- ▶ **Ergotamine** is predicted to increase the risk of ergotism when given with **dopamine receptor agonists (bromocriptine, cabergoline)**. Avoid. [Moderate] Theoretical
- ▶ **Flupentixol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1491
- ▶ **Givosiran** is predicted to increase the exposure to **ropinirole**. Use with caution and adjust dose. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** are predicted to increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study
- ▶ **Haloperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 9 p. 1492 → Also see TABLE 10 p. 1492
- ▶ **HIV-protease inhibitors** increase the exposure to **bromocriptine**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
- ▶ **Hormone replacement therapy** decreases the clearance of **ropinirole**. Monitor and adjust dose. [Moderate] Study
- ▶ **Idelalisib** increases the exposure to **bromocriptine**. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
- ▶ **Imatinib** is predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
- ▶ **Letermovir** is predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
- ▶ **Loxapine** is predicted to decrease the effects of **dopamine receptor agonists**. [Moderate] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 10 p. 1492
- ▶ **Macrolides (clarithromycin)** increase the exposure to **bromocriptine**. [Severe] Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the concentration of **cabergoline**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
- ▶ **Amantadine** increases the risk of CNS toxicity when given with **mementine**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Mementine** is predicted to increase the effects of **dopamine receptor agonists (apomorphine, bromocriptine, cabergoline, pramipexole, quinagolide, ropinirole, rotigotine)**. [Moderate] Theoretical
- ▶ **Metoclopramide** is predicted to decrease the effects of **dopamine receptor agonists (apomorphine, bromocriptine, cabergoline, pramipexole, quinagolide, ropinirole, rotigotine)**. Avoid. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
- ▶ **Nilotinib** is predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
- ▶ **Osilodrostat** is predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
- ▶ **Phenothiazines** are predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 9 p. 1492 → Also see TABLE 10 p. 1492
- ▶ **Pimozide** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 9 p. 1492 → Also see TABLE 10 p. 1492
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study

**Dopamine receptor agonists** (continued)

- ▶ **Rucaparib** is predicted to increase the exposure to **ropinirole**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **ropinirole**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Sulpiride** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [\[Moderate\]](#) Theoretical → Also see [TABLE 8 p. 1491](#) → Also see [TABLE 9 p. 1492](#)
- ▶ **Sympathomimetics, vasoconstrictor (isometheptene)** potentially increase the risk of adverse effects when given with **bromocriptine**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Trimethoprim** is predicted to increase the exposure to **pramipexole**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Vandetanib** is predicted to increase the exposure to **pramipexole**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **ropinirole**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Zuclophenthixol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [\[Moderate\]](#) Theoretical → Also see [TABLE 8 p. 1491](#) → Also see [TABLE 9 p. 1492](#)

**Doravirine** → see [NNRTIs](#)**Dorzolamide**

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application of **dorzolamide**, the possibility of interactions should be borne in mind.

**Dostarlimab** → see monoclonal antibodies**Dosulepin** → see tricyclic antidepressants**Doxapram**

- ▶ **Aminophylline** increases the risk of agitation when given with **doxapram**. [\[Moderate\]](#) Study
- ▶ **MAOIs, irreversible** are predicted to increase the effects of **doxapram**. [\[Moderate\]](#) Theoretical
- ▶ **Theophylline** increases the risk of agitation when given with **doxapram**. [\[Moderate\]](#) Study

**Doxazosin** → see alpha blockers**Doxepin** → see tricyclic antidepressants**Doxorubicin** → see anthracyclines**Doxycycline** → see tetracyclines**Doxylamine** → see antihistamines, sedating**Dronabinol** → see [TABLE 11 p. 1492](#) (CNS depressant effects)

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [\[Mid\]](#) Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [\[Mid\]](#) Study → Also see [TABLE 11 p. 1492](#)
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **dronabinol**. Adjust dose. [\[Mid\]](#) Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **dronabinol**. Adjust dose. [\[Mid\]](#) Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dronabinol**. Adjust dose. [\[Mid\]](#) Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **dronabinol**. Adjust dose. [\[Mid\]](#) Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **dronabinol**. Adjust dose. [\[Mid\]](#) Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [\[Mid\]](#) Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [\[Mid\]](#) Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [\[Mid\]](#) Study
- Dronedrone** → see antiarrhythmics
- Droperidol** → see [TABLE 8 p. 1491](#) (hypotension), [TABLE 9 p. 1492](#) (QT-interval prolongation), [TABLE 11 p. 1492](#) (CNS depressant effects)
- ▶ **Droperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [\[Moderate\]](#) Theoretical → Also see [TABLE 8 p. 1491](#) → Also see [TABLE 9 p. 1492](#)
  - ▶ **Droperidol** decreases the effects of **levodopa**. [\[Severe\]](#) Study → Also see [TABLE 8 p. 1491](#)
- Drospirenone** → see [TABLE 16 p. 1494](#) (increased serum potassium)

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **drospirenone**. [\[Severe\]](#) Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **drospirenone**. [\[Severe\]](#) Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **drospirenone**. [\[Severe\]](#) Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **drospirenone**. [\[Severe\]](#) Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **drospirenone**. [\[Severe\]](#) Study
- Drugs that cause serotonin syndrome**
- ▶ **Bupropion** might enhance the risk of serotonin syndrome when given with drugs that cause serotonin syndrome. [\[Severe\]](#) Anecdotal
  - ▶ **Opioids (tapentadol)** are predicted to increase the risk of serotonin syndrome when given with drugs that cause serotonin syndrome. [\[Severe\]](#) Theoretical

**Drugs that reduce serum potassium**

- ▶ **Drugs that reduce serum potassium** (see [TABLE 17 p. 1494](#)) are predicted to increase the risk of digoxin toxicity when given with **digoxin**. [\[Severe\]](#) Study

**Drugs with anticoagulant effects**

- ▶ **Bismuth subsalicylate** is predicted to increase the risk of bleeding events when given with **drugs with anticoagulant effects** (see [TABLE 3 p. 1490](#)). [\[Moderate\]](#) Theoretical
  - ▶ **Drugs with anticoagulant effects** (see [TABLE 3 p. 1490](#)) cause bleeding, as can **cabozantinib**; concurrent use might increase the risk of developing this effect. [\[Severe\]](#) Theoretical
  - ▶ **Drugs with anticoagulant effects** (see [TABLE 3 p. 1490](#)) cause bleeding, as can **capacizumab**; concurrent use might increase the risk of developing this effect. [\[Severe\]](#) Theoretical
  - ▶ **Drugs with anticoagulant effects** (see [TABLE 3 p. 1490](#)) cause bleeding, as can **cobimetinib**; concurrent use might increase the risk of developing this effect. [\[Severe\]](#) Theoretical
  - ▶ **Drugs with anticoagulant effects** (see [TABLE 3 p. 1490](#)) cause bleeding, as can **intotersen**; concurrent use might increase the risk of developing this effect. [\[Severe\]](#) Theoretical
  - ▶ **Drugs with anticoagulant effects** (see [TABLE 3 p. 1490](#)) cause bleeding, as can **monoclonal antibodies (bevacizumab, trastuzumab emtansine)**; concurrent use might increase the risk of developing this effect. [\[Severe\]](#) Theoretical
  - ▶ **Drugs with anticoagulant effects** (see [TABLE 3 p. 1490](#)) cause bleeding, as can **ruxolitinib**; concurrent use might increase the risk of developing this effect. [\[Severe\]](#) Theoretical
  - ▶ **Drugs with anticoagulant effects** (see [TABLE 3 p. 1490](#)) cause bleeding, as can **trametinib**; concurrent use might increase the risk of developing this effect. [\[Severe\]](#) Theoretical
  - ▶ **Drugs with anticoagulant effects** (see [TABLE 3 p. 1490](#)) cause bleeding, as can **volanesorsen**; concurrent use might increase the risk of developing this effect. Avoid depending on platelet count—consult product literature. [\[Severe\]](#) Theoretical
- Drugs with antimuscarinic effects**
- ▶ **Drugs with antimuscarinic effects** (see [TABLE 10 p. 1492](#)) decrease the absorption of **levodopa**. [\[Moderate\]](#) Theoretical
- Drugs with antiplatelet effects**
- ▶ **Drugs with antiplatelet effects** (see [TABLE 4 p. 1490](#)) cause bleeding, as can **cabozantinib**; concurrent use might increase the risk of developing this effect. [\[Severe\]](#) Theoretical
  - ▶ **Drugs with antiplatelet effects** (see [TABLE 4 p. 1490](#)) cause bleeding, as can **capacizumab**; concurrent use might increase the risk of developing this effect. [\[Severe\]](#) Theoretical
  - ▶ **Drugs with antiplatelet effects** (see [TABLE 4 p. 1490](#)) cause bleeding, as can **cobimetinib**; concurrent use might increase the risk of developing this effect. [\[Severe\]](#) Theoretical
  - ▶ **Drugs with antiplatelet effects** (see [TABLE 4 p. 1490](#)) cause bleeding, as can **monoclonal antibodies (bevacizumab, trastuzumab emtansine)**; concurrent use might increase the risk of developing this effect. [\[Severe\]](#) Theoretical
  - ▶ **Drugs with antiplatelet effects** (see [TABLE 4 p. 1490](#)) cause bleeding, as can **ruxolitinib**; concurrent use might increase the risk of developing this effect. [\[Severe\]](#) Theoretical

- ▶ **Drugs with antiplatelet effects** (see TABLE 4 p. 1490) cause bleeding, as can **trametinib**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
  - ▶ **Drugs with antiplatelet effects** (see TABLE 4 p. 1490) cause bleeding, as can **volanesorsen**; concurrent use might increase the risk of developing this effect. Avoid depending on platelet count—consult product literature. [Severe] Theoretical
  - Dulaglutide** → see glucagon-like peptide-1 receptor agonists
  - Duloxetine** → see SNRIs
  - Dupilumab** → see monoclonal antibodies
  - Durvalumab** → see monoclonal antibodies
  - Dutasteride**
    - ▶ **Antiarrhythmics (dronedaron)** are predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
    - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
    - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **dutasteride**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
    - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
    - ▶ **Cobicistat** is predicted to increase the exposure to **dutasteride**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
    - ▶ **Crizotinib** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
    - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dutasteride**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
    - ▶ **Idelalisib** is predicted to increase the exposure to **dutasteride**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
    - ▶ **Imatinib** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
    - ▶ **Letermovir** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
    - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **dutasteride**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
    - ▶ **Macrolides (erythromycin)** are predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
    - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
    - ▶ **Nilotinib** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
  - Eculizumab** → see monoclonal antibodies
  - Edoxaban** → see factor Xa inhibitors
  - Efavirenz** → see NNRTIs
  - Eicosapentaenoic acid** → see TABLE 4 p. 1490 (antiplatelet effects)
  - Elbasvir**
    - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
    - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
    - ▶ **Dabrafenib** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
    - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
    - ▶ **Mitotane** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
    - ▶ **Modafinil** is predicted to decrease the exposure to **elbasvir**. Avoid. [Unknown] Theoretical
    - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
    - ▶ **NNRTIs (etravirine)** are predicted to decrease the exposure to **elbasvir**. Avoid. [Unknown] Theoretical
    - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
    - ▶ **St John's wort** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
    - ▶ **Elbasvir** with grazoprevir slightly increases the exposure to **statins (atorvastatin)**. Adjust **atorvastatin** dose, p. 220. [Moderate] Study
  - ▶ **Elbasvir** with grazoprevir is predicted to increase the exposure to **statins (fluvastatin)**. Adjust **fluvastatin** dose, p. 220. [Moderate] Theoretical
  - ▶ **Elbasvir** with grazoprevir moderately increases the exposure to **statins (rosuvastatin)**. Adjust **rosuvastatin** dose, p. 221. [Moderate] Study
  - ▶ **Elbasvir** with grazoprevir is predicted to increase the exposure to **statins (simvastatin)**. Adjust **simvastatin** dose, p. 222. [Moderate] Theoretical
  - ▶ **Elbasvir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ **Elbasvir** is predicted to increase the concentration of **thrombin inhibitors (dabigatran)**. [Moderate] Theoretical
- Eletriptan** → see triptans
- Elexacaftor**
- ▶ **Anti-androgens (apalutamide, enzalutamide)** is predicted to decrease the exposure to **elexacaftor**. Avoid. [Severe] Theoretical
  - ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **elexacaftor**. Adjust tezacaftor with ivacaftor and elexacaftor p. 320 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** is predicted to decrease the exposure to **elexacaftor**. Avoid. [Severe] Theoretical
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **elexacaftor**. Adjust tezacaftor with ivacaftor and elexacaftor p. 320 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **elexacaftor**. Adjust tezacaftor with ivacaftor and elexacaftor p. 320 dose with potent CYP3A4 inhibitors. [Severe] Study
  - ▶ **Elexacaftor** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **elexacaftor**. Adjust tezacaftor with ivacaftor and elexacaftor p. 320 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **elexacaftor**. Adjust tezacaftor with ivacaftor and elexacaftor p. 320 dose with potent CYP3A4 inhibitors. [Severe] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **elexacaftor**. Adjust tezacaftor with ivacaftor and elexacaftor p. 320 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
  - ▶ **Elexacaftor** is predicted to increase the exposure to **endothelin receptor antagonists (bosentan)**. [Moderate] Theoretical
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **elexacaftor**. Avoid. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **elexacaftor**. Adjust tezacaftor with ivacaftor and elexacaftor p. 320 dose with potent CYP3A4 inhibitors. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **elexacaftor**. Adjust tezacaftor with ivacaftor and elexacaftor p. 320 dose with potent CYP3A4 inhibitors. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **elexacaftor**. Adjust tezacaftor with ivacaftor and elexacaftor p. 320 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **elexacaftor**. Adjust tezacaftor with ivacaftor and elexacaftor p. 320 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **elexacaftor**. Adjust tezacaftor with ivacaftor and elexacaftor p. 320 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **elexacaftor**. Adjust tezacaftor with ivacaftor and elexacaftor p. 320 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
  - ▶ **Elexacaftor** is predicted to increase the exposure to **meglitinides (repaglinide)**. [Moderate] Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to **elexacaftor**. Avoid. [Severe] Theoretical
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **elexacaftor**. Adjust

## Ellexacafator (continued)

tezacafator with ivacafator and ellexacafator p. 320 dose with moderate CYP3A4 inhibitors. [\[Severe\]](#) Theoretical

- ▶ **Nilotinib** is predicted to increase the exposure to **ellexacafator**. Adjust tezacafator with ivacafator and ellexacafator p. 320 dose with moderate CYP3A4 inhibitors. [\[Severe\]](#) Theoretical
- ▶ **Rifamycins (rifabutin)** are predicted to decrease the exposure to **ellexacafator**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** is predicted to decrease the exposure to **ellexacafator**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **ellexacafator**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Ellexacafator** is predicted to increase the exposure to **statins (atorvastatin, pravastatin, rosuvastatin, simvastatin)**. [\[Moderate\]](#) Theoretical
- ▶ **Ellexacafator** is predicted to increase the exposure to **sulfonyleureas (glibenclamide)**. [\[Moderate\]](#) Theoretical

**Eliglustat**

- ▶ **Eliglustat** is predicted to increase the exposure to **aliskiren**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Anti-androgens (abiraterone)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **eliglustat**. Avoid. [\[Severe\]](#) Study
- ▶ **Antiarrhythmics (dronedaron, propafenone)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **eliglustat**. Avoid. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **atomoxetine**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Bertralstat** is predicted to increase the exposure to **eliglustat**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **beta blockers, non-selective (propranolol)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Bupropion** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Cinacalcet** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **colchicine**. Avoid or adjust colchicine dose, p. 1212. [\[Severe\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Dacomitinib** is predicted to markedly increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Eliglustat** increases the exposure to **digoxin**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **eliglustat**. [\[Moderate\]](#) Theoretical
- ▶ **Eliglustat** is predicted to increase the exposure to **everolimus**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **factor XA inhibitors (edoxaban)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Fedratinib** is predicted to increase the exposure to **eliglustat**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Givosiran** is predicted to increase the exposure to **eliglustat**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Grapefruit** juice is predicted to increase the exposure to **eliglustat**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Interferons (ropeginterferon alfa)** are predicted to increase the exposure to **eliglustat**. [\[Moderate\]](#) Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **loperamide**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Mirabegron** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **eliglustat**. Avoid. [\[Severe\]](#) Study
- ▶ **Moclobemide** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **eliglustat**. [\[Moderate\]](#) Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **eliglustat**. Avoid. [\[Severe\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **sirilimum**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **SNRIs (duloxetine)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **St John's wort** is predicted to increase the exposure to **eliglustat**. Avoid. [\[Severe\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **taxanes (paclitaxel)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Terbinafine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **tolterodine**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Eliglustat** is predicted to increase the exposure to **topotecan**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **tricyclic antidepressants (nortriptyline)**. Adjust dose. [\[Moderate\]](#) Theoretical

**Elotuzumab** → see monoclonal antibodies

**Eltrombopag**

- ▶ **Eltrombopag** is predicted to increase the exposure to **alpelisib**. [\[Moderate\]](#) Theoretical
- ▶ Oral **antacids** decrease the absorption of oral **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after antacids. [\[Severe\]](#) Study
- ▶ **Eltrombopag** is predicted to increase the exposure to **bertralstat**. [\[Severe\]](#) Theoretical
- ▶ Oral **calcium salts** decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after calcium salts. [\[Severe\]](#) Study
- ▶ **Closporin** causes a small decrease in the exposure to **eltrombopag**. Monitor platelet count and adjust dose. [\[Moderate\]](#) Study

- ▶ **Eltrombopag** is predicted to increase the exposure to **cladribine**. Avoid or adjust dose. [Moderate] Theoretical
  - ▶ Oral **iron** is predicted to decrease the absorption of oral **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after iron. [Severe] Theoretical
  - ▶ **Eltrombopag** is predicted to increase the exposure to **larotrectinib**. [Mid] Study
  - ▶ **Eltrombopag** is predicted to increase the concentration of **letermovir**. [Moderate] Study
  - ▶ **Eltrombopag** is predicted to increase the concentration of **methotrexate**. [Moderate] Theoretical
  - ▶ **Eltrombopag** is predicted to increase the exposure to the active metabolites of **ozanimod**. Avoid. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **eltrombopag** and **eltrombopag** is predicted to increase the concentration of **rifamycins (rifampicin)**. [Moderate] Theoretical
  - ▶ Oral **selenium** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **selenium**. [Severe] Theoretical
  - ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **eltrombopag**. [Moderate] Theoretical
  - ▶ **Eltrombopag** is predicted to increase the exposure to **statins**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Eltrombopag** is predicted to increase the exposure to **talazoparib**. Avoid or monitor. [Moderate] Theoretical
  - ▶ **Eltrombopag** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
  - ▶ **Eltrombopag** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical
  - ▶ **Eltrombopag** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
  - ▶ Oral **zinc** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **zinc**. [Severe] Theoretical
- Elvitegravir**
- ▶ Oral **antacids** decrease the exposure to oral **elvitegravir**. Separate administration by at least 4 hours. [Moderate] Study
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Study
  - ▶ **Elvitegravir** is predicted to decrease the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
  - ▶ **Dabrafenib** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
  - ▶ **Elvitegravir** markedly increases the exposure to **grazoprevir**. Avoid. [Severe] Study
  - ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** boosted with ritonavir increase the concentration of **elvitegravir**. Refer to specialist literature. [Moderate] Study
  - ▶ **Elvitegravir** boosted with ritonavir is predicted to increase the exposure to **midostaurin**. [Severe] Theoretical
  - ▶ **Mitotane** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Study
  - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- Empagliflozin** → see sodium glucose co-transporter 2 inhibitors
- Emtricitabine** → see NRTIs
- Enalapril** → see ACE inhibitors
- Encorafenib** → see TABLE 9 p. 1492 (QT-interval prolongation)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Antiarrhythmics (dronedaron)** are predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study → Also see TABLE 9 p. 1492
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study
  - ▶ **Encorafenib** is predicted to affect the exposure to **combined hormonal contraceptives**. [Severe] Theoretical
  - ▶ **Crizotinib** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ **Encorafenib** is predicted to increase the exposure to **dolutegravir**. [Moderate] Theoretical
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **encorafenib**. Avoid. [Moderate] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study
  - ▶ **Imatinib** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
  - ▶ **Letermovir** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study → Also see TABLE 9 p. 1492
  - ▶ **Macrolides (erythromycin)** are predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ **Mitotane** is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
  - ▶ **Nilotinib** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **encorafenib**. Avoid or monitor. [Severe] Theoretical
  - ▶ **Encorafenib** is predicted to increase the exposure to **raltegravir**. [Moderate] Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
  - ▶ **Encorafenib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
- Endothelin receptor antagonists**
- ambrisentan · bosentan · macitentan
- ▶ **Bosentan** is predicted to decrease the exposure to **acalabrutinib**. [Severe] Study
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** affect the exposure to **bosentan**. Avoid. [Severe] Study
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the efficacy of **anti-androgens (cyproterone)** with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **anti-androgens (darolutamide)**. Avoid. [Moderate] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **antiarrhythmics (dronedaron)**. [Severe] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** affect the exposure to **bosentan**. Avoid. [Severe] Study

## Endothelin receptor antagonists (continued)

- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**) are predicted to increase the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**) are predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ Antifungals, azoles (**ketoconazole**) moderately increase the exposure to **bosentan**. [Moderate] Study
- ▶ Antifungals, azoles (**voriconazole**) are predicted to increase the exposure to **bosentan**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **antipsychotics, second generation (lurasidone)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **antipsychotics, second generation (quetiapine)**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **axitinib**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the concentration of **benzodiazepines (midazolam)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **brigatinib**. Avoid. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate] Theoretical
- ▶ **Cephalosporins (ceftobiprole)** are predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **ceritinib**. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **ambrisentan**. Adjust **ambrisentan** dose, p. 199. [Moderate] Study
- ▶ **Bosentan** moderately decreases the exposure to **ciclosporin** and **ciclosporin** moderately increases the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Study
- ▶ **Bosentan** decreases the anticoagulant effect of **coumarins**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **dabrafenib**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **dasatinib**. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **dolutegravir**. [Severe] Study
- ▶ **Bosentan** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Elxacaftor** is predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **eliglustat**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **erlotinib**. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the efficacy of **estradiol**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **fedratinib**. Avoid. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **glasdegib**. Avoid or adjust **glasdegib** dose, p. 1087. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **bosentan**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Bosentan** is predicted to decrease the exposure to **ibrutinib**. Avoid or monitor. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **imatatinib**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **ivacaftor**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **bosentan**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the concentration of **bosentan**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **maraviroc**. Avoid. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **midostaurin** and **midostaurin** is predicted to increase the exposure to **bosentan**. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
- ▶ **Mitotane** affects the exposure to **bosentan**. Avoid. [Severe] Study

- ▶ **Mitotane** is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **neratinib**. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. [Moderate] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **neurokinin-1 receptor antagonists (fosaprepitant, netupitant)**. [Moderate] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **bosentan**. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **NNRTIs (doravirine)**. Avoid or adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **NNRTIs (etravirine)**. Avoid. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **NNRTIs (nevirapine)**. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **NNRTIs (rilpivirine)**. Avoid. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
  - ▶ **Bosentan** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
  - ▶ **Bosentan** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **ospemifene**. [Moderate] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **pazopanib**. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **pemigatinib**. Avoid or monitor. [Severe] Study
  - ▶ **Bosentan** decreases the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **ponatinib**. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **regorafenib**. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **ribociclib**. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** transiently increase the exposure to **ambriesentan**. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** affect the exposure to **bosentan**. Avoid. [Severe] Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
  - ▶ **Roxadustat** is predicted to increase the exposure to **bosentan**. Monitor adverse effects and adjust dose. [Moderate] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **selpercatinib**. [Moderate] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the concentration of **sirolimus** and **sirolimus** potentially increases the concentration of **bosentan**. Avoid. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **sorafenib**. [Moderate] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **bosentan**. Avoid. [Moderate] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Study
  - ▶ **Bosentan** increases the risk of hepatotoxicity when given with **sulfonylureas (glibenclamide)**. Avoid. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **sunitinib**. [Moderate] Study
  - ▶ **Bosentan** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** potentially increases the concentration of **bosentan**. Avoid. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **taxanes (paclitaxel)**. Avoid. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
  - ▶ **Teriflunomide** is predicted to increase the exposure to **bosentan**. [Moderate] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **tofacinib**. [Moderate] Study
  - ▶ **Bosentan** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
  - ▶ **Bosentan** is predicted to decrease the exposure to **vandetanib**. [Moderate] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
  - ▶ **Vemurafenib** is predicted to increase the exposure to **ambriesentan**. Use with caution or avoid. [Moderate] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **vemurafenib**. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
  - ▶ **Venetoclax** is predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
  - ▶ **Bosentan** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- Enoxaparin** → see low molecular-weight heparins
- Entacapone**
- ▶ Oral **entacapone** is predicted to decrease the absorption of oral **iron**. Separate administration by at least 2 hours. [Moderate] Theoretical
  - ▶ **Entacapone** increases the exposure to **levodopa**. Monitor adverse effects and adjust dose. [Moderate] Study
  - ▶ **Entacapone** is predicted to increase the risk of elevated blood pressure when given with **MAOIs, irreversible**. Avoid. [Severe] Theoretical
  - ▶ **Entacapone** is predicted to increase the exposure to **methylidopa**. [Moderate] Theoretical
  - ▶ **Entacapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, inotropic**. [Moderate] Theoretical
  - ▶ **Entacapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Moderate] Study
- Enteral feeds**
- ▶ **Aluminium hydroxide** increases the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. [Moderate] Study
  - ▶ **Enteral feeds** decrease the absorption of **antiepileptics (phenytoin)**. [Severe] Study
  - ▶ **Enteral feeds** (vitamin-K containing) potentially decrease the anticoagulant effect of **coumarins**. [Severe] Anecdotal
  - ▶ **Enteral feeds** (vitamin-K containing) potentially decrease the effects of **phenindione**. [Severe] Theoretical
  - ▶ **Enteral feeds** decrease the exposure to **quinolones (ciprofloxacin)**. [Moderate] Study
  - ▶ **Sucralfate** increases the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. Separate administration by 1 hour. [Moderate] Study

## Enteral feeds (continued)

- ▶ **Enteral feeds** decrease the exposure to **theophylline**. [Moderate] Study
- Entrectinib** → see TABLE 9 p. 1492 (QT-interval prolongation)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 1056. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 1056. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **entrectinib**. Avoid potent CYP3A4 inhibitors or adjust **entrectinib** dose, p. 1056. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Entrectinib** slightly increases the exposure to **benzodiazepines (midazolam)**. [Mild] study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 1056. [Severe] Theoretical
- ▶ **Entrectinib** is predicted to increase the exposure to **ciclosporin**. [Mild] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **entrectinib**. Avoid potent CYP3A4 inhibitors or adjust **entrectinib** dose, p. 1056. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 1056. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Dabrafenib** is predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Theoretical
- ▶ **Entrectinib** is predicted to increase the exposure to **ergotamine**. [Mild] Theoretical
- ▶ **Entrectinib** is predicted to increase the exposure to **everolimus**. [Mild] Theoretical
- ▶ **Grapefruit** is predicted to increase the exposure to **entrectinib**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **entrectinib**. Avoid potent CYP3A4 inhibitors or adjust **entrectinib** dose, p. 1056. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **entrectinib**. Avoid potent CYP3A4 inhibitors or adjust **entrectinib** dose, p. 1056. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 1056. [Severe] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 1056. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **entrectinib**. Avoid potent CYP3A4 inhibitors or adjust **entrectinib** dose, p. 1056. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 1056. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Mitotane** is predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 1056. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 1056. [Severe] Theoretical → Also see TABLE 9 p. 1492

- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Entrectinib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. [Mild] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Study
- ▶ **Entrectinib** is predicted to increase the exposure to **sirolimus**. [Mild] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Theoretical
- ▶ **Entrectinib** is predicted to increase the exposure to **temsirolimus**. [Mild] Theoretical
- Enzalutamide** → see anti-androgens
- Ephedrine** → see sympathomimetics, vasoconstrictor
- Epirubicin** → see anthracyclines
- Eplerenone** → see aldosterone antagonists
- Epoetin alfa** → see TABLE 5 p. 1491 (thromboembolism), TABLE 16 p. 1494 (increased serum potassium)
- Epoetin beta** → see TABLE 5 p. 1491 (thromboembolism), TABLE 16 p. 1494 (increased serum potassium)
- Epoetin zeta** → see TABLE 5 p. 1491 (thromboembolism), TABLE 16 p. 1494 (increased serum potassium)
- Epoprostenol** → see TABLE 8 p. 1491 (hypotension), TABLE 4 p. 1490 (antiplatelet effects)
- Eprosartan** → see angiotensin-II receptor antagonists
- Eptifibatid** → see TABLE 3 p. 1490 (anticoagulant effects)
- Ergocalciferol** → see vitamin D substances
- Ergometrine**
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
  - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **ergometrine**. Avoid. [Moderate] Theoretical
  - ▶ **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergometrine**. [Severe] Study
  - ▶ **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergometrine**. [Severe] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
  - ▶ **Crizotinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
  - ▶ **Ergometrine** is predicted to increase the risk of ergotism when given with **dopamine receptor agonists (cabergoline)**. Avoid. [Moderate] Theoretical
  - ▶ **Esketamine** is predicted to increase the risk of elevated blood pressure when given with **ergometrine**. Avoid. [Severe] Theoretical
  - ▶ **Grapefruit** juice is predicted to increase the exposure to **ergometrine**. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
  - ▶ **Idelalisib** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
  - ▶ **Imatinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
  - ▶ **Ketamine** is predicted to increase the risk of elevated blood pressure when given with **ergometrine**. [Severe] Theoretical
  - ▶ **Letermovir** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical

- ▶ **Macrolides (erythromycin)** are predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
  - ▶ **Nilotinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ergometrine**. Avoid. [Severe] Theoretical
  - ▶ **Olaparib** might alter the exposure to **ergometrine**. [Moderate] Theoretical
  - ▶ **Ergometrine** potentially increases the risk of peripheral vasoconstriction when given with **sympathomimetics, inotropic (dopamine)**. Avoid. [Severe] Anecdotal
  - ▶ **Ergometrine** is predicted to increase the risk of peripheral vasoconstriction when given with **sympathomimetics, vasoconstrictor (noradrenaline/norepinephrine)**. [Severe] Anecdotal
- Ergotamine**
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
  - ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
  - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **ergotamine**. Avoid. [Moderate] Theoretical
  - ▶ **Bertralstat** is predicted to increase the exposure to **ergotamine**. [Moderate] Study
  - ▶ **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergotamine**. [Severe] Study
  - ▶ **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergotamine**. [Severe] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
  - ▶ **Ceritinib** is predicted to increase the exposure to **ergotamine**. Avoid. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
  - ▶ **Crizotinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
  - ▶ **Dabrafenib** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
  - ▶ **Ergotamine** is predicted to increase the risk of ergotism when given with **dopamine receptor agonists (bromocriptine, cabergoline)**. Avoid. [Moderate] Theoretical
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
  - ▶ **Entrectinib** is predicted to increase the exposure to **ergotamine**. [Mild] Theoretical
  - ▶ **Fedratinib** is predicted to increase the exposure to **ergotamine**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Grapefruit** juice is predicted to increase the exposure to **ergotamine**. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
  - ▶ **Idelalisib** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
  - ▶ **Imatinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
  - ▶ **Larotrectinib** is predicted to increase the exposure to **ergotamine**. Use with caution and adjust dose. [Mild] Theoretical
  - ▶ **Letermovir** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **ergotamine**. Avoid. [Moderate] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
  - ▶ **Macrolides (erythromycin)** are predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
  - ▶ **Mifepristone** is predicted to increase the exposure to **ergotamine**. [Severe] Theoretical
  - ▶ **Mitotane** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
  - ▶ **Nilotinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ergotamine**. Avoid. [Severe] Theoretical
  - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
  - ▶ **Olaparib** might alter the exposure to **ergotamine**. [Moderate] Theoretical
  - ▶ **Palbociclib** is predicted to increase the exposure to **ergotamine**. Adjust dose. [Moderate] Theoretical
  - ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **ergotamine**. Avoid. [Moderate] Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
  - ▶ **Rucaparib** is predicted to increase the exposure to **ergotamine**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Selpercatinib** is predicted to increase the exposure to **ergotamine**. Avoid. [Moderate] Study
  - ▶ **Sotorasib** is predicted to decrease the exposure to **ergotamine**. Avoid or adjust dose. [Moderate] Theoretical
  - ▶ **St John's wort** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
  - ▶ **Ticagrelor** is predicted to increase the exposure to **ergotamine**. Avoid. [Severe] Theoretical
  - ▶ **Triptans (almotriptan)** are predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **almotriptan**. [Severe] Theoretical
  - ▶ **Triptans (eletriptan)** increase the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Study
  - ▶ **Triptans (frova triptan, naratriptan)** are predicted to increase the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Theoretical
  - ▶ **Triptans (rizatriptan)** are predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **rizatriptan**. [Severe] Theoretical
  - ▶ **Triptans (sumatriptan)** increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **sumatriptan**. [Severe] Study
  - ▶ **Triptans (zolmitriptan)** are predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **zolmitriptan**. [Severe] Theoretical
- Eribulin** → see TABLE 15 p. 1493 (myelosuppression), TABLE 12 p. 1493 (peripheral neuropathy), TABLE 9 p. 1492 (QT-interval prolongation)
- Erlotinib**
- FOOD AND LIFESTYLE** Dose adjustment may be necessary if smoking started or stopped during treatment.
- ▶ Oral **antacids** are predicted to decrease the absorption of oral **erlotinib**. **Erlotinib** should be taken 2 hours before or 4 hours after antacids. [Moderate] Theoretical
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 1057. [Severe] Study
  - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
  - ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **erlotinib**. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 1057. [Severe] Study

## Erlotinib (continued)

- ▶ **Antiepileptics (eslicarbazepine)** are predicted to decrease the exposure to **erlotinib**. [\[Severe\]](#) Theoretical
- ▶ **Antiepileptics (oxcarbazepine)** decrease the exposure to **erlotinib**. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Severe\]](#) Study
- ▶ **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **aspirin** (high-dose). [\[Severe\]](#) Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Study
- ▶ Oral **calcium salts (calcium carbonate)** -containing antacids are predicted to decrease the absorption of oral **erlotinib**. **Erlotinib** should be taken 2 hours before or 4 hours after antacids. [\[Moderate\]](#) Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Severe\]](#) Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **corticosteroids**. [\[Severe\]](#) Theoretical
- ▶ **Erlotinib** increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Crizotinib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **erlotinib**. [\[Severe\]](#) Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **erlotinib**. [\[Severe\]](#) Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **erlotinib**. **Erlotinib** should be taken 2 hours before or 10 hours after **H<sub>2</sub> receptor antagonists**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Study
- ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Study
- ▶ **Mexiletine** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 1057. [\[Severe\]](#) Study
- ▶ **Neratinib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **erlotinib**. [\[Severe\]](#) Study
- ▶ **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. [\[Severe\]](#) Theoretical

- ▶ **Osilodrostat** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **Erlotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **erlotinib**. Avoid. [\[Moderate\]](#) Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **Ranolazine** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 1057. [\[Severe\]](#) Study
- ▶ **Rucaparib** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **Erlotinib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [\[Severe\]](#) Theoretical
- ▶ Oral **sodium bicarbonate**-containing antacids are predicted to decrease the absorption of oral **erlotinib**. **Erlotinib** should be taken 2 hours before or 4 hours after antacids. [\[Moderate\]](#) Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **erlotinib**. Separate administration by at least 2 hours. [\[Moderate\]](#) Theoretical
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **erlotinib**. [\[Severe\]](#) Study
- ▶ **Vandetanib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Vemurafenib** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **Ertapenem** → see carbapenems
- ▶ **Ertugliflozin** → see sodium glucose co-transporter 2 inhibitors
- ▶ **Erythromycin** → see macrolides
- ▶ **Escitalopram** → see SSRIs
- ▶ **Esketamine** → see TABLE 8 p. 1491 (hypotension), TABLE 11 p. 1492 (CNS depressant effects)
- ▶ **Esketamine** is predicted to increase the risk of seizures when given with **aminophylline**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 11 p. 1492
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Esketamine** is predicted to increase the risk of elevated blood pressure when given with **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Esketamine** is predicted to increase the risk of seizures when given with **theophylline**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Eslicarbazepine** → see antiepileptics
- ▶ **NSMolol** → see beta blockers, selective
- ▶ **Esomeprazole** → see proton pump inhibitors

**Estradiol**

- ▶ Antiepileptics (**carbamazepine**, **eslicarbazepine**, **fosphenytoin**, **oxcarbazepine**, **perampanel**, **phenobarbital**, **phenytoin**, **primidone**, **rufinamide**, **topiramate**) are predicted to decrease the efficacy of **estradiol**. [Moderate] Theoretical
- ▶ Endothelin receptor antagonists (**bosentan**) are predicted to decrease the efficacy of **estradiol**. [Moderate] Theoretical
- ▶ HIV-protease inhibitors (**ritonavir**) are predicted to decrease the efficacy of **estradiol**. [Moderate] Theoretical
- ▶ **Modafinil** is predicted to decrease the efficacy of **estradiol**. [Moderate] Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant**, **fosaprepitant**) are predicted to decrease the efficacy of **estradiol**. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz**, **nevirapine**) are predicted to decrease the efficacy of **estradiol**. [Moderate] Theoretical
- ▶ **Rifamycins** are predicted to decrease the efficacy of **estradiol**. [Moderate] Theoretical

**Estramustine** → see alkylating agents

**Etanercept**

- ▶ **Anakinra** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etanercept**. Avoid. [Severe] Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **etanercept**. Avoid. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etanercept**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ Monoclonal antibodies (**sarilumab**) might cause severe infection and neutropenia when given with **etanercept**. [Severe] Theoretical

**Etelcalcetide**

- ▶ **Cinacalcet** increases the risk of hypocalcaemia when given with **etelcalcetide**. Avoid. [Severe] Theoretical
- ▶ **Etelcalcetide** might increase the risk of hypocalcaemia when given with **denosumab**. [Severe] Theoretical

**Ethambutol**

- ▶ **Isoniazid** increases the risk of optic neuropathy when given with **ethambutol**. [Severe] Anecdotal

**Ethinylestradiol**

- ▶ **Fostemsavir** increases the concentration of **ethinylestradiol** from a combined hormonal contraceptive. Adjust dose—consult product literature. [Severe] Study

**Ethosuximide** → see antiepileptics

**Etodolac** → see NSAIDs

**Etomidate** → see TABLE 8 p. 1491 (hypotension), TABLE 11 p. 1492 (CNS depressant effects)

**Etonogestrel**

- ▶ Antiepileptics (**carbamazepine**, **eslicarbazepine**, **fosphenytoin**, **oxcarbazepine**, **perampanel**, **phenobarbital**, **phenytoin**, **primidone**, **rufinamide**, **topiramate**) are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of subdermal **etonogestrel**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the concentration of subdermal **etonogestrel**. [Moderate] Theoretical
- ▶ Endothelin receptor antagonists (**bosentan**) are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ▶ **Griseofulvin** decreases the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ▶ HIV-protease inhibitors (**ritonavir**) are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ▶ HIV-protease inhibitors are predicted to increase the concentration of subdermal **etonogestrel**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the concentration of subdermal **etonogestrel**. [Moderate] Theoretical
- ▶ **Lumacaftor** might decrease the efficacy of subdermal **etonogestrel**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the concentration of subdermal **etonogestrel**. [Moderate] Theoretical
- ▶ **Modafinil** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant**, **fosaprepitant**) are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz**, **nevirapine**) are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ▶ **Rifamycins** are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the efficacy of **etonogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ▶ **Sugammadex** is predicted to decrease the efficacy of **etonogestrel**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Etonogestrel** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of **etonogestrel**. Avoid. [Severe] theoretical

**Etoposide** → see TABLE 15 p. 1493 (myelosuppression)

- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the efficacy of **etoposide**. [Moderate] Study
- ▶ **Ciclosporin** increases the exposure to **etoposide**. Monitor and adjust dose. [Severe] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etoposide**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ Neurokinin-1 receptor antagonists (**netupitant**) slightly increase the exposure to **etoposide**. [Moderate] Study

**Etoricoxib** → see NSAIDs

**Etravirine** → see NNRTIs

**Everolimus**

- ▶ **Abrocitinib** might increase the exposure to **everolimus**. [Moderate] Theoretical
- ▶ **Everolimus** potentially increases the risk of angioedema when given with **ACE inhibitors**. [Severe] Anecdotal
- ▶ Anti-androgens (**apalutamide**, **enzalutamide**) are predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ Antiarrhythmics (**dronedaron**) are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **everolimus**. Avoid. [Severe] Study
- ▶ **Berotrastat** is predicted to increase the concentration of **everolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Cenobamate** is predicted to decrease the exposure to **everolimus**. Adjust dose. [Moderate] Theoretical
- ▶ **Certinib** is predicted to increase the exposure to **everolimus**. [Moderate] Theoretical
- ▶ **Ciclosporin** moderately increases the exposure to **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **everolimus**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study

## Everolimus (continued)

- ▶ **Eliglustat** is predicted to increase the exposure to everolimus. Adjust dose. [Moderate] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the concentration of everolimus. Avoid or adjust dose. [Severe] Study
- ▶ **Entrectinib** is predicted to increase the exposure to everolimus. [Mild] Theoretical
- ▶ **Fedratinib** is predicted to increase the exposure to everolimus. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Grapefruit** juice is predicted to increase the exposure to everolimus. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to everolimus. Avoid. [Severe] Study
- ▶ **Ibrutinib** is predicted to increase the exposure to everolimus. Separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to everolimus. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the concentration of everolimus. Avoid or adjust dose. [Moderate] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to everolimus. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to everolimus. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the concentration of everolimus. Avoid or adjust dose. [Moderate] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with everolimus. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Everolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Mild] Theoretical
- ▶ **Lorlatinib** is predicted to decrease the exposure to everolimus. Avoid. [Moderate] Study
- ▶ **Lumacaftor** is predicted to decrease the exposure to everolimus. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to everolimus. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of everolimus. Avoid or adjust dose. [Moderate] Study
- ▶ **Mifepristone** is predicted to increase the exposure to everolimus. [Severe] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to everolimus. [Mild] Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of everolimus. Avoid or adjust dose. [Severe] Study
- ▶ **Neratinib** is predicted to increase the exposure to everolimus. [Moderate] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the concentration of everolimus. Avoid or adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the concentration of everolimus. Avoid or adjust dose. [Moderate] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of everolimus. [Severe] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the concentration of everolimus. Avoid or adjust dose. [Severe] Study
- ▶ **Olaparib** might increase the exposure to everolimus. [Moderate] Theoretical
- ▶ **Osimertinib** is predicted to increase the exposure to everolimus. [Moderate] Study
- ▶ **Palbociclib** is predicted to increase the exposure to everolimus. Adjust dose. [Moderate] Theoretical
- ▶ **Pemigatinib** might increase the exposure to everolimus. Separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to everolimus. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to everolimus. Avoid. [Severe] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to everolimus. Use with caution and adjust dose. [Moderate] Theoretical

- ▶ **Rifamycins (rifampicin)** are predicted to decrease the concentration of everolimus. Avoid or adjust dose. [Severe] Study
- ▶ **Selpercatinib** is predicted to increase the exposure to everolimus. Avoid. [Moderate] Study
- ▶ **Sotorasib** is predicted to increase the exposure to everolimus. Avoid or adjust dose. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the concentration of everolimus. Avoid or adjust dose. [Severe] Study
- ▶ **Teptinib** is predicted to increase the concentration of everolimus. [Severe] Study
- ▶ **Tucatinib** is predicted to increase the exposure to everolimus. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Vandetanib** is predicted to increase the exposure to everolimus. [Moderate] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to everolimus. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to everolimus. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to everolimus. Avoid or adjust dose. [Severe] Study

**Exemestane**

- ▶ **Anti-androgens (apalutamide, enzalutamide)** moderately decrease the exposure to exemestane. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** moderately decrease the exposure to exemestane. [Moderate] Study
- ▶ **Mitotane** moderately decreases the exposure to exemestane. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to exemestane. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to exemestane. [Moderate] Theoretical

**Exenatide** → see glucagon-like peptide-1 receptor agonists

**Ezetimibe**

- ▶ **Ciclosporin** moderately increases the exposure to ezetimibe and ezetimibe slightly increases the exposure to ciclosporin. [Moderate] Study
- ▶ **Fibrates** are predicted to increase the risk of gallstones when given with ezetimibe. [Severe] Theoretical

**Factor XA inhibitors** → see TABLE 3 p. 1490 (anticoagulant effects)

apixaban · edoxaban · fondaparinux · rivaroxaban

- ▶ **Abrocitinib** might increase the exposure to factor XA inhibitors (edoxaban, rivaroxaban). [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to apixaban. [Moderate] Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to rivaroxaban. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ **Antiarrhythmics (amiodarone)** slightly increase the exposure to edoxaban. [Severe] Study
- ▶ **Antiarrhythmics (amiodarone)** might increase the exposure to rivaroxaban. [Moderate] Study
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to apixaban. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** slightly increase the exposure to edoxaban. Adjust edoxaban dose, p. 138. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** might increase the exposure to rivaroxaban. Avoid. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to edoxaban. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to rivaroxaban. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, phenytoin)** are predicted to decrease the exposure to apixaban. Use with caution or avoid. [Severe] Study
- ▶ **Antiepileptics (fosphenytoin)** are predicted to decrease the exposure to rivaroxaban. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Theoretical
- ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to edoxaban. [Severe] Theoretical
- ▶ **Antiepileptics (fosphenytoin, primidone)** are predicted to decrease the exposure to apixaban. [Severe] Study

- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to **rivaroxaban**. [Severe] Study
- ▶ **Antiepileptics (phenobarbital)** are predicted to decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Anecdotal
- ▶ **Antifungals, azoles (fluconazole)** might increase the risk of bleeding when given with **apixaban**. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole)** are predicted to increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Antifungals, azoles (ketoconazole)** slightly increase the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 138. [Severe] Study
- ▶ **Antifungals, azoles (posaconazole, voriconazole)** are predicted to increase the exposure to **apixaban**. Avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (posaconazole, voriconazole)** are predicted to increase the exposure to **rivaroxaban**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (itraconazole)** are predicted to increase the exposure to factor XA inhibitors (**apixaban, rivaroxaban**). Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (ketoconazole)** moderately increase the exposure to factor XA inhibitors (**apixaban, rivaroxaban**). Avoid. [Severe] Study
- ▶ **Aspirin (high-dose)** increases the exposure to **edoxaban**. Avoid. [Severe] Study
- ▶ **Bertralstat** is predicted to increase the concentration of factor XA inhibitors (**edoxaban, rivaroxaban**). Monitor and adjust dose. [Moderate] Study
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (verapamil)** slightly increase the exposure to **edoxaban**. [Severe] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **edoxaban**. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
- ▶ **Ciclosporin** slightly increases the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 138. [Severe] Study
- ▶ **Ciclosporin** slightly increases the exposure to **rivaroxaban**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to factor XA inhibitors (**apixaban, edoxaban, rivaroxaban**). Avoid. [Severe] Theoretical
- ▶ **Eliglustat** is predicted to increase the exposure to **edoxaban**. Adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir)** boosted with ritonavir are predicted to increase the exposure to **apixaban**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, fosamprenavir, tipranavir)** boosted with ritonavir are predicted to increase the exposure to **rivaroxaban**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (darunavir)** boosted with ritonavir or cobicistat are predicted to increase the exposure to **apixaban**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (darunavir)** boosted with ritonavir are predicted to increase the exposure to **rivaroxaban**. Avoid. [Severe] Anecdotal
- ▶ **HIV-protease inhibitors (fosamprenavir, tipranavir)** boosted with ritonavir are predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (lopinavir)** boosted with ritonavir are predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **apixaban**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** moderately increase the exposure to **rivaroxaban**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (lopinavir)** boosted with ritonavir are predicted to increase the exposure to factor XA inhibitors (**apixaban, rivaroxaban**). Avoid. [Severe] Theoretical
- ▶ **Ibrutinib** is predicted to increase the exposure to factor XA inhibitors (**edoxaban, rivaroxaban**). Separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
- ▶ **Ivacaftor** is predicted to increase the exposure to factor XA inhibitors (**edoxaban, rivaroxaban**). [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Lorlatinib** is predicted to decrease the exposure to factor XA inhibitors (**edoxaban, rivaroxaban**). [Moderate] Study
- ▶ **Macrolides (azithromycin, clarithromycin)** are predicted to increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** slightly increase the exposure to **apixaban**. [Moderate] Study
- ▶ **Macrolides (erythromycin)** slightly increase the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 138. [Severe] Study
- ▶ **Macrolides (erythromycin)** slightly increase the exposure to **rivaroxaban**. [Mild] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **edoxaban**. [Mild] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **apixaban**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ **Neratinib** is predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
- ▶ **Neratinib** is predicted to increase the exposure to factor XA inhibitors (**edoxaban, rivaroxaban**). [Moderate] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of factor XA inhibitors (**apixaban, rivaroxaban**). Avoid. [Severe] Theoretical
- ▶ **NRRTs (nevirapine)** are predicted to decrease the exposure to **rivaroxaban**. [Severe] Anecdotal
- ▶ **Olaparib** might increase the exposure to factor XA inhibitors (**edoxaban, rivaroxaban**). [Moderate] Theoretical
- ▶ **Osimertinib** is predicted to increase the exposure to factor XA inhibitors (**edoxaban, rivaroxaban**). [Moderate] Study
- ▶ **Pemigatinib** might increase the exposure to factor XA inhibitors (**edoxaban, rivaroxaban**). Separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Pibrentavir** with glecaprevir is predicted to increase the exposure to **edoxaban**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **edoxaban**. [Mild] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **edoxaban**. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ **Sotorasib** is predicted to increase the exposure to factor XA inhibitors (**edoxaban, rivaroxaban**). Avoid or adjust dose. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **edoxaban**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ **Teptotinib** is predicted to increase the concentration of factor XA inhibitors (**edoxaban, rivaroxaban**). [Severe] Study
- ▶ **Tucatinib** is predicted to increase the exposure to **edoxaban**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **rivaroxaban**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Vandetanib** is predicted to increase the exposure to **apixaban**. [Moderate] Theoretical

## Factor XA inhibitors (continued)

- ▶ **Vandetanib** is predicted to increase the exposure to factor XA inhibitors (**edoxaban**, **rivaroxaban**). [Moderate] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Vemurafenib** might increase the exposure to **rivaroxaban**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to factor XA inhibitors (**edoxaban**, **rivaroxaban**). Avoid or adjust dose. [Severe] Study
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the concentration of **edoxaban**. Avoid. [Severe] Theoretical

**Famciclovir**

- ▶ **Famciclovir** is predicted to decrease the efficacy of **live vaccines (herpes-zoster vaccine, live)**. [Moderate] Theoretical

**Famotidine** → see H<sub>2</sub> receptor antagonists

**Fampridine**

- ▶ **Dolutegravir** might increase the concentration of **fampridine**. Avoid. [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the concentration of **fampridine**. Avoid. [Severe] Theoretical

**Febuxostat**

- ▶ **Febuxostat** is predicted to increase the exposure to **azathioprine**. Avoid. [Severe] Theoretical
- ▶ **Febuxostat** is predicted to increase the exposure to **mercaptopurine**. Avoid. [Severe] Theoretical

**Fedratinib**

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **fedratinib**. Avoid. [Moderate] Study
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **fedratinib**. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to **fedratinib**. Avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (isavuconazole, posaconazole)** are predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **fedratinib**. Adjust **fedratinib** dose, but avoid depending on other drugs taken—consult product literature, p. 1060. [Moderate] Study
- ▶ **Fedratinib** is predicted to increase the exposure to **atomoxetine**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Fedratinib** moderately increases the exposure to **benzodiazepines (midazolam)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Fedratinib** moderately increases the exposure to **beta blockers, selective (metoprolol)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Fedratinib** is predicted to increase the exposure to **beta blockers, selective (nebivolol)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **fedratinib**. Adjust **fedratinib** dose, but avoid depending on other drugs taken—consult product literature, p. 1060. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **fedratinib**. Avoid. [Moderate] Study
- ▶ **Fedratinib** is predicted to increase the exposure to **eliglustat**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **fedratinib**. Avoid. [Moderate] Study
- ▶ **Fedratinib** is predicted to increase the exposure to **ergotamine**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Fedratinib** is predicted to increase the exposure to **everolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Grapefruit** and grapefruit juice is predicted to increase the exposure to **fedratinib**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **fedratinib**. Adjust **fedratinib** dose, but avoid depending on other drugs taken—consult product literature, p. 1060. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **fedratinib**. Adjust **fedratinib** dose, but avoid depending on other drugs taken—consult product literature, p. 1060. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **fedratinib**. Adjust **fedratinib** dose, but avoid depending on other drugs taken—consult product literature, p. 1060. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **fedratinib**. Avoid. [Moderate] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **fedratinib**. Avoid. [Moderate] Study
- ▶ **Fedratinib** is predicted to increase the exposure to **opioids (alfentanil)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Fedratinib** moderately increases the exposure to **proton pump inhibitors (omeprazole)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **fedratinib**. Avoid. [Moderate] Study
- ▶ **Fedratinib** is predicted to increase the exposure to **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine)** are predicted to increase the exposure to **fedratinib**. Avoid depending on other drugs taken—consult product literature. [Moderate] Theoretical
- ▶ **SSRIs (flvoxamine)** are predicted to increase the exposure to **fedratinib**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **fedratinib**. Avoid. [Moderate] Study
- ▶ **Fedratinib** is predicted to increase the exposure to **temsirolimus** (oral). Monitor and adjust dose. [Moderate] Theoretical

**Felbinac** → see NSAIDs

**Felodipine** → see calcium channel blockers

**Fenfluramine** → see TABLE 13 p. 1493 (serotonin syndrome)

- ▶ **Fenfluramine** might decrease blood glucose concentrations when given with **acarbose**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the concentration of **fenfluramine**. Adjust dose. [Severe] Theoretical
- ▶ **Antiepileptics (stiripentol)** (given with clobazam, and with or without valproate) modestly increase the exposure to **fenfluramine**. Adjust **fenfluramine** dose, p. 341. [Severe] Study
- ▶ **Antihistamines, sedating (cyproheptadine)** might decrease the efficacy of **fenfluramine**. [Severe] Theoretical
- ▶ **Fenfluramine** might decrease blood glucose concentrations when given with **dipeptidylpeptidase-4 inhibitors**. [Moderate] Theoretical
- ▶ **Fenfluramine** might decrease blood glucose concentrations when given with **glucagon-like peptide-1 receptor agonists**. [Moderate] Theoretical
- ▶ **Fenfluramine** might decrease blood glucose concentrations when given with **insulin**. [Moderate] Theoretical
- ▶ **Fenfluramine** might decrease blood glucose concentrations when given with **meglitinides**. [Moderate] Theoretical
- ▶ **Fenfluramine** might decrease blood glucose concentrations when given with **metformin**. [Moderate] Theoretical

- ▶ **Fenfluramine** might decrease blood glucose concentrations when given with **pioglitazone**. [Moderate] Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the concentration of **fenfluramine**. [Severe] Theoretical
  - ▶ **Fenfluramine** might decrease blood glucose concentrations when given with **sodium glucose co-transporter 2 inhibitors**. [Moderate] Theoretical
  - ▶ **Fenfluramine** might decrease blood glucose concentrations when given with **sulfonylureas**. [Moderate] Theoretical
- Fenofibrate** → see fibrates
- Fentanyl** → see opioids
- Fesoterodine** → see TABLE 10, p. 1492 (antimuscarinics)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment, p. 840. [Mild] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment, p. 840. [Mild] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent CYP3A4 inhibitors; avoid in hepatic and renal impairment, p. 840. [Severe] Study
  - ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **fesoterodine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10, p. 1492
  - ▶ **Bupropion** is predicted to increase the exposure to **fesoterodine**. Use with caution and adjust dose. [Mild] Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment, p. 840. [Mild] Study
  - ▶ **Cinacalcet** is predicted to increase the exposure to **fesoterodine**. Use with caution and adjust dose. [Mild] Theoretical
  - ▶ **Cobicistat** is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent CYP3A4 inhibitors; avoid in hepatic and renal impairment, p. 840. [Severe] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment, p. 840. [Mild] Study
  - ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent CYP3A4 inhibitors; avoid in hepatic and renal impairment, p. 840. [Severe] Study
  - ▶ **Idelalisib** is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent CYP3A4 inhibitors; avoid in hepatic and renal impairment, p. 840. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment, p. 840. [Mild] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment, p. 840. [Mild] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent CYP3A4 inhibitors; avoid in hepatic and renal impairment, p. 840. [Severe] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment, p. 840. [Mild] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **fesoterodine**. Adjust

- fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment, p. 840. [Mild] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment, p. 840. [Mild] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **fesoterodine**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Severe] Theoretical
- ▶ **Terbinafine** is predicted to increase the exposure to **fesoterodine**. Use with caution and adjust dose. [Mild] Theoretical

**Fexofenadine** → see antihistamines, non-sedating

## Fibrates

bezafibrate · ciprofibrate · fenofibrate · gemfibrozil

- ▶ **Acipimox** is predicted to increase the risk of rhabdomyolysis when given with **fibrates**. [Severe] Theoretical
- ▶ **Oral antacids** decrease the exposure to oral **gemfibrozil**. [Moderate] Study
- ▶ **Gemfibrozil** slightly increases the exposure to **anti-androgens (apalutamide)**. [Mild] Study
- ▶ **Gemfibrozil** moderately increases the exposure to **anti-androgens (enzalutamide)**. Avoid or adjust **enzalutamide** dose, p. 1023. [Severe] Study
- ▶ **Bezafibrate** is predicted to increase the risk of nephrotoxicity when given with **ciclosporin**. [Severe] Theoretical
- ▶ **Fenofibrate** increases the risk of nephrotoxicity when given with **ciclosporin**. [Severe] Study
- ▶ **Colchicine** increases the risk of rhabdomyolysis when given with **fibrates**. [Severe] Anecdotal
- ▶ **Fibrates** are predicted to increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Gemfibrozil** is predicted to increase the exposure to **dabrafenib**. [Moderate] Theoretical
- ▶ **Fibrates** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
- ▶ **Fibrates** are predicted to increase the risk of gallstones when given with **ezetimibe**. [Severe] Theoretical
- ▶ **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **insulin**. [Moderate] Theoretical
- ▶ **Gemfibrozil** is predicted to increase the exposure to **irinotecan**. Avoid. [Moderate] Theoretical
- ▶ **Gemfibrozil** is predicted to increase the concentration of **letermovir**. [Moderate] Study
- ▶ **Gemfibrozil** increases the exposure to **meglitinides (repaglinide)**. Avoid. [Severe] Study
- ▶ **Gemfibrozil** is predicted to moderately increase the exposure to **montelukast**. [Moderate] Study
- ▶ **Gemfibrozil** is predicted to increase the exposure to the active metabolites of **ozanimod**. [Moderate] Study
- ▶ **Fibrates** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Gemfibrozil** increases the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. [Severe] Study
- ▶ **Gemfibrozil** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust alitretinoin dose, p. 1356. [Moderate] Theoretical
- ▶ **Gemfibrozil** increases the concentration of **retinoids (bexarotene)**. Avoid. [Severe] Study
- ▶ **Gemfibrozil** moderately increases the exposure to **roxadustat**. Monitor haemoglobin and adjust dose. [Moderate] Study
- ▶ **Gemfibrozil** increases the exposure to **selexipag**. Avoid. [Severe] Study
- ▶ **Ciprofibrate** increases the risk of rhabdomyolysis when given with **statins (atorvastatin)**. Avoid or adjust dose. [Severe] Study
- ▶ **Fenofibrate** increases the risk of rhabdomyolysis when given with **statins (atorvastatin)**. Monitor and adjust **fenofibrate** dose, p. 217. [Severe] Anecdotal
- ▶ **Bezafibrate** increases the risk of rhabdomyolysis when given with **statins (atorvastatin, fluvastatin)**. [Severe] Study
- ▶ **Ciprofibrate** increases the risk of rhabdomyolysis when given with **statins (fluvastatin)**. [Severe] Study

## Fibrates (continued)

- ▶ **Fenofibrate** is predicted to increase the risk of rhabdomyolysis when given with **statins (fluvastatin)**. Use with caution and adjust fenofibrate dose, p. 217. [\[Severe\]](#) Theoretical
- ▶ **Fenofibrate** is predicted to increase the risk of rhabdomyolysis when given with **statins (pravastatin)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Fibrates (**bezafibrate**, **ciprofibrate**) increase the risk of rhabdomyolysis when given with **statins (pravastatin)**. Avoid. [\[Severe\]](#) Study
- ▶ **Fenofibrate** increases the risk of rhabdomyolysis when given with **statins (rosuvastatin)**. Adjust fenofibrate and rosuvastatin doses, p. 217, p. 221. [\[Severe\]](#) Anecdotal
- ▶ Fibrates (**bezafibrate**, **ciprofibrate**) increase the risk of rhabdomyolysis when given with **statins (rosuvastatin)**. Adjust rosuvastatin dose, p. 221. [\[Severe\]](#) Study
- ▶ **Fenofibrate** increases the risk of rhabdomyolysis when given with **statins (simvastatin)**. Adjust fenofibrate dose, p. 217. [\[Severe\]](#) Anecdotal
- ▶ Fibrates (**bezafibrate**, **ciprofibrate**) increase the risk of rhabdomyolysis when given with **statins (simvastatin)**. Adjust simvastatin dose, p. 222. [\[Severe\]](#) Study
- ▶ **Gemfibrozil** increases the risk of rhabdomyolysis when given with **statins**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ Fibrates are predicted to increase the risk of hypoglycaemia when given with **sulfonylureas**. [\[Moderate\]](#) Theoretical
- ▶ **Gemfibrozil** is predicted to increase the concentration of **taxanes (paclitaxel)**. [\[Severe\]](#) Anecdotal
- ▶ **Gemfibrozil** increases the exposure to **trastuzumab**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Gemfibrozil** is predicted to increase the exposure to **tucatinib**. Avoid or adjust tucatinib dose, p. 1085. [\[Severe\]](#) Study
- ▶ Fibrates are predicted to decrease the efficacy of **ursodeoxycholic acid**. Avoid. [\[Severe\]](#) Theoretical

## Fidaxomicin

- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
- ▶ **Lapatinib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
- ▶ **Macrolides** are predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
- ▶ **Neratinib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
- ▶ **Ranolazine** is predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
- ▶ **Rucaparib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
- ▶ **Vandetanib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study

## Filgotinib

- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **abatacept**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **anakinra**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **azathioprine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **baricitinib**. Avoid. [\[Severe\]](#) Theoretical

- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **ciclosporin**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **etanercept**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **leflunomide**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **filgotinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **monoclonal antibodies (adalimumab, certolizumab pegol, golimumab, infliximab, rituximab, sarilumab, secukinumab, tocilizumab)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **tacrolimus**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **teriflunomide**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **tocifitinib**. Avoid. [\[Severe\]](#) Theoretical

**Fingolimod** → see TABLE 6 p. 1491 (bradycardia), TABLE 9 p. 1492 (QT-interval prolongation)

- ▶ **Live vaccines** might increase the risk of generalised infection (possibly life-threatening) when given with **fingolimod**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Monoclonal antibodies (alemtuzumab)** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fingolimod**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **fingolimod**. Avoid. [\[Moderate\]](#) Theoretical

**Flavoxate** → see TABLE 10 p. 1492 (antimuscarinics)

- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **flavoxate**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see TABLE 10 p. 1492

**Flecainide** → see antiarrhythmics

**Flucloxacillin** → see penicillins

**Fluconazole** → see antifungals, azoles

## Flucytosine

- ▶ **Amphotericin B** increases the risk of toxicity when given with **flucytosine**. [\[Severe\]](#) Study
- ▶ **Cytarabine** decreases the concentration of **flucytosine**. Avoid. [\[Severe\]](#) Study
- ▶ **NRTIs (zidovudine)** increase the risk of haematological toxicity when given with **flucytosine**. Monitor and adjust dose. [\[Severe\]](#) Theoretical

**Fludarabine** → see TABLE 15 p. 1493 (myelosuppression)

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fludarabine**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Fludarabine** increases the risk of pulmonary toxicity when given with **pentostatin**. Avoid. [\[Severe\]](#) Study → Also see TABLE 15 p. 1493

**Fludrocortisone** → see corticosteroids

## Fluocinolone

- ▶ With intravitreal use of **fluocinolone** in adults: caution with concurrent administration of anticoagulant or antiplatelet drugs (higher incidence of conjunctival haemorrhage).
- ▶ Interactions do not generally apply to corticosteroids used for topical action unless specified.

**Fluorouracil** → see TABLE 15 p. 1493 (myelosuppression), TABLE 5 p. 1491 (thromboembolism)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application of **fluorouracil**, the possibility of interactions should be borne in mind.

- ▶ **Fluorouracil** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Fluorouracil** increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Folates (folic acid)** are predicted to increase the risk of toxicity when given with **fluorouracil**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Folates (folic acid)** are predicted to increase the risk of toxicity when given with **fluorouracil**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **fluorouracil**. [\[Severe\]](#) Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fluorouracil**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Methotrexate** potentially increases the risk of severe skin reaction when given with topical **fluorouracil**. [\[Severe\]](#) Anecdotal → Also see TABLE 15 p. 1493 → Also see TABLE 5 p. 1491
- ▶ **Metronidazole** increases the risk of toxicity when given with **fluorouracil**. [\[Severe\]](#) Study
- Fluoxetine** → see SSRIs
- Flupentixol** → see TABLE 8 p. 1491 (hypotension), TABLE 11 p. 1492 (CNS depressant effects)
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **flupentixol**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492
- ▶ **Flupentixol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1491
- ▶ **Flupentixol** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1491
- Flurazepam** → see benzodiazepines
- Flurbiprofen** → see NSAIDs
- Flutamide** → see anti-androgens
- Fluticasone** → see corticosteroids
- Fluvastatin** → see statins
- Fluvoxamine** → see SSRIs
- Folates**
  - folic acid • folinic acid • levofolinic acid
- ▶ **Folates** are predicted to decrease the concentration of **antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)**. Monitor concentration and adjust dose. [\[Severe\]](#) Study
- ▶ **Folates** are predicted to increase the risk of toxicity when given with **capecitabine**. [\[Severe\]](#) Anecdotal
- ▶ **Folic acid** is predicted to increase the risk of toxicity when given with **fluorouracil**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Folinic acid** is predicted to increase the risk of toxicity when given with **fluorouracil**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Folates** are predicted to alter the effects of **raltitrexed**. Avoid. [\[Moderate\]](#) Study
- ▶ **Sulfasalazine** is predicted to decrease the absorption of **folates**. [\[Moderate\]](#) Study
- ▶ **Folates** are predicted to increase the risk of toxicity when given with **tegafur**. [\[Severe\]](#) Theoretical
- Folic acid** → see folates
- Folinic acid** → see folates
- Fondaparinux** → see factor XA inhibitors
- Formoterol** → see beta<sub>2</sub> agonists
- Fosamprenavir** → see HIV-protease inhibitors
- Fosaprepitant** → see neurokinin-1 receptor antagonists
- Foscarnet** → see TABLE 2 p. 1490 (nephrotoxicity)
- ▶ **Foscarnet** increases the risk of hypocalcaemia when given with **pentamidine**. [\[Severe\]](#) Anecdotal → Also see TABLE 2 p. 1490
- Fosinopril** → see ACE inhibitors
- Fosphenytoin** → see antiepileptics
- Fostamatinib**
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **fostamatinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **fostamatinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **fostamatinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **fostamatinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Calcium channel blockers (diltiazem)** are predicted to increase the exposure to **fostamatinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **fostamatinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Fostamatinib** potentially alters the anticoagulant effect of **coumarins (warfarin)**. [\[Moderate\]](#) Theoretical
  - ▶ **Fostamatinib** slightly increases the exposure to **digoxin**. Monitor **digoxin** concentration and adjust dose, p. 117. [\[Moderate\]](#) Study
  - ▶ **Grapefruit** juice is predicted to increase the exposure to **fostamatinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **fostamatinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **fostamatinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **fostamatinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **fostamatinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **fostamatinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **fostamatinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Fostamatinib** slightly increases the exposure to **statins (rosuvastatin)**. [\[Moderate\]](#) Study
  - ▶ **Fostamatinib** slightly increases the exposure to **statins (simvastatin)**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
- Fostemsavir**
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to the active metabolite of **fostemsavir**. Avoid. [\[Severe\]](#) Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to the active metabolite of **fostemsavir**. Avoid. [\[Severe\]](#) Study
  - ▶ **Fostemsavir** increases the concentration of **ethinylestradiol** from a combined hormonal contraceptive. Adjust dose—consult product literature. [\[Severe\]](#) Study
  - ▶ **Fostemsavir** is predicted to increase the exposure to **grazoprevir**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to the active metabolite of **fostemsavir**. Avoid. [\[Severe\]](#) Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to the active metabolite of **fostemsavir**. Avoid. [\[Severe\]](#) Study
  - ▶ **St John's wort** is predicted to decrease the exposure to the active metabolite of **fostemsavir**. Avoid. [\[Severe\]](#) Study
  - ▶ **Fostemsavir** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin, simvastatin)**. Adjust starting dose and monitor. [\[Severe\]](#) Theoretical
  - ▶ **Fostemsavir** increases the exposure to **statins (rosuvastatin)**. Adjust starting dose and monitor. [\[Severe\]](#) Study
  - ▶ **Fostemsavir** is predicted to increase the exposure to **tenofوفير alafenamide**. Adjust dose—consult product literature. [\[Moderate\]](#) Theoretical
- Frovatriptan** → see triptans
- Fulvestrant** → see TABLE 5 p. 1491 (thromboembolism)
- Furosemide** → see loop diuretics
- Fusidate**
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **fusidate**. Avoid. [\[Moderate\]](#) Theoretical

## Fusidate (continued)

- ▶ **Fusidate** has been reported to cause rhabdomyolysis when given with **statins**. Avoid. [\[Severe\]](#) Anecdotal

**Gabapentin** → see antiepileptics

**Galantamine** → see anticholinesterases, centrally acting

- ▶ **Ganciclovir** → see TABLE 15 p. 1493 (myelosuppression), TABLE 2 p. 1490 (nephrotoxicity)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Ganciclovir** is predicted to increase the risk of seizures when given with **carbamapenems (imipenem)**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Leflunomide** is predicted to increase the exposure to **ganciclovir**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1493
- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **ganciclovir**. [\[Moderate\]](#) Theoretical
- ▶ **Nitisinone** is predicted to increase the exposure to **ganciclovir**. [\[Moderate\]](#) Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **ganciclovir**. [\[Moderate\]](#) Study

**Gefitinib**

- ▶ Oral **antacids** are predicted to decrease the exposure to oral **gefitinib**. [\[Moderate\]](#) Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **gefitinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **gefitinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Antiepileptics (eslicarbazepine)** are predicted to decrease the exposure to **gefitinib**. [\[Moderate\]](#) Theoretical
- ▶ **Antiepileptics (oxcarbazepine)** decrease the exposure to **gefitinib**. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **gefitinib**. [\[Severe\]](#) Study
- ▶ **Bupropion** is predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Study
- ▶ Oral **calcium salts (calcium carbonate)** -containing antacids are predicted to decrease the exposure to oral **gefitinib**. [\[Moderate\]](#) Theoretical
- ▶ **Cinacalcet** is predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **gefitinib**. [\[Severe\]](#) Study
- ▶ **Gefitinib** is predicted to increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Crizotinib** is predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **gefitinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **gefitinib**. Avoid. [\[Severe\]](#) Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to slightly to moderately decrease the exposure to **gefitinib**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **gefitinib**. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **gefitinib**. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Study
- ▶ **Letermovir** is predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **gefitinib**. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **gefitinib**. Avoid. [\[Severe\]](#) Study

- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Study
  - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **gefitinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Gefitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
  - ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **gefitinib**. [\[Severe\]](#) Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **gefitinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Gefitinib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [\[Severe\]](#) Theoretical
  - ▶ Oral **sodium bicarbonate** -containing antacids are predicted to decrease the exposure to oral **gefitinib**. [\[Moderate\]](#) Theoretical
  - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **gefitinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Terbinafine** is predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Gefitinib** might affect the exposure to **vemurafenib**. [\[Moderate\]](#) Theoretical
- Gemcitabine** → see TABLE 15 p. 1493 (myelosuppression)
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **gemcitabine**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- Gemfibrozil** → see fibrates
- Gemtuzumab ozogamicin** → see TABLE 15 p. 1493 (myelosuppression)
- Gentamicin** → see aminoglycosides
- Gilteritinib**
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **gilteritinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenytoin)** are predicted to decrease the exposure to **gilteritinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **gilteritinib**. [\[Moderate\]](#) Study
  - ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **gilteritinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Ciclosporin** is predicted to increase the exposure to **gilteritinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **gilteritinib**. [\[Moderate\]](#) Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **gilteritinib**. [\[Moderate\]](#) Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **gilteritinib**. [\[Moderate\]](#) Study
  - ▶ **Ivacaftor** is predicted to increase the exposure to **gilteritinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Lapatinib** is predicted to increase the exposure to **gilteritinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **gilteritinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **gilteritinib**. [\[Moderate\]](#) Study
  - ▶ **Neratinib** is predicted to increase the exposure to **gilteritinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Ranolazine** is predicted to increase the exposure to **gilteritinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **gilteritinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Gilteritinib** is predicted to decrease the efficacy of **SSRIs (escitalopram, fluoxetine, sertraline)**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **gilteritinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Vandetanib** is predicted to increase the exposure to **gilteritinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Vemurafenib** is predicted to increase the exposure to **gilteritinib**. [\[Moderate\]](#) Theoretical

**Givosiran**

- ▶ **Givosiran** is predicted to increase the exposure to **agomelatine**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Givosiran** is predicted to increase the exposure to **atomoxetine**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Givosiran** is predicted to increase the exposure to **beta blockers, selective (nebivolol)**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Givosiran** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Givosiran** is predicted to increase the exposure to **eliglustat**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Givosiran** is predicted to increase the exposure to **MAO-B inhibitors (rasagiline)**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Givosiran** is predicted to increase the exposure to **melatonin**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Givosiran** is predicted to increase the exposure to **SNRIs (duloxetine)**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Givosiran** is predicted to increase the exposure to **tizanidine**. Use with caution and adjust dose. [Moderate] Study
- Glasdegib** → see TABLE 9 p. 1492 (QT-interval prolongation)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **glasdegib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **glasdegib**. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [Severe] Study → Also see TABLE 9 p. 1492
  - ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [Severe] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **glasdegib**. Avoid or adjust **glasdegib** dose, p. 1087. [Moderate] Theoretical
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **glasdegib**. Avoid or adjust **glasdegib** dose, p. 1087. [Moderate] Theoretical
  - ▶ **Grapefruit** juice is predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [Severe] Study
  - ▶ **Idealalisib** is predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [Severe] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [Severe] Study → Also see TABLE 9 p. 1492
  - ▶ **Mitotane** is predicted to decrease the exposure to **glasdegib**. Avoid. [Severe] Study
  - ▶ **Modafinil** is predicted to decrease the exposure to **glasdegib**. Avoid or adjust **glasdegib** dose, p. 1087. [Moderate] Theoretical
  - ▶ **NNRTIs (efavirenz, etravirine, nevirapine)** are predicted to decrease the exposure to **glasdegib**. Avoid or adjust **glasdegib** dose, p. 1087. [Moderate] Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **glasdegib**. Avoid. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **glasdegib**. Avoid or adjust **glasdegib** dose, p. 1087. [Moderate] Theoretical
- Glecaprevir**
- ▶ **Anti-androgens (enzalutamide)** are predicted to greatly decrease the concentration of **glecaprevir**. Avoid. [Severe] Study
  - ▶ **Antiarrhythmics (dronedronone)** potentially increase the exposure to **glecaprevir**. [Moderate] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
  - ▶ **Antiepileptics (eslicarbazepine, oxcarbazepine)** potentially decrease the exposure to **glecaprevir**. Avoid. [Severe] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** potentially increase the exposure to **glecaprevir**. [Moderate] Theoretical

- ▶ **Ciclosporin** increases the exposure to **glecaprevir**. Avoid or monitor. [Severe] Study
  - ▶ **Cobicistat** potentially increases the exposure to **glecaprevir**. [Moderate] Theoretical
  - ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **glecaprevir**. Avoid. [Severe] Study
  - ▶ **Crizotinib** potentially decreases the exposure to **glecaprevir**. Avoid. [Severe] Theoretical
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
  - ▶ **Glecaprevir** with pibrentasvir increases the exposure to **digoxin**. [Moderate] Study
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
  - ▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** boosted with ritonavir increase the exposure to **glecaprevir**. Avoid. [Severe] Study
  - ▶ **HIV-protease inhibitors (ritonavir)** increase the exposure to **glecaprevir**. Avoid. [Severe] Study
  - ▶ **Lumacaftor** potentially decreases the exposure to **glecaprevir**. Avoid. [Severe] Theoretical
  - ▶ **Mitotane** is predicted to greatly decrease the concentration of **glecaprevir**. Avoid. [Severe] Study
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **glecaprevir**. Avoid. [Severe] Theoretical
  - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
  - ▶ **Rifamycins (rifampicin)** markedly affect the exposure to **glecaprevir**. Avoid. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
  - ▶ **Glecaprevir** with pibrentasvir markedly increases the exposure to **statins (atorvastatin)**. Avoid. [Severe] Study
  - ▶ **Glecaprevir** with pibrentasvir is predicted to increase the exposure to **statins (fluvastatin)**. [Moderate] Theoretical
  - ▶ **Glecaprevir** with pibrentasvir moderately increases the exposure to **statins (pravastatin)**. Use with caution and adjust **pravastatin** dose. [Moderate] Study
  - ▶ **Glecaprevir** with pibrentasvir moderately increases the exposure to **statins (rosuvastatin)**. Use with caution and adjust **rosuvastatin** dose, p. 221. [Moderate] Study
  - ▶ **Glecaprevir** with pibrentasvir moderately increases the exposure to **statins (simvastatin)**. Avoid. [Moderate] Study
  - ▶ **Glecaprevir** with pibrentasvir slightly increases the exposure to **tacrolimus**. Monitor and adjust dose. [Mid] Study
  - ▶ **Glecaprevir** with pibrentasvir increases the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Moderate] Study
- Glibenclamide** → see sulfonylureas
- Gliclazide** → see sulfonylureas
- Glimepiride** → see sulfonylureas
- Glipizide** → see sulfonylureas
- Glucagon**
- ▶ **Glucagon** increases the anticoagulant effect of **coumarins (warfarin)**. [Severe] Study
- Glucagon-like peptide-1 receptor agonists** → see TABLE 14 p. 1493 (antidiabetic drugs)
- dulaglutide · exenatide · liraglutide · lixisenatide · semaglutide
- ▶ With standard-release **exenatide**: some orally administered drugs should be taken at least 1 hour before, or 4 hours after, exenatide injection.
  - ▶ Some orally administered drugs should be taken at least 1 hour before, or 4 hours after, **lixisenatide** injection.
- ▶ **Fenfluramine** might decrease blood glucose concentrations when given with **glucagon-like peptide-1 receptor agonists**. [Moderate] Theoretical
- Glucosamine**
- ▶ **Glucosamine** potentially decreases the anticoagulant effect of **coumarins (acenocoumarol)**. [Moderate] Anecdotal
  - ▶ **Glucosamine** potentially increases the anticoagulant effect of **coumarins (warfarin)**. Avoid. [Moderate] Anecdotal

**Glycerol phenylbutyrate**

- ▶ Antiepileptics (**valproate**) potentially oppose the effects of glycerol phenylbutyrate. [Moderate] Theoretical
- ▶ Corticosteroids potentially oppose the effects of glycerol phenylbutyrate. [Moderate] Theoretical
- ▶ Haloperidol potentially opposes the effects of glycerol phenylbutyrate. [Moderate] Theoretical

**Glyceryl trinitrate** → see nitrates**Glycopyrronium** → see TABLE 10 p. 1492 (antimuscarinics)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application of **glycopyrronium**, the possibility of interactions should be borne in mind.

- ▶ Antipsychotics, second generation (**clozapine**) can cause constipation, as can **glycopyrronium**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492

**Golimumab** → see monoclonal antibodies**Granisetron** → see 5-HT<sub>3</sub>-receptor antagonists**Grapefruit**

- ▶ Grapefruit juice is predicted to increase the exposure to **abemaciclib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice moderately decreases the exposure to **aliskiren**. Avoid. [Severe] Study
- ▶ Grapefruit juice increases the exposure to antiarrhythmics (**amiodarone**). Avoid. [Moderate] Study
- ▶ Grapefruit juice moderately increases the exposure to antiarrhythmics (**dronedarone**). Avoid. [Severe] Study
- ▶ Grapefruit juice increases the exposure to antiarrhythmics (**propafenone**). Monitor and adjust dose. [Moderate] Study
- ▶ Grapefruit juice slightly increases the exposure to antiepileptics (**carbamazepine**). Monitor and adjust dose. [Moderate] Study
- ▶ Grapefruit juice slightly decreases the exposure to antihistamines, non-sedating (**bilastine**). Bilastine should be taken 1 hour before or 2 hours after grapefruit. [Moderate] Study
- ▶ Grapefruit juice increases the exposure to antihistamines, non-sedating (**rupatadine**). Avoid. [Moderate] Study
- ▶ Grapefruit juice increases the exposure to antimalarials (**artemether**). [Unknown] Study
- ▶ Grapefruit juice is predicted to increase the concentration of antimalarials (**piperazine**). Avoid. [Severe] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to antipsychotics, second generation (**cariprazine**). Avoid. [Moderate] Study
- ▶ Grapefruit juice is predicted to increase the exposure to antipsychotics, second generation (**lurasidone, quetiapine**). Avoid. [Severe] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **avapritinib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **berotralstat**. [Moderate] Theoretical
- ▶ Grapefruit juice greatly decreases the exposure to beta blockers, selective (**celiprolol**). [Moderate] Study
- ▶ Grapefruit juice is predicted to increase the exposure to **bosutinib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the concentration of **brigatinib**. Avoid. [Severe] Study
- ▶ Grapefruit juice increases the exposure to **bupirone**. Avoid. [Mild] Study
- ▶ Grapefruit juice is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ Grapefruit juice very slightly increases the exposure to calcium channel blockers (**amlodipine**). Avoid. [Mild] Study
- ▶ Grapefruit juice increases the exposure to calcium channel blockers (**felodipine**). Avoid. [Moderate] Study
- ▶ Grapefruit juice is predicted to increase the exposure to calcium channel blockers (**lercanidipine**). Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice increases the exposure to calcium channel blockers (**nicardipine**). [Mild] Study
- ▶ Grapefruit juice increases the exposure to calcium channel blockers (**nifedipine, verapamil**). Avoid. [Mild] Study
- ▶ Grapefruit juice is predicted to increase the exposure to **certinib**. Avoid. [Severe] Theoretical
- ▶ Grapefruit juice increases the concentration of **ciclosporin**. Avoid. [Severe] Study
- ▶ Grapefruit juice markedly decreases the exposure to **clopidogrel**. [Severe] Study
- ▶ Grapefruit juice is predicted to increase the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ Grapefruit juice moderately increases the exposure to oral corticosteroids (**budesonide**). Avoid. [Moderate] Study
- ▶ Grapefruit juice is predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ Grapefruit juice is predicted to increase the exposure to **dasatinib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to dipeptidylpeptidase-4 inhibitors (**saxagliptin**). [Mild] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **elexacator**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **eliglustat**. Avoid. [Severe] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **encorafenib**. Avoid. [Moderate] Study
- ▶ Grapefruit juice is predicted to increase the exposure to **entrectinib**. Avoid. [Severe] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **ergometrine**. [Severe] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **ergotamine**. [Severe] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **everolimus**. Avoid. [Severe] Theoretical
- ▶ Grapefruit and grapefruit juice is predicted to increase the exposure to **fedratinib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **foxtamatinib**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **guanfacine**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **ibrutinib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **imatatinib**. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **ivabradine**. Avoid. [Moderate] Study
- ▶ Grapefruit juice is predicted to increase the exposure to **ivacaftor**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **larotrectinib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **lomitapide**. Avoid. [Mild] Theoretical
- ▶ Grapefruit juice is predicted to increase the concentration of **lorlatinib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **mifepristone**. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **naloxegol**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **neratinib**. Avoid. [Severe] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **palbociclib**. Avoid. [Severe] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **pazopanib**. Avoid. [Severe] Theoretical

- ▶ **Grapefruit** and grapefruit juice is predicted to increase the exposure to **pemigatinib**. Avoid. [Severe] Study
- ▶ **Grapefruit** juice is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors**. Use with caution or avoid. [Moderate] Study
- ▶ **Grapefruit** juice increases the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit** juice is predicted to increase the exposure to **ponatinib**. [Moderate] Theoretical
- ▶ **Grapefruit** juice is predicted to increase the exposure to **praziquantel**. [Moderate] Study
- ▶ **Grapefruit** juice is predicted to increase the concentration of **ranolazine**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit** juice is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit** juice is predicted to increase the exposure to **ribociclib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit** juice is predicted to increase the exposure to **ruxolitinib**. [Severe] Theoretical
- ▶ **Grapefruit** juice is predicted to increase the exposure to **selumetinib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit** juice increases the concentration of **sirolimus**. Avoid. [Moderate] Study
- ▶ **Grapefruit** juice moderately increases the exposure to **SSRIs (sertraline)**. Avoid. [Moderate] Study
- ▶ **Grapefruit** juice increases the exposure to **statins (atorvastatin)**. [Mild] Study
- ▶ **Grapefruit** juice increases the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ **Grapefruit** juice is predicted to increase the exposure to **sunitinib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit** juice greatly increases the concentration of **tacrolimus**. Avoid. [Severe] Study
- ▶ **Grapefruit** juice is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Grapefruit** juice is predicted to increase the exposure to **tezacaftor**. Avoid. [Severe] Study
- ▶ **Grapefruit** juice moderately increases the exposure to **ticagrelor**. [Moderate] Study
- ▶ **Grapefruit** juice increases the exposure to **tolvaptan**. Avoid. [Moderate] Study
- ▶ **Grapefruit** juice is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Theoretical
- ▶ **Grapefruit** is predicted to increase the exposure to **upadacitinib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit** juice is predicted to increase the exposure to **venetoclax**. Avoid. [Severe] Theoretical

#### Grass pollen extract

**GENERAL INFORMATION** Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

#### Grazoprevir

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Grazoprevir** is predicted to increase the concentration of **calcium channel blockers**. [Moderate] Theoretical
- ▶ **Ciclosporin** greatly increases the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Dabrafenib** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Elvitegravir** markedly increases the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Fostemsavir** is predicted to increase the exposure to **grazoprevir**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Modafinil** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **grazoprevir**. [Severe] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **NNRTIs (etravirine)** are predicted to decrease the exposure to **grazoprevir**. Avoid. [Mild] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Grazoprevir** moderately increases the exposure to **statins (atorvastatin)**. Adjust atorvastatin dose, p. 220. [Moderate] Study
- ▶ **Grazoprevir** with elbasvir is predicted to increase the exposure to **statins (fluvastatin)**. Adjust fluvastatin dose, p. 220. [Moderate] Theoretical
- ▶ **Grazoprevir** with elbasvir moderately increases the exposure to **statins (rosuvastatin)**. Adjust rosuvastatin dose, p. 221. [Moderate] Study
- ▶ **Grazoprevir** with elbasvir is predicted to increase the exposure to **statins (simvastatin)**. Adjust simvastatin dose, p. 222. [Moderate] Theoretical
- ▶ **Grazoprevir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Grazoprevir** increases the exposure to **tacrolimus**. [Moderate] Study

#### Griseofulvin

**ROUTE-SPECIFIC INFORMATION** Interactions do not generally apply to topical use unless specified.

- ▶ **Alcohol** potentially causes a disulfiram-like reaction when given with **griseofulvin**. [Moderate] Anecdotal
- ▶ **Griseofulvin** is predicted to decrease the efficacy of **anti-androgens (cyproterone)** with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. [Severe] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** decrease the effects of **griseofulvin**. [Moderate] Study
- ▶ **Griseofulvin** potentially decreases the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ▶ **Griseofulvin** potentially decreases the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ▶ **Griseofulvin** decreases the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of oral **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal

**Guanfacine** → see TABLE 8 p. 1491 (hypotension), TABLE 11 p. 1492 (CNS depressant effects)

## Guanfacine (continued)

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the concentration of guanfacine. Adjust guanfacine dose, p. 384. [\[Moderate\]](#) Study
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the concentration of guanfacine. Adjust guanfacine dose, p. 384. [\[Moderate\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of guanfacine. Adjust guanfacine dose, p. 384. [\[Moderate\]](#) Study → Also see TABLE 11 p. 1492
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the concentration of guanfacine. Monitor and adjust guanfacine dose, p. 384. [\[Moderate\]](#) Theoretical
- ▶ **Guanfacine** increases the concentration of **antiepileptics (valproate)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of guanfacine. Adjust guanfacine dose, p. 384. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to guanfacine. Adjust guanfacine dose, p. 384. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of guanfacine. Adjust guanfacine dose, p. 384. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1491
- ▶ **Chloramphenicol** is predicted to increase the exposure to guanfacine. Adjust guanfacine dose, p. 384. [\[Moderate\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to guanfacine. Adjust guanfacine dose, p. 384. [\[Moderate\]](#) Study
- ▶ **Crizotinib** is predicted to increase the concentration of guanfacine. Adjust guanfacine dose, p. 384. [\[Moderate\]](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the concentration of guanfacine. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the concentration of guanfacine. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to guanfacine. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to guanfacine. Adjust guanfacine dose, p. 384. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to guanfacine. Adjust guanfacine dose, p. 384. [\[Moderate\]](#) Study
- ▶ **Imatinib** is predicted to increase the concentration of guanfacine. Adjust guanfacine dose, p. 384. [\[Moderate\]](#) Theoretical
- ▶ **Letermovir** is predicted to increase the concentration of guanfacine. Adjust guanfacine dose, p. 384. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to guanfacine. Adjust guanfacine dose, p. 384. [\[Moderate\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of guanfacine. Adjust guanfacine dose, p. 384. [\[Moderate\]](#) Theoretical
- ▶ **Guanfacine** is predicted to increase the concentration of **metformin**. [\[Moderate\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of guanfacine. Adjust guanfacine dose, p. 384. [\[Moderate\]](#) Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the concentration of guanfacine. Adjust guanfacine dose, p. 384. [\[Moderate\]](#) Theoretical
- ▶ **Neurokinin-1 receptor antagonists (fosaprepitant)** are predicted to increase the concentration of guanfacine. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of guanfacine. Adjust guanfacine dose, p. 384. [\[Moderate\]](#) Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the concentration of guanfacine. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the concentration of guanfacine. Adjust guanfacine dose, p. 384. [\[Moderate\]](#) Study
- ▶ **St John's wort** is predicted to decrease the concentration of guanfacine. Adjust dose. [\[Moderate\]](#) Theoretical

**Guselkumab** → see monoclonal antibodies

**H<sub>2</sub> receptor antagonists**

cimetidine · famotidine · nizatidine · ranitidine

- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **acalabrutinib**. Acalabrutinib should be taken 2 hours before or 10 hours after H<sub>2</sub> receptor antagonists. [\[Moderate\]](#) Theoretical
- ▶ **Cimetidine** decreases the clearance of **albendazole**. [\[Moderate\]](#) Study
- ▶ **Cimetidine** increases the concentration of **aminophylline**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Cimetidine** slightly increases the exposure to **anthracyclines (epirubicin)**. Avoid. [\[Moderate\]](#) Study
- ▶ **Cimetidine** increases the exposure to **antiarrhythmics (amiodarone)**. [\[Moderate\]](#) Study
- ▶ **Cimetidine** slightly increases the exposure to **antiarrhythmics (flecainide)**. Monitor and adjust dose. [\[Mid\]](#) Study
- ▶ **Cimetidine** increases the exposure to **antiarrhythmics (lidocaine)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Cimetidine** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cimetidine** transiently increases the concentration of **antiepileptics (carbamazepine)**. Monitor concentration and adjust dose. [\[Moderate\]](#) Study
- ▶ **Cimetidine** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [\[Severe\]](#) Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **antifungals, azoles (itraconazole)**. Administer itraconazole capsules with an acidic beverage. [\[Moderate\]](#) Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **antifungals, azoles (ketoconazole)**. Administer ketoconazole with an acidic beverage. [\[Moderate\]](#) Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **antifungals, azoles (posaconazole)**. Avoid use of posaconazole oral suspension. [\[Moderate\]](#) Study
- ▶ **Cimetidine** decreases the clearance of **antimalarials (chloroquine)**. [\[Moderate\]](#) Study
- ▶ **Cimetidine** slightly increases the exposure to **antimalarials (quinine)**. [\[Moderate\]](#) Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **bosutinib**. [\[Moderate\]](#) Theoretical
- ▶ **Cimetidine** slightly increases the exposure to **calcium channel blockers (diltiazem, nimodipine)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Cimetidine** (high-dose) is predicted to increase the exposure to **calcium channel blockers (lercanidipine)**. [\[Moderate\]](#) Theoretical
- ▶ **Cimetidine** moderately increases the exposure to **calcium channel blockers (nifedipine)**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Cimetidine** increases the exposure to **calcium channel blockers (verapamil)**. [\[Moderate\]](#) Study
- ▶ **Cimetidine** is predicted to slightly increase the exposure to **capcitabine**. [\[Severe\]](#) Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **ceritinib**. [\[Moderate\]](#) Theoretical
- ▶ **Cimetidine** increases the concentration of **ciclosporin**. [\[Mid\]](#) Study
- ▶ **Cimetidine** increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the concentration of **dacomitinib**. Dacomitinib should be taken 2 hours before or 10 hours after H<sub>2</sub> receptor antagonists. [\[Mid\]](#) Study
- ▶ **Cimetidine** increases the exposure to **darifenacin**. [\[Mid\]](#) Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **dasatinib**. Avoid. [\[Moderate\]](#) Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [\[Moderate\]](#) Theoretical
- ▶ **Cimetidine** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **erlotinib**. Erlotinib should be taken 2 hours before or 10 hours after H<sub>2</sub> receptor antagonists. [\[Moderate\]](#) Study
- ▶ **Cimetidine** increases the concentration of **fampridine**. Avoid. [\[Severe\]](#) Theoretical

- ▶ **Cimetidine** slightly increases the exposure to **fluorouracil**. [Severe] Study
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to slightly to moderately decrease the exposure to **gefitinib**. [Moderate] Study
  - ▶ **H<sub>2</sub> receptor antagonists** decrease the exposure to **HIV-protease inhibitors (atazanavir)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Cimetidine** is predicted to decrease the clearance of **hydroxychloroquine**. [Moderate] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **lapatinib**. Avoid. [Moderate] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 683. [Moderate] Study
  - ▶ **Leflunomide** is predicted to increase the exposure to H<sub>2</sub> receptor antagonists (**cimetidine, famotidine**). [Moderate] Theoretical
  - ▶ **Cimetidine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Mild] Theoretical
  - ▶ **Ranitidine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
  - ▶ **Cimetidine** slightly increases the exposure to **macrolides (erythromycin)**. [Moderate] Study
  - ▶ **Cimetidine** increases the concentration of **mebendazole**. [Moderate] Study
  - ▶ **Cimetidine** increases the exposure to **metformin**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Cimetidine** slightly increases the exposure to **mirtazapine**. Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ **Cimetidine** increases the exposure to **moclobemide**. Adjust **moclobemide** dose, p. 394. [Mild] Study
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists** might affect the absorption of **nilotinib**. H<sub>2</sub> receptor antagonists should be taken 10 hours before or 2 hours after **nilotinib**. [Mild] Theoretical
  - ▶ **Nitisinone** is predicted to increase the exposure to H<sub>2</sub> receptor antagonists (**cimetidine, famotidine**). [Moderate] Study
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **NNRTIs (rilpivirine)**. H<sub>2</sub> receptor antagonists should be taken 12 hours before or 4 hours after **rilpivirine**. [Severe] Study
  - ▶ **Cimetidine** increases the concentration of **opioids (alfentanil)**. Use with caution and adjust dose. [Severe] Study
  - ▶ **Cimetidine** increases the exposure to **opioids (fentanyl)**. [Moderate] Study
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **pazopanib**. H<sub>2</sub> receptor antagonists should be taken 10 hours before or 2 hours after **pazopanib**. [Moderate] Theoretical
  - ▶ **Cimetidine** increases the exposure to **phenindione**. [Severe] Anecdotal
  - ▶ **Cimetidine** slightly increases the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. [Moderate] Study
  - ▶ **Cimetidine** moderately increases the exposure to **praziquantel**. [Moderate] Study
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **selpercatinib**. Manufacturer advises take 2 hours before or 10 hours after H<sub>2</sub> receptor antagonists. [Moderate] Study
  - ▶ **Cimetidine** slightly increases the exposure to **SNRIs (venlafaxine)**. [Mild] Study
  - ▶ **H<sub>2</sub> receptor antagonists** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see ledipasvir with sofosbuvir p. 683, sofosbuvir with velpatasvir p. 685, and sofosbuvir with velpatasvir and voxilaprevir p. 685. [Moderate] Study
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **sotorasib**. Avoid. [Moderate] Study
  - ▶ **Cimetidine** slightly increases the exposure to **SSRIs (citalopram, escitalopram)**. Adjust dose. [Moderate] Study
  - ▶ **Cimetidine** slightly increases the exposure to **SSRIs (paroxetine, sertraline)**. [Moderate] Study
  - ▶ **Cimetidine** is predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
  - ▶ **Teriflunomide** is predicted to increase the exposure to H<sub>2</sub> receptor antagonists (**cimetidine, famotidine**). [Moderate] Study
  - ▶ **Cimetidine** increases the concentration of **theophylline**. Adjust dose. [Severe] Study
  - ▶ **Cimetidine** increases the exposure to **tricyclic antidepressants**. [Moderate] Study
  - ▶ **Cimetidine** slightly increases the exposure to **triptans (zolmitriptan)**. Adjust **zolmitriptan** dose, p. 515. [Mild] Study
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir p. 685. [Moderate] Study
- Haloperidol** → see TABLE 8 p. 1491 (hypotension), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 11 p. 1492 (CNS depressant effects), TABLE 10 p. 1492 (antimuscarinics)
- FOOD AND LIFESTYLE** Dose adjustment might be necessary if smoking started or stopped during treatment.
- ▶ **Anti-androgens (apalutamide, enzalutamide)** decrease the concentration of **haloperidol**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the concentration of **haloperidol**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1492
  - ▶ **Haloperidol** potentially increases the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [Severe] Theoretical
  - ▶ **Antifungals, azoles (itraconazole)** increase the concentration of **haloperidol**. [Moderate] Study
  - ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **haloperidol**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492 → Also see TABLE 10 p. 1492
  - ▶ **Haloperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 9 p. 1492 → Also see TABLE 10 p. 1492
  - ▶ **Haloperidol** potentially opposes the effects of **glycerol phenylbutyrate**. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **haloperidol**. [Severe] Theoretical
  - ▶ **Haloperidol** decreases the effects of **levodopa**. [Severe] Study → Also see TABLE 8 p. 1491
  - ▶ **Mitotane** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **haloperidol**. [Severe] Theoretical
  - ▶ **Rifamycins (rifampicin)** decrease the concentration of **haloperidol**. Adjust dose. [Moderate] Study
  - ▶ **SNRIs (venlafaxine)** slightly increase the exposure to **haloperidol**. [Severe] Study → Also see TABLE 9 p. 1492 → Also see TABLE 11 p. 1492
  - ▶ **Haloperidol** potentially decreases the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
  - ▶ **SSRIs (fluoxetine)** increase the concentration of **haloperidol**. Adjust dose. [Moderate] Anecdotal
  - ▶ **SSRIs (fluvoxamine)** increase the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- Heparin** → see TABLE 16 p. 1494 (increased serum potassium), TABLE 3 p. 1490 (anticoagulant effects)
- ▶ **Andexanet alfa** has been reported to affect the anticoagulant effect of heparin. Avoid. [Severe] Anecdotal
  - ▶ **Ranibizumab** increases the risk of bleeding events when given with heparin. [Severe] Theoretical
- Hepatitis B immunoglobulin** → see immunoglobulins  
**Herpes-zoster vaccine, live** → see live vaccines
- HIV-protease inhibitors**
- atazanavir · darunavir · fosamprenavir · lopinavir · ritonavir · tipranavir
- ▶ Caution on concurrent use of **atazanavir, lopinavir with ritonavir**, and **ritonavir** with drugs that prolong the PR interval.
  - ▶ Caution with concurrent use of **tipranavir** with drugs that increase risk of bleeding.
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 1042. [Severe] Study

## HIV-protease inhibitors (continued)

- ▶ HIV-protease inhibitors are predicted to increase the exposure to **acalabrutinib**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors (**lopinavir**, **ritonavir**) are predicted to increase the exposure to **afatinib**. [Moderate] Study
- ▶ Ritonavir is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ Ritonavir decreases the exposure to **albendazole**. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Severe] Study
- ▶ Ritonavir is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ HIV-protease inhibitors are predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **alpha blockers (doxazosin)**. [Moderate] Study
- ▶ HIV-protease inhibitors (**ritonavir**, **tipranavir**) are predicted to increase the exposure to **amfetamines**. [Severe] Theoretical
- ▶ Ritonavir decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ Ritonavir is predicted to decrease the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
- ▶ Oral **antacids** are predicted to decrease the absorption of oral **atanavir**. Atazanavir should be taken 2 hours before or 1 hour after antacids. [Severe] Theoretical
- ▶ Oral **antacids** are predicted to decrease the absorption of oral **tipranavir**. Separate administration by 2 hours. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **anti-androgens (apalutamide)**. [Mid] Study
- ▶ Ritonavir is predicted to decrease the efficacy of **anti-androgens (cyproterone)** with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. [Severe] Study
- ▶ HIV-protease inhibitors (**lopinavir**, **ritonavir**) are predicted to increase the exposure to **anti-androgens (darolutamide)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **antiarrhythmics (amiodarone)**. Avoid. [Severe] Theoretical
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **antiarrhythmics (disopyramide)**. [Severe] Theoretical
- ▶ HIV-protease inhibitors very markedly increase the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Study
- ▶ Ritonavir is predicted to increase the exposure to **antiarrhythmics (flecainide)**. Avoid or monitor adverse effects. [Severe] Theoretical
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **antiarrhythmics (lidocaine)**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **antiepileptics (carbamazepine)** and **antiepileptics (carbamazepine)** are predicted to decrease the exposure to HIV-protease inhibitors. Monitor and adjust dose. [Severe] Theoretical
- ▶ HIV-protease inhibitors are predicted to affect the exposure to **antiepileptics (fosphenytoin, phenytoin)** and **antiepileptics (fosphenytoin, phenytoin)** decrease the concentration of HIV-protease inhibitors. [Severe] Theoretical
- ▶ Ritonavir slightly decreases the exposure to **antiepileptics (lamotrigine)**. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to very slightly increase the exposure to **antiepileptics (perampanel)**. [Mid] Study
- ▶ HIV-protease inhibitors are predicted to affect the concentration of **antiepileptics (phenobarbital, primidone)** and **antiepileptics (phenobarbital, primidone)** are predicted to decrease the concentration of HIV-protease inhibitors. [Severe] Theoretical
- ▶ Ritonavir is predicted to decrease the concentration of **antiepileptics (valproate)**. [Severe] Anecdotal
- ▶ Antifungals, azoles (**fluconazole**) slightly increase the exposure to **tipranavir**. Avoid or adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**miconazole**) are predicted to increase the concentration of **HIV-protease inhibitors**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**posaconazole**) are predicted to increase the exposure to **HIV-protease inhibitors**. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. Avoid or monitor adverse effects. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **antifungals, azoles (itraconazole)**. Use with caution and adjust dose. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **antifungals, azoles (ketoconazole)**. Use with caution and adjust dose. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to affect the exposure to **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** potentially affect the exposure to **HIV-protease inhibitors**. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ HIV-protease inhibitors decrease the exposure to **antimalarials (atovaquone)**. Avoid if boosted with ritonavir. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ HIV-protease inhibitors are predicted to decrease the exposure to **antimalarials (proguanil)**. Avoid. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to affect the exposure to **antimalarials (quinine)**. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to slightly increase the exposure to **antipsychotics, second generation (aripiprazole)**. Adjust aripiprazole dose, p. 427. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to moderately increase the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Study
- ▶ Ritonavir is predicted to affect the exposure to **antipsychotics, second generation (clozapine)**. Avoid. [Severe] Theoretical
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **antipsychotics, second generation (lurasidone, quetiapine)**. Avoid. [Severe] Study
- ▶ Ritonavir is predicted to decrease the exposure to **antipsychotics, second generation (olanzapine)**. Monitor and adjust dose. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **antipsychotics, second generation (risperidone)**. Adjust dose. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **avapritinib**. Avoid. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Study
- ▶ HIV-protease inhibitors moderately increase the exposure to **benzodiazepines (alprazolam)**. Avoid. [Moderate] Study
- ▶ Ritonavir is predicted to increase the exposure to **benzodiazepines (diazepam, flurazepam)**. Avoid. [Moderate] Theoretical
- ▶ HIV-protease inhibitors are predicted to markedly to very markedly increase the exposure to **benzodiazepines (midazolam)**. Avoid or adjust dose. [Severe] Study
- ▶ HIV-protease inhibitors (**lopinavir**, **ritonavir**) are predicted to increase the exposure to **berotrastal**. [Severe] Study
- ▶ HIV-protease inhibitors (**lopinavir**, **ritonavir**) are predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ Ritonavir is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **beta<sub>2</sub> agonists (salmeterol)**. Avoid. [Severe] Study

- ▶ **Atazanavir** moderately increases the exposure to **bictegravir**. Avoid. [\[Severe\]](#) Study
- ▶ HIV-protease inhibitors (**lopinavir**, **ritonavir**) are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** slightly increase the exposure to **bortezomib**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **brigatinib**. Avoid or adjust brigatinib dose, p. 1048. [\[Severe\]](#) Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **bupropion**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **buspirone**. Adjust buspirone dose, p. 373. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **cabozantinib**. [\[Moderate\]](#) Study
- ▶ **Ritonavir** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [\[Mild\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ceritinib**. Avoid or adjust ceritinib dose, p. 1050. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** increase the concentration of **ciclosporin**. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cilostazol**. Adjust cilostazol dose, p. 252. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Ritonavir** might increase the exposure to **cladribine**. [\[Moderate\]](#) Theoretical
- ▶ **Ritonavir** might decrease the efficacy of **clopidogrel**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **colchicine**. Avoid potent CYP3A4 inhibitors or adjust colchicine dose, p. 1212. [\[Severe\]](#) Study
- ▶ **Atazanavir** affects the exposure to **combined hormonal contraceptives**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Ritonavir** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 859. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **corticosteroids (beclometasone)** (risk with beclometasone is likely to be lower than with other corticosteroids). [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone)**. Avoid or monitor adverse effects. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to affect the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **crizotinib**. Avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **darifenacin**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** very slightly increase the exposure to **delamanid**. [\[Severe\]](#) Study
- ▶ **Ritonavir** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **dienogest**. [\[Moderate\]](#) Study
- ▶ **Ritonavir** increases the concentration of **digoxin**. Adjust dose and monitor concentration. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [\[Moderate\]](#) Study
- ▶ **Atazanavir** (alone or boosted with ritonavir) slightly increases the exposure to **dolutegravir**. Adjust dose—consult product literature. [\[Moderate\]](#) Study
- ▶ **Fosamprenavir** boosted with ritonavir slightly decreases the exposure to **dolutegravir**. Avoid if resistant to HIV-integrase inhibitors. [\[Severe\]](#) Study
- ▶ **Tipranavir** moderately decreases the exposure to **dolutegravir**. Adjust dolutegravir dose, p. 696. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **domperidone**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** increase the exposure to **dopamine receptor agonists (bromocriptine)**. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [\[Moderate\]](#) Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dronabinol**. Adjust dose. [\[Mild\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **drospirenone**. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dutasteride**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **elxacaftor**. Adjust tezacaftor with ivacaftor and elxacaftor p. 320 dose with potent CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** boosted with ritonavir increase the concentration of **elvitegravir**. Refer to specialist literature. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **encorafenib**. Avoid or monitor. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **endothelin receptor antagonists (bosentan)**. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **endothelin receptor antagonists (macitentan)**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **entrectinib**. Avoid potent CYP3A4 inhibitors or adjust entrectinib dose, p. 1056. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Ritonavir** is predicted to decrease the efficacy of **estradiol**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of subdermal **etonogestrel**. [\[Moderate\]](#) Theoretical
- ▶ **Ritonavir** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **everolimus**. Avoid. [\[Severe\]](#) Study
- ▶ **Atazanavir** boosted with ritonavir is predicted to increase the exposure to **factor XA inhibitors (apixaban)**. [\[Severe\]](#) Theoretical

## HIV-protease inhibitors (continued)

- ▶ **Darunavir** boosted with ritonavir or cobicistat is predicted to increase the exposure to **factor XA inhibitors (apixaban)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Ritonavir** is predicted to increase the exposure to **factor XA inhibitors (apixaban)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ HIV-protease inhibitors (**fosamprenavir, tipranavir**) boosted with ritonavir are predicted to increase the exposure to **factor XA inhibitors (apixaban)**. [\[Moderate\]](#) Theoretical
- ▶ **Lopinavir** boosted with ritonavir is predicted to increase the exposure to **factor XA inhibitors (apixaban, rivaroxaban)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Lopinavir** boosted with ritonavir is predicted to slightly increase the exposure to **factor XA inhibitors (edoxaban)**. [\[Severe\]](#) Theoretical
- ▶ **Ritonavir** is predicted to slightly increase the exposure to **factor XA inhibitors (edoxaban)**. [\[Severe\]](#) Theoretical
- ▶ **Darunavir** boosted with ritonavir is predicted to increase the exposure to **factor XA inhibitors (rivaroxaban)**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Ritonavir** moderately increases the exposure to **factor XA inhibitors (rivaroxaban)**. Avoid. [\[Severe\]](#) Study
- ▶ HIV-protease inhibitors (**atazanavir, fosamprenavir, tipranavir**) boosted with ritonavir are predicted to increase the exposure to **factor XA inhibitors (rivaroxaban)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **fedratinib**. Adjust **fedratinib** dose, but avoid depending on other drugs taken—consult product literature, p. 1060. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent CYP3A4 inhibitors; avoid in hepatic and renal impairment, p. 840. [\[Severe\]](#) Study
- ▶ HIV-protease inhibitors (**lopinavir, ritonavir**) are predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **fofostatinib**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **gefitinib**. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **gilteritinib**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ HIV-protease inhibitors (**atazanavir, darunavir, lopinavir**) boosted with ritonavir increase the exposure to **glecaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **Ritonavir** increases the exposure to **glecaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 384. [\[Moderate\]](#) Study
- ▶ **H<sub>2</sub> receptor antagonists** decrease the exposure to **atazanavir**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Ritonavir** is predicted to increase the exposure to **haloperidol**. [\[Severe\]](#) Theoretical
- ▶ **Ritonavir** is predicted to decrease the effects of **hormone replacement therapy**. [\[Moderate\]](#) Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ibrutinib**. Avoid potent CYP3A4 inhibitors or adjust ibrutinib dose, p. 1062. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **imatinitib**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the risk of toxicity when given with **irrotectan**. Avoid. [\[Moderate\]](#) Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **iron chelators (deferiasirox)**. Monitor serum ferritin and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ivabradine**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ivacaftor**. Adjust dose with potent CYP3A4 inhibitors, see ivacaftor p. 317, lumacaftor with ivacaftor p. 318, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **lapatinib**. Avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 1065. [\[Moderate\]](#) Study
- ▶ **Tipranavir** boosted with ritonavir is predicted to decrease the exposure to **ledipasvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ HIV-protease inhibitors (**atazanavir, lopinavir**) boosted with ritonavir are predicted to increase the concentration of **letemovir**. [\[Moderate\]](#) Study
- ▶ **Ritonavir** is predicted to decrease the concentration of **letemovir**. [\[Moderate\]](#) Theoretical
- ▶ **Ritonavir** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **lomitapide**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose, p. 1067. [\[Severe\]](#) Study
- ▶ **Atazanavir** is predicted to increase the exposure to **macrolides (clarithromycin)**. Adjust dose in renal impairment. [\[Severe\]](#) Study
- ▶ **Ritonavir** increases the exposure to **macrolides (clarithromycin)**. Adjust dose in renal impairment. [\[Severe\]](#) Study
- ▶ **Tipranavir** boosted with ritonavir increases the exposure to **macrolides (clarithromycin)** and **macrolides (clarithromycin)** increase the exposure to **tipranavir** boosted with ritonavir. Monitor; adjust dose in renal impairment. [\[Severe\]](#) Study
- ▶ HIV-protease inhibitors (**darunavir, fosamprenavir, lopinavir**) boosted with ritonavir are predicted to increase the exposure to **macrolides (clarithromycin)**. Adjust dose in renal impairment. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **macrolides (erythromycin)**. [\[Severe\]](#) Theoretical
- ▶ **Atazanavir** moderately to markedly increases the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
- ▶ **Darunavir** boosted with ritonavir markedly increases the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
- ▶ **Maraviroc** potentially decreases the exposure to **fosamprenavir** and **fosamprenavir** potentially decreases the exposure to **maraviroc**. Avoid. [\[Severe\]](#) Study
- ▶ **Lopinavir** boosted with ritonavir moderately increases the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
- ▶ **Ritonavir** markedly increases the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of intramuscular **medroxyprogesterone**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **meglitinides (repaglinide)**. [\[Moderate\]](#) Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
- ▶ **Ritonavir** is predicted to increase the clearance of **meixiletine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **mifepristone**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 843. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **mirtazapine**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **modafinil**. [\[Mild\]](#) Theoretical
- ▶ HIV-protease inhibitors (**lopinavir, ritonavir**) are predicted to increase the risk of neutropenia when given with **monoclonal antibodies (brentuximab vedotin)**. Monitor and adjust dose. [\[Severe\]](#) Study

- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **neratinib**. Avoid potent CYP3A4 inhibitors or adjust **neratinib** dose, p. 1069. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **neurokinin-1 receptor antagonists (fosaprepitant)**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **neurokinin-1 receptor antagonists (netupitant)**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, tipranavir)** boosted with **ritonavir** are predicted to increase the exposure to **nintedanib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Nirmatrelvir** boosted with **ritonavir** is predicted to increase the concentration of **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, tipranavir)**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **nitisonein**. Adjust dose. [Moderate] Theoretical
- ▶ **NNRTIs (efavirenz)** decrease the exposure to **HIV-protease inhibitors**. Refer to specialist literature. [Severe] Study
- ▶ **NNRTIs (etravirine)** increase the exposure to **fosamprenavir** boosted with **ritonavir**. Refer to specialist literature. [Moderate] Study
- ▶ **NNRTIs (nevirapine)** decrease the exposure to **HIV-protease inhibitors**. Refer to specialist literature. [Moderate] Study
- ▶ **Tipranavir** decreases the exposure to **NNRTIs (etravirine)**. Avoid. [Severe] Study
- ▶ **Ritonavir** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ▶ **Tipranavir** slightly decreases the exposure to **NRTIs (abacavir)**. Avoid. [Moderate] Study
- ▶ **Tipranavir** slightly decreases the exposure to **NRTIs (zidovudine)**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **olaparib**. Avoid potent CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** boosted with **ritonavir** are predicted to decrease the exposure to **opioids (methadone)**. [Moderate] Study
- ▶ **Ritonavir** is predicted to decrease the concentration of **opioids (morphine)**. [Moderate] Theoretical
- ▶ **Ritonavir** increases the risk of CNS toxicity when given with **opioids (pethidine)**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **osilodrostat**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **oxybutynin**. [Mid] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1072. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 1009. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 1073. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **pemigatinib**. Avoid or adjust **pemigatinib** dose, p. 1074. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 879. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** boosted with **ritonavir** increase the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ **Ritonavir** potentially increases the exposure to **pibrentasvir**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1075. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **praziquantel**. [Mid] Study
- ▶ **HIV-protease inhibitors** given with carbimazole are predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical
- ▶ **Proton pump inhibitors** decrease the exposure to **atazanavir**. Avoid or adjust dose. [Severe] Study
- ▶ **Tipranavir** decreases the exposure to **proton pump inhibitors**. Avoid. [Severe] Study
- ▶ **Atazanavir** increases the exposure to **raltegravir** (high-dose). Avoid. [Moderate] Study
- ▶ **Darunavir** increases the risk of rash when given with **raltegravir**. [Moderate] Study
- ▶ **Fosamprenavir** boosted with **ritonavir** decreases the exposure to **raltegravir** and **raltegravir** decreases the exposure to **fosamprenavir** boosted with **ritonavir**. Avoid. [Severe] Study
- ▶ **Tipranavir** boosted with **ritonavir** is predicted to decrease the exposure to **raltegravir** (high-dose). Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the exposure to **relugolix**. Avoid or take **relugolix** first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust **alitretinoin** dose, p. 1356. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1077. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** slightly decrease the exposure to **ritonavir**. [Severe] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **tipranavir**. Avoid. [Severe] Study
- ▶ **Rifamycins (rifampicin)** are predicted to moderately to markedly decrease the exposure to **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir)**. Avoid. [Severe] Study
- ▶ **Ritonavir** markedly increases the exposure to **rifamycins (rifabutin)**. Avoid or adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, tipranavir)** boosted with **ritonavir** increase the exposure to **rifamycins (rifabutin)**. Monitor and adjust dose. [Severe] Study

## HIV-protease inhibitors (continued)

- ▶ **Ritonavir** is predicted to increase the exposure to **riociguat**. Adjust dose and monitor blood pressure. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **roxilutininib**. Adjust dose and monitor adverse effects. [Moderate] Study
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **tipranavir**) boosted with ritonavir are predicted to decrease the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
- ▶ **Ritonavir** is predicted to decrease the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **selpercatinib**. Adjust selpercatinib dose, p. 1079. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **SNRIs (duloxetine)**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **SNRIs (venlafaxine)**. [Moderate] Study
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **HIV-protease inhibitors**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Tipranavir** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **solifenacin**. Adjust solifenacin p. 842 or tamsulosin with solifenacin p. 848 dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **SSRIs (dapoxetine)**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose, p. 887. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **HIV-protease inhibitors**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **HIV-protease inhibitors** might affect the exposure to **statins (pravastatin)**. [Moderate] Study
- ▶ HIV-protease inhibitors (**atazanavir**, **lopinavir**) are predicted to increase the exposure to **statins (rosuvastatin)**. Avoid or adjust **rosuvastatin** dose, p. 221. [Severe] Study
- ▶ HIV-protease inhibitors (**darunavir**, **ritonavir**) are predicted to increase the exposure to **statins (rosuvastatin)**. Avoid or adjust dose. [Severe] Study
- ▶ HIV-protease inhibitors (**fosamprenavir**, **tipranavir**) are predicted to increase the exposure to **statins (rosuvastatin)**. Use with caution and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1080. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ HIV-protease inhibitors (**darunavir**, **tipranavir**) are predicted to increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [Moderate] Theoretical
- ▶ HIV-protease inhibitors (**lopinavir**, **ritonavir**) are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid or monitor—consult product literature. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **lopinavir**) increase the exposure to **tenofovir alafenamide**. Avoid or adjust dose. [Moderate] Study
- ▶ **Tipranavir** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **lopinavir**) are predicted to increase the risk of renal impairment when given with **tenofovir disoproxil**. [Severe] Anecdotal
- ▶ **Lopinavir** boosted with ritonavir might increase the exposure to **tepotinib**. Avoid. [Severe] Theoretical
- ▶ **Ritonavir** might increase the exposure to **tepotinib**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ **Ritonavir** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **lopinavir**) boosted with ritonavir are predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Anecdotal
- ▶ HIV-protease inhibitors (**fosamprenavir**, **tipranavir**) boosted with ritonavir are predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Theoretical
- ▶ **Ritonavir** decreases the concentration of **thyroid hormones (levothyroxine)**. MHRA advises monitor TSH for at least one month after starting or stopping ritonavir. [Moderate] Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors (**lopinavir**, **ritonavir**) might increase the exposure to **tigecycline**. [Mid] Anecdotal
- ▶ **Ritonavir** moderately decreases the exposure to **tizanidine**. [Mid] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1200. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors, p. 724. [Severe] Study
- ▶ HIV-protease inhibitors (**lopinavir**, **ritonavir**) are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **toremifene**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical
- ▶ HIV-protease inhibitors (**lopinavir**, **ritonavir**) are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- ▶ HIV-protease inhibitors (**ritonavir**, **tipranavir**) are predicted to increase the exposure to **tricyclic antidepressants**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** increase the exposure to **triptans (almotriptan)**. [Mid] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **triptans (eletriptan)**. Avoid. [Severe] Study
- ▶ **Tucatinib** is predicted to increase the exposure to HIV-protease inhibitors (**darunavir**, **tipranavir**). Avoid or adjust dose. [Moderate] Theoretical
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **tipranavir**) boosted with ritonavir are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ **Ritonavir** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal

- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
  - ▶ **Tipranavir** is predicted to increase the exposure to **velpatasvir**. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **demurafenib**. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [Moderate] Study
  - ▶ **Atazanavir** boosted with **ritonavir** increases the concentration of **voxilaprevir**. Avoid. [Severe] Study
  - ▶ **Lopinavir** boosted with **ritonavir** is predicted to increase the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
  - ▶ **Tipranavir** boosted with **ritonavir** is predicted to increase the concentration of **voxilaprevir**. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- Homatropine** → see TABLE 10 p. 1492 (antimuscarinics)
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **homatropine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492

#### Hormone replacement therapy

- ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampamel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
  - ▶ **Hormone replacement therapy** is predicted to alter the exposure to **antiepileptics (lamotrigine)**. [Moderate] Theoretical
  - ▶ **Hormone replacement therapy** decreases the clearance of **dopamine receptor agonists (ropinirole)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
  - ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. [Moderate] Theoretical
  - ▶ **Hormone replacement therapy** is predicted to increase the exposure to **MAO-B inhibitors (selegiline)**. Avoid. [Moderate] Study
  - ▶ **Modafinil** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant)** are predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
  - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
  - ▶ **NSAIDs (etoricoxib)** increase the exposure to **hormone replacement therapy**. [Moderate] Study
  - ▶ **Hormone replacement therapy** potentially opposes the effects of **ospremfene**. Avoid. [Severe] Theoretical
  - ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. [Severe] Theoretical
  - ▶ **Hormone replacement therapy** potentially opposes the effects of **raloxifene**. Avoid. [Severe] Theoretical
  - ▶ **Rifamycins** are predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
  - ▶ **St John's wort** is predicted to decrease the efficacy of **hormone replacement therapy**. [Moderate] Theoretical
  - ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **thalidomide**. [Severe] Theoretical
  - ▶ **Oral hormone replacement therapy** is predicted to decrease the effects of **thyroid hormones**. [Moderate] Theoretical
- Hydralazine** → see TABLE 8 p. 1491 (hypotension)
- ▶ **Diazoxide** increases the risk of severe hypotension when given with **hydralazine**. [Severe] Study → Also see TABLE 8 p. 1491

**Hydrochlorothiazide** → see thiazide diuretics

**Hydrocortisone** → see corticosteroids

**Hydroflumethiazide** → see thiazide diuretics

**Hydromorphone** → see opioids

**Hydroxycarbamide** → see TABLE 15 p. 1493 (myelosuppression)

▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **hydroxycarbamide**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical

**Hydroxychloroquine** → see TABLE 9 p. 1492 (QT-interval prolongation)

- ▶ **Hydroxychloroquine** is predicted to decrease the effects of **agalsidase alfa**. [Moderate] Theoretical
  - ▶ **Hydroxychloroquine** is predicted to decrease the exposure to **agalsidase beta**. [Moderate] Theoretical
  - ▶ **Oral antacids** are predicted to decrease the absorption of oral **hydroxychloroquine**. Separate administration by at least 4 hours. [Moderate] Theoretical
  - ▶ **Calcium salts (calcium carbonate)** are predicted to decrease the absorption of **hydroxychloroquine**. [Moderate] Theoretical
  - ▶ **Hydroxychloroquine** is predicted to decrease the efficacy of oral **cholera vaccine**. [Moderate] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** are predicted to decrease the clearance of **hydroxychloroquine**. [Moderate] Theoretical
  - ▶ **Oral kaolin** is predicted to decrease the absorption of oral **hydroxychloroquine**. [Moderate] Theoretical
  - ▶ **Lanthanum** is predicted to decrease the absorption of **hydroxychloroquine**. Separate administration by at least 2 hours. [Moderate] Theoretical
  - ▶ **Hydroxychloroquine** is predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. [Severe] Theoretical
  - ▶ **Macrolides** might increase the risk of serious cardiovascular adverse effects when given with **hydroxychloroquine**. [Severe] Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Oral magnesium trisilicate** is predicted to decrease the absorption of oral **hydroxychloroquine**. [Moderate] Theoretical
  - ▶ **Hydroxychloroquine** is predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [Severe] Theoretical
  - ▶ **Hydroxychloroquine** is predicted to decrease efficacy **rabies vaccine**. [Moderate] Theoretical
  - ▶ **Hydroxychloroquine** might decrease the effects of **remdesivir**. Avoid. [Moderate] Theoretical
- Hydroxyzine** → see antihistamines, sedating
- Hyoscine** → see TABLE 10 p. 1492 (antimuscarinics)
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **hyoscine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492

**Ibandronate** → see bisphosphonates

**Ibrutinib** → see TABLE 15 p. 1493 (myelosuppression), TABLE 4 p. 1490 (antiplatelet effects)

**FOOD AND LIFESTYLE** Avoid food or drink containing bitter (Seville) oranges as they are predicted to increase the exposure to ibrutinib.

