxychloroquine sulfate).
- **PRESCRIBING AND DISPENSING INFORMATION** To avoid excessive dosage in obese patients, the dose of hydroxychloroquine should be calculated on the basis of ideal body-weight.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

### Tablet

CAUTIONARY AND ADVISORY LABELS 21

#### ▶ Hydroxychloroquine sulfate (Non-proprietary)

**Hydroxychloroquine sulfate 200 mg** Hydroxychloroquine 200mg tablets | 60 tablet [PoM](#) £32.49 DT = £3.41

**Hydroxychloroquine sulfate 300 mg** Hydroxychloroquine 300mg tablets | 30 tablet [PoM](#) £9.50 DT = £9.50

#### ▶ Quinoric (Bristol Laboratories Ltd)

**Hydroxychloroquine sulfate 200 mg** Quinoric 200mg tablets | 60 tablet [PoM](#) £5.10 DT = £3.41

## Leflunomide

19-May-2021

### ● INDICATIONS AND DOSE

**Moderate to severe active rheumatoid arthritis (specialist use only)**

#### ▶ BY MOUTH

- ▶ **Adult:** Initially 100 mg once daily for 3 days, then reduced to 10–20 mg once daily

**Active psoriatic arthritis (specialist use only)**

#### ▶ BY MOUTH

- ▶ **Adult:** Initially 100 mg once daily for 3 days, then reduced to 20 mg once daily

- **CONTRA-INDICATIONS** Serious infection · severe hypoproteinaemia · severe immunodeficiency
- **CAUTIONS** Anaemia (avoid if significant and due to causes other than rheumatoid or psoriatic arthritis) · history of tuberculosis · impaired bone-marrow function (avoid if significant and due to causes other than rheumatoid or psoriatic arthritis) · leucopenia (avoid if significant and due to causes other than rheumatoid or psoriatic arthritis) · thrombocytopenia (avoid if significant and due to causes other than rheumatoid or psoriatic arthritis)
- **INTERACTIONS** → Appendix 1: leflunomide
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Abdominal pain · accelerated hair loss · appetite decreased · asthenia · diarrhoea · dizziness · gastrointestinal disorders · headache · leucopenia · nausea · oral disorders · paraesthesia · peripheral neuropathy · skin reactions · tendon disorders · vomiting · weight decreased
  - ▶ **Uncommon** Anaemia · anxiety · electrolyte imbalance · hyperlipidaemia · taste altered · thrombocytopenia
  - ▶ **Rare or very rare** Agranulocytosis · eosinophilia · hepatic disorders · infection · pancreatitis · pancytopenia · respiratory disorders · sepsis · severe cutaneous adverse reactions (SCARs) · vasculitis
  - ▶ **Frequency not known** Cutaneous lupus erythematosus · hypouricaemia · pulmonary hypertension · renal failure
- **SIDE-EFFECTS, FURTHER INFORMATION** Discontinue treatment and institute washout procedure in case of serious side-effect (consult product literature).
  - ▶ **Hepatotoxicity** Potentially life-threatening hepatotoxicity reported usually in the first 6 months. Discontinue treatment (and institute washout procedure—consult product literature) or reduce dose according to liver-function abnormality; if liver-function abnormality persists after dose reduction, discontinue treatment and institute washout procedure.
- **CONCEPTION AND CONTRACEPTION** Effective contraception **essential** during treatment and for at least 2 years after treatment in women and at least 3 months after treatment in men (plasma concentration monitoring required; waiting time before conception may be reduced with washout procedure—consult product literature). The concentration of the active metabolite after washout should be less than 20 micrograms/litre (measured on 2

occasions 14 days apart) in men or women before conception—consult product literature.

- **PREGNANCY** Avoid—active metabolite teratogenic in *animal* studies.
- **BREAST FEEDING** Present in milk in *animal* studies—manufacturer advises avoid.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid—active metabolite may accumulate.
- **RENAL IMPAIRMENT** Manufacturer advises avoid in moderate or severe impairment—no information available.
- **PRE-TREATMENT SCREENING** Exclude pregnancy before treatment.
- **MONITORING REQUIREMENTS**
  - ▶ Monitor full blood count (including differential white cell count and platelet count) before treatment and every 2 weeks for 6 months then every 8 weeks.
  - ▶ Monitor liver function before treatment and every 2 weeks for first 6 months then every 8 weeks.
  - ▶ Monitor blood pressure.
- **TREATMENT CESSATION**

Washout Procedure The active metabolite persists for a long period; to aid drug elimination in case of serious adverse effect, or before starting another disease-modifying antirheumatic drug, or before conception, stop treatment and give *either* colestyramine p. 215 or charcoal, activated p. 1481. Procedure may be repeated as necessary.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Tablet

CAUTIONARY AND ADVISORY LABELS 4

##### ▶ Leflunomide (Non-proprietary)

**Leflunomide 10 mg** Leflunomide 10mg tablets | 30 tablet [PoM](#)  
£46.00 DT = £2.65

## Penicillamine

19-May-2021

- **DRUG ACTION** Penicillamine aids the elimination of copper ions in Wilson's disease (hepatolenticular degeneration).

### • INDICATIONS AND DOSE

#### Severe active rheumatoid arthritis (administered on expert advice)

##### ▶ BY MOUTH

- ▶ **Adult:** Initially 125–250 mg daily for 1 month, then increased in steps of 125–250 mg, at intervals of not less than 4 weeks; maintenance 500–750 mg daily in divided doses, then reduced in steps of 125–250 mg every 12 weeks, dose reduction attempted only if remission sustained for 6 months; maximum 1.5 g per day
- ▶ **Elderly:** Initially up to 125 mg daily for 1 month, then increased in steps of up to 125 mg, at intervals of at least 4 weeks; maximum 1 g per day

#### Wilson's disease

##### ▶ BY MOUTH

- ▶ **Adult:** 1.5–2 g daily in divided doses, adjusted according to response, to be taken before food; maintenance 0.75–1 g daily, a dose of 2 g daily should not be continued for more than one year; maximum 2 g per day

- ▶ **Elderly:** 20 mg/kg daily in divided doses, adjusted according to response

#### Autoimmune hepatitis (used rarely; after disease controlled with corticosteroids)

##### ▶ BY MOUTH

- ▶ **Adult:** Initially 500 mg daily in divided doses, to be increased slowly over 3 months; maintenance 1.25 g daily

#### Cystinuria, therapeutic

##### ▶ BY MOUTH

- ▶ **Adult:** 1–3 g daily in divided doses, to be adjusted to maintain urinary cystine below 200 mg/litre, to be taken before food

#### Cystinuria, prophylactic

##### ▶ BY MOUTH

- ▶ **Adult:** 0.5–1 g daily, maintain urinary cystine below 300 mg/litre and adequate fluid intake (at least 3 litres daily), to be taken at bedtime
- ▶ **Elderly:** Minimum dose to maintain urinary cystine below 200 mg/litre is recommended

- **CONTRA-INDICATIONS** Lupus erythematosus
- **CAUTIONS** Neurological involvement in Wilson's disease
- **INTERACTIONS** → Appendix 1: penicillamine
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Proteinuria · thrombocytopenia
  - ▶ **Rare or very rare** Alopecia · breast enlargement (males and females) · connective tissue disorders · haematuria (discontinue immediately if cause unknown) · hypersensitivity · oral disorders · skin reactions
  - ▶ **Frequency not known** Agranulocytosis · aplastic anaemia · appetite decreased · fever · glomerulonephritis · Goodpasture's syndrome · haemolytic anaemia · increased risk of infection · jaundice cholestatic · leucopenia · lupus-like syndrome · myasthenia gravis · nausea · nephrotic syndrome · neurological deterioration in Wilson's Disease · neutropenia · pancreatitis · polymyositis · pulmonary haemorrhage · rash (consider dose reduction) · respiratory disorders · Stevens-Johnson syndrome · taste loss (mineral supplements not recommended) · vomiting · yellow nail syndrome

**SIDE-EFFECTS, FURTHER INFORMATION** Proteinuria occurs in up to 30% of patients—can be a sign of immune-mediated nephropathy. Discontinue immediately if nephrotoxicity occurs.

Nausea and rash more common early in treatment if full dose used from initiation. Delayed rash can occur after months or years of treatment—manufacturer advises reduce dose.

- **ALLERGY AND CROSS-SENSITIVITY** Patients who are hypersensitive to penicillin may react rarely to penicillamine.
- **PREGNANCY** Fetal abnormalities reported rarely; avoid if possible.
- **BREAST FEEDING** Manufacturer advises avoid unless potential benefit outweighs risk—no information available.
- **RENAL IMPAIRMENT** [EvGr](#) Caution in mild impairment; avoid in moderate to severe impairment. [M](#)
- **Dose adjustments** [EvGr](#) Dose reduction may be required in mild impairment depending on indication (consult product literature). [M](#)
- **MONITORING REQUIREMENTS**
  - ▶ Consider withdrawal if platelet count falls below 120 000/mm<sup>3</sup> or white blood cells below 2500/mm<sup>3</sup> or if 3 successive falls within reference range (can restart at reduced dose when counts return to within reference range but permanent withdrawal necessary if recurrence of leucopenia or thrombocytopenia).

- ▶ Blood counts, including platelets, and urine examinations should be carried out before starting treatment and then every 1 or 2 weeks for the first 2 months then every 4 weeks to detect blood disorders and proteinuria (they should also be carried out in the week after any dose increase).
- ▶ A reduction in platelet count calls for discontinuation with subsequent re-introduction at a lower dosage and then, if possible, gradual increase.
- ▶ Longer intervals may be adequate in cystinuria and Wilson's disease.
- **PATIENT AND CARER ADVICE** Counselling on the symptoms of blood disorders is advised. Warn patient and carers to tell doctor immediately if sore throat, fever, infection, non-specific illness, unexplained bleeding and bruising, purpura, mouth ulcers, or rashes develop.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral solution

**Tablet**

CAUTIONARY AND ADVISORY LABELS 6, 22

▶ **Penicillamine (Non-proprietary)**

**Penicillamine 125 mg** Penicillamine 125mg tablets | 56 tablet (POM)  
 £63.89 DT = £63.66

**Penicillamine 250 mg** Penicillamine 250mg tablets |  
 56 tablet (POM) £137.47 DT = £126.46

**IMMUNOSUPPRESSANTS > INTERLEUKIN INHIBITORS****Anakinra**

04-May-2021

● **INDICATIONS AND DOSE**

**Rheumatoid arthritis (in combination with methotrexate) which has not responded to methotrexate alone (specialist use only)**

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Adult: 100 mg once daily

**Cryopyrin-associated periodic syndromes (specialist use only)**

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Adult: 1–2 mg/kg daily, for severe cryopyrin-associated periodic syndromes, usual maintenance is 3–4 mg/kg daily, up to a maximum of 8 mg/kg daily

**Still's disease (specialist use only)**

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Adult (body-weight up to 49 kg): 1–2 mg/kg daily
- ▶ Adult (body-weight 50 kg and above): 100 mg daily

- **CONTRA-INDICATIONS** Active infection · neutropenia (absolute neutrophil count less than  $1.5 \times 10^9$ /litre)—do not initiate · pre-existing malignancy
- **CAUTIONS** Elderly · history of asthma (increased risk of serious infection) · history of recurrent infection · predisposition to infection
- **INTERACTIONS** → Appendix 1: anakinra
- **SIDE-EFFECTS**
  - ▶ Common or very common Headache · infection · neutropenia · thrombocytopenia
  - ▶ Uncommon Skin reactions
  - ▶ Frequency not known Hepatitis
- **SIDE-EFFECTS, FURTHER INFORMATION** Neutropenia reported commonly—discontinue if neutropenia develops.
- **PREGNANCY** Manufacturer advises avoid.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment.
- **RENAL IMPAIRMENT** Manufacturer advises caution in moderate impairment.

**Dose adjustments** Manufacturer advises consider alternate day dosing in severe impairment.

- **PRE-TREATMENT SCREENING** Manufacturer advises patients should be screened for latent tuberculosis and viral hepatitis prior to initiation of treatment.
- **MONITORING REQUIREMENTS**
  - ▶ Manufacturer advises monitor neutrophil count before treatment, then every month for 6 months, then every 3 months thereafter.
  - ▶ When used for Cryopyrin-associated periodic syndromes Manufacturer advises monitor for CNS inflammation (including ear and eye tests) 3 months after starting treatment, then every 6 months until effective treatment doses have been identified, then yearly thereafter.
  - ▶ When used for Still's disease Manufacturer advises consider routine monitoring of hepatic enzymes during the first month of treatment.
- **PRESCRIBING AND DISPENSING INFORMATION**
  - ▶ When used for Cryopyrin-associated periodic syndromes or Still's disease The manufacturer of *Kineret*<sup>®</sup> has provided a *Guide for Healthcare Professionals*.
- **PATIENT AND CARER ADVICE**

Blood disorders Patients should be instructed to seek medical advice if symptoms suggestive of neutropenia (such as fever, sore throat, bruising or, bleeding) develop.

  - ▶ When used for Still's disease A patient card and patient booklet should be provided.
  - ▶ When used for Cryopyrin-associated periodic syndromes A patient booklet should be provided.
- **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

  - ▶ Anakinra for treating Still's disease (March 2021) NICE TA685 Recommended with restrictions

**Scottish Medicines Consortium (SMC) decisions**

  - ▶ Anakinra (*Kineret*<sup>®</sup>) for rheumatoid arthritis (November 2002) SMC No. 05/02 Not recommended
  - ▶ Anakinra (*Kineret*<sup>®</sup>) for the treatment of Still's disease, as monotherapy or in combination with other anti-inflammatory drugs and disease-modifying antirheumatic drugs (October 2018) SMC No. SMC2104 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**▶ **Kineret** (Swedish Orphan Biovitrum Ltd)

**Anakinra 150 mg per 1 ml** Kineret 100mg/0.67ml solution for injection pre-filled syringes | 7 pre-filled disposable injection (POM)  
 £183.61 DT = £183.61

**Sarilumab**

11-Nov-2020

- **DRUG ACTION** Sarilumab is a recombinant human monoclonal antibody that specifically binds to interleukin-6 receptors and blocks the activity of pro-inflammatory cytokines.

● **INDICATIONS AND DOSE**

**Moderate-to-severe active rheumatoid arthritis in patients who have had an inadequate response to, or are intolerant to one or more disease-modifying anti-rheumatic drugs (as monotherapy or in combination with methotrexate) (specialist use only)**

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Adult: 200 mg every 2 weeks, for dose adjustments due to neutropenia, thrombocytopenia, or liver enzyme elevations—consult product literature

- **CONTRA-INDICATIONS** Do not initiate if absolute neutrophil count less than  $2 \times 10^9$ /litre · do not initiate if

platelet count less than  $150 \times 10^3$ /microlitre · do not initiate if serum transaminases (ALT or AST) greater than 1.5 times the upper limit of normal · severe active infection

- **CAUTIONS** Chronic or recurrent infection · elderly (increased risk of infection) · history of diverticulitis · history of intestinal ulceration · history of serious or opportunistic infection · predisposition to infection
- CAUTIONS, FURTHER INFORMATION**
  - ▶ Infection Manufacturer advises caution in patients who have been exposed to tuberculosis, or who have lived in or travelled to areas of endemic tuberculosis or mycoses. Patients with latent tuberculosis should complete anti-tuberculosis therapy before initiation of sarilumab; consider anti-tuberculosis therapy before initiation of sarilumab in patients with a past history of latent or active tuberculosis in whom an adequate course of treatment cannot be confirmed, and for those with a negative test for latent tuberculosis but have risk factors for tuberculosis—consultation with a tuberculosis specialist may be appropriate.
 

Manufacturer advises patients should be brought up-to-date with current immunisation schedule before initiating treatment.
- **INTERACTIONS** → Appendix 1: monoclonal antibodies
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Dyslipidaemia · increased risk of infection · neutropenia · thrombocytopenia
  - ▶ **Frequency not known** Hypersensitivity · skin reactions
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception in women of childbearing potential during treatment and for up to 3 months after treatment.
- **PREGNANCY** Manufacturer advises avoid unless essential—limited information available.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid (no information available).
- **PRE-TREATMENT SCREENING** Manufacturer advises that patients should be evaluated for tuberculosis before treatment.
- **MONITORING REQUIREMENTS**
  - ▶ Manufacturer advises monitor for signs and symptoms of infection; monitor neutrophil count 4 to 8 weeks after treatment initiation and according to clinical judgement thereafter—discontinue if absolute neutrophil count less than  $0.5 \times 10^9$ /litre.
  - ▶ Manufacturer advises monitor platelet count 4 to 8 weeks after treatment initiation and according to clinical judgement thereafter—discontinue if platelet count less than  $50 \times 10^3$ /microlitre.
  - ▶ Manufacturer advises monitor hepatic transaminases (ALT and AST) 4 to 8 weeks after treatment initiation and every 3 months thereafter, and consider other liver function tests if clinically indicated—discontinue if ALT is greater than 5 times the upper limit of normal.
  - ▶ Manufacturer advises monitor lipid profile approximately 4 to 8 weeks after treatment initiation and approximately every 6 months thereafter—hyperlipidaemia should be managed according to clinical guidelines.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises to avoid injecting into areas of the skin that are tender, damaged, or have bruises or scars; patients may self-administer *Kevzara*<sup>®</sup>, after appropriate training in subcutaneous injection technique.
- **PRESCRIBING AND DISPENSING INFORMATION** Sarilumab is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1; manufacturer advises to record the brand name and batch number after each administration.

- **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator (2–8°C) and protect from light—consult product literature for further information regarding storage outside refrigerator.
- **PATIENT AND CARER ADVICE** Manufacturer advises patients should be advised to seek immediate medical attention if symptoms of a hypersensitivity reaction occur. Self-administration Manufacturer advises patients and their carers should be given training in subcutaneous injection technique if appropriate.
 

Alert card An alert card should be provided.

Missed doses Manufacturer advises if a dose is more than 3 days late, the missed dose should not be taken and the next dose should be taken at the normal time.
- **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

  - ▶ **Sarilumab for moderate-to-severe rheumatoid arthritis (November 2017)** NICE TA485 Recommended with restrictions
  - ▶ **Scottish Medicines Consortium (SMC) decisions**
  - ▶ **Sarilumab (Kevzara<sup>®</sup>) in combination with methotrexate, or as monotherapy for the treatment of moderately to severely active rheumatoid arthritis in adult patients who have responded inadequately to, or who are intolerant to one or more disease modifying anti rheumatic drugs (April 2018)** SMC No. 1314/18 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

## Secukinumab

07-Nov-2021

- **DRUG ACTION** Secukinumab is a recombinant human monoclonal antibody that selectively binds to cytokine interleukin-17A (IL-17A) and inhibits the release of proinflammatory cytokines and chemokines.

#### ● INDICATIONS AND DOSE

##### Ankylosing spondylitis (initiated by a specialist)

#### ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: 150 mg every week for 5 doses, then maintenance 150 mg every month, dose may be increased to 300 mg according to clinical response. Review treatment if no response within 16 weeks of initial dose

##### Non-radiographic axial spondyloarthritis (initiated by a specialist)

#### ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: 150 mg every week for 5 doses, then maintenance 150 mg every month, review treatment if no response within 16 weeks of initial dose

##### Psoriatic arthritis (initiated by a specialist)

#### ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: 150 mg every week for 5 doses, then maintenance 150 mg every month, dose may be increased to 300 mg according to clinical response. Review treatment if no response within 16 weeks of initial dose

**Psoriatic arthritis with concomitant moderate to severe plaque psoriasis or if inadequate response to anti-TNF $\alpha$  treatment (initiated by a specialist)**

► BY SUBCUTANEOUS INJECTION

- Adult: 300 mg every week for 5 doses, then maintenance 300 mg every month, review treatment if no response within 16 weeks of initial dose

**Plaque psoriasis (initiated by a specialist)**

► BY SUBCUTANEOUS INJECTION

- Adult: 300 mg every week for 5 doses, then maintenance 300 mg every month, review treatment if no response within 16 weeks of initial dose

- **CONTRA-INDICATIONS** Severe active infection
- **CAUTIONS** Chronic infection · history of recurrent infection · Inflammatory bowel disease (discontinue if signs or symptoms develop, or an exacerbation occurs) · predisposition to infection (discontinue if new serious infection develops)
- CAUTIONS, FURTHER INFORMATION**
- Tuberculosis [\[EVGr\]](#) Anti-tuberculosis therapy should be considered before starting secukinumab in patients with latent tuberculosis. [\[M\]](#)
- **INTERACTIONS** → Appendix 1: monoclonal antibodies
- **SIDE-EFFECTS**
- **Common or very common** Diarrhoea · fatigue · headache · increased risk of infection · nausea · rhinorrhoea
- **Uncommon** Conjunctivitis · inflammatory bowel disease · neutropenia (usually mild and reversible) · skin reactions
- **Rare or very rare** Anaphylactic reaction
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises that women of childbearing potential should use effective contraception during treatment and for at least 20 weeks after stopping treatment.
- **PREGNANCY** Manufacturer advises avoid—no information available.
- **BREAST FEEDING** Manufacturer advises avoid during treatment and for up to 20 weeks after discontinuing treatment—no information available.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises to take the syringe or pen out of the refrigerator 20 minutes before administration and to avoid injecting into areas of the skin that show psoriasis. Patients may self-administer *Cosentyx*<sup>®</sup> pre-filled pen.
- **PRESCRIBING AND DISPENSING INFORMATION** Secukinumab is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1; [\[EVGr\]](#) record the brand name and batch number after each administration. [\[M\]](#)
- **PATIENT AND CARER ADVICE** Self-administration Patients and their carers should be given training in subcutaneous injection technique. Infection Patients and their carers should be advised to seek immediate medical attention if symptoms of infection develop during treatment with secukinumab.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
- NICE decisions**
- Secukinumab for treating moderate to severe plaque psoriasis (July 2015) NICE TA350 Recommended with restrictions
- Secukinumab for active ankylosing spondylitis after treatment with non-steroidal anti-inflammatory drugs or TNF-alpha inhibitors (September 2016) NICE TA407 Recommended with restrictions
- Secukinumab for treating non-radiographic axial spondyloarthritis (July 2021) NICE TA719 Recommended with restrictions

- Certolizumab pegol and secukinumab for treating active psoriatic arthritis after inadequate response to DMARDs (May 2017) NICE TA445 Recommended with restrictions
- Scottish Medicines Consortium (SMC) decisions**
- Secukinumab (*Cosentyx*<sup>®</sup>) for treatment of moderate to severe plaque psoriasis in adults who are candidates for systemic therapy (June 2015) SMC No. 1054/15 Recommended with restrictions
- Secukinumab (*Cosentyx*<sup>®</sup>) for the treatment of active non-radiographic axial spondyloarthritis with objective signs of inflammation as indicated by elevated C-reactive protein and/or magnetic resonance imaging evidence in adults who have responded inadequately to non-steroidal anti-inflammatory drugs (January 2021) SMC No. SMC2308 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

EXCIPIENTS: May contain Polysorbates

- *Cosentyx* (Novartis Pharmaceuticals UK Ltd)

**Secukinumab 150 mg per 1 ml** *Cosentyx* 150mg/1ml solution for injection pre-filled pens | 2 pre-filled disposable injection [\[PoM\]](#) £1,218.78

## Tocilizumab

26-Apr-2022

- **DRUG ACTION** Tocilizumab is a recombinant humanised monoclonal antibody that binds to interleukin-6 receptors thereby blocking the activity of pro-inflammatory cytokines.

● **INDICATIONS AND DOSE**

**Rheumatoid arthritis (initiated by a specialist)**

► BY INTRAVENOUS INFUSION

- Adult: 8 mg/kg every 4 weeks (max. per dose 800 mg), for dose adjustments in patients with liver enzyme abnormalities, or low absolute neutrophil or platelet count—consult product literature

► BY SUBCUTANEOUS INJECTION

- Adult: 162 mg once weekly, administer to abdomen, thigh or upper arm, for dose adjustments in patients with liver enzyme abnormalities, or low absolute neutrophil or platelet count—consult product literature

**Giant cell arteritis (initiated by a specialist)**

► BY SUBCUTANEOUS INJECTION

- Adult: 162 mg once weekly, administer to abdomen, thigh or upper arm, for dose adjustments in patients with liver enzyme abnormalities, or low absolute neutrophil or platelet count—consult product literature, not to be used alone for acute relapses; review need for treatment beyond 52 weeks

**COVID-19 in hospitalised patients who are receiving systemic corticosteroids and require oxygen supplementation or mechanical ventilation (initiated by a specialist)**

► BY INTRAVENOUS INFUSION

- Adult: 8 mg/kg (max. per dose 800 mg) for 1 dose

**Cytokine release syndrome (initiated by a specialist)**

► BY INTRAVENOUS INFUSION

- Adult (body-weight up to 30 kg): 12 mg/kg (max. per dose 800 mg), if no improvement in symptoms after the first dose, up to 3 additional doses may be administered.

The interval between the infusions should be at least

8 hours

continued →

- ▶ Adult (body-weight 30 kg and above): 8 mg/kg (max. per dose 800 mg), if no improvement in symptoms after the first dose, up to 3 additional doses may be administered. The interval between the infusions should be at least 8 hours

#### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: TOCILIZUMAB (ROACTEMRA®): RARE RISK OF SERIOUS LIVER INJURY INCLUDING CASES REQUIRING TRANSPLANTATION (JULY 2019)

There have been reports of rare but serious cases of drug-induced liver injury, including acute liver failure and hepatitis, in patients treated with tocilizumab; some cases required liver transplantation. Serious liver injury was reported from 2 weeks to more than 5 years after initiation of tocilizumab. Healthcare professionals are advised to initiate tocilizumab treatment with caution in patients with active hepatic disease or hepatic impairment. Patients and their carers should be advised to seek immediate medical attention if signs and symptoms of liver injury, such as tiredness, abdominal pain, and jaundice, occur. For further information see *Cautions, Contra-indications and Monitoring requirements.*

#### ● CONTRA-INDICATIONS

**GENERAL CONTRA-INDICATIONS** Severe active infection (unless used for the treatment of COVID-19)

#### SPECIFIC CONTRA-INDICATIONS

- ▶ When used for covid-19 Do not initiate if absolute neutrophil count less than  $1 \times 10^9$ /litre · do not initiate if hepatic enzymes more than 10 times the upper limit of normal · do not initiate if platelet count less than  $50 \times 10^3$ /microlitre
- ▶ When used for giant cell arteritis Do not initiate if hepatic enzymes more than 5 times the upper limit of normal · do not initiate in patients not previously treated with RoActemra® if absolute neutrophil count less than  $2 \times 10^7$ /litre
- ▶ When used for rheumatoid arthritis Do not initiate if hepatic enzymes more than 5 times the upper limit of normal · do not initiate in patients not previously treated with RoActemra® if absolute neutrophil count less than  $2 \times 10^9$ /litre

#### ● CAUTIONS

- ▶ When used for covid-19 History of recurrent or chronic infection (interrupt treatment if serious infection occurs) · predisposition to infection (interrupt treatment if serious infection occurs)
- ▶ When used for giant cell arteritis Hepatic enzymes more than 1.5 times the upper limit of normal · history of diverticulitis · history of intestinal ulceration · history of recurrent or chronic infection (interrupt treatment if serious infection occurs) · low absolute neutrophil count (discontinue treatment if neutrophil count less than  $0.5 \times 10^9$ /litre) · platelet count less than  $100 \times 10^3$ /microlitre (discontinue treatment if platelet count less than  $50 \times 10^3$ /microlitre) · predisposition to infection (interrupt treatment if serious infection occurs)
- ▶ When used for rheumatoid arthritis Hepatic enzymes more than 1.5 times the upper limit of normal · history of diverticulitis · history of intestinal ulceration · history of recurrent or chronic infection (interrupt treatment if serious infection occurs) · low absolute neutrophil count (discontinue treatment if neutrophil count less than  $0.5 \times 10^9$ /litre) · platelet count less than  $100 \times 10^3$ /microlitre (discontinue treatment if platelet count less than  $50 \times 10^3$ /microlitre) · predisposition to infection (interrupt treatment if serious infection occurs)

#### CAUTIONS, FURTHER INFORMATION

- ▶ Tuberculosis
- ▶ When used for rheumatoid arthritis or giant cell arteritis [EvGr](#) Patients with latent tuberculosis should be treated with standard therapy before starting tocilizumab. [M](#)
- **INTERACTIONS** → Appendix 1: monoclonal antibodies
- **SIDE-EFFECTS**
- ▶ **Common or very common** Abdominal pain · anxiety · conjunctivitis · constipation · cough · diarrhoea · dizziness · dyslipidaemia · dyspnoea · gastrointestinal disorders · headache · hypersensitivity · hypertension · hypofibrinogenaemia · hypokalaemia · increased risk of infection · insomnia · leucopenia · nausea · neutropenia · oral disorders · peripheral oedema · skin reactions · weight increased
- ▶ **Uncommon** Hypothyroidism · nephrolithiasis
- ▶ **Rare or very rare** Hepatic disorders · Stevens-Johnson syndrome
- ▶ **Frequency not known** Infusion related reaction · pancytopenia · respiratory disorders · sepsis
- **CONCEPTION AND CONTRACEPTION** Effective contraception required during and for 3 months after treatment.
- **PREGNANCY** Manufacturer advises avoid unless essential—*toxicity in animal studies.*
- **BREAST FEEDING** Specialist sources indicate use with caution. Monitor breast-fed infants for adequate feeding, fever, frequent infections, diarrhoea, or unusual behaviour.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution—consult product literature.
- **RENAL IMPAIRMENT**
- ▶ With intravenous use Manufacturer advises monitor renal function closely in moderate-to-severe impairment—no information available.
- ▶ With subcutaneous use Manufacturer advises monitor renal function closely in severe impairment—no information available.
- **PRE-TREATMENT SCREENING**
- ▶ Tuberculosis
- ▶ When used for rheumatoid arthritis or giant cell arteritis Patients should be evaluated for tuberculosis before treatment.
- **MONITORING REQUIREMENTS**
- ▶ When used for rheumatoid arthritis or giant cell arteritis [EvGr](#) Monitor lipid profile 4–8 weeks after starting treatment and then as indicated. Monitor for demyelinating disorders. Monitor hepatic transaminases before starting treatment, every 4–8 weeks for first 6 months of treatment, then every 12 weeks thereafter. Monitor neutrophil and platelet count before starting treatment, 4–8 weeks after starting treatment and then as indicated. [M](#)
- **DIRECTIONS FOR ADMINISTRATION**
- ▶ With intravenous use For *intravenous infusion*, manufacturer advises give intermittently in Sodium chloride 0.9%; dilute requisite dose to a volume of 100 mL with infusion fluid and give over 1 hour.
- ▶ With subcutaneous use For *subcutaneous injection*, manufacturer advises rotate injection site and avoid skin that is tender, damaged or scarred. Patients may self-administer RoActemra®, after appropriate training in subcutaneous injection technique.
- **PRESCRIBING AND DISPENSING INFORMATION** Tocilizumab is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines and Biosimilar medicines*, under Guidance on prescribing p. 1; record the brand name and batch number after each administration.
- **HANDLING AND STORAGE** Manufacturer advises protect from light and store in a refrigerator (2–8°C)—consult

product literature for further information regarding storage conditions outside refrigerator and after preparation of the infusion.

- **PATIENT AND CARER ADVICE** Patients and carers should be advised to seek immediate medical attention if symptoms of infection occur, or if symptoms of diverticular perforation such as abdominal pain, haemorrhage, or fever accompanying change in bowel habits occur.

An alert card and patient information brochure highlighting important safety information should be provided.

**Missed doses** ▶ With subcutaneous use If an injection administered once every 2 weeks or once every 3 weeks is missed and it is within 7 days of the scheduled dose, it should be administered as soon as possible and the next dose taken at the normal time.

**Driving and skilled tasks** Patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of dizziness.

- **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

## Ustekinumab

25-Nov-2020

- **INDICATIONS AND DOSE**

**Plaque psoriasis (specialist use only)**

- ▶ **BY SUBCUTANEOUS INJECTION**

- ▶ **Adult (body-weight up to 100 kg):** Initially 45 mg, then 45 mg after 4 weeks, then 45 mg every 12 weeks, consider discontinuation if no response within 28 weeks
- ▶ **Adult (body-weight 100 kg and above):** Initially 90 mg, then 90 mg after 4 weeks, then 90 mg every 12 weeks, consider discontinuation if no response within 28 weeks

**Psoriatic arthritis (specialist use only)**

- ▶ **BY SUBCUTANEOUS INJECTION**

- ▶ **Adult:** Initially 45 mg, then 45 mg after 4 weeks, then 45 mg every 12 weeks, consider discontinuation if no response within 28 weeks, higher doses of 90 mg may be used in patients with body-weight over 100 kg

**Crohn's disease (specialist use only) | Ulcerative colitis (specialist use only)**

- ▶ **INITIALLY BY INTRAVENOUS INFUSION**

- ▶ **Adult (body-weight up to 56 kg):** 260 mg, then (by subcutaneous injection) 90 mg after 8 weeks, then (by subcutaneous injection) 90 mg every 12 weeks, if response is inadequate 8 weeks after first subcutaneous dose, or response is lost, dosing frequency may be increased—consult product literature; consider discontinuation if no response within 16 weeks of initial dose or increase in dosing frequency
- ▶ **Adult (body-weight 56–85 kg):** 390 mg, then (by subcutaneous injection) 90 mg after 8 weeks, then (by subcutaneous injection) 90 mg every 12 weeks, if response is inadequate 8 weeks after first subcutaneous dose, or response is lost, dosing frequency may be increased—consult product literature; consider discontinuation if no response within 16 weeks of initial dose or increase in dosing frequency
- ▶ **Adult (body-weight 86 kg and above):** 520 mg, then (by subcutaneous injection) 90 mg after 8 weeks, then (by subcutaneous injection) 90 mg every 12 weeks, if response is inadequate 8 weeks after first subcutaneous dose, or response is lost, dosing frequency may be increased—consult product literature; consider discontinuation if no response within 16 weeks of initial dose or increase in dosing frequency

- **CONTRA-INDICATIONS** Active infection
- **CAUTIONS** Development of malignancy · elderly · history of malignancy · predisposition to infection · start appropriate treatment if widespread erythema and skin exfoliation develop, and stop ustekinumab treatment if exfoliative dermatitis suspected

**CAUTIONS, FURTHER INFORMATION**

- ▶ **Tuberculosis** Active tuberculosis should be treated with standard treatment for at least 2 months before starting ustekinumab. Patients who have previously received adequate treatment for tuberculosis can start ustekinumab but should be monitored every 3 months for possible recurrence. In patients without active tuberculosis but who were previously not treated adequately, chemoprophylaxis should ideally be completed before starting ustekinumab. In patients at high risk of tuberculosis who cannot be assessed by tuberculin skin test, chemoprophylaxis can be given concurrently with ustekinumab.
- **INTERACTIONS** → Appendix 1: monoclonal antibodies
- **SIDE-EFFECTS**
- ▶ **Common or very common** Arthralgia · asthenia · back pain · diarrhoea · dizziness · headache · increased risk of infection · myalgia · nausea · oropharyngeal pain · skin reactions · vomiting
- ▶ **Uncommon** Depression · facial paralysis · hypersensitivity (may be delayed) · nasal congestion
- ▶ **Rare or very rare** Respiratory disorders
- ▶ **Frequency not known** Increased risk of cancer
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during treatment and for 15 weeks after stopping treatment.
- **PREGNANCY** Avoid.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in animal studies.

### ● PRE-TREATMENT SCREENING

Tuberculosis Patients should be evaluated for tuberculosis before treatment.

### ● MONITORING REQUIREMENTS

- ▶ Monitor for non-melanoma skin cancer, especially in patients with a history of PUVA treatment or prolonged immunosuppressant therapy, or those over 60 years of age.
- ▶ Monitor for signs and symptoms of exfoliative dermatitis or erythrodermic psoriasis.

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises for *intravenous infusion* (*Stelara*®), give intermittently in Sodium Chloride 0.9%; dilute requisite dose with infusion fluid to final volume of 250 mL and give over at least 1 hour through an in-line low-protein binding filter (pore size 0.2 micron); use within 4 hours of dilution.

### ● PATIENT AND CARER ADVICE

Exfoliative dermatitis Patients should be advised to seek prompt medical attention if symptoms suggestive of exfoliative dermatitis or erythrodermic psoriasis (such as increased redness and shedding of skin over a larger area of the body) develop.

Tuberculosis Patients should be advised to seek medical attention if symptoms suggestive of tuberculosis (e.g. persistent cough, weight loss, and fever) develop.

### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### NICE decisions

- ▶ **Ustekinumab for the treatment of adults with moderate to severe psoriasis** (updated March 2017) NICE TA180 Recommended with restrictions
- ▶ **Ustekinumab for treating active psoriatic arthritis** (updated March 2017) NICE TA340 Recommended with restrictions
- ▶ **Ustekinumab for moderately to severely active Crohn's disease after previous treatment** (July 2017) NICE TA456 Recommended
- ▶ **Ustekinumab for treating moderately to severely active ulcerative colitis** (June 2020) NICE TA633 Recommended with restrictions

#### Scottish Medicines Consortium (SMC) decisions

- ▶ **Ustekinumab (*Stelara*®) alone or in combination with methotrexate, for the treatment of active psoriatic arthritis in adult patients when the response to previous non-biological disease-modifying anti-rheumatic drug therapy has been inadequate** (March 2014) SMC No. 944/14 Recommended with restrictions
- ▶ **Ustekinumab (*Stelara*®) for the treatment of adult patients with moderately to severely active Crohn's disease who have had an inadequate response with, lost response to, or were intolerant to either conventional therapy or a tumour necrosis factor-alpha antagonist or have medical contra-indications to such therapies** (July 2017) SMC No. 1250/17 Recommended
- ▶ **Ustekinumab (*Stelara*®) for the treatment of adult patients with moderately to severely active ulcerative colitis who have had an inadequate response with, lost response to, or were intolerant to either conventional therapy or a biologic or have medical contra-indications to such therapies** (April 2020) SMC No. SMC2250 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

CAUTIONARY AND ADVISORY LABELS 10

- ▶ **Stelara** (Janssen-Cilag Ltd)

**Ustekinumab 90 mg per 1 ml** Stelara 90mg/1ml solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £2,147.00 (Hospital only)

Stelara 45mg/0.5ml solution for injection vials | 1 vial [PoM] £2,147.00 (Hospital only)

Stelara 45mg/0.5ml solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £2,147.00 (Hospital only)

#### Solution for infusion

CAUTIONARY AND ADVISORY LABELS 10

- ▶ **Stelara** (Janssen-Cilag Ltd)

**Ustekinumab 5 mg per 1 ml** Stelara 130mg/26ml concentrate for solution for infusion vials | 1 vial [PoM] £2,147.00 (Hospital only)

## IMMUNOSUPPRESSANTS > JAK INHIBITORS

### Baricitinib

25-Jun-2021

- **DRUG ACTION** Baricitinib selectively and reversibly inhibits the Janus-associated tyrosine kinases JAK1 and JAK2.

#### ● INDICATIONS AND DOSE

**Moderate-to-severe active rheumatoid arthritis (initiated by a specialist)**

- ▶ BY MOUTH

- ▶ Adult 18-74 years: 4 mg once daily, for dose adjustments or treatment interruption due to side-effects, or dose reduction due to history of infection or sustained control of disease activity—consult product literature
- ▶ Adult 75 years and over: 2 mg once daily, for dose adjustments or treatment interruption due to side-effects—consult product literature

**Moderate-to-severe atopic eczema (initiated by a specialist)**

- ▶ BY MOUTH

- ▶ Adult 18-74 years: 4 mg once daily, for dose adjustments or treatment interruption due to side-effects, or dose reduction due to history of infection or sustained control of disease activity—consult product literature, consider discontinuation of treatment if no response after 8 weeks
- ▶ Adult 75 years and over: 2 mg once daily, for dose adjustments or treatment interruption due to side-effects—consult product literature, consider discontinuation of treatment if no response after 8 weeks

#### IMPORTANT SAFETY INFORMATION

**MHRA/CHM ADVICE: BARICITINIB (*OLUMIANT*®): RISK OF VENOUS THROMBOEMBOLISM (MARCH 2020)**

Clinical trial data have shown that baricitinib is associated with an increased frequency of venous thromboembolism (VTE) compared with placebo. Healthcare professionals are advised to use baricitinib with caution in patients with additional risk factors for VTE. Patients should be informed of the signs and symptoms of VTE before starting treatment and advised to seek urgent medical attention if these develop. Baricitinib should be permanently discontinued if clinical features of VTE occur.

**MHRA/CHM ADVICE: BARICITINIB (*OLUMIANT*®): INCREASED RISK OF DIVERTICULITIS, PARTICULARLY IN PATIENTS WITH RISK FACTORS (AUGUST 2020)**

A European review of worldwide data concluded that baricitinib is associated with an increased risk of diverticulitis. The MHRA recommends healthcare professionals use baricitinib with caution in patients with pre-existing diverticular disease, and in patients on long-term concomitant medicines associated with an increased risk of diverticulitis (including non-steroidal anti-inflammatory drugs, corticosteroids, and opioids). Patients should be advised to seek immediate medical attention if they experience severe abdominal pain especially accompanied with fever, nausea and vomiting, or other symptoms of diverticulitis. Prompt evaluation is needed of any patients treated with baricitinib who present with new-onset abdominal signs and symptoms to identify early diverticulitis or gastrointestinal perforation.

- **CONTRA-INDICATIONS** Absolute lymphocyte count less than  $0.5 \times 10^9$  cells/litre (do not initiate) · absolute neutrophil count less than  $1 \times 10^9$  cells/litre (do not initiate) · haemoglobin less than 8 g/dL (do not initiate) · tuberculosis (active)
- **CAUTIONS** 75 years and older · active, chronic, or recurrent infection (interrupt treatment if no response to standard therapy) · risk factors for deep-vein thrombosis or pulmonary embolism · risk of diverticulitis · risk of viral reactivation (consult product literature)
- **CAUTIONS, FURTHER INFORMATION**
  - ▶ Tuberculosis [EvGr](#) Consider anti-tuberculosis therapy prior to initiation of baricitinib in patients with previously untreated latent tuberculosis. [M](#)
  - ▶ Immunisation [EvGr](#) Patients should receive all recommended vaccinations before starting treatment; live vaccines are not recommended immediately before, or during, treatment. [M](#)
- **INTERACTIONS** → Appendix 1: baricitinib
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Abdominal pain · dyslipidaemia · headache · herpes zoster (interrupt treatment) · increased risk of infection · nausea · skin reactions · thrombocytosis
  - ▶ **Uncommon** Deep vein thrombosis (discontinue permanently) · facial swelling · neutropenia · pulmonary embolism (discontinue permanently) · weight increased
  - ▶ **Frequency not known** Gastrointestinal perforation · hypersensitivity (discontinue) · lymphoproliferative disorder · reactivation of infections · venous thromboembolism (discontinue permanently)
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during and for at least 1 week after treatment in women of child-bearing potential.
- **PREGNANCY** Manufacturer advises avoid—toxicity in *animal* studies.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal* studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid in severe impairment (no information available).
- **RENAL IMPAIRMENT** Manufacturer advises avoid if creatinine clearance less than 30 mL/minute. **Dose adjustments** Manufacturer advises reduce dose to 2 mg once daily if creatinine clearance 30–60 mL/minute. See p. 21.
- **PRE-TREATMENT SCREENING** Manufacturer advises patients should be evaluated for tuberculosis and viral hepatitis before treatment.
- **MONITORING REQUIREMENTS**
  - ▶ Manufacturer advises monitor patients with hepatitis B surface antibody and hepatitis B core antibody, without hepatitis B surface antigen, for expression of hepatitis B virus (HBV) DNA—if HBV DNA detected, consult liver specialist for advice.
  - ▶ Manufacturer advises monitor lipid profile 12 weeks after treatment initiation—hyperlipidaemia should be managed according to international clinical guidelines; monitor hepatic transaminases routinely—interrupt treatment if drug-induced liver injury suspected.
  - ▶ Manufacturer advises monitor for haematological abnormalities; interrupt treatment if absolute neutrophil count less than  $1 \times 10^9$  cells/litre, absolute lymphocyte count less than  $0.5 \times 10^9$  cells/litre, or haemoglobin less than 8 g/dL—treatment may be restarted when levels return above these values.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
- **NICE decisions**
  - ▶ Baricitinib for moderate to severe rheumatoid arthritis (August 2017) NICE TA466 Recommended with restrictions

- ▶ Baricitinib for treating moderate to severe atopic dermatitis (March 2021) NICE TA681 Recommended with restrictions
- **Scottish Medicines Consortium (SMC) decisions**
  - ▶ Baricitinib (*Olumiant*<sup>®</sup>) for treatment of moderate to severe active rheumatoid arthritis (RA) in adult patients who have responded inadequately to, or who are intolerant to one or more disease-modifying anti-rheumatic drugs (DMARDs). Baricitinib may be used as monotherapy or in combination with methotrexate (September 2017) SMC No. 1265/17 Recommended with restrictions
  - ▶ Baricitinib (*Olumiant*<sup>®</sup>) for the treatment of moderate to severe atopic dermatitis in adult patients who are candidates for systemic therapy (June 2021) SMC No. SMC2337 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Tablet**

- ▶ **Olumiant** (Eli Lilly and Company Ltd) ▼

Baricitinib 2 mg Olumiant 2mg tablets | 28 tablet [PoM](#) £805.56 DT = £805.56

Baricitinib 4 mg Olumiant 4mg tablets | 28 tablet [PoM](#) £805.56 DT = £805.56

**Filgotinib**

06-Oct-2021

- **DRUG ACTION** Filgotinib is a selective inhibitor of the Janus-associated tyrosine kinase JAK1.