- ▶ **Ibrutinib** is predicted to increase the exposure to **aliskiren**. Separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **ibrutinib**. Avoid or monitor. [Severe] Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose, p. 1062. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors, p. 1062. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ibrutinib**. Avoid or monitor. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors, p. 1062. [Severe] Study

## Ibrutinib (continued)

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ibrutinib**. Avoid potent CYP3A4 inhibitors or adjust **ibrutinib** dose, p. 1062. [Severe] Study
- ▶ **Ibrutinib** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. Separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors, p. 1062. [Severe] Study
- ▶ **Cenobamate** is predicted to decrease the exposure to **ibrutinib**. Adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **ibrutinib**. Avoid potent CYP3A4 inhibitors or adjust **ibrutinib** dose, p. 1062. [Severe] Study
- ▶ **Ibrutinib** is predicted to increase the exposure to **colchicine**. Separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors, p. 1062. [Severe] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **ibrutinib**. Avoid or monitor. [Severe] Study
- ▶ **Ibrutinib** is predicted to increase the exposure to **digoxin**. Separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **ibrutinib**. Avoid or monitor. [Severe] Study
- ▶ **Ibrutinib** is predicted to increase the exposure to **everolimus**. Separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Ibrutinib** is predicted to increase the exposure to **factor XA inhibitors (edoxaban, rivaroxaban)**. Separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Grapefruit** juice is predicted to increase the exposure to **ibrutinib**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ibrutinib**. Avoid potent CYP3A4 inhibitors or adjust **ibrutinib** dose, p. 1062. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ibrutinib**. Avoid potent CYP3A4 inhibitors or adjust **ibrutinib** dose, p. 1062. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors, p. 1062. [Severe] Study → Also see TABLE 15 p. 1493 → Also see TABLE 4 p. 1490
- ▶ **Letermovir** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors, p. 1062. [Severe] Study
- ▶ **Ibrutinib** is predicted to increase the exposure to **loperamide**. Separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ibrutinib**. Avoid potent CYP3A4 inhibitors or adjust **ibrutinib** dose, p. 1062. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors, p. 1062. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ibrutinib**. Avoid or monitor. [Severe] Study → Also see TABLE 15 p. 1493
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors, p. 1062. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (fosaprepitant)** are predicted to slightly increase the exposure to **ibrutinib**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors, p. 1062. [Severe] Study → Also see TABLE 15 p. 1493
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 1062. [Severe] Theoretical

- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **ibrutinib**. Avoid or monitor. [Severe] Study
  - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose, p. 1062. [Severe] Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **ibrutinib**. Avoid or monitor. [Severe] Study
  - ▶ **Ibrutinib** is predicted to increase the exposure to **sirolimus**. Separate administration by at least 6 hours. [Moderate] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **ibrutinib**. Avoid. [Severe] Theoretical
  - ▶ **Ibrutinib** is predicted to increase the exposure to **talazoparib**. Separate administration by at least 6 hours. [Moderate] Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Ibrutinib** is predicted to increase the exposure to **taxanes (docetaxel, paclitaxel)**. Separate administration by at least 6 hours. [Moderate] Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Ibrutinib** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Separate administration by at least 6 hours. [Moderate] Theoretical
  - ▶ **Ibrutinib** is predicted to increase the exposure to **topotecan**. Separate administration by at least 6 hours. [Moderate] Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Tucatinib** is predicted to increase the exposure to **ibrutinib**. Avoid or adjust dose. [Moderate] Theoretical
- Ibuprofen** → see NSAIDs
- Icatibant**
- ▶ **ACE inhibitors** are predicted to decrease the efficacy of **icaticbant** and **icaticbant** is predicted to decrease the efficacy of **ACE inhibitors**. Avoid. [Moderate] Theoretical
- Idarubicin** → see anthracyclines
- Idelalisib**
- ▶ **Idelalisib** is predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 1042. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **acalabrutinib**. Avoid. [Severe] Study
  - ▶ **Idelalisib** is predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Severe] Study
  - ▶ **Idelalisib** is predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **alpha blockers (doxazosin)**. [Moderate] Study
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **anti-androgens (apalutamide)**. [Mild] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **antiarrhythmics (amiodarone)**. Avoid. [Moderate] Theoretical
  - ▶ **Idelalisib** very markedly increases the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
  - ▶ **Idelalisib** is predicted to very slightly increase the exposure to **antiepileptics (perampanel)**. [Mild] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. Avoid or monitor adverse effects. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the concentration of **antimalarials (piperazine)**. [Severe] Theoretical
  - ▶ **Idelalisib** is predicted to slightly increase the exposure to **antipsychotics, second generation (aripiprazole)**. Adjust **aripiprazole** dose, p. 427. [Moderate] Study

- ▶ **Idelalisib** is predicted to moderately increase the exposure to antipsychotics, second generation (**cariprazine**). Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to antipsychotics, second generation (**lurasidone, quetiapine**). Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to antipsychotics, second generation (**risperidone**). Adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **avapritinib**. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study
- ▶ **Idelalisib** moderately increases the exposure to **benzodiazepines (alprazolam)**. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to markedly to very markedly increase the exposure to **benzodiazepines (midazolam)**. Avoid or adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **beta<sub>2</sub> agonists (salmeterol)**. Avoid. [Severe] Study
- ▶ **Idelalisib** slightly increases the exposure to **bortezomib**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **brigatinib**. Avoid or adjust brigatinib dose, p.1048. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **buspirone**. Adjust buspirone dose, p. 373. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **cabozantinib**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ceritinib**. Avoid or adjust ceritinib dose, p.1050. [Severe] Study
- ▶ **Idelalisib** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **cilostazol**. Adjust cilostazol dose, p. 252. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **colchicine**. Avoid potent CYP3A4 inhibitors or adjust colchicine dose, p. 1212. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **corticosteroids (beclometasone)** (risk with beclometasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone)**. Avoid or monitor adverse effects. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Idelalisib** very slightly increases the exposure to **delamanid**. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
- ▶ **Idelalisib** increases the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Idelalisib** is predicted to increase the exposure to **dronabinol**. Adjust dose. [Mild] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **drosipronone**. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **dutasteride**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **elxacaftor**. Adjust tezacaftor with ivacaftor and elxacaftor p. 320 dose with potent CYP3A4 inhibitors. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **endothelin receptor antagonists (macitentan)**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **entrectinib**. Avoid potent CYP3A4 inhibitors or adjust entrectinib dose, p. 1056. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **erlotinib**. Use with caution and adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **esketamine**. Adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the concentration of subdermal **etonogestrel**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **everolimus**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **factor XA inhibitors (apixaban)**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **fedratinib**. Adjust fedratinib dose, but avoid depending on other drugs taken—consult product literature, p. 1060. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **fesoterodine**. Adjust fesoterodine dose with potent CYP3A4 inhibitors; avoid in hepatic and renal impairment, p. 840. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **fostamatinib**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **gefitinib**. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **gilteritinib**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **guanfacine**. Adjust guanfacine dose, p. 384. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ibrutinib**. Avoid potent CYP3A4 inhibitors or adjust ibrutinib dose, p. 1062. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **imatinitib**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study

## Idelalisib (continued)

- ▶ **Idelalisib** is predicted to increase the exposure to **ivacaftor**. Adjust dose with potent CYP3A4 inhibitors, see ivacaftor p. 317, lumacaftor with ivacaftor p. 318, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 1065. [Moderate] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose, p. 1067. [Severe] Study
- ▶ **Idelalisib** markedly increases the exposure to **maraviroc**. Adjust dose. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the concentration of intramuscular **medroxyprogesterone**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **meglitinides (repaglinide)**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **mifepristone**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 843. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **neratinib**. Avoid potent CYP3A4 inhibitors or adjust **neratinib** dose, p. 1069. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **neurokinin-1 receptor antagonists (fosaprepitant)**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **neurokinin-1 receptor antagonists (netupitant)**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **NNTs (efavirenz, nevirapine)** are predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **olaparib**. Avoid potent CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **opioids (methadone)**. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **osilodrostat**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **oxybutynin**. [Mild] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1072. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 1009. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 1073. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **pemigatinib**. Avoid or adjust **pemigatinib** dose, p. 1074. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 879. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1075. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
- ▶ **Idelalisib** given with carbimazole is predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust **alitretinoin** dose, p. 1356. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1077. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **selipercatinib**. Adjust **selipercatinib** dose, p. 1079. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **SNRIs (venlafaxine)**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 842 or tamsulosin with **solifenacin** p. 848 dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **SSRIs (dapoxetine)**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose, p. 887. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1080. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid or monitor—consult product literature. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [Severe] Study

- ▶ **Idelalisib** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Anecdotal
- ▶ **Idelalisib** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tofacitinib**. Adjust tofacitinib dose, p. 1200. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust tolvaptan dose with potent CYP3A4 inhibitors, p. 724. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- ▶ **Idelalisib** increases the exposure to **triptans (almotriptan)**. [Mild] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **triptans (eletriptan)**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- Ifosfamide** → see alkylating agents
- iloprost** → see TABLE 8 p. 1491 (hypotension), TABLE 4 p. 1490 (antiplatelet effects)
- Imatinib** → see TABLE 15 p. 1493 (myelosuppression), TABLE 4 p. 1490 (antiplatelet effects)
- ▶ **Imatinib** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. [Severe] Study → Also see TABLE 4 p. 1490
- ▶ **Imatinib** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust eplerenone dose, p. 210. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **antiarrhythmics (dronedarone)**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (eslicarbazepine)** are predicted to decrease the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Antiepileptics (topiramate)** are predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, posaconazole)** are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the concentration of **antimalarials (piperazine)**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **antipsychotics, second generation (lurasidone)**. Adjust lurasidone dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **antipsychotics, second generation (quetiapine)**. Avoid. [Moderate] Study
- ▶ **Asparaginase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 1493
- ▶ **Imatinib** is predicted to increase the exposure to **avapritinib**. Avoid or adjust avapritinib dose, p. 1045. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **axitinib**. [Moderate] Study → Also see TABLE 15 p. 1493 → Also see TABLE 4 p. 1490
- ▶ **Imatinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **benzodiazepines (alprazolam)**. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **benzodiazepines (midazolam)**. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 1493 → Also see TABLE 4 p. 1490
- ▶ **Imatinib** is predicted to increase the exposure to **brigatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **buspiron**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 15 p. 1493
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Study → Also see TABLE 15 p. 1493
- ▶ **Imatinib** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **colchicine**. Adjust colchicine dose with moderate CYP3A4 inhibitors, p. 1212. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crisantaspase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 1493
- ▶ **Imatinib** is predicted to increase the exposure to **crizotinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dabrafenib**. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 15 p. 1493 → Also see TABLE 4 p. 1490
- ▶ **Imatinib** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [Mild] Study

## Imatinib (continued)

- ▶ **Imatinib** is predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Imatinib** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Imatinib** is predicted to increase the exposure to **elxacaftor**. Adjust tezacaftor with ivacaftor and elxacaftor p. 320 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Imatinib** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust entrectinib dose, p. 1056. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **fesoterodine**. Adjust fesoterodine dose with moderate CYP3A4 inhibitors in hepatic and renal impairment, p. 840. [Mild] Study
- ▶ **Imatinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Grapefruit** juice is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 384. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors, p. 1062. [Severe] Study → Also see TABLE 15 p. 1493 → Also see TABLE 4 p. 1490
- ▶ **Idelalisib** is predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 231. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 317, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elxacaftor p. 320. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1493
- ▶ **Imatinib** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects, p. 67. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **imatinib**. [Moderate] Study → Also see TABLE 15 p. 1493
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [Moderate] Theoretical → Also see TABLE 15 p. 1493
- ▶ **Imatinib** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical
- ▶ **Imatinib** increases the risk of hepatotoxicity when given with **paracetamol**. [Severe] Anecdotal
- ▶ **Imatinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Study → Also see TABLE 4 p. 1490
- ▶ **Pegaspargase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 1493
- ▶ **Imatinib** is predicted to increase the exposure to **pemigatinib**. [Severe] Study
- ▶ **Imatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 878. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **ponatinib**. [Moderate] Study → Also see TABLE 4 p. 1490
- ▶ **Imatinib** is predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **regorafenib**. [Moderate] Study → Also see TABLE 15 p. 1493 → Also see TABLE 4 p. 1490
- ▶ **Imatinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 15 p. 1493
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **roxolitinib**. [Moderate] Study → Also see TABLE 15 p. 1493
- ▶ **Imatinib** is predicted to increase the exposure to **selpercatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study
- ▶ **Imatinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. [Moderate] Theoretical → Also see TABLE 4 p. 1490
- ▶ **St John's wort** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Imatinib** moderately increases the exposure to **statins (simvastatin)**. Monitor and adjust dose. [Severe] Study

- ▶ **Imatinib** is predicted to increase the exposure to **sunitinib**. **[Moderate]** Study → Also see TABLE 15 p. 1493 → Also see TABLE 4 p. 1490
  - ▶ **Imatinib** is predicted to increase the concentration of **tacrolimus**. **[Severe]** Study
  - ▶ **Imatinib** is predicted to increase the exposure to **taxanes (cabazitaxel)**. **[Moderate]** Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Imatinib** is predicted to increase the exposure to **taxanes (docetaxel)**. **[Severe]** Study → Also see TABLE 15 p. 1493
  - ▶ **Imatinib** is predicted to increase the exposure to **taxanes (paclitaxel)**. **[Moderate]** Anecdotal → Also see TABLE 15 p. 1493
  - ▶ **Tedizolid** is predicted to increase the exposure to **imatinib**. Avoid. **[Moderate]** Theoretical
  - ▶ **Imatinib** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. **[Moderate]** Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Imatinib** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. **[Severe]** Study
  - ▶ **Imatinib** causes hypothyroidism when given with **thyroid hormones (levothyroxine)** in thyroidectomy patients. **[Moderate]** Study
  - ▶ **Imatinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust tofacitinib dose, p. 1200. **[Moderate]** Study
  - ▶ **Imatinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust tolvaptan dose with moderate CYP3A4 inhibitors, p. 724. **[Moderate]** Study
  - ▶ **Imatinib** is predicted to increase the exposure to **trazodone**. **[Moderate]** Theoretical
  - ▶ **Imatinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. **[Moderate]** Study
  - ▶ **Imatinib** is predicted to increase the exposure to **vemurafenib**. **[Severe]** Theoretical
  - ▶ **Imatinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. **[Severe]** Study
  - ▶ **Imatinib** is predicted to increase the exposure to **vinca alkaloids**. **[Severe]** Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Imatinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. **[Moderate]** Study
- Imidapril** → see ACE inhibitors  
**Imipenem** → see carbapenems  
**Imipramine** → see tricyclic antidepressants
- Immunoglobulins**
- Anti-D (Rh<sub>0</sub>) immunoglobulin · antithymocyte immunoglobulin (rabbit) · cytomegalovirus immunoglobulin · hepatitis B immunoglobulin · normal immunoglobulin · rabies immunoglobulin · tetanus immunoglobulin · varicella-zoster immunoglobulin
- ▶ **Cytomegalovirus immunoglobulin** is predicted to decrease the efficacy of **live vaccines (Bacillus Calmette-Guérin vaccine, herpes-zoster vaccine, live, influenza vaccine (live), measles, mumps and rubella vaccine, live, rotavirus vaccine, typhoid vaccine, oral)**. Avoid and for 3 months after stopping cytomegalovirus immunoglobulin. **[Moderate]** Theoretical
  - ▶ **Anti-D (Rh<sub>0</sub>) immunoglobulin** is predicted to decrease the efficacy of **live vaccines (Bacillus Calmette-Guérin vaccine, herpes-zoster vaccine, live, influenza vaccine (live), measles, mumps and rubella vaccine, live, rotavirus vaccine, typhoid vaccine, oral, varicella-zoster vaccine)**. Avoid and for 3 months after stopping anti-D (Rh<sub>0</sub>) immunoglobulin. **[Moderate]** Theoretical
  - ▶ **Normal immunoglobulin** is predicted to decrease the efficacy of **live vaccines (Bacillus Calmette-Guérin vaccine, influenza vaccine (live), rotavirus vaccine, typhoid vaccine, oral, varicella-zoster vaccine)**. Avoid and for 3 months after stopping normal immunoglobulin. **[Moderate]** Theoretical
  - ▶ **Varicella-zoster immunoglobulin** is predicted to decrease the efficacy of **live vaccines (Bacillus Calmette-Guérin vaccine, influenza vaccine (live), rotavirus vaccine, typhoid vaccine, oral, varicella-zoster vaccine)**. Avoid and for at least 3 months after stopping varicella-zoster immunoglobulin. **[Moderate]** Theoretical
  - ▶ **Varicella-zoster immunoglobulin** is predicted to decrease the efficacy of **live vaccines (herpes-zoster vaccine, live)**. Avoid and

- for 3 months after stopping varicella-zoster immunoglobulin. **[Moderate]** Theoretical
  - ▶ **Varicella-zoster immunoglobulin** is predicted to decrease efficacy **live vaccines (measles, mumps and rubella vaccine, live)**. Avoid and for at least 3 months after stopping varicella-zoster immunoglobulin. **[Moderate]** Theoretical
  - ▶ **Cytomegalovirus immunoglobulin** is predicted to decrease the exposure to **live vaccines (varicella-zoster vaccine)**. Avoid and for 3 months after stopping cytomegalovirus immunoglobulin. **[Moderate]** Theoretical
  - ▶ **Cytomegalovirus immunoglobulin** is predicted to increase the risk of adverse effects when given with **loop diuretics**. Avoid. **[Moderate]** Theoretical
  - ▶ **Loop diuretics** might increase the risk of adverse effects when given with **normal immunoglobulin**. Avoid. **[Moderate]** Theoretical
  - ▶ **Normal immunoglobulin** is predicted to alter the effects of **monoclonal antibodies (dinutuximab)**. Avoid. **[Severe]** Theoretical
- Indacaterol** → see beta<sub>2</sub> agonists  
**Indapamide** → see thiazide diuretics  
**Indometacin** → see NSAIDs  
**Indoramin** → see alpha blockers  
**Infliximab** → see monoclonal antibodies  
**Influenza vaccine (live)** → see live vaccines  
**Intersen** → see TABLE 2 p. 1490 (nephrotoxicity)
  - ▶ **Drugs with anticoagulant effects** (see TABLE 3 p. 1490) cause bleeding, as can **intersen**; concurrent use might increase the risk of developing this effect. **[Severe]** Theoretical
  - ▶ **Drugs with antiplatelet effects** (see TABLE 4 p. 1490) cause bleeding, as can **intersen**; concurrent use might increase the risk of developing this effect. **[Severe]** Theoretical

**Intotuzumab ozogamicin** → see monoclonal antibodies  
**Insulin** → see TABLE 14 p. 1493 (antidiabetic drugs)
  - ▶ **Fenfluramine** might decrease blood glucose concentrations when given with **insulin**. **[Moderate]** Theoretical
  - ▶ **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **insulin**. **[Moderate]** Theoretical
  - ▶ **Metreleptin** is predicted to increase the risk of hypoglycaemia when given with **insulin**. Monitor blood glucose and adjust dose. **[Severe]** Theoretical

**Interferon beta** → see interferons  
**Interferons** → see TABLE 15 p. 1493 (myelosuppression)

interferon beta · peginterferon alpha · ropeginterferon alpha

  - ▶ **Interferons** are predicted to slightly increase the exposure to **aminophylline**. Adjust dose. **[Moderate]** Theoretical
  - ▶ **Ropeginterferon alpha** is predicted to increase the exposure to **antipsychotics, second generation (risperidone)**. **[Moderate]** Theoretical
  - ▶ **Ropeginterferon alpha** is predicted to increase the exposure to **atomoxetine**. **[Moderate]** Theoretical
  - ▶ **Ropeginterferon alpha** is predicted to increase the exposure to **beta blockers, selective (nebivolol)**. **[Moderate]** Theoretical
  - ▶ **Ropeginterferon alpha** is predicted to increase the exposure to **eliglustat**. **[Moderate]** Theoretical
  - ▶ **Ropeginterferon alpha** is predicted to increase the exposure to **opioids (methadone)**. **[Moderate]** Theoretical
  - ▶ **Interferons** should increase the exposure to **theophylline**. Adjust dose. **[Moderate]** Study
  - ▶ **Ropeginterferon alpha** is predicted to increase the exposure to **vortioxetine**. **[Moderate]** Theoretical

**Ipilimumab** → see monoclonal antibodies  
**Ipratropium** → see TABLE 10 p. 1492 (antimuscarinics)
  - ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **ipratropium**; concurrent use might increase the risk of developing intestinal obstruction. **[Severe]** Theoretical → Also see TABLE 10 p. 1492
  - ▶ **Beta<sub>2</sub> agonists** are predicted to increase the risk of glaucoma when given with **ipratropium**. **[Moderate]** Anecdotal

**Irbesartan** → see angiotensin-II receptor antagonists  
**Irinotecan** → see TABLE 15 p. 1493 (myelosuppression)
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **irinotecan**. Avoid. **[Severe]** Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **irinotecan**. Avoid. **[Severe]** Study

## Irinotecan (continued)

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the risk of toxicity when given with irinotecan. Avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the risk of toxicity when given with irinotecan. Avoid. [Moderate] Study
- ▶ **Fibrates (gemfibrozil)** are predicted to increase the exposure to irinotecan. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the risk of toxicity when given with irinotecan. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the risk of toxicity when given with irinotecan. Avoid. [Moderate] Study
- ▶ **Lapatinib** increases the exposure to the active metabolite of irinotecan. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with irinotecan. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the risk of toxicity when given with irinotecan. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to irinotecan. Avoid. [Severe] Study → Also see TABLE 15 p. 1493
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant)** are predicted to increase the exposure to intravenous irinotecan. [Severe] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (netupitant)** are predicted to increase the exposure to irinotecan. [Moderate] Study
- ▶ **Irinotecan** is predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to irinotecan. [Mild] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to irinotecan. Avoid. [Severe] Study
- ▶ **St John's wort** slightly decreases the exposure to irinotecan. Avoid. [Severe] Study
- ▶ **Irinotecan** is predicted to increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Theoretical

## Iron

- ▶ Oral **antacids** decrease the absorption of oral iron. Manufacturer advises iron should be taken 1 hour before or 2 hours after antacids. [Moderate] Study
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can iron; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Anecdotal
- ▶ Oral iron might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Avoid. [Severe] Theoretical
- ▶ Oral iron decreases the exposure to oral **bictegravir**. Manufacturer advises bictegravir should be taken 2 hours before iron. [Moderate] Study
- ▶ Oral iron decreases the absorption of oral **bisphosphonates (clodronate)**. **Clodronate** should be taken 1 hour before or 2 hours after iron. [Moderate] Study
- ▶ Oral iron is predicted to decrease the absorption of oral **bisphosphonates (ibandronate)**. **Ibandronate** should be taken 1 hour before or 6 hours after iron. [Moderate] Theoretical
- ▶ Oral iron decreases the absorption of oral **bisphosphonates (risedronate)**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral **calcium salts (calcium carbonate)** decrease the absorption of oral iron. **Calcium carbonate** should be taken 1 hour before or 2 hours after iron. [Moderate] Study
- ▶ Oral iron is predicted to decrease the exposure to oral **cabidopag**. [Moderate] Theoretical
- ▶ **Chloramphenicol** decreases the efficacy of iron. [Moderate] Anecdotal
- ▶ Oral iron decreases the absorption of oral **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after iron. [Moderate] Study
- ▶ Oral iron is predicted to decrease the absorption of oral **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after iron. [Severe] Theoretical
- ▶ Oral **entacapone** is predicted to decrease the absorption of oral iron. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ Oral iron is predicted to decrease the absorption of oral **iron chelators (deferiprone)**. [Moderate] Theoretical
- ▶ Oral iron decreases the absorption of oral **levodopa**. [Moderate] Study
- ▶ Oral iron decreases the effects of oral **methyldopa**. [Moderate] Study
- ▶ Oral iron is predicted to decrease the absorption of oral **penicillamine**. Separate administration by at least 2 hours. [Mild] Study
- ▶ Oral iron decreases the exposure to oral **quinolones**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Iron** might decrease the exposure to **roxadustat**. **Roxadustat** should be taken at least 1 hour after iron. [Moderate] Theoretical
- ▶ Oral iron decreases the absorption of oral **tetracyclines**. **Tetracyclines** should be taken 2 to 3 hours after iron. [Moderate] Study
- ▶ Oral iron decreases the absorption of oral **thyroid hormones (levothyroxine)**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ Oral **trientine** potentially decreases the absorption of oral iron. [Moderate] Theoretical
- ▶ Oral **zinc** is predicted to decrease the efficacy of oral iron and oral iron is predicted to decrease the efficacy of oral **zinc**. [Moderate] Study

**Iron chelators** → see TABLE 15 p. 1493 (myelosuppression)

- deferasirox · deferiprone · desferrioxamine · dextrazoxane
- ▶ **Aluminium hydroxide** is predicted to decrease the exposure to **deferasirox**. Avoid. [Moderate] Theoretical
- ▶ **Aluminium hydroxide** is predicted to decrease the absorption of **deferiprone**. Avoid. [Moderate] Theoretical
- ▶ **Deferasirox** is predicted to increase the exposure to **aminophylline**. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **deferasirox**. Monitor serum ferritin and adjust dose. [Moderate] Theoretical
- ▶ **Dextrazoxane** might decrease the absorption of **antiepileptics (fosphenytoin, phenytoin)**. Avoid. [Severe] Theoretical
- ▶ **Deferasirox** is predicted to increase the exposure to **antipsychotics, second generation (clozapine)**. Avoid. [Moderate] Theoretical
- ▶ **Ascorbic acid** is predicted to increase the risk of cardiovascular adverse effects when given with **deferiprone**. [Severe] Theoretical
- ▶ **Ascorbic acid** might increase the risk of cardiovascular adverse effects when given with **desferrioxamine**. Manufacturer advises caution or adjust ascorbic acid dose; monitor cardiac function and avoid concurrent use in those with cardiac failure. [Severe] Theoretical
- ▶ **Aspirin** (high-dose) is predicted to increase the risk of gastrointestinal bleeds when given with **deferasirox**. [Severe] Theoretical
- ▶ **Bisphosphonates** are predicted to increase the risk of gastrointestinal bleeding when given with **deferasirox**. [Severe] Theoretical
- ▶ **Dextrazoxane** might increase the risk of immunosuppression when given with **ciclosporin**. [Severe] Theoretical
- ▶ **Corticosteroids** are predicted to increase the risk of gastrointestinal bleeding when given with **deferasirox**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **deferasirox**. Monitor serum ferritin and adjust dose. [Moderate] Theoretical
- ▶ Oral iron is predicted to decrease the absorption of oral **deferiprone**. [Moderate] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dextrazoxane**. Avoid. [Severe] Theoretical
- ▶ **Deferasirox** moderately increases the exposure to **meglitinides (repaglinide)**. Avoid. [Moderate] Study
- ▶ **Deferasirox** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical

- ▶ **NSAIDs** are predicted to increase the risk of gastrointestinal bleeding when given with **deferasirox**. [Severe] Theoretical
- ▶ **NSAIDs (diclofenac)** are predicted to increase the exposure to **deferiprone**. [Moderate] Theoretical
- ▶ **Deferasirox** is predicted to increase the exposure to **pioglitazone**. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **deferasirox**. Monitor serum ferritin and adjust dose. [Moderate] Study
- ▶ **Deferasirox** is predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose, p. 198. [Moderate] Study
- ▶ **Dextrazoxane** might increase the risk of immunosuppression when given with **tacrolimus**. [Severe] Theoretical
- ▶ **Deferasirox** is predicted to increase the concentration of **taxanes (paclitaxel)**. [Severe] Anecdotal
- ▶ **Deferasirox** increases the exposure to **theophylline**. Avoid. [Moderate] Study
- ▶ **Deferasirox** is predicted to increase the exposure to **tizanidine**. Avoid. [Moderate] Theoretical
- ▶ **Deferasirox** is predicted to increase the exposure to **treprostinil**. Adjust dose. [Moderate] Theoretical
- ▶ **Deferasirox** is predicted to increase the exposure to **tucatinib**. [Moderate] Theoretical
- ▶ **Oral zinc** is predicted to decrease the absorption of oral **deferiprone**. [Moderate] Theoretical
- Isavuconazole** → see antifungals, azoles
- Iso carbamazepine** → see MAOIs, irreversible
- Isoflurane** → see volatile halogenated anaesthetics
- Isonethetene** → see sympathomimetics, vasoconstrictor
- Isoniazid** → see TABLE 1 p. 1490 (hepatotoxicity), TABLE 12 p. 1493 (peripheral neuropathy)

**FOOD AND LIFESTYLE** Avoid tyramine-rich foods (such as mature cheeses, salami, pickled herring, *Bovril*<sup>®</sup>, *Oxo*<sup>®</sup>, *Marmite*<sup>®</sup> or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines) or histamine-rich foods (such as very mature cheese or fish from the scromboid family (e.g. tuna, mackerel, salmon)) with **isoniazid**, as tachycardia, palpitation, hypotension, flushing, headache, dizziness, and sweating reported.

- ▶ **Isoniazid** is predicted to affect the clearance of **aminophylline**. [Severe] Theoretical
- ▶ **Isoniazid** markedly increases the concentration of **antiepileptics (carbamazepine)** and **antiepileptics (carbamazepine)** increase the risk of hepatotoxicity when given with **isoniazid**. Monitor concentration and adjust dose. [Severe] Study → Also see TABLE 1 p. 1490
- ▶ **Isoniazid** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Moderate] Study → Also see TABLE 12 p. 1493
- ▶ **Cycloserine** increases the risk of CNS toxicity when given with **isoniazid**. Monitor and adjust dose. [Moderate] Study
- ▶ **Isoniazid** increases the risk of optic neuropathy when given with **ethambutol**. [Severe] Anecdotal
- ▶ **Isoniazid** decreases the effects of **levodopa**. [Moderate] Study
- ▶ **Isoniazid** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Unknown] Theoretical → Also see TABLE 1 p. 1490
- ▶ **Isoniazid** is predicted to affect the clearance of **theophylline**. [Severe] Anecdotal
- ▶ **Isoniazid** potentially increases the risk of nephrotoxicity when given with **volatile halogenated anaesthetics (methoxyflurane)**. Avoid. [Severe] Theoretical
- Iso sorbide dinitrate** → see nitrates
- Iso sorbide mononitrate** → see nitrates
- Iso retinoin** → see retinoids
- Itraconazole** → see antifungals, azoles
- Ivabradine** → see TABLE 6 p. 1491 (bradycardia), TABLE 9 p. 1492 (QT-interval prolongation)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 231. [Severe] Theoretical → Also see TABLE 6 p. 1491

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 231. [Severe] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ivabradine**. Avoid. [Moderate] Study → Also see TABLE 6 p. 1491
- ▶ **Cobicistat** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 231. [Severe] Theoretical → Also see TABLE 6 p. 1491
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ivabradine**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 231. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 231. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 231. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** decreases the exposure to **ivabradine**. Avoid. [Moderate] Study

## Ivacaftor

- FOOD AND LIFESTYLE** Food or drinks containing bitter (Seville) oranges are predicted to increase the exposure to **ivacaftor**.
- ▶ **Ivacaftor** is predicted to increase the exposure to **afatinib**. [Moderate] Study
  - ▶ **Ivacaftor** is predicted to increase the exposure to **aliskiren**. [Moderate] Study
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
  - ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see **ivacaftor** p. 317, **tezacaftor** with **ivacaftor** p. 319, and **tezacaftor** with **ivacaftor** and **elxacaftor** p. 320. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see **ivacaftor** p. 317, **tezacaftor** with **ivacaftor** p. 319, and **tezacaftor** with **ivacaftor** and **elxacaftor** p. 320. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ivacaftor**. Adjust dose with potent CYP3A4 inhibitors, see **ivacaftor** p. 317, **lumacaftor** with **ivacaftor** p. 318, **tezacaftor** with **ivacaftor** p. 319, and **tezacaftor** with **ivacaftor** and **elxacaftor** p. 320. [Severe] Study
  - ▶ **Ivacaftor** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Study
  - ▶ **Ivacaftor** is predicted to increase the exposure to **berotralstat**. [Severe] Study
  - ▶ **Ivacaftor** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical

**Ivacaftor** (continued)

- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 317, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. [Moderate] Study
- ▶ **Cenobamate** is predicted to decrease the exposure to **ivacaftor**. Adjust dose. [Moderate] Theoretical
- ▶ **Ivacaftor** is predicted to increase the exposure to **ciclosporin**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **ivacaftor**. Adjust dose with potent CYP3A4 inhibitors, see ivacaftor p. 317, lumacaftor with ivacaftor p. 318, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **colchicine**. [Moderate] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **coumarins (warfarin)**. [Moderate] theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 317, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **ivacaftor**. [Moderate] Study
- ▶ **Ivacaftor** slightly increases the exposure to **digoxin**. [Moderate] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **ivacaftor**. [Moderate] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Ivacaftor** is predicted to increase the exposure to **everolimus**. [Moderate] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **factor XA inhibitors (edoxaban, rivaroxaban)**. [Moderate] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ivacaftor**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ivacaftor**. Adjust dose with potent CYP3A4 inhibitors, see ivacaftor p. 317, lumacaftor with ivacaftor p. 318, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ivacaftor**. Adjust dose with potent CYP3A4 inhibitors, see ivacaftor p. 317, lumacaftor with ivacaftor p. 318, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 317, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 317, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. [Moderate] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Ivacaftor** is predicted to increase the exposure to **loperamide**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ivacaftor**. Adjust dose with potent CYP3A4 inhibitors, see ivacaftor p. 317, lumacaftor with ivacaftor p. 318, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 317, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ivacaftor**. Avoid. [Severe] Study

- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 317, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 317, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. [Moderate] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **ivacaftor**. [Moderate] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **sirolimus**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **tacrolimus**. [Moderate] Theoretical
- ▶ **Ivacaftor** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust talazoparib dose, p. 1091. [Severe] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **taxanes (docetaxel)** (oral). [Unknown] Theoretical
- ▶ **Ivacaftor** is predicted to increase the exposure to **taxanes (paclitaxel)** (oral). [Unknown] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. [Moderate] Study
- ▶ **Ivacaftor** might increase the exposure to **tigecycline**. [Mild] Anecdotal
- ▶ **Ivacaftor** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Ivacaftor** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Ivacaftor** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] theoretical
- ▶ **Ivacaftor** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical

**Ivermectin**

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Ivermectin** potentially increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
  - ▶ **Levamisole** increases the exposure to **ivermectin**. [Moderate] Study
- Ixazomib**
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Theoretical
- Ixekizumab** → see monoclonal antibodies
- Kaolin**
- ▶ Oral **kaolin** decreases the absorption of oral **antimalarials (chloroquine)**. Separate administration by at least 4 hours. [Moderate] Study
  - ▶ Oral **kaolin** is predicted to decrease the absorption of oral **hydroxychloroquine**. [Moderate] Theoretical
  - ▶ Oral **kaolin** is predicted to decrease the absorption of oral **tetracyclines**. [Moderate] Theoretical
- Ketamine** → see TABLE 8 p. 1491 (hypotension), TABLE 11 p. 1492 (CNS depressant effects)

- ▶ **Ketamine** is predicted to increase the risk of elevated blood pressure when given with **ergometrine**. [\[Severe\]](#) Theoretical
- ▶ **Memantine** is predicted to increase the risk of CNS adverse effects when given with **ketamine**. Avoid. [\[Severe\]](#) Theoretical
- Ketoconazole** → see antifungals, azoles
- Ketoprofen** → see NSAIDs
- Ketorolac** → see NSAIDs
- Ketotifen** → see antihistamines, sedating
- Labetalol** → see beta blockers, non-selective
- Lacidipine** → see calcium channel blockers
- Lacosamide** → see antiepileptics
- Lamivudine** → see NRTIs
- Lamotrigine** → see antiepileptics
- Lanreotide**
  - ▶ **Beta blockers, non-selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. [\[Moderate\]](#) Theoretical
  - ▶ **Beta blockers, selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. [\[Moderate\]](#) Theoretical
  - ▶ **Lanreotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. [\[Severe\]](#) Theoretical
- Lansoprazole** → see proton pump inhibitors
- Lanthanum**
  - ▶ **Lanthanum** is predicted to decrease the absorption of **antifungals, azoles (ketoconazole)**. Separate administration by at least 2 hours. [\[Moderate\]](#) Theoretical
  - ▶ **Lanthanum** is predicted to decrease the absorption of **antimalarials (chloroquine)**. Separate administration by at least 2 hours. [\[Moderate\]](#) Theoretical
  - ▶ **Lanthanum** is predicted to decrease the absorption of **hydroxychloroquine**. Separate administration by at least 2 hours. [\[Moderate\]](#) Theoretical
  - ▶ **Lanthanum** moderately decreases the exposure to **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after lanthanum. [\[Moderate\]](#) Study
  - ▶ Oral **lanthanum** might decrease the absorption of oral **tetracyclines**. Separate administration by 2 hours. [\[Moderate\]](#) Theoretical
  - ▶ **Lanthanum** decreases the absorption of **thyroid hormones**. Separate administration by 2 hours. [\[Moderate\]](#) Study
- Lapatinib** → see TABLE 9 p. 1492 (QT-interval prolongation)
  - ▶ **Lapatinib** is predicted to increase the exposure to **afatinib**. [\[Moderate\]](#) Study
  - ▶ **Lapatinib** is predicted to increase the exposure to **aliskiren**. [\[Moderate\]](#) Theoretical
  - ▶ **Lapatinib** is predicted to increase the exposure to **alpelisib**. [\[Moderate\]](#) Theoretical
  - ▶ Oral **antacids** is predicted to decrease the absorption of oral **lapatinib**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **lapatinib**. Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 1492
  - ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **lapatinib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **lapatinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **lapatinib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **lapatinib**. Avoid. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
  - ▶ **Lapatinib** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [\[Moderate\]](#) Theoretical
  - ▶ **Lapatinib** is predicted to increase the exposure to **berotralstat**. [\[Severe\]](#) Study
  - ▶ **Lapatinib** is predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [\[Moderate\]](#) Study
  - ▶ **Lapatinib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **lapatinib**. [\[Moderate\]](#) Study
  - ▶ Oral **calcium salts (calcium carbonate)** -containing antacids are predicted to decrease the absorption of oral **lapatinib**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Lapatinib** is predicted to increase the exposure to **ceritinib**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Ciclosporin** might increase the concentration of **lapatinib**. [\[Severe\]](#) Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **lapatinib**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Lapatinib** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose, p. 1212. [\[Moderate\]](#) Theoretical
  - ▶ **Lapatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
  - ▶ **Crizotinib** is predicted to increase the exposure to **lapatinib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **lapatinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Lapatinib** is predicted to increase the exposure to **digoxin**. [\[Moderate\]](#) Theoretical
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **lapatinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Lapatinib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Lapatinib** is predicted to increase the exposure to **everolimus**. [\[Moderate\]](#) Theoretical
  - ▶ **Lapatinib** is predicted to increase the exposure to **factor XA inhibitors (apixaban)**. [\[Moderate\]](#) Theoretical
  - ▶ **Lapatinib** is predicted to slightly increase the exposure to **factor XA inhibitors (edoxaban)**. [\[Severe\]](#) Theoretical
  - ▶ **Lapatinib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Lapatinib** is predicted to increase the exposure to **gilteritinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Grapefruit** juice is predicted to increase the exposure to **lapatinib**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **lapatinib**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **lapatinib**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **lapatinib**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Imatinib** is predicted to increase the exposure to **lapatinib**. [\[Moderate\]](#) Study
  - ▶ **Lapatinib** increases the exposure to the active metabolite of **irinotecan**. Monitor adverse effects and adjust dose. [\[Severe\]](#) Study
  - ▶ **Lapatinib** is predicted to increase the exposure to **larotrectinib**. [\[Mild\]](#) Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **lapatinib**. [\[Moderate\]](#) Study
  - ▶ **Lapatinib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Mild\]](#) Theoretical
  - ▶ **Lapatinib** is predicted to increase the exposure to **loperamide**. [\[Moderate\]](#) Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **lapatinib**. Avoid. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **lapatinib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
  - ▶ **Mitotane** is predicted to decrease the exposure to **lapatinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **lapatinib**. [\[Moderate\]](#) Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **lapatinib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
  - ▶ **Lapatinib** is predicted to increase the exposure to **nintedanib**. [\[Moderate\]](#) Study
  - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **lapatinib**. Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 1492
  - ▶ **Lapatinib** is predicted to increase the exposure to **panobinostat**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Lapatinib** increases the exposure to **pazopanib**. Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 1492
  - ▶ **Lapatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical

**Lapatinib** (continued)

- ▶ **Lapatinib** is predicted to increase the exposure to **pibrentavir**. [Moderate] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Lapatinib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **sirolimus**. [Moderate] Theoretical
- ▶ Oral **sodium bicarbonate**-containing antacids are predicted to decrease the absorption of oral **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Lapatinib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [Severe] Study
- ▶ **Lapatinib** slightly increases the exposure to **taxanes (paclitaxel)**. [Severe] Study
- ▶ **Tedizolid** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. [Severe] Theoretical
- ▶ **Lapatinib** might increase the exposure to **tigecycline**. [Mild] Anecdotal
- ▶ **Lapatinib** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Lapatinib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Lapatinib** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1492

**Larotrectinib**

- ▶ **Antimalarials (chloroquine)** are predicted to decrease the exposure to **larotrectinib**. Avoid simultaneous administration. [Severe] Theoretical
- ▶ **Hydroxychloroquine** is predicted to decrease the exposure to **larotrectinib**. Avoid simultaneous administration. [Severe] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 1065. [Moderate] Study
- ▶ **Larotrectinib** slightly increases the exposure to **benzodiazepines (midazolam)**. Use with caution and adjust dose. [Mild] Study
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **larotrectinib**. [Mild] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 1065. [Moderate] Study
- ▶ **Larotrectinib** potentially decreases the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Eltrombopag** is predicted to increase the exposure to **larotrectinib**. [Mild] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study

- ▶ **Larotrectinib** is predicted to increase the exposure to **ergotamine**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **Grapefruit** juice is predicted to increase the exposure to **larotrectinib**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 1065. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 1065. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **larotrectinib**. [Mild] Study
- ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 1065. [Moderate] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Larotrectinib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **Larotrectinib** is predicted to increase the exposure to **pimozide**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Larotrectinib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Larotrectinib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **larotrectinib**. [Mild] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical

**Ledipasvir**

- ▶ Oral **antacids** are predicted to decrease the exposure to oral **ledipasvir**. Separate administration by 4 hours. [Moderate] Theoretical
- ▶ **Ledipasvir** increases the risk of severe bradycardia or heart block when given with **antiarrhythmics (amiodarone)**. Refer to specialist literature. [Severe] Anecdotal
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
- ▶ **Antiepileptics (fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- ▶ **Calcium salts (calcium carbonate)** are predicted to decrease the exposure to **ledipasvir**. Separate administration by 4 hours. [Moderate] Theoretical
- ▶ **Ledipasvir** is predicted to increase the exposure to **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 683. [Moderate] Study
- ▶ **HIV-protease inhibitors (tipranavir)** boosted with ritonavir are predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 683. [Moderate] Theoretical
- ▶ **Rifamycins (rifabutin)** are predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **ledipasvir**. Separate administration by at least 2 hours. [Moderate] Theoretical

- ▶ **St John's wort** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
  - ▶ **Ledipasvir** with sofosbuvir is predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Moderate] Anecdotal
  - ▶ **Ledipasvir** with sofosbuvir is predicted to increase the exposure to **statins (fluvastatin, pravastatin, simvastatin)**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Ledipasvir** with sofosbuvir is predicted to increase the exposure to **statins (rosuvastatin)**. Avoid. [Severe] Theoretical
  - ▶ **Ledipasvir** with sofosbuvir slightly increases the exposure to **tenofovir disoproxil**. [Moderate] Study
  - ▶ **Ledipasvir** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. [Moderate] Theoretical
  - Leflunomide** → see TABLE 1 p. 1490 (hepatotoxicity), TABLE 15 p. 1493 (myelosuppression)
- PHARMACOLOGY** Leflunomide has a long half-life; without procedure recommended before switching to other DMARDs (consult product literature).
- ▶ **Leflunomide** is predicted to increase the exposure to **adefovir**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **alpelisib**. [Moderate] Theoretical
  - ▶ **Leflunomide** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
  - ▶ **Leflunomide** is predicted to decrease the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **anthracyclines (daunorubicin, doxorubicin, mitoxantrone)**. [Moderate] Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Leflunomide** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Study
  - ▶ **Leflunomide** is predicted to decrease the exposure to **antipsychotics, second generation (clozapine)**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to decrease the exposure to **antipsychotics, second generation (olanzapine)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Leflunomide** is predicted to increase the exposure to **baricitinib**. [Moderate] Study
  - ▶ **Leflunomide** is predicted to increase the exposure to **berotralstat**. [Severe] Theoretical
  - ▶ **Leflunomide** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Leflunomide** is predicted to increase the exposure to **cephalosporins (cefactor)**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **cladribine**. Avoid or adjust dose. [Moderate] Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Leflunomide** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
  - ▶ **Leflunomide** is predicted to increase the exposure to **endothelin receptor antagonists (bosentan)**. [Moderate] Study
  - ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **leflunomide**. Avoid. [Severe] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **ganciclovir**. [Moderate] Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Leflunomide** is predicted to increase the exposure to **H<sub>2</sub> receptor antagonists (cimetidine, famotidine)**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **larotrectinib**. [Mid] Study
  - ▶ **Leflunomide** is predicted to increase the concentration of **letemovir**. [Moderate] Study
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **leflunomide**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **loop diuretics (furosemide)**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **meglitinides (repaglinide)**. [Moderate] Study
  - ▶ **Leflunomide** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **methotrexate**. [Moderate] Theoretical → Also see TABLE 1 p. 1490 → Also see TABLE 15 p. 1493
  - ▶ **Leflunomide** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Leflunomide** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **NRTIs (zidovudine)**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **NSAIDs (indometacin, ketoprofen)**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **oseltamivir**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to the active metabolites of **ozanimod**. Avoid. [Moderate] Study
  - ▶ **Leflunomide** is predicted to increase the exposure to **penicillins (benzylpenicillin)**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **pioglitazone**. [Moderate] Study
  - ▶ **Leflunomide** is predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **quinolones (ciprofloxacin)**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **rifamycins (rifampicin)**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **selexipag**. Adjust selexipag dose, p. 198. [Moderate] Study
  - ▶ **Leflunomide** is predicted to decrease the exposure to **SNRIs (duloxetine)**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin, pravastatin, simvastatin)**. [Moderate] Study → Also see TABLE 1 p. 1490
  - ▶ **Leflunomide** is predicted to increase the exposure to **statins (rosuvastatin)**. Adjust dose. [Moderate] Study → Also see TABLE 1 p. 1490
  - ▶ **Leflunomide** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 1 p. 1490 → Also see TABLE 15 p. 1493
  - ▶ **Leflunomide** is predicted to increase the exposure to **sulfonylureas (glibenclamide)**. [Moderate] Study
  - ▶ **Leflunomide** is predicted to increase the exposure to **talazoparib**. Avoid or monitor. [Moderate] Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Leflunomide** is predicted to increase the concentration of **taxanes (paclitaxel)**. [Severe] Anecdotal → Also see TABLE 15 p. 1493
  - ▶ **Leflunomide** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
  - ▶ **Leflunomide** moderately decreases the exposure to **tizanidine**. [Mid] Study
  - ▶ **Leflunomide** is predicted to increase the exposure to **topotecan**. [Moderate] Study → Also see TABLE 15 p. 1493
  - ▶ **Leflunomide** is predicted to increase the exposure to **tucatinib**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
  - Lenalidomide** → see TABLE 1 p. 1490 (hepatotoxicity), TABLE 15 p. 1493 (myelosuppression), TABLE 5 p. 1491 (thromboembolism)
  - ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. Avoid. [Severe] Theoretical
  - ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. [Moderate] Theoretical
  - Lenvatinib** → see TABLE 9 p. 1492 (QT-interval prolongation), TABLE 4 p. 1490 (antiplatelet effects)
  - Lercanidipine** → see calcium channel blockers
  - Letemovir**
  - ▶ **Letemovir** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study

## Letemrovir (continued)

- ▶ **Letemrovir** is predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. [Severe] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust eplerenone dose, p. 210. [Severe] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- ▶ **Letemrovir** is predicted to increase the concentration of **antiarrhythmics (amiodarone)**. [Moderate] Theoretical
- ▶ **Letemrovir** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, phenobarbital, primidone)** are predicted to decrease the concentration of **letemrovir**. [Moderate] Theoretical
- ▶ **Letemrovir** is predicted to decrease the concentration of **antiepileptics (fosphenytoin, phenytoin)** and **antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the concentration of **letemrovir**. [Moderate] Theoretical
- ▶ **Letemrovir** slightly decreases the exposure to **antifungals, azoles (voriconazole)**. [Moderate] Study
- ▶ **Letemrovir** is predicted to increase the concentration of **antihistamines, non-sedating (fexofenadine)**. [Moderate] Theoretical
- ▶ **Letemrovir** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ **Letemrovir** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Letemrovir** is predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **Letemrovir** is predicted to increase the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **antipsychotics, second generation (quetiapine)**. Avoid. [Moderate] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **avapritinib**. Avoid or adjust avapritinib dose, p. 1045. [Moderate] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **axitinib**. [Moderate] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Letemrovir** is predicted to increase the exposure to **benzodiazepines (alprazolam)**. [Severe] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **benzodiazepines (midazolam)**. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **brigatinib**. [Moderate] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **cabozantinib**. [Moderate] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicanidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **ceritinib**. [Moderate] Study
- ▶ **Letemrovir** increases the exposure to **ciclosporin** and **ciclosporin** increases the exposure to **letemrovir**. Monitor and adjust **letemrovir** dose, p. 693. [Severe] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **cobimetinib**. [Severe] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors, p. 1212. [Severe] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Letemrovir** is predicted to decrease the concentration of **coumarins (warfarin)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Letemrovir** is predicted to increase the exposure to **crizotinib**. [Moderate] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **dabrafenib**. [Moderate] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ **Letemrovir** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [Mild] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ **Letemrovir** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **elxacaftor**. Adjust tezacaftor with ivacaftor and elxacaftor p. 320 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
- ▶ **Letemrovir** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eltrombopag** is predicted to increase the concentration of **letemrovir**. [Moderate] Study
- ▶ **Letemrovir** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
- ▶ **Letemrovir** is predicted to increase the concentration of **endothelin receptor antagonists (bosentan)**. [Moderate] Theoretical
- ▶ **Letemrovir** is predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 1056. [Severe] Theoretical
- ▶ **Letemrovir** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Letemrovir** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Letemrovir** is predicted to increase the exposure to **erlotinib**. [Moderate] Study
- ▶ **Letemrovir** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment, p. 840. [Mild] Study
- ▶ **Fibrates (gemfibrozil)** are predicted to increase the concentration of **letemrovir**. [Moderate] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Letemrovir** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 384. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** boosted with ritonavir are predicted to increase the concentration of **letemrovir**. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the concentration of **letemrovir**. [Moderate] Theoretical
- ▶ **Letemrovir** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors, p. 1062. [Severe] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **imatinitib**. [Moderate] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 317, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elxacaftor p. 320. [Moderate] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the concentration of **letemrovir**. [Moderate] Study
- ▶ **Letemrovir** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the concentration of **letemrovir**. [Moderate] Study
- ▶ **Letemrovir** is predicted to increase the concentration of **meglitinides (repaglinide)**. Avoid. [Moderate] Theoretical

- ▶ **Letermovir** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
  - ▶ **Modafinil** is predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects, p. 67. [Moderate] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. [Severe] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **nilotinib**. [Moderate] Study
  - ▶ **NNRTIs (efavirenz)** are predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
  - ▶ **NNRTIs (etravirine)** are predicted to decrease the exposure to **letermovir**. [Moderate] Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [Moderate] Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **pazopanib**. [Moderate] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **pemigatinib**. [Severe] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 878. [Moderate] Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. [Moderate] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **ponatinib**. [Moderate] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **ranolazine**. [Severe] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **regorafenib**. [Moderate] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **ribociclib**. [Moderate] Study
  - ▶ **Rifamycins (rifabutin)** are predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to affect the concentration of **letermovir**. [Severe] Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **roxolitinib**. [Moderate] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **selpercatinib**. [Moderate] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study
  - ▶ **Letermovir** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. [Moderate] Theoretical
  - ▶ **St John's wort** is predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
  - ▶ **Letermovir** moderately increases the exposure to **statins (atorvastatin)**. Avoid or adjust **atorvastatin** dose, p. 220. [Severe] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **statins (fluvastatin)**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **statins (pravastatin)**. Avoid or adjust dose. [Moderate] Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **statins (rosuvastatin, simvastatin)**. Avoid. [Severe] Study
  - ▶ **Letermovir** is predicted to increase the concentration of **sulfonylureas (glibenclamide)**. [Moderate] Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **sunitinib**. [Moderate] Study
  - ▶ **Letermovir** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **taxanes (docetaxel)**. [Severe] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Anecdotal
  - ▶ **Teriflunomide** is predicted to increase the concentration of **letermovir**. [Moderate] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see **tezacaftor** with **ivacaftor** p. 319 and **tezacaftor** with **ivacaftor** and **elxacaftor** p. 320. [Severe] Study
  - ▶ **Letermovir** is predicted to decrease the concentration of **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Theoretical
  - ▶ **Letermovir** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. [Moderate] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. [Moderate] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- Levamisole**
- ▶ **Albendazole** slightly decreases the exposure to **levamisole** and **levamisole** moderately decreases the exposure to **albendazole**. [Moderate] Study
  - ▶ **Alcohol** potentially causes a disulfiram-like reaction when given with **levamisole**. [Moderate] Study
  - ▶ **Levamisole** increases the exposure to **ivermectin**. [Moderate] Study
- Levetiracetam** → see antiepileptics
- Levobunolol** → see beta blockers, non-selective
- Levobupivacaine** → see anaesthetics, local
- Levocetirizine** → see antihistamines, non-sedating
- Levodopa** → see TABLE 8 p. 1491 (hypotension)
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of **levodopa**. [Moderate] Study
  - ▶ **Antipsychotics, second generation (amisulpride)** are predicted to decrease the effects of **levodopa**. Avoid. [Severe] Theoretical
  - ▶ **Antipsychotics, second generation (aripiprazole, clozapine, lurasidone, paliperidone)** are predicted to decrease the effects of **levodopa**. [Moderate] Theoretical → Also see TABLE 8 p. 1491
  - ▶ **Antipsychotics, second generation (asenapine)** are predicted to decrease the effects of **levodopa**. Adjust dose. [Severe] Theoretical → Also see TABLE 8 p. 1491
  - ▶ **Antipsychotics, second generation (olanzapine)** decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Anecdotal → Also see TABLE 8 p. 1491
  - ▶ **Antipsychotics, second generation (quetiapine)** decrease the effects of **levodopa**. [Severe] Anecdotal → Also see TABLE 8 p. 1491

**Levodopa** (continued)

- ▶ **Antipsychotics, second generation (risperidone)** are predicted to decrease the effects of **levodopa**. Avoid or adjust dose. [Severe] Anecdotal → Also see TABLE 8 p. 1491
  - ▶ **Baclofen** is predicted to increase the risk of adverse effects when given with **levodopa**. [Severe] Anecdotal → Also see TABLE 8 p. 1491
  - ▶ **Benperidol** is predicted to decrease the effects of **levodopa**. [Severe] Study → Also see TABLE 8 p. 1491
  - ▶ **Bupropion** increases the risk of adverse effects when given with **levodopa**. [Moderate] Study
  - ▶ **Droperidol** decreases the effects of **levodopa**. [Severe] Study → Also see TABLE 8 p. 1491
  - ▶ **Drugs with antimuscarinic effects** (see TABLE 10 p. 1492) decrease the absorption of **levodopa**. [Moderate] Theoretical
  - ▶ **Entacapone** increases the exposure to **levodopa**. Monitor adverse effects and adjust dose. [Moderate] Study
  - ▶ **Flupentixol** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Theoretical → Also see TABLE 8 p. 1491
  - ▶ **Haloperidol** decreases the effects of **levodopa**. [Severe] Study → Also see TABLE 8 p. 1491
  - ▶ Oral **iron** decreases the absorption of oral **levodopa**. [Moderate] Study
  - ▶ **Isoniazid** decreases the effects of **levodopa**. [Moderate] Study
  - ▶ **Levodopa** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
  - ▶ **Loxapine** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1491
  - ▶ **MAO-B inhibitors** are predicted to increase the effects of **levodopa**. Adjust dose. [Mild] Study → Also see TABLE 8 p. 1491
  - ▶ **Levodopa** increases the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Study → Also see TABLE 8 p. 1491
  - ▶ **Memantine** is predicted to increase the effects of **levodopa**. [Moderate] Theoretical
  - ▶ **Metoclopramide** decreases the effects of **levodopa**. Avoid. [Moderate] Study
  - ▶ **Levodopa** increases the risk of adverse effects when given with **moclobemide**. [Moderate] Study
  - ▶ **Opicapone** increases the exposure to **levodopa**. Adjust dose. [Moderate] Study
  - ▶ **Phenothiazines** decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Study → Also see TABLE 8 p. 1491
  - ▶ **Pimozide** decreases the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1491
  - ▶ **Sulpiride** is predicted to decrease the effects of **levodopa**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1491
  - ▶ **Tetrabenazine** is predicted to decrease the effects of **levodopa**. Use with caution or avoid. [Moderate] Theoretical
  - ▶ **Tolcapone** increases the exposure to **levodopa**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Tryptophan** greatly decreases the concentration of **levodopa**. [Moderate] Study
  - ▶ **Zuclophentixol** is predicted to decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Theoretical → Also see TABLE 8 p. 1491
- Levofloxacin** → see quinolones  
**Levofolinic acid** → see folates  
**Levomepromazine** → see phenothiazines  
**Levonorgestrel**
- ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
  - ▶ **Griseofulvin** potentially decreases the efficacy of oral **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal

- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the efficacy of **levonorgestrel**. Use additional contraceptive precautions. [Severe] Theoretical
  - ▶ **Modafinil** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant)** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
  - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
  - ▶ **Rifamycins** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
  - ▶ **St John's wort** is predicted to decrease the efficacy of **levonorgestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
  - ▶ **Sugammadex** is predicted to decrease the exposure to **levonorgestrel**. Use additional contraceptive precautions. [Severe] Theoretical
  - ▶ **Levonorgestrel** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of **levonorgestrel**. Avoid. [Severe] Theoretical
- Levothyroxine** → see thyroid hormones  
**Lidocaine** → see antiarrhythmics  
**Lineagliptin** → see dipeptidylpeptidase-4 inhibitors  
**Linezolid** → see TABLE 13 p. 1493 (serotonin syndrome)

**FOOD AND LIFESTYLE** Patients taking linezolid should avoid consuming large amounts of tyramine-rich foods (such as mature cheese, salami, pickled herring, Bovril<sup>®</sup>, Oxo<sup>®</sup>, Marmite<sup>®</sup> or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- ▶ **Beta<sub>2</sub> agonists** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Bupropion** is predicted to increase the risk of intraoperative hypertension when given with **linezolid**. [Severe] Anecdotal
- ▶ **Buspiron** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Levodopa** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** increase the exposure to **linezolid**. [Moderate] Anecdotal
- ▶ **MAO-B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of adverse effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1493
- ▶ **MAO-B inhibitors (safinamide)** are predicted to increase the risk of adverse effects when given with **linezolid**. Avoid and for 1 week after stopping **safinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1493
- ▶ **MAOIs, irreversible** are predicted to increase the risk of adverse effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1493
- ▶ **Methylphenidate** might increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Moclobemide** is predicted to increase the risk of adverse effects when given with **linezolid**. Avoid and for 14 days after stopping **moclobemide**. [Severe] Theoretical → Also see TABLE 13 p. 1493
- ▶ **Ozanimod** might increase the risk of a hypertensive crisis when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** slightly decrease the exposure to **linezolid**. [Moderate] Study
- ▶ **Sympathomimetics, inotropic** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical

- ▶ **Sympathomimetics, vasoconstrictor (adrenaline/epinephrine, ephedrine, isometheptene, noradrenaline/norepinephrine, phenylephrine)** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Sympathomimetics, vasoconstrictor (pseudoephedrine)** increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Study
- Liothyronine** → see thyroid hormones
- Liraglutide** → see glucagon-like peptide-1 receptor agonists
- Lisdexamfetamine** → see amfetamines
- Lisinopril** → see ACE inhibitors
- Lithium** → see TABLE 13 p. 1493 (serotonin syndrome), TABLE 9 p. 1492 (QT-interval prolongation)
- ▶ **ACE inhibitors** are predicted to increase the concentration of **lithium**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Acetazolamide** alters the concentration of **lithium**. [Severe] Anecdotal
- ▶ **Aldosterone antagonists (eplerenone)** potentially increase the concentration of **lithium**. Avoid. [Moderate] Theoretical
- ▶ **Aldosterone antagonists (spironolactone)** potentially increase the concentration of **lithium**. [Moderate] Study
- ▶ **Aminophylline** is predicted to decrease the concentration of **lithium**. [Moderate] Theoretical
- ▶ **Angiotensin-II receptor antagonists** potentially increase the concentration of **lithium**. Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ **Antiepileptics (carbamazepine, oxcarbazepine)** are predicted to increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ **Antipsychotics, second generation (quetiapine, risperidone)** potentially increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1492
- ▶ **Calcitonins** decrease the concentration of **lithium**. Adjust dose. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ **Loop diuretics** increase the concentration of **lithium**. Monitor and adjust dose. [Severe] Study
- ▶ **Methyl dopa** increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ **Metronidazole** is predicted to increase the concentration of **lithium**. Avoid or adjust dose. [Severe] Anecdotal
- ▶ **Mexiletine** potentially affects the exposure to **lithium**. Avoid. [Unknown] Theoretical
- ▶ **NSAIDs** increase the concentration of **lithium**. Monitor and adjust dose. [Severe] Study
- ▶ **Phenothiazines** potentially increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1492
- ▶ **Potassium-sparing diuretics (triamterene)** potentially increase the clearance of **lithium**. [Moderate] Study
- ▶ **Sodium bicarbonate** decreases the concentration of **lithium**. [Severe] Anecdotal
- ▶ **Sulpiride** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1492
- ▶ **Tetracyclines** are predicted to increase the risk of **lithium** toxicity when given with **lithium**. Avoid or adjust dose. [Severe] Anecdotal
- ▶ **Theophylline** is predicted to decrease the concentration of **lithium**. Monitor concentration and adjust dose. [Moderate] Anecdotal
- ▶ **Thiazide diuretics** increase the concentration of **lithium**. Avoid or adjust dose and monitor concentration. [Severe] Study
- ▶ **Tricyclic antidepressants** potentially increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 13 p. 1493 → Also see TABLE 9 p. 1492
- ▶ **Zuclopenthixol** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1492

#### Live vaccines

Bacillus Calmette-Guérin vaccine · herpes-zoster vaccine, live · influenza vaccine (live) · measles, mumps and rubella vaccine, live · rotavirus vaccine · typhoid vaccine, oral · varicella-zoster vaccine ·

yellow fever vaccine, live

**GENERAL INFORMATION** **Oral typhoid vaccine** is inactivated by concurrent administration of antibacterials or antimalarials: antibacterials should be avoided for 3 days before and after oral typhoid vaccination; *mefloquine* should be avoided for at least 12 hours before or after oral typhoid vaccination; for other antimalarials oral typhoid vaccine vaccination should be completed at least 3 days before the first dose of the antimalarial (except proguanil hydrochloride with atovaquone, which can be given concurrently).

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **abatacept**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **abroctinib**. Avoid. [Severe] Theoretical
- ▶ **Aciclovir** is predicted to decrease the efficacy of **herpes-zoster vaccine, live**. [Moderate] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **alkylating agents**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **amascrine**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **anakinra**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **anthracyclines**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **azathioprine** (high-dose). UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **baricitinib**. Avoid. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **belatacept**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **bleomycin**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **capcitabine**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **ciclosporin**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **cladribine**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **clofarabine**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **corticosteroids** (high-dose). UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **cytarabine**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical

## Live vaccines (continued)

- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dactinomycin**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dimethyl fumarate**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **diroximel fumarate**. Use with caution or avoid. [\[Severe\]](#) Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etanercept**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etoposide**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **everolimus**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Famciclovir** is predicted to decrease the efficacy of **herpes-zoster vaccine, live**. [\[Moderate\]](#) Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **filgotinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Live vaccines might increase the risk of generalised infection (possibly life-threatening) when given with  **fingolimod**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fludarabine**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fluorouracil**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **gemcitabine**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **hydroxycarbamide**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Immunoglobulins (cytomegalovirus immunoglobulin)** are predicted to decrease the exposure to **varicella-zoster vaccine**. Avoid and for 3 months after stopping **cytomegalovirus immunoglobulin**. [\[Moderate\]](#) Theoretical
- ▶ **Immunoglobulins (varicella-zoster immunoglobulin)** are predicted to decrease the efficacy of **herpes-zoster vaccine, live**. Avoid and for 3 months after stopping **varicella-zoster immunoglobulin**. [\[Moderate\]](#) Theoretical
- ▶ **Immunoglobulins (varicella-zoster immunoglobulin)** are predicted to decrease efficacy **measles, mumps and rubella vaccine, live**. Avoid and for at least 3 months after stopping **varicella-zoster immunoglobulin**. [\[Moderate\]](#) Theoretical
- ▶ **Immunoglobulins (cytomegalovirus immunoglobulin)** are predicted to decrease the efficacy of live vaccines (**Bacillus Calmette-Guérin vaccine, herpes-zoster vaccine, live, influenza vaccine (live), measles, mumps and rubella vaccine, live, rotavirus vaccine, typhoid vaccine, oral, varicella-zoster vaccine**). Avoid and for 3 months after stopping **cytomegalovirus immunoglobulin**. [\[Moderate\]](#) Theoretical
- ▶ **Immunoglobulins (anti-D (Rh<sub>0</sub>) immunoglobulin)** are predicted to decrease the efficacy of live vaccines (**Bacillus Calmette-Guérin vaccine, herpes-zoster vaccine, live, influenza vaccine (live), measles, mumps and rubella vaccine, live, rotavirus vaccine, typhoid vaccine, oral, varicella-zoster vaccine**). Avoid and for 3 months after stopping **anti-D (Rh<sub>0</sub>) immunoglobulin**. [\[Moderate\]](#) Theoretical
- ▶ **Immunoglobulins (normal immunoglobulin)** are predicted to decrease the efficacy of live vaccines (**Bacillus Calmette-Guérin vaccine, herpes-zoster vaccine, live, influenza vaccine (live), measles, mumps and rubella vaccine, live, rotavirus vaccine, typhoid vaccine, oral, varicella-zoster vaccine**). Avoid and for 3 months after stopping **normal immunoglobulin**. [\[Moderate\]](#) Theoretical
- ▶ **Immunoglobulins (varicella-zoster immunoglobulin)** are predicted to decrease the efficacy of live vaccines (**Bacillus Calmette-Guérin vaccine, influenza vaccine (live), rotavirus vaccine, typhoid vaccine, oral, varicella-zoster vaccine**). Avoid and for at least 3 months after stopping **varicella-zoster immunoglobulin**. [\[Moderate\]](#) Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **irinotecan**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **iron chelators (dexrazoxane)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **leflunomide**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ Live vaccines (**measles, mumps and rubella vaccine, live**) might decrease the efficacy of live vaccines (**herpes-zoster vaccine, live**). [\[Moderate\]](#) Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mercaptopurine** (high-dose). UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **methotrexate** (high-dose). UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mitomycin**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **monoclonal antibodies**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mycophenolate**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ Live vaccines might increase the risk of generalised infection (possibly life-threatening) when given with **ozanimod**. Avoid and for 3 months after stopping **ozanimod**. [\[Severe\]](#) Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **pemetrexed**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **platinum compounds**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ Live vaccines might increase the risk of generalised infection (possibly life-threatening) when given with **ponesimod**. Avoid and for 1 week after stopping **ponesimod**. [\[Severe\]](#) Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **procarbazine**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **raltitrexed**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ Live vaccines might increase the risk of generalised infection (possibly life-threatening) when given with **siponimod**. Avoid and for 4 weeks after stopping **siponimod**. [\[Severe\]](#) Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with

**sirolimus.** UKHSA advises avoid (refer to Green Book). [Severe]

Theoretical

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **streptozocin.** UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tacrolimus.** UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **taxanes (docetaxel, paclitaxel).** UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tegafur.** UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **temsirolimus.** UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **teriflunomide.** UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tioguanine.** UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** potentially increase the risk of generalised infection (possibly life-threatening) when given with **tofacinib.** Avoid. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **topotecan.** UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **trabectedin.** UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **upadacitinib.** Avoid. [Severe] Theoretical
- ▶ **Valaciclovir** is predicted to decrease the efficacy of herpes-zoster vaccine, live. [Moderate] Theoretical
- ▶ **Venetoclax** potentially decreases the efficacy of live vaccines. Avoid. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **vinca alkaloids.** UKHSA advises avoid (refer to Green Book). [Severe] Theoretical

**Lixisenatide** → see glucagon-like peptide-1 receptor agonists

**Lofexamine** → see tricyclic antidepressants

**Lofexidine** → see TABLE 8 p. 1491 (hypotension), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 11 p. 1492 (CNS depressant effects)

**Lomitapide** → see TABLE 1 p. 1490 (hepatotoxicity)

**FOOD AND LIFESTYLE** Bitter (Seville) orange is predicted to increase the exposure to lomitapide; separate administration by 12 hours.

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to lomitapide. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Anti-androgens (bicalutamide)** are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to lomitapide. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to lomitapide. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 1490
- ▶ **Antifungals, azoles (clotrimazole)** are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to lomitapide. Avoid. [Moderate] Theoretical → Also see TABLE 1 p. 1490
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to lomitapide. Avoid. [Severe] Study → Also see TABLE 1 p. 1490
- ▶ **Benzodiazepines (alprazolam)** are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Calcium channel blockers (amlodipine, lacidipine)** are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to lomitapide. Avoid. [Moderate] Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to lomitapide. Adjust dose. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Clofazolin** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to markedly increase the exposure to lomitapide. Avoid. [Severe] Study
- ▶ Oral **combined hormonal contraceptives** slightly increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Lomitapide** increases the exposure to **coumarins (warfarin).** Monitor INR and adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to lomitapide. Avoid. [Moderate] Theoretical
- ▶ **Dipeptidylpeptidase-4 inhibitors (linagliptin)** are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Everolimus** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Mild] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to lomitapide. Avoid. [Mild] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Mild] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (ranitidine)** are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to lomitapide. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to lomitapide. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to lomitapide. Avoid. [Moderate] Theoretical
- ▶ **Isoniazid** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Unknown] Theoretical → Also see TABLE 1 p. 1490
- ▶ **Ivacaftor** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Mild] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to lomitapide. Avoid. [Moderate] Theoretical
- ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to lomitapide. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to lomitapide. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to lomitapide. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to lomitapide. Avoid. [Moderate] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (fosaprepitant)** are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Mild] Theoretical

## Lomitapide (continued)

- ▶ **Nilotinib** is predicted to increase the exposure to **lomitapide**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **lomitapide**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Pazopanib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Mild\]](#) Theoretical
- ▶ **Peppermint** oil is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Propiverine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Mild\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **SSRIs (fluoxetine)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Unknown\]](#) Theoretical
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Mild\]](#) Theoretical
- ▶ **Lomitapide** increases the exposure to **statins (atorvastatin)**. Adjust **lomitapide** dose or separate administration by 12 hours, p. 226. [\[Mild\]](#) Study → Also see [TABLE 1](#) p. 1490
- ▶ **Lomitapide** increases the exposure to **statins (simvastatin)**. Monitor and adjust **simvastatin** dose, p. 222. [\[Moderate\]](#) Study → Also see [TABLE 1](#) p. 1490
- ▶ **Tacrolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Ticagrelor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Tolvaptan** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **lomitapide**. Avoid or adjust dose. [\[Moderate\]](#) Theoretical

**Lomustine** → see alkylating agents

**Loop diuretics** → see [TABLE 18](#) p. 1494 (hyponatraemia), [TABLE 8](#) p. 1491 (hypotension), [TABLE 19](#) p. 1494 (ototoxicity), [TABLE 17](#) p. 1494 (reduced serum potassium)

bumetanide · furosemide · torasemide

- ▶ **Aliskiren** slightly decreases the exposure to **furosemide**. [\[Moderate\]](#) Study → Also see [TABLE 8](#) p. 1491
- ▶ **Loop diuretics** increase the risk of nephrotoxicity when given with **aminoglycosides**. Avoid. [\[Moderate\]](#) Study → Also see [TABLE 19](#) p. 1494
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of **furosemide**. [\[Moderate\]](#) Study
- ▶ Intravenous **furosemide** potentially increases the risk of sweating, variable blood pressure, and tachycardia when given after **chloral hydrate**. [\[Moderate\]](#) Anecdotal
- ▶ **Immunoglobulins (cytomegalovirus immunoglobulin)** are predicted to increase the risk of adverse effects when given with **loop diuretics**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Loop diuretics** might increase the risk of adverse effects when given with **immunoglobulins (normal immunoglobulin)**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **furosemide**. [\[Moderate\]](#) Theoretical
- ▶ **Loop diuretics** increase the concentration of **lithium**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Nitisinone** is predicted to increase the exposure to **furosemide**. [\[Moderate\]](#) Study
- ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **loop diuretics**. [\[Moderate\]](#) Theoretical
- ▶ **Selpercatinib** is predicted to increase the exposure to **torasemide**. Avoid. [\[Severe\]](#) Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **furosemide**. [\[Moderate\]](#) Study
- ▶ **Furosemide** might slightly decrease the clearance of **treprostinil**. [\[Unknown\]](#) Theoretical → Also see [TABLE 8](#) p. 1491

**Loperamide**

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **loperamide**. [\[Severe\]](#) Theoretical

- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **loperamide**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Anecdotal
  - ▶ **Bertrastat** is predicted to increase the concentration of **loperamide**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Ceritinib** is predicted to increase the exposure to **loperamide**. [\[Moderate\]](#) Theoretical
  - ▶ **Loperamide** greatly increases the absorption of oral **desmopressin** (and possibly sublingual). [\[Moderate\]](#) Study
  - ▶ **Eliglustat** is predicted to increase the exposure to **loperamide**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ **Ibrutinib** is predicted to increase the exposure to **loperamide**. Separate administration by at least 6 hours. [\[Moderate\]](#) Theoretical
  - ▶ **Ivacaftor** is predicted to increase the exposure to **loperamide**. [\[Moderate\]](#) Study
  - ▶ **Lapatinib** is predicted to increase the exposure to **loperamide**. [\[Moderate\]](#) Theoretical
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **loperamide**. [\[Moderate\]](#) Study
  - ▶ **Mifepristone** is predicted to increase the exposure to **loperamide**. [\[Moderate\]](#) Theoretical
  - ▶ **Mirabegron** is predicted to increase the exposure to **loperamide**. [\[Mild\]](#) Theoretical
  - ▶ **Neratinib** is predicted to increase the exposure to **loperamide**. [\[Moderate\]](#) Study
  - ▶ **Olaparib** might increase the exposure to **loperamide**. [\[Moderate\]](#) Theoretical
  - ▶ **Opicapone** is predicted to increase the exposure to **loperamide**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Osimertinib** is predicted to increase the exposure to **loperamide**. [\[Moderate\]](#) Study
  - ▶ **Pibrentavir** with glecaprevir is predicted to increase the exposure to **loperamide**. [\[Moderate\]](#) Study
  - ▶ **Pitolisant** is predicted to decrease the exposure to **loperamide**. [\[Mild\]](#) Theoretical
  - ▶ **Sotorasib** is predicted to increase the exposure to **loperamide**. Avoid or adjust dose. [\[Moderate\]](#) Study
  - ▶ **Teplotinib** is predicted to increase the concentration of **loperamide**. [\[Severe\]](#) Study
  - ▶ **Tucatinib** is predicted to increase the exposure to **loperamide**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Vedetanib** is predicted to increase the exposure to **loperamide**. [\[Moderate\]](#) Study
  - ▶ **Velpatasvir** is predicted to increase the exposure to **loperamide**. [\[Severe\]](#) Theoretical
  - ▶ **Vemurafinib** might increase the exposure to **loperamide**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- Lopinavir** → see HIV-protease inhibitors
- Lorazepam** → see benzodiazepines
- Loratadine** → see antihistamines, non-sedating
- Lorazepam** → see benzodiazepines
- Lorlatinib**
- ▶ **Lorlatinib** is predicted to decrease the exposure to **aliskiren**. [\[Moderate\]](#) Study
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **lorlatinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **lorlatinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose, p. 1067. [\[Severe\]](#) Study
  - ▶ **Lorlatinib** decreases the exposure to **antihistamines, non-sedating (fexofenadine)**. [\[Moderate\]](#) Study
  - ▶ **Lorlatinib** moderately decreases the exposure to **benzodiazepines (midazolam)**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **ciclosporin**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose, p. 1067. [\[Severe\]](#) Study
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **colchicine**. [\[Moderate\]](#) Study

- ▶ **Lorlatinib** is predicted to decrease the exposure to **combined hormonal contraceptives**. Avoid. [Moderate] Theoretical
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **coumarins**. [Moderate] Theoretical
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **digoxin**. [Moderate] Study
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **ergotamine**. Avoid. [Moderate] Theoretical
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **everolimus**. Avoid. [Moderate] Study
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **factor XA inhibitors (edoxaban, rivaroxaban)**. [Moderate] Study
  - ▶ **Grapefruit** juice is predicted to increase the concentration of **lorlatinib**. Avoid. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose, p. 1067. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose, p. 1067. [Severe] Study
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **loperamide**. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose, p. 1067. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. Avoid. [Moderate] Theoretical
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **pimozide**. Avoid. [Moderate] Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **sirolimus**. Avoid. [Moderate] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Theoretical
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Moderate] Theoretical
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **talazoparib**. [Moderate] Study
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **taxanes (paclitaxel)**. [Moderate] Study
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **thrombin inhibitors (dabigatran)**. [Moderate] Study
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **topotecan**. [Moderate] Study
- Lormetazepam** → see benzodiazepines
- Losartan** → see angiotensin-II receptor antagonists
- Low molecular-weight heparins** → see TABLE 16 p. 1494 (increased serum potassium), TABLE 3 p. 1490 (anticoagulant effects)
- bemiparin • dalteparin • enoxaparin • tinzaparin
- ▶ **Andexanet alfa** is predicted to affect the anticoagulant effect of **low molecular-weight heparins**. Avoid. [Severe] Theoretical
  - ▶ **Ranibizumab** increases the risk of **bleeding** events when given with **low molecular-weight heparins**. [Severe] Theoretical
- Loxapine** → see TABLE 8 p. 1491 (hypotension), TABLE 11 p. 1492 (CNS depressant effects), TABLE 10 p. 1492 (antimuscarinics)
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **loxapine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492 → Also see TABLE 10 p. 1492
  - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
  - ▶ **Loxapine** is predicted to decrease the effects of **dopamine receptor agonists**. [Moderate] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 10 p. 1492
  - ▶ **Loxapine** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1491
  - ▶ **Mexiletine** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
  - ▶ **Oslodrostat** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
  - ▶ **Rucaparib** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
  - ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
  - ▶ **Vemurafenib** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
- Lumacaftor**
- ▶ **Lumacaftor** is predicted to decrease the exposure to **antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)**. Avoid. [Severe] Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the exposure to **antifungals, azoles (itraconazole, ketoconazole, posaconazole, voriconazole)**. Avoid or monitor efficacy. [Moderate] Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the exposure to **benzodiazepines (midazolam)**. Avoid. [Severe] Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the exposure to **bupropion**. Adjust dose. [Moderate] Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Severe] Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the exposure to **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the exposure to **corticosteroids (methylprednisolone)**. Adjust dose. [Severe] Theoretical
  - ▶ **Lumacaftor** might decrease the efficacy of subdermal **etonogestrel**. Use additional contraceptive precautions. [Severe] Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the exposure to **everolimus**. Avoid. [Severe] Theoretical
  - ▶ **Lumacaftor** potentially decreases the exposure to **glecaprevir**. Avoid. [Severe] Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the efficacy of **levonorgestrel**. Use additional contraceptive precautions. [Severe] Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the exposure to **macrolides (clarithromycin, erythromycin)**. [Moderate] Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the exposure to **NNRTIs (doravirine)**. Avoid. [Severe] Theoretical
  - ▶ **Lumacaftor** potentially decreases the exposure to **pibrentasvir**. Avoid. [Severe] Theoretical
  - ▶ **Lumacaftor** might decrease the efficacy of oral **progestogen-only contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the exposure to **rifamycins (rifabutin)**. Adjust dose. [Moderate] Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the exposure to **sirolimus**. Avoid. [Severe] Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the exposure to **temsirolimus**. Avoid. [Severe] Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the efficacy of **uipristal**. Use additional contraceptive precautions. [Severe] Theoretical
- Lumefantrine** → see antimalarials
- Lurasidone** → see antipsychotics, second generation
- Lymecycline** → see tetracyclines
- Macitentan** → see endothelin receptor antagonists
- Macrolides** → see TABLE 9 p. 1492 (QT-interval prolongation)
- azithromycin • clarithromycin • erythromycin
- ▶ Interactions do not generally apply to topical use of **azithromycin** unless specified.
  - ▶ Since systemic absorption can follow topical application of **erythromycin**, the possibility of interactions should be borne in mind.
- ▶ **Clarithromycin** is predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 1042. [Severe] Study
  - ▶ **Erythromycin** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
  - ▶ **Clarithromycin** is predicted to increase the exposure to **acalabrutinib**. Avoid. [Severe] Study

## Macrolides (continued)

- ▶ **Erythromycin** is predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. [Severe] Study
- ▶ **Macrolides** are predicted to increase the exposure to **afatinib**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust eplerenone dose, p. 210. [Severe] Study
- ▶ **Azithromycin** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **aliskiren**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **alpha blockers (doxazosin)**. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- ▶ **Azithromycin** is predicted to increase the exposure to **aminophylline**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Aminophylline** is predicted to decrease the exposure to **erythromycin**. Adjust dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **anti-androgens (apalutamide)**. [Mild] Study → Also see TABLE 9 p. 1492
- ▶ **Clarithromycin** is predicted to increase the exposure to **anti-androgens (darolutamide)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Clarithromycin** very markedly increases the exposure to **antiarrhythmics (dronedaronе)**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Erythromycin** is predicted to moderately increase the exposure to **antiarrhythmics (dronedaronе)**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **antiarrhythmics (lidocaine)**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** slightly increases the concentration of **antiepileptics (carbamazepine)**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Erythromycin** markedly increases the concentration of **antiepileptics (carbamazepine)**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to very slightly increase the exposure to **antiepileptics (perampanel)**. [Mild] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. Avoid or monitor adverse effects. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Macrolides** might increase the risk of serious cardiovascular adverse effects when given with **antimalarials (chloroquine)**. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **antipsychotics, second generation (aripiprazole)**. Adjust aripiprazole dose, p. 427. [Moderate] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Study
- ▶ **Erythromycin** potentially increases the risk of toxicity when given with **antipsychotics, second generation (clozapine)**. [Severe] Anecdotal
- ▶ **Erythromycin** is predicted to increase the exposure to **antipsychotics, second generation (lurasidone)**. Adjust lurasidone dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **antipsychotics, second generation (lurasidone, quetiapine)**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **antipsychotics, second generation (quetiapine)**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **antipsychotics, second generation (risperidone)**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Clarithromycin** is predicted to increase the exposure to **avapritinib**. Avoid. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **avapritinib**. Avoid or adjust avapritinib dose, p. 1045. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **axitinib**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study → Also see TABLE 9 p. 1492
- ▶ **Erythromycin** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Clarithromycin** moderately increases the exposure to **benzodiazepines (alprazolam)**. Avoid. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **benzodiazepines (alprazolam)**. [Severe] Study
- ▶ **Clarithromycin** is predicted to markedly to very markedly increase the exposure to **benzodiazepines (midazolam)**. Avoid or adjust dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **benzodiazepines (midazolam)**. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Macrolides** are predicted to increase the exposure to **berotralstat**. [Severe] Study
- ▶ **Macrolides** are predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **beta<sub>2</sub> agonists (salmeterol)**. Avoid. [Severe] Study
- ▶ **Macrolides** are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Clarithromycin** slightly increases the exposure to **bortezomib**. [Moderate] Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Clarithromycin** is predicted to increase the exposure to **brigatinib**. Avoid or adjust brigatinib dose, p. 1048. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **brigatinib**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **buspirone**. Adjust buspirone dose, p. 373. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study

- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Erythromycin** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **calcium channel blockers (diltiazem)**. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **calcium channel blockers (verapamil)**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 1050. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Erythromycin** is predicted to increase the exposure to **ceritinib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Clarithromycin** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Erythromycin** greatly increases the exposure to **ciclosporin**. Avoid or monitor. [Severe] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 252. [Moderate] Study
- ▶ **Erythromycin** slightly increases the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 252. [Moderate] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the concentration of **erythromycin**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **cobimetinib**. [Severe] Study
- ▶ **Azithromycin** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose, p. 1212. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **colchicine**. Avoid potent CYP3A4 inhibitors or adjust **colchicine** dose, p. 1212. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors, p. 1212. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **corticosteroids (beclomethasone)** (risk with beclomethasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone)**. Avoid or monitor adverse effects. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Macrolides (**clarithromycin, erythromycin**) increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Clarithromycin** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **dabrafenib**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Erythromycin** slightly increases the exposure to **darifenacin**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Erythromycin** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Clarithromycin** very slightly increases the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Erythromycin** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Macrolides** increase the concentration of **digoxin**. [Severe] Anecdotal
- ▶ **Clarithromycin** is predicted to increase the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [Mild] Study
- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
- ▶ **Clarithromycin** increases the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. Avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **dronabinol**. Adjust dose. [Mild] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **drospirenone**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **dutasteride**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ **Erythromycin** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **elxacaftor**. Adjust tezacaftor with ivacaftor and elxacaftor p. 320 dose with potent CYP3A4 inhibitors. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **elxacaftor**. Adjust tezacaftor with ivacaftor and elxacaftor p. 320 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Erythromycin** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Clarithromycin** is predicted to increase the exposure to **endothelin receptor antagonists (bosentan)**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **endothelin receptor antagonists (macitentan)**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **entrectinib**. Avoid potent CYP3A4 inhibitors or adjust **entrectinib** dose, p. 1056. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Erythromycin** is predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 1056. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Clarithromycin** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Azithromycin** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical

## Macrolides (continued)

- ▶ **Clarithromycin** is predicted to increase the exposure to **erlotinib**. Use with caution and adjust dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **erlotinib**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **esketamine**. Adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the concentration of subdermal **etonogestrel**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **everolimus**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Clarithromycin** slightly increases the exposure to **factor XA inhibitors (apixaban)**. [Moderate] Study
- ▶ Macrolides (**azithromycin, erythromycin**) are predicted to increase the exposure to **factor XA inhibitors (apixaban)**. [Moderate] Theoretical
- ▶ **Erythromycin** slightly increases the exposure to **factor XA inhibitors (edoxaban)**. Adjust **edoxaban** dose, p. 138. [Severe] Study
- ▶ Macrolides (**azithromycin, clarithromycin**) are predicted to increase the exposure to **factor XA inhibitors (edoxaban)**. [Severe] Theoretical
- ▶ **Erythromycin** slightly increases the exposure to **factor XA inhibitors (rivaroxaban)**. [Mild] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **fedratinib**. Adjust **fedratinib** dose, but avoid depending on other drugs taken—consult product literature, p. 1060. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent CYP3A4 inhibitors; avoid in hepatic and renal impairment, p. 840. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment, p. 840. [Mild] Study
- ▶ Macrolides are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **fosfomycin**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **gefitinib**. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **gilteritinib**. [Moderate] Study
- ▶ Macrolides (**azithromycin, erythromycin**) are predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Clarithromycin** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 384. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 384. [Moderate] Theoretical
- ▶  $H_2$  receptor antagonists (**cimetidine**) slightly increase the exposure to **erythromycin**. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir)** are predicted to increase the exposure to **clarithromycin**. Adjust dose in renal impairment. [Severe] Study
- ▶ **HIV-protease inhibitors (darunavir, fosamprenavir, lopinavir)** boosted with ritonavir are predicted to increase the exposure to **clarithromycin**. Adjust dose in renal impairment. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** increase the exposure to **clarithromycin**. Adjust dose in renal impairment. [Severe] Study
- ▶ **HIV-protease inhibitors (tipranavir)** boosted with ritonavir increase the exposure to **clarithromycin** and **clarithromycin** increases the exposure to **HIV-protease inhibitors (tipranavir)** boosted with ritonavir. Monitor; adjust dose in renal impairment. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **erythromycin**. [Severe] Theoretical
- ▶ **Macrolides** might increase the risk of serious cardiovascular adverse effects when given with **hydroxychloroquine**. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Clarithromycin** is predicted to increase the exposure to **ibrutinib**. Avoid potent CYP3A4 inhibitors or adjust **ibrutinib** dose, p. 1062. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors, p. 1062. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **ivacaftor**. Adjust dose with potent CYP3A4 inhibitors, see ivacaftor p. 317, lumacaftor with ivacaftor p. 318, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 317, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Erythromycin** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 1065. [Moderate] Study
- ▶ Macrolides (**azithromycin, erythromycin**) are predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the concentration of **letermovir**. [Moderate] Study
- ▶ **Clarithromycin** increases the exposure to **linezolid**. [Moderate] Anecdotal
- ▶ **Azithromycin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose, p. 1067. [Severe] Study
- ▶ **Lumacaftor** is predicted to decrease the exposure to macrolides (**clarithromycin, erythromycin**). [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the concentration of intramuscular **medroxyprogesterone**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **meglitinides (repaglinide)**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **mifepristone**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 843. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **modafinil**. [Mild] Theoretical

- ▶ **Clarithromycin** increases the risk of neutropenia when given with **monoclonal antibodies (brentuximab vedotin)**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [\[Moderate\]](#) Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [\[Moderate\]](#) Study
- ▶ Macrolides (**azithromycin, erythromycin**) are predicted to increase the exposure to **naldemedine**. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [\[Severe\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects, p. 67. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **neratinib**. Avoid potent CYP3A4 inhibitors or adjust **neratinib** dose, p. 1069. [\[Severe\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. [\[Severe\]](#) Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. [\[Moderate\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **neurokinin-1 receptor antagonists (fosaprepitant)**. [\[Moderate\]](#) Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **neurokinin-1 receptor antagonists (netupitant)**. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **nilotinib**. Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 1492
- ▶ **Erythromycin** is predicted to increase the exposure to **nilotinib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
- ▶ **Macrolides** are predicted to increase the exposure to **nintedanib**. [\[Moderate\]](#) Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **erythromycin**. [\[Moderate\]](#) Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **nitisone**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** decrease the exposure to **clarithromycin**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
- ▶ **NNRTIs (etravirine)** decrease the exposure to **clarithromycin** and **clarithromycin** slightly increases the exposure to **NNRTIs (etravirine)**. [\[Severe\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **NNRTIs (nevirapine)**. [\[Moderate\]](#) Theoretical
- ▶ **Clarithromycin** decreases the absorption of **NRTIs (zidovudine)**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **olaparib**. Avoid potent CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [\[Moderate\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [\[Moderate\]](#) Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the concentration of **opioids (methadone)**. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1492
- ▶ **Erythromycin** is predicted to increase the exposure to **opioids (methadone)**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1492
- ▶ **Clarithromycin** is predicted to increase the exposure to **osilodrostat**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1492
- ▶ **Clarithromycin** is predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **oxybutynin**. [\[Mild\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1072. [\[Severe\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 1009. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
- ▶ Macrolides (**azithromycin, erythromycin**) are predicted to increase the exposure to **panobinostat**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1492
- ▶ **Clarithromycin** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 1073. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
- ▶ **Erythromycin** is predicted to increase the exposure to **pazopanib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
- ▶ **Clarithromycin** is predicted to increase the exposure to **pemigatinib**. Avoid or adjust **pemigatinib** dose, p. 1074. [\[Severe\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **pemigatinib**. [\[Severe\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 878. [\[Moderate\]](#) Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 1492
- ▶ **Clarithromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 879. [\[Severe\]](#) Study → Also see TABLE 9 p. 1492
- ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
- ▶ **Clarithromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [\[Severe\]](#) Theoretical
- ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1492
- ▶ **Macrolides** are predicted to increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **pimozide**. Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 1492
- ▶ **Erythromycin** is predicted to increase the exposure to **pimozide**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1492
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1075. [\[Moderate\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **ponatinib**. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **praziquantel**. [\[Mild\]](#) Study
- ▶ **Clarithromycin** given with carbimazole is predicted to increase the exposure to **propiverine**. Adjust starting dose. [\[Moderate\]](#) Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **ranolazine**. Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 1492
- ▶ **Erythromycin** is predicted to increase the exposure to **ranolazine**. [\[Severe\]](#) Study → Also see TABLE 9 p. 1492
- ▶ **Clarithromycin** is predicted to increase the exposure to **reboxetine**. Avoid. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **regorafenib**. Avoid. [\[Moderate\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **regorafenib**. [\[Moderate\]](#) Study
- ▶ **Macrolides** are predicted to increase the exposure to **relugolix**. Avoid or take **relugolix** first and separate administration by at least 6 hours. [\[Moderate\]](#) Study

## Macrolides (continued)

- ▶ **Clarithromycin** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust **alitretinoin** dose, p. 1356. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1077. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Erythromycin** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Rifamycins (rifabutin)** have been reported to cause neutropenia when given with **azithromycin**. [Severe] Study
- ▶ **Rifamycins (rifabutin)** decrease the concentration of **clarithromycin** and **clarithromycin** increases the concentration of **rifamycins (rifabutin)**. Monitor and adjust dose. [Severe] Study
- ▶ **Rifamycins (rifampicin)** greatly decrease the concentration of **clarithromycin**. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the concentration of **rifamycins (rifabutin)** and **rifamycins (rifabutin)** are predicted to decrease the concentration of **erythromycin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. [Moderate] Study
- ▶ **Erythromycin** slightly increases the exposure to **ruxolitinib**. [Mild] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **selpercatinib**. Adjust **selpercatinib** dose, p. 1079. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Erythromycin** is predicted to increase the exposure to **selpercatinib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Erythromycin** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **SNRIs (venlafaxine)**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Clarithromycin** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 842 or **tamsulosin** with **solifenacin** p. 848 dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **SSRIs (dapoxetine)**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose, p. 887. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Erythromycin** slightly increases the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Study
- ▶ **Clarithromycin** moderately increases the exposure to **statins (pravastatin)**. [Severe] Study
- ▶ **Erythromycin** slightly increases the exposure to **statins (pravastatin)**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ **Erythromycin** markedly increases the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **sulfonylureas**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1080. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Erythromycin** is predicted to increase the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Clarithromycin** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Macrolides** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid or monitor—consult product literature. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **taxanes (docetaxel)**. [Severe] Study
- ▶ **Azithromycin** is predicted to increase the exposure to **taxanes (docetaxel, paclitaxel)** (oral). [Unknown] Theoretical
- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Anecdotal
- ▶ **Clarithromycin** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Clarithromycin** might increase the exposure to **tepotinib**. Avoid. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see **tezacaftor** with **ivacaftor** p. 319 and **tezacaftor** with **ivacaftor** and **elezacaftor** p. 320. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see **tezacaftor** with **ivacaftor** p. 319 and **tezacaftor** with **ivacaftor** and **elezacaftor** p. 320. [Severe] Study
- ▶ **Erythromycin** decreases the clearance of **theophylline** and **theophylline** potentially decreases the clearance of **erythromycin**. Adjust dose. [Severe] Study
- ▶ Macrolides (**azithromycin, clarithromycin**) are predicted to increase the exposure to **theophylline**. Adjust dose. [Moderate] Anecdotal
- ▶ **Clarithromycin** increases the exposure to **thrombin inhibitors (dabigatran)**. [Moderate] Study
- ▶ Macrolides (**azithromycin, erythromycin**) are predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. [Severe] Theoretical
- ▶ **Azithromycin** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Macrolides** might increase the exposure to **tigecycline**. [Mild] Anecdotal
- ▶ **Clarithromycin** is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1200. [Moderate] Study
- ▶ **Erythromycin** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1200. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Clarithromycin** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors, p. 724. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. [Moderate] Study
- ▶ **Macrolides** are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Clarithromycin** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical
- ▶ **Macrolides** are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study

- ▶ **Erythromycin** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Clarithromycin** increases the exposure to **triptans (almotriptan)**. [Mid] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **triptans (eletriptan)**. Avoid. [Severe] Study
- ▶ **Erythromycin** moderately increases the exposure to **triptans (eletriptan)**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ **Erythromycin** moderately increases the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the exposure to **venurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Azithromycin** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Clarithromycin** is predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- ▶ **Erythromycin** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

### Magnesium

**SEPARATION OF ADMINISTRATION** Magnesium-containing antacids should preferably not be taken at the same time as other drugs since they might impair absorption. Magnesium-containing antacids might damage enteric coatings designed to prevent dissolution in the stomach.

- ▶ Oral magnesium trisilicate decreases the absorption of oral antimalarials (**chloroquine**). Separate administration by at least 4 hours. [Moderate] Study
  - ▶ Oral magnesium might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Avoid. [Severe] Theoretical
  - ▶ Oral magnesium decreases the absorption of oral **bisphosphonates (alendronate)**. Alendronate should be taken at least 30 minutes before magnesium. [Moderate] Study
  - ▶ Oral magnesium decreases the absorption of oral **bisphosphonates (clodronate)**. Avoid magnesium for 2 hours before or 1 hour after clodronate. [Moderate] Study
  - ▶ Oral magnesium is predicted to decrease the absorption of oral **bisphosphonates (ibandronate)**. Avoid for at least 6 hours before or 1 hour after ibandronate. [Moderate] Theoretical
  - ▶ Oral magnesium decreases the absorption of oral **bisphosphonates (risedronate)**. Separate administration by at least 2 hours. [Moderate] Study
  - ▶ Intravenous magnesium potentially increases the risk of hypotension when given with **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine, verapamil)** in pregnant women. [Severe] Anecdotal
  - ▶ Oral magnesium trisilicate is predicted to decrease the absorption of oral **hydroxychloroquine**. [Moderate] Theoretical
  - ▶ Intravenous magnesium increases the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Study
  - ▶ Oral magnesium trisilicate decreases the absorption of oral **nitrofurantoin**. [Moderate] Study
  - ▶ Magnesium might decrease the exposure to **roxadustat**. Roxadustat should be taken at least 1 hour after magnesium. [Moderate] Theoretical
  - ▶ Intravenous magnesium is predicted to increase the effects of **suxamethonium**. [Moderate] Study
- MAO-B inhibitors** → see TABLE 6 p. 1491 (bradycardia), TABLE 8 p. 1491 (hypotension), TABLE 13 p. 1493 (serotonin syndrome)

### rasagiline · safinamide · selegiline

- FOOD AND LIFESTYLE** Hypertension is predicted to occur when high-dose **selegiline** is taken with tyramine-rich foods (such as mature cheese, salami, pickled herring, *Bovril*<sup>®</sup>, *Oxo*<sup>®</sup>, *Marmite*<sup>®</sup> or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).
- ▶ MAO-B inhibitors (**rasagiline, selegiline**) are predicted to increase the risk of severe hypertension when given with **amfetamines**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1493
  - ▶ **Safinamide** is predicted to increase the risk of severe hypertension when given with **amfetamines**. [Severe] Theoretical → Also see TABLE 13 p. 1493
  - ▶ **Axitinib** is predicted to increase the exposure to **rasagiline**. [Moderate] Theoretical
  - ▶ MAO-B inhibitors (**rasagiline, selegiline**) are predicted to increase the risk of severe hypertension when given with **beta<sub>2</sub> agonists**. Avoid. [Severe] Theoretical
  - ▶ **Safinamide** is predicted to increase the risk of severe hypertension when given with **beta<sub>2</sub> agonists**. [Severe] Theoretical
  - ▶ **Bupropion** is predicted to increase the risk of severe hypertension when given with **MAO-B inhibitors**. Avoid. [Moderate] Theoretical
  - ▶ **Combined hormonal contraceptives** slightly increases the exposure to **rasagiline**. [Moderate] Study
  - ▶ **Combined hormonal contraceptives** increase the exposure to **selegiline**. Avoid. [Severe] Study
  - ▶ **Givosiran** is predicted to increase the exposure to **rasagiline**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Hormone replacement therapy** is predicted to increase the exposure to **selegiline**. Avoid. [Moderate] Study
  - ▶ MAO-B inhibitors are predicted to increase the effects of **levodopa**. Adjust dose. [Mid] Study → Also see TABLE 8 p. 1491
  - ▶ MAO-B inhibitors (**rasagiline, selegiline**) are predicted to increase the risk of adverse effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1493
  - ▶ **Safinamide** is predicted to increase the risk of adverse effects when given with **linezolid**. Avoid and for 1 week after stopping **safranamide**. [Severe] Theoretical → Also see TABLE 13 p. 1493
  - ▶ MAO-B inhibitors (**rasagiline, selegiline**) are predicted to increase the risk of adverse effects when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1493
  - ▶ **Safinamide** is predicted to increase the risk of adverse effects when given with **MAOIs, irreversible**. Avoid and for 1 week after stopping **safranamide**. [Severe] Theoretical → Also see TABLE 13 p. 1493
  - ▶ **Rasagiline** is predicted to increase the risk of a hypertensive crisis when given with **methylphenidate**. Avoid. [Severe] Theoretical
  - ▶ **Selegiline** might increase the risk of a hypertensive crisis when given with **methylphenidate**. Avoid. [Severe] Theoretical
  - ▶ **Mexiletine** slightly increases the exposure to **rasagiline**. [Moderate] Study
  - ▶ **Moclobemide** is predicted to increase the effects of MAO-B inhibitors (**rasagiline, selegiline**). Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1493
  - ▶ **Moclobemide** is predicted to increase the risk of adverse effects when given with **safranamide**. Avoid and for 1 week after stopping **safranamide**. [Severe] Theoretical → Also see TABLE 13 p. 1493
  - ▶ **Rasagiline** is predicted to increase the risk of adverse effects when given with **opioids (pethidine)**. Avoid and for 14 days after stopping **rasagiline**. [Severe] Theoretical → Also see TABLE 13 p. 1493
  - ▶ **Safinamide** is predicted to increase the risk of adverse effects when given with **opioids (pethidine)**. Avoid and for 1 week after stopping **safranamide**. [Severe] Theoretical → Also see TABLE 13 p. 1493
  - ▶ **Selegiline** increases the risk of adverse effects when given with **opioids (pethidine)**. Avoid. [Severe] Anecdotal → Also see TABLE 13 p. 1493
  - ▶ **Osilodrostat** slightly increases the exposure to **rasagiline**. [Moderate] Study

## MAO-B inhibitors (continued)

- ▶ **Ozanimod** might increase the risk of a hypertensive crisis when given with **MAO-B inhibitors** and **MAO-B inhibitors** might decrease the exposure to the active metabolites of **ozanimod**. Avoid. [Severe] Theoretical → Also see TABLE 6 p. 1491
- ▶ **Quinolones (ciprofloxacin)** slightly increase the exposure to **rasagiline**. [Moderate] Study
- ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors (rasagiline, selegiline)**. Avoid. [Severe] Theoretical
- ▶ **Rucaparib** slightly increases the exposure to **rasagiline**. [Moderate] Study
- ▶ **Solriamfetol** is predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors**. Avoid and for 14 days after stopping **MAO-B inhibitors**. [Severe] Theoretical
- ▶ **Sympathomimetics, inotropic** are predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors**. Avoid. [Severe] Anecdotal
- ▶ **Sympathomimetics, vasoconstrictor** are predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors**. Avoid. [Severe] Anecdotal
- ▶ **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **MAO-B inhibitors**. [Severe] Theoretical
- ▶ **Vemurafenib** slightly increases the exposure to **rasagiline**. [Moderate] Study

**MAOIs, irreversible** → see TABLE 8 p. 1491 (hypotension), TABLE 13 p. 1493 (serotonin syndrome)

isocarboxazid · phenelzine · tranylcypromine

**FOOD AND LIFESTYLE** Potentially life-threatening hypertensive crisis can develop in those taking MAOIs who eat tyramine-rich food (such as mature cheese, salami, pickled herring, Bovril®, Oxo®, Marmite® or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines) or foods containing dopa (such as broad bean pods). Avoid tyramine-rich or dopa-rich food or drinks with, or for 2 to 3 weeks after stopping, the MAOI.

- ▶ **MAOIs, irreversible** are predicted to increase the effects of **alpha blockers (indoramin)**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1491
- ▶ **Amfetamines** are predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Anecdotal → Also see TABLE 13 p. 1493
- ▶ **Antiepileptics (carbamazepine)** are predicted to increase the risk of severe toxic reaction when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to increase the effects of **MAOIs, irreversible**. [Severe] Theoretical
- ▶ **MAOIs, irreversible** are predicted to increase the risk of antimuscarinic adverse effects when given with **antihistamines, non-sedating**. Avoid. [Severe] Theoretical
- ▶ **MAOIs, irreversible** are predicted to increase the risk of antimuscarinic adverse effects when given with **antihistamines, sedating**. Avoid. [Severe] Theoretical
- ▶ **MAOIs, irreversible** are predicted to increase the risk of adverse effects when given with **atomoxetine**. Avoid and for 2 weeks after stopping the MAOI. [Severe] Theoretical
- ▶ **MAOIs, irreversible** are predicted to increase the risk of cardiovascular adverse effects when given with **beta<sub>2</sub> agonists**. [Moderate] Anecdotal
- ▶ **Bupropion** is predicted to increase the risk of severe hypertension when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Buspiron** is predicted to increase the risk of elevated blood pressure when given with **MAOIs, irreversible**. Avoid. [Severe] Anecdotal
- ▶ **MAOIs, irreversible** are predicted to increase the effects of **doxapram**. [Moderate] Theoretical
- ▶ **Entacapone** is predicted to increase the risk of elevated blood pressure when given with **MAOIs, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Levodopa** increases the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Study → Also see TABLE 8 p. 1491
- ▶ **MAOIs, irreversible** are predicted to increase the risk of adverse effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1493
- ▶ **MAO-B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of adverse effects when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 13 p. 1493
- ▶ **MAO-B inhibitors (safinamide)** are predicted to increase the risk of adverse effects when given with **MAOIs, irreversible**. Avoid and for 1 week after stopping **safinamide**, p. 459. [Severe] Theoretical → Also see TABLE 13 p. 1493
- ▶ **MAOIs, irreversible** are predicted to alter the antihypertensive effects of **methyldopa**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1491
- ▶ **Methylphenidate** causes a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Mianserin** is predicted to increase the risk of toxicity when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Nefopam** is predicted to increase the risk of serious elevations in blood pressure when given with **MAOIs, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **MAOIs, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Opioids** are predicted to increase the risk of CNS excitation or depression when given with **MAOIs, irreversible**. Avoid. [Severe] Study → Also see TABLE 13 p. 1493
- ▶ **Ozanimod** might increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid. [Severe] Theoretical
- ▶ **MAOIs, irreversible** are predicted to increase the risk of neuroleptic malignant syndrome when given with **phenothiazines**. [Severe] Theoretical → Also see TABLE 8 p. 1491
- ▶ **Pholcodine** is predicted to increase the risk of CNS excitation or depression when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Solriamfetol** is predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Sympathomimetics, inotropic** are predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Sympathomimetics, vasoconstrictor** are predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Study
- ▶ **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Tolcapone** is predicted to increase the effects of **MAOIs, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 13 p. 1493
- ▶ **MAOIs, irreversible** are predicted to increase the exposure to **triptans (rizatriptan, sumatriptan)**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1493
- ▶ **MAOIs, irreversible** are predicted to increase the exposure to **triptans (zolmitriptan)**. [Severe] Theoretical → Also see TABLE 13 p. 1493
- ▶ **Tryptophan** increases the risk of adverse effects when given with **MAOIs, irreversible**. [Severe] Anecdotal → Also see TABLE 13 p. 1493

## Maraviroc

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **maraviroc**. Adjust dose. [\[Severe\]](#) Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **maraviroc**. Adjust dose. [\[Severe\]](#) Study
  - ▶ **Cenobamate** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Cobicistat** markedly increases the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **maraviroc**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **HIV-protease inhibitors (atazanavir)** moderately to markedly increase the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
  - ▶ **HIV-protease inhibitors (darunavir)** boosted with ritonavir markedly increase the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
  - ▶ **HIV-protease inhibitors (lopinavir)** boosted with ritonavir moderately increase the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
  - ▶ **HIV-protease inhibitors (ritonavir)** markedly increase the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
  - ▶ **Maraviroc** potentially decreases the exposure to **HIV-protease inhibitors (fosamprenavir)** and **HIV-protease inhibitors (fosamprenavir)** potentially decrease the exposure to **maraviroc**. Avoid. [\[Severe\]](#) Study
  - ▶ **Idelalisib** markedly increases the exposure to **maraviroc**. Adjust dose. [\[Severe\]](#) Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **maraviroc**. Adjust dose. [\[Severe\]](#) Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [\[Severe\]](#) Study
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **maraviroc**. [\[Moderate\]](#) Study
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Theoretical
  - ▶ **NNRTIs (efavirenz)** decrease the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Theoretical
  - ▶ **NNRTIs (etravirine)** slightly decrease the exposure to **maraviroc**. Refer to specialist literature. [\[Moderate\]](#) Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **maraviroc**. Adjust dose. [\[Severe\]](#) Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **maraviroc**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Vemurafenib** is predicted to increase the exposure to **maraviroc**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- Measles, mumps and rubella vaccine, live** → see live vaccines
- Mebendazole**
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the concentration of **mebendazole**. [\[Moderate\]](#) Study
- Medroxyprogesterone**
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of intramuscular **medroxyprogesterone**. [\[Moderate\]](#) Theoretical
  - ▶ **Cobicistat** is predicted to increase the concentration of intramuscular **medroxyprogesterone**. [\[Moderate\]](#) Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the concentration of intramuscular **medroxyprogesterone**. [\[Moderate\]](#) Theoretical
  - ▶ **Idelalisib** is predicted to increase the concentration of intramuscular **medroxyprogesterone**. [\[Moderate\]](#) Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of intramuscular **medroxyprogesterone**. [\[Moderate\]](#) Theoretical
  - ▶ **Sugammadex** is predicted to decrease the exposure to **medroxyprogesterone**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- Mefenamic acid** → see NSAIDs
- Mefloquine** → see antimalarials
- Meglitinides** → see TABLE 14 p. 1493 (antidiabetic drugs)
- ▶ **repaglinide**
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Anti-androgens (darolutamide)** are predicted to increase the concentration of **repaglinide**. [\[Moderate\]](#) Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **repaglinide**. [\[Moderate\]](#) Study
  - ▶ **Ciclosporin** moderately increases the exposure to **repaglinide**. [\[Moderate\]](#) Study
  - ▶ **Clopidogrel** increases the exposure to **repaglinide**. Avoid. [\[Severe\]](#) Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **repaglinide**. [\[Moderate\]](#) Study
  - ▶ **Ellexacafor** is predicted to increase the exposure to **repaglinide**. [\[Moderate\]](#) Theoretical
  - ▶ **Fenfluramine** might decrease blood glucose concentrations when given with **meglitinides**. [\[Moderate\]](#) Theoretical
  - ▶ **Fibrates (gemfibrozil)** increase the exposure to **repaglinide**. Avoid. [\[Severe\]](#) Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **repaglinide**. [\[Moderate\]](#) Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **repaglinide**. [\[Moderate\]](#) Study
  - ▶ **Iron chelators (deferasirox)** moderately increase the exposure to **repaglinide**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Leflunomide** is predicted to increase the exposure to **repaglinide**. [\[Moderate\]](#) Study
  - ▶ **Letermovir** is predicted to increase the concentration of **repaglinide**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **repaglinide**. [\[Moderate\]](#) Study
  - ▶ **Mifepristone** is predicted to increase the exposure to **repaglinide**. [\[Moderate\]](#) Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Opicapone** is predicted to increase the exposure to **repaglinide**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Pitolisant** is predicted to decrease the exposure to **repaglinide**. [\[Mild\]](#) Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Roxadustat** is predicted to increase the exposure to **repaglinide**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Selpercatinib** increases the exposure to **repaglinide**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Taxanes (cabazitaxel)** are predicted to affect the exposure to **repaglinide**. Manufacturer advises take 12 hours before or 3 hours after **cabazitaxel**. [\[Moderate\]](#) Theoretical
  - ▶ **Teriflunomide** is predicted to increase the exposure to **repaglinide**. [\[Moderate\]](#) Study
  - ▶ **Trimethoprim** slightly increases the exposure to **repaglinide**. Avoid or monitor blood glucose. [\[Moderate\]](#) Study
  - ▶ **Venetoclax** is predicted to increase the exposure to **repaglinide**. [\[Moderate\]](#) Theoretical
- Melatonin** → see TABLE 11 p. 1492 (CNS depressant effects)
- ▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
  - ▶ **Axitinib** is predicted to increase the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
  - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
  - ▶ **Givosiran** is predicted to increase the exposure to **melatonin**. Use with caution and adjust dose. [\[Moderate\]](#) Study
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
  - ▶ **Leflunomide** is predicted to decrease the exposure to **melatonin**. [\[Moderate\]](#) Theoretical

**Melatonin** (continued)

- ▶ **Mexiletine** is predicted to increase the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
- ▶ **Osilodrostat** is predicted to increase the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
- ▶ **SSRIs (fluvoxamine)** very markedly increase the exposure to **melatonin**. Avoid. [\[Severe\]](#) Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **melatonin**. [\[Moderate\]](#) Theoretical

**Meloxicam** → see NSAIDs

**Melphalan** → see alkylating agents

**Memantine**

- ▶ **Dopamine receptor agonists (amantadine)** increase the risk of CNS toxicity when given with **memantine**. Use with caution or avoid. [\[Severe\]](#) Theoretical
- ▶ **Memantine** is predicted to increase the effects of **dopamine receptor agonists (apomorphine, bromocriptine, cabergoline, pramipexole, quinagolide, ropinirole, rotigotine)**. [\[Moderate\]](#) Theoretical
- ▶ **Memantine** is predicted to increase the risk of CNS adverse effects when given with **ketamine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Memantine** is predicted to increase the effects of **levodopa**. [\[Moderate\]](#) Theoretical

**Mepacrine**

- ▶ **Mepacrine** is predicted to increase the concentration of **antimalarials (primaquine)**. Avoid. [\[Moderate\]](#) Theoretical

**Mepivacaine** → see anaesthetics, local

**Mepztazolin** → see opioids

**Mercaptopurine** → see TABLE 1 p. 1490 (hepatotoxicity), TABLE 15 p. 1493 (myelosuppression)

- ▶ **Allopurinol** potentially increases the risk of haematological toxicity when given with **mercaptopurine**. Adjust **mercaptopurine** dose, p. 986. [\[Severe\]](#) Study
- ▶ **Mercaptopurine** decreases the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Anecdotal
- ▶ **Febuxostat** is predicted to increase the exposure to **mercaptopurine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mercaptopurine** (high-dose). UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Trimethoprim** might increase the risk of haematological toxicity when given with **mercaptopurine** in renal transplant patients. [\[Severe\]](#) Theoretical

**Meropenem** → see carbapenems

**Mesalazine**

**ROUTE-SPECIFIC INFORMATION** The manufacturers of some mesalazine gastro-resistant and modified-release medicines (*Asacol MR* tablets, *Ipocol*, *Salofalk* granules) suggest that preparations that lower stool pH (e.g. lactulose) might prevent the release of mesalazine.

**Metaraminol** → see sympathomimetics, vasoconstrictor

**Metformin** → see TABLE 14 p. 1493 (antidiabetic drugs)

- ▶ **Alcohol** (excessive consumption) potentially increases the risk of lactic acidosis when given with **metformin**. Avoid excessive alcohol consumption. [\[Moderate\]](#) Theoretical
- ▶ **Bictegravir** slightly increases the exposure to **metformin**. [\[Moderate\]](#) Study
- ▶ **Dolutegravir** increases the exposure to **metformin**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Fenfluramine** might decrease blood glucose concentrations when given with **metformin**. [\[Moderate\]](#) Theoretical
- ▶ **Guanfacine** is predicted to increase the concentration of **metformin**. [\[Moderate\]](#) Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **metformin**. Monitor and adjust dose. [\[Moderate\]](#) Study

▶ **Mexiletine** is predicted to affect the exposure to **metformin**.

[\[Unknown\]](#) Theoretical

▶ **Pitolisant** is predicted to increase the exposure to **metformin**.

[\[Mild\]](#) Theoretical

▶ **Ribociclib** is predicted to increase the exposure to **metformin**.

[\[Moderate\]](#) Theoretical

▶ **Risdiplam** is predicted to increase the concentration of **metformin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical

▶ **Vandetanib** increases the exposure to **metformin**. Monitor and adjust dose. [\[Moderate\]](#) Study

**Methadone** → see opioids

**Methenamine**

▶ **Acetazolamide** is predicted to decrease the efficacy of **methenamine**. Avoid. [\[Moderate\]](#) Theoretical

▶ **Potassium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. [\[Moderate\]](#) Theoretical

▶ **Sodium bicarbonate** is predicted to decrease the efficacy of **methenamine**. Avoid. [\[Moderate\]](#) Theoretical

▶ **Sodium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. [\[Moderate\]](#) Theoretical

▶ **Thiazide diuretics (metolazone)** are predicted to decrease the efficacy of **methenamine**. [\[Moderate\]](#) Theoretical

**Methocarbamol** → see TABLE 11 p. 1492 (CNS depressant effects)

**Methotrexate** → see TABLE 1 p. 1490 (hepatotoxicity), TABLE 15 p. 1493 (myelosuppression), TABLE 2 p. 1490 (nephrotoxicity), TABLE 5 p. 1491 (thromboembolism)

▶ **Acetazolamide** increases the urinary excretion of **methotrexate**. [\[Moderate\]](#) Study

▶ **Methotrexate** is predicted to decrease the clearance of **aminophylline**. [\[Moderate\]](#) Theoretical

▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **methotrexate**. [\[Mild\]](#) Study

▶ **Anti-androgens (darolutamide)** are predicted to increase the concentration of **methotrexate**. [\[Moderate\]](#) Theoretical

▶ **Antiepileptics (levetiracetam)** decrease the clearance of **methotrexate**. [\[Severe\]](#) Anecdotal

▶ **Antimalarials (pyrimethamine)** are predicted to increase the risk of adverse effects when given with **methotrexate**. [\[Severe\]](#) Theoretical

▶ **Asparaginase** affects the efficacy of **methotrexate**. [\[Severe\]](#) Anecdotal

▶ **Aspirin** (high-dose) is predicted to increase the risk of toxicity when given with **methotrexate**. [\[Severe\]](#) Study

▶ **Baricitinib** is predicted to enhance the risk of immunosuppression when given with **methotrexate**. [\[Severe\]](#) Study

▶ **Crisantaspase** affects the efficacy of **methotrexate**. [\[Severe\]](#) Anecdotal

▶ **Eltrombopag** is predicted to increase the concentration of **methotrexate**. [\[Moderate\]](#) Theoretical

▶ **Methotrexate** potentially increases the risk of severe skin reaction when given with topical **fluorouracil**. [\[Severe\]](#) Anecdotal

▶ **Leflunomide** is predicted to increase the exposure to **methotrexate**. [\[Moderate\]](#) Theoretical

▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **methotrexate** (high-dose). UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical

▶ **Nitisinone** is predicted to increase the exposure to **methotrexate**. [\[Moderate\]](#) Study

▶ **Nitroxide** potentially increases the risk of methotrexate toxicity when given with **methotrexate**. Avoid. [\[Severe\]](#) Study

▶ **NSAIDs** are predicted to increase the risk of toxicity when given with **methotrexate**. [\[Severe\]](#) Study

▶ **Pegaspargase** affects the efficacy of **methotrexate**. [\[Severe\]](#) Anecdotal

▶ **Penicillins** are predicted to increase the risk of toxicity when given with **methotrexate**. [\[Severe\]](#) Anecdotal

▶ **Potassium aminobenzoate** increases the concentration of **methotrexate**. [\[Moderate\]](#) Theoretical

▶ **Proton pump inhibitors** decrease the clearance of **methotrexate** (high-dose). Use with caution or avoid. [\[Severe\]](#) Study

- ▶ **Quinolones (ciprofloxacin)** potentially increase the risk of toxicity when given with **methotrexate**. [\[Severe\]](#) Anecdotal
- ▶ **Regorafenib** is predicted to increase the exposure to **methotrexate**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1493
- ▶ **Retinoids (acitretin)** are predicted to increase the concentration of **methotrexate**. Avoid. [\[Moderate\]](#) Anecdotal
- ▶ **Methotrexate** is predicted to decrease the efficacy of **sapropterin**. [\[Moderate\]](#) Theoretical
- ▶ **Sulfonamides** are predicted to increase the exposure to **methotrexate**. Use with caution or avoid. [\[Severe\]](#) Theoretical
- ▶ **Tedizolid** is predicted to increase the exposure to **methotrexate**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Methotrexate** is predicted to increase the risk of toxicity when given with **tegafur**. [\[Severe\]](#) Theoretical → Also see TABLE 15 p. 1493
- ▶ **Teriflunomide** is predicted to increase the exposure to **methotrexate**. [\[Moderate\]](#) Study → Also see TABLE 1 p. 1490
- ▶ **Methotrexate** decreases the clearance of **theophylline**. [\[Moderate\]](#) Study
- ▶ **Trimethoprim** increases the risk of adverse effects when given with **methotrexate**. Avoid. [\[Severe\]](#) Anecdotal → Also see TABLE 2 p. 1490

**Methoxy polyethylene glycol-epoetin beta** → see TABLE 5 p. 1491 (thromboembolism)

**Methoxyflurane** → see volatile halogenated anaesthetics

**Methyldopa** → see TABLE 8 p. 1491 (hypotension)

- ▶ **Entacapone** is predicted to increase the exposure to **methyldopa**. [\[Moderate\]](#) Theoretical
- ▶ Oral **iron** decreases the effects of oral **methyldopa**. [\[Moderate\]](#) Study
- ▶ **Methyldopa** increases the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal
- ▶ **MAOIs, irreversible** are predicted to alter the antihypertensive effects of **methyldopa**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1491

### Methylphenidate

- ▶ **Alcohol** might increase the concentration of **methylphenidate**. Avoid. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine)** might decrease the concentration of **methylphenidate**. [\[Moderate\]](#) Anecdotal
- ▶ **Antiepileptics (valproate)** might enhance the effects of **methylphenidate**. [\[Severe\]](#) Anecdotal
- ▶ **Methylphenidate** might increase the risk of dyskinesias when given with **antipsychotics, second generation (paliperidone)**. [\[Severe\]](#) Theoretical
- ▶ **Methylphenidate** increases the risk of dyskinesias when given with **antipsychotics, second generation (risperidone)**. [\[Severe\]](#) Anecdotal
- ▶ **Methylphenidate** is predicted to decrease the effects of **apraclonidine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Methylphenidate** has been reported to cause psychotic symptoms when given with **disulfiram**. [\[Severe\]](#) Anecdotal
- ▶ **Methylphenidate** might increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **MAO-B inhibitors (rasagiline)** are predicted to increase the risk of a hypertensive crisis when given with **methylphenidate**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **MAO-B inhibitors (selegiline)** might increase the risk of a hypertensive crisis when given with **methylphenidate**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Methylphenidate** causes a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical
- ▶ **Methylphenidate** is predicted to cause a hypertensive crisis when given with **methylthioninium chloride**. [\[Severe\]](#) Theoretical
- ▶ **Methylphenidate** is predicted to cause a hypertensive crisis when given with **moclobemide**. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **methylphenidate**. [\[Severe\]](#) Theoretical
- ▶ **Methylphenidate** is predicted to increase the risk of a hypertensive crisis when given with **ozanimod**. [\[Severe\]](#) Theoretical
- ▶ **Methylphenidate** might increase the concentration of **tricyclic antidepressants**. Use with caution and adjust dose. [\[Moderate\]](#) Study

- ▶ **Methylphenidate** might increase the risk of hypertension and arrhythmias when given with **volatile halogenated anaesthetics**. Avoid **methylphenidate** on day of surgery, p. 379. [\[Severe\]](#) Theoretical
- ▶ **Methylprednisolone** → see corticosteroids
- ▶ **Methylthioninium chloride** → see TABLE 13 p. 1493 (serotonin syndrome)
- ▶ **Methylthioninium chloride** is predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Methylphenidate** is predicted to cause a hypertensive crisis when given with **methylthioninium chloride**. [\[Severe\]](#) Theoretical
- ▶ **Metoclopramide**
  - ▶ **Metoclopramide** is predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Metoclopramide** potentially decreases the absorption of **antifungals, azoles (posaconazole)** oral suspension. [\[Moderate\]](#) Study
  - ▶ **Metoclopramide** decreases the concentration of **antimalarials (atovaquone)**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Metoclopramide** is predicted to decrease the effects of **dopamine receptor agonists (apomorphine, bromocriptine, cabergoline, pramipexole, quinagolide, ropinirole, rotigotine)**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Metoclopramide** decreases the effects of **levodopa**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Metoclopramide** is predicted to increase the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Moderate\]](#) Theoretical
  - ▶ **Metoclopramide** increases the effects of **suxamethonium**. [\[Moderate\]](#) Study
- ▶ **Metolazone** → see thiazide diuretics
- ▶ **Metoprolol** → see beta blockers, selective
- ▶ **Metreleptin**
  - ▶ **Metreleptin** might alter the exposure to **aminophylline**. [\[Severe\]](#) Theoretical
  - ▶ **Metreleptin** might alter the exposure to **ciclosporin**. Monitor concentration and adjust dose. [\[Severe\]](#) Theoretical
  - ▶ **Metreleptin** might decrease the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
  - ▶ **Metreleptin** might alter the exposure to **coumarins (warfarin)**. Monitor INR and adjust dose. [\[Severe\]](#) Theoretical
  - ▶ **Metreleptin** is predicted to increase the risk of hypoglycaemia when given with **insulin**. Monitor blood glucose and adjust dose. [\[Severe\]](#) Theoretical
  - ▶ **Metreleptin** is predicted to increase the risk of hypoglycaemia when given with **sulfonylureas**. Monitor blood glucose and adjust dose. [\[Severe\]](#) Theoretical
  - ▶ **Metreleptin** might alter the exposure to **theophylline**. Monitor concentration and adjust dose. [\[Severe\]](#) Theoretical

**Metronidazole** → see TABLE 12 p. 1493 (peripheral neuropathy)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Alcohol** potentially causes a disulfiram-like reaction when given with **metronidazole**. Avoid for at least 48 hours after stopping treatment. [\[Moderate\]](#) Study
- ▶ **Metronidazole** increases the risk of toxicity when given with **alkylating agents (busulfan)**. [\[Severe\]](#) Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **metronidazole**. [\[Moderate\]](#) Study
- ▶ **Metronidazole** is predicted to increase the risk of capectabine toxicity when given with **capectabine**. [\[Severe\]](#) Theoretical
- ▶ **Metronidazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Severe\]](#) Study
- ▶ **Disulfiram** increases the risk of acute psychoses when given with **metronidazole**. [\[Severe\]](#) Study → Also see TABLE 12 p. 1493
- ▶ **Metronidazole** increases the risk of toxicity when given with **fluorouracil**. [\[Severe\]](#) Study
- ▶ **Metronidazole** is predicted to increase the concentration of **lithium**. Avoid or adjust dose. [\[Severe\]](#) Anecdotal

**Metyrapone**

- ▶ Antiepileptics (**fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the effects of metyrapone. Avoid. [Moderate] Study
- ▶ Antihistamines, sedating (**cyproheptadine**) decrease the effects of metyrapone. Avoid. [Moderate] Study
- ▶ **Carbamazole** decreases the effects of metyrapone. Avoid. [Moderate] Theoretical
- ▶ **Combined hormonal contraceptives** decrease the effects of metyrapone. Avoid. [Moderate] Theoretical
- ▶ Phenothiazines (**chlorpromazine**) decrease the effects of metyrapone. Avoid. [Moderate] Theoretical
- ▶ **Propylthiouracil** is predicted to decrease the effects of metyrapone. Avoid. [Moderate] Theoretical
- ▶ **Tricyclic antidepressants (amitriptyline)** decrease the effects of metyrapone. Avoid. [Moderate] Theoretical

**Mexiletine**

**FOOD AND LIFESTYLE** Dose adjustment might be necessary if smoking started or stopped during treatment.

- ▶ **Mexiletine** is predicted to increase the exposure to **agomelatine**. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to increase the risk of torsade de pointes when given with **antiarrhythmics**. Avoid. [Severe] Theoretical
- ▶ **Antiepileptics (phenytoin)** are predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mexiletine** increases the concentration of **antipsychotics, second generation (clozapine)**. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **antipsychotics, second generation (olanzapine)**. Adjust dose. [Moderate] Anecdotal
- ▶ **Mexiletine** potentially increases the risk of cardiovascular adverse effects when given with **beta blockers, non-selective**. Avoid or monitor. [Severe] Theoretical
- ▶ **Mexiletine** potentially increases the risk of cardiovascular adverse effects when given with **beta blockers, selective**. Avoid or monitor. [Severe] Theoretical
- ▶ **Bupropion** is predicted to increase the exposure to **mexiletine**. [Moderate] Study
- ▶ **Mexiletine** increases the risk of cardiovascular adverse effects when given with **calcium channel blockers (diltiazem)**. Avoid or monitor. [Severe] Theoretical
- ▶ **Mexiletine** potentially increases the risk of cardiovascular adverse effects when given with **calcium channel blockers (verapamil)**. Avoid or monitor. [Severe] Theoretical
- ▶ **Cinacalcet** is predicted to increase the exposure to **mexiletine**. [Moderate] Study
- ▶ **Cobicistat** potentially increases the exposure to **mexiletine**. [Severe] Theoretical
- ▶ **Mexiletine** potentially affects the exposure to **coumarins (warfarin)**. Avoid. [Unknown] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [Moderate] Study
- ▶ **Mexiletine** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mexiletine** potentially affects the exposure to **lithium**. Avoid. [Unknown] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
- ▶ **Mexiletine** slightly increases the exposure to **MAO-B inhibitors (rasagiline)**. [Moderate] Study

- ▶ **Mexiletine** is predicted to increase the exposure to **melatonin**. [Moderate] Theoretical
  - ▶ **Mexiletine** is predicted to affect the exposure to **metformin**. [Unknown] Theoretical
  - ▶ **Opioids** potentially decrease the absorption of oral **mexiletine**. [Moderate] Study
  - ▶ **Mexiletine** is predicted to increase the exposure to **phenothiazines (chlorpromazine)**. [Moderate] Theoretical
  - ▶ **Mexiletine** is predicted to increase the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. [Moderate] Theoretical
  - ▶ **Mexiletine** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** are predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Mexiletine** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
  - ▶ **Mexiletine** is predicted to increase the exposure to **SNRIs (duloxetine)**. [Moderate] Theoretical
  - ▶ **SSRIs (fluoxetine, fluvoxamine, paroxetine)** are predicted to increase the exposure to **mexiletine**. [Moderate] Study
  - ▶ **Terbinafine** is predicted to increase the exposure to **mexiletine**. [Moderate] Study
  - ▶ **Teriflunomide** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Mexiletine** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Mexiletine** increases the exposure to **tizanidine**. Avoid. [Moderate] Study
  - ▶ **Mexiletine** is predicted to increase the exposure to **triptans (zolmitriptan)**. Adjust zolmitriptan dose, p. 515. [Moderate] Theoretical
- Mianserin** → see TABLE 11 p. 1492 (CNS depressant effects)
- ▶ **Antiepileptics (carbamazepine)** markedly decrease the exposure to **mianserin**. Adjust dose. [Moderate] Study
  - ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **mianserin**. [Moderate] Study → Also see TABLE 11 p. 1492
  - ▶ **Mianserin** is predicted to increase the risk of toxicity when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
  - ▶ **Mianserin** is predicted to increase the risk of toxicity when given with **moclobemide**. Avoid and for 1 week after stopping **mianserin**. [Severe] Theoretical
  - ▶ **Mianserin** is predicted to decrease the efficacy of **pitolisant**. [Moderate] Theoretical
  - ▶ **Mianserin** decreases the effects of **sympathomimetics, vasoconstrictor (ephedrine)**. [Severe] Anecdotal
- Micafungin** → see TABLE 1 p. 1490 (hepatotoxicity)
- ▶ **Micafungin** slightly increases the exposure to **amphotericin B**. Avoid or monitor toxicity. [Moderate] Study
- Miconazole** → see antifungals, azoles
- Midazolam** → see benzodiazepines
- Midodrine** → see sympathomimetics, vasoconstrictor
- Midostaurin**
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketonazole, voriconazole)** are predicted to increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Midostaurin** moderately decreases the exposure to the active metabolite of **bupropion**. [Moderate] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
  - ▶ **Midostaurin** might increase the concentration of **ciclosporin**. [Severe] Anecdotal

- ▶ **Cobicistat** is predicted to increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **midostaurin**. [Severe] Study
  - ▶ **Elvitegravir** boosted with **ritonavir** is predicted to increase the exposure to **midostaurin**. [Severe] Theoretical
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **midostaurin** and **midostaurin** is predicted to increase the exposure to **endothelin receptor antagonists (bosentan)**. [Severe] Study
  - ▶ **Grapefruit** juice is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
  - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **midostaurin**. [Severe] Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Theoretical
  - Mifamurtide** → see TABLE 15 p. 1493 (myelosuppression)
  - ▶ **Ciclosporin** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
  - ▶ **Corticosteroids** are predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
  - ▶ **NSAIDs** (high-dose) are predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
  - ▶ **Pimecrolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
  - ▶ **Sirolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
  - ▶ **Tacrolimus** is predicted to affect the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
  - Mifepristone**
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **mifepristone**. [Moderate] Study
  - ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **mifepristone**. [Moderate] Theoretical
  - ▶ **Mifepristone** is predicted to increase the exposure to **avatrombopag**. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **mifepristone**. [Moderate] Study
  - ▶ **Mifepristone** is predicted to decrease the efficacy of **corticosteroids**. Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ **Mifepristone** is predicted to increase the exposure to **coumarins (warfarin)**. [Moderate] Theoretical
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
  - ▶ **Mifepristone** is predicted to increase the exposure to **ergotamine**. [Severe] Theoretical
  - ▶ **Mifepristone** is predicted to increase the exposure to **everolimus**. [Severe] Theoretical
  - ▶ **Grapefruit** juice is predicted to increase the exposure to **mifepristone**. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **mifepristone**. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **mifepristone**. [Moderate] Study
  - ▶ **Mifepristone** is predicted to increase the exposure to **loperamide**. [Moderate] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **mifepristone**. [Moderate] Study
  - ▶ **Mifepristone** is predicted to increase the exposure to **meglitinides (repaglinide)**. [Moderate] Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
  - ▶ **Mifepristone** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
  - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
  - ▶ **Mifepristone** is predicted to increase the exposure to **opioids (alfentanil)**. [Severe] Theoretical
  - ▶ **Mifepristone** is predicted to increase the exposure to **pioglitazone**. [Moderate] Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
  - ▶ **Mifepristone** is predicted to increase the exposure to **siponimod**. [Moderate] Theoretical
  - ▶ **Mifepristone** is predicted to increase the exposure to **sirolimus**. [Severe] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
  - ▶ **Mifepristone** moderately increases the exposure to **statins (fluvastatin)**. [Moderate] Study
  - ▶ **Mifepristone** very markedly increases the exposure to **statins (simvastatin)**. [Severe] Study
  - ▶ **Mifepristone** is predicted to increase the exposure to **sulfonylureas (gliclazide, tolbutamide)**. [Moderate] Theoretical
  - ▶ **Mifepristone** is predicted to increase the exposure to oral **tensirolium**. [Severe] Theoretical
  - Minocycline** → see tetracyclines
  - Minoxidil** → see TABLE 8 p. 1491 (hypotension)
- ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- Mirabegron**
  - ▶ **Mirabegron** is predicted to increase the exposure to **aliskiren**. [Mild] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 843. [Moderate] Study
  - ▶ **Mirabegron** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Mild] Theoretical
  - ▶ **Mirabegron** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 843. [Moderate] Study
  - ▶ **Mirabegron** is predicted to increase the exposure to **colchicine**. [Mild] Theoretical
  - ▶ **Mirabegron** slightly increases the exposure to **digoxin**. Monitor concentration and adjust dose. [Severe] Study
  - ▶ **Mirabegron** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Mirabegron** is predicted to increase the exposure to **everolimus**. [Mild] Theoretical
  - ▶ **Mirabegron** is predicted to increase the exposure to **factor Xa inhibitors (edoxaban)**. [Mild] Theoretical

**Mirabegron** (continued)

- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 843. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 843. [Moderate] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **loperamide**. [Mid] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 843. [Moderate] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **sirolimus**. [Mid] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Mid] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. [Severe] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **topotecan**. [Mid] Theoretical

**Mirtazapine** → see TABLE 13 p. 1493 (serotonin syndrome), TABLE 11 p. 1492 (CNS depressant effects)

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1492
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **mirtazapine**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ **Mirtazapine** is predicted to decrease the efficacy of **pitolisant**. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study

**Misoprostol**

- ▶ **Misoprostol** can cause uterine contractions, as can **oxytocin**; concurrent use might increase the risk of developing this effect. Avoid and for 4 hours after stopping **misoprostol**. [Severe] Theoretical

**Mitomycin** → see TABLE 15 p. 1493 (myelosuppression), TABLE 5 p. 1491 (thromboembolism)

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mitomycin**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Mitotane** → see TABLE 15 p. 1493 (myelosuppression)
- ▶ **Mitotane** is predicted to decrease the exposure to **5-HT<sub>3</sub>-receptor antagonists (ondansetron)**. [Moderate] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **acalabrutinib**. Avoid. [Severe] Study
- ▶ **Aldosterone antagonists (spironolactone)** are predicted to decrease the effects of **mitotane**. Avoid. [Severe] Anecdotal
- ▶ **Mitotane** is predicted to decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **anti-androgens (abiraterone)**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **anti-androgens (darolutamide)**. Avoid. [Moderate] Study

- ▶ **Mitotane** is predicted to decrease the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the efficacy of **antiarrhythmics (propafenone)**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **anticholinesterases, centrally acting (donepezil)**. [Mid] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **antiepileptics (perampanel)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **antimalarials (artemether)** with lumefantrine. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the concentration of **antimalarials (piperaquine)**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **antipsychotics, second generation (aripiprazole)**. Adjust **aripiprazole** dose, p. 427. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **antipsychotics, second generation (lurasidone)**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **antipsychotics, second generation (paliperidone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **antipsychotics, second generation (quetiapine)**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **antipsychotics, second generation (risperidone)**. Adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1493
- ▶ **Mitotane** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **benzodiazepines (alprazolam)**. Adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **benzodiazepines (midazolam)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Study
- ▶ **Mitotane** slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1493
- ▶ **Mitotane** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1493
- ▶ **Mitotane** is predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **bupirone**. Use with caution and adjust dose. [Severe] Study
- ▶ **Mitotane** moderately decreases the exposure to **cabozantinib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1493
- ▶ **Mitotane** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **calcium channel blockers (diltiazem)**. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1493
- ▶ **Mitotane** decreases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Mitotane** is predicted to alter the effects of **ciostazol**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** decreases the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Study

- ▶ **Mitotane** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **corticosteroids (budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **corticosteroids (fluticasone)**. [Unknown] Theoretical
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1493
- ▶ **Mitotane** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **dienogest**. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **dipeptidylpeptidase-4 inhibitors (linagliptin)**. [Moderate] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **dolutegravir**. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [Mid] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **elxacaftor**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
- ▶ **Mitotane** affects the exposure to **endothelin receptor antagonists (bosentan)**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **endothelin receptor antagonists (macitentan)**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 1057. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **esketamine**. Adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Mitotane** moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **factor XA inhibitors (apixaban)**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **factor XA inhibitors (rivaroxaban)**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **fedratinib**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **fostamatinib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to the active metabolite of **fostemsavir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **glasdegib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to greatly decrease the concentration of **glecaprevir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 384. [Moderate] Study
- ▶ **Mitotane** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ibrutinib**. Avoid or monitor. [Severe] Study → Also see TABLE 15 p. 1493
- ▶ **Mitotane** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **imatinitib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1493
- ▶ **Mitotane** is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study → Also see TABLE 15 p. 1493
- ▶ **Mitotane** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **meglitinides (repaglinide)**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **montelukast**. [Mid] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **neurokinin-1 receptor antagonists (fosaprepitant)**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **neurokinin-1 receptor antagonists (netupitant)**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1493
- ▶ **Mitotane** is predicted to decrease the exposure to **nirmatrelvir** boosted with ritonavir. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **nitisone**. Adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **NNRTIs (doravirine)**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **NNRTIs (etravirine)**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **NNRTIs (nevirapine)**. [Severe] Theoretical
- ▶ **Mitotane** markedly decreases the exposure to **NNRTIs (rilpivirine)**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1493
- ▶ **Mitotane** is predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [Moderate] Study

## Mitotane (continued)

- ▶ Mitotane is predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ Mitotane decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
  - ▶ Mitotane is predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [Moderate] Study
  - ▶ Mitotane is predicted to decrease the exposure to **osilodrostat**. [Moderate] Theoretical
  - ▶ Mitotane is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
  - ▶ Mitotane is predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
  - ▶ Mitotane is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1493
  - ▶ Mitotane is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1493
  - ▶ Mitotane is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
  - ▶ Mitotane is predicted to decrease the exposure to **pegmatinib**. Avoid. [Severe] Study
  - ▶ Mitotane moderately decreases the exposure to **phosphodiesterase type-4 inhibitors (apremilast)**. Avoid. [Severe] Study
  - ▶ Mitotane is predicted to decrease the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. Avoid. [Moderate] Study
  - ▶ Mitotane is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [Severe] Study
  - ▶ Mitotane is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [Moderate] Theoretical
  - ▶ Mitotane is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
  - ▶ Mitotane is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
  - ▶ Mitotane is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
  - ▶ Mitotane might decrease the exposure to **ponesimod**. [Moderate] Theoretical
  - ▶ Mitotane is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
  - ▶ Mitotane is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
  - ▶ Mitotane is predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
  - ▶ Mitotane is predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1493
  - ▶ Mitotane is predicted to decrease the exposure to **relugolix**. Avoid. [Moderate] Study
  - ▶ Mitotane might decrease the exposure to **remdesivir**. Avoid. [Moderate] Theoretical
  - ▶ Mitotane is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1493
  - ▶ Mitotane is predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 15 p. 1493
  - ▶ Mitotane is predicted to decrease the exposure to **selpatercinib**. Avoid. [Moderate] Study
  - ▶ Mitotane is predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
  - ▶ Mitotane is predicted to decrease the exposure to **siponimod**. [Severe] Study
  - ▶ Mitotane is predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
  - ▶ Mitotane is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
  - ▶ Mitotane is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical → Also see TABLE 15 p. 1493
  - ▶ Mitotane is predicted to decrease the exposure to **sotorasib**. Avoid. [Severe] Study
  - ▶ Mitotane is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Study
  - ▶ Mitotane is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1080. [Moderate] Study → Also see TABLE 15 p. 1493
  - ▶ Mitotane decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
  - ▶ Mitotane is predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1493
  - ▶ Mitotane is predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical → Also see TABLE 15 p. 1493
  - ▶ Mitotane is predicted to decrease the exposure to **taxanes (paclitaxel)**. Avoid. [Severe] Study → Also see TABLE 15 p. 1493
  - ▶ Mitotane is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study → Also see TABLE 15 p. 1493
  - ▶ Mitotane might decrease the exposure to **tepotinib**. Avoid. [Severe] Theoretical
  - ▶ Mitotane is predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
  - ▶ Mitotane is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
  - ▶ Mitotane is predicted to decrease the exposure to **tivozanib**. [Severe] Study
  - ▶ Mitotane is predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
  - ▶ Mitotane is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
  - ▶ Mitotane is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
  - ▶ Mitotane is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1493
  - ▶ Mitotane is predicted to decrease the exposure to **tucatinib**. Avoid. [Severe] Study
  - ▶ Mitotane is predicted to decrease the efficacy of **ulipristal**. Avoid and for 4 weeks after stopping **ulipristal**. [Severe] Theoretical
  - ▶ Mitotane is predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
  - ▶ Mitotane is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
  - ▶ Mitotane is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
  - ▶ Mitotane is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Study
  - ▶ Mitotane is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
  - ▶ Mitotane is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical → Also see TABLE 15 p. 1493
  - ▶ Mitotane is predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1493
  - ▶ Mitotane is predicted to decrease the exposure to **vinca alkaloids (vinorelbine)**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 15 p. 1493
  - ▶ Mitotane is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
  - ▶ Mitotane is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
  - ▶ Mitotane is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
  - ▶ Mitotane is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- Mitoxantrone** → see anthracyclines
- Mivacurium** → see neuromuscular blocking drugs, non-depolarising
- Mizolastine** → see antihistamines, non-sedating
- Moclobemide** → see TABLE 13 p. 1493 (serotonin syndrome)

**FOOD AND LIFESTYLE** Moclobemide is claimed to cause less potentiation of the pressor effect of tyramine than the traditional (irreversible) MAOIs, but patients should avoid consuming large amounts of tyramine-rich foods (such as mature cheese, salami, pickled herring, Bovril<sup>®</sup>, Oxo<sup>®</sup>, Marmite<sup>®</sup> or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- ▶ **Amfetamines** are predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1493
  - ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **moclobemide**. Avoid or monitor. [Mild] Study
  - ▶ **Moclobemide** potentially increases the exposure to benzodiazepines (**clobazam**). Adjust dose. [Moderate] Theoretical
  - ▶ **Bupropion** is predicted to increase the risk of severe hypertension when given with **moclobemide**. Avoid. [Severe] Theoretical
  - ▶ **Moclobemide** is predicted to increase the exposure to **cannabidiol**. [Moderate] Theoretical
  - ▶ **Moclobemide** is predicted to increase the exposure to **cilostazol**. [Moderate] Theoretical
  - ▶ **Moclobemide** is predicted to decrease the efficacy of **clopidogrel**. Avoid. [Moderate] Study
  - ▶ **Moclobemide** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **moclobemide**. Adjust **moclobemide** dose, p. 394. [Mild] Study
  - ▶ **Levodopa** increases the risk of adverse effects when given with **moclobemide**. [Moderate] Study
  - ▶ **Moclobemide** is predicted to increase the risk of adverse effects when given with **linezolid**. Avoid and for 14 days after stopping **moclobemide**. [Severe] Theoretical → Also see TABLE 13 p. 1493
  - ▶ **Moclobemide** is predicted to increase the effects of **MAO-B inhibitors (rasagiline, selegiline)**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1493
  - ▶ **Moclobemide** is predicted to increase the risk of adverse effects when given with **MAO-B inhibitors (safinamide)**. Avoid and for 1 week after stopping **safinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1493
  - ▶ **Methylphenidate** is predicted to cause a hypertensive crisis when given with **moclobemide**. [Severe] Theoretical
  - ▶ **Mianserin** is predicted to increase the risk of toxicity when given with **moclobemide**. Avoid and for 1 week after stopping **mianserin**. [Severe] Theoretical
  - ▶ **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **moclobemide**. Avoid. [Severe] Theoretical
  - ▶ **Ozanimod** might increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Theoretical
  - ▶ **Moclobemide** increases the risk of adverse effects when given with **phenothiazines (levomepromazine)**. [Moderate] Study
  - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Theoretical
  - ▶ **Moclobemide** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
  - ▶ **Moclobemide** is predicted to increase the exposure to **SSRIs (escitalopram)**. Use with caution and adjust dose. [Severe] Study → Also see TABLE 13 p. 1493
  - ▶ **Sympathomimetics, vasoconstrictor (ephedrine, isometheptene, phenylephrine, pseudoephedrine)** are predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Study
  - ▶ **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **moclobemide**. [Severe] Theoretical
  - ▶ **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **moclobemide**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1493
  - ▶ **Moclobemide** moderately increases the exposure to **triptans (rizatriptan, sumatriptan)**. Avoid. [Moderate] Study → Also see TABLE 13 p. 1493
  - ▶ **Moclobemide** slightly increases the exposure to **triptans (zolmitriptan)**. Adjust **zolmitriptan** dose, p. 515. [Moderate] Study → Also see TABLE 13 p. 1493
- Modafinil**
- ▶ **Modafinil** is predicted to decrease the efficacy of **anti-androgens (cyproterone)** with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. [Severe] Study
  - ▶ **Antiepileptics (carbamazepine, phenobarbital, primidone)** are predicted to decrease the exposure to **modafinil**. [Mild] Theoretical
  - ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **modafinil** and **modafinil** is predicted to increase the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Moderate] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **modafinil**. [Mild] Theoretical
  - ▶ **Modafinil** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **modafinil**. [Mild] Theoretical
  - ▶ **Modafinil** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Study
  - ▶ **Modafinil** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
  - ▶ **Modafinil** is predicted to decrease the exposure to **elbasvir**. Avoid. [Unknown] Theoretical
  - ▶ **Modafinil** is predicted to decrease the efficacy of **estradiol**. [Moderate] Theoretical
  - ▶ **Modafinil** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
  - ▶ **Modafinil** is predicted to decrease the exposure to **glasdegib**. Avoid or adjust **glasdegib** dose, p. 1087. [Moderate] Theoretical
  - ▶ **Modafinil** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **modafinil**. [Mild] Theoretical
  - ▶ **Modafinil** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
  - ▶ **Idelalisib** is predicted to increase the exposure to **modafinil**. [Mild] Theoretical
  - ▶ **Modafinil** is predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
  - ▶ **Modafinil** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **modafinil**. [Mild] Theoretical
  - ▶ **Modafinil** is predicted to decrease the exposure to **NNRTIs (doravirine)**. Avoid or adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. [Severe] Theoretical
  - ▶ **Modafinil** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
  - ▶ **Modafinil** is predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **modafinil**. [Moderate] Theoretical
  - ▶ **Modafinil** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
  - ▶ **Modafinil** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
  - ▶ **Modafinil** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Severe] Theoretical
  - ▶ **Modafinil** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- Mogamulizumab** → see monoclonal antibodies
- Mometasone** → see corticosteroids
- Monoclonal antibodies** → see TABLE 15 p. 1493 (myelosuppression), TABLE 12 p. 1493 (peripheral neuropathy), TABLE 9 p. 1492 (QT-interval prolongation)

- ▶ **Certolizumab pegol** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **abatacept**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Abatacept** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **golimumab**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Blinatumomab** is predicted to transiently increase the exposure to **aminophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Sarilumab** potentially affects the exposure to **aminophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Tocilizumab** is predicted to decrease the exposure to **aminophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Certolizumab pegol** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **anakinra**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Anakinra** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **golimumab**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Anti-anthracyclines** are predicted to increase the risk of cardiotoxicity when given with monoclonal antibodies (trastuzumab, trastuzumab emtansine). Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 15 p. 1493
- ▶ **Anthracyclines** are predicted to increase the risk of cardiotoxicity when given with **trastuzumab deruxtecan**. [\[Severe\]](#) Theoretical → Also see TABLE 15 p. 1493
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **polatuzumab vedotin**. [\[Moderate\]](#) Theoretical
- ▶ **Antiarrhythmics (dronedaron)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the effects of **brentuximab vedotin**. [\[Severe\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **polatuzumab vedotin**. [\[Moderate\]](#) Theoretical
- ▶ **Tocilizumab** is predicted to decrease the exposure to **antiepileptics (fosphenytoin, phenytoin)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **polatuzumab vedotin**. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Tocilizumab** is predicted to decrease the exposure to **benzodiazepines (alprazolam, diazepam, midazolam)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Brentuximab vedotin** increases the risk of pulmonary toxicity when given with **bleomycin**. Avoid. [\[Severe\]](#) Study → Also see TABLE 15 p. 1493
- ▶ **Tocilizumab** is predicted to decrease the exposure to **calcium channel blockers**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Blinatumomab** is predicted to transiently increase the exposure to **ciclosporin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Sarilumab** potentially affects the exposure to **ciclosporin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Tocilizumab** is predicted to decrease the exposure to **ciclosporin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **polatuzumab vedotin**. [\[Moderate\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Sarilumab** potentially decreases the exposure to **combined hormonal contraceptives**. [\[Severe\]](#) Theoretical
- ▶ **Corticosteroids** are predicted to increase the risk of immunosuppression when given with **dinutuximab**. Avoid except in life-threatening situations. [\[Severe\]](#) Theoretical
- ▶ **Corticosteroids (betamethasone, deflazacort, dexamethasone, hydrocortisone, methylprednisolone, prednisolone)** are predicted to decrease the efficacy of monoclonal antibodies (atezolizumab, ipilimumab, nivolumab, pembrolizumab). Use with caution or avoid. [\[Severe\]](#) Theoretical
- ▶ **Tocilizumab** is predicted to decrease the exposure to **corticosteroids (dexamethasone, methylprednisolone)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Bimekizumab** might affect the exposure to **coumarins (warfarin)**. [\[Moderate\]](#) Theoretical
- ▶ **Blinatumomab** is predicted to transiently increase the exposure to **coumarins (warfarin)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Sarilumab** potentially affects the exposure to **coumarins (warfarin)**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Tocilizumab** is predicted to decrease the exposure to **coumarins (warfarin)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Drugs with anticoagulant effects** (see TABLE 3 p. 1490) cause bleeding, as can monoclonal antibodies (bevacizumab, trastuzumab emtansine); concurrent use might increase the risk of developing this effect. [\[Severe\]](#) Theoretical
- ▶ **Drugs with antiplatelet effects** (see TABLE 4 p. 1490) cause bleeding, as can monoclonal antibodies (bevacizumab, trastuzumab emtansine); concurrent use might increase the risk of developing this effect. [\[Severe\]](#) Theoretical
- ▶ **Sarilumab** might cause severe infection and neutropenia when given with **etanercept**. [\[Severe\]](#) Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with monoclonal antibodies (adalimumab, certolizumab pegol, golimumab, infliximab, rituximab, sarilumab, secukinumab, tocilizumab). Avoid. [\[Severe\]](#) Theoretical
- ▶ **Alemtuzumab** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with  **fingolimod**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **polatuzumab vedotin**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **polatuzumab vedotin**. [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Immunoglobulins (normal immunoglobulin)** are predicted to alter the effects of **dinutuximab**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **monoclonal antibodies**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **polatuzumab vedotin**. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **polatuzumab vedotin**. [\[Moderate\]](#) Theoretical
- ▶ **Monoclonal antibodies (sarilumab)** might cause severe infection and neutropenia when given with monoclonal antibodies (adalimumab, certolizumab pegol, infliximab). [\[Severe\]](#) Theoretical
- ▶ **Monoclonal antibodies (sarilumab)** might cause the risk of severe infection and neutropenia when given with monoclonal antibodies (golimumab). [\[Severe\]](#) Theoretical
- ▶ **Alemtuzumab** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **ozanimod**. Avoid. [\[Severe\]](#) Theoretical

- ▶ **Alemtuzumab** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **ponesimod**. [Severe] Theoretical
  - ▶ **Rifamycins (rifampicin)** decrease the effects of **brentuximab vedotin**. [Severe] Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **potluzumab vedotin**. [Moderate] Theoretical
  - ▶ **Alemtuzumab** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **siponimod**. Avoid. [Severe] Theoretical
  - ▶ **Sarilumab** potentially affects the exposure to **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Sarilumab** is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Study
  - ▶ **Tocilizumab** is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Sarilumab** potentially affects the exposure to **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Blinatumomab** is predicted to transiently increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Sarilumab** potentially affects the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Tocilizumab** is predicted to decrease the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Ipilimumab** might increase the risk of hepatotoxicity when given with **vemurafenib**. Avoid. [Severe] Study
- Montelukast**
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **montelukast**. [Mild] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **montelukast**. [Mild] Study
  - ▶ **Clopidogrel** is predicted to moderately increase the exposure to **montelukast**. [Moderate] Study
  - ▶ **Fibrates (gemfibrozil)** are predicted to moderately increase the exposure to **montelukast**. [Moderate] Study
  - ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
  - ▶ **Mifepristone** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to **montelukast**. [Mild] Study
  - ▶ **Opicapone** is predicted to increase the exposure to **montelukast**. Avoid. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **montelukast**. [Mild] Study
  - ▶ **Selpercatinib** is predicted to increase the exposure to **montelukast**. Avoid. [Moderate] Study
  - ▶ **Teriflunomide** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
- Morphine** → see opioids
- Moxifloxacin** → see quinolones
- Moxisylyte** → see TABLE 8 p. 1491 (hypotension)
- Moxonidine** → see TABLE 8 p. 1491 (hypotension), TABLE 11 p. 1492 (CNS depressant effects)
- ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **moxonidine**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492
- Mycophenolate**
- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **aciclovir**. [Moderate] Theoretical
  - ▶ Oral **antacids** decrease the exposure to oral **mycophenolate**. [Moderate] Study
  - ▶ **Antifungals, azoles (isavuconazole)** increase the exposure to **mycophenolate**. [Moderate] Study
  - ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **ganciclovir**. [Moderate] Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with

- mycophenolate**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
  - ▶ **Rifamycins (rifampicin)** decrease the concentration of **mycophenolate**. Monitor and adjust dose. [Severe] Study
  - ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valaciclovir**. [Moderate] Theoretical
  - ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valganciclovir**. [Moderate] Theoretical
- Nabilone** → see TABLE 11 p. 1492 (CNS depressant effects)
- ▶ **Nabilone** is predicted to increase the risk of cardiovascular adverse effects when given with **amfetamines**. [Severe] Theoretical
- Nabumetone** → see NSAIDs
- Nadolol** → see beta blockers, non-selective
- Naldemedine**
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
  - ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **naldemedine**. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (flucanazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **naldemedine**. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **naldemedine**. [Moderate] Study
  - ▶ **Ciclosporin** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
  - ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **naldemedine**. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
  - ▶ **Mitotane** is predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **naldemedine**. [Moderate] Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
  - ▶ **Ranolazine** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** are predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **naldemedine**. Avoid. [Severe] Study
  - ▶ **Vemurafenib** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- Nalmefene**
- ▶ **Nalmefene** is predicted to decrease the efficacy of **opioids**. Avoid except in an emergency situation—consult product literature. [Severe] Theoretical

**Naloxegol**

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to naloxegol. Avoid. [Moderate] Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to naloxegol. Adjust naloxegol dose and monitor adverse effects, p. 67. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to naloxegol. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to naloxegol. Adjust naloxegol dose and monitor adverse effects, p. 67. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to naloxegol. Avoid. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to naloxegol. Adjust naloxegol dose and monitor adverse effects, p. 67. [Moderate] Study
- ▶ **Cenobamate** is predicted to decrease the exposure to naloxegol. Adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to markedly increase the exposure to naloxegol. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to naloxegol. Adjust naloxegol dose and monitor adverse effects, p. 67. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to naloxegol. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to naloxegol. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to naloxegol. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to naloxegol. Adjust naloxegol dose and monitor adverse effects, p. 67. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to naloxegol. Adjust naloxegol dose and monitor adverse effects, p. 67. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to naloxegol. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to naloxegol. Adjust naloxegol dose and monitor adverse effects, p. 67. [Moderate] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to naloxegol. Avoid. [Moderate] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to naloxegol. Adjust naloxegol dose and monitor adverse effects, p. 67. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to naloxegol. Adjust naloxegol dose and monitor adverse effects, p. 67. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to markedly decrease the exposure to naloxegol. Avoid. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to naloxegol. Avoid. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to naloxegol. Avoid or adjust dose. [Moderate] Theoretical

**Naltrexone**

- ▶ **Naltrexone** is predicted to decrease the efficacy of **opioids**. Avoid except in an emergency situation—consult product literature. [Severe] Theoretical

**Nandrolone**

- ▶ **Nandrolone** is predicted to increase the anticoagulant effect of **coumarins**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Nandrolone** is predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [Severe] Theoretical

**Naproxen** → see NSAIDs

**Naratriptan** → see triptans

**Natalizumab** → see monoclonal antibodies

**Nebivolol** → see beta blockers, selective

**Nefopam** → see TABLE 10 p. 1492 (antimuscarinics)

- ▶ **Nefopam** is predicted to increase the risk of serious elevations in blood pressure when given with **MAOIs**, **irreversible**. Avoid. [Severe] Theoretical

**Nelarabine** → see TABLE 15 p. 1493 (myelosuppression)

**Neomycin** → see TABLE 2 p. 1490 (nephrotoxicity), TABLE 19 p. 1494 (ototoxicity), TABLE 20 p. 1494 (neuromuscular blocking effects)  
**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application of **neomycin**, the possibility of interactions should be borne in mind.

- ▶ **Neomycin** decreases the absorption of **digoxin**. [Moderate] Study

▶ **Neomycin** moderately decreases the exposure to **sorafenib**. [Moderate] Study

**Neostigmine** → see TABLE 6 p. 1491 (bradycardia)

▶ **Aminoglycosides** are predicted to decrease the effects of **neostigmine**. [Moderate] Theoretical

**Nepafenac** → see NSAIDs

**Neratinib** → see TABLE 1 p. 1490 (hepatotoxicity)

**FOOD AND LIFESTYLE** Avoid pomegranate, and pomegranate juice, as it might increase the concentration of neratinib.

- ▶ **Neratinib** is predicted to increase the exposure to **afatinib**. [Moderate] Study
- ▶ **Neratinib** is predicted to increase the exposure to **aliskiren**. [Moderate] Study
- ▶ Oral **antacids** are predicted to decrease the exposure to oral **neratinib**. Separate administration by at least 3 hours. [Mid] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study → Also see TABLE 1 p. 1490
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. [Severe] Study → Also see TABLE 1 p. 1490
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **neratinib**. Avoid potent CYP3A4 inhibitors or adjust **neratinib** dose, p. 1069. [Severe] Study → Also see TABLE 1 p. 1490
- ▶ **Neratinib** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Study
- ▶ **Neratinib** is predicted to increase the exposure to **berotralstat**. [Severe] Study
- ▶ **Neratinib** is predicted to increase the exposure to **bictegrovir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. [Severe] Study
- ▶ Oral **calcium salts (calcium carbonate)**-containing antacids are predicted to decrease the exposure to oral **neratinib**. Separate administration by at least 3 hours. [Mid] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **neratinib**. Avoid or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **neratinib**. Avoid potent CYP3A4 inhibitors or adjust **neratinib** dose, p. 1069. [Severe] Study
- ▶ **Neratinib** is predicted to increase the exposure to **colchicine**. [Moderate] Study
- ▶ **Neratinib** might affect the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. [Severe] Study

- ▶ **Neratinib** slightly increases the exposure to **digoxin**. [Moderate] Study
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **neratinib**. [Severe] Study
  - ▶ **Neratinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
  - ▶ **Neratinib** is predicted to increase the exposure to **everolimus**. [Moderate] Study
  - ▶ **Neratinib** is predicted to increase the exposure to **factor XA inhibitors (apixaban)**. [Moderate] Theoretical
  - ▶ **Neratinib** is predicted to increase the exposure to **factor XA inhibitors (edoxaban, rivaroxaban)**. [Moderate] Study
  - ▶ **Neratinib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
  - ▶ **Neratinib** is predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
  - ▶ **Grapefruit** juice is predicted to increase the exposure to **neratinib**. Avoid. [Severe] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **neratinib**. Avoid potent CYP3A4 inhibitors or adjust **neratinib** dose, p. 1069. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **neratinib**. Avoid potent CYP3A4 inhibitors or adjust **neratinib** dose, p. 1069. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. [Severe] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. [Severe] Study
  - ▶ **Neratinib** is predicted to increase the exposure to **loperamide**. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **neratinib**. Avoid potent CYP3A4 inhibitors or adjust **neratinib** dose, p. 1069. [Severe] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. [Severe] Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. [Severe] Study
  - ▶ **Neratinib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **neratinib**. Avoid. [Severe] Theoretical
  - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **neratinib**. [Severe] Study
  - ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study
  - ▶ **Neratinib** is predicted to increase the exposure to **relugolix**. Avoid or take **relugolix** first and separate administration by at least 6 hours. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study
  - ▶ **Neratinib** is predicted to increase the exposure to **sirolimus**. [Moderate] Study
  - ▶ Oral **sodium bicarbonate**-containing antacids are predicted to decrease the exposure to oral **neratinib**. Separate administration by at least 3 hours. [Mild] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Theoretical
  - ▶ **Neratinib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [Severe] Study
  - ▶ **Neratinib** is predicted to increase the exposure to **taxanes (docetaxel)** (oral). [Unknown] Theoretical
  - ▶ **Neratinib** is predicted to increase the exposure to **taxanes (paclitaxel)** (oral). [Unknown] Study
  - ▶ **Neratinib** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. [Moderate] Study
  - ▶ **Neratinib** might increase the exposure to **tigecycline**. [Mild] Anecdotal → Also see TABLE 1 p. 1490
  - ▶ **Neratinib** is predicted to increase the exposure to **topotecan**. [Severe] Study
  - ▶ **Neratinib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
  - ▶ **Neratinib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
  - ▶ **Neratinib** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 1 p. 1490
- Netupitant** → see neurokinin-1 receptor antagonists
- Neurokinin-1 receptor antagonists**
- aprepitant · fosaprepitant · netupitant
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **abemaciclib**. [Moderate] Study
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. [Severe] Study
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose, p. 210. [Severe] Study
  - ▶ **Netupitant** very slightly increases the exposure to **alkylating agents (cyclophosphamide)**. [Moderate] Study
  - ▶ **Netupitant** is predicted to increase the exposure to **alkylating agents (ifosfamide)**. [Moderate] Study
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**) are predicted to increase the exposure to **alkylating agents (ifosfamide)**. [Severe] Theoretical
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**) are predicted to decrease the efficacy of **anti-androgens (cyproterone)** with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. [Severe] Study
  - ▶ **Aprepitant** increases the exposure to **antiarrhythmics (dronedaron)**. [Severe] Theoretical
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to **aprepitant**. [Moderate] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study

## Neurokinin-1 receptor antagonists (continued)

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **netupitant**. [Moderate] Study
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**). [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **antipsychotics, second generation (lurasidone)**. Adjust lurasidone dose. [Moderate] Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **antipsychotics, second generation (quetiapine)**. Avoid. [Moderate] Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **avapritinib**. Avoid or adjust **avapritinib** dose, p. 1045. [Moderate] Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **axitinib**. [Moderate] Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Fosaprepitant** is predicted to increase the exposure to **benzodiazepines (alprazolam)**. [Moderate] Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **benzodiazepines (alprazolam)**. [Severe] Study
- ▶ **Fosaprepitant** slightly increases the exposure to **benzodiazepines (midazolam)**. [Moderate] Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **benzodiazepines (midazolam)**. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **beta<sub>2</sub> agonists (salmeterol)**. [Moderate] Study
- ▶ **Fosaprepitant** is predicted to increase the exposure to **bosutinib**. [Severe] Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **brigatinib**. [Moderate] Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **cabozantinib**. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **aprepitant** and **aprepitant** is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate] Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Fosaprepitant** is predicted to increase the exposure to **ceritinib**. [Severe] Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **ceritinib**. [Moderate] Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **netupitant**. [Moderate] Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **cobimetinib**. [Severe] Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors, p. 1212. [Severe] Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**) are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to oral **corticosteroids (budesonide)**. [Moderate] Study
- ▶ **Aprepitant** moderately increases the exposure to **corticosteroids (dexamethasone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Netupitant** moderately increases the exposure to **corticosteroids (dexamethasone)**. Adjust dose. [Moderate] Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **corticosteroids (fluticasone)**. [Moderate] Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Aprepitant** decreases the anticoagulant effect of **coumarins**. [Moderate] Study
- ▶ **Fosaprepitant** is predicted to decrease the anticoagulant effect of **coumarins**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **crizotinib**. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **netupitant**. [Moderate] Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **dabrafenib**. [Moderate] Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**) are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [Mild] Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal

- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to moderately increase the exposure to **dutasteride**. [\[Mild\]](#) Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **eluxacaftor**. Adjust tezacaftor with ivacaftor and eluxacaftor p. 320 dose with moderate CYP3A4 inhibitors. [\[Severe\]](#) Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to moderately increase the exposure to **encorafenib**. [\[Moderate\]](#) Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **aprepitant**. [\[Moderate\]](#) Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to neurokinin-1 receptor antagonists (**fosaprepitant, netupitant**). [\[Moderate\]](#) Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 1056. [\[Severe\]](#) Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the risk of ergotism when given with **ergometrine**. [\[Severe\]](#) Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the risk of ergotism when given with **ergotamine**. [\[Severe\]](#) Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**) are predicted to decrease the efficacy of **estradiol**. [\[Moderate\]](#) Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**) are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [\[Severe\]](#) Theoretical
- ▶ **Netupitant** slightly increases the exposure to **etoposide**. [\[Moderate\]](#) Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment, p. 840. [\[Mild\]](#) Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Study
- ▶ **Fosaprepitant** is predicted to increase the concentration of **guanfacine**. [\[Moderate\]](#) Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 384. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **aprepitant**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **fosaprepitant**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **netupitant**. [\[Moderate\]](#) Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**) are predicted to decrease the effects of **hormone replacement therapy**. [\[Moderate\]](#) Anecdotal
- ▶ **Fosaprepitant** is predicted to slightly increase the exposure to **ibrutinib**. [\[Moderate\]](#) Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors, p. 1062. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **aprepitant**. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **fosaprepitant**. [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **netupitant**. [\[Moderate\]](#) Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **imatinib**. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **irinotecan**. [\[Moderate\]](#) Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**) are predicted to increase the exposure to intravenous **irinotecan**. [\[Severe\]](#) Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 231. [\[Severe\]](#) Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 317, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and eluxacaftor p. 320. [\[Moderate\]](#) Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **lapatinib**. [\[Moderate\]](#) Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**) are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [\[Severe\]](#) Theoretical
- ▶ **Fosaprepitant** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Mild\]](#) Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **lomitapide**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **aprepitant**. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **fosaprepitant**. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **netupitant**. [\[Moderate\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **aprepitant**. [\[Moderate\]](#) Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **maraviroc**. [\[Moderate\]](#) Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **midostaurin**. [\[Moderate\]](#) Theoretical
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **netupitant**. Avoid. [\[Severe\]](#) Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **naldemedine**. [\[Moderate\]](#) Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects, p. 67. [\[Moderate\]](#) Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. [\[Severe\]](#) Study
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **nilotinib**. [\[Moderate\]](#) Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **aprepitant**. [\[Moderate\]](#) Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to neurokinin-1 receptor antagonists (**fosaprepitant, netupitant**). [\[Moderate\]](#) Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**) are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. [\[Severe\]](#) Anecdotal
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **olaparib**. Avoid

## Neurokinin-1 receptor antagonists (continued)

- moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [\[Moderate\]](#) Theoretical
- ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **opioids (methadone)**. [\[Moderate\]](#) Theoretical
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **pazopanib**. [\[Moderate\]](#) Study
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **pemigatinib**. [\[Severe\]](#) Study
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 878. [\[Moderate\]](#) Theoretical
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. [\[Moderate\]](#) Study
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [\[Severe\]](#) Theoretical
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [\[Severe\]](#) Theoretical
  - ▶ **Neurokinin-1 receptor antagonists** are predicted to increase the exposure to **pimozide**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **ponatinib**. [\[Moderate\]](#) Study
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **ranolazine**. [\[Severe\]](#) Study
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **regorafenib**. [\[Moderate\]](#) Study
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **ribociclib**. [\[Moderate\]](#) Study
  - ▶ **Rifamycins (rifampicin)** are predicted to markedly decrease the exposure to **aprepitant**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **fosaprepitant**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **netupitant**. Avoid. [\[Severe\]](#) Study
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **ruxolitinib**. [\[Moderate\]](#) Study
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **selpercatinib**. [\[Moderate\]](#) Study
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [\[Severe\]](#) Study
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) increase the concentration of **sirinilimus**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. [\[Moderate\]](#) Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **netupitant**. [\[Moderate\]](#) Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**). Avoid. [\[Moderate\]](#) Theoretical
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **statins (atorvastatin, simvastatin)**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **sunitinib**. [\[Moderate\]](#) Study
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **taxanes (cabazitaxel)**. [\[Moderate\]](#) Theoretical
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **taxanes (docetaxel)**. [\[Severe\]](#) Study
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **taxanes (paclitaxel)**. [\[Moderate\]](#) Anecdotal
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [\[Severe\]](#) Study
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1200. [\[Moderate\]](#) Study
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. [\[Moderate\]](#) Study
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **triptans (eletriptan)**. [\[Moderate\]](#) Study
  - ▶ **Netupitant** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, fosaprepitant**) decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. [\[Severe\]](#) Anecdotal
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **vemurafenib**. [\[Severe\]](#) Theoretical
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
  - ▶ Neurokinin-1 receptor antagonists are predicted to increase the exposure to **vinca alkaloids**. [\[Severe\]](#) Theoretical
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant, netupitant**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Study

**Neuromuscular blocking drugs, non-depolarising** → see TABLE 20 p. 1494 (neuromuscular blocking effects)

atracurium · cisatracurium · mivacurium · pancuronium · rocuronium · vecuronium

- ▶ **Anticholinesterases, centrally acting** are predicted to decrease the effects of neuromuscular blocking drugs, non-depolarising. [\[Moderate\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the effects of (but acute use increases the effects of) neuromuscular blocking drugs, non-depolarising (**atracurium, cisatracurium, pancuronium, rocuronium, vecuronium**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of (but acute use increases the effects of) neuromuscular blocking drugs, non-depolarising (**atracurium, cisatracurium, pancuronium, rocuronium, vecuronium**). [\[Moderate\]](#) Study
- ▶ **Clindamycin** increases the effects of neuromuscular blocking drugs, non-depolarising. [\[Severe\]](#) Anecdotal
- ▶ **Corticosteroids** are predicted to decrease the effects of neuromuscular blocking drugs, non-depolarising. [\[Severe\]](#) Anecdotal
- ▶ **Pancuronium** is predicted to increase the risk of cardiovascular adverse effects when given with **digoxin**. [\[Severe\]](#) Anecdotal

- ▶ **Irinotecan** is predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Theoretical
- ▶ Intravenous **magnesium** increases the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Study
- ▶ **Metoclopramide** is predicted to increase the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Theoretical
- ▶ **Penicillins (piperacillin)** increase the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Study
- ▶ **SSRIs** potentially increase the risk of prolonged neuromuscular blockade when given with **mivacurium**. [Unknown] Theoretical
- Nevirapine** → see NNRTIs
- Nicardipine** → see calcium channel blockers
- Nicorandil** → see TABLE 8 p. 1491 (hypotension)
- ▶ **Aspirin** is predicted to increase the risk of gastrointestinal perforation when given with **nicorandil**. [Severe] Theoretical
- ▶ **Corticosteroids** increase the risk of gastrointestinal perforation when given with **nicorandil**. [Severe] Anecdotal
- ▶ **Nicorandil** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. [Severe] Theoretical
- ▶ **Nicorandil** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1491
- Nicotinic acid** → see TABLE 3 p. 1490 (anticoagulant effects)
- ▶ **Nicotinic acid** might increase the risk of rhabdomyolysis when given with **statins**. Use with caution or avoid. [Severe] Theoretical
- Nifedipine** → see calcium channel blockers
- Nilotinib** → see TABLE 15 p. 1493 (myelosuppression), TABLE 9 p. 1492 (QT-interval prolongation)
- ▶ **Nilotinib** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose, p. 210. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- ▶ Oral **antacids** might affect the absorption of oral **nilotinib**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Nilotinib** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **nilotinib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Nilotinib** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **antipsychotics, second generation (lurasidone)**. Adjust **lurasidone** dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **antipsychotics, second generation (quetiapine)**. Avoid. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **avapritinib**. Avoid or adjust **avapritinib** dose, p. 1045. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **axitinib**. [Moderate] Study → Also see TABLE 15 p. 1493
- ▶ **Nilotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Nilotinib** is predicted to increase the exposure to **benzodiazepines (alprazolam)**. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **benzodiazepines (midazolam)**. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 1493 → Also see TABLE 9 p. 1492
- ▶ **Nilotinib** is predicted to increase the exposure to **brigatinib**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 15 p. 1493 → Also see TABLE 9 p. 1492
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Oral calcium salts (calcium carbonate)**-containing antacids might affect the exposure to oral **nilotinib**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **certinib**. [Moderate] Study → Also see TABLE 15 p. 1493 → Also see TABLE 9 p. 1492
- ▶ **Nilotinib** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors, p. 1212. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **dabrafenib**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 15 p. 1493 → Also see TABLE 9 p. 1492
- ▶ **Nilotinib** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [Mid] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Nilotinib** is predicted to moderately increase the exposure to **dutasteride**. [Mid] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **elxacaftor**. Adjust tezacaftor with ivacaftor and elxacaftor p. 320 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Nilotinib** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 1056. [Severe] Theoretical → Also see TABLE 9 p. 1492

## Nilotinib (continued)

- ▶ Nilotinib is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ Nilotinib is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ Nilotinib is predicted to increase the exposure to **erlotinib**. [Moderate] Study
- ▶ Nilotinib is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ Nilotinib is predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [Moderate] Study
- ▶ Nilotinib is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment, p. 840. [Mild] Study
- ▶ Nilotinib is predicted to increase the exposure to **gefatinib**. [Moderate] Study
- ▶ **Grapefruit** juice is predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ Nilotinib is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 384. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** might affect the absorption of **nilotinib**. **H<sub>2</sub> receptor antagonists** should be taken 10 hours before or 2 hours after **nilotinib**. [Mild] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ Nilotinib is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors, p. 1062. [Severe] Study → Also see TABLE 15 p. 1493
- ▶ **Idelalisib** is predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ Nilotinib is predicted to increase the exposure to **imatinib**. [Moderate] Study → Also see TABLE 15 p. 1493
- ▶ Nilotinib is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 231. [Severe] Theoretical
- ▶ Nilotinib is predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see **ivacaftor** p. 317, **tezacaftor** with **ivacaftor** p. 319, and **tezacaftor** with **ivacaftor** and **elxacaftor** p. 320. [Moderate] Study
- ▶ Nilotinib is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Letermovir** is predicted to increase the exposure to **nilotinib**. [Moderate] Study
- ▶ Nilotinib is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **nilotinib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Nilotinib is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1493
- ▶ Nilotinib is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ Nilotinib is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects, p. 67. [Moderate] Study
- ▶ Nilotinib is predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **nilotinib**. [Moderate] Study
- ▶ **Nirmatrelvir** boosted with **ritonavir** is predicted to increase the concentration of **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **NRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ Nilotinib is predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [Moderate] Theoretical → Also see TABLE 15 p. 1493
- ▶ Nilotinib is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Nilotinib is predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- ▶ Nilotinib is predicted to increase the exposure to **pazopanib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Nilotinib is predicted to increase the exposure to **pemigatinib**. [Severe] Study
- ▶ Nilotinib is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ Nilotinib is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 878. [Moderate] Theoretical
- ▶ Nilotinib is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Nilotinib is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ Nilotinib is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ Nilotinib is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Pitolisant** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ Nilotinib is predicted to increase the exposure to **ponatinib**. [Moderate] Study
- ▶ Nilotinib is predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ Nilotinib is predicted to increase the exposure to **regorafenib**. [Moderate] Study → Also see TABLE 15 p. 1493
- ▶ Nilotinib is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 15 p. 1493 → Also see TABLE 9 p. 1492
- ▶ **Rifamycins (rifampicin)** are predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ Nilotinib is predicted to increase the exposure to **ruxolitinib**. [Moderate] Study → Also see TABLE 15 p. 1493
- ▶ Nilotinib is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
- ▶ Nilotinib is predicted to increase the exposure to **selpercatinib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Nilotinib is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ Nilotinib is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study
- ▶ Nilotinib increases the concentration of **sirinolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ Oral **sodium bicarbonate**-containing antacids might affect the exposure to oral **nilotinib**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **nilotinib**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ Nilotinib is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ Nilotinib is predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Nilotinib is predicted to increase the exposure to **statins (simvastatin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ Nilotinib is predicted to increase the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 15 p. 1493 → Also see TABLE 9 p. 1492
- ▶ Nilotinib is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ Nilotinib is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical → Also see TABLE 15 p. 1493
- ▶ Nilotinib is predicted to increase the exposure to **taxanes (docetaxel)**. [Severe] Study → Also see TABLE 15 p. 1493
- ▶ Nilotinib is predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Anecdotal → Also see TABLE 15 p. 1493

- ▶ **Nilotinib** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1493
- ▶ **Nilotinib** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 320 and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
- ▶ **Nilotinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust tofacitinib dose, p. 1200. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust tolvaptan dose with moderate CYP3A4 inhibitors, p. 724. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Nilotinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1493 → Also see TABLE 9 p. 1492
- ▶ **Nilotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- Nimodipine** → see calcium channel blockers
- Nintedanib** → see TABLE 4 p. 1490 (antiplatelet effects)
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **nintedanib**. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital, phenytoin)** are predicted to decrease the exposure to **nintedanib**. [Severe] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Antifungals, azoles (voriconazole)** are predicted to increase the exposure to **nintedanib**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **nintedanib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, tipranavir)** boosted with ritonavir are predicted to increase the exposure to **nintedanib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Macrolides** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Neratinib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **nintedanib**. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **nintedanib**. [Moderate] Study
- ▶ **Vandetanib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- Niraparib** → see TABLE 15 p. 1493 (myelosuppression)
- Nirmatrelvir**
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **abemaciclib**. Avoid or adjust abemaciclib dose, p. 1042. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **afatinib**. [Moderate] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **alpha blockers (alfuzosin)**. Avoid. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **amfetamines**. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **nirmatrelvir** boosted with ritonavir. Avoid. [Severe] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **antiarrhythmics (amiodarone, dronedarone, flecainide, propafenone)**. Avoid. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **antiarrhythmics (lidocaine)**. [Severe] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **nirmatrelvir** boosted with ritonavir. Avoid. [Severe] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **antiepileptics (lamotrigine, valproate)**. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **antifungals, azoles (isavuconazole)**. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir increases the exposure to **antifungals, azoles (itraconazole)**. [Severe] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **antifungals, azoles (ketoconazole)**. Adjust dose. [Moderate] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **antifungals, azoles (voriconazole)**. Avoid. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **antimalarials (atovaquone)**. [Moderate] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **antipsychotics, second generation (clozapine, lurasidone, quetiapine)**. Avoid. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **antipsychotics, second generation (risperidone)**. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **bedaquiline**. Avoid or monitor. [Moderate] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **benzodiazepines (alprazolam)**. [Moderate] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **benzodiazepines (clonazepam, diazepam, flurazepam)**. Avoid. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **benzodiazepines (midazolam)**. Avoid or adjust dose. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **beta<sub>2</sub> agonists (salmeterol)**. Avoid. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **bupropion**. [Moderate] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **bupirone**. [Moderate] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **calcium channel blockers**. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ceritinib**. Avoid or adjust ceritinib dose, p. 1050. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ciclosporin**. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **colchicine**. Avoid. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **combined hormonal contraceptives**

## Nirmatrelvir (continued)

- (containing ethinylestradiol). Use additional contraceptive precautions. [Moderate] Theoretical
- ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **corticosteroids (beclomethasone)** (risk with beclomethasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone)**. Avoid or monitor adverse effects and consider beclomethasone as an alternative. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to affect the concentration of **coumarins (warfarin)**. [Moderate] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **dasatinib**. Avoid. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **delamanid**. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **digoxin**. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **encorafenib**. Avoid or monitor. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **endothelin receptor antagonists (bosentan)**. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **ergometrine**. Avoid. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **ergotamine**. Avoid. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **everolimus**. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **factor XA inhibitors (apixaban, rivaroxaban)**. Avoid. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **fostamatinib**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **fusidate**. Avoid. [Moderate] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **glecaprevir**. Avoid. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **grazoprevir**. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **haloperidol**. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, tipranavir)**. [Moderate] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **ibrutinib**. Avoid or adjust ibrutinib dose, p. 1062. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **lomitapide**. Avoid. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **macrolides (erythromycin)**. [Moderate] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **maraviroc**. Refer to specialist literature. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **methyphenidate**. [Severe] Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to nirmatrelvir boosted with ritonavir. Avoid. [Severe] Study
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **neratinib**. Avoid. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **nilotinib**. Avoid. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **NNRTIs (efavirenz)**. [Moderate] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **NSAIDs (piroxicam)**. Avoid. [Severe] Theoretical

- ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **opioids (buprenorphine)**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **opioids (fentanyl)**. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to decrease the concentration of **opioids (methadone)**. Adjust dose. [Moderate] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to decrease the concentration of **opioids (morphine)**. [Moderate] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **opioids (pethidine)**. Avoid. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **phosphodiesterase type-5 inhibitors (tadalafil)**. Adjust dose—consult product literature. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **pibrentasvir**. Avoid. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **pimozide**. Avoid. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **ranolazine**. Avoid. [Severe] Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to nirmatrelvir boosted with ritonavir. Avoid. [Severe] Study
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **rifamycins (rifabutin)**. Adjust dose. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **riociguat**. Avoid. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **sirolimus**. [Severe] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to nirmatrelvir boosted with ritonavir. Avoid. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **statins (atorvastatin, rosuvastatin)**. Adjust dose. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **statins (simvastatin)**. Avoid. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **tacrolimus**. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to decrease the concentration of **theophylline**. Adjust dose. [Moderate] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir might decrease the efficacy of **thyroid hormones (levothyroxine)**. [Moderate] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **trazodone**. [Moderate] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **tricyclic antidepressants (amitriptyline, imipramine, nortriptyline)**. [Moderate] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **vinca alkaloids (vinblastine, vincristine)**. [Severe] Theoretical
  - ▶ Nirmatrelvir boosted with ritonavir is predicted to increase the concentration of **zolpidem**. [Severe] Theoretical
- Nitisinone**
- ▶ **Nitisinone** is predicted to increase the exposure to **adefovir**. [Moderate] Study
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to nitisinone. Adjust dose. [Moderate] Theoretical

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
  - ▶ **Nitisinone** is predicted to increase the exposure to **cephalosporins (cefactor)**. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
  - ▶ **Nitisinone** is predicted to increase the exposure to **coumarins (warfarin)**. [Moderate] Study
  - ▶ **Nitisinone** is predicted to increase the exposure to **ganciclovir**. [Moderate] Study
  - ▶ **Nitisinone** is predicted to increase the exposure to **H<sub>2</sub> receptor antagonists (cimetidine, famotidine)**. [Moderate] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
  - ▶ **Idealisib** is predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
  - ▶ **Nitisinone** is predicted to increase the exposure to **loop diuretics (furosemide)**. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
  - ▶ **Nitisinone** is predicted to increase the exposure to **methotrexate**. [Moderate] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
  - ▶ **Nitisinone** is predicted to increase the exposure to **NSAIDs (celecoxib)**. [Moderate] Study
  - ▶ **Nitisinone** is predicted to increase the exposure to **oseltamivir**. [Moderate] Study
  - ▶ **Nitisinone** is predicted to increase the exposure to **penicillins (benzylpenicillin)**. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
  - ▶ **Nitisinone** is predicted to increase the exposure to **sulfonylureas (glimepiride, tolbutamide)**. [Moderate] Study
- Nitrates** → see TABLE 7 p. 1491 (first-dose hypotension), TABLE 8 p. 1491 (hypotension)
- glyceryl trinitrate · isosorbide dinitrate · isosorbide mononitrate

**PHARMACOLOGY** Drugs with antimuscarinic effects can cause dry mouth, which can reduce the effectiveness of sublingual glyceryl trinitrate tablets.

- ▶ **Acetylcysteine** might increase the vasodilatory effects of **glyceryl trinitrate**. [Moderate] Theoretical
  - ▶ **Nitrates** are predicted to increase the risk of methaemoglobinemia when given with topical **anaesthetics, local (prilocaine)**. Avoid. [Severe] Theoretical
  - ▶ **Nitrates** are predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [Severe] Theoretical
  - ▶ **Nitrates** potentially increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [Severe] Study → Also see TABLE 8 p. 1491
- Nitrazepam** → see benzodiazepines
- Nitrofurantoin** → see TABLE 12 p. 1493 (peripheral neuropathy)
- ▶ **Nitrofurantoin** is predicted to increase the risk of methaemoglobinemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Nitrofurantoin** is predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [Severe] Theoretical
  - ▶ Oral **magnesium** trisilicate decreases the absorption of oral **nitrofurantoin**. [Moderate] Study
- Nitroprusside** → see TABLE 8 p. 1491 (hypotension)
- ▶ **Nitroprusside** is predicted to increase the risk of methaemoglobinemia when given with **anaesthetics, local (prilocaine)**. [Severe] Theoretical
  - ▶ **Nitroprusside** is predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [Severe] Theoretical
- Nitrous oxide** → see TABLE 8 p. 1491 (hypotension), TABLE 11 p. 1492 (CNS depressant effects)

- ▶ **Nitrous oxide** potentially increases the risk of methotrexate toxicity when given with **methotrexate**. Avoid. [Severe] Study
- Nivolumab** → see monoclonal antibodies
- Nizatidine** → see H<sub>2</sub> receptor antagonists
- NNRTIs** → see TABLE 9 p. 1492 (QT-interval prolongation)
- doravirine · efavirenz · etravirine · nevirapine · rilpivirine
- ▶ **Efavirenz** is predicted to decrease the exposure to **abrocitinib**. Avoid. [Moderate] Theoretical
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **acalabrutinib**. [Severe] Study
  - ▶ Oral **antacids** are predicted to decrease the exposure to oral **rilpivirine**. Rilpivirine should be taken 4 hours before or 2 hours after antacids. [Severe] Theoretical
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **nevirapine**. [Severe] Study
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** markedly decrease the exposure to **rilpivirine**. Avoid. [Severe] Study
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the efficacy of **anti-androgens (cyproterone)** with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. [Severe] Study
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **anti-androgens (darolutamide)**. Avoid. [Moderate] Theoretical
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **antiarrhythmics (dronedarone)**. [Severe] Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Antiepileptics (carbamazepine)** slightly decrease the exposure to **efavirenz** and **efavirenz** slightly decreases the exposure to **antiepileptics (carbamazepine)**. [Severe] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** markedly decrease the exposure to **rilpivirine**. Avoid. [Severe] Study
  - ▶ **Antiepileptics (fosphenytoin, phenytoin)** slightly decrease the exposure to **efavirenz** and **efavirenz** affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Severe] Theoretical
  - ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Theoretical
  - ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the concentration of **rilpivirine**. Avoid. [Severe] Theoretical
  - ▶ **Antiepileptics (phenobarbital)** are predicted to decrease the exposure to **efavirenz** and **efavirenz** affects the concentration of **antiepileptics (phenobarbital)**. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the concentration of **antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** and **antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **nevirapine**. [Severe] Study
  - ▶ **Efavirenz** is predicted to affect the efficacy of **antiepileptics (primidone)** and **antiepileptics (primidone)** are predicted to slightly decrease the exposure to **efavirenz**. [Severe] Theoretical
  - ▶ **Antifungals, azoles (fluconazole)** slightly to moderately increase the exposure to **nevirapine**. [Moderate] Study
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Theoretical
  - ▶ **Efavirenz** slightly decreases the exposure to **antifungals, azoles (itraconazole)**. Avoid and for 14 days after stopping **efavirenz**. [Moderate] Study
  - ▶ **Nevirapine** moderately decreases the exposure to **antifungals, azoles (itraconazole)**. Avoid and for 14 days after stopping **nevirapine**. [Moderate] Study

## NNRTIs (continued)

- ▶ **Efavirenz** moderately decreases the exposure to **antifungals, azoles (ketoconazole)**. [Severe] Study
- ▶ **Nevirapine** moderately decreases the exposure to **antifungals, azoles (ketoconazole)**. Avoid. [Severe] Study
- ▶ **Efavirenz** slightly decreases the exposure to **antifungals, azoles (posaconazole)**. Avoid. [Moderate] Study
- ▶ **Efavirenz** moderately decreases the exposure to **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** slightly increase the exposure to **efavirenz**. Adjust dose. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Nevirapine** is predicted to decrease the exposure to **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** increase the exposure to **nevirapine**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Efavirenz** decreases the concentration of **antimalarials (artemether)**. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Etravirine** decreases the exposure to **antimalarials (artemether)**. [Moderate] Study
- ▶ **Efavirenz** moderately decreases the exposure to **antimalarials (atovaquone)**. Avoid. [Moderate] Study
- ▶ **Efavirenz** affects the exposure to **antimalarials (proguanil)**. Avoid. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **antipsychotics, second generation (lurasidone)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **antipsychotics, second generation (quetiapine)**. [Moderate] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **axitinib**. [Moderate] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the concentration of **benzodiazepines (alprazolam)**. [Moderate] Theoretical
- ▶ **Etravirine** has been reported to increase the concentration of **benzodiazepines (clobazam)**. [Moderate] Anecdotal
- ▶ **Nevirapine** is predicted to decrease the concentration of **benzodiazepines (clonazepam)** and **benzodiazepines (clonazepam)** are predicted to decrease the concentration of **nevirapine**. [Moderate] Theoretical
- ▶ **Etravirine** is predicted to increase the exposure to **benzodiazepines (diazepam)**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to alter the effects of **benzodiazepines (midazolam)**. Avoid. [Moderate] Theoretical
- ▶ **Nevirapine** decreases the concentration of **benzodiazepines (midazolam)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **brigatinib**. Avoid. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **bupropion**. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate] Theoretical
- ▶ Oral **calcium salts (calcium carbonate)**-containing antacids are predicted to decrease the exposure to oral **rilpivirine**. **Rilpivirine** should be taken 4 hours before or 2 hours after antacids. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the concentration of **caspofungin**. Adjust dose. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the concentration of **caspofungin**. Adjust dose. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **ceritinib**. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Efavirenz** decreases the concentration of **ciclosporin**. Monitor concentration and adjust dose. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the concentration of **ciclosporin**. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see **Contraceptives, interactions** p. 859. [Severe] Study
- ▶ **Corticosteroids (dexamethasone)** are predicted to decrease the concentration of **rilpivirine**. Avoid multiple-dose dexamethasone. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to affect the concentration of **coumarins**. Adjust dose. [Moderate] Theoretical
- ▶ **Etravirine** increases the anticoagulant effect of **coumarins**. [Moderate] Theoretical
- ▶ **Nevirapine** potentially alters the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Dabrafenib** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. [Severe] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **dabrafenib**. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see **Contraceptives, interactions** p. 859. [Severe] Theoretical
- ▶ **Efavirenz** moderately decreases the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 696. [Severe] Study
- ▶ **Etravirine** moderately decreases the exposure to **dolutegravir**. Adjust **dolutegravir** dose unless given with atazanavir, darunavir, or lopinavir (all boosted with ritonavir), p. 696. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 696. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **elbasvir**. Avoid. [Unknown] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **eliglustat**. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. [Severe] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **nevirapine**. [Severe] Theoretical

- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **erlotinib**. [Severe] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the efficacy of **estradiol**. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **factor XA inhibitors (rivaroxaban)**. [Severe] Anecdotal
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **fedratinib**. Avoid. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ NNRTIs (**efavirenz, etravirine, nevirapine**) are predicted to decrease the exposure to **glasdegib**. Avoid or adjust **glasdegib** dose, p. 1087. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Mid] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **rilpivirine**. **H<sub>2</sub> receptor antagonists** should be taken 12 hours before or 4 hours after **rilpivirine**. [Severe] Study
- ▶ **Efavirenz** decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. [Severe] Study
- ▶ **HIV-protease inhibitors (tipranavir)** decrease the exposure to **etravirine**. Avoid. [Severe] Study
- ▶ **Etravirine** increases the exposure to **HIV-protease inhibitors (fosamprenavir)** boosted with ritonavir. Refer to specialist literature. [Moderate] Study
- ▶ **Nevirapine** decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **ibrutinib**. Avoid or monitor. [Severe] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **imatinitib**. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **ivacaftor**. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **Etravirine** is predicted to decrease the exposure to **letermovir**. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **nevirapine**. [Moderate] Theoretical
- ▶ **Etravirine** decreases the exposure to **macrolides (clarithromycin)** and **macrolides (clarithromycin)** slightly increase the exposure to **etravirine**. [Severe] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) decrease the exposure to **macrolides (clarithromycin)**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Efavirenz** decreases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Theoretical
- ▶ **Etravirine** slightly decreases the exposure to **maraviroc**. Refer to specialist literature. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **midostaurin**. [Severe] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **nevirapine**. [Severe] Theoretical
- ▶ **Mitotane** markedly decreases the exposure to **rilpivirine**. Avoid. [Severe] Study
- ▶ **Modafinil** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **neratinib**. [Severe] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **neurokinin-1 receptor antagonists (fosaprepitant, netupitant)**. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **niotinib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **efavirenz**. [Moderate] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to NNRTIs (**doravirine**). Avoid or adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. [Severe] Theoretical
- ▶ NNRTIs (**etravirine**) are predicted to decrease the exposure to NNRTIs (**doravirine**). Avoid. [Severe] Theoretical
- ▶ NNRTIs (**nevirapine**) decrease the concentration of NNRTIs (**efavirenz**). Avoid. [Severe] Study
- ▶ NNRTIs (**efavirenz**) are predicted to decrease the exposure to NNRTIs (**etravirine**). Avoid. [Severe] Study
- ▶ NNRTIs (**nevirapine**) are predicted to decrease the exposure to NNRTIs (**etravirine**). Avoid. [Severe] Study
- ▶ NNRTIs (**efavirenz, etravirine, nevirapine**) are predicted to decrease the exposure to NNRTIs (**rilpivirine**). Avoid. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ▶ **Nevirapine** is predicted to slightly decrease the exposure to **NRRTs (zidovudine)**. Refer to specialist literature. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Efavirenz** moderately decreases the exposure to **opioids (buprenorphine)**. Adjust dose. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) decrease the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Etravirine** is predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **ospiemifene**. [Moderate] Study
- ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **pazopanib**. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Efavirenz** is predicted to decrease the exposure to **pemigatinib** and **pemigatinib** might decrease the exposure to **efavirenz**. Avoid or monitor. [Severe] Study

## NNRTIs (continued)

- ▶ **Nevirapine** is predicted to decrease the exposure to **pemigatinib**. Avoid or monitor. [Severe] Study
  - ▶ **Etravirine** moderately decreases the exposure to **phosphodiesterase type-5 inhibitors**. Adjust dose. [Moderate] Study
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Theoretical → Also see TABLE 9 p. 1492
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
  - ▶ **Pitolisant** is predicted to decrease the exposure to **efavirenz**. [Mild] Theoretical
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **ponatinib**. [Severe] Study
  - ▶ **Proton pump inhibitors** are predicted to decrease the exposure to oral **rilpivirine**. Avoid. [Severe] Study
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **regorafenib**. [Severe] Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to **relugolix**. Avoid. [Moderate] Study
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ **Rifamycins (rifabutin)** moderately decrease the exposure to **doravirine**. Adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. [Moderate] Study
  - ▶ **Rifamycins (rifabutin)** decrease the exposure to **etravirine**. [Moderate] Study
  - ▶ **Rifamycins (rifabutin)** modestly decrease the exposure to **rilpivirine**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
  - ▶ **Rifamycins (rifampicin)** slightly decrease the exposure to **efavirenz**. Adjust dose. [Severe] Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
  - ▶ **Rifamycins (rifampicin)** decrease the concentration of **nevirapine**. Avoid. [Severe] Study
  - ▶ **Rifamycins (rifampicin)** markedly decrease the exposure to **rilpivirine**. Avoid. [Severe] Study
  - ▶ **Efavirenz** slightly decreases the exposure to **rifamycins (rifabutin)**. Adjust dose. [Severe] Study
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [Moderate] Study
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **selpercatinib**. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
  - ▶ **Doravirine** is predicted to decrease the exposure to **sirolimus**. Monitor **sirolimus** concentration and adjust dose, p. 906. [Moderate] Theoretical
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ Oral **sodium bicarbonate** -containing antacids are predicted to decrease the exposure to oral **rilpivirine**. **Rilpivirine** should be taken 4 hours before or 2 hours after antacids. [Severe] Theoretical
  - ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **rilpivirine**. Separate administration by at least 2 hours. [Moderate] Theoretical
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **sorafenib**. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ **St John's wort** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to NNRTIs (**doravirine, rilpivirine**). Avoid. [Severe] Theoretical
  - ▶ **St John's wort** is predicted to decrease the concentration of NNRTIs (**efavirenz, nevirapine**). Avoid. [Severe] Theoretical
  - ▶ **Etravirine** slightly decreases the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Moderate] Study
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Study
  - ▶ **Etravirine** is predicted to increase the exposure to **statins (fluvastatin)**. Adjust dose. [Severe] Theoretical
  - ▶ **Etravirine** is predicted to decrease the exposure to **statins (simvastatin)**. Adjust dose. [Moderate] Theoretical
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ **Doravirine** is predicted to decrease the exposure to **tacrolimus**. Monitor **tacrolimus** concentration and adjust dose, p. 907. [Moderate] Theoretical
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **taxanes (paclitaxel)**. Avoid. [Severe] Study
  - ▶ **Telotristat ethyl** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. [Severe] Theoretical
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the concentration of **temsirrolimus**. Avoid. [Severe] Theoretical
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **tofacinib**. [Moderate] Study
  - ▶ NNRTIs (**efavirenz, nevirapine**) decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **vandetanib**. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **venurafenib**. [Severe] Study → Also see TABLE 9 p. 1492
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- Noradrenaline/norepinephrine** → see sympathomimetics, vasoconstrictor
- Norethisterone**
- ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
  - ▶ **Griseofulvin** potentially decreases the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
  - ▶ **Modafinil** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant)** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
  - ▶ NNRTIs (**efavirenz, nevirapine**) are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal

- ▶ **Rifamycins** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. [\[Severe\]](#) Anecdotal
  - ▶ **St John's wort** is predicted to decrease the efficacy of **norethisterone**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 859. [\[Severe\]](#) Anecdotal
  - ▶ **Sugammadex** is predicted to decrease the exposure to **norethisterone**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
  - ▶ **Norethisterone** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of **norethisterone**. Avoid or use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- Normal immunoglobulin** → see immunoglobulins
- Nortriptyline** → see tricyclic antidepressants
- NRTIs** → see TABLE 2 p. 1490 (nephrotoxicity), TABLE 12 p. 1493 (peripheral neuropathy)
- abacavir · emtricitabine · lamivudine · zidovudine
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **abacavir**. [\[Moderate\]](#) Theoretical
  - ▶ **Antiepileptics (valproate)** slightly increase the exposure to **zidovudine**. [\[Moderate\]](#) Study
  - ▶ **Antifungals, azoles (fluconazole)** slightly increase the exposure to **zidovudine**. [\[Moderate\]](#) Study
  - ▶ **Antimalarials (pyrimethamine)** are predicted to increase the risk of adverse effects when given with **zidovudine**. [\[Severe\]](#) Theoretical
  - ▶ **Zidovudine** increases the risk of haematological toxicity when given with **aspirin** (high-dose). [\[Severe\]](#) Study
  - ▶ **Zidovudine** increases the risk of haematological toxicity when given with **flucytosine**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
  - ▶ **HIV-protease inhibitors (tipranavir)** slightly decrease the exposure to **abacavir**. Avoid. [\[Severe\]](#) Study
  - ▶ **HIV-protease inhibitors (tipranavir)** slightly decrease the exposure to **zidovudine**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Leflunomide** is predicted to increase the exposure to **zidovudine**. [\[Moderate\]](#) Theoretical
  - ▶ **Macrolides (clarithromycin)** decrease the absorption of **zidovudine**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
  - ▶ **NNRTIs (nevirapine)** are predicted to slightly decrease the exposure to **zidovudine**. Refer to specialist literature. [\[Severe\]](#) Theoretical
  - ▶ **NRTIs (zidovudine)** increase the risk of toxicity when given with NRTIs (lamivudine). [\[Severe\]](#) Anecdotal
  - ▶ **Zidovudine** increases the risk of haematological toxicity when given with **NSAIDs**. [\[Severe\]](#) Study → Also see TABLE 2 p. 1490
  - ▶ **Ribavirin** increases the risk of anaemia and/or leucopenia when given with **zidovudine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Teriflunomide** is predicted to increase the exposure to **zidovudine**. [\[Moderate\]](#) Theoretical
  - ▶ **Trimethoprim** slightly increases the exposure to lamivudine. [\[Moderate\]](#) Study
- NSAIDs** → see TABLE 18 p. 1494 (hyponatraemia), TABLE 2 p. 1490 (nephrotoxicity), TABLE 16 p. 1494 (increased serum potassium), TABLE 4 p. 1490 (antiplatelet effects)
- aceticlofenac · benzydamine · bromfenac · celecoxib · dexketoprofen · diclofenac · etodolac · etoricoxib · felbinac · flurbiprofen · ibuprofen · indometacin · ketoprofen · ketorolac · mefenamic acid · meloxicam · nabumetone · naproxen · nepafenac · parecoxib · phenazone · piroxicam · sulindac · tenoxicam · tiaprofenic acid · tofenamic acid
- ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application of NSAIDs, the possibility of interactions should be borne in mind.
- ▶ **Celecoxib** is predicted to increase the exposure to antiarrhythmics (**flecainide, propafenone**). Monitor and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Antifungals, azoles (fluconazole)** moderately increase the exposure to **celecoxib**. Adjust **celecoxib** dose, p. 1225. [\[Moderate\]](#) Study
  - ▶ **Antifungals, azoles (fluconazole)** increase the exposure to **parecoxib**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Antifungals, azoles (voriconazole)** slightly increase the exposure to **diclofenac**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Antifungals, azoles (voriconazole)** moderately increase the exposure to **ibuprofen**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ **NSAIDs** are predicted to increase the risk of gastrointestinal irritation when given with **bisphosphonates (alendronate, ibandronate)**. [\[Moderate\]](#) Study
  - ▶ **NSAIDs** are predicted to increase the risk of renal impairment when given with **bisphosphonates (clodronate)**. [\[Moderate\]](#) Study
  - ▶ **Certinib** is predicted to increase the exposure to NSAIDs (celecoxib, diclofenac). Adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Ciclosporin** increases the concentration of **diclofenac**. [\[Severe\]](#) Study → Also see TABLE 2 p. 1490 → Also see TABLE 16 p. 1494
  - ▶ **Sulindac** might increase the exposure to **cladribine**. Avoid or adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Etoricoxib** increases the exposure to **combined hormonal contraceptives**. [\[Moderate\]](#) Study
  - ▶ **NSAIDs** increase the risk of gastrointestinal bleeding when given with **corticosteroids**. [\[Severe\]](#) Study
  - ▶ **NSAIDs** increase the risk of renal impairment when given with **daptomycin**. [\[Moderate\]](#) Theoretical
  - ▶ **Indometacin** increases the concentration of **digoxin**. [\[Severe\]](#) Study
  - ▶ **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. [\[Severe\]](#) Theoretical
  - ▶ **Etoricoxib** increases the exposure to **hormone replacement therapy**. [\[Moderate\]](#) Study
  - ▶ **NSAIDs** are predicted to increase the risk of gastrointestinal bleeding when given with **iron chelators (deferiasirox)**. [\[Severe\]](#) Theoretical
  - ▶ **Diclofenac** is predicted to increase the exposure to **iron chelators (deferiprone)**. [\[Moderate\]](#) Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to NSAIDs (indometacin, ketoprofen). [\[Moderate\]](#) Theoretical
  - ▶ **NSAIDs** increase the concentration of **lithium**. Monitor and adjust dose. [\[Severe\]](#) Study
  - ▶ **NSAIDs** are predicted to increase the risk of toxicity when given with **methotrexate**. [\[Severe\]](#) Study → Also see TABLE 2 p. 1490
  - ▶ **NSAIDs** (high-dose) are predicted to decrease the efficacy of **mifamurtide**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Nicorandil** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. [\[Severe\]](#) Theoretical
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **piroxicam**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Nitisinone** is predicted to increase the exposure to celecoxib. [\[Moderate\]](#) Study
  - ▶ **NRTIs (zidovudine)** increase the risk of haematological toxicity when given with **NSAIDs**. [\[Severe\]](#) Study → Also see TABLE 2 p. 1490
  - ▶ **NSAIDs** are predicted to increase the exposure to **pemetrexed**. Use with caution or avoid. [\[Severe\]](#) Theoretical → Also see TABLE 2 p. 1490
  - ▶ **NSAIDs** potentially increase the risk of seizures when given with **quinolones**. [\[Severe\]](#) Theoretical
  - ▶ **Mefenamic acid** is predicted to increase the exposure to **regorafenib**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 4 p. 1490
  - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to NSAIDs (celecoxib, diclofenac, etoricoxib). [\[Moderate\]](#) Study
  - ▶ **Teriflunomide** is predicted to increase the exposure to NSAIDs (indometacin, ketoprofen). [\[Moderate\]](#) Theoretical
  - ▶ **NSAIDs** increase the risk of acute renal failure when given with **thiazide diuretics**. [\[Severe\]](#) Theoretical → Also see TABLE 18 p. 1494
- Obeticholic acid**
- ▶ **Obeticholic acid** decreases the anticoagulant effect of **coumarins (warfarin)**. [\[Severe\]](#) Study
  - ▶ **Obeticholic acid** is predicted to increase the exposure to **theophylline**. [\[Severe\]](#) Theoretical
  - ▶ **Obeticholic acid** is predicted to increase the exposure to **tizanidine**. [\[Severe\]](#) Theoretical
- Obinutuzumab** → see monoclonal antibodies
- Ocrelizumab** → see monoclonal antibodies

**Octreotide**

- ▶ **Octreotide** decreases the absorption of oral **ciclosporin**. Adjust **ciclosporin** dose, p. 904. [Severe] Anecdotal
- ▶ **Octreotide** (short-acting) decreases the exposure to **telotristat ethyl**. **Telotristat ethyl** should be taken at least 30 minutes before **octreotide**. [Moderate] Study

**Ofatimumab** → see monoclonal antibodies

**Ofloxacin** → see quinolones

**Olanzapine** → see antipsychotics, second generation

**Olaparib** → see TABLE 15 p. 1493 (myelosuppression)

**FOOD AND LIFESTYLE** Bitter (Seville) orange is predicted to increase the exposure to **olaparib**.

- ▶ **Olaparib** might increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **olaparib**. Avoid potent CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [Moderate] Study
- ▶ **Olaparib** might increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Theoretical
- ▶ **Olaparib** might alter the exposure to **antipsychotics, second generation (quetiapine)**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [Moderate] Theoretical
- ▶ **Olaparib** might alter the exposure to **ciclosporin**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **olaparib**. Avoid potent CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [Moderate] Study
- ▶ **Olaparib** might increase the exposure to **colchicine**. [Moderate] Theoretical
- ▶ **Olaparib** potentially affects the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [Moderate] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Olaparib** might increase the exposure to **digoxin**. [Moderate] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Olaparib** might alter the exposure to **ergometrine**. [Moderate] Theoretical
- ▶ **Olaparib** might alter the exposure to **ergotamine**. [Moderate] Theoretical
- ▶ **Olaparib** might increase the exposure to **everolimus**. [Moderate] Theoretical
- ▶ **Olaparib** might increase the exposure to **factor XA inhibitors (edoxaban, rivaroxaban)**. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **olaparib**. Avoid potent CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **olaparib**. Avoid potent CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [Moderate] Theoretical → Also see TABLE 15 p. 1493

- ▶ **Letermovir** is predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [Moderate] Theoretical
  - ▶ **Olaparib** might increase the exposure to **loperamide**. [Moderate] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **olaparib**. Avoid potent CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [Moderate] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [Moderate] Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [Moderate] Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [Moderate] Theoretical → Also see TABLE 15 p. 1493
  - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
  - ▶ **Olaparib** might alter the exposure to **opioids (alfentanil)**. [Moderate] Theoretical
  - ▶ **Olaparib** might alter the exposure to **pimozide**. [Moderate] Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
  - ▶ **Olaparib** might increase the exposure to **sirolimus**. [Moderate] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
  - ▶ **Olaparib** is predicted to increase the exposure to **statins**. [Moderate] Theoretical
  - ▶ **Olaparib** might alter the exposure to **tacrolimus**. [Moderate] Theoretical
  - ▶ **Olaparib** might increase the exposure to **talazoparib**. [Moderate] Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Olaparib** might increase the exposure to **taxanes (docetaxel, paclitaxel)**. [Moderate] Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Olaparib** might alter the exposure to **temsirolimus**. [Moderate] Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Olaparib** might increase the exposure to **thrombin inhibitors (dabigatran)**. [Moderate] Theoretical
  - ▶ **Olaparib** might increase the exposure to **topotecan**. [Moderate] Theoretical → Also see TABLE 15 p. 1493
- Olmесartan** → see angiotensin-II receptor antagonists
- Olodaterol** → see beta<sub>2</sub> agonists
- Omega-3-acid ethyl esters** → see TABLE 4 p. 1490 (antiplatelet effects)
- ▶ **Omega-3-acid ethyl esters** might enhance the blood pressure-lowering effects of **beta blockers, non-selective**. [Moderate] Study
  - ▶ **Omega-3-acid ethyl esters** might enhance the blood pressure-lowering effects of **beta blockers, selective**. [Moderate] Study
- Omeprozole** → see proton pump inhibitors
- Ondansetron** → see 5-HT<sub>3</sub>-receptor antagonists
- Opicapone**
- ▶ **Opicapone** increases the exposure to **levodopa**. Adjust dose. [Moderate] Study
  - ▶ **Opicapone** is predicted to increase the exposure to **loperamide**. Avoid. [Moderate] Study
  - ▶ **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **MAOIs, irreversible**. Avoid. [Severe] Theoretical
  - ▶ **Opicapone** is predicted to increase the exposure to **meglitinides (repaglinide)**. Avoid. [Moderate] Study
  - ▶ **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **moclobemide**. Avoid. [Severe] Theoretical
  - ▶ **Opicapone** is predicted to increase the exposure to **montelukast**. Avoid. [Moderate] Study
  - ▶ **Opicapone** is predicted to increase the exposure to **pioglitazone**. Avoid. [Moderate] Study

- ▶ **Opicapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, inotropic**. [\[Severe\]](#) Theoretical
- ▶ **Opicapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [\[Severe\]](#) Theoretical
- Opioids** → see TABLE 6 p. 1491 (bradycardia), TABLE 13 p. 1493 (serotonin syndrome), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 11 p. 1492 (CNS depressant effects)
- alfentanil · buprenorphine · codeine · diamorphine · dihydrocodeine · diphenoxylate · dipipanone · fentanyl · hydromorphone · meptazinol · methadone · morphine · oxycodone · pentazocine · pethidine · remifentanyl · tapentadol · tramadol
- ▶ **Alcohol** causes rapid release of opioids (**hydromorphone, morphine**) from extended-release preparations. Avoid. [\[Severe\]](#) Study → Also see TABLE 11 p. 1492
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** decrease the exposure to **methadone**. Monitor and adjust dose. [\[Severe\]](#) Study → Also see TABLE 9 p. 1492
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to opioids (**alfentanil, fentanyl**). [\[Moderate\]](#) Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the concentration of **fentanyl**. [\[Moderate\]](#) Theoretical → Also see TABLE 6 p. 1491
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **methadone**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1492
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 6 p. 1491
- ▶ **Antiepileptics (carbamazepine)** decrease the concentration of **tramadol**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 11 p. 1492
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **methadone**. Monitor and adjust dose. [\[Severe\]](#) Study → Also see TABLE 11 p. 1492
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 11 p. 1492
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to opioids (**alfentanil, fentanyl**). [\[Moderate\]](#) Study → Also see TABLE 11 p. 1492
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **methadone**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1492
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **methadone**. Adjust dose. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1492
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **alfentanil**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **opioids**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Anecdotal → Also see TABLE 11 p. 1492
- ▶ **Berotrastat** is predicted to increase the exposure to opioids (**alfentanil, fentanyl**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Bictegravir** is predicted to increase the exposure to **methadone**. [\[Moderate\]](#) Theoretical
- ▶ **Brigatinib** potentially decreases the concentration of opioids (**alfentanil, fentanyl**). Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 6 p. 1491
- ▶ **Bupropion** is predicted to decrease the efficacy of **codeine**. [\[Moderate\]](#) Theoretical
- ▶ **Bupropion** is predicted to decrease the efficacy of **tramadol**. [\[Severe\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **methadone**. [\[Moderate\]](#) Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 6 p. 1491
- ▶ **Cenobamate** is predicted to decrease the exposure to **alfentanil**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 11 p. 1492
- ▶ **Certinib** is predicted to increase the exposure to opioids (**alfentanil, fentanyl**). Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 6 p. 1491
- ▶ **Cinacalcet** is predicted to decrease the efficacy of **codeine**. [\[Moderate\]](#) Theoretical
- ▶ **Cinacalcet** is predicted to decrease the efficacy of **tramadol**. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **methadone**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1492
- ▶ **Crizotinib** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 6 p. 1491
- ▶ **Dabrafenib** decreases the exposure to **methadone**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Tapentadol** is predicted to increase the risk of serotonin syndrome when given with **drugs that cause serotonin syndrome** (see TABLE 13 p. 1493). [\[Severe\]](#) Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** decrease the exposure to **methadone**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Entrectinib** is predicted to increase the exposure to opioids (**alfentanil, fentanyl**). [\[Mid\]](#) Theoretical
- ▶ **Fedratinib** is predicted to increase the exposure to **alfentanil**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the concentration of **alfentanil**. Use with caution and adjust dose. [\[Severe\]](#) Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **fentanyl**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** boosted with ritonavir are predicted to decrease the exposure to **methadone**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the concentration of **morphine**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** increase the risk of CNS toxicity when given with **pethidine**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **methadone**. [\[Severe\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **methadone**. [\[Moderate\]](#) Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Interferons (ropeginterferon alfa)** are predicted to increase the exposure to **methadone**. [\[Moderate\]](#) Theoretical

## Opioids (continued)

- ▶ **Larotrectinib** is predicted to increase the exposure to opioids (**alfentanil, fentanyl**). Use with caution and adjust dose. [Mild] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **methadone**. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Lorlatinib** is predicted to decrease the exposure to opioids (**alfentanil, fentanyl**). Avoid. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of **methadone**. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **methadone**. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [Moderate] Study
- ▶ **MAO-B inhibitors (rasagiline)** are predicted to increase the risk of adverse effects when given with **pethidine**. Avoid and for 14 days after stopping **rasagiline**. [Severe] Theoretical → Also see TABLE 13 p. 1493
- ▶ **MAO-B inhibitors (safinamide)** are predicted to increase the risk of adverse effects when given with **pethidine**. Avoid and for 1 week after stopping **safinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1493
- ▶ **MAO-B inhibitors (selegiline)** increase the risk of adverse effects when given with **pethidine**. Avoid. [Severe] Anecdotal → Also see TABLE 13 p. 1493
- ▶ **Opioids** are predicted to increase the risk of CNS excitation or depression when given with **MAOIs, irreversible**. Avoid. [Severe] Study → Also see TABLE 13 p. 1493
- ▶ **Opioids** potentially decrease the absorption of oral **mexiletine**. [Moderate] Study
- ▶ **Mifepristone** is predicted to increase the exposure to **alfentanil**. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** decreases the exposure to **methadone**. Monitor and adjust dose. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to opioids (**alfentanil, fentanyl**). [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nalmefene** is predicted to decrease the efficacy of **opioids**. Avoid except in an emergency situation—consult product literature. [Severe] Theoretical
- ▶ **Naltrexone** is predicted to decrease the efficacy of **opioids**. Avoid except in an emergency situation—consult product literature. [Severe] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **methadone**. [Moderate] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **methadone**. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Nilotinib** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **buprenorphine**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **fentanyl**. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **methadone**. Adjust dose. [Moderate] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **morphine**. [Moderate] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **pethidine**. Avoid. [Severe] Theoretical
- ▶ **NNRTIs (efavirenz)** moderately decrease the exposure to **buprenorphine**. Adjust dose. [Moderate] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** decrease the exposure to **methadone**. Monitor and adjust dose. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Olaparib** might alter the exposure to **alfentanil**. [Moderate] Theoretical
- ▶ **Opioids (buprenorphine)** are predicted to increase the risk of opiate withdrawal when given with opioids (**alfentanil**). [Severe] Theoretical → Also see TABLE 11 p. 1492
- ▶ **Opioids (pentazocine)** are predicted to increase the risk of opiate withdrawal when given with opioids (**alfentanil, codeine, diamorphine, dihydrocodeine, dipipanone, fentanyl, hydromorphone, meptazinol, methadone, morphine, oxycodone**). [Severe] Theoretical → Also see TABLE 13 p. 1493 → Also see TABLE 11 p. 1492
- ▶ **Opioids (buprenorphine)** are predicted to increase the risk of opiate withdrawal when given with opioids (**codeine, diamorphine, dihydrocodeine, dipipanone, fentanyl, hydromorphone, meptazinol, methadone, morphine, oxycodone, pentazocine, pethidine, remifentanyl, tapentadol, tramadol**). [Severe] Theoretical → Also see TABLE 11 p. 1492
- ▶ **Opioids (pentazocine)** are predicted to increase the risk of opiate withdrawal when given with opioids (**pethidine, remifentanyl, tapentadol, tramadol**). [Severe] Theoretical → Also see TABLE 13 p. 1493 → Also see TABLE 11 p. 1492
- ▶ **Opioids** might increase the risk of adverse effects when given with **ozanimod**. [Severe] Theoretical → Also see TABLE 6 p. 1491
- ▶ **Palbociclib** is predicted to increase the exposure to opioids (**alfentanil, fentanyl**). Adjust dose. [Moderate] Theoretical
- ▶ **Pemigatinib** might decrease the exposure to **methadone**. [Moderate] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **morphine**. [Mild] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to opioids (**alfentanil, fentanyl**). Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** decrease the exposure to **methadone**. Monitor and adjust dose. [Severe] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to opioids (**alfentanil, fentanyl**). [Moderate] Study
- ▶ **Rifamycins (rifampicin)** decrease the exposure to opioids (**codeine, morphine**). [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to opioids (**alfentanil, fentanyl**). Monitor and adjust dose. [Moderate] Study
- ▶ **Selpercatinib** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine**). Avoid. [Moderate] Study
- ▶ **Sotorasib** is predicted to decrease the exposure to **alfentanil**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to decrease the efficacy of **codeine**. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to decrease the efficacy of **tramadol**. [Severe] Study → Also see TABLE 13 p. 1493
- ▶ **St John's wort** decreases the exposure to **methadone**. Monitor and adjust dose. [Severe] Study → Also see TABLE 13 p. 1493
- ▶ **St John's wort** moderately decreases the exposure to **oxycodone**. Adjust dose. [Moderate] Study
- ▶ **Terbinafine** is predicted to decrease the efficacy of **codeine**. [Moderate] Theoretical
- ▶ **Terbinafine** is predicted to decrease the efficacy of **tramadol**. [Severe] Study
- ▶ **Tucatinib** is predicted to increase the exposure to **alfentanil**. Avoid or adjust dose. [Moderate] Theoretical

**Opium** → see interactions of codeine and morphine under opioids

**Orlistat**

**SEPARATION OF ADMINISTRATION** Orlistat might affect the absorption of concurrently administered drugs—consider separating administration. Particular care should be taken with antiepileptics, antiretrovirals, and drugs that have a narrow therapeutic index.