**INDICATIONS AND DOSE****Rheumatoid arthritis (initiated by a specialist)**

- ▶ BY MOUTH

▶ Adult 18–74 years: 200 mg once daily

▶ Adult 75 years and over: Initially 100 mg once daily, any further dose increase to 200 mg once daily should be based on the particular clinical circumstances of the patient

- **CONTRA-INDICATIONS** Absolute lymphocyte count less than  $0.5 \times 10^9$  cells/litre · absolute neutrophil count less than  $1 \times 10^9$  cells/litre · haemoglobin less than 8 g/dL · serious infection (active) · tuberculosis (active)
- **CAUTIONS** 75 years and older · history of serious or opportunistic infection · infection (chronic or recurrent) · malignancy · predisposition to infection · risk factors for venous thromboembolism · risk of viral reactivation · tuberculosis exposure

**CAUTIONS, FURTHER INFORMATION**

- ▶ Tuberculosis [EvGr](#) Anti-tuberculosis therapy should be initiated in patients with latent tuberculosis before starting filgotinib. Use filgotinib with caution in patients who have travelled or resided in areas of endemic tuberculosis or endemic mycoses, or who have had previous exposure to tuberculosis. [M](#)
- ▶ Immunisation [EvGr](#) Patients should receive all recommended vaccinations before starting treatment; live vaccines are not recommended immediately before, or during, treatment. [M](#)
- ▶ Venous thromboembolism [EvGr](#) Use with caution in patients with risk factors for deep-vein thrombosis or pulmonary embolism—discontinue and initiate appropriate treatment promptly. [M](#)
- **INTERACTIONS** → Appendix 1: filgotinib
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Dizziness · increased risk of infection · nausea
  - ▶ **Uncommon** Hypercholesterolaemia · neutropenia
  - ▶ **Frequency not known** Embolism and thrombosis · malignancy · non-melanoma skin cancer · reactivation of infections
- **CONCEPTION AND CONTRACEPTION** [EvGr](#) Females of childbearing potential should use effective contraception

during and for at least 1 week after stopping treatment. Impaired sperm production, decreased fertility and effects on male reproductive organs were observed in *animal* studies; the effect on humans is unknown (including if reversible)—male patients should be informed of the potential risk of reduced fertility or infertility before initiating treatment. No effects on female fertility were observed in *animal* studies. 

- **PREGNANCY**  Avoid—toxicity in *animal* studies. 
- **BREAST FEEDING**  Avoid—no information available. 

- **HEPATIC IMPAIRMENT**  Avoid in severe impairment (no information available). 

- **RENAL IMPAIRMENT**  Caution in moderate or severe impairment; avoid in end-stage renal disease (no information available). 

**Dose adjustments**  A dose of 100 mg once daily is recommended in moderate or severe impairment. 

- **PRE-TREATMENT SCREENING**  Patients should be evaluated for tuberculosis and viral hepatitis before treatment. 

#### ● **MONITORING REQUIREMENTS**

- ▶  Monitor for signs and symptoms of infections (including tuberculosis) during and after treatment—consider treatment interruption until the infection is controlled.
- ▶ Monitor for haematological abnormalities before and during treatment; interrupt treatment if absolute neutrophil count less than  $1 \times 10^9$  cells/litre, absolute lymphocyte count less than  $0.5 \times 10^9$  cells/litre, or haemoglobin less than 8 g/dL—treatment may be restarted when levels return above these values.
- ▶ Monitor lipid profile 12 weeks after treatment initiation and as needed thereafter—hyperlipidaemia should be managed according to international clinical guidelines.
- ▶ Monitor for viral reactivation (including viral hepatitis and herpes zoster) during treatment; interrupt treatment if herpes zoster infection develops and resume once resolved.
- ▶ Periodic skin examination is recommended in patients at increased risk for skin cancer. 

- **PRESCRIBING AND DISPENSING INFORMATION** The manufacturer of *Jyseleca*<sup>®</sup> has provided a guide for healthcare professionals.

- **PATIENT AND CARER ADVICE** For *Jyseleca*<sup>®</sup>, a patient alert card should be provided.

- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website

#### **NICE decisions**

- ▶ **Filgotinib for treating moderate to severe rheumatoid arthritis** (February 2021) NICE TA676 Recommended with restrictions

#### **Scottish Medicines Consortium (SMC) decisions**

## Tofacitinib

16-Nov-2021

- **DRUG ACTION** Tofacitinib selectively inhibits the Janus-associated tyrosine kinases JAK1 and JAK3.

#### ● **INDICATIONS AND DOSE**

**Moderate to severe rheumatoid arthritis (specialist use only) | Psoriatic arthritis (specialist use only)**

▶ **BY MOUTH USING FILM-COATED TABLETS**

- ▶ **Adult:** 5 mg twice daily, for dose interruption or treatment discontinuation due to side-effects—consult product literature

▶ **BY MOUTH USING MODIFIED-RELEASE TABLETS**

- ▶ **Adult:** 11 mg once daily, for dose interruption or treatment discontinuation due to side-effects—consult product literature

**Moderate to severe ulcerative colitis (specialist use only)**

▶ **BY MOUTH USING FILM-COATED TABLETS**

- ▶ **Adult:** Initially 10 mg twice daily for 8 weeks, then maintenance 5 mg twice daily, if an adequate therapeutic response is not achieved after 8 weeks, the initial dose can be extended for an additional 8 weeks, discontinue treatment if no response after 16 weeks, for dose adjustments due to side-effects, decreased response during maintenance treatment, or following treatment interruption—consult product literature

#### **DOSE ADJUSTMENTS DUE TO INTERACTIONS**

- ▶  Reduce total daily dose by half with concurrent use of potent CYP3A4 inhibitors, or concurrent use of moderate CYP3A4 inhibitor and a potent CYP2C19 inhibitor, or concurrent use of drugs which are both moderate CYP3A4 and potent CYP2C19 inhibitors. 

#### **DOSE EQUIVALENCE AND CONVERSION**

- ▶ A twice-daily dose of *Xeljanz*<sup>®</sup> 5 mg film-coated tablets is equivalent to a once-daily dose of *Xeljanz*<sup>®</sup> 11 mg modified-release tablets—they may be switched between each other on the day after the last dose of either tablet.

#### **IMPORTANT SAFETY INFORMATION**

**MHRA/CHM ADVICE: TOFACITINIB (*XELJANZ*<sup>®</sup>): NEW MEASURES TO MINIMISE RISK OF VENOUS THROMBOEMBOLISM AND OF SERIOUS AND FATAL INFECTIONS (MARCH 2020)**

New recommendations have been issued following a European safety review that found a dose-dependent increased risk of serious venous thromboembolism (VTE) associated with tofacitinib. Healthcare professionals are advised to use tofacitinib with caution in any patients with known risk factors for VTE, in addition to the underlying disease. In patients with risk factors being treated for ulcerative colitis, the use of tofacitinib 10 mg twice daily as maintenance treatment is **not** recommended, unless no suitable alternative is available. In **all** patients being treated for rheumatoid or psoriatic arthritis, the recommended daily dose of tofacitinib should not be exceeded—see *Indications and Dose*. Patients should be informed of the signs and symptoms of VTE before starting treatment and advised to seek urgent medical attention if these develop. Tofacitinib should be permanently discontinued if signs of VTE occur.

Tofacitinib was also found to increase the risk of serious and fatal infections, with higher rates of infections in the elderly. Use of tofacitinib in patients older than 65 years is **not** recommended, unless no suitable alternative is available.

**MHRA/CHM ADVICE: TOFACITINIB (*XELJANZ*<sup>®</sup>): NEW MEASURES TO MINIMISE RISK OF MAJOR ADVERSE CARDIOVASCULAR EVENTS AND MALIGNANCIES (OCTOBER 2021)**

Data from a clinical trial of patients aged 50 years or older with rheumatoid arthritis and at least one cardiovascular risk factor showed an increased incidence

of major adverse cardiovascular events and malignancies, particularly lung cancer and lymphoma (excluding non-melanoma skin cancer), when comparing tofacitinib with tumour necrosis factor alpha inhibitors. Healthcare professionals are advised to inform patients of the risks associated with tofacitinib treatment and should only use tofacitinib in patients over 65 years of age, in patients who are current or past smokers, patients with other cardiovascular risk factors (such as diabetes or coronary artery disease), and patients with other malignancy risk factors if no suitable alternatives are available.

- **CONTRA-INDICATIONS** Absolute lymphocyte count less than 750 cells/mm<sup>3</sup> (do not initiate) · absolute neutrophil count less than 1000 cells/mm<sup>3</sup> (do not initiate) · active infection including localised infection · active tuberculosis · haemoglobin less than 9 g/dL (do not initiate) · risk factors for venous thromboembolism (high doses)
- **CAUTIONS** Elderly (over 65 years) · predisposition to infection · previous or current malignancy · raised serum transaminases (particularly in combination with potentially hepatotoxic drugs) · recurrent infection or history of serious infection · risk factors for venous thromboembolism · risk of diverticulitis · risk of gastrointestinal perforation (new onset abdominal signs and symptoms should be evaluated promptly) · risk of viral reactivation (consult product literature) · tuberculosis exposure
- CAUTIONS, FURTHER INFORMATION**
  - ▶ Immunisation [EVR](#) Patients should receive all recommended vaccinations before starting treatment (consider prophylactic varicella zoster vaccination); live vaccines should be given at least 2 weeks, but preferably 4 weeks, before treatment initiation—consult product literature. [M](#)
  - ▶ Tuberculosis [EVR](#) Anti-tuberculosis therapy should be initiated in patients with latent tuberculosis before starting tofacitinib. Consider anti-tuberculosis therapy prior to initiation of tofacitinib in patients with a history of previously untreated latent or active tuberculosis or in patients at risk of tuberculosis infection. Use tofacitinib with caution in patients who have travelled or resided in areas of endemic mycoses, or who have had previous exposure to tuberculosis. [M](#)
- **INTERACTIONS** → Appendix 1: tofacitinib
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Abdominal pain (more common in patients with juvenile idiopathic arthritis) · anaemia · cough (more common in patients with juvenile idiopathic arthritis) · diarrhoea · dyspepsia · fatigue · fever (more common in patients with juvenile idiopathic arthritis) · gastrointestinal disorders · headache (more common in patients with juvenile idiopathic arthritis) · hypertension · increased risk of infection · influenza (more common in patients with juvenile idiopathic arthritis) · joint disorders · nausea (more common in patients with juvenile idiopathic arthritis) · peripheral oedema · pharyngitis (more common in patients with juvenile idiopathic arthritis) · sinusitis (more common in patients with juvenile idiopathic arthritis) · skin reactions · vomiting (more common in patients with juvenile idiopathic arthritis)
  - ▶ **Uncommon** Decreased leucocytes · deep vein thrombosis (discontinue permanently) · dehydration · dyslipidaemia · dyspnoea · hepatic steatosis · insomnia · ligament sprain · muscle strain · musculoskeletal pain · myocardial infarction · neoplasms · neutropenia · paraesthesia · pulmonary embolism (discontinue permanently) · sinus congestion · tendinitis · venous thromboembolism (discontinue permanently) · viral infection (more common

in patients with juvenile idiopathic arthritis) · weight increased

- ▶ **Rare or very rare** Meningitis cryptococcal · sepsis
- ▶ **Frequency not known** Angioedema · BK virus infection · interstitial lung disease (including fatal cases) · malignancy · reactivation of infections · ulcerative colitis aggravated
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during and for at least 4 weeks after treatment in women of child-bearing potential.
- **PREGNANCY** Manufacturer advises avoid—toxicity in *animal* studies.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal* studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in moderate impairment; avoid in severe impairment. **Dose adjustments** Manufacturer advises dose reduction in moderate impairment—consult product literature.
- **RENAL IMPAIRMENT** **Dose adjustments** Manufacturer advises reduce dose in severe impairment—consult product literature.
- **PRE-TREATMENT SCREENING** Manufacturer advises patients should be evaluated for tuberculosis and viral hepatitis before treatment.
- **MONITORING REQUIREMENTS**
  - ▶ Manufacturer advises monitor for signs and symptoms of infection during and after treatment.
  - ▶ Manufacturer advises periodic skin examination in patients at increased risk for skin cancer.
  - ▶ Manufacturer advises monitor liver function routinely; monitor lipid profile 8 weeks after treatment initiation.
  - ▶ Manufacturer advises monitor lymphocytes at baseline and every 3 months thereafter; neutrophils and haemoglobin should be monitored at baseline, after 4 to 8 weeks of treatment and every 3 months thereafter.
- **DIRECTIONS FOR ADMINISTRATION** [EVR](#) *Xeljanz*<sup>®</sup> film-coated tablets may be crushed and taken with water. [M](#)
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
- NICE decisions**
  - ▶ Tofacitinib for moderate-to-severe rheumatoid arthritis (October 2017) NICE TA480 Recommended with restrictions
  - ▶ Tofacitinib for treating active psoriatic arthritis after inadequate response to DMARDs (October 2018) NICE TA543 Recommended with restrictions
  - ▶ Tofacitinib for moderately to severely active ulcerative colitis (November 2018) NICE TA547 Recommended with restrictions
- Scottish Medicines Consortium (SMC) decisions**
  - ▶ Tofacitinib citrate (*Xeljanz*<sup>®</sup>) in combination with methotrexate for the treatment of moderate to severe active rheumatoid arthritis in adult patients who have responded inadequately to, or who are intolerant to one or more disease-modifying anti-rheumatic drugs (DMARDs). Tofacitinib can be given as monotherapy in case of intolerance to methotrexate or when treatment with methotrexate is inappropriate (February 2018) SMC No. 1298/18 Recommended with restrictions
  - ▶ Tofacitinib (*Xeljanz*<sup>®</sup>) in combination with methotrexate for the treatment of active psoriatic arthritis in adult patients who have had an inadequate response or who have been intolerant to a prior disease-modifying antirheumatic drug (DMARD) therapy (January 2019) SMC No. SMC2116 Recommended with restrictions
  - ▶ Tofacitinib (*Xeljanz*<sup>®</sup>) for the treatment of adult patients with moderately to severely active ulcerative colitis who have had an inadequate response, lost response, or were intolerant to either conventional therapy or a biologic agent (February 2019) SMC No. SMC2122 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

## Upadacitinib

05-May-2022

- **DRUG ACTION** Upadacitinib is a selective and reversible inhibitor of the Janus-associated tyrosine kinase JAK1.

#### INDICATIONS AND DOSE

**Rheumatoid arthritis (specialist use only) | Psoriatic arthritis (specialist use only)**

▶ BY MOUTH

- ▶ Adult: 15 mg once daily, for treatment interruption due to side-effects—consult product literature, consider discontinuation of treatment if no response after 12 weeks

**Ankylosing spondylitis (specialist use only)**

▶ BY MOUTH

- ▶ Adult: 15 mg once daily, for treatment interruption due to side-effects—consult product literature, consider discontinuation of treatment if no response after 16 weeks

**Atopic eczema (specialist use only)**

▶ BY MOUTH

- ▶ Adult: 15 mg once daily, for treatment interruption due to side-effects—consult product literature, consider discontinuation of treatment if no response after 12 weeks, alternatively 30 mg once daily, for treatment interruption due to side-effects—consult product literature, consider discontinuation of treatment if no response after 12 weeks
- ▶ Elderly: 15 mg once daily, for treatment interruption due to side-effects—consult product literature, consider discontinuation of treatment if no response after 12 weeks

#### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: UPADACITINIB (*RINVOQ*<sup>®</sup>): ADVICE FOR VENOUS THROMBOEMBOLISM (MARCH 2020)

Cases of deep vein thrombosis and pulmonary embolism have been reported in patients taking upadacitinib.

Healthcare professionals are advised to use upadacitinib with caution in patients with risk factors for VTE.

Patients should be informed of the signs and symptoms of VTE before starting treatment and advised to seek urgent medical attention if these develop. Upadacitinib should be discontinued if clinical features of VTE occur.

- **CONTRA-INDICATIONS** Absolute lymphocyte count less than  $0.5 \times 10^9$  cells/litre · absolute neutrophil count less than  $1 \times 10^9$  cells/litre · active serious infection including localised infection · active tuberculosis · haemoglobin less than 8 g/dL
- **CAUTIONS** 65 years and over · chronic or recurrent infection · diverticular disease (including patients with increased risk of diverticulitis) · history of serious or opportunistic infection · known malignancy · patients at high risk for deep-vein thrombosis or pulmonary embolism · predisposition to infection · risk of viral reactivation (consult product literature) · tuberculosis exposure

#### CAUTIONS, FURTHER INFORMATION

- ▶ Immunisation [EvGr] Patients should receive all recommended vaccinations, including prophylactic varicella-zoster vaccination, before starting treatment; live vaccines are not recommended. ⚠
- ▶ Tuberculosis [EvGr] Consider anti-tuberculosis therapy prior to initiation of upadacitinib in patients with previously untreated latent tuberculosis or in patients at risk of tuberculosis infection. Use upadacitinib with caution in patients who have travelled or resided in areas of endemic tuberculosis or endemic mycoses. ⚠
- **INTERACTIONS** → Appendix 1: upadacitinib
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Abdominal pain · anaemia · cough · dyslipidaemia · fatigue · fever · headache · increased risk of infection · nausea · neutropenia · skin reactions · weight increased
  - ▶ **Frequency not known** Deep vein thrombosis (discontinue and initiate treatment promptly) · malignancy · meningitis bacterial · non-melanoma skin cancer · pulmonary embolism (discontinue and initiate treatment promptly) · reactivation of infections · venous thromboembolism (discontinue and initiate treatment promptly)
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises females of childbearing potential should use effective contraception during and for 4 weeks after treatment.
- **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in animal studies.
- **HEPATIC IMPAIRMENT** [EvGr] Avoid in severe impairment (no information available). ⚠
- **RENAL IMPAIRMENT** [EvGr] Caution in severe impairment (limited information available). ⚠
- Dose adjustments**
  - ▶ When used for Atopic eczema [EvGr] Reduce dose to 15 mg once daily in severe impairment. ⚠
- **PRE-TREATMENT SCREENING** Manufacturer advises patients should be evaluated for tuberculosis and viral hepatitis before treatment.
- **MONITORING REQUIREMENTS**
  - ▶ [EvGr] Monitor for signs and symptoms of infection during and after treatment.
  - ▶ Periodic skin examination is recommended in patients at increased risk of skin cancer.
  - ▶ Monitor neutrophils, lymphocytes, and haemoglobin before and during treatment (no later than 12 weeks after initiation), and as clinically indicated thereafter; interrupt treatment if absolute neutrophil count less than  $1 \times 10^9$  cells/litre, absolute lymphocyte count less than  $0.5 \times 10^9$  cells/litre, or haemoglobin less than 8 g/dL—treatment may be restarted when levels return above these values.
  - ▶ Monitor hepatic transaminases before starting treatment, and as clinically indicated thereafter—interrupt treatment if drug-induced liver injury suspected; monitor lipids 12 weeks after starting treatment, and then as clinically indicated. ⚠
- **PRESCRIBING AND DISPENSING INFORMATION** The manufacturer of *Rinvoq*<sup>®</sup> has provided a guide for healthcare professionals.
- **PATIENT AND CARER ADVICE** A patient alert card should be provided.

  - ▶ **Upadacitinib** for treating active psoriatic arthritis after inadequate response to DMARDs (February 2022) NICE TA768 Recommended with restrictions
- Scottish Medicines Consortium (SMC) decisions**
- ▶ **Upadacitinib (Rinvoq<sup>®</sup>)** for treatment of moderate to severe active rheumatoid arthritis in adult patients who have responded inadequately to, or who are intolerant to one or more disease-modifying antirheumatic drugs (February 2021) SMC No. SMC2315 Recommended with restrictions
  - ▶ **Upadacitinib (Rinvoq<sup>®</sup>)** for the treatment of active psoriatic arthritis in adult patients who have responded inadequately to, or who are intolerant to one or more disease-modifying antirheumatic drugs. Upadacitinib may be used as monotherapy or in combination with methotrexate (May 2021) SMC No. SMC2361 Recommended with restrictions
  - ▶ **Upadacitinib (Rinvoq<sup>®</sup>)** for the treatment of moderate to severe atopic dermatitis in adults and adolescents 12 years and older who are candidates for systemic therapy (April 2022) SMC No. SMC2417 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Modified-release tablet

CAUTIONARY AND ADVISORY LABELS 25

- ▶ **Rinvoq** (AbbVie Ltd) ▼

**Upadacitinib (as Upadacitinib hemihydrate) 15 mg** Rinvoq 15mg modified-release tablets | 28 tablet [PoM](#) £805.56 (Hospital only)

**Upadacitinib (as Upadacitinib hemihydrate) 30 mg** Rinvoq 30mg modified-release tablets | 28 tablet [PoM](#) £1,611.12

## IMMUNOSUPPRESSANTS > T-CELL ACTIVATION INHIBITORS

### Abatacept

10-Aug-2021

#### ● INDICATIONS AND DOSE

**Moderate-to-severe active rheumatoid arthritis (specialist use only) | Active psoriatic arthritis (specialist use only)**

##### ▶ BY INTRAVENOUS INFUSION

- ▶ Adult (body-weight up to 60 kg): 500 mg every 2 weeks for 3 doses, then 500 mg every 4 weeks, review treatment if no response within 6 months
- ▶ Adult (body-weight 60–100 kg): 750 mg every 2 weeks for 3 doses, then 750 mg every 4 weeks, review treatment if no response within 6 months
- ▶ Adult (body-weight 101 kg and above): 1 g every 2 weeks for 3 doses, then 1 g every 4 weeks, review treatment if no response within 6 months

**Moderate-to-severe active rheumatoid arthritis (specialist use only) | Active psoriatic arthritis (specialist use only)**

##### ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: 125 mg once weekly, review treatment if no response within 6 months, subcutaneous dosing may be initiated with or without an intravenous loading dose—consult product literature

- **CONTRA-INDICATIONS** Severe infection

- **CAUTIONS** Do not initiate until active infections are controlled · elderly (increased risk of side-effects) · predisposition to infection (screen for latent tuberculosis and viral hepatitis) · progressive multifocal leucoencephalopathy (discontinue treatment if neurological symptoms present)

- **INTERACTIONS** → Appendix 1: abatacept

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Asthenia · cough · diarrhoea · dizziness · gastrointestinal discomfort · headaches · hypertension · increased risk of infection · nausea · oral ulceration · skin reactions · vomiting

- ▶ **Uncommon** Alopecia · anxiety · arrhythmias · arthralgia · bruising tendency · conjunctivitis · depression · dry eye · dyspnoea · gastritis · hyperhidrosis · hypotension · influenza like illness · leucopenia · menstrual cycle irregularities · neoplasms · pain in extremity · palpitations · paraesthesia · respiratory disorders · sepsis · sleep disorders · throat tightness · thrombocytopenia · vasculitis · vasodilation · vertigo · visual acuity decreased · weight increased

- ▶ **Rare or very rare** Pelvic inflammatory disease

- **CONCEPTION AND CONTRACEPTION** Effective contraception required during treatment and for 14 weeks after last dose.

- **PREGNANCY** Manufacturer advises avoid unless essential.

- **BREAST FEEDING** Present in milk in *animal* studies—manufacturer advises avoid breast-feeding during treatment and for 14 weeks after last dose.

- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion*, manufacturer advises give intermittently in Sodium chloride 0.9%; reconstitute each vial with 10 mL water for injections using the silicone-free syringe provided; dilute requisite dose in Sodium Chloride 0.9% to 100 mL (using the same silicone-free syringe); give over 30 minutes through a low protein-binding filter (pore size 0.2–1.2 micron).

- **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

#### NICE decisions

- ▶ **Adalimumab, etanercept, infliximab, rituximab, and abatacept** for the treatment of rheumatoid arthritis after the failure of a TNF inhibitor (August 2010) NICE TA195 Recommended
- ▶ **Adalimumab, etanercept, infliximab, certolizumab pegol, golimumab, tocilizumab and abatacept** for rheumatoid arthritis not previously treated with DMARDs or after conventional DMARDs only have failed (January 2016) NICE TA375 Recommended with restrictions
- ▶ **Adalimumab, etanercept, infliximab and abatacept** for treating moderate rheumatoid arthritis after conventional DMARDs have failed (July 2021) NICE TA715 Not recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Orencia** (Bristol-Myers Squibb Pharmaceuticals Ltd)

**Abatacept 125 mg per 1 ml** Orencia 50mg/0.4ml solution for injection pre-filled syringes | 4 pre-filled disposable injection [PoM](#) [S](#) (Hospital only)

Orencia 125mg/1ml solution for injection pre-filled syringes | 4 pre-filled disposable injection [PoM](#) £1,209.60 DT = £1,209.60 (Hospital only)

Orencia 87.5mg/0.7ml solution for injection pre-filled syringes | 4 pre-filled disposable injection [PoM](#) [S](#) (Hospital only)

- ▶ **Orencia ClickJect** (Bristol-Myers Squibb Pharmaceuticals Ltd)

**Abatacept 125 mg per 1 ml** Orencia ClickJect 125mg/1ml solution for injection pre-filled pens | 4 pre-filled disposable injection [PoM](#) £1,209.60 DT = £1,209.60

#### Powder for solution for infusion

ELECTROLYTES: May contain Sodium

- ▶ **Orencia** (Bristol-Myers Squibb Pharmaceuticals Ltd)

**Abatacept 250 mg** Orencia 250mg powder for concentrate for solution for infusion vials | 1 vial [PoM](#) £302.40 (Hospital only)

## IMMUNOSUPPRESSANTS > TUMOR NECROSIS FACTOR ALPHA (TNF- $\alpha$ ) INHIBITORS

### Adalimumab

12-Apr-2022

#### • INDICATIONS AND DOSE

##### Plaque psoriasis (initiated by a specialist)

###### ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: Initially 80 mg, then 40 mg every 2 weeks, to be started 1 week after initial dose, review treatment if no response within 16 weeks—consult product literature

##### Rheumatoid arthritis (initiated by a specialist)

###### ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: 40 mg every 2 weeks, then increased if necessary to 40 mg once weekly, alternatively 80 mg every 2 weeks, dose to be increased only in patients receiving adalimumab alone, review treatment if no response within 12 weeks

##### Psoriatic arthritis (initiated by a specialist) | Ankylosing spondylitis (initiated by a specialist) | Axial spondyloarthritis (initiated by a specialist)

###### ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: 40 mg every 2 weeks, review treatment if no response within 12 weeks

##### Crohn's disease (initiated by a specialist)

###### ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: Initially 80 mg, then 40 mg after 2 weeks; maintenance 40 mg every 2 weeks, increased if necessary to 40 mg once weekly, alternatively 80 mg every 2 weeks, review treatment if no response within 12 weeks

##### Crohn's disease (accelerated regimen) (initiated by a specialist)

###### ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: Initially 160 mg, dose can alternatively be given as divided injections over 2 days, then 80 mg after 2 weeks; maintenance 40 mg every 2 weeks, increased if necessary to 40 mg once weekly, alternatively 80 mg every 2 weeks, review treatment if no response within 12 weeks

##### Ulcerative colitis (initiated by a specialist)

###### ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: Initially 160 mg, dose can alternatively be given as divided injections over 2 days, then 80 mg after 2 weeks, then maintenance 40 mg every 2 weeks, increased if necessary to 40 mg once weekly, alternatively 80 mg every 2 weeks, review treatment if no response within 8 weeks

##### Hidradenitis suppurativa (initiated by a specialist)

###### ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: Initially 160 mg, dose can alternatively be given as divided injections over 2 days, followed by 80 mg after 2 weeks, then maintenance 40 mg once weekly, after 2 weeks, alternatively 80 mg every 2 weeks, after 2 weeks, review treatment if no response within 12 weeks; if treatment interrupted—consult product literature

##### Uveitis (initiated by a specialist)

###### ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: Initially 80 mg, then 40 mg after 1 week; maintenance 40 mg every 2 weeks

- **CONTRA-INDICATIONS** Moderate or severe heart failure · severe infections
- **CAUTIONS** Demyelinating disorders (risk of exacerbation) · development of malignancy · do not initiate until active infections are controlled (discontinue if new serious infection develops) · hepatitis B virus—monitor for active infection · history of malignancy · mild heart failure

(discontinue if symptoms develop or worsen) · predisposition to infection

#### CAUTIONS, FURTHER INFORMATION

- ▶ **Tuberculosis** Active tuberculosis should be treated with standard treatment for at least 2 months before starting adalimumab. Patients who have previously received adequate treatment for tuberculosis can start adalimumab but should be monitored every 3 months for possible recurrence. In patients without active tuberculosis but who were previously not treated adequately, chemoprophylaxis should ideally be completed before starting adalimumab. In patients at high risk of tuberculosis who cannot be assessed by tuberculin skin test, chemoprophylaxis can be given concurrently with adalimumab.

- **INTERACTIONS** → Appendix 1: monoclonal antibodies

#### • SIDE-EFFECTS

- ▶ **Common or very common** Agranulocytosis · alopecia · anaemia · anxiety · arrhythmias · asthma · broken nails · chest pain · coagulation disorder · connective tissue disorders · cough · dehydration · depression · dyspnoea · electrolyte imbalance · eye inflammation · fever · flushing · gastrointestinal discomfort · gastrointestinal disorders · haemorrhage · headaches · healing impaired · hyperglycaemia · hypersensitivity · hypertension · increased risk of infection · insomnia · leucocytosis · leucopenia · mood altered · muscle spasms · musculoskeletal pain · nausea · neoplasms · nerve disorders · neutropenia · oedema · renal impairment · seasonal allergy · sensation abnormal · sepsis · skin reactions · sweat changes · thrombocytopenia · vertigo · vision disorders · vomiting
- ▶ **Uncommon** Aortic aneurysm · arterial occlusion · congestive heart failure · deafness · dysphagia · embolism and thrombosis · erectile dysfunction · gallbladder disorders · hepatic disorders · inflammation · lupus erythematosus · meningitis viral · myocardial infarction · nocturia · pancreatitis · respiratory disorders · rhabdomyolysis · sarcoidosis · solid organ neoplasm · stroke · tinnitus · tremor · vasculitis
- ▶ **Rare or very rare** Bone marrow disorders · cardiac arrest · demyelinating disorders · reactivation of infections · Stevens-Johnson syndrome
- ▶ **Frequency not known** Weight increased

**SIDE-EFFECTS, FURTHER INFORMATION** Associated with infections, sometimes severe, including tuberculosis, septicaemia, and hepatitis B reactivation.

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception required during treatment and for at least 5 months after last dose.
- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk.
- **BREAST FEEDING** Manufacturer advises can be used—excreted in breast milk at very low concentrations (limited information available).
- **PRE-TREATMENT SCREENING** Tuberculosis Manufacturer advises patients should be evaluated for active and latent tuberculosis before treatment.
- **MONITORING REQUIREMENTS**
  - ▶ Manufacturer advises monitor for infection before, during, and for 4 months after treatment.
  - ▶ Manufacturer advises monitor for non-melanoma skin cancer before and during treatment, especially in patients with a history of PUVA treatment for psoriasis or extensive immunosuppressant therapy.
  - ▶ *For uveitis*, manufacturer advises patients should be assessed for pre-existing or developing central demyelinating disorders before and at regular intervals during treatment.

### ● PRESCRIBING AND DISPENSING INFORMATION

Adalimumab is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines and Biosimilar medicines*, under Guidance on prescribing p. 1.

- **PATIENT AND CARER ADVICE** When used to treat *hidradenitis suppurativa*, patients and their carers should be advised to use a daily topical antiseptic wash on lesions during treatment with adalimumab. Tuberculosis Patients and their carers should be advised to seek medical attention if symptoms suggestive of tuberculosis (e.g. persistent cough, weight loss, and fever) develop. Blood disorders Patients and their carers should be advised to seek medical attention if symptoms suggestive of blood disorders (such as fever, sore throat, bruising, or bleeding) develop. Alert card An alert card should be provided.

### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### NICE decisions

- ▶ **Infliximab and adalimumab for Crohn's disease (May 2010)** NICE TA187 Recommended
  - ▶ **Infliximab, adalimumab and golimumab for treating moderately to severely active ulcerative colitis after the failure of conventional therapy (February 2015)** NICE TA329 Recommended with restrictions
  - ▶ **Etanercept, infliximab, and adalimumab for the treatment of psoriatic arthritis (August 2010)** NICE TA199 Recommended with restrictions
  - ▶ **Adalimumab, etanercept, infliximab, rituximab, and abatacept for the treatment of rheumatoid arthritis after the failure of a TNF inhibitor (August 2010)** NICE TA195 Recommended with restrictions
  - ▶ **Adalimumab, etanercept, infliximab, certolizumab pegol, golimumab, tocilizumab and abatacept for rheumatoid arthritis not previously treated with DMARDs or after conventional DMARDs only have failed (January 2016)** NICE TA375 Recommended with restrictions
  - ▶ **Adalimumab, etanercept, infliximab and abatacept for treating moderate rheumatoid arthritis after conventional DMARDs have failed (July 2021)** NICE TA715 Recommended with restrictions
  - ▶ **TNF-alpha inhibitors for ankylosing spondylitis and non-radiographic axial spondyloarthritis (February 2016)** NICE TA383 Recommended
  - ▶ **Adalimumab for treating moderate-to-severe hidradenitis suppurativa (June 2016)** NICE TA392 Recommended with restrictions
  - ▶ **Adalimumab for plaque psoriasis in adults (June 2008)** NICE TA146 Recommended with restrictions
  - ▶ **Adalimumab and dexamethasone for treating non-infectious uveitis (July 2017)** NICE TA460 Recommended
- Scottish Medicines Consortium (SMC) decisions**
- ▶ **Adalimumab (*Humira*®) for moderate to severe chronic plaque psoriasis in adult patients (June 2008)** SMC No. 468/08 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

## Certolizumab pegol

11-Nov-2020

### ● INDICATIONS AND DOSE

**Moderate to severe active rheumatoid arthritis when response to disease-modifying antirheumatic drugs (including methotrexate) has been inadequate (as monotherapy or in combination with methotrexate) | Severe, active and progressive rheumatoid arthritis in patients not previously treated with methotrexate or other disease-modifying antirheumatic drugs (in combination with methotrexate) | Active psoriatic arthritis when response to disease-modifying antirheumatic drugs has been inadequate (as monotherapy or in combination with methotrexate)**

#### ▶ BY SUBCUTANEOUS INJECTION

- ▶ **Adult:** Loading dose 400 mg every 2 weeks for 3 doses, then maintenance 200 mg every 2 weeks, once clinical response is confirmed, an alternative maintenance dosing of 400 mg every 4 weeks can be considered, review treatment if no response within 12 weeks

**Treatment of severe active ankylosing spondylitis in patients who have had an inadequate response to, or are intolerant of NSAIDs | Treatment of severe active axial spondyloarthritis, without radiographic evidence of ankylosing spondylitis but with objective signs of inflammation, in patients who have had an inadequate response to, or are intolerant of NSAIDs**

#### ▶ BY SUBCUTANEOUS INJECTION

- ▶ **Adult:** Loading dose 400 mg every 2 weeks for 3 doses, then maintenance 200 mg every 2 weeks, alternatively maintenance 400 mg every 4 weeks, review treatment if no response within 12 weeks

### Moderate to severe plaque psoriasis

#### ▶ BY SUBCUTANEOUS INJECTION

- ▶ **Adult:** Loading dose 400 mg every 2 weeks for 3 doses, then maintenance 200 mg every 2 weeks, an alternative maintenance dosing of 400 mg every 2 weeks can be considered in patients with insufficient response, review treatment if no response within 16 weeks

- **CONTRA-INDICATIONS** Moderate to severe heart failure · severe active infection
- **CAUTIONS** Demyelinating CNS disorders (risk of exacerbation) · do not initiate until active infections are controlled (discontinue if new serious infection develops and until infection controlled) · hepatitis B virus (monitor for active infection) · history of development of malignancy · mild heart failure (discontinue if symptoms develop or worsen) · predisposition to infection
- **CAUTIONS, FURTHER INFORMATION**
  - ▶ Tuberculosis Active tuberculosis should be treated with standard treatment for at least 2 months before starting certolizumab pegol. Patients who have previously received adequate treatment for tuberculosis can start certolizumab pegol but should be monitored every 3 months for possible recurrence. In patients without active tuberculosis but who were previously not treated adequately, chemoprophylaxis should ideally be completed before starting certolizumab pegol. In patients at high risk of tuberculosis who cannot be assessed by tuberculin skin test, chemoprophylaxis can be given concurrently with certolizumab pegol.
- **INTERACTIONS** → Appendix 1: monoclonal antibodies
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Abscess · asthenia · decreased leucocytes · eosinophilic disorders · fever · headaches · hepatic disorders · hypertension · increased risk of infection · nausea · neoplasms · neutropenia · pain · sensory disorder · skin reactions
  - ▶ **Uncommon** Alopecia · anaemia · anxiety · appetite disorder · arrhythmias · ascites · asthma · breast disorder · cardiomyopathy · chills · coronary artery disease · cough · cyst · dizziness · dyslipidaemia · electrolyte imbalance · embolism and thrombosis · eye inflammation · flushing · gastrointestinal discomfort · gastrointestinal disorders · haemorrhage · healing impaired · heart failure · hypercoagulation · hypersensitivity · influenza like illness · lacrimation disorder · lymphadenopathy · menstrual cycle irregularities · mood disorder · muscle disorder · nail disorder · nerve disorders · oedema · oral disorders · oropharyngeal dryness · palpitations · photosensitivity reaction · renal impairment · respiratory disorders · sepsis · skin ulcer · solid organ neoplasm · sweat changes · syncope · systemic lupus erythematosus (SLE) · temperature perception abnormal · thrombocytopenia · thrombocytosis · tinnitus · tremor · urinary tract disorder · vasculitides · vertigo · vision disorders · weight change
  - ▶ **Rare or very rare** Angioedema · atherosclerosis · atrioventricular block · cholelithiasis · cognitive impairment · delirium · fistula · haemosiderosis · hair texture abnormal · movement disorders · nephritis · nephropathy · odynophagia · pancytopenia · panniculitis · pericarditis · polycythaemia · Raynaud's phenomenon · sarcoidosis · seizure · sexual dysfunction · splenomegaly · stroke · suicide attempt · telangiectasia · thyroid disorder
- ▶ **Frequency not known** Multiple sclerosis
- **SIDE-EFFECTS, FURTHER INFORMATION** Associated with infections, sometimes severe, including tuberculosis, septicaemia, and hepatitis B reactivation.
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises adequate contraception in women of childbearing potential during treatment and for 5 months after last dose.
- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk—limited information available.
- **PRE-TREATMENT SCREENING** Tuberculosis Patients should be evaluated for tuberculosis before treatment.
- **MONITORING REQUIREMENTS** Monitor for infection before, during, and for 5 months after treatment.

- **PATIENT AND CARER ADVICE** Blood disorders Patients should be advised to seek medical attention if symptoms suggestive of blood disorders (such as fever, sore throat, bruising, or bleeding) develop. Tuberculosis Patients should be advised to seek medical attention if symptoms suggestive of tuberculosis (e.g. persistent cough, weight loss and fever) develop. Alert card An alert card should be provided.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website

disposable injection (PoM) £715.00

Cimzia 200mg/1ml solution for injection pre-filled syringes |

2 syringe (PoM) £715.00

## Etanercept

14-Mar-2022

### ● INDICATIONS AND DOSE

**Rheumatoid arthritis (initiated by a specialist) | Psoriatic arthritis (initiated by a specialist) | Ankylosing spondylitis (initiated by a specialist) | Non-radiographic axial spondyloarthritis (initiated by a specialist)**

- ▶ BY SUBCUTANEOUS INJECTION

▶ Adult: 25 mg twice weekly, alternatively 50 mg once weekly, review treatment if no response within 12 weeks of initial dose

#### Plaque psoriasis (initiated by a specialist)

- ▶ BY SUBCUTANEOUS INJECTION

▶ Adult: 25 mg twice weekly, alternatively 50 mg once weekly, alternatively 50 mg twice weekly for up to 12 weeks, followed by 25 mg twice weekly, alternatively 50 mg once weekly if required for up to 24 weeks—continuous therapy beyond 24 weeks may be appropriate in some patients (consult product literature), discontinue if no response after 12 weeks

- **CONTRA-INDICATIONS** Active infection
- **CAUTIONS** Development of malignancy · diabetes mellitus · heart failure (risk of exacerbation) · hepatitis B virus—monitor for active infection · hepatitis C infection

(monitor for worsening infection) · history of blood disorders · history of malignancy · history or increased risk of demyelinating disorders · predisposition to infection (avoid if predisposition to septicaemia) · significant exposure to herpes zoster virus—interrupt treatment and consider varicella–zoster immunoglobulin

#### CAUTIONS, FURTHER INFORMATION

- ▶ **Tuberculosis** Active tuberculosis should be treated with standard treatment for at least 2 months before starting etanercept. Patients who have previously received adequate treatment for tuberculosis can start etanercept but should be monitored every 3 months for possible recurrence. In patients without active tuberculosis but who were previously not treated adequately, chemoprophylaxis should ideally be completed before starting etanercept. In patients at high risk of tuberculosis who cannot be assessed by tuberculin skin test, chemoprophylaxis can be given concurrently with etanercept.

● **INTERACTIONS** → Appendix 1: etanercept

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Cystitis · fever · headache · hypersensitivity · increased risk of infection · skin reactions
- ▶ **Uncommon** Abscess · anaemia · angioedema · bursitis · cholecystitis · diarrhoea · endocarditis · eye inflammation · gastritis · heart failure · hepatic disorders · inflammatory bowel disease · leucopenia · myositis · neoplasms · neutropenia · sepsis · skin ulcers · thrombocytopenia · vasculitis
- ▶ **Rare or very rare** Bone marrow disorders · cutaneous lupus erythematosus · demyelination · lupus-like syndrome · nerve disorders · respiratory disorders · sarcoidosis · seizure · severe cutaneous adverse reactions (SCARs) · transverse myelitis
- ▶ **Frequency not known** Dermatomyositis exacerbated · hepatitis B reactivation

**SIDE-EFFECTS, FURTHER INFORMATION** Associated with infections, sometimes severe, including tuberculosis, septicaemia, and hepatitis B reactivation.

● **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception required during treatment and for 3 weeks after last dose.

● **PREGNANCY**  Use only if essential.

● **BREAST FEEDING** Manufacturer advises avoid—present in milk in animal studies.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution in moderate to severe alcoholic hepatitis.

#### ● PRE-TREATMENT SCREENING

Tuberculosis Patients should be evaluated for tuberculosis before treatment.

● **MONITORING REQUIREMENTS**  Monitor for skin cancer during treatment, particularly in patients with risk factors or psoriasis. 

● **PRESCRIBING AND DISPENSING INFORMATION** Etanercept is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1.

● **HANDLING AND STORAGE** Store in a refrigerator (2–8°C)—consult product literature for further information regarding storage conditions outside refrigerator.

#### ● PATIENT AND CARER ADVICE

Blood disorders Patients and their carers should be advised to seek medical attention if symptoms suggestive of blood disorders (such as fever, sore throat, bruising, or bleeding) develop.

Tuberculosis Patients and their carers should be advised to seek medical attention if symptoms suggestive of

tuberculosis (e.g. persistent cough, weight loss, and fever) develop.

Patient card A patient card should be provided.

## Golimumab

06-Nov-2020

## ● INDICATIONS AND DOSE

**Ulcerative colitis (initiated by a specialist)**

## ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult (body-weight up to 80 kg): Initially 200 mg, then 100 mg after 2 weeks; maintenance 50 mg every 4 weeks, alternatively maintenance 100 mg every 4 weeks, if inadequate response, review treatment if no response after 4 doses
- ▶ Adult (body-weight 80 kg and above): Initially 200 mg, then 100 mg after 2 weeks; maintenance 100 mg every 4 weeks, review treatment if no response after 4 doses

**Rheumatoid arthritis (initiated by a specialist) | Psoriatic arthritis (initiated by a specialist) | Ankylosing spondylitis (initiated by a specialist) | Non-radiographic axial spondyloarthritis (initiated by a specialist)**

## ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult (body-weight up to 100 kg): 50 mg once a month, on the same date each month, review treatment if no response after 3–4 doses
- ▶ Adult (body-weight 100 kg and above): Initially 50 mg once a month for 3–4 doses, on the same date each month, dose may be increased if inadequate response, increased to 100 mg once a month, review treatment if inadequate response to this higher dose after 3–4 doses

- **CONTRA-INDICATIONS** Moderate or severe heart failure · severe active infection

- **CAUTIONS** Active infection (do not initiate until active infections are controlled; discontinue if new serious infection develops until infection controlled) · demyelinating disorders (risk of exacerbation) · hepatitis B virus—monitor for active infection · history or development of malignancy · mild heart failure (discontinue if symptoms develop or worsen) · predisposition to infection · risk factors for dysplasia or carcinoma of the colon—screen for dysplasia regularly

▶ **CAUTIONS, FURTHER INFORMATION**

- ▶ Tuberculosis Active tuberculosis should be treated with standard treatment for at least 2 months before starting golimumab. Patients who have previously received adequate treatment for tuberculosis can start golimumab but should be monitored every 3 months for possible recurrence. In patients without active tuberculosis but who were previously not treated adequately, chemoprophylaxis should ideally be completed before starting golimumab. In patients at high risk of tuberculosis who cannot be assessed by tuberculin skin test, chemoprophylaxis can be given concurrently with golimumab. Patients who have tested negative for latent tuberculosis, and those who are receiving or who have completed treatment for latent tuberculosis, should be monitored closely for symptoms of active infection.

- **INTERACTIONS** → Appendix 1: monoclonal antibodies

● **SIDE-EFFECTS**

- ▶ **Common or very common** Abscess · alopecia · anaemia · asthenia · asthma · bone fracture · chest discomfort · depression · dizziness · fever · gastrointestinal discomfort · gastrointestinal disorders · gastrointestinal inflammatory disorders · headache · hypersensitivity · hypertension · increased risk of infection · insomnia · nausea · paraesthesia · respiratory disorders · skin reactions · stomatitis
- ▶ **Uncommon** Arrhythmia · balance impaired · bone marrow disorders · breast disorder · cholelithiasis · constipation · eye inflammation · eye irritation · flushing · goitre · hyperthyroidism · hypothyroidism · leucopenia · liver disorder · menstrual disorder · myocardial ischaemia ·

neoplasms · sepsis · thrombocytopenia · thrombosis · thyroid disorder · vision disorders

- ▶ **Rare or very rare** Bladder disorder · congestive heart failure · demyelination · healing impaired · hepatitis B reactivation · lupus-like syndrome · Raynaud's phenomenon · renal disorder · sarcoidosis · taste altered · vasculitis

**SIDE-EFFECTS, FURTHER INFORMATION** Associated with infections, sometimes severe, including tuberculosis, septicæmia, and hepatitis B reactivation.