**Orphenadrine** → see TABLE 10 p. 1492 (antimuscarinics)

► **Antipsychotics, second generation (clozapine)** can cause constipation, as can **orphenadrine**; concurrent use might increase the risk of developing intestinal obstruction. **[Severe]** Theoretical → Also see TABLE 10 p. 1492

**Osetamivir**

► **Leflunomide** is predicted to increase the exposure to **oseltamivir**. **[Moderate]** Theoretical

► **Nitisinone** is predicted to increase the exposure to **oseltamivir**. **[Moderate]** Study

► **Teriflunomide** is predicted to increase the exposure to **oseltamivir**. **[Moderate]** Study

**Osilodrostat** → see TABLE 9 p. 1492 (QT-interval prolongation)

► **Osilodrostat** is predicted to increase the exposure to **agomelatine**. **[Moderate]** Study

► **Osilodrostat** is predicted to increase the exposure to **aminophylline**. Adjust dose. **[Moderate]** Theoretical

► **Osilodrostat** is predicted to increase the exposure to **anaesthetics, local (ropivacaine)**. **[Moderate]** Theoretical

► **Osilodrostat** is predicted to increase the exposure to **anagrelide**. **[Moderate]** Theoretical → Also see TABLE 9 p. 1492

► **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **osilodrostat**. **[Moderate]** Theoretical → Also see TABLE 9 p. 1492

► **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **osilodrostat**. **[Moderate]** Theoretical

► **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **osilodrostat**. **[Moderate]** Theoretical → Also see TABLE 9 p. 1492

► **Osilodrostat** increases the concentration of **antipsychotics, second generation (clozapine)**. Monitor adverse effects and adjust dose. **[Severe]** Study

► **Osilodrostat** is predicted to increase the exposure to **antipsychotics, second generation (olanzapine)**. Adjust dose. **[Moderate]** Anecdotal

► **Cobicistat** is predicted to increase the exposure to **osilodrostat**. **[Moderate]** Theoretical

► **Osilodrostat** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. **[Moderate]** Study

► **Osilodrostat** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. **[Moderate]** Study

► **HIV-protease inhibitors** are predicted to increase the exposure to **osilodrostat**. **[Moderate]** Theoretical

► **Idelalisib** is predicted to increase the exposure to **osilodrostat**. **[Moderate]** Theoretical

► **Osilodrostat** is predicted to increase the exposure to **loxapine**. Avoid. **[Unknown]** Theoretical

► **Macrolides (clarithromycin)** are predicted to increase the exposure to **osilodrostat**. **[Moderate]** Theoretical → Also see TABLE 9 p. 1492

► **Osilodrostat** slightly increases the exposure to **MAO-B inhibitors (rasagiline)**. **[Moderate]** Study

► **Osilodrostat** is predicted to increase the exposure to **melatonin**. **[Moderate]** Theoretical

► **Mitotane** is predicted to decrease the exposure to **osilodrostat**. **[Moderate]** Theoretical

► **Osilodrostat** is predicted to increase the exposure to **phenothiazines (chlorpromazine)**. **[Moderate]** Theoretical → Also see TABLE 9 p. 1492

► **Osilodrostat** is predicted to increase the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. **[Moderate]** Theoretical

► **Osilodrostat** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. **[Moderate]** Study

► **Rifamycins (rifampicin)** are predicted to decrease the exposure to **osilodrostat**. **[Moderate]** Theoretical

► **Osilodrostat** is predicted to increase the exposure to **riluzole**. **[Moderate]** Theoretical

► **Osilodrostat** is predicted to increase the exposure to **SNRIs (duloxetine)**. **[Moderate]** Theoretical

► **Osilodrostat** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. **[Moderate]** Theoretical

► **Osilodrostat** increases the exposure to **tizanidine**. Avoid. **[Moderate]** Study → Also see TABLE 9 p. 1492

► **Osilodrostat** is predicted to increase the exposure to **triptans (zolmitriptan)**. Adjust **zolmitriptan** dose, p. 515. **[Moderate]** Theoretical

**Osimertinib** → see TABLE 9 p. 1492 (QT-interval prolongation)

► **Osimertinib** is predicted to increase the exposure to **aliskiren**. **[Moderate]** Study

► **Anti-androgens (apalutamide, enzalutamide)** are predicted to moderately decrease the exposure to **osimertinib**. Avoid. **[Moderate]** Study → Also see TABLE 9 p. 1492

► **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **osimertinib**. Avoid. **[Moderate]** Study

► **Osimertinib** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. **[Moderate]** Study

► **Osimertinib** is predicted to increase the exposure to **colchicine**. **[Moderate]** Study

► **Dabrafenib** is predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. **[Severe]** Study

► **Osimertinib** is predicted to increase the exposure to **digoxin**. **[Moderate]** Study

► **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. **[Severe]** Study

► **Osimertinib** is predicted to increase the exposure to **everolimus**. **[Moderate]** Study

► **Osimertinib** is predicted to increase the exposure to **factor XA inhibitors (edoxaban, rivaroxaban)**. **[Moderate]** Study

► **Osimertinib** is predicted to increase the exposure to **loperamide**. **[Moderate]** Study

► **Mitotane** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. **[Moderate]** Study

► **Modafinil** is predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. **[Severe]** Theoretical

► **NRRTs (efavirenz, nevirapine)** are predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. **[Severe]** Study → Also see TABLE 9 p. 1492

► **NRRTs (etravirine)** are predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. **[Severe]** Theoretical

► **Rifamycins (rifampicin)** are predicted to moderately decrease the exposure to **osimertinib**. Avoid. **[Moderate]** Study

► **Osimertinib** is predicted to increase the exposure to **sirolimus**. **[Moderate]** Study

► **St John's wort** is predicted to decrease the exposure to **osimertinib**. Avoid. **[Severe]** Study

► **Osimertinib** causes a small increase in the exposure to **statins (rosuvastatin)**. **[Severe]** Study

► **Osimertinib** is predicted to increase the exposure to **talazoparib**. **[Moderate]** Study

► **Osimertinib** is predicted to increase the exposure to **taxanes (docetaxel, paclitaxel)**. **[Moderate]** Study

► **Osimertinib** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. **[Moderate]** Study

► **Osimertinib** is predicted to increase the exposure to **topotecan**. **[Moderate]** Study

**Ospemifene**

► **Anti-androgens (apalutamide, enzalutamide)** are predicted to moderately decrease the exposure to **ospemifene**. **[Moderate]** Study

► **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **ospemifene**. **[Moderate]** Study

► **Antifungals, azoles (fluconazole)** increase the exposure to **ospemifene**. Use with caution or avoid. **[Moderate]** Study

► **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. **[Moderate]** Study

## Ospemifene (continued)

- ▶ **Cobicistat** is predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- ▶ **Combined hormonal contraceptives** potentially oppose the effects of **ospemifene**. Avoid. [Severe] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- ▶ **Hormone replacement therapy** potentially opposes the effects of **ospemifene**. Avoid. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ **NNR1s (efavirenz, nevirapine)** are predicted to decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **ospemifene**. [Moderate] Study

**Oxaliplatin** → see platinum compounds  
**Oxazepam** → see benzodiazepines  
**Oxcarbazepine** → see antiepileptics  
**Oxybutynin** → see anaesthetics, local

- ▶ **Oxybutynin** → see TABLE 10 p. 1492 (antimuscarinics)
  - ▶ **Oxybutynin** potentially increases the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [Severe] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **oxybutynin**. [Mild] Study
  - ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **oxybutynin**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
  - ▶ **Cobicistat** is predicted to increase the exposure to **oxybutynin**. [Mild] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **oxybutynin**. [Mild] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **oxybutynin**. [Mild] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **oxybutynin**. [Mild] Study
- Oxycodone** → see opioids  
**Oxymetholone**  
 ▶ **Oxymetholone** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal  
 ▶ **Oxymetholone** increases the anticoagulant effect of **phenindione**. [Severe] Anecdotal
- Oxytetracycline** → see tetracyclines  
**Oxytocin**  
 ▶ **Misoprostol** can cause uterine contractions, as can **oxytocin**; concurrent use might increase the risk of developing this effect. Avoid and for 4 hours after stopping **misoprostol**. [Severe] Theoretical

**Ozanimod** → see TABLE 6 p. 1491 (bradycardia), TABLE 9 p. 1492 (QT-interval prolongation)

**FOOD AND LIFESTYLE** Tyramine-rich foods might increase the risk of hypertensive crisis when given **ozanimod**.

- ▶ **Ciclosporin** is predicted to increase the exposure to the active metabolites of **ozanimod**. Avoid. [Moderate] Study
- ▶ **Clopidogrel** is predicted to increase the exposure to the active metabolites of **ozanimod**. [Moderate] Study
- ▶ **Eltrombopag** is predicted to increase the exposure to the active metabolites of **ozanimod**. Avoid. [Moderate] Study
- ▶ **Fibrates (gemfibrozil)** are predicted to increase the exposure to the active metabolites of **ozanimod**. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to the active metabolites of **ozanimod**. Avoid. [Moderate] Study

- ▶ **Ozanimod** might increase the risk of a hypertensive crisis when given with **linezolid**. Avoid. [Severe] Theoretical
  - ▶ **Live vaccines** might increase the risk of generalised infection (possibly life-threatening) when given with **ozanimod**. Avoid and for 3 months after stopping **ozanimod**. [Severe] Theoretical
  - ▶ **Ozanimod** might increase the risk of a hypertensive crisis when given with **MAO-B inhibitors** and **MAO-A inhibitors** might decrease the exposure to the active metabolites of **ozanimod**. Avoid. [Severe] Theoretical → Also see TABLE 6 p. 1491
  - ▶ **Ozanimod** might increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid. [Severe] Theoretical
  - ▶ **Methylphenidate** is predicted to increase the risk of a hypertensive crisis when given with **ozanimod**. [Severe] Theoretical
  - ▶ **Ozanimod** might increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Theoretical
  - ▶ **Monoclonal antibodies (alemtuzumab)** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **ozanimod**. Avoid. [Severe] Theoretical
  - ▶ **Opioids** might increase the risk of adverse effects when given with **ozanimod**. [Severe] Theoretical → Also see TABLE 6 p. 1491
  - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to the active metabolites of **ozanimod**. Avoid. [Moderate] Study
  - ▶ **SNRIs (duloxetine)** might increase the risk of adverse effects when given with **ozanimod**. [Severe] Theoretical
  - ▶ **SSRIs** might increase the risk of adverse effects when given with **ozanimod**. [Severe] Theoretical
  - ▶ **Sympathomimetics, vasoconstrictor** might increase the risk of a hypertensive crisis when given with **ozanimod**. [Severe] Theoretical
  - ▶ **Teriflunomide** is predicted to increase the exposure to the active metabolites of **ozanimod**. Avoid. [Moderate] Study
  - ▶ **Tricyclic antidepressants** might increase the risk of adverse effects when given with **ozanimod**. [Severe] Theoretical
- Palitaxel** → see taxanes  
**Palbociclib** → see TABLE 15 p. 1493 (myelosuppression)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1072. [Severe] Study
  - ▶ **Palbociclib** increases the exposure to **benzodiazepines (midazolam)**. [Moderate] Study
  - ▶ **Palbociclib** is predicted to increase the exposure to **ciclosporin**. Adjust dose. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1072. [Severe] Study
  - ▶ **Palbociclib** is predicted to increase the exposure to **ergotamine**. Adjust dose. [Moderate] Theoretical
  - ▶ **Palbociclib** is predicted to increase the exposure to **everolimus**. Adjust dose. [Moderate] Theoretical
  - ▶ **Grapefruit** juice is predicted to increase the exposure to **palbociclib**. Avoid. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1072. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1072. [Severe] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1072. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1493
  - ▶ **Palbociclib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Adjust dose. [Moderate] Theoretical
  - ▶ **Palbociclib** is predicted to increase the exposure to **pimozide**. Adjust dose. [Moderate] Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
  - ▶ **Palbociclib** is predicted to increase the exposure to **sirolimus**. Adjust dose. [Moderate] Theoretical

- ▶ **St John's wort** is predicted to decrease the exposure to **palbociclib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Palbociclib** is predicted to increase the exposure to **tacrolimus**. Adjust dose. [\[Moderate\]](#) Theoretical
- Paliperidone** → see antipsychotics, second generation
- Palonosetron** → see 5-HT<sub>3</sub>-receptor antagonists
- Pamidronate** → see bisphosphonates
- Pancreatin**
  - ▶ **Pancreatin** is predicted to decrease the effects of **acarbose**. Avoid. [\[Moderate\]](#) Theoretical
- Pancuronium** → see neuromuscular blocking drugs, non-depolarising
- Panitumumab** → see monoclonal antibodies
- Panobinostat** → see TABLE 15 p. 1493 (myelosuppression), TABLE 9 p. 1492 (QT-interval prolongation)
 

**FOOD AND LIFESTYLE** Avoid pomegranate, pomegranate juice, and star fruit as they are predicted to increase panobinostat exposure.

  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **panobinostat**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **panobinostat**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **panobinostat**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 1009. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
  - ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **panobinostat**. Adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Panobinostat** is predicted to increase the exposure to **atomoxetine**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
  - ▶ **Panobinostat** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Panobinostat** is predicted to increase the exposure to **beta blockers, selective (nebulivolol)**. Monitor and adjust dose. [\[Mild\]](#) Theoretical
  - ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **panobinostat**. Adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Ciclosporin** is predicted to increase the exposure to **panobinostat**. Adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 1009. [\[Moderate\]](#) Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 1009. [\[Moderate\]](#) Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 1009. [\[Moderate\]](#) Study
  - ▶ **Lapatinib** is predicted to increase the exposure to **panobinostat**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **panobinostat**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 1009. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
  - ▶ **Mitotane** is predicted to decrease the exposure to **panobinostat**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Panobinostat** is predicted to increase the exposure to **pimozide**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Ranolazine** is predicted to increase the exposure to **panobinostat**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **panobinostat**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **panobinostat**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **panobinostat**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1492
- Pantoprazole** → see proton pump inhibitors
- Paracetamol** → see TABLE 1 p. 1490 (hepatotoxicity)
- ▶ **Alcohol** (in those who drink heavily) causes severe liver damage when given with **paracetamol**. [\[Severe\]](#) Study → Also see TABLE 1 p. 1490
- ▶ **Paracetamol** is predicted to decrease the clearance of **alkylating agents (busulfan)**. [\[Moderate\]](#) Theoretical
- ▶ **Paracetamol** is predicted to increase the risk of methaemoglobinemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [\[Severe\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **paracetamol**. [\[Moderate\]](#) Study → Also see TABLE 1 p. 1490
- ▶ **Paracetamol** increases the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Study
- ▶ **Paracetamol** is predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [\[Severe\]](#) Theoretical
- ▶ **Imatinib** increases the risk of hepatotoxicity when given with **paracetamol**. [\[Severe\]](#) Anecdotal
- ▶ **Paracetamol** has been reported to cause high anion gap metabolic acidosis when given with **penicillins (flucloxacillin)**. [\[Severe\]](#) Anecdotal → Also see TABLE 1 p. 1490
- ▶ **Paracetamol** is predicted to increase the anticoagulant effect of **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **paracetamol**. [\[Mild\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** decrease the exposure to **paracetamol**. [\[Moderate\]](#) Study
- Paraldehyde** → see antiepileptics
- Parathyroid hormone**
  - ▶ **Bisphosphonates** are predicted to decrease the effects of **parathyroid hormone**. Avoid. [\[Moderate\]](#) Study
- Parecoxib** → see NSAIDs
- Paricalcitol** → see vitamin D substances
- Paroxetine** → see SSRIs
- Pasireotide** → see TABLE 6 p. 1491 (bradycardia), TABLE 9 p. 1492 (QT-interval prolongation)
- ▶ **Pasireotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. [\[Severe\]](#) Theoretical
- Patiromer**

**SEPARATION OF ADMINISTRATION** Manufacturer advises take 3 hours before, or after, other drugs.

  - Pazopanib** → see TABLE 9 p. 1492 (QT-interval prolongation), TABLE 4 p. 1490 (antiplatelet effects)
  - ▶ Oral **antacids** are predicted to decrease the absorption of oral **pazopanib**. **Pazopanib** should be taken 1 hour before or 2 hours after antacids. [\[Moderate\]](#) Theoretical
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **pazopanib**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **pazopanib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **pazopanib**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **pazopanib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 1073. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **pazopanib**. [\[Moderate\]](#) Study
  - ▶ Oral **calcium salts (calcium carbonate)** -containing antacids might decrease the absorption of oral **pazopanib**. **Pazopanib** should be taken 1 hour before or 2 hours after antacids. [\[Moderate\]](#) Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 1073. [\[Moderate\]](#) Study

## Pazopanib (continued)

- ▶ **Pazopanib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Dabrafenib** is predicted to decrease the exposure to **pazopanib**. [Severe] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **pazopanib**. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **pazopanib**. H<sub>2</sub> receptor antagonists should be taken 10 hours before or 2 hours after **pazopanib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 1073. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 1073. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Study → Also see TABLE 4 p. 1490
- ▶ **Lapatinib** increases the exposure to **pazopanib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Letermovir** is predicted to increase the exposure to **pazopanib**. [Moderate] Study
- ▶ **Pazopanib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Mid] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 1073. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **pazopanib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Mitotane** is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **pazopanib**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **pazopanib**. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Pazopanib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **pazopanib**. Avoid or administer concurrently without food. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **Pazopanib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
- ▶ Oral **sodium bicarbonate** -containing antacids might decrease the absorption of oral **pazopanib**. **Pazopanib** should be taken 1 hour before or 2 hours after antacids. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **pazopanib**. [Severe] Study
- ▶ **Pazopanib** might affect the exposure to **statins (atorvastatin, pravastatin, rosuvastatin)**. [Moderate] Theoretical
- ▶ **Pazopanib** might cause increased ALT concentrations when given with **statins (simvastatin)**. [Moderate] Study

**Pegaspargase** → see TABLE 1 p. 1490 (hepatotoxicity), TABLE 15 p. 1493 (myelosuppression)

- ▶ **Pegaspargase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 1493
- ▶ **Pegaspargase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1490 → Also see TABLE 15 p. 1493
- ▶ **Pegaspargase** potentially increases the risk of neurotoxicity when given with **vinca alkaloids (vincristine)**. **Vincristine** should be taken 3 to 24 hours before **pegaspargase**. [Severe] Anecdotal → Also see TABLE 1 p. 1490 → Also see TABLE 15 p. 1493

**Peginterferon alfa** → see interferons

**Pembrolizumab** → see monoclonal antibodies

**Pemetrexed** → see TABLE 15 p. 1493 (myelosuppression), TABLE 2 p. 1490 (nephrotoxicity)

- ▶ **Antimalarials (pyrimethamine)** are predicted to increase the risk of adverse effects when given with **pemetrexed**. [Severe] Theoretical
- ▶ **Aspirin** (high-dose) potentially increases the exposure to **pemetrexed**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **pemetrexed**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **NSAIDs** are predicted to increase the exposure to **pemetrexed**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 2 p. 1490

## Pemigatinib

- ▶ **Pemigatinib** might increase the exposure to the active metabolite of **alkylating agents (cyclophosphamide)**. [Moderate] Theoretical
- ▶ **Pemigatinib** might decrease the exposure to **alkylating agents (ifosfamide)**. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **pemigatinib**. Avoid. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **pemigatinib**. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **pemigatinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **pemigatinib**. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **pemigatinib**. Avoid or adjust **pemigatinib** dose, p. 1074. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **pemigatinib**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **pemigatinib**. Avoid or adjust **pemigatinib** dose, p. 1074. [Severe] Study
- ▶ **Pemigatinib** might increase the exposure to **colchicine**. Separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **pemigatinib**. [Severe] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **pemigatinib**. Avoid or monitor. [Severe] Study
- ▶ **Pemigatinib** might increase the exposure to **digoxin**. Separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **pemigatinib**. Avoid or monitor. [Severe] Study
- ▶ **Pemigatinib** might increase the exposure to **everolimus**. Separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Pemigatinib** might increase the exposure to **factor XA inhibitors (edoxaban, rivaroxaban)**. Separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Grapefruit and grapefruit juice** is predicted to increase the exposure to **pemigatinib**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **pemigatinib**. Avoid or adjust **pemigatinib** dose, p. 1074. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **pemigatinib**. Avoid or adjust **pemigatinib** dose, p. 1074. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **pemigatinib**. [Severe] Study
- ▶ **Letermovir** is predicted to increase the exposure to **pemigatinib**. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **pemigatinib**. Avoid or adjust **pemigatinib** dose, p. 1074. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **pemigatinib**. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **pemigatinib**. Avoid. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **pemigatinib**. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **pemigatinib**. [Severe] Study

- ▶ **NNRTIs (efavirenz)** are predicted to decrease the exposure to **pemigatinib** and **pemigatinib** might decrease the exposure to **NNRTIs (efavirenz)**. Avoid or monitor. [\[Severe\]](#) Study
- ▶ **NNRTIs (nevirapine)** are predicted to decrease the exposure to **pemigatinib**. Avoid or monitor. [\[Severe\]](#) Study
- ▶ **Pemigatinib** might decrease the exposure to **opioids (methadone)**. [\[Moderate\]](#) Theoretical
- ▶ **Pemigatinib** is predicted to increase the risk of hyperphosphataemia when given with **phosphate**. [\[Moderate\]](#) Theoretical
- ▶ **Proton pump inhibitors** have been reported to decrease the exposure to **pemigatinib**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **pemigatinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Pemigatinib** might increase the exposure to **sirolimus**. Separate administration by at least 6 hours. [\[Moderate\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **pemigatinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Pemigatinib** might increase the exposure to **thrombin inhibitors (dabigatran)**. Separate administration by at least 6 hours. [\[Moderate\]](#) Theoretical
- ▶ **Penicillamine** → see TABLE 2 p. 1490 (nephrotoxicity)
- ▶ Oral **antacids** decrease the absorption of oral **penicillamine**. Separate administration by 2 hours. [\[Mild\]](#) Study
- ▶ **Antimalarials (chloroquine)** are predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Penicillamine** potentially decreases the concentration of **digoxin**. Separate administration by 2 hours. [\[Severe\]](#) Anecdotal
- ▶ **Hydroxychloroquine** is predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Oral **iron** is predicted to decrease the absorption of oral **penicillamine**. Separate administration by at least 2 hours. [\[Mild\]](#) Study
- ▶ **Zinc** is predicted to decrease the absorption of **penicillamine**. [\[Mild\]](#) Theoretical
- ▶ **Penicillins** → see TABLE 1 p. 1490 (hepatotoxicity)
 

amoxicillin · ampicillin · benzathine benzylpenicillin · benzylpenicillin · flucloxacillin · phenoxymethylpenicillin · piperacillin · pivmecillinam · temocillin
- ▶ **Allopurinol** increases the risk of skin rash when given with penicillins (amoxicillin, ampicillin). [\[Moderate\]](#) Study
- ▶ **Antiepileptics (valproate)** increase the risk of adverse effects when given with **pivmecillinam**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Penicillins** potentially alter the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Lefunomide** is predicted to increase the exposure to **benzylpenicillin**. [\[Moderate\]](#) Theoretical
- ▶ **Penicillins** are predicted to increase the risk of toxicity when given with **methotrexate**. [\[Severe\]](#) Anecdotal → Also see TABLE 1 p. 1490
- ▶ **Piperacillin** increases the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Moderate\]](#) Study
- ▶ **Nitisonone** is predicted to increase the exposure to **benzylpenicillin**. [\[Moderate\]](#) Study
- ▶ **Paracetamol** has been reported to cause high anion gap metabolic acidosis when given with **flucloxacillin**. [\[Severe\]](#) Anecdotal → Also see TABLE 1 p. 1490
- ▶ **Penicillins** are predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Piperacillin** increases the effects of **suxamethonium**. [\[Moderate\]](#) Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **benzylpenicillin**. [\[Moderate\]](#) Study
- ▶ **Pentamidine** → see TABLE 2 p. 1490 (nephrotoxicity), TABLE 9 p. 1492 (QT-interval prolongation)
- ▶ **Foscarnet** increases the risk of hypocalcaemia when given with **pentamidine**. [\[Severe\]](#) Anecdotal → Also see TABLE 2 p. 1490
- ▶ **Pentazocine** → see opioids
- ▶ **Pentostatin** → see TABLE 15 p. 1493 (myelosuppression), TABLE 5 p. 1491 (thromboembolism)
- ▶ **Alkylating agents (cyclophosphamide)** (high-dose) increase the risk of toxicity when given with **pentostatin**. Avoid. [\[Severe\]](#) Anecdotal → Also see TABLE 15 p. 1493 → Also see TABLE 5 p. 1491
- ▶ **Fludarabine** increases the risk of pulmonary toxicity when given with **pentostatin**. Avoid. [\[Severe\]](#) Study → Also see TABLE 15 p. 1493
- ▶ **Pentoxifylline**
  - ▶ **Pentoxifylline** is predicted to increase the concentration of **aminophylline**. Use with caution or avoid. [\[Severe\]](#) Theoretical
  - ▶ **Quinolones (ciprofloxacin)** very slightly increase the exposure to **pentoxifylline**. [\[Moderate\]](#) Study
  - ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **pentoxifylline**. [\[Moderate\]](#) Theoretical
  - ▶ **Pentoxifylline** increases the concentration of **theophylline**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Peppermint**
  - ▶ **Peppermint** oil is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Perampanel** → see antiepileptics
- ▶ **Pericyazine** → see phenothiazines
- ▶ **Perindopril** → see ACE inhibitors
- ▶ **Pertuzumab** → see monoclonal antibodies
- ▶ **Pethidine** → see opioids
- ▶ **Phenazone** → see NSAIDs
- ▶ **Phenelzine** → see MAOIs, irreversible
- ▶ **Phenindione** → see TABLE 3 p. 1490 (anticoagulant effects)
 

**FOOD AND LIFESTYLE** The effects of phenindione can be reduced or abolished by vitamin K, including that found in health foods, food supplements, enteral feeds, or large amounts of some green vegetables or green tea. Major changes in diet (especially involving salads and vegetables) and in alcohol consumption can affect anticoagulant control.
- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (miconazole)** greatly increase the anticoagulant effect of **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Cephalosporins (cefazolin, ceftriaxone)** potentially increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Anecdotal
- ▶ **Certinib** is predicted to increase the exposure to **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Corticosteroids** are predicted to increase the effects of **phenindione**. [\[Moderate\]](#) Anecdotal
- ▶ **Crizotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **phenindione**. [\[Moderate\]](#) Study
- ▶ **Disulfiram** is predicted to increase the anticoagulant effect of **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Enteral feeds** (vitamin-K containing) potentially decrease the effects of **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Erlotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Fibrates** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [\[Severe\]](#) Study
- ▶ **Gefitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **phenindione**. [\[Severe\]](#) Anecdotal
- ▶ **Imatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Lapatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Nandrolone** is predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Oxymetholone** increases the anticoagulant effect of **phenindione**. [\[Severe\]](#) Anecdotal
- ▶ **Paracetamol** is predicted to increase the anticoagulant effect of **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Pazopanib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical

**Phenindione** (continued)

- ▶ **Penicillins** are predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Selumetinib** might increase the risk of bleeding when given with **phenindione**. [Severe] Theoretical
- ▶ **Sorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Statins (rosuvastatin)** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [Severe] Theoretical
- ▶ **Tetracyclines** are predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
- ▶ **Tigecycline** is predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
- ▶ **Tofacitinib** is predicted to increase the risk of bleeding when given with **phenindione**. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **phenindione**. [Moderate] Study

**Phenobarbital** → see antiepileptics

- ▶ **Phenothiazines** → see TABLE 8 p. 1491 (hypotension), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 11 p. 1492 (CNS depressant effects), TABLE 10 p. 1492 (antimuscarinics)

chlormpromazine · levomepromazine · pericyazine · prochlorperazine · promazine · trifluoperazine

**FOOD AND LIFESTYLE** **Chlorpromazine** dose adjustment might be necessary if smoking started or stopped during treatment.

- ▶ **Phenothiazines** are predicted to decrease the effects of **amfetamines** and **amfetamines** are predicted to decrease the effects of **phenothiazines**. [Moderate] Study
- ▶ Oral **antacids** decrease the absorption of oral **phenothiazines**. [Moderate] Anecdotal
- ▶ **Chlorpromazine** decreases the concentration of **antiepileptics (phenobarbital, primidone)** and **antiepileptics (phenobarbital, primidone)** decrease the concentration of **chlorpromazine**. [Moderate] Study → Also see TABLE 11 p. 1492
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **phenothiazines**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492 → Also see TABLE 10 p. 1492
- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **chlorpromazine**. [Moderate] Theoretical
- ▶ **Chlorpromazine** is predicted to increase the risk of hyponatraemia when given with **desmopressin**. [Severe] Theoretical
- ▶ **Phenothiazines** are predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 9 p. 1492 → Also see TABLE 10 p. 1492
- ▶ **Phenothiazines** decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Study → Also see TABLE 8 p. 1491
- ▶ **Phenothiazines** potentially increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1492
- ▶ **MAOIs, irreversible** are predicted to increase the risk of neuroleptic malignant syndrome when given with **phenothiazines**. [Severe] Theoretical → Also see TABLE 8 p. 1491
- ▶ **Chlorpromazine** decreases the effects of **metryapone**. Avoid. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **chlorpromazine**. [Moderate] Theoretical
- ▶ **Moclobemide** increases the risk of adverse effects when given with **levomepromazine**. [Moderate] Study
- ▶ **Osilodrostat** is predicted to increase the exposure to **chlorpromazine**. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **chlorpromazine**. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **chlorpromazine**. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **chlorpromazine**. [Moderate] Theoretical

- ▶ **Vemurafenib** is predicted to increase the exposure to **chlormpromazine**. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- Phenoxymethylpenicillin** → see penicillins  
**Phenylephrine** → see sympathomimetics, vasoconstrictor  
**Phenytoin** → see antiepileptics  
**Pholcodine**  
 ▶ **Pholcodine** is predicted to increase the risk of CNS excitation or depression when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical

**Phosphate**

- ▶ **Pemigatinib** is predicted to increase the risk of hyperphosphataemia when given with **phosphate**. [Moderate] Theoretical

**Phosphodiesterase type-4 inhibitors**

apremilast · roflumilast

- ▶ **Aminophylline** is predicted to slightly increase the exposure to **roflumilast**. Avoid. [Moderate] Theoretical
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** moderately decrease the exposure to **apremilast**. Avoid. [Severe] Study
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** moderately decrease the exposure to **apremilast**. Avoid. [Severe] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
  - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **roflumilast**. [Moderate] Study
  - ▶ **Mexiletine** is predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
  - ▶ **Mitotane** moderately decreases the exposure to **apremilast**. Avoid. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
  - ▶ **Osilodrostat** is predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
  - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
  - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **apremilast**. Avoid. [Severe] Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
  - ▶ **Rucaparib** is predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
  - ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **roflumilast**. [Moderate] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **apremilast**. Avoid. [Severe] Theoretical
  - ▶ **Theophylline** is predicted to slightly increase the exposure to **roflumilast**. Avoid. [Moderate] Theoretical
  - ▶ **Vemurafenib** is predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
- Phosphodiesterase type-5 inhibitors** → see TABLE 8 p. 1491 (hypotension), TABLE 9 p. 1492 (QT-interval prolongation)
- avanafil · sildenafil · tadalafil · vardenafil
- ▶ **Alpha blockers** cause significant hypotensive effects when given with **phosphodiesterase type-5 inhibitors**. Patient should be stabilised on first drug then second drug should be added at the lowest recommended dose. [Severe] Study → Also see TABLE 8 p. 1491
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [Severe] Study
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [Moderate] Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 878. [Moderate] Theoretical

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **ildenafil**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil, tadalafil**). Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil, vardenafil**). [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 878. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **vardenafil**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **sildenafil**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 879. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [Severe] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **sildenafil**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafil**). Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 878. [Moderate] Theoretical → Also see TABLE 8 p. 1491
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. [Moderate] Study → Also see TABLE 8 p. 1491
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tadalafil**. [Severe] Theoretical → Also see TABLE 8 p. 1491
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **vardenafil**. Adjust dose. [Severe] Theoretical → Also see TABLE 8 p. 1491
- ▶ **Cenobamate** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil, sildenafil, vardenafil**). Adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafil**). Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **sildenafil**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 879. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 878. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Crizotinib** is predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **vardenafil**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Endothelin receptor antagonists (bosentan)** decrease the exposure to phosphodiesterase type-5 inhibitors. [Moderate] Study
- ▶ **Grapefruit** juice is predicted to increase the exposure to phosphodiesterase type-5 inhibitors. Use with caution or avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafil**). Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **sildenafil**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 879. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafil**). Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **sildenafil**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 879. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 878. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **vardenafil**. Adjust dose. [Severe] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 878. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **vardenafil**. Adjust dose. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **sildenafil**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 879. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 878. [Moderate] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **vardenafil**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafil**). Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Mitotane** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil, tadalafil**). Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil, vardenafil**). [Moderate] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 878. [Moderate] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **sildenafil**. Monitor or

**Phosphodiesterase type-5 inhibitors** (continued)

- adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. [\[Moderate\]](#) Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **ildenafil**. Adjust dose. [\[Severe\]](#) Theoretical
  - ▶ **Nicorandil** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1491
  - ▶ **Nilotinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 878. [\[Moderate\]](#) Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
  - ▶ **Nilotinib** is predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to **ildenafil**. Adjust dose. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of phosphodiesterase type-5 inhibitors (**avanafil, vardenafil**). Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **sildenafil**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Theoretical
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **tadalafil**. Adjust dose—consult product literature. [\[Severe\]](#) Theoretical
  - ▶ **Nitrates** potentially increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [\[Severe\]](#) Study → Also see TABLE 8 p. 1491
  - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1492
  - ▶ **NNRTIs (etravirine)** moderately decrease the exposure to **phosphodiesterase type-5 inhibitors**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ **Ribociclib** is predicted to increase the exposure to **sildenafil**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil, tadalafil**). Avoid. [\[Severe\]](#) Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil, vardenafil**). [\[Moderate\]](#) Theoretical
  - ▶ **Phosphodiesterase type-5 inhibitors** are predicted to increase the risk of hypotension when given with **sapropterin**. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1491
  - ▶ **St John's wort** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [\[Moderate\]](#) Theoretical
  - ▶ **Tucatinib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafil**). Avoid or adjust dose. [\[Moderate\]](#) Theoretical
- Pibrentasvir**
- ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **aliskiren**. [\[Moderate\]](#) Study
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
  - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
  - ▶ **Antiarrhythmics (dronedarone)** potentially increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
  - ▶ **Antiepileptics (eslicarbazepine, oxcarbazepine)** potentially decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
  - ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [\[Moderate\]](#) Study

- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
- ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **colchicine**. [\[Moderate\]](#) Study
- ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **pibrentasvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Crizotinib** potentially decreases the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Pibrentasvir** with glecaprevir increases the exposure to **digoxin**. [\[Moderate\]](#) Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **everolimus**. [\[Moderate\]](#) Study
- ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **factor XA inhibitors (edoxaban)**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** boosted with ritonavir increase the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (ritonavir)** potentially increase the exposure to **pibrentasvir**. [\[Severe\]](#) Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
- ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **loperamide**. [\[Moderate\]](#) Study
- ▶ **Lumacaftor** potentially decreases the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Macrolides** are predicted to increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
- ▶ **Mitotane** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **pibrentasvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Ranolazine** is predicted to increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **sirolimus**. [\[Moderate\]](#) Study
- ▶ **St John's wort** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Pibrentasvir** with glecaprevir markedly increases the exposure to **statins (atorvastatin)**. Avoid. [\[Severe\]](#) Study
- ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **statins (fluvastatin)**. [\[Moderate\]](#) Theoretical
- ▶ **Pibrentasvir** with glecaprevir moderately increases the exposure to **statins (pravastatin)**. Use with caution and adjust pravastatin dose. [\[Moderate\]](#) Study
- ▶ **Pibrentasvir** with glecaprevir moderately increases the exposure to **statins (rosuvastatin)**. Use with caution and adjust rosuvastatin dose, p. 221. [\[Moderate\]](#) Study
- ▶ **Pibrentasvir** with glecaprevir moderately increases the exposure to **statins (simvastatin)**. Avoid. [\[Moderate\]](#) Study
- ▶ **Pibrentasvir** with glecaprevir slightly increases the exposure to **tacrolimus**. Monitor and adjust dose. [\[Mid\]](#) Study
- ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **taxanes (paclitaxel)**. [\[Moderate\]](#) Study
- ▶ **Pibrentasvir** with glecaprevir increases the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [\[Moderate\]](#) Study
- ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **topotecan**. [\[Moderate\]](#) Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical

**Pilocarpine**

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

**Pimecrolimus**

- ▶ **Alcohol** increases the risk of facial flushing and skin irritation when given with topical **pimecrolimus**. [Moderate] Study
- ▶ **Pimecrolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Pimozide** → see TABLE 8 p. 1491 (hypotension), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 11 p. 1492 (CNS depressant effects), TABLE 10 p. 1492 (antimuscarinics)
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **pimozide**. Avoid. [Moderate] Theoretical
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **pimozide**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492 → Also see TABLE 10 p. 1492
- ▶ **Berotrastat** is predicted to increase the exposure to **pimozide**. Avoid. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1491
- ▶ **Ceritinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Cobicistat** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Pimozide** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 9 p. 1492 → Also see TABLE 10 p. 1492
- ▶ **Grapefruit** juice increases the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Larotrectinib** is predicted to increase the exposure to **pimozide**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Pimozide** decreases the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1491
- ▶ **Lorlatinib** is predicted to decrease the exposure to **pimozide**. Avoid. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Neurokinin-1 receptor antagonists** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Olaparib** might alter the exposure to **pimozide**. [Moderate] Theoretical
- ▶ **Palbociclib** is predicted to increase the exposure to **pimozide**. Adjust dose. [Moderate] Theoretical
- ▶ **Panobinostat** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Pitolisant** is predicted to decrease the exposure to **pimozide**. Avoid. [Severe] Theoretical

- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **pimozide**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Rucaparib** is predicted to increase the exposure to **pimozide**. Monitor and adjust dose. [Moderate] Study
- ▶ **Pindolol** → see beta blockers, non-selective
- ▶ **Pioglitazone** → see TABLE 14 p. 1493 (antidiabetic drugs)
- ▶ **Pioglitazone** potentially decreases the exposure to **antifungals, azoles (isavuconazole)**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Clopidogrel** increases the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. [Severe] Study
- ▶ **Fenfluramine** might decrease blood glucose concentrations when given with **pioglitazone**. [Moderate] Theoretical
- ▶ **Fibrates (gemfibrozil)** increase the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. [Severe] Study
- ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **pioglitazone**. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **pioglitazone**. [Moderate] Study
- ▶ **Mifepristone** is predicted to increase the exposure to **pioglitazone**. [Moderate] Theoretical
- ▶ **Opicapone** is predicted to increase the exposure to **pioglitazone**. Avoid. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **pioglitazone**. Monitor and adjust dose. [Moderate] Study
- ▶ **St John's wort** slightly decreases the exposure to **pioglitazone**. [Mild] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **pioglitazone**. [Moderate] Study
- ▶ **Piperacillin** → see penicillins
- ▶ **Piperazine** → see antimalarials
- ▶ **Pirfenidone**

**FOOD AND LIFESTYLE** Smoking increases pirfenidone clearance; patients should be encouraged to stop smoking before and during treatment with pirfenidone.

- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ **Axitinib** is predicted to increase the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Osilodrostat** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **pirfenidone**. Avoid. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** are predicted to moderately increase the exposure to **pirfenidone**. Avoid. [Moderate] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Piroxicam** → see NSAIDs
- ▶ **Pitolisant**
- ▶ **Pitolisant** is predicted to decrease the exposure to **aliskiren**. [Mild] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **antihistamines, non-sedating (fexofenadine)**. [Mild] Theoretical

## Pitolisant (continued)

- ▶ **Antihistamines, sedating** are predicted to decrease the efficacy of **pitolisant**. [Moderate] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Bupropion** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Severe] Theoretical
- ▶ **Cinacalcet** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **colchicine**. [Mid] Theoretical
- ▶ **Pitolisant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **coumarins (warfarin)**. [Mid] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **dasatinib**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **digoxin**. [Mid] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **everolimus**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **factor XA inhibitors (edoxaban)**. [Mid] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **irinotecan**. [Mid] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **loperamide**. [Mid] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **meglitinides (repaglinide)**. [Mid] Theoretical
- ▶ **Pitolisant** is predicted to increase the exposure to **metformin**. [Mid] Theoretical
- ▶ **Mianserin** is predicted to decrease the efficacy of **pitolisant**. [Moderate] Theoretical
- ▶ **Mirtazapine** is predicted to decrease the efficacy of **pitolisant**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **NNRTIs (efavirenz)**. [Mid] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **opioids (morphine)**. [Mid] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **paracetamol**. [Mid] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **sirolimus**. Avoid. [Severe] Theoretical
- ▶ **SNRIs (duloxetine)** are predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **SNRIs (venlafaxine)** are predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Mid] Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **pitolisant**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **taxanes (docetaxel)**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **taxanes (paclitaxel)**. [Mid] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **temsirolimus**. Avoid. [Severe] Theoretical

- ▶ **Terbinafine** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **thrombin inhibitors (dabigatran)**. [Mid] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **topotecan**. [Mid] Theoretical

- ▶ **Tricyclic antidepressants** are predicted to decrease the efficacy of **pitolisant**. [Mid] Theoretical

**Pivmecillinam** → see penicillins

**Pixantrone** → see anthracyclines

**Pizotifen** → see antihistamines, sedating

**Platinum compounds** → see TABLE 15 p. 1493 (myelosuppression), TABLE 2 p. 1490 (nephrotoxicity), TABLE 19 p. 1494 (ototoxicity), TABLE 12 p. 1493 (peripheral neuropathy)

carboplatin · cisplatin · oxaliplatin

- ▶ **Cisplatin** increases the risk of pulmonary toxicity when given with **bleomycin**. [Severe] Study → Also see TABLE 15 p. 1493

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **platinum compounds**. UKHSA advises avoid (refer to Green Book).

[Severe] Theoretical

**Polatumumab vedotin** → see monoclonal antibodies

**Polymyxin b** → see TABLE 2 p. 1490 (nephrotoxicity), TABLE 20 p. 1494 (neuromuscular blocking effects)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application of **polymyxin B**, the possibility of interactions should be borne in mind.

**Polystyrene sulfonate**

**SEPARATION OF ADMINISTRATION** Manufacturers advise take other drugs at least 3 hours before or after calcium- or sodium-polystyrene sulfonate; a 6-hour separation should be considered in gastroparesis.

- ▶ Oral **antacids** increase the risk of metabolic alkalosis when given with oral **polystyrene sulfonate**. [Severe] Anecdotal
- ▶ **Pomalidomide** → see TABLE 15 p. 1493 (myelosuppression), TABLE 5 p. 1491 (thromboembolism)
- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. Avoid. [Severe] Theoretical
- ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. [Severe] Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 1035. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** moderately increase the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 1035. [Moderate] Study

**Ponatinib** → see TABLE 4 p. 1490 (antiplatelet effects)

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **ponatinib**. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ponatinib**. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1075. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ponatinib**. [Moderate] Study
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1075. [Moderate] Study
- ▶ **Ponatinib** might affect the effects of **combined hormonal contraceptives**. Avoid or use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **ponatinib**. [Moderate] Study

- ▶ **Dabrafenib** is predicted to decrease the exposure to ponatinib. [\[Severe\]](#) Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to ponatinib. [\[Severe\]](#) Study
- ▶ **Grapefruit** juice is predicted to increase the exposure to ponatinib. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to ponatinib. Monitor and adjust ponatinib dose, p. 1075. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to slightly increase the exposure to ponatinib. Monitor and adjust ponatinib dose, p. 1075. [\[Moderate\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to ponatinib. [\[Moderate\]](#) Study → Also see TABLE 4 p. 1490
- ▶ **Letermovir** is predicted to increase the exposure to ponatinib. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to ponatinib. Monitor and adjust ponatinib dose, p. 1075. [\[Moderate\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to ponatinib. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to ponatinib. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to ponatinib. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to ponatinib. [\[Moderate\]](#) Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to ponatinib. [\[Severe\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to ponatinib. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to ponatinib. Avoid. [\[Severe\]](#) Theoretical
- Ponesimod** → see TABLE 6 p. 1491 (bradycardia), TABLE 9 p. 1492 (QT-interval prolongation)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** might decrease the exposure to ponesimod. [\[Moderate\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** might decrease the exposure to ponesimod. [\[Moderate\]](#) Theoretical
- ▶ **Live vaccines** might increase the risk of generalised infection (possibly life-threatening) when given with ponesimod. Avoid and for 1 week after stopping ponesimod. [\[Severe\]](#) Theoretical
- ▶ **Mitotane** might decrease the exposure to ponesimod. [\[Moderate\]](#) Theoretical
- ▶ **Monoclonal antibodies (alemtuzumab)** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with ponesimod. [\[Severe\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** might decrease the exposure to ponesimod. [\[Moderate\]](#) Theoretical
- Posaconazole** → see antifungals, azoles
- Potassium aminobenzoate** → see TABLE 16 p. 1494 (increased serum potassium)
- ▶ **Potassium aminobenzoate** increases the concentration of **methotrexate**. [\[Moderate\]](#) Theoretical
- ▶ **Potassium aminobenzoate** is predicted to affect the efficacy of **sulfonamides**. Avoid. [\[Severe\]](#) Theoretical
- Potassium canrenoate** → see TABLE 16 p. 1494 (increased serum potassium)
- Potassium chloride** → see TABLE 16 p. 1494 (increased serum potassium)
- Potassium citrate**
  - ▶ **Potassium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Potassium citrate** increases the risk of adverse effects when given with **suclalfate**. Avoid. [\[Moderate\]](#) Theoretical
- Potassium-sparing diuretics** → see TABLE 18 p. 1494 (hyponatraemia), TABLE 16 p. 1494 (increased serum potassium)
  - amiloride - triamterene
- ▶ **Triamterene** potentially increases the clearance of **lithium**. [\[Moderate\]](#) Study
- Pramipexole** → see dopamine receptor agonists
- Prasugrel** → see TABLE 4 p. 1490 (antiplatelet effects)
- ▶ **Selumetinib** might increase the risk of bleeding when given with prasugrel. [\[Severe\]](#) Theoretical

**Pravastatin** → see statins

#### **Praziquantel**

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to praziquantel. Avoid. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to praziquantel. Avoid. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to praziquantel. [\[Mild\]](#) Study
- ▶ **Antimalarials (chloroquine)** moderately decrease the exposure to praziquantel. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to praziquantel. [\[Mild\]](#) Study
- ▶ **Corticosteroids (dexamethasone)** decrease the exposure to praziquantel. [\[Moderate\]](#) Study
- ▶ **Grapefruit** juice is predicted to increase the exposure to praziquantel. [\[Moderate\]](#) Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** moderately increase the exposure to praziquantel. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to praziquantel. [\[Mild\]](#) Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to praziquantel. [\[Mild\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to praziquantel. [\[Mild\]](#) Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to praziquantel. Avoid. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to markedly decrease the exposure to praziquantel. Avoid. [\[Moderate\]](#) Study
- Prazosin** → see alpha blockers
- Prednisolone** → see corticosteroids
- Pregabalin** → see antiepileptics
- Pridnolol** → see TABLE 10 p. 1492 (antimuscarinics)
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can pridnolol; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see TABLE 10 p. 1492
- Prilocaine** → see anaesthetics, local
- Primaquine** → see antimalarials
- Primidone** → see antiepileptics
- Procarbazine** → see TABLE 15 p. 1493 (myelosuppression)
 

**FOOD AND LIFESTYLE** Procarbazine is a mild monoamine-oxidase inhibitor and might rarely interact with tyramine-rich foods (such as mature cheese, salami, pickled herring, *Bovril*<sup>®</sup>, *Oxo*<sup>®</sup>, *Marmite*<sup>®</sup> or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).
- ▶ **Alcohol** potentially causes a disulfiram-like reaction when given with procarbazine. [\[Moderate\]](#) Anecdotal
- ▶ **Antiepileptics (carbamazepine, phenobarbital, phenytoin, primidone)** are predicted to increase the risk of hypersensitivity reactions when given with procarbazine. [\[Severe\]](#) Anecdotal
- ▶ **Antiepileptics (fosphenytoin)** are predicted to increase the risk of hypersensitivity when given with procarbazine. [\[Severe\]](#) Anecdotal
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with procarbazine. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- Prochlorperazine** → see phenothiazines
- Procyclidine** → see TABLE 10 p. 1492 (antimuscarinics)
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can procyclidine; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see TABLE 10 p. 1492
- ▶ **SSRIs (paroxetine)** slightly increase the exposure to procyclidine. Monitor and adjust dose. [\[Moderate\]](#) Study
- Progestogen-only contraceptives**
  - ▶ **Lumacaftor** might decrease the efficacy of oral progestogen-only contraceptives. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical

**Proguanil** → see antimalarials

**Promazine** → see phenothiazines

**Promethazine** → see antihistamines, sedating

**Propafenone** → see antiarrhythmics

**Propantheline** → see TABLE 10 p. 1492 (antimuscarinics)

▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **propantheline**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492

**Propiverine** → see TABLE 10 p. 1492 (antimuscarinics)

▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** given with carbimazole are predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical

▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **propiverine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492

▶ **Carbimazole** given with a potent CYP3A4 inhibitor is predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical

▶ **Cobicistat** given with carbimazole is predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical

▶ **HIV-protease inhibitors** given with carbimazole are predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical

▶ **Idelalisib** given with carbimazole is predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical

▶ **Propiverine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical

▶ **Macrolides (clarithromycin)** given with carbimazole are predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical

**Propofol** → see TABLE 6 p. 1491 (bradycardia), TABLE 8 p. 1491 (hypotension), TABLE 11 p. 1492 (CNS depressant effects)

▶ **Antiepileptics (valproate)** potentially increase the concentration of **propofol**. Adjust dose. [Severe] Theoretical

▶ **Propofol** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical

**Propranolol** → see beta blockers, non-selective

**Propylthiouracil**

▶ **Propylthiouracil** is predicted to decrease the effects of **metyrapone**. Avoid. [Moderate] Theoretical

**Proton pump inhibitors**  
esomeprazole · lansoprazole · omeprazole · pantoprazole · rabeprazole

▶ **Proton pump inhibitors** are predicted to decrease the exposure to **acalabrutinib**. Avoid. [Moderate] Study

▶ **Pantoprazole** is predicted to increase the exposure to **alpelisib**. [Moderate] Theoretical

▶ **Anti-androgens (apalutamide)** markedly decrease the exposure to **omeprazole**. Avoid or monitor. [Moderate] Study

▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to proton pump inhibitors (**lansoprazole, rabeprazole**). Avoid or monitor. [Mild] Study

▶ **Antifungals, azoles (voriconazole)** increase the exposure to proton pump inhibitors (**esomeprazole, omeprazole**). Adjust dose. [Moderate] Study

▶ **Proton pump inhibitors** decrease the absorption of **antifungals, azoles (itraconazole)**. Administer itraconazole capsules with an acidic beverage. [Moderate] Study

▶ **Proton pump inhibitors** decrease the absorption of **antifungals, azoles (ketoconazole)**. Administer ketoconazole with an acidic beverage. [Moderate] Study

▶ **Proton pump inhibitors** decrease the absorption of **antifungals, azoles (posaconazole)** oral suspension. Avoid. [Moderate] Study

▶ Proton pump inhibitors (**esomeprazole, omeprazole**) potentially increase the exposure to **benzodiazepines (clobazam)**. Adjust dose. [Moderate] Theoretical

▶ **Proton pump inhibitors** are predicted to decrease the absorption of **bosutinib**. [Moderate] Study

▶ **Esomeprazole** is predicted to increase the exposure to **cannabidiol**. [Moderate] Theoretical

▶ **Cenobamate** moderately increases the exposure to **omeprazole**. Adjust dose. [Moderate] Study

▶ **Proton pump inhibitors** are predicted to decrease the absorption of **ceritinib**. [Moderate] Theoretical

▶ **Esomeprazole** is predicted to increase the exposure to **cilostazol**. [Moderate] Theoretical

▶ **Omeprazole** is predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 252. [Moderate] Study

▶ Proton pump inhibitors (**esomeprazole, omeprazole**) are predicted to decrease the efficacy of **clopidogrel**. Avoid. [Moderate] Study

▶ **Proton pump inhibitors** are predicted to decrease the exposure to **daclotitinib**. Avoid. [Moderate] Study

▶ **Proton pump inhibitors** are predicted to decrease the exposure to **dasatinib**. Avoid. [Severe] Study

▶ **Proton pump inhibitors** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [Moderate] Theoretical

▶ **Proton pump inhibitors** are predicted to decrease the exposure to **erlotinib**. Avoid. [Moderate] Study

▶ **Fedratinib** moderately increases the exposure to **omeprazole**. Monitor and adjust dose. [Moderate] Study

▶ **Proton pump inhibitors** are predicted to decrease the exposure to **gefitinib**. [Severe] Theoretical

▶ **HIV-protease inhibitors (tipranavir)** decrease the exposure to **proton pump inhibitors**. Avoid. [Severe] Study

▶ **Proton pump inhibitors** decrease the exposure to **HIV-protease inhibitors (atazanavir)**. Avoid or adjust dose. [Severe] Study

▶ **Proton pump inhibitors** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 683. [Moderate] Theoretical

▶ **Proton pump inhibitors** decrease the clearance of **methotrexate** (high-dose). Use with caution or avoid. [Severe] Study

▶ **Proton pump inhibitors** are predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study

▶ **Proton pump inhibitors** are predicted to decrease the exposure to oral **NNRTIs (rilpivirine)**. Avoid. [Severe] Study

▶ **Proton pump inhibitors** are predicted to decrease the exposure to **pazopanib**. Avoid or administer concurrently without food. [Moderate] Study

▶ **Proton pump inhibitors** have been reported to decrease the exposure to **pemigatinib**. Avoid. [Severe] Anecdotal

▶ **Proton pump inhibitors** are predicted to decrease the exposure to **selpercatinib**. Manufacturer advises take **selpercatinib** with food, p. 1079. [Moderate] Study

▶ Proton pump inhibitors (**esomeprazole, omeprazole**) are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Theoretical

▶ **Proton pump inhibitors** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see ledipasvir with sofosbuvir p. 683, sofosbuvir with velpatasvir p. 685, and sofosbuvir with voxilaprevir p. 685. [Moderate] Study

▶ **Proton pump inhibitors** are predicted to decrease the exposure to **sotorasib**. Avoid. [Moderate] Study

▶ **Esomeprazole** is predicted to slightly to moderately increase the exposure to **SSRIs (citalopram)**. Monitor and adjust dose. [Severe] Theoretical

▶ **Omeprazole** slightly to moderately increases the exposure to **SSRIs (citalopram)**. Monitor and adjust dose. [Severe] Study

▶ Proton pump inhibitors (**esomeprazole, omeprazole**) are predicted to increase the exposure to **SSRIs (escitalopram)**. Use with caution and adjust dose. [Severe] Study

▶ **Proton pump inhibitors** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir p. 685. [Moderate] Study

▶ **Proton pump inhibitors** are predicted to decrease the exposure to **voxlaprevir**. Adjust dose, see sofosbuvir with velpatasvir and voxlaprevir p. 685. [Moderate] Study

▶ **Proton pump inhibitors** are predicted to decrease the exposure to **voxlaprevir**. Adjust dose, see sofosbuvir with velpatasvir and voxlaprevir p. 685. [Moderate] Study

▶ **Proxymetacaine** → see anaesthetics, local

**Pseudoephedrine** → see sympathomimetics, vasoconstrictor

**Pyrazinamide**

▶ **Allopurinol** is predicted to increase the risk of hyperuricaemia when given with **pyrazinamide**. [Moderate] Theoretical

**Pyridostigmine** → see TABLE 6 p. 1491 (bradycardia)

- ▶ **Aminoglycosides** are predicted to decrease the effects of pyridostigmine. [Moderate] Theoretical
- Pyrimethamine** → see antimalarials
- Quetiapine** → see antipsychotics, second generation
- Quinagolide** → see dopamine receptor agonists
- Quinapril** → see ACE inhibitors
- Quinine** → see antimalarials
- Quinolones** → see TABLE 9 p. 1492 (QT-interval prolongation)

ciprofloxacin · delafloxacin · levofloxacin · moxifloxacin · ofloxacin

- ▶ Avoid concurrent administration of dairy products and mineral-fortified drinks with oral **ciprofloxacin** due to reduced exposure.
  - ▶ Since systemic absorption can follow topical application of **ciprofloxacin**, **levofloxacin**, and **ofloxacin** the possibility of interactions should be borne in mind.
  - ▶ Interactions do not generally apply to topical use of **moxifloxacin** unless specified.
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **agomelatine**. [Moderate] Study
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical
  - ▶ Oral **antacids** decrease the absorption of oral **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after antacids. [Moderate] Study
  - ▶ **Ciprofloxacin** slightly increases the exposure to **antiarrhythmics (lidocaine)**. [Mid] Study
  - ▶ **Ciprofloxacin** affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Study
  - ▶ **Ciprofloxacin** increases the concentration of **antipsychotics, second generation (clozapine)**. Monitor adverse effects and adjust dose. [Severe] Study
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **antipsychotics, second generation (olanzapine)**. Adjust dose. [Moderate] Anecdotal
  - ▶ **Calcium salts (calcium carbonate)** decrease the absorption of **ciprofloxacin**. Separate administration by 2 hours. [Moderate] Study
  - ▶ **Quinolones** increase the anticoagulant effect of **coumarins**. [Severe] Anecdotal
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [Moderate] Study
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
  - ▶ **Enteral feeds** decrease the exposure to **ciprofloxacin**. [Moderate] Study
  - ▶ **Ciprofloxacin** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [Moderate] Study
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **ibrutinib**. Adjust ibrutinib dose, p. 1062. [Severe] Theoretical
  - ▶ Oral **iron** decreases the exposure to oral **quinolones**. Separate administration by at least 2 hours. [Moderate] Study
  - ▶ **Lanthanum** moderately decreases the exposure to **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after lanthanum. [Moderate] Study
  - ▶ **Leflunomide** is predicted to increase the exposure to **ciprofloxacin**. [Moderate] Theoretical
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
  - ▶ **Ciprofloxacin** slightly increases the exposure to **MAO-B inhibitors (rasagiline)**. [Moderate] Study
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **melatonin**. [Moderate] Theoretical
  - ▶ **Ciprofloxacin** potentially increases the risk of toxicity when given with **methotrexate**. [Severe] Anecdotal
  - ▶ **NSAIDs** potentially increase the risk of seizures when given with **quinolones**. [Severe] Theoretical
  - ▶ **Ciprofloxacin** very slightly increases the exposure to **pentoxifylline**. [Moderate] Study
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **phenothiazines (chlorpromazine)**. [Moderate] Theoretical
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. [Moderate] Theoretical
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 1035. [Moderate] Theoretical
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **SNRIs (duloxetine)**. Avoid. [Moderate] Theoretical
  - ▶ **Strontium** is predicted to decrease the absorption of **quinolones**. Avoid. [Moderate] Theoretical
  - ▶ **Sucralfate** decreases the exposure to **quinolones**. Separate administration by 2 hours. [Moderate] Study
  - ▶ **Terflunomide** is predicted to increase the exposure to **ciprofloxacin**. [Moderate] Theoretical
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Ciprofloxacin** increases the exposure to **tizanidine**. Avoid. [Moderate] Study
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **tolvaptan**. Use with caution and adjust **tolvaptan** dose, p. 724. [Moderate] Theoretical
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **triptans (zolmitriptan)**. Adjust **zolmitriptan** dose, p. 515. [Moderate] Theoretical
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
  - ▶ **Zinc** is predicted to decrease the exposure to **quinolones**. Separate administration by 2 hours. [Moderate] Study
- Rabeprazole** → see proton pump inhibitors
- Rabies immunoglobulin** → see immunoglobulins
- Rabies vaccine**
- ▶ **Antimalarials (chloroquine)** decrease the efficacy of **rabies vaccine** (intradermal). Avoid. [Moderate] Study
  - ▶ **Hydroxychloroquine** is predicted to decrease efficacy **rabies vaccine**. [Moderate] Theoretical
- Raloxifene** → see TABLE 5 p. 1491 (thromboembolism)
- ▶ **Combined hormonal contraceptives** potentially oppose the effects of **raloxifene**. Avoid. [Severe] Theoretical
  - ▶ **Hormone replacement therapy** potentially opposes the effects of **raloxifene**. Avoid. [Severe] Theoretical
- Raltegravir**
- ▶ Oral **antacids** decrease the exposure to oral **raltegravir**. Avoid. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine)** are predicted to affect the exposure to **raltegravir**. [Moderate] Theoretical
  - ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to affect the exposure to **raltegravir**. Use with caution or avoid. [Moderate] Theoretical
  - ▶ **Calcium salts (calcium carbonate)** greatly decrease the exposure to **raltegravir** (high-dose). Avoid. [Severe] Study
  - ▶ **Encorafenib** is predicted to increase the exposure to **raltegravir**. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors (atazanavir)** increase the exposure to **raltegravir** (high-dose). Avoid. [Moderate] Study
  - ▶ **HIV-protease inhibitors (darunavir)** increase the risk of rash when given with **raltegravir**. [Moderate] Study
  - ▶ **HIV-protease inhibitors (fosamprenavir)** boosted with ritonavir decrease the exposure to **raltegravir** and **raltegravir** decreases the exposure to **HIV-protease inhibitors (fosamprenavir)** boosted with ritonavir. Avoid. [Severe] Study
  - ▶ **HIV-protease inhibitors (tipranavir)** boosted with ritonavir are predicted to decrease the exposure to **raltegravir** (high-dose). Avoid. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** slightly decrease the exposure to **raltegravir**. Avoid or adjust dose—consult product literature. [Moderate] Study

## Raltegravir (continued)

- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **raltegravir**. Separate administration by at least 2 hours. [Moderate] Theoretical

**Ralitrexed** → see TABLE 15 p. 1493 (myelosuppression)

- ▶ **Folates** are predicted to alter the effects of **ralitrexed**. Avoid. [Moderate] Study

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **ralitrexed**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical

**Ramipril** → see ACE inhibitors**Ramucicromab** → see monoclonal antibodies**Ranibizumab**

- ▶ **Ranibizumab** increases the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **danaparoid**. [Severe] Theoretical
- ▶ **Ranibizumab** increases the risk of bleeding events when given with **heparin**. [Severe] Theoretical
- ▶ **Ranibizumab** increases the risk of bleeding events when given with **low molecular-weight heparins**. [Severe] Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **thrombin inhibitors (argatroban)**. [Severe] Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **thrombin inhibitors (bivalirudin)**. [Moderate] Theoretical

**Ranitidine** → see H<sub>2</sub> receptor antagonists**Ranolazine** → see TABLE 9 p. 1492 (QT-interval prolongation)

- ▶ **Ranolazine** is predicted to increase the exposure to **afatinib**. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Ranolazine** is predicted to increase the exposure to **berotralstat**. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the concentration of **ranolazine** and **ranolazine** is predicted to increase the concentration of **ciclosporin**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose, p. 1212. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Ranolazine** increases the concentration of **digoxin**. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **ertotinib**. [Moderate] Theoretical

- ▶ **Ranolazine** is predicted to increase the exposure to **factor XA inhibitors (apixaban)**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to slightly increase the exposure to **factor XA inhibitors (edoxaban)**. [Severe] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
- ▶ **Grapefruit** juice is predicted to increase the concentration of **ranolazine**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Mild] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Mitotane** is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Ranolazine** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ranolazine**. Avoid. [Severe] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Ranolazine** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **statins (atorvastatin)**. [Moderate] Theoretical
- ▶ **Ranolazine** slightly increases the exposure to **statins (simvastatin)**. Adjust simvastatin dose, p. 222. [Moderate] Study
- ▶ **Ranolazine** increases the concentration of **tacrolimus**. Adjust dose. [Severe] Anecdotal
- ▶ **Ranolazine** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **taxanes (docetaxel, paclitaxel)** (oral). [Unknown] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. [Severe] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Ranolazine** might increase the exposure to **tigecycline**. [Mild] Anecdotal
- ▶ **Ranolazine** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Vemurafenib** might increase the exposure to **ranolazine**. Use with caution or avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1492

- ▶ **Ranolazine** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
  - ▶ **Ranolazine** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1492
  - Rasagiline** → see MAO-B inhibitors
  - Reboxetine**
    - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
    - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
    - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
    - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **reboxetine**. Use with caution and adjust dose. [Moderate] Theoretical
    - ▶ **Cobicistat** is predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
    - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
    - ▶ **Idelalisib** is predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
    - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **linezolid**. Avoid. [Severe] Theoretical
    - ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **loop diuretics**. [Moderate] Theoretical
    - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
    - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors (rasagiline, selegiline)**. Avoid. [Severe] Theoretical
    - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid. [Severe] Theoretical
    - ▶ **Mitotane** is predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
    - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Theoretical
    - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
    - ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **thiazide diuretics**. [Moderate] Anecdotal
  - Regorafenib** → see TABLE 15 p. 1493 (myelosuppression), TABLE 4 p. 1490 (antiplatelet effects)
    - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
    - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **regorafenib**. [Moderate] Study
    - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
    - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **regorafenib**. [Moderate] Study
    - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
    - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **regorafenib**. [Moderate] Study
    - ▶ **Cobicistat** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
    - ▶ **Crizotinib** is predicted to increase the exposure to **regorafenib**. [Moderate] Study
    - ▶ **Dabrafenib** is predicted to decrease the exposure to **regorafenib**. [Severe] Study
    - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **regorafenib**. [Severe] Study
    - ▶ **Grapefruit** juice is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Theoretical
    - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
    - ▶ **Idelalisib** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **regorafenib**. [Moderate] Study → Also see TABLE 15 p. 1493 → Also see TABLE 4 p. 1490
  - ▶ **Letermovir** is predicted to increase the exposure to **regorafenib**. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **regorafenib**. [Moderate] Study
  - ▶ **Regorafenib** is predicted to increase the exposure to **methotrexate**. [Moderate] Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Mitotane** is predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1493
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **regorafenib**. [Moderate] Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **regorafenib**. [Moderate] Study → Also see TABLE 15 p. 1493
  - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **regorafenib**. [Severe] Study
  - ▶ **NSAIDs (mefenamic acid)** are predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Theoretical → Also see TABLE 4 p. 1490
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
  - ▶ **Regorafenib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **regorafenib**. Avoid. [Severe] Study
  - ▶ **Regorafenib** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin)**. [Moderate] Study
  - ▶ **Regorafenib** is predicted to increase the exposure to **statins (rosuvastatin)**. Adjust rosuvastatin dose, p. 221. [Moderate] Study
  - ▶ **Regorafenib** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 15 p. 1493
  - ▶ **Regorafenib** is predicted to increase the exposure to **topotecan**. [Moderate] Study → Also see TABLE 15 p. 1493
- Relugolix**
- ▶ **Aminoglycosides (gentamicin)** are predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Theoretical
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **relugolix**. Avoid. [Moderate] Study
  - ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
  - ▶ **Antiarrhythmics (propafenone)** are predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **relugolix**. Avoid. [Moderate] Study
  - ▶ **Antiepileptics (oxcarbazepine, topiramate)** are predicted to decrease the exposure to **relugolix**. Avoid. [Moderate] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
  - ▶ **Beta blockers, non-selective (carvedilol)** are predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Theoretical
  - ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
  - ▶ **Ciclosporin** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
  - ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
  - ▶ **Vacafator** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study

## Relugolix (continued)

- ▶ **Lapatinib** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **Macrolides** are predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **relugolix**. Avoid. [Moderate] Study
- ▶ **Neratinib** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **NNRTIs (efavirenz)** are predicted to decrease the exposure to **relugolix**. Avoid. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **relugolix**. Avoid. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **relugolix**. Avoid. [Moderate] Study
- ▶ **Tetracyclines (tetracycline)** are predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Vandetanib** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study

## Remdesivir

- ▶ **Anti-androgens (apalutamide, enzalutamide)** might decrease the exposure to **remdesivir**. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** might decrease the exposure to **remdesivir**. Avoid. [Moderate] Theoretical
- ▶ **Antimalarials (chloroquine)** might decrease the effects of **remdesivir**. Avoid. [Moderate] Theoretical
- ▶ **Hydroxychloroquine** might decrease the effects of **remdesivir**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** might decrease the exposure to **remdesivir**. Avoid. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** might decrease the exposure to **remdesivir**. Avoid. [Moderate] Theoretical

Remifentanil → see opioids

Remimazolam → see benzodiazepines

Repaglinide → see meglitinides

Retigabine → see antiepileptics

Retinoids → see TABLE 15 p. 1493 (myelosuppression), TABLE 5 p. 1491 (thromboembolism)

acitretin · adapalene · alitretinoin · bexarotene · isotretinoin · tazarotene · tretinoin

- ▶ Avoid concomitant use of keratolytics in patients taking **acitretin** and **isotretinoin**.
- ▶ Since systemic absorption can follow topical application of **isotretinoin** and **tretinoin**, the possibility of interactions should be borne in mind.
- ▶ **Alcohol** potentially increases the concentration of **acitretin**. Avoid and for 2 months after stopping **acitretin**. [Moderate] Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1356. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, itraconazole, ketoconazole, miconazole, voriconazole)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1356. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, ketoconazole, voriconazole)** are predicted to increase the risk of tretinoin toxicity when given with **tretinoin**. [Moderate] Study

- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the risk of tretinoin toxicity when given with **tretinoin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Clopidogrel** is predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1356. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1356. [Moderate] Theoretical
- ▶ **Fibrates (gemfibrozil)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1356. [Moderate] Theoretical
- ▶ **Fibrates (gemfibrozil)** increase the concentration of **bexarotene**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1356. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1356. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1356. [Moderate] Theoretical
- ▶ **Acitretin** is predicted to increase the concentration of **methotrexate**. Avoid. [Moderate] Anecdotal
- ▶ Retinoids (**acitretin, alitretinoin, isotretinoin, tretinoin**) increase the risk of benign intracranial hypertension when given with **tetracyclines**. Avoid. [Severe] Anecdotal
- ▶ Retinoids (**acitretin, alitretinoin, isotretinoin, tretinoin**) increase the risk of benign intracranial hypertension when given with **tigecycline**. Avoid. [Severe] Anecdotal
- ▶ **Bexarotene** is predicted to increase the risk of toxicity when given with **vitamin A**. Adjust dose. [Moderate] Theoretical
- ▶ Retinoids (**acitretin, alitretinoin, isotretinoin**) are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Theoretical
- ▶ **Tretinoin** is predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Study

## Ribavirin

▶ **Ribavirin** increases the risk of anaemia and/or leucopenia when given with **NRTIs (zidovudine)**. Avoid. [Severe] Study**Ribociclib** → see TABLE 15 p. 1493 (myelosuppression), TABLE 9 p. 1492 (QT-interval prolongation)

FOOD AND LIFESTYLE Avoid concomitant use of pomegranate or pomegranate juice as it is predicted to increase ribociclib exposure.

- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **alpha blockers (alfuzosin)**. Avoid. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **antiarrhythmics (amiodarone)**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1077. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **antipsychotics, second generation (quetiapine)**. Avoid. [Moderate] Theoretical
- ▶ **Ribociclib** moderately increases the exposure to **benzodiazepines (midazolam)**. Avoid. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Ribociclib** is predicted to increase the exposure to **ciclosporin**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1077. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1492

- ▶ **Ribociclib** is predicted to increase the exposure to **digoxin**.  
[Moderate] Theoretical
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **ribociclib**. [Moderate] Study
  - ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **ergotamine**. Avoid. [Moderate] Theoretical
  - ▶ **Ribociclib** is predicted to increase the exposure to **everolimus**. Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ **Grapefruit** juice is predicted to increase the exposure to **ribociclib**. Avoid. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1077. [Moderate] Study
  - ▶ **Idealisib** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1077. [Moderate] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 15 p. 1493
  - ▶ **Letermovir** is predicted to increase the exposure to **ribociclib**. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1077. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ **Ribociclib** is predicted to increase the exposure to **metformin**. [Moderate] Theoretical
  - ▶ **Mitotane** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1493
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, nupitriptan)** are predicted to increase the exposure to **ribociclib**. [Moderate] Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 15 p. 1493 → Also see TABLE 9 p. 1492
  - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ **Ribociclib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ **Ribociclib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **pimozide**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Rifamycins (rifampicin)** are predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
  - ▶ **Ribociclib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **ribociclib**. Avoid. [Severe] Study
  - ▶ **Ribociclib** is predicted to increase the exposure to **statins (pravastatin, rosuvastatin)**. [Moderate] Theoretical
  - ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Moderate] Theoretical
  - ▶ **Ribociclib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. [Moderate] Theoretical
- Rifabutin** → see rifamycins  
**Rifampicin** → see rifamycins  
**Rifamycins**
- |                        |
|------------------------|
| rifabutin · rifampicin |
|------------------------|
- GENERAL INFORMATION** Although some manufacturers class rifabutin as a potent inducer of CYP3A4, clinical data suggests it is potentially a weak inducer, and therefore the BNF does not extrapolate the interactions of potent CYP3A4 inducers to rifabutin. For those who wish to err on the side of caution, see the interactions of rifampicin but bear in mind other mechanisms might be involved.
- ▶ **Rifampicin** is predicted to decrease the exposure to **5-HT<sub>3</sub>-receptor antagonists (ondansetron)**. [Moderate] Study
  - ▶ **Rifampicin** is predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **abrocitinib**. Avoid. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **acalabrutinib**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **afatinib**. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Theoretical
  - ▶ **Rifampicin** decreases the exposure to **aliskiren**. [Moderate] Study
  - ▶ **Rifampicin** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
  - ▶ **Oral antacids** decrease the absorption of oral **rifampicin**. **Rifampicin** should be taken 1 hour before antacids. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **anti-androgens (abiraterone)**. Avoid. [Severe] Study
  - ▶ **Rifamycins** are predicted to decrease the efficacy of **anti-androgens (cyproterone)** with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **anti-androgens (darolutamide)**. Avoid. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the efficacy of **antiarrhythmics (propafenone)**. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **anticholinesterases, centrally acting (donepezil)**. [Mild] Study
  - ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **rifampicin** and **rifampicin** is predicted to decrease the exposure to **antiepileptics (phenobarbital, primidone)**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Rifampicin** slightly decreases the exposure to **antiepileptics (brivaracetam)**. Adjust dose. [Moderate] Study
  - ▶ **Rifampicin** decreases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Rifampicin** markedly increases the clearance of **antiepileptics (lamotrigine)**. Adjust lamotrigine dose, p. 346. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **antiepileptics (perampanel)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Antifungals, azoles (fluconazole)** increase the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Study
  - ▶ **Antifungals, azoles (itraconazole, posaconazole)** increase the concentration of **rifabutin** and **rifabutin** decreases the concentration of **antifungals, azoles (itraconazole, posaconazole)**. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (ketoconazole)** are predicted to increase the concentration of **rifabutin** and **rifabutin** is predicted to decrease the concentration of **antifungals, azoles (ketoconazole)**. Avoid. [Severe] Theoretical
  - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **rifabutin**. Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ **Rifampicin** slightly decreases the exposure to **antifungals, azoles (fluconazole)**. Adjust dose. [Moderate] Study
  - ▶ **Rifabutin** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Study
  - ▶ **Rifampicin** markedly decreases the exposure to **antifungals, azoles (itraconazole)**. Avoid and for 14 days after stopping **rifampicin**. [Moderate] Study
  - ▶ **Rifampicin** markedly decreases the exposure to **antifungals, azoles (ketoconazole)** and **antifungals, azoles (ketoconazole)** potentially decrease the exposure to **rifampicin**. Avoid. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **antifungals, azoles (posaconazole)**. Avoid. [Moderate] Anecdotal
  - ▶ **Rifabutin** decreases the concentration of **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** increase

## Rifamycins (continued)

- the concentration of **rifabutin**. Avoid or adjust **voriconazole** dose, p. 654. [\[Severe\]](#) Study
- ▶ **Rifampicin** very markedly decreases the exposure to **antifungals, azoles (voriconazole)**. Avoid. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antihistamines, non-sedating (bilastine)**. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** increases the clearance of **antihistamines, non-sedating (fexofenadine)**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antimalarials (artemether)** with lumefantrine. Avoid. [\[Severe\]](#) Study
- ▶ **Rifabutin** slightly decreases the exposure to **antimalarials (atovaquone)**. Avoid. [\[Moderate\]](#) Study
- ▶ **Rifampicin** moderately decreases the exposure to **antimalarials (atovaquone)** and **antimalarials (atovaquone)** slightly increase the exposure to **rifampicin**. Avoid. [\[Moderate\]](#) Study
- ▶ **Rifampicin** moderately decreases the exposure to **antimalarials (mefloquine)**. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the concentration of **antimalarials (piperazine)**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** decreases the exposure to **antimalarials (quinine)**. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **antipsychotics, second generation (aripiprazole)**. Adjust aripiprazole dose, p. 427. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Rifampicin** decreases the exposure to **antipsychotics, second generation (clozapine)**. [\[Severe\]](#) Anecdotal
- ▶ **Rifampicin** is predicted to decrease the exposure to **antipsychotics, second generation (lurasidone)**. Avoid. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antipsychotics, second generation (olanzapine)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antipsychotics, second generation (paliperidone)**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antipsychotics, second generation (quetiapine)**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antipsychotics, second generation (risperidone)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifampicin** decreases the exposure to **ataluren**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **avapritinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **avatrombopag**. Adjust **avatrombopag** dose with moderate CYP2C9 inducers in chronic immune thrombocytopenia, p. 1120. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **bazedoxifene**. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** decreases the exposure to **bedaquiline**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **benzodiazepines (alprazolam)**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **benzodiazepines (chlordiazepoxide)**. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** moderately decreases the exposure to **benzodiazepines (diazepam)**. Avoid. [\[Moderate\]](#) Study
- ▶ **Rifampicin** increases the clearance of **benzodiazepines (lorazepam, nitrazepam)**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **benzodiazepines (midazolam)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the concentration of **berotralstat**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Rifampicin** moderately decreases the exposure to **beta blockers, non-selective (carvedilol)**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** decreases the exposure to **beta blockers, non-selective (propranolol)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifampicin** slightly decreases the exposure to **beta blockers, selective (bisoprolol, metoprolol)**. [\[Mild\]](#) Study
- ▶ **Rifampicin** moderately decreases the exposure to **beta blockers, selective (celiprolol)**. [\[Moderate\]](#) Study
- ▶ **Rifabutin** slightly decreases the exposure to **bictegravir**. Avoid. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **bictegravir**. Avoid. [\[Moderate\]](#) Study
- ▶ **Rifampicin** slightly decreases the exposure to **bortezomib**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **brigatinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **bupropion**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. [\[Severe\]](#) Study
- ▶ **Rifabutin** has been reported to cause a small decrease in the exposure to **cabotegravir**. Avoid intramuscular **cabotegravir**, p. 696. [\[Moderate\]](#) Study
- ▶ **Rifampicin** modestly decreases the exposure to **cabotegravir**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** moderately decreases the exposure to **cabozantinib**. Avoid. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nimodipine)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifampicin** greatly decreases the exposure to **calcium channel blockers (diltiazem, verapamil)**. [\[Severe\]](#) Study
- ▶ **Rifampicin** moderately decreases the exposure to **calcium channel blockers (nifedipine)**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **cannabidiol**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifampicin** decreases the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 646. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ceritinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** decreases the concentration of **chloramphenicol**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** decreases the concentration of **ciclosporin**. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to alter the effects of **cilostazol**. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifampicin** decreases the exposure to **clomethiazole**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifampicin** moderately increases the exposure to the active metabolite of **clopidogrel**. Avoid. [\[Moderate\]](#) Study
- ▶ **Rifabutin** decreases the concentration of **cobicistat** and **cobicistat** increases the exposure to **rifabutin**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **cobicistat**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **cobimetinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Rifamycins** are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see *Contraceptives*, interactions p. 859. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **corticosteroids (budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **corticosteroids (fluticasone)**. [\[Unknown\]](#) Theoretical
- ▶ **Rifabutin** might decrease the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** decreases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Study

- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
- ▶ **Rifamycins** decrease the exposure to **dapson**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **Rifamycins** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **dienogest**. [Severe] Study
- ▶ **Rifampicin** decreases the concentration of **digoxin**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **dipeptidylpeptidase-4 inhibitors (linagliptin)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 696. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [Mild] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Rifabutin** is predicted to decrease the exposure to **elexacaftor**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **elxacaftor**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **eltrombopag** and **eltrombopag** is predicted to increase the concentration of **rifampicin**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
- ▶ **Rifampicin** transiently increases the exposure to **endothelin receptor antagonists (ambrisentan)**. [Moderate] Study
- ▶ **Rifampicin** affects the exposure to **endothelin receptor antagonists (bosentan)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **endothelin receptor antagonists (macitentan)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 1057. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **esketamine**. Adjust dose. [Moderate] Theoretical
- ▶ **Rifamycins** are predicted to decrease the efficacy of **estradiol**. [Moderate] Theoretical
- ▶ **Rifamycins** are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **factor XA inhibitors (apixaban)**. Use with caution or avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **factor XA inhibitors (edoxaban)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **factor XA inhibitors (rivaroxaban)**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **fedratinib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the concentration of **fenfluramine**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **fostamatinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to the active metabolite of **fostemsavir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **gilteritinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **glasdegib**. Avoid. [Severe] Study
- ▶ **Rifampicin** markedly affects the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 384. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, tipranavir)** boosted with ritonavir increase the exposure to **rifabutin**. Monitor and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** markedly increase the exposure to **rifabutin**. Avoid or adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately to markedly decrease the exposure to **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir)**. Avoid. [Severe] Study
- ▶ **Rifampicin** slightly decreases the exposure to **HIV-protease inhibitors (ritonavir)**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **HIV-protease inhibitors (tipranavir)**. Avoid. [Severe] Study
- ▶ **Rifamycins** are predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Rifampicin** is predicted to decrease the exposure to **ibrutinib**. Avoid or monitor. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **iron chelators (deferasirox)**. Monitor serum ferritin and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Rifabutin** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **rifampicin**. [Moderate] Theoretical
- ▶ **Rifabutin** is predicted to decrease the concentration of **letemovir**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to affect the concentration of **letemovir**. [Severe] Theoretical
- ▶ **Rifamycins** are predicted to decrease the efficacy of **levonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ▶ **Rifampicin** slightly decreases the exposure to **linezolid**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study

## Rifamycins (continued)

- ▶ **Lumacaftor** is predicted to decrease the exposure to **rifabutin**. Adjust dose. [Moderate] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of **rifabutin** and **rifabutin** is predicted to decrease the concentration of **macrolides (erythromycin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Rifabutin** has been reported to cause neutropenia when given with **macrolides (azithromycin)**. [Severe] Study
- ▶ **Rifabutin** decreases the concentration of **macrolides (clarithromycin)** and **macrolides (clarithromycin)** increase the concentration of **rifabutin**. Monitor and adjust dose. [Severe] Study
- ▶ **Rifampicin** greatly decreases the concentration of **macrolides (clarithromycin)**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **meglitinides (repaglinide)**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **modafinil**. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the effects of **monoclonal antibodies (brentuximab vedotin)**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **montelukast**. [Mild] Study
- ▶ **Rifampicin** decreases the concentration of **mycophenolate**. Monitor and adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **neurokinin-1 receptor antagonists (fosaprepitant)**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **neurokinin-1 receptor antagonists (netupitant)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **nintedanib**. [Moderate] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **rifabutin**. Adjust dose. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **nirmatrelvir** boosted with ritonavir. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **NNRTIs (efavirenz)** slightly decrease the exposure to **rifabutin**. Adjust dose. [Severe] Study
- ▶ **Rifabutin** moderately decreases the exposure to **NNRTIs (doravirine)**. Adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **NNRTIs (doravirine)**. Avoid. [Severe] Study
- ▶ **Rifampicin** slightly decreases the exposure to **NNRTIs (efavirenz)**. Adjust dose. [Severe] Study
- ▶ **Rifabutin** decreases the exposure to **NNRTIs (etravirine)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **NNRTIs (etravirine)**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** decreases the concentration of **NNRTIs (nevirapine)**. Avoid. [Severe] Study
- ▶ **Rifabutin** modestly decreases the exposure to **NNRTIs (rilpivirine)**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Rifampicin** markedly decreases the exposure to **NNRTIs (rilpivirine)**. Avoid. [Severe] Study
- ▶ **Rifamycins** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ▶ **Rifampicin** moderately decreases the exposure to **NSAIDs (celecoxib, diclofenac, etoricoxib)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **opioids (codeine, morphine)**. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **osilodrostat**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to the active metabolites of **ozanimod**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **paracetamol**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **pegmatinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **phosphodiesterase type-4 inhibitors (apremilast)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **pioglitazone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **pirfenidone**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** might decrease the exposure to **ponesimod**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **raltegravir**. Avoid or adjust dose—consult product literature. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study

- ▶ **Rifampicin** is predicted to decrease the exposure to **reboxetine**.  
[Moderate] Anecdotal
  - ▶ **Rifampicin** is predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **relugolix**.  
Avoid. [Moderate] Study
  - ▶ **Rifampicin** might decrease the exposure to **remdesivir**. Avoid.  
[Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
  - ▶ **Rifampicin** might decrease the exposure to **roxadustat**.  
Monitor haemoglobin and adjust roxadustat dose, p. 1103.  
[Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **roxolitinib**.  
Monitor and adjust dose. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
  - ▶ **Rifampicin** moderately decreases the exposure to the active metabolite of **selexipag**. Adjust dose. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **selpercatinib**. Avoid. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **siponimod**.  
[Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **SNRIs (duloxetine)**. [Moderate] Theoretical
  - ▶ **Rifampicin** moderately decreases the exposure to **sodium glucose co-transporter 2 inhibitors (canagliflozin)**. Adjust canagliflozin dose, p. 772. [Moderate] Study
  - ▶ **Rifampicin** might decrease the exposure to **sodium glucose co-transporter 2 inhibitors (empagliflozin)**. Avoid or monitor diabetic control. [Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **sofosbuvir**.  
Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **solifenacin**.  
[Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **sorafenib**.  
[Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **sotorasib**.  
Avoid. [Severe] Study
  - ▶ **Rifampicin** markedly decreases the exposure to **statins (atorvastatin)**. Manufacturer advises take both drugs at the same time. [Moderate] Study
  - ▶ **Rifampicin** moderately decreases the exposure to **statins (fluvastatin)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Rifampicin** very markedly decreases the exposure to **statins (simvastatin)**. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **sulfonyleureas**. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **sunitinib**.  
Avoid or adjust sunitinib dose, p. 1080. [Moderate] Study
  - ▶ **Rifampicin** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
  - ▶ **Rifampicin** markedly decreases the exposure to **tamoxifen**.  
[Unknown] Study
  - ▶ **Rifabutin** is predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **taxanes (paclitaxel)**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study
  - ▶ **Rifamycins** are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
  - ▶ **Rifampicin** might decrease the exposure to **tepotinib**. Avoid.  
[Severe] Theoretical
  - ▶ **Rifampicin** decreases the exposure to **terbinafine**. Adjust dose.  
[Moderate] Study
  - ▶ **Teriflunomide** is predicted to increase the exposure to **rifampicin**. [Moderate] Theoretical
  - ▶ **Rifampicin** modestly decreases the exposure to **tetracyclines (doxycycline)**. Adjust dose. [Moderate] Study
  - ▶ **Rifamycins** are predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
  - ▶ **Rifampicin** might decrease the exposure to **tigecycline**. [Mild] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **tivozanib**.  
[Severe] Study
  - ▶ **Rifampicin** moderately decreases the exposure to **tizanidine**.  
[Mild] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **tofacinib**.  
Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **tolvaptan**.  
Use with caution or avoid depending on indication. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **toremifene**.  
Adjust dose. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** slightly decreases the exposure to **treprostinil**.  
Adjust dose. [Mild] Study
  - ▶ **Rifampicin** decreases the exposure to **trimethoprim**. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **tucatinib**.  
Avoid. [Severe] Study
  - ▶ **Rifamycins** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
  - ▶ **Rifampicin** is predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
  - ▶ **Rifampicin** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **venetoclax**.  
Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **vinca alkaloids (vinorelbine)**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
  - ▶ **Rifampicin** potentially increases the risk of nephrotoxicity when given with **volatile halogenated anaesthetics (methoxyflurane)**. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Rifabutin** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
  - ▶ **Rifampicin** moderately decreases the exposure to **zolidem**.  
[Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **zopiclone**.  
Adjust dose. [Moderate] Study
- Rifaximin**
- ▶ **Ciclosporin** very markedly increases the exposure to rifaximin.  
[Severe] Study
  - ▶ **Rifaximin** has been reported to decrease the anticoagulant effect of **coumarins (warfarin)**. Monitor INR and adjust dose.  
[Severe] Anecdotal

**Rilpivirine** → see NNRTIs

**Riluzole**

**FOOD AND LIFESTYLE** Charcoal-grilled foods are predicted to decrease the exposure to riluzole.

- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to riluzole. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to riluzole. [Moderate] Theoretical
- ▶ **Osilodrostat** is predicted to increase the exposure to riluzole. [Moderate] Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to riluzole. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to riluzole. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to riluzole. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to riluzole. [Moderate] Theoretical

**Riociguat** → see TABLE 8 p. 1491 (hypotension)

**FOOD AND LIFESTYLE** Dose adjustment might be necessary if smoking is started or stopped during treatment.

- ▶ Oral **antacids** decrease the exposure to oral **riociguat**. **Riociguat** should be taken 1 hour before or 2 hours after antacids. [Mild] Study
- ▶ **Antifungals, azoles (itraconazole, posaconazole)** are predicted to increase the exposure to **riociguat**. Adjust **riociguat** dose and monitor blood pressure, p. 200. [Moderate] Theoretical
- ▶ **Antifungals, azoles (ketoconazole)** moderately increase the exposure to **riociguat**. Adjust **riociguat** dose and monitor blood pressure, p. 200. [Moderate] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **riociguat**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **riociguat**. Adjust dose and monitor blood pressure. [Moderate] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **riociguat**. Avoid. [Severe] Theoretical

**Risankizumab** → see monoclonal antibodies

**Risdiplam**

- ▶ **Risdiplam** is predicted to increase the concentration of **metformin**. Monitor and adjust dose. [Moderate] Theoretical

**Risedronate** → see bisphosphonates

**Risperidone** → see antipsychotics, second generation

**Ritonavir** → see HIV-protease inhibitors

**Rituximab** → see monoclonal antibodies

**Rivaroxaban** → see factor XA inhibitors

**Rivastigmine** → see anticholinesterases, centrally acting

**Rizatriptan** → see triptans

**Rocuronium** → see neuromuscular blocking drugs, non-depolarising

**Roflumilast** → see phosphodiesterase type-4 inhibitors

**Ropeginterferon alfa** → see interferons

**Ropinirole** → see dopamine receptor agonists

**Ropivacaine** → see anaesthetics, local

**Rosuvastatin** → see statins

**Rotavirus vaccine** → see live vaccines

**Rotigotine** → see dopamine receptor agonists

**Roxadustat**

- ▶ **Aluminium hydroxide** might decrease the exposure to roxadustat. **Roxadustat** should be taken at least 1 hour after aluminium hydroxide. [Moderate] Theoretical
- ▶ **Antacids** might decrease the exposure to roxadustat. **Roxadustat** should be taken at least 1 hour after antacids. [Moderate] Theoretical
- ▶ **Roxadustat** is predicted to increase the exposure to antihistamines, non-sedating (**fexofenadine**). Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Calcium salts (calcium acetate)** minimally decrease the exposure to roxadustat. **Roxadustat** should be taken at least 1 hour after calcium acetate. [Moderate] Study
- ▶ **Roxadustat** is predicted to increase the exposure to endothelin receptor antagonists (**bosentan**). Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Fibrates (gemfibrozil)** moderately increase the exposure to roxadustat. Monitor haemoglobin and adjust dose. [Moderate] Study

- ▶ **Iron** might decrease the exposure to roxadustat. **Roxadustat** should be taken at least 1 hour after iron. [Moderate] Theoretical
- ▶ **Magnesium** might decrease the exposure to roxadustat. **Roxadustat** should be taken at least 1 hour after magnesium. [Moderate] Theoretical
- ▶ **Roxadustat** is predicted to increase the exposure to meglitinides (**repaglinide**). Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** might decrease the exposure to roxadustat. Monitor haemoglobin and adjust roxadustat dose, p. 1103. [Moderate] Study
- ▶ **Sevelamer** modestly decreases the exposure to roxadustat. **Roxadustat** should be taken at least 1 hour after sevelamer. [Moderate] Study
- ▶ **Roxadustat** is predicted to increase the exposure to statins (**atorvastatin, pravastatin, rosuvastatin, simvastatin**). Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Roxadustat** might increase the exposure to statins (**fluvastatin**). Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ **Sucroferic oxyhydroxide** might decrease the exposure to roxadustat. **Roxadustat** should be taken at least 1 hour after sucroferic oxyhydroxide. [Moderate] Theoretical
- ▶ **Roxadustat** might increase the exposure to sulfasalazine. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ **Roxadustat** is predicted to increase the exposure to sulfonylureas (**glibenclamide**). Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Roxadustat** might increase the exposure to **topotecan**. Monitor adverse effects and adjust dose. [Moderate] Theoretical

**Rucaparib** → see TABLE 15 p. 1493 (myelosuppression)

- ▶ **Rucaparib** is predicted to increase the exposure to **afatinib**. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **agonelatine**. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to anaesthetics, local (**ropivacaine**). [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **antiepileptics (phenytoin)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** increases the concentration of **antipsychotics, second generation (clozapine)**. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **antipsychotics, second generation (olanzapine)**. Adjust dose. [Moderate] Anecdotal
- ▶ **Rucaparib** slightly increases the exposure to **benzodiazepines (midazolam)**. Monitor and adjust dose. [Severe] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **berotralstat**. [Severe] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** slightly increases the exposure to **coumarins (warfarin)**. Monitor and adjust dose. [Severe] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **ergotamine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
- ▶ **Rucaparib** slightly increases the exposure to **MAO-B inhibitors (rasagiline)**. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study

- ▶ **Rucaparib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Rucaparib** is predicted to increase the exposure to **phenothiazines (chlorpromazine)**. [Moderate] Theoretical
  - ▶ **Rucaparib** is predicted to increase the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. [Moderate] Theoretical
  - ▶ **Rucaparib** is predicted to increase the exposure to **pimozide**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Rucaparib** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Rucaparib** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
  - ▶ **Rucaparib** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
  - ▶ **Rucaparib** is predicted to increase the exposure to **sirolimus**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Rucaparib** is predicted to increase the exposure to **SNRIs (duloxetine)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Rucaparib** is predicted to increase the exposure to **tacrolimus**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Rucaparib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust talazoparib dose, p. 1091. [Severe] Study → Also see TABLE 15 p. 1493
  - ▶ **Rucaparib** is predicted to increase the exposure to **taxanes (docetaxel, paclitaxel)** (oral). [Unknown] Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Rucaparib** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Rucaparib** increases the exposure to **tizanidine**. Avoid. [Moderate] Study
  - ▶ **Rucaparib** is predicted to increase the exposure to **topotecan**. [Severe] Study → Also see TABLE 15 p. 1493
  - ▶ **Rucaparib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
  - ▶ **Rucaparib** is predicted to increase the exposure to **triptans (zolmitriptan)**. Adjust zolmitriptan dose, p. 515. [Moderate] Theoretical
  - ▶ **Rucaparib** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1493
- Rufinamide** → see antiepileptics
- Ruxolitinib** → see antihistamines, non-sedating
- Ruxolitinib** → see TABLE 15 p. 1493 (myelosuppression)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **ruxolitinib**. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to **ruxolitinib**. Avoid or adjust dose. [Moderate] Theoretical
  - ▶ **Antifungals, azoles (isavuconazole, posaconazole)** are predicted to increase the exposure to **ruxolitinib**. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. [Moderate] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ruxolitinib**. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. [Moderate] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Drugs with anticoagulant effects** (see TABLE 3 p. 1490) cause bleeding, as can **ruxolitinib**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
  - ▶ **Drugs with antiplatelet effects** (see TABLE 4 p. 1490) cause bleeding, as can **ruxolitinib**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **ruxolitinib**. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. [Moderate] Study
  - ▶ **Idealisib** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. [Moderate] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Study → Also see TABLE 15 p. 1493
  - ▶ **Letermovir** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. [Moderate] Study
  - ▶ **Macrolides (erythromycin)** slightly increase the exposure to **ruxolitinib**. [Mild] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 15 p. 1493
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **ruxolitinib**. [Moderate] Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Study → Also see TABLE 15 p. 1493
  - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
- Sacituzumab govitecan**
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenytoin)** are predicted to decrease the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
  - ▶ **Antifungals, azoles (ketoconazole)** are predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
  - ▶ **Encorafenib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
  - ▶ **Erlotinib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
  - ▶ **Gefitinib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, tipranavir)** (boosted with ritonavir) are predicted to decrease the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
  - ▶ **Lapatinib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
  - ▶ **Pazopanib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
  - ▶ **Propofol** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
  - ▶ **Regorafenib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
  - ▶ **Sorafenib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
- Sacubitril** → see TABLE 8 p. 1491 (hypotension)
- Safinamide** → see MAO-B inhibitors
- Salbutamol** → see beta<sub>2</sub> agonists
- Salmeterol** → see beta<sub>2</sub> agonists
- Sapropterin** → see TABLE 8 p. 1491 (hypotension)

## Sapropterin (continued)

- ▶ **Methotrexate** is predicted to decrease the efficacy of **sapropterin**. [Moderate] Theoretical
- ▶ **Phosphodiesterase type-5 inhibitors** are predicted to increase the risk of hypotension when given with **sapropterin**. [Moderate] Theoretical → Also see TABLE 8 p. 1491
- ▶ **Trimethoprim** is predicted to decrease the efficacy of **sapropterin**. [Moderate] Theoretical

**Sarilumab** → see monoclonal antibodies

**Saxagliptin** → see dipeptidyl/peptidase-4 inhibitors

**Secukinumab** → see monoclonal antibodies

**Selegiline** → see MAO-B inhibitors

## Selenium

**ROUTE-SPECIFIC INFORMATION** Interactions do not generally apply to topical use unless specified.

- ▶ Oral selenium might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Avoid. [Severe] Theoretical
- ▶ Oral selenium is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after selenium. [Severe] Theoretical

## Selexipag

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenytoin)** are predicted to decrease the exposure to the active metabolite of **selexipag**. Adjust dose. [Moderate] Study
- ▶ **Antiepileptics (valproate)** are predicted to increase the exposure to **selexipag**. [Unknown] Theoretical
- ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to **selexipag**. [Unknown] Theoretical
- ▶ **Clopidogrel** is predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose, p. 198. [Moderate] Study
- ▶ **Fibrates (gemfibrozil)** increase the exposure to **selexipag**. Avoid. [Severe] Study
- ▶ Iron chelators (**deferasirox**) are predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose, p. 198. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose, p. 198. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to the active metabolite of **selexipag**. Adjust dose. [Moderate] Study
- ▶ **Selpercatinib** is predicted to increase the exposure to **selexipag**. Avoid. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose, p. 198. [Moderate] Study

**Selpercatinib** → see TABLE 9 p. 1492 (QT-interval prolongation)

▶ **Antacids** are predicted to decrease the exposure to **selpercatinib**. [Moderate] Theoretical

▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **selpercatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1492

▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **selpercatinib**. [Moderate] Study → Also see TABLE 9 p. 1492

▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **selpercatinib**. Avoid. [Moderate] Study

▶ **Antifungals, azoles (fluconazole, isavuconazole)** are predicted to increase the exposure to **selpercatinib**. [Moderate] Study → Also see TABLE 9 p. 1492

▶ **Antifungals, azoles (itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **selpercatinib**. Adjust **selpercatinib** dose, p. 1079. [Moderate] Study → Also see TABLE 9 p. 1492

▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **selpercatinib**. [Moderate] Study

▶ **Cobicistat** is predicted to increase the exposure to **selpercatinib**. Adjust **selpercatinib** dose, p. 1079. [Moderate] Study

▶ **Crizotinib** is predicted to increase the exposure to **selpercatinib**. [Moderate] Study → Also see TABLE 9 p. 1492

▶ **Dabrafenib** is predicted to decrease the exposure to **selpercatinib**. [Moderate] Study

▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **selpercatinib**. [Moderate] Study

▶ **Selpercatinib** is predicted to increase the exposure to **ergotamine**. Avoid. [Moderate] Study

▶ **Selpercatinib** is predicted to increase the exposure to **everolimus**. Avoid. [Moderate] Study

▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **selpercatinib**. Manufacturer advises take 2 hours before or 10 hours after **H<sub>2</sub> receptor antagonists**. [Moderate] Study

▶ **HIV-protease inhibitors** are predicted to increase the exposure to **selpercatinib**. Adjust **selpercatinib** dose, p. 1079. [Moderate] Study

▶ **Idelalisib** is predicted to increase the exposure to **selpercatinib**. Adjust **selpercatinib** dose, p. 1079. [Moderate] Study

▶ **Imatinib** is predicted to increase the exposure to **selpercatinib**. [Moderate] Study

▶ **Letermovir** is predicted to increase the exposure to **selpercatinib**. [Moderate] Study

▶ **Selpercatinib** is predicted to increase the exposure to **loop diuretics (torsemide)**. Avoid. [Severe] Study

▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **selpercatinib**. Adjust **selpercatinib** dose, p. 1079. [Moderate] Study → Also see TABLE 9 p. 1492

▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **selpercatinib**. [Moderate] Study → Also see TABLE 9 p. 1492

▶ **Selpercatinib** increases the exposure to **meglitinides (repaglinide)**. Avoid. [Moderate] Study

▶ **Mitotane** is predicted to decrease the exposure to **selpercatinib**. Avoid. [Moderate] Study

▶ **Selpercatinib** is predicted to increase the exposure to **montelukast**. Avoid. [Moderate] Study

▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **selpercatinib**. [Moderate] Study

▶ **Nilotinib** is predicted to increase the exposure to **selpercatinib**. [Moderate] Study → Also see TABLE 9 p. 1492

▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **selpercatinib**. [Moderate] Study → Also see TABLE 9 p. 1492

▶ **Selpercatinib** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine)**. Avoid. [Moderate] Study

▶ **Pron pump inhibitors** are predicted to decrease the exposure to **selpercatinib**. Manufacturer advises take **selpercatinib** with food, p. 1079. [Moderate] Study

▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **selpercatinib**. Avoid. [Moderate] Study

▶ **Selpercatinib** is predicted to increase the exposure to **selexipag**. Avoid. [Moderate] Study

▶ **Selpercatinib** is predicted to increase the exposure to **sirolimus**. [Moderate] Study

▶ **Selpercatinib** is predicted to increase the exposure to **sorafenib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492

▶ **St John's wort** is predicted to decrease the exposure to **selpercatinib**. Avoid. [Moderate] Study

▶ **Selpercatinib** is predicted to increase the exposure to **taxanes (paclitaxel)**. Avoid. [Moderate] Study

▶ **Selpercatinib** is predicted to increase the exposure to **temsirolimus**. [Moderate] Study

## Selumetinib

▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study

▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study

▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study

▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study

▶ **Selumetinib** might increase the risk of bleeding when given with **aspirin**. [Severe] Theoretical

▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study

▶ **Selumetinib** might increase the risk of bleeding when given with **cangrelor**. [Severe] Theoretical

- ▶ **Selumetinib** might increase the risk of bleeding when given with **cilostazol**. [Severe] Theoretical
- ▶ **Selumetinib** might increase the risk of bleeding when given with **clopidogrel**. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Selumetinib** might increase the risk of bleeding when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
- ▶ **Selumetinib** might increase the risk of bleeding when given with **dipyridamole**. [Moderate] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
- ▶ **Grapefruit** juice is predicted to increase the exposure to **selumetinib**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Letermovir** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
- ▶ **Moclobemide** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
- ▶ **Selumetinib** might increase the risk of bleeding when given with **phenindione**. [Severe] Theoretical
- ▶ **Selumetinib** might increase the risk of bleeding when given with **prasugrel**. [Severe] Theoretical
- ▶ **Proton pump inhibitors (esomeprazole, omeprazole)** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
- ▶ **SSRIs (fluoxetine)** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **selumetinib**. Avoid or monitor—consult product literature. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
- ▶ **Selumetinib** might increase the risk of bleeding when given with **ticagrelor**. [Severe] Theoretical
- ▶ **Vitamin E substances** might increase the risk of bleeding when given with **selumetinib**. Avoid. [Severe] Theoretical

**Semaglutide** → see glucagon-like peptide-1 receptor agonists

**Sertraline** → see SSRIs

### Sevelamer

**SEPARATION OF ADMINISTRATION** Drugs for which a reduction in bioavailability could be clinically important should be administered at least 1 hour before, or 3 hours after, sevelamer; alternatively consider monitoring blood concentrations.