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises adequate contraception during treatment and for at least 6 months after last dose.
- **PREGNANCY** Use only if essential.
- **BREAST FEEDING** Manufacturer advises avoid during and for at least 6 months after treatment—present in milk in animal studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (no information available).
- **PRE-TREATMENT SCREENING** Tuberculosis Patients should be evaluated for tuberculosis before treatment.
- **MONITORING REQUIREMENTS** Monitor for infection before, during, and for 5 months after treatment.
- **DIRECTIONS FOR ADMINISTRATION** For doses requiring multiple injections, each injection should be administered at a different site.  
Missed dose If dose administered more than 2 weeks late, manufacturer advises subsequent doses should be administered on the new monthly due date.

● **PATIENT AND CARER ADVICE**

Tuberculosis All patients and their carers should be advised to seek medical attention if symptoms suggestive of tuberculosis (e.g. persistent cough, weight loss, and fever) develop.

Blood disorders Patients and their carers should be advised to seek medical attention if symptoms suggestive of blood disorders (such as fever, sore throat, bruising, or bleeding) develop.

Alert card An alert card should be provided.

● **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

- ▶ Golimumab for the treatment of psoriatic arthritis (April 2011) NICE TA220 Recommended with restrictions
- ▶ Adalimumab, etanercept, infliximab, certolizumab pegol, golimumab, tocilizumab and abatacept for rheumatoid arthritis not previously treated with DMARDs or after conventional DMARDs only have failed (January 2016) NICE TA375 Recommended with restrictions
- ▶ Golimumab for the treatment of rheumatoid arthritis after the failure of previous disease-modifying anti-rheumatic drugs (June 2011) NICE TA225 Recommended with restrictions
- ▶ TNF-alpha inhibitors for ankylosing spondylitis and non-radiographic axial spondyloarthritis (February 2016) NICE TA383 Recommended
- ▶ Golimumab for treating non-radiographic axial spondyloarthritis (January 2018) NICE TA497 Recommended with restrictions
- ▶ Infliximab, adalimumab and golimumab for treating moderately to severely active ulcerative colitis after the failure of conventional therapy (February 2015) NICE TA329 Recommended with restrictions

**Scottish Medicines Consortium (SMC) decisions**

- ▶ Golimumab 50 mg (*Simponi*<sup>®</sup>) for the treatment of active and progressive psoriatic arthritis in adult patients (July 2012) SMC No. 674/11 Recommended with restrictions
- ▶ Golimumab (*Simponi*<sup>®</sup>) for the treatment of adults with severe non-radiographic axial spondyloarthritis with objective

signs of inflammation as indicated by elevated C-reactive protein and/or magnetic resonance imaging (MRI) evidence, who have had an inadequate response to, or are intolerant to non-steroidal anti-inflammatory drugs (February 2016) SMC No. 1124/16 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

Simponi 50mg/0.5ml solution for injection pre-filled pens | 1 pre-filled disposable injection [PoM] £762.97 DT = £762.97

## Infliximab

25-Feb-2022

### ● INDICATIONS AND DOSE

#### Active Crohn's disease (under expert supervision)

##### ▶ BY INTRAVENOUS INFUSION

- ▶ **Adult:** Initially 5 mg/kg, then 5 mg/kg after 2 weeks, then 5 mg/kg, to be taken at 6 weeks after initial dose if condition has responded; discontinue if no response within 6 weeks of initial infusion (after 2 doses), then maintenance 5 mg/kg every 8 weeks, maintenance treatment can be restarted after a drug-free interval if symptoms recur within 16 weeks of the last infusion. Consult product literature for dose escalation in selected patients

##### ▶ INITIALLY BY INTRAVENOUS INFUSION

- ▶ **Adult:** Initially 5 mg/kg, then (by intravenous infusion) 5 mg/kg after 2 weeks; (by subcutaneous injection) maintenance 120 mg every 2 weeks, subcutaneous maintenance dosing to be started 4 weeks after the second of the initial intravenous infusions if a response has been seen. Discontinue if no response within 6 weeks of the initial infusion (after 2 doses). Treatment can be restarted after a drug-free interval if symptoms recur within 16 weeks of the last dose—consult product literature

#### Fistulating Crohn's disease (under expert supervision)

##### ▶ BY INTRAVENOUS INFUSION

- ▶ **Adult:** Initially 5 mg/kg, then 5 mg/kg, to be taken at week 2 and 6 after initial dose, discontinue if no response after initial 3 doses, then maintenance 5 mg/kg every 8 weeks, maintenance treatment can be restarted after a drug-free interval if symptoms recur within 16 weeks of the last infusion

##### ▶ INITIALLY BY INTRAVENOUS INFUSION

- ▶ **Adult:** Initially 5 mg/kg, followed by (by intravenous infusion) 5 mg/kg after 2 weeks; (by subcutaneous injection) maintenance 120 mg every 2 weeks, subcutaneous maintenance dosing to be started 4 weeks after the second of the initial intravenous infusions. Discontinue if no response after 6 doses in total. Treatment can be restarted after a drug-free interval if symptoms recur within 16 weeks of the last dose—consult product literature

#### Active ulcerative colitis (under expert supervision)

##### ▶ BY INTRAVENOUS INFUSION

- ▶ **Adult:** Initially 5 mg/kg, then 5 mg/kg, to be taken at week 2 and 6 after initial dose, then 5 mg/kg every 8 weeks, consider discontinuation if no response within 14 weeks after initial infusion (3 doses)

##### ▶ INITIALLY BY INTRAVENOUS INFUSION

- ▶ **Adult:** Initially 5 mg/kg, then (by intravenous infusion) 5 mg/kg after 2 weeks; (by subcutaneous injection) maintenance 120 mg every 2 weeks, subcutaneous

maintenance dosing to be started 4 weeks after the second of the initial intravenous infusions. Consider discontinuation if no response within 14 weeks (after 6 doses in total)

#### Rheumatoid arthritis (in combination with methotrexate) (under expert supervision)

##### ▶ BY INTRAVENOUS INFUSION

- ▶ **Adult:** Initially 3 mg/kg, then 3 mg/kg, to be taken at week 2 and 6 after initial dose, then 3 mg/kg every 8 weeks, dose to be increased only if response is inadequate after 12 weeks of initial treatment; increased if necessary to 3 mg/kg every 4 weeks, alternatively increased in steps of 1.5 mg/kg every 8 weeks (max. per dose 7.5 mg/kg every 8 weeks), consider discontinuation if no response within 12 weeks of initial infusion (after 3 doses) or after dose adjustment. Maintenance treatment can be restarted after a drug-free interval if symptoms recur within 16 weeks of the last infusion

##### ▶ INITIALLY BY INTRAVENOUS INFUSION

- ▶ **Adult:** Initially 3 mg/kg, then (by intravenous infusion) 3 mg/kg after 2 weeks; (by subcutaneous injection) maintenance 120 mg every 2 weeks, subcutaneous maintenance dosing to be started 4 weeks after the second of the initial intravenous infusions. Consider discontinuation if no response within 12 weeks of the initial infusion. Treatment can be restarted after a drug-free interval if symptoms recur within 16 weeks of the last dose—consult product literature

#### Ankylosing spondylitis (under expert supervision)

##### ▶ BY INTRAVENOUS INFUSION

- ▶ **Adult:** Initially 5 mg/kg, then 5 mg/kg, to be taken at week 2 and 6 after initial dose, then 5 mg/kg every 6–8 weeks, discontinue if no response by 6 weeks of initial infusion (after 2 doses)

##### ▶ INITIALLY BY INTRAVENOUS INFUSION

- ▶ **Adult:** Initially 5 mg/kg, followed by (by intravenous infusion) 5 mg/kg after 2 weeks; (by subcutaneous injection) maintenance 120 mg every 2 weeks, subcutaneous maintenance dosing to be started 4 weeks after the second of the initial intravenous infusions. Discontinue if no response within 6 weeks of the initial infusion (after 2 doses)

#### Psoriatric arthritis (under expert supervision)

##### ▶ BY INTRAVENOUS INFUSION

- ▶ **Adult:** Initially 5 mg/kg, then 5 mg/kg, to be taken at week 2 and 6 after initial dose, followed by 5 mg/kg every 8 weeks

##### ▶ INITIALLY BY INTRAVENOUS INFUSION

- ▶ **Adult:** Initially 5 mg/kg, followed by (by intravenous infusion) 5 mg/kg after 2 weeks; (by subcutaneous injection) maintenance 120 mg every 2 weeks, subcutaneous maintenance dosing to be started 4 weeks after the second of the initial intravenous infusions

#### Plaque psoriasis (under expert supervision)

##### ▶ BY INTRAVENOUS INFUSION

- ▶ **Adult:** Initially 5 mg/kg, then 5 mg/kg, to be taken at week 2 and 6 after initial dose, then 5 mg/kg every 8 weeks, discontinue if no response after 14 weeks of initial infusion (after 4 doses)

##### ▶ INITIALLY BY INTRAVENOUS INFUSION

- ▶ **Adult:** Initially 5 mg/kg, followed by (by intravenous infusion) 5 mg/kg after 2 weeks; (by subcutaneous injection) maintenance 120 mg every 2 weeks, subcutaneous maintenance dosing to be started 4 weeks after the second of the initial intravenous

continued →

infusions. Discontinue if no response after 14 weeks of the initial infusion (after 7 doses in total)

#### IMPORTANT SAFETY INFORMATION

Adequate resuscitation facilities must be available when infliximab is used.

- **CONTRA-INDICATIONS** Moderate or severe heart failure · severe infections
- **CAUTIONS** Demyelinating disorders (risk of exacerbation) · dermatomyositis · development of malignancy · hepatitis B virus—monitor for active infection · history of colon carcinoma (in inflammatory bowel disease) · history of dysplasia (in inflammatory bowel disease) · history of malignancy · history of prolonged immunosuppressant or PUVA treatment in patients with psoriasis · mild heart failure (discontinue if symptoms develop or worsen) · predisposition to infection (discontinue if new serious infection develops) · risk of delayed hypersensitivity reactions if drug-free interval exceeds 16 weeks (re-administration after interval exceeding 16 weeks not recommended)
- **CAUTIONS, FURTHER INFORMATION**
  - ▶ **Infection** Manufacturer advises patients should be up-to-date with current immunisation schedule before initiating treatment.
  - ▶ **Tuberculosis** Manufacturer advises to evaluate patients for active and latent tuberculosis before treatment. Active tuberculosis should be treated with standard treatment for at least 2 months before starting infliximab. If latent tuberculosis is diagnosed, treatment should be started before commencing treatment with infliximab. Patients who have previously received adequate treatment for tuberculosis can start infliximab but should be monitored every 3 months for possible recurrence. In patients without active tuberculosis but who were previously not treated adequately, chemoprophylaxis should ideally be completed before starting infliximab. In patients at high risk of tuberculosis who cannot be assessed by tuberculin skin test, chemoprophylaxis can be given concurrently with infliximab. Patients should be advised to seek medical attention if symptoms suggestive of tuberculosis develop (e.g. persistent cough, weight loss and fever).
  - ▶ **Hypersensitivity reactions** Hypersensitivity reactions (including fever, chest pain, hypotension, hypertension, dyspnoea, transient visual loss, pruritus, urticaria, serum sickness-like reactions, angioedema, anaphylaxis) reported during or within 1–2 hours after infusion (risk greatest during first or second infusion or in patients who discontinue other immunosuppressants). Manufacturer advises prophylactic antipyretics, antihistamines, or hydrocortisone may be administered.
- **INTERACTIONS** → Appendix 1: monoclonal antibodies
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Abscess · alopecia · anaemia · arrhythmias · arthralgia · chest pain · chills · constipation · decreased leucocytes · depression · diarrhoea · dizziness · dyspnoea · eye inflammation · fatigue · fever · gastrointestinal discomfort · gastrointestinal disorders · haemorrhage · headache · hepatic disorders · hyperhidrosis · hypertension · hypotension · increased risk of infection · infusion related reaction · insomnia · lymphadenopathy · myalgia · nausea · neutropenia · oedema · pain · palpitations · respiratory disorders · sensation abnormal · sepsis · skin reactions · vasodilation · vertigo
  - ▶ **Uncommon** Anxiety · cheilitis · cholecystitis · confusion · drowsiness · healing impaired · heart failure · hypersensitivity · lupus erythematosus · lymphocytosis · memory loss · neoplasms · nerve disorders · pancreatitis · peripheral ischaemia · pulmonary oedema · seborrhoea · seizure · syncope · thrombocytopenia · thrombophlebitis

- ▶ **Rare or very rare** Agranulocytosis · circulatory collapse · cyanosis · demyelinating disorders · granuloma · haemolytic anaemia · hepatitis B reactivation · meningitis · pancytopenia · pericardial effusion · sarcoid-like reaction · severe cutaneous adverse reactions (SCARs) · transverse myelitis · vasculitis · vasospasm
- ▶ **Frequency not known** Dermatomyositis exacerbated · hepatosplenic T-cell lymphoma (increased risk in inflammatory bowel disease) · myocardial infarction · myocardial ischaemia · sarcoidosis · stroke · vision loss
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises adequate contraception during and for at least 6 months after last dose.
- **PREGNANCY** Use only if essential.
- **BREAST FEEDING** Specialist sources indicate amount present in milk probably too small to be harmful.
- **PRE-TREATMENT SCREENING** Tuberculosis Manufacturer advises patients should be evaluated for tuberculosis before treatment.
- **MONITORING REQUIREMENTS**
  - ▶ Monitor for infection before, during, and for 6 months after treatment.
  - ▶ All patients should be observed carefully for 1–2 hours after infusion and resuscitation equipment should be available for immediate use (risk of hypersensitivity reactions).
  - ▶ Monitor for symptoms of delayed hypersensitivity if re-administered after a prolonged period.
  - ▶ Manufacturer advises periodic skin examination for non-melanoma skin cancer, particularly in patients with risk factors.
- **DIRECTIONS FOR ADMINISTRATION** [EvGr](#) For *intermittent intravenous infusion*, dilute reconstituted solution with Sodium Chloride 0.9%. Reconstitute each 100 mg vial with 10 mL Water for Injections using a 21-gauge or smaller needle and gently swirl vial without shaking to dissolve; allow to stand for 5 minutes. Dilute requisite dose with infusion fluid to a usual final volume of 250 mL (maximum concentration 4 mg/mL). Give over 2 hours through a low protein-binding filter (1.2 micron or less); adults who have tolerated 3 initial 2-hour infusions may be given subsequent infusions of up to 6 mg/kg over at least 1 hour. Start infusion within 3 hours of reconstitution. [M](#)
- **PRESCRIBING AND DISPENSING INFORMATION** Infliximab is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1.
- **HANDLING AND STORAGE** Store in a refrigerator (2–8°C)—consult product literature for further information regarding storage outside refrigerator.
- **PATIENT AND CARER ADVICE** Tuberculosis Patients and carers should be advised to seek medical attention if symptoms suggestive of tuberculosis (e.g. persistent cough, weight loss, and fever) develop. Blood disorders Patients and carers should be advised to seek medical attention if symptoms suggestive of blood disorders (such as fever, sore throat, bruising, or bleeding) develop. Hypersensitivity reactions Patients and carers should be advised to keep Alert card with them at all times and seek medical advice if symptoms of delayed hypersensitivity develop. Self-administration Manufacturer advises patients may self-administer *Remsima*<sup>®</sup> pre-filled syringes or pens following training in subcutaneous injection technique. Alert card An alert card should be provided. **Driving and skilled tasks** Manufacturer advises patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of dizziness.

## ● NATIONAL FUNDING/ACCESS DECISIONS

## PHOSPHODIESTERASE TYPE-4 INHIBITORS

### Apremilast

02-Aug-2021

- **DRUG ACTION** Apremilast inhibits the activity of phosphodiesterase type-4 (PDE4) which results in suppression of pro-inflammatory mediator synthesis and promotes anti-inflammatory mediators.

### ● INDICATIONS AND DOSE

**Active psoriatic arthritis (in combination with disease-modifying antirheumatic drugs or alone) in patients who have had an inadequate response or who have been intolerant to a prior disease-modifying antirheumatic drug therapy | Moderate to severe chronic plaque psoriasis that has not responded to standard systemic treatments or photochemotherapy, or when these treatments cannot be used because of intolerance or contra-indications**

#### ▶ BY MOUTH

- ▶ **Adult:** Initially 10 mg daily on day 1, then 10 mg twice daily on day 2, then 10 mg in the morning and 20 mg in the evening on day 3, then 20 mg twice daily on day 4, then 20 mg in the morning and 30 mg in the evening on day 5, then maintenance 30 mg twice daily, doses should be taken approximately 12 hours apart; review treatment if no response within 24 weeks of initiation

### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE (JANUARY 2017): APREMILAST (OTEZLA<sup>®</sup>): RISK OF SUICIDAL THOUGHTS AND BEHAVIOUR

A review of evidence from clinical trials and postmarketing cases has suggested a causal association between apremilast and suicidal thoughts and behaviour.

- **CAUTIONS** Concomitant use of drugs likely to cause psychiatric symptoms · history of psychiatric illness · low body-weight—consider discontinuation if weight loss is unexplained or clinically significant
- **INTERACTIONS** → Appendix 1: phosphodiesterase type-4 inhibitors
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Appetite decreased · back pain · cough · depression · diarrhoea · fatigue · gastrointestinal discomfort · gastrointestinal disorders · headaches · increased risk of infection · insomnia · nausea · vomiting
  - ▶ **Uncommon** Gastrointestinal haemorrhage · rash · suicidal behaviours · weight decreased
- **CONCEPTION AND CONTRACEPTION** Exclude pregnancy before treatment and ensure effective contraception during treatment.
- **PREGNANCY** Avoid—teratogenic in *animal* studies.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal* studies.
- **RENAL IMPAIRMENT**  
**Dose adjustments** [EvGr] Reduce dose if eGFR less than 30 mL/minute/1.73 m<sup>2</sup>; consult product literature for initial dose titration. ⚠ See p. 21.
- **MONITORING REQUIREMENTS**
  - ▶ Manufacturer advises monitor body-weight regularly in patients underweight at the start of treatment.
  - ▶ Manufacturer advises monitor for psychiatric symptoms (including depression, suicidal ideation and behaviour)—discontinue treatment if new or worsening psychiatric symptoms are identified.
- **PATIENT AND CARER ADVICE** Manufacturer advises patients and carers should be instructed to notify the prescriber of any changes in behaviour or mood, and of any suicidal ideation.

**• NATIONAL FUNDING/ACCESS DECISIONS**

## 2 Hyperuricaemia and gout

### Gout

08-Aug-2020

#### Overview

Gout is a common form of inflammatory arthritis characterised by raised uric acid concentration in the blood (hyperuricaemia) and the deposition of urate crystals in joints and other tissues. It occurs in three distinct phases— asymptomatic hyperuricaemia, a period of acute attacks followed by variable intervals (months to years) with no symptoms, and a final period of chronic tophaceous gout, where people have nodules affecting joints. **[EvGr]** The management of gout in those under 30 years of age requires specialist supervision. **[A]**

#### Acute attacks of gout

**[EvGr]** Treatment for an acute attack of gout should be started as soon as possible. Acute attacks of gout are usually treated with either colchicine below or high doses of an NSAID (excluding aspirin). The choice of drug depends on factors such as patient preference, renal function, and co-morbidities. A gastro-protective drug (such as a proton pump inhibitor) should be co-prescribed in patients using NSAIDs. **[A]**

The use of colchicine is limited by the development of toxicity at higher doses. However unlike NSAIDs, it does not induce fluid retention; moreover, it can be co-administered with anticoagulants.

**[EvGr]** Combination treatment can be considered for acute attacks of gout in patients with inadequate response to monotherapy.

Joint aspiration and intra-articular injection of a corticosteroid can be used in acute monoarticular gout

[unlicensed indication]. A short course of oral corticosteroid or a single injection of intramuscular corticosteroid are effective alternatives in those who cannot tolerate NSAIDs or colchicine, and when intra-articular injection is unsuitable.

An interleukin-1 inhibitor, such as canakinumab p. 909, can be considered for treatment of frequent gouty arthritis attacks (at least 3 in the previous 12 months) in patients who have an inadequate response to standard treatment. **[A]**

#### Long-term control of gout

**[EvGr]** All patients with gout should be offered urate-lowering therapy, particularly in those with frequent recurrence of acute attacks of gout (2 or more in a year), the presence of tophi, or signs of chronic gouty arthritis.

For long-term control of gout, the formation of uric acid from purines may be reduced with xanthine-oxidase inhibitors, allopurinol p. 1213 or febuxostat p. 1214. Allopurinol is recommended as first-line urate-lowering therapy where renal function allows. Febuxostat can be used as an alternative when allopurinol is contra-indicated or not tolerated. Uricosuric drugs, such as sulfinpyrazone or benzbromarone (specialist use—available from 'special-order' manufacturers or specialist importing companies), may be used as urate-lowering therapy in patients who are resistant to or are intolerant of xanthine-oxidase inhibitors; they increase the excretion of uric acid in the urine. Uricosuric drugs may also be used in combination with xanthine-oxidase inhibitors in patients who have an inadequate response to monotherapy.

Urate-lowering therapy is ideally started after the inflammation in an acute attack has settled. The initiation or up-titration of urate-lowering therapy may precipitate an acute attack, and therefore colchicine should be considered as prophylaxis and continued for up to 6 months. A low-dose NSAID with gastro-protection is an alternative in patients who have contra-indications to colchicine. If an acute attack develops during treatment, the urate-lowering therapy should continue at the same dosage and the acute attack treated separately.

Patients with gout and a history of urolithiasis should be advised to ensure adequate daily fluid intake and avoid dehydration. Alkalinisation of the urine with potassium citrate can be considered in recurrent stone formers. **[A]**

**Other drugs used for Hyperuricaemia and gout** Diclofenac potassium, p. 1226 · Diclofenac sodium, p. 1227 · Etoricoxib, p. 1230 · Indometacin, p. 1235 · Ketoprofen, p. 1236 · Naproxen, p. 1240 · Naproxen with esomeprazole, p. 1241 · Sulindac, p. 1242

### ALKALOIDS > PLANT ALKALOIDS

#### Colchicine

19-Aug-2021

##### • INDICATIONS AND DOSE

###### Acute gout

###### ▶ BY MOUTH

- ▶ Adult: 500 micrograms 2–4 times a day until symptoms relieved, maximum 6 mg per course, do not repeat course within 3 days

###### Short-term prophylaxis during initial therapy with allopurinol and uricosuric drugs

###### ▶ BY MOUTH

- ▶ Adult: 500 micrograms twice daily

###### Prophylaxis of familial Mediterranean fever (recurrent polyserositis)

###### ▶ BY MOUTH

- ▶ Adult: 0.5–2 mg once daily

**DOSE ADJUSTMENTS DUE TO INTERACTIONS**

- ▶ Manufacturer advises reduce dose by half with concurrent use of moderate inhibitors of CYP3A4.
- ▶ Manufacturer advises reduce dose by 75% (to one quarter of usual dose) with concurrent use of potent inhibitors of CYP3A4 or P-glycoprotein inhibitors; avoid concurrent use in patients with hepatic or renal impairment.

● **UNLICENSED USE** BNF doses may differ from those in the product literature. Use of colchicine for prophylaxis of familial Mediterranean fever (recurrent polyserositis) is an unlicensed indication.

● **CONTRA-INDICATIONS** Blood disorders

● **CAUTIONS** Cardiac disease · elderly · gastro-intestinal disease

**CAUTIONS, FURTHER INFORMATION**

- ▶ Elderly Prescription potentially inappropriate (STOPP criteria):
  - if eGFR less than 10 mL/minute/1.73 m<sup>2</sup> (risk of toxicity)
  - for chronic treatment of gout where there is no contra-indication to a xanthine-oxidase inhibitor (xanthine-oxidase inhibitors are first choice prophylactic drugs in gout)

See also Prescribing in the elderly p. 29.

● **INTERACTIONS** → Appendix 1: colchicine

**SIDE-EFFECTS**

- ▶ **Common or very common** Abdominal pain · diarrhoea · nausea · vomiting
- ▶ **Frequency not known** Agranulocytosis · alopecia · bone marrow disorders · gastrointestinal haemorrhage · kidney injury · liver injury · menstrual cycle irregularities · myopathy · nerve disorders · rash · sperm abnormalities · thrombocytopenia

● **PREGNANCY** Avoid—teratogenicity in *animal* studies.

● **BREAST FEEDING** Present in milk but no adverse effects reported. Manufacturers advise caution.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild to moderate impairment; avoid in severe impairment.

● **RENAL IMPAIRMENT** EVGR Avoid if eGFR less than 10 mL/minute/1.73 m<sup>2</sup>. A D  
**Dose adjustments** EVGR Reduce dose or increase dosage interval if eGFR 10–50 mL/minute/1.73 m<sup>2</sup>. A D See p. 21.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Tablet**▶ **Colchicine (Non-proprietary)**

Colchicine 500 microgram Colchicine 500microgram tablets | 28 tablet PM £2.54 | 100 tablet PM £21.95 DT = £3.74

**XANTHINE OXIDASE INHIBITORS****Allopurinol**

16-Feb-2022

**● INDICATIONS AND DOSE**

**Prophylaxis of gout and of uric acid and calcium oxalate renal stones | Prophylaxis of hyperuricaemia associated with cancer chemotherapy**

▶ **BY MOUTH**

- ▶ **Adult:** Initially 100 mg daily, for maintenance adjust dose according to plasma or urinary uric acid concentration, dose to be taken preferably after food

**Prophylaxis of gout and of uric acid and calcium oxalate renal stones (usual maintenance in mild conditions) | Prophylaxis of hyperuricaemia associated with cancer chemotherapy (usual maintenance in mild conditions)**

▶ **BY MOUTH**

- ▶ **Adult:** 100–200 mg daily, dose to be taken preferably after food

**Prophylaxis of gout and of uric acid and calcium oxalate renal stones (usual maintenance in moderately severe conditions) | Prophylaxis of hyperuricaemia associated with cancer chemotherapy (usual maintenance in moderately severe conditions)**

▶ **BY MOUTH**

- ▶ **Adult:** 300–600 mg daily in divided doses (max. per dose 300 mg), dose to be taken preferably after food

**Prophylaxis of gout and of uric acid and calcium oxalate renal stones (usual maintenance in severe conditions) | Prophylaxis of hyperuricaemia associated with cancer chemotherapy (usual maintenance in severe conditions)**

▶ **BY MOUTH**

- ▶ **Adult:** 700–900 mg daily in divided doses (max. per dose 300 mg), dose to be taken preferably after food

● **CONTRA-INDICATIONS** Not a treatment for acute gout but continue if attack develops when already receiving allopurinol, and treat attack separately

● **CAUTIONS** Ensure adequate fluid intake (2–3 litres/day) for hyperuricaemia associated with cancer therapy, allopurinol treatment should be started before cancer therapy · thyroid disorders

**CAUTIONS, FURTHER INFORMATION** Initiation or up-titration of treatment may precipitate an acute attack of gout—for information on prophylaxis see Gout p. 1212

● **INTERACTIONS** → Appendix 1: allopurinol

**● SIDE-EFFECTS**

- ▶ **Common or very common** Rash (discontinue therapy; if rash mild re-introduce cautiously but discontinue immediately if recurrence)
- ▶ **Uncommon** Hypersensitivity · nausea · vomiting
- ▶ **Rare or very rare** Agranulocytosis · alopecia · angina pectoris · angioedema · angioimmunoblastic T-cell lymphoma · aplastic anaemia · asthenia · ataxia · bil · bradycardia · cataract · coma · depression · diabetes mellitus · drowsiness · erectile dysfunction · fever · gastrointestinal disorders · gynaecomastia · haemorrhage · hair colour changes · headache · hepatic disorders · hyperlipidaemia · hypertension · infertility male · maculopathy · malaise · oedema · paraesthesia · paralysis · peripheral neuropathy · severe cutaneous adverse reactions (SCARs) · skin reactions · stomatitis · taste altered · thrombocytopenia · vertigo · visual impairment
- **PREGNANCY** Toxicity not reported. Manufacturer advises use only if no safer alternative and disease carries risk for mother or child.

● **BREAST FEEDING** Present in milk—not known to be harmful.

● **HEPATIC IMPAIRMENT** Manufacturer advises monitor liver function periodically during early stages of therapy. **Dose adjustments** Manufacturer advises reduce dose.

● **RENAL IMPAIRMENT** EVGR Use with caution (risk of accumulation). A D Increased risk of hypersensitivity skin reactions.

**Dose adjustments** EVGR Max. initial dose 100 mg daily, increased only if response inadequate; in severe impairment, reduce daily dose below 100 mg, or increase dose interval; if facilities available, adjust dose to maintain plasma-oxipurinol concentration below 100 micromol/litre. A D

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

**Tablet**

CAUTIONARY AND ADVISORY LABELS 8, 21, 27

## Febuxostat

09-Aug-2021

### ● INDICATIONS AND DOSE

#### Treatment of chronic hyperuricaemia in gout

► BY MOUTH

- Adult: Initially 80 mg once daily, if after 2–4 weeks of initial dose, serum uric acid greater than 6 mg/100 mL then increase dose; increased if necessary to 120 mg once daily

#### Prophylaxis and treatment of acute hyperuricaemia with initial chemotherapy for haematologic malignancies

► BY MOUTH

- Adult: 120 mg once daily, to be started 2 days before start of cytotoxic therapy and continued for 7–9 days, according to chemotherapy duration

### IMPORTANT SAFETY INFORMATION

#### MHRA/CHM ADVICE: SERIOUS HYPERSENSITIVITY REACTIONS (JUNE 2012)

There have been rare but serious reports of hypersensitivity reactions, including Stevens-Johnson syndrome and acute anaphylactic shock with febuxostat. Patients should be advised of the signs and symptoms of severe hypersensitivity; febuxostat must be stopped immediately if these occur (early withdrawal is associated with a better prognosis), and must not be restarted in patients who have ever developed a hypersensitivity reaction to febuxostat. Most cases occur during the first month of treatment; a prior history of hypersensitivity to allopurinol and/or renal disease may indicate potential hypersensitivity to febuxostat.

#### MHRA/CHM ADVICE: FEBUXOSTAT (ADENURIC<sup>®</sup>): INCREASED RISK OF CARDIOVASCULAR DEATH AND ALL-CAUSE MORTALITY IN CLINICAL TRIAL IN PATIENTS WITH A HISTORY OF MAJOR CARDIOVASCULAR DISEASE (JULY 2019)

Results from the clinical study (CARES) in patients with gout and a history of major cardiovascular disease showed an increased risk of cardiovascular-related death and all-cause mortality associated with febuxostat compared with allopurinol. Healthcare professionals are advised to avoid treatment with febuxostat in patients with pre-existing major cardiovascular disease (e.g. myocardial infarction, stroke, or unstable angina), unless no other therapy options are appropriate; clinical guidelines for gout recommend treatment with febuxostat only when allopurinol is not tolerated or is contra-indicated.

- **CONTRA-INDICATIONS** Not a treatment for acute gout but continue if attack develops when already receiving febuxostat, and treat attack separately
- **CAUTIONS** Major cardiovascular disease, see *Important safety information* · thyroid disorders · transplant recipients
- **CAUTIONS, FURTHER INFORMATION** [EvGr](#) Administer prophylactic NSAID (not aspirin or salicylates) or colchicine for at least 6 months after starting febuxostat to avoid precipitating an acute attack. [M](#)
- **INTERACTIONS** → Appendix 1: febuxostat

### ● SIDE-EFFECTS

- **Common or very common** Diarrhoea · gout aggravated · headache · hepatic disorders · nausea · oedema · skin reactions
- **Uncommon** Altered smell sensation · appetite abnormal · arrhythmias · arthritis · bundle branch block · chest discomfort · cholelithiasis · constipation · cough · diabetes mellitus · dizziness · drowsiness · dry mouth · dyspnoea · fatigue · gastrointestinal discomfort · gastrointestinal disorders · haemorrhage · hemiparesis · hyperlipidaemia · hypertension · increased risk of infection · insomnia · joint disorders · muscle complaints · muscle weakness · musculoskeletal pain · nephrolithiasis · palpitations · proteinuria · renal failure · sensation abnormal · sexual dysfunction · taste altered · urinary disorders · vasodilation · vomiting · weight changes
- **Rare or very rare** Agranulocytosis · alopecia · angioedema · hyperhidrosis · hypersensitivity · musculoskeletal stiffness · nephritis tubulointerstitial · nervousness · oral ulceration · pancreatitis · pancytopenia · rhabdomyolysis · severe cutaneous adverse reactions (SCARs) · sudden cardiac death · thirst · thrombocytopenia · tinnitus · vision blurred

- **PREGNANCY** Manufacturer advises avoid—limited information available.

- **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal* studies.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution. **Dose adjustments** Manufacturer advises max. 80 mg daily in mild impairment; no dose information available in moderate to severe impairment.

- **RENAL IMPAIRMENT** [EvGr](#) Use with caution if creatinine clearance less than 30 mL/minute (limited information available). [M](#) See p. 21.

- **PRE-TREATMENT SCREENING** Monitor liver function tests before treatment as indicated.

- **MONITORING REQUIREMENTS** Monitor liver function tests periodically during treatment as indicated.

- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website

#### NICE decisions

- Febuxostat for the management of hyperuricaemia in patients with gout (December 2008) NICE TA164 Recommended with restrictions

#### Scottish Medicines Consortium (SMC) decisions

- Febuxostat (*Adenuric*<sup>®</sup>) for the treatment of chronic hyperuricaemia (September 2010) SMC No. 637/10 Recommended with restrictions
- Febuxostat (*Adenuric*<sup>®</sup>) for the prevention and treatment of hyperuricaemia in adult patients undergoing chemotherapy for haematologic malignancies at intermediate to high risk of tumour lysis syndrome (TLS) (June 2016) SMC No. 1153/16 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

£24.36 DT = £24.36

## 3 Neuromuscular disorders

### Neuromuscular disorders

17-Dec-2019

#### Drugs that enhance neuromuscular transmission

Anticholinesterases are used as first-line treatment in *ocular myasthenia gravis* and as an adjunct to immunosuppressant therapy for *generalised myasthenia gravis*.

Corticosteroids are used when anticholinesterases do not control symptoms completely. A second-line immunosuppressant such as azathioprine p. 902 is frequently used to reduce the dose of corticosteroid.

Plasmapheresis or infusion of intravenous immunoglobulin [unlicensed indication] may induce temporary remission in severe relapses, particularly where bulbar or respiratory function is compromised or before thymectomy.

#### Anticholinesterases

Anticholinesterase drugs enhance neuromuscular transmission in voluntary and involuntary muscle in *myasthenia gravis*. Excessive dosage of these drugs can impair neuromuscular transmission and precipitate cholinergic crises by causing a depolarising block. This may be difficult to distinguish from a worsening myasthenic state.

Muscarinic side-effects of anticholinesterases include increased sweating, increased salivary and gastric secretions, increased gastro-intestinal and uterine motility, and bradycardia. These parasympathomimetic effects are antagonised by atropine sulfate p. 1445.

Neostigmine p. 1218 produces a therapeutic effect for up to 4 hours. Its pronounced muscarinic action is a disadvantage, and simultaneous administration of an antimuscarinic drug such as atropine sulfate or propanteline bromide p. 92 may be required to prevent colic, excessive salivation, or diarrhoea. In severe disease neostigmine can be given every 2 hours. The maximum that most patients can tolerate is 180 mg daily.

Pyridostigmine bromide p. 1218 is less powerful and slower in action than neostigmine but it has a longer duration of action. It is preferable to neostigmine because of its smoother action and the need for less frequent dosage. It is particularly preferred in patients whose muscles are weak on waking. It has a comparatively mild gastrointestinal effect but an antimuscarinic drug may still be required.

Neostigmine is also used to reverse the actions of the non-depolarising neuromuscular blocking drugs.

#### Immunosuppressant therapy

**Corticosteroids** are established as treatment for *myasthenia gravis*; although they are commonly given on alternate days there is little evidence of benefit over daily administration. Corticosteroid treatment is usually initiated under in-patient supervision and all patients should receive osteoporosis prophylaxis.

In *generalised myasthenia gravis* prednisolone p. 747 is given. About 10% of patients experience a transient but very serious worsening of symptoms in the first 2–3 weeks, especially if the corticosteroid is started at a high dose. Smaller doses of corticosteroid are usually required in *ocular myasthenia*. Once clinical remission has occurred (usually after 2–6 months), the dose of prednisolone should be reduced slowly to the minimum effective dose.

In *generalised myasthenia gravis* azathioprine is usually started at the same time as the corticosteroid and it allows a lower maintenance dose of the corticosteroid to be used. Cyclosporin p. 904, methotrexate p. 987, or mycophenolate mofetil p. 911 can be used in patients unresponsive or intolerant to other treatments [unlicensed indications].

#### Acetylcholine-release enhancers

Amifampridine p. 1218 is licensed for the symptomatic treatment of Lambert-Eaton myasthenic syndrome (LEMS), a rare disorder of neuromuscular transmission.

Fampridine p. 915 is licensed for the improvement of walking in patients with Multiple sclerosis p. 913 who have a walking disability.

#### Skeletal muscle relaxants

The drugs described are used for the relief of chronic muscle spasm or spasticity associated with Multiple sclerosis p. 913 or other neurological damage; they are not indicated for spasm associated with minor injuries. Baclofen, diazepam, and tizanidine act principally on the central nervous system. Dantrolene has a peripheral site of action; cannabis extract has both a central and a peripheral action. Skeletal muscle relaxants differ in action from the muscle relaxants used in anaesthesia, which block transmission at the neuromuscular junction.

The underlying cause of spasticity should be treated and any aggravating factors (e.g. pressure sores, infection) remedied. Skeletal muscle relaxants are effective in most forms of spasticity except the rare alpha variety. The major disadvantage of treatment with these drugs is that reduction in the muscle tone can cause a loss of splinting action of the spastic leg and trunk muscles and sometimes lead to an increase in disability.

Baclofen p. 1219 inhibits transmission at spinal level and also depresses the central nervous system. The dose should be increased slowly to avoid the major side-effects of sedation and muscular hypotonia (other adverse events are uncommon).

Dantrolene sodium p. 1460 acts directly on skeletal muscle and produces fewer central adverse effects making it a drug of choice. The dose should be increased slowly.

Diazepam p. 375 can also be used. Sedation and occasionally extensor hypotonus are disadvantages. Other benzodiazepines also have muscle-relaxant properties. Muscle-relaxant doses of benzodiazepines are similar to anxiolytic doses.

Tizanidine p. 1221 is an alpha<sub>2</sub>-adrenoceptor agonist indicated for spasticity associated with Multiple sclerosis p. 913 or spinal cord injury.

**EVGr** Cannabis extract p. 1219 can be trialled as an adjunct treatment for moderate to severe spasticity in multiple sclerosis if other pharmacological treatments are not effective. Treatment must be initiated and supervised by a specialist. For further information see Multiple sclerosis p. 913. 

#### Other muscle relaxants

The clinical efficacy of methocarbamol p. 1221 and meprobamate as muscle relaxants is **not** well established, although they have been included in compound analgesic preparations.

## NEUROPROTECTIVE DRUGS

### Riluzole

15-Jun-2021

#### ● INDICATIONS AND DOSE

To extend life in patients with amyotrophic lateral sclerosis, initiated by specialist experienced in the management of motor neurone disease

- ▶ BY MOUTH
- ▶ Adult: 50 mg twice daily

● **CONTRA-INDICATIONS** Acute porphyrias p. 1150

● **CAUTIONS** History of abnormal hepatic function (consult product literature for details) · interstitial lung disease

**CAUTIONS, FURTHER INFORMATION**

- ▶ Interstitial lung disease [EvGr](#) Perform chest radiography if symptoms such as dry cough or dyspnoea develop; discontinue if interstitial lung disease is diagnosed. [⚠](#)
- **INTERACTIONS** → Appendix 1: riluzole
- **SIDE-EFFECTS**
- ▶ **Common or very common** Abdominal pain · asthenia · diarrhoea · dizziness · drowsiness · headache · nausea · oral paraesthesia · pain · tachycardia · vomiting
- ▶ **Uncommon** Anaemia · angioedema · interstitial lung disease · pancreatitis
- ▶ **Frequency not known** Hepatitis · neutropenia
- SIDE-EFFECTS, FURTHER INFORMATION** White blood cell counts should be determined in febrile illness; neutropenia requires discontinuation of riluzole.
- **PREGNANCY** Avoid—no information available.
- **BREAST FEEDING** Avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid (risk of increased exposure).
- **RENAL IMPAIRMENT** [EvGr](#) Avoid—no information available. [⚠](#)
- **PATIENT AND CARER ADVICE**
- ▶ **Blood disorders** Patients or their carers should be told how to recognise signs of neutropenia and advised to seek immediate medical attention if symptoms such as fever occur.
- ▶ **Driving and skilled tasks** Dizziness or vertigo may affect performance of skilled tasks (e.g. driving).
- **NATIONAL FUNDING/ACCESS DECISIONS**
- ▶ For full details see funding body website
- NICE decisions**
- ▶ **Guidance on the use of Riluzole (*Rilutek*<sup>®</sup>) for the treatment of Motor Neurone Disease (January 2001) NICE TA20 Recommended**

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution, powder

**Oral suspension**

- ▶ **Teglutik** (Martindale Pharmaceuticals Ltd)  
Riluzole 5 mg per 1 ml Teglutik 5mg/1ml oral suspension sugar-free | 300 ml [PoM](#) £100.00 DT = £100.00

**Tablet**

- ▶ **Riluzole (Non-proprietary)**
- Riluzole 50 mg Riluzole 50mg tablets | 56 tablet [PoM](#) £320.33 DT = £8.02
- ▶ **Rilutek** (Sanofi)
- Riluzole 50 mg Rilutek 50mg tablets | 56 tablet [PoM](#) £320.33 DT = £8.02

● **SIDE-EFFECTS**

- ▶ **Common or very common** Appetite decreased · constipation · cough · enuresis · fever · flatulence · gastrointestinal discomfort · haemorrhage · headache · hypertension · hypertriglyceridaemia · nausea · pain · skin reactions · vomiting · weight decreased
- ▶ **Frequency not known** Ear infection · malaise
- **PREGNANCY** Manufacturer advises avoid—toxicity in *animal* studies.
- **BREAST FEEDING** Manufacturer advises discontinue breastfeeding—present in milk in *animal* studies.
- **RENAL IMPAIRMENT** Manufacturer advises close monitoring—safety and efficacy not established.
- **MONITORING REQUIREMENTS** Manufacturer advises monitor renal function at least every 6–12 months, and cholesterol and triglyceride concentrations at least annually.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises the contents of each sachet should be mixed with at least 30 mL of liquid (water, milk, fruit juice), or 3 tablespoons of semi-solid food (yoghurt or apple sauce).
- **PATIENT AND CARER ADVICE** Manufacturer advises patients should maintain adequate hydration during treatment.
- Missed doses** Manufacturer advises if a morning or midday dose is more than 3 hours late, or an evening dose is more than 6 hours late, the missed dose should not be taken and the next dose should be taken at the normal time.

● **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

- ▶ Ataluren for treating Duchenne muscular dystrophy with a nonsense mutation in the dystrophin gene (July 2016) NICE HST3 Recommended

**Scottish Medicines Consortium (SMC) decisions**

- ▶ Ataluren (*Translarna*<sup>®</sup>) for the treatment of Duchenne muscular dystrophy resulting from a nonsense mutation in the dystrophin gene, in ambulatory patients aged 5 years and older (April 2016) SMC No. 1131/16 Not recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Granules**

- ▶ **Translarna** (PTC Therapeutics Ltd) ▼
- Ataluren 125 mg Translarna 125mg granules for oral suspension sachets | 30 sachet [PoM](#) £2,532.00 (Hospital only)
- Ataluren 250 mg Translarna 250mg granules for oral suspension sachets | 30 sachet [PoM](#) £5,064.00 (Hospital only)
- Ataluren 1 gram Translarna 1,000mg granules for oral suspension sachets | 30 sachet [PoM](#) £20,256.00 (Hospital only)

## 3.1 Muscular dystrophy

### DRUGS FOR NEUROMUSCULAR DISORDERS

#### Ataluren

02-Nov-2020

- **DRUG ACTION** Ataluren restores the synthesis of dystrophin by allowing ribosomes to read through premature stop codons that cause incomplete dystrophin synthesis in nonsense mutation Duchenne muscular dystrophy.

● **INDICATIONS AND DOSE**

**Duchenne muscular dystrophy resulting from a nonsense mutation in the dystrophin gene, in ambulatory patients (initiated by a specialist)**

- ▶ BY MOUTH
- ▶ Adult: (consult product literature)

- **INTERACTIONS** → Appendix 1: ataluren

#### Nusinersen

11-Nov-2020

- **DRUG ACTION** Nusinersen is an antisense oligonucleotide that increases the production of survival motor neurone (SMN) protein, thereby helping to compensate for the defect in the SMN1 gene found in 5q spinal muscular atrophy.

● **INDICATIONS AND DOSE**

**5q spinal muscular atrophy (initiated by a specialist)**

- ▶ BY INTRATHECAL INJECTION
- ▶ Adult: Initially 12 mg for 4 doses, on days 0, 14, 28 and 63, then 12 mg every 4 months, for advice on missed doses—consult product literature

**IMPORTANT SAFETY INFORMATION**

MHRA/CHM ADVICE: NUSINERSEN (SPINRAZA®): REPORTS OF COMMUNICATING HYDROCEPHALUS NOT RELATED TO MENINGITIS OR BLEEDING (JULY 2018)

Communicating hydrocephalus not related to meningitis or bleeding has been reported in patients treated with Spinraza®. Patients and caregivers should be informed about the signs and symptoms of hydrocephalus before Spinraza® is started and should be instructed to seek medical attention in case of: persistent vomiting or headache, unexplained decrease in consciousness, and in children increase in head circumference. Patients with signs and symptoms suggestive of hydrocephalus should be further investigated by a physician with expertise in its management.