- ▶ **Sevelamer** modestly decreases the exposure to **roxadustat**. **Roxadustat** should be taken at least 1 hour after **sevelamer**. [Moderate] Study

**Sevoflurane** → see volatile halogenated anaesthetics

**Sildenafil** → see phosphodiesterase type-5 inhibitors

**Siltuximab** → see monoclonal antibodies

### Silver sulfadiazine

**PHARMACOLOGY** Silver might inactivate enzymatic debriding agents—concurrent use might not be appropriate.

**Simvastatin** → see statins

**Siponimod** → see TABLE 6 p. 1491 (bradycardia), TABLE 9 p. 1492 (QT-interval prolongation)

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **siponimod**. [Severe] Study
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study → Also see TABLE 6 p. 1491
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **siponimod**. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, micazazole, posaconazole)** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study → Also see TABLE 6 p. 1491
- ▶ **Cobicistat** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study → Also see TABLE 6 p. 1491
- ▶ **Dabrafenib** is predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study
- ▶ **Letermovir** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study
- ▶ **Live vaccines** might increase the risk of generalised infection (possibly life-threatening) when given with **siponimod**. Avoid and for 4 weeks after stopping **siponimod**. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study
- ▶ **Mifepristone** is predicted to increase the exposure to **siponimod**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **siponimod**. [Severe] Study
- ▶ **Monoclonal antibodies (alemtuzumab)** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **siponimod**. Avoid. [Severe] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study

## Siponimod (continued)

- ▶ **Nilotinib** is predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. [Severe] Study
  - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to siponimod. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to siponimod. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to siponimod. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
- Sirolimus**
- ▶ **Abrocitinib** might increase the exposure to sirolimus. [Moderate] Theoretical
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the concentration of sirolimus. Avoid. [Severe] Study
  - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the concentration of sirolimus. [Severe] Anecdotal
  - ▶ **Antiarrhythmics (dronedarone)** increase the concentration of sirolimus. Monitor and adjust dose. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of sirolimus. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** increase the concentration of sirolimus. Monitor and adjust dose. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of sirolimus. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of sirolimus. Monitor and adjust dose. [Moderate] Study
  - ▶ **Berotrastat** is predicted to increase the concentration of sirolimus. Monitor and adjust dose. [Moderate] Study
  - ▶ **Brigatinib** potentially decreases the concentration of sirolimus. Avoid. [Moderate] Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** increase the concentration of sirolimus. Monitor and adjust dose. [Moderate] Study
  - ▶ **Cenobamate** is predicted to decrease the exposure to sirolimus. Adjust dose. [Moderate] Theoretical
  - ▶ **Certinib** is predicted to increase the exposure to sirolimus. Avoid. [Severe] Theoretical
  - ▶ **Sirolimus** is predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Ciclosporin** moderately increases the exposure to sirolimus. Separate administration by 4 hours. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the concentration of sirolimus. Avoid. [Severe] Study
  - ▶ **Crizotinib** increases the concentration of sirolimus. Monitor and adjust dose. [Moderate] Study
  - ▶ **Eliglustat** is predicted to increase the exposure to sirolimus. Adjust dose. [Moderate] Study
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the concentration of sirolimus and sirolimus potentially increases the concentration of **endothelin receptor antagonists (bosentan)**. Avoid. [Severe] Theoretical
  - ▶ **Entrectinib** is predicted to increase the exposure to sirolimus. [Mild] Theoretical
  - ▶ **Fedratinib** is predicted to increase the exposure to sirolimus. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Grapefruit juice** increases the concentration of sirolimus. Avoid. [Moderate] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the concentration of sirolimus. Avoid. [Severe] Study
  - ▶ **Ibrutinib** is predicted to increase the exposure to sirolimus. Separate administration by at least 6 hours. [Moderate] Theoretical
  - ▶ **Idelalisib** is predicted to increase the concentration of sirolimus. Avoid. [Severe] Study
  - ▶ **Imatinib** increases the concentration of sirolimus. Monitor and adjust dose. [Moderate] Study

- ▶ **Ivacaftor** is predicted to increase the exposure to sirolimus. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to sirolimus. [Moderate] Theoretical
- ▶ **Larotrectinib** is predicted to increase the exposure to sirolimus. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **Letermovir** increases the concentration of sirolimus. Monitor and adjust dose. [Moderate] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with sirolimus. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Lorlatinib** is predicted to decrease the exposure to sirolimus. Avoid. [Moderate] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to sirolimus. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of sirolimus. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** increase the concentration of sirolimus. Monitor and adjust dose. [Moderate] Study
- ▶ **Sirolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Mifepristone** is predicted to increase the exposure to sirolimus. [Severe] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to sirolimus. [Mild] Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of sirolimus. Avoid. [Severe] Study
- ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to sirolimus. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Neratinib** is predicted to increase the exposure to sirolimus. [Moderate] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** increase the concentration of sirolimus. Monitor and adjust dose. [Moderate] Study
- ▶ **Nilotinib** increases the concentration of sirolimus. Monitor and adjust dose. [Moderate] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of sirolimus. [Severe] Theoretical
- ▶ **NNRTIs (doravirine)** are predicted to decrease the exposure to sirolimus. Monitor sirolimus concentration and adjust dose, p. 906. [Moderate] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the concentration of sirolimus. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Olaparib** might increase the exposure to sirolimus. [Moderate] Theoretical
- ▶ **Osimertinib** is predicted to increase the exposure to sirolimus. [Moderate] Study
- ▶ **Palbociclib** is predicted to increase the exposure to sirolimus. Adjust dose. [Moderate] Theoretical
- ▶ **Pemigatinib** might increase the exposure to sirolimus. Separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to sirolimus. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to sirolimus. Avoid. [Severe] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to sirolimus. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the concentration of sirolimus. Avoid. [Severe] Study
- ▶ **Rucaparib** is predicted to increase the exposure to sirolimus. Monitor and adjust dose. [Moderate] Study
- ▶ **Selpercatinib** is predicted to increase the exposure to sirolimus. [Moderate] Study
- ▶ **Sotorasib** is predicted to increase the exposure to sirolimus. Avoid or adjust dose. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the concentration of sirolimus. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Sirolimus** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** increases the exposure to sirolimus. [Severe] Study

- ▶ **Teptinib** is predicted to increase the concentration of **sirolimus**. [Severe] Study
  - ▶ **Tucatinib** is predicted to increase the exposure to **sirolimus**. Avoid or adjust dose. [Moderate] Theoretical
  - ▶ **Vandetanib** is predicted to increase the exposure to **sirolimus**. [Moderate] Study
  - ▶ **Velpatasvir** is predicted to increase the exposure to **sirolimus**. [Severe] Theoretical
  - ▶ **Vemurafenib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. [Severe] Theoretical
  - ▶ **Venetoclax** is predicted to increase the exposure to **sirolimus**. Avoid or adjust dose. [Severe] Study
- Sitagliptin** → see dipeptidylpeptidase-4 inhibitors
- SNRIs** → see TABLE 18 p. 1494 (hyponatraemia), TABLE 13 p. 1493 (serotonin syndrome), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 11 p. 1492 (CNS depressant effects), TABLE 4 p. 1490 (antiplatelet effects)

#### duloxetine - venlafaxine

- ▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **venlafaxine**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Axitinib** is predicted to increase the exposure to **duloxetine**. [Moderate] Theoretical → Also see TABLE 4 p. 1490
- ▶ **Duloxetine** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **venlafaxine**. [Moderate] Study
- ▶ **Duloxetine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Givosiran** is predicted to increase the exposure to **duloxetine**. Use with caution and adjust dose. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **venlafaxine**. [Mild] Study
- ▶ **Venlafaxine** slightly increases the exposure to **haloperidol**. [Severe] Study → Also see TABLE 9 p. 1492 → Also see TABLE 11 p. 1492
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **venlafaxine**. [Moderate] Study
- ▶ **Idealalisib** is predicted to increase the exposure to **venlafaxine**. [Moderate] Study
- ▶ **Leflunomide** is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **venlafaxine**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Mexiletine** is predicted to increase the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **Osilodrostat** is predicted to increase the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **Duloxetine** might increase the risk of adverse effects when given with **ozanimod**. [Severe] Theoretical
- ▶ **Duloxetine** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Venlafaxine** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **duloxetine**. Avoid. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **duloxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** markedly increase the exposure to **duloxetine**. Avoid. [Severe] Study → Also see TABLE 18 p. 1494 → Also see TABLE 13 p. 1493 → Also see TABLE 4 p. 1490
- ▶ **Tacrolimus** potentially increases the risk of serotonin syndrome when given with **venlafaxine**. [Severe] Anecdotal
- ▶ **Teriflunomide** is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **Vaborbactam** is predicted to increase the concentration of **venlafaxine**. [Unknown] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **duloxetine**. Use with caution or avoid. [Moderate] Theoretical

#### Sodium bicarbonate

**ROUTE-SPECIFIC INFORMATION** Interactions do not generally apply to topical use of **sodium bicarbonate** unless specified.

- ▶ Oral **sodium bicarbonate** -containing antacids are predicted to decrease the exposure to oral **acalabrutinib**. Separate administration by at least 2 hours. [Moderate] Study
  - ▶ Oral **sodium bicarbonate** decreases the absorption of **antifungals, azoles (ketoconazole)**. [Moderate] Study
  - ▶ Oral **sodium bicarbonate** -containing antacids are predicted to decrease the absorption of oral **bosutinib**. **Bosutinib** should be taken at least 12 hours before antacids. [Moderate] Theoretical
  - ▶ Oral **sodium bicarbonate** -containing antacids are predicted to decrease the exposure to oral **dasatinib**. Separate administration by at least 2 hours. [Moderate] Study
  - ▶ Oral **sodium bicarbonate** -containing antacids are predicted to decrease the absorption of oral **erlotinib**. **Erlotinib** should be taken 2 hours before or 4 hours after antacids. [Moderate] Theoretical
  - ▶ Oral **sodium bicarbonate** -containing antacids are predicted to decrease the exposure to oral **gefitinib**. [Moderate] Theoretical
  - ▶ Oral **sodium bicarbonate** -containing antacids are predicted to decrease the absorption of oral **lapatinib**. Avoid. [Moderate] Theoretical
  - ▶ **Sodium bicarbonate** decreases the concentration of **lithium**. [Severe] Anecdotal
  - ▶ **Sodium bicarbonate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
  - ▶ Oral **sodium bicarbonate** -containing antacids are predicted to decrease the exposure to oral **neratinib**. Separate administration by at least 3 hours. [Mild] Theoretical
  - ▶ Oral **sodium bicarbonate** -containing antacids might affect the exposure to oral **nilotinib**. Separate administration by at least 2 hours. [Moderate] Study
  - ▶ Oral **sodium bicarbonate** -containing antacids are predicted to decrease the exposure to oral **NRRTIs (rilpivirine)**. **Rilpivirine** should be taken 4 hours before or 2 hours after antacids. [Severe] Theoretical
  - ▶ Oral **sodium bicarbonate** -containing antacids might decrease the absorption of oral **pazopanib**. **Pazopanib** should be taken 1 hour before or 2 hours after antacids. [Moderate] Theoretical
  - ▶ Oral **sodium bicarbonate** is predicted to decrease the exposure to oral **sotorasib**. **Sotorasib** should be taken 4 hours before or 10 hours after antacids. [Moderate] Theoretical
- Sodium citrate**
- ▶ **Sodium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
  - ▶ **Sodium citrate** is predicted to increase the risk of adverse effects when given with **sucralfate**. Avoid. [Moderate] Theoretical
- Sodium glucose co-transporter 2 inhibitors** → see TABLE 14 p. 1493 (antidiabetic drugs), TABLE 8 p. 1491 (hypotension)
- canagliflozin - dapagliflozin - empagliflozin - ertugliflozin
- ▶ **Antiepileptics (phenytoin)** might decrease the exposure to **empagliflozin**. Avoid or monitor diabetic control. [Moderate] Theoretical
  - ▶ **Fenfluramine** might decrease blood glucose concentrations when given with **sodium glucose co-transporter 2 inhibitors**. [Moderate] Theoretical
  - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **canagliflozin**. Adjust **canagliflozin** dose, p. 772. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** might decrease the exposure to **empagliflozin**. Avoid or monitor diabetic control. [Moderate] Theoretical
- Sodium oxybate** → see TABLE 8 p. 1491 (hypotension), TABLE 11 p. 1492 (CNS depressant effects)
- ▶ **Antiepileptics (valproate)** increase the exposure to **sodium oxybate**. Adjust **sodium oxybate** dose, p. 524. [Moderate] Study
- Sodium phenylbutyrate**
- ▶ **Antiepileptics (valproate)** potentially decrease the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
  - ▶ **Corticosteroids** potentially decrease the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
  - ▶ **Haloperidol** potentially decreases the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
- Sodium picosulfate** → see TABLE 18 p. 1494 (hyponatraemia)

**Sodium picosulfate** (continued)

- ▶ Oral sodium picosulfate might decrease the concentration of the active metabolite of oral baloxavir marboxil. [\[Severe\]](#) Theoretical

**Sodium zirconium cyclosilicate**

- ▶ Sodium zirconium cyclosilicate is predicted to decrease the exposure to antifungals, azoles. Separate administration by at least 2 hours. [\[Moderate\]](#) Theoretical
- ▶ Sodium zirconium cyclosilicate is predicted to decrease the exposure to dasatinib. Separate administration by at least 2 hours. [\[Moderate\]](#) Theoretical
- ▶ Sodium zirconium cyclosilicate is predicted to decrease the exposure to ertotinib. Separate administration by at least 2 hours. [\[Moderate\]](#) Theoretical
- ▶ Sodium zirconium cyclosilicate is predicted to decrease the exposure to HIV-protease inhibitors. Separate administration by at least 2 hours. [\[Moderate\]](#) Theoretical
- ▶ Sodium zirconium cyclosilicate is predicted to decrease the exposure to ledipasvir. Separate administration by at least 2 hours. [\[Moderate\]](#) Theoretical
- ▶ Sodium zirconium cyclosilicate is predicted to decrease the exposure to nilotinib. Separate administration by at least 2 hours. [\[Moderate\]](#) Theoretical
- ▶ Sodium zirconium cyclosilicate is predicted to decrease the exposure to NRTIs (rilpivirine). Separate administration by at least 2 hours. [\[Moderate\]](#) Theoretical
- ▶ Sodium zirconium cyclosilicate is predicted to decrease the exposure to raltegravir. Separate administration by at least 2 hours. [\[Moderate\]](#) Theoretical

**Sofosbuvir**

- ▶ Sofosbuvir is predicted to increase the risk of severe bradycardia or heart block when given with antiarrhythmics (amiodarone). Refer to specialist literature. [\[Severe\]](#) Anecdotal
- ▶ Antiepileptics (carbamazepine) are predicted to decrease the exposure to sofosbuvir. Avoid. [\[Severe\]](#) Study
- ▶ Antiepileptics (fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to sofosbuvir. Avoid. [\[Severe\]](#) Theoretical
- ▶ H<sub>2</sub> receptor antagonists potentially decrease the exposure to sofosbuvir. Adjust dose, see ledipasvir with sofosbuvir p. 683, sofosbuvir with velpatasvir p. 685, and sofosbuvir with velpatasvir and voxilaprevir p. 685. [\[Moderate\]](#) Study
- ▶ HIV-protease inhibitors (tipranavir) are predicted to decrease the exposure to sofosbuvir. Avoid. [\[Severe\]](#) Theoretical
- ▶ Modafinil is predicted to decrease the exposure to sofosbuvir. Avoid. [\[Severe\]](#) Theoretical
- ▶ Proton pump inhibitors potentially decrease the exposure to sofosbuvir. Adjust dose, see ledipasvir with sofosbuvir p. 683, sofosbuvir with velpatasvir p. 685, and sofosbuvir with velpatasvir and voxilaprevir p. 685. [\[Moderate\]](#) Study
- ▶ Rifamycins (rifampicin) are predicted to decrease the exposure to sofosbuvir. Avoid. [\[Severe\]](#) Study
- ▶ St John's wort is predicted to decrease the exposure to sofosbuvir. Avoid. [\[Severe\]](#) Study

**Solifenacin** → see TABLE 10 p. 1492 (antimuscarinics)

- ▶ Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to solifenacin. [\[Moderate\]](#) Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to solifenacin. [\[Moderate\]](#) Theoretical
- ▶ Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the exposure to solifenacin. Adjust solifenacin p. 842 or tamsulosin with solifenacin p. 848 dose; avoid in hepatic and renal impairment. [\[Severe\]](#) Study
- ▶ Antipsychotics, second generation (clozapine) can cause constipation, as can solifenacin; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see TABLE 10 p. 1492
- ▶ Cobicistat is predicted to increase the exposure to solifenacin. Adjust solifenacin p. 842 or tamsulosin with solifenacin p. 848 dose; avoid in hepatic and renal impairment. [\[Severe\]](#) Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to solifenacin. Adjust solifenacin p. 842 or tamsulosin with solifenacin p. 848 dose; avoid in hepatic and renal impairment. [\[Severe\]](#) Study

- ▶ Idelalisib is predicted to increase the exposure to solifenacin. Adjust solifenacin p. 842 or tamsulosin with solifenacin p. 848 dose; avoid in hepatic and renal impairment. [\[Severe\]](#) Study
- ▶ Macrolides (clarithromycin) are predicted to increase the exposure to solifenacin. Adjust solifenacin p. 842 or tamsulosin with solifenacin p. 848 dose; avoid in hepatic and renal impairment. [\[Severe\]](#) Study
- ▶ Mitotane is predicted to decrease the exposure to solifenacin. [\[Moderate\]](#) Theoretical
- ▶ Rifamycins (rifampicin) are predicted to decrease the exposure to solifenacin. [\[Moderate\]](#) Theoretical

**Solriamfetol**

- ▶ Solriamfetol is predicted to increase the risk of a hypertensive crisis when given with MAO-B inhibitors. Avoid and for 14 days after stopping MAO-B inhibitors. [\[Severe\]](#) Theoretical

- ▶ Solriamfetol is predicted to increase the risk of a hypertensive crisis when given with MAOIs, irreversible. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical

**Somatropin**

- ▶ Corticosteroids are predicted to decrease the effects of somatropin. [\[Moderate\]](#) Theoretical

**Sorafenib** → see TABLE 15 p. 1493 (myelosuppression), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 4 p. 1490 (antiplatelet effects)

- ▶ Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to sorafenib. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1492
- ▶ Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to sorafenib. [\[Moderate\]](#) Theoretical
- ▶ Antiepileptics (oxcarbazepine) are predicted to decrease the exposure to sorafenib. [\[Moderate\]](#) Study
- ▶ Sorafenib increases the anticoagulant effect of coumarins. [\[Severe\]](#) Anecdotal
- ▶ Dabrafenib is predicted to decrease the exposure to sorafenib. [\[Moderate\]](#) Study
- ▶ Endothelin receptor antagonists (bosentan) are predicted to decrease the exposure to sorafenib. [\[Moderate\]](#) Study
- ▶ Mitotane is predicted to decrease the exposure to sorafenib. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1493
- ▶ Neomycin moderately decreases the exposure to sorafenib. [\[Moderate\]](#) Study
- ▶ NRTIs (efavirenz, nevirapine) are predicted to decrease the exposure to sorafenib. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
- ▶ Sorafenib is predicted to increase the risk of bleeding events when given with phenindione. [\[Severe\]](#) Theoretical
- ▶ Rifamycins (rifampicin) are predicted to decrease the exposure to sorafenib. [\[Moderate\]](#) Theoretical
- ▶ Sorafenib is predicted to increase the exposure to the active component of sacituzumab govitecan. [\[Severe\]](#) Theoretical
- ▶ Selpercatinib is predicted to increase the exposure to sorafenib. Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 1492
- ▶ St John's wort is predicted to decrease the exposure to sorafenib. [\[Moderate\]](#) Study

**Sotalol** → see beta blockers, non-selective**Sotorasib** → see TABLE 1 p. 1490 (hepatotoxicity)

- ▶ Sotorasib is predicted to increase the exposure to aliskiren. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ Oral antacids are predicted to decrease the exposure to oral sotorasib. Sotorasib should be taken 4 hours before or 10 hours after antacids. [\[Moderate\]](#) Theoretical
- ▶ Anti-androgens (apalutamide, enzalutamide) are predicted to decrease the exposure to sotorasib. Avoid. [\[Severe\]](#) Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to sotorasib. Avoid. [\[Severe\]](#) Study → Also see TABLE 1 p. 1490
- ▶ Sotorasib is predicted to increase the exposure to antihistamines, non-sedating (fexofenadine). Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ Sotorasib moderately decreases the exposure to benzodiazepines (midazolam). [\[Moderate\]](#) Study
- ▶ Oral calcium salts (calcium carbonate) are predicted to decrease the exposure to oral sotorasib. Sotorasib should be taken 4 hours before or 10 hours after antacids. [\[Moderate\]](#) Theoretical

- ▶ **Sotorasib** is predicted to increase the exposure to **colchicine**. Avoid or adjust dose. [\[Moderate\]](#) Study
  - ▶ **Sotorasib** is predicted to increase the exposure to **digoxin**. Avoid or adjust dose. [\[Moderate\]](#) Study
  - ▶ **Sotorasib** is predicted to decrease the exposure to **ergotamine**. Avoid or adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Sotorasib** is predicted to increase the exposure to **everolimus**. Avoid or adjust dose. [\[Moderate\]](#) Study
  - ▶ **Sotorasib** is predicted to increase the exposure to **factor XA inhibitors (edoxaban, rivaroxaban)**. Avoid or adjust dose. [\[Moderate\]](#) Study
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **sotorasib**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Sotorasib** is predicted to increase the exposure to **loperamide**. Avoid or adjust dose. [\[Moderate\]](#) Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **sotorasib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Sotorasib** is predicted to decrease the exposure to **opioids (alfentanil)**. Avoid or adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **sotorasib**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **sotorasib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Sotorasib** is predicted to increase the exposure to **sirrolimus**. Avoid or adjust dose. [\[Moderate\]](#) Study
  - ▶ Oral **sodium bicarbonate** is predicted to decrease the exposure to oral **sotorasib**. **Sotorasib** should be taken 4 hours before or 10 hours after antacids. [\[Moderate\]](#) Theoretical
  - ▶ **Sotorasib** is predicted to increase the exposure to **talazoparib**. Avoid or adjust dose. [\[Moderate\]](#) Study
  - ▶ **Sotorasib** is predicted to increase the exposure to **taxanes (docetaxel, paclitaxel)**. Avoid or adjust dose. [\[Moderate\]](#) Study
  - ▶ **Sotorasib** is predicted to decrease the exposure to **temsirolimus**. Avoid or adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Sotorasib** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Avoid or adjust dose. [\[Moderate\]](#) Study
  - ▶ **Sotorasib** is predicted to increase the exposure to **topotecan**. Avoid or adjust dose. [\[Moderate\]](#) Study
  - Spironolactone** → see aldosterone antagonists
  - SSRIs** → see TABLE 18 p. 1494 (hyponatraemia), TABLE 13 p. 1493 (serotonin syndrome), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 4 p. 1490 (antiplatelet effects)
- citalopram · dapoxetine · escitalopram · fluoxetine · fluvoxamine · paroxetine · sertraline
- ▶ SSRIs (**fluoxetine, fluvoxamine**) are predicted to increase the exposure to **abrocitinib**. Adjust **abrocitinib** dose, p. 1354. [\[Severe\]](#) Study
  - ▶ **Fluvoxamine** very markedly increases the exposure to **agomelatine**. Avoid. [\[Severe\]](#) Study
  - ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to **amfetamines**. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 1493
  - ▶ **Fluvoxamine** moderately to markedly increases the exposure to **aminophylline**. Avoid. [\[Severe\]](#) Study
  - ▶ **Fluvoxamine** decreases the clearance of **anaesthetics, local (ropivacaine)**. Avoid prolonged use. [\[Moderate\]](#) Study
  - ▶ **Fluvoxamine** is predicted to increase the exposure to **anagrelide**. [\[Moderate\]](#) Theoretical → Also see TABLE 4 p. 1490
  - ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **citalopram**. Avoid or monitor. [\[Mild\]](#) Study → Also see TABLE 9 p. 1492
  - ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. [\[Moderate\]](#) Theoretical
  - ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to SSRIs (**citalopram, escitalopram, fluoxetine, fluvoxamine, paroxetine, sertraline**). [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Fluvoxamine** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the concentration of **paroxetine**. [\[Moderate\]](#) Study
  - ▶ **Sertraline** potentially increases the risk of toxicity when given with **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [\[Severe\]](#) Anecdotal
  - ▶ SSRIs (**fluoxetine, fluvoxamine**) are predicted to increase the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor and adjust dose. [\[Severe\]](#) Anecdotal
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. [\[Moderate\]](#) Theoretical
  - ▶ **Antifungals, azoles (fluconazole, voriconazole)** are predicted to increase the exposure to **escitalopram**. Use with caution and adjust dose. [\[Severe\]](#) Study → Also see TABLE 9 p. 1492
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose, p. 887. [\[Severe\]](#) Study
  - ▶ **Antifungals, azoles (voriconazole)** are predicted to increase the exposure to **citalopram**. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Antihistamines, sedating (cyproheptadine)** potentially decrease the effects of SSRIs. [\[Moderate\]](#) Anecdotal
  - ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to moderately increase the exposure to **antipsychotics, second generation (aripiprazole)**. Adjust aripiprazole dose, p. 427. [\[Moderate\]](#) Study
  - ▶ **Fluvoxamine** increases the exposure to **antipsychotics, second generation (asenapine)**. [\[Moderate\]](#) Study
  - ▶ **Paroxetine** moderately increases the exposure to **antipsychotics, second generation (asenapine)**. [\[Moderate\]](#) Study
  - ▶ **Fluvoxamine** increases the concentration of **antipsychotics, second generation (clozapine)**. Monitor adverse effects and adjust dose. [\[Severe\]](#) Study
  - ▶ **Fluvoxamine** moderately increases the exposure to **antipsychotics, second generation (olanzapine)**. Adjust dose. [\[Severe\]](#) Anecdotal
  - ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to **antipsychotics, second generation (risperidone)**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [\[Severe\]](#) Study
  - ▶ **Fluvoxamine** moderately increases the exposure to **benzodiazepines (alprazolam)**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ SSRIs (**fluoxetine, fluvoxamine**) potentially increase the exposure to **benzodiazepines (clonazepam)**. Adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Fluvoxamine** moderately increases the exposure to **benzodiazepines (diazepam)**. [\[Moderate\]](#) Study
  - ▶ **Fluvoxamine** moderately increases the concentration of **beta blockers, non-selective (propranolol)**. [\[Moderate\]](#) Study
  - ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [\[Moderate\]](#) Study
  - ▶ **Bupropion** is predicted to increase the exposure to **dapoxetine**. [\[Moderate\]](#) Theoretical
  - ▶ **Fluvoxamine** markedly decreases the clearance of **caffeine citrate**. Monitor and adjust dose. [\[Severe\]](#) Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. [\[Moderate\]](#) Theoretical
  - ▶ SSRIs (**fluoxetine, fluvoxamine**) are predicted to increase the exposure to **cannabidiol**. [\[Moderate\]](#) Theoretical
  - ▶ SSRIs (**fluoxetine, fluvoxamine**) are predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 252. [\[Moderate\]](#) Theoretical → Also see TABLE 4 p. 1490
  - ▶ **Cinacalcet** is predicted to increase the exposure to **dapoxetine**. [\[Moderate\]](#) Theoretical
  - ▶ **Fluvoxamine** is predicted to increase the exposure to **cinacalcet**. Adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ SSRIs (**fluoxetine, fluvoxamine**) are predicted to decrease the efficacy of **clopidogrel**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 4 p. 1490

## SSRIs (continued)

- ▶ **Cobicistat** is predicted to moderately increase the exposure to **dapoxetine**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose, p. 887. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to SSRIs (**citalopram**, **escitalopram**, **fluoxetine**, **fluvoxamine**, **paroxetine**, **sertraline**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **Fluvoxamine** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [Moderate] Study
- ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Fluvoxamine** is predicted to increase the exposure to **eltrombopag**. [Moderate] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ **Fluoxetine** is predicted to increase the exposure to **fedratinib**. Avoid depending on other drugs taken—consult product literature. [Moderate] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **fedratinib**. Avoid. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to increase the exposure to **fesoterodine**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to increase the exposure to **gefinitib**. [Moderate] Theoretical
- ▶ **Gilteritinib** is predicted to decrease the efficacy of SSRIs (**escitalopram**, **fluoxetine**, **sertraline**). Avoid. [Moderate] Theoretical
- ▶ **Grapefruit** juice moderately increases the exposure to **sertraline**. Avoid. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to SSRIs (**citalopram**, **escitalopram**). Adjust dose. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to SSRIs (**paroxetine**, **sertraline**). [Moderate] Study
- ▶ **Fluoxetine** increases the concentration of **haloperidol**. Adjust dose. [Moderate] Anecdotal
- ▶ **Fluvoxamine** increases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose, p. 887. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **dapoxetine**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose, p. 887. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. [Moderate] Theoretical → Also see TABLE 4 p. 1490
- ▶ **Letermovir** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. [Moderate] Theoretical
- ▶ **Fluoxetine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Unknown] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Mild] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose, p. 887. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. [Moderate] Theoretical
- ▶ **Fluvoxamine** very markedly increases the exposure to **melatonin**. Avoid. [Severe] Study
- ▶ SSRIs (**fluoxetine**, **fluvoxamine**, **paroxetine**) are predicted to increase the exposure to **mexiletine**. [Moderate] Study
- ▶ **Moclobemide** is predicted to increase the exposure to **escitalopram**. Use with caution and adjust dose. [Severe] Study → Also see TABLE 13 p. 1493
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. [Moderate] Theoretical
- ▶ SSRIs potentially increase the risk of prolonged neuromuscular blockade when given with **neuromuscular blocking drugs, non-depolarising (mivacurium)**. [Unknown] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to decrease the efficacy of **opioids (codeine)**. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to decrease the efficacy of **opioids (tramadol)**. [Severe] Study → Also see TABLE 13 p. 1493
- ▶ SSRIs might increase the risk of adverse effects when given with **ozanimod**. [Severe] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **pentoxifylline**. [Moderate] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **phenothiazines (chlorpromazine)**. [Moderate] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. [Moderate] Study
- ▶ **Fluvoxamine** is predicted to moderately increase the exposure to **pirfenidone**. Avoid. [Moderate] Study
- ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Fluvoxamine** moderately increases the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 1035. [Moderate] Study
- ▶ **Paroxetine** slightly increases the exposure to **procyclidine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Proton pump inhibitors (esomeprazole)** are predicted to slightly to moderately increase the exposure to **citalopram**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Proton pump inhibitors (esomeprazole, omeprazole)** are predicted to increase the exposure to **escitalopram**. Use with caution and adjust dose. [Severe] Study
- ▶ **Proton pump inhibitors (omeprazole)** slightly to moderately increase the exposure to **citalopram**. Monitor and adjust dose. [Severe] Study
- ▶ **Fluvoxamine** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
- ▶ **Fluoxetine** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **selumetinib**. Avoid or monitor—consult product literature. [Severe] Theoretical
- ▶ **Fluvoxamine** markedly increases the exposure to **SNRIs (duloxetine)**. Avoid. [Severe] Study → Also see TABLE 18 p. 1494 → Also see TABLE 13 p. 1493 → Also see TABLE 4 p. 1490
- ▶ SSRIs (**fluvoxamine**) are predicted to increase the exposure to SSRIs (**citalopram**). Monitor and adjust dose. [Severe] Anecdotal → Also see TABLE 18 p. 1494 → Also see TABLE 13 p. 1493 → Also see TABLE 4 p. 1490
- ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to increase the exposure to SSRIs (**dapoxetine**). [Moderate] Theoretical → Also see TABLE 18 p. 1494 → Also see TABLE 13 p. 1493 → Also see TABLE 4 p. 1490
- ▶ SSRIs (**fluoxetine**, **fluvoxamine**) are predicted to increase the exposure to SSRIs (**escitalopram**). Use with caution and adjust dose. [Severe] Study → Also see TABLE 18 p. 1494 → Also see TABLE 13 p. 1493 → Also see TABLE 4 p. 1490
- ▶ SSRIs potentially increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Unknown] Theoretical
- ▶ **Fluvoxamine** very slightly increases the exposure to **talazoparib**. [Moderate] Study

- ▶ SSRIs (fluoxetine, paroxetine) are predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **fluoxetine**. Adjust dose. [Moderate] Theoretical
- ▶ **Terbinafine** moderately increases the exposure to **paroxetine**. [Moderate] Study
- ▶ **Terbinafine** is predicted to increase the exposure to SSRIs (citalopram, dapoxetine, escitalopram, fluvoxamine, sertraline). [Moderate] Theoretical
- ▶ SSRIs (fluoxetine, paroxetine) are predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
- ▶ **Fluvoxamine** moderately to markedly increases the exposure to **theophylline**. Avoid. [Severe] Study
- ▶ **Fluvoxamine** very markedly increases the exposure to **tizanidine**. Avoid. [Severe] Study
- ▶ SSRIs (fluoxetine, fluvoxamine) given with a moderate CYP3A4 inhibitor are predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1200. [Moderate] Study
- ▶ SSRIs (fluoxetine, paroxetine) are predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study → Also see TABLE 18 p. 1494 → Also see TABLE 13 p. 1493
- ▶ **Fluvoxamine** increases the exposure to **tricyclic antidepressants (amitriptyline, imipramine)**. Adjust dose. [Severe] Study → Also see TABLE 18 p. 1494 → Also see TABLE 13 p. 1493
- ▶ **Fluvoxamine** markedly increases the exposure to **tricyclic antidepressants (clomipramine)**. Adjust dose. [Severe] Study → Also see TABLE 18 p. 1494 → Also see TABLE 13 p. 1493
- ▶ **Fluvoxamine** increases the concentration of **triptans (frovatriptan)**. [Severe] Study → Also see TABLE 13 p. 1493
- ▶ **Fluvoxamine** is predicted to increase the exposure to **triptans (zolmitriptan)**. Adjust **zolmitriptan** dose, p. 515. [Severe] Theoretical → Also see TABLE 13 p. 1493
- ▶ SSRIs (fluoxetine, paroxetine) are predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 13 p. 1493 → Also see TABLE 4 p. 1490
- St John's wort** → see TABLE 13 p. 1493 (serotonin syndrome)
- ▶ **St John's wort** is predicted to decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **acalabrutinib**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **afatinib**. [Moderate] Study
- ▶ **St John's wort** is predicted to slightly decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Study
- ▶ **St John's wort** decreases the exposure to **aliskiren**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the concentration of **aminophylline**. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **anti-androgens (darolutamide)**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antiepileptics (brivaracetam)**. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the concentration of **antiepileptics (carbamazepine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the concentration of **antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antiepileptics (perampamel)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antiepileptics (tiagabine)**. Avoid. [Mid] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** moderately decreases the exposure to **antifungals, azoles (voriconazole)**. Avoid. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the concentration of **antimalarials (piperazine)**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antipsychotics, second generation (lurasidone)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antipsychotics, second generation (paliperidone)**. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **antipsychotics, second generation (quetiapine)**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **St John's wort** moderately decreases the exposure to **benzodiazepines (alprazolam)**. [Moderate] Study
- ▶ **St John's wort** moderately decreases the exposure to **benzodiazepines (midazolam)**. Monitor and adjust dose. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the concentration of **berotralstat**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **brigatinib**. Avoid. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Mid] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** decreases the concentration of **ciclosporin**. Avoid. [Moderate] Study
- ▶ **St John's wort** is predicted to alter the effects of **clostazol**. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** decreases the efficacy of **combined hormonal contraceptives**. MHRAs advises avoid. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ▶ **St John's wort** decreases the anticoagulant effect of **coumarins**. Avoid. [Severe] Anecdotal
- ▶ **St John's wort** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **dasatinib**. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the efficacy of **desogestrel**. MHRAs advises avoid. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ▶ **St John's wort** decreases the concentration of **digoxin**. Avoid. [Severe] Anecdotal
- ▶ **St John's wort** is predicted to decrease the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 696. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [Mid] Study
- ▶ **St John's wort** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study

## St John's wort (continued)

- ▶ St John's wort is predicted to decrease the exposure to **elxacaftor**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to increase the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **endothelin receptor antagonists (bosentan)**. Avoid. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **endothelin receptor antagonists (macitentan)**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **erlotinib**. [Severe] Study
- ▶ St John's wort is predicted to decrease the efficacy of **etonogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **exemestane**. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **factor XA inhibitors (apixaban)**. Use with caution or avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **factor XA inhibitors (edoxaban)**. [Moderate] Study
- ▶ St John's wort is predicted to decrease the exposure to **factor XA inhibitors (rivaroxaban)**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **fedratinib**. Avoid. [Moderate] Study
- ▶ St John's wort is predicted to decrease the exposure to **fosoterodine**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to  **fingolimod**. Avoid. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to the active metabolite of  **fostemsavir**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to  **gefitinib**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to  **gilteritinib**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to  **glasdegib**. Avoid or adjust  **glasdegib** dose, p. 1087. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to  **glecaprevir**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to markedly decrease the exposure to  **grazoprevir**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the concentration of  **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to  **HIV-protease inhibitors**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the efficacy of  **hormone replacement therapy**. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to  **ibrutinib**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to  **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to  **imatinib**. [Moderate] Study
- ▶ St John's wort slightly decreases the exposure to  **irinotecan**. Avoid. [Severe] Study
- ▶ St John's wort decreases the exposure to  **ivabradine**. Avoid. [Moderate] Study
- ▶ St John's wort is predicted to decrease the exposure to  **ivacaftor**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to  **ixazomib**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to  **lapatinib**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to  **larotrectinib**. Avoid. [Moderate] Study
- ▶ St John's wort is predicted to decrease the exposure to  **ledipasvir**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the concentration of  **letermovir**. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the efficacy of  **levonorgestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to  **lorlatinib**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to  **maraviroc**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to  **midostaurin**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to  **mifepristone**. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to  **naldemedine**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to  **naloxegol**. Avoid. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to  **neratinib**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to  **neurokinin-1 receptor antagonists (aprepitant, fosaprepitant)**. Avoid. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to  **neurokinin-1 receptor antagonists (netupitant)**. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to  **nilotinib**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to  **nintedanib**. [Moderate] Study
- ▶ St John's wort is predicted to decrease the exposure to  **nirmatrelvir** boosted with ritonavir. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to  **NNRTIs (doravirine, rilpivirine)**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the concentration of  **NNRTIs (efavirenz, nevirapine)**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to  **NNRTIs (etravirine)**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the efficacy of  **norethisterone**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ▶ St John's wort is predicted to decrease the exposure to  **olaparib**. Avoid. [Moderate] Theoretical
- ▶ St John's wort decreases the exposure to  **opioids (methadone)**. Monitor and adjust dose. [Severe] Study → Also see TABLE 13 p. 1493
- ▶ St John's wort moderately decreases the exposure to  **opioids (oxycodone)**. Adjust dose. [Moderate] Study
- ▶ St John's wort is predicted to decrease the exposure to  **osimertinib**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to  **ospemifene**. [Moderate] Study
- ▶ St John's wort is predicted to decrease the exposure to  **palbociclib**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to  **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to  **pazopanib**. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to  **pemigatinib**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to  **phosphodiesterase type-4 inhibitors (apremilast)**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to  **phosphodiesterase type-5 inhibitors**. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to  **pibrentasvir**. Avoid. [Severe] Study
- ▶ St John's wort slightly decreases the exposure to  **pioglitazone**. [Mild] Study
- ▶ St John's wort is predicted to decrease the exposure to  **pitolisant**. Monitor and adjust dose. [Moderate] Theoretical

- ▶ **St John's wort** is predicted to decrease the exposure to **ponatinib**. Avoid. [Severe] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **regorafenib**. Avoid. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **relugolix**. Avoid. [Moderate] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **ribociclib**. Avoid. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **selpercatinib**. Avoid. [Moderate] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
  - ▶ **St John's wort** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Severe] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **sorafenib**. [Moderate] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **sunitinib**. [Moderate] Study
  - ▶ **St John's wort** decreases the concentration of **tacrolimus**. Avoid. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **taxanes (paclitaxel)**. Avoid. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the concentration of **tenosiroimus**. Avoid. [Severe] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
  - ▶ **Teplotinib** might decrease the exposure to **St John's wort**. Avoid. [Severe] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
  - ▶ **St John's wort** potentially decreases the exposure to **theophylline**. [Severe] Anecdotal
  - ▶ **St John's wort** is predicted to decrease the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
  - ▶ **St John's wort** might decrease the exposure to **tigecycline**. [Mid] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **tivozanib**. Avoid. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **tofacinib**. [Moderate] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **tolvaptan**. Avoid. [Moderate] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **topotecan**. [Severe] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **treprostinil**. Adjust dose. [Mid] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **tucatinib**. Avoid. [Severe] Theoretical
  - ▶ **St John's wort** is predicted to decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
  - ▶ **St John's wort** is predicted to decrease the exposure to **vandetanib**. Avoid. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine, vinorelbine)**. [Severe] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [Severe] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
  - ▶ **St John's wort** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- Statins** → see TABLE 1 p. 1490 (hepatotoxicity)
- atorvastatin · fluvastatin · pravastatin · rosuvastatin · simvastatin
- ▶ **Acipimox** is predicted to increase the risk of rhabdomyolysis when given with **statins**. [Severe] Theoretical
  - ▶ **Atorvastatin** slightly to moderately increases the exposure to **aliskiren**. [Moderate] Study
  - ▶ Oral **antacids** decrease the absorption of oral **rosuvastatin**. Separate administration by 2 hours. [Moderate] Study
  - ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **atorvastatin**. [Moderate] Study
  - ▶ **Anti-androgens (apalutamide)** slightly decrease the exposure to **rosuvastatin**. [Mid] Study
  - ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **simvastatin**. Avoid or monitor. [Moderate] Study
  - ▶ **Anti-androgens (darolutamide)** are predicted to increase the exposure to statins (**atorvastatin, fluvastatin, rosuvastatin**). Avoid. [Severe] Theoretical
  - ▶ **Anti-androgens (enzalutamide)** are predicted to decrease the exposure to statins (**atorvastatin, simvastatin**). [Moderate] Study
  - ▶ **Anti-androgens (darolutamide)** are predicted to increase the concentration of statins (**pravastatin, simvastatin**). [Moderate] Theoretical
  - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **fluvastatin**. [Moderate] Study
  - ▶ **Antiarrhythmics (amiodarone)** increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 222. [Severe] Study
  - ▶ **Antiarrhythmics (dronedarone)** slightly increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Study
  - ▶ **Antiarrhythmics (dronedarone)** slightly increase the exposure to **rosuvastatin**. Adjust dose. [Severe] Study
  - ▶ **Antiarrhythmics (dronedarone)** moderately increase the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Study
  - ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **atorvastatin**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 1 p. 1490
  - ▶ **Antiepileptics (carbamazepine, eslicarbazepine)** moderately decrease the exposure to **simvastatin**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 1 p. 1490
  - ▶ **Antiepileptics (eslicarbazepine)** are predicted to decrease the exposure to **atorvastatin**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Antiepileptics (eslicarbazepine)** decrease the exposure to **rosuvastatin**. [Moderate] Study
  - ▶ **Antiepileptics (phenytoin)** moderately decrease the exposure to **atorvastatin**. [Moderate] Study
  - ▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to **simvastatin**. [Moderate] Study
  - ▶ **Antiepileptics (fosphenytoin, phenobarbital, primidone)** are predicted to decrease the exposure to statins (**atorvastatin, simvastatin**). [Moderate] Study
  - ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to statins (**atorvastatin, simvastatin**). [Moderate] Theoretical
  - ▶ **Antifungals, azoles (flucanazole, miconazole)** are predicted to increase the exposure to **fluvastatin**. [Moderate] Study → Also see TABLE 1 p. 1490
  - ▶ **Antifungals, azoles (isavuconazole)** slightly increase the exposure to **atorvastatin**. [Moderate] Study
  - ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Theoretical

## Statins (continued)

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study → Also see TABLE 1 p. 1490
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study → Also see TABLE 1 p. 1490
- ▶ **Antifungals, azoles (miconazole)** (including the oral gel) might increase the exposure to **atorvastatin**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (miconazole)** (including the oral gel) are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Anecdotal
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **atorvastatin**. Avoid. [Severe] Anecdotal
- ▶ **Antifungals, azoles (posaconazole)** markedly to very markedly increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to statins (**atorvastatin, simvastatin**). Monitor and adjust dose. [Severe] Anecdotal → Also see TABLE 1 p. 1490
- ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to statins (**fluvastatin, rosuvastatin**). [Moderate] Theoretical
- ▶ **Bempedoic acid** increases the exposure to **pravastatin**. [Moderate] Study
- ▶ **Bempedoic acid** increases the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 222. [Moderate] Study
- ▶ **Calcium channel blockers (amlodipine)** slightly increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 222. [Mild] Study
- ▶ **Calcium channel blockers (diltiazem)** slightly increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** moderately increase the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Study
- ▶ **Calcium channel blockers (verapamil)** are predicted to slightly to moderately increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to **simvastatin**. Adjust dose. [Moderate] Theoretical
- ▶ **Cephalosporins (ceftobiprole)** are predicted to increase the concentration of statins. [Moderate] Theoretical
- ▶ **Ciclosporin** markedly to very markedly increases the exposure to **atorvastatin**. Avoid or adjust **atorvastatin** dose, p. 220. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **fluvastatin**. [Severe] Study
- ▶ **Ciclosporin** markedly to very markedly increases the exposure to **pravastatin**. Adjust dose. [Severe] Study
- ▶ **Ciclosporin** markedly increases the exposure to **rosuvastatin**. Avoid. [Severe] Study
- ▶ **Ciclosporin** markedly to very markedly increases the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Clostrazol** is predicted to increase the exposure to **atorvastatin**. [Moderate] Theoretical
- ▶ **Clostrazol** slightly increases the exposure to **simvastatin**. [Moderate] Study
- ▶ **Clopidogrel** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 221. [Moderate] Study
- ▶ **Cobicicstat** is predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Cobicicstat** is predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Colchicine** has been reported to cause rhabdomyolysis when given with statins. [Severe] Anecdotal
- ▶ Statins (**fluvastatin, rosuvastatin**) increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **pravastatin**. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to statins (**atorvastatin, simvastatin**). [Moderate] Study
- ▶ Statins are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
- ▶ **Dasatinib** is predicted to increase the exposure to **simvastatin**. [Moderate] Theoretical
- ▶ **Elbasvir** with grazoprevir slightly increases the exposure to **atorvastatin**. Adjust **atorvastatin** dose, p. 220. [Moderate] Study
- ▶ **Elbasvir** with grazoprevir is predicted to increase the exposure to **fluvastatin**. Adjust **fluvastatin** dose, p. 220. [Moderate] Theoretical
- ▶ **Elbasvir** with grazoprevir moderately increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 221. [Moderate] Study
- ▶ **Elbasvir** with grazoprevir is predicted to increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 222. [Moderate] Theoretical
- ▶ **Elxacaftor** is predicted to increase the exposure to statins (**atorvastatin, pravastatin, rosuvastatin, simvastatin**). [Moderate] Theoretical
- ▶ **Eltrombopag** is predicted to increase the exposure to statins. Monitor and adjust dose. [Moderate] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to statins (**atorvastatin, simvastatin**). [Moderate] Study
- ▶ **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **pravastatin**. Avoid. [Severe] Study
- ▶ **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **rosuvastatin**. Adjust **rosuvastatin** dose, p. 221. [Severe] Study
- ▶ **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **simvastatin**. Adjust **simvastatin** dose, p. 222. [Severe] Study
- ▶ **Fibrates (ciprofibrate)** increase the risk of rhabdomyolysis when given with **atorvastatin**. Avoid or adjust dose. [Severe] Study
- ▶ **Fibrates (ciprofibrate)** increase the risk of rhabdomyolysis when given with **fluvastatin**. [Severe] Study
- ▶ **Fibrates (fenofibrate)** increase the risk of rhabdomyolysis when given with **atorvastatin**. Monitor and adjust **fenofibrate** dose, p. 217. [Severe] Anecdotal
- ▶ **Fibrates (fenofibrate)** are predicted to increase the risk of rhabdomyolysis when given with **fluvastatin**. Use with caution and adjust **fenofibrate** dose, p. 217. [Severe] Theoretical
- ▶ **Fibrates (fenofibrate)** are predicted to increase the risk of rhabdomyolysis when given with **pravastatin**. Avoid. [Severe] Theoretical
- ▶ **Fibrates (fenofibrate)** increase the risk of rhabdomyolysis when given with **rosuvastatin**. Adjust **fenofibrate** and **rosuvastatin** doses, p. 217, p. 221. [Severe] Anecdotal
- ▶ **Fibrates (fenofibrate)** increase the risk of rhabdomyolysis when given with **simvastatin**. Adjust **fenofibrate** dose, p. 217. [Severe] Anecdotal
- ▶ **Fibrates (gemfibrozil)** increase the risk of rhabdomyolysis when given with statins. Avoid. [Severe] Anecdotal
- ▶ **Fibrates (bezafibrate)** increase the risk of rhabdomyolysis when given with statins (**atorvastatin, fluvastatin**). [Severe] Study
- ▶ **Fostamatinib** slightly increases the exposure to **rosuvastatin**. [Moderate] Study
- ▶ **Fostamatinib** slightly increases the exposure to **simvastatin**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Fostemsavir** increases the exposure to **rosuvastatin**. Adjust starting dose and monitor. [Severe] Study
- ▶ **Fostemsavir** is predicted to increase the exposure to statins (**atorvastatin, fluvastatin, simvastatin**). Adjust starting dose and monitor. [Severe] Theoretical
- ▶ **Fusidate** has been reported to cause rhabdomyolysis when given with statins. Avoid. [Severe] Anecdotal
- ▶ **Glecaprevir** with pibrentasvir markedly increases the exposure to **atorvastatin**. Avoid. [Severe] Study
- ▶ **Glecaprevir** with pibrentasvir is predicted to increase the exposure to **fluvastatin**. [Moderate] Theoretical
- ▶ **Glecaprevir** with pibrentasvir moderately increases the exposure to **pravastatin**. Use with caution and adjust **pravastatin** dose, p. 221. [Moderate] Study

- ▶ **Glecaprevir** with pibrentasvir moderately increases the exposure to **rosuvastatin**. Use with caution and adjust **rosuvastatin** dose, p. 221. [Moderate] Study
- ▶ **Glecaprevir** with pibrentasvir moderately increases the exposure to **simvastatin**. Avoid. [Moderate] Study
- ▶ **Grapefruit** juice increases the exposure to **atorvastatin**. [Mild] Study
- ▶ **Grapefruit** juice increases the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Grazoprevir** moderately increases the exposure to **atorvastatin**. Adjust **atorvastatin** dose, p. 220. [Moderate] Study
- ▶ **Grazoprevir** with elbasvir is predicted to increase the exposure to **fluvastatin**. Adjust **fluvastatin** dose, p. 220. [Moderate] Theoretical
- ▶ **Grazoprevir** with elbasvir moderately increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 221. [Moderate] Study
- ▶ **Grazoprevir** with elbasvir is predicted to increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 222. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **HIV-protease inhibitors** might affect the exposure to **pravastatin**. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** are predicted to increase the exposure to **rosuvastatin**. Avoid or adjust **rosuvastatin** dose, p. 221. [Severe] Study
- ▶ **HIV-protease inhibitors (darunavir, ritonavir)** are predicted to increase the exposure to **rosuvastatin**. Avoid or adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors (fosamprenavir, tipranavir)** are predicted to increase the exposure to **rosuvastatin**. Use with caution and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Imatinib** moderately increases the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Study
- ▶ **Ledipasvir** with sofosbuvir is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Moderate] Anecdotal
- ▶ **Ledipasvir** with sofosbuvir is predicted to increase the exposure to **rosuvastatin**. Avoid. [Severe] Theoretical
- ▶ **Ledipasvir** with sofosbuvir is predicted to increase the exposure to statins (**fluvastatin, pravastatin, simvastatin**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **rosuvastatin**. Adjust dose. [Moderate] Study → Also see TABLE 1 p. 1490
- ▶ **Leflunomide** is predicted to increase the exposure to statins (**atorvastatin, fluvastatin, pravastatin, simvastatin**). [Moderate] Study → Also see TABLE 1 p. 1490
- ▶ **Letermovir** moderately increases the exposure to **atorvastatin**. Avoid or adjust **atorvastatin** dose, p. 220. [Severe] Study
- ▶ **Letermovir** is predicted to increase the exposure to **fluvastatin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **pravastatin**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to statins (**rosuvastatin, simvastatin**). Avoid. [Severe] Study
- ▶ **Lomitapide** increases the exposure to **atorvastatin**. Adjust **lomitapide** dose or separate administration by 12 hours, p. 226. [Mild] Study → Also see TABLE 1 p. 1490
- ▶ **Lomitapide** increases the exposure to **simvastatin**. Monitor and adjust **simvastatin** dose, p. 222. [Moderate] Study → Also see TABLE 1 p. 1490
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Macrolides (clarithromycin)** moderately increase the exposure to **pravastatin**. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** slightly increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Study
- ▶ **Macrolides (erythromycin)** slightly increase the exposure to **pravastatin**. [Severe] Study
- ▶ **Macrolides (erythromycin)** markedly increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Mifepristone** moderately increases the exposure to **fluvastatin**. [Moderate] Study
- ▶ **Mifepristone** very markedly increases the exposure to **simvastatin**. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to statins (**atorvastatin, simvastatin**). [Moderate] Study
- ▶ **Monoclonal antibodies (sarilumab)** are predicted to decrease the exposure to statins (**atorvastatin, simvastatin**). [Moderate] Study
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to statins (**atorvastatin, simvastatin**). Monitor and adjust dose. [Moderate] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to statins (**atorvastatin, simvastatin**). Monitor and adjust dose. [Severe] Theoretical
- ▶ **Nicotinic acid** might increase the risk of rhabdomyolysis when given with statins. Use with caution or avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **simvastatin**. Avoid. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of statins (**atorvastatin, rosuvastatin**). Adjust dose. [Severe] Theoretical
- ▶ **NNRTIs (etravirine)** slightly decrease the exposure to **atorvastatin**. Monitor and adjust dose. [Moderate] Study
- ▶ **NNRTIs (etravirine)** are predicted to increase the exposure to **fluvastatin**. Adjust dose. [Severe] Theoretical
- ▶ **NNRTIs (etravirine)** are predicted to decrease the exposure to **simvastatin**. Adjust dose. [Moderate] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to statins (**atorvastatin, simvastatin**). [Moderate] Study
- ▶ **Olaparib** is predicted to increase the exposure to statins. [Moderate] Theoretical
- ▶ **Osimertinib** causes a small increase in the exposure to **rosuvastatin**. [Severe] Study
- ▶ **Pazopanib** might cause increased ALT concentrations when given with **simvastatin**. [Moderate] Study
- ▶ **Pazopanib** might affect the exposure to statins (**atorvastatin, pravastatin, rosuvastatin**). [Moderate] Theoretical
- ▶ **Rosuvastatin** is predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [Severe] Theoretical
- ▶ **Pibrentasvir** with glecaprevir markedly increases the exposure to **atorvastatin**. Avoid. [Severe] Study
- ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **fluvastatin**. [Moderate] Theoretical
- ▶ **Pibrentasvir** with glecaprevir moderately increases the exposure to **pravastatin**. Use with caution and adjust **pravastatin** dose, p. 221. [Moderate] Study
- ▶ **Pibrentasvir** with glecaprevir moderately increases the exposure to **rosuvastatin**. Use with caution and adjust **rosuvastatin** dose, p. 221. [Moderate] Study
- ▶ **Pibrentasvir** with glecaprevir moderately increases the exposure to **simvastatin**. Avoid. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **atorvastatin**. [Moderate] Theoretical
- ▶ **Ranolazine** slightly increases the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 222. [Moderate] Study
- ▶ **Regorafenib** is predicted to increase the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 221. [Moderate] Study
- ▶ **Regorafenib** is predicted to increase the exposure to statins (**atorvastatin, fluvastatin**). [Moderate] Study
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **simvastatin**. Avoid. [Moderate] Theoretical

## Statins (continued)

- ▶ **Ribociclib** is predicted to increase the exposure to statins (pravastatin, rosuvastatin). [Moderate] Theoretical
  - ▶ **Rifamycins (rifampicin)** markedly decrease the exposure to atorvastatin. Manufacturer advises take both drugs at the same time. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to fluvastatin. Monitor and adjust dose. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** very markedly decrease the exposure to simvastatin. [Moderate] Study
  - ▶ **Roxadustat** might increase the exposure to fluvastatin. Monitor adverse effects and adjust dose. [Moderate] Theoretical
  - ▶ **Roxadustat** is predicted to increase the exposure to statins (atorvastatin, pravastatin, rosuvastatin, simvastatin). Monitor adverse effects and adjust dose. [Moderate] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to statins (atorvastatin, simvastatin). [Moderate] Study
  - ▶ **Fluvastatin** slightly increases the exposure to **sulfonylureas (glibenclamide)**. [Mild] Study
  - ▶ **Atorvastatin** very slightly increases the exposure to **talazoparib**. [Moderate] Study
  - ▶ **Taxanes (cabazitaxel)** are predicted to affect the exposure to statins (atorvastatin, pravastatin, rosuvastatin, simvastatin). Manufacturer advises take 12 hours before or 3 hours after cabazitaxel. [Moderate] Theoretical
  - ▶ **Tedizolid** is predicted to increase the exposure to statins (atorvastatin, fluvastatin, rosuvastatin). Avoid. [Moderate] Study
  - ▶ **Tepotinib** might increase the exposure to statins (atorvastatin, fluvastatin, rosuvastatin). [Moderate] Theoretical
  - ▶ **Teriflunomide** moderately increases the exposure to rosuvastatin. Adjust rosuvastatin dose, p. 221. [Moderate] Study → Also see TABLE 1 p. 1490
  - ▶ **Teriflunomide** is predicted to increase the exposure to statins (atorvastatin, fluvastatin, pravastatin, simvastatin). [Moderate] Study → Also see TABLE 1 p. 1490
  - ▶ **Ticagrelor** slightly to moderately increases the exposure to simvastatin. Adjust simvastatin dose, p. 222. [Moderate] Study
  - ▶ **Tivozanib** is predicted to decrease the exposure to rosuvastatin. [Moderate] Theoretical
  - ▶ **Tucatinib** is predicted to increase the exposure to simvastatin. Avoid or adjust dose. [Moderate] Theoretical
  - ▶ **Velpatasvir** with sofosbuvir slightly increases the exposure to atorvastatin. [Severe] Study
  - ▶ **Velpatasvir** moderately increases the exposure to rosuvastatin. Adjust rosuvastatin dose and monitor adverse effects, p. 221. [Severe] Study
  - ▶ **Velpatasvir** with sofosbuvir is predicted to increase the exposure to statins (fluvastatin, simvastatin). Monitor adverse effects and adjust dose. [Severe] Theoretical
  - ▶ **Venetoclax** is predicted to increase the exposure to atorvastatin. [Moderate] Study
  - ▶ **Venetoclax** is predicted to increase the exposure to statins (fluvastatin, pravastatin, rosuvastatin, simvastatin). [Moderate] Theoretical
  - ▶ **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the exposure to atorvastatin. Adjust atorvastatin dose, p. 220. [Moderate] Theoretical
  - ▶ **Voxilaprevir** with sofosbuvir and velpatasvir moderately increases the exposure to pravastatin. Monitor and adjust pravastatin dose, p. 221. [Moderate] Study
  - ▶ **Voxilaprevir** with sofosbuvir and velpatasvir markedly increases the exposure to rosuvastatin. Avoid. [Severe] Study
  - ▶ **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the exposure to statins (fluvastatin, simvastatin). Avoid. [Moderate] Theoretical
- Stiripentol** → see antiepileptics
- Streptokinase** → see TABLE 3 p. 1490 (anticoagulant effects)
- Streptomycin** → see aminoglycosides
- Streptozocin** → see TABLE 1 p. 1490 (hepatotoxicity), TABLE 15 p. 1493 (myelosuppression), TABLE 2 p. 1490 (nephrotoxicity)
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with streptozocin. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- Strontium** → see TABLE 5 p. 1491 (thromboembolism)

- ▶ Oral **antacids** decrease the absorption of oral strontium. Separate administration by 2 hours. [Moderate] Study
  - ▶ Oral **calcium salts** decrease the exposure to strontium. Separate administration by 2 hours. [Moderate] Study
  - ▶ **Strontium** is predicted to decrease the absorption of **quinolones**. Avoid. [Moderate] Theoretical
  - ▶ **Strontium** is predicted to decrease the absorption of **tetracyclines**. Avoid. [Moderate] Theoretical
- Sucralfate**
- ▶ **Sucralfate** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Theoretical
  - ▶ **Sucralfate** potentially decreases the effects of **coumarins (warfarin)**. Separate administration by 2 hours. [Moderate] Anecdotal
  - ▶ **Sucralfate** decreases the absorption of **digoxin**. Separate administration by 2 hours. [Severe] Anecdotal
  - ▶ **Sucralfate** decreases the absorption of **dolutegravir**. [Moderate] Study
  - ▶ **Sucralfate** increases the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. Separate administration by 1 hour. [Moderate] Study
  - ▶ **Potassium citrate** increases the risk of adverse effects when given with sucralfate. Avoid. [Moderate] Theoretical
  - ▶ **Sucralfate** decreases the exposure to **quinolones**. Separate administration by 2 hours. [Moderate] Study
  - ▶ **Sodium citrate** is predicted to increase the risk of adverse effects when given with sucralfate. Avoid. [Moderate] Theoretical
  - ▶ **Sucralfate** decreases the absorption of **sulpiride**. Separate administration by 2 hours. [Moderate] Study
  - ▶ Oral sucralfate might decrease the absorption of oral **tetracyclines**. [Moderate] Theoretical
  - ▶ **Sucralfate** potentially decreases the absorption of **theophylline**. Separate administration by at least 2 hours. [Moderate] Study
  - ▶ **Sucralfate** decreases the absorption of **thyroid hormones (levothyroxine)**. Separate administration by at least 4 hours. [Moderate] Study
  - ▶ **Sucralfate** is predicted to decrease the absorption of **tricyclic antidepressants**. [Moderate] Study
- Sucroferric oxyhydroxide**
- ▶ **Sucroferric oxyhydroxide** might decrease the exposure to **roxadustat**. Roxadustat should be taken at least 1 hour after sucroferric oxyhydroxide. [Moderate] Theoretical
- Sugammadex**
- ▶ **Sugammadex** is predicted to decrease the exposure to **combined hormonal contraceptives**. Refer to patient information leaflet for missed pill advice. [Severe] Theoretical
  - ▶ **Sugammadex** is predicted to decrease the exposure to **desogestrel**. Refer to patient information leaflet for missed pill advice. [Severe] Theoretical
  - ▶ **Sugammadex** is predicted to decrease the efficacy of **etonogestrel**. Use additional contraceptive precautions. [Severe] Theoretical
  - ▶ **Sugammadex** is predicted to decrease the exposure to **levonorgestrel**. Use additional contraceptive precautions. [Severe] Theoretical
  - ▶ **Sugammadex** is predicted to decrease the exposure to **medroxyprogesterone**. Use additional contraceptive precautions. [Severe] Theoretical
  - ▶ **Sugammadex** is predicted to decrease the exposure to **norethisterone**. Use additional contraceptive precautions. [Severe] Theoretical
- Sulfadiazine** → see sulfonamides
- Sulfadoxine** → see sulfonamides
- Sulfamethoxazole** → see sulfonamides
- Sulfasalazine** → see TABLE 1 p. 1490 (hepatotoxicity), TABLE 15 p. 1493 (myelosuppression)
- ▶ **Anti-androgens (darolutamide)** are predicted to increase the exposure to sulfasalazine. Avoid. [Severe] Theoretical
  - ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to sulfasalazine. [Moderate] Theoretical
  - ▶ **Sulfasalazine** decreases the concentration of **digoxin**. [Moderate] Study
  - ▶ **Sulfasalazine** is predicted to decrease the absorption of **folates**. [Moderate] Study

- ▶ **Leflunomide** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 1 p. 1490 → Also see TABLE 15 p. 1493
- ▶ **Regorafenib** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 15 p. 1493
- ▶ **Roxadustat** might increase the exposure to **sulfasalazine**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ **Tedizolid** is predicted to increase the exposure to **sulfasalazine**. Avoid. [Moderate] Study
- ▶ **Tepotinib** might increase the exposure to **sulfasalazine**. [Severe] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 1 p. 1490
- ▶ **Velpatasvir** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Theoretical
- ▶ **Voxilaprevir** is predicted to increase the concentration of **sulfasalazine**. Avoid. [Severe] Theoretical

### Sulfonamides

sulfadiazine · sulfadoxine · sulfamethoxazole

- ▶ **Sulfonamides** potentially increase the risk of methaemoglobinaemia when given with topical **anaesthetics**, **local (prilocaine)**. Use with caution or avoid. [Severe] Anecdotal
- ▶ **Sulfadiazine** is predicted to increase the concentration of **antiepileptics (fosphenytoin)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Sulfadiazine** increases the concentration of **antiepileptics (phenytoin)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antimalarials (pyrimethamine)** increase the risk of adverse effects when given with **sulfonamides**. [Severe] Study
- ▶ **Chlorprocaine** is predicted to decrease the effects of **sulfonamides**. Avoid. [Severe] Theoretical
- ▶ **Sulfadiazine** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Theoretical
- ▶ **Sulfamethoxazole** increases the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Sulfonamides** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ **Sulfonamides** are predicted to increase the exposure to **methotrexate**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Potassium aminobenzoate** is predicted to affect the efficacy of **sulfonamides**. Avoid. [Severe] Theoretical
- ▶ **Sulfonamides** are predicted to increase the exposure to **sulfonylureas**. [Moderate] Study
- ▶ **Sulfonamides** are predicted to increase the effects of **thiopental**. [Moderate] Theoretical

**Sulfonylureas** → see TABLE 14 p. 1493 (antidiabetic drugs)

glibenclamide · gliclazide · glimepiride · glipizide · tolbutamide

- ▶ **Anti-androgens (darolutamide)** are predicted to increase the concentration of **glibenclamide**. [Moderate] Theoretical
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, miconazole)** are predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (voriconazole)** are predicted to increase the concentration of **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Cephalosporins (ceftobiprole)** are predicted to increase the concentration of **glibenclamide**. [Moderate] Theoretical
- ▶ **Certinib** is predicted to increase the exposure to **glimepiride**. Adjust dose. [Moderate] Theoretical
- ▶ **Chloramphenicol** is predicted to increase the exposure to **sulfonylureas**. [Severe] Study
- ▶ **Elxacaftor** is predicted to increase the exposure to **glibenclamide**. [Moderate] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** increase the risk of hepatotoxicity when given with **glibenclamide**. Avoid. [Severe] Study
- ▶ **Fenfluramine** might decrease blood glucose concentrations when given with **sulfonylureas**. [Moderate] Theoretical

- ▶ **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **sulfonylureas**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **glibenclamide**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the concentration of **glibenclamide**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to **sulfonylureas**. [Moderate] Theoretical
- ▶ **Metreleptin** is predicted to increase the risk of hypoglycaemia when given with **sulfonylureas**. Monitor blood glucose and adjust dose. [Severe] Theoretical
- ▶ **Mifepristone** is predicted to increase the exposure to **sulfonylureas (glimepiride, tolbutamide)**. [Moderate] Theoretical
- ▶ **Nitisinone** is predicted to increase the exposure to **sulfonylureas (glimepiride, tolbutamide)**. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **sulfonylureas**. [Moderate] Study
- ▶ **Roxadustat** is predicted to increase the exposure to **glibenclamide**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Statins (fluvastatin)** slightly increase the exposure to **glibenclamide**. [Mid] Study
- ▶ **Sulfonamides** are predicted to increase the exposure to **sulfonylureas**. [Moderate] Study
- ▶ **Taxanes (cabazitaxel)** are predicted to affect the exposure to **glibenclamide**. Manufacturer advises take 12 hours before or 3 hours after **cabazitaxel**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **glibenclamide**. [Moderate] Study
- ▶ **Venetoclax** is predicted to increase the exposure to **glibenclamide**. [Moderate] Theoretical

**Sulindac** → see NSAIDs

- ▶ **Sulpiride** → see TABLE 8 p. 1491 (hypotension), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 11 p. 1492 (CNS depressant effects)
- ▶ Oral **antacids** decrease the absorption of oral **sulpiride**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Sulpiride** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 9 p. 1492
- ▶ **Sulpiride** is predicted to decrease the effects of **levodopa**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1491
- ▶ **Sulpiride** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1492
- ▶ **Sucralfate** decreases the absorption of **sulpiride**. Separate administration by 2 hours. [Moderate] Study

**Sumatriptan** → see triptans

- ▶ **Sunitinib** → see TABLE 15 p. 1493 (myelosuppression), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 4 p. 1490 (antiplatelet effects)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1080. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1080. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1080. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **sunitinib**. [Moderate] Study
- ▶ **Cobiciclat** is predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1080. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Dabrafenib** is predicted to decrease the exposure to **sunitinib**. [Moderate] Study
- ▶ **Elbasvir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. [Moderate] Theoretical

## Sunitinib (continued)

- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **sunitinib**. [Moderate] Study
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **sunitinib**. Avoid. [Moderate] Theoretical
  - ▶ **Grazoprevir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1080. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1080. [Moderate] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 15 p. 1493 → Also see TABLE 4 p. 1490
  - ▶ **Letemovir** is predicted to increase the exposure to **sunitinib**. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1080. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ **Mitotane** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1080. [Moderate] Study → Also see TABLE 15 p. 1493
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **sunitinib**. [Moderate] Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 15 p. 1493 → Also see TABLE 9 p. 1492
  - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1080. [Moderate] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **sunitinib**. [Moderate] Study
  - ▶ **Sunitinib** has been reported to cause hypothyroidism when given with **thyroid hormones (levothyroxine)**. [Moderate] Anecdotal
- Suxamethonium** → see TABLE 6 p. 1491 (bradycardia), TABLE 20 p. 1494 (neuromuscular blocking effects)
- ▶ **Alkylating agents (cyclophosphamide)** increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Study
  - ▶ **Antiarrhythmics (lidocaine)** are predicted to increase the effects of **suxamethonium**. [Moderate] Study
  - ▶ **Anticholinesterases, centrally acting** increase the effects of **suxamethonium**. [Moderate] Theoretical → Also see TABLE 6 p. 1491
  - ▶ **Antiepileptics (carbamazepine)** increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Study
  - ▶ **Antiepileptics (fosphenytoin, phenytoin)** increase the effects of **suxamethonium**. [Moderate] Study
  - ▶ **Clindamycin** increases the effects of **suxamethonium**. [Severe] Anecdotal
  - ▶ **Corticosteroids** are predicted to decrease the effects of **suxamethonium**. [Severe] Anecdotal
  - ▶ **Suxamethonium** is predicted to increase the risk of cardiovascular adverse effects when given with **digoxin**. [Severe] Anecdotal → Also see TABLE 6 p. 1491
  - ▶ **Irinotecan** is predicted to increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Theoretical
  - ▶ Intravenous **magnesium** is predicted to increase the effects of **suxamethonium**. [Moderate] Study
  - ▶ **Metoclopramide** increases the effects of **suxamethonium**. [Moderate] Study
  - ▶ **Penicillins (piperacillin)** increase the effects of **suxamethonium**. [Moderate] Study
  - ▶ **SSRIs** potentially increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Unknown] Theoretical

**Sympathomimetics, inotropic**

dobutamine · dopamine

- ▶ **Sympathomimetics, inotropic** are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
- ▶ **Beta blockers, non-selective** increase the risk of hypertension and bradycardia when given with **dobutamine**. [Severe] Theoretical
- ▶ **Beta blockers, selective** increase the risk of hypertension and bradycardia when given with **dobutamine**. [Moderate] Theoretical
- ▶ **Entacapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, inotropic**. [Moderate] Theoretical
- ▶ **Ergometrine** potentially increases the risk of peripheral vasoconstriction when given with **dopamine**. Avoid. [Severe] Anecdotal
- ▶ **Sympathomimetics, inotropic** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Sympathomimetics, inotropic** are predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors**. Avoid. [Severe] Anecdotal
- ▶ **Sympathomimetics, inotropic** are predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Opicapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, inotropic**. [Severe] Theoretical
- ▶ **Tolcapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, inotropic**. [Moderate] Theoretical

**Sympathomimetics, vasoconstrictor**

adrenaline/epinephrine · ephedrine · isometheptene · metaraminol · midodrine · noradrenaline/norepinephrine · phenylephrine · pseudoephedrine · xylometazoline

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application of **phenylephrine** and **xylometazoline**, the possibility of interactions should be borne in mind.

- ▶ **Ephedrine** increases the risk of adverse effects when given with **aminophylline**. Avoid in children. [Moderate] Study
- ▶ **Sympathomimetics, vasoconstrictor** are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
- ▶ **Atropine** increases the risk of severe hypertension when given with **phenylephrine**. [Severe] Study
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of hypertension and bradycardia when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Severe] Study
- ▶ **Beta blockers, selective** are predicted to increase the risk of hypertension and bradycardia when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Severe] Study
- ▶ **Isometheptene** potentially increases the risk of adverse effects when given with **dopamine receptor agonists (bromocriptine)**. Avoid. [Severe] Anecdotal
- ▶ **Entacapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Moderate] Study
- ▶ **Ergometrine** is predicted to increase the risk of peripheral vasoconstriction when given with **noradrenaline/norepinephrine**. [Severe] Anecdotal
- ▶ **Pseudoephedrine** increases the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Study
- ▶ **Sympathomimetics, vasoconstrictor (adrenaline/epinephrine, ephedrine, isometheptene, noradrenaline/norepinephrine, phenylephrine)** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Sympathomimetics, vasoconstrictor** are predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors**. Avoid. [Severe] Anecdotal
- ▶ **Sympathomimetics, vasoconstrictor** are predicted to increase the risk of a hypertensive crisis when given with **MAOIs**,

**irreversible.** Avoid and for 14 days after stopping the MAOI.

[Severe] Study

- ▶ **Mianserin** decreases the effects of **ephedrine**. [Severe] Anecdotal
- ▶ Sympathomimetics, vasoconstrictor (**ephedrine, isometheptene, phenylephrine, pseudoephedrine**) are predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Study
- ▶ **Opicapone** is predicted to increase the risk of cardiovascular adverse effects when given with sympathomimetics, vasoconstrictor (**adrenaline/epinephrine, noradrenaline/norepinephrine**). [Severe] Theoretical
- ▶ Sympathomimetics, vasoconstrictor might increase the risk of a hypertensive crisis when given with **ozanimod**. [Severe] Theoretical
- ▶ **Ephedrine** increases the risk of adverse effects when given with **theophylline**. Avoid in children. [Moderate] Study
- ▶ **Tolcapone** is predicted to increase the effects of sympathomimetics, vasoconstrictor (**adrenaline/epinephrine, noradrenaline/norepinephrine**). [Moderate] Theoretical
- ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **ephedrine**. Avoid. [Severe] Study
- ▶ **Tricyclic antidepressants** increase the effects of sympathomimetics, vasoconstrictor (**adrenaline/epinephrine, noradrenaline/norepinephrine, phenylephrine**). Avoid. [Severe] Study

**Tacalcitol** → see vitamin D substances

**Tacrolimus** → see TABLE 2 p. 1490 (nephrotoxicity), TABLE 16 p. 1494 (increased serum potassium)

- ▶ Pomelo and pomegranate juices might greatly increase the concentration of tacrolimus.
- ▶ Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Tacrolimus** is predicted to increase the exposure to **afatinib**. [Moderate] Theoretical
- ▶ **Alcohol** increases the risk of facial flushing and skin irritation when given with topical **tacrolimus**. [Moderate] Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the concentration of **tacrolimus**. [Severe] Anecdotal
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Baricitinib** is predicted to enhance the risk of immunosuppression when given with **tacrolimus**. [Severe] Theoretical
- ▶ **Berotrastat** is predicted to increase the exposure to **tacrolimus**. [Moderate] Study
- ▶ **Brigatinib** potentially decreases the concentration of **tacrolimus**. Avoid. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Calcium channel blockers (nicardipine)** potentially increase the concentration of **tacrolimus**. Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ **Ceritinib** is predicted to increase the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
- ▶ **Chloramphenicol** increases the concentration of **tacrolimus**. [Severe] Study
- ▶ **Ciclosporin** increases the concentration of **tacrolimus**. Avoid. [Severe] Study → Also see TABLE 2 p. 1490 → Also see TABLE 16 p. 1494
- ▶ **Cobicistat** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the concentration of **tacrolimus** and **tacrolimus** potentially increases the concentration of **endothelin receptor antagonists (bosentan)**. Avoid. [Severe] Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **tacrolimus**. Avoid. [Severe] Theoretical
- ▶ **Glecaprevir** with pibrentasvir slightly increases the exposure to **tacrolimus**. Monitor and adjust dose. [Mild] Study
- ▶ **Grapefruit** juice greatly increases the concentration of **tacrolimus**. Avoid. [Severe] Study
- ▶ **Grazoprevir** increases the exposure to **tacrolimus**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Iron chelators (dexrazoxane)** might increase the risk of immunosuppression when given with **tacrolimus**. [Severe] Theoretical
- ▶ **Ivacaftor** is predicted to increase the exposure to **tacrolimus**. [Moderate] Theoretical
- ▶ **Larotrectinib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **Letermovir** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tacrolimus**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Tacrolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Lorlatinib** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Moderate] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Tacrolimus** is predicted to affect the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **tacrolimus**. [Severe] Theoretical
- ▶ **NNRTIs (doravirine)** are predicted to decrease the exposure to **tacrolimus**. Monitor **tacrolimus** concentration and adjust dose, p. 907. [Moderate] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Olaparib** might alter the exposure to **tacrolimus**. [Moderate] Theoretical
- ▶ **Palbociclib** is predicted to increase the exposure to **tacrolimus**. Adjust dose. [Moderate] Theoretical
- ▶ **Pibrentasvir** with glecaprevir slightly increases the exposure to **tacrolimus**. Monitor and adjust dose. [Mild] Study

## Tacrolimus (continued)

- ▶ **Pitolisant** is predicted to decrease the exposure to **tacrolimus**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Ranolazine** increases the concentration of **tacrolimus**. Adjust dose. [\[Severe\]](#) Anecdotal
  - ▶ **Ribociclib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Rifamycins (rifampicin)** decrease the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
  - ▶ **Rucaparib** is predicted to increase the exposure to **tacrolimus**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Sirolimus** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** increases the exposure to **sirolimus**. [\[Severe\]](#) Study
  - ▶ **Tacrolimus** potentially increases the risk of serotonin syndrome when given with **SNRIs (venlafaxine)**. [\[Severe\]](#) Anecdotal
  - ▶ **St John's wort** decreases the concentration of **tacrolimus**. Avoid. [\[Severe\]](#) Study
  - ▶ **Tacrolimus** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Tigecycline** has been reported to increase the concentration of **tacrolimus**. [\[Severe\]](#) Anecdotal
  - ▶ **Tacrolimus** increases the exposure to **tofacitinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Tucatinib** is predicted to increase the exposure to **tacrolimus**. Avoid or adjust dose. [\[Moderate\]](#) Theoretical
- Tadalafil** → see phosphodiesterase type-5 inhibitors
- Tafasitamab** → see monoclonal antibodies
- Talazoparib** → see TABLE 15 p. 1493 (myelosuppression)
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [\[Severe\]](#) Study
  - ▶ **Antiarrhythmics (propafenone)** are predicted to increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [\[Moderate\]](#) Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [\[Severe\]](#) Study
  - ▶ **Berotrastat** is predicted to increase the concentration of **talazoparib**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Beta blockers, non-selective (carvedilol)** cause a small increase in the bioavailability of **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [\[Moderate\]](#) Study
  - ▶ **Calcium channel blockers (diltiazem, felodipine)** very slightly increase the exposure to **talazoparib**. [\[Moderate\]](#) Study
  - ▶ **Calcium channel blockers (verapamil)** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [\[Severe\]](#) Study
  - ▶ **Ciclosporin** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [\[Severe\]](#) Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [\[Moderate\]](#) Theoretical
  - ▶ **Eltrombopag** is predicted to increase the exposure to **talazoparib**. Avoid or monitor. [\[Moderate\]](#) Theoretical
  - ▶ **HIV-protease inhibitors (darunavir, tipranavir)** are predicted to increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [\[Moderate\]](#) Theoretical
  - ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [\[Severe\]](#) Study
  - ▶ **Ibrutinib** is predicted to increase the exposure to **talazoparib**. Separate administration by at least 6 hours. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Ivacaftor** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [\[Severe\]](#) Study
  - ▶ **Lapatinib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [\[Severe\]](#) Study
  - ▶ **Leflunomide** is predicted to increase the exposure to **talazoparib**. Avoid or monitor. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **talazoparib**. [\[Moderate\]](#) Study

- ▶ **Macrolides** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [\[Severe\]](#) Study
  - ▶ **Neratinib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [\[Severe\]](#) Study
  - ▶ **Olaparib** might increase the exposure to **talazoparib**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Osimertinib** is predicted to increase the exposure to **talazoparib**. [\[Moderate\]](#) Study
  - ▶ **Ranolazine** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [\[Severe\]](#) Study
  - ▶ **Rucaparib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [\[Severe\]](#) Study → Also see TABLE 15 p. 1493
  - ▶ **Sotorasib** is predicted to increase the exposure to **talazoparib**. Avoid or adjust dose. [\[Moderate\]](#) Study
  - ▶ **SSRIs (fluvoxamine)** very slightly increase the exposure to **talazoparib**. [\[Moderate\]](#) Study
  - ▶ **Statins (atorvastatin)** very slightly increase the exposure to **talazoparib**. [\[Moderate\]](#) Study
  - ▶ **Teptinib** is predicted to increase the concentration of **talazoparib**. [\[Severe\]](#) Study
  - ▶ **Teriflunomide** is predicted to increase the exposure to **talazoparib**. Avoid or monitor. [\[Moderate\]](#) Theoretical
  - ▶ **Tucatinib** is predicted to increase the exposure to **talazoparib**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Vandetanib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [\[Severe\]](#) Study
  - ▶ **Vemurafenib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [\[Severe\]](#) Study
- Tamoxifen** → see TABLE 5 p. 1491 (thromboembolism)
- ▶ **Tamoxifen** (high-dose) might increase the concentration of **antiepileptics (fosphenytoin)** and **antiepileptics (fosphenytoin)** might decrease the concentration of **tamoxifen** (high-dose). [\[Severe\]](#) Theoretical
  - ▶ **Tamoxifen** (high-dose) might increase the concentration of **antiepileptics (phenytoin)** and **antiepileptics (phenytoin)** might decrease the concentration of **tamoxifen** (high-dose). [\[Severe\]](#) Anecdotal
  - ▶ **Bupropion** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [\[Severe\]](#) Study
  - ▶ **Cinacalcet** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [\[Severe\]](#) Study
  - ▶ **Tamoxifen** increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Study
  - ▶ **Rifamycins (rifampicin)** markedly decrease the exposure to **tamoxifen**. [\[Unknown\]](#) Study
  - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to decrease the efficacy of **tamoxifen**. Avoid. [\[Severe\]](#) Study
  - ▶ **Terbinafine** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [\[Severe\]](#) Study
- Tamsulosin** → see alpha blockers
- Tapentadol** → see opioids
- Taxanes** → see TABLE 15 p. 1493 (myelosuppression), TABLE 12 p. 1493 (peripheral neuropathy)
- cabazitaxel · docetaxel · paclitaxel
- ▶ **Cabazitaxel** is predicted to affect the exposure to **angiotensin-1 receptor antagonists (valsartan)**. Manufacturer advises take 12 hours before or 3 hours after **cabazitaxel**. [\[Moderate\]](#) Theoretical
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **cabazitaxel**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **docetaxel**. [\[Severe\]](#) Theoretical
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **paclitaxel**. Avoid. [\[Severe\]](#) Study
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **cabazitaxel**. [\[Moderate\]](#) Theoretical
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **docetaxel**. [\[Severe\]](#) Study

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **paclitaxel**. [\[Moderate\]](#) Anecdotal
- ▶ **Antiarrhythmics (amiodaron)** are predicted to increase the exposure to taxanes (**docetaxel**, **paclitaxel**) (oral). [\[Unknown\]](#) Theoretical → Also see [TABLE 12 p. 1493](#)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cabazitaxel**. Avoid. [\[Moderate\]](#) Study → Also see [TABLE 12 p. 1493](#)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **docetaxel**. [\[Severe\]](#) Theoretical → Also see [TABLE 12 p. 1493](#)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **paclitaxel**. Avoid. [\[Severe\]](#) Study → Also see [TABLE 12 p. 1493](#)
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **paclitaxel**. [\[Moderate\]](#) Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **cabazitaxel**. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **docetaxel**. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **cabazitaxel**. Avoid or monitor—consult product literature. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **docetaxel**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **docetaxel**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cabazitaxel** is predicted to affect the exposure to antihistamines, non-sedating (**fexofenadine**). Manufacturer advises take 12 hours before or 3 hours after **cabazitaxel**. [\[Moderate\]](#) Theoretical
- ▶ **Berotrastat** is predicted to increase the concentration of taxanes (**docetaxel**, **paclitaxel**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **cabazitaxel**. [\[Moderate\]](#) Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **docetaxel**. [\[Severe\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **paclitaxel**. [\[Moderate\]](#) Anecdotal
- ▶ **Ceritinib** is predicted to increase the exposure to **paclitaxel**. [\[Moderate\]](#) Theoretical → Also see [TABLE 15 p. 1493](#)
- ▶ **Ciclosporin** increases the concentration of taxanes (**docetaxel**, **paclitaxel**) (oral). [\[Unknown\]](#) Study
- ▶ **Clopidogrel** is predicted to increase the concentration of **paclitaxel**. [\[Severe\]](#) Anecdotal
- ▶ **Cobicistat** is predicted to increase the exposure to **cabazitaxel**. Avoid or monitor—consult product literature. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **docetaxel**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **paclitaxel**. [\[Moderate\]](#) Anecdotal
- ▶ **Crizotinib** is predicted to increase the exposure to **cabazitaxel**. [\[Moderate\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **docetaxel**. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **paclitaxel**. [\[Moderate\]](#) Anecdotal
- ▶ **Dabrafenib** is predicted to decrease the exposure to **cabazitaxel**. [\[Moderate\]](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **docetaxel**. [\[Severe\]](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **paclitaxel**. Avoid. [\[Severe\]](#) Study
- ▶ **Eliugustat** is predicted to increase the exposure to **paclitaxel**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **cabazitaxel**. [\[Moderate\]](#) Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **docetaxel**. [\[Severe\]](#) Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **paclitaxel**. Avoid. [\[Severe\]](#) Study
- ▶ **Fibrates (gemfibrozil)** are predicted to increase the concentration of **paclitaxel**. [\[Severe\]](#) Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **cabazitaxel**. Avoid or monitor—consult product literature. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **docetaxel**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **paclitaxel**. [\[Moderate\]](#) Anecdotal
- ▶ **Ibrutinib** is predicted to increase the exposure to taxanes (**docetaxel**, **paclitaxel**). Separate administration by at least 6 hours. [\[Moderate\]](#) Theoretical → Also see [TABLE 15 p. 1493](#)
- ▶ **Idelalisib** is predicted to increase the exposure to **cabazitaxel**. Avoid or monitor—consult product literature. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **docetaxel**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **paclitaxel**. [\[Moderate\]](#) Anecdotal
- ▶ **Imatinib** is predicted to increase the exposure to **cabazitaxel**. [\[Moderate\]](#) Theoretical → Also see [TABLE 15 p. 1493](#)
- ▶ **Imatinib** is predicted to increase the exposure to **docetaxel**. [\[Severe\]](#) Study → Also see [TABLE 15 p. 1493](#)
- ▶ **Imatinib** is predicted to increase the exposure to **paclitaxel**. [\[Moderate\]](#) Anecdotal → Also see [TABLE 15 p. 1493](#)
- ▶ **Iron chelators (deferrioxirox)** are predicted to increase the concentration of **paclitaxel**. [\[Severe\]](#) Anecdotal
- ▶ **Ivacafor** is predicted to increase the exposure to **docetaxel** (oral). [\[Unknown\]](#) Theoretical
- ▶ **Ivacafor** is predicted to increase the exposure to **paclitaxel** (oral). [\[Unknown\]](#) Study
- ▶ **Lapatinib** slightly increases the exposure to **paclitaxel**. [\[Severe\]](#) Study
- ▶ **Leflunomide** is predicted to increase the concentration of **paclitaxel**. [\[Severe\]](#) Anecdotal → Also see [TABLE 15 p. 1493](#)
- ▶ **Letermovir** is predicted to increase the exposure to **cabazitaxel**. [\[Moderate\]](#) Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **docetaxel**. [\[Severe\]](#) Study
- ▶ **Letermovir** is predicted to increase the exposure to **paclitaxel**. [\[Moderate\]](#) Anecdotal
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with taxanes (**docetaxel**, **paclitaxel**). UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Lorlatinib** is predicted to decrease the exposure to **paclitaxel**. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **cabazitaxel**. Avoid or monitor—consult product literature. [\[Severe\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **docetaxel**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **paclitaxel**. [\[Moderate\]](#) Anecdotal
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **cabazitaxel**. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **docetaxel**. [\[Severe\]](#) Study
- ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to taxanes (**docetaxel**, **paclitaxel**) (oral). [\[Unknown\]](#) Theoretical
- ▶ **Cabazitaxel** is predicted to affect the exposure to **meglitinides (repaglinide)**. Manufacturer advises take 12 hours before or 3 hours after **cabazitaxel**. [\[Moderate\]](#) Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **paclitaxel**. [\[Mild\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **cabazitaxel**. Avoid. [\[Moderate\]](#) Study → Also see [TABLE 15 p. 1493](#)
- ▶ **Mitotane** is predicted to decrease the exposure to **docetaxel**. [\[Severe\]](#) Theoretical → Also see [TABLE 15 p. 1493](#)
- ▶ **Mitotane** is predicted to decrease the exposure to **paclitaxel**. Avoid. [\[Severe\]](#) Study → Also see [TABLE 15 p. 1493](#)
- ▶ **Neratinib** is predicted to increase the exposure to **docetaxel** (oral). [\[Unknown\]](#) Theoretical

## Taxanes (continued)

- ▶ **Neratinib** is predicted to increase the exposure to **paclitaxel** (oral). [Unknown] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **docetaxel**. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **paclitaxel**. [Moderate] Anecdotal
- ▶ **Nilotinib** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical → Also see TABLE 15 p. 1493
- ▶ **Nilotinib** is predicted to increase the exposure to **docetaxel**. [Severe] Study → Also see TABLE 15 p. 1493
- ▶ **Nilotinib** is predicted to increase the exposure to **paclitaxel**. [Moderate] Anecdotal → Also see TABLE 15 p. 1493
- ▶ **NRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **cabazitaxel**. [Moderate] Theoretical
- ▶ **NRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical
- ▶ **NRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **paclitaxel**. Avoid. [Severe] Study
- ▶ **Olaparib** might increase the exposure to taxanes (**docetaxel, paclitaxel**). [Moderate] Theoretical → Also see TABLE 15 p. 1493
- ▶ **Osimertinib** is predicted to increase the exposure to taxanes (**docetaxel, paclitaxel**). [Moderate] Study
- ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **paclitaxel**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **docetaxel**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **paclitaxel**. [Mil] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to taxanes (**docetaxel, paclitaxel**) (oral). [Unknown] Theoretical
- ▶ **Rifamycins (rifabutin)** are predicted to decrease the exposure to **cabazitaxel**. Avoid. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **cabazitaxel**. Avoid. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **paclitaxel**. Avoid. [Severe] Study
- ▶ **Rucaparib** is predicted to increase the exposure to taxanes (**docetaxel, paclitaxel**) (oral). [Unknown] Theoretical → Also see TABLE 15 p. 1493
- ▶ **Selpercatinib** is predicted to increase the exposure to **paclitaxel**. Avoid. [Moderate] Study
- ▶ **Sotorasib** is predicted to increase the exposure to taxanes (**docetaxel, paclitaxel**). Avoid or adjust dose. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **cabazitaxel**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **paclitaxel**. Avoid. [Severe] Study
- ▶ **Cabazitaxel** is predicted to affect the exposure to **statins (atorvastatin, pravastatin, rosuvastatin, simvastatin)**. Manufacturer advises take 12 hours before or 3 hours after **cabazitaxel**. [Moderate] Theoretical
- ▶ **Cabazitaxel** is predicted to affect the exposure to **sulfonlureas (glibenclamide)**. Manufacturer advises take 12 hours before or 3 hours after **cabazitaxel**. [Moderate] Theoretical
- ▶ **Tepotinib** is predicted to increase the concentration of taxanes (**docetaxel, paclitaxel**) (oral). [Severe] Study
- ▶ **Teriflunomide** is predicted to increase the concentration of **paclitaxel**. [Severe] Anecdotal
- ▶ **Tucatinib** is predicted to increase the exposure to taxanes (**docetaxel, paclitaxel**). Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Vandetanib** is predicted to increase the exposure to **docetaxel** (oral). [Unknown] Theoretical
- ▶ **Vandetanib** is predicted to increase the exposure to **paclitaxel** (oral). [Unknown] Study

- ▶ **Velpatasvir** is predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **docetaxel** (oral). [Unknown] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **paclitaxel** (oral). Use with caution and adjust dose. [Unknown] Theoretical

**Tazarotene** → see retinoids

**Tedizolid**

- ▶ **Tedizolid** is predicted to increase the exposure to **imatinib**. Avoid. [Moderate] Theoretical
- ▶ **Tedizolid** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **Tedizolid** is predicted to increase the exposure to **methotrexate**. Avoid. [Moderate] Theoretical
- ▶ **Tedizolid** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin, rosuvastatin)**. Avoid. [Moderate] Study
- ▶ **Tedizolid** is predicted to increase the exposure to **sulfasalazine**. Avoid. [Moderate] Study
- ▶ **Tedizolid** is predicted to increase the exposure to **topotecan**. Avoid. [Moderate] Study

**Tegafur** → see TABLE 15 p. 1493 (myelosuppression)

- ▶ **Tegafur** potentially increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ **Tegafur** increases the anticoagulant effect of **coumarins**. [Moderate] Theoretical
- ▶ **Folates** are predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** are predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tegafur**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Methotrexate** is predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical → Also see TABLE 15 p. 1493

**Teicoplanin**

**GENERAL INFORMATION** If other nephrotoxic or neurotoxic drugs are given, monitor renal and auditory function on prolonged administration.

**Telmisartan** → see angiotensin-II receptor antagonists

**Telotristat ethyl**

- ▶ **Telotristat ethyl** decreases the exposure to **benzodiazepines (midazolam)**. [Moderate] Study
- ▶ **Telotristat ethyl** is predicted to decrease the exposure to **NRTIs (doravirine)**. Avoid or adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. [Severe] Theoretical
- ▶ **Octreotide** (short-acting) decreases the exposure to **telotristat ethyl**. **Telotristat ethyl** should be taken at least 30 minutes before octreotide. [Moderate] Study

**Temazepam** → see benzodiazepines

**Temocillin** → see penicillins

**Temozolomide** → see alkylating agents

**Temeisrolimus** → see TABLE 15 p. 1493 (myelosuppression)

- ▶ **ACE inhibitors** are predicted to increase the risk of angioedema when given with **temeisrolimus**. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the concentration of **temeisrolimus**. Avoid. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the concentration of **temeisrolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **temeisrolimus**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **temeisrolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **temeisrolimus**. Avoid. [Severe] Theoretical
- ▶ **Bertralstat** is predicted to increase the exposure to **temeisrolimus**. Use with caution or avoid. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of and the risk of angioedema

when given with **temsirolimus**. Use with caution or avoid.

[Moderate] Theoretical

- ▶ **Temsirolimus** is predicted to increase the risk of angioedema when given with **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. [Moderate] Theoretical
  - ▶ **Cenobamate** is predicted to decrease the exposure to oral **temsirolimus**. Adjust dose. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
  - ▶ **Crizotinib** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
  - ▶ **Dabrafenib** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
  - ▶ **Entrectinib** is predicted to increase the exposure to **temsirolimus**. [Mild] Theoretical
  - ▶ **Fedratinib** is predicted to increase the exposure to **temsirolimus** (oral). Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Grapefruit** juice is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
  - ▶ **Idealisib** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
  - ▶ **Imatinib** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **temsirolimus**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the exposure to **temsirolimus**. Avoid. [Severe] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
  - ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
  - ▶ **Mifepristone** is predicted to increase the exposure to oral **temsirolimus**. [Severe] Theoretical
  - ▶ **Mitotane** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study → Also see TABLE 15 p. 1493
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
  - ▶ **Nilotinib** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1493
  - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
  - ▶ **Olaparib** might alter the exposure to **temsirolimus**. [Moderate] Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Pitolisant** is predicted to decrease the exposure to **temsirolimus**. Avoid. [Severe] Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study
  - ▶ **Selpercatinib** is predicted to increase the exposure to **temsirolimus**. [Moderate] Study
  - ▶ **Sotorasib** is predicted to decrease the exposure to **temsirolimus**. Avoid or adjust dose. [Moderate] Theoretical
  - ▶ **St John's wort** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- Tenecteplase** → see TABLE 3 p. 1490 (anticoagulant effects)
- Tenofovir alafenamide**
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
  - ▶ **Ciclosporin** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical

- ▶ **Eltrombopag** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
  - ▶ **Fostemsavir** is predicted to increase the exposure to **tenofovir alafenamide**. Adjust dose—consult product literature. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** increase the exposure to **tenofovir alafenamide**. Avoid or adjust dose. [Moderate] Study
  - ▶ **HIV-protease inhibitors (tipranavir)** are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
  - ▶ **Rifamycins** are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
  - ▶ **Teriflunomide** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
- Tenofovir disoproxil** → see TABLE 2 p. 1490 (nephrotoxicity)
- ▶ **Ciclosporin** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical → Also see TABLE 2 p. 1490
  - ▶ **Eltrombopag** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** are predicted to increase the risk of renal impairment when given with **tenofovir disoproxil**. [Severe] Anecdotal
  - ▶ **Ledipasvir** with sofosbuvir slightly increases the exposure to **tenofovir disoproxil**. [Moderate] Study
  - ▶ **Leflunomide** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical
  - ▶ **Teriflunomide** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical
  - ▶ **Velpatasvir** is predicted to increase the exposure to **tenofovir disoproxil**. [Severe] Study
  - ▶ **Voxilaprevir** with sofosbuvir and velpatasvir potentially increases the concentration of **tenofovir disoproxil**. [Severe] Study
- Tenoxicam** → see NSAIDs
- Tepotinib**
- ▶ **Tepotinib** is predicted to increase the concentration of **aliskiren**. [Severe] Study
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** might decrease the exposure to **tepotinib**. Avoid. [Severe] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** might decrease the exposure to **tepotinib**. Avoid. [Severe] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** might increase the exposure to **tepotinib**. Avoid. [Severe] Theoretical
  - ▶ **Tepotinib** is predicted to increase the concentration of **antihistamines, non-sedating (fexofenadine)**. [Severe] Study
  - ▶ **Tepotinib** is predicted to increase the concentration of **colchicine**. [Severe] Study
  - ▶ **Tepotinib** is predicted to increase the concentration of **digoxin**. [Severe] Study
  - ▶ **Tepotinib** is predicted to increase the concentration of **everolimus**. [Severe] Study
  - ▶ **Tepotinib** is predicted to increase the concentration of **factor XA inhibitors (edoxaban, rivaroxaban)**. [Severe] Study
  - ▶ **HIV-protease inhibitors (lopinavir)** boosted with ritonavir might increase the exposure to **tepotinib**. Avoid. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors (ritonavir)** might increase the exposure to **tepotinib**. Avoid. [Severe] Theoretical
  - ▶ **Tepotinib** is predicted to increase the concentration of **loperamide**. [Severe] Study
  - ▶ **Macrolides (clarithromycin)** might increase the exposure to **tepotinib**. Avoid. [Severe] Theoretical
  - ▶ **Mitotane** might decrease the exposure to **tepotinib**. Avoid. [Severe] Theoretical
  - ▶ **Rifamycins (rifampicin)** might decrease the exposure to **tepotinib**. Avoid. [Severe] Theoretical
  - ▶ **Tepotinib** is predicted to increase the concentration of **sirolimus**. [Severe] Study
  - ▶ **Tepotinib** might decrease the exposure to **St John's wort**. Avoid. [Severe] Theoretical

**Tepotinib** (continued)

- ▶ **Tepotinib** might increase the exposure to **statins** (**atorvastatin**, **fluvastatin**, **rosuvastatin**). [Moderate] Theoretical
- ▶ **Tepotinib** might increase the exposure to **sulfasalazine**. [Severe] Theoretical
- ▶ **Tepotinib** is predicted to increase the concentration of **talazoparib**. [Severe] Study
- ▶ **Tepotinib** is predicted to increase the concentration of **taxanes** (**docetaxel**, **paclitaxel**) (oral). [Severe] Study
- ▶ **Tepotinib** slightly increases the exposure to **thrombin inhibitors** (**dabigatran**). [Severe] Study
- ▶ **Tepotinib** is predicted to increase the concentration of **topotecan**. [Severe] Study

**Terazosin** → see alpha blockers

**Terbinafine**

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Terbinafine** is predicted to increase the exposure to **anticholinesterases, centrally acting** (**galantamine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Terbinafine** is predicted to moderately increase the exposure to **antipsychotics, second generation** (**aripiprazole**). Adjust aripiprazole dose, p. 427. [Moderate] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **antipsychotics, second generation** (**risperidone**). Adjust dose. [Moderate] Study
- ▶ **Terbinafine** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **beta blockers, selective** (**metoprolol**, **nebivolol**). [Moderate] Study
- ▶ **Terbinafine** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **fosetoridine**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **Terbinafine** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Terbinafine** is predicted to increase the exposure to **mexiletine**. [Moderate] Study
- ▶ **Terbinafine** is predicted to decrease the efficacy of **opioids** (**codeine**). [Moderate] Theoretical
- ▶ **Terbinafine** is predicted to decrease the efficacy of **opioids** (**tramadol**). [Severe] Study
- ▶ **Terbinafine** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifamycins** (**rifampicin**) decrease the exposure to **terbinafine**. Adjust dose. [Moderate] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **SSRIs** (**citalopram**, **dapoxetine**, **escitalopram**, **fluvoxamine**, **sertraline**). [Moderate] Theoretical
- ▶ **Terbinafine** is predicted to increase the exposure to **SSRIs** (**fluoxetine**). Adjust dose. [Moderate] Theoretical
- ▶ **Terbinafine** moderately increases the exposure to **SSRIs** (**paroxetine**). [Moderate] Study
- ▶ **Terbinafine** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
- ▶ **Terbinafine** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study

**Terbutaline** → see beta<sub>2</sub> agonists

**Teriflunomide** → see TABLE 1 p. 1490 (hepatotoxicity)

- ▶ **Teriflunomide** is predicted to increase the exposure to **adefovir**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **alpelisib**. [Moderate] Theoretical
- ▶ **Teriflunomide** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study

- ▶ **Teriflunomide** is predicted to decrease the exposure to anaesthetics, local (**ropivacaine**). [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **anthracyclines** (**daunorubicin**, **doxorubicin**, **mitoxantrone**). [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **antihistamines, non-sedating** (**fexofenadine**). [Moderate] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **antipsychotics, second generation** (**clozapine**). [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to decrease the exposure to **antipsychotics, second generation** (**olanzapine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **baricitinib**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **berotrastat**. [Severe] Theoretical
- ▶ **Teriflunomide** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **cephalosporins** (**cefaclor**). [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **cladribine**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Teriflunomide** affects the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **endothelin receptor antagonists** (**bosentan**). [Moderate] Study
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **teriflunomide**. Avoid. [Severe] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **ganciclovir**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **H<sub>2</sub> receptor antagonists** (**cimetidine**, **famotidine**). [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **larotrectinib**. [Mild] Study
- ▶ **Teriflunomide** is predicted to increase the concentration of **letermovir**. [Moderate] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **teriflunomide**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **loop diuretics** (**furosemide**). [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **meglitinides** (**repaglinide**). [Moderate] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **methotrexate**. [Moderate] Study → Also see TABLE 1 p. 1490
- ▶ **Teriflunomide** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **NRTIs** (**zidovudine**). [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **NSAIDs** (**indometacin**, **ketoprofen**). [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **oseltamivir**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to the active metabolites of **ozanimod**. Avoid. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **penicillins** (**benzylpenicillin**). [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **pioglitazone**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **quinolones** (**ciprofloxacin**). [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **rifamycins** (**rifampicin**). [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **selexipag**. Adjust selexipag dose, p. 198. [Moderate] Study

- ▶ **Teriflunomide** is predicted to decrease the exposure to **SNRIs (duloxetine)**. [Moderate] Theoretical
  - ▶ **Teriflunomide** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin, pravastatin, simvastatin)**. [Moderate] Study → Also see TABLE 1 p. 1490
  - ▶ **Teriflunomide** moderately increases the exposure to **statins (rosuvastatin)**. Adjust **rosuvastatin** dose, p. 221. [Moderate] Study → Also see TABLE 1 p. 1490
  - ▶ **Teriflunomide** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 1 p. 1490
  - ▶ **Teriflunomide** is predicted to increase the exposure to **sulfonylureas (glibenclamide)**. [Moderate] Study
  - ▶ **Teriflunomide** is predicted to increase the exposure to **talazoparib**. Avoid or monitor. [Moderate] Theoretical
  - ▶ **Teriflunomide** is predicted to increase the concentration of **taxanes (paclitaxel)**. [Severe] Anecdotal
  - ▶ **Teriflunomide** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
  - ▶ **Teriflunomide** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical
  - ▶ **Teriflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
  - ▶ **Teriflunomide** moderately decreases the exposure to **tizanidine**. [MilG] Study
  - ▶ **Teriflunomide** is predicted to increase the exposure to **topotecan**. [Moderate] Study
  - ▶ **Teriflunomide** is predicted to increase the exposure to **tucatinib**. [Moderate] Theoretical
  - ▶ **Teriflunomide** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
  - Tetanus immunoglobulin** → see immunoglobulins
  - Tetrabenazine** → see TABLE 9 p. 1492 (QT-interval prolongation), TABLE 11 p. 1492 (CNS depressing effects)
  - ▶ **Bupropion** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
  - ▶ **Cinacalcet** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
  - ▶ **Tetrabenazine** is predicted to decrease the effects of **levodopa**. Use with caution or avoid. [Moderate] Theoretical
  - ▶ **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **MAO-B inhibitors**. [Severe] Theoretical
  - ▶ **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
  - ▶ **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **moclobemide**. [Severe] Theoretical
  - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
  - ▶ **Terbinafine** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
  - Treracaine** → see anaesthetics, local
  - Tricycline** → see tetracyclines
  - Tetracyclines** → see TABLE 1 p. 1490 (hepatotoxicity)
- demeclocycline · doxycycline · lymecycline · minocycline · oxytetracycline · tetracycline

  - ▶ Dairy products decrease the absorption of **demeclocycline** and **oxytetracycline**.
  - ▶ Interactions do not generally apply to topical use of **oxytetracycline** unless specified.
  - ▶ Dairy products decrease the exposure to **tetracycline**—manufacturer advises take 1 hour before or 2 hours after dairy products.
- ▶ Oral **ACE inhibitors (quinapril)** (magnesium carbonate-containing forms) might decrease the absorption of oral **tetracyclines**. Avoid. [Moderate] Study
  - ▶ Oral **antacids** greatly decrease the absorption of oral **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, phenobarbital, phenytoin, primidone)** decrease the concentration of **doxycycline**. Adjust dose. [Moderate] Study → Also see TABLE 1 p. 1490
  - ▶ **Antiepileptics (fosphenytoin)** are predicted to decrease the concentration of **doxycycline**. Adjust dose. [Moderate] Theoretical
  - ▶ **Tetracycline** decreases the concentration of **antimalarials (atovaquone)**. [Moderate] Study
  - ▶ **Bismuth** greatly decreases the efficacy of **tetracyclines**. Separate administration by 2 hours. [Moderate] Study
  - ▶ **Calcium salts (calcium carbonate)** are predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Theoretical
  - ▶ **Doxycycline** is predicted to increase the concentration of **ciclosporin**. [Severe] Theoretical
  - ▶ **Combined hormonal contraceptives** might exacerbate skin pigmentation when given with **minocycline**. [Moderate] Anecdotal
  - ▶ **Tetracyclines** increase the anticoagulant effect of **coumarins**. [Severe] Anecdotal
  - ▶ Oral **iron** decreases the absorption of oral **tetracyclines**. **Tetracyclines** should be taken 2 to 3 hours after iron. [Moderate] Study
  - ▶ Oral **kaolin** is predicted to decrease the absorption of oral **tetracyclines**. [Moderate] Theoretical
  - ▶ Oral **lanthanum** might decrease the absorption of oral **tetracyclines**. Separate administration by 2 hours. [Moderate] Theoretical
  - ▶ **Tetracyclines** are predicted to increase the risk of lithium toxicity when given with **lithium**. Avoid or adjust dose. [Severe] Anecdotal
  - ▶ **Tetracyclines** are predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
  - ▶ **Tetracycline** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Theoretical
  - ▶ **Retinoids (acitretin, alitretinoin, isotretinoin, tretinoin)** increase the risk of benign intracranial hypertension when given with **tetracyclines**. Avoid. [Severe] Anecdotal
  - ▶ **Rifamycins (rifampicin)** modestly decrease the exposure to **doxycycline**. Adjust dose. [Moderate] Study
  - ▶ **Strontium** is predicted to decrease the absorption of **tetracyclines**. Avoid. [Moderate] Theoretical
  - ▶ Oral **sucralfate** might decrease the absorption of oral **tetracyclines**. [Moderate] Theoretical
  - ▶ Oral **zinc** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Theoretical
- Tezacaftor**
- FOOD AND LIFESTYLE** Bitter (Seville) oranges might increase the exposure to tezacaftor.
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
  - ▶ **Antiarrhythmics (dronedaronone)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study

**Tezacaftor** (continued)

- ▶ **Crizotinib** is predicted to increase the exposure to **tezacaftor**.

Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [\[Severe\]](#) Study

- ▶ **Grapefruit** juice is predicted to increase the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [\[Severe\]](#) Study
- ▶ **Letermovir** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [\[Severe\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [\[Severe\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [\[Severe\]](#) Study
- ▶ **Rifamycins** are predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Theoretical

**Thalidomide** → see TABLE 6 p. 1491 (bradycardia), TABLE 15 p. 1493 (myelosuppression), TABLE 12 p. 1493 (peripheral neuropathy), TABLE 5 p. 1491 (thromboembolism), TABLE 11 p. 1492 (CNS depressant effects)

- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **thalidomide**. Avoid. [\[Severe\]](#) Study
- ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **thalidomide**. [\[Severe\]](#) Theoretical

**Theophylline** → see TABLE 17 p. 1494 (reduced serum potassium)

**FOOD AND LIFESTYLE** Smoking can increase theophylline clearance and increased doses of theophylline are therefore required; dose adjustments are likely to be necessary if smoking started or stopped during treatment.

- ▶ **Aciclovir** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Theophylline** decreases the efficacy of **antiarrhythmics (adenosine)**. Separate administration by 24 hours. [\[Mild\]](#) Study
- ▶ **Antiepileptics (carbamazepine)** potentially increase the clearance of **theophylline** and **theophylline** decreases the exposure to **antiepileptics (carbamazepine)**. Adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to increase the clearance of **theophylline**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Antiepileptics (stiripentol)** are predicted to increase the exposure to **theophylline**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Axitinib** is predicted to increase the exposure to **theophylline**. [\[Moderate\]](#) Theoretical
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Caffeine citrate** decreases the clearance of **theophylline**. [\[Moderate\]](#) Study
- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Theophylline** increases the risk of agitation when given with **doxapram**. [\[Moderate\]](#) Study
- ▶ **Enteral feeds** decrease the exposure to **theophylline**. [\[Moderate\]](#) Study
- ▶ **Esketamine** is predicted to increase the risk of seizures when given with **theophylline**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the concentration of **theophylline**. Adjust dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Interferons** slightly increase the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Iron chelators (deferasirox)** increase the exposure to **theophylline**. Avoid. [\[Moderate\]](#) Study
- ▶ **Isoniazid** is predicted to affect the clearance of **theophylline**. [\[Severe\]](#) Anecdotal
- ▶ **Leflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Theophylline** is predicted to decrease the concentration of **lithium**. Monitor concentration and adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Macrolides (azithromycin, clarithromycin)** are predicted to increase the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Macrolides (erythromycin)** decrease the clearance of **theophylline** and **theophylline** potentially decreases the clearance of **macrolides (erythromycin)**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Methotrexate** decreases the clearance of **theophylline**. [\[Moderate\]](#) Study
- ▶ **Metrelaprin** might alter the exposure to **theophylline**. Monitor concentration and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Monoclonal antibodies (blinatumomab)** are predicted to transiently increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **theophylline**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Obeticholic acid** is predicted to increase the exposure to **theophylline**. [\[Severe\]](#) Theoretical
- ▶ **Osilodrostat** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Pentoxifylline** increases the concentration of **theophylline**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Theophylline** is predicted to slightly increase the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Study

- ▶ **Rucaparib** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** moderately to markedly increase the exposure to **theophylline**. Avoid. [Severe] Study
- ▶ **St John's wort** potentially decreases the exposure to **theophylline**. [Severe] Anecdotal
- ▶ **Sucralfate** potentially decreases the absorption of **theophylline**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Sympathomimetics, vasoconstrictor (ephedrine)** increase the risk of adverse effects when given with **theophylline**. Avoid in children. [Moderate] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ **Valaciclovir** is predicted to increase the exposure to **theophylline**. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- Thiazide diuretics** → see TABLE 18 p. 1494 (hyponatraemia), TABLE 8 p. 1491 (hypotension), TABLE 17 p. 1494 (reduced serum potassium)
- bendroflumethiazide · chlorothiazide · chlortalidone · hydrochlorothiazide · hydroflumethiazide · indapamide · metolazone · xipamide
- ▶ **Thiazide diuretics** are predicted to increase the risk of hypersensitivity reactions when given with **allopurinol**. [Severe] Theoretical
- ▶ **Aspirin** (high-dose) increases the risk of acute renal failure when given with **thiazide diuretics**. [Severe] Theoretical
- ▶ **Thiazide diuretics** increase the risk of hypercalcaemia when given with **calcium salts**. [Severe] Anecdotal
- ▶ **Thiazide diuretics** increase the concentration of **lithium**. Avoid or adjust dose and monitor concentration. [Severe] Study
- ▶ **Metolazone** is predicted to decrease the efficacy of **methenamine**. [Moderate] Theoretical
- ▶ **NSAIDs** increase the risk of acute renal failure when given with **thiazide diuretics**. [Severe] Theoretical → Also see TABLE 18 p. 1494
- ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **thiazide diuretics**. [Moderate] Anecdotal
- ▶ **Thiazide diuretics** are predicted to increase the risk of hypercalcaemia when given with **toremifene**. [Severe] Theoretical
- ▶ **Thiazide diuretics** increase the risk of hypercalcaemia when given with **vitamin D substances**. [Moderate] Theoretical
- Thiopental** → see TABLE 8 p. 1491 (hypotension), TABLE 11 p. 1492 (CNS depressant effects)
- ▶ **Sulfonamides** are predicted to increase the effects of **thiopental**. [Moderate] Theoretical
- ▶ **Tricyclic antidepressants** increase the risk of cardiac arrhythmias and hypotension when given with **thiopental**. [Moderate] Study → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492
- Thiotepa** → see alkylating agents
- Thrombin inhibitors** → see TABLE 3 p. 1490 (anticoagulant effects)
- argatroban · bivalirudin · dabigatran
- ▶ **Abrocitinib** slightly increases the exposure to **dabigatran**. [Moderate] Study
- ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **dabigatran**. [Mild] Study
- ▶ **Antiarrhythmics (amiodarone)** increase the exposure to **dabigatran**. Monitor and adjust dose. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** moderately increase the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (fluconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **dabigatran**. [Severe] Study
- ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **dabigatran**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Berotrastat** is predicted to increase the concentration of **dabigatran**. Monitor and adjust dose. [Moderate] Study
- ▶ **Calcium channel blockers (verapamil)** increase the exposure to **dabigatran**. Monitor and adjust dose. [Severe] Study
- ▶ **Certinib** is predicted to increase the exposure to **dabigatran**. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Cobicistat** moderately increases the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Elbasvir** is predicted to increase the concentration of **dabigatran**. [Moderate] Theoretical
- ▶ **Eliglustat** is predicted to increase the exposure to **dabigatran**. Adjust dose. [Moderate] Study
- ▶ **Glecaprevir** with pibrentasvir increases the exposure to **dabigatran**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** boosted with ritonavir are predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Anecdotal
- ▶ **HIV-protease inhibitors (fosamprenavir, tipranavir)** boosted with ritonavir are predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Ibrutinib** is predicted to increase the exposure to **dabigatran**. Separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Ivacaftor** is predicted to increase the exposure to **dabigatran**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Ledipasvir** is predicted to increase the exposure to **dabigatran**. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to decrease the concentration of **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Lorlatinib** is predicted to decrease the exposure to **dabigatran**. [Moderate] Study
- ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** increase the exposure to **dabigatran**. [Moderate] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Neratinib** is predicted to increase the exposure to **dabigatran**. [Moderate] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Olaparib** might increase the exposure to **dabigatran**. [Moderate] Theoretical
- ▶ **Osimertinib** is predicted to increase the exposure to **dabigatran**. [Moderate] Study
- ▶ **Pemigatinib** might increase the exposure to **dabigatran**. Separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Pibrentasvir** with glecaprevir increases the exposure to **dabigatran**. Avoid. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **dabigatran**. [Mild] Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **argatroban**. [Severe] Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **bivalirudin**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Sotorasib** is predicted to increase the exposure to **dabigatran**. Avoid or adjust dose. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Tacrolimus** is predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Teptotinib** slightly increases the exposure to **dabigatran**. [Severe] Study

**Thrombin inhibitors** (continued)

- ▶ **Ticagrelor** increases the exposure to **dabigatran**. Monitor and adjust dose. [Severe] Study
- ▶ **Tucatinib** is predicted to increase the exposure to **dabigatran**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Vandetanib** is predicted to increase the exposure to **dabigatran**. [Moderate] Study
- ▶ **Velpatasvir** increases the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **dabigatran**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **dabigatran**. Avoid or adjust dose. [Severe] Study
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir increases the concentration of **dabigatran**. Avoid. [Severe] Study

**Thyroid hormones**

levothyroxine - liothyronine

**FOOD AND LIFESTYLE** Food, including dietary fibre, milk, soya products, and coffee, might decrease the absorption of levothyroxine.

- ▶ Oral **antacids** are predicted to decrease the absorption of oral **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Anecdotal
- ▶ **Anti-androgens (apalutamide)** potentially decrease the exposure to **levothyroxine**. [Mild] Theoretical
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the risk of thyroid dysfunction when given with **thyroid hormones**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to increase the risk of hypothyroidism when given with **thyroid hormones**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to increase the risk of hypothyroidism when given with **thyroid hormones**. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the effects of **thyroid hormones**. [Moderate] Theoretical
- ▶ Oral **calcium salts** are predicted to decrease the absorption of **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Anecdotal
- ▶ **Thyroid hormones** are predicted to affect the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** decrease the concentration of **levothyroxine**. MHRA advises monitor TSH for at least one month after starting or stopping ritonavir. [Moderate] Anecdotal
- ▶ Oral **hormone replacement therapy** is predicted to decrease the effects of **thyroid hormones**. [Moderate] Theoretical
- ▶ **Imatinib** causes hypothyroidism when given with **levothyroxine** in thyroidectomy patients. [Moderate] Study
- ▶ Oral **iron** decreases the absorption of oral **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ **Lanthanum** decreases the absorption of **thyroid hormones**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Nirmatrelvir** boosted with ritonavir might decrease the efficacy of **levothyroxine**. [Moderate] Theoretical
- ▶ **Sucralfate** decreases the absorption of **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ **Sunitinib** has been reported to cause hypothyroidism when given with **levothyroxine**. [Moderate] Anecdotal

**Tiagabine** → see antiepileptics

**Tiaprofenic acid** → see NSAIDs

**Tibolone** → see TABLE 5 p. 1491 (thromboembolism)

**Ticagrelor** → see TABLE 6 p. 1491 (bradycardia), TABLE 4 p. 1490 (antiplatelet effects)

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study → Also see TABLE 6 p. 1491
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Cenobamate** is predicted to decrease the exposure to **ticagrelor**. Adjust dose. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
- ▶ **Ticagrelor** increases the concentration of **digoxin**. [Moderate] Study → Also see TABLE 6 p. 1491
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
- ▶ **Ticagrelor** is predicted to increase the exposure to **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit** juice moderately increases the exposure to **ticagrelor**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Ticagrelor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Rifamycins (rifampicin)** are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Selumetinib** might increase the risk of bleeding when given with **ticagrelor**. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
- ▶ **Ticagrelor** slightly to moderately increases the exposure to **statins (simvastatin)**. Adjust simvastatin dose, p. 222. [Moderate] Study
- ▶ **Ticagrelor** increases the exposure to **thrombin inhibitors (dabigatran)**. Monitor and adjust dose. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study

**Tigecycline** → see TABLE 1 p. 1490 (hepatotoxicity)

- ▶ **Antiarrhythmics (amiodarone, dronedarone)** might increase the exposure to **tigecycline**. [Mild] Anecdotal
- ▶ **Antiepileptics (carbamazepine)** might decrease the exposure to **tigecycline**. [Mild] Theoretical → Also see TABLE 1 p. 1490
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** might increase the exposure to **tigecycline**. [Mild] Anecdotal → Also see TABLE 1 p. 1490
- ▶ **Calcium channel blockers (verapamil)** might increase the exposure to **tigecycline**. [Mild] Anecdotal
- ▶ **Ciclosporin** might increase the exposure to **tigecycline** and **tigecycline** has been reported to increase the concentration of **ciclosporin**. [Severe] Anecdotal
- ▶ **Tigecycline** is predicted to alter the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** might increase the exposure to **tigecycline**. [Mild] Anecdotal
- ▶ **Ivacaftor** might increase the exposure to **tigecycline**. [Mild] Anecdotal
- ▶ **Lapatinib** might increase the exposure to **tigecycline**. [Mild] Anecdotal
- ▶ **Macrolides** might increase the exposure to **tigecycline**. [Mild] Anecdotal
- ▶ **Neratinib** might increase the exposure to **tigecycline**. [Mild] Anecdotal → Also see TABLE 1 p. 1490
- ▶ **Tigecycline** is predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical

- ▶ **Ranolazine** might increase the exposure to **tigecycline**. [Mild] Anecdotal
- ▶ **Retinoids (acitretin, alitretinoin, isotretinoin, tretinoin)** increase the risk of benign intracranial hypertension when given with **tigecycline**. Avoid. [Severe] Anecdotal
- ▶ **Rifamycins (rifampicin)** might decrease the exposure to **tigecycline**. [Mild] Theoretical
- ▶ **St John's wort** might decrease the exposure to **tigecycline**. [Mild] Theoretical
- ▶ **Tigecycline** has been reported to increase the concentration of **tacrolimus**. [Severe] Anecdotal
- ▶ **Vandetanib** might increase the exposure to **tigecycline**. [Mild] Anecdotal
- ▶ **Vemurafenib** might increase the exposure to **tigecycline**. [Mild] Anecdotal
- Tildrakizumab** → see monoclonal antibodies
- Timolol** → see beta blockers, non-selective
- Tinzaparin** → see low molecular-weight heparins
- Tioguanine** → see TABLE 15 p. 1493 (myelosuppression)
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tioguanine**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- Tiotropium** → see TABLE 10 p. 1492 (antimuscarinics)
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **tiotropium**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
- Tipranavir** → see HIV-protease inhibitors
- Tirofiban** → see TABLE 3 p. 1490 (anticoagulant effects)
- Tivozanib**
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **tivozanib**. [Severe] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tivozanib**. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **tivozanib**. [Severe] Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **tivozanib**. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **tivozanib**. Avoid. [Severe] Study
  - ▶ **Tivozanib** is predicted to decrease the exposure to **statins (rosuvastatin)**. [Moderate] Theoretical
- Tizanidine** → see TABLE 6 p. 1491 (bradycardia), TABLE 8 p. 1491 (hypotension), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 11 p. 1492 (CNS depressant effects)
  - ▶ **Antiepileptics (fosphenytoin, phenytoin)** moderately decrease the exposure to **tizanidine**. [Mild] Study
  - ▶ **Axitinib** is predicted to increase the exposure to **tizanidine**. [Moderate] Theoretical
  - ▶ **Combined hormonal contraceptives** increases the exposure to **tizanidine**. Avoid. [Moderate] Study
  - ▶ **Givosiran** is predicted to increase the exposure to **tizanidine**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **HIV-protease inhibitors (ritonavir)** moderately decrease the exposure to **tizanidine**. [Mild] Study
  - ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **tizanidine**. Avoid. [Moderate] Theoretical
  - ▶ **Leflunomide** moderately decreases the exposure to **tizanidine**. [Mild] Study
  - ▶ **Mexiletine** increases the exposure to **tizanidine**. Avoid. [Moderate] Study
  - ▶ **Obeticholic acid** is predicted to increase the exposure to **tizanidine**. [Severe] Theoretical
  - ▶ **Osilodrostat** increases the exposure to **tizanidine**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ **Quinolones (ciprofloxacin)** increase the exposure to **tizanidine**. Avoid. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **tizanidine**. [Mild] Study
  - ▶ **Rucaparib** increases the exposure to **tizanidine**. Avoid. [Moderate] Study
  - ▶ **SSRIs (fluvoxamine)** very markedly increase the exposure to **tizanidine**. Avoid. [Severe] Study
- ▶ **Terflunomide** moderately decreases the exposure to **tizanidine**. [Mild] Study
- ▶ **Vemurafenib** increases the exposure to **tizanidine**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1492
- Tobramycin** → see aminoglycosides
- Tocilizumab** → see monoclonal antibodies
- Tofacitinib**
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
  - ▶ **Antiarrhythmics (dronedarone)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (fluconazole)** increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. [Moderate] Study
  - ▶ **Antifungals, azoles (isavuconazole)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. [Moderate] Study
  - ▶ **Antifungals, azoles (posaconazole)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. [Moderate] Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. [Moderate] Study
  - ▶ **Ciclosporin** increases the exposure to **tofacitinib**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. [Moderate] Study
  - ▶ **Tofacitinib** is predicted to increase the risk of bleeding when given with **coumarins**. [Severe] Theoretical
  - ▶ **Crizotinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. [Moderate] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
  - ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **tofacitinib**. Avoid. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. [Moderate] Study
  - ▶ **Imatinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. [Moderate] Study
  - ▶ **Letermovir** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. [Moderate] Study
  - ▶ **Live vaccines** potentially increase the risk of generalised infection (possibly life-threatening) when given with **tofacitinib**. Avoid. [Severe] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. [Moderate] Study
  - ▶ **Macrolides (erythromycin)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. [Moderate] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. [Moderate] Study
  - ▶ **Nilotinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. [Moderate] Study

**Tofacitinib** (continued)

- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
- ▶ **Tofacitinib** is predicted to increase the risk of bleeding when given with **phenindione**. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
- ▶ **SSRIs (fluoxetine, fluvoxamine)** given with a moderate CYP3A4 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
- ▶ **Tacrolimus** increases the exposure to **tofacitinib**. Avoid. [Severe] Study

**Tolbutamide** → see sulfonylureas

**Tolcapone**

- ▶ **Tolcapone** increases the exposure to **levodopa**. Monitor and adjust dose. [Moderate] Study
- ▶ **Tolcapone** is predicted to increase the effects of **MAOIs, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Tolcapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, inotropic**. [Moderate] Theoretical
- ▶ **Tolcapone** is predicted to increase the effects of **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Moderate] Theoretical

**Tolfenamic acid** → see NSAIDs

**Tolterodine** → see TABLE 9 p. 1492 (QT-interval prolongation),

- TABLE 10 p. 1492 (antimuscarinics)
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
  - ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **tolterodine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
  - ▶ **Cobicicstat** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
  - ▶ **Dacomitinib** is predicted to markedly increase the exposure to **tolterodine**. Avoid. [Severe] Study
  - ▶ **Eliglustat** is predicted to increase the exposure to **tolterodine**. Adjust dose. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492

**Tolvaptan** → see TABLE 16 p. 1494 (increased serum potassium)

**GENERAL INFORMATION** Avoid concurrent use of drugs that increase serum-sodium concentrations.

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors, p. 724. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. [Moderate] Study

- ▶ **Tenobamate** is predicted to decrease the exposure to **tolvaptan**. Adjust dose. [Moderate] Theoretical
- ▶ **Cobicicstat** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors, p. 724. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. [Moderate] Study
- ▶ **Tolvaptan** increases the concentration of **digoxin**. [Mild] Study
- ▶ **Grapefruit** juice increases the exposure to **tolvaptan**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors, p. 724. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors, p. 724. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. [Moderate] Study
- ▶ **Tolvaptan** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors, p. 724. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **tolvaptan**. Use with caution and adjust **tolvaptan** dose, p. 724. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **tolvaptan**. Avoid. [Moderate] Theoretical

**Topiramate** → see antiepileptics

**Topotecan** → see TABLE 15 p. 1493 (myelosuppression)

- ▶ **Anti-androgens (darolutamide)** are predicted to increase the exposure to **topotecan**. Avoid. [Severe] Theoretical
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** increase the clearance of **topotecan**. [Moderate] Study
- ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **topotecan**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Berotrastat** is predicted to increase the concentration of **topotecan**. Monitor and adjust dose. [Moderate] Study
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **topotecan**. [Moderate] Theoretical → Also see TABLE 15 p. 1493
- ▶ **Ciclosporin** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **topotecan**. Adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the exposure to **topotecan**. [Severe] Study

- ▶ **Ibrutinib** is predicted to increase the exposure to **topotecan**. Separate administration by at least 6 hours. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1493
- ▶ **Ivacafator** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **Lapatinib** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **Leflunomide** is predicted to increase the exposure to **topotecan**. [\[Moderate\]](#) Study → Also see TABLE 15 p. 1493
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **topotecan**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Lorlatinib** is predicted to decrease the exposure to **topotecan**. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **Mirabegron** is predicted to increase the exposure to **topotecan**. [\[Mild\]](#) Theoretical
- ▶ **Neratinib** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **Olaparib** might increase the exposure to **topotecan**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1493
- ▶ **Osimertinib** is predicted to increase the exposure to **topotecan**. [\[Moderate\]](#) Study
- ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **topotecan**. [\[Moderate\]](#) Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **topotecan**. [\[Mild\]](#) Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **Regorafenib** is predicted to increase the exposure to **topotecan**. [\[Moderate\]](#) Study → Also see TABLE 15 p. 1493
- ▶ **Roxadustat** might increase the exposure to **topotecan**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study → Also see TABLE 15 p. 1493
- ▶ **Sotorasib** is predicted to increase the exposure to **topotecan**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **St John's wort** is predicted to decrease the exposure to **topotecan**. [\[Severe\]](#) Theoretical
- ▶ **Tedizolid** is predicted to increase the exposure to **topotecan**. Avoid. [\[Moderate\]](#) Study
- ▶ **Teptinib** is predicted to increase the concentration of **topotecan**. [\[Severe\]](#) Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **topotecan**. [\[Moderate\]](#) Study
- ▶ **Tucatinib** is predicted to increase the exposure to **topotecan**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Vandetanib** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **Venetoclax** is predicted to increase the exposure to **topotecan**. [\[Moderate\]](#) Theoretical
- ▶ **Voxilaprevir** is predicted to increase the concentration of **topotecan**. Avoid. [\[Severe\]](#) Theoretical
- Torsemide** → see loop diuretics
- Toremifene** → see TABLE 5 p. 1491 (thromboembolism), TABLE 9 p. 1492 (QT-interval prolongation)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **toremifene**. Adjust dose. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **toremifene**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **toremifene**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1492
- ▶ **Cobicistat** is predicted to increase the exposure to **toremifene**. [\[Moderate\]](#) Theoretical
- ▶ **Toremifene** is predicted to increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **toremifene**. [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **toremifene**. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **toremifene**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1492
- ▶ **Mitotane** is predicted to decrease the exposure to **toremifene**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **toremifene**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Thiazide diuretics** are predicted to increase the risk of hypercalcaemia when given with **toremifene**. [\[Severe\]](#) Theoretical
- Trabectedin** → see TABLE 1 p. 1490 (hepatotoxicity), TABLE 15 p. 1493 (myelosuppression)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **trabectedin**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **trabectedin**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 1 p. 1490
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [\[Severe\]](#) Theoretical → Also see TABLE 1 p. 1490
- ▶ **Cobicistat** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **trabectedin**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **trabectedin**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 15 p. 1493
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **trabectedin**. Avoid. [\[Severe\]](#) Theoretical
- Tralokinumab** → see monoclonal antibodies
- Tramadol** → see opioids
- Trametinib**
  - ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Calcium channel blockers (verapamil)** are predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Ciclosporin** is predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Drugs with anticoagulant effects** (see TABLE 3 p. 1490) cause bleeding, as can **trametinib**; concurrent use might increase the risk of developing this effect. [\[Severe\]](#) Theoretical
  - ▶ **Drugs with antiplatelet effects** (see TABLE 4 p. 1490) cause bleeding, as can **trametinib**; concurrent use might increase the risk of developing this effect. [\[Severe\]](#) Theoretical
  - ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Ivacafator** is predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Lapatinib** is predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Macrolides** are predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Neratinib** is predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Ranolazine** is predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Rucaparib** is predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
  - ▶ **Vandetanib** is predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical

## Trametinib (continued)

- ▶ **Vemurafenib** is predicted to increase the concentration of trametinib. [\[Moderate\]](#) Theoretical
- Trandolapril** → see ACE inhibitors
- Tranexamic acid** → see TABLE 5 p. 1491 (thromboembolism)
- Tranylcypromine** → see MAOIs, irreversible
- Trastuzumab** → see monoclonal antibodies
- Trastuzumab deruxtecan** → see monoclonal antibodies
- Trastuzumab emtansine** → see monoclonal antibodies
- Trazodone** → see TABLE 13 p. 1493 (serotonin syndrome), TABLE 11 p. 1492 (CNS depressant effects)
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine)** decrease the concentration of **trazodone**. Adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **trazodone**. [\[Moderate\]](#) Theoretical

## Tree pollen extract

**GENERAL INFORMATION** Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

## Trosulfan → see alkylating agents

- Treprostinil** → see TABLE 8 p. 1491 (hypotension), TABLE 4 p. 1490 (antiplatelet effects)
- ▶ **Antiepileptics (carbamazepine, phenobarbital, phenytoin)** are predicted to decrease the exposure to **treprostinil**. Adjust dose. [\[Mild\]](#) Theoretical
- ▶ **Clopidogrel** is predicted to increase the exposure to **treprostinil**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 4 p. 1490
- ▶ **Fibrates (gemfibrozil)** increase the exposure to **treprostinil**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **treprostinil**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Loop diuretics (furosemide)** might slightly decrease the clearance of **treprostinil**. [\[Unknown\]](#) Theoretical → Also see TABLE 8 p. 1491
- ▶ **Rifamycins (rifampicin)** slightly decrease the exposure to **treprostinil**. Adjust dose. [\[Mild\]](#) Study
- ▶ **St John's wort** is predicted to decrease the exposure to **treprostinil**. Adjust dose. [\[Mild\]](#) Theoretical
- ▶ **Trimethoprim** is predicted to increase the exposure to **treprostinil**. Adjust dose. [\[Moderate\]](#) Theoretical

## Tretinoin → see retinoids

## Triamcinolone → see corticosteroids

## Triamterene → see potassium-sparing diuretics

- Tricyclic antidepressants** → see TABLE 18 p. 1494 (hyponatraemia), TABLE 8 p. 1491 (hypotension), TABLE 13 p. 1493 (serotonin syndrome), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 11 p. 1492 (CNS depressant effects), TABLE 10 p. 1492 (antimuscarinics)

amitriptyline · clomipramine · dosulepin · doxepin · imipramine · lofepramine · nortriptyline · trimipramine

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions of topical **doxepin** should be borne in mind.

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **tricyclic antidepressants**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1492
- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the concentration of **tricyclic antidepressants**. [\[Moderate\]](#) Theoretical → Also see TABLE 10 p. 1492
- ▶ **Antiepileptics (carbamazepine)** decrease the exposure to **tricyclic antidepressants**. Adjust dose. [\[Moderate\]](#) Study → Also see TABLE 18 p. 1494
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **tricyclic antidepressants**. [\[Moderate\]](#) Study → Also see TABLE 11 p. 1492
- ▶ **Antiepileptics (valproate)** increase the concentration of **nortriptyline**. [\[Severe\]](#) Study
- ▶ **Tricyclic antidepressants (clomipramine, imipramine)** potentially increase the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [\[Severe\]](#) Theoretical
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **tricyclic antidepressants**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492 → Also see TABLE 10 p. 1492
- ▶ **Bupropion** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [\[Severe\]](#) Study
- ▶ **Cinacalcet** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [\[Severe\]](#) Study
- ▶ **Tricyclic antidepressants** decrease the antihypertensive effects of **clonidine**. Monitor and adjust dose. [\[Moderate\]](#) Anecdotal → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **tricyclic antidepressants**. [\[Mild\]](#) Study
- ▶ **Dacomitinib** is predicted to markedly increase the exposure to **tricyclic antidepressants (imipramine, nortriptyline)**. Avoid. [\[Severe\]](#) Study
- ▶ **Darifenacin** (high-dose) is predicted to increase the exposure to **tricyclic antidepressants**. [\[Moderate\]](#) Study → Also see TABLE 10 p. 1492
- ▶ **Eliglustat** is predicted to increase the exposure to **nortriptyline**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **tricyclic antidepressants**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors (ritonavir, tipranavir)** are predicted to increase the exposure to **tricyclic antidepressants**. [\[Moderate\]](#) Theoretical
- ▶ **Tricyclic antidepressants** potentially increase the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal → Also see TABLE 13 p. 1493 → Also see TABLE 9 p. 1492
- ▶ **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 13 p. 1493
- ▶ **Methylphenidate** might increase the concentration of **tricyclic antidepressants**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Amitriptyline** decreases the effects of **metyrapone**. Avoid. [\[Moderate\]](#) Theoretical

- ▶ **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **moclobemide**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1493
  - ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **moxonidine**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of tricyclic antidepressants (**amitriptyline**, **imipramine**, **nortriptyline**). [Moderate] Theoretical
  - ▶ **Tricyclic antidepressants** might increase the risk of adverse effects when given with **ozanimod**. [Severe] Theoretical
  - ▶ **Tricyclic antidepressants** are predicted to decrease the efficacy of **pitolisant**. [Mild] Theoretical
  - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study → Also see TABLE 18 p. 1494 → Also see TABLE 13 p. 1493
  - ▶ **SSRIs (fluvoxamine)** markedly increase the exposure to **clomipramine**. Adjust dose. [Severe] Study → Also see TABLE 18 p. 1494 → Also see TABLE 13 p. 1493
  - ▶ **SSRIs (fluvoxamine)** increase the exposure to tricyclic antidepressants (**amitriptyline**, **imipramine**). Adjust dose. [Severe] Study → Also see TABLE 18 p. 1494 → Also see TABLE 13 p. 1493
  - ▶ **Sucralfate** is predicted to decrease the absorption of tricyclic antidepressants. [Moderate] Study
  - ▶ **Tricyclic antidepressants** increase the effects of **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine, phenylephrine)**. Avoid. [Severe] Study
  - ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **sympathomimetics, vasoconstrictor (ephedrine)**. Avoid. [Severe] Study
  - ▶ **Terbinafine** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study
  - ▶ **Tricyclic antidepressants** increase the risk of cardiac arrhythmias and hypotension when given with **thiopental**. [Moderate] Study → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492
- Trientine**
- ▶ **Oral trientine** potentially decreases the absorption of oral **irinotecan**. [Moderate] Theoretical
  - ▶ **Trientine** potentially decreases the absorption of **zinc**. [Moderate] Theoretical
- Trifluoperazine** → see phenothiazines
- Trihexyphenidyl** → see TABLE 10 p. 1492 (antimuscarinics)
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **trihexyphenidyl**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
- Trimethoprim** → see TABLE 18 p. 1494 (hyponatraemia), TABLE 2 p. 1490 (nephrotoxicity), TABLE 16 p. 1494 (increased serum potassium)
- ▶ **Trimethoprim** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Moderate] Study
  - ▶ **Antimalarials (pyrimethamine)** increase the risk of adverse effects when given with **trimethoprim**. [Severe] Study
  - ▶ **Trimethoprim** might increase the risk of haematological toxicity when given with **azathioprine** in renal transplant patients. [Severe] Anecdotal
  - ▶ **Trimethoprim** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Study
  - ▶ **Dapsone** increases the exposure to **trimethoprim** and **trimethoprim** increases the exposure to **dapsone**. [Severe] Study
  - ▶ **Trimethoprim** increases the concentration of **digoxin**. [Moderate] Study
  - ▶ **Trimethoprim** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [Moderate] Study
  - ▶ **Trimethoprim** slightly increases the exposure to **meglitinides (repaglinide)**. Avoid or monitor blood glucose. [Moderate] Study
  - ▶ **Trimethoprim** might increase the risk of haematological toxicity when given with **mercaptopurine** in renal transplant patients. [Severe] Theoretical
- ▶ **Trimethoprim** increases the risk of adverse effects when given with **methotrexate**. Avoid. [Severe] Anecdotal → Also see TABLE 2 p. 1490
  - ▶ **Trimethoprim** slightly increases the exposure to **NRTIs (lamivudine)**. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** decrease the exposure to **trimethoprim**. [Moderate] Study
  - ▶ **Trimethoprim** is predicted to decrease the efficacy of **sapropterin**. [Moderate] Theoretical
  - ▶ **Trimethoprim** is predicted to increase the exposure to **treprostinil**. Adjust dose. [Moderate] Theoretical
- Trimipramine** → see tricyclic antidepressants
- Triptans** → see TABLE 13 p. 1493 (serotonin syndrome)
- almotriptan · eletriptan · frovatriptan · naratriptan · rizatriptan · sumatriptan · zolmitriptan
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** increase the exposure to **almotriptan**. [Mild] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
  - ▶ **Beta blockers, non-selective (propranolol)** slightly to moderately increase the exposure to **rizatriptan**. Adjust **rizatriptan** dose and separate administration by at least 2 hours, p. 513. [Moderate] Study
  - ▶ **Cenobamate** is predicted to decrease the exposure to **eletriptan**. Adjust dose. [Moderate] Theoretical
  - ▶ **Cobicistat** increases the exposure to **almotriptan**. [Mild] Study
  - ▶ **Cobicistat** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
  - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 515. [Moderate] Theoretical
  - ▶ **Almotriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **almotriptan**. [Severe] Theoretical
  - ▶ **Eletriptan** increases the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Study
  - ▶ **Rizatriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **rizatriptan**. [Severe] Theoretical
  - ▶ **Sumatriptan** increases the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **sumatriptan**. [Severe] Study
  - ▶ **Triptans (frovatriptan, naratriptan)** are predicted to increase the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Theoretical
  - ▶ **Zolmitriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **zolmitriptan**. [Severe] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 515. [Mild] Study
  - ▶ **HIV-protease inhibitors** increase the exposure to **almotriptan**. [Mild] Study
  - ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
  - ▶ **Idelalisib** increases the exposure to **almotriptan**. [Mild] Study
  - ▶ **Idelalisib** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
  - ▶ **Macrolides (clarithromycin)** increase the exposure to **almotriptan**. [Mild] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
  - ▶ **Macrolides (erythromycin)** moderately increase the exposure to **eletriptan**. Avoid. [Moderate] Study
  - ▶ **MAOIs, irreversible** are predicted to increase the exposure to triptans (**rizatriptan**, **sumatriptan**). Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1493
  - ▶ **MAOIs, irreversible** are predicted to increase the exposure to **zolmitriptan**. [Severe] Theoretical → Also see TABLE 13 p. 1493

## Triptans (continued)

- ▶ **Mexiletine** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 515. [Moderate] Theoretical
- ▶ **Moclobemide** moderately increases the exposure to triptans (**rizatriptan**, **sumatriptan**). Avoid. [Moderate] Study → Also see TABLE 13 p. 1493
- ▶ **Moclobemide** slightly increases the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 515. [Moderate] Study → Also see TABLE 13 p. 1493
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **eletriptan**. [Moderate] Study
- ▶ **Osilodrostat** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 515. [Moderate] Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 515. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 515. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** increase the concentration of **froatriptan**. [Severe] Study → Also see TABLE 13 p. 1493
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 515. [Severe] Theoretical → Also see TABLE 13 p. 1493
- ▶ **Vemurafenib** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 515. [Moderate] Theoretical
- Tropicamide** → see TABLE 10 p. 1492 (antimuscarinics)
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **tropicamide**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
- Trospium** → see TABLE 10 p. 1492 (antimuscarinics)
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **trospium**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
- Tryptophan** → see TABLE 13 p. 1493 (serotonin syndrome)
- ▶ **Tryptophan** greatly decreases the concentration of **levodopa**. [Moderate] Study
- ▶ **Tryptophan** increases the risk of adverse effects when given with **MAOIs, irreversible**. [Severe] Anecdotal → Also see TABLE 13 p. 1493
- Tucatinib**
- ▶ **Tucatinib** is predicted to increase the exposure to **aliskiren**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **tucatinib**. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tucatinib**. Avoid. [Severe] Study
- ▶ **Tucatinib** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Tucatinib** markedly increases the exposure to **benzodiazepines (midazolam)**. Avoid or adjust dose. [Moderate] Study
- ▶ **Tucatinib** is predicted to increase the exposure to **bupirone**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Clopidogrel** is predicted to increase the exposure to **tucatinib**. Avoid or adjust **tucatinib** dose, p. 1085. [Severe] Study
- ▶ **Tucatinib** is predicted to increase the exposure to **colchicine**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **darfenacin**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Tucatinib** slightly increases the exposure to **digoxin**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Tucatinib** is predicted to increase the exposure to **everolimus**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **factor XA inhibitors (edoxaban)**. Avoid or adjust dose. [Moderate] Theoretical

- ▶ **Tucatinib** is predicted to increase the exposure to **factor XA inhibitors (rivaroxaban)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Fibrates (gemfibrozil)** are predicted to increase the exposure to **tucatinib**. Avoid or adjust **tucatinib** dose, p. 1085. [Severe] Study
- ▶ **Tucatinib** is predicted to increase the exposure to **HIV-protease inhibitors (darunavir, tipranavir)**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **ibrutinib**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **tucatinib**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **tucatinib**. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **lomitapide**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **loperamide**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **tucatinib**. Avoid. [Severe] Study
- ▶ **Tucatinib** is predicted to increase the exposure to **naloxegol**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **opioids (alfentanil)**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **tucatinib**. Avoid. [Severe] Study
- ▶ **Tucatinib** is predicted to increase the exposure to **sirolimus**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **tucatinib**. Avoid. [Severe] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **statins (simvastatin)**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **tacrolimus**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **talizaparib**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **taxanes (docetaxel, paclitaxel)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **tucatinib**. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Tucatinib** is predicted to increase the exposure to **topotecan**. Use with caution and adjust dose. [Moderate] Theoretical

**Typhoid vaccine, oral** → see live vaccines

**Ulipristal**

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the efficacy of **ulipristal**. Avoid and for 4 weeks after stopping **ulipristal**. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ **Combined hormonal contraceptives** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of

**combined hormonal contraceptives.** Avoid or use additional contraceptive precautions. [Severe] Theoretical

- ▶ **Crizotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the efficacy of **ulipristal**. Avoid and for 4 weeks after stopping **ulipristal**. [Severe] Theoretical
- ▶ **Desogestrel** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of **desogestrel**. Avoid or use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ▶ **Etonogestrel** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of **etonogestrel**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit** juice is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Theoretical
- ▶ **Griseofulvin** potentially decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, tipranavir)** boosted with ritonavir are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ▶ **Idealalisib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Levonorgestrel** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of **levonorgestrel**. Avoid. [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the efficacy of **ulipristal**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ **Macrolides (erythromycin)** moderately increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the efficacy of **ulipristal**. Avoid and for 4 weeks after stopping **ulipristal**. [Severe] Theoretical
- ▶ **Modafinil** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ▶ **Neurokinin-1 receptor antagonists (netupitant)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ▶ **Norethisterone** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of **norethisterone**. Avoid or use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Rifamycins** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ▶ **St John's wort** is predicted to decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal

**Umeclidinium** → see TABLE 10 p. 1492 (antimuscarinics)

- ▶ **Antipsychotics, second generation (clozapine)** cause constipation, as can **umeclidinium**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492

## Upadacitinib

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
  - ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
  - ▶ **Grapefruit** is predicted to increase the exposure to **upadacitinib**. Avoid. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
  - ▶ **Idealalisib** is predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **upadacitinib**. Avoid. [Severe] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
- Urokinase** → see TABLE 3 p. 1490 (anticoagulant effects)
- Ursodeoxycholic acid**
- ▶ Oral **antacids** are predicted to decrease the absorption of oral **ursodeoxycholic acid**. Separate administration by 2 hours. [Moderate] Theoretical
  - ▶ **Ursodeoxycholic acid** affects the concentration of **ciclosporin**. Use with caution and adjust dose. [Severe] Anecdotal
  - ▶ **Fibrates** are predicted to decrease the efficacy of **ursodeoxycholic acid**. Avoid. [Severe] Theoretical
- Ustekinumab** → see monoclonal antibodies
- Vaborbactam**
- ▶ **Vaborbactam** is predicted to increase the concentration of **beta blockers, selective (metoprolol)**. [Unknown] Theoretical
  - ▶ **Vaborbactam** is predicted to increase the concentration of **SNRIs (venlafaxine)**. [Unknown] Theoretical
- Valaciclovir** → see TABLE 2 p. 1490 (nephrotoxicity)
- ▶ **Valaciclovir** is predicted to increase the exposure to **aminophylline**. [Severe] Anecdotal
  - ▶ **Valaciclovir** is predicted to decrease the efficacy of **live vaccines (herpes-zoster vaccine, live)**. [Moderate] Theoretical
  - ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valaciclovir**. [Moderate] Theoretical
  - ▶ **Valaciclovir** is predicted to increase the exposure to **theophylline**. [Severe] Theoretical
- Valganciclovir** → see TABLE 15 p. 1493 (myelosuppression), TABLE 2 p. 1490 (nephrotoxicity)
- ▶ **Valganciclovir** is predicted to increase the risk of seizures when given with **carbamapenems (impipenem)**. Avoid. [Severe] Anecdotal
  - ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valganciclovir**. [Moderate] Theoretical
- Valproate** → see antiepileptics
- Valsartan** → see angiotensin-II receptor antagonists
- Vancomycin** → see TABLE 2 p. 1490 (nephrotoxicity), TABLE 19 p. 1494 (ototoxicity)
- Vandetanib** → see TABLE 9 p. 1492 (QT-interval prolongation)
- ▶ **Vandetanib** is predicted to increase the exposure to **afatinib**. [Moderate] Study
  - ▶ **Vandetanib** is predicted to increase the exposure to **aliskiren**. [Moderate] Study
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1492

## Vandetanib (continued)

- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to vandetanib. Avoid. [Moderate] Study
- ▶ Vandetanib is predicted to increase the exposure to antihistamines, non-sedating (**fxefenadine**). [Moderate] Study
- ▶ Vandetanib is predicted to increase the exposure to **berotralstat**. [Severe] Study
- ▶ Vandetanib is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ Vandetanib is predicted to increase the exposure to **colchicine**. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to vandetanib. [Moderate] Study
- ▶ Vandetanib slightly increases the exposure to **digoxin**. [Moderate] Study
- ▶ Vandetanib is predicted to increase the exposure to dopamine receptor agonists (**pramipexole**). Adjust dose. [Moderate] Study
- ▶ Endothelin receptor antagonists (**bosentan**) are predicted to decrease the exposure to vandetanib. [Moderate] Study
- ▶ Vandetanib is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ Vandetanib is predicted to increase the exposure to **everolimus**. [Moderate] Study
- ▶ Vandetanib is predicted to increase the exposure to factor XA inhibitors (**apixaban**). [Moderate] Theoretical
- ▶ Vandetanib is predicted to increase the exposure to factor XA inhibitors (**edoxaban**, **rivaroxaban**). [Moderate] Study
- ▶ Vandetanib is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ Vandetanib is predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
- ▶ Vandetanib is predicted to increase the exposure to **loperamide**. [Moderate] Study
- ▶ Vandetanib increases the exposure to **metformin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to vandetanib. Avoid. [Moderate] Study
- ▶ Vandetanib is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ NNRTIs (**efavirenz**, **nevirapine**) are predicted to decrease the exposure to vandetanib. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Vandetanib is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **Rifamycins** (**rifampicin**) are predicted to decrease the exposure to vandetanib. Avoid. [Moderate] Study
- ▶ Vandetanib is predicted to increase the exposure to **sirolimus**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to vandetanib. Avoid. [Severe] Study
- ▶ Vandetanib is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [Severe] Study
- ▶ Vandetanib is predicted to increase the exposure to **taxanes** (**docetaxel**) (oral). [Unknown] Theoretical
- ▶ Vandetanib is predicted to increase the exposure to **taxanes** (**paclitaxel**) (oral). [Unknown] Study
- ▶ Vandetanib is predicted to increase the exposure to thrombin inhibitors (**dabigatran**). [Moderate] Study
- ▶ Vandetanib might increase the exposure to **tigecycline**. [Mild] Anecdotal
- ▶ Vandetanib is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ Vandetanib is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ Vandetanib might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1492

**Vardenafil** → see phosphodiesterase type-5 inhibitors

**Varicella-zoster immunoglobulin** → see immunoglobulins

**Varicella-zoster vaccine** → see live vaccines

**Vecuonium** → see neuromuscular blocking drugs, non-depolarising

**Vedolizumab** → see monoclonal antibodies

## Velpatasvir

- ▶ Velpatasvir is predicted to increase the exposure to **aliskiren**. [Severe] Theoretical
- ▶ Oral **antacids** are predicted to decrease the concentration of oral velpatasvir. Separate administration by 4 hours. [Moderate] Theoretical
- ▶ Anti- $\alpha$ -androgens (**apalutamide**, **enzalutamide**) are predicted to moderately decrease the exposure to velpatasvir. Avoid. [Severe] Study
- ▶ Antiarrhythmics (**amiodarone**) are predicted to increase the concentration of velpatasvir. Avoid or monitor. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to moderately decrease the exposure to velpatasvir. Avoid. [Severe] Study
- ▶ Antiepileptics (**oxcarbazepine**) are predicted to decrease the exposure to velpatasvir. Avoid. [Severe] Theoretical
- ▶ Velpatasvir is predicted to increase the exposure to antihistamines, non-sedating (**fxefenadine**). [Severe] Theoretical
- ▶ Calcium salts (**calcium carbonate**) are predicted to decrease the concentration of velpatasvir. Separate administration by 4 hours. [Moderate] Anecdotal
- ▶ Velpatasvir is predicted to increase the exposure to **colchicine**. [Severe] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to velpatasvir. Avoid. [Moderate] Theoretical
- ▶ Velpatasvir is predicted to increase the exposure to **digoxin**. [Severe] Study
- ▶ Endothelin receptor antagonists (**bosentan**) are predicted to decrease the exposure to velpatasvir. Avoid. [Moderate] Theoretical
- ▶ Velpatasvir is predicted to increase the exposure to **everolimus**. [Severe] Theoretical
- ▶ Velpatasvir is predicted to increase the exposure to factor XA inhibitors (**edoxaban**). [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the concentration of velpatasvir. Adjust dose, see sofosbuvir with velpatasvir p. 685. [Moderate] Study
- ▶ HIV-protease inhibitors (**tipranavir**) are predicted to increase the exposure to velpatasvir. [Severe] Theoretical
- ▶ Velpatasvir is predicted to increase the exposure to **loperamide**. [Severe] Theoretical
- ▶ **Mitotane** is predicted to moderately decrease the exposure to velpatasvir. Avoid. [Severe] Study
- ▶ **Modafinil** is predicted to decrease the exposure to velpatasvir. Avoid. [Severe] Theoretical
- ▶ NNRTIs (**efavirenz**, **nevirapine**) are predicted to decrease the exposure to velpatasvir. Avoid. [Moderate] Theoretical
- ▶ Proton pump inhibitors are predicted to decrease the concentration of velpatasvir. Adjust dose, see sofosbuvir with velpatasvir p. 685. [Moderate] Study
- ▶ **Rifamycins** (**rifampicin**) are predicted to moderately decrease the exposure to velpatasvir. Avoid. [Severe] Study
- ▶ Velpatasvir is predicted to increase the exposure to **sirolimus**. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to velpatasvir. Avoid. [Moderate] Theoretical
- ▶ Velpatasvir with sofosbuvir slightly increases the exposure to **statins** (**atorvastatin**). [Severe] Study
- ▶ Velpatasvir with sofosbuvir is predicted to increase the exposure to **statins** (**fluvastatin**, **simvastatin**). Monitor adverse effects and adjust dose. [Severe] Theoretical
- ▶ Velpatasvir moderately increases the exposure to **statins** (**rosuvastatin**). Adjust **rosuvastatin** dose and monitor adverse effects, p. 221. [Severe] Study
- ▶ Velpatasvir is predicted to increase the exposure to **sulfasalazine**. [Moderate] Theoretical
- ▶ Velpatasvir is predicted to increase the exposure to **taxanes** (**paclitaxel**). [Severe] Theoretical
- ▶ Velpatasvir is predicted to increase the exposure to **tenofovir disoproxil**. [Severe] Study
- ▶ Velpatasvir increases the exposure to thrombin inhibitors (**dabigatran**). Avoid. [Severe] Study
- ▶ Velpatasvir is predicted to increase the exposure to **topotecan**. [Severe] Theoretical

**Vemurafenib** → see TABLE 9 p. 1492 (QT-interval prolongation)

- ▶ **Vemurafenib** is predicted to increase the exposure to **afatinib**. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **agomelatine**. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **aliskiren**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Vemurafenib** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Vemurafenib** increases the concentration of **antipsychotics, second generation (clozapine)**. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **antipsychotics, second generation (olanzapine)**. Adjust dose. [Moderate] Anecdotal
- ▶ **Vemurafenib** slightly to moderately decreases the exposure to **benzodiazepines (midazolam)**. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **berotralstat**. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to decrease the concentration of **bupropion**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Ciclosporin** might affect the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust colchicine dose, p. 1212. [Severe] Theoretical
- ▶ **Vemurafenib** might decrease the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **coumarins**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Dabrafenib** is predicted to decrease the exposure to **vemurafenib**. [Severe] Study
- ▶ **Vemurafenib** slightly increases the exposure to **digoxin**. Use with caution and adjust dose. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **dipeptidylpeptidase-4 inhibitors (sitagliptin)**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [Moderate] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **vemurafenib**. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **endothelin receptor antagonists (ambrisentan)**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Vemurafenib** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **everolimus**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **factor XA inhibitors (apixaban)**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to slightly increase the exposure to **factor XA inhibitors (edoxaban)**. [Severe] Theoretical
- ▶ **Vemurafenib** might increase the exposure to **factor XA inhibitors (rivaroxaban)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Gefitinib** might affect the exposure to **vemurafenib**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Vemurafenib** might increase the exposure to **loperamide**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Vemurafenib** slightly increases the exposure to **MAO-B inhibitors (rasagiline)**. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **maraviroc**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Study
- ▶ **Monoclonal antibodies (ipilimumab)** might increase the risk of hepatotoxicity when given with **vemurafenib**. Avoid. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Vemurafenib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **vemurafenib**. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Vemurafenib** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Vemurafenib** is predicted to increase the exposure to **phenindione**. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **phenothiazines (chlorpromazine)**. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Vemurafenib** is predicted to increase the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Vemurafenib** might increase the exposure to **ranolazine**. Use with caution or avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1492

## Vemurafenib (continued)

- ▶ **Vemurafenib** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **SNRIs (duloxetine)**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Study
- ▶ **Vemurafenib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **taxanes (docetaxel)** (oral). [Unknown] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **taxanes (paclitaxel)** (oral). Use with caution and adjust dose. [Unknown] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Vemurafenib** might increase the exposure to **tigecycline**. [Mild] Anecdotal
- ▶ **Vemurafenib** increases the exposure to **tizanidine**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Vemurafenib** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **triptans (zolmitriptan)**. Adjust **zolmitriptan** dose, p. 515. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Vemurafenib** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1492

**Venetoclax**

**FOOD AND LIFESTYLE** Avoid Seville (bitter orange) and star fruit as they might increase the exposure to venetoclax.

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Venetoclax** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Venetoclax** is predicted to increase the exposure to **colchicine**. Avoid or adjust dose. [Severe] Study
- ▶ **Venetoclax** slightly increases the exposure to **coumarins (warfarin)**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Venetoclax** increases the exposure to **digoxin**. Avoid or adjust dose. [Severe] Study
- ▶ **Eltrombopag** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Venetoclax** is predicted to increase the exposure to **endothelin receptor antagonists (bosentan)**. [Moderate] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Venetoclax** is predicted to increase the exposure to **factor XA inhibitors (edoxaban, rivaroxaban)**. Avoid or adjust dose. [Severe] Study
- ▶ **Grapefruit** juice is predicted to increase the exposure to **venetoclax**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Ivacastrol** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Venetoclax** potentially decreases the efficacy of **live vaccines**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Venetoclax** is predicted to increase the exposure to **meglitinides (repaglinide)**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Neratinib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Venetoclax** is predicted to increase the exposure to **sirolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Venetoclax** is predicted to increase the exposure to **statins (atorvastatin)**. [Moderate] Study
- ▶ **Venetoclax** is predicted to increase the exposure to **statins (fluvastatin, pravastatin, rosuvastatin, simvastatin)**. [Moderate] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **sulfonylureas (glibenclamide)**. [Moderate] Theoretical

- ▶ **Teriflunomide** is predicted to increase the exposure to venetoclax. Avoid or monitor for toxicity. [Severe] Theoretical
  - ▶ **Venetoclax** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Avoid or adjust dose. [Severe] Study
  - ▶ **Venetoclax** is predicted to increase the exposure to **topotecan**. [Moderate] Theoretical
  - ▶ **Vemurafenib** is predicted to increase the exposure to venetoclax. Avoid or monitor for toxicity. [Severe] Theoretical
- Venlafaxine** → see SNRIs
- Verapamil** → see calcium channel blockers
- Vericiguat** → see TABLE 8 p. 1491 (hypotension)
- Vernakalant** → see antiarrhythmics
- Verteporfin**

**GENERAL INFORMATION** Caution on concurrent use with other photosensitising drugs.

- Vigabatrin** → see antiepileptics
- Vilanterol** → see beta<sub>2</sub> agonists
- Vildagliptin** → see dipeptidylpeptidase-4 inhibitors
- Vinblastine** → see vinca alkaloids
- Vinca alkaloids** → see TABLE 1 p. 1490 (hepatotoxicity), TABLE 15 p. 1493 (myelosuppression), TABLE 19 p. 1494 (ototoxicity), TABLE 12 p. 1493 (peripheral neuropathy), TABLE 5 p. 1491 (thromboembolism), TABLE 9 p. 1492 (QT-interval prolongation)
- vinblastine · vincristine · vindesine · vinflunine · vinorelbine
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to vinca alkaloids (**vinblastine, vincristine, vindesine**). [Severe] Theoretical
  - ▶ **Antiarrhythmics (amiodarone)** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 12 p. 1493 → Also see TABLE 9 p. 1492
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical → Also see TABLE 12 p. 1493
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 12 p. 1493
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to vinca alkaloids (**vinblastine, vincristine, vindesine**). [Severe] Theoretical → Also see TABLE 1 p. 1490 → Also see TABLE 12 p. 1493
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 1 p. 1490 → Also see TABLE 9 p. 1492
  - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **vinca alkaloids**. Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ **Asparaginase** potentially increases the risk of neurotoxicity when given with **vincristine**. Vincristine should be taken 3 to 24 hours before asparaginase. [Severe] Anecdotal → Also see TABLE 1 p. 1490 → Also see TABLE 15 p. 1493
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
  - ▶ **Ciclosporin** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
  - ▶ **Crisantaspase** potentially increases the risk of neurotoxicity when given with **vincristine**. Vincristine should be taken 3 to 24 hours before crisantaspase. [Severe] Anecdotal → Also see TABLE 1 p. 1490 → Also see TABLE 15 p. 1493
  - ▶ **Crizotinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1492

- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
  - ▶ **Idelalisib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
  - ▶ **Imatinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Ivacaftor** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical
  - ▶ **Lapatinib** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Letermovir** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **vinca alkaloids**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
  - ▶ **Macrolides (azithromycin)** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical
  - ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Mitotane** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Mitotane** is predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Mitotane** is predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Neratinib** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 1 p. 1490
  - ▶ **Neurokinin-1 receptor antagonists** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1493 → Also see TABLE 9 p. 1492
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **vinca alkaloids (vinblastine, vincristine)**. [Severe] Theoretical
  - ▶ **Pegaspargase** potentially increases the risk of neurotoxicity when given with **vincristine**. Vincristine should be taken 3 to 24 hours before pegaspargase. [Severe] Anecdotal → Also see TABLE 1 p. 1490 → Also see TABLE 15 p. 1493
  - ▶ **Ranolazine** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical
  - ▶ **Rucaparib** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1493
  - ▶ **St John's wort** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine, vinorelbine)**. [Severe] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical
  - ▶ **Vandetanib** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Vemurafenib** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1492
- Vincristine** → see vinca alkaloids
- Vindesine** → see vinca alkaloids
- Vinflunine** → see vinca alkaloids
- Vinorelbine** → see vinca alkaloids
- Vismodegib**
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical

## Vismodegib (continued)

- ▶ **Mitotane** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical

## Vitamin A

- ▶ **Retinoids (acitretin, alitretinoin, isotretinoin)** are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Theoretical
- ▶ **Retinoids (bexarotene)** are predicted to increase the risk of toxicity when given with **vitamin A**. Adjust dose. [Moderate] Theoretical
- ▶ **Retinoids (tretinoin)** are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Study

## Vitamin D substances

alfacalcidol · calcipotriol · calcitriol · calcitriol · calcitriol · ergocalciferol · paricalcitol · tacalcitol

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions with topical **calcitriol** should be borne in mind.

- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the effects of **vitamin D substances**. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of **vitamin D substances**. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the effects of **vitamin D substances**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (clotrimazole, ketoconazole)** are predicted to decrease the exposure to **calcitriol**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Vitamin D substances** are predicted to increase the risk of toxicity when given with **digoxin**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Thiazide diuretics** increase the risk of hypercalcaemia when given with **vitamin D substances**. [Moderate] Theoretical

## Vitamin E substances

- ▶ **Vitamin E substances** affect the exposure to **ciclosporin**. [Moderate] Study
- ▶ **Vitamin E substances** might increase the risk of bleeding when given with **selumetinib**. Avoid. [Severe] Theoretical

## Volanesorsen

- ▶ **Drugs with anticoagulant effects** (see TABLE 3 p. 1490) cause bleeding, as can **volanesorsen**; concurrent use might increase the risk of developing this effect. Avoid depending on platelet count—consult product literature. [Severe] Theoretical
- ▶ **Drugs with antiplatelet effects** (see TABLE 4 p. 1490) cause bleeding, as can **volanesorsen**; concurrent use might increase the risk of developing this effect. Avoid depending on platelet count—consult product literature. [Severe] Theoretical

## Volatile halogenated anaesthetics → see TABLE 8 p. 1491

(hypotension), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 11 p. 1492 (CNS depressant effects)

desflurane · isoflurane · methoxyflurane · sevoflurane

- ▶ **Antiepileptics (phenobarbital, primidone)** potentially increase the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. [Severe] Theoretical → Also see TABLE 11 p. 1492
- ▶ **Isoniazid** potentially increases the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. [Severe] Theoretical
- ▶ **Methylphenidate** might increase the risk of hypertension and arrhythmias when given with **volatile halogenated**

**anaesthetics**. Avoid **methylphenidate** on day of surgery, p. 379.

[Severe] Theoretical

- ▶ **Rifamycins (rifampicin)** potentially increase the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. [Severe] Theoretical

**Voriconazole** → see antifungals, azoles

**Vortioxetine** → see TABLE 13 p. 1493 (serotonin syndrome), TABLE 4 p. 1490 (antiplatelet effects)

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cinacalcet** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Interferons (ropeginterferon alfa)** are predicted to increase the exposure to **vortioxetine**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 13 p. 1493 → Also see TABLE 4 p. 1490
- ▶ **Terbinafine** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study

## Voxilaprevir

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Ciclosporin** increases the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **voxilaprevir** with sofosbuvir and velpatasvir. Avoid. [Severe] Study
- ▶ **Dabrafenib** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the exposure to **digoxin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the concentration of **factor XA inhibitors (edoxaban)**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir)** boosted with ritonavir increase the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (lopinavir)** boosted with ritonavir are predicted to increase the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (tipranavir)** boosted with ritonavir are predicted to increase the concentration of **voxilaprevir**. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Modafinil** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **voxilaprevir**. Adjust dose, see sofosbuvir with velpatasvir and voxilaprevir p. 685. [Moderate] Study
- ▶ **Rifamycins (rifabutin)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study

- ▶ **St John's wort** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the exposure to **statins (atorvastatin)**. Adjust **atorvastatin** dose, p. 220. [Moderate] Theoretical
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the exposure to **statins (fluvastatin, simvastatin)**. Avoid. [Moderate] Theoretical
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir moderately increases the exposure to **statins (pravastatin)**. Monitor and adjust **pravastatin** dose. [Moderate] Study
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir markedly increases the exposure to **statins (rosuvastatin)**. Avoid. [Severe] Study
- ▶ **Voxilaprevir** is predicted to increase the concentration of **sulfasalazine**. Avoid. [Severe] Theoretical
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir potentially increases the concentration of **tenofovir disoproxil**. [Severe] Study
- ▶ **Voxilaprevir** with sofosbuvir and velpatasvir increases the concentration of **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Study
- ▶ **Voxilaprevir** is predicted to increase the concentration of **topotecan**. Avoid. [Severe] Theoretical

**Warfarin** → see coumarins

#### Wasp venom extract

**GENERAL INFORMATION** Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

**Xipamide** → see thiazide diuretics

**Xylometazoline** → see sympathomimetics, vasoconstrictor

**Yellow fever vaccine, live** → see live vaccines

**Zidovudine** → see NRTIs

#### ZINC

**ROUTE-SPECIFIC INFORMATION** Interactions do not generally apply to topical use unless specified.

- ▶ Oral zinc might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Avoid. [Severe] Theoretical
  - ▶ Oral zinc decreases the absorption of oral **bisphosphonates (alendronate)**. **Alendronate** should be taken at least 30 minutes before zinc. [Moderate] Study
  - ▶ Oral zinc decreases the absorption of oral **bisphosphonates (clodronate)**. Avoid zinc. [Moderate] Study
  - ▶ Oral zinc is predicted to decrease the absorption of oral **bisphosphonates (ibandronate)**. Avoid zinc for at least 6 hours before or 1 hour after **ibandronate**. [Moderate] Theoretical
  - ▶ Oral zinc decreases the absorption of oral **bisphosphonates (risedronate)**. Separate administration by at least 2 hours. [Moderate] Study
  - ▶ Oral **calcium salts** decrease the absorption of zinc. [Moderate] Study
  - ▶ Oral zinc is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after zinc. [Severe] Theoretical
  - ▶ Oral zinc is predicted to decrease the efficacy of oral **iron** and oral **iron** is predicted to decrease the efficacy of oral zinc. [Moderate] Study
  - ▶ Oral zinc is predicted to decrease the absorption of oral **iron chelators (deferiprone)**. [Moderate] Theoretical
  - ▶ Zinc is predicted to decrease the absorption of **penicillamine**. [Mild] Theoretical
  - ▶ Zinc is predicted to decrease the exposure to **quinolones**. Separate administration by 2 hours. [Moderate] Study
  - ▶ Oral zinc is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Theoretical
  - ▶ **Trientine** potentially decreases the absorption of zinc. [Moderate] Theoretical
- Zoledronate** → see bisphosphonates
- Zolmitriptan** → see triptans
- Zolpidem** → see TABLE 11 p. 1492 (CNS depressant effects)
- ▶ **Antiepileptics (carbamazepine)** moderately decrease the exposure to **zolpidem**. [Moderate] Study

- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **zolpidem**. [Severe] Theoretical
  - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **zolpidem**. [Moderate] Study
- Zonisamide** → see antiepileptics
- Zopiclone** → see TABLE 11 p. 1492 (CNS depressant effects)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1492
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
  - ▶ **Crizotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
  - ▶ **Idelalisib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
  - ▶ **Imatinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- Zuclopenthixol** → see TABLE 8 p. 1491 (hypotension), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 11 p. 1492 (CNS depressant effects)
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **zuclopenthixol**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492
  - ▶ **Zuclopenthixol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 9 p. 1492
  - ▶ **Zuclopenthixol** is predicted to decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Theoretical → Also see TABLE 8 p. 1491
  - ▶ **Zuclopenthixol** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1492

# Appendix 2

## Borderline substances

### CONTENTS

<b>Enteral feeds (non-disease specific)</b>	page 1724	Feed thickeners and pre-thickened drinks	page 1751
Enteral feeds (non-disease specific): less than 5 g protein/100 mL	1724	Flavouring preparations	1751
Enteral feeds (non-disease specific): 5 g (or more) protein/100 mL	1726	<b>Foods for special diets</b>	1752
<b>Nutritional supplements (non-disease specific)</b>	1730	Gluten-free foods	1752
Nutritional supplements: less than 5 g protein/100 mL	1730	Low-protein foods	1754
Nutritional supplements: 5 g (or more) protein/100 mL	1732	<b>Nutritional supplements for metabolic diseases</b>	1757
<b>Specialised formulas</b>	1741	Glutaric aciduria (type 1)	1757
Specialised formulas for specific clinical conditions	1741	Glycogen storage disease	1757
<b>Feed supplements</b>	1745	Homocystinuria or hypermethioninaemia	1758
High-energy supplements	1745	Maple syrup urine disease	1758
Fibre, vitamin, and mineral supplements	1749	Methylmalonic or propionic acidemia	1759
<b>Feed additives</b>	1751	Other inborn errors of metabolism	1759
Special additives for conditions of intolerance	1751	Phenylketonuria	1760
		Tyrosinaemia	1763

In certain conditions some foods (and toilet preparations) have characteristics of drugs and the Advisory Committee on Borderline Substances (ACBS) advises as to the circumstances in which such substances may be regarded as drugs. Prescriptions issued in accordance with the Committee's advice and endorsed 'ACBS' will normally not be investigated.

### Information

General Practitioners are reminded that the ACBS recommends products on the basis that they may be regarded as drugs for the management of specified conditions. Doctors should satisfy themselves that the products can safely be prescribed, that patients are adequately monitored and that, where necessary, expert hospital supervision is available.

### Foods which may be prescribed on FP10, GP10 (Scotland), or WP10 (Wales)

All the food products listed in this appendix have ACBS approval. Some products may not be approved in all three countries. The clinical condition for which the product has been approved is included with each entry.

**Note** Foods included in this appendix may contain cariogenic sugars and patients should be advised to take appropriate oral hygiene measures.

### Enteral feeds and supplements

For most enteral feeds and nutritional supplements, the main source of **carbohydrate** is either maltodextrin or glucose syrup; other carbohydrate sources are listed in the relevant table, below. Feeds containing residual lactose (less than 1 g lactose/100 mL formula) are described as 'clinically lactose-free' or 'lactose-free' by some manufacturers. The presence of lactose (including residual lactose) in feeds is indicated in the relevant table, below. The primary sources of **protein** or **amino acids** are included with each product entry. The **fat** or **oil** content is derived from a variety of sources such as vegetables, soya bean, corn, palm nuts, and seeds; where the fat content is derived from animal or fish sources, this information is included in the relevant table, below. The presence of medium chain triglycerides (MCT) is also noted where the quantity exceeds 30% of the fat content.

Enteral feeds and nutritional supplements can contain varying amounts of **vitamins, minerals, and trace elements**—the manufacturer's product literature should be consulted for more detailed information. Feeds containing vitamin K may affect the INR in patients receiving warfarin. The suitability of food products for patients requiring a vegan, kosher, halal, or other compliant diet should be confirmed with individual manufacturers.

**Note** Feeds containing more than 6 g/100 mL protein or 2 g/100 mL fibre should be avoided in children unless recommended by an appropriate specialist or dietician.

### Nutritional values

Nutritional values of products vary with flavour and pack size—consult product literature.

### Other conditions for which ACBS products can be prescribed

This is a list of clinical conditions for which the ACBS has approved toilet preparations.

#### Dermatitis, Eczema and Pruritus

*Aveeno*<sup>®</sup> Cream; *Aveeno*<sup>®</sup> Lotion; *E45*<sup>®</sup> Emollient Bath Oil; *E45*<sup>®</sup> Emollient Wash Cream

#### Disfiguring skin lesions (birthmarks, mutilating lesions, scars, vitiligo)

*Covermark*<sup>®</sup> classic foundation and finishing powder; *Dermacolor*<sup>®</sup> Camouflage cream and fixing powder; *Keromask*<sup>®</sup> finishing powder and masking cream; *Veil*<sup>®</sup> Cover cream and Finishing Powder. (Cleansing Creams, Cleansing Milks, and Cleansing Lotions are excluded).

#### Disinfectants (antiseptics)

May be prescribed on an FP10 only when ordered in such quantities and with such directions as are appropriate for the treatment of patients, but not if ordered for general hygienic purposes.

#### Dry mouth (xerostomia)

For patients suffering from dry mouth as a result of having (or having undergone) radiotherapy, or sicca syndrome. *AS Saliva Orthana*<sup>®</sup>; *Biotène Oralbalance*<sup>®</sup>; *Glandosane*<sup>®</sup>; *Saliveze*<sup>®</sup>

#### Photodermatoses (skin protection in)

*Sunsense*<sup>®</sup> Ultra (Ego) SPF 50+; *Uvistat*<sup>®</sup> Lipscreen SPF 50, *Uvistat*<sup>®</sup> Suncream SPF 30 and 50

**Standard ACBS indications:** Disease-related malnutrition, intractable malabsorption, pre-operative preparation of malnourished patients, dysphagia, proven inflammatory bowel disease, following total gastrectomy, short-bowel syndrome, bowel fistula

**Table 1 Enteral feeds (non-disease specific)**

Less than 5 g protein/100 mL

**Enteral feeds: 1 kcal/mL and less than 5 g protein/100 mL**

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 1500 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g milk, soya proteins	13 g (sugars 0.9 g)	3.4 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723 except bowel fistula and pre-operative preparation of malnourished patients.	Fresubin 1500 Complete liquid: 1.5 litre = £16.50
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® Original Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g milk, soya proteins	13.0 g (sugars 0.9 g)	3.4 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723 except bowel fistula and pre-operative preparation of malnourished patients.	Fresubin Original Fibre liquid: 1000 ml = £11.81; 500 ml = £6.26
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® Original tube feed (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g milk, soya proteins	13.8 g (sugars 0.85 g)	3.4 g	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723; also Refsum's Disease.	Fresubin Original tube feed liquid: 1000 ml = £10.40; 1500 ml = £15.60; 500 ml = £5.95
Not suitable for use in child under 3 years; not recommended for child 3-6 years									
Jevity® (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	449 kJ (107 kcal)	4 g caseinates	14.1 g (sugars 0.25 g)	3.47 g	1.76 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723 except bowel fistula.	Jevity liquid: 1000 ml = £12.19; 1500 ml = £18.25; 500 ml = £6.46
Not suitable for use in child under 1 year; not recommended for use in children									
Nutrison® (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g cow's milk, pea, soya, whey proteins	12.3 g (sugars 0.7 g)	3.9 g	Less than 0.1 g	Contains fish oil, residual lactose, soya. Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1723.	Nutrison liquid: 500 ml = £5.91; 1000 ml = £10.38; 1500 ml = £15.59
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Nutrison® Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	430 kJ (103 kcal)	4 g caseinate, pea, soya, whey proteins	12.3 g (sugars 0.8 g)	3.9 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Nutrison Multi Fibre liquid: 500 ml = £6.39; 1500 ml = £18.02; 1000 ml = £12.03
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Osmolite® (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	424 kJ (101 kcal)	4 g caseinates, soya protein isolate	13.6 g (sugars 0.6 g)	3.4 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Osmolite liquid: 500 ml = £5.98; 1000 ml = £10.51; 1500 ml = £15.77
Not suitable for use in child under 1 year; not recommended for use in children									

SOYA PROTEIN FORMULA									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® Soya Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g soya protein	12.1 g (sugars 4.1 g)	3.6 g	2 g	Contains fish oil, soya. Gluten-free, lactose-free	Borderline substances standard ACBS indications p. 1723 except dysphagia. Also cows' milk protein intolerance, lactose intolerance.	Fresubin Soya Fibre liquid: 500 ml = €6.05
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Nutrison® Soya (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g soya protein isolate	12.3 g (sugars 1 g)	3.9 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723; also cow's milk protein and lactose intolerance.	Nutrison Soya liquid: 500 ml = €6.38; 1000 ml = €12.79
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Nutrison® Soya Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	430 kJ (103 kcal)	4 g soya protein	12.3 g (sugars 0.7 g)	3.9 g	1.5 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723; also cows' milk protein and lactose intolerance.	Nutrison Soya Multi Fibre liquid: 1500 ml = €21.27
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
PEPTIDE-BASED FORMULA									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Nutrison® Peptisorb (Nutricia Ltd)	Liquid (tube feed) per 100 mL	425 kJ (100 kcal)	4 g whey protein hydrolysate	17.6 g (sugars 1.7 g)	1.7 g (MCT 47%)	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723; also growth failure.	Nutrison Peptisorb liquid: 500 ml = €9.31; 1000 ml = €16.78
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Peptamen® liquid unflavoured (Nestle Health Science)	Liquid (sip or tube feed) per 100 mL	421 kJ (100 kcal)	4 g whey protein	13 g (sugars 0.48 g)	3.7 g (MCT 70%)	Nil	Contains residual lactose, soya. Gluten-free	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistulae.	Peptamen liquid unflavoured: 500 ml = £7.52; 1000 ml = £14.12
Not suitable for use in child under 3 years; not recommended for child under 5 years									
Survimed® OPD (Fresenius Kabi Ltd)	Liquid (sip or tube feed) per 100 mL	420 kJ (100 kcal)	4.5-4.7 g whey protein hydrolysate	14.1-14.3 g (sugars 1.1-5 g)	2.8 g (MCT 48-51%)	less than or equal to 0.1 g	Contains fish oil (tube feed only), residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1723; also growth failure.	Survimed OPD liquid: 500 ml = €9.23; 800 ml = €13.56; 1000 ml = €17.47
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Enteral feeds: Less than 1 kcal/mL and less than 5 g protein/100 mL									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Peptamen® Junior 0.6 (Nestle Health Science)	Liquid (tube feed) per 100 mL	254 kJ (60 kcal)	2.3 g whey protein	6.8 g (sugars 1.5 g)	2.5 g (MCT 36%)	0.8 g	Contains fish oil, residual lactose, soya. Gluten-free	Disease-related malnutrition in patients with malabsorption and/or maldigestion who have reduced energy requirements.	Peptamen Junior 0.6 liquid: 500 ml = £7.32
Not suitable for use in child under 1 year									

## Enteral feeds (non-disease specific): 5 g (or more) protein/100 mL

**Enteral feeds: 1.5 kcal/mL and 5 g (or more) protein/100 mL**

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 2250 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	5.6 g milk, soya proteins	18 g (sugars 1.2 g)	5.8 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723	Fresubin 2250 Complete liquid: 1.5 litre = £18.42
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® Energy (Fresenius Kabi Ltd)	Liquid (sip or tube feed) per 100 mL	630 kJ (150 kcal)	5.6 g milk, whey proteins	18.8 g (sugars 1.1-6.3)	5.8 g	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Fresubin Energy liquid unflavoured: 1500 ml = £19.43; 1000 ml = £12.99; 500 ml = £6.88; 200 ml = £1.40
Not suitable for use in child under 3 years; not recommended for child 3-6 years									
Fresubin® Energy Fibre Tube Feed (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	5.6 g milk, soya proteins	18 g (sugars 1.2 g)	5.8 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Fresubin Energy Fibre liquid unflavoured: 500 ml = £7.50; 1000 ml = £14.14
Not suitable for use in child under 3 years; not recommended for child 3-6 years									
Fresubin® HP Energy (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	7.5 g milk protein	17 g (sugars 1 g)	5.8 g (MCT 57 %)	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723; also CAPD and haemodialysis.	Fresubin HP Energy liquid: 500 ml = £6.95; 1000 ml = £13.09
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Fresubin® HP Energy Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	7.5 g milk protein	16.2 g (sugars 1.11 g)	5.8 g (MCT 57%)	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723 except dysphagia. Also CAPD and haemodialysis.	Fresubin HP Energy Fibre liquid: 500 ml = £7.65; 1000 ml = £14.42
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Jevity® 1.5kcal (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	649 kJ (154 kcal)	6.38 g caseinates, soya protein isolate	20.1 g (sugars 1.3 g)	4.9 g	2.2 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Jevity 1.5kcal liquid: 1500 ml = £22.51; 500 ml = £7.73; 1000 ml = £14.58
Not recommended for use in children									
Nutrison® Energy (Nutricia Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	6 g caseinate, pea, soya, whey proteins	18.3 g (sugars 1.1 g)	5.8 g	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723	Nutrison Energy liquid: 1000 ml = £22.51; 500 ml = £6.89; 1500 ml = £19.40
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Nutrison® Energy Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	640 kJ (153 kcal)	6 g caseinates, pea, soya, whey proteins	18.4 g (sugars 2.4 g)	5.8 g	1.5 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Nutrison Energy Multi Fibre liquid: 1000 ml = £14.39; 500 ml = £7.65; 1500 ml = £22.21
Not suitable for use in child under 1 year; not recommended for child 1-6 years									

Nutrison® Peptisorb Plus HEHP (Nutricia Ltd)	Liquid (tube feed) per 100 ml	631 kJ (150 kcal)	7.5 g whey protein hydrolysate	18.7 g (sugars 1.4 g)	5 g (MCT 60%)	Less than 0.5 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723 except dysphagia.	Nutrison Peptisorb Plus HEHP liquid: 1000 ml = £17.47; 500 ml = £9.28
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Nutrison® Protein Plus Energy (Nutricia Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	7.5 g caseinates, pea, soya, whey proteins	16.9 g (sugars 3.3 g)	5.8 g	Less than 0.1 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Nutrison Protein Plus Energy liquid: 500 ml = £6.89; 1000 ml = £12.97
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Osmolite® 1.5kcal (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	634 kJ (151 kcal)	6.3 g caseinates, soya protein isolate	20.4 g (sugars 1.2 g)	4.9 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723; also continuous ambulatory peritoneal dialysis (CAPD), and haemodialysis.	Osmolite 1.5kcal tube feed liquid: 1000 ml = £13.13; 1500 ml = £19.64; 500 ml = £6.96
Not suitable for use in child under 1 year; not recommended for use in children									
Vital® 1.5kcal (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	631 kJ (150 kcal)	6.8 g caseinates, whey protein hydrolysate	18.4 g (sugars 3.5 g)	5.5 g (MCT 64%)	Nil	Contains residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1723 except dysphagia.	Vital 1.5kcal liquid: mixed berry 200 ml = £3.63; vanilla 200 ml = £3.63; 1000 ml = £18.65; cafe latte 200 ml = £3.63
Not recommended for use in children									
<b>Enteral feeds: Less than 1.5 kcal/mL and 5 g (or more) protein/100 mL</b>									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 1000 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	418 kJ (100 kcal)	5.5 g milk protein	12.5 g (sugars 1.1 g)	2.7 g	2 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723	Fresubin 1000 Complete liquid: 1 litre = £12.58
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® 1200 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	504 kJ (120 kcal)	6 g milk protein	14 g (sugars 1.17 g)	4.1 g	2 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723 except dysphagia.	Fresubin 1200 Complete liquid: 1 litre = £15.69
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® 1800 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	504 kJ (120 kcal)	6 g milk protein	14 g (sugars 1.17 g)	4.1 g	2 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723 except dysphagia.	Fresubin 1800 Complete liquid: 1.5 litre = £15.69
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Jevity® Plus (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	514 kJ (122 kcal)	5.6 g caseinates, soya protein isolate	15.1 g (sugars 0.75 g)	3.9 g	2.2 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Jevity Plus liquid: 1500 ml = £21.12; 500 ml = £7.74; 1000 ml = £14.12
Not recommended for use in children									

Enteral feeds: Less than 1.5 kcal/mL and 5g (or more) protein/100 mL (product list continued)									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Jevity® Plus HP (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	551 kJ (131 kcal)	8.1 g caseinates, milk, soya protein isolates	14.2 g (sugars 0.7 g)	4.3 g	1.5 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723; also CAPD, haemodialysis.	Jevity Plus HP gluten free liquid: 500 ml = £7.59
Not suitable for use in child under 2 years; not recommended for use in children									
Jevity® Promote (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	434 kJ (103 kcal)	5.6 g caseinates, soya protein isolate	12 g (sugars 0.52 g)	3.3 g	1.7 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Jevity Promote liquid: 1 litre = £13.50
Not suitable for use in child under 2 years; not recommended for use in children									
Nutrison® 800 Complete Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	345 kJ (83 kcal)	5.5 g caseinate, pea, soya, whey proteins	8.8 g (sugars 0.6 g)	2.5 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723 except bowel fistula.	Nutrison 800 Complete Multi Fibre liquid: 1000 ml = £12.58
Not suitable for use in child under 6 years; not recommended for child under 12 years									
Nutrison® 1000 Complete Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	440 kJ (104 kcal)	5.5 g caseinate, pea, soya, whey proteins	11.3 g (sugars 0.8 g)	3.7 g	2 g	Contains fish oil, residual lactose, soya. Gluten-free	Disease related malnutrition in patients with low energy and/or low fluid requirements.	Nutrison 1000 Complete Multi Fibre liquid: 1000 ml = £13.35
Not suitable for use in child under 1 year; not recommended for child under 12 years									
Nutrison® 1200 Complete Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	525 kJ (124 kcal)	5.5 g caseinates, pea, soya, whey proteins	15 g (sugars 1 g)	4.3 g	2 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723 except bowel fistula.	Nutrison 1200 Complete Multi Fibre liquid: 1500 ml = £21.21; 1000 ml = £14.12
Not suitable for use in child under 1 year; not recommended for child under 12 years									
Nutrison® MCT (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	5 g caseinates	12.6 g (sugars 1 g)	3.3 g (MCT 61%)	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Nutrison MCT liquid: 1000 ml = £12.02
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Nutrison® Protein Plus (Nutricia Ltd)	Liquid (tube feed) per 100 mL	525 kJ (125 kcal)	6.3 g caseinates, pea, soya, whey proteins	14.2 g (sugars 0.9 g)	4.9 g	Less than 0.1 g	Contains fish oil, residual lactose, soya. Gluten-free	Disease related malnutrition.	Nutrison Protein Plus liquid: 500 ml = £6.37; 1000 ml = £12.34
Not suitable for use in child under 1 year; not recommended for child 1-6 years									

Nutrison® Protein Plus Multifibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	535 kJ (128 kcal)	6.3 g caseinates, pea, soya, whey proteins	14.1 g (sugars 1 g)	4.9 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Disease related malnutrition.	Nutrison Protein Plus Multifibre liquid: 1000 ml = £13.76; 500 ml = £7.08
Not suitable for use in child under 1 year; not recommended in child 1-6 years									
Osmolite® Plus (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	508 kJ (121 kcal)	5.6 g caseinates	15.8 g (sugars 0.42 g)	3.9 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Osmolite Plus liquid: 1000 ml = £11.83; 500 ml = £6.50
Not suitable for use in child under 1 year; not recommended for use in children									
Peptamen® HN (Nestle Health Science)	Liquid (sip or tube feed) per 100 mL	559 kJ (133 kcal)	6.6 g whey protein hydrolysate	16 g (sugars 1.4 g)	4.9 g (MCT 69%)	Nil	Contains meat derivatives, residual lactose, soya. Gluten-free	Impaired gastrointestinal function, short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease and bowel fistula or with higher nutritional requirements.	Peptamen HN liquid: 1000 ml = £15.20; 500 ml = £8.09
Not suitable for use in child under 3 years									
Perative® (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	552 kJ (131 kcal)	6.7 g caseinates, whey protein hydrolysate	17.7 g (sugars 0.45 g)	3.7 g (MCT 37%)	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723 except dysphagia.	Perative liquid: 1000 ml = £16.99; 500 ml = £9.20
Not suitable for use in child under 1 year; not recommended for use in children									
Survimed® OPD HN (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	560 kJ (133 kcal)	6.7 g whey protein hydrolysate	18.3 g (sugars 1.3 g)	3.7 g (MCT 52%)	less than or equal to 0.1 g	Contains fish oil, residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1723; also haemodialysis and continuous ambulatory peritoneal dialysis.	Survimed OPD HN liquid: 500 ml = £8.94
Not suitable for use in child under 3 years; not recommended for use in child under 6 years									
<b>Enteral feeds: More than 1.5 kcal/mL and 5 g (or more) protein/100 mL</b>									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 2kcal HP (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	840 kJ (200 kcal)	10 g milk protein	17.5 g (sugars 2.5 g)	10 g	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Fresubin 2kcal HP tube liquid feed: 500 ml = £8.43
Not suitable for use in child under 1 year; not recommended for child under 6 years									
Fresubin® 2kcal HP Fibre (Fresenius Kabi Ltd)	Liquid per 100 mL	840 kJ (200 kcal)	10 g milk protein	16.7 g (sugars 2.5 g)	10 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Fresubin 2kcal HP Fibre tube feed liquid: 500 ml = £9.99
Not suitable for use in child under 1 year; not recommended for child under 6 years									
TwoCal® (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	837 kJ (200 kcal)	8.4 g casein, milk protein isolate	21 g hydrolysed corn starch (sugars 4.7 g)	8.9 g	1 g	Contains residual lactose, soya. Gluten-free	Adults with or at risk of disease-related malnutrition, catabolic or fluid-restricted patients, and other patients requiring a 2 kcal/mL feed.	TwoCal liquid: 1 litre = £19.08
Not recommended for use in children									

**Table 2 Nutritional supplements (non-disease specific)**

Nutritional supplements: less than 5 g protein/100 mL

**Nutritional supplements: 1 kcal/mL and less than 5 g protein/100 mL**

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Elemental 028 <sup>®</sup> Extra liquid (Nutricia Ltd)	Liquid (sip feed) per 100 mL	360 kJ (86 kcal)	2.5 g protein equivalent (essential and nonessential amino acids)	11 g (sugars 4.7 g)	3.5 g (MCT 35%)	Nil	Gluten-free, lactose-free	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistulae.	Elemental 028 Extra liquid: grapefruit, orange & pineapple, summer fruits 250 ml = £4.28
Not suitable for use in child under 1 year; not recommended for child 1-5 years									
Elemental 028 <sup>®</sup> Extra powder (Nutricia Ltd)	Standard dilution (20% w/v) of powder per 100 mL	374 kJ (89 kcal)	2.5 g protein equivalent (essential and nonessential amino acids)	12 g (sugars 1.1 g)	3.5 g (MCT 35%)	Nil	Gluten-free, lactose-free	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistulae.	Elemental 028 Extra powder: banana, orange, plain 100 g = £8.33
Powder provides: protein 12.5 g, carbohydrate 59 g, fat 17.5 g, energy 1871 kJ (443 kcal)/100 g Not suitable for use in child under 1 year; not recommended for child 1-5 years									
Emsogen <sup>®</sup> (Nutricia Ltd)	Standard dilution (20% w/v) of powder per 100 mL	368 kJ (88 kcal)	2.5 g protein equivalent (essential and nonessential amino acids)	12.0 g (sugars 1.6 g)	3.3 g (MCT 83%)	Nil		Short-bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula.	Emsogen powder unflavoured: 100 gram = £8.57
Powder provides: protein 12.5 g, carbohydrate 60.0 g, fat 16.4 g, energy 1839 kJ (438 kcal)/100 g Not suitable for use in child under 1 year; not recommended for use in child under 5 years									
Ensure <sup>®</sup> (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	423 kJ (100 kcal)	4 g caseinates, soya protein isolate	13.6 g (sugars 3.8 g)	3.4 g	Nil	Contains residual lactose, soya. Gluten-free.	Disease-related malnutrition, intractable malabsorption, total gastrectomy, proven inflammatory bowel disease, and pre-operative preparation of patients who are undernourished.	Ensure liquid: chocolate, vanilla 250 ml = £2.64
Not suitable for use in child under 1 year; not recommended for use in children									
Fresubin <sup>®</sup> Original drink (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	420 kJ (100 kcal)	3.8 g milk, soya proteins	13.8 g (sugars 3.5 g)	3.4 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723; also Refsum's Disease.	Fresubin Original drink: chocolate, vanilla, blackcurrant, peach, nut 200 ml = £2.60
Not suitable for use in child under 3 years; not recommended for child 3-6 years									

Peptamen <sup>®</sup> liquid vanilla (Nestle Health Science)	Liquid (sip feed) per 100 mL	421 kJ (100 kcal)	4 g whey protein	12.7 g (sugars 3.3 g)	3.7 g (MCT 68%)	Nil	Contains residual lactose, soya	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistulae.	Peptamen liquid vanilla: 800 ml = £13.38
Not suitable for use in child under 3 years; not recommended for child under 5 years									
Resource <sup>®</sup> Thickened Drink (Nestle Health Science)	Liquid (sip feed) per 100 mL	376 kJ (89 kcal)	0.4 g	21 g (sugars 9.5 g)	less than 0.1 g	Nil	Gluten-free, lactose-free	Dysphagia.	Resource Thickened Drink custard: apple 114 ml = £0.78; orange 114 ml = £0.78; Resource Thickened Drink syrup orange: 114 ml = £0.78
Not suitable for use in child under 3 years									
<b>Nutritional supplements: More than 1 kcal/mL and less than 5 g protein/100 mL</b>									
<b>Product</b>	<b>Formulation</b>	<b>Energy</b>	<b>Protein</b>	<b>Carbohydrate</b>	<b>Fat</b>	<b>Fibre</b>	<b>Special Characteristics</b>	<b>ACBS Indications</b>	<b>Presentation &amp; Flavour</b>
Altrajuce <sup>®</sup> (Nualtra Ltd)	Liquid (sip feed) per 100 ml	636 kJ (150 kcal)	3.9 g milk protein	33.5 g (sugars 13.5 g)	Nil	Nil	Contains residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1723 except dysphagia.	Altrajuce Starter Pack liquid: 800 ml = £7.32; Altrajuce liquid: apple, blackcurrant, orange, strawberry 200 ml = £1.70
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Aymes <sup>®</sup> ActaSolve High Energy (Aymes International Ltd)	Powder per 100 g	2105 kJ (503 kcal)	4.8 g milk protein	63.8 g (sugar 22.5 g)	25.3 g	0.40 g	Contains lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723 except dysphagia.	Aymes ActaSolve High Energy Starter Pack powder: 4 sachet = £8.96; Aymes ActaSolve High Energy powder 85g sachets: banana, chocolate, strawberry, vanilla 6 sachet = £11.76
Powder 85g reconstituted with 240 ml whole milk provides: protein 12.3g, carbohydrate 65.6g, fat 30.4g, energy 2451 kJ (586 kcal)									
Not suitable for use in child under 3 years; use with caution in child under 6 years									
EnergieShake <sup>®</sup> Powder (Anaiiah Healthcare PVT Ltd)	Powder per 100 g	1849 kJ (439 kcal)	16.5 g milk protein	62.1 g (sugars 26.8 g)	13.9 g	Less than 1 g	Contains lactose, soya	Borderline substances standard ACBS indications p. 1723.	EnergieShake Powder Starter Pack oral powder sachets: 285 gram = £2.88; EnergieShake Powder oral powder 57g sachets: banana, chocolate, neutral, strawberry, vanilla 4 sachet = £1.76; 7 sachet = £3.08
Powder 57g reconstituted with 200 mL water provides: protein 9.4g, carbohydrate 35.4g, fat 7.9g, energy 1054 kJ (250 kcal)									
Not recommended for use in child under 6 years									
Ensure <sup>®</sup> Plus Juice (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	638 kJ (150 kcal)	4.8 g whey protein isolate	32.7 g (sugars 9.4 g)	Nil	Nil	Contains residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1723	Ensure Plus Juice liquid: apple, fruit punch, lemon & lime, orange, peach, strawberry 200 ml = £2.12
Not suitable for use in child under 1 year; not recommended for use in children									
Fortijuce <sup>®</sup> (Nutricia Ltd)	Liquid (sip feed) per 100 mL	635 kJ (150 kcal)	3.9 g milk protein	33.5 g (sugars 13.1 g)	Nil	Nil	Contains residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1723; except dysphagia.	Fortijuce Starter Pack liquid: 800 ml = £8.08; Fortijuce liquid: apple, blackcurrant, forest fruits, lemon, orange, tropical 200 ml = £2.02; Fortisip Range Starter Pack liquid: 2 litre = £20.20
Not suitable for use in child under 1 year; not recommended for child 1-5 years

Powder 57 g reconstituted with 100 ml whole milk provides: protein 15 g, carbohydrate 37 g, fat 12 g, energy 1338 kJ (318 kcal) Not suitable for use in children under 3 years; not recommended for child 3-6 years									
Foodlink® Complete with Fibre (Nualtra Ltd)	Powder per 100 g	1779 kJ (423 kcal)	19 g milk, soya proteins	52 g (sugars 40 g)	14 g	7.2 g	Contains lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723	Foodlink Complete powder with fibre 63g sachets: banana, chocolate, natural, strawberry, vanilla 7 sachet = £5.32; Foodlink Complete powder with fibre Starter Pack: 5 sachet = £3.95
Powder 63 g reconstituted with 200 ml whole milk provides: protein 19 g, carbohydrate 42 g, fat 16 g, energy 1667 kJ (397 kcal) Not suitable for use in child under 3 years; not recommended for child 3-6 years									
Forticreme® Complete (Nutricia Ltd)	Semi-solid per 100 g	675 kJ (160 kcal)	9.5 g milk proteins	19.2 g (sugars 10.6 g)	5 g	less than 0.5 g	Contains residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1723; also continuous ambulatory peritoneal dialysis (CAPD), haemodialysis.	Forticreme Complete dessert: forest fruits 500 gram = £8.24; banana, chocolate, vanilla 500 gram = £8.24
Not suitable for use in child under 3 years; not recommended for child under 6 years									

Fortisip® 2kcal (Nutricia Ltd)	Liquid (sip feed) per 100 mL	839 kJ (201 kcal)	10.1 g milk proteins	20.6 g (sugars 15.4 g)	8.6 g	Nil	Contains residual lactose, soya.	Borderline substances standard ACBS indications p. 1723 except dysphagia; also CAPD and haemodialysis.	Fortisip 2kcal liquid: chocolate-caramel, forest fruit, mocha, strawberry, vanilla 200 ml = £2.22
Not suitable for use in child under 3 years; use with caution in child 3-6 years									
Fortisip® Compact (Nutricia Ltd)	Liquid (sip feed) per 100 mL	1010 kJ (240 kcal)	9.6 g milk proteins	29.6 g (sugars 15.5 g)	9.3 g	Nil	Contains residual lactose, soya	Borderline substances standard ACBS indications p. 1723 except dysphagia.	Fortisip Compact Starter Pack liquid: 750 ml = £7.98; Fortisip Compact liquid: apricot, banana, chocolate, forest fruit, mocha, neutral, strawberry, vanilla 500 ml = £5.32
Not suitable for use in child under 3 years; use with caution in child 3-6 years									
Fortisip® Compact Fibre (Nutricia Ltd)	Liquid (sip feed) per 100 mL	1005 kJ (240 kcal)	9.5 g milk proteins	25.2 g (sugars 14.1 g)	10.4 g	3.6 g	Contains residual lactose, soya. Gluten-free.	Borderline substances standard ACBS indications p. 1723	Fortisip Compact Fibre Starter Pack liquid: 500 ml = £8.80; Fortisip Compact Fibre liquid: mocha, strawberry, vanilla 500 ml = £8.80
Not suitable for use in child under 3 years									
Fortisip® Compact Protein (Nutricia Ltd)	Liquid (sip feed) per 100 mL	1029 kJ (245 kcal)	14.6 g milk proteins	25.1 g (sugars 13.7 g)	9.6 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723 except dysphagia.	Fortisip Compact Protein Starter Pack liquid: 1000 ml = £16.40; Fortisip Compact Protein liquid: banana, berries, cool red fruits, hot tropical ginger, mocha, neutral, peach & mango, strawberry, vanilla 500ml = £8.20
Not suitable for use in child under 6 years; use with caution in child 6-10 years									
Fortisip® Extra (Nutricia Ltd)	Liquid (sip feed) per 100 mL	670 kJ (159 kcal)	9.8 g milk proteins	18.1 g (sugars 9 g)	5.3 g	Nil	Contains lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723	Fortisip Extra liquid: strawberry, vanilla 200 ml = £2.52
Not suitable for use in child under 3 years									
Fresubin® 2kcal (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	840 kJ (200 kcal)	10 g milk protein	22.5 g (sugars 3.2-5.8 g)	7.8 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723; also CAPD, haemodialysis.	Fresubin 2kcal drink: apricot, cappuccino, fruits of the forest, neutral, peach, toffee, vanilla 200ml = £2.24
Not suitable for use in child under 3 years; use with caution in child under 6 years									
Fresubin® 2kcal Creme (Fresenius Kabi Ltd)	Semi-solid per 100 g	840 kJ (200 kcal)	10 g milk protein	22.5 g sucrose (sugars 13.4 g)	7.8 g	Nil	Contains residual lactose, soya	Borderline substances standard ACBS indications p. 1723, continuous ambulatory peritoneal dialysis (CAPD) and haemodialysis.	Fresubin 2kcal Creme dessert: cappuccino, chocolate, praline, vanilla, wild strawberry 500 gram = £8.16
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® 2kcal Fibre (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	840 kJ (200 kcal)	10 g milk protein	21.7-21.8 g (sugars 3.3-5.9 g)	7.8 g	1.5 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723; also CAPD, haemodialysis.	Fresubin 2kcal Fibre drink: apricot-peach, cappuccino, chocolate, lemon, neutral, vanilla 200ml = £2.25
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® 2kcal Fibre Mini (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	840 kJ (200 kcal)	10 g milk protein	21.8 g (sugars 5.9 g)	7.8 g	1.5 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723; also CAPD, haemodialysis.	Fresubin 2kcal Fibre Mini drink: chocolate, vanilla 500 ml = £5.40
Not suitable for use in child under 3 years; not recommended for child 3-6 years									

Nutritional supplements: More than 1.5 kcal/mL and 5 g (or more) protein/100 mL (product list continued)									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 2kcal Mini (Fresenius Kabi Ltd)	Liquid per 100 mL	840 kJ (200 kcal)	10 g milk protein	22.5 g (sugars 5.3-5.8g)	7.8 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723; also CAPD, haemodialysis.	Fresubin 2kcal Mini drink: apricot-peach, fruits of the forest, vanilla 500 ml = £5.16
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® 3.2kcal (Fresenius Kabi Ltd)	Liquid per 100 mL	1344 kJ (320 kcal)	16 g collagen, milk proteins	28 g (sugars 10.8g)	16 g	0.5 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Fresubin 3.2kcal drink: hazelnut, mango, vanilla-caramel 500 ml = £9.72
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® Dessert Fruit (Fresenius Kabi Ltd)	Semi-solid per 100 g	670 kJ (160 kcal)	7 g whey protein	18.7 g sucrose (sugars 16.2 g)	5.6 g	3.5 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723 except intractable malabsorption.	Fresubin Dessert Fruit: 500 gram = £8.80
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® Powder Extra (Fresenius Kabi Ltd)	Powder per 100 g	1764 kJ (420 kcal)	17.5 g milk, whey proteins	63 g (sugars 18.6g)	10.9 g	Nil	Contains lactose. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Fresubin Powder Extra oral powder 62g sachets: chocolate, neutral, strawberry, vanilla 7 sachet = £5.11
Powder 62 g reconstituted with 200 ml whole milk provides: protein 17.7 g, carbohydrate 48.5 g, fat 14.8 g, energy 1658 kJ (397 kcal)									
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Nutrilis® Complete Creme Level 3 (Nutricia Ltd)	Semi-solid per 100 g	1030 kJ (245 kcal)	9.6 g milk protein	29.1 g (sugars 11.8g)	9.4 g	3.2 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Nutrilis Complete Creme Level 3 custard: chocolate, strawberry, vanilla 500 gram = £9.28
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Nutrilis® Complete Drink Level 3 (Nutricia Ltd)	Liquid (sip feed) per 100 mL	1025 kJ (245 kcal)	9.6 g caseinates, milk proteins	29.1 g (sugars 5.4g)	9.3 g	3.2 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723	Nutrilis Complete Drink Level 3 liquid: chocolate, lemon tea, mango, passionfruit, strawberry, vanilla 500 ml = £9.28
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Nutricrem® (Nualtra Ltd)	Semi-solid per 100 g	756 kJ (180 kcal)	10 g caseinates, milk protein, soya protein	18.8 g (sugars 9.7g)	7.2 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Nutricrem Starter Pack dessert: 500 gram = £7.04; Nutricrem dessert: chocolate orange, mint chocolate, strawberry, vanilla 500 gram = £7.32
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Nutrison® Energy Multi Fibre Vanilla (Nutricia Ltd)	Liquid per 100 mL	645 kJ (154 kcal)	6 g milk protein	18.4 g (sugars 6.8g)	5.8 g	2.2 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Nutrison Energy Multi Fibre Vanilla liquid: 200 ml = £2.57
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Renilon® 7.5 (Nutricia Ltd)	Liquid (sip feed) per 100 mL	835 kJ (199 kcal)	7.3 g milk protein	20 g (sugars 4.8g)	10 g	Nil	Contains residual lactose, soya	Borderline substances standard ACBS indications p. 1723 except dysphagia.	Renilon 7.5 liquid: apricot, caramel 500 ml = £10.32
Not suitable for use in child under 3 years; not recommended for child under 6 years									

Resource® 2.0 Fibre (Nestle Health Science)	Liquid (sip or tube feed) per 100 mL	835 kJ (200 kcal)	9 g milk protein	20 g (sugars 6 g)	8.7 g	2.5 g	Contains residual lactose	Borderline substances standard ACBS indications p. 1723.	Resource Fibre 2.0 liquid: apricot, coffee, neutral, summer fruit, strawberry, vanilla 200 ml = £2.08
Not suitable for use in child under 6 years, not recommended for child under 10 years									
SLO® Milkshake+ (SLO Drinks Ltd)	Powder per 100 g	1649 kJ (395 kcal)	34.7 g caseinates, whey protein isolate	50.9 g fructose (sugars 47.1 g)	5.1 g	0.5 g	Contains lactose, soya	Dysphagia.	SLO Milkshake+ IDDSI 1 Slightly Thick oral powder 50g sachets: banana, chocolate, strawberry 7 sachet = £6.65; SLO Milkshake+ IDDSI 2 Mildly Thick oral powder 50g sachets: banana, chocolate, strawberry 7 sachet = £5.95; SLO Milkshake+ IDDSI 3 Moderately Thick oral powder 50g sachets: banana, chocolate, strawberry 7 sachet = £5.95; SLO Milkshake+ IDDSI 4 Extremely Thick oral powder 50g sachets: banana, chocolate, strawberry 7 sachet = £6.65
Powder 50 g reconstituted with 200 ml whole milk provides: protein 24.2 g, carbohydrate 34.9 g, fat 10.6 g, energy 1389 kJ (334 kcal)									
Not suitable for use in child under 3 years									
TwoCal® Bolus (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	837 kJ (200 kcal)	8.4 g casein, milk protein isolate	21 g hydrolysed corn starch (sugars 4.65 g)	8.9 g	1 g	Contains residual lactose, soya. Gluten-free	Adults with or at risk of disease-related malnutrition, catabolic or fluid-restricted patients, and other patients requiring a 2 kcal/mL feed.	TwoCal Bolus liquid: 200 ml = £3.43
Not recommended for use in children

Polycal liquid: neutral, orange 200 ml = £2.04
Not suitable for use in child under 3 years									
Polycal <sup>®</sup> powder (Nutricia Ltd)	Standard dilution (10% w/v) of powder per 100 mL	82 kJ (19 kcal)	Nil	4.8 g (sugars 0.3 g)	Nil	Nil		Disease-related malnutrition, malabsorption states or other conditions requiring fortification with a high or readily available carbohydrate supplement.	Polycal powder: 400 gram = £5.15
Powder provides: protein Nil g, carbohydrate 96 g, fat Nil g, energy 1630 kJ (384 kcal)/100 g Not suitable for use in child under 1 year, not recommended for child 1-6 years									
Vitajoule <sup>®</sup> (Vitaflo International Ltd)	Powder per 100 g	1615 kJ (380 kcal)	Nil	95 g (sugars 9 g)	Nil	Nil		Disease related malnutrition, malabsorption states, other conditions requiring fortification with carbohydrate and as a carbohydrate source in modular feeds.	Vitajoule powder: 500 gram = £5.23

**High-energy supplements: fat**

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Betaquik <sup>®</sup> (Vitaflo International Ltd)	Liquid (sip feed) per 100 mL	777 kJ (189 kcal)	Nil	Nil	21 g (MCT 95%)	Nil		Ketogenic diet or conditions requiring a source of MCT.	Betaquik liquid: 225 ml = £3.83
Not suitable for use in child under 3 years									
Calogen <sup>®</sup> (Nutricia Ltd)	Liquid (sip or tube feed) per 100 mL	1850 kJ (450 kcal)	Nil	0.1 g (sugar Nil)	50 g	Nil	Banana and strawberry flavours not suitable for child under 3 years. Gluten-free, lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat supplement, with or without fluid and electrolyte restrictions.	Calogen emulsion: banana, strawberry 200ml = £5.24; banana, neutral, strawberry 500ml = £12.89
Fresubin <sup>®</sup> 5kcal shot (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	2100 kJ (500 kcal)	Nil	4 g sucrose (sugars 4 g)	53.8 g	0.4 g	Gluten-free, lactose-free	Disease related malnutrition malabsorption states or other conditions requiring fortification with a high fat supplement with or without fluid or electrolyte restrictions.	Fresubin 5kcal shot drink: lemon 480 ml = £12.52; neutral 480 ml = £12.52
Not suitable for use in child under 3 years									

FAT AND CARBOHYDRATE									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Duocal <sup>®</sup> Super Soluble (Nutricia Ltd)	Powder per 100 g	2061 kJ (492 kcal)	Nil	72.7 g (sugars 6.5 g)	22.3 g (MCT 38%)	Nil		Disease related malnutrition, malabsorption states or other conditions requiring fortification with a fat/carbohydrate supplement.	Duocal Super Soluble powder: 400 gram = £21.09
Scandishake <sup>®</sup> Mix (Nutricia Ltd)	Powder per 100 g	2120 kJ (507 kcal)	4.8 g caseinates	67 g (sugars 20.5 g)	24.5 g	Nil	Contains lactose, soya.	Disease-related malnutrition, malabsorption states or other conditions requiring fortification with a fat / carbohydrate supplement.	Scandishake Mix oral powder 85g sachets: banana, caramel, chocolate, strawberry, unflavoured, vanilla 6 sachet = £16.50
Powder 85 g reconstituted with 240 mL whole milk provides: protein 12.1 g, carbohydrate 68.2 g, fat 29.6 g, energy 2460 kJ (587 kcal) Not suitable for use in child under 3 years									
High-energy supplements: protein									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
ProSource <sup>®</sup> jelly (Nutrino Ltd)	Semi-solid per 100 mL	315 kJ (75 kcal)	16.9 g collagen protein, whey protein isolate	Less than 1 g	Nil	Less than 1 g	Contains porcine derivatives, residual lactose. Gluten-free	Hypoproteinaemia.	ProSource jelly: blackcurrant, fruit punch, lime, orange 118 ml = £2.07
Not recommended for child under 3 years									
ProSource <sup>®</sup> TF (Nutrino Ltd)	Liquid (tube feed) per 100 mL	373 kJ (98 kcal)	24.4 g collagen protein, protein equivalent (amino acids)	2.2 g (sugars Nil)	Less than 1 g	Less than 1 g	Contains bovine derivatives. Gluten-free, lactose-free	Hypoproteinaemia.	ProSource TF liquid 45ml sachets: 100 sachet = £136.08
Not recommended for child under 3 years									
Protifar <sup>®</sup> (Nutricia Ltd)	Powder per 100 g	1560 kJ (368 kcal)	87.2 g milk protein	less than 1.5 g	1.6 g	Nil	Contains residual lactose, soya. Gluten-free	Hypoproteinaemia.	Protifar powder: 225 gram = £10.48
Powder 2.5 g provides: protein 2.2 g, carbohydrate less than 0.04 g, fat 0.04 g, energy 39 kJ (9 kcal) Not suitable for use in child under 3 years									
Renapro Shot <sup>®</sup> (Stanningley Pharma Ltd)	Liquid (sip or tube feed) per 100ml	711 kJ (167 kcal)	33 g collagen protein	4.9 g fructose (sugars 4.9 g)	less than 0.5 g	Nil	Contains beef derivatives. Gluten-free	Hypoproteinaemia.	Renapro Shot 60ml bottles: cola, peach, wild berry 30 bottle = £69.60
Not suitable for use in child under 1 year									
Renapro <sup>®</sup> (Stanningley Pharma Ltd)	Powder per 100 g	1558 kJ (372 kcal)	90 g whey protein	3.4 g	1 g	Nil	Gluten-free	Dialysis, hypoproteinaemia.	Renapro powder 20g sachets: 30 sachet = £69.60
Powder 20 g reconstituted with 60-100 mL cold water provides: protein 18 g, carbohydrate 0.7 g, fat 0.2 g, energy 312 kJ (74 kcal) Not suitable for use in child under 1 year									

PROTEIN AND CARBOHYDRATE									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Dialamine <sup>®</sup> (Nutricia Ltd)	Standard dilution (20% w/v) of powder per 100 mL	264 kJ (62 kcal)	4.3 g protein equivalent (amino acids)	11.2 g (sugars 10.2 g)	Nil	Nil	Lactose-free	Chronic renal failure, hypoproteinaemia, wound fistula leakage with excessive protein loss, conditions requiring a controlled nitrogen intake and haemodialysis.	Dialamine powder: 400 gram = £85.69
Powder provides: protein 25 g, carbohydrate 65 g, fat Nil, energy 1530 kJ (360 kcal)/100 g Not suitable for use in child under 6 months									
ProSource <sup>®</sup> liquid (Nutrino Ltd)	Liquid (sip or tube feed) per 100 mL	1400 kJ (333 kcal)	33.3 g collagen protein, whey protein isolate	50 g (sugars 26.7 g)	Less than 1 g	Less than 1 g	Contains residual lactose, porcine derivatives. Gluten-free	Biochemically proven hypoproteinaemia.	ProSource liquid 30ml sachets: citrus berry, lemon, neutral, orange creme 100 sachet = £112.03
Not recommended for child under 3 years									
ProSource <sup>®</sup> Plus (Nutrino Ltd)	Liquid (sip and tube feed) per 100 mL	1400 kJ (333 kcal)	50 g collagen protein, whey protein isolate	36.7 g sucrose (sugars 33.3 g)	Less than 1 g	Less than 1 g	Contains porcine derivatives, residual lactose. Gluten-free	Hypoproteinaemia.	ProSource Plus liquid 30ml sachets: citrus berry, neutral, orange creme 50 sachet = £79.68; 100 sachet £159.36
Not recommended for child under 3 years									
PROTEIN, FAT, AND CARBOHYDRATE									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Calogen <sup>®</sup> Extra (Nutricia Ltd)	Liquid (sip or tube feed) per 100 mL	1650 kJ (400 kcal)	5 g caseinates, whey protein hydrolysate	4.5 g (sugars 3.5 g)	40.3 g	Nil	Contains residual lactose. Gluten-free	Disease related malnutrition, malabsorption states or other conditions requiring fortification with a high fat supplement with or without fluid restriction.	Calogen Extra Shots emulsion: neutral, strawberry 240 ml = £6.00; Calogen Extra emulsion: neutral, strawberry 200 ml = £5.10
Not suitable for use in child under 3 years; not recommended for child 3-6 years									
Calshake <sup>®</sup> (Fresenius Kabi Ltd)	Standard dilution (28% w/v) of powder per 100 ml	795 kJ (190 kcal)	3.8 g milk protein	22.2 g (sugars 7 g)	9.5 g	less than 0.15 g	Contains lactose. Gluten-free. Neutral flavour not suitable for use in child under 1 year	Disease related malnutrition, malabsorption states or other conditions requiring fortification with a fat/carbohydrate supplement.	Calshake powder 87g sachets: banana, neutral, strawberry, vanilla 7 sachet = £19.81; Calshake powder 90g sachets chocolate: 7 sachet = £19.81
Powder provides: protein 4.3 g, carbohydrate 67.3 g, fat 24.1 g, energy 2100 kJ (500 kcal)/100 g Not suitable for use in child under 3 years; not recommended for child under 6 years									
Enshake <sup>®</sup> (Abbott Laboratories Ltd)	Standard dilution (31.1% w/v) of powder per 100 mL	815 kJ (194 kcal)	5.2 g caseinate, milk, soya protein isolates	25.5 g 24.7 g corn syrup (sugars 7.4 g)	8 g	Nil	Contains residual lactose, soya. Gluten-free	Disease-related malnutrition, malabsorption states or other conditions requiring fortification with a fat/carbohydrate supplement.	Enshake oral powder 96.5g sachets: banana, chocolate, strawberry, vanilla 6 sachet = £16.92
Powder provides: protein 8.4 g, carbohydrate 69.5 g, fat 15.6 g, energy 1902 kJ (452 kcal)/100 g Not suitable for use in child under 1 year; not recommended for child under 6 years									

MCTprocal® (Vitafo International Ltd)	Powder per 100 g	2907 kJ (703 kcal)	12.2 g milk protein	20.6 g (sugars 3.1 g)	63.5 g (MCT 96%)	Nil	Contains lactose	Disorders of long chain fatty acid oxidation, fat malabsorption and other disorders requiring a low LCT, high MCT supplement.	MCTprocal oral powder 16g sachets: 30 sachet = £28.49
Not suitable for use in child under 3 years									
Pro-Cal® powder (Vitafo International Ltd)	Powder per 100 g	2764 kJ (667 kcal)	13.6 g milk protein	28.2 g (sugars 16 g)	55.5 g	Nil	Contains lactose. Gluten-free	Disease-related malnutrition, malabsorption states or other conditions requiring fortification with a fat / carbohydrate supplement (with protein).	Pro-Cal powder: 12500 gram = £254.89; 510 gram = £17.59; 1500 gram = £35.85; Pro-Cal powder: starter pack 8 sachet = £5.99; 15g sachets 30 sachet = £22.61; 200 sachet = £84.65
Powder 15 g reconstituted with 100 ml water provides: protein 2 g, carbohydrate 4.2 g, fat 8.3 g, energy 415 kJ (100 kcal)									
Not suitable for use in child under 3 years									
Pro-Cal® Shot (Vitafo International Ltd)	Liquid (sip feed) per 100 mL	1385 kJ (334 kcal)	6.7 g caseinates, milk proteins	13.4 g lactose (sugars 13.3 g)	28.2 g	Nil	Contains lactose, soya. Gluten-free	Disease-related malnutrition, malabsorption states or other conditions requiring fortification with a fat/carbohydrate supplement (with protein).	Pro-Cal shot: banana, neutral, strawberry 720ml = £16.67; shot starter pack 360 ml = £8.33
Not suitable for use in child under 3 years									

## Fibre, vitamin, and mineral supplements

### High-fibre supplements

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
HyFiber® (Nutrinovo Ltd)	Liquid (sip or tube feed) per 100 mL	484 kJ (119 kcal)	Nil	10.4 g (sugars 10.4 g)	Nil	39 g	Gluten-free, lactose-free	Bowel transit disorder in tube fed patients.	HyFiber: liquid 30ml sachets 100 sachet = £85.46; liquid 887 ml = £25.00
Not recommended for child under 3 years									
Optifibre® (Nestle Health Science)	Powder per 100 g	816 kJ (202 kcal)	less than 1.5 g	6 g partially hydrolysed guar gum (sugars 6 g)	Nil	86 g	Contains residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1723 except dysphagia.	Optifibre: powder 5g sachets 16 sachet = £4.60; powder 250 gram = £11.34
Not suitable for use in child under 5 years									

### Vitamin and Mineral supplements

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
DEKAs® Essential (Alveolus Biomedical B.V.)	Solid per 100 g	2642 kJ (631 kcal)	Nil	50 g	49 g	Nil	Contains fish gelatin	Cystic fibrosis.	DEKAs Essential capsules: 60 capsule = £37.17
Not suitable for child under 4 years; not recommended for child over 10 years									
DEKAs® Plus chewable tablets (Alveolus Biomedical B.V.)	Solid per 100 g	1577 kJ (377 kcal)	2.5 g	88 g (sugars 70 g)	1.8 g	Nil		Cystic fibrosis.	DEKAs Plus chewable tablets: 60 tablet = £43.34
Not suitable for use in child under 4 years.									