- **CAUTIONS** Risk factors for renal toxicity—monitor urine protein (preferably using a first morning urine specimen) · risk factors for thrombocytopenia and coagulation disorders—monitor platelet and coagulation profile before treatment
- **PREGNANCY** Manufacturer advises avoid—no information available.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **RENAL IMPAIRMENT** Manufacturer advises close monitoring—safety and efficacy not established.
- **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator (2–8 °C); may be stored (in the original carton, protected from light) at or below 30 °C, for up to 14 days.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website

**NICE decisions**

- ▶ Nusinersen for treating spinal muscular atrophy (July 2019)  
NICE TA588 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

- Spinraza (Biogen Idec Ltd)

Nusinersen (as Nusinersen sodium) 2.4 mg per 1 ml Spinraza 12mg/5ml solution for injection vials | 1 vial [PoM] £75,000.00 (Hospital only)

**Risdiplam**

01-Mar-2022

- **DRUG ACTION** Risdiplam is a survival motor neurone 2 (SMN2) pre-mRNA splicing modifier that increases the production of SMN protein, thereby helping to compensate for the defect in the SMN1 gene found in 5q spinal muscular atrophy.

**• INDICATIONS AND DOSE****5q spinal muscular atrophy (initiated by a specialist)**

- ▶ BY MOUTH

- ▶ Adult: 5 mg once daily, to be taken after a meal at the same time each day

- **INTERACTIONS** → Appendix 1: risdiplam

**• SIDE-EFFECTS**

- ▶ **Common or very common** Arthralgia · cystitis · diarrhoea · fever · headache · hyperpyrexia · increased risk of infection · nausea · oral ulceration · skin reactions

- **CONCEPTION AND CONTRACEPTION** [EvGr] Females of childbearing potential should use highly effective contraception during treatment and for at least 1 month after last treatment; male patients should use highly effective contraception during treatment and for at least 4 months after last treatment if their partner is of childbearing potential. Male fertility may be impaired

during treatment; sperm degeneration and reduced sperm numbers in *animal* studies. ◊M

- **PREGNANCY** [EvGr] Avoid—toxicity in *animal* studies. ◊M
  - **BREAST FEEDING** [EvGr] Avoid—present in milk in *animal* studies. ◊M
  - **DIRECTIONS FOR ADMINISTRATION** Evrysdi® must be reconstituted by a healthcare professional before dispensing. It should be administered orally with the reusable oral syringe provided; the patient should drink water after a dose to ensure that it has been completely swallowed. If a dose is not taken within 5 minutes of being drawn, it should be discarded and a new dose prepared. The solution can also be administered via nasogastric or gastrostomy tube.
  - **PRESCRIBING AND DISPENSING INFORMATION** Patients or their carers should be counselled on the administration of the oral solution.
  - **PATIENT AND CARER ADVICE** If Evrysdi® oral solution spills or gets on the skin, the area should be washed with soap and water. Store in a refrigerator (2–8 °C); any unused portion must be discarded 64 days after reconstitution. Vomiting If a dose is not fully swallowed or vomiting occurs after taking a dose, no additional dose should be taken on that day and the next dose should be taken at the usual time.
- Missed doses** If a dose is more than 6 hours late, the missed dose should not be taken and the next dose should be taken at the usual time.

**• NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

- ▶ Risdiplam for treating spinal muscular atrophy (December 2021) NICE TA755 Recommended with restrictions
- **Scottish Medicines Consortium (SMC) decisions**
- ▶ Risdiplam (Evrysdi®) for the treatment of 5q spinal muscular atrophy (SMA) in patients two months of age and older, with a clinical diagnosis of SMA type 1, type 2 or type 3 or with one to four survival of motor neuron 2 copies (February 2022) SMC No. SMC2401 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Oral solution**

CAUTIONARY AND ADVISORY LABELS 8

EXCIPIENTS: May contain Disodium edetate

- ▶ Evrysdi (Roche Products Ltd) ▼

Risdiplam 750 microgram per 1 ml Evrysdi 0.75mg/ml oral solution sugar-free | 80 ml [PoM] £7,900.00 (Hospital only)

## 3.2 Myasthenia gravis and Lambert-Eaton myasthenic syndrome

**Other drugs used for Myasthenia gravis and Lambert-Eaton myasthenic syndrome** Eculizumab, p. 1104

**ANTICHOLINESTERASES****Anticholinesterases**

- **DRUG ACTION** They prolong the action of acetylcholine by inhibiting the action of the enzyme acetylcholinesterase.
- **CONTRA-INDICATIONS** Intestinal obstruction · urinary obstruction
- **CAUTIONS** Arrhythmias · asthma (extreme caution) · atropine or other antidote to muscarinic effects may be necessary (particularly when neostigmine is given by

injection) but not given routinely because it may mask signs of overdosage · bradycardia · epilepsy · hyperthyroidism · hypotension · parkinsonism · peptic ulceration · recent myocardial infarction · vagotonia

#### CAUTIONS, FURTHER INFORMATION

- ▶ **Elderly** Prescription potentially inappropriate (STOPP criteria) in patients with a known history of persistent bradycardia (heart rate less than 60 beats per minute), heart block, or recurrent unexplained syncope, or concurrent treatment with drugs that reduce heart rate (risk of cardiac conduction failure, syncope and injury). See also Prescribing in the elderly p. 29.
- **SIDE-EFFECTS** Abdominal cramps · diarrhoea · excessive tearing · hypersalivation · nausea · vomiting
- Overdose** Signs of overdosage include bronchoconstriction, increased bronchial secretions, lacrimation, excessive sweating, involuntary defaecation, involuntary micturition, miosis, nystagmus, bradycardia, heart block, arrhythmias, hypotension, agitation, excessive dreaming, and weakness eventually leading to fasciculation and paralysis.
- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk.
- **BREAST FEEDING** Amount probably too small to be harmful.

## Neostigmine

(Neostigmine methylsulfate)

### ● INDICATIONS AND DOSE

#### Treatment of myasthenia gravis

- ▶ **BY MOUTH**
- ▶ **Adult:** Initially 15–30 mg, dose repeated at suitable intervals throughout the day, total daily dose 75–300 mg, the maximum that most patients can tolerate is 180 mg daily
- ▶ **BY SUBCUTANEOUS INJECTION, OR BY INTRAMUSCULAR INJECTION**
- ▶ **Adult:** 1–2.5 mg, dose repeated at suitable intervals throughout the day (usual total daily dose 5–20 mg)

#### Reversal of non-depolarising (competitive) neuromuscular blockade

- ▶ **BY INTRAVENOUS INJECTION**
- ▶ **Adult:** 2.5 mg (max. per dose 5 mg), repeated if necessary after or with glycopyrronium or atropine, to be given over 1 minute

- **CAUTIONS**
- ▶ With intravenous use Glycopyrronium or atropine should also be given when reversing neuromuscular blockade
- **INTERACTIONS** → Appendix 1: neostigmine
- **SIDE-EFFECTS**
- ▶ With parenteral use Intestinal hypermotility · muscle spasms
- **RENAL IMPAIRMENT**
- Dose adjustments** May need dose reduction.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral solution

#### Solution for injection

- ▶ **Neostigmine (Non-proprietary)**
- Neostigmine metilsulfate 2.5 mg per 1 ml** Neostigmine 2.5mg/1ml solution for injection ampoules | 10 ampoule [PoM] £7.50–£13.00 DT = £7.75

## Pyridostigmine bromide

F 1217

05-Nov-2021

- **DRUG ACTION** Pyridostigmine bromide has weaker muscarinic action than neostigmine.

### ● INDICATIONS AND DOSE

#### Myasthenia gravis

- ▶ **BY MOUTH**
- ▶ **Adult:** 30–120 mg, doses to be given at suitable intervals throughout day; usual dose 0.3–1.2 g daily in divided doses, it is inadvisable to exceed a total daily dose of 450 mg in order to avoid acetylcholine receptor down-regulation; patients requiring doses exceeding 450 mg daily will usually require input from a specialised neuromuscular service. Immunosuppressant therapy is usually considered if the dose of pyridostigmine exceeds 360 mg daily

- **INTERACTIONS** → Appendix 1: pyridostigmine
- **SIDE-EFFECTS** Gastrointestinal hypermotility · muscle cramps · rash
- **RENAL IMPAIRMENT**
- Dose adjustments** [EvGr] Consider dose reduction (excreted renally). ⚠

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: tablet, oral suspension, oral solution

#### Oral solution

EXCIPIENTS: May contain Propylene glycol, sorbitol  
ELECTROLYTES: May contain Sodium

#### ▶ Pyridostigmine bromide (Non-proprietary)

**Pyridostigmine bromide 12 mg per 1 ml** Pyridostigmine bromide 12mg/1ml oral solution sugar free sugar-free | 150 ml [PoM] £90.00–£135.36

#### Tablet

#### ▶ Pyridostigmine bromide (Non-proprietary)

**Pyridostigmine bromide 60 mg** Pyridostigmine bromide 60mg tablets | 200 tablet [PoM] £45.48 DT = £45.43

#### ▶ Mestinon (Viatris UK Healthcare Ltd)

**Pyridostigmine bromide 60 mg** Mestinon 60mg tablets | 200 tablet [PoM] £45.57 DT = £45.43

## CHOLINERGIC RECEPTOR STIMULATING DRUGS

### Amifampridine

28-Jun-2021

### ● INDICATIONS AND DOSE

#### Symptomatic treatment of Lambert-Eaton myasthenic syndrome (specialist use only)

- ▶ **BY MOUTH**
- ▶ **Adult:** Initially 15 mg daily in 3 divided doses, then increased in steps of 5 mg every 4–5 days, increased to up to 60 mg daily in 3–4 divided doses (max. per dose 20 mg); maximum 60 mg per day

- **CONTRA-INDICATIONS** Congenital QT syndromes · epilepsy · uncontrolled asthma
- **CAUTIONS** Risk factors for schwannomas
- **INTERACTIONS** → Appendix 1: amifampridine
- **SIDE-EFFECTS**
- ▶ **Common or very common** Dizziness · gastrointestinal discomfort · nausea · oral disorders · peripheral coldness · sensation abnormal · sweat changes
- ▶ **Frequency not known** Anxiety · arrhythmia · asthenia · asthmatic attack · bronchial secretion increased · cough · diarrhoea · drowsiness · gastrointestinal disorder · headache · movement disorders · palpitations · Raynaud's phenomenon · seizures · sleep disorder · vision blurred
- **CONCEPTION AND CONTRACEPTION** Ensure effective contraception during treatment in men and women.

- **PREGNANCY** Manufacturer advises avoid.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (risk of increased exposure).  
**Dose adjustments** Manufacturer advises initial dose reduction to 5 mg twice daily in mild impairment, titrate in steps of 5 mg every 7 days.  
Manufacturer advises initial dose reduction to 5 mg once daily in moderate to severe impairment, titrate in steps of 5 mg every 7 days.
- **RENAL IMPAIRMENT** EvGr Use with caution (risk of increased exposure). ⚠  
**Dose adjustments** EvGr Reduce initial dose to 5 mg twice daily in mild impairment, titrate in steps of 5 mg every 7 days.  
Reduce initial dose to 5 mg once daily in moderate to severe impairment, titrate in steps of 5 mg every 7 days. ⚠
- **MONITORING REQUIREMENTS** Clinical and ECG monitoring required at treatment initiation and yearly thereafter.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website  
**Scottish Medicines Consortium (SMC) decisions**  
▶ **Amifampridine (Firdapse<sup>®</sup>) for the symptomatic treatment of Lambert-Eaton myasthenic syndrome (LEMS) in adults (August 2012)** SMC No. 660/10 Not recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: tablet

**Tablet**

CAUTIONARY AND ADVISORY LABELS 3, 21

▶ **Firdapse (SERB)** ▼Amifampridine (as Amifampridine phosphate) 10 mg Firdapse 10mg tablets | 100 tablet Ⓜ £1,815.00 (Hospital only)

### 3.3 Nocturnal leg cramps

#### Nocturnal leg cramps

03-May-2021

**Quinine salts**

Quinine salts p. 673, such as quinine sulfate, may reduce the frequency of nocturnal leg cramps. EvGr However, because of potential toxicity, quinine is not recommended for routine treatment and should not be used unless cramps cause regular disruption to sleep. Quinine should only be considered when cramps are very painful or frequent, when other treatable causes of cramp have been excluded, and when non-pharmacological treatments have not worked (e.g. passive stretching exercises). ⚠ EvGr It may take up to 4 weeks for improvement to become apparent; if there is benefit, quinine treatment can be continued. Treatment should be interrupted at intervals of approximately 3 months to assess the need for further quinine treatment. ⚠ EvGr In patients taking quinine long term, a trial discontinuation may be considered. ⚠ Quinine is toxic in overdosage and fatalities have occurred.

### 3.4 Spasticity

**Other drugs used for Spasticity** Dantrolene sodium, p. 1460  
• Diazepam, p. 375

## CANNABINOIDS

### Cannabis extract

26-Jan-2022

The properties listed below are those particular to the combination only. For the properties of the components please consider, cannabidiol p. 336.

**● INDICATIONS AND DOSE****Adjunct in moderate to severe spasticity in multiple sclerosis (specialist use only)**

- ▶ BY BUCCAL ADMINISTRATION
- ▶ Adult: (consult product literature)

- **CONTRA-INDICATIONS** Family history of psychosis · history of other severe psychiatric disorder · personal history of psychosis
- **CAUTIONS** History of epilepsy · significant cardiovascular disease
- **INTERACTIONS** → Appendix 1: cannabidiol · dronabinol
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Appetite abnormal · balance impaired · concentration impaired · constipation · depression · diarrhoea · disorientation · dizziness · drowsiness · dry mouth · dysarthria · euphoric mood · feeling drunk · malaise · memory loss · nausea · oral disorders · perception altered · taste altered · vertigo · vision blurred · vomiting
  - ▶ **Uncommon** Abdominal pain upper · delusions · hallucinations · hypertension · palpitations · paranoia · pharyngitis · suicidal ideation · syncope · tachycardia · throat irritation · tooth discolouration
- **CONCEPTION AND CONTRACEPTION** Manufacturer recommends effective contraception during and for 3 months after treatment in men and women.
- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risks.
- **BREAST FEEDING** Avoid—present in milk.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid in moderate to severe impairment (risk of accumulation with chronic dosing)—no information available.
- **RENAL IMPAIRMENT** Manufacturer advises more frequent monitoring in significant impairment (no information available; possible risk of prolonged or enhanced effect).
- **MONITORING REQUIREMENTS** Monitor oral mucosa—interrupt treatment if lesions or persistent soreness.
- **PATIENT AND CARER ADVICE**  
**Driving and skilled tasks** For information on 2015 legislation regarding driving whilst taking certain controlled drugs, including cannabis, see Drugs and driving under Guidance on prescribing p. 1.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Spray**

CAUTIONARY AND ADVISORY LABELS 2

## MUSCLE RELAXANTS > CENTRALLY ACTING

### Baclofen

05-Oct-2021

**● INDICATIONS AND DOSE****Pain of muscle spasm in palliative care**

- ▶ BY MOUTH
- ▶ Adult: 5–10 mg 3 times a day

continued →

**Hiccup due to gastric distension in palliative care**

- ▶ BY MOUTH
- ▶ Adult: 5 mg twice daily

**Chronic severe spasticity resulting from disorders such as multiple sclerosis or traumatic partial section of spinal cord**

- ▶ BY MOUTH
- ▶ Adult: Initially 5 mg 3 times a day, gradually increased; maintenance up to 60 mg daily in divided doses, review treatment if no benefit within 6 weeks of achieving maximum dose; maximum 100 mg per day

**Severe chronic spasticity unresponsive to oral antispastic drugs (or where side-effects of oral therapy unacceptable) or as alternative to ablative neurosurgical procedures (specialist use only)**

- ▶ BY INTRATHECAL INJECTION
- ▶ Adult: Test dose 25–50 micrograms, to be given over at least 1 minute via catheter or lumbar puncture, then increased in steps of 25 micrograms (max. per dose 100 micrograms), not given more often than every 24 hours to determine appropriate dose, then *dose-titration phase*, most often using infusion pump (implanted into chest wall or abdominal wall tissues) to establish maintenance dose (ranging from 12 micrograms to 2 mg daily for spasticity of spinal origin or 22 micrograms to 1.4 mg daily for spasticity of cerebral origin) retaining some spasticity to avoid sensation of paralysis

**IMPORTANT SAFETY INFORMATION**

Consult product literature for details on test dose and titration—important to monitor patients closely in appropriately equipped and staffed environment during screening and immediately after pump implantation. Resuscitation equipment must be available for immediate use. Treatment with continuous pump-administered intrathecal baclofen should be initiated within 3 months of a satisfactory response to intrathecal baclofen testing.

**● CONTRA-INDICATIONS**

- ▶ With intrathecal use Local infection · systemic infection
- ▶ With oral use Active peptic ulceration

**● CAUTIONS**

**GENERAL CAUTIONS** Cerebrovascular disease · diabetes · elderly · epilepsy · history of peptic ulcer · history of substance abuse · hypertonic bladder sphincter · Parkinson's disease · psychiatric illness · respiratory impairment

**SPECIFIC CAUTIONS**

- ▶ With intrathecal use Coagulation disorders · malnutrition (increased risk of post-surgical complications) · previous spinal fusion procedure

- **INTERACTIONS** → Appendix 1: baclofen

**● SIDE-EFFECTS****GENERAL SIDE-EFFECTS**

- ▶ **Common or very common** Confusion · constipation · depression · diarrhoea · dizziness · drowsiness · dry mouth · euphoric mood · hallucination · headache · hyperhidrosis · hypotension · nausea · paraesthesia · skin reactions · urinary disorders · vision disorders · vomiting
- ▶ **Uncommon** Bradycardia · hypothermia
- ▶ **Rare or very rare** Withdrawal syndrome

**SPECIFIC SIDE-EFFECTS**

- ▶ **Common or very common**
- ▶ With intrathecal use Anxiety · appetite decreased · asthenia · chills · dyspnoea · fever · hypersalivation · insomnia · neuromuscular dysfunction · oedema · pain · pneumonia · respiratory disorders · seizure · sexual dysfunction

- ▶ With oral use Fatigue · gastrointestinal disorder · muscle weakness · myalgia · respiratory depression · sleep disorders

**▶ Uncommon**

- ▶ With intrathecal use Alopecia · deep vein thrombosis · dehydration · flushing · hypertension · hypogeusia · ileus · memory loss · pallor · paranoia · suicidal behaviours

**▶ Rare or very rare**

- ▶ With oral use Abdominal pain · erectile dysfunction · hepatic function abnormal · taste altered

**▶ Frequency not known**

- ▶ With intrathecal use Scoliosis

- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk (toxicity in *animal* studies).

- **BREAST FEEDING** Present in milk—amount probably too small to be harmful.

**● HEPATIC IMPAIRMENT**

- ▶ With oral use Manufacturer advises use with caution—no information available.

- **RENAL IMPAIRMENT** See p. 21. [\[EvdG\]](#) Use with caution. [Ⓜ](#)

- ▶ With oral use [\[EvdG\]](#) Only use if potential benefit outweighs risk if eGFR less than 15 mL/minute/1.73 m<sup>2</sup>. [Ⓜ](#)

- ▶ **Dose adjustments** ▶ With oral use [\[EvdG\]](#) Use smaller doses (e.g. 5 mg daily) and if necessary increase dosage interval—monitor for signs and symptoms of toxicity. [Ⓜ](#)

- **TREATMENT CESSATION** Avoid abrupt withdrawal (risk of hyperactive state, may exacerbate spasticity, and precipitate autonomic dysfunction including hyperthermia, psychiatric reactions and convulsions; to minimise risk, discontinue by gradual dose reduction over at least 1–2 weeks (longer if symptoms occur)).

- **PRESCRIBING AND DISPENSING INFORMATION** Flavours of oral liquid formulations may include raspberry.

**Palliative care** For further information on the use of baclofen in palliative care, see [www.medicinescomplete.com/#/content/palliative/baclofen](http://www.medicinescomplete.com/#/content/palliative/baclofen).

**● PATIENT AND CARER ADVICE**

**Driving and skilled tasks** Drowsiness may affect performance of skilled tasks (e.g. driving); effects of alcohol enhanced.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution, solution for injection

**Tablet**

## 4 Pain and inflammation in musculoskeletal disorders

### Low back pain and sciatica

09-Aug-2021

#### Description of condition

Low back pain is pain in the lumbosacral area of the back. It can be described as *non-specific*, *mechanical*, *musculoskeletal*, or *simple* (if it is not associated with serious or potentially serious causes). Episodes of back pain do not usually last long, with rapid improvements in pain and disability seen within a few weeks to months.

Sciatica (*radicular pain* or *radiculopathy*) is neuropathic leg pain secondary to compressive lumbosacral nerve root pathology. Sciatica can also be present in about 5–10% of individuals with non-specific back pain, and where they coexist, the symptoms of sciatica tend to predominate.

#### Non-drug treatment

[EvGr](#) Exercise programmes, manual therapy (spinal manipulation, mobilisation, or soft-tissue techniques such as massage), and psychological therapies should be considered for managing low back pain with or without sciatica.

Spinal decompression may be considered in patients with sciatica when pain and function has not improved with non-surgical treatment (including drug treatment). [⚠](#)

#### Drug treatment

[EvGr](#) An oral NSAID (see Non-steroidal anti-inflammatory drugs below) should be considered for managing acute low back pain, taking into consideration the risks associated with

NSAIDs, the need for continued monitoring, and the possible need for gastroprotective treatment (for further information, see Peptic ulcer disease p. 76).

A weak opioid, either alone or with paracetamol p. 477, can be used to manage acute low back pain only if an NSAID is contra-indicated, not tolerated or ineffective (see *Opioid analgesics* under Analgesics p. 474). Paracetamol alone is ineffective for managing low back pain. [⚠](#)

[EvGr](#) Benzodiazepines are sometimes used to manage acute low back pain (particularly in loss of lordosis); however evidence to support their use is very weak. [⚠](#)

[EvGr](#) In patients with chronic low back pain who have had an inadequate response to non-drug treatment, NSAIDs should be considered as first-line therapy. Opioids should be the last treatment option considered and should be considered only in patients for whom other therapies have failed and only if the potential benefits outweigh the risks for individual patients. If indicated, opioids should only be prescribed for a limited period of time. Long term opioid therapy should be avoided.

Selective serotonin re-uptake inhibitors (SSRIs), serotonin and noradrenaline re-uptake inhibitors (SNRIs), tricyclic antidepressants, gabapentinoids, and antiepileptic drugs should **not** be offered for managing low back pain.

When non-surgical treatment is ineffective in patients with moderate or severe localised back pain arising from structures supplied by the medial branch nerve, referral for radiofrequency denervation can be considered. [⚠](#)

#### Sciatica

If prescribing NSAIDs for sciatica, take into consideration the limited evidence of benefit and the risks associated with their use.

[EvGr](#) Patients with acute and severe sciatica may benefit from treatment with epidural injections of a local anaesthetic and/or corticosteroid. [⚠](#)

#### Useful Resources

Low back pain and sciatica. National Institute for Health and Care Excellence. Clinical guideline NG59. November 2016 (updated December 2020).

[www.nice.org.uk/guidance/ng59](http://www.nice.org.uk/guidance/ng59)

### Non-steroidal anti-inflammatory drugs

14-Dec-2020

#### Therapeutic effects

In *single doses* non-steroidal anti-inflammatory drugs (NSAIDs) have analgesic activity comparable to that of paracetamol p. 477, but paracetamol is preferred, particularly in the elderly.

In regular *full dosage* NSAIDs have both a lasting analgesic and an anti-inflammatory effect which makes them particularly useful for the treatment of continuous or regular pain associated with inflammation. Therefore, although paracetamol often gives adequate pain control in osteoarthritis, NSAIDs are more appropriate than paracetamol or the opioid analgesics in the *inflammatory arthritides* (e.g. rheumatoid arthritis) and in some cases of *advanced osteoarthritis*. NSAIDs can also be of benefit in the less well defined conditions of *back pain* and *soft-tissue disorders*.

#### Choice

Differences in anti-inflammatory activity between NSAIDs are small, but there is considerable variation in individual response and tolerance to these drugs. About 60% of patients will respond to any NSAID; of the others, those who do not respond to one may well respond to another. Pain relief starts soon after taking the first dose and a full analgesic effect should normally be obtained within a week,

whereas an anti-inflammatory effect may not be achieved (or may not be clinically assessable) for up to 3 weeks. If appropriate responses are not obtained within these times, another NSAID should be tried.

NSAIDs reduce the production of prostaglandins by inhibiting the enzyme cyclo-oxygenase. They vary in their selectivity for inhibiting different types of cyclo-oxygenase; selective inhibition of cyclo-oxygenase-2 (COX-2) is associated with less gastro-intestinal intolerance. Several other factors also influence susceptibility to gastrointestinal effects, and a NSAID should be chosen on the basis of the incidence of gastro-intestinal and other side-effects.

Ibuprofen p. 1232 is a propionic acid derivative with anti-inflammatory, analgesic, and antipyretic properties. It has fewer side-effects than other non-selective NSAIDs but its anti-inflammatory properties are weaker. It is unsuitable for conditions where inflammation is prominent. Dexibuprofen is the active enantiomer of ibuprofen. It has similar properties to ibuprofen and is licensed for the relief of mild to moderate pain and inflammation.

Other propionic acid derivatives:

Naproxen p. 1240 is one of the first choices because it combines good efficacy with a low incidence of side-effects (but more than ibuprofen).

Flurbiprofen p. 1231 may be slightly more effective than naproxen, and is associated with slightly more gastro-intestinal side-effects than ibuprofen.

Ketoprofen p. 1236 has anti-inflammatory properties similar to ibuprofen and has more side-effects.

Dexketoprofen p. 1226, an isomer of ketoprofen, has been introduced for the short-term relief of mild to moderate pain.

Tiaprofenic acid p. 1244 is as effective as naproxen; it has more side-effects than ibuprofen.

Drugs with properties similar to those of propionic acid derivatives:

Diclofenac sodium p. 1227 and aceclofenac p. 1224 are similar in efficacy to naproxen.

Etodolac p. 1230 is comparable in efficacy to naproxen; it is licensed for symptomatic relief of osteoarthritis and rheumatoid arthritis.

Indometacin p. 1235 has an action equal to or superior to that of naproxen, but with a high incidence of side-effects including headache, dizziness, and gastro-intestinal disturbances.

Mefenamic acid p. 1238 has minor anti-inflammatory properties. It has occasionally been associated with diarrhoea and haemolytic anaemia which require discontinuation of treatment.

Meloxicam p. 1238 is licensed for the short-term relief of pain in osteoarthritis and for long-term treatment of rheumatoid arthritis and ankylosing spondylitis.

Nabumetone p. 1239 is comparable in effect to naproxen.

Phenylbutazone is licensed for ankylosing spondylitis, but is not recommended because it is associated with serious side-effects, in particular haematological reactions; it should be used only by a specialist in severe cases where other treatments have been found unsuitable.

Piroxicam p. 1241 is as effective as naproxen and has a long duration of action which permits once-daily administration. However, it has more gastro-intestinal side-effects than most other NSAIDs, and is associated with more frequent serious skin reactions.

Sulindac p. 1242 is similar in tolerance to naproxen.

Tenoxicam p. 1243 is similar in activity and tolerance to naproxen. Its long duration of action allows once-daily administration.

Tolfenamic acid p. 508 is licensed for the treatment of migraine.

Ketorolac trometamol p. 1268 and the selective inhibitor of cyclo-oxygenase-2, parecoxib p. 1455, are licensed for the short-term management of postoperative pain.

The selective inhibitors of COX-2, etoricoxib p. 1230 and celecoxib p. 1225, are as effective as non-selective NSAIDs such as diclofenac sodium and naproxen. Although selective inhibitors can cause serious gastro-intestinal events, available evidence appears to indicate that the risk of serious upper gastro-intestinal events is lower with selective inhibitors compared to non-selective NSAIDs; this advantage may be lost in patients who require concomitant low-dose aspirin.

Celecoxib and etoricoxib are licensed for the relief of pain in osteoarthritis, rheumatoid arthritis, and ankylosing spondylitis; etoricoxib is also licensed for the relief of pain from acute gout.

Aspirin p. 133 has been used in high doses to treat rheumatoid arthritis, but other NSAIDs are now preferred.

### Dental and orofacial pain

Most mild to moderate dental pain and inflammation is effectively relieved by NSAIDs. Those used for dental pain include ibuprofen, diclofenac sodium, and diclofenac potassium p. 1226.

### Considerations in the elderly

The use of NSAIDs in elderly patients is potentially inappropriate (STOPP criteria) if prescribed:

- with a vitamin K antagonist, direct thrombin inhibitor or factor Xa inhibitor in combination (risk of major gastrointestinal bleeding);
- with concurrent antiplatelet agent(s) without proton pump inhibitor (PPI) prophylaxis (increased risk of peptic ulcer disease);
- in a history of peptic ulcer disease or gastrointestinal bleeding, unless with concurrent PPI or H<sub>2</sub>-receptor antagonist (risk of peptic ulcer relapse)—not including COX-2 selective NSAIDs;
- with concurrent corticosteroids without PPI prophylaxis (increased risk of peptic ulcer disease);
- in patients with an eGFR less than 50 mL/minute/1.73 m<sup>2</sup> (risk of deterioration in renal function);
- in severe hypertension or severe heart failure (risk of exacerbation);
- for long-term (longer than 3 months) symptom relief of osteoarthritis pain where paracetamol has not been tried (simple analgesics are preferable and usually as effective for pain relief);
- for chronic treatment of gout where there is no contra-indication to a xanthine-oxidase inhibitor (xanthine-oxidase inhibitors are first choice prophylactic drugs in gout);
- a **COX-2 selective** NSAID in concurrent cardiovascular disease (increased risk of myocardial infarction and stroke).

For further information, see *STOPP/START criteria* in Prescribing in the elderly p. 29.

### Asthma

Any degree of worsening of asthma may be related to the ingestion of NSAIDs, either prescribed or (in the case of ibuprofen **and** others) purchased over the counter.

### NSAIDs and cardiovascular events

All NSAID use (including COX-2 selective inhibitors) can, to varying degrees, be associated with a small increased risk of thrombotic events (e.g. myocardial infarction and stroke) independent of baseline cardiovascular risk factors or duration of NSAID use; however, the greatest risk may be in those receiving high doses long term.

COX-2 selective inhibitors, diclofenac (150 mg daily) and ibuprofen p. 1232 (2.4 g daily) are associated with an increased risk of thrombotic events. Although there are limited data regarding the thrombotic effects of aceclofenac p. 1224, treatment advice has been updated in line with diclofenac, based on aceclofenac's structural similarity to

diclofenac and its metabolism to diclofenac. The increased risk for diclofenac is similar to that of licensed doses of etoricoxib p. 1230. Naproxen p. 1240 (1 g daily) is associated with a lower thrombotic risk, and low doses of ibuprofen (1.2 g daily or less) have not been associated with an increased risk of myocardial infarction.

The lowest effective dose of NSAID should be prescribed for the shortest period of time to control symptoms and the need for long-term treatment should be reviewed periodically.

### NSAIDs and gastro-intestinal events

All NSAIDs are associated with serious gastro-intestinal toxicity; the risk is higher in the elderly. Evidence on the relative safety of non-selective NSAIDs indicates differences in the risks of serious upper gastro-intestinal side-effects—piroxicam p. 1241, ketoprofen p. 1236, and ketorolac trometamol p. 1268 are associated with the highest risk; indometacin p. 1235, diclofenac, and naproxen are associated with intermediate risk, and ibuprofen with the lowest risk (although high doses of ibuprofen have been associated with intermediate risk). Selective inhibitors of COX-2 are associated with a *lower risk* of serious upper gastro-intestinal side-effects than non-selective NSAIDs.

Recommendations are that NSAIDs associated with a low risk e.g. ibuprofen are *generally preferred*, to start at the *lowest recommended dose* and not to use more than one oral NSAID at a time.

The combination of a NSAID and low-dose aspirin can increase the risk of gastro-intestinal side-effects; this combination should be used only if absolutely necessary and the patient should be monitored closely.

While it is preferable to avoid NSAIDs in patients with active or previous gastro-intestinal ulceration or bleeding, and to withdraw them if gastro-intestinal lesions develop, nevertheless patients with serious rheumatic diseases are usually dependent on NSAIDs for effective relief of pain and stiffness.

Patients at risk of gastro-intestinal ulceration (including the elderly), who need NSAID treatment should receive gastroprotective treatment.

Systemic as well as local effects of NSAIDs contribute to gastro-intestinal damage; taking oral formulations with milk or food, or using enteric-coated formulations, or changing the route of administration may only partially reduce symptoms such as dyspepsia.

### NSAIDs and alcohol

Alcohol increases the risk of gastro-intestinal haemorrhage associated with NSAIDs. Specialist sources recommend that concurrent use need not be avoided with moderate alcohol intake, but greater caution is warranted in those who drink more than the recommended daily limits.

Some cases of acute kidney injury have been attributed to use of NSAIDs and acute excessive alcohol consumption.

### Advanced Pharmacy Services

Patients taking NSAIDs may be eligible for the Medicines Use Review service provided by a community pharmacist. For further information, see *Advanced Pharmacy Services* in Medicines optimisation p. 16.

#### • INDICATIONS AND DOSE

**Pain and inflammation in rheumatoid arthritis, osteoarthritis and ankylosing spondylitis**

- ▶ BY MOUTH
- ▶ Adult: 100 mg twice daily

• **CONTRA-INDICATIONS** Active bleeding · active gastro-intestinal bleeding · active gastro-intestinal ulceration · bleeding disorders · cerebrovascular disease · history of gastro-intestinal bleeding related to previous NSAID therapy · history of gastro-intestinal perforation related to previous NSAID therapy · history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) · history of recurrent gastro-intestinal ulceration (two or more distinct episodes) · ischaemic heart disease · mild to severe heart failure · peripheral arterial disease · varicella infection

• **CAUTIONS** Allergic disorders · avoid in Acute porphyrias p. 1150 · cardiac impairment (NSAIDs may impair renal function) · connective-tissue disorders · dehydration (risk of renal impairment) · elderly (risk of serious side-effects and fatalities) · history of cardiac failure · history of cerebrovascular bleeding · history of gastro-intestinal disorders (e.g. ulcerative colitis, Crohn's disease) · hypertension · may mask symptoms of infection · oedema · risk factors for cardiovascular events

• **INTERACTIONS** → Appendix 1: NSAIDs

#### • SIDE-EFFECTS

- ▶ **Common or very common** Diarrhoea · dizziness · gastrointestinal discomfort · nausea
- ▶ **Uncommon** Constipation · gastrointestinal disorders · oral disorders · skin reactions · vomiting
- ▶ **Rare or very rare** Anaemia · angioedema · bone marrow disorders · depression · drowsiness · dyspnoea · fatigue · haemolytic anaemia · haemorrhage · headache · heart failure · hepatic disorders · hyperkalaemia · hypersensitivity · hypertension · inflammatory bowel disease · leg cramps · nephrotic syndrome · neutropenia · oedema · palpitations · pancreatitis · paraesthesia · renal failure (more common in patients with pre-existing renal impairment) · respiratory disorders · severe cutaneous adverse reactions (SCARs) · sleep disorders · taste altered · thrombocytopenia · tinnitus · tremor · vasculitis · vasodilation · vertigo · visual impairment · weight increased

▶ **Frequency not known** Acute coronary syndrome · agranulocytosis · asthma · confusion · hallucination · increased risk of arterial thromboembolism · increased risk of ischaemic stroke · malaise · meningitis aseptic (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · nephritis tubulointerstitial · optic neuritis · photosensitivity reaction · platelet aggregation inhibition · respiratory tract reaction

**SIDE-EFFECTS, FURTHER INFORMATION** For information about cardiovascular and gastrointestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1222

• **ALLERGY AND CROSS-SENSITIVITY** EvGr Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. M

• **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

- **PREGNANCY** Most manufacturers advise avoiding the use of NSAIDs during pregnancy or avoiding them unless the potential benefit outweighs the risk. NSAIDs should be avoided during the third trimester because use is associated with a risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn. In addition, the onset of labour may be delayed and its duration may be increased.
- **BREAST FEEDING** Use with caution during breast-feeding. Manufacturer advises avoid.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild to moderate impairment; avoid in hepatic failure. **Dose adjustments** Manufacturer advises consider initial dose reduction to 100 mg daily in mild to moderate impairment.
- **RENAL IMPAIRMENT** In general, for NSAIDs the MHRA advises to avoid where possible; if necessary, use with caution (risk of fluid retention and further renal impairment, including renal failure). [EVGR](#) For *accefofenac*, avoid in renal failure.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Tablet**

**Postoperative pain**

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Adult: 75 mg 1–2 times a day for maximum 2 days, twice daily administration in severe cases, to be injected into the gluteal muscle

**Acute exacerbations of pain**

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Adult: 75 mg 1–2 times a day for maximum 2 days, twice daily administration in severe cases, to be injected into the gluteal muscle

**Ureteric colic**

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Adult: 75 mg, then 75 mg after 30 minutes if required

**Acute postoperative pain (in hospital setting)**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: 75 mg, then 75 mg after 4–6 hours if required for maximum 2 days; maximum 150 mg per day

**Prevention of postoperative pain (in hospital setting)**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: Initially 25–50 mg, to be given after surgery over 15–60 minutes, then 5 mg/hour for maximum 2 days; maximum 150 mg per day

**● CONTRA-INDICATIONS**

- ▶ With intravenous use Dehydration · history of asthma · history of confirmed or suspected cerebrovascular bleeding · history of haemorrhagic diathesis · hypovolaemia · operations with high risk of haemorrhage
- ▶ With systemic use Active gastro-intestinal bleeding · active gastro-intestinal ulceration · avoid suppositories in proctitis · cerebrovascular disease · history of gastro-intestinal bleeding related to previous NSAID therapy · history of gastro-intestinal perforation related to previous NSAID therapy · history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) · history of recurrent gastro-intestinal ulceration (two or more distinct episodes) · ischaemic heart disease · mild to severe heart failure · peripheral arterial disease

**● CAUTIONS**

- ▶ With systemic use Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · coagulation defects · connective-tissue disorders · dehydration (risk of renal impairment) · elderly (risk of serious side-effects and fatalities) · history of cardiac failure · history of gastro-intestinal disorders (e.g. ulcerative colitis, Crohn's disease) · hypertension · may mask symptoms of infection · oedema · risk factors for cardiovascular events
- ▶ With topical use Avoid contact with eyes · avoid contact with inflamed or broken skin · avoid contact with mucous membranes · not for use with occlusive dressings · topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported)

**● INTERACTIONS** → Appendix 1: NSAIDs**● SIDE-EFFECTS****▶ Common or very common**

- ▶ With systemic use Appetite decreased · diarrhoea · dizziness · gastrointestinal discomfort · gastrointestinal disorders · headache · nausea · oedema · rash (discontinue) · skin reactions · vertigo · vomiting
- ▶ With topical use Conjunctivitis · muscle tone increased · oedema · rash (discontinue) · sensation abnormal · skin reactions · skin ulcer

**▶ Uncommon**

- ▶ With systemic use Chest pain · heart failure · myocardial infarction · palpitations
- ▶ With topical use Abdominal pain · alopecia · diarrhoea · eye pain · haemorrhage · lacrimation disorder · nausea · seborrhoea

**▶ Rare or very rare**

- ▶ With rectal use Ulcerative colitis aggravated
- ▶ With systemic use Acute kidney injury · agranulocytosis · alopecia · anaemia · angioedema · anxiety · aplastic anaemia · asthma · confusion · constipation · depression · drowsiness · dyspnoea · erectile dysfunction · fatigue · haemolytic anaemia · haemorrhage · hearing impairment · hepatic disorders · hypersensitivity · hypertension · hypotension · irritability · leucopenia · memory loss · meningitis aseptic (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · nephritis tubulointerstitial · nephrotic syndrome · oesophageal disorder · oral disorders · pancreatitis · photosensitivity reaction · pneumonitis · proteinuria · psychotic disorder · renal papillary necrosis · seizure · sensation abnormal · severe cutaneous adverse reactions (SCARs) · shock · sleep disorders · stroke · taste altered · thrombocytopenia · tinnitus · tremor · vasculitis · vision disorders
- ▶ With topical use Acute kidney injury · angioedema · asthma · hypersensitivity · photosensitivity reaction · rash pustular
- ▶ **Frequency not known**
- ▶ With systemic use Fertility decreased female · fluid retention · hallucination · malaise · optic neuritis · platelet aggregation inhibition
- ▶ With parenteral use Injection site necrosis
- ▶ With topical use Hair colour changes

**SIDE-EFFECTS, FURTHER INFORMATION** Topical application of large amounts of diclofenac can result in systemic effects.

For information about cardiovascular and gastrointestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1222

- **ALLERGY AND CROSS-SENSITIVITY** EvGr Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. M

**● CONCEPTION AND CONTRACEPTION**

- ▶ With systemic use Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

**● PREGNANCY**

- ▶ With systemic use Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.
- ▶ With topical use Patient packs for topical preparations carry a warning to avoid during pregnancy.

**● BREAST FEEDING**

- ▶ With systemic use Use with caution during breast-feeding. Amount in milk too small to be harmful.
- ▶ With topical use Patient packs for topical preparations carry a warning to avoid during breast-feeding.

**● HEPATIC IMPAIRMENT**

- ▶ With systemic use Manufacturer advises caution in mild to moderate impairment; avoid in severe impairment.

**● RENAL IMPAIRMENT**

- ▶ With systemic use In general, for NSAIDs the MHRA advises to avoid where possible; if necessary, use with caution (risk of fluid retention and further renal impairment, including renal failure). For *diclofenac sodium*, manufacturers advise avoid in severe impairment.
- ▶ With topical use In general, manufacturers advise caution (deterioration in renal function has also been reported after topical use).
- ▶ With intravenous use Manufacturers advise avoid in moderate to severe impairment.

### ● DIRECTIONS FOR ADMINISTRATION

- ▶ With intravenous use For *intravenous infusion* (Voltarol®), give continuously or intermittently in Glucose 5% or Sodium chloride 0.9%. Dilute 75 mg with 100–500 mL infusion fluid (previously buffered with 0.5 mL sodium bicarbonate 8.4% solution or with 1 mL sodium bicarbonate 4.2% solution). For intermittent infusion give 25–50 mg over 15–60 minutes or 75 mg over 30–120 minutes. For continuous infusion give at a rate of 5 mg/hour.
- ▶ With topical use For topical preparations, apply with gentle massage only.

- **PRESCRIBING AND DISPENSING INFORMATION** Voltarol® dispersible tablets are more suitable for **short-term** use in acute conditions for which treatment required for no more than 3 months (no information on use beyond 3 months).

- **PATIENT AND CARER ADVICE** For topical preparations, patients and their carers should be advised to wash hands immediately after use.

### ● PROFESSION SPECIFIC INFORMATION

**Dental practitioners' formulary** Diclofenac Sodium Tablets may be prescribed.

### ● EXCEPTIONS TO LEGAL CATEGORY

- ▶ When used for Relief of pain in musculoskeletal conditions and adjunctive treatment in knee or hand osteoarthritis Various pack sizes of gel preparations may be available on sale to the public.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: dispersible tablet, oral suspension, oral solution

#### Modified-release tablet

CAUTIONARY AND ADVISORY LABELS 21, 25

- ▶ **Diclo-SR** (Strides Pharma UK Ltd)  
Diclofenac sodium 75 mg Diclo-SR 75mg tablets | 28 tablet [PoM] £6.50 | 56 tablet [PoM] £14.50 DT = £17.56
- ▶ **Dicloflex 75mg SR** (Dexcel-Pharma Ltd)

- ▶ **Dicloflex Retard** (Dexcel-Pharma Ltd)  
Diclofenac sodium 100 mg Dicloflex Retard 100mg tablets | 28 tablet [PoM] £11.33 DT = £11.33
- ▶ **Enstar XL** (Ennogen Pharma Ltd)  
Diclofenac sodium 100 mg Enstar XL 100 tablets | 28 tablet [PoM] £7.58 DT = £11.33

#### Gastro-resistant tablet

CAUTIONARY AND ADVISORY LABELS 5, 25

- ▶ **Diclofenac sodium (Non-proprietary)**  
Diclofenac sodium 25 mg Diclofenac sodium 25mg gastro-resistant tablets | 28 tablet [PoM] £8.99 DT = £1.15 | 84 tablet [PoM] £1.15-£26.97
- ▶ **Diclofenac sodium 50 mg** Diclofenac sodium 50mg gastro-resistant tablets | 28 tablet [PoM] £4.97 DT = £1.01 | 84 tablet [PoM] £1.01-£15.00

#### Suppository

- ▶ **Econac** (Advanz Pharma)  
Diclofenac sodium 100 mg Econac 100mg suppositories | 10 suppository [PoM] £3.04 DT = £3.64
- ▶ **Voltarol** (Novartis Pharmaceuticals UK Ltd)  
Diclofenac sodium 12.5 mg Voltarol 12.5mg suppositories | 10 suppository [PoM] £0.70 DT = £0.70
- ▶ **Diclofenac sodium 25 mg** Voltarol 25mg suppositories | 10 suppository [PoM] £1.24 DT = £1.24
- ▶ **Diclofenac sodium 50 mg** Voltarol 50mg suppositories | 10 suppository [PoM] £2.04 DT = £2.04
- ▶ **Diclofenac sodium 100 mg** Voltarol 100mg suppositories | 10 suppository [PoM] £3.64 DT = £3.64

#### Dispersible tablet

CAUTIONARY AND ADVISORY LABELS 13, 21

#### Solution for injection

EXCIPIENTS: May contain Benzyl alcohol, propylene glycol

- ▶ **Voltarol** (Novartis Pharmaceuticals UK Ltd)  
Diclofenac sodium 25 mg per 1 ml Voltarol 75mg/3ml solution for injection ampoules | 10 ampoule [PoM] £9.91 DT = £9.91

#### Modified-release capsule

CAUTIONARY AND ADVISORY LABELS 21 (does not apply to Motifene® 75 mg), 25

EXCIPIENTS: May contain Propylene glycol

- ▶ **Dicloxam Retard** (Galen Ltd)  
Diclofenac sodium 100 mg Dicloxam Retard 100mg capsules | 28 capsule [PoM] £8.20 DT = £8.20
- ▶ **Dicloxam SR** (Galen Ltd)  
Diclofenac sodium 75 mg Dicloxam SR 75mg capsules | 56 capsule [PoM] £11.40 DT = £11.40
- ▶ **Motifene** (Daiichi Sankyo UK Ltd)  
Diclofenac sodium 75 mg Motifene 75mg modified-release capsules | 56 capsule [PoM] £8.00 DT = £8.00

#### Gel

EXCIPIENTS: May contain Propylene glycol, fragrances, benzyl alcohol

- ▶ **Voltarol Emulgel** (GlaxoSmithKline Consumer Healthcare UK Ltd)  
Diclofenac diethylammonium 11.6 mg per 1 gram Voltarol 1.16% Emulgel | 100 gram [PoM] £4.63 DT = £4.63

## Diclofenac sodium with misoprostol

05-Aug-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, diclofenac sodium p. 1227, misoprostol p. 893.

### ● INDICATIONS AND DOSE

#### ARTHROTEC® 50/200

**Prophylaxis against NSAID-induced gastroduodenal ulceration in patients requiring diclofenac for rheumatoid arthritis or osteoarthritis**

- ▶ BY MOUTH
- ▶ Adult: 1 tablet 2–3 times a day, take with food

#### ARTHROTEC® 75/200

**Prophylaxis against NSAID-induced gastroduodenal ulceration in patients requiring diclofenac for rheumatoid arthritis or osteoarthritis**

- ▶ BY MOUTH
- ▶ Adult: 1 tablet twice daily, take with food

#### MISOFEN® 50/200

**Prophylaxis against NSAID-induced gastroduodenal ulceration in patients requiring diclofenac for rheumatoid arthritis or osteoarthritis**

- ▶ BY MOUTH
- ▶ Adult: 1 tablet 2–3 times a day, take with food

#### MISOFEN® 75/200

**Prophylaxis against NSAID-induced gastroduodenal ulceration in patients requiring diclofenac for rheumatoid arthritis or osteoarthritis**

- ▶ BY MOUTH
- ▶ Adult: 1 tablet twice daily, take with food

- **INTERACTIONS** → Appendix 1: misoprostol · NSAIDs

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Gastro-resistant tablet

CAUTIONARY AND ADVISORY LABELS 21, 25

- ▶ **Arthrotec** (Pfizer Ltd)  
Misoprostol 200 microgram, Diclofenac sodium 50 mg Arthrotec 50 gastro-resistant tablets | 60 tablet [PoM] £11.98 DT = £11.98
- ▶ **Misoprostol 200 microgram, Diclofenac sodium 75 mg** Arthrotec 75 gastro-resistant tablets | 60 tablet [PoM] £15.83 DT = £15.83
- ▶ **Misofen** (Morningside Healthcare Ltd)  
Misoprostol 200 microgram, Diclofenac sodium 50 mg Misofen 50mg/200microgram gastro-resistant tablets | 60 tablet [PoM] £11.98 DT = £11.98
- ▶ **Misoprostol 200 microgram, Diclofenac sodium 75 mg** Misofen 75mg/200microgram gastro-resistant tablets | 60 tablet [PoM] £15.83 DT = £15.83

## Etodolac

25-Nov-2021

## ● INDICATIONS AND DOSE

**Pain and inflammation in rheumatoid arthritis and osteoarthritis**

- ▶ BY MOUTH USING MODIFIED-RELEASE MEDICINES
- ▶ Adult: 600 mg once daily

- **CONTRA-INDICATIONS** Active gastro-intestinal bleeding · active gastro-intestinal ulceration · history of gastro-intestinal bleeding related to previous NSAID therapy · history of gastro-intestinal perforation related to previous NSAID therapy · history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) · history of recurrent gastro-intestinal ulceration (two or more distinct episodes) · severe heart failure
  - **CAUTIONS** Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · cerebrovascular disease · coagulation defects · connective-tissue disorders · dehydration (risk of renal impairment) · elderly (risk of serious side-effects and fatalities) · heart failure · history of gastro-intestinal disorders (e.g. ulcerative colitis, Crohn's disease) · ischaemic heart disease · may mask symptoms of infection · peripheral arterial disease · risk factors for cardiovascular events · uncontrolled hypertension
  - **INTERACTIONS** → Appendix 1: NSAIDs
  - **SIDE-EFFECTS** Agranulocytosis · angioedema · aplastic anaemia · asthenia · asthma · bilirubinuria · bronchospasm · chills · confusion · constipation · Crohn's disease aggravated · depression · diarrhoea · dizziness · drowsiness · dyspnoea · fever · gastrointestinal discomfort · gastrointestinal disorders · haemolytic anaemia · haemorrhage · hallucination · headache · heart failure · hepatic disorders · hypersensitivity · hypertension · insomnia · malaise · meningitis aseptic (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · nausea · nephritic syndrome · nephritis tubulointerstitial · nephrotoxicity · nervousness · neutropenia · oedema · optic neuritis · oral ulceration · palpitations · pancreatitis · paraesthesia · photosensitivity reaction · renal failure (more common in patients with pre-existing renal impairment) · severe cutaneous adverse reactions (SCARs) · skin reactions · thrombocytopenia · tinnitus · tremor · urinary disorders · vasculitis · vertigo · visual impairment · vomiting
- SIDE-EFFECTS, FURTHER INFORMATION** For information about cardiovascular and gastrointestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1222
- **ALLERGY AND CROSS-SENSITIVITY** <sup>[EvGr]</sup> Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. <sup>⚠</sup>
  - **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.
  - **PREGNANCY** Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.
  - **BREAST FEEDING** Use with caution during breast-feeding. Manufacturer advises avoid.
  - **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild to moderate impairment; avoid in severe impairment.
  - **RENAL IMPAIRMENT** In general, for NSAIDs the MHRA advises to avoid where possible; if necessary, use with caution (risk of fluid retention and further renal

impairment, including renal failure). <sup>[EvGr]</sup> For *etodolac*, avoid in severe impairment. <sup>⚠</sup>

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Modified-release tablet**

CAUTIONARY AND ADVISORY LABELS 25, 21

- ▶ **Etolyn** (Viatris UK Healthcare Ltd)  
**Etodolac 600 mg** Etolyn 600mg modified-release tablets | 30 tablet <sup>[PoM]</sup> £12.40 DT = £15.50
- ▶ **Etopan XL** (Sun Pharmaceutical Industries Europe B.V.)

## Etoricoxib

22-Nov-2021

## ● INDICATIONS AND DOSE

**Pain and inflammation in osteoarthritis**

- ▶ BY MOUTH
- ▶ Child 16-17 years: 30 mg once daily, increased if necessary to 60 mg once daily
- ▶ Adult: 30 mg once daily, increased if necessary to 60 mg once daily

**Pain and inflammation in rheumatoid arthritis | Ankylosing spondylitis**

- ▶ BY MOUTH
- ▶ Child 16-17 years: 60 mg once daily, increased if necessary to 90 mg once daily
- ▶ Adult: 60 mg once daily, increased if necessary to 90 mg once daily

**Acute gout**

- ▶ BY MOUTH
- ▶ Child 16-17 years: 120 mg once daily for maximum 8 days
- ▶ Adult: 120 mg once daily for maximum 8 days

- **CONTRA-INDICATIONS** Active gastro-intestinal bleeding · active gastro-intestinal ulceration · cerebrovascular disease · inflammatory bowel disease · ischaemic heart disease · mild to severe heart failure · peripheral arterial disease · uncontrolled hypertension (persistently above 140/90 mmHg)
- **CAUTIONS** Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · coagulation defects · connective-tissue disorders · dehydration (risk of renal impairment) · elderly (risk of serious side-effects and fatalities) · history of cardiac failure · history of gastro-intestinal disorders · hypertension · left ventricular dysfunction · may mask symptoms of infection · oedema · risk factors for cardiovascular events
- **INTERACTIONS** → Appendix 1: NSAIDs
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Arrhythmias · asthenia · bronchospasm · constipation · diarrhoea · dizziness · fluid retention · gastrointestinal discomfort · gastrointestinal disorders · headache · hypertension · increased risk of infection · influenza like illness · nausea · oedema · oral ulceration · palpitations · skin reactions · vomiting
  - ▶ **Uncommon** Alertness decreased · anaemia · angina pectoris · anxiety · appetite abnormal · cerebrovascular insufficiency · chest pain · congestive heart failure · conjunctivitis · cough · depression · drowsiness · dry mouth · dyspnoea · flushing · haemorrhage · hallucination · hyperkalaemia · hypersensitivity · insomnia · irritable bowel syndrome · leucopenia · myocardial infarction · pancreatitis · proteinuria · renal failure (more common in patients with pre-existing renal impairment) · sensation abnormal · taste altered · thrombocytopenia · tinnitus · vasculitis · vertigo · vision blurred · weight increased

- ▶ **Rare or very rare** Angioedema · confusion · hepatic disorders · muscle complaints · severe cutaneous adverse reactions (SCARs) · shock
- ▶ **Frequency not known** Nephritis tubulointerstitial · nephropathy

**SIDE-EFFECTS, FURTHER INFORMATION** For information about cardiovascular and gastrointestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1222

- **ALLERGY AND CROSS-SENSITIVITY** [EvGr](#) Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. [⚠](#)
- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.
- **PREGNANCY** Manufacturer advises avoid (teratogenic in animal studies). Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.
- **BREAST FEEDING** Use with caution during breast-feeding. Manufacturer advises avoid—present in milk in animal studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild to moderate impairment; avoid in severe impairment (no information available).  
**Dose adjustments** Manufacturer advises max. 60 mg once daily in mild impairment; max. 30 mg once daily in moderate impairment.
- **RENAL IMPAIRMENT** In general, for NSAIDs the MHRA advises to avoid where possible; if necessary, use with caution (risk of fluid retention and further renal impairment, including renal failure). [EvGr](#) For *etoricoxib*, avoid if creatinine clearance less than 30 mL/minute. [⚠](#) See p. 21.
- **MONITORING REQUIREMENTS** Monitor blood pressure before treatment, 2 weeks after initiation and periodically during treatment.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Tablet

## Felbinac

07-Dec-2020

- **DRUG ACTION** Felbinac is an active metabolite of the NSAID fenbufen.

### ● INDICATIONS AND DOSE

#### Relief of pain in musculoskeletal conditions | Treatment in knee or hand osteoarthritis (adjunct)

##### ▶ TO THE SKIN

- ▶ Adult: Apply 2–4 times a day, therapy should be reviewed after 14 days; maximum 25 g per day

- **CAUTIONS** Avoid contact with eyes · avoid contact with inflamed or broken skin · avoid contact with mucous membranes · not for use with occlusive dressings · topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported)
- **INTERACTIONS** → Appendix 1: NSAIDs
- **SIDE-EFFECTS** Bronchospasm · gastrointestinal disorder · hypersensitivity · paraesthesia · photosensitivity reaction · skin reactions
- **SIDE-EFFECTS, FURTHER INFORMATION** For information about cardiovascular and gastrointestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1222
- **ALLERGY AND CROSS-SENSITIVITY** [EvGr](#) Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. [⚠](#)
- **PREGNANCY** Patient packs for topical preparations carry a warning to avoid during pregnancy.
- **BREAST FEEDING** Patient packs for topical preparations carry a warning to avoid during breast-feeding.
- **RENAL IMPAIRMENT** Deterioration in renal function has also been reported after topical use.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises for topical preparations, apply with gentle massage only.
- **PATIENT AND CARER ADVICE** For topical preparations patients and carers should be advised to wash hands immediately after use.  
Photosensitivity Patients should be advised against excessive exposure to sunlight of area treated in order to avoid possibility of photosensitivity.

- **MEDICINAL FORMS** No licensed medicines listed.

## Flurbiprofen

30-Nov-2021

### ● INDICATIONS AND DOSE

#### Pain and inflammation in rheumatic disease and other musculoskeletal disorders | Migraine | Postoperative analgesia | Mild to moderate pain

##### ▶ BY MOUTH

- ▶ Child 12–17 years: 150–200 mg daily in 2–4 divided doses, then increased to 300 mg daily, dose to be increased only in acute conditions
- ▶ Adult: 150–200 mg daily in 2–4 divided doses, then increased to 300 mg daily, dose to be increased only in acute conditions

#### Dysmenorrhoea

##### ▶ BY MOUTH

- ▶ Child 12–17 years: Initially 100 mg, then 50–100 mg every 4–6 hours; maximum 300 mg per day
- ▶ Adult: Initially 100 mg, then 50–100 mg every 4–6 hours; maximum 300 mg per day

- **CONTRA-INDICATIONS** Active gastro-intestinal bleeding · active gastro-intestinal ulceration · Crohn's disease (may

be exacerbated) · history of gastro-intestinal bleeding related to previous NSAID therapy · history of gastro-intestinal perforation related to previous NSAID therapy · history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) · history of recurrent gastro-intestinal ulceration (two or more distinct episodes) · severe heart failure · ulcerative colitis (may be exacerbated)

- **CAUTIONS** Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · cerebrovascular disease · coagulation defects · connective-tissue disorders · dehydration (risk of renal impairment) · elderly (risk of serious side-effects and fatalities) · heart failure · history of gastro-intestinal disorders · ischaemic heart disease · may mask symptoms of infection · peripheral arterial disease · risk factors for cardiovascular events · uncontrolled hypertension

- **INTERACTIONS** → Appendix 1: NSAIDs

- **SIDE-EFFECTS** Agranulocytosis · angioedema · aplastic anaemia · asthma · bronchospasm · confusion · constipation · Crohn's disease · depression · diarrhoea · dizziness · drowsiness · dyspnoea · fatigue · fertility decreased female · gastrointestinal discomfort · gastrointestinal disorders · haemolytic anaemia · haemorrhage · hallucination · headache · heart failure · hepatic disorders · hypersensitivity · hypertension · malaise · meningitis aseptic (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · nausea · nephritis tubulointerstitial · nephropathy · neutropenia · oedema · optic neuritis · oral ulceration · pancreatitis · paraesthesia · photosensitivity reaction · platelet aggregation inhibition · renal failure (more common in patients with pre-existing renal impairment) · respiratory tract reaction · severe cutaneous adverse reactions (SCARs) · skin reactions · stroke · thrombocytopenia · tinnitus · vertigo · visual impairment · vomiting

**SIDE-EFFECTS, FURTHER INFORMATION** For information about cardiovascular and gastrointestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1222

- **ALLERGY AND CROSS-SENSITIVITY** [EvGr](#) Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. [M](#)
- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.
- **PREGNANCY** Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.
- **BREAST FEEDING** Use with caution during breast-feeding. Small amount present in milk—manufacturer advises avoid.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild to moderate impairment; avoid in severe impairment.
- **RENAL IMPAIRMENT** In general, for NSAIDs the MHRA advises to avoid where possible; if necessary, use with caution (risk of fluid retention and further renal impairment, including renal failure). [EvGr](#) For flurbiprofen, avoid in severe impairment. [M](#)

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

## Ibuprofen

07-Dec-2021

### ● INDICATIONS AND DOSE

**Pain and inflammation in rheumatic disease and other musculoskeletal disorders | Mild to moderate pain including dysmenorrhoea | Postoperative analgesia | Dental pain**

► BY MOUTH USING IMMEDIATE-RELEASE MEDICINES

► Adult: Initially 300–400 mg 3–4 times a day; increased if necessary up to 600 mg 4 times a day; maintenance 200–400 mg 3 times a day, may be adequate

► BY MOUTH USING MODIFIED-RELEASE MEDICINES

► Adult: 1.6 g once daily, dose to be taken in the early evening, increased if necessary to 2.4 g daily in 2 divided doses, dose to be increased only in severe cases

#### Acute migraine

► BY MOUTH USING IMMEDIATE-RELEASE MEDICINES

► Adult: 400–600 mg for 1 dose, to be taken as soon as migraine symptoms develop

**Mild to moderate pain | Pain and inflammation of soft-tissue injuries | Pyrexia with discomfort**

► BY MOUTH USING IMMEDIATE-RELEASE MEDICINES

► Child 3–5 months: 50 mg 3 times a day, maximum daily dose to be given in 3–4 divided doses; maximum 30 mg/kg per day

► Child 6–11 months: 50 mg 3–4 times a day, maximum daily dose to be given in 3–4 divided doses; maximum 30 mg/kg per day

► Child 1–3 years: 100 mg 3 times a day, maximum daily dose to be given in 3–4 divided doses; maximum 30 mg/kg per day

► Child 4–6 years: 150 mg 3 times a day, maximum daily dose to be given in 3–4 divided doses; maximum 30 mg/kg per day

► Child 7–9 years: 200 mg 3 times a day, maximum daily dose to be given in 3–4 divided doses; maximum 30 mg/kg per day; maximum 2.4 g per day

► Child 10–11 years: 300 mg 3 times a day, maximum daily dose to be given in 3–4 divided doses; maximum 30 mg/kg per day; maximum 2.4 g per day

► Child 12–17 years: Initially 300–400 mg 3–4 times a day; increased if necessary up to 600 mg 4 times a day; maintenance 200–400 mg 3 times a day, may be adequate

#### Pain and inflammation

► BY MOUTH USING MODIFIED-RELEASE MEDICINES

► Child 12–17 years: 1.6 g once daily, dose preferably taken in the early evening, increased to 2.4 g daily in 2 divided doses, dose to be increased only in severe cases

**Pain and inflammation in rheumatic disease including juvenile idiopathic arthritis**

► BY MOUTH USING IMMEDIATE-RELEASE MEDICINES

► Child 3 months–17 years: 30–40 mg/kg daily in 3–4 divided doses; maximum 2.4 g per day

**Pain and inflammation in systemic juvenile idiopathic arthritis**

- ▶ BY MOUTH USING IMMEDIATE-RELEASE MEDICINES
- ▶ Child 3 months-17 years: Up to 60 mg/kg daily in 4–6 divided doses; maximum 2.4 g per day

**Post-immunisation pyrexia in infants (on doctor's advice only)**

- ▶ BY MOUTH USING IMMEDIATE-RELEASE MEDICINES
- ▶ Child 2-3 months: 50 mg for 1 dose, followed by 50 mg after 6 hours if required

**Pain relief in musculoskeletal conditions | Treatment in knee or hand osteoarthritis (adjunct)**

- ▶ TO THE SKIN
- ▶ Adult: Apply up to 3 times a day, ibuprofen gel 5% gel to be administered

**Pain and inflammation in rheumatic disease and other musculoskeletal disorders (dose approved for use by community practitioner nurse prescribers) | Mild to moderate pain including dysmenorrhoea (dose approved for use by community practitioner nurse prescribers) | Migraine (dose approved for use by community practitioner nurse prescribers) | Dental pain (dose approved for use by community practitioner nurse prescribers) | Headache (dose approved for use by community practitioner nurse prescribers) | Fever (dose approved for use by community practitioner nurse prescribers) | Symptoms of colds and influenza (dose approved for use by community practitioner nurse prescribers) | Neuralgia (dose approved for use by community practitioner nurse prescribers)**

- ▶ BY MOUTH USING IMMEDIATE-RELEASE MEDICINES
- ▶ Child 12-17 years: 200–400 mg 3 times a day, if symptoms worsen or persist for more than 3 days refer to doctor
- ▶ Adult: 200–400 mg 3 times a day, if symptoms worsen or persist for more than 10 days refer to doctor

**Mild to moderate pain (dose approved for use by community practitioner nurse prescribers) | Pain and inflammation of soft-tissue injuries (dose approved for use by community practitioner nurse prescribers) | Pyrexia with discomfort (dose approved for use by community practitioner nurse prescribers)**

- ▶ BY MOUTH USING IMMEDIATE-RELEASE MEDICINES
- ▶ Child 3-5 months (body-weight 5 kg and above): 20–30 mg/kg daily in divided doses, alternatively 50 mg 3 times a day for maximum of 24 hours, refer to doctor if symptoms persist for more than 24 hours
- ▶ Child 6-11 months: 50 mg 3–4 times a day, refer to doctor if symptoms persist for more than 3 days
- ▶ Child 1-3 years: 100 mg 3 times a day, refer to doctor if symptoms persist for more than 3 days
- ▶ Child 4-6 years: 150 mg 3 times a day, refer to doctor if symptoms persist for more than 3 days
- ▶ Child 7-9 years: 200 mg 3 times a day, refer to doctor if symptoms persist for more than 3 days
- ▶ Child 10-11 years: 300 mg 3 times a day, refer to doctor if symptoms persist for more than 3 days

**Post-immunisation pyrexia in infants (dose approved for use by community practitioner nurse prescribers) (on doctor's advice only)**

- ▶ BY MOUTH USING IMMEDIATE-RELEASE MEDICINES
- ▶ Child 3 months: 50 mg for 1 dose, followed by 50 mg after 6 hours if required, if pyrexia persists refer to doctor

**Acute moderate pain (in hospital setting) | Pyrexia (in hospital setting)**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: 400 mg every 6–8 hours if required for maximum 3 days; maximum 1.2 g per day

**FENBID<sup>®</sup> FORTE****Pain relief in musculoskeletal conditions | Treatment in knee or hand osteoarthritis (adjunct)**

- ▶ TO THE SKIN
- ▶ Adult: Apply up to 4 times a day, therapy should be reviewed after 14 days

**IBUGEL<sup>®</sup> FORTE****Pain relief in musculoskeletal conditions | Treatment in knee or hand osteoarthritis (adjunct)**

- ▶ TO THE SKIN
- ▶ Adult: Apply up to 3 times a day

**• UNLICENSED USE**

- ▶ With oral use in children Not licensed for use in children under 3 months or body-weight under 5 kg. Maximum dose for systemic juvenile idiopathic arthritis is unlicensed.

**• CONTRA-INDICATIONS**

- ▶ With systemic use Active gastro-intestinal bleeding · active gastro-intestinal ulceration · history of gastro-intestinal bleeding related to previous NSAID therapy · history of gastro-intestinal perforation related to previous NSAID therapy · history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) · history of recurrent gastro-intestinal ulceration (two or more distinct episodes) · severe heart failure · varicella infection

**• CAUTIONS**

- ▶ With systemic use Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · cerebrovascular disease · coagulation defects · connective-tissue disorders · dehydration (risk of renal impairment) · elderly (risk of serious side-effects and fatalities) · heart failure · history of gastro-intestinal disorders (e.g. ulcerative colitis, Crohn's disease) · ischaemic heart disease · may mask symptoms of infection · peripheral arterial disease · risk factors for cardiovascular events · uncontrolled hypertension
- ▶ With topical use Avoid contact with eyes · avoid contact with inflamed or broken skin · avoid contact with mucous membranes · not for use with occlusive dressings · topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported)

**CAUTIONS, FURTHER INFORMATION**

- ▶ High-dose ibuprofen
- ▶ With oral use A small increase in cardiovascular risk, similar to the risk associated with cyclo-oxygenase-2 inhibitors and diclofenac, has been reported with high-dose ibuprofen (≥ 2.4 g daily); use should be avoided in patients with established ischaemic heart disease, peripheral arterial disease, cerebrovascular disease, congestive heart failure (New York Heart Association classification II-III), and uncontrolled hypertension.
- ▶ Masking of symptoms of underlying infections
- ▶ With systemic use Ibuprofen can mask symptoms of infection, which may lead to delayed initiation of appropriate treatment and thereby worsen infection outcome. This has been observed in bacterial community-acquired pneumonia and bacterial complications to varicella. When administered for fever or pain relief in relation to infection, monitoring of infection is advised.

**• INTERACTIONS → Appendix 1: NSAIDs****• SIDE-EFFECTS****GENERAL SIDE-EFFECTS**

- ▶ Common or very common Gastrointestinal discomfort · skin reactions
- ▶ Uncommon Asthma · hypersensitivity
- ▶ Rare or very rare Dyspnoea

**SPECIFIC SIDE-EFFECTS**

- ▶ Common or very common
- ▶ With intravenous use Constipation · diarrhoea · dizziness · fatigue · gastrointestinal disorders · haemorrhage ·

headache · inflammatory bowel disease · insomnia · nausea · oral disorders · vertigo · vomiting

► **Uncommon**

► With intravenous use Acute kidney injury · anxiety · nephritis tubulointerstitial · nephrotic syndrome · oedema · tinnitus · vision disorders

► With oral use Headache · nausea · rash (discontinue)

► **Rare or very rare**

► With intravenous use Agranulocytosis · alopecia · anaemia · auditory disorder · confusion · depression · heart failure · hepatic disorders · hypersensitivity vasculitis · hypertension · hypotension · infection exacerbated · irritability · leucopenia · meningitis aseptic (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · myocardial infarction · neck stiffness · palpitations · pancreatitis · pancytopenia · photosensitivity reaction · psychotic disorder · renal papillary necrosis · respiratory disorders · severe cutaneous adverse reactions (SCARs) · shock · systemic lupus erythematosus (SLE) · thrombocytopenia

► With oral use Acute kidney injury · agranulocytosis · anaemia · angioedema · constipation · diarrhoea · gastrointestinal disorders · haemorrhage · leucopenia · liver disorder · meningitis aseptic (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · oedema · oral ulceration · pancytopenia · renal papillary necrosis · severe cutaneous adverse reactions (SCARs) · shock · thrombocytopenia · vomiting

► **Frequency not known**

► With oral use Crohn's disease · fertility decreased female · fluid retention · heart failure · hypertension · increased risk of arterial thromboembolism · renal failure (more common in patients with pre-existing renal impairment) · respiratory disorders · respiratory tract reaction

► With topical use Angioedema · bronchospasm · rash (discontinue) · renal impairment · toxic epidermal necrolysis

**SIDE-EFFECTS, FURTHER INFORMATION** For information about cardiovascular and gastrointestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1222

**With topical use** Topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported).

**Overdose** Overdosage with ibuprofen may cause nausea, vomiting, epigastric pain, and tinnitus, but more serious toxicity is very uncommon. Charcoal, activated followed by symptomatic measures are indicated if more than 100 mg/kg has been ingested within the preceding hour.

For details on the management of poisoning, see Emergency treatment of poisoning p. 1473.

► **ALLERGY AND CROSS-SENSITIVITY** <sup>EvGr</sup> Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. ⚠

► **CONCEPTION AND CONTRACEPTION**

► With systemic use Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

► **PREGNANCY**

► With systemic use Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.

► With topical use Patient packs for topical preparations carry a warning to avoid during pregnancy.

► **BREAST FEEDING**

► With oral use Use with caution during breast-feeding. Amount too small to be harmful but some manufacturers advise avoid.

► With topical use Patient packs for topical preparations carry a warning to avoid during breast-feeding.

► **HEPATIC IMPAIRMENT**

► With systemic use for indications relating to pain or pyrexia <sup>EvGr</sup> Caution in mild to moderate impairment; avoid in severe impairment. ⚠

**Dose adjustments** ► With systemic use for indications relating to pain or pyrexia <sup>EvGr</sup> The lowest effective dose should be used for the shortest possible duration. ⚠

► **RENAL IMPAIRMENT**

► With systemic use for indications relating to pain or pyrexia In general, for NSAIDs the MHRA advises to avoid where possible; if necessary, use with caution (risk of fluid retention and further renal impairment, including renal failure). <sup>EvGr</sup> For *ibuprofen*, avoid in severe impairment. ⚠

► With topical use <sup>EvGr</sup> Caution (deterioration in renal function has also been reported after topical use). ⚠

**Dose adjustments** ► With systemic use for indications relating to pain or pyrexia <sup>EvGr</sup> The lowest effective dose should be used for the shortest possible duration. ⚠

► **DIRECTIONS FOR ADMINISTRATION**

► With intravenous use <sup>EvGr</sup> For *intravenous infusion*, give over 30 minutes. ⚠

► With topical use <sup>EvGr</sup> For topical preparations, apply with gentle massage only. ⚠

► **PRESCRIBING AND DISPENSING INFORMATION**

► With oral use Flavours of syrup may include orange.

► **PATIENT AND CARER ADVICE**

► With topical use For topical preparations, patients and their carers should be advised to wash hands immediately after use.

Photosensitivity

► With topical use For topical preparations, patients or their carers should be advised against excessive exposure to sunlight of area treated in order to avoid possibility of photosensitivity.

Medicines for Children leaflet: *ibuprofen* for pain and inflammation [www.medicinesforchildren.org.uk/medicines/ibuprofen-for-pain-and-inflammation/](http://www.medicinesforchildren.org.uk/medicines/ibuprofen-for-pain-and-inflammation/)

► **PROFESSION SPECIFIC INFORMATION**

**Dental practitioners' formulary** *Ibuprofen* Oral Suspension Sugar-free may be prescribed. *Ibuprofen* Tablets may be prescribed.

► **EXCEPTIONS TO LEGAL CATEGORY**

► With topical use Smaller pack sizes of gel preparations may be available on sale to the public.

► With oral use Oral preparations can be sold to the public in certain circumstances.

► **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension

● **INDICATIONS AND DOSE****Pain and moderate to severe inflammation in rheumatic disease and other musculoskeletal disorders**▶ **BY MOUTH USING IMMEDIATE-RELEASE MEDICINES**

▶ **Adult:** 50–200 mg daily in divided doses

▶ **BY RECTUM**

▶ **Adult:** 100 mg 1–2 times a day, dose to be administered at night and in the morning if required, combined oral and rectal treatment maximum total daily dose 150–200 mg

▶ **BY MOUTH USING MODIFIED-RELEASE MEDICINES**

▶ **Adult:** 75 mg 1–2 times a day

**Acute gout**▶ **BY MOUTH USING IMMEDIATE-RELEASE MEDICINES**

▶ **Adult:** 150–200 mg daily in divided doses

▶ **BY RECTUM**

▶ **Adult:** 100 mg 1–2 times a day, dose to be administered at night and in the morning if required, combined oral and rectal treatment maximum total daily dose 150–200 mg

▶ **BY MOUTH USING MODIFIED-RELEASE MEDICINES**

▶ **Adult:** 75 mg 1–2 times a day

**Dysmenorrhoea**▶ **BY MOUTH USING IMMEDIATE-RELEASE MEDICINES**

▶ **Adult:** Up to 75 mg daily

▶ **BY RECTUM**

▶ **Adult:** 100 mg 1–2 times a day, dose to be administered at night and in the morning if required, combined oral and rectal treatment maximum total daily dose 150–200 mg

▶ **BY MOUTH USING MODIFIED-RELEASE MEDICINES**

▶ **Adult:** 75 mg daily

- **CONTRA-INDICATIONS** Active gastro-intestinal bleeding · active gastro-intestinal ulceration · history of gastro-intestinal bleeding related to previous NSAID therapy · history of gastro-intestinal perforation related to previous NSAID therapy · history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) · history of recurrent gastro-intestinal ulceration (two or more distinct episodes) · severe heart failure

#### ● CAUTIONS

**GENERAL CAUTIONS** Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · cerebrovascular disease · coagulation defects · connective-tissue disorders · dehydration (risk of renal impairment) · elderly (risk of serious side-effects and fatalities) · epilepsy · heart failure · history of gastro-intestinal disorders (e.g. ulcerative colitis, Crohn's disease) · ischaemic heart disease · may mask symptoms of infection · parkinsonism · peripheral arterial disease · psychiatric disturbances · risk factors for cardiovascular events · uncontrolled hypertension

#### SPECIFIC CAUTIONS

- ▶ With rectal use Avoid rectal administration in proctitis · avoid rectal administration in recent rectal bleeding

- **INTERACTIONS** → Appendix 1: NSAIDs

#### ● SIDE-EFFECTS

**GENERAL SIDE-EFFECTS** Agranulocytosis · alopecia · anaphylactic reaction · angioedema · anxiety · appetite decreased · arrhythmias · asthma · blood disorder · bone marrow disorders · breast abnormalities · chest pain · coma · confusion · congestive heart failure · constipation · corneal deposits · depression · diarrhoea · disseminated intravascular coagulation · dizziness · drowsiness · dysarthria · erythema nodosum · eye disorder · eye pain · fatigue · fluid retention · flushing · gastrointestinal discomfort · gastrointestinal disorders · gynaecomastia · haemolytic anaemia · haemorrhage · hallucination · headache · hearing impairment · hepatic disorders · hyperglycaemia · hyperhidrosis · hyperkalaemia · hypotension · inflammatory bowel disease · insomnia · leucopenia · movement disorders · muscle weakness · nausea · nephritis tubulointerstitial · nephrotic syndrome · oedema · oral disorders · palpitations · pancreatitis · paraesthesia · peripheral neuropathy · photosensitivity reaction · platelet aggregation inhibition · psychiatric disorders · renal failure (more common in patients with pre-existing renal impairment) · respiratory disorders · seizures · severe cutaneous adverse reactions (SCARs) · skin reactions · syncope · thrombocytopenia · tinnitus · urine abnormalities · vasculitis · vertigo · vision disorders · vomiting

#### SPECIFIC SIDE-EFFECTS

- ▶ With oral use Dyspnoea · malaise · pulmonary oedema · sigmoid lesion perforation

**SIDE-EFFECTS, FURTHER INFORMATION** For information about cardiovascular and gastrointestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1222

- **ALLERGY AND CROSS-SENSITIVITY** [EvGr](#) Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. [M](#)
- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.
- **PREGNANCY** Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.

- **BREAST FEEDING** Amount probably too small to be harmful—manufacturers advise avoid. Use with caution during breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild to moderate impairment; avoid in severe impairment (increased risk of gastro-intestinal bleeding and fluid retention).
- **RENAL IMPAIRMENT** In general, for NSAIDs the MHRA advises to avoid where possible; if necessary, use with caution (risk of fluid retention and further renal impairment, including renal failure). [EvGr](#) For *indometacin*, avoid in severe impairment. [M](#)
- **MONITORING REQUIREMENTS** During prolonged therapy ophthalmic and blood examinations particularly advisable.
- **PATIENT AND CARER ADVICE**  
**Driving and skilled tasks** Dizziness may affect performance of skilled tasks (e.g. driving).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

## Ketoprofen

29-Nov-2021

#### ● INDICATIONS AND DOSE

**Pain and mild inflammation in rheumatic disease and musculoskeletal conditions | Dysmenorrhoea | Acute gout**

▶ BY MOUTH

▶ Adult: 100–200 mg once daily

**Relief of pain in rheumatic disease and musculoskeletal conditions**

▶ TO THE SKIN

▶ Adult: Apply 2–4 times a day for up to 7 days, ketoprofen 2.5% gel to be administered; maximum 15 g per day

**POWERGEL**®

**Relief of pain in musculoskeletal conditions | Adjunctive treatment in knee or hand osteoarthritis**

▶ TO THE SKIN

▶ Adult: Apply 2–3 times a day for up to max. 10 days

#### ● CONTRA-INDICATIONS

- ▶ With systemic use Active gastro-intestinal bleeding · active gastro-intestinal ulceration · coagulation disorders · history of gastro-intestinal bleeding · history of gastro-intestinal perforation · history of gastro-intestinal ulceration · severe heart failure

#### ● CAUTIONS

- ▶ With systemic use Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · cerebrovascular disease · connective-tissue disorders · dehydration (risk of renal impairment) · elderly (risk of serious side-effects and fatalities) · heart failure · history of gastro-intestinal disorders (e.g. ulcerative colitis, Crohn's disease) · ischaemic heart disease · may mask symptoms of infection · peripheral arterial disease · risk factors for cardiovascular events · uncontrolled hypertension
- ▶ With topical use Avoid contact with eyes · avoid contact with inflamed or broken skin · avoid contact with mucous

membranes · not for use with occlusive dressings · topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported)

#### CAUTIONS, FURTHER INFORMATION

- Masking of symptoms of underlying infections
- With systemic use Ketoprofen can mask symptoms of infection, which may lead to delayed initiation of appropriate treatment and thereby worsen infection outcome. This has been observed in bacterial community-acquired pneumonia and bacterial complications to varicella. When administered for fever or pain relief in relation to infection, monitoring of infection is advised.
- INTERACTIONS** → Appendix 1: NSAIDs

#### ● SIDE-EFFECTS

##### GENERAL SIDE-EFFECTS

- Uncommon** Diarrhoea · paraesthesia · skin reactions
- Rare or very rare** Hypersensitivity · photosensitivity reaction · renal impairment
- Frequency not known** Angioedema

##### SPECIFIC SIDE-EFFECTS

- Common or very common**
  - With oral use Gastrointestinal discomfort · nausea · vomiting
- Uncommon**
  - With oral use Constipation · dizziness · drowsiness · fatigue · gastrointestinal disorders · headache · oedema · rash (discontinue)
- With topical use Increased risk of infection
- Rare or very rare**
  - With oral use Asthma · haemorrhagic anaemia · hepatic disorders · pancreatitis · shock · stomatitis · tinnitus · vision disorders · weight increased
- Frequency not known**
  - With oral use Acute kidney injury (more common in patients with pre-existing renal impairment) · agranulocytosis · alopecia · appetite decreased · bone marrow failure · bronchospasm · confusion · Crohn's disease aggravated · depression · dyspnoea · fertility decreased female · haemorrhage · hallucination · hearing impairment · heart failure · hypertension · increased risk of arterial thromboembolism · increased risk of ischaemic stroke · increased risk of myocardial infarction · malaise · meningitis aseptic (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · menometrorrhagia · mood altered · nephritic syndrome · nephritis tubulointerstitial · nephrotic syndrome · neutropenia · optic neuritis · rhinitis · seizure · severe cutaneous adverse reactions (SCARs) · taste altered · thrombocytopenia · vasodilation · vertigo
- With topical use Eosinophilia · eyelid oedema · fever · gastrointestinal haemorrhage · lip swelling · peptic ulcer · vasculitis · wound complications

**SIDE-EFFECTS, FURTHER INFORMATION** Topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported).

For information about cardiovascular and gastrointestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1222

- ALLERGY AND CROSS-SENSITIVITY** [\[EvGr\]](#) Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. [\[M\]](#)
- CONCEPTION AND CONTRACEPTION**
  - With systemic use Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

#### ● PREGNANCY

- With systemic use Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.
- With topical use Patient packs for topical preparations carry a warning to avoid during pregnancy.

#### ● BREAST FEEDING

- With systemic use Use with caution during breast-feeding. Amount probably too small to be harmful but manufacturers advise avoid.
- With topical use Patient packs for topical preparations carry a warning to avoid during breast-feeding.

#### ● HEPATIC IMPAIRMENT

- With systemic use Manufacturer advises caution in mild to moderate impairment; avoid in severe impairment.
- With topical use Manufacturer advises caution.

#### ● RENAL IMPAIRMENT

- With systemic use In general, for NSAIDs the MHRA advises to avoid where possible; if necessary, use with caution (risk of fluid retention and further renal impairment, including renal failure). [\[EvGr\]](#) For *ketoprofen*, avoid in severe renal insufficiency. [\[M\]](#)
- With topical use [\[EvGr\]](#) Caution (deterioration in renal function has also been reported after topical use). [\[M\]](#)

#### ● DIRECTIONS FOR ADMINISTRATION

- With topical use For topical preparations, manufacturer advises apply with gentle massage only.

#### ● PATIENT AND CARER ADVICE

- With topical use For topical preparations, patients and their carers should be advised to wash hands immediately after use.
- Photosensitivity
  - With topical use Patients should be advised against excessive exposure to sunlight of area treated in order to avoid possibility of photosensitivity. Patients should be advised not to expose area treated to sunbeds or sunlight (even on a bright but cloudy day) during, and for two weeks after stopping treatment; treated areas should be protected with clothing.

#### ● EXCEPTIONS TO LEGAL CATEGORY

- With topical use Smaller pack sizes of gel preparations may be available on sale to the public.

- MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: gel

##### Modified-release capsule

CAUTIONARY AND ADVISORY LABELS 21, 25

## Mefenamic acid

26-Nov-2021

### • INDICATIONS AND DOSE

#### Pain and inflammation in rheumatoid arthritis and osteoarthritis | Postoperative pain | Mild to moderate pain

- ▶ BY MOUTH
- ▶ Adult: 500 mg 3 times a day

#### Acute pain including dysmenorrhoea | Menorrhagia

- ▶ BY MOUTH
- ▶ Child 12–17 years: 500 mg 3 times a day
- ▶ Adult: 500 mg 3 times a day

- **CONTRA-INDICATIONS** Active gastro-intestinal bleeding · active gastro-intestinal ulceration · following coronary artery bypass graft (CABG) surgery · history of gastro-intestinal bleeding related to previous NSAID therapy · history of gastro-intestinal perforation related to previous NSAID therapy · history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) · history of recurrent gastro-intestinal ulceration (two or more distinct episodes) · inflammatory bowel disease · severe heart failure
- **CAUTIONS** Acute porphyrias p. 1150 · allergic disorders · cardiac impairment (NSAIDs may impair renal function) · cerebrovascular disease · coagulation defects · connective-tissue disorders · dehydration (risk of renal impairment) · elderly (risk of serious side-effects and fatalities) · epilepsy · heart failure · history of gastro-intestinal disorders (e.g. ulcerative colitis, Crohn's disease) · ischaemic heart disease · may mask symptoms of infection · peripheral arterial disease · risk factors for cardiovascular events · uncontrolled hypertension
- **INTERACTIONS** → Appendix 1: NSAIDs
- **SIDE-EFFECTS** Agranulocytosis · anaemia · angioedema · appetite decreased · asthma · bone marrow disorders · confusion · constipation · Crohn's disease · depression · diarrhoea (discontinue) · disseminated intravascular coagulation · dizziness · drowsiness · dyspnoea · dysuria · ear pain · eosinophilia · eye irritation · fatigue · fertility decreased female · gastrointestinal discomfort · gastrointestinal disorders · glomerulonephritis · glucose tolerance impaired · haemolytic anaemia · haemorrhage · hallucination · headache · heart failure · hepatic disorders · hyperhidrosis · hypersensitivity · hypertension · hyponatraemia · hypotension · insomnia · leucopenia · malaise · meningitis aseptic (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · multi organ failure · nausea · nephritis acute interstitial · nephrotic syndrome · nervousness · neutropenia · oedema · optic neuritis · oral ulceration · palpitations · pancreatitis · paraesthesia · photosensitivity reaction · proteinuria · rash (discontinue) · renal failure (more common in patients with pre-existing renal impairment) · renal failure non-oliguric · renal papillary necrosis · respiratory disorders · seizure · sepsis · severe cutaneous adverse reactions (SCARs) · skin reactions · thrombocytopenia · tinnitus · vertigo · vision disorders · vomiting
- **SIDE-EFFECTS, FURTHER INFORMATION** For information about cardiovascular and gastrointestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1222
- **Overdose** Mefenamic acid has important consequences in overdosage because it can cause convulsions, which if prolonged or recurrent, require treatment.  
For details on the management of poisoning, see Emergency treatment of poisoning p. 1473, in particular, Convulsions.
- **ALLERGY AND CROSS-SENSITIVITY** [EvGr](#) Contra-indicated in patients with a history of hypersensitivity to aspirin or

any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. [M](#)

- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.
- **PREGNANCY** Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.
- **BREAST FEEDING** Use with caution during breast-feeding. Amount too small to be harmful but manufacturer advises avoid.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild to moderate impairment; avoid in severe impairment.
- **RENAL IMPAIRMENT** In general, for NSAIDs the MHRA advises to avoid where possible; if necessary, use with caution (risk of fluid retention and further renal impairment, including renal failure). [EvGr](#) For *mefenamic acid*, avoid in severe impairment. [M](#)

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension

#### Oral suspension

##### CAUTIONARY AND ADVISORY LABELS 21

EXCIPIENTS: May contain Ethanol

## Meloxicam

22-Nov-2021

### • INDICATIONS AND DOSE

#### Exacerbation of osteoarthritis (short-term)

- ▶ BY MOUTH
- ▶ Child 16–17 years: 7.5 mg once daily, then increased if necessary up to 15 mg once daily
- ▶ Adult: 7.5 mg once daily, then increased if necessary up to 15 mg once daily

#### Pain and inflammation in rheumatic disease | Ankylosing spondylitis

- ▶ BY MOUTH
- ▶ Child 16–17 years: 15 mg once daily, then reduced to 7.5 mg once daily if required
- ▶ Adult: 15 mg once daily, then reduced to 7.5 mg once daily if required
- ▶ Elderly: 7.5 mg once daily

#### Relief of pain and inflammation in juvenile idiopathic arthritis and other musculoskeletal disorders in children intolerant to other NSAIDs

- ▶ BY MOUTH
- ▶ Child 12–17 years (body-weight up to 50 kg): 7.5 mg once daily

- ▶ Child 12–17 years (body-weight 50 kg and above): 15 mg once daily

#### ● UNLICENSED USE

- ▶ In children Expert sources advise that meloxicam may be used from the age of 12 years for the treatment of pain and inflammation in juvenile idiopathic arthritis and other musculoskeletal disorders in children intolerant to other NSAIDs, but it is not licensed for this age group.

- **CONTRA-INDICATIONS** Active gastro-intestinal bleeding · active gastro-intestinal ulceration · following coronary artery bypass graft surgery · history of gastro-intestinal bleeding related to previous NSAID therapy · history of gastro-intestinal perforation related to previous NSAID therapy · history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) · history of recurrent gastro-intestinal ulceration (two or more distinct episodes) · severe heart failure

- **CAUTIONS** Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · cerebrovascular disease · coagulation defects · connective-tissue disorders · dehydration (risk of renal impairment) · elderly (risk of serious side-effects and fatalities) · heart failure · history of gastro-intestinal disorders (e.g. ulcerative colitis, Crohn's disease) · ischaemic heart disease · may mask symptoms of infection · peripheral arterial disease · risk factors for cardiovascular events · uncontrolled hypertension

- **INTERACTIONS** → Appendix 1: NSAIDs

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Constipation · diarrhoea · gastrointestinal discomfort · gastrointestinal disorders · headache · nausea · vomiting
- ▶ **Uncommon** Anaemia · angioedema · burping · dizziness · drowsiness · electrolyte imbalance · fluid retention · flushing · haemorrhage · hepatic disorders · hypersensitivity · oedema · skin reactions · stomatitis · vertigo
- ▶ **Rare or very rare** Acute kidney injury · asthma · conjunctivitis · leucopenia · mood altered · nightmare · palpitations · severe cutaneous adverse reactions (SCARs) · thrombocytopenia · tinnitus · vision disorders
- ▶ **Frequency not known** Agranulocytosis · confusion · fertility decreased female · heart failure · increased risk of arterial thromboembolism · nephritis tubulointerstitial · nephrotic syndrome · photosensitivity reaction · renal necrosis

**SIDE-EFFECTS, FURTHER INFORMATION** For information about cardiovascular and gastrointestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1222

- **ALLERGY AND CROSS-SENSITIVITY** EvGr Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. ⚠

- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

- **PREGNANCY** Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.