Vitamin and Mineral supplements (product list continued)									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
DEKAs <sup>®</sup> Plus liquid (Alveolus Biomedical B.V.)	Liquid per 100 mL	400 kJ (100 kcal)	2 g	22 g	Nil	Nil		Cystic fibrosis.	DEKAs Plus liquid: 60 ml = £33.84
Not recommended for child over 3 years									
DEKAs <sup>®</sup> Plus softgels capsules (Alveolus Biomedical B.V.)	Solid per 100 g	2090 kJ (500 kcal)	25 g	22 g (sugars less than 1 g)	43 g	Nil	Contains bovine derivatives, soya	Cystic fibrosis.	DEKAs Plus softgels capsules: 60 capsule = £43.34
Not suitable for use in child under 10 years									
FruitiVits <sup>®</sup> (Vitafo International Ltd)	Powder per 100 g	168 kJ (40 kcal)	Nil	8.3 g (sugars 0.5 g)	Nil	3.3 g		Restrictive therapeutic diets.	FruitiVits oral powder 6g sachets: 30 sachet = £77.09
Powder 6 g reconstituted with 60 ml water provides: protein nil, carbohydrate 0.5 g, fat nil, energy 10 kJ (2.4 kcal)									
Not suitable for child under 3 years of age; not recommended for child over 10 years									
Renavit <sup>®</sup> (Stanningley Pharma Ltd)	Solid per 100 g	582 kJ (140 kcal)	Nil	29 g	Nil	Nil		Dietary management of water-soluble vitamin deficiency in adults with renal failure on dialysis	Renavit tablets: 100 tablet = £13.79
Not suitable for use in children									

## Feed additives

### Special additives for conditions of intolerance

#### Glucose liquid

- ▶ For use as an energy supplement in sucrose-isomaltase deficiency.

LIQUID, contains syrups, hydrolysed starch, sulphur dioxide.

#### Glucose liquid (J M Loveridge Ltd)

280 gram (ACBS) · No NHS indicative price available | 500 gram (ACBS) · NHS indicative price = £4.39

#### Glucose powder

- ▶ For use as an energy supplement in sucrose-isomaltase deficiency.

POWDER, contains dextrose monohydrate.

#### Glucose powder for oral use BP 1980 (Thornton & Ross Ltd)

500 gram (ACBS) · NHS indicative price = £1.75 · Drug Tariff (Part VIII A Category C) price = £1.75

### Feed thickeners and pre-thickened drinks

#### Instant Carobel®

- ▶ For thickening of liquids or foods in the treatment of vomiting. POWDER, contains residual lactose.

#### Instant Carobel powder (Nutricia Ltd)

135 gram (ACBS) · NHS indicative price = £3.19

#### Multi-thick®

- ▶ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains modified maize starch (sulphur dioxide and sulphites), residual lactose. Gluten-free.

#### Multi-thick powder (Abbott Laboratories Ltd)

250 gram (ACBS) · NHS indicative price = £4.83

#### Nutilis® Clear

- ▶ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains guar gum, maltodextrin, xanthan gum. Gluten-free, lactose-free.

#### Nutilis Clear powder (Nutricia Ltd)

175 gram (ACBS) · NHS indicative price = £8.46

#### Nutilis Clear powder 1.25g sachets (Nutricia Ltd)

50 sachet (ACBS) · NHS indicative price = £11.65

#### Nutilis® Powder

- ▶ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years of age.

POWDER, gluten-free and lactose-free.

#### Nutilis powder (Nutricia Ltd)

300 gram (ACBS) · NHS indicative price = £6.03

#### Osmosip® Clear and Thick Instant Thickener

- ▶ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains maltodextrin (corn, potato), potassium chloride, xanthan gum. Gluten-free.

#### Osmosip Clear & Thick Instant Thickener powder (Spectral Pharmaceuticals Ltd)

133 gram (ACBS) · NHS indicative price = £3.95

#### Resource® ThickenUp®

- ▶ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains modified food starch (maize).

#### Resource ThickenUp powder (Nestle Health Science)

227 gram (ACBS) · NHS indicative price = £4.66

#### Resource ThickenUp powder 4.5g sachets (Nestle Health Science)

75 sachet (ACBS) · NHS indicative price = £18.49

#### Resource® ThickenUp® Clear

- ▶ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains maltodextrin (corn, potato), potassium chloride, residual lactose (tin only), xanthan gum. Gluten-free.

#### Resource ThickenUp Clear powder (Nestle Health Science)

127 gram (ACBS) · NHS indicative price = £8.46

#### Resource ThickenUp Clear powder 1.2g sachets (Nestle Health Science)

24 sachet (ACBS) · NHS indicative price = £5.28

#### SLO Drinks®

- ▶ Nutritional supplement for patient hydration in the dietary management of dysphagia. Not suitable for children under 3 years.

POWDER, carbohydrate content varies with flavour and chosen consistency (3 consistencies available), see product literature.

#### SLO Drink Stage 1: IDDSI 2 Mildly Thick oral powder blackcurrant (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

#### SLO Drink Stage 1: IDDSI 2 Mildly Thick oral powder orange (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

#### SLO Drink Stage 2: IDDSI 3 Moderately Thick oral powder blackcurrant (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

#### SLO Drink Stage 2: IDDSI 3 Moderately Thick oral powder orange (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

#### Swalloweze® Clear Instant Food & Fluid Thickener

- ▶ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 5 years.

POWDER, contains erythritol (E968), maltodextrin, xanthan gum (E415). Gluten-free, lactose-free.

#### Swalloweze Clear Instant Food & Fluid Thickener powder (Nualtra Ltd)

165 gram (ACBS) · NHS indicative price = £5.50

#### Swalloweze Clear Instant Food & Fluid Thickener powder 1.6g sachets (Nualtra Ltd)

48 sachet (ACBS) · NHS indicative price = £9.60

#### Thick and Easy® Clear

- ▶ For thickening of liquids or foods in dysphagia, and for the dietary management of conditions such as stroke, Parkinson's disease, muscular dystrophy, motor neurone disease, multiple sclerosis, malignancies of the oral cavity and throat, neurological disorders caused by injury or disease. Not suitable for use in child under 5 years.

POWDER, gluten-free, lactose-free.

#### Thick & Easy Clear powder (Fresenius Kabi Ltd)

126 gram (ACBS) · NHS indicative price = £6.50

#### Thick & Easy Clear powder 1.4g sachets (Fresenius Kabi Ltd)

100 sachet (ACBS) · NHS indicative price = £24.00

#### Thick and Easy® Original

- ▶ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains maltodextrin, modified maize starch (E1442). Gluten-free, lactose-free.

#### Thick & Easy Original powder (Fresenius Kabi Ltd)

225 gram (ACBS) · NHS indicative price = £5.57 | 4540 gram (ACBS) · NHS indicative price = £104.20

#### Thixo-D® Original

- ▶ For thickening of liquids or foods in dysphagia. Not recommended for child under 1 year.

POWDER, contains modified maize starch. Gluten-free, lactose-free.

#### Thixo-D Original powder (Ecogreen Technologies Ltd)

375 gram (ACBS) · NHS indicative price = £8.10

### Flavouring preparations

#### FlavourPac®

- ▶ For use with Vitaflo's inborn error range of protein substitutes. Not suitable for use in child under 3 years.

POWDER

#### FlavourPac oral powder 4g sachets blackcurrant (Vitaflo International Ltd)

30 sachet (ACBS) · NHS indicative price = £16.53

#### FlavourPac oral powder 4g sachets orange (Vitaflo International Ltd)

30 sachet (ACBS) · NHS indicative price = £16.53

**FlavourPac oral powder 4g sachets raspberry** (Vitaflor International Ltd)

30 sachet (ACBS) · NHS indicative price = £16.53

**FlavourPac oral powder 4g sachets tropical** (Vitaflor International Ltd)

30 sachet (ACBS) · NHS indicative price = £16.53

**Nutricia Flavour Modjul®**

- For use with a range of unflavoured amino acid and peptide based foods for special medical purposes. Not suitable for use in child under 6 months.

POWDER

**Nutricia Flavour Modjul powder blackcurrant** (Nutricia Ltd)

100 gram (ACBS) · NHS indicative price = £14.19

**Nutricia Flavour Modjul powder orange** (Nutricia Ltd)

100 gram (ACBS) · NHS indicative price = £14.19

**Nutricia Flavour Modjul powder pineapple** (Nutricia Ltd)

100 gram (ACBS) · NHS indicative price = £14.19

## Foods for special diets

### Gluten-free foods

**ACBS indications:** established gluten-sensitive enteropathies including steatorrhoea due to gluten sensitivity, coeliac disease, and dermatitis herpetiformis.

### Bread

#### LOAVES

**Barkat® Loaves**

GLUTEN-FREE

**Barkat gluten free par baked white bread sliced** (Gluten Free Foods Ltd)

300 gram (ACBS) · NHS indicative price = £4.21

**Barkat gluten free wholemeal bread sliced** (Gluten Free Foods Ltd)

500 gram (ACBS) · NHS indicative price = £4.05

**Glutafin® Loaves**

GLUTEN-FREE

**Glutafin gluten free fibre loaf sliced** (Dr Schar UK Ltd)

300 gram (ACBS) · NHS indicative price = £2.89

**Glutafin gluten free white loaf sliced** (Dr Schar UK Ltd)

300 gram (ACBS) · NHS indicative price = £2.89

**Glutafin® Select Loaves**

GLUTEN-FREE

**Glutafin gluten free Select fibre loaf sliced** (Dr Schar UK Ltd)

400 gram (ACBS) · NHS indicative price = £3.43

**Glutafin gluten free Select fresh brown loaf sliced** (Dr Schar UK Ltd)

400 gram (ACBS) · NHS indicative price = £3.43

**Glutafin gluten free Select fresh white loaf sliced** (Dr Schar UK Ltd)

400 gram (ACBS) · NHS indicative price = £3.43

**Glutafin gluten free Select seeded loaf sliced** (Dr Schar UK Ltd)

400 gram (ACBS) · NHS indicative price = £3.72

**Glutafin gluten free Select white loaf sliced** (Dr Schar UK Ltd)

400 gram (ACBS) · NHS indicative price = £3.43

**Juvela® Loaf**

GLUTEN-FREE

**Juvela gluten free fibre loaf sliced** (Hero UK Ltd)

400 gram (ACBS) · NHS indicative price = £3.75

**Juvela gluten free fibre loaf unsliced** (Hero UK Ltd)

400 gram (ACBS) · NHS indicative price = £3.75

**Juvela gluten free fresh fibre loaf sliced** (Hero UK Ltd)

400 gram (ACBS) · NHS indicative price = £3.55

**Juvela gluten free fresh white loaf sliced** (Hero UK Ltd)

400 gram (ACBS) · NHS indicative price = £3.90

**Juvela gluten free loaf sliced** (Hero UK Ltd)

400 gram (ACBS) · NHS indicative price = £3.75

**Juvela gluten free loaf unsliced** (Hero UK Ltd)

400 gram (ACBS) · NHS indicative price = £3.75

**Juvela gluten free part baked fibre loaf** (Hero UK Ltd)

400 gram (ACBS) · NHS indicative price = £4.00

**Juvela gluten free part baked loaf** (Hero UK Ltd)

400 gram (ACBS) · NHS indicative price = £4.15

**Lifestyle® Loaf**

GLUTEN-FREE

**Lifestyle gluten free brown bread sliced** (Ultraparm Ltd)

400 gram (ACBS) · NHS indicative price = £2.82

**Lifestyle gluten free high fibre bread sliced** (Ultraparm Ltd)

400 gram · NHS indicative price = £2.82

**Lifestyle gluten free white bread sliced** (Ultraparm Ltd)

400 gram · NHS indicative price = £2.82

**Warburtons® Loaf**

GLUTEN-FREE

**Warburtons gluten free brown bread sliced** (Warburtons Ltd)

400 gram (ACBS) · NHS indicative price = £3.15

**Warburtons gluten free white bread sliced** (Warburtons Ltd)

400 gram (ACBS) · NHS indicative price = £3.15

### BAGUETTES, BUNS AND ROLLS

**Barkat® Baguettes, buns and rolls**

GLUTEN-FREE

**Barkat gluten free par baked baguettes** (Gluten Free Foods Ltd)

200 gram (ACBS) · NHS indicative price = £4.05

**Barkat gluten free par baked rolls** (Gluten Free Foods Ltd)

200 gram (ACBS) · NHS indicative price = £4.05

**Glutafin® Baguettes and rolls**

GLUTEN-FREE

**Glutafin gluten free baguettes** (Dr Schar UK Ltd)

350 gram (ACBS) · NHS indicative price = £3.51

**Glutafin gluten free 4 white rolls** (Dr Schar UK Ltd)

200 gram (ACBS) · NHS indicative price = £3.68

**Glutafin gluten free part baked 4 fibre rolls** (Dr Schar UK Ltd)

200 gram (ACBS) · NHS indicative price = £3.68

**Glutafin® Select Rolls**

GLUTEN-FREE

**Glutafin gluten free part baked 4 white rolls** (Dr Schar UK Ltd)

200 gram (ACBS) · NHS indicative price = £3.68

**Glutafin gluten free part baked 2 long white rolls** (Dr Schar UK Ltd)

150 gram (ACBS) · NHS indicative price = £2.81

**Juvela® Baguettes, buns and rolls**

GLUTEN-FREE

**Juvela gluten free bread rolls** (Hero UK Ltd)

425 gram (ACBS) · NHS indicative price = £5.00

**Juvela gluten free fibre bread rolls** (Hero UK Ltd)

425 gram (ACBS) · NHS indicative price = £5.00

**Juvela gluten free fresh fibre rolls** (Hero UK Ltd)

425 gram (ACBS) · NHS indicative price = £4.65

**Juvela gluten free fresh white rolls** (Hero UK Ltd)

425 gram (ACBS) · NHS indicative price = £4.65

**Juvela gluten free part baked fibre bread rolls** (Hero UK Ltd)

375 gram (ACBS) · NHS indicative price = £5.20

**Juvela gluten free part baked white bread rolls** (Hero UK Ltd)

375 gram (ACBS) · NHS indicative price = £5.20

**Lifestyle® Baguettes, buns and rolls**

30 sachet (ACBS) · NHS indicative price = £550.92

**TYR<sup>®</sup> Easy Shake and Go**

- ▶ Nutritional supplement for the dietary management of tyrosinaemia. Not suitable for use in child under 3 years. Includes added vitamins A, B, C, D, E and K. POWDER, protein equivalent 45 g, carbohydrate 38 g, fat less than 0.5 g, energy 1542 kJ (363 kcal)/100 g.

**TYR Easy Shake & Go oral powder 34g sachets** (POA Pharma Scandinavia AB)

30 sachet (ACBS) · NHS indicative price = £362.00

**XPHEN TYR Tyrosidon<sup>®</sup> Free AA Mix**

- ▶ Nutritional supplement for the dietary management of tyrosinaemia where plasma methionine levels are normal. POWDER, protein 77 g, carbohydrate 4.5 g, fat Nil, energy 1386 kJ (326 kcal)/100 g.

**XPHEN TYR Tyrosidon Free AA Mix powder** (Nutricia Ltd)

500 gram (ACBS) · NHS indicative price = £217.07

# Appendix 3

## Cautionary and advisory labels for dispensed medicines

### Guidance for cautionary and advisory labels

Medicinal forms within BNF publications include code numbers of the cautionary labels that pharmacists are recommended to add when dispensing. It is also expected that pharmacists will counsel patients and carers when necessary.

Counselling needs to be related to the age, experience, background, and understanding of the individual patient or carer. The pharmacist should ensure understanding of how to take or use the medicine and how to follow the correct dosage schedule. Any effects of the medicine on co-ordination, performance of skilled tasks (e.g. driving or work), any foods or medicines to be avoided, and what to do if a dose is missed should also be explained. Other matters, such as the possibility of staining of the clothes or skin, or discolouration of urine or stools by a medicine should also be mentioned.

For some medicines there is a special need for counselling, such as an unusual method or time of administration or a potential interaction with a common food or domestic remedy, and this should be mentioned where necessary.

### Original packs

Most preparations are dispensed in unbroken original packs that include further advice for the patient in the form of patient information leaflets. Label 10 may be of value where appropriate. More general leaflets advising on the administration of preparations such as eye drops, eye ointments, inhalers, and suppositories are also available.

### Scope of labels

In general no label recommendations have been made for injections on the assumption that they will be administered by a healthcare professional or a well-instructed patient. The labelling is not exhaustive and pharmacists are recommended to use their professional discretion in labelling new preparations and those for which no labels are shown.

Individual labelling advice is not given on the administration of the large variety of antacids. In the absence of instructions from the prescriber, and if on enquiry the patient has had no verbal instructions, the directions given under 'Dose' should be used on the label.

It is recognised that there may be occasions when pharmacists will use their knowledge and professional discretion and decide to omit one or more of the recommended labels for a particular patient. In this case counselling is of the utmost importance. There may also be an occasion when a prescriber does not wish additional cautionary labels to be used, in which case the prescription should be endorsed 'NCL' (no cautionary labels). The exact wording that is required instead should then be specified on the prescription.

Pharmacists label medicines with various wordings in addition to those directions specified on the prescription. Such labels include 'Shake the bottle', 'For external use only', and 'Store in a cool place', as well as 'Discard... days after opening' and 'Do not use after...', which apply particularly to antibiotic mixtures, diluted liquid and topical preparations, and to eye-drops. Although not listed in the BNF these labels should continue to be used when appropriate; indeed, 'For external use only' is a legal requirement on external liquid preparations, while 'Keep out of the reach of children' is a legal requirement on all dispensed medicines. Care should be taken not to obscure other relevant information with adhesive labelling.

It is the usual practice for patients to take standard tablets with water or other liquid and for this reason no separate label has been recommended.

The label wordings recommended by the BNF apply to medicines dispensed against a prescription. Patients should be aware that a dispensed medicine should never be taken by, or shared with, anyone other than for whom the prescriber intended it. Therefore, the BNF does not include warnings against the use of a dispensed medicine by persons other than for whom it was specifically prescribed.

The label or labels for each preparation are recommended after careful consideration of the information available. However, it is recognised that in some cases this information may be either incomplete or open to a different interpretation. The BNF will therefore be grateful to receive any constructive comments on the labelling suggested for any preparation.

### Recommended label wordings

For BNF 61 (March 2011), a revised set of cautionary and advisory labels were introduced. All of the existing labels were user-tested, and the revised wording selected reflects terminology that is better understood by patients.

Wordings which can be given as separate warnings are labels 1–19, 29–30, and 32. Wordings which can be incorporated in an appropriate position in the directions for dosage or administration are labels 21–28. A label has been omitted for number 20; labels 31 and 33 no longer apply to any medicines in the BNF and have therefore been deleted.

If separate labels are used it is recommended that the wordings be used without modification.

### Welsh labels

Comprehensive Welsh translations are available for each cautionary and advisory label.

### Labels

#### 1 Warning: This medicine may make you sleepy

**Rhybudd:** Gall y feddyginiaeth hon eich gwneud yn gysglyd

To be used on *preparations for children* containing antihistamines, or other preparations given to children where the warnings of label 2 on driving or alcohol would not be appropriate.

#### 2 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol

**Rhybudd:** Gall y feddyginiaeth hon eich gwneud yn gysglyd. Peidiwch â gyrru, defnyddio offer llaw neu beiriannau os yw hyn yn digwydd. Peidiwch ag yfed alcohol

To be used on *preparations for adults that can cause drowsiness*, thereby affecting coordination and the ability to drive and operate hazardous machinery; label 1 is more appropriate for children. *It is an offence to drive while under the influence of drink or drugs.*

Some of these preparations only cause drowsiness in the first few days of treatment and some only cause drowsiness in higher doses.

In such cases the patient should be told that the advice applies until the effects have worn off. However many of these preparations can produce a slowing of reaction time and a loss of mental concentration that can have the same effects as drowsiness.

Avoidance of alcoholic drink is recommended because the effects of CNS depressants are enhanced by alcohol. Strict prohibition however could lead to some patients not taking the medicine. Pharmacists should therefore explain the risk and encourage compliance, particularly in patients who may think they already tolerate the effects of alcohol (see also

- label 3). Queries from patients with epilepsy regarding fitness to drive should be referred back to the patient's doctor.
- Side-effects unrelated to drowsiness that may affect a patient's ability to drive or operate machinery safely include *blurred vision, dizziness, or nausea*. In general, no label has been recommended to cover these cases, but the patient should be suitably counselled.
- 3 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines**
- Rhybudd:** Gall y feddyginiaeth hon eich gwneud yn gysglyd. Peidiwch â gyrru, defnyddio offer llaw neu beiriannau os yw hyn yn digwydd
- To be used on *preparations containing monoamine-oxidase inhibitors*; the warning to avoid alcohol and decaffeinated (low alcohol) drink is covered by the patient information leaflet.
- Also to be used as for label 2 but where alcohol is not an issue.
- 4 Warning: Do not drink alcohol**
- Rhybudd:** Peidiwch ag yfed alcohol
- To be used on *preparations where a reaction such as flushing may occur if alcohol is taken* (e.g. metronidazole). Alcohol may also enhance the hypoglycaemia produced by some oral antidiabetic drugs but routine application of a warning label is not considered necessary.
- Patients should be advised not to drink alcohol for as long as they are receiving/using a course of medication, and in some cases for a period of time after the course is finished.
- 5 Do not take indigestion remedies 2 hours before or after you take this medicine**
- Peidiwch â chymryd meddyginiaethau camdrefiliad 2 awr cyn neu ar ôl y feddyginiaeth hon**
- To be used with label 25 on *preparations coated to resist gastric acid* (e.g. enteric-coated tablets). This is to avoid the possibility of premature dissolution of the coating in the presence of an alkaline pH.
- Label 5 also applies to drugs such as gabapentin *where the absorption is significantly affected by antacids*. Pharmacists will be aware (from a knowledge of physiology) that the usual time during which indigestion remedies should be avoided is at least 2 hours before and after the majority of medicines have been taken; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.
- 6 Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine**
- Peidiwch â chymryd meddyginiaethau camdrefiliad neu feddyginiaethau sy'n cynnwys haearn neu sinc, 2 awr cyn neu ar ôl y feddyginiaeth hon**
- To be used on *preparations containing ofloxacin and some other quinolones, doxycycline, lymecycline, minocycline, and penicillamine*. These drugs chelate calcium, iron, and zinc and are less well absorbed when taken with calcium-containing antacids or preparations containing iron or zinc. Pharmacists will be aware (from a knowledge of physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.
- 7 Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine**
- Peidiwch â chymryd llaeth, meddyginiaethau camdrefiliad, neu feddyginiaethau sy'n cynnwys haearn neu sinc, 2 awr cyn neu ar ôl chymryd y feddyginiaeth hon**
- To be used on *preparations containing ciprofloxacin, norfloxacin, or tetracyclines that chelate calcium, iron, magnesium, and zinc*, and are thus less available for absorption. Pharmacists will be aware (from a knowledge of physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines;
- when a manufacturer advises a different time period, this can be followed, and should be explained to the patient. Doxycycline, lymecycline, and minocycline are less liable to form chelates and therefore only require label 6 (see above).
- 8 Warning: Do not stop taking this medicine unless your doctor tells you to stop**
- Rhybudd:** Peidiwch â stopio cymryd y feddyginiaeth hon, oni bai fod eich meddyg yn dweud wrthyfch am stopio
- To be used on *preparations that contain a drug which is required to be taken over long periods without the patient necessarily perceiving any benefit* (e.g. antituberculous drugs).
- Also to be used on *preparations that contain a drug whose withdrawal is likely to be a particular hazard* (e.g. clonidine for hypertension). Label 10 (see below) is more appropriate for corticosteroids.
- 9 Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop**
- Gadewch yr un faint o amser rhwng pob dŵs yn ystod y dydd. Parhewch i gymryd y feddyginiaeth nes bod y cyfan wedi'i orffen, oni bai eich bod yn cael cyngor i stopio**
- To be used on *preparations where a course of treatment should be completed* to reduce the incidence of relapse or failure of treatment.
- The preparations are antimicrobial drugs given by mouth. Very occasionally, some may have severe side-effects (e.g. diarrhoea in patients receiving clindamycin) and in such cases the patient may need to be advised of reasons for stopping treatment quickly and returning to the doctor.
- 10 Warning: Read the additional information given with this medicine**
- Rhybudd:** Darllenwch y wybodaeth ychwanegol gyda'r feddyginiaeth hon
- To be used particularly on *preparations containing anticoagulants, lithium, and oral corticosteroids*. The appropriate treatment card should be given to the patient and any necessary explanations given.
- This label may also be used on other preparations to remind the patient of the instructions that have been given.
- 11 Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds**
- Diogelwch eich croen rhag golau'r haul, hyd yn oed ar ddiwrnod braf ond cymylog. Peidiwch â defnyddio gwely haul**
- To be used on *preparations that may cause phototoxic or photoallergic reactions* if the patient is exposed to ultraviolet radiation. Exposure to high intensity ultraviolet radiation from sunray lamps and sunbeds is particularly likely to cause reactions.
- 12 Do not take anything containing aspirin while taking this medicine**
- Peidiwch â chymryd unrhyw beth sy'n cynnwys aspirin gyda'r feddyginiaeth hon**
- To be used on *preparations containing sulfonpyrazone* whose activity is reduced by aspirin.
- Label 12 should not be used for anticoagulants since label 10 is more appropriate.
- 13 Dissolve or mix with water before taking**
- Gadewch i doddi mewn dŵr cyn ei gymryd**
- To be used on *preparations that are intended to be dissolved in water* (e.g. soluble tablets) or *mixed with water* (e.g. powders, granules) before use. In a few cases other liquids such as fruit juice or milk may be used.
- 14 This medicine may colour your urine. This is harmless**
- Gall y feddyginiaeth hon liwio eich dŵr. Nid yw hyn yn arwydd o ddrwg**
- To be used on *preparations that may cause the patient's urine to turn an unusual colour*. These include triamterene (blue under some lights), levodopa (dark reddish), and rifampicin (red).

- 15 Caution: flammable.** Keep your body away from fire or flames after you have put on the medicine  
 Rhybudd: Fflamadwy. Ar ôl rhoi'r feddyginiaeth ymlaen, cadwch yn glir o dân neu fflamau  
 To be used on *preparations containing sufficient flammable solvent to render them flammable if exposed to a naked flame.*
- 16 Dissolve the tablet under your tongue—do not swallow.** Store the tablets in this bottle with the cap tightly closed. Get a new supply 8 weeks after opening  
 Rhwch y dabled i doddî dan eich tafod - peidiwch â'i lyncu. Cadwch y tabledi yn y botel yma gyda'r caead wedi'i gau yn dynn. Gofynnwch am dabledi newydd 8 wythnos ar ôl ei hagar  
 To be used on *glyceryl trinitrate tablets* to remind the patient not to transfer the tablets to plastic or less suitable containers.
- 17 Do not take more than... in 24 hours**  
 Peidiwch â chymryd mwy na... mewn 24 awr  
 To be used on *preparations for the treatment of acute migraine* except those containing ergotamine, for which label 18 is used. The dose form should be specified, e.g. tablets or capsules.  
 It may also be used on preparations for which no dose has been specified by the prescriber.
- 18 Do not take more than... in 24 hours. Also, do not take more than... in any one week**  
 Peidiwch â chymryd mwy na... mewn 24 awr. Hefyd, peidiwch â chymryd mwy na... mewn wythnos  
 To be used on preparations containing ergotamine. The dose form should be specified, e.g. tablets or suppositories.
- 19 Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink alcohol**  
 Rhybudd: Bydd y feddyginiaeth hon yn eich gwneud yn gysglyd. Os ydych yn dal i deimlo'n gysglyd drannoeth, peidiwch â gyrru, defnyddio offer llaw neu beiriannau. Peidiwch ag yfed alcohol  
 To be used on *preparations containing hypnotics (or some other drugs with sedative effects) prescribed to be taken at night.* On the rare occasions when hypnotics are prescribed for daytime administration (e.g. nitrazepam in epilepsy), this label would clearly not be appropriate. Also to be used as an *alternative to the label 2 wording* (the choice being at the discretion of the pharmacist) *for anxiolytics prescribed to be taken at night.*  
 It is hoped that this wording will convey adequately the problem of residual morning sedation after taking 'sleeping tablets'.
- 21 Take with or just after food, or a meal**  
 Cymerwch gyda neu ar ôl bwyd  
 To be used on *preparations that are liable to cause gastric irritation, or those that are better absorbed with food.*  
 Patients should be advised that a *small amount of food is sufficient.*
- 22 Take 30 to 60 minutes before food**  
 Cymerwch 30 i 60 munud cyn bwyd  
 To be used on some preparations *whose absorption is thereby improved.*  
 Most oral antibacterials require label 23 instead (see below).
- 23 Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food**  
 Cymerwch y feddyginiaeth hon ar stumog wag. Mae hyn yn golygu awr cyn, neu 2 awr ar ôl bwyd  
 To be used on *oral antibacterials whose absorption may be reduced by the presence of food and acid in the stomach.*
- 24 Suck or chew this medicine**  
 Bydd angen cnoi neu sugno'r feddyginiaeth hon  
 To be used on *preparations that should be sucked or chewed.*  
 The pharmacist should use discretion as to which of these words is appropriate.
- 25 Swallow this medicine whole. Do not chew or crush**  
 Llyncwch yn gyfan. Peidiwch â chnoi neu falu'n fân  
 To be used on *preparations that are enteric-coated or designed for modified-release.*  
 Also to be used on *preparations that taste very unpleasant or may damage the mouth if not swallowed whole.*  
 Patients should be advised (where relevant) that some modified-release preparations can be broken in half, but that the halved tablet should still be swallowed whole, and not chewed or crushed.
- 26 Dissolve this medicine under your tongue**  
 Gadewch i'r feddyginiaeth hon doddî o dan y tafod  
 To be used on *preparations designed for sublingual use.* Patients should be advised to hold under the tongue and avoid swallowing until dissolved. The buccal mucosa between the gum and cheek is occasionally specified by the prescriber.
- 27 Take with a full glass of water**  
 Cymerwch gyda llond gwydr o ddŵr  
 To be used on *preparations that should be well diluted (e.g. chloral hydrate), where a high fluid intake is required (e.g. sulfonamides), or where water is required to aid the action (e.g. methylcellulose).* The patient should be advised that 'a full glass' means at least 150 mL. In most cases fruit juice, tea, or coffee may be used.
- 28 Spread thinly on the affected skin only**  
 Taenwch yn denau ar y croen sydd wedi'i effeithio yn unig  
 To be used on *external preparations* that should be applied sparingly (e.g. corticosteroids, dithranol).
- 29 Do not take more than 2 at any one time. Do not take more than 8 in 24 hours**  
 Peidiwch â chymryd mwy na 2 ar unrhyw un adeg. Peidiwch â chymryd mwy nag 8 mewn 24 awr  
 To be used on containers of dispensed *solid dose preparations containing paracetamol for adults when the instruction on the label indicates that the dose can be taken on an 'as required' basis.* The dose form should be specified, e.g. tablets or capsules.  
 This label has been introduced because of the serious consequences of overdosage with paracetamol.
- 30 Contains paracetamol. Do not take anything else containing paracetamol while taking this medicine. Talk to a doctor at once if you take too much of this medicine, even if you feel well**  
 Yn cynnwys paracetamol. Peidiwch â chymryd unrhyw beth arall sy'n cynnwys paracetamol tra'n cymryd y feddyginiaeth hon. Siaradwch gyda'ch meddyg ar unwaith os ydych yn cymryd gormod, hyd yn oed os ydych yn teimlo'n iawn  
 To be used on all containers of dispensed *preparations containing paracetamol.*
- 32 Contains aspirin. Do not take anything else containing aspirin while taking this medicine**  
 Yn cynnwys aspirin. Peidiwch â chymryd unrhyw beth arall sy'n cynnwys aspirin tra'n cymryd y feddyginiaeth hon  
 To be used on containers of dispensed *preparations containing aspirin when the name on the label does not include the word 'aspirin'.*

The correct dressing for wound management depends not only on the type of wound but also on the stage of the healing process. The principal stages of healing are: cleansing, removal of debris; granulation, vascularisation; epithelialisation. The ideal dressing for moist wound healing needs to ensure that the wound remains: moist with exudate, but not macerated; free of clinical infection and excessive slough; free of toxic chemicals, particles or fibres; at the optimum temperature for healing; undisturbed by the need for frequent changes; at the optimum pH value. As wound healing passes through its different stages, different types of dressings may be required to satisfy better one or other of these requirements. Under normal circumstances, a moist environment is a necessary part of the wound healing process; exudate provides a moist environment and promotes healing, but excessive exudate can cause maceration of the wound and surrounding healthy tissue. The volume and viscosity of exudate changes as the wound heals. There are certain circumstances where moist wound healing is not appropriate (e.g. gangrenous toes associated with vascular disease).

Advanced wound dressings are designed to control the environment for wound healing, for example to donate fluid (hydrogels), maintain hydration (hydrocolloids), or to absorb wound exudate (alginates, foams).

Practices such as the use of irritant cleansers and desloughing agents may be harmful and are largely obsolete; removal of debris and dressing remnants should need minimal irrigation with lukewarm sterile sodium chloride 0.9% solution or water.

Hydrogel, hydrocolloid, and medical grade honey dressings can be used to deslough wounds by promoting autolytic

debridement; there is insufficient evidence to support any particular method of debridement for difficult-to-heal surgical wounds. Sterile larvae (maggots) are also available for biosurgical removal of wound debris.

There have been few clinical trials able to establish a clear advantage for any particular product. The choice between different dressings depends not only on the type and stage of the wound, but also on patient preference or tolerance, site of the wound, and cost. For further information, see *Buyers' Guide: Advanced wound dressings* (October 2008); NHS Purchasing and Supply Agency, Centre for Evidence-based Purchasing.

Prices quoted in Appendix 4 are basic NHS net prices; for further information see *Prices in the BNF* under How to use the BNF.

The table below gives suggestions for choices of primary dressing depending on the type of wound (a secondary dressing may be needed in some cases).

### Basic wound contact dressings

#### Low adherence dressing

Low adherence dressings are used as interface layers under secondary absorbent dressings. Placed directly on the wound bed, non-absorbent, low adherence dressings are suitable for clean, granulating, lightly exuding wounds without necrosis, and protect the wound bed from direct contact with secondary dressings. Care must be taken to avoid granulation tissue growing into the weave of these dressings. Tulle dressings are manufactured from cotton or viscose fibres which are impregnated with white or yellow soft paraffin to prevent the fibres from sticking, but this is only partly successful and it may be necessary to change the

Wound contact material for different types of wounds		
<b>Wound PINK (epithelialising)</b>		
<b>Low Exudate</b>	<b>Moderate Exudate</b>	
Low adherence p. 1767 Vapour-permeable film p. 1770 Soft polymer p. 1772 Hydrocolloid p. 1773	Soft ploymer p. 1772 Foam, low absorbent p. 1775 Alginate p. 1776	
<b>Wound RED (granulating)</b>		
Symptoms or signs of infection, see Wounds with signs of infection		
<b>Low Exudate</b>	<b>Moderate Exudate</b>	<b>Heavy Exudate</b>
Low adherence p. 1767 Soft polymer p. 1772 Hydrocolloid p. 1773 Foam, low absorbent p. 1775	Hydrocolloid-fibrous p. 1773 Foam p. 1775 Alginate p. 1776	Foam with extra absorbency p. 1775 Hydrocolloid-fibrous p. 1773 Alginate p. 1776
<b>Wound YELLOW (Sloughy) (granulating)</b>		
Symptoms or signs of infection, see Wounds with signs of infection		
<b>Low Exudate</b>	<b>Moderate Exudate</b>	<b>Heavy Exudate</b>
Hydrogel p. 1770 Hydrocolloid p. 1773	Hydrocolloid-fibrous p. 1773 Alginate p. 1776	Hydrocolloid-fibrous p. 1773 Alginate p. 1776 Capillary-action p. 1776
<b>Wound BLACK (Necrotic/ Eschar)</b>		
Consider mechanical debridement alongside autolytic debridement		
<b>Low Exudate</b>	<b>Moderate Exudate</b>	<b>Heavy Exudate</b>
Hydrogel p. 1770 Hydrocolloid p. 1773	Hydrocolloid p. 1773 Hydrocolloid-fibrous p. 1773 Foam p. 1775	Seek advice from wound care specialist
<b>Wounds with signs of infection</b>		
Consider systemic antibacterials if appropriate; also consider odour-absorbent dressings. For malodorous wounds with slough or necrotic tissue, consider mechanical or autolytic debridement		
<b>Low Exudate</b>	<b>Moderate Exudate</b>	<b>Heavy Exudate</b>
Low adherence with honey p. 1777 Low adherence with iodine p. 1778 Low adherence with silver p. 1778 Hydrocolloid with silver p. 1779	Hydrocolloid-fibrous with silver p. 1779 Foam with silver p. 1779 Alginate with silver p. 1778 Honey-topical p. 1777 Cadexomer-iodine p. 1778	Hydrocolloid-fibrous with silver p. 1779 Foam extra absorbent, with silver p. 1779 Alginate with honey p. 1777 Alginate with silver p. 1778
<b>Note</b> In each section of this table the dressings are listed in order of increasing absorbency. Some wound contact (primary) dressings require a secondary dressing		

dressings frequently. The paraffin reduces absorbency of the dressing. Dressings with a reduced content (light loading) of soft paraffin are less liable to interfere with absorption; dressings with 'normal loading' (such as Jelonet<sup>®</sup>) have been used for skin graft transfer. Knitted viscose primary dressing is an alternative to tulle dressings for exuding wounds; it can be used as the initial layer of multi-layer compression bandaging in the treatment of venous leg ulcers.

#### Knitted polyester primary dressing

##### Atrauman

Non-adherent knitted polyester primary dressing impregnated with neutral triglycerides

**Atrauman dressing** (Paul Hartmann Ltd) 10cm × 20cm= £0.83, 20cm × 30cm= £2.28, 5cm × 5cm= £0.35, 7.5cm × 10cm= £0.36

#### Knitted viscose primary dressing

##### N-A Dressing

Warp knitted fabric manufactured from a bright viscose monofilament.

**N-A dressing** (Systagenix Wound Management Ltd) 19cm × 9.5cm= £0.67, 9.5cm × 9.5cm= £0.35

##### N-A Ultra

Warp knitted fabric manufactured from a bright viscose monofilament.

**N-A Ultra dressing** (Systagenix Wound Management Ltd) 19cm × 9.5cm= £0.65, 9.5cm × 9.5cm= £0.34

##### Profore

Warp knitted fabric manufactured from a bright viscose monofilament.

**Profore** (Smith & Nephew Healthcare Ltd) wound contact layer 14cm × 20cm= £0.34

##### Tricotex

Warp knitted fabric manufactured from a bright viscose monofilament.

**Tricotex dressing** (Smith & Nephew Healthcare Ltd) 9.5cm × 9.5cm= £0.36

#### Paraffin Gauze Dressing

##### Cuticell

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading  
**Cuticell** (BSN medical Ltd) Classic dressing 10cm × 10cm= £0.31

##### Jelonet

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading

**Jelonet** (Smith & Nephew Healthcare Ltd) dressing 10cm × 10cm= £0.44

##### Neotulle

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading

**Neotulle** (Neomedic Ltd) dressing 10cm × 10cm= £0.29

**Absorbent dressings**

Perforated film absorbent dressings are suitable only for wounds with mild to moderate amounts of exudate; they are not appropriate for leg ulcers or for other lesions that produce large quantities of viscous exudate. Dressings with an absorbent cellulose or polymer wadding layer are suitable for use on moderately to heavily exuding wounds.

*Absorbent cellulose dressing***CelluDress**

Absorbent Cellulose Dressing with Fluid Repellent Backing  
**CelluDress dressing** (Medicareplus International Ltd) 10cm × 10cm= £0.19, 10cm × 15cm= £0.20, 10cm × 20cm= £0.22, 15cm × 20cm= £0.30, 20cm × 25cm= £0.40, 20cm × 30cm= £0.85

**Eclipse**

Absorbent Cellulose Dressing with Fluid Repellent Backing  
**Eclipse** (Advancis Medical) Boot dressing 60cm × 70cm= £14.42, dressing 15cm × 15cm= £1.01, 20cm × 30cm= £2.24, 60cm × 40cm= £8.53

**Exu-Dry**

Absorbent Cellulose Dressing with Fluid Repellent Backing  
**Exu-Dry dressing** (Smith & Nephew Healthcare Ltd) 10cm × 15cm= £1.20, 15cm × 23cm= £2.45, 23cm × 38cm= £5.69

**Mesorb**

Cellulose wadding pad with gauze wound contact layer and non-woven repellent backing

**Mesorb dressing** (Molnlycke Health Care Ltd) 10cm × 10cm= £0.65, 10cm × 15cm= £0.85, 10cm × 20cm= £1.05, 15cm × 20cm= £1.49, 20cm × 25cm= £2.35, 20cm × 30cm= £2.67

**Zetuvit E**

Absorbent Cellulose Dressing with Fluid Repellent Backing; sterile or non-sterile

**Zetuvit E** (Paul Hartmann Ltd) non-sterile dressing 10cm × 10cm= £0.07, 10cm × 20cm= £0.09, 20cm × 20cm= £0.15, 20cm × 40cm= £0.29, sterile dressing 10cm × 10cm= £0.23, 10cm × 20cm= £0.26, 20cm × 20cm= £0.41, 20cm × 40cm= £1.16

*Absorbent perforated dressing***Adpore**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Adpore dressing** (Medicareplus International Ltd) 10cm × 10cm= £0.10, 10cm × 15cm= £0.16, 10cm × 20cm= £0.30, 10cm × 25cm= £0.34, 10cm × 30cm= £0.42, 10cm × 35cm= £0.50, 7cm × 8cm= £0.08

**Cosmopore E**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Cosmopore E dressing** (Paul Hartmann Ltd) 10cm × 20cm= £0.48, 10cm × 25cm= £0.59, 10cm × 35cm= £0.82, 5cm × 7.2cm= £0.09, 8cm × 10cm= £0.18, 8cm × 15cm= £0.29

**Cutiplast Steril**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Cutiplast Steril dressing** (Smith & Nephew Healthcare Ltd) 10cm × 20cm= £0.33, 10cm × 25cm= £0.34, 10cm × 30cm= £0.45, 8cm × 10cm= £0.11, 8cm × 15cm= £0.26

**Leukomed**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Leukomed dressing** (BSN medical Ltd) 10cm × 20cm= £0.46, 10cm × 25cm= £0.52, 10cm × 30cm= £0.67, 10cm × 35cm= £0.77, 5cm × 7.2cm= £0.09, 8cm × 10cm= £0.20, 8cm × 15cm= £0.34

**Medipore + Pad**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Medipore + Pads dressing** (3M Health Care Ltd) 10cm × 10cm= £0.16, 10cm × 15cm= £0.25, 10cm × 20cm= £0.38, 10cm × 25cm= £0.47, 10cm × 35cm= £0.65, 5cm × 7.2cm= £0.08

**Medisafe**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Medisafe dressing** (Neomedic Ltd) 6cm × 8cm= £0.08, 8cm × 10cm= £0.13, 8cm × 12cm= £0.23, 9cm × 15cm= £0.29, 9cm × 20cm= £0.34, 9cm × 25cm= £0.36

**Mepore**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Mepore dressing** (Molnlycke Health Care Ltd) 10cm × 11cm= £0.22, 11cm × 15cm= £0.37, 7cm × 8cm= £0.11, 9cm × 20cm= £0.46, 9cm × 25cm= £0.63, 9cm × 30cm= £0.72, 9cm × 35cm= £0.79

**PremierPore**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**PremierPore dressing** (Shermond) 10cm × 10cm= £0.12, 10cm × 15cm= £0.18, 10cm × 20cm= £0.32, 10cm × 25cm= £0.36, 10cm × 30cm= £0.45, 10cm × 35cm= £0.52, 5cm × 7cm= £0.05

**Primapore**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Primapore dressing** (Smith & Nephew Healthcare Ltd) 10cm × 20cm= £0.46, 10cm × 25cm= £0.53, 10cm × 30cm= £0.67, 10cm × 35cm= £1.03, 6cm × 8.3cm= £0.19, 8cm × 10cm= £0.20, 8cm × 15cm= £0.35

**Softpore**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Softpore dressing** (Richardson Healthcare Ltd) 10cm × 10cm= £0.13, 10cm × 15cm= £0.20, 10cm × 20cm= £0.35, 10cm × 25cm= £0.40, 10cm × 30cm= £0.49, 10cm × 35cm= £0.58, 6cm × 7cm= £0.06

*Absorbent perforated plastic film faced dressing***Absopad**

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Absopad dressing** (Medicareplus International Ltd) 10cm × 10cm= £0.13, 20cm × 10cm= £0.28

**Askina Pad**

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Askina Pad dressing** (B.Braun Medical Ltd) 10cm × 10cm= £0.22

**Melolin**

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Melolin dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £0.29, 20cm × 10cm= £0.57, 5cm × 5cm= £0.18

**Skintact**

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Skintact dressing** (Robinson Healthcare) 10cm × 10cm= £0.17, 20cm × 10cm= £0.34, 5cm × 5cm= £0.10

**Solvaline N**

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Solvaline N dressing** (Lohmann & Rauscher) 10cm × 10cm= £0.19, 20cm × 10cm= £0.38, 5cm × 5cm= £0.11

**Telfa**

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Telfa dressing** (H & R Healthcare Ltd) 10cm × 7.5cm= £0.16, 15cm × 7.5cm= £0.18, 20cm × 7.5cm= £0.29, 7.5cm × 5cm= £0.12

*Super absorbent cellulose and polymer primary dressing***Curea P1**

Super absorbent cellulose and polymer primary dressing.

**Curea P1 dressing** (Regen Medical Ltd) 10cm × 10cm square= £1.56, 10cm × 20cm rectangular= £2.08, 10cm × 30cm rectangular=

£3.32, 12cm × 12cm square= £2.67, 20cm × 20cm square= £4.03, 20cm × 30cm rectangular= £4.68, 7.5cm × 7.5cm square= £1.50

#### Curea P2

Super absorbent cellulose and polymer primary dressing (non-adherent)

**Curea P2 dressing** (Regen Medical Ltd) 10cm × 20cm rectangular= £3.12, 11cm × 11cm square= £2.12, 20cm × 20cm square= £5.59, 20cm × 30cm rectangular= £7.28

#### Cutisorb Ultra

Super absorbent cellulose and polymer primary dressing  
**Cutisorb Ultra dressing** (BSN medical Ltd) 10cm × 10cm square= £2.13, 10cm × 20cm rectangular= £3.56, 20cm × 20cm square= £6.68, 20cm × 30cm rectangular= £10.06

#### DryMax Extra

Super absorbent cellulose and polymer primary dressing  
**DryMax Super dressing** (Espere Healthcare Ltd) 10cm × 10cm square= £0.88, 10cm × 20cm rectangular= £1.05, 20cm × 20cm square= £1.87, 20cm × 30cm rectangular= £2.36

#### Zetuvit Plus

Super absorbent cellulose primary dressing  
**Zetuvit Plus dressing** (Paul Hartmann Ltd) 10cm × 10cm= £0.86, 10cm × 20cm= £1.19, 15cm × 20cm= £1.36, 20cm × 25cm= £1.86, 20cm × 40cm= £2.88

#### Super absorbent hydroconductive dressing

##### Drawtex

Super absorbent hydroconductive dressing with absorbent, cross-action structures of viscose, polyester and cotton  
**Drawtex dressing** (Martindale Pharmaceuticals Ltd) 10cm × 1.3m= £16.00, 10cm × 10cm= £2.24, 10cm × 1m= £16.00, 15cm × 20cm= £6.00, 20cm × 1m= £25.00, 20cm × 20cm= £6.98, 5cm × 5cm= £0.95, 7.5cm × 1m= £15.50, 7.5cm × 7.5cm= £1.77

## Advanced wound dressings

Advanced wound dressings can be used for both acute and chronic wounds. Categories for dressings in this section start with the least absorptive, moisture-donating hydrogel dressings, followed by increasingly more absorptive dressings. These dressings are classified according to their primary component; some dressings are comprised of several components.

### Hydrogel dressings

Hydrogel dressings are most commonly supplied as an amorphous, cohesive topical application that can take up the shape of a wound. A secondary, non-absorbent dressing is needed. These dressings are generally used to donate liquid to dry sloughy wounds and facilitate autolytic debridement of necrotic tissue; some also have the ability to absorb very small amounts of exudate. Hydrogel products that do not contain propylene glycol should be used if the wound is to be treated with larval therapy. Hydrogel sheets have a fixed structure and limited fluid-handling capacity; hydrogel sheet dressings are best avoided in the presence of infection, and are unsuitable for heavily exuding wounds.

#### Hydrogel application (amorphous)

##### ActivHeal Hydrogel

Hydrogel containing guar gum and propylene glycol  
**ActivHeal** (Advanced Medical Solutions Ltd) Hydrogel dressing= £1.43

##### Cutimed

Hydrogel

**Cutimed** (BSN medical Ltd) Gel dressing= £3.22

##### Flexigran

Hydrogel containing modified starch and glycerol

**Flexigran** (A1 Pharmaceuticals) Gel dressing= £1.90

##### GranuGel

Hydrogel containing carboxymethylcellulose, pectin and propylene glycol

**GranuGEL** (ConvaTec Ltd) Hydrocolloid Gel dressing= £2.48

##### Intrasite Gel

Hydrogel containing modified carmellose polymer and propylene glycol

**IntraSite** (Smith & Nephew Healthcare Ltd) Gel dressing= £3.82

##### Nu-Gel

Hydrogel containing alginate and propylene glycol  
**Nu-Gel** (Systagenix Wound Management Ltd) dressing= £2.16

##### Purilon Gel

Hydrogel containing carboxymethylcellulose and calcium alginate

**Purilon** (Coloplast Ltd) Gel dressing= £2.42

#### Hydrogel sheet dressings

##### ActiFormCool

Hydrogel dressing

**ActiFormCool sheet** (L&R Medical UK Ltd) 10cm × 10cm square= £2.81, 10cm × 15cm rectangular= £4.03, 20cm × 20cm square= £8.45, 5cm × 6.5cm rectangular= £1.91

##### Aquaflao

Hydrogel dressing

**Aquaflao** (Covidien (UK) Commercial Ltd) sheet 7.5cm discs= £2.60

##### Coolie

Hydrogel dressing (without adhesive border)

**Coolie** (Zeroderma Ltd) sheet 7cm discs= £1.96

##### Gel FX

Hydrogel dressing (without adhesive border)

**Gel FX sheet** (Synergy Health (UK) Ltd) 10cm × 10cm square= £1.60, 15cm × 15cm square= £3.20

##### Geliperm

Hydrogel sheets

**Geliperm** (Geistlich Sons Ltd) sheet 10cm × 10cm square= £2.53

##### Intrasite Conformable

Soft non-woven dressing impregnated with Intrasite<sup>®</sup> gel  
**IntraSite Conformable dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £1.92, 10cm × 20cm rectangular= £2.60, 10cm × 40cm rectangular= £4.64

##### Novogel

Glycerol-based hydrogel sheets (standard or thin)

**Novogel sheet** (Ford Medical Associates Ltd) 10cm × 10cm square= £3.18, 15cm × 20cm rectangular= £6.07, 20cm × 40cm rectangular= £11.56, 30cm × 30cm (0.15cm thickness) square= £12.71, (0.30cm thickness) square= £13.47, 5cm × 7.5cm rectangular= £1.99, 7.5cm diameter circular= £5.84

##### SanoSkin NET

Hydrogel sheet (without adhesive border)

**SanoSkin NET** (Ideal Medical Solutions Ltd) sheet 8.5cm × 12cm rectangular= £2.28

##### Vacunet

Non-adherent, hydrogel coated polyester net dressing

**Vacunet dressing** (Protex Healthcare Ltd) 10cm × 10cm square= £1.93, 10cm × 15cm rectangular= £2.86

#### Sodium hyaluronate dressings

The hydrating properties of sodium hyaluronate promote wound healing, and dressings can be applied directly to the wound, or to a primary dressing (a secondary dressing should also be applied). The iodine and potassium iodide in these dressings prevent the bacterial decay of sodium hyaluronate in the wound.

**Hyiodine<sup>®</sup>** should be used with caution in thyroid disorders.

##### Hyiodine

Sodium hyaluronate 1.5%, potassium iodide 0.15%, iodine 0.1%, in a viscous solution

#### Vapour-permeable films and membranes

Vapour-permeable films and membranes allow the passage of water vapour and oxygen but are impermeable to water and micro-organisms, and are suitable for lightly exuding wounds. They are highly conformable, provide protection, and a moist healing environment; transparent film dressings permit constant observation of the wound. Water vapour loss can occur at a slower rate than exudate is generated, so that fluid accumulates under the dressing, which can lead to tissue maceration and to wrinkling at the adhesive contact site (with risk of bacterial entry). Newer versions of these dressings have increased moisture vapour permeability.

Despite these advances, vapour-permeable films and membranes are unsuitable for infected, large heavily exuding wounds, and chronic leg ulcers. Vapour-permeable films and membranes are suitable for partial-thickness wounds with minimal exudate, or wounds with eschar. Most commonly, they are used as a secondary dressing over alginates or hydrogels; film dressings can also be used to protect the fragile skin of patients at risk of developing minor skin damage caused by friction or pressure.

*Non-woven fabric dressing with viscose-rayon pad*

#### **Niko Fix**

For intravenous and subcutaneous catheter sites

**Niko Fix dressing** (Unomedical Ltd) 7cm × 8.5cm= £0.20

*Vapour-permeable Adhesive Film Dressing (Semi-permeable Adhesive Dressing)*

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces.

#### **Askina Derm**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Askina Derm dressing** (B.Braun Medical Ltd) 10cm × 12cm= £1.16, 10cm × 20cm= £2.20, 15cm × 20cm= £2.66, 20cm × 30cm= £4.76, 6cm × 7cm= £0.40

#### **Dressfilm**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Dressfilm dressing** (St Georges Medical Ltd) 15cm × 20cm= £1.90

#### **Hydrofilm**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Hydrofilm dressing** (Paul Hartmann Ltd) 10cm × 12.5cm= £0.44, 10cm × 15cm= £0.56, 10cm × 25cm= £0.86, 12cm × 25cm= £0.91, 15cm × 20cm= £1.02, 20cm × 30cm= £1.69, 6cm × 7cm= £0.24

#### **Hypafix Transparent**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Hypafix Transparent dressing** (BSN medical Ltd) 10cm × 2m= £9.14

#### **Leukomed T**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Leukomed T dressing** (BSN medical Ltd) 10cm × 12.5cm= £1.09, 11cm × 14cm= £1.32, 15cm × 20cm= £2.53, 15cm × 25cm= £2.70, 7.2cm × 5cm= £0.40, 8cm × 10cm= £0.75

#### **Mepitel Film**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Mepitel Film dressing** (Molnlycke Health Care Ltd) 10.5cm × 12cm= £1.37, 10.5cm × 25cm= £2.66, 15.5cm × 20cm= £3.38

#### **Mepore Film**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Mepore Film dressing** (Molnlycke Health Care Ltd) 10cm × 12cm= £1.28, 10cm × 25cm= £2.50, 15cm × 20cm= £3.18, 6cm × 7cm= £0.48

#### **OpSite Flexifix**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**OpSite Flexifix dressing** (Smith & Nephew Healthcare Ltd) 10cm × 1m= £7.03, 5cm × 1m= £4.17

#### **OpSite Flexigrid**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**OpSite Flexigrid dressing** (Smith & Nephew Healthcare Ltd) 12cm × 12cm= £1.20, 15cm × 20cm= £3.04, 6cm × 7cm= £0.42

#### **ProtectFilm**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**ProtectFilm dressing** (Wallace, Cameron & Company Ltd) 10cm × 12cm= £0.20, 15cm × 20cm= £0.40, 6cm × 7cm= £0.11

#### **Suprasorb F**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Suprasorb F dressing** (Lohmann & Rauscher) 10cm × 12cm= £0.83, 15cm × 20cm= £2.58, 5cm × 7cm= £0.34

#### **Tegaderm**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Tegaderm Film dressing** (3M Health Care Ltd) 12cm × 12cm= £1.13, 15cm × 20cm= £2.44, 6cm × 7cm= £0.39

#### **Tegaderm diamond**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Tegaderm Diamond dressing** (3M Health Care Ltd) 10cm × 12cm= £1.23, 6cm × 7cm= £0.45

#### **Vellafilm**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Vellafilm dressing** (Advancis Medical) 12cm × 12cm= £1.15, 12cm × 35cm= £2.88, 15cm × 20cm= £2.20

*Vapour-permeable Adhesive Film Dressing with absorbent pad*

#### **Adpore Ultra**

Film dressing with adsorbent pad

**Adpore Ultra dressing** (Medicareplus International Ltd) 10cm × 10cm= £0.14, 10cm × 15cm= £0.22, 10cm × 20cm= £0.33, 10cm × 25cm= £0.35, 10cm × 30cm= £0.52, 7cm × 8cm= £0.12

*Vapour-permeable Adhesive Film Dressing with adsorbent pad*

#### **Alldress**

Film dressing with adsorbent pad

**Alldress dressing** (Molnlycke Health Care Ltd) 10cm × 10cm= £1.01, 15cm × 15cm= £2.19, 15cm × 20cm= £2.71

#### **Clearpore**

Film dressing with adsorbent pad

**Clearpore dressing** (Richardson Healthcare Ltd) 10cm × 10cm= £0.20, 10cm × 15cm= £0.24, 10cm × 20cm= £0.36, 10cm × 25cm= £0.40, 10cm × 30cm= £0.65, 6cm × 10cm= £0.15, 6cm × 7cm= £0.12

#### **Hydrofilm Plus**

Film dressing with adsorbent pad

**Hydrofilm Plus dressing** (Paul Hartmann Ltd) 10cm × 20cm= £0.48, 10cm × 25cm= £0.64, 10cm × 30cm= £0.73, 7.2cm × 5cm= £0.19, 9cm × 10cm= £0.29, 9cm × 15cm= £0.32

#### **Leukomed T Plus**

Film dressing with adsorbent pad

**Leukomed T plus dressing** (BSN medical Ltd) 10cm × 20cm= £1.44, 10cm × 25cm= £1.61, 10cm × 30cm= £2.70, 10cm × 35cm= £3.28, 7.2cm × 5cm= £0.29, 8cm × 10cm= £0.57, 8cm × 15cm= £0.86

#### **Mepore Film & Pad**

Film dressing with adsorbent pad

**Mepore Film & Pad dressing** (Molnlycke Health Care Ltd) 4cm × 5cm= £0.25, 5cm × 7cm= £0.26, 9cm × 10cm= £0.65, 9cm × 15cm= £0.96, 9cm × 20cm= £1.42, 9cm × 25cm= £1.57, 9cm × 30cm= £2.10, 9cm × 35cm= £2.62

**Mepore Ultra**

Film dressing with adsorbent pad

**Mepore Ultra dressing** (Molnlycke Health Care Ltd) 10cm × 11cm= £0.84, 11cm × 15cm= £1.23, 7cm × 8cm= £0.42, 9cm × 20cm= £1.58, 9cm × 25cm= £1.74, 9cm × 30cm= £2.88

**OpSite Plus**

Film dressing with adsorbent pad

**OpSite Plus dressing** (Smith & Nephew Healthcare Ltd) 10cm × 12cm= £1.28, 10cm × 20cm= £2.15, 10cm × 35cm= £3.56, 6.5cm × 5cm= £0.35, 8.5cm × 9.5cm= £0.94

**OpSite Post-op**

Film dressing with adsorbent pad

**OpSite Post-Op dressing** (Smith & Nephew Healthcare Ltd) 10cm × 12cm= £1.25, 10cm × 20cm= £2.11, 10cm × 25cm= £2.65, 10cm × 30cm= £3.14, 10cm × 35cm= £3.50, 8.5cm × 15.5cm= £1.28, 8.5cm × 9.5cm= £0.92

**Pharmapore-PU**

Film dressing with adsorbent pad

**Pharmapore-PU dressing** (Wallace, Cameron & Company Ltd) 10cm × 25cm= £0.38, 10cm × 30cm= £0.58, 8.5cm × 15.5cm= £0.20

**PremierPore VP**

Film dressing with adsorbent pad

**PremierPore VP dressing** (Shermond) 10cm × 10cm= £0.16, 10cm × 15cm= £0.24, 10cm × 20cm= £0.36, 10cm × 25cm= £0.38, 10cm × 30cm= £0.57, 10cm × 35cm= £0.70, 5cm × 7cm= £0.13

**Tegaderm**

Film dressing with adsorbent pad

**Tegaderm + Pad dressing** (3M Health Care Ltd) 5cm × 7cm= £0.27, 9cm × 10cm= £0.67, 9cm × 15cm= £0.98, 9cm × 20cm= £1.44, 9cm × 25cm= £1.62, 9cm × 35cm= £2.68

**Tegaderm Absorbent Clear**

Film dressing with clear acrylic polymer oval-shaped pad or rectangular-shaped pad

**Tegaderm Absorbent Clear Acrylic dressing** (3M Health Care Ltd) 11.1cm × 12.7cm oval= £4.24, 14.2cm × 15.8cm oval= £5.96, 14.9cm × 15.2cm rectangular= £8.94, 20cm × 20.3cm rectangular= £14.35, 7.6cm × 9.5cm oval= £3.27

**Vapour-permeable transparent adhesive film dressing IV3000**

For intravenous and subcutaneous catheter sites

**IV3000 dressing** (Smith & Nephew Healthcare Ltd) 10cm × 12cm= £1.49, 5cm × 6cm= £0.45, 6cm × 7cm= £0.59, 7cm × 9cm= £0.78, 9cm × 12cm= £1.55

**Mepore IV**

For intravenous and subcutaneous catheter sites

**Mepore IV dressing** (Molnlycke Health Care Ltd) 10cm × 11cm= £1.13, 5cm × 5.5cm= £0.32, 8cm × 9cm= £0.42

**Pharmapore-PU IV**

For intravenous and subcutaneous catheter sites

**Pharmapore-PU-IV dressing** (Wallace, Cameron & Company Ltd) 6cm × 7cm= £0.08, 7cm × 8.5cm= £0.07, 7cm × 9cm= £0.17

**Tegaderm IV**

For intravenous and subcutaneous catheter sites

**Tegaderm IV Advanced dressing with securing tapes** (3M Health Care Ltd) 10cm × 15.5cm= £1.68, 7cm × 8.5cm= £0.60

**Vapour-permeable transparent film dressing with adhesive foam border Central Gard**

For intravenous and subcutaneous catheter sites

**Central Gard dressing** (Unomedical Ltd) 16cm × 7cm= £1.00, 16cm × 8.8cm= £1.10

**Easi-V**

For intravenous and subcutaneous catheter sites

**Easi-V** (ConvaTec Ltd) dressing 7cm × 7.5cm= £0.38

**Soft polymer dressings**

Dressings with soft polymer, often a soft silicone polymer, in a non-adherent or gently adherent layer are suitable for use on lightly to moderately exuding wounds. For moderately to heavily exuding wounds, an absorbent secondary dressing can be added, or a soft polymer dressing with an absorbent

pad can be used. Wound contact dressings coated with soft silicone have gentle adhesive properties and can be used on fragile skin areas or where it is beneficial to reduce the frequency of primary dressing changes. Soft polymer dressings should not be used on heavily bleeding wounds; blood clots can cause the dressing to adhere to the wound surface. For silicone keloid dressings see under Specialised dressings.

**Cellulose dressings****Sorbion Sachet Border**

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope, with adhesive border

**Cutimed Sorbion Sachet Border dressing** (BSN medical Ltd) 10cm × 10cm square= £3.14, 15cm × 15cm square= £4.78, 25cm × 15cm rectangular= £7.45

**Sorbion Sachet EXTRA**

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope

**Cutimed Sorbion Sachet Extra dressing** (BSN medical Ltd) 10cm × 10cm= £2.40, 20cm × 10cm= £3.98, 20cm × 20cm= £7.46, 30cm × 20cm= £10.65, 5cm × 5cm= £1.55, 7.5cm × 7.5cm= £1.90

**Sorbion Sachet Multi Star**

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope

**Cutimed Sorbion Sachet Multi Star dressing** (BSN medical Ltd) 14cm × 14cm= £5.21, 8cm × 8cm= £3.19

**Sorbion Sachet S Drainage**

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope (‘v’ shaped dressing)

**Cutimed Sorbion Sachet S drainage dressing** (BSN medical Ltd) 10cm × 10cm= £2.81

**Suprasorb X**

Biosynthetic cellulose fibre dressing

**Suprasorb X dressing** (Lohmann & Rauscher) 14cm × 20cm rectangular= £8.89, 2cm × 21cm rope= £6.91, 5cm × 5cm square= £2.16, 9cm × 9cm square= £4.49

**With absorbent pad****Advazorb Border**

Soft silicone wound contact dressing with polyurethane foam film backing and adhesive border

**Advazorb Border dressing** (Advancis Medical) 10cm × 10cm= £2.20, 10cm × 20cm= £3.04, 10cm × 30cm= £4.45, 12.5cm × 12.5cm= £2.70, 15cm × 15cm= £3.30, 20cm × 20cm= £5.72, 7.5cm × 7.5cm= £1.25

**Advazorb Border Lite**

Soft silicone wound contact dressing with polyurethane foam film backing and adhesive border

**Advazorb Border Lite dressing** (Advancis Medical) 10cm × 10cm= £1.98, 10cm × 20cm= £2.73, 10cm × 30cm= £4.01, 12.5cm × 12.5cm= £2.43, 15cm × 15cm= £2.97, 20cm × 20cm= £5.14, 7.5cm × 7.5cm= £1.12

**Advazorb Silfix**

Soft silicone wound contact dressing with polyurethane foam film backing

**Advazorb Silfix dressing** (Advancis Medical) 10cm × 10cm= £1.94, 10cm × 20cm= £3.33, 12.5cm × 12.5cm= £2.71, 15cm × 15cm= £3.52, 20cm × 20cm= £5.21, 7.5cm × 7.5cm= £1.04

**Advazorb Silfix Lite**

Soft silicone wound contact dressing with polyurethane foam film backing

**Advazorb Silfix Lite dressing** (Advancis Medical) 10cm × 10cm= £1.75, 10cm × 20cm= £2.99, 12.5cm × 12.5cm= £2.44, 15cm × 15cm= £3.16, 20cm × 20cm= £4.69, 7.5cm × 7.5cm= £0.93

**Alleyn Gentle Border**

Silicone gel wound contact dressing, with polyurethane foam film backing

**Alleyn Gentle Border** (Smith & Nephew Healthcare Ltd) Heel dressing 23cm × 23.2cm= £10.27, dressing 10cm × 10cm= £2.33, 12.5cm × 12.5cm= £2.86, 17.5cm × 17.5cm= £5.63, 7.5cm × 7.5cm= £1.59

**Allevyn Gentle Border Lite**

Silicone gel wound contact dressing, with polyurethane foam film backing

**Allevyn Gentle Border Lite dressing** (Smith & Nephew Healthcare Ltd)

10cm × 10cm= £2.30, 15cm × 15cm= £4.06, 5.5cm × 12cm= £1.97, 5cm × 5cm= £0.96, 8cm × 15cm= £3.66

**Allevyn Life**

Soft silicone wound contact dressing, with central mesh screen, polyurethane foam film backing and adhesive border

**Allevyn Life dressing** (Smith & Nephew Healthcare Ltd) 10.3cm × 10.3cm= £1.80, 12.9cm × 12.9cm= £2.64, 15.4cm × 15.4cm= £3.23, 21cm × 21cm= £6.37

**Cutimed Siltec**

Soft silicone wound contact dressing, with polyurethane foam film backing

**Cutimed Siltec** (BSN medical Ltd) Sacrum dressing 17.5cm × 17.5cm= £4.75, 23cm × 23cm= £6.49, dressing 10cm × 10cm= £2.36, 10cm × 20cm= £3.90, 15cm × 15cm= £4.41, 20cm × 20cm= £6.69, 5cm × 6cm= £1.27

**Cutimed Siltec B**

Soft silicone wound contact dressing, with polyurethane foam film backing, with adhesive border, for lightly to moderately exuding wounds

**Cutimed Siltec B dressing** (BSN medical Ltd) 12.5cm × 12.5cm= £2.41, 15cm × 15cm= £3.20, 17.5cm × 17.5cm= £5.18, 22.5cm × 22.5cm= £6.32, 7.5cm × 7.5cm= £1.41

**Cutimed Siltec L**

Soft silicone wound contact dressing, with polyurethane foam film backing, for lightly to moderately exuding wounds

**Cutimed Siltec L dressing** (BSN medical Ltd) 10cm × 10cm= £1.64, 15cm × 15cm= £3.61, 5cm × 6cm= £1.12

**Eclipse Adherent**

Soft silicone wound contact layer with absorbent pad and film backing

**Eclipse Adherent dressing** (Advancis Medical) 10cm × 10cm= £3.13, 10cm × 20cm= £3.93, 15cm × 15cm= £5.22, 20cm × 30cm= £10.46, 17cm × 19cm sacral= £3.94, 22cm × 23cm sacral= £6.52

**Mepilex**

Absorbent soft silicone dressing with polyurethane foam film backing

**Mepilex** (Molnlycke Health Care Ltd) Heel dressing 13cm × 20cm= £5.70, 15cm × 22cm= £6.53, XT dressing 10cm × 11cm= £2.78, 11cm × 20cm= £4.59, 15cm × 16cm= £5.05, 20cm × 21cm= £7.62, dressing 5cm × 5cm= £1.26

**Mepilex Border**

Absorbent soft silicone dressing with polyurethane foam film backing and adhesive border

**Mepilex Border dressing** (Molnlycke Health Care Ltd) 10cm × 12.5cm= £2.76, 10cm × 20cm= £3.77, 10cm × 30cm= £5.66, 15cm × 17.5cm= £4.24, 17cm × 20cm= £6.16

**Mepilex Border Lite**

Thin absorbent soft silicone dressing with polyurethane foam film backing and adhesive border

**Mepilex Border Lite dressing** (Molnlycke Health Care Ltd) 15cm × 15cm= £3.99, 4cm × 5cm= £0.94, 5cm × 12.5cm= £2.04, 7.5cm × 7.5cm= £1.37

**Mepilex Lite**

Thin absorbent soft silicone dressing with polyurethane foam film backing

**Mepilex Lite dressing** (Molnlycke Health Care Ltd) 10cm × 10cm= £2.26, 15cm × 15cm= £4.38, 20cm × 50cm= £27.66, 6cm × 8.5cm= £1.89

**Mepilex Transfer**

Soft silicone exudate transfer dressing

**Mepilex Transfer dressing** (Molnlycke Health Care Ltd) 10cm × 12cm= £3.67, 15cm × 20cm= £11.12, 20cm × 50cm= £28.42, 7.5cm × 8.5cm= £2.33

**Sorbion Sana**

Non-adherent polyethylene wound contact dressing with absorbent core

**Cutimed Sorbion Sana Gentle dressing** (BSN medical Ltd) 12cm × 12cm= £2.65, 12cm × 22cm= £4.78, 22cm × 22cm= £8.51, 8.5cm × 8.5cm= £2.12

**UrgotulDuo**

Non-adherent soft polymer wound contact dressing with absorbent pad

**UrgotulDuo dressing** (Urgo Ltd) 10cm × 12cm= £4.03, 15cm × 20cm= £9.37, 5cm × 10cm= £2.61

**Viiwasorb Adhesive**

Absorbent polymer dressing with non-adherent wound contact layer and adhesive border

**Viiwasorb Adhesive dressing** (Lohmann & Rauscher) 12cm × 12cm square= £3.48, 15cm × 15cm square= £4.70, 15cm × 25cm rectangular= £6.90

*Without absorbent pad*

**Adaptic Touch**

Non-adherent soft silicone wound contact dressing

**Adaptic Touch dressing** (Systagenix Wound Management Ltd) 12.7cm × 15cm= £4.71, 20cm × 32cm= £12.66, 5cm × 7.6cm= £1.14, 7.6cm × 11cm= £2.28

**Askina SilNet**

Soft silicone-coated wound contact dressing

**Askina SilNet dressing** (B.Braun Medical Ltd) 10cm × 18cm= £5.31, 20cm × 30cm= £13.00, 5cm × 7.5cm= £1.21, 7.5cm × 10cm= £2.43

**Mepitel**

Soft silicone, semi-transparent wound contact dressing

**Mepitel dressing** (Molnlycke Health Care Ltd) 12cm × 15cm= £5.72, 5cm × 7cm= £1.43, 8cm × 10cm= £2.86

**Mepitel One**

Soft silicone, thin, transparent wound contact dressing

**Mepitel One dressing** (Molnlycke Health Care Ltd) 13cm × 15cm= £5.04, 24cm × 27.5cm= £14.43, 6cm × 7cm= £1.24, 9cm × 10cm= £2.44

**Sifix**

Soft silicone-coated polyester wound contact dressing

**Sifix dressing** (Advancis Medical) 12cm × 15cm= £4.79, 20cm × 30cm= £12.34, 35cm × 60cm= £41.39, 5cm × 7cm= £1.16, 8cm × 10cm= £2.38

**Silon-TSR**

Soft silicone polymer wound contact dressing

**Silon-TSR dressing** (Bio Med Sciences) 13cm × 13cm= £3.52, 13cm × 25cm= £5.47, 28cm × 30cm= £7.37

**Sorbion Contact**

Non-adherent soft polymer wound contact dressing

**Cutimed Sorbion Contact dressing** (BSN medical Ltd) 10cm × 10cm= £2.07, 10cm × 20cm= £4.14, 20cm × 20cm= £7.26, 20cm × 30cm= £10.37, 7.5cm × 7.5cm= £1.55

**Tegaderm Contact**

Non-adherent soft polymer wound contact dressing

**Tegaderm Contact dressing** (3M Health Care Ltd) 20cm × 25cm= £11.06, 7.5cm × 10cm= £2.32

**Urgotul**

Non-adherent soft polymer wound contact dressing

**Urgotul dressing** (Urgo Ltd) 10cm × 10cm= £3.13, 10cm × 40cm= £10.53, 15cm × 15cm= £6.66, 15cm × 20cm= £8.86, 20cm × 30cm= £14.25, 5cm × 5cm= £1.57

**Hydrocolloid dressings**

Hydrocolloid dressings are usually presented as a hydrocolloid layer on a vapour-permeable film or foam pad.

Semi-permeable to water vapour and oxygen, these dressings form a gel in the presence of exudate to facilitate rehydration in lightly to moderately exuding wounds and promote autolytic debridement of dry, sloughy, or necrotic wounds; they are also suitable for promoting granulation. Hydrocolloid-fibrous dressings made from modified carmellose fibres resemble alginate dressings; hydrocolloid-fibrous dressings are more absorptive and suitable for moderately to heavily exuding wounds.

*Hydrocolloid-fibrous dressings***Aquacel**

Soft non-woven pad containing hydrocolloid-fibres

**Aquacel Ribbon dressing** (ConvaTec Ltd) 1cm × 45cm= £1.97, 2cm × 45cm= £2.61**Aquacel Foam**

Soft non-woven pad containing hydrocolloid-fibres with foam layer; with or without adhesive border

**Aquacel Foam dressing adhesive** (ConvaTec Ltd) 10cm × 10cm= £2.28, 12.5cm × 12.5cm= £2.83, 17.5cm × 17.5cm= £5.65, 19.8cm × 14cm heel= £5.78, 20cm × 16.9cm sacral= £5.19, 21cm × 21cm= £8.27, 25cm × 30cm= £10.71, 8cm × 8cm= £1.47, **non-adhesive** 10cm × 10cm= £2.70, 15cm × 15cm= £4.53, 15cm × 20cm= £6.20, 20cm × 20cm= £7.39**UrgoClean Pad**

Pad, hydrocolloid fibres coated with soft-adherent lipocolloidal wound contact layer

**UrgoClean Pad dressing** (Urgo Ltd) 10cm × 10cm square= £2.24, 20cm × 15cm rectangular= £4.21, 6cm × 6cm square= £1.01**UrgoClean Rope**

Rope, non-woven rope containing hydrocolloid fibres

**UrgoClean rope dressing** (Urgo Ltd) 2.5cm × 40cm= £2.52, 5cm × 40cm= £3.33*Polyurethane matrix dressing***Cutinova Hydro**

Polyurethane matrix with absorbent particles and waterproof polyurethane film

**Cutinova Hydro dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £2.71, 15cm × 20cm rectangular= £5.74, 5cm × 6cm rectangular= £1.35*With adhesive border***Biatain Super**

Semi-permeable hydrocolloid dressing; without adhesive border

**Biatain Super dressing (adhesive)** (Coloplast Ltd) 10cm × 10cm square= £2.29, 12.5cm × 12.5cm square= £3.79, 12cm × 20cm rectangular= £3.80, 15cm × 15cm square= £4.56, 20cm × 20cm square= £7.12**Granuflex Bordered**

Hydrocolloid wound contact layer bonded to plastic foam layer, with outer semi-permeable polyurethane film

**Granuflex Bordered dressing** (ConvaTec Ltd) 10cm × 10cm square= £3.55, 10cm × 13cm triangular= £4.19, 15cm × 15cm square= £6.78, 6cm × 6cm square= £1.87**Hydrocoll Border**

Hydrocolloid dressing with adhesive border and absorbent wound contact pad

Semi-permeable polyurethane film backing, hydrocolloid wound contact layer, with or without polyurethane foam later

**ActivHeal Hydrocolloid** (Advanced Medical Solutions Ltd) dressing 10cm × 10cm square= £1.60, 15cm × 15cm square= £3.48, 15cm × 18cm sacral= £4.03, 5cm × 7.5cm rectangular= £0.79, foam backed dressing 10cm × 10cm square= £1.56, 15cm × 15cm square= £2.95, 15cm × 18cm sacral= £3.40, 5cm × 7.5cm rectangular= £0.99**Biatain Super**

Semi-permeable, hydrocolloid film dressing without adhesive border

**Biatain Super dressing (non-adhesive)** (Coloplast Ltd) 10cm × 10cm square= £2.29, 12.5cm × 12.5cm square= £3.79, 12cm × 20cm rectangular= £3.80, 15cm × 15cm square= £4.56, 20cm × 20cm square= £7.12**Comfeel Plus Contour**

Hydrocolloid dressings containing carmellose sodium and calcium alginate

**Comfeel Plus Contour dressing** (Coloplast Ltd) 6cm × 8cm= £2.35, 9cm × 11cm= £4.08**Comfeel Plus Pressure Relieving**

Hydrocolloid dressings containing carmellose sodium and calcium alginate

**Comfeel Plus Pressure Relief dressing** (Coloplast Ltd) 10cm diameter circular= £4.92, 15cm diameter circular= £7.41, 7cm diameter circular= £3.67**Comfeel Plus Transparent**

Hydrocolloid dressings containing carmellose sodium and calcium alginate

**Comfeel Plus Transparent dressing** (Coloplast Ltd) 10cm × 10cm square= £1.35, 15cm × 15cm square= £3.53, 15cm × 20cm rectangular= £3.59, 20cm × 20cm square= £3.61, 5cm × 15cm rectangular= £1.68, 5cm × 25cm rectangular= £2.73, 5cm × 7cm rectangular= £0.71, 9cm × 14cm rectangular= £2.58, 9cm × 25cm rectangular= £3.66**Comfeel Plus Ulcer**

Hydrocolloid dressings containing carmellose sodium and calcium alginate

**Comfeel Plus dressing** (Coloplast Ltd) 10cm × 10cm square= £2.60, 20cm × 20cm square= £8.01, 4cm × 6cm rectangular= £1.02**DuoDERM Extra Thin**

Semi-permeable hydrocolloid dressing

**DuoDERM Extra Thin dressing** (ConvaTec Ltd) 10cm × 10cm square= £1.41, 15cm × 15cm square= £3.03, 5cm × 10cm rectangular= £0.81, 7.5cm × 7.5cm square= £0.85, 9cm × 15cm rectangular= £1.88, 9cm × 25cm rectangular= £3.00, 9cm × 35cm rectangular= £4.20**DuoDERM Signal**

Semi-permeable hydrocolloid dressing with 'Time to change' indicator

**DuoDERM Signal dressing** (ConvaTec Ltd) 10cm × 10cm square= £2.26, 14cm × 14cm square= £3.96, 20cm × 20cm square= £7.86**Flexigran**

Semi-permeable hydrocolloid dressing without adhesive border; normal or thin

**Flexigran** (A1 Pharmaceuticals) Thin dressing 10cm × 10cm square= £1.08, dressing 10cm × 10cm square= £2.19**Granuflex**

Hydrocolloid wound contact layer bonded to plastic foam layer, with outer semi-permeable polyurethane film

**Granuflex (modified) dressing** (ConvaTec Ltd) 10cm × 10cm square= £2.98, 15cm × 15cm square= £5.65, 20cm × 20cm square= £8.51**Hydrocoll Basic**

Hydrocolloid dressing with absorbent wound contact pad

**Hydrocoll Basic dressing** (Paul Hartmann Ltd) 10cm × 10cm square= £2.59**Hydrocoll Thin Film**

Thin hydrocolloid dressing with absorbent wound contact pad

**Hydrocoll Thin Film dressing** (Paul Hartmann Ltd) 10cm × 10cm square= £1.22, 15cm × 15cm square= £2.75, 7.5cm × 7.5cm square= £0.74**Nu-Derm**

Semi-permeable hydrocolloid dressing (normal and thin)

**Nu-Derm dressing** (Systagenix Wound Management Ltd) 10cm × 10cm square= £1.57, 15cm × 15cm square= £3.21, 15cm × 18cm sacral= £4.49, 20cm × 20cm square= £6.41, 5cm × 5cm square= £0.86, 8cm × 12cm heel/elbow= £3.21, thin 10cm × 10cm square= £1.07**Tegaderm Hydrocolloid**

Hydrocolloid dressing without adhesive border; normal and thin

**Tegaderm Hydrocolloid** (3M Health Care Ltd) Thin dressing 10cm × 10cm square= £1.60, dressing 10cm × 10cm square= £2.44

### Foam dressings

Dressings containing hydrophilic polyurethane foam (adhesive or non-adhesive), with or without plastic film-backing, are suitable for all types of exuding wounds, but not for dry wounds; some foam dressings have a moisture-sensitive film backing with variable permeability dependent on the level of exudate. Foam dressings vary in their ability to absorb exudate; some are suitable only for lightly to moderately exuding wounds, others have greater fluid-handling capacity and are suitable for heavily exuding wounds. Saturated foam dressings can cause maceration of healthy skin if left in contact with the wound. Foam dressings can be used in combination with other primary wound contact dressings. If used under compression bandaging or compression garments, the fluid-handling capacity of the foam dressing may be reduced. Foam dressings can also be used to provide a protective cushion for fragile skin. A foam dressing containing ibuprofen is available and may be useful for treating painful exuding wounds.

**UrgoTul Absorb dressing** (Urigo Ltd) 10cm × 10cm= £2.44, 15cm × 20cm= £4.31, 6cm × 6cm= £1.24, 12cm × 19cm heel= £4.92

**Alginate dressings**

Non-woven or fibrous, non-occlusive, alginate dressings, made from calcium alginate, or calcium sodium alginate, derived from brown seaweed, form a soft gel in contact with wound exudate. Alginate dressings are highly absorbent and suitable for use on exuding wounds, and for the promotion of autolytic debridement of debris in very moist wounds. Alginate dressings also act as a haemostatic, but caution is needed because blood clots can cause the dressing to adhere to the wound surface. Alginate dressings should not be used if bleeding is heavy and extreme caution is needed if used for tumours with friable tissue. Alginate sheets are suitable for use as a wound contact dressing for moderately to heavily exuding wounds and can be layered into deep wounds; alginate rope can be used in sinus and cavity wounds to improve absorption of exudate and prevent maceration. If the dressing does not have an adhesive border or integral adhesive plastic film backing, a secondary dressing will be required.

**ActivHeal Alginate**

Calcium sodium alginate dressing

**ActivHeal Alginate** (Advanced Medical Solutions Ltd) Rope dressing 2.5cm × 30cm= £2.16, dressing 10cm × 10cm= £1.17, 10cm × 20cm= £2.87, 5cm × 5cm= £0.60

**ActivHeal Aquafiber**

Non-woven, calcium sodium alginate dressing

**ActivHeal Aquafiber** (Advanced Medical Solutions Ltd) Rope dressing 2cm × 42cm= £1.84, dressing 10cm × 10cm= £1.50, 15cm × 15cm= £2.82, 5cm × 5cm= £0.63

**Algisite M**

Calcium alginate fibre, non-woven dressing

**Algisite M** (Smith & Nephew Healthcare Ltd) Rope dressing 2cm × 30cm= £3.69, dressing 10cm × 10cm= £2.04, 15cm × 20cm= £5.47, 5cm × 5cm= £0.99

**Biatain Alginate**

Alginate and carboxymethylcellulose dressing, highly absorbent, gelling dressing

**Biatain Alginate dressing** (Coloplast Ltd) 10cm × 10cm= £2.46, 15cm × 15cm= £4.66, 44cm= £2.90, 5cm × 5cm= £1.03

**Cutimed Alginate**

Calcium sodium alginate dressing

**Cutimed Alginate dressing** (BSN medical Ltd) 10cm × 10cm= £1.67, 10cm × 20cm= £3.13, 5cm × 5cm= £0.79

**Kaltostat**

Calcium alginate fibre, non-woven

**Kaltostat dressing** (ConvaTec Ltd) 10cm × 20cm= £4.35, 15cm × 25cm= £7.47, 2g= £4.07, 5cm × 5cm= £1.02, 7.5cm × 12cm= £2.21

**Kendall**

Calcium alginate dressing

**Kendall Calcium Alginate** (H & R Healthcare Ltd) Rope dressing 30cm= £2.93, 61cm= £5.14, 91cm= £5.53, dressing 10cm × 10cm= £1.54, 10cm × 14cm= £2.48, 10cm × 20cm= £3.02, 15cm × 25cm= £5.32, 30cm × 61cm= £27.90, 5cm × 5cm= £0.73

**Kendall Plus**

Calcium alginate dressing

**Kendall Foam Plus** (H & R Healthcare Ltd) dressing 10cm × 10cm square= £1.50

**Melgisorb**

Calcium sodium alginate fibre, highly absorbent, gelling dressing, non-woven

**Melgisorb** (Molnlycke Health Care Ltd) Cavity dressing 2.2cm × 32cm= £3.55, dressing 10cm × 10cm= £1.88, 10cm × 20cm= £3.52, 5cm × 5cm= £0.90

**Sorbalgon**

Calcium alginate dressing

**Sorbalgon** (Paul Hartmann Ltd) T dressing 2g= £3.68, dressing 10cm × 10cm= £1.81, 5cm × 5cm= £0.86

**Sorbsan Flat**

Calcium alginate fibre, highly absorbent, flat non-woven pads

**Sorbsan Flat dressing** (Aspen Medical Europe Ltd) 10cm × 10cm= £1.72, 10cm × 20cm= £3.22, 5cm × 5cm= £0.82

**Sorbsan Plus**

Alginate dressing bonded to a secondary absorbent viscose pad

**Sorbsan Plus dressing** (Aspen Medical Europe Ltd) 10cm × 15cm= £3.12, 10cm × 20cm= £3.98, 15cm × 20cm= £5.53, 7.5cm × 10cm= £1.77

**Sorbsan Ribbon**

Alginate dressing bonded to a secondary absorbent viscose pad

**Sorbsan Ribbon dressing** (Aspen Medical Europe Ltd) 40cm= £2.06

**Sorbsan Surgical Packing**

Alginate dressing bonded to a secondary absorbent viscose pad

**Sorbsan Packing dressing** (Aspen Medical Europe Ltd) 2g= £3.50

**Suprasorb A**

Calcium alginate dressing

**Suprasorb A** (Lohmann & Rauscher) alginate dressing 10cm × 10cm= £1.29, 5cm × 5cm= £0.66, cavity dressing 2g= £2.40

**Tegaderm Alginate**

Calcium alginate dressing

**Tegaderm Alginate dressing** (3M Health Care Ltd) 10cm × 10cm= £1.78, 2cm × 30.4cm= £2.96, 5cm × 5cm= £0.84

**Urgosorb**

Alginate and carboxymethylcellulose dressing without adhesive border

**Urgosorb** (Urigo Ltd) Pad dressing 10cm × 10cm= £2.25, 10cm × 20cm= £4.12, 5cm × 5cm= £0.94, Rope dressing 30cm= £2.94

**Capillary-acting dressings****Vacutex**

Low-adherent dressing consisting of two external polyester wound contact layers with central wicking polyester/cotton mix absorbent layer

**Vacutex dressing** (Haddenham Healthcare Ltd) 10cm × 10cm= £1.70, 10cm × 15cm= £2.29, 10cm × 20cm= £2.75, 5cm × 5cm= £0.96

**Odour absorbent dressings**

Dressings containing activated charcoal are used to absorb odour from wounds. The underlying cause of wound odour should be identified. Wound odour is most effectively reduced by debridement of slough, reduction in bacterial levels, and frequent dressing changes. Fungating wounds and chronic infected wounds produce high volumes of exudate which can reduce the effectiveness of odour absorbent dressings. Many odour absorbent dressings are intended for use in combination with other dressings; odour absorbent dressings with a suitable wound contact layer can be used as a primary dressing.

**Askina Carbosorb**

Activated charcoal and non-woven viscose rayon dressing

**Askina Carbosorb dressing** (B.Braun Medical Ltd) 10cm × 10cm= £3.08, 10cm × 20cm= £5.95

**CarboFLEX**

Dressing in 5 layers: wound-facing absorbent layer containing alginate and hydrocolloid; water-resistant second layer; third layer containing activated charcoal; non-woven absorbent fourth layer; water-resistant backing layer

**CarboFlex dressing** (ConvaTec Ltd) 10cm × 10cm= £3.42, 15cm × 20cm= £7.78, 8cm × 15cm oval= £4.10

**Carbopad VC**

Activated charcoal non-absorbent dressing

**Carbopad VC dressing** (Synergie Health (UK) Ltd) 10cm × 10cm= £1.62, 10cm × 20cm= £2.19

**CliniSorb Odour Control Dressings**

Activated charcoal cloth enclosed in viscose rayon with outer polyamide coating

**CliniSorb dressing** (CliniMed Ltd) 10cm × 10cm= £2.01, 10cm × 20cm= £2.68, 15cm × 25cm= £4.31

**Antimicrobial dressings**

Spreading infection at the wound site requires treatment with systemic antibacterials. For local wound infection, a topical antimicrobial dressing can be used to reduce the level of bacteria at the wound surface but will not eliminate a spreading infection. Some dressings are designed to release the antimicrobial into the wound, others act upon the bacteria after absorption from the wound. The amount of exudate present and the level of infection should be taken into account when selecting an antimicrobial dressing. Medical grade honey has antimicrobial and anti-inflammatory properties. Dressings impregnated with iodine can be used to treat clinically infected wounds. Dressings containing silver should be used only when clinical signs or symptoms of infection are present. Dressings containing other antimicrobials such as polihexanide (polyhexamethylene biguanide) or dialkylcarbamoyl chloride are available for use on infected wounds. Although hypersensitivity is unlikely with chlorhexidine impregnated tulle dressing, the antibacterial efficacy of these dressings has not been established.

**Honey dressings**

Medical grade honey has antimicrobial and anti-inflammatory properties and can be used for acute or chronic wounds. Medical grade honey has osmotic properties, producing an environment that promotes autolytic debridement; it can help control wound malodour. Honey dressings should not be used on patients with extreme sensitivity to honey, bee stings or bee products. Patients with diabetes should be monitored for changes in blood-glucose concentrations during treatment with topical honey or honey-impregnated dressings.

For *Actilite*<sup>®</sup>, *Activon Tulle*<sup>®</sup> and *Revamil*<sup>®</sup>, where no size is stated by the prescriber the 5 cm size is to be supplied.

*Medihoney*<sup>®</sup> *Antimicrobial Wound Gel* is not recommended for use in deep wounds or body cavities where removal of waxes may be difficult.

**Honey-based topical application****Activon Honey**

Medical grade manuka honey

**Activon** (Advancis Medical) Medical Grade Manuka Honey dressing= £2.80

**L-Mesitran SOFT ointment dressing**

Honey (medical grade) 40%

**L-Mesitran** (H & R Healthcare Ltd) SOFT ointment dressing= £3.62

**MANUKAplI Honey**

Medical grade manuka honey

**MANUKAplI** (Manuka Medical Ltd) dressing= £5.90

**Medihoney Antibacterial Medical Honey**

Medical grade, *Leptospermum* sp.

**Medihoney** (Integra NeuroSciences Ltd) Antibacterial Medical Honey dressing= £4.03

**Medihoney Antibacterial Wound Gel**

Medical grade, *Leptospermum* sp. 80% in natural waxes and oils

**Medihoney** (Integra NeuroSciences Ltd) Antibacterial Wound Gel dressing= £4.09

**Melladerm Plus Honey**

Medical grade; Bulgarian (mountain flower) 45% in basis containing polyethylene glycol

**Melladerm Plus** (SanoMed Manufacturing BV) dressing= £8.50

**Revamil Balm**

Medical grade honey-based ointment

**Revamil Balm** (Oswell Penda Pharmaceutical Ltd) dressing= £9.99

**Revamil Wound Gel**

Medical grade honey

**Revamil Wound Gel** (Oswell Penda Pharmaceutical Ltd) dressing= £3.48

**Sheet dressing****Actilite**

Knitted viscose impregnated with medical grade manuka honey and manuka oil

**Actilite gauze dressing** (Advancis Medical) 10cm × 10cm= £1.25, 10cm × 20cm= £2.41, 5cm × 5cm= £0.72

**Activon Tulle**

Knitted viscose impregnated with medical grade manuka honey

**Activon Tulle gauze dressing** (Advancis Medical) 10cm × 10cm= £3.76, 5cm × 5cm= £2.28

**Algivon**

Absorbent, non-adherent calcium alginate dressing impregnated with medical grade manuka honey

**Algivon dressing** (Advancis Medical) 10cm × 10cm= £4.30, 5cm × 5cm= £2.51

**Algivon Plus**

Reinforced calcium alginate dressing impregnated with medical grade manuka honey

**Algivon Plus Ribbon dressing** (Advancis Medical) 2.5cm × 20cm= £4.25, dressing 10cm × 10cm= £4.25, 5cm × 5cm= £2.48

**L-Mesitran Border**

Hydrogel, semi-permeable dressing impregnated with medical grade honey, with adhesive border

**L-Mesitran Border sheet** (H & R Healthcare Ltd) 10cm × 10cm square= £2.76

**L-Mesitran Hydro**

Hydrogel, semi-permeable dressing impregnated with medical grade honey, without adhesive border

**L-Mesitran Hydro sheet** (H & R Healthcare Ltd) 10cm × 10cm square= £2.65

**L-Mesitran Net**

Hydrogel, non-adherent wound contact layer, without adhesive border

**L-Mesitran Net sheet** (H & R Healthcare Ltd) 10cm × 10cm square= £2.55

**Medihoney Antibacterial Honey Apinate**

Non-adherent calcium alginate dressing, impregnated with medical grade honey

**Medihoney Antibacterial Honey Apinate** (Integra NeuroSciences Ltd) dressing 10cm × 10cm square= £3.46, 5cm × 5cm square= £2.04, rope dressing 1.9cm × 30cm= £4.28

**Medihoney Antibacterial Honey Tulle**

Woven fabric impregnated with medical grade manuka honey

**Medihoney Tulle dressing** (Integra NeuroSciences Ltd) 10cm x10cm= £3.03

**Medihoney Gel sheet**

Sodium alginate dressing impregnated with medical grade honey

**Medihoney Gel Sheet dressing** (Integra NeuroSciences Ltd) 10cm × 10cm= £4.28, 5cm × 5cm= £1.78

**Melladerm Plus Tulle**

Knitted viscose impregnated with medical grade honey (Bulgarian, mountain flower) 45% in a basis containing polyethylene glycol

**Melladerm Plus Tulle dressing** (SanoMed Manufacturing BV) 10cm × 10cm= £2.10

**Revamil**

Polyacetate dressing impregnated with medical grade honey  
**Revamil dressing** (Oswell Penda Pharmaceutical Ltd) 10cm × 10cm= £2.90, 10cm × 20cm= £5.30, 5cm × 5cm= £1.75, 8cm × 8cm= £3.33

**Iodine dressings**

Cadexomer–iodine, like povidone–iodine, releases free iodine when exposed to wound exudate. The free iodine acts as an antiseptic on the wound surface, the cadexomer absorbs wound exudate and encourages de-sloughing. Two-component hydrogel dressings containing glucose oxidase and iodide ions generate a low level of free iodine in the presence of moisture and oxygen. Povidone–iodine fabric dressing is a knitted viscose dressing with povidone–iodine incorporated in a hydrophilic polyethylene glycol basis; this facilitates diffusion of the iodine into the wound and permits removal of the dressing by irrigation. The iodine has a wide spectrum of antimicrobial activity but it is rapidly deactivated by wound exudate. Systemic absorption of iodine may occur, particularly from large wounds or with prolonged use.

*Iodoflex*<sup>®</sup> and *Iodosorb*<sup>®</sup> are used for the treatment of chronic exuding wounds; max. single application 50 g, max. weekly application 150 g; max. duration up to 3 months in any single course of treatment. They are contra-indicated in patients receiving lithium, in thyroid disorders, in pregnancy and breast feeding, and in children; they should be used with caution in patients with severe renal impairment or history of thyroid disorder.

*Iodozyme*<sup>®</sup> is an antimicrobial dressing used for lightly to moderately exuding wounds. It is contra-indicated in thyroid disorders and in patients receiving lithium; it should be used with caution in children and in women who are pregnant or breast-feeding.

*Oxyzyme*<sup>®</sup> is used for non-infected, dry to moderately exuding wounds. It is contra-indicated in thyroid disorders and in patients receiving lithium; it should be used with caution in children and in women who are pregnant or breast-feeding.

*Povidone-iodine Fabric Dressing* is used as a wound contact layer for abrasions and superficial burns. It is contra-indicated in patients with severe renal impairment and in women who are pregnant or breast-feeding; it should be used with caution in patients with thyroid disease and in children under 6 months.

**Iodoflex Paste**

Iodine 0.9% as cadexomer–iodine in a paste basis with gauze backing

**Iodoflex paste** (Smith & Nephew Healthcare Ltd) dressing= £8.66

**Iodosorb Ointment**

Iodine 0.9% as cadexomer–iodine in an ointment basis

**Iodosorb ointment** (Smith & Nephew Healthcare Ltd) dressing= £9.57

**Iodosorb Powder**

Iodine 0.9% as cadexomer–iodine microbeads, 3-g sachet  
**Iodosorb powder** (Smith & Nephew Healthcare Ltd) dressing sachets= £2.05

**Povidone-iodine fabric dressing****Inadine**

(Drug Tariff specification 43). Knitted viscose primary dressing impregnated with povidone–iodine ointment 10%  
**Inadine dressing** (Systagenix Wound Management Ltd) 5cm × 5cm= £0.34, 9.5cm × 9.5cm= £0.50

**Silver dressings**

Antimicrobial dressings containing silver should be used only when infection is suspected as a result of clinical signs

or symptoms (see also notes above). Silver ions exert an antimicrobial effect in the presence of wound exudate; the volume of wound exudate as well as the presence of infection should be considered when selecting a silver-containing dressing. Silver-impregnated dressings should not be used routinely for the management of uncomplicated ulcers. It is recommended that these dressings should not be used on acute wounds as there is some evidence to suggest they delay wound healing. Dressings impregnated with silver sulfadiazine have broad antimicrobial activity; if silver sulfadiazine is applied to large areas, or used for prolonged periods, there is a risk of blood disorders and skin discoloration. The use of silver sulfadiazine-impregnated dressings is contra-indicated in neonates, in pregnancy, and in patients with significant renal or hepatic impairment, sensitivity to sulfonamides, or G6PD deficiency. Large amounts of silver sulfadiazine applied topically may interact with other drugs—see Appendix 1 (sulfonamides).