- **BREAST FEEDING** Use with caution during breast-feeding. Present in milk in *animal* studies—manufacturer advises avoid.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild to moderate impairment; avoid in severe impairment.

- **RENAL IMPAIRMENT** In general, for NSAIDs the MHRA advises to avoid where possible; if necessary, use with caution (risk of fluid retention and further renal

impairment, including renal failure). EvGr For *meloxicam*, avoid if creatinine clearance less than 25 mL/minute; ⚠ see p. 21.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension

#### **Orodispersible tablet**

**Meloxicam 15 mg** Meloxicam 15mg tablets | 30 tablet PoM £5.50 DT = £2.81

## Nabumetone

18-Nov-2021

#### ● INDICATIONS AND DOSE

##### **Pain and inflammation in osteoarthritis and rheumatoid arthritis**

###### ▶ BY MOUTH

- ▶ Adult: 1 g once daily, dose to be taken at night
- ▶ Elderly: 0.5–1 g daily

##### **Pain and inflammation in osteoarthritis and rheumatoid arthritis (severe and persistent symptoms)**

###### ▶ BY MOUTH

- ▶ Adult: 0.5–1 g, dose to be taken in the morning and 1 g, dose to be taken at night
- ▶ Elderly: 0.5–1 g daily

- **CONTRA-INDICATIONS** Active gastro-intestinal bleeding · active gastro-intestinal ulceration · history of gastro-intestinal bleeding related to previous NSAID therapy · history of gastro-intestinal perforation related to previous NSAID therapy · history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) · history of recurrent gastro-intestinal ulceration (two or more distinct episodes) · severe heart failure

- **CAUTIONS** Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · cerebrovascular disease · coagulation defects · connective-tissue disorders · dehydration (risk of renal impairment) · elderly (risk of serious side-effects and fatalities) · heart failure · history of gastro-intestinal disorders (e.g. ulcerative colitis, Crohn's disease) · ischaemic heart disease · may mask symptoms of infection · peripheral arterial disease · risk factors for cardiovascular events · uncontrolled hypertension

- **INTERACTIONS** → Appendix 1: NSAIDs

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Constipation · diarrhoea · ear disorder · gastrointestinal discomfort · gastrointestinal disorders · nausea · oedema · skin reactions · tinnitus
- ▶ **Uncommon** Anxiety · asthenia · confusion · dizziness · drowsiness · dry mouth · dyspnoea · eye disorder · haemorrhage · headache · hyperhidrosis · insomnia · myopathy · oral disorders · paraesthesia · photosensitivity reaction · respiratory disorders · urinary tract disorder · visual impairment · vomiting
- ▶ **Rare or very rare** Alopecia · angioedema · hepatic disorders · hypersensitivity · menorrhagia · nephrotic syndrome · pancreatitis · renal failure (more common in patients with pre-existing renal impairment) · severe cutaneous adverse reactions (SCARs) · thrombocytopenia
- ▶ **Frequency not known** Agranulocytosis · aplastic anaemia · asthma · Crohn's disease aggravated · depression · fertility decreased female · haemolytic anaemia · hallucination ·

heart failure · hypertension · increased risk of arterial thromboembolism · leucopenia · malaise · meningitis aseptic (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · nephritis tubulointerstitial · neutropenia · optic neuritis · vertigo

**SIDE-EFFECTS, FURTHER INFORMATION** For information about cardiovascular and gastrointestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1222

- **ALLERGY AND CROSS-SENSITIVITY** [EvGr](#) Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. [M](#)
- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

## Naproxen

22-Nov-2021

### ● INDICATIONS AND DOSE

#### Pain and inflammation in rheumatic disease

##### ▶ BY MOUTH

- ▶ Adult: 0.5–1 g daily in 1–2 divided doses

#### Pain and inflammation in musculoskeletal disorders | Dysmenorrhoea

##### ▶ BY MOUTH

- ▶ Adult: Initially 500 mg, then 250 mg every 6–8 hours as required, maximum dose after the first day 1.25 g daily

#### Acute gout

##### ▶ BY MOUTH

- ▶ Adult: Initially 750 mg, then 250 mg every 8 hours until attack has passed

#### Acute migraine

##### ▶ BY MOUTH

- ▶ Adult: 500 mg for 1 dose, to be taken in combination with sumatriptan as soon as migraine symptoms develop

- **UNLICENSED USE** [EvGr](#) Naproxen is used for the treatment of acute migraine in combination with sumatriptan, [M](#) but is not licensed for this indication.
- **CONTRA-INDICATIONS** Active gastro-intestinal bleeding · active gastro-intestinal ulceration · history of gastro-intestinal bleeding related to previous NSAID therapy · history of gastro-intestinal perforation related to previous NSAID therapy · history of recurrent gastro-intestinal

haemorrhage (two or more distinct episodes) · history of recurrent gastro-intestinal ulceration (two or more distinct episodes) · severe heart failure

- **CAUTIONS** Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · cerebrovascular disease · coagulation defects · connective-tissue disorders · dehydration (risk of renal impairment) · elderly (risk of serious side-effects and fatalities) · heart failure · history of gastro-intestinal disorders (e.g. ulcerative colitis, Crohn's disease) · ischaemic heart disease · may mask symptoms of infection · peripheral arterial disease · risk factors for cardiovascular events · uncontrolled hypertension
- **INTERACTIONS** → Appendix 1: NSAIDs
- **SIDE-EFFECTS** Agranulocytosis · alopecia · angioedema · aplastic anaemia · asthma · cognitive impairment · concentration impaired · confusion · constipation · corneal opacity · depression · diarrhoea · dizziness · drowsiness · dyspnoea · erythema nodosum · fatigue · gastrointestinal discomfort · gastrointestinal disorders · glomerulonephritis · haemolytic anaemia · haemorrhage · hallucination · headache · hearing impairment · heart failure · hepatic disorders · hyperhidrosis · hyperkalaemia · hypersensitivity · hypertension · increased risk of arterial thromboembolism · infertility female · inflammatory bowel disease · malaise · meningitis aseptic (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · muscle weakness · myalgia · nausea · nephritis tubulointerstitial · nephropathy · neutropenia · oedema · optic neuritis · oral disorders · palpitations · pancreatitis · papillitis · papilloedema · paraesthesia · photosensitivity reaction · platelet aggregation inhibition · pulmonary oedema · rash pustular · renal failure (more common in patients with pre-existing renal impairment) · renal papillary necrosis · respiratory disorders · seizure · severe cutaneous adverse reactions (SCARs) · skin reactions · sleep disorders · thirst · thrombocytopenia · tinnitus · vasculitis · vertigo · visual impairment · vomiting

**SIDE-EFFECTS, FURTHER INFORMATION** For information about cardiovascular and gastrointestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1222

- **ALLERGY AND CROSS-SENSITIVITY** [EvGr](#) Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. [M](#)
- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

## Piroxicam

30-Nov-2021

### ● INDICATIONS AND DOSE

**Rheumatoid arthritis (initiated by a specialist) | Osteoarthritis (initiated by a specialist) | Ankylosing spondylitis (initiated by a specialist)**

#### ▶ BY MOUTH

Adult: Up to 20 mg once daily

**Pain relief in musculoskeletal conditions | Treatment in knee or hand osteoarthritis (adjunct)**

#### ▶ TO THE SKIN

Adult: Apply 3–4 times a day, 0.5% gel to be applied; review treatment after 4 weeks

### IMPORTANT SAFETY INFORMATION

CHMP ADVICE—PIROXICAM (JUNE 2007)

#### ▶ With systemic use

The CHMP has recommended restrictions on the use of piroxicam because of the increased risk of gastro-intestinal side effects and serious skin reactions. The CHMP has advised that:

- piroxicam should be initiated only by physicians experienced in treating inflammatory or degenerative rheumatic diseases
- piroxicam should not be used as first-line treatment
- in adults, use of piroxicam should be limited to the symptomatic relief of osteoarthritis, rheumatoid arthritis, and ankylosing spondylitis
- piroxicam dose should not exceed 20 mg daily
- piroxicam should no longer be used for the treatment of acute painful and inflammatory conditions
- treatment should be reviewed 2 weeks after initiating piroxicam, and periodically thereafter
- concomitant administration of a gastro-protective agent should be considered.

Topical preparations containing piroxicam are not affected by these restrictions.

### ● CONTRA-INDICATIONS

- ▶ With systemic use Active gastro-intestinal bleeding · active gastro-intestinal ulceration · history of gastro-intestinal bleeding · history of gastro-intestinal perforation · history of gastro-intestinal ulceration · inflammatory bowel disease · severe heart failure

### ● CAUTIONS

- ▶ With systemic use Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · cerebrovascular disease · coagulation defects · connective-tissue disorders · dehydration (risk of renal impairment) · elderly (risk of serious side-effects and fatalities) · heart failure · history of gastro-intestinal disorders · ischaemic heart disease · may mask symptoms of infection · peripheral arterial disease · risk factors for cardiovascular events · uncontrolled hypertension
- ▶ With topical use Avoid contact with eyes · avoid contact with inflamed or broken skin · avoid contact with mucous membranes · not for use with occlusive dressings · topical application of large amounts can result in systemic effects,

## Naproxen with esomeprazole

17-Jul-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, naproxen p. 1240, esomeprazole p. 82.

### ● INDICATIONS AND DOSE

**Patients requiring naproxen for osteoarthritis, rheumatoid arthritis, or ankylosing spondylitis, who are at risk of NSAID-associated duodenal or gastric ulcer and when treatment with lower doses of naproxen or other NSAIDs ineffective**

#### ▶ BY MOUTH

Adult: 500/20 mg twice daily, dose expressed as x/y mg naproxen/esomeprazole

- **INTERACTIONS** → Appendix 1: NSAIDs · proton pump inhibitors

including hypersensitivity and asthma (renal disease has also been reported)

● **INTERACTIONS** → Appendix 1: NSAIDs

● **SIDE-EFFECTS**

**GENERAL SIDE-EFFECTS**

- ▶ **Common or very common** Gastrointestinal discomfort · gastrointestinal disorders · nausea · skin reactions
- ▶ **Rare or very rare** Severe cutaneous adverse reactions (SCARs)
- ▶ **Frequency not known** Bronchospasm · dyspnoea · photosensitivity reaction

**SPECIFIC SIDE-EFFECTS**

- ▶ **Common or very common**
  - ▶ With oral use Anaemia · appetite decreased · constipation · diarrhoea · dizziness · drowsiness · eosinophilia · headache · hyperglycaemia · leucopenia · oedema · rash (discontinue) · thrombocytopenia · tinnitus · vertigo · vomiting · weight changes
- ▶ **Uncommon**
  - ▶ With oral use Hypoglycaemia · palpitations · stomatitis · vision blurred
- ▶ **Rare or very rare**
  - ▶ With oral use Nephritis tubulointerstitial · nephrotic syndrome · renal failure · renal papillary necrosis
- ▶ **Frequency not known**
  - ▶ With oral use Alopecia · angioedema · aplastic anaemia · confusion · depression · embolism and thrombosis · eye irritation · eye swelling · fertility decreased female · fluid retention · haemolytic anaemia · haemorrhage · hallucination · hearing impairment · heart failure · hepatic disorders · hypersensitivity · hypertension · malaise · mood altered · nervousness · onycholysis · pancreatitis · paraesthesia · sleep disorders · vasculitis

**SIDE-EFFECTS, FURTHER INFORMATION** For information about cardiovascular and gastrointestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1222

Topical application of large amounts can result in systemic effects.

● **ALLERGY AND CROSS-SENSITIVITY** [\[EvGr\]](#) Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. [⚠](#)

● **CONCEPTION AND CONTRACEPTION**

- ▶ With systemic use Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

● **PREGNANCY**

- ▶ With systemic use Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.
- ▶ With topical use Patient packs for topical preparations carry a warning to avoid during pregnancy.

● **BREAST FEEDING**

- ▶ With systemic use Use with caution during breast-feeding. Amount too small to be harmful.
- ▶ With topical use Patient packs for topical preparations carry a warning to avoid during breast-feeding.

● **HEPATIC IMPAIRMENT**

- ▶ With oral use Manufacturer advises caution.

● **RENAL IMPAIRMENT**

- ▶ With systemic use In general, for NSAIDs the MHRA advises to avoid where possible; if necessary, use with caution (risk of fluid retention and further renal impairment, including renal failure).
- ▶ With topical use [\[EvGr\]](#) Caution (deterioration in renal function has also been reported after topical use). [⚠](#)

● **DIRECTIONS FOR ADMINISTRATION** Piroxicam orodispersible tablets can be taken by placing on the tongue and allowing to dissolve or by swallowing.

- ▶ With topical use For topical preparations, manufacturer advises apply with gentle massage only.

● **PATIENT AND CARER ADVICE**

- ▶ With topical use For topical preparations, patients and their carers should be advised to wash hands immediately after use. Photosensitivity
  - ▶ With topical use Patients should be advised against excessive exposure to sunlight of area treated in order to avoid possibility of photosensitivity.

● **LESS SUITABLE FOR PRESCRIBING**

- ▶ With oral use Piroxicam is less suitable for prescribing.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Orodispersible tablet**

## Sulindac

26-Nov-2021

● **INDICATIONS AND DOSE**

**Pain and inflammation in rheumatic disease and other musculoskeletal disorders | Acute gout**

- ▶ BY MOUTH

- ▶ **Adult:** 200 mg twice daily for maximum duration 7–10 days in peri-articular disorders, dose may be reduced according to response; acute gout should respond within 7 days; maximum 400 mg per day

● **CONTRA-INDICATIONS** Active gastro-intestinal bleeding · active gastro-intestinal ulceration · history of gastro-intestinal bleeding related to previous NSAID therapy · history of gastro-intestinal perforation related to previous NSAID therapy · history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) · history of recurrent gastro-intestinal ulceration (two or more distinct episodes) · severe heart failure

● **CAUTIONS** Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · cerebrovascular disease · coagulation defects · connective-tissue disorders · dehydration (risk of renal impairment) · elderly (risk of serious side-effects and fatalities) · heart failure · history of gastro-intestinal disorders (e.g. ulcerative colitis, Crohn's disease) · history of renal stones (ensure adequate hydration) · ischaemic heart disease · may mask symptoms of infection · peripheral arterial disease · risk factors for cardiovascular events · uncontrolled hypertension

- **INTERACTIONS** → Appendix 1: NSAIDs
- **SIDE-EFFECTS** Acute psychosis · agranulocytosis · alopecia · angioedema · appetite decreased · arrhythmia · asthenia · asthma · bone marrow disorders · cholecystitis · confusion · constipation · Crohn's disease aggravated · depression · diarrhoea · dizziness · drowsiness · dyspnoea · dysuria · eye disorder · fever · gastrointestinal discomfort · gastrointestinal disorders · gynaecomastia · haemolytic anaemia · haemorrhage · hallucination · headache · hearing loss · heart failure · hepatic disorders · hyperglycaemia · hyperhidrosis · hyperkalaemia · hypersensitivity · hypersensitivity vasculitis · hypertension · increased risk of arterial thromboembolism · increased risk of infection · insomnia · leucopenia · malaise · meningitis aseptic (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · mucosal abnormalities · muscle weakness · nausea · nephritis tubulointerstitial · nephrotic syndrome · nerve disorders · nervousness · neutropenia · oedema · oral disorders · palpitations · pancreatitis · paraesthesia · photosensitivity reaction · psychiatric disorder · renal impairment · respiratory disorders · seizure · severe cutaneous adverse reactions (SCARs) · skin reactions · syncope · taste altered · thrombocytopenia · tinnitus · urine abnormalities · urine discolouration · vertigo · vision disorders · vomiting
- SIDE-EFFECTS, FURTHER INFORMATION** For information about cardiovascular and gastrointestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1222
- **ALLERGY AND CROSS-SENSITIVITY** [E<sub>6</sub>G<sub>1</sub>](#) Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. [M](#)
- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.
- **PREGNANCY** Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.
- **BREAST FEEDING** Use with caution during breast-feeding.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild to moderate impairment; avoid in severe impairment.
- **RENAL IMPAIRMENT** In general, for NSAIDs the MHRA advises to avoid where possible; if necessary, use with caution (risk of fluid retention and further renal impairment, including renal failure). [E<sub>6</sub>G<sub>1</sub>](#) For *sulindac*, avoid in severe impairment. [M](#)

## Tiaprofenic acid

26-Nov-2021

### ● INDICATIONS AND DOSE

**Pain and inflammation in rheumatic disease and other musculoskeletal disorders**

► BY MOUTH

► Adult: 300 mg twice daily

### IMPORTANT SAFETY INFORMATION

#### CSM ADVICE

Following reports of **severe cystitis** the CSM has recommended that tiaprofenic acid should not be given to patients with urinary-tract disorders and should be stopped if urinary symptoms develop.

Patients should be advised to stop taking tiaprofenic acid and to report to their doctor promptly if they develop urinary-tract symptoms (such as increased frequency, nocturia, urgency, pain on urinating, or blood in urine).

- **CONTRA-INDICATIONS** Active bladder disease (or symptoms) · active gastro-intestinal bleeding · active gastro-intestinal ulceration · active prostate disease (or symptoms) · history of gastro-intestinal bleeding related to previous NSAID therapy · history of gastro-intestinal perforation related to previous NSAID therapy · history of recurrent gastro-intestinal haemorrhage (two or more distinct episodes) · history of recurrent gastro-intestinal ulceration (two or more distinct episodes) · history of recurrent urinary-tract disorders (if urinary symptoms develop discontinue immediately and perform urine tests and culture) · severe heart failure
- **CAUTIONS** Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · cerebrovascular disease · coagulation defects · connective-tissue disorders · dehydration (risk of renal impairment) · elderly (risk of serious side-effects and fatalities) · heart failure · history of gastro-intestinal disorders (e.g. ulcerative colitis, Crohn's disease) · ischaemic heart disease · may mask symptoms of infection · peripheral arterial disease · risk factors for cardiovascular events · uncontrolled hypertension
- **INTERACTIONS** → Appendix 1: NSAIDs
- **SIDE-EFFECTS** Agranulocytosis · alopecia · anaemia · angioedema · aplastic anaemia · appetite decreased · asthma · bladder pain · bronchospasm · confusion · constipation · Crohn's disease aggravated · cystitis · depression · diarrhoea · dizziness · drowsiness · dyspnoea · fatigue · fertility decreased female · fluid retention · gastrointestinal discomfort · gastrointestinal disorders · haemolytic anaemia · haemorrhage · hallucination · headache · heart failure · hepatic disorders · hypersensitivity · hypertension · increased risk of arterial thromboembolism · malaise · meningitis aseptic (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · nausea · nephritis tubulointerstitial · nephropathy · neutropenia · oedema · optic neuritis · oral ulceration · pancreatitis · paraesthesia · photosensitivity reaction · renal failure (more common in patients with pre-existing renal impairment) · severe cutaneous adverse reactions (SCARs) · skin reactions · sodium retention · thrombocytopenia · tinnitus · urinary disorders · urinary tract inflammation · vertigo · visual impairment · vomiting
- **SIDE-EFFECTS, FURTHER INFORMATION** For information about cardiovascular and gastrointestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs p. 1222
- **ALLERGY AND CROSS-SENSITIVITY** [EvGr](#) Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. [M](#)
- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.
- **PREGNANCY** Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.
- **BREAST FEEDING** Use with caution during breast-feeding. Amount too small to be harmful.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in mild to moderate impairment; avoid in severe impairment. **Dose adjustments** In elderly patients, manufacturer advises dose reduction to 200 mg twice daily in mild to moderate impairment.
- **RENAL IMPAIRMENT** In general, for NSAIDs the MHRA advises to avoid where possible; if necessary, use with caution (risk of fluid retention and further renal impairment, including renal failure). [EvGr](#) For *tiaprofenic acid*, avoid in severe impairment. [M](#) **Dose adjustments** [EvGr](#) In elderly patients, reduce dose to 200 mg twice daily in mild to moderate impairment. [M](#)
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

## 5 Soft tissue and joint disorders

### 5.1 Local inflammation of joints and soft tissue

**Other drugs used for Local inflammation of joints and soft tissue** Prednisolone, p. 747

#### CORTICOSTEROIDS

### Corticosteroids, inflammatory disorders

18-Sep-2020

#### Systemic corticosteroids

Short-term treatment with corticosteroids can help to rapidly decrease inflammatory symptoms of rheumatoid arthritis. [EVG](#) Long-term treatment in patients with established rheumatoid arthritis should only be continued after evaluating the risks and all other treatments have been considered, see Rheumatoid arthritis p. 1186. [A](#)

*Polymyalgia rheumatica* and *giant cell (temporal) arteritis* are always treated with corticosteroids. Relapse is common if therapy is stopped prematurely. Many patients require treatment for at least 2 years and in some patients it may be necessary to continue long-term low-dose corticosteroid treatment.

*Polyarteritis nodosa* and *polymyositis* are usually treated with corticosteroids.

*Systemic lupus erythematosus* is treated with corticosteroids when necessary using a similar dosage regimen to that for polyarteritis nodosa and polymyositis. Patients with pleurisy, pericarditis, or other systemic manifestations will respond to corticosteroids. It may then be possible to reduce the dosage; alternate-day treatment is sometimes adequate, and the drug may be gradually withdrawn. In some mild cases corticosteroid treatment may be stopped after a few months. Many mild cases of systemic lupus erythematosus do not require corticosteroid treatment. Alternative treatment with anti-inflammatory analgesics, and possibly chloroquine p. 669 or hydroxychloroquine sulfate p. 1190, should be considered.

*Ankylosing spondylitis* should not be treated with long-term corticosteroids; rarely, pulse doses may be needed and may be useful in extremely active disease that does not respond to conventional treatment.

For further information on corticosteroid use, see Corticosteroids, general use p. 737.

#### Local corticosteroid injections

Corticosteroids are injected locally for an anti-inflammatory effect. In inflammatory conditions of the joints, particularly in rheumatoid arthritis, they are given by intra-articular injection to relieve pain, increase mobility, and reduce deformity in one or a few joints; they can also provide symptomatic relief while waiting for disease-modifying antirheumatic drugs (DMARDs) to take effect. Full aseptic precautions are essential; infected areas should be avoided. Occasionally an acute inflammatory reaction develops after an intra-articular or soft-tissue injection of a corticosteroid. This may be a reaction to the microcrystalline suspension of the corticosteroid used, but must be distinguished from sepsis introduced into the injection site.

Smaller amounts of corticosteroids may also be injected directly into soft tissues for the relief of inflammation in conditions such as *tennis* or *golfer's elbow* or *compression neuropathies*. In *tendinitis*, injections should be made into the

tendon sheath and not directly into the tendon (due to the absence of a true tendon sheath and a high risk of rupture, the Achilles tendon should not be injected).

Hydrocortisone acetate p. 744 or one of the synthetic analogues is generally used for local injection. Intra-articular corticosteroid injections can cause flushing and may affect the hyaline cartilage. Each joint should not usually be treated more than 4 times in one year.

Corticosteroid injections are also injected into soft tissues for the treatment of skin lesions.

For further information on corticosteroid use, see Corticosteroids, general use p. 737.

F 740

17-May-2022

### Dexamethasone

- **DRUG ACTION** Dexamethasone has very high glucocorticoid activity and insignificant mineralocorticoid activity.

#### ● INDICATIONS AND DOSE

##### Local inflammation of joints

- ▶ BY INTRA-ARTICULAR INJECTION

▶ Adult: 0.3–3.3 mg, where appropriate, dose may be repeated at intervals of 3–21 days according to response, dose given according to size—consult product literature

##### Local inflammation of soft tissues

- ▶ BY LOCAL INFILTRATION

▶ Adult: 1.7–5 mg, dose given according to size—consult product literature, where appropriate may be repeated at intervals of 3–21 days, use the 3.3 mg/mL injection preparation for this dose

- **INTERACTIONS** → Appendix 1: corticosteroids
- **PREGNANCY** Dexamethasone readily crosses the placenta.
- **PRESCRIBING AND DISPENSING INFORMATION** Dexamethasone 3.8 mg/mL Injection has replaced dexamethasone 4 mg/mL Injection. All dosage recommendations for intravenous, intramuscular, intrarticular use or local infiltration; are given in units of dexamethasone base.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### ● **Solution for injection**

**5.2 Soft tissue disorders****Soft-tissue disorders**

07-Jul-2020

**Extravasation**

Local guidelines for the management of extravasation should be followed where they exist or specialist advice sought.

Extravasation injury follows leakage of drugs or intravenous fluids from the veins or inadvertent

administration into the subcutaneous or subdermal tissue. It must be dealt with **promptly** to prevent tissue necrosis.

Acidic or alkaline preparations and those with an osmolarity greater than that of plasma can cause extravasation injury; excipients including alcohol and polyethylene glycol have also been implicated. Cytotoxic drugs commonly cause extravasation injury. In addition, certain patients such as the very young and the elderly are at increased risk. Those receiving anticoagulants are more likely to lose blood into surrounding tissues if extravasation occurs, while those receiving sedatives or analgesics may not notice the early signs or symptoms of extravasation.

#### Extravasation prevention

Precautions should be taken to avoid extravasation; ideally, drugs likely to cause extravasation injury should be given through a central line and patients receiving repeated doses of hazardous drugs peripherally should have the cannula resited at regular intervals. Attention should be paid to the manufacturers' recommendations for administration. Placing a glyceryl trinitrate patch p. 237 distal to the cannula may improve the patency of the vessel in patients with small veins or in those whose veins are prone to collapse.

Patients should be asked to report any pain or burning at the site of injection immediately.

#### Extravasation management

If extravasation is suspected the infusion should be stopped immediately but the cannula should not be removed until after an attempt has been made to aspirate the area (through the cannula) in order to remove as much of the drug as possible. Aspiration is sometimes possible if the extravasation presents with a raised bleb or blister at the injection site and is surrounded by hardened tissue, but it is often unsuccessful if the tissue is soft or soggy.

**Corticosteroids** are usually given to treat inflammation, although there is little evidence to support their use in extravasation. Hydrocortisone p. 744 or dexamethasone p. 1245 can be given either locally by subcutaneous injection or intravenously at a site distant from the injury.

**Antihistamines** and **analgesics** may be required for symptom relief.

The management of extravasation beyond these measures is not well standardised and calls for specialist advice. Treatment depends on the nature of the offending substance; one approach is to localise and neutralise the substance whereas another is to spread and dilute it.

The first method may be appropriate following extravasation of vesicant drugs and involves administration of an antidote (if available) and the application of cold compresses 3–4 times a day (consult specialist literature for details of specific antidotes). Spreading and diluting the offending substance involves infiltrating the area with physiological saline, applying warm compresses, elevating the affected limb, and administering hyaluronidase below. A saline flush-out technique (involving flushing the subcutaneous tissue with physiological saline) may be effective but requires specialist advice. Hyaluronidase should not be administered following extravasation of vesicant drugs (unless it is either specifically indicated or used in the saline flush-out technique). Dextrazoxane p. 1014 is licensed for the treatment of anthracycline-induced extravasation.

### Enzymes used in soft-tissue disorders

#### Collagenase

Collagenases are proteolytic enzymes that are derived from the fermentation of *Clostridium histolyticum* and have the ability to break down collagen.

#### Hyaluronidase

Hyaluronidase is used to render the tissues more readily permeable to injected fluids, e.g. for introduction of fluids by subcutaneous infusion (termed hypodermoclysis).

### Rubefacients

Rubefacients act by counter-irritation. Pain, whether superficial or deep-seated, is relieved by any method that itself produces irritation of the skin. Topical rubefacient preparations may contain nicotinate and salicylate compounds, essential oils, capsicum, and camphor.

### Topical NSAIDs

The use of a NSAID by mouth is effective for relieving musculoskeletal pain. Topical NSAIDs (e.g. felbinac p. 1231, ibuprofen p. 1232, ketoprofen p. 1236, and piroxicam p. 1241) may provide some relief of pain in musculoskeletal conditions; they can be considered as an adjunctive treatment in knee or hand osteoarthritis.

## ENZYMES

### Hyaluronidase

24-Feb-2020

#### ● INDICATIONS AND DOSE

##### Enhance permeation of subcutaneous or intramuscular injections

- ▶ BY SUBCUTANEOUS INJECTION, OR BY INTRAMUSCULAR INJECTION
- ▶ Adult: 1500 units, to be dissolved directly into the solution to be injected (ensure compatibility)

##### Enhance permeation of local anaesthetics

- ▶ BY LOCAL INFILTRATION
- ▶ Adult: 1500 units, to be mixed with the local anaesthetic solution

##### Enhance permeation of ophthalmic local anaesthetic

- ▶ TO THE EYE
- ▶ Adult: 15 units/mL, to be mixed with the local anaesthetic solution

##### Hypodermoclysis

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Adult: 1500 units, to be dissolved in 1 mL water for injections or 0.9% sodium chloride injection, administered before start of 500–1000 mL infusion fluid

##### Extravasation

- ▶ BY LOCAL INFILTRATION
- ▶ Adult: 1500 units, to be dissolved in 1 mL water for injections or 0.9% sodium chloride and infiltrated into affected area as soon as possible after extravasation

##### Haematoma

- ▶ BY LOCAL INFILTRATION
- ▶ Adult: 1500 units, to be dissolved in 1 mL water for injections or 0.9% sodium chloride and infiltrated into affected area

- **CONTRA-INDICATIONS** Avoid sites where infection is present · avoid sites where malignancy is present · do not apply direct to cornea · not for anaesthesia in unexplained premature labour · not for intravenous administration · not to be used to enhance the absorption and dispersion of dopamine and/or alpha-adrenoceptor agonists · not to be used to reduce swelling of bites · not to be used to reduce swelling of stings

#### ● CAUTIONS

- ▶ When used for hypodermoclysis Elderly (control speed and total volume) and avoid overhydration especially in renal impairment)

- **SIDE-EFFECTS** Oedema · periorbital oedema

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Powder for solution for injection**

##### ▶ Hyaluronidase (Non-proprietary)

**Hyaluronidase 1500 unit** Hyaluronidase 1,500unit powder for solution for injection ampoules | 10 ampoule (POM) £161.86

## Eye

30-Nov-2020

### Eye treatment: drug administration

The structure of the eye is divided into two main parts: the anterior segment and the posterior segment. Drugs are most commonly administered to the anterior segment of the eye by topical application in the form of eye drops or ointments. When a higher drug concentration is required, and when wanting to achieve therapeutic drug concentrations to the posterior segment of the eye, administration by intravitreal injection, periocular injection, or by the systemic route may be necessary.

#### Eye drops and eye ointments

Eye drops are generally instilled into the pocket formed by gently pulling down the lower eyelid, blinking a few times to ensure even spread, and then closing the eye; in neonates and infants it may be more appropriate to administer the drop in the inner angle of the open eye. A small amount of eye ointment is applied similarly; blinking helps to spread it. [EUGr](#) Eye drops and ointments may cause temporary blurring of vision. If affected, patients should be warned not to drive or perform other skilled tasks until vision is clear.

When two different eye preparations are used at the same time of day, the patient should leave an interval of at least 5 minutes between the two, to allow the first to be fully absorbed; eye ointment should be applied after drops. 

Systemic effects may arise from absorption of drugs into the general circulation either directly from the conjunctival sac or after the excess preparation has drained down through the tear ducts into the nasal cavity. The extent of systemic absorption following ocular administration is highly variable due to a number of factors (e.g. drainage, blink rate, tear turnover). Nasal drainage of drugs is associated with eye drops much more often than with eye ointments. Applying pressure on the lacrimal punctum for at least a minute after administering eye drops reduces nasolacrimal drainage and therefore decreases systemic absorption from the nasal mucosa.

Eye-drop dispenser devices are available to aid the instillation of eye drops from plastic bottles and some are prescribable on the NHS (consult Drug Tariff—see Part IXA - Appliances). Product-specific devices may be supplied by manufacturers—consult individual manufacturers for information. They are particularly useful in patients with poor manual dexterity (e.g. due to arthritis) or reduced vision.

#### Eye irrigation solutions

These are solutions for the irrigation of the conjunctival sac. They act mechanically to flush out irritants or foreign bodies as a first-aid treatment. Sterile sodium chloride 0.9% solution p. 1258 is usually used. Clean water will suffice in an emergency.

#### Other preparations administered to the eye

The intravitreal route is used to administer drug into the posterior segment of the eye for conditions such as macular oedema and age-related macular degeneration. The intracameral route can be used to deliver certain drugs to the anterior chamber, for example antibacterials after cataract surgery. These injections should only be used under specialist supervision.

#### Ophthalmic Specials

The Royal College of Ophthalmologists and the UK Ophthalmic Pharmacy Group have produced the Ophthalmic Special Order Products guidance to help prescribers and pharmacists manage and restrict the use of unlicensed eye preparations. 'Specials' should only be prescribed in situations where a licensed product is not suitable for a patient's needs. The Ophthalmic Special Order Products guidance can be accessed on the Royal College of Ophthalmologists website ([www.rcophth.ac.uk](http://www.rcophth.ac.uk)).

#### Preservatives and sensitisers

Information on preservatives and substances identified as skin sensitisers is provided under Excipients statements in Medicinal form entries—see individual drug monographs. Very rarely, cases of corneal calcification have been reported with the use of phosphate-containing eye drops in patients with significantly damaged corneas—consult product literature for further information.

#### Eye preparations: control of microbial contamination

Preparations for the eye should be sterile when issued. Care should be taken to avoid contamination of the contents during use.

Eye preparations in multiple-application containers for use by the patient *at home* are normally discarded 4 weeks after first opening (unless otherwise stated by the manufacturer).

Multiple application eye preparations for use in *hospital general wards* are also normally discarded 4 weeks after first opening (unless otherwise stated by the manufacturer)—local practice may vary. Individual containers should be

provided for each patient. A separate container should be supplied for each eye only if there are special concerns about contamination. Patients admitted with an eye infection should be supplied with a fresh container on admission. On discharge from hospital, eye preparations used during the hospital stay should be assessed for suitability (e.g. period of use, risk of contamination); if unsuitable, a fresh supply should be provided.

During formal eye examinations and in eye surgery, single-application containers should be used if possible to reduce the risk of contamination. There is a high-risk of cross-contamination in areas such as operating theatres, eye disease clinics, and ophthalmic accident and emergency departments, therefore all containers should be discarded after single patient use whether they are single- or multiple-application containers.

Compared to eye preparations containing a preservative, unpreserved eye preparations may have a shorter period of safe use; consult packaging and see Guidance on the in-use shelf life for eye drops and ointments for more information ([www.sps.nhs.uk/articles/guidance-on-in-use-shelf-life-for-eye-drops-and-ointments/](http://www.sps.nhs.uk/articles/guidance-on-in-use-shelf-life-for-eye-drops-and-ointments/)).

### Contact lenses

Contact lenses are usually worn for their visual corrective function (e.g. myopia, astigmatism). There are two main types of lenses; hard (rigid or gas-permeable rigid) lenses or soft (hydrogel or hydrophilic) lenses. Soft lenses are the most popular type because they tend to be more comfortable, but they may not give the best vision.

Lenses are usually worn for a specified number of hours each day and removed for sleeping unless specifically designed for overnight wear. The risk of infectious and non-infectious keratitis is increased by extended continuous contact lens wear, and poor compliance with directions for use, daily cleaning, and disinfection.

*Acanthamoeba keratitis*, a painful and severe sight-threatening infection of the cornea, can be associated with ineffective lens cleaning and disinfection, the use of contaminated lens cases, or tap water coming into contact with the lenses. The condition, which is treated promptly by specialists, is especially associated with the use of soft lenses (particularly reusable or extended wear lenses).

### Contact lenses and drug treatment

Unless medically indicated, soft lenses should be removed before instillation of the eye preparation. Alternatively, unpreserved drops can be used, as preservatives accumulate in soft lenses and can cause irritation. Eye drops, however, may be instilled while patients are wearing hard contact lenses but removal prior to instillation is still generally advised. Ointment preparations should never be used in conjunction with contact lens wear; oily eye drops can cause lens deposits and should also be avoided.

Many drugs given systemically can also have adverse effects on contact lens wear. These include drugs which can cause corneal oedema (e.g. oral contraceptives—particularly those with a higher oestrogen content), drugs which reduce eye movement and blink reflex (e.g. anxiolytics, sedative hypnotics, antihistamines, and muscle relaxants), drugs which reduce lacrimation (e.g. older generation antihistamines, phenothiazines and related drugs, some beta-blockers, diuretics, and tricyclic antidepressants), and drugs which increase lacrimation (including ephedrine hydrochloride p. 294 and hydralazine hydrochloride p. 196). Other drugs that may affect contact lens wear include isotretinoin p. 1365 (can decrease tolerance to contact lens), aspirin p. 133 (can cause irritation), and rifampicin p. 634 and sulfasalazine p. 44 (can discolour lenses).

## 1 Allergic and inflammatory eye conditions

### Eye, allergy and inflammation

05-JUN-2020

#### Corticosteroids

Corticosteroids administered locally to the eye or given by mouth are effective for treating anterior segment inflammation, including that which results from surgery.

*Topical corticosteroids* are applied frequently for the first 24–48 hours; once inflammation is controlled, the frequency of application is reduced. They should normally only be used under expert supervision; three main dangers are associated with their use:

- a 'red eye', when the diagnosis is unconfirmed, may be due to herpes simplex virus, and a corticosteroid may aggravate the condition, leading to corneal ulceration, with possible damage to vision and even loss of the eye.
- Bacterial, fungal, and amoebic infections pose a similar hazard;
- 'steroid glaucoma' can follow the use of corticosteroid eye preparations in susceptible individuals;
- a 'steroid cataract' can follow prolonged use.

Combination products containing a corticosteroid with an anti-infective drug are sometimes used after ocular surgery to reduce inflammation and prevent infection; use of combination products is otherwise rarely justified.

*Systemic corticosteroids* may be useful for ocular conditions. The risk of producing a 'steroid cataract' increases with the dose and duration of corticosteroid use.

#### Intravitreal corticosteroids

An intravitreal implant containing dexamethasone p. 1252 (*Ozurdex*<sup>®</sup>) is licensed for the treatment of adults with macular oedema following either branch retinal vein occlusion or central retinal vein occlusion; it is also licensed for the treatment of adult patients with inflammation of the posterior segment of the eye presenting as non-infectious uveitis.

An intravitreal implant containing fluocinolone acetonide p. 1282 (*Iluvien*<sup>®</sup>) is licensed for the treatment of visual impairment associated with chronic diabetic macular oedema which is insufficiently responsive to available therapies; it is also licensed for the prevention of relapse in recurrent non-infectious uveitis affecting the posterior segment of the eye. It should be administered by specialists experienced in the use of intravitreal injections.

#### Eye care, other anti-inflammatory preparations

Other preparations used for the topical treatment of inflammation and allergic conjunctivitis include antihistamines, lodoxamide p. 1251, and sodium cromoglycate p. 1251.

Eye drops containing antihistamines, such as antazoline with xylometazoline p. 1250, azelastine hydrochloride p. 1250, epinastine hydrochloride p. 1250, ketotifen p. 1250, and olopatadine p. 1251, can be used for allergic conjunctivitis.

Sodium cromoglycate (sodium cromoglycate) and nedocromil sodium eye drops can be useful for vernal keratoconjunctivitis and other allergic forms of conjunctivitis.

Lodoxamide eye drops are used for allergic conjunctival conditions including seasonal allergic conjunctivitis.

Diclofenac sodium eye drops p. 1267 are also licensed for seasonal allergic conjunctivitis.

Non-steroidal anti-inflammatory eye drops are used for the prophylaxis and treatment of inflammation of the eye following surgery or laser treatment.

Ciclosporin eye drops p. 1255 are licensed for severe keratitis in patients with dry eye disease, which has not improved despite treatment with tear substitutes.

## 1.1 Allergic conjunctivitis

**Other drugs used for Allergic conjunctivitis** Diclofenac sodium, p. 1267

### ANTI-HISTAMINES

#### Antazoline with xylometazoline

06-Apr-2020

##### ● INDICATIONS AND DOSE

###### Allergic conjunctivitis

- ▶ TO THE EYE
- ▶ Child 12-17 years: Apply 2-3 times a day for maximum 7 days
- ▶ Adult: Apply 2-3 times a day for maximum 7 days

- **CAUTIONS** Angle-closure glaucoma · cardiovascular disease · diabetes mellitus · hypertension · hyperthyroidism · phaeochromocytoma · urinary retention

- **INTERACTIONS** → Appendix 1: antihistamines, sedating · sympathomimetics, vasoconstrictor

- **SIDE-EFFECTS** Drowsiness · eye irritation · headache · hyperhidrosis · hypertension · mydriasis · nausea · palpitations · vascular disorders · vision blurred

**SIDE-EFFECTS, FURTHER INFORMATION** Absorption of antazoline and xylometazoline may result in systemic side-effects.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

###### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

- ▶ **Otrivine Antistin** (Thea Pharmaceuticals Ltd)  
Xylometazoline hydrochloride 500 microgram per 1 ml, Antazoline sulfate 5 mg per 1 ml Otrivine Antistin 0.5%/0.05% eye drops | 10 ml [P] £3.35 DT = £3.35

#### Azelastine hydrochloride

11-May-2020

##### ● INDICATIONS AND DOSE

###### Seasonal allergic conjunctivitis

- ▶ TO THE EYE
- ▶ Child 4-17 years: Apply twice daily, increased if necessary to 4 times a day
- ▶ Adult: Apply twice daily, increased if necessary to 4 times a day

###### Perennial conjunctivitis

- ▶ TO THE EYE
- ▶ Child 12-17 years: Apply twice daily; increased if necessary to 4 times a day, maximum duration of treatment 6 weeks
- ▶ Adult: Apply twice daily; increased if necessary to 4 times a day, maximum duration of treatment 6 weeks

- **INTERACTIONS** → Appendix 1: antihistamines, non-sedating

##### ● SIDE-EFFECTS

- ▶ **Common or very common** Eye irritation · taste bitter (if applied incorrectly)

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

###### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

- ▶ **Azelastine hydrochloride (Non-proprietary)**  
Azelastine hydrochloride 500 microgram per 1 ml Azelastine 0.05% eye drops | 8 ml [PoM] £6.40 DT = £6.40
- ▶ **Optilast** (Viatris UK Healthcare Ltd)  
Azelastine hydrochloride 500 microgram per 1 ml Optilast 0.05% eye drops | 8 ml [PoM] £6.40 DT = £6.40

#### Epinastine hydrochloride

26-Mar-2020

##### ● INDICATIONS AND DOSE

###### Seasonal allergic conjunctivitis

- ▶ TO THE EYE
- ▶ Child 12-17 years: Apply twice daily for maximum 8 weeks
- ▶ Adult: Apply twice daily for maximum 8 weeks

##### ● SIDE-EFFECTS

- ▶ **Common or very common** Eye discomfort
- ▶ **Uncommon** Dry eye · eye disorders · headache · nasal irritation · rhinitis · taste altered · visual impairment

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

###### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

- ▶ **Relestat** (AbbVie Ltd)  
Epinastine hydrochloride 500 microgram per 1 ml Relestat 500micrograms/ml eye drops | 5 ml [PoM] £9.90 DT = £9.90

#### Ketotifen

14-Dec-2020

##### ● INDICATIONS AND DOSE

###### Seasonal allergic conjunctivitis

- ▶ TO THE EYE
- ▶ Child 3-17 years: Apply twice daily
- ▶ Adult: Apply twice daily

- **INTERACTIONS** → Appendix 1: antihistamines, sedating

##### ● SIDE-EFFECTS

- ▶ **Common or very common** Eye discomfort · eye disorders · eye inflammation
- ▶ **Uncommon** Conjunctival haemorrhage · drowsiness · dry eye · dry mouth · headache · skin reactions · vision disorders
- ▶ **Frequency not known** Asthma exacerbated · facial swelling · oedema

##### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

##### All Wales Medicines Strategy Group (AWMSG) decisions

- ▶ Ketotifen (*Ketofall*<sup>®</sup>) for symptomatic treatment of seasonal allergic conjunctivitis (June 2020) AWMSG No. 3930 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

###### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride

- ▶ **Ketofall** (Scope Ophthalmics Ltd)  
Ketotifen (as Ketotifen hydrogen fumarate) 250 microgram per 1 ml Ketofall 0.25mg/ml eye drops 0.4ml unit dose | 30 unit dose [PoM] £6.95 DT = £6.95
- ▶ **Zaditen** (Thea Pharmaceuticals Ltd)  
Ketotifen (as Ketotifen fumarate) 250 microgram per 1 ml Zaditen 250micrograms/ml eye drops | 5 ml [PoM] £7.80 DT = £7.80

## Olopatadine

25-Mar-2020

### ● INDICATIONS AND DOSE

#### Seasonal allergic conjunctivitis

- ▶ TO THE EYE
- ▶ Child 3-17 years: Apply twice daily for maximum 4 months
- ▶ Adult: Apply twice daily for maximum 4 months

### ● SIDE-EFFECTS

- ▶ **Common or very common** Asthenia · dry eye · eye discomfort · headache · nasal dryness · taste altered
- ▶ **Uncommon** Dizziness · eye disorders · eye inflammation · increased risk of infection · numbness · skin reactions · vision disorders
- ▶ **Frequency not known** Drowsiness · dyspnoea · malaise · nausea · vomiting

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride

#### ▶ Olopatadine (Non-proprietary)

Olopatadine (as Olopatadine hydrochloride) 1 mg per 1 ml Olopatadine 1mg/ml eye drops | 5 ml [PoM] £5.55 DT = £4.68

#### ▶ Opatanol (Novartis Pharmaceuticals UK Ltd)

Olopatadine (as Olopatadine hydrochloride) 1 mg per 1 ml Opatanol 1mg/ml eye drops | 5 ml [PoM] £4.68 DT = £4.68

## CORTICOSTEROIDS

F 740

## Betamethasone

08-Mar-2022

- **DRUG ACTION** Betamethasone has very high glucocorticoid activity and insignificant mineralocorticoid activity.

● **INDICATIONS AND DOSE****Local treatment of inflammation (short-term)**

- ▶ TO THE EYE USING EYE DROP
- ▶ Child: Apply every 1–2 hours until controlled then reduce frequency
- ▶ Adult: Apply every 1–2 hours until controlled then reduce frequency

- **INTERACTIONS** → Appendix 1: corticosteroids
- **SIDE-EFFECTS** Vision disorders

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Ear/eye/nose drops solution**

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

- ▶ **Betnesol** (RPH Pharmaceuticals AB)  
Betamethasone sodium phosphate 1 mg per 1 ml Betnesol 0.1% eye/ear/nose drops | 10 ml [PoM] £2.32 DT = £2.32
- ▶ **Vistamethasone** (Martindale Pharmaceuticals Ltd)  
Betamethasone sodium phosphate 1 mg per 1 ml Vistamethasone 0.1% ear/eye/nose drops | 5 ml [PoM] £1.02 | 10 ml [PoM] £1.16 DT = £2.32

Combinations available: *Betamethasone with neomycin*, p. 1254

F 740

## Dexamethasone

17-May-2022

- **DRUG ACTION** Dexamethasone has very high glucocorticoid activity and insignificant mineralocorticoid activity.

● **INDICATIONS AND DOSE****Local treatment of inflammation (short-term)**

- ▶ TO THE EYE USING EYE DROP
- ▶ Child: Apply 4–6 times a day
- ▶ Adult: Apply every 30–60 minutes until controlled, then reduced to 4–6 times a day

**Short term local treatment of inflammation (severe conditions)**

- ▶ TO THE EYE USING EYE DROP
- ▶ Child: Apply every 30–60 minutes until controlled, reduce frequency when control achieved

**Macular oedema following either branch retinal vein occlusion or central retinal vein occlusion (specialist use only) | Visual impairment due to diabetic macular oedema in adults who are pseudophakic, or who are insufficiently responsive to, or unsuitable for non-corticosteroid therapy (specialist use only) | For the treatment of inflammation of the posterior segment of the eye presenting as non-infectious uveitis (specialist use only)**

- ▶ BY INTRAVITREAL INJECTION
- ▶ Adult: 700 micrograms, to be administered into the affected eye, concurrent administration to both eyes not recommended. For further information on pre-treatment, administration and repeat dosing, consult product literature

- **UNLICENSED USE** *Maxidex*<sup>®</sup> not licensed for use in children under 2 years. *Dropodex*<sup>®</sup> not licensed for use in children.
- **CONTRA-INDICATIONS**
  - ▶ With intravitreal use Active ocular herpes simplex · active or suspected ocular infection · active or suspected periocular infection · rupture of the posterior lens capsule in patients

with aphakia, iris or transscleral fixated intra-ocular lens or anterior chamber intra-ocular lens · uncontrolled advanced glaucoma

- **CAUTIONS**
  - ▶ With intravitreal use History of ocular viral infection (including herpes simplex) · posterior capsule tear or iris defect (risk of implant migration into the anterior chamber which may cause corneal oedema and, in persistent severe cases, the need for corneal transplantation) · retinal vein occlusion with significant retinal ischaemia
- **INTERACTIONS** → Appendix 1: corticosteroids
- **SIDE-EFFECTS**
  - ▶ Common or very common Eye discomfort
  - ▶ Uncommon
    - ▶ When used by eye (topical) Photophobia · taste altered
    - ▶ With intravitreal use Necrotising retinitis
- **PREGNANCY** Dexamethasone readily crosses the placenta.
  - ▶ With intravitreal use Manufacturer advises avoid unless potential benefit outweighs risk—no information available.
- **BREAST FEEDING**
  - ▶ With intravitreal use Manufacturer advises avoid unless potential benefit outweighs risk—no information available.
- **MONITORING REQUIREMENTS**
  - ▶ With intravitreal use Monitor intra-ocular pressure and for signs of ocular infection. In patients with posterior capsule tear or iris defect monitor for implant migration to allow for early diagnosis and management.
- **PRESCRIBING AND DISPENSING INFORMATION**
  - ▶ When used by eye Although multi-dose dexamethasone eye drops commonly contain preservatives, preservative-free unit dose vials may be available.
- **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

  - ▶ Dexamethasone intravitreal implant for the treatment of macular oedema secondary to retinal vein occlusion (July 2011) NICE TA229 Recommended
  - ▶ Dexamethasone intravitreal implant for treating diabetic macular oedema (July 2015) NICE TA349 Recommended with restrictions
  - ▶ Adalimumab and dexamethasone for treating non-infectious uveitis (July 2017) NICE TA460 Recommended

**Scottish Medicines Consortium (SMC) decisions**

  - ▶ Dexamethasone intravitreal implant (*Ozurdex*<sup>®</sup>) for the treatment of adult patients with macular oedema following either branch retinal vein occlusion (BRVO) or central retinal vein occlusion (CRVO) (June 2012) SMC No. 652/10 Recommended with restrictions
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

**Eye drops**

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate, polysorbates

● **INDICATIONS AND DOSE****Local treatment of inflammation (short term)**

- ▶ TO THE EYE
- ▶ Child 2-17 years: Apply every 1 hour for 24–48 hours, then reduced to 2–4 times a day
- ▶ Adult: Apply every 1 hour for 24–48 hours, then reduced to 2–4 times a day

**IMPORTANT SAFETY INFORMATION**

MHRA/CHM ADVICE: CORTICOSTEROIDS: RARE RISK OF CENTRAL SEROUS CHORIORETINOPATHY WITH LOCAL AS WELL AS SYSTEMIC ADMINISTRATION (AUGUST 2017)

See Corticosteroids, general use p. 737.

NHS IMPROVEMENT PATIENT SAFETY ALERT: STEROID EMERGENCY CARD TO SUPPORT EARLY RECOGNITION AND TREATMENT OF ADRENAL CRISIS IN ADULTS (AUGUST 2020)

See Adrenal insufficiency p. 738.

PAEDIATRIC STEROID TREATMENT CARD FOR CHILDREN WITH ADRENAL INSUFFICIENCY (NOVEMBER 2020)

The British Society for Paediatric Endocrinology and Diabetes (BSPED) has developed a Paediatric Steroid Treatment Card which should be issued to children with adrenal insufficiency and steroid dependence. The card includes a management summary for the emergency treatment of adrenal crisis and can be issued by any healthcare professional managing such patients. The BSPED Paediatric Steroid Treatment Card is available at: [www.endocrinology.org/adrenal-crisis](http://www.endocrinology.org/adrenal-crisis).

- **SIDE-EFFECTS** Cataract · eye discomfort · eye disorders · eye infection · eye inflammation · rash · taste altered · vision disorders
- **PATIENT AND CARER ADVICE**
  - ▶ In adults If systemic absorption occurs following topical and local use, side-effects applicable to systemic corticosteroids may apply; a patient information leaflet should be supplied and the need for a Steroid Treatment Card and a Steroid Emergency Card considered, see Corticosteroids, general use p. 737.
  - ▶ In children If systemic absorption occurs following topical and local use, side-effects applicable to systemic corticosteroids may apply; a patient information leaflet should be supplied and the need for a Steroid Treatment Card considered, see Corticosteroids, general use p. 737.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate, polysorbates

**Prednisolone sodium phosphate 5 mg per 1 ml** Prednisolone sodium phosphate 0.5% ear/eye drops | 10 ml [PoM] £2.57 DT = £2.57

## CORTICOSTEROIDS &gt; COMBINATIONS WITH ANTI-INFECTIVES

**Betamethasone with neomycin** 28-May-2021

The properties listed below are those particular to the combination only. For the properties of the components please consider, betamethasone p. 1252.

● **INDICATIONS AND DOSE****Local treatment of eye inflammation and bacterial infection (short-term)**

- ▶ TO THE EYE USING EYE DROP
- ▶ Adult: Apply up to 6 times a day

● **INTERACTIONS** → Appendix 1: corticosteroids · neomycin

● **SIDE-EFFECTS** Eye disorders · glaucoma · posterior subcapsular cataract · punctate keratitis · vision blurred

● **LESS SUITABLE FOR PRESCRIBING** Betamethasone with neomycin eye-drops are less suitable for prescribing.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Ear/eye/nose drops solution**

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

▶ **Betnesol-N** (RPH Pharmaceuticals AB)

Betamethasone (as Betamethasone sodium phosphate) 1 mg per 1 ml, Neomycin sulfate 5 mg per 1 ml Betnesol-N ear/eye/nose drops | 10 ml [PoM] £2.39 DT = £2.39

**Dexamethasone with framycetin sulfate and gramicidin** 02-Mar-2021

The properties listed below are those particular to the combination only. For the properties of the components please consider, dexamethasone p. 1252, framycetin sulfate p. 1285.

● **INDICATIONS AND DOSE****Local treatment of inflammation (short-term)**

- ▶ TO THE EYE
- ▶ Child: Apply 4–6 times a day, may be administered every 30–60 minutes in severe conditions until controlled, then reduce frequency
- ▶ Adult: Apply 4–6 times a day, may be administered every 30–60 minutes in severe conditions until controlled, then reduce frequency

● **CAUTIONS** Avoid prolonged use

● **INTERACTIONS** → Appendix 1: corticosteroids

● **LESS SUITABLE FOR PRESCRIBING** Sofradex® is less suitable for prescribing.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Ear/eye drops solution**

EXCIPIENTS: May contain Polysorbates

▶ **Sofradex** (Sanofi)

Gramicidin 50 microgram per 1 ml, Dexamethasone (as Dexamethasone sodium metasulfobenzoate) 500 microgram per 1 ml, Framycetin sulfate 5 mg per 1 ml Sofradex ear/eye drops | 8 ml [PoM] £7.50

**Dexamethasone with hypromellose, neomycin and polymyxin B sulfate**

14-Dec-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, dexamethasone p. 1252, neomycin sulfate p. 562.

● **INDICATIONS AND DOSE****Local treatment of inflammation (short-term)**

- ▶ TO THE EYE USING EYE DROP
- ▶ Adult: Apply every 30–60 minutes until controlled, then reduced to 4–6 times a day

**Local treatment of inflammation (short-term)**

- ▶ TO THE EYE USING EYE OINTMENT
- ▶ Adult: Apply 3–4 times a day, alternatively, apply at night when used with eye drops

● **INTERACTIONS** → Appendix 1: corticosteroids · neomycin · polymyxin b

● **LESS SUITABLE FOR PRESCRIBING** Dexamethasone with neomycin and polymyxin B sulfate is less suitable for prescribing.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Eye ointment**

EXCIPIENTS: May contain Hydroxybenzoates (parabens), woolfat and related substances (including lanolin)

▶ **Maxitrol** (Novartis Pharmaceuticals UK Ltd)

Dexamethasone 1 mg per 1 gram, Neomycin (as Neomycin sulfate) 3500 unit per 1 gram, Polymyxin B sulfate 6000 unit per 1 gram Maxitrol eye ointment | 3.5 gram [PoM] £1.44

**Eye drops**

EXCIPIENTS: May contain Benzalkonium chloride, polysorbates

▶ **Maxitrol** (Novartis Pharmaceuticals UK Ltd)

Dexamethasone 1 mg per 1 ml, Hypromellose 5 mg per 1 ml, Neomycin (as Neomycin sulfate) 3500 unit per 1 ml, Polymyxin B sulfate 6000 unit per 1 ml Maxitrol eye drops | 5 ml [PoM] £1.68

**Dexamethasone with tobramycin**

The properties listed below are those particular to the combination only. For the properties of the components please consider, dexamethasone p. 1252, tobramycin p. 563.

● **INDICATIONS AND DOSE****Local treatment of inflammation (short-term)**

- ▶ TO THE EYE
- ▶ Adult: (consult product literature)

● **INTERACTIONS** → Appendix 1: aminoglycosides · corticosteroids

● **LESS SUITABLE FOR PRESCRIBING** Dexamethasone with tobramycin eye-drops are less suitable for prescribing.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

▶ **Tobradex** (Novartis Pharmaceuticals UK Ltd)

Dexamethasone 1 mg per 1 ml, Tobramycin 3 mg per 1 ml Tobradex 3mg/ml / 1mg/ml eye drops | 5 ml [PoM] £5.37 DT = £5.37

## IMMUNOSUPPRESSANTS > CALCINEURIN INHIBITORS AND RELATED DRUGS

### Ciclosporin

17-Sep-2021

#### (Cyclosporin)

- **DRUG ACTION** Ciclosporin inhibits production and release of lymphokines, thereby suppressing cell-mediated immune response.

#### ● INDICATIONS AND DOSE

IKERVIS®

**Severe keratitis in dry eye disease that has not responded to treatment with tear substitutes (initiated by a specialist)**

- ▶ TO THE EYE
- ▶ **Adult:** Apply 1 drop once daily, to be applied to the affected eye(s) at bedtime, review treatment at least every 6 months
- **CONTRA-INDICATIONS** Active or suspected ocular or peri-ocular infection · ocular or peri-ocular malignancies or premalignant conditions
- **CAUTIONS** Glaucoma—limited information available · history of ocular herpes—no information available
- **INTERACTIONS** → Appendix 1: ciclosporin
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Eye discomfort · eye disorders · eye inflammation · vision blurred
  - ▶ **Uncommon** Eye deposit · increased risk of infection
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—no information available.
- **BREAST FEEDING** Manufacturer advises avoid—limited information.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises keep eyes closed for 2 minutes after using eye drops to increase local drug action and reduce systemic absorption.
- **PATIENT AND CARER ADVICE**

**Driving and skilled tasks** Manufacturer advises patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of blurred vision.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
- **NICE decisions**
  - ▶ **Ciclosporin for treating dry eye disease that has not improved despite treatment with artificial tears (December 2015)** NICE TA369 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

- ▶ **Ikervis** (Santen UK Ltd)

- **INTERACTIONS** → Appendix 1: homatropine

- **MEDICINAL FORMS** Forms available from special-order manufacturers include: eye drops

**2 Dry eye conditions****Dry eye**

08-Feb-2020

**Description of condition**

Dry eye presents as chronic soreness and inflammation of ocular surface associated with reduced or abnormal tear secretion (e.g. in Sjögren's syndrome). It often responds to tear replacement therapy in the form of eye drops (preferably preservative-free), eye ointment (used at night), or gels. Choice of preparation is based on the type of dry eye (e.g. aqueous-deficient or evaporative), symptoms, and patient preference.

**Drug treatment**

[EvGr] Hypromellose p. 1257 is the most frequently used treatment for tear deficiency in patients with mild dry eye.

⚠ Initially, it may need to be instilled frequently (e.g. hourly) for adequate symptom relief, then at a reduced frequency. [EvGr] Carbomers below and polyvinyl alcohol p. 1258 are suitable alternatives. ⚠ The ability of carbomers below and polyvinyl alcohol to cling to the eye surface and their higher viscosity may help reduce frequency of application to 4 times daily. Carbomers below can be less tolerated than hypromellose due to their impact on vision.

[EvGr] Preservative-free tear replacement is preferred in cases of frequent and chronic application.

Ocular lubricants containing sodium hyaluronate p. 1259, hydroxypropyl guar, or carmellose sodium p. 1257 can be used for moderate to severe dry eye following a suitable trial (6–8 weeks) of treatment options for mild dry eye.

Eye ointments containing a paraffin (e.g. liquid paraffin with white soft paraffin and wool alcohols p. 1258) can be used in addition to other options to lubricate the eye surface, especially in cases of recurrent corneal epithelial erosion.

⚠ They may cause temporary visual disturbance and are

best suited for application before sleep. Ointments should not be used during contact lens wear.

**Other drugs used for Dry eye conditions** Pilocarpine, p. 1273

**OCULAR LUBRICANTS****Acetylcysteine**

05-Oct-2020

● **INDICATIONS AND DOSE****Tear deficiency | Impaired or abnormal mucus production**

## Hydroxyethylcellulose

23-Mar-2020

### ● INDICATIONS AND DOSE

#### Tear deficiency

- ▶ TO THE EYE
- ▶ Child: Apply as required
- ▶ Adult: Apply as required

- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose hydroxyethylcellulose eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

##### ▶ Artificial tears (Bausch & Lomb UK Ltd)

- Hydroxyethylcellulose 4.4 mg per 1 ml** Minims artificial tears 0.44% eye drops 0.5ml unit dose | 20 unit dose [P] £9.33 DT = £9.33

## Hydroxypropyl guar with polyethylene glycol and propylene glycol (Formulated as an ocular lubricant)

### ● INDICATIONS AND DOSE

#### Dry eye conditions

- ▶ TO THE EYE
- ▶ Child: Apply as required
- ▶ Adult: Apply as required

- **MEDICINAL FORMS** No licensed medicines listed.

## Hypromellose

23-Mar-2020

### ● INDICATIONS AND DOSE

#### Tear deficiency

- ▶ TO THE EYE
- ▶ Child: Apply as required
- ▶ Adult: Apply as required

- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose hypromellose eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

#### Eye drops

- EXCIPIENTS: May contain Benzalkonium chloride, cetrimide, disodium edetate

##### ▶ Hypromellose (Non-proprietary)

- Hypromellose 3 mg per 1 ml** Evolve Hypromellose 0.3% eye drops preservative free | 10 ml £1.98
- Hypromellose 0.3% eye drops preservative free | 10 ml £5.75
- Aapromel 0.3% eye drops | 10 ml £0.69 DT = £1.05

##### ▶ Artelac (Bausch & Lomb UK Ltd)

- Hypromellose 3.2 mg per 1 ml** Artelac Single Dose Unit 0.32% eye drops 0.5ml unit dose | 30 unit dose [P] £16.95 DT = £16.95
- Artelac 0.32% eye drops | 10 ml [P] £4.99 DT = £4.99

##### ▶ Hydromoor (Rayner Pharmaceuticals Ltd)

- Hydromoor 0.3% eye drops 0.4ml unit dose preservative free | 30 unit dose £5.75

##### ▶ Hypromellose (Aspire Pharma Ltd)

- Hypromellose 3.2 mg per 1 ml** PF Drops Hypromellose 0.3% eye drops preservative free | 10 ml £5.75

##### ▶ Hypromol (Ennogen Healthcare Ltd)

- Hypromellose 3 mg per 1 ml** Hypromol 0.3% eye drops preservative free | 10 ml £4.55

##### ▶ Lumecare (Hypromellose) (Medicom Healthcare Ltd)

- Hypromellose 3 mg per 1 ml** Lumecare Hypromellose 0.3% eye drops | 10 ml £1.71 DT = £1.05

**Hypromellose 3 mg per 1 ml** Tear-Lac Hypromellose 0.3% eye drops preservative free | 10 ml £5.80
- ▶ **TeardeW** (Sai-Meds Ltd)  
**Hypromellose 3 mg per 1 ml** TeardeW 0.3% eye drops | 10 ml £0.99 DT = £1.05
- ▶ **TeardeW 5 mg per 1 ml** TeardeW 0.5% eye drops | 10 ml £1.17 DT = £0.00
- ▶ **Xailin Hydrate** (Visufarma UK Ltd)  
**Hypromellose 3 mg per 1 ml** Xailin Hydrate 0.3% eye drops preservative free | 10 ml £4.80

## Hypromellose with dextran 70 07-Apr-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, hypromellose p. 1257.

### ● INDICATIONS AND DOSE

#### Tear deficiency

- ▶ TO THE EYE
- ▶ Adult: Apply as required

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

- ▶ **Hypromellose with dextran 70 (Non-proprietary)**  
**Dextran 70 1 mg per 1 ml, Hypromellose 3 mg per 1 ml** Tears Naturelle II eye drops | 15 ml £2.70 DT = £0.00

## Liquid paraffin with white soft paraffin and wool alcohols 26-Nov-2020

### ● INDICATIONS AND DOSE

#### Dry eye conditions

- ▶ TO THE EYE
- ▶ Child: Apply as required, best suited for application before sleep
- ▶ Adult: Apply as required, best suited for application before sleep

- **PATIENT AND CARER ADVICE** May cause temporary visual disturbance. Should not be used during contact lens wear.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Eye ointment

- ▶ **Liquid paraffin with white soft paraffin and wool alcohols (Non-proprietary)**  
Xailin Night eye ointment preservative free | 5 gram £2.60

## Paraffin, yellow, soft 05-Oct-2021

### ● INDICATIONS AND DOSE

#### Eye surface lubrication

- ▶ TO THE EYE
- ▶ Child: Apply as required
- ▶ Adult: Apply as required

- **PATIENT AND CARER ADVICE** Ophthalmic preparations may cause temporary visual disturbance. Should not be used during contact lens wear.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Eye ointment

##### ▶ Paraffin, yellow, soft (Non-proprietary)

- ▶ **Liquid paraffin 100 mg per 1 gram, Wool fat 100 mg per 1 gram, Yellow soft paraffin 800 mg per 1 gram** Simple eye ointment | 4 gram [P] £53.28 DT = £53.28

## Polyvinyl alcohol 17-Apr-2020

### ● INDICATIONS AND DOSE

#### Tear deficiency

- ▶ TO THE EYE
- ▶ Child: Apply as required
- ▶ Adult: Apply as required

- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose polyvinyl alcohol eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

#### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

- ▶ **Liquifilm Tears** (Allergan Ltd)  
**Polyvinyl alcohol 14 mg per 1 ml** Liquifilm Tears 1.4% eye drops | 15 ml £1.93  
Liquifilm Tears 1.4% eye drops 0.4ml unit dose preservative free | 30 unit dose £5.35
- ▶ **Refresh Ophthalmic** (Allergan Ltd)  
**Polyvinyl alcohol 14 mg per 1 ml** Refresh Ophthalmic 1.4% eye drops 0.4ml unit dose | 30 unit dose £2.25
- ▶ **Sno Tears** (Bausch & Lomb UK Ltd)  
**Polyvinyl alcohol 14 mg per 1 ml** Sno Tears 1.4% eye drops | 10 ml £1.06

## Retinol palmitate with white soft paraffin, light liquid paraffin, liquid paraffin and wool fat

(Formulated as an ocular lubricant)

### ● INDICATIONS AND DOSE

#### Dry eye conditions

- ▶ TO THE EYE
- ▶ Adult: (consult product literature)

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Eye ointment

- ▶ **Vita-POS** (Scope Ophthalmics Ltd)  
Hylo Night eye ointment preservative free | 5 gram £2.75

## Sodium chloride 25-Apr-2020

### ● INDICATIONS AND DOSE

**Tear deficiency | Ocular lubricants and astringents | Irrigation, including first-aid removal of harmful substances | Intra-ocular or topical irrigation during surgical procedures**

- ▶ TO THE EYE
- ▶ Child: Apply as required, use 0.9% eye preparations
- ▶ Adult: Apply as required, use 0.9% eye preparations

**Corneal oedema**

## ▶ TO THE EYE

- ▶ Adult: Use 5% eye preparations (consult product literature)

- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose sodium chloride eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

- ▶ In adults Some sodium chloride 5% eye drop preparations may also contain sodium hyaluronate—consult product literature.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops, eye ointment

**Eye drops**▶ **Sodium chloride (Non-proprietary)**

**Sodium chloride 50 mg per 1 ml** Sodium chloride 5% eye drops | 10 ml £25.25

▶ **Aeon Sodium Chloride** (Rayner Pharmaceuticals Ltd)

- ▶ Adult: Apply up to 4 times a day

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**

- ▶ **Emustil** (Rayner Pharmaceuticals Ltd)  
Emustil eye drops 0.3ml unit dose preservative free | 20 unit dose £6.22

**3 Eye infections****Eye, infections**

07-Jun-2020

**Overview**

Most acute superficial eye infections can be treated topically with eye drops or ointment. Blepharitis is often caused by staphylococci. Bacterial conjunctivitis is commonly caused by *Streptococcus pneumoniae*, *Staphylococcus aureus*, or *Haemophilus influenzae*. Keratitis may be bacterial, viral, or fungal; it can also be caused by *Acanthamoeba* (parasite). Endophthalmitis is usually either bacterial or fungal; it can also be non-infective (retention of foreign material).

**EVGr** Anterior bacterial blepharitis is treated by application of an antibacterial eye ointment (such as chloramphenicol p. 1262) to the conjunctival sac or rubbed into the lid margins, if blepharitis is not controlled by eyelid hygiene alone. Systemic treatment (e.g. tetracyclines in patients over 12 years of age) may be required in patients with posterior blepharitis. Treatments can be intermittently

stopped and restarted, based on the severity of the blepharitis and drug tolerance. **A**

Most cases of acute bacterial conjunctivitis are self-limiting and resolve within 5–7 days without treatment.

**EVGr** In severe infection or where rapid resolution is required, treatment with antibacterial eye drops or ointments are used. Ongoing symptoms despite treatment may indicate viral conjunctivitis or the need for a different antibacterial; cultures or referral to a specialist may be required.

Corneal ulcer and keratitis require specialist treatment and may call for hospital admission for intensive therapy.

Endophthalmitis is a medical emergency which also calls for specialist management and may require treatment with antibacterial drugs and steroids. Surgical intervention, such as vitrectomy, is sometimes indicated. **A**

Trachoma which results from chronic infection with *Chlamydia trachomatis* can be treated with azithromycin p. 583 by mouth [unlicensed indication] as recommended by the World Health Organisation.

For information on the management of ocular herpes, see Herpesvirus infections p. 686.

Fungal infections of the cornea (e.g. fungal keratitis) are rare but can occur particularly in agricultural areas and tropical climates. Antifungal preparations for the eye are not generally available. For information about supply of preparations not commercially available, contact the local Clinical Commissioning Group (CCG), or equivalent in Scotland, Wales, or Northern Ireland, or the nearest hospital ophthalmology unit, or Moorfields Eye Hospital, 162 City Road, London EC1V 2PD (tel. (020) 7253 3411) or [www.moorfields.nhs.uk](http://www.moorfields.nhs.uk).

**3.1 Bacterial eye infection****ANTIBACTERIALS > AMINOGLYCOSIDES****F 559****Gentamicin**

25-Oct-2021

**INDICATIONS AND DOSE****Bacterial eye infections**

- ▶ TO THE EYE
- ▶ Child: Apply 1 drop at least every 2 hours in severe infection, reduce frequency as infection is controlled and continue for 48 hours after healing, frequency of eye drops depends on the severity of the infection and the potential for irreversible ocular damage; for less severe infection 3–4 times daily is generally sufficient
- ▶ Adult: Apply 1 drop at least every 2 hours, reduce frequency as infection is controlled and continue for 48 hours after healing, frequency of eye drops depends on the severity of the infection and the potential for irreversible ocular damage; for less severe infection 3–4 times daily is generally sufficient

- **UNLICENSED USE** Gentamicin doses in BNF Publications may differ from those in product literature.

- **INTERACTIONS** → Appendix 1: aminoglycosides

- **PRESCRIBING AND DISPENSING INFORMATION** For choice of antibacterial therapy, see Eye infections, antibacterial therapy p. 547.

Eye drops may be sourced as a manufactured special or from specialist importing companies.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: infusion, eye drops

**Eye drops**

EXCIPIENTS: May contain Benzalkonium chloride

**Ear/eye drops solution**

EXCIPIENTS: May contain Benzalkonium chloride

▶ **Gentamicin (Non-proprietary)**

Gentamicin (as Gentamicin sulfate) 3 mg per 1 ml Gentamicin 0.3% ear/eye drops | 10 ml [PoM] £30.29 DT = £26.86

**Tobramycin**

02-Dec-2021

● **INDICATIONS AND DOSE****Local treatment of infections**

## ▶ TO THE EYE

- ▶ Child 1-17 years: Apply twice daily for 6-8 days
- ▶ Adult: Apply twice daily for 6-8 days

**Local treatment of infections (severe infection)**

## ▶ TO THE EYE

- ▶ Child 1-17 years: Apply 4 times a day for first day, then apply twice daily for 5-7 days
- ▶ Adult: Apply 4 times a day for first day, then apply twice daily for 5-7 days

- **INTERACTIONS** → Appendix 1: aminoglycosides

- **MEDICINAL FORMS** No licensed medicines listed.

**ANTIBACTERIALS > CEPHALOSPORINS, SECOND-GENERATION****Cefuroxime**

25-Oct-2021

● **INDICATIONS AND DOSE**APROKAM<sup>®</sup> INTRACAMERAL INJECTION**Prophylaxis of endophthalmitis after cataract surgery**

## ▶ BY INTRACAMERAL INJECTION

- ▶ Adult: 1 mg, dose to be injected into the anterior chamber of the eye at the end of cataract surgery

● **CAUTIONS**APROKAM<sup>®</sup> INTRACAMERAL INJECTION

- ▶ With intracameral use Combined operations with cataract surgery · complicated cataracts · reduced corneal endothelial cells (less than 2000) · severe risk of infection · severe thyroid disease

- **INTERACTIONS** → Appendix 1: cephalosporins

- **PREGNANCY** Not known to be harmful.

- **BREAST FEEDING** Present in milk in low concentration, but appropriate to use.

● **NATIONAL FUNDING/ACCESS DECISIONS**APROKAM<sup>®</sup> INTRACAMERAL INJECTION For full details see funding body website**Scottish Medicines Consortium (SMC) decisions**

- ▶ Cefuroxime (Aprokam<sup>®</sup>) for antibiotic prophylaxis of postoperative endophthalmitis after cataract surgery (December 2016) SMC No. 932/13 Recommended

- ▶ Child: Apply 4 times a day for maximum duration of treatment 21 days
- ▶ Adult: Apply 4 times a day for maximum duration of treatment 21 days

## ▶ TO THE EYE USING EYE OINTMENT

- ▶ Child 1-17 years: Apply 1.25 centimetres 3 times a day for 2 days, then apply 1.25 centimetres twice daily for 5 days
- ▶ Adult: Apply 1.25 centimetres 3 times a day for 2 days, then apply 1.25 centimetres twice daily for 5 days

**Superficial bacterial eye infection (severe infection)**

## ▶ TO THE EYE USING EYE DROP

- ▶ Child: Apply every 2 hours during waking hours for 2 days, then apply 4 times a day for maximum duration of treatment 21 days
- ▶ Adult: Apply every 2 hours during waking hours for 2 days, then apply 4 times a day for maximum duration of treatment 21 days

**Corneal ulcer**

## ▶ TO THE EYE USING EYE DROP

- ▶ Child: Apply every 15 minutes for 6 hours, then apply every 30 minutes for the remainder of day 1, then apply every 1 hour on day 2, then apply every 4 hours on days 3-14, maximum duration of treatment 21 days, to be administered throughout the day and night

- ▶ Adult: Apply every 15 minutes for 6 hours, then apply every 30 minutes for the remainder of day 1, then apply every 1 hour on day 2, then apply every 4 hours on days 3-14, maximum duration of treatment 21 days, to be administered throughout the day and night

## ▶ TO THE EYE USING EYE OINTMENT

- ▶ Child 1-17 years: Apply 1.25 centimetres every 1-2 hours for 2 days, then apply 1.25 centimetres every 4 hours for the next 12 days, to be administered throughout the day and night

- ▶ Adult: Apply 1.25 centimetres every 1-2 hours for 2 days, then apply 1.25 centimetres every 4 hours for the next 12 days, to be administered throughout the day and night

- **UNLICENSED USE** Eye ointment not licensed for use in children under 1 year.
- **INTERACTIONS** → Appendix 1: quinolones
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Corneal deposits (reversible after completion of treatment)
  - ▶ **Rare or very rare** Ear pain · increased risk of infection · paranasal sinus hypersecretion
- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk.
- **BREAST FEEDING** Manufacturer advises caution.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops, eye ointment

**Eye drops**

EXCIPIENTS: May contain Benzalkonium chloride

▶ **Ciloxan** (Novartis Pharmaceuticals UK Ltd)

**Ciprofloxacin (as Ciprofloxacin hydrochloride) 3 mg per 1 ml** Ciloxan 0.3% eye drops | 5 ml [PoM] £4.70 DT = £4.70

**Levofloxacin**

15-Jul-2021

● **INDICATIONS AND DOSE****Local treatment of eye infections**

- ▶ **TO THE EYE**
- ▶ **Child 1-17 years:** Apply every 2 hours for first 2 days, to be applied maximum 8 times a day, then apply 4 times a day for 3 days
- ▶ **Adult:** Apply every 2 hours for first 2 days, to be applied maximum 8 times a day, then apply 4 times a day for 3 days

- **INTERACTIONS** → Appendix 1: quinolones
- **SIDE-EFFECTS**
  - ▶ **Uncommon** Rhinitis
  - ▶ **Rare or very rare** Laryngeal oedema
- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk.
- **BREAST FEEDING** Manufacturer advises use only if potential benefit outweighs risk.
- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose levofloxacin eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**

EXCIPIENTS: May contain Benzalkonium chloride

▶ **Levofloxacin (Non-proprietary)**

**Levofloxacin (as Levofloxacin hemihydrate) 5 mg per 1 ml** Levofloxacin 5mg/ml eye drops | 5 ml [PoM] £8.62 DT = £8.62 | 5 ml [PoM] £8.91 DT = £8.62 (Hospital only)

▶ **EyfloX** (Aspire Pharma Ltd)

**Ofloxacin**

08-Dec-2021

● **INDICATIONS AND DOSE****Local treatment of infections**

- ▶ **TO THE EYE**
- ▶ **Child 1-17 years:** Apply every 2–4 hours for the first 2 days, then reduced to 4 times a day for maximum 10 days treatment
- ▶ **Adult:** Apply every 2–4 hours for the first 2 days, then reduced to 4 times a day for maximum 10 days treatment

- **CAUTIONS** Corneal ulcer (risk of corneal perforation) · epithelial defect (risk of corneal perforation)
- **INTERACTIONS** → Appendix 1: quinolones
- **SIDE-EFFECTS** Face oedema · oropharyngeal swelling · tongue swelling
- **PREGNANCY** Manufacturer advises use only if benefit outweighs risk (systemic quinolones have caused arthropathy in *animal* studies).
- **BREAST FEEDING** Manufacturer advises avoid.
- **PRESCRIBING AND DISPENSING INFORMATION** For choice of antibacterial therapy, see Eye, infections p. 1260.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**

EXCIPIENTS: May contain Benzalkonium chloride

▶ **Exocin** (AbbVie Ltd)

**Oflaxacin 3 mg per 1 ml** Exocin 0.3% eye drops | 5 ml [PoM] £2.17 DT = £2.17

**ANTIBACTERIALS > OTHER****Chloramphenicol**

04-Jan-2022

- **DRUG ACTION** Chloramphenicol is a potent broad-spectrum antibiotic.

● **INDICATIONS AND DOSE****Superficial eye infections**

- ▶ **TO THE EYE USING EYE DROP**
- ▶ **Child:** Apply 1 drop every 2 hours then reduce frequency as infection is controlled and continue for 48 hours after healing, frequency dependent on the

severity of the infection. For less severe infection 3–4 times daily is generally sufficient

- ▶ **Adult:** Apply 1 drop every 2 hours then reduce frequency as infection is controlled and continue for 48 hours after healing, frequency dependent on the severity of the infection. For less severe infection 3–4 times daily is generally sufficient
- ▶ **TO THE EYE USING EYE OINTMENT**
- ▶ **Child:** Apply daily, to be applied at night (if eye drops used during the day), alternatively apply 3–4 times a day, if ointment used alone
- ▶ **Adult:** Apply daily, to be applied at night (if eye drops used during the day), alternatively apply 3–4 times a day, if ointment used alone

#### IMPORTANT SAFETY INFORMATION

**MHRA/CHM ADVICE: CHLORAMPHENICOL EYE DROPS CONTAINING BORAX OR BORIC ACID BUFFERS: USE IN CHILDREN YOUNGER THAN 2 YEARS (JULY 2021)**

Some licences for chloramphenicol eye drops containing borax or boric acid buffers were updated to restrict use in children younger than 2 years of age to reflect warnings on maximum daily limits for boron exposure. The MHRA has reviewed the available evidence and consulted independent expert advice and has concluded that the benefits of chloramphenicol eye drops containing borax or boric acid outweigh the potential risks, as the potential exposure from topical application to both eyes, in children aged 0 to 2 years old, was well below the safety limit. Healthcare professionals should advise parents and carers that these products can be safely used in children younger than 2 years as advised by a doctor or other prescriber.

- **INTERACTIONS** → Appendix 1: chloramphenicol
- **SIDE-EFFECTS** Angioedema · bone marrow disorders · eye stinging · fever · paraesthesia · skin reactions
- **PREGNANCY** Avoid unless essential—no information on topical use but risk of 'neonatal grey-baby syndrome' with oral use in third trimester.
- **BREAST FEEDING** Avoid unless essential—*theoretical* risk of bone-marrow toxicity.
- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose chloramphenicol eye drops commonly contain preservatives, preservative-free unit dose vials may be available.
- **PATIENT AND CARER ADVICE**  
Medicines for Children leaflet: Chloramphenicol for eye infections [www.medicinesforchildren.org.uk/medicines/chloramphenicol-for-eye-infections/](http://www.medicinesforchildren.org.uk/medicines/chloramphenicol-for-eye-infections/)
- **EXCEPTIONS TO LEGAL CATEGORY** Chloramphenicol 0.5% eye drops (in max. pack size 10 mL) and 1% eye ointment (in max. pack size 4 g) can be sold to the public for treatment of acute bacterial conjunctivitis in adults and children over 2 years; max. duration of treatment 5 days.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

EXCIPIENTS: May contain Phenylmercuric acetate

##### ▶ Chloramphenicol (Non-proprietary)

**Chloramphenicol 5 mg per 1 ml** Minims chloramphenicol 0.5% eye drops 0.5ml unit dose | 20 unit dose [PoM] £11.43 DT = £11.43  
Chloramphenicol 0.5% eye drops | 10 ml [PoM] £8.15 DT = £8.15

##### ▶ Eykappo (Aspire Pharma Ltd)

**Chloramphenicol 5 mg per 1 ml** Eykappo 5mg/ml eye drops | 10 ml [PoM] £10.12 DT = £10.12

#### Eye ointment

##### ▶ Chloramphenicol (Non-proprietary)

**Chloramphenicol 10 mg per 1 gram** Chloramphenicol 1% eye ointment | 4 gram [PoM] £2.56 DT = £1.74

## Fusidic acid

05-Oct-2021

- **DRUG ACTION** Fusidic acid and its salts are narrow-spectrum antibiotics used for staphylococcal infections.

#### ● INDICATIONS AND DOSE

##### Staphylococcal eye infections

- ▶ TO THE EYE
- ▶ **Child:** Apply twice daily
- ▶ **Adult:** Apply twice daily

- **INTERACTIONS** → Appendix 1: fusidate

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Dry eye · eye discomfort · vision blurred
- ▶ **Uncommon** Crying on application · skin reactions · watering eye
- ▶ **Frequency not known** Angioedema · eye inflammation

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Modified-release drops

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

##### ▶ Fusidic acid (Non-proprietary)

**Fusidic acid 10 mg per 1 gram** Fusidic acid 1% modified-release eye drops | 5 gram [PoM] £35.00 DT = £32.29

## ANTIPROTOZOALS

## Propamidine isetionate

#### ● INDICATIONS AND DOSE

##### *Acanthamoeba keratitis* infections (specialist use only) |

##### Local treatment of eye infections

- ▶ TO THE EYE USING EYE OINTMENT
- ▶ **Adult:** Apply 1–2 times a day
- ▶ TO THE EYE USING EYE DROP
- ▶ **Adult:** Apply up to 4 times a day

- **UNLICENSED USE** Not licensed for *acanthamoeba keratitis* infections.

- **SIDE-EFFECTS** Eye discomfort · vision blurred

- **PREGNANCY** Manufacturer advises avoid unless essential—no information available.

- **BREAST FEEDING** Manufacturer advises avoid unless essential—no information available.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Eye ointment

▶ **Golden Eye (dibrompropamidine)** (Cambridge Healthcare Supplies Ltd)

**Dibrompropamidine isetionate 1.5 mg per 1 gram** Golden Eye 0.15% ointment | 5 gram [E] £4.15 DT = £4.15

#### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride

##### ▶ Brolene (Propamidine) (Thornton & Ross Ltd)

**Propamidine isetionate 1 mg per 1 ml** Brolene 0.1% eye drops | 10 ml [E] £2.80 DT = £2.80

##### ▶ Golden Eye (propamidine) (Cambridge Healthcare Supplies Ltd)

**Propamidine isetionate 1 mg per 1 ml** Golden Eye 0.1% drops | 10 ml [E] £3.95 DT = £2.80

## 3.2 Viral eye infection

### 3.2a Ophthalmic herpes simplex

#### ANTIVIRALS > NUCLEOSIDE ANALOGUES

##### Aciclovir

27-Apr-2022

###### (Acyclovir)

###### ● INDICATIONS AND DOSE

###### Herpes simplex infection (local treatment)

###### ▶ TO THE EYE USING EYE OINTMENT

- ▶ Adult: Apply 1 centimetre 5 times a day continue for at least 3 days after complete healing

###### ● INTERACTIONS → Appendix 1: aciclovir

###### ● SIDE-EFFECTS

- ▶ **Common or very common** Eye inflammation · eye pain

###### ● MEDICINAL FORMS There can be variation in the licensing of different medicines containing the same drug.

###### Eye ointment

###### ▶ Aciclovir (Non-proprietary)

- ▶ **Aciclovir 30 mg per 1 gram** Aciclovir 3% eye ointment | 4.5 gram **[PoM]** £45.00 DT = £45.00

##### Ganciclovir

15-Dec-2020

###### ● INDICATIONS AND DOSE

###### Acute herpetic keratitis

###### ▶ TO THE EYE

- ▶ Adult: Apply 5 times a day until healing complete, then apply 3 times a day for a further 7 days, treatment does not usually exceed 21 days

###### ● INTERACTIONS → Appendix 1: ganciclovir

###### ● SIDE-EFFECTS

- ▶ **Common or very common** Eye stinging · punctate keratitis

###### ● ALLERGY AND CROSS-SENSITIVITY **[EvGr]** Contra-indicated in patients hypersensitive to valganciclovir.

Caution in patients hypersensitive to aciclovir, valaciclovir, or famciclovir. **[M]**

###### ● CONCEPTION AND CONTRACEPTION As teratogenicity and impaired fertility observed in animal studies with *oral* and *intravenous* ganciclovir, manufacturer advises women of childbearing potential should use effective contraception during treatment; men with partners of childbearing potential should be advised to use barrier contraception during and for at least 90 days after treatment.

###### ● PREGNANCY Manufacturer advises avoid unless no suitable alternative—limited information available.

###### ● BREAST FEEDING Manufacturer advises avoid unless no suitable alternative—limited information available.

###### ● MEDICINAL FORMS There can be variation in the licensing of different medicines containing the same drug.

###### Eye gel

EXCIPIENTS: May contain Benzalkonium chloride

###### ▶ Virgan (Thea Pharmaceuticals Ltd)

- ▶ **Ganciclovir 1.5 mg per 1 gram** Virgan 0.15% eye gel | 5 gram **[PoM]** £19.99 DT = £19.99

## 4 Eye procedures

### Mydriatics and cycloplegics

25-Apr-2020

#### Overview

Antimuscarinics dilate the pupil and paralyse the ciliary muscle; they vary in potency and duration of action.

Short-acting, relatively weak mydriatics, such as tropicamide below (action lasts for up to 6 hours), facilitate the examination of the fundus of the eye. Longer-acting options include cyclopentolate hydrochloride p. 1255 (complete recovery can take up to 24 hours) or atropine sulfate p. 1255 (action up to 7 days).

Phenylephrine hydrochloride p. 1265 is a sympathomimetic licensed for mydriasis in diagnostic or therapeutic procedures. Mydriasis occurs within 60–90 minutes and lasts up to 5–7 hours.

**[EvGr]** Mydriatics and cycloplegics are used in the treatment of anterior uveitis, usually as an adjunct to corticosteroids. Atropine sulfate or cyclopentolate hydrochloride can prevent posterior synechiae and relieve ciliary spasm when used for anterior uveitis. **[A]**

**Other drugs used for Eye procedures** Apraclonidine, p. 1277 · Atropine sulfate, p. 1255 · Cyclopentolate hydrochloride, p. 1255

#### ANTIMUSCARINICS

**[1255]**

### Tropicamide

###### ● INDICATIONS AND DOSE

###### Funduscopy

###### ▶ TO THE EYE

- ▶ Child: 0.5% eye drops to be applied 20 minutes before examination
- ▶ Adult: (consult product literature)

###### ● INTERACTIONS → Appendix 1: tropicamide

###### ● SIDE-EFFECTS Eye erythema · eye irritation (on prolonged administration) · eye pain · headache · hypotension · nausea · syncope · vision blurred

###### ● PRESCRIBING AND DISPENSING INFORMATION Although multi-dose tropicamide eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

###### ● MEDICINAL FORMS There can be variation in the licensing of different medicines containing the same drug.

###### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride, edetic acid (edta)

###### ▶ Mydriacyl (Alcon Eye Care UK Ltd)

- ▶ **Tropicamide 10 mg per 1 ml** Mydriacyl 1% eye drops | 5 ml **[PoM]** £1.60 DT = £1.60

###### ▶ Tropicamide (Bausch & Lomb UK Ltd)

- ▶ **Tropicamide 5 mg per 1 ml** Minims tropicamide 0.5% eye drops 0.5ml unit dose | 20 unit dose **[PoM]** £11.18 DT = £11.18

- ▶ **Tropicamide 10 mg per 1 ml** Minims tropicamide 1% eye drops 0.5ml unit dose | 20 unit dose **[PoM]** £11.31 DT = £11.31

**Combinations available:** *Phenylephrine with tropicamide*, p. 1266 · *Tropicamide with phenylephrine and lidocaine*, p. 1266

## ANTISEPTICS AND DISINFECTANTS > IODINE PRODUCTS

### Povidone-iodine

08-Feb-2022

#### ● INDICATIONS AND DOSE

##### Cutaneous peri-ocular and conjunctival antiseptics before ocular surgery

###### ▶ TO THE EYE

- Adult: Apply, leave for 2 minutes, then irrigate thoroughly with sodium chloride 0.9%

- **CONTRA-INDICATIONS** Concomitant use of ocular antimicrobial drugs · concomitant use of ocular formulations containing mercury-based preservatives · preterm neonates

#### ● SIDE-EFFECTS

- ▶ Rare or very rare Eye erythema · punctate keratitis
- ▶ Frequency not known Cytotoxicity · eye discolouration

- **BREAST FEEDING** Avoid regular or excessive use.

- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose povidone iodine eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops, eye lotion, liquid

#### Eye drops

- ▶ **Povidone iodine** (Bausch & Lomb UK Ltd)

**Povidone-iodine 50 mg per 1 ml** Minims povidone iodine 5% eye drops 0.4ml unit dose | 20 unit dose [PoM](#) £16.00 DT = £16.00

## DIAGNOSTIC AGENTS > DYES

### Fluorescein sodium

#### ● INDICATIONS AND DOSE

##### Detection of lesions and foreign bodies

###### ▶ TO THE EYE

- Adult: Use sufficient amount to stain damaged areas

- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose fluorescein eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

- ▶ **Fluorescein sodium** (Bausch & Lomb UK Ltd)

**Fluorescein sodium 10 mg per 1 ml** Minims fluorescein sodium 1% eye drops 0.5ml unit dose | 20 unit dose [P](#) £9.25 DT = £9.25

**Fluorescein sodium 20 mg per 1 ml** Minims fluorescein sodium 2% eye drops 0.5ml unit dose | 20 unit dose [P](#) £9.25 DT = £9.25

## MIOTICS > PARASYMPATHOMIMETICS

### Acetylcholine chloride

22-Feb-2021

#### ● INDICATIONS AND DOSE

##### Cataract surgery | Penetrating keratoplasty | Iridectomy | Anterior segment surgery requiring rapid complete miosis

###### ▶ TO THE EYE

- Adult: (consult product literature)

- **SIDE-EFFECTS** Bradycardia · corneal decompensation · corneal oedema · dyspnoea · flushing · hyperhidrosis · hypertension

- **PREGNANCY** Avoid unless potential benefit outweighs risk—no information available.
- **BREAST FEEDING** Avoid unless potential benefit outweighs risk—no information available.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Irrigation

- ▶ **Miochol-E** (Bausch & Lomb UK Ltd)

**Acetylcholine chloride 20 mg** Miochol-E 20mg powder and solvent for solution for intraocular irrigation vials | 1 Vial [PoM](#) £7.28

- ▶ **Miphtel** (Farmigee S.p.A.)

**Acetylcholine chloride 20 mg** Miphtel 20mg powder and solvent for solution for intraocular irrigation ampoules | 6 ampoule [PoM](#) £43.68 (Hospital only)

## SYMPATHOMIMETICS > VASOCONSTRICTOR

### Phenylephrine hydrochloride

#### ● INDICATIONS AND DOSE

##### Mydriasis

###### ▶ TO THE EYE

- ▶ Child: Apply 1 drop, to be administered before procedure, a drop of proxymetacaine topical anaesthetic may be applied to the eye a few minutes before using phenylephrine to prevent stinging
- ▶ Adult: Apply 1 drop, to be administered before procedure, then apply 1 drop after 60 minutes if required, a drop of topical anaesthetic may be applied to the eye a few minutes before using phenylephrine to prevent stinging

- **CONTRA-INDICATIONS** 10% strength eye drops in children · 10% strength eye drops in elderly · aneurysms · cardiovascular disease · hypertension · thyrotoxicosis
- **CAUTIONS** Asthma · cerebral arteriosclerosis (in adults) · corneal epithelial damage · darkly pigmented iris is more resistant to pupillary dilatation and caution should be exercised to avoid overdose · diabetes (avoid eye drops in long standing diabetes) · mydriasis can precipitate acute angle-closure glaucoma in a few patients, usually over 60 years and hypermetropic (long-sighted), who are predisposed to the condition because of a shallow anterior chamber (in adults) · mydriasis can precipitate acute angle-closure glaucoma in the very few children who are predisposed to the condition because of a shallow anterior chamber · ocular hyperaemia · susceptibility to angle-closure glaucoma
- **INTERACTIONS** → Appendix 1: sympathomimetics, vasoconstrictor
- **SIDE-EFFECTS** Arrhythmias · conjunctivitis allergic · eye discomfort · hypertension · myocardial infarction (usually after use of 10% strength in patients with pre-existing cardiovascular disease) · palpitations · periorbital pallor (in children) · vision disorders
- **PREGNANCY** Use only if potential benefit outweighs risk.
- **BREAST FEEDING** Use only if potential benefit outweighs risk—no information available.
- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose phenylephrine eye drops commonly contain preservatives, preservative-free unit dose vials may be available.
- **PATIENT AND CARER ADVICE**  
**Driving and skilled tasks** Patients should be warned not to undertake skilled tasks (e.g. driving) until vision clears after mydriasis.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

#### Eye drops

EXCIPIENTS: May contain Disodium edetate, sodium metabisulfite

- ▶ **Phenylephrine hydrochloride** (Bausch & Lomb UK Ltd)

**Phenylephrine hydrochloride 25 mg per 1 ml** Minims phenylephrine hydrochloride 2.5% eye drops 0.5ml unit dose | 20 unit dose [P] £11.87 DT = £11.87

**Phenylephrine hydrochloride 100 mg per 1 ml** Minims phenylephrine hydrochloride 10% eye drops 0.5ml unit dose | 20 unit dose [P] £11.87 DT = £11.87

## Phenylephrine with tropicamide

12-Aug-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, phenylephrine hydrochloride p. 1265, tropicamide p. 1264.

#### ● INDICATIONS AND DOSE

##### Pre-operative mydriasis | Diagnostic procedures when monotherapy insufficient

- ▶ TO THE EYE

▶ **Adult:** One insert to be applied into the lower conjunctival sac up to max. 2 hours before procedure; remove insert within 30 minutes of satisfactory mydriasis, and within 2 hours of application

- **INTERACTIONS** → Appendix 1: sympathomimetics, vasoconstrictor · tropicamide
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises patients with severe dry eyes may require a drop of saline to improve insert tolerance.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Ophthalmic insert

- ▶ **Mydrasert** (Thea Pharmaceuticals Ltd)

**Tropicamide.28 mg, Phenylephrine hydrochloride 5.4 mg** Mydrasert 5.4mg/0.28mg ophthalmic inserts | 20 insert [PoM] £84.00

## Tropicamide with phenylephrine and lidocaine

17-Aug-2017

#### ● INDICATIONS AND DOSE

##### Mydriasis and intraocular anaesthesia during cataract surgery

- ▶ BY INTRACAMERAL INJECTION

▶ **Adult:** 0.2 mL for 1 dose, to be injected slowly at the start of the surgical procedure

#### DOSE EQUIVALENCE AND CONVERSION

▶ Each 0.2 mL dose of **Mydrane**® solution for injection contains 0.04 mg of tropicamide, 0.62 mg of phenylephrine hydrochloride and 2 mg of lidocaine hydrochloride.

- **CONTRA-INDICATIONS** Cataract surgery combined with vitrectomy · history of acute, narrow-angle glaucoma · shallow anterior chamber
- **CAUTIONS** Conditions where systemic exposure to phenylephrine or lidocaine could be harmful (consult product literature) · risk of floppy iris syndrome (consult product literature)
- **INTERACTIONS** → Appendix 1: antiarrhythmics · sympathomimetics, vasoconstrictor · tropicamide
- **SIDE-EFFECTS**
  - ▶ **Uncommon** Headache · hyperaemia · hypertension · keratitis

- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with known hypersensitivity to amide-type anaesthetics or atropine derivatives.
- **PREGNANCY** Manufacturer advises avoid (systemic uptake after administration cannot be excluded)—insufficient data available for phenylephrine and tropicamide in pregnancy; lidocaine crosses the placenta but is not known to be harmful in *animal* studies.
- **BREAST FEEDING** Manufacturer advises avoid—no data available for phenylephrine or tropicamide; lidocaine present in milk in small amount.
- **PRE-TREATMENT SCREENING** Manufacturer advises patients must have demonstrated, at a previous visit, a satisfactory pupil dilation with topical mydriatic treatment.
- **PATIENT AND CARER ADVICE**
  - ▶ **Driving and skilled tasks** Manufacturer advises patients should be counselled about the effects on driving and skilled tasks.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

EXCIPIENTS: May contain Disodium edetate

- ▶ **Mydrane** (Thea Pharmaceuticals Ltd)

**Tropicamide 200 microgram per 1 ml, Phenylephrine hydrochloride 3.1 mg per 1 ml, Lidocaine hydrochloride 10 mg per 1 ml** Mydrane 0.2mg/ml / 3.1mg/ml / 10mg/ml solution for injection 0.6ml ampoules | 20 ampoule [PoM] £119.95 (Hospital only)

## 4.1 Post-operative pain and inflammation

### ANAESTHETICS, LOCAL

## Fluorescein with lidocaine

#### ● INDICATIONS AND DOSE

##### Local anaesthesia

- ▶ TO THE EYE

▶ **Adult:** Apply as required

- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose lidocaine and fluorescein eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

- ▶ **Lidocaine and Fluorescein** (Bausch & Lomb UK Ltd)

**Fluorescein sodium 2.5 mg per 1 ml, Lidocaine hydrochloride 40 mg per 1 ml** Minims lidocaine and fluorescein eye drops 0.5ml unit dose | 20 unit dose [PoM] £11.69 DT = £11.69

## Oxybuprocaine hydrochloride (Benoxinate hydrochloride)

#### ● INDICATIONS AND DOSE

##### Local anaesthetic

- ▶ TO THE EYE

▶ **Adult:** Apply as required

- **INTERACTIONS** → Appendix 1: anaesthetics, local
- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose oxybuprocaine eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

- ▶ **Oxybuprocaine hydrochloride** (Bausch & Lomb UK Ltd)  
**Oxybuprocaine hydrochloride 4 mg per 1 ml** Minim  
oxybuprocaine hydrochloride 0.4% eye drops 0.5ml unit dose | 20 unit  
dose [PoM] £10.56 DT = £10.56

## Proxymetacaine hydrochloride

### ● INDICATIONS AND DOSE

#### Local anaesthetic

£10.57 DT = £10.57

## ANALGESICS > NON-STEROIDAL ANTI-INFLAMMATORY DRUGS

## Bromfenac

14-Jul-2020

### ● INDICATIONS AND DOSE

#### Postoperative inflammation following cataract surgery

- ▶ TO THE EYE
- ▶ Adult: (consult product literature)

- **INTERACTIONS** → Appendix 1: NSAIDs

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

- EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate, sulfites
- ▶ **Yellox** (Bausch & Lomb UK Ltd)  
**Bromfenac (as Bromfenac sodium sesquihydrate)**  
**900 microgram per 1 ml** Yellox 900micrograms/ml eye drops |  
5 ml [PoM] £8.50 DT = £8.50

## Diclofenac sodium

21-Apr-2022

### ● INDICATIONS AND DOSE

**Inhibition of intra-operative miosis during cataract surgery (but does not possess intrinsic mydriatic properties) | Postoperative inflammation in cataract surgery, strabismus surgery or argon laser trabeculoplasty | Pain in corneal epithelial defects after photorefractive keratotomy, radial keratotomy or accidental trauma | Seasonal allergic conjunctivitis**

- ▶ TO THE EYE
- ▶ Adult: (consult product literature)

- **INTERACTIONS** → Appendix 1: NSAIDs
- **SIDE-EFFECTS**
- ▶ **Common or very common** Oedema · skin reactions
- ▶ **Rare or very rare** Asthma exacerbated · eye disorders · eye inflammation · hypersensitivity
- ▶ **Frequency not known** Dyspnoea · eye discomfort · rhinitis · vision blurred
- **ALLERGY AND CROSS-SENSITIVITY** [EvGr] Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. ⚠
- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose diclofenac sodium eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

- EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate, propylene glycol
- ▶ **Voltoral Ophtha** (Thea Pharmaceuticals Ltd)  
**Diclofenac sodium 1 mg per 1 ml** Voltoral Ophtha 0.1% eye drops 0.3ml unit dose | 5 unit dose [PoM] £4.00 DT = £4.00 | 40 unit dose [PoM] £32.00 DT = £32.00
- ▶ **Voltoral Ophtha Multidose** (Thea Pharmaceuticals Ltd)  
**Diclofenac sodium 1 mg per 1 ml** Voltoral Ophtha Multidose 0.1% eye drops | 5 ml [PoM] £6.68 DT = £6.68

## Flurbiprofen

30-Nov-2021

### ● INDICATIONS AND DOSE

**Inhibition of intra-operative miosis (but does not possess intrinsic mydriatic properties) | Control of anterior segment inflammation following postoperative and post-laser trabeculoplasty when corticosteroids contra-indicated**

- ▶ TO THE EYE
- ▶ Adult: (consult product literature)

- **INTERACTIONS** → Appendix 1: NSAIDs
- **SIDE-EFFECTS**
- ▶ **Common or very common** Eye discomfort · haemorrhage
- ▶ **Frequency not known** Eye disorders
- **ALLERGY AND CROSS-SENSITIVITY** [EvGr] Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks

of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. 

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

##### ► Ocufen (AbbVie Ltd)

Flurbiprofen sodium 300 microgram per 1 ml Ocufen 0.03% eye drops 0.4ml unit dose | 40 unit dose  £37.15 DT = £37.15

## Ketorolac trometamol

24-Nov-2021

### ● INDICATIONS AND DOSE

#### Prophylaxis and reduction of inflammation and associated symptoms following ocular surgery

- TO THE EYE
- Adult: (consult product literature)

- **CAUTIONS** May mask symptoms of infection
- **INTERACTIONS** → Appendix 1: NSAIDs
- **SIDE-EFFECTS**
  - **Common or very common** Eye discomfort · eye disorders · eye infection · eye inflammation · headache · hypersensitivity · keratic deposits · paraesthesia · retinal haemorrhage · vision disorders
  - **Uncommon** Dry eye
  - **Frequency not known** Asthma exacerbated · bronchospasm
- **ALLERGY AND CROSS-SENSITIVITY**  Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. 

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

##### ► Ketorolac trometamol (Non-proprietary)

Ketorolac trometamol 5 mg per 1 ml Ketorolac 0.5% eye drops | 5 ml  £3.99 DT = £3.99

##### ► Acular (AbbVie Ltd)

Ketorolac trometamol 5 mg per 1 ml Acular 0.5% eye drops | 5 ml  £3.00 DT = £3.99

## CORTICOSTEROIDS

### Loteprednol etabonate

09-Mar-2022

### ● INDICATIONS AND DOSE

#### Treatment of post-operative inflammation following ocular surgery

- TO THE EYE
- Adult: Apply 4 times a day for maximum duration of treatment of 14 days, to be started 24 hours after surgery

#### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: CORTICOSTEROIDS: RARE RISK OF CENTRAL SEROUS CHORIORETINOPATHY WITH LOCAL AS WELL AS SYSTEMIC ADMINISTRATION (AUGUST 2017)

See Corticosteroids, general use p. 737.

NHS IMPROVEMENT PATIENT SAFETY ALERT: STEROID EMERGENCY CARD TO SUPPORT EARLY RECOGNITION AND TREATMENT OF ADRENAL CRISIS IN ADULTS (AUGUST 2020)

See Adrenal insufficiency p. 738.

- **SIDE-EFFECTS**
  - **Common or very common** Dry eye · eye discomfort · eye disorders · headaches
  - **Uncommon** Conjunctival oedema · vision disorders
  - **Rare or very rare** Breast neoplasm · face oedema · muscle twitching · taste altered

- **PATIENT AND CARER ADVICE** If systemic absorption occurs following topical and local use, side-effects applicable to systemic corticosteroids may apply; a patient information leaflet should be supplied and the need for a Steroid Treatment Card and a Steroid Emergency Card considered, see Corticosteroids, general use p. 737.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

##### ► Lotemax (Bausch & Lomb UK Ltd)

Loteprednol etabonate 5 mg per 1 ml Lotemax 0.5% eye drops | 5 ml  £5.50 DT = £5.50

## 5 Glaucoma and ocular hypertension

### Glaucoma and ocular hypertension

18-Feb-2022

#### Description of condition

Glaucoma is a group of eye disorders characterised by a loss of visual field associated with pathological cupping of the optic disc and optic nerve damage. While glaucoma is generally linked to raised intra-ocular pressure (IOP), which is the main treatable risk factor, it can also occur when the IOP is within the normal range. Other risk factors include age, family history, ethnicity, corticosteroid use, myopia, type 2 diabetes mellitus, cardiovascular disease, and hypertension.

The most common form of glaucoma is chronic open-angle glaucoma (also known as primary open-angle glaucoma) where drainage of the aqueous humour through the trabecular meshwork is restricted, and the angle between the iris and the cornea is normal. Initially, this condition tends to be asymptomatic, however, as glaucoma progresses, patients may present with irreversible sight loss or visual field defects. Patients with ocular hypertension (an IOP greater than 21 mmHg) are at high risk of developing chronic open-angle glaucoma. The diagnosis, monitoring, and management of patients with ocular hypertension, suspected chronic open-angle glaucoma, or chronic open-angle glaucoma should be carried out by a specialist; patients with suspected optic nerve damage or repeatable visual field defect, or both, should be referred to a consultant ophthalmologist.

Acute angle-closure glaucoma is less common and occurs when the outflow of aqueous humour from the eye is totally obstructed by bowing of the iris against the trabecular meshwork. It is characterised by its abrupt onset of symptoms, and is a sight-threatening medical emergency that requires urgent reduction of IOP to prevent loss of vision.

#### Aims of treatment

Treatment aims to control intra-ocular pressure to prevent the development or progression of glaucoma, and subsequent visual field damage or sight loss.

#### Ocular hypertension

 Patients with ocular hypertension who are not at risk of visual impairment in their lifetime do not require treatment, but they should be monitored regularly.

Patients newly diagnosed with ocular hypertension with an intra-ocular pressure (IOP) of 24 mmHg or more and who are at risk of visual impairment within their lifetime (excluding cases associated with pigment dispersion syndrome), should be offered 360° selective laser

trabeculoplasty (SLT) as first-line treatment. Patients suitable for 360° SLT should be referred to and discussed with a consultant ophthalmologist regarding the decision to offer it, and how it will be performed. A second 360° SLT procedure can be considered if the effect of an initial successful SLT has subsequently reduced over time. Patients in whom 360° SLT does not reduce intra-ocular pressure to a satisfactory level, should be referred to a consultant ophthalmologist to discuss other treatment options.

A topical prostaglandin analogue, such as latanoprost p. 1274, tafluprost p. 1274, travoprost p. 1275, or bimatoprost p. 1276 (a synthetic prostamide), is recommended as first-line pharmacological treatment in patients who require treatment but choose not to have 360° SLT or it is unsuitable, or if they are waiting for 360° SLT and need interim treatment, or have previously had 360° SLT but need additional treatment to reduce their IOP sufficiently to prevent the risk of visual impairment.

If initial treatment with a topical prostaglandin analogue is not tolerated, an alternative prostaglandin analogue should be tried before switching to a topical beta-blocker such as betaxolol below, levobunolol hydrochloride p. 1270, or timolol maleate p. 1270. If treatment is still not tolerated, alternative options include carbonic anhydrase inhibitors such as brinzolamide p. 1271 or dorzolamide p. 1272, a topical sympathomimetic such as apraclonidine p. 1277 [unlicensed use] or brimonidine tartrate p. 1277, or a topical miotic such as pilocarpine p. 1273 [unlicensed use], given either as monotherapy or as combination therapy.

Alternative options as either monotherapy or combination therapy with drugs from different therapeutic classes (topical beta-blockers, carbonic anhydrase inhibitors, or topical sympathomimetics), should also be offered to patients with an IOP of 24 mmHg or more whose current treatment is not reducing IOP sufficiently to prevent the risk of progression to sight loss. The patient's adherence and drop instillation technique should also be checked. If drug treatment still does not reduce their IOP to a satisfactory level, patients should be referred to a consultant ophthalmologist to discuss other treatment options.

Preservative free eye drops should be used in patients who are allergic to preservatives, or in those who have clinically significant ocular surface disease and are at high risk of conversion to chronic open-angle glaucoma. 

*Note: based on cost-effective analysis, NICE guideline 81 recommends generic prostaglandin analogues as first-line pharmacological treatment, and non-generic prostaglandin analogues as third-line pharmacological treatment if topical beta-blocker treatment is ineffective.*

### Suspected chronic open-angle glaucoma

 Patients with suspected chronic open-angle glaucoma and an intra-ocular pressure (IOP) below 24 mmHg do not require drug treatment unless they are at risk of visual impairment within their lifetime, but they should be regularly monitored for changes in IOP and visual impairment. 

### Chronic open-angle glaucoma

 Patients with newly diagnosed chronic open-angle glaucoma (excluding cases associated with pigment dispersion syndrome), should be offered 360° selective laser trabeculoplasty (SLT) as first-line treatment. Patients suitable for 360° SLT should be referred to and discussed with a consultant ophthalmologist regarding the decision to offer it, and how it will be performed. A second 360° SLT procedure can be considered if the effect of an initial successful SLT has subsequently reduced over time.

Topical prostaglandin analogues such as latanoprost p. 1274, tafluprost p. 1274, travoprost p. 1275, or bimatoprost p. 1276 (a synthetic prostamide), are recommended as first-line pharmacological treatment

options for patients who choose not to have 360° SLT or it is unsuitable, or if they are waiting for 360° SLT and need interim treatment, or have previously had 360° SLT but need additional treatment to reduce their intra-ocular pressure (IOP) sufficiently to prevent the risk of visual impairment.

If a topical prostaglandin analogue does not sufficiently reduce IOP and the patient's adherence to treatment and eye drop instillation technique are both satisfactory, treatment with either a topical beta-blocker such as betaxolol below, levobunolol hydrochloride p. 1270, or timolol maleate p. 1270, a carbonic anhydrase inhibitor such as brinzolamide p. 1271 or dorzolamide p. 1272, a topical sympathomimetic such as apraclonidine p. 1277 or brimonidine tartrate p. 1277, or a combination of these, should be offered. When a particular drug is not tolerated, another drug from a different therapeutic class can be tried. Preservative free eye drops should be used in patients who are allergic to preservatives, or those who have clinically significant ocular surface disease. Alternative treatment options are 360° SLT or glaucoma surgery with pharmacological augmentation (with mitomycin p. 994 [unlicensed use]).

Patients with *advanced chronic open-angle glaucoma* should be offered glaucoma surgery with pharmacological augmentation (with mitomycin p. 994 [unlicensed use]). Treatment with a topical prostaglandin analogue should be initiated and continued until surgery takes place.

If glaucoma surgery fails to adequately reduce the IOP in patients with chronic open-angle glaucoma, alternative options include pharmacological treatment (a combination of topical drugs from different therapeutic classes may be needed), further surgery, 360° SLT, or cyclodiode laser treatment.

Pharmacological treatment, 360° SLT, or cyclodiode laser treatment may also be offered to patients with chronic open-angle glaucoma (including advanced chronic open-angle glaucoma) who prefer not to have glaucoma surgery, or for whom surgery is unsuitable.

## BETA-ADRENOCEPTOR BLOCKERS

### Betaxolol

03-Apr-2020

#### ● INDICATIONS AND DOSE

##### ● Chronic open-angle glaucoma | Ocular hypertension

- ▶ TO THE EYE
- ▶ Adult: Apply twice daily

- **CONTRA-INDICATIONS** Also consider contra-indications listed for systemically administered beta blockers · bradycardia · heart block
- **CAUTIONS** Patients with corneal disease  
**CAUTIONS, FURTHER INFORMATION** Systemic absorption can follow topical application to the eyes; consider cautions listed for systemically administered beta blockers.
- **INTERACTIONS** → Appendix 1: beta blockers, selective
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Eye discomfort · eye disorders · vision disorders
  - ▶ **Uncommon** Dry eye · eye inflammation · rhinitis
  - ▶ **Rare or very rare** Cataract · rhinorrhoea · skin reactions
  - ▶ **Frequency not known** Angioedema · hypersensitivity
- SIDE-EFFECTS, FURTHER INFORMATION** Systemic absorption can follow topical application to the eyes; consider side effects listed for systemically administered beta blockers.

- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose bexotaxolol eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

## CARBONIC ANHYDRASE INHIBITORS

## Acetazolamide

05-Feb-2021

## ● INDICATIONS AND DOSE

**Reduction of intra-ocular pressure in open-angle glaucoma | Reduction of intra-ocular pressure in secondary glaucoma | Reduction of intra-ocular pressure perioperatively in angle-closure glaucoma**

- ▶ BY MOUTH USING IMMEDIATE-RELEASE MEDICINES, OR BY INTRAVENOUS INJECTION, OR BY INTRAMUSCULAR INJECTION
- ▶ Adult: 0.25–1 g daily in divided doses, intramuscular injection preferably avoided because of alkalinity

**Glaucoma**

- ▶ BY MOUTH USING MODIFIED-RELEASE MEDICINES
- ▶ Adult: 250–500 mg daily

**Epilepsy**

- ▶ BY MOUTH USING IMMEDIATE-RELEASE MEDICINES, OR BY INTRAVENOUS INJECTION, OR BY INTRAMUSCULAR INJECTION
- ▶ Adult: 0.25–1 g daily in divided doses, intramuscular injection preferably avoided because of alkalinity

## IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: ANTIPILEPTICS: RISK OF SUICIDAL THOUGHTS AND BEHAVIOUR (AUGUST 2008)

See Epilepsy p. 330.

MHRA/CHM ADVICE: ANTIPILEPTIC DRUGS: UPDATED ADVICE ON SWITCHING BETWEEN DIFFERENT MANUFACTURERS' PRODUCTS (NOVEMBER 2017)

See Epilepsy p. 330.

MHRA/CHM ADVICE: ANTIPILEPTIC DRUGS IN PREGNANCY: UPDATED ADVICE FOLLOWING COMPREHENSIVE SAFETY REVIEW (JANUARY 2021)

See Epilepsy p. 330.

- **CONTRA-INDICATIONS** Adrenocortical insufficiency · hyperchloraemic acidosis · hypokalaemia · hyponatraemia · long-term administration in chronic angle-closure glaucoma
- **CAUTIONS** Avoid extravasation at injection site (risk of necrosis) · diabetes mellitus · elderly · impaired alveolar ventilation (risk of acidosis) · long-term use · pulmonary obstruction (risk of acidosis) · renal calculi

- **INTERACTIONS** → Appendix 1: acetazolamide

● **SIDE-EFFECTS**

## GENERAL SIDE-EFFECTS

- ▶ **Common or very common** Haemorrhage · metabolic acidosis · nephrolithiasis · sensation abnormal
- ▶ **Uncommon** Bone marrow disorders · depression · dizziness · electrolyte imbalance · hearing impairment · hepatic disorders · leucopenia · nausea · renal colic · renal impairment · renal lesions · severe cutaneous adverse reactions (SCARs) · skin reactions · thrombocytopenia · tinnitus · urinary tract discomfort · urine abnormalities · vomiting
- ▶ **Rare or very rare** Anaphylactic reaction · appetite disorder · confusion · diarrhoea · fatigue · fever · flushing · headache · irritability · libido decreased · paralysis · photosensitivity reaction · seizure
- ▶ **Frequency not known** Agranulocytosis · drowsiness · myopia · polyuria · suicidal behaviours · taste altered · thirst

## SPECIFIC SIDE-EFFECTS

- ▶ **Uncommon**
- ▶ With oral use Osteomalacia
- ▶ **Rare or very rare**
- ▶ With oral use Ataxia · hyperglycaemia · hypoglycaemia · renal tubular necrosis
- ▶ **Frequency not known**
- ▶ With oral use Agitation

**SIDE-EFFECTS, FURTHER INFORMATION** Acetazolamide is a sulfonamide derivative; blood disorders, rashes, and other sulfonamide-related side-effects occur occasionally — patients should be told to report any unusual skin rash.

If electrolyte disturbances and metabolic acidosis occur, these can be corrected by administering bicarbonate.

- **ALLERGY AND CROSS-SENSITIVITY**  Contra-indicated if history of sulfonamide hypersensitivity. 
- **PREGNANCY** Manufacturer advises avoid, especially in first trimester (toxicity in *animal studies*). See also *Pregnancy* in *Epilepsy* p. 330.
- **BREAST FEEDING** Amount too small to be harmful.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid.
- **RENAL IMPAIRMENT** Avoid—risk of metabolic acidosis.
- **MONITORING REQUIREMENTS** Monitor blood count and plasma electrolyte concentrations with prolonged use.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

**Tablet**

CAUTIONARY AND ADVISORY LABELS 3

## Brinzolamide

23-Jul-2021

## ● INDICATIONS AND DOSE

**Reduction of intra-ocular pressure in ocular hypertension and open-angle glaucoma either as adjunct to beta-blockers or prostaglandin analogues or used alone in patients unresponsive to beta-blockers or if beta-blockers contra-indicated**

- ▶ TO THE EYE
- ▶ Adult: Apply twice daily, then increased if necessary up to 3 times a day

- **CONTRA-INDICATIONS** Hyperchloraemic acidosis
- **CAUTIONS** Renal tubular immaturity or abnormality—risk of metabolic acidosis · systemic absorption follows topical application
- **INTERACTIONS** → Appendix 1: brinzolamide
- **SIDE-EFFECTS**
- ▶ **Common or very common** Eye discomfort · eye disorders · taste altered · vision disorders
- ▶ **Uncommon** Arrhythmias · asthenia · cardio-respiratory distress · chest discomfort · cough · depression · diarrhoea · dizziness · dry eye · dry mouth · dyspnoea · epistaxis · eye deposit · eye inflammation · feeling abnormal · foreign body in eye · gastrointestinal discomfort · gastrointestinal disorders · headache · increased risk of infection · memory loss · motor dysfunction · muscle complaints · nasal complaints · nausea · nervousness · oral disorders · oropharyngeal pain · pain · palpitations · renal pain · scleral discolouration · sensation abnormal · sexual dysfunction · skin reactions · sleep disorders · throat complaints · vomiting
- ▶ **Rare or very rare** Alopecia · angina pectoris · drowsiness · irritability · optic nerve disorder · respiratory disorders · tinnitus

- ▶ **Frequency not known** Appetite decreased · arthralgia · asthma · hypertension · malaise · peripheral oedema · tremor · urinary frequency increased · vertigo
- SIDE-EFFECTS, FURTHER INFORMATION** Systemic absorption can rarely cause sulfonamide-like side-effects and may require discontinuation if severe.
- **ALLERGY AND CROSS-SENSITIVITY** EvGr Contra-indicated if history of sulfonamide hypersensitivity. ⚠
- **PREGNANCY** Avoid—toxicity in *animal* studies.
- **BREAST FEEDING** Use only if benefit outweighs risk.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid—no information available.
- **RENAL IMPAIRMENT** EvGr Avoid if creatinine clearance less than 30 mL/minute (no information available). ⚠ See p. 21.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

▶ **Brinzolamide (Non-proprietary)**Brinzolamide 10 mg per 1 ml | Brinzolamide 10mg/ml eye drops | 5 ml [PoM] £6.92 DT = £2.34▶ **Azopt** (Novartis Pharmaceuticals UK Ltd)Brinzolamide 10 mg per 1 ml | Azopt 10mg/ml eye drops | 5 ml [PoM] £6.92 DT = £2.34**Brinzolamide with brimonidine** 11-May-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, brinzolamide p. 1271, brimonidine tartrate p. 1277.

● **INDICATIONS AND DOSE****Raised intra-ocular pressure in open-angle glaucoma and in ocular hypertension when monotherapy is inadequate**

▶ TO THE EYE

▶ Adult: Apply 1 drop twice daily

- **INTERACTIONS** → Appendix 1: brimonidine · brinzolamide

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**

CAUTIONARY AND ADVISORY LABELS 3

EXCIPIENTS: May contain Benzalkonium chloride, propylene glycol

▶ **Simbrinza** (Novartis Pharmaceuticals UK Ltd)Brimonidine tartrate 2 mg per 1 ml, Brinzolamide 10 mg per 1 ml | Simbrinza 10mg/ml / 2mg/ml eye drops | 5 ml [PoM] £9.23 DT = £9.23**Brinzolamide with timolol** 11-May-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, brinzolamide p. 1271, timolol maleate p. 1270.

● **INDICATIONS AND DOSE****Raised intra-ocular pressure in open-angle glaucoma or ocular hypertension when beta-blocker alone not adequate**

▶ TO THE EYE

▶ Adult: Apply twice daily

- **INTERACTIONS** → Appendix 1: beta blockers, non-selective · brinzolamide

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

▶ **Brinzolamide with timolol (Non-proprietary)**Timolol (as Timolol maleate) 5 mg per 1 ml, Brinzolamide 10 mg per 1 ml | Brinzolamide 10mg/ml / Timolol 5mg/ml eye drops | 5 ml [PoM] £11.05 DT = £3.52▶ **Azarga** (Novartis Pharmaceuticals UK Ltd)Timolol (as Timolol maleate) 5 mg per 1 ml, Brinzolamide 10 mg per 1 ml | Azarga 10mg/ml / 5mg/ml eye drops | 5 ml [PoM] £11.05 DT = £3.52**Dorzolamide**

29-Jul-2021

● **INDICATIONS AND DOSE****Raised intra-ocular pressure in ocular hypertension used alone in patients unresponsive to beta-blockers or if beta-blockers contra-indicated | Open-angle glaucoma used alone in patients unresponsive to beta-blockers or if beta-blockers contra-indicated | Pseudo-exfoliative glaucoma used alone in patients unresponsive to beta-blockers or if beta-blockers contra-indicated**

▶ TO THE EYE

▶ Adult: Apply 3 times a day

**Raised intra-ocular pressure in ocular hypertension as adjunct to beta-blocker | Open-angle glaucoma as adjunct to beta-blocker | Pseudo-exfoliative glaucoma as adjunct to beta-blocker**

▶ TO THE EYE

▶ Adult: Apply twice daily

- **CONTRA-INDICATIONS** Hyperchloraemic acidosis
- **CAUTIONS** Chronic corneal defects · history of intra-ocular surgery · history of renal calculi · low endothelial cell count · systemic absorption follows topical application
- **INTERACTIONS** → Appendix 1: dorzolamide
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Asthenia · eye discomfort · eye disorders · eye inflammation · headache · nausea · taste bitter · vision disorders
  - ▶ **Rare or very rare** Angioedema · bronchospasm · dizziness · dry mouth · epistaxis · local reaction · paraesthesia · severe cutaneous adverse reactions (SCARs) · skin reactions · throat irritation · urolithiasis
- ▶ **Frequency not known** Dyspnoea · palpitations
- SIDE-EFFECTS, FURTHER INFORMATION** Systemic absorption can cause sulfonamide-like side-effects and may require discontinuation if severe.
- **ALLERGY AND CROSS-SENSITIVITY** EvGr Caution in patients with hypersensitivity to sulfonamides (systemic absorption occurs). ⚠
- **PREGNANCY** Manufacturer advises avoid—toxicity in *animal* studies.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution—no information available.
- **RENAL IMPAIRMENT** EvGr Avoid if creatinine clearance less than 30 mL/minute. ⚠ See p. 21.
- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose dorzolamide eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride

- ▶ **Dorzolamide (Non-proprietary)**  
Dorzolamide (as Dorzolamide hydrochloride) 20 mg per 1 ml Dorzolamide 20mg/ml eye drops | 5 ml [PoM] £5.69 DT = £1.70
- ▶ **Eydelto** (Aspire Pharma Ltd)  
Dorzolamide (as Dorzolamide hydrochloride) 20 mg per 1 ml Eydelto 20mg/ml eye drops | 5 ml [PoM] £7.09 DT = £7.09
- ▶ **Trusopt** (Santen UK Ltd)  
Dorzolamide (as Dorzolamide hydrochloride) 20 mg per 1 ml Trusopt 20mg/ml eye drops | 5 ml [PoM] £6.33 DT = £1.70  
Trusopt 20mg/ml eye drops 0.2ml unit dose preservative free | 60 unit dose [PoM] £24.18 DT = £24.18
- ▶ **Vizidor** (Bausch & Lomb UK Ltd)  
Dorzolamide (as Dorzolamide hydrochloride) 20 mg per 1 ml Vizidor 20mg/ml eye drops | 5 ml [PoM] £7.10 DT = £7.09

## Dorzolamide with timolol

The properties listed below are those particular to the combination only. For the properties of the components please consider, dorzolamide p. 1272, timolol maleate p. 1270.

### • INDICATIONS AND DOSE

**Raised intra-ocular pressure in ocular hypertension when beta-blockers alone not adequate | Raised intra-ocular pressure in open-angle glaucoma when beta-blockers alone not adequate | Raised intra-ocular pressure in pseudo-exfoliative glaucoma when beta-blockers alone not adequate**

▶ TO THE EYE

▶ Adult: Apply twice daily

- **INTERACTIONS** → Appendix 1: beta blockers, non-selective | dorzolamide
- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose dorzolamide with timolol eye drops commonly contain preservatives, preservative-free unit dose vials may be available.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride

- ▶ **Dorzolamide with timolol (Non-proprietary)**  
Timolol (as Timolol maleate) 5 mg per 1 ml, Dorzolamide (as Dorzolamide hydrochloride) 20 mg per 1 ml Dorzolamide 20mg/ml / Timolol 5mg/ml eye drops 0.2ml unit dose preservative free | 60 unit dose [PoM] £41.41 DT = £26.44  
Dorzolamide 20mg/ml / Timolol 5mg/ml eye drops | 5 ml [PoM] £27.16 DT = £1.73
- ▶ **Cosopt** (Santen UK Ltd)  
Timolol (as Timolol maleate) 5 mg per 1 ml, Dorzolamide (as Dorzolamide hydrochloride) 20 mg per 1 ml Cosopt 20mg/ml / 5mg/ml eye drops 0.2ml unit dose preservative free | 60 unit dose [PoM] £28.59 DT = £26.44  
Cosopt 20mg/ml / 5mg/ml eye drops | 5 ml [PoM] £10.05 DT = £1.73
- ▶ **Cosopt iMulti** (Santen UK Ltd)  
Timolol (as Timolol maleate) 5 mg per 1 ml, Dorzolamide (as Dorzolamide hydrochloride) 20 mg per 1 ml Cosopt iMulti 20mg/ml / 5mg/ml eye drops preservative free | 10 ml [PoM] £28.00
- ▶ **Eylamdo** (Aspire Pharma Ltd)  
Timolol (as Timolol maleate) 5 mg per 1 ml, Dorzolamide (as Dorzolamide hydrochloride) 20 mg per 1 ml Eylamdo 20mg/ml / 5mg/ml eye drops | 5 ml [PoM] £8.14 DT = £8.14
- ▶ **Vizidor Duo** (Bausch & Lomb UK Ltd)  
Timolol (as Timolol maleate) 5 mg per 1 ml, Dorzolamide (as Dorzolamide hydrochloride) 20 mg per 1 ml Vizidor Duo 20mg/ml / 5mg/ml eye drops | 5 ml [PoM] £8.15 DT = £8.14

## MIOTICS > PARASYMPATHOMIMETICS

### Pilocarpine

11-May-2021

- **DRUG ACTION** Pilocarpine acts by opening the inefficient drainage channels in the trabecular meshwork.

### • INDICATIONS AND DOSE

**Primary angle-closure glaucoma | Some secondary glaucomas**

▶ TO THE EYE

▶ Adult: Apply up to 4 times a day

- **CONTRA-INDICATIONS** Acute iritis · anterior uveitis · conditions where pupillary constriction is undesirable · some forms of secondary glaucoma (where pupillary constriction is undesirable)
- **CAUTIONS** A darkly pigmented iris may require a higher concentration of the miotic or more frequent administration and care should be taken to avoid overdose · asthma · cardiac disease · care in conjunctival damage · care in corneal damage · epilepsy · gastro-intestinal spasm · hypertension · hyperthyroidism · hypotension · marked vasomotor instability · Parkinson's disease · peptic ulceration · retinal detachment has occurred in susceptible individuals and those with retinal disease · urinary-tract obstruction
- **INTERACTIONS** → Appendix 1: pilocarpine
- **SIDE-EFFECTS**
  - ▶ Common or very common Diarrhoea · headache · hyperhidrosis · hypersalivation · nausea · skin reactions · vision disorders · vomiting
  - ▶ Frequency not known Bradycardia · bronchospasm · conjunctival vascular congestion · eye disorder (long term use) · eye disorders · hypotension · lens changes (long term use) · pain · paraesthesia · pulmonary oedema · sensitisation · vitreous haemorrhage
- **PREGNANCY** Avoid unless the potential benefit outweighs risk—limited information available.
- **BREAST FEEDING** Avoid unless the potential benefit outweighs risk—no information available.
- **PRE-TREATMENT SCREENING** Fundus examination is advised before starting treatment with a miotic (retinal detachment has occurred).
- **MONITORING REQUIREMENTS** Intra-ocular pressure and visual fields should be monitored in those with chronic simple glaucoma and those receiving long-term treatment with a miotic.
- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose pilocarpine eye drops commonly contain preservatives, preservative-free unit dose vials may be available.
- **PATIENT AND CARER ADVICE**  
**Driving and skilled tasks** Blurred vision may affect performance of skilled tasks (e.g. driving) particularly at night or in reduced lighting.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: eye drops

### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride

#### ▶ Pilocarpine (Non-proprietary)

- Pilocarpine hydrochloride 10 mg per 1 ml Pilocarpine hydrochloride 1% eye drops | 10 ml [PoM] £24.50 DT = £24.24
- Pilocarpine hydrochloride 20 mg per 1 ml Pilocarpine hydrochloride 2% eye drops | 10 ml [PoM] £24.91 DT = £24.91
- Pilocarpine hydrochloride 40 mg per 1 ml Pilocarpine hydrochloride 4% eye drops | 10 ml [PoM] £31.24 DT = £30.89
- ▶ **Pilocarpine nitrate** (Bausch & Lomb UK Ltd)  
Pilocarpine nitrate 20 mg per 1 ml Minims pilocarpine nitrate 2% eye drops 0.5ml unit dose | 20 unit dose [PoM] £12.47 DT = £12.47

## PROSTAGLANDINS AND ANALOGUES

## Latanoprost

16-Nov-2020

## ● INDICATIONS AND DOSE

**Raised intra-ocular pressure in open-angle glaucoma | Ocular hypertension**

▶ TO THE EYE

▶ Adult: Apply once daily, to be administered preferably in the evening

## IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: LATANOPROST (XALATAN®): INCREASED REPORTING OF EYE IRRITATION SINCE REFORMULATION (JULY 2015)

Following reformulation of *Xalatan*®, to allow for long-term storage at room temperature, there has been an increase in the number of reports of eye irritation from across the EU. Patients should be advised to tell their health professional promptly (within a week) if they experience eye irritation (e.g. excessive watering) severe enough to make them consider stopping treatment. Review treatment and prescribe a different formulation if necessary.

- **CONTRA-INDICATIONS** Active herpes simplex keratitis · history of recurrent herpetic keratitis associated with prostaglandin analogues
- **CAUTIONS** Angle-closure glaucoma · aphakia · asthma · contact lens wearers · do not use within 5 minutes of thiomersal-containing preparations · history of significant ocular viral infections · inflammatory ocular conditions (no experience of use) · narrow-angle glaucoma (no experience of use) · neovascular glaucoma (no experience of use) · peri-operative period of cataract surgery · pseudophakia with torn posterior lens capsule or anterior chamber lenses · risk factors for cystoid macular oedema · risk factors for iritis · risk factors for uveitis
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Eye discolouration · eye discomfort · eye disorders · eye inflammation · vision disorders
  - ▶ **Uncommon** Dry eye · rash
  - ▶ **Rare or very rare** Asthma · chest pain · dyspnoea · unstable angina
  - ▶ **Frequency not known** Arthralgia · dizziness · headache · myalgia · ophthalmic herpes simplex · palpitations
- **PREGNANCY** Manufacturer advises avoid.
- **BREAST FEEDING** May be present in milk—manufacturer advises avoid.
- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose latanoprost eye drops commonly contain preservatives, preservative-free unit dose vials may be available.
- **PATIENT AND CARER ADVICE** Changes in eye colour Before initiating treatment, patients should be warned of a possible change in eye colour as an increase in the brown pigment in the iris can occur, which may be permanent; particular care is required in those with mixed coloured irides and those receiving treatment to one eye only. Changes in eyelashes and vellus hair can also occur, and patients should also be advised to avoid repeated contact of the eye drop solution with skin as this can lead to hair growth or skin pigmentation.
- **NATIONAL FUNDING/ACCESS DECISIONS**
  - MONOPOST® For full details see funding body website
  - Scottish Medicines Consortium (SMC) decisions**
    - ▶ Latanoprost (*Monopost*®) for the reduction of elevated intraocular pressure in patients with open-angle glaucoma

and ocular hypertension (July 2013) SMC No. 879/13  
Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**

EXCIPIENTS: May contain Benzalkonium chloride

▶ **Latanoprost (Non-proprietary)**

Latanoprost 50 microgram per 1 ml Latanoprost 50micrograms/ml eye drops | 2.5 ml [PoM] £12.48 DT = £1.60

▶ **Medizol (Medicom Healthcare Ltd)**

Latanoprost 50 microgram per 1 ml Medizol 0.005% eye drops | 2.5 ml [PoM] £10.00 DT = £1.60

▶ **Monopost (Thea Pharmaceuticals Ltd)**

Latanoprost 50 microgram per 1 ml Monopost 50micrograms/ml eye drops 0.2ml unit dose | 30 unit dose [PoM] £8.49 DT = £8.49 | 90 unit dose [PoM] £25.47 DT = £25.47

▶ **Xalatan (Viatris UK Healthcare Ltd)**

Latanoprost 50 microgram per 1 ml Xalatan 50micrograms/ml eye drops | 2.5 ml [PoM] £12.48 DT = £1.60

## Latanoprost with timolol

10-Nov-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, latanoprost above, timolol maleate p. 1270.

## ● INDICATIONS AND DOSE

**Raised intra-ocular pressure in patients with open-angle glaucoma and ocular hypertension when beta-blocker or prostaglandin analogue alone not adequate**

▶ TO THE EYE