**Alginate dressings****Algisite Ag**

Calcium alginate dressing, with silver

**Algisite Ag dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £4.43, 10cm × 20cm= £8.15, 2g= £6.12, 5cm × 5cm= £1.77

**Askina Calgitrol Ag**

Calcium alginate and silver alginate dressing with polyurethane foam backing

**Askina Calgitrol Ag dressing** (B.Braun Medical Ltd) 10cm × 10cm square= £3.41, 15cm × 15cm square= £6.61, 20cm × 20cm square= £15.41

**Askina Calgitrol Thin**

Calcium alginate and silver alginate matrix, for use with absorptive secondary dressings

**Askina Calgitrol Thin dressing** (B.Braun Medical Ltd) 10cm × 10cm square= £4.35, 20cm × 20cm square= £17.24, 5cm × 5cm square= £2.09

**Melgisorb Ag**

Alginate and carboxymethylcellulose dressing, with ionic silver

**Melgisorb Ag** (Molnlycke Health Care Ltd) Cavity dressing 3cm × 44cm= £4.78, dressing 10cm × 10cm= £3.83, 15cm × 15cm= £8.12, 5cm × 5cm= £1.92

**Silvercel**

Alginate and carboxymethylcellulose dressing impregnated with silver

**Silvercel dressing** (Systagenix Wound Management Ltd) 10cm × 20cm rectangular= £7.92, 11cm × 11cm square= £4.27, 2.5cm × 30.5cm rectangular= £4.59, 5cm × 5cm square= £1.73

**Silvercel Non-adherent**

Alginate and carboxymethylcellulose dressing with film wound contact layer, impregnated with silver

**Silvercel Non-Adherent** (Systagenix Wound Management Ltd) cavity dressing 2.5cm × 30.5cm= £4.03, dressing 10cm × 20cm rectangular= £7.42, 11cm × 11cm square= £3.98, 5cm × 5cm square= £1.66

**Sorbsan Silver Flat**

Calcium alginate fibre, highly absorbent, flat non-woven pads, with silver

**Sorbsan Silver Flat dressing** (Aspen Medical Europe Ltd) 10cm × 10cm= £4.00, 10cm × 20cm= £7.31, 5cm × 5cm= £1.58

**Sorbsan Silver Plus**

Calcium alginate dressing with absorbent backing, with silver

**Sorbsan Silver Plus dressing** (Aspen Medical Europe Ltd) 10cm × 15cm= £5.60, 10cm × 20cm= £6.82, 15cm × 20cm= £9.15, 7.5cm × 10cm= £3.37

**Sorbsan Silver Ribbon**

With silver

**Sorbsan Silver Ribbon dressing** (Aspen Medical Europe Ltd) 1g= £4.18

**Sorbsan Silver Surgical Packing**

With silver

**Sorbsan Silver Packing dressing** (Aspen Medical Europe Ltd) 2g= £5.80

**Suprasorb A + Ag**

Calcium alginate dressing, with silver

**Suprasorb A + Ag** (Lohmann & Rauscher) dressing 10cm × 10cm= £4.32, 10cm × 20cm= £7.97, 5cm × 5cm= £1.72, rope dressing 2g= £6.38

**Tegaderm Alginate Ag**

Calcium alginate and carboxymethylcellulose dressing, with silver

**Tegaderm Alginate Ag dressing** (3M Health Care Ltd) 10cm × 10cm= £3.30, 3cm × 30cm= £3.77, 5cm × 5cm= £1.42

**Urgosorb Silver**

Alginate and carboxymethylcellulose dressing, impregnated with silver

**Urgosorb Silver** (Urgo Ltd) Rope dressing 2.5cm × 30cm= £3.91, dressing 10cm × 10cm= £3.89, 10cm × 20cm= £7.33, 5cm × 5cm= £1.63

*Foam dressings***Acticoat Moisture Control**

Three layer polyurethane dressing consisting of a silver coated layer, a foam layer, and a waterproof layer

**Acticoat Moisture Control dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £17.88, 10cm × 20cm rectangular= £34.84, 5cm × 5cm square= £7.65

**Allevyn Ag**

Silver sulfadiazine impregnated polyurethane foam film dressing with or without adhesive border

**Allevyn Ag** (Smith & Nephew Healthcare Ltd) **Adhesive dressing** 10cm × 10cm square= £5.86, 12.5cm × 12.5cm square= £7.70, 17.5cm × 17.5cm square= £14.81, 17cm × 17cm sacral= £11.56, 22cm × 22cm sacral= £15.49, 7.5cm × 7.5cm square= £3.72, **Heel Non-Adhesive dressing** 10.5cm × 13.5cm= £11.46, **Non-Adhesive dressing** 10cm × 10cm square= £6.54, 15cm × 15cm square= £12.40, 20cm × 20cm square= £18.16, 5cm × 5cm square= £3.47

**Biatain Ag**

Silver impregnated polyurethane foam film dressing, with or without adhesive border

**Biatain Ag** (Coloplast Ltd) cavity dressing 5cm × 8cm= £4.29, dressing 10cm × 10cm square= £8.60, 10cm × 20cm rectangular= £15.81, 12.5cm × 12.5cm square= £9.84, 15cm × 15cm square= £17.27, 18cm × 18cm square= £19.74, 19cm × 20cm heel= £19.47, 20cm × 20cm square= £24.35, 23cm × 23cm sacral= £20.69, 5cm × 7cm rectangular= £3.54

**PolyMem Silver**

Silver impregnated polyurethane foam film dressing, with or without adhesive border

**PolyMem Silver** (H & R Healthcare Ltd) WIC dressing 8cm × 8cm= £7.19, dressing 10.8cm × 10.8cm square= £9.04, 12.7cm × 8.8cm oval= £5.71, 17cm × 19cm rectangular= £18.11, 5cm × 7.6cm oval= £2.32

*Hydrocolloid dressings***Aquacel Ag**

Soft non-woven pad containing hydrocolloid fibres, (silver impregnated)

**Aquacel Ag** (ConvaTec Ltd) Ribbon dressing 1cm × 45cm= £3.28, 2cm × 45cm= £5.02, dressing 10cm × 10cm square= £4.99, 15cm × 15cm square= £9.40, 20cm × 30cm rectangular= £23.32, 4cm × 10cm rectangular= £3.04, 4cm × 20cm rectangular= £3.96, 4cm × 30cm rectangular= £5.93

*Low adherence dressing***Acticoat**

Three-layer antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 3-day wear)

**Acticoat dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £9.12, 10cm × 20cm rectangular= £14.26, 20cm × 40cm rectangular= £48.81, 5cm × 5cm square= £3.74

**Acticoat 7**

Five-layer antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 7-day wear)

**Acticoat 7 dressing** (Smith & Nephew Healthcare Ltd) 10cm × 12.5cm rectangular= £19.34, 15cm × 15cm square= £34.77, 5cm × 5cm square= £6.49

**Acticoat Flex 3**

Conformable antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 3-day wear)

**Acticoat Flex 3 dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £9.22, 10cm × 20cm rectangular= £14.42, 20cm × 40cm rectangular= £49.35, 5cm × 5cm square= £3.78

**Acticoat Flex 7**

Conformable antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 7-day wear)

**Acticoat Flex 7 dressing** (Smith & Nephew Healthcare Ltd) 10cm × 12.5cm rectangular= £19.56, 15cm × 15cm square= £35.16, 5cm × 5cm square= £6.56

**Atrauman Ag**

Non-adherent polyamide fabric impregnated with silver and neutral triglycerides

**Atrauman Ag dressing** (Paul Hartmann Ltd) 10cm × 10cm= £1.33, 10cm × 20cm= £2.59, 5cm × 5cm= £0.55

*Soft polymer dressings***Allevyn Ag Gentle**

Soft polymer wound contact dressing, with silver sulfadiazine impregnated polyurethane foam layer, with or without adhesive border

**Allevyn Ag Gentle** (Smith & Nephew Healthcare Ltd) Border dressing 10cm × 10cm= £6.78, 12.5cm × 12.5cm= £8.71, 17.5cm × 17.5cm= £16.61, 7.5cm × 7.5cm= £4.51, dressing 10cm × 10cm= £6.58, 10cm × 20cm= £10.88, 15cm × 15cm= £12.24, 20cm × 20cm= £18.13, 5cm × 5cm= £3.53

**Mepilex Ag**

Soft silicone wound contact dressing with polyurethane foam film backing, with silver, with or without adhesive border

**Mepilex** (Molnlycke Health Care Ltd) Ag dressing 10cm × 10cm= £6.45, 10cm × 20cm= £10.63, 15cm × 15cm= £11.97, 20cm × 20cm= £17.73, 20cm × 50cm= £66.54, Border Ag dressing 10cm × 12.5cm= £6.49, 10cm × 20cm= £9.44, 10cm × 30cm= £14.17, 15cm × 17.5cm= £11.91, 17cm × 20cm= £15.43, 7cm × 7.5cm= £3.59, Border Sacrum Ag dressing 18cm × 18cm= £12.45, 20cm × 20cm= £15.14, 23cm × 23cm= £19.89, Heel Ag dressing 13cm × 20cm= £13.45, 15cm × 22cm= £15.07

**Urgotul Silver**

Non-adherent soft polymer wound contact dressing, with silver

**Urgotul Silver dressing** (Urgo Ltd) 10cm × 12cm= £3.28, 15cm × 20cm= £9.30

*With charcoal***Actisorb Silver 220**

Knitted fabric of activated charcoal, with one-way stretch, with silver residues, within spun-bonded nylon sleeve

**Actisorb Silver 220 dressing** (Systagenix Wound Management Ltd) 10.5cm × 10.5cm= £2.66, 10.5cm × 19cm= £4.84, 6.5cm × 9.5cm= £1.70

**Other antimicrobials****Cutimed Siltac Sorbact**

Polyurethane foam dressing with acetate fabric coated with dialkylcarbamoyl chloride, with adhesive border

**Cutimed Siltac Sorbact dressing** (BSN medical Ltd) 12.5cm × 12.5cm= £6.87, 15cm × 15cm= £8.51, 17.5cm × 17.5cm= £11.90, 22.5cm × 22.5cm= £18.11, 7.5cm × 7.5cm= £2.68, 17.5cm × 17.5cm sacral= £8.60, 23cm × 23cm sacral= £12.93

**Cutimed Sorbact**

Low adherence acetate tissue impregnated with dialkylcarbamoyl chloride; dressing pad, swabs, round swabs or ribbon gauze, cotton

**Cutimed Sorbact** (BSN medical Ltd) Ribbon dressing 2cm × 50cm= £4.30, 5cm × 20cm= £8.47, Round swab 3cm= £3.51, dressing

pad 10cm × 10cm = £5.86, 10cm × 20cm = £9.14, 7cm × 9cm = £3.75, swab 4cm × 6cm = £1.76, 7cm × 9cm = £2.93

#### **Cutimed Sorbact Gel**

Hydrogel dressing impregnated with dialkylcarbamoyle chloride

**Cutimed Sorbact Gel dressing** (BSN medical Ltd) 7.5cm × 15cm rectangular = £4.77, 7.5cm square = £2.83

#### **Cutimed Sorbact Hydroactive**

Non-adhesive gel dressing with hydropolymer matrix and acetate fabric coated with dialkylcarbamoyle chloride

**Cutimed Sorbact Hydroactive dressing** (BSN medical Ltd) 14cm × 14cm = £5.72, 14cm × 24cm = £9.16, 19cm × 19cm = £10.77, 24cm × 24cm = £16.32, 7cm × 8.5cm = £3.92

#### **Cutimed Sorbact Hydroactive B**

Gel dressing with hydropolymer matrix and acetate fabric coated with dialkylcarbamoyle chloride, with adhesive border

**Cutimed Sorbact Hydroactive B dressing** (BSN medical Ltd) 10cm × 10cm = £7.55, 10cm × 20cm = £12.09, 15cm × 15cm = £14.21, 5cm × 6.5cm = £4.24

#### **Flaminal Forte gel**

Alginate with glucose oxidase and lactoperoxidase, for moderately to heavily exuding wounds

**Flaminal** (Flen Health UK Ltd) Forte gel dressing = £8.16

#### **Flaminal Hydro gel**

Alginate with glucose oxidase and lactoperoxidase, for lightly to moderately exuding wounds

**Flaminal** (Flen Health UK Ltd) Hydro gel dressing = £8.16

#### **Kendall AMD**

Foam dressing with polyhexanide, without adhesive border

**Kendall AMD Antimicrobial foam dressing** (H & R Healthcare Ltd) 10cm × 10cm square = £4.82, 10cm × 20cm rectangular = £9.13, 15cm × 15cm square = £9.13, 20cm × 20cm square = £13.38, 5cm × 5cm square = £2.56, 8.8cm × 7.5cm rectangular (fenestrated) = £4.33

#### **Kendall AMD Plus**

Foam dressing with polyhexanide, without adhesive border

**Kendall AMD Antimicrobial Plus foam dressing** (H & R Healthcare Ltd) 10cm × 10cm square = £5.06, 8.8cm × 7.5cm rectangular (fenestrated) = £4.54

#### **Octeniin Wound gel**

Wound gel, hydroxyethylcellulose and propylene glycol, with octenidine hydrochloride

**Octeniin Wound Gel** (Schulke & Mayr UK Ltd) dressing = £5.02

#### **Prontosan Wound Gel**

Hydrogel containing betaine surfactant and polyhexanide

**Prontosan Wound Gel** (B.Braun Medical Ltd) gel dressing = £6.80

#### **Suprasorb X + PHMB**

Biosynthetic cellulose fibre dressing with polyhexanide

**Suprasorb X + PHMB dressing** (Lohmann & Rauscher) 14cm × 20cm rectangular = £12.22, 2cm × 21cm rope = £7.61, 5cm × 5cm square = £2.70, 9cm × 9cm square = £5.37

#### **Telfa AMD**

Low adherence absorbent perforated plastic film faced dressing with polyhexanide

**Telfa AMD dressing** (H & R Healthcare Ltd) 10cm × 7.5cm = £0.18, 20cm × 7.5cm = £0.28

#### **Telfa AMD Island**

Low adherence dressing with adhesive border and absorbent pad, with polyhexanide

**Telfa AMD Island dressing** (H & R Healthcare Ltd) 10cm × 12.5cm = £0.60, 10cm × 20cm = £0.87, 10cm × 25.5cm = £0.99, 10cm × 35cm = £1.23

#### **Chlorhexidine gauze dressing**

##### **Bactigras**

Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with ointment containing chlorhexidine acetate

**Bactigras gauze dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm, 5cm × 5cm

#### **Irrigation fluids**

##### **Octeniin Wound irrigation solution**

Aqueous solution containing glycerol, ethylhexylglycerol and octenidine hydrochloride

**Octeniin irrigation solution** (Schulke & Mayr UK Ltd) 350ml bottles = £4.83

##### **Prontosan Wound Irrigation Solution**

Aqueous solution containing betaine surfactant and polyhexanide

**Prontosan irrigation solution** (B.Braun Medical Ltd) 350ml bottles = £5.09, 40ml unit dose = £15.11

#### **Specialised dressings**

##### **Protease-modulating matrix dressings**

###### **Cadesorb Ointment**

**Cadesorb** (Smith & Nephew Healthcare Ltd) ointment = £9.83

###### **Catrix**

**Catrix dressing** (Crantage Healthcare Ltd) sachets = £3.80

###### **Promogran**

Collagen and oxidised regenerated cellulose matrix, applied directly to wound and covered with suitable dressing

**Promogran dressing** (Systagenix Wound Management Ltd) 123 square cm = £16.12, 28 square cm = £5.35

###### **Promogran Prisma Matrix**

Collagen, silver and oxidised regenerated cellulose matrix, applied directly to wound and covered with suitable dressing

**Promogran Prisma dressing** (Systagenix Wound Management Ltd) 123 square cm = £18.54, 28 square cm = £6.51

###### **UrgoStart**

Soft adherent polymer matrix containing nano-oligosaccharide factor (NOSF), with polyurethane foam film backing

**UrgoStart dressing** (Urgo Ltd) 10cm × 10cm = £6.50, 15cm × 20cm = £11.68, 6cm × 6cm = £4.70, 12cm × 19cm heel = £8.95

###### **UrgoStart Contact**

Non-adherent soft polymer wound contact dressing containing nano-oligosaccharide factor (NOSF)

**UrgoStart Contact dressing** (Urgo Ltd) 5cm × 7cm = £3.11

##### **Silicone keloid dressings**

Silicone gel and gel sheets are used to reduce or prevent hypertrophic and keloid scarring. They should not be used on open wounds. Application times should be increased gradually. Silicone sheets can be washed and reused.

###### *Silicone gel*

###### **Bapscarcare**

Silicone gel

**Bapscarcare** (Espere Healthcare Ltd) gel = £17.36

###### **Ciltech**

Silicone gel

**Ciltech** (Su-Med International (UK) Ltd) gel = £50.00

###### **Dermatix**

Silicone gel

**Dermatix gel** (Meda Pharmaceuticals Ltd) = £60.53

###### **Kelo-cote UV**

Silicone gel with SPF 30 UV protection

**Kelo-cote** (Alliance Pharmaceuticals Ltd) UV gel = £17.88

###### **Kelo-cote gel**

Silicone gel

**Kelo-cote** (Alliance Pharmaceuticals Ltd) gel = £51.00

###### **Kelo-cote spray**

Silicone spray

**Kelo-cote** (Alliance Pharmaceuticals Ltd) spray = £51.00

###### **ScarSil**

Silicone gel

**ScarSil** (Jobsite Ltd) gel = £15.19

###### **Silgel STC-SE**

Silicone gel

**Silgel** (Nagor Ltd) STC-SE gel = £19.00

*Silicone sheets***Advasil Conform**

Self-adhesive silicone gel sheet with polyurethane film backing

**Advasil Conform sheet** (Advancis Medical) 10cm × 10cm square= £5.44, 15cm × 10cm rectangular= £9.60

**Bapsarcare T**

Self-adhesive silicone gel sheet

**Bapsarcare T sheet** (Espere Healthcare Ltd) 10cm × 15cm rectangular= £9.19, 5cm × 30cm rectangular= £9.19, 5cm × 7cm rectangular= £3.22

**Cica-Care**

Soft, self-adhesive, semi-occlusive silicone gel sheet with backing

**Cica-Care sheet** (Smith & Nephew Healthcare Ltd) 15cm × 12cm rectangular= £30.40, 6cm × 12cm rectangular= £15.59

**Ciltech**

Silicone gel sheet

**Ciltech sheet** (Su-Med International (UK) Ltd) 10cm × 10cm square= £7.50, 10cm × 20cm rectangular= £12.50, 15cm × 15cm square= £14.00

**Dermatix**

Self-adhesive silicone gel sheet (clear- or fabric-backed)

**Dermatix** (Meda Pharmaceuticals Ltd) Clear sheet 13cm × 13cm square= £15.79, 13cm × 25cm rectangular= £28.53, 20cm × 30cm rectangular= £51.97, 4cm × 13cm rectangular= £6.88, Fabric sheet 13cm × 13cm square= £15.79, 13cm × 25cm rectangular= £28.53, 20cm × 30cm rectangular= £51.97, 4cm × 13cm rectangular= £6.88

**Mepiform**

Self-adhesive silicone gel sheet with polyurethane film backing

**Mepiform sheet** (Molnlycke Health Care Ltd) 4cm × 31cm rectangular= £11.62, 5cm × 7cm rectangular= £3.68, 9cm × 18cm rectangular= £14.38

**Scar FX**

Self-adhesive, transparent, silicone gel sheet

**Scar Fx sheet** (Jobskin Ltd) 10cm × 20cm rectangular= £16.00, 22.5cm × 14.5cm shaped= £12.00, 25.5cm × 30.5cm rectangular= £60.00, 3.75cm × 22.5cm rectangular= £12.00, 7.5cm diameter shaped= £8.50

**Silgel**

Silicone gel sheet

**Silgel sheet** (Nagor Ltd) 10cm × 10cm square= £13.50, 10cm × 30cm rectangular= £31.50, 10cm × 5cm rectangular= £7.50, 15cm × 10cm rectangular= £19.50, 20cm × 20cm square= £40.00, 25cm × 15cm shaped= £21.12, 30cm × 5cm rectangular= £19.50, 40cm × 40cm square= £144.00, 46cm × 8.5cm shaped= £39.46, 5.5cm diameter shaped= £4.00

**Adjunct dressings and appliances****Surgical absorbents**

Surgical absorbents applied directly to the wound have many disadvantages—dehydration of and adherence to the wound, shedding of fibres, and the leakage of exudate ('strike through') with an associated risk of infection. Gauze and cotton absorbent dressings can be used as secondary layers in the management of heavily exuding wounds (but see also Capillary-action dressings). Absorbent cotton gauze fabric can be used for swabbing and cleaning skin. Ribbon gauze can be used post-operatively to pack wound cavities, but adherence to the wound bed will cause bleeding and tissue damage on removal of the dressing—an advanced wound dressing (e.g. hydrocolloid-fibrous, foam, or alginate) layered into the cavity is often more suitable.

*Cotton***Absorbent Cotton, BP**

Carded cotton fibres of not less than 10 mm average staple length, available in rolls and balls

**Absorbent** (Robert Bailey & Son Plc) cotton BP 1988

**Absorbent Cotton, Hospital Quality**

As for absorbent cotton but lower quality materials, shorter staple length etc.

**Absorbent** (Robert Bailey & Son Plc) cotton hospital quality

*Gauze and cotton tissue***Gamgee Tissue (blue)**

Consists of absorbent cotton enclosed in absorbent cotton gauze type 12 or absorbent cotton and viscose gauze type 2

**Gamgee** (Robinson Healthcare) tissue blue label

**Gamgee Tissue (pink)**

Consists of absorbent cotton enclosed in absorbent cotton gauze type 12 or absorbent cotton and viscose gauze type 2

**Gamgee** (Robinson Healthcare) tissue pink label DT

*Gauze and tissue***Absorbent Cotton Gauze, BP 1988**

Cotton fabric of plain weave, in rolls and as swabs (see below), usually Type 13 light, sterile

**Absorbent** (Robert Bailey & Son Plc) cotton BP 1988

**Alvita** (Alliance Healthcare (Distribution) Ltd) absorbent cotton BP 1988

**Clini** (CliniSupplies Ltd) absorbent cotton BP 1988

**Vernaid** (Synergy Health (UK) Ltd) absorbent cotton BP 1988

**Absorbent Cotton and Viscose Ribbon Gauze, BP 1988**

Woven fabric in ribbon form with fast selvedge edges, warp threads of cotton, weft threads of viscose or combined cotton and viscose yarn, sterile

**Vernaid Fast Edge ribbon gauze sterile** (Synergy Health (UK) Ltd) 1.25cm, 2.5cm

*Lint***Absorbent Lint, BPC**

Cotton cloth of plain weave with nap raised on one side from warp yarns

**Absorbent** (Robinson Healthcare) lint

**Alvita** (Alliance Healthcare (Distribution) Ltd) absorbent lint BPC

**Clini** (CliniSupplies Ltd) absorbent lint BPC

*Pads***Drisorb**

Absorbent Dressing Pads, Sterile

**Drisorb** (Synergy Health (UK) Ltd) dressing pad 10cm × 20cm= £0.17

**PremierPad**

Absorbent Dressing Pads, Sterile

**PremierPad dressing pad** (Shermond) 10cm × 20cm= £0.18, 20cm × 20cm= £0.25

**XuPad**

Absorbent Dressing Pads, Sterile

**Xupad dressing pad** (Richardson Healthcare Ltd) 10cm × 20cm= £0.17, 20cm × 20cm= £0.28, 20cm × 40cm= £0.40

**Wound drainage pouches**

Wound drainage pouches can be used in the management of wounds and fistulas with significant levels of exudate.

**Eakin Access window**

For use with Eakin<sup>®</sup> pouches

**Eakin access window large** (Pelican Healthcare Ltd) = £40.22

**Eakin Wound pouch, bung closure**

Wound pouch, bung closure

**Eakin wound drainage bag with bung closure** (Pelican Healthcare Ltd) large= £109.17, medium= £80.44, small= £57.46, and access window for horizontal wounds, extra large= £109.17, for horizontal wounds, extra large= £97.68, for vertical incision wounds, extra large= £97.68, wounds, extra large= £97.68

**Eakin Wound pouch, fold and tuck closure**

Wound pouch, fold and tuck closure

**Eakin wound drainage bag with fold and tuck closure** (Pelican Healthcare Ltd) large= £97.68, medium= £74.70, small= £51.71, extra large= £86.19

**Option Wound Manager**

Wound drainage bag

**Option wound manager bag** (Oakmed Ltd) large= £168.34, medium= £141.24, small= £138.17, square= £147.38, extra small= £124.22

**Option Wound Manager with access port**

Wound drainage bag, with access port

**Option wound manager bag with access port** (Oakmed Ltd) large= £179.95, medium= £147.38, small= £144.31, square= £153.52, extra small= £135.83

**Option Wound Manager, cut to fit**

Wound drainage bag, cut to fit

**Option wound manager bag** (Oakmed Ltd) large= £88.50, medium= £84.50, small= £76.27

**Welland Fistula bag**

Wound drainage bag, cut-to-fit

**Welland** (Welland Medical Ltd) Fistula wound drainage bag= £87.45

**Physical debridement pads**

Debrisoft<sup>®</sup> is a pad that is used for the debridement of superficial wounds containing loose slough and debris, and for the removal of hyperkeratosis from the skin. Debrisoft<sup>®</sup> must be fully moistened with a wound cleansing solution before use and is not appropriate for use as a wound dressing.

**Debrisoft Pad**

Polyester fibres with bound edges and knitted outer surface coated with polyacrylate

**Debrisoft** (Lohmann & Rauscher) pad 10cm × 10cm= £6.78

**Complex adjunct therapies****Topical negative pressure therapy****Accessories****Renasys**

Soft port and connector

**Renasys** (Smith & Nephew Healthcare Ltd) Soft Port= £11.78, connector for use with soft port= £3.47

**V.A.C.**

Drape, gel for canister, Sensa T.R.A.C. Pad

**SensaT.R.A.C.** (KCI Medical Ltd) pad= £11.45

**T.R.A.C.** (KCI Medical Ltd) connector= £3.27

**V.A.C.** (KCI Medical Ltd) drape= £9.70, gel strips= £3.93

**WoundASSIST gel strip**

**WoundASSIST** (Huntleigh Healthcare Ltd) TNP gel strip= £3.37

**Vacuum assisted closure products****Exsu-Fast kit 1**

Dressing Kit

**Exsu-Fast** (Synergy Health (UK) Ltd) dressing kit 1= £28.04

**Exsu-Fast kit 2**

Dressing Kit

**Exsu-Fast** (Synergy Health (UK) Ltd) dressing kit 2= £35.83

**Exsu-Fast kit 3**

Dressing Kit

**Exsu-Fast** (Synergy Health (UK) Ltd) dressing kit 3= £35.83

**Exsu-Fast kit 4**

Dressing Kit

**Exsu-Fast** (Synergy Health (UK) Ltd) dressing kit 4= £28.04

**V.A.C GranuFoam**

Polyurethane foam dressing (with adhesive drapes and pad connector); with or without silver

**V.A.C. GranuFoam** (KCI Medical Ltd) Bridge dressing kit= £33.50, Silver with SensaT.R.A.C dressing kit medium= £39.77, small= £34.29, dressing kit large= £33.14, medium= £28.57, small= £24.00

**V.A.C Simplace**

Spiral-cut polyurethane foam dressings, vapour-permeable adhesive film dressings (with adhesive drapes and pad connector)

**V.A.C. Simplace EX dressing kit** (KCI Medical Ltd) medium= £31.98, small= £27.81

**V.A.C WhiteFoam**

Polyvinyl alcohol foam dressing or dressing kit

**V.A.C. WhiteFoam dressing** (KCI Medical Ltd) large= £17.82, small= £11.13, kit large= £35.07, small= £27.09

**WoundASSIST**

Wound pack and channel drain

**WoundASSIST TNP dressing pack** (Huntleigh Healthcare Ltd)

medium/large= £23.85, small/medium= £20.81, channel drain medium/large= £23.85, small/medium= £20.81, extra large= £34.05

**Wound drainage collection devices****ActiV.A.C.**

Canister with gel

**ActiV.A.C** (KCI Medical Ltd) canister with gel= £29.71

**S-Canister**

Canister kit

**S-Canister** (Smith & Nephew Healthcare Ltd) kit= £19.00

**V.A.C Freedom**

Canister with gel

**V.A.C.** (KCI Medical Ltd) Freedom Canister with gel= £30.17

**Venturi**

Canister kit with solidifier

**Venturi** (Talley Group Ltd) Compact canister kit= £12.81, canister kit= £12.81

**WoundASSIST wound pack**

Canister

**WoundASSIST** (Huntleigh Healthcare Ltd) TNP canister= £20.30

**Wound care accessories****Dressing packs**

The role of dressing packs is very limited. They are used to provide a clean or sterile working surface; some packs shown below include cotton wool balls, which are not recommended for use on wounds.

**Multiple Pack Dressing No. 1**

Contains absorbent cotton, absorbent cotton gauze type 13 light (sterile), open-wove bandages (banded)

**Vernaid** (Synergy Health (UK) Ltd) multiple pack dressing

**Non-drug tariff specification sterile dressing packs****Dressit**

Vitrex gloves, large apron, disposable bag, paper towel,

softswabs, adsorbent pad, sterile field

**Dressit sterile dressing pack** (Richardson Healthcare Ltd) with medium/large gloves= £0.60, small/medium gloves= £0.60

**Nurse It**

Contains latex-free, powder-free nitrile gloves, sterile laminated paper sheet, large apron, non-woven swabs, paper towel, disposable bag, compartmented tray, disposable forceps, paper measuring tape

**Nurse It sterile dressing pack** (Medicareplus International Ltd) with medium/large gloves= £0.81, small/medium gloves= £0.81

**Polyfield Nitrile Patient Pack**

Contains powder-free nitrile gloves, laminate sheet, non-woven swabs, towel, polythene disposable bag, apron

**Polyfield Nitrile Patient Pack** (Shermond) with large gloves= £0.52, medium gloves= £0.52, small gloves= £0.52

**Sterile Dressing Pack with Non-Woven Pads****Vernaid**

(Drug Tariff specification 35). Contains non-woven fabric covered dressing pad, non-woven fabric swabs, absorbent cotton wool balls, absorbent paper towel, water repellent inner wrapper

**Vernaid** (Synergy Health (UK) Ltd) sterile dressing pack with non-woven pads

**Sterile dressing packs****Vernaid**

(Drug Tariff specification 10). Contains gauze and cotton tissue pad, gauze swabs, absorbent cotton wool balls,

absorbent paper towel, water repellent inner wrapper

**Vernaid** (Synergy Health (UK) Ltd) sterile dressing pack

**Woven and fabric swabs****Gauze Swab, PB 1988**

Consists of absorbent cotton gauze type 13 light or absorbent cotton and viscose gauze type 1 folded into

squares or rectangles of 8-ply with no cut edges exposed, sterile or non-sterile

**Alvita gauze swab 8ply** (Alliance Healthcare (Distribution) Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

**CS** (CliniSupplies Ltd) gauze swab 8ply non-sterile 10cm × 10cm  
**Clini gauze swab 8ply** (CliniSupplies Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

**Gauze** (Robert Bailey & Son Plc) swab 8ply non-sterile 10cm × 10cm  
**MeCoBo gauze swab 8ply** (MeCoBo Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

**Propaq gauze** (BSN medical Ltd) swab 8ply sterile 7.5cm × 7.5cm  
**Sovereign** (Waymade Healthcare Plc) gauze swab 8ply sterile 7.5cm × 7.5cm

**Steraid gauze swab 8ply** (Robert Bailey & Son Plc) sterile 7.5cm × 7.5cm

**Vernaid gauze swab 8ply** (Synergy Health (UK) Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

#### **Non-woven Fabric Swab**

(Drug Tariff specification 28). Consists of non-woven fabric folded 4-ply; alternative to gauze swabs, type 13 light, sterile or non-sterile

**CS non-woven fabric swab 4ply** (CliniSupplies Ltd) non-sterile 10cm × 10cm

**Clini non-woven fabric swab 4ply** (CliniSupplies Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

**CliniMed non-woven fabric swab 4ply** (CliniMed Ltd) non-sterile 10cm × 10cm

**MeCoBo non-woven fabric swab 4ply** (MeCoBo Ltd) non-sterile 10cm × 10cm

**Multisorb non-woven fabric swab 4ply** (BSN medical Ltd) sterile 7.5cm × 7.5cm

**Sofisorb non-woven fabric swab 4ply** (Synergy Health (UK) Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

**Softswab non-woven fabric swab 4ply** (Richardson Healthcare Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

**Topper** (Systagenix Wound Management Ltd) 8 non-woven fabric swab 4ply non-sterile 10cm × 10cm

#### *Filmated non-woven Fabric Swab*

##### **Regal**

(Drug Tariff specification 29). Film of viscose fibres enclosed within non-woven viscose fabric folded 8-ply, non-sterile

**Regal** (Systagenix Wound Management Ltd) filmated swab 8ply 10cm × 10cm

#### **Surgical adhesive tapes**

Adhesive tapes are useful for retaining dressings on joints or awkward body parts. These tapes, particularly those containing rubber, can cause irritant and allergic reactions in susceptible patients; synthetic adhesives have been developed to overcome this problem, but they, too, may sometimes be associated with reactions. Synthetic adhesive, or silicon adhesive, tapes can be used for patients with skin reactions to plasters and strapping containing rubber, or undergoing prolonged treatment.

Adhesive tapes that are occlusive may cause skin maceration. Care is needed not to apply these tapes under tension, to avoid creating a tourniquet effect. If applied over joints they need to be orientated so that the area of maximum extensibility of the fabric is in the direction of movement of the limb.

#### *Occlusive adhesive tapes*

##### **Blenderm**

(Impermeable Plastic Adhesive Tape, BP 1988). Extensible water-impermeable plastic film spread with a polymeric adhesive mass

**Blenderm** (3M Health Care Ltd) tape 5cm= £3.43

##### **Sleek**

(Impermeable Plastic Adhesive Tape, BP 1988). Extensible water-impermeable plastic film spread with an adhesive mass

**Leukoplast Sleek tape** (BSN medical Ltd) 2.5cm, 5cm, 7.5cm

#### *Permeable adhesive tapes*

##### **3m Kind Removal Silicone Tape**

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

**3M Micropore Silicone tape** (3M Health Care Ltd) 2.5cm= £3.65, 5cm= £6.60

##### **Chemifix**

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

**Chemifix tape** (Medicareplus International Ltd) 10cm= £2.10, 2.5cm= £0.90, 5cm= £1.40

##### **Chemipore**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Chemipore tape** (Medicareplus International Ltd) 1.25cm= £0.27, 2.5cm= £0.70, 5cm= £0.95

##### **Clinipore**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Clinipore tape** (CliniSupplies Ltd) 1.25cm= £0.36, 2.5cm= £0.75, 5cm= £1.02

##### **Elastoplast**

(Elastic Adhesive Tape, BP 1988). Woven fabric, elastic in warp (crepe-twisted cotton threads), weft of cotton and/or viscose threads, spread with adhesive mass containing zinc oxide

**Tensoplast** (BSN medical Ltd) elastic adhesive tape 2.5cm

##### **Hypafix**

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

**Hypafix tape** (BSN medical Ltd) 10cm= £4.86, 15cm= £7.20, 2.5cm= £1.75, 20cm= £9.55, 30cm= £13.80, 5cm= £2.78

##### **Insil**

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

**Insil tape** (Insight Medical Products Ltd) 2cm= £5.77, 4cm= £5.77

##### **Leukofix**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Leukofix tape** (BSN medical Ltd) 1.25cm= £0.58, 2.5cm= £0.94, 5cm= £1.65

##### **Leukopore**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Leukopore tape** (BSN medical Ltd) 1.25cm= £0.51, 2.5cm= £0.80, 5cm= £1.41

##### **Medioplast**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Medioplast tape** (Neomedic Ltd) 1.25cm= £0.30, 2.5cm= £0.50

##### **Medioplast**

Fabric, plain weave, warp and weft of cotton and/or viscose, spread with an adhesive containing zinc oxide

**Medioplast Zinc Oxide plaster** (Neomedic Ltd) 1.25cm= £0.82, 2.5cm= £1.19, 5cm= £1.99, 7.5cm= £2.99

##### **Mefix**

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

**Mefix tape** (Molnlycke Health Care Ltd) 10cm= £3.03, 15cm= £4.13, 2.5cm= £1.07, 20cm= £5.29, 30cm= £7.60, 5cm= £1.90

**Mepitac**

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

**Mepitac tape** (Molnlycke Health Care Ltd) 2cm= £7.28, 4cm= £7.28

**Micro pore**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Micro pore tape** (3M Health Care Ltd) 1.25cm= £0.63, 2.5cm= £0.93, 5cm= £1.65

**Omnifix**

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

**Omnifix tape** (Paul Hartmann Ltd) 10cm= £4.29, 15cm= £6.32, 5cm= £2.54

**OpSite Flexifix Gentle**

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

**OpSite Flexifix Gentle tape** (Smith & Nephew Healthcare Ltd) 2.5cm= £11.00, 5cm= £20.62

**Primafix**

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

**Primafix tape** (Smith & Nephew Healthcare Ltd) 10cm= £2.49, 15cm= £3.67, 20cm= £4.52, 5cm= £1.70

**Scanpor**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Scanpor tape** (Bio-Diagnostics Ltd) 1.25cm= £0.57, 2.5cm= £0.95, 5cm= £1.80, 7.5cm= £2.64

**Siltape**

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

**Siltape** (Advancis Medical) 2cm= £5.86, 4cm= £5.86

**Strappal**

Fabric, plain weave, warp and weft of cotton and /or viscose, spread with an adhesive containing zinc oxide

**Strappal adhesive tape** (BSN medical Ltd) 2.5cm= £1.48, 5cm= £2.50, 7.5cm= £3.76

**Transpore**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Transpore tape** (3M Health Care Ltd) 2.5cm= £0.86, 5cm= £1.51

**Zinc Oxide Adhesive Tape, BP 1988**

Fabric, plain weave, warp and weft of cotton and /or viscose, spread with an adhesive containing zinc oxide

**Fast Aid zinc oxide adhesive tape** (Robinson Healthcare) 1.25cm, 2.5cm, 5cm, 7.5cm

**Skin closure dressings**

Skin closure strips are used as an alternative to sutures for minor cuts and lacerations. Skin tissue adhesive can be used for closure of minor skin wounds and for additional suture support.

*Skin closure strips, sterile***Leukostrip**

Drug Tariff specifies that these are specifically for personal administration by the prescriber

**Leukostrip** (Smith & Nephew Healthcare Ltd) skin closure strips 6.4mm × 76mm= £6.73

**Omnistrip**

Drug Tariff specifies that these are specifically for personal administration by the prescriber

**Omnistrip** (Paul Hartmann Ltd) skin closure strips sterile 6mm × 76mm= £25.56

**Steri-strip**

Drug Tariff specifies that these are specifically for personal administration by the prescriber

**Steri-strip** (3M Health Care Ltd) skin closure strips 6mm × 75mm= £8.93

**Bandages****Non-extensible bandages**

Skin closure strips are used as an alternative to sutures for minor cuts and lacerations. Skin tissue adhesive can be used for closure of minor skin wounds and for additional suture support.

**Open-weave Bandage, Type 1 BP 1988**

Cotton cloth, plain weave, warp of cotton, weft of cotton, viscose, or combination, one continuous length

**Clini open weave bandage Type 1 BP 1988** (CliniSupplies Ltd) 10cm × 5m, 2.5cm × 5m, 5cm × 5m, 7.5cm × 5m

**Vernaid white open weave bandage** (Synergy Health (UK) Ltd) 10cm × 5m, 2.5cm × 5m, 5cm × 5m, 7.5cm × 5m

**White open weave bandage** (Robert Bailey & Son Plc) 10cm × 5m, 2.5cm × 5m, 5cm × 5m, 7.5cm × 5m

**Triangular Calico Bandage, BP 1980**

Unbleached calico right-angled triangle

**Clini** (CliniSupplies Ltd) triangular calico bandage BP 1980 90cm × 127cm

**Triangular** (BSN medical Ltd) calico bandage 90cm × 127cm

**Light-weight conforming bandages**

Lightweight conforming bandages are used for dressing retention, with the aim of keeping the dressing close to the wound without inhibiting movement or restricting blood flow. The elasticity of conforming-stretch bandages (also termed contour bandages) is greater than that of cotton conforming bandages.

**Acti-Wrap**

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

**Acti-Wrap (cohesive/latex free) bandage** (L&R Medical UK Ltd) 10cm × 4m= £0.86, 6cm × 4m= £0.50, 8cm × 4m= £0.72

**Easifix**

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

**Easifix bandage** (BSN medical Ltd) 10cm × 4m= £0.53, 15cm × 4m= £0.91, 5cm × 4m= £0.37, 7.5cm × 4m= £0.45

**Easifix K**

Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched

**Easifix K bandage** (BSN medical Ltd) 10cm × 4m= £0.19, 15cm × 4m= £0.34, 2.5cm × 4m= £0.10, 5cm × 4m= £0.11, 7.5cm × 4m= £0.17

**Hospiform**

Fabric, plain weave, warp of polyamide, weft of viscose

**Hospiform bandage** (Paul Hartmann Ltd) 10cm × 4m= £0.20, 12cm × 4m= £0.25, 6cm × 4m= £0.14, 8cm × 4m= £0.18

**K-Band**

Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched

**K-Band bandage** (Urgo Ltd) 10cm × 4m= £0.30, 15cm × 4m= £0.52, 5cm × 4m= £0.21, 7cm × 4m= £0.27

**Knit Fix**

Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched

**Knit Fix bandage** (Robert Bailey & Son Plc) 10cm × 4m= £0.17, 15cm × 4m= £0.33, 5cm × 4m= £0.12, 7cm × 4m= £0.17

**Knit-Band**

Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched

**Knit-Band bandage** (CliniSupplies Ltd) 10cm × 4m= £0.18, 15cm × 4m= £0.31, 5cm × 4m= £0.10, 7cm × 4m= £0.16

**Kontour**

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

**Kontour bandage** (Easigrip Ltd) 10cm × 4m= £0.40, 15cm × 4m= £0.66, 5cm × 4m= £0.28, 7.5cm × 4m= £0.35

**Mollelast**

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

**Mollelast** (Lohmann & Rauscher) bandage 4cm × 4m= £0.32

**Peha-haft**

Polyamide and Cellulose Contour Bandage, cohesive, latex-free

**peha-haft bandage** (Paul Hartmann Ltd) 10cm × 4m= £0.81, 12cm × 4m= £0.95, 2.5cm × 4m= £0.77, 4cm × 4m= £0.50, 6cm × 4m= £0.59, 8cm × 4m= £0.70

**PremierBand**

Polyamide and Cellulose Contour Bandage

**PremierBand bandage** (Shermond) 10cm × 4m= £0.17, 15cm × 4m= £0.25, 5cm × 4m= £0.12, 7.5cm × 4m= £0.14

**Slinky**

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

**Slinky bandage** (Molnlycke Health Care Ltd) 10cm × 4m= £0.72, 15cm × 4m= £1.05, 7.5cm × 4m= £0.60

**Stayform**

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

**Stayform bandage** (Robinson Healthcare) 10cm × 4m= £0.40, 15cm × 4m= £0.69, 5cm × 4m= £0.29, 7.5cm × 4m= £0.36

**Tubular bandages and garments**

Tubular bandages are available in different forms, according to the function required of them. Some are used under orthopaedic casts and some are suitable for protecting areas to which creams or ointments (other than those containing potent corticosteroids) have been applied. The conformability of the elasticated versions makes them particularly suitable for retaining dressings on difficult parts of the body or for soft tissue injury, but their use as the only means of applying pressure to an oedematous limb or to a varicose ulcer is not appropriate, since the pressure they exert is inadequate. Compression hosiery reduces the recurrence of venous leg ulcers and should be considered for use after wound healing. Silk clothing is available as an alternative to elasticated viscose stockinette garments, for use in the management of severe eczema and allergic skin conditions.

*Elasticated Surgical Tubular Stockinette, Foam padded* is used for relief of pressure and elimination of friction in relevant area; porosity of foam lining allows normal water loss from skin surface.

For *Elasticated Tubular Bandage, BP 1993*, where no size stated by the prescriber, the 50 cm length should be supplied and width endorsed.

*Non-elasticated Cotton Stockinette, Bleached, BP 1988* 1m lengths is used as basis (with wadding) for Plaster of Paris bandages etc.; 6 m length, compression bandage.

For *Non-elasticated Ribbed Cotton and Viscose Surgical Tubular Stockinette, BP 1988*, the Drug Tariff specifies various combinations of sizes to provide sufficient material for part or full body coverage. It is used as protective dressings with tar-based and other steroid ointments.

**Elasticated****Acti-Fast**

(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage

**Acti-Fast 2-way stretch stockinette** (L&R Medical UK Ltd) 10.75cm= £5.96, 17.5cm= £1.91, 20cm= £3.31, 3.5cm= £0.59, 5cm= £0.61, 7.5cm= £0.81

**Clinifast**

(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage; various colours and sizes  
**CliniFast stockinette** (CliniSupplies Ltd) 10.75cm= £6.18, 17.5cm= £1.87, 3.5cm= £0.57, 5cm= £0.59, 7.5cm= £0.79, clava 5-14 years= £6.92, 6 months-5 years= £5.99, cycle shorts large adult= £16.77, medium adult= £14.71, small adult= £12.90, gloves large adult= £5.15, child/small adult= £5.15, gloves medium adult= £5.15, child= £5.15, gloves small child= £5.15, leggings (Blue, Pink, White) 11-14 years= £12.17, 2-5 years= £9.74, 5-8 years= £10.95, 8-11 years= £12.17, mittens 2-8 years= £3.04, 8-14 years= £3.04, up to 24 months= £3.04, socks 8-14 years= £3.07, up to 8 years= £3.04, tights (Blue, Pink, White) 6-24 months= £7.31, vest long sleeve (Blue, Pink, White) 11-14 years= £12.17, 2-5 years= £9.74, 5-8 years= £10.95, 6-24 months= £7.31, 8-11 years= £12.17, vest short sleeve large adult= £16.77, medium adult= £14.71, small adult= £12.90

**Comffast**

(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage; various colours and sizes  
**Comffast stockinette** (Vernacare Ltd) 10.75cm= £6.04, 17.5cm= £1.83, 3.5cm= £0.56, 5cm= £0.58, 7.5cm= £0.77

**Support bandages**

Light support bandages, which include the various forms of crepe bandage, are used in the prevention of oedema; they are also used to provide support for mild sprains and joints but their effectiveness has not been proven for this purpose. Since they have limited extensibility, they are able to provide light support without exerting undue pressure. For a warning against injudicious compression see Compression bandages.

**Cotton Crepe Bandage, BP 1988**

Fabric, plain weave, warp of crepe-twisted cotton threads, weft of cotton and/or viscose threads; stretch bandage. 4.5 m stretched (both)

**Elastocrepe bandage** (BSN medical Ltd) 10cm × 4.5m, 7.5cm × 4.5m

**Flexocrepe bandage** (Robinson Healthcare) 10cm × 4.5m, 7.5cm × 4.5m

**Sterocrepe bandage** (Steroplast Healthcare Ltd) 10cm × 4.5m, 7.5cm × 4.5m

**Crepe Bandage, BP 1988**

Fabric, plain weave, warp of wool threads and crepe-twisted cotton threads, weft of cotton threads; stretch bandage; 4.5 m stretched

**Alvita crepe bandage** (Alliance Healthcare (Distribution) Ltd) 10cm × 4.5m, 15cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m

**Clinicrepe bandage** (CliniSupplies Ltd) 10cm × 4.5m, 15cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m

**Crepe bandage** (Robert Bailey & Son Plc) 10cm × 4.5m, 15cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m

**Propax crepe bandage** (BSN medical Ltd) 10cm × 4.5m, 15cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m

**Vernaïd crepe bandage** (Synergy Health (UK) Ltd) 10cm × 4.5m, 15cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m

#### Elset

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**Elset** (Molnlycke Health Care Ltd) S bandage 15cm × 12m= £5.85, bandage 10cm × 6m= £2.73, 10cm × 8m= £3.49, 15cm × 6m= £2.92

#### Hospilite

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

**Hospilite bandage** (Paul Hartmann Ltd) 10cm × 4.5m= £0.65, 15cm × 4.5m= £0.95, 5cm × 4.5m= £0.39, 7.5cm × 4.5m= £0.53

#### K-Lite

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**K-Lite** (Urgo Ltd) Long bandage 10cm × 5.25m= £1.21, bandage 10cm × 4.5m= £1.05, 15cm × 4.5m= £1.53, 5cm × 4.5m= £0.58, 7cm × 4.5m= £0.81

#### K-Plus

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**K-Plus** (Urgo Ltd) Long bandage 10cm × 10.25m= £2.77, bandage 10cm × 8.7m= £2.40

#### Knit-Firm

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**Knit-Firm bandage** (Millpledge Healthcare) 10cm × 4.5m= £0.66, 15cm × 4.5m= £0.96, 5cm × 4.5m= £0.36, 7cm × 4.5m= £0.51

#### L3

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**L3** (Smith & Nephew Healthcare Ltd) bandage 10cm × 8.6m= £2.34

#### Neosport

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

**Neosport bandage** (Neomedic Ltd) 10cm × 4.5m= £0.91, 15cm × 4.5m= £1.12, 5cm × 4.5m= £0.54, 7.5cm × 4.5m= £0.73

#### Portia

Cotton net bag with elastic edge and webbing waistband; small, medium, and large (all)

**Portia suspensory bandage cotton type** (Bray Group Ltd) 2 extra large, large, medium, small, 3 extra large, large, medium

#### PremierBand

Fabric, plain weave, warp of crepe-twisted cotton threads, weft of cotton threads; stretch bandage, lighter than cotton crepe, 4.5 m stretched (all)

**PremierBand bandage** (Shermond) 10cm × 4.5m= £0.79, 15cm × 4.5m= £1.18, 5cm × 4.5m= £0.45, 7.5cm × 4.5m= £0.63

#### Profore #2

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

**Profore #2** (Smith & Nephew Healthcare Ltd) bandage 10cm × 4.5m= £1.44, latex free bandage 10cm × 4.5m= £1.52

#### Profore #3

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**Profore #3** (Smith & Nephew Healthcare Ltd) bandage 10cm × 8.7m= £4.18, latex free bandage 10cm × 8.7m= £4.54

#### Setocrepe

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

**Setocrepe** (Molnlycke Health Care Ltd) bandage 10cm × 4.5m= £1.24

#### Soffcrepe

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

**Soffcrepe bandage** (BSN medical Ltd) 10cm × 4.5m= £1.32, 15cm × 4.5m= £1.92, 5cm × 4.5m= £0.74, 7.5cm × 4.5m= £1.04

#### Adhesive bandages

Elastic adhesive bandages are used to provide compression in the treatment of varicose veins and for the support of injured joints; they should no longer be used for the support of fractured ribs and clavicles. They have also been used with zinc paste bandage in the treatment of venous ulcers, but they can cause skin reactions in susceptible patients and may not produce sufficient pressures for healing (significantly lower than those provided by other compression bandages).

#### Elastic Adhesive Bandage, BP 1993

Woven fabric, elastic in warp (crepe-twisted cotton threads), weft of cotton and/or viscose threads spread with adhesive mass containing zinc oxide. 4.5 m stretched

**Tensoplast bandage** (BSN medical Ltd) 10cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m

#### Cohesive bandages

Cohesive bandages adhere to themselves, but not to the skin, and are useful for providing support for sports use where ordinary stretch bandages might become displaced and adhesive bandages are inappropriate. Care is needed in their application, however, since the loss of ability for movement between turns of the bandage to equalise local areas of high tension carries the potential for creating a tourniquet effect. Cohesive bandages can be used to support sprained joints and as an outer layer for multi-layer compression bandaging; they should not be used if arterial disease is suspected.

#### Cohesive extensible bandages

##### Coban

Bandage

**Coban** (3M Health Care Ltd) self-adherent bandage 10cm × 6m= £2.98

##### Profore #4

Bandage

**Profore #4** (Smith & Nephew Healthcare Ltd) bandage 10cm × 2.5m= £3.46, latex free bandage 10cm × 2.5m= £3.76

##### Ultra Fast

Bandage

**Ultra** (Robinson Healthcare) Fast cohesive bandage 10cm × 6.3m= £2.62

#### Compression bandages

High compression products are used to provide the high compression needed for the management of gross varices, post-thrombotic venous insufficiency, venous leg ulcers, and gross oedema in average-sized limbs. Their use calls for an expert knowledge of the elastic properties of the products and experience in the technique of providing careful graduated compression. Incorrect application can lead to uneven and inadequate pressures or to hazardous levels of pressure. In particular, injudicious use of compression in limbs with arterial disease has been reported to cause severe skin and tissue necrosis (in some instances calling for amputation). Doppler testing is required before treatment with compression. Oral pentoxifylline p. 253 can be used as adjunct therapy if a chronic venous leg ulcer does not respond to compression bandaging [unlicensed indication].

#### High compression bandages

##### High Compression Bandage

Cotton, viscose, nylon, and Lycra<sup>®</sup> extensible bandage, 3 m (unstretched)

**K-ThreeC** (Urgo Ltd) bandage 10cm × 3m= £2.98

**SurePress** (ConvaTec Ltd) bandage 10cm × 3m= £3.85

##### PEC High Compression Bandages

Polyamide, elastane, and cotton compression (high) extensible bandage, 3.5 m unstretched

**Setopress** (Molnlycke Health Care Ltd) bandage 10cm × 3.5m= £3.71

#### **VEC High Compression Bandages**

Viscose, elastane, and cotton compression (high) extensible bandage, 3 m unstretched (both)

**Tensopress bandage** (BSN medical Ltd) 10cm × 3m= £3.67, 7.5cm × 3m= £2.86

#### *Short stretch compression bandages*

##### **Actico**

Bandage

**Actico bandage** (L&R Medical UK Ltd) 10cm × 6m= £3.56, 12cm × 6m= £4.54, 4cm × 6m= £2.55, 6cm × 6m= £2.98, 8cm × 6m= £3.43

##### **Comprilan**

Bandage

**Comprilan bandage** (BSN medical Ltd) 10cm × 5m= £3.59, 12cm × 5m= £4.38, 6cm × 5m= £2.85, 8cm × 5m= £3.34

##### **Rosidal K**

Bandage

**Rosidal K bandage** (Lohmann & Rauscher) 10cm × 10m= £6.33, 10cm × 5m= £3.63, 12cm × 5m= £4.41, 6cm × 5m= £2.79, 8cm × 5m= £3.33

#### *Sub-compression wadding bandage*

##### **Cellona Undercast Padding**

Padding

**Cellona Undercast padding bandage** (Lohmann & Rauscher) 10cm × 2.7m= £0.49, 15cm × 2.7m= £0.64, 5cm × 2.7m= £0.33, 7.5cm × 2.7m= £0.40

##### **Flexi-Ban**

Padding

**Flexi-Ban** (L&R Medical UK Ltd) bandage 10cm × 3.5m= £0.53

##### **K-Soft**

Padding

**K-Soft** (Urigo Ltd) Long bandage 10cm × 4.5m= £0.60, bandage 10cm × 3.5m= £0.48

##### **Ortho-Band Plus**

Padding

**Ortho-Band** (Millpledge Healthcare) Plus bandage 10cm × 3.5m= £0.37

##### **Profore #1**

Padding

**Profore #1** (Smith & Nephew Healthcare Ltd) bandage 10cm × 3.5m= £0.75, latex free bandage 10cm × 3.5m= £0.81

##### **Softex**

Padding

**Softex** (Molnlycke Health Care Ltd) bandage 10cm × 3.5m= £0.62

##### **SurePress**

Padding

**SurePress** (ConvaTec Ltd) bandage 10cm × 3m= £3.85

##### **Ultra Soft**

Padding

**Ultra** (Robinson Healthcare) Soft wadding bandage 10cm × 3.5m= £0.39

##### **Velband**

Padding

**Velband** (BSN medical Ltd) absorbent padding bandage 10cm × 4.5m= £0.77

#### **Multi-layer compression bandaging**

Multi-layer compression bandaging systems are an alternative to High Compression Bandages for the treatment of venous leg ulcers. Compression is achieved by the combined effects of two or three extensible bandages applied over a layer of orthopaedic wadding and a wound contact dressing.

#### *Four layer systems*

##### **K-Four**

Multi-layer compression bandaging kit, four layer system  
**K-Four** (Urigo Ltd) Reduced Compression multi-layer compression bandage kit 18cm+ ankle circumference = £4.72, multi-layer compression bandage kit 18cm-25cm ankle circumference= £7.22, 25cm-30cm ankle circumference= £7.22, greater than

30cm ankle circumference= £9.94, less than 18cm ankle circumference= £7.55

##### **Profore**

Multi-layer compression bandaging kit, four layer system  
**Profore** (Smith & Nephew Healthcare Ltd) Lite latex free multi-layer compression bandage kit= £6.33, multi-layer compression bandage kit= £5.82, latex free multi-layer compression bandage kit 18cm-25cm ankle circumference = £10.78, multi-layer compression bandage kit 18cm-25cm ankle circumference= £10.09, 25cm-30cm ankle circumference= £8.37, above 30cm ankle circumference= £12.54, up to 18cm ankle circumference= £10.82

##### **Ultra Four**

Multi-layer compression bandaging kit, four layer system  
**Ultra Four** (Robinson Healthcare) Reduced Compression multi-layer compression bandage kit= £4.19, multi-layer compression bandage kit 18cm-25cm ankle circumference= £5.73, up to 18cm ankle circumference= £6.48

#### *Two layer systems*

##### **Coban 2**

Multi-layer compression bandaging kit, two layer system (latex-free, foam bandage and cohesive compression bandage)

**Coban 2** (3M Health Care Ltd) Lite multi-layer compression bandage kit= £8.40, multi-layer compression bandage kit 10cm × 3.5m= £8.40

##### **K Two**

Multi-layer compression bandaging kit, two layer system  
**UrigoKTwo** (Urigo Ltd) Reduced latex free multi-layer compression bandage kit (10cm) 18cm-25cm ankle circumference= £8.98, 25cm-32cm ankle circumference= £9.81, Reduced multi-layer compression bandage kit 18cm-25cm ankle circumference= £8.46, 25cm-32cm ankle circumference= £9.24, latex free multi-layer compression bandage kit (10cm) 18cm-25cm ankle circumference= £8.98, 25cm-32cm ankle circumference= £9.81, multi-layer compression bandage kit (10cm) 18cm-25cm ankle circumference= £8.46, 25cm-32cm ankle circumference= £9.24, multi-layer compression bandage kit (12cm) 18cm-25cm ankle circumference= £10.66, 25cm-32cm ankle circumference= £11.65, multi-layer compression bandage kit (8cm) 18cm-25cm ankle circumference= £7.98, 25cm-32cm ankle circumference= £8.68, multi-layer compression bandage kit size 0 short 18cm-25cm ankle circumference= £7.14, with UrgoStart multi-layer compression bandage kit 18cm-25cm ankle circumference= £10.54, 25cm-32cm ankle circumference= £11.24

#### **Medicated bandages**

Zinc Paste Bandage has been used with compression bandaging for the treatment of venous leg ulcers. However, paste bandages are associated with hypersensitivity reactions and should be used with caution. Zinc paste bandages are also used with coal tar or ichthammol in chronic lichenified skin conditions such as chronic eczema (ichthammol often being preferred since its action is considered to be milder). They are also used with calamine in milder eczematous skin conditions.

*Ziploc*® can be used under appropriate compression bandages or hosiery in chronic venous insufficiency.

#### **Zinc Paste Bandage, BP 1993**

Cotton fabric, plain weave, impregnated with suitable paste containing zinc oxide; requires additional bandaging  
*Excipients: may include* cetostearyl alcohol, hydroxybenzoates

**Viscopaste** (Evolan Pharma AB) PB7 bandage 7.5cm × 6m= £3.89

#### **Zinc Paste and Ichthammol Bandage, BP 1993**

Cotton fabric, plain weave, impregnated with suitable paste containing zinc oxide and ichthammol; requires additional bandaging

*Excipients: may include* cetostearyl alcohol

**Ichthopaste** (Evolan Pharma AB) bandage 7.5cm × 6m= £3.92

**Zipzoc**

Sterile rayon stocking impregnated with ointment containing zinc oxide 20%

**Zipzoc** (Evolan Pharma AB) stockings= £34.70

**Compression hosiery and garments**

Compression (elastic) hosiery is used to treat conditions associated with chronic venous insufficiency, to prevent recurrence of thrombosis, or to reduce the risk of further venous ulceration after treatment with compression bandaging. Doppler testing to confirm arterial sufficiency is required before recommending the use of compression hosiery.

Before elastic hosiery can be dispensed, the quantity (single or pair), article (including accessories), and compression class must be specified by the prescriber. There are different compression values for graduated compression hosiery and lymphoedema garments (see below). All dispensed elastic hosiery articles must state on the packaging that they conform with Drug Tariff technical specification No. 40, for further details see Drug Tariff.

*Graduated Compression hosiery, Class 1 Light Support* is used for superficial or early varices, varicosis during pregnancy.

*Graduated Compression hosiery, Class 2 Medium Support* is used for varices of medium severity, ulcer treatment and prophylaxis, mild oedema, varicosis during pregnancy.

*Graduated Compression hosiery, Class 3 Strong Support* is used for gross varices, post thrombotic venous insufficiency, gross oedema, ulcer treatment and prophylaxis.

**Compression values for hosiery and lymphoedema garments** *Class 1:* Compression hosiery (British standard) 14–17 mmHg, lymphoedema garments (European classification) 18–21 mmHg; *Class 2* Compression hosiery (British standard) 18–24 mmHg, lymphoedema garments (European classification) 23–32 mmHg; *Class 3* Compression hosiery (British standard) 25–35 mmHg, lymphoedema garments (European classification) 34–46 mmHg; *Class 4* Compression hosiery (British standard)—not available, lymphoedema garments (European classification) 49–70 mmHg; *Class 4 super* Compression hosiery (British standard)—not available, lymphoedema garments (European classification) 60–90 mmHg.

**Graduated compression hosiery****Class 1 Light Support**

Hosiery, compression at ankle 14–17 mmHg, thigh length or below knee with knitted in heel

**Class 2 Light Support**

Hosiery, compression at ankle 14–17 mmHg, thigh length or below knee with knitted in heel

**Accessories****Suspender**

Suspender, for thigh stockings

**Anklets****Class 2 Medium Support**

Anklets, compression 18–24 mmHg, circular knit (standard and made-to-measure)

**Class 3 Strong Support**

Anklets, compression 18–24 mmHg, circular knit (standard and made-to-measure)

**Knee caps****Class 2 Medium Support**

Kneecaps, compression 18–24 mmHg, circular knit (standard and made-to-measure)

**Class 3 Strong Support**

Kneecaps, compression 18–24 mmHg, circular knit (standard and made-to-measure)

**Lymphoedema garments**

Lymphoedema compression garments are used to maintain limb shape and prevent additional fluid retention. Either flat-bed or circular knitting methods are used in the

manufacture of elasticated compression garments. Seamless, circular-knitted garments (in standard sizes) can be used to prevent swelling if the lymphoedema is well controlled and if the limb is in good shape and without skin folds. Flat-knitted garments (usually made-to-measure) with a seam, provide greater rigidity and stiffness to maintain reduction of lymphoedema following treatment with compression bandages. A standard range of light, medium, or high compression garments are available, as well as low compression (12–16 mmHg) armsleeves, made-to-measure garments up to compression 90 mmHg, and accessories—see Drug Tariff for details. Note, there are different compression values for lymphoedema garments and graduated compression hosiery, see Compression hosiery and garments above.

# Dental Practitioners' Formulary

## List of Dental Preparations

The following list has been approved by the appropriate Secretaries of State, and the preparations therein may be prescribed by dental practitioners on form FP10D (GP14 in Scotland, WP10D in Wales).

Licensed **sugar-free** versions, where available, are preferred.

Licensed **alcohol-free** mouthwashes, where available, are preferred.

Aciclovir Cream, BP  
 Aciclovir Oral Suspension, BP, 200 mg/5 mL  
 Aciclovir Tablets, BP, 200 mg  
 Aciclovir Tablets, BP, 800 mg  
 Amoxicillin Capsules, BP  
 Amoxicillin Oral Powder, DPF  
 Amoxicillin Oral Suspension, BP  
 Artificial Saliva Gel, DPF  
 Artificial Saliva Oral Spray, DPF  
 Artificial Saliva Pastilles, DPF  
 Artificial Saliva Protective Spray, DPF  
 Artificial Saliva Substitutes as listed below (to be prescribed only for indications approved by ACBS (patients suffering from dry mouth as a result of having or, having undergone, radiotherapy or sicca syndrome):  
*BioXtra*<sup>®</sup> Gel Mouthspray  
*BioXtra*<sup>®</sup> Moisturising Gel  
*Glandosane*<sup>®</sup>  
*Saliveze*<sup>®</sup>  
 Artificial Saliva Substitute Spray, DPF  
 Aspirin Tablets, Dispersible, BP  
 Azithromycin Capsules, 250 mg, DPF  
 Azithromycin Oral Suspension, 200 mg/5 mL, DPF  
 Azithromycin Tablets, 250 mg, DPF  
 Azithromycin Tablets, 500 mg, DPF  
 Beclometasone Pressurised Inhalation, BP,  
 50 micrograms/metered inhalation, CFC-free, as:  
*Clenil Modulite*<sup>®</sup>  
 Benzylamine Mouthwash, BP 0.15%  
 Benzylamine Oromucosal Spray, BP 0.15%  
 Betamethasone Soluble Tablets, 500 micrograms, DPF  
 Carbamazepine Tablets, BP  
 Cefalexin Capsules, BP  
 Cefalexin Oral Suspension, BP  
 Cefalexin Tablets, BP  
 Cefradine Capsules, BP  
 Cetirizine Oral Solution, BP, 5 mg/5 mL  
 Cetirizine Tablets, BP, 10 mg  
 Chlorhexidine Gluconate Gel, BP  
 Chlorhexidine Mouthwash, BP  
 Chlorhexidine Oral Spray, DPF  
 Chlorphenamine Oral Solution, BP  
 Chlorphenamine Tablets, BP  
 Choline Salicylate Dental Gel, BP  
 Clarithromycin Oral Suspension, 125 mg/5 mL, DPF  
 Clarithromycin Oral Suspension, 250 mg/5 mL, DPF  
 Clarithromycin Tablets, BP  
 Clindamycin Capsules, BP  
 Co-amoxiclav Tablets, BP, 250/125 (amoxicillin 250 mg as trihydrate, clavulanic acid 125 mg as potassium salt)  
 Co-amoxiclav Oral Suspension, BP, 125/31 (amoxicillin 125 mg as trihydrate, clavulanic acid 31.25 mg as potassium salt)/5 mL  
 Co-amoxiclav Oral Suspension, BP, 250/62 (amoxicillin 250 mg as trihydrate, clavulanic acid 62.5 mg as potassium salt)/5 mL  
 Diazepam Oral Solution, BP, 2 mg/5 mL  
 Diazepam Tablets, BP

Diclofenac Sodium Tablets, Gastro-resistant, BP  
 Dihydrocodeine Tablets, BP, 30 mg  
 Doxycycline Tablets, Dispersible, BP  
 Doxycycline Capsules, BP, 100 mg  
 Doxycycline Tablets, 20 mg, DPF  
 Ephedrine Nasal Drops, BP  
 Erythromycin Ethyl Succinate Oral Suspension, BP  
 Erythromycin Ethyl Succinate Tablets, BP  
 Erythromycin Stearate Tablets, BP  
 Erythromycin Tablets, Gastro-resistant, BP  
 Fluconazole Capsules, 50 mg, DPF  
 Fluconazole Oral Suspension, 50 mg/5 mL, DPF  
 Hydrocortisone Cream, BP, 1%  
 Hydrocortisone Oromucosal Tablets, BP  
 Hydrogen Peroxide Mouthwash, BP, 6%  
 Ibuprofen Oral Suspension, BP, sugar-free  
 Ibuprofen Tablets, BP  
 Lansoprazole Capsules, Gastro-resistant, BP  
 Lidocaine Ointment, BP, 5%  
 Lidocaine Spray 10%, DPF  
 Loratadine Syrup, 5 mg/5 mL, DPF  
 Loratadine Tablets, BP, 10 mg  
 Menthol and Eucalyptus Inhalation, BP 1980  
 Metronidazole Oral Suspension, BP  
 Metronidazole Tablets, BP  
 Miconazole Cream, BP  
 Miconazole Oromucosal Gel, BP  
 Miconazole and Hydrocortisone Cream, BP  
 Miconazole and Hydrocortisone Ointment, BP  
 Nystatin Oral Suspension, BP  
 Omeprazole Capsules, Gastro-resistant, BP  
 Oxytetracycline Tablets, BP  
 Paracetamol Oral Suspension, BP  
 Paracetamol Tablets, BP  
 Paracetamol Tablets, Soluble, BP  
 Phenoxymethylpenicillin Oral Solution, BP  
 Phenoxymethylpenicillin Tablets, BP  
 Promethazine Hydrochloride Tablets, BP  
 Promethazine Oral Solution, BP  
 Saliva Stimulating Tablets, DPF  
 Sodium Chloride Mouthwash, Compound, BP  
 Sodium Fluoride Mouthwash, BP  
 Sodium Fluoride Oral Drops, BP  
 Sodium Fluoride Tablets, BP  
 Sodium Fluoride Toothpaste 0.619%, DPF  
 Sodium Fluoride Toothpaste 1.1%, DPF  
 Sodium Fusidate Ointment, BP  
 Temazepam Oral Solution, BP  
 Temazepam Tablets, BP  
 Tetracycline Tablets, BP  
 Preparations in this list which are not included in the BP or BPC are described under Details of DPF preparations. For details of preparations that can be prescribed, see individual entries under the relevant drug monographs throughout the BNF publications.

## Details of DPF preparations

Preparations on the List of Dental Preparations which are specified as DPF are described as follows in the DPF. Although brand names have sometimes been included for identification purposes preparations on the list should be prescribed by non-proprietary name.

### Amoxicillin Oral Powder

amoxicillin (as trihydrate) 3 g sachet

**Artificial Saliva Gel**

consists of lactoperoxidase, lactoferrin, lysozyme, glucose oxidase, xylitol in a gel basis

**Artificial Saliva Oral Spray**

(proprietary product: *Xerotin*) consists of water, sorbitol, carmellose (carboxymethylcellulose), potassium chloride, sodium chloride, potassium phosphate, magnesium chloride, calcium chloride and other ingredients, pH neutral

**Artificial Saliva Pastilles**

(proprietary product: *Salivix*), consists of acacia, malic acid, and other ingredients

**Artificial Saliva Protective Spray**

(proprietary product: *Aequasyl*) consists of oxidised glycerol triesters, silicon dioxide, flavouring agents, aspartame

**Artificial Saliva Substitute Spray**

(proprietary product: *AS Saliva Orthana Spray*) consists of mucin, methylparaben, benzalkonium chloride, EDTA, xylitol, peppermint oil, spearmint oil, mineral salts

**Azithromycin Capsules**

azithromycin 250 mg

**Azithromycin Oral Suspension 200 mg/5 mL**

azithromycin 200 mg/5 mL when reconstituted with water

**Azithromycin Tablets**

azithromycin 250 mg and 500 mg

**Betamethasone Soluble Tablets 500 micrograms**

betamethasone (as sodium phosphate) 500 micrograms

**Chlorhexidine Oral Spray**

(proprietary product: *Corsodyl Oral Spray*), chlorhexidine gluconate 0.2%

**Clarithromycin Oral Suspension 125 mg/5 mL**

clarithromycin 125 mg/5 mL when reconstituted with water

**Clarithromycin Oral Suspension 250 mg/5 mL**

clarithromycin 250 mg/5 mL when reconstituted with water

**Doxycycline Tablets 20 mg**

(proprietary product: *Periostat*), doxycycline (as hyclate) 20 mg

**Fluconazole Capsules 50 mg**

fluconazole 50 mg

**Fluconazole Oral Suspension 50 mg/5 mL**

(proprietary product: *Diflucan*), fluconazole 50 mg/5 mL when reconstituted with water

**Lidocaine Spray 10%**

(proprietary product: *Xylocaine Spray*), lidocaine 10% supplying 10 mg lidocaine/spray

**Loratadine Syrup 5 mg/5 mL**

loratadine 5 mg/5 mL

**Saliva Stimulating Tablets**

(proprietary product: *SST*), citric acid, malic acid and other ingredients in a sorbitol base

**Sodium Fluoride Toothpaste 0.619%**

(proprietary product: *Duraphat '2800 ppm' Toothpaste*), sodium fluoride 0.619%

**Sodium Fluoride Toothpaste 1.1%**

(proprietary product: *Duraphat '5000 ppm' Toothpaste*), sodium fluoride 1.1%

# Approved list for prescribing by Community Practitioner Nurse Prescribers (NPF)

## Nurse Prescribers' Formulary for Community Practitioners

The Nurse Prescribers' Formulary for Community Practitioners is for use by District Nurses and Specialist Community Public Health Nurses (including Health Visitors) who have received nurse prescriber training. It provides a list of preparations approved by the Secretary of State that can be prescribed for patients receiving NHS treatment on form FP10P (form HS21(N) in Northern Ireland, form GP10(N) in Scotland, forms WP10CN and WP10PN in Wales). Community practitioner nurse prescribers should only prescribe items appearing in the nurse prescribers' list set out below (for the indications specified). Most medicinal preparations should be prescribed generically, except where this would not be clinically appropriate or where there is no approved generic name—see individual entries for further information.

The Nurse Prescribers' Advisory Group p. vii oversees the preparation of the NPF and advises UK health ministers on the list of preparations that may be prescribed by community practitioner nurse prescribers. Feedback from nurse prescribers is welcome and will be taken into account when reviewing this list; comments and constructive criticism should be sent to editor@bnf.org.

## How to use the NPF

The list of medicinal preparations includes:

- Links to BNF monographs to allow full prescribing information for each preparation to be accessed;
- Details of the indications for which each medicinal preparation can be prescribed;
- Signposting to doses for community practitioner nurse prescribers where these differ from those in the BNF for the specified indications;
- Additional information that should be considered before prescribing certain preparations.

The NPF should be used in conjunction with BNF monographs to ensure that all relevant prescribing information is considered when prescribing decisions are made; links to the relevant BNF monographs allow quick access to this prescribing information. Most of the doses that can be prescribed by nurse prescribers for the specified indications are in line with those in BNF monographs, so the BNF doses for those indications can be used. If doses that can be prescribed by nurse prescribers differ from those in the BNF, specific indications and doses have been added to BNF monographs. These can be found towards the bottom of indication and dose sections of the relevant monographs with the statement "dose approved for use by community practitioner nurse prescribers" following the indication; individual preparation entries signpost to these doses.

General guidance for community practitioner nurse prescribers (Nurse Prescribers' Formulary—General guidance) includes information on prescribing for nurse prescribers and can be found in online versions of the BNF and the BNF app. Treatment summaries for nurse prescribers (e.g. Nurse Prescribers' Formulary—Analgesics) can also be found in online versions of the BNF and the BNF app; these provide an overview of the drug management or prophylaxis

of conditions that are commonly managed by nurse prescribers and/or information on the use of appliances, such as stoma appliances. In order to select safe and effective medicines for individual patients, information in the treatment summaries must be used in conjunction with other prescribing details about the drugs and knowledge of the patient's medical and drug history.

## Medicinal Preparations

Preparations on this list which are not included in the BP or BPC are described under Details of NPF preparations.

- **Almond oil ear drops p. 1291, BP**
  - ▶ Removal of ear wax
- **Arachis oil enema p. 61, NPF**
  - ▶ To soften impacted faeces
- **Aspirin tablets, dispersible, 300 mg p. 133, BP** (max. 96 tablets; max. pack size 32 tablets)
  - ▶ Mild to moderate pain| Pyrexia (for both indications, see doses for community practitioner nurse prescribers)
- **Bisacodyl suppositories p. 62, BP** (includes 5-mg and 10-mg strengths)
  - ▶ Constipation (see dose for community practitioner nurse prescribers)
- **Bisacodyl tablets p. 62, BP**
  - ▶ Constipation (see dose for community practitioner nurse prescribers)
- **Catheter maintenance solutions, sodium chloride p. 854, NPF**
  - ▶ For removal of clots and other debris, to be instilled as required
- **Catheter maintenance solutions, 'Solution G' p. 854, NPF**
  - ▶ For prevention of catheter encrustation and crystallisation; in very severe cases use 'Solution R'
- **Catheter maintenance solutions, 'Solution R' p. 854, NPF**
  - ▶ For prevention of catheter encrustation and dissolution of crystallisation if 'Solution G' unsuccessful
- **Chlorhexidine gluconate alcoholic solutions** containing at least 0.05%, see chlorhexidine p. 1372 and chlorhexidine gluconate with isopropyl alcohol p. 1373
  - ▶ Skin disinfection
- **Chlorhexidine gluconate aqueous solutions p. 1372** containing at least 0.05%
  - ▶ Skin disinfection
- **Choline salicylate dental gel p. 1308, BP**
  - ▶ Mild oral and perioral lesions
- **Clotrimazole cream 1% p. 1324, BP**
  - ▶ Fungal skin infections
- **Co-danthramer capsules, NPF** [discontinued]
- **Co-danthramer capsules, strong, NPF** [discontinued]
- **Co-danthramer oral suspension p. 63, NPF**
  - ▶ In consultation with doctor, constipation in palliative care
- **Co-danthramer oral suspension, strong p. 63, NPF**
  - ▶ In consultation with doctor, constipation in palliative care
- **Co-danthrusate capsules, BP** [discontinued]
- **Co-danthrusate oral suspension p. 63, NPF**
  - ▶ In consultation with doctor, constipation in palliative care
- **Crotamiton cream p. 1360, BP**
  - ▶ Pruritus (including pruritus after scabies)

- **Crotamiton lotion, BP** [discontinued]
- **Dimeticone barrier creams** containing at least 10%, see barrier creams and ointments p. 1314
  - ▶ *For use as a barrier preparation*
- **Dimeticone lotion p. 1328, NPF**
  - ▶ *Head lice*
- **Docusate sodium capsules p. 61, BP**
  - ▶ *Chronic constipation*
- **Docusate sodium enema p. 61, NPF**
  - ▶ *Chronic constipation*
- **Docusate sodium oral solution p. 61, BP**
  - ▶ *Chronic constipation*
- **Docusate sodium oral solution, paediatric p. 61, BP**
  - ▶ *Chronic constipation*
- **Econazole nitrate cream 1% p. 1324, BP**
  - ▶ *Fungal skin infections*
- **Emollient creams and ointments, paraffin-containing p. 1318** as listed below:
  - *Dry skin conditions* | Eczema | Psoriasis | Ichthyosis | Pruritus
  - **Cetaben<sup>®</sup> emollient cream**
  - **Dermamist<sup>®</sup>**
  - **Diprobase<sup>®</sup> cream**
  - **Diprobase<sup>®</sup> ointment**
  - **Doublebase<sup>®</sup>**
  - **Doublebase<sup>®</sup> Dayleve gel**
  - **E45<sup>®</sup> cream**
  - **Emulsifying ointment, BP**
  - **Hydromol<sup>®</sup> cream**
  - **Hydrous ointment, BP**
  - **Lipobase<sup>®</sup>**
  - **Liquid and white soft paraffin ointment, NPF**
  - **Neutrogena<sup>®</sup> Norwegian Formula Dermatological cream** [discontinued]
  - **Oilatum<sup>®</sup> cream**
  - **Oilatum<sup>®</sup> Junior cream**
  - **Paraffin, white soft, BP**
  - **Paraffin, yellow soft, BP**
  - **Ultrabase<sup>®</sup>**
  - **Unguentum M<sup>®</sup>**
- **Emollients, urea-containing p. 1319** as listed below:
  - **Aquadrate<sup>®</sup> 10% w/w cream**
    - ▶ *Dry, scaling, and itching skin*
  - **Balneum<sup>®</sup> Plus cream**
    - ▶ *Dry, scaling, and itching skin*
  - **E45<sup>®</sup> Itch Relief cream**
    - ▶ *Dry, scaling, and itching skin*
  - **Eucerin<sup>®</sup> Intensive 10% w/w urea treatment cream**
    - ▶ *Dry skin conditions including eczema, ichthyosis, xeroderma, and hyperkeratosis*
  - **Eucerin<sup>®</sup> Intensive 10% w/w urea treatment lotion**
    - ▶ *Dry skin conditions including eczema, ichthyosis, xeroderma, and hyperkeratosis*
  - **Hydromol<sup>®</sup> Intensive**
    - ▶ *Dry, scaling, and itching skin*
  - **Nutraplus<sup>®</sup> cream**
    - ▶ *Dry, scaling, and itching skin*
- **Emollient bath and shower products, paraffin-containing p. 1315** as listed below:
  - **Aqueous cream, BP**
    - ▶ *Dry skin conditions*
  - **Cetaben<sup>®</sup> emollient bath additive**
    - ▶ *Dry skin conditions, including eczema*
  - **Dermale<sup>®</sup> bath emollient**
    - ▶ *Dermatitis* | *Dry skin conditions, including ichthyosis* | *Pruritus of the elderly*
  - **Doublebase<sup>®</sup> emollient bath additive**
    - ▶ *Dry skin conditions, including dermatitis and ichthyosis* | *Pruritus of the elderly*
  - **Doublebase<sup>®</sup> emollient shower gel**
    - ▶ *Dry, chapped, or itchy skin conditions*
  - **Doublebase<sup>®</sup> emollient wash gel**
    - ▶ *Dry, chapped, or itchy skin conditions*
- **Hydromol<sup>®</sup> bath and shower emollient**
  - ▶ *Dry skin conditions* | Eczema | Ichthyosis | Pruritus of the elderly
- **Oilatum<sup>®</sup> emollient**
  - ▶ *Dry skin conditions including dermatitis and ichthyosis* | *Pruritus of the elderly*
- **Oilatum<sup>®</sup> gel** [discontinued]
- **Oilatum<sup>®</sup> Junior bath additive**
  - ▶ *Dry skin conditions including dermatitis and ichthyosis* | *Pruritus of the elderly*
- **Zerolatum<sup>®</sup> emollient medicinal bath oil**
  - ▶ *Dry skin conditions* | Dermatitis | Ichthyosis
- **Emollient bath and shower products, soya-bean oil-containing p. 1317** as listed below:
  - **Balneum<sup>®</sup>** (except pack sizes that are not to be prescribed under the NHS (see Part XVIII of the Drug Tariff, Part XI of the Northern Ireland Drug Tariff))
    - ▶ *Dry skin conditions including those associated with dermatitis and eczema*
  - **Balneum Plus<sup>®</sup> bath oil** (except pack sizes that are not to be prescribed under the NHS (see Part XVIII of the Drug Tariff, Part XI of the Northern Ireland Drug Tariff))
    - ▶ *Dry skin conditions including those associated with dermatitis and eczema where pruritus also experienced*
  - **Folic acid tablets 400 micrograms p. 1112, BP**
    - ▶ *Prevention of neural tube defects (in those at a low risk of conceiving a child with a neural tube defect)*
  - **Glycerol suppositories p. 64, BP**
    - ▶ *Constipation*
  - **Ibuprofen oral suspension p. 1232, BP** (except for indications and doses that are prescription-only)
    - ▶ *Pain and inflammation in rheumatic disease and other musculoskeletal disorders* | *Mild to moderate pain including dysmenorrhoea* | *Migraine* | *Dental pain* | *Headache* | *Fever* | *Symptoms of colds and influenza* | *Neuralgia* | *Mild to moderate pain* | *Pain and inflammation of soft-tissue injuries* | *Pyrexia with discomfort* | *Post-immunisation pyrexia in infants* (for all indications, see doses for community practitioner nurse prescribers)
  - **Ibuprofen tablets p. 1232, BP** (except for indications and doses that are prescription-only)
    - ▶ *Pain and inflammation in rheumatic disease and other musculoskeletal disorders* | *Mild to moderate pain including dysmenorrhoea* | *Migraine* | *Dental pain* | *Headache* | *Fever* | *Symptoms of colds and influenza* | *Neuralgia* | *Mild to moderate pain* | *Pain and inflammation of soft-tissue injuries* | *Pyrexia with discomfort* (for all indications, see doses for community practitioner nurse prescribers)
  - **Ispaghula husk granules p. 55, BP**
    - ▶ *Constipation* (see dose for community practitioner nurse prescribers)
  - **Ispaghula husk granules, effervescent p. 55, BP**
    - ▶ *Constipation* (see dose for community practitioner nurse prescribers)
  - **Ispaghula husk oral powder, BP** [discontinued]
  - **Lactulose solution p. 57, BP**
    - ▶ *Constipation* (see dose for community practitioner nurse prescribers)
  - **Lidocaine hydrochloride ointment p. 1466, BP**
    - ▶ *Sore nipples from breast-feeding*
  - **Lidocaine and chlorhexidine gel, BP**, see chlorhexidine with lidocaine p. 853
    - ▶ *Surface anaesthesia* (see dose for community practitioner nurse prescribers)
  - **Macrogol oral liquid, compound, NPF**, see macrogol 3350 with potassium chloride, sodium bicarbonate and sodium chloride p. 58
    - ▶ *Chronic constipation*
  - **Macrogol oral powder, compound, NPF**, see macrogol 3350 with potassium chloride, sodium bicarbonate and sodium chloride p. 58

- ▶ *Chronic constipation*| *Faecal impaction (important: initial assessment by doctor; usual max. duration of treatment 3 days)*
- **Macrogol oral powder, compound, half-strength, NPF**, see macrogol 3350 with potassium chloride, sodium bicarbonate and sodium chloride p. 58
- ▶ *Chronic constipation*| *Faecal impaction (important: initial assessment by doctor; usual max. duration of treatment 3 days)*
- **Magnesium hydroxide mixture p. 59, BP**
- ▶ *Constipation*
- **Magnesium sulfate paste, BP**
- ▶ *Adjunct in management of boils, apply under dressing; stir before use*
- **Malathion aqueous lotions p. 1328** containing at least 0.5%
  - ▶ *Head lice*| *Scabies*
- **Mebendazole oral suspension p. 659, NPF**
- ▶ *Threadworm infections* (see dose for community practitioner nurse prescribers)
- **Mebendazole tablets p. 659, NPF**
- ▶ *Threadworm infections* (see dose for community practitioner nurse prescribers)
- **Methylcellulose tablets, BP**[discontinued]
  - ▶ *Constipation*
- **Miconazole cream 2% p. 1325, BP**
- ▶ *Fungal skin infections*
- **Miconazole oromucosal gel p. 1310, BP**
- ▶ *Prevention and treatment of oral candidiasis* (see dose for community practitioner nurse prescribers)
- **Mouthwash solution-tablets, NPF**
- **Nicotine inhalation cartridge for oromucosal use p. 533, NPF**
  - ▶ *Nicotine replacement therapy*
- **Nicotine lozenge p. 533, NPF**
  - ▶ *Nicotine replacement therapy*
- **Nicotine medicated chewing gum p. 533, NPF**
  - ▶ *Nicotine replacement therapy in individuals who smoke fewer than 20 cigarettes each day*| *Nicotine replacement therapy in individuals who smoke more than 20 cigarettes each day or who require more than 15 pieces of 2-mg strength gum each day*
- **Nicotine nasal spray p. 533, NPF**
  - ▶ *Nicotine replacement therapy*
- **Nicotine oral spray p. 533, NPF**
  - ▶ *Nicotine replacement therapy*
- **Nicotine sublingual tablets p. 533, NPF**
  - ▶ *Nicotine replacement therapy in individuals who smoke fewer than 20 cigarettes each day*| *Nicotine replacement therapy in individuals who smoke more than 20 cigarettes each day*
- **Nicotine transdermal patches p. 533, NPF**
  - ▶ *Nicotine replacement therapy*
- **Nystatin oral suspension p. 1311, BP**
  - ▶ *Oral and perioral fungal infections* (see dose for community practitioner nurse prescribers)
- **Olive oil ear drops p. 1292, BP**
  - ▶ *Removal of earwax* (see dose for community practitioner nurse prescribers)
- **Paracetamol oral suspension p. 477, BP** (includes 120 mg/5 mL and 250 mg/5 mL strengths—both of which are available as sugar-free formulations)
  - ▶ *Mild to moderate pain (in adults)*| *Pyrexia (in adults)*| *Pain (in children)*| *Pyrexia with discomfort (in children)*| *Post-immunisation pyrexia in infants (refer to doctor if pyrexia persists)*
- **Paracetamol tablets p. 477, BP** (max. 96 tablets; max. pack size 32 tablets)
  - ▶ *Mild to moderate pain (in adults)*| *Pyrexia (in adults)*| *Pain (in children)*| *Pyrexia with discomfort (in children)*
- **Paracetamol tablets, soluble p. 477, BP** (max. 96 tablets; max. pack size 32 tablets)
  - ▶ *Mild to moderate pain (in adults)*| *Pyrexia (in adults)*| *Pain (in children)*| *Pyrexia with discomfort (in children)*
- ▶ *Mild to moderate pain (in adults)*| *Pyrexia (in adults)*| *Pain (in children)*| *Pyrexia with discomfort (in children)*
- **Permethrin cream p. 1329, NPF**
- ▶ *Scabies*
- **Phosphates enema, BP**, see sodium acid phosphate with sodium phosphate p. 60
- ▶ *Constipation, using Phosphates enema BP Formula B*| *Constipation, using Phosphates enema (Cleen Ready-to-Use)* (for both indications, see doses for community practitioner nurse prescribers)
- **Povidone-iodine solution p. 1372, BP**
- ▶ *Skin disinfection*
- **Senna oral solution p. 64, NPF**
  - ▶ *Constipation* (see dose for community practitioner nurse prescribers)
- **Senna tablets p. 64, BP**
  - ▶ *Constipation* (see dose for community practitioner nurse prescribers)
- **Senna with ispaghula husk granules p. 65, NPF**
  - ▶ *Constipation*
- **Sodium chloride solution, sterile, BP**, see Irrigation solutions p. 1374
- ▶ *Skin cleansing*
- **Sodium citrate compound enema p. 851, NPF**
  - ▶ *Constipation* (see dose for community practitioner nurse prescribers)
- **Sodium picosulfate capsules, NPF** [discontinued]
- **Sodium picosulfate elixir p. 66, NPF**
  - ▶ *Constipation* (see dose for community practitioner nurse prescribers)
- **Spermicidal contraceptive: Gygel<sup>®</sup> contraceptive jelly**, see nonoxinol p. 877
  - ▶ *Spermicidal contraceptive in conjunction with barrier methods of contraception such as diaphragms or caps*
- **Sterculia granules p. 56, NPF**
  - ▶ *Constipation*
- **Sterculia with frangula granules p. 56, NPF**
  - ▶ *Constipation*
- **Titanium ointment, BP**, see barrier creams and ointments p. 1314
  - ▶ *For use as a barrier preparation*
- **Water for injections, BP**; available as 2-mL ampoules, 5-mL ampoules, 10-mL ampoules, 10-mL vials, 20-mL ampoules, and 100-mL vials
- **Zinc and castor oil ointment, BP**, see barrier creams and ointments p. 1314
  - ▶ *For use as a barrier preparation*
- **Zinc oxide and dimeticone spray, NPF**, see barrier creams and ointments p. 1314
  - ▶ *For use as a barrier preparation*
- **Zinc oxide impregnated medicated bandage, NPF**, see Medicated bandages p. 1788
- **Zinc oxide impregnated medicated stocking, NPF**, see Medicated bandages p. 1788
- **Zinc paste bandage, BP 1993**, see Medicated bandages p. 1788
- **Zinc paste and ichthammol bandage, BP 1993**, see Medicated bandages p. 1788

## Appliances and Reagents (including Wound Management Products)

Community Practitioner Nurse Prescribers in England, Wales and Northern Ireland can prescribe any appliance or reagent in the relevant Drug Tariff. In the Scottish Drug Tariff, Appliances and Reagents which may **not** be prescribed by Nurses are annotated Nx.

**Appliances** (including Contraceptive Devices) as listed in Part IXA of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 3 (Appliances) and Part 2 (Dressings) of the Scottish Drug Tariff). (Where it is not appropriate for nurse prescribers in family planning clinics to prescribe contraceptive devices using form FP10(P) (forms WP10CN

and WP10PN in Wales), they may prescribe using the same system as doctors in the clinic.)

**Incontinence Appliances** as listed in Part IXB of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 5 of the Scottish Drug Tariff).

**Stoma Appliances and Associated Products** as listed in Part IXC of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 6 of the Scottish Drug Tariff).

**Chemical Reagents** as listed in Part IXR of the Drug Tariff (Part II of the Northern Ireland Drug Tariff, Part 9 of the Scottish Drug Tariff).

The Drug Tariffs can be accessed online at:

National Health Service Drug Tariff for England and Wales: [www.nhsbsa.nhs.uk/pharmacies-gp-practices-and-appliance-contractors/drug-tariff](http://www.nhsbsa.nhs.uk/pharmacies-gp-practices-and-appliance-contractors/drug-tariff)

Health and Personal Social Services for Northern Ireland Drug Tariff: [www.hscbusiness.hscni.net/services/2034.htm](http://www.hscbusiness.hscni.net/services/2034.htm)

Scottish Drug Tariff: [www.isdscotland.org/Health-topics/Prescribing-and-Medicines/Scottish-Drug-Tariff/](http://www.isdscotland.org/Health-topics/Prescribing-and-Medicines/Scottish-Drug-Tariff/)

## Details of NPF preparations

Preparations on the Nurse Prescribers' Formulary which are not included in the BP or BPC are described as follows in the Nurse Prescribers' Formulary. Although brand names have sometimes been included for identification purposes, it is recommended that non-proprietary names should be used for prescribing medicinal preparations in the NPF except where a non-proprietary name is not available.

### ● Arachis oil enema

- ▶ arachis oil 100%

### ● Catheter maintenance solution, sodium chloride

- ▶ (proprietary products: *OptiFlo S*; *Uro-Tainer Sodium Chloride*; *Uriflex-S*), sodium chloride 0.9%

### ● Catheter maintenance solution, 'Solution G'

- ▶ (proprietary products: *OptiFlo G*; *Uro-Tainer Suby G*; *Uriflex G*), citric acid 3.23%, magnesium oxide 0.38%, sodium bicarbonate 0.7%, disodium edetate 0.01%

### ● Catheter maintenance solution, 'Solution R'

- ▶ (proprietary products: *OptiFlo R*; *Uro-Tainer Solutio R*; *Uriflex R*), citric acid 6%, gluconolactone 0.6%, magnesium carbonate 2.8%, disodium edetate 0.01%

### ● Chlorhexidine gluconate alcoholic solutions

- ▶ (proprietary products: *ChloraPrep*; *Hydrex Solution*; *Hydrex spray*), chlorhexidine gluconate in alcoholic solution

### ● Chlorhexidine gluconate aqueous solutions

- ▶ (proprietary product: *Unisept*), chlorhexidine gluconate in aqueous solution

### ● Co-danthramer capsules <sup>[PoM]</sup>

- ▶ co-danthramer 25/200 (dantron 25 mg, poloxamer '188' 200 mg)

### ● Co-danthramer capsules, strong <sup>[PoM]</sup>

- ▶ co-danthramer 37.5/500 (dantron 37.5 mg, poloxamer '188' 500 mg)

### ● Co-danthramer oral suspension <sup>[PoM]</sup>

- ▶ co-danthramer 25/200 in 5 mL (dantron 25 mg, poloxamer '188' 200 mg/5 mL)

### ● Co-danthramer oral suspension, strong <sup>[PoM]</sup>

- ▶ co-danthramer 75/1000 in 5 mL (dantron 75 mg, poloxamer '188' 1 g/5 mL)

### ● Co-danthrusate oral suspension <sup>[PoM]</sup>

- ▶ (proprietary product: *Normax*), co-danthrusate 50/60 (dantron 50 mg, docusate sodium 60 mg/5 mL)

### ● Dimeticone barrier creams

- ▶ (proprietary products *Conotrane Cream*, dimeticone '350' 22%; *Siopel Barrier Cream*, dimeticone '1000' 10%), dimeticone 10–22%

### ● Dimeticone lotion

- ▶ (proprietary product: *Hedrin*), dimeticone 4%

### ● Docusate enema

- ▶ (proprietary product: *Norgalax Micro-enema*), docusate sodium 120 mg in 10 g

### ● Liquid and white soft paraffin ointment

- ▶ liquid paraffin 50%, white soft paraffin 50%

### ● Macrogol oral liquid, compound

- ▶ (proprietary product: *Movicol Liquid*), macrogol '3350' (polyethylene glycol '3350') 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/25 mL

### ● Macrogol oral powder, compound

- ▶ (proprietary products: *Laxido Orange*, *Molaxole*, *Movicol*), macrogol '3350' (polyethylene glycol '3350') 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/sachet; (amount of potassium chloride varies according to flavour of *Movicol*® as follows: plain-flavour (sugar-free) = 50.2 mg/sachet; lime and lemon flavour = 46.6 mg/sachet; chocolate flavour = 31.7 mg/sachet. 1 sachet when reconstituted with 125 mL water provides K<sup>+</sup> 5.4 mmol/litre)

### ● Macrogol oral powder, compound, half-strength

- ▶ (proprietary product: *Movicol-Half*), macrogol '3350' (polyethylene glycol '3350') 6.563 g, sodium bicarbonate 89.3 g, sodium chloride 175.4 mg, potassium chloride 23.3 mg/sachet

### ● Malathion aqueous lotions

- ▶ (proprietary products: *Derbac-M Liquid*), malathion 0.5% in an aqueous basis

### ● Mebendazole oral suspension <sup>[PoM]</sup>

- ▶ (proprietary product: *Vermox*), mebendazole 100 mg/5 mL

### ● Mebendazole tablets <sup>[PoM]</sup>

- ▶ (proprietary products: *Oxev*, *Vermox*), mebendazole 100 mg (can be supplied for oral use in the treatment of enterobiasis in adults and children over 2 years provided its container or package is labelled to show a max. single dose of 100 mg and it is supplied in a container or package containing not more than 800 mg)

### ● Mouthwash solution-tablets

- ▶ consist of tablets which may contain antimicrobial, colouring and flavouring agents in a suitable soluble effervescent basis to make a mouthwash

### ● Nicotine inhalation cartridge for oromucosal use

- ▶ (proprietary products: *NicAssist Inhalator*, *Nicorette Inhalator*), nicotine 15 mg (for use with inhalation mouthpiece; to be prescribed as either a starter pack (6 cartridges with inhalator device and holder) or refill pack (42 cartridges with inhalator device))

### ● Nicotine lozenge

- ▶ nicotine (as bitartrate) 1 mg or 2 mg (proprietary product: *Nicorette Mint Lozenge*, *Nicotinell Mint Lozenge*), or nicotine (as resinate) 1.5 mg, 2 mg, or 4 mg (proprietary product: *NiQuitin Lozenges*, *NiQuitin Minis*, *NiQuitin Pre-quit*)

### ● Nicotine medicated chewing gum

- ▶ (proprietary products: *NicAssist Gum*, *Nicorette Gum*, *Nicotinell Gum*, *NiQuitin Gum*), nicotine 2 mg or 4 mg

### ● Nicotine nasal spray

- ▶ (proprietary product: *NicAssist Nasal Spray*, *Nicorette Nasal Spray*), nicotine 500 micrograms/metered spray

### ● Nicotine oral spray

- ▶ (proprietary product: *Nicorette Quickmist*), nicotine 1 mg/metered spray

### ● Nicotine sublingual tablets

- ▶ (proprietary product: *NicAssist Microtab*, *Nicorette Microtab*), nicotine (as a cyclodextrin complex) 2 mg (to be prescribed as either a starter pack (2 × 15-tablet discs with dispenser) or refill pack (7 × 15-tablet discs))

### ● Nicotine transdermal patches

- ▶ releasing in each 16 hours, nicotine approx. 5 mg, 10 mg, or 15 mg (proprietary products: *Boots NicAssist Patch*, *Nicorette Patch*), or releasing in each 16 hours approx. 10 mg, 15 mg, or 25 mg (proprietary products: *NicAssist Translucous Patch*, *Nicorette Invisi Patch*), or releasing in each 24 hours nicotine approx. 7 mg, 14 mg, or 21 mg (proprietary products: *Nicopatch*, *Nicotinell TTS*, *NiQuitin*,

*NiQuitin Clear*) (prescriber should specify the brand to be dispensed)

- **Permethrin cream**
  - ▶ (proprietary product: *Lyclear Dermal Cream*), permethrin 5%
- **Senna oral solution**
  - ▶ (proprietary product: *Senokot Syrup*), sennosides 7.5 mg/5 mL
- **Senna and ispaghula granules**
  - ▶ (proprietary product: *Manevac Granules*), senna fruit 12.4%, ispaghula 54.2%
- **Sodium citrate compound enema**
  - ▶ (proprietary products: *Micolette Micro-enema; Micralax Micro-enema; Relaxit Micro-enema*), sodium citrate 450 mg with glycerol, sorbitol and an anionic surfactant
- **Sodium picosulfate capsules**
  - ▶ (proprietary products: *Dulcolax Perles*), sodium picosulfate 2.5 mg
- **Sodium picosulfate elixir**
  - ▶ (proprietary product: *Dulcolax Liquid*), sodium picosulfate 5 mg/5 mL
- **Sterculia granules**
  - ▶ (proprietary product: *Normacol Granules*), sterculia 62%
- **Sterculia and frangula granules**
  - ▶ (proprietary product: *Normacol Plus Granules*), sterculia 62%, frangula (standardised) 8%
- **Zinc oxide and dimeticone spray**
  - ▶ (proprietary product: *Sprilon*), dimeticone 1.04%, zinc oxide 12.5% in a pressurised aerosol unit
- **Zinc oxide impregnated medicated bandage**
  - ▶ (proprietary product: *Steripaste*), sterile cotton bandage impregnated with paste containing zinc oxide 15%
- **Zinc oxide impregnated medicated stocking**
  - ▶ (proprietary product: *Zipzoc*), sterile rayon stocking impregnated with ointment containing zinc oxide 20%

# Non-medical prescribing

## Overview

A range of non-medical healthcare professionals can prescribe medicines for patients as either Independent or Supplementary Prescribers.

Independent Prescribers are practitioners responsible and accountable for the assessment of patients with previously undiagnosed or diagnosed conditions and for decisions about the clinical management required, including prescribing. They are recommended to prescribe generically, except where this would not be clinically appropriate or where there is no approved non-proprietary name.

Supplementary prescribing is a partnership between an independent prescriber (a doctor or a dentist) and a supplementary prescriber to implement an agreed Clinical Management Plan for an individual patient with that patient's agreement.

Independent and Supplementary Prescribers are identified by an annotation next to their name in the relevant professional register.

Information and guidance on non-medical prescribing is available on the Department of Health website at [www.dh.gov.uk/health/2012/04/prescribing-change](http://www.dh.gov.uk/health/2012/04/prescribing-change).

For information on the mixing of medicines by Independent and Supplementary Prescribers, see *Mixing of medicines prior to administration in clinical practice: medical and non-medical prescribing*, National Prescribing Centre, May 2010 (available at [www.gov.uk/government/publications/mixing-of-medicines-prior-to-administration-in-clinical-practice-medical-and-non-medical-prescribing](http://www.gov.uk/government/publications/mixing-of-medicines-prior-to-administration-in-clinical-practice-medical-and-non-medical-prescribing)).

For information on the supply and administration of medicines to groups of patients using Patient Group Directions see Guidance on prescribing p. 1.

In order to protect patient safety, the initial prescribing and supply of medicines prescribed should normally remain separate functions performed by separate healthcare professionals.

## Nurses

Nurse Independent Prescribers (formerly known as Extended Formulary Nurse Prescribers) are able to prescribe any medicine for any medical condition. Unlicensed medicines are excluded from the Nurse Prescribing Formulary in Scotland.

Nurse Independent Prescribers are able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine hydrochloride p. 488, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction.

Nurse Independent Prescribers must work within their own level of professional competence and expertise.

The Approved list for prescribing by Community Practitioner Nurse Prescribers (NPF) p. 1792 for Community Practitioners provides information on prescribing.

## Pharmacists

Pharmacist Independent Prescribers can prescribe any medicine for any medical condition. This includes unlicensed medicines, subject to accepted clinical good practice.

They are also able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine hydrochloride p. 488, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction.

Pharmacist Independent Prescribers must work within their own level of professional competence and expertise.

## Physiotherapists

Physiotherapist Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. They are also allowed to prescribe the following Controlled Drugs: oral or injectable morphine p. 496, transdermal fentanyl p. 490 and oral diazepam p. 375, dihydrocodeine tartrate p. 489, lorazepam p. 369, oxycodone hydrochloride p. 498 or temazepam p. 520.

Physiotherapist Independent Prescribers must work within their own level of professional competence and expertise.

## Therapeutic radiographers

Therapeutic Radiographer Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. Prescribing of Controlled Drugs is subject to legislative changes. Therapeutic Radiographer Independent Prescribers must work within their own level of professional competence and expertise.

## Optometrists

Optometrist Independent Prescribers can prescribe any licensed medicine for ocular conditions affecting the eye and the tissues surrounding the eye, except Controlled Drugs or medicines for parenteral administration. Optometrist Independent Prescribers must work within their own level of professional competence and expertise.

## Podiatrists

Podiatrist Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. They are also allowed to prescribe the following Controlled Drugs for oral administration: diazepam p. 375, dihydrocodeine tartrate p. 489, lorazepam p. 369 and temazepam p. 520.

Podiatrist Independent Prescribers must work within their own level of professional competence and expertise.

## Paramedics

Paramedic Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. Prescribing of Controlled Drugs is subject to legislative changes. Paramedic Independent Prescribers must work within their own level of professional competence and expertise.

## Further Information

For further details about the different types of prescribers, see *Medicines, Ethics and Practice*, London, Pharmaceutical Press (always consult latest edition).

# Index of manufacturers

The following is an alphabetical list of manufacturers and other companies referenced in the BNF, with their medicines information or general contact details. For information on 'special-order' manufacturers and specialist importing companies see 'Special-order manufacturers'.

**3M Health Care Ltd**, Tel: 01509 611611

# Special-order manufacturers

Unlicensed medicines are available from 'special-order' manufacturers and specialist-importing companies; the MHRA maintains a register of these companies at [www.gov.uk/government/publications/human-and-veterinary-medicines-register-of-licensed-manufacturing-sites](http://www.gov.uk/government/publications/human-and-veterinary-medicines-register-of-licensed-manufacturing-sites).

Licensed **hospital manufacturing units** also manufacture 'special-order' products as unlicensed medicines, the principal NHS units are listed below. A database (*Pro-File*; [www.pro-file.nhs.uk](http://www.pro-file.nhs.uk)) provides information on medicines manufactured in the NHS; access is restricted to NHS pharmacy staff.

The Association of Pharmaceutical Specials Manufacturers may also be able to provide further information about commercial companies ([www.apsm-uk.com](http://www.apsm-uk.com)).

The MHRA recommends that an unlicensed medicine should only be used when a patient has special requirements that cannot be met by use of a licensed medicine.

As well as being available direct from the hospital manufacturer(s) concerned, many NHS-manufactured Specials may be bought from the Oxford Pharmacy Store, owned and operated by Oxford Health NHS Foundation Trust.

## England

### London

#### Barts Health NHS Trust

Ms N. Phul, Deputy Chief Pharmacist, Performance  
Barts Health NHS Trust  
The Royal London Hospital  
Pathology and Pharmacy Building  
80 Newark Street  
Whitechapel  
London  
E1 2ES  
(020) 3246 0394 (order/enquiry)  
[bartshealth.pharmaceuticals@nhs.net](mailto:bartshealth.pharmaceuticals@nhs.net)

#### Guy's and St. Thomas' NHS Foundation Trust

Mr P. Forsey, Associate Chief Pharmacist  
Guy's and St. Thomas' NHS Foundation Trust  
Guy's Hospital  
Pharmacy Department  
Great Maze Pond  
London

## Recommended wording of cautionary and advisory labels

For details including Welsh Language translation see p. 1764

- 1 **Warning:** This medicine may make you sleepy
- 2 **Warning:** This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol
- 3 **Warning:** This medicine may make you sleepy. If this happens, do not drive or use tools or machines
- 4 **Warning:** Do not drink alcohol
- 5 **Do not take indigestion remedies 2 hours before or after you take this medicine**
- 6 **Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine**
- 7 **Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine**
- 8 **Warning:** Do not stop taking this medicine unless your doctor tells you to stop
- 9 **Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop**
- 10 **Warning:** Read the additional information given with this medicine
- 11 **Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds**
- 12 **Do not take anything containing aspirin while taking this medicine**
- 13 **Dissolve or mix with water before taking**
- 14 **This medicine may colour your urine. This is harmless**
- 15 **Caution: flammable. Keep your body away from fire or flames after you have put on the medicine**
- 16 **Dissolve the tablet under your tongue—do not swallow. Store the tablets in this bottle with the cap tightly closed. Get a new supply 8 weeks after opening**
- 17 **Do not take more than... in 24 hours**
- 18 **Do not take more than... in 24 hours. Also, do not take more than... in any one week**
- 19 **Warning:** This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink alcohol
- 21 **Take with or just after food, or a meal**
- 22 **Take 30 to 60 minutes before food**
- 23 **Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food**
- 24 **Suck or chew this medicine**
- 25 **Swallow this medicine whole. Do not chew or crush**
- 26 **Dissolve this medicine under your tongue**
- 27 **Take with a full glass of water**
- 28 **Spread thinly on the affected skin only**
- 29 **Do not take more than 2 at any one time. Do not take more than 8 in 24 hours**
- 30 **Contains paracetamol. Do not take anything else containing paracetamol while taking this medicine. Talk to a doctor at once if you take too much of this medicine, even if you feel well**
- 32 **Contains aspirin. Do not take anything else containing aspirin while taking this medicine**

# Approximate Conversions and Units

## Conversion of pounds to kilograms

lb	kg
1	0.45
2	0.91
3	1.36
4	1.81
5	2.27
6	2.72
7	3.18
8	3.63
9	4.08
10	4.54
11	4.99
12	5.44
13	5.90
14	6.35

## Conversion of stones to kilograms

stones	kg
1	6.35
2	12.70
3	19.05
4	25.40
5	31.75
6	38.10
7	44.45
8	50.80
9	57.15
10	63.50
11	69.85
12	76.20
13	82.55
14	88.90
15	95.25

## Conversion from millilitres to fluid ounces

mL	fl oz
50	1.8
100	3.5
150	5.3
200	7.0
500	17.6
1000	35.2

## Length

1 metre (m) = 1000 millimetres (mm)  
 1 centimetre (cm) = 10 mm  
 1 inch (in) = 25.4 mm  
 1 foot (ft) = 12 inches  
 12 inches = 304.8 mm

## Mass

1 kilogram (kg) = 1000 grams (g)  
 1 gram (g) = 1000 milligrams (mg)  
 1 milligram (mg) = 1000 micrograms  
 1 microgram = 1000 nanograms  
 1 nanogram = 1000 picograms

## Volume

1 litre = 1000 millilitres (mL)  
 1 millilitre (1 mL) = 1000 microlitres  
 1 pint = 568 mL

## Other units

1 kilocalorie (kcal) = 4186.8 joules (J)  
 1000 kilocalories (kcal) = 4.1868 megajoules (MJ)  
 1 megajoule (MJ) = 238.8 kilocalories (kcal)  
 1 millimetre of mercury (mmHg) = 133.3 pascals (Pa)  
 1 kilopascal (kPa) = 7.5 mmHg (pressure)

## Plasma-drug concentrations

Plasma-drug concentrations in BNF publications are expressed in mass units per litre (e.g. mg/litre). The approximate equivalent in terms of amount of substance units (e.g. micromol/litre) is given in brackets.

## Prescribing for children: weight, height, and sex

The table below shows the **mean values** for weight, height, and sex by age; these values have been derived from the UK-WHO growth charts 2009 and UK 1990 standard centile charts, by extrapolating the 50th centile, and may be used to calculate doses in the absence of measurements. However, an individual's weight and height might vary considerably from the values in the table and it is important to ensure that the value chosen is appropriate. In most cases the actual measurement should be obtained as soon as possible and the dose re-calculated.

Age	Weight (kg)	Height (cm)
Full-term neonate	3.5	51
1 month	4.3	55
2 months	5.4	58
3 months	6.1	61
4 months	6.7	63
6 months	7.6	67
1 year	9	75
3 years	14	96
5 years	18	109
7 years	23	122
10 years	32	138
12 years	39	149
14 year old boy	49	163
14 year old girl	50	159
Adult male	68	176
Adult female	58	164

## Abbreviations and Symbols

Internationally recognised units and symbols are used in the BNF publications where possible.

## Latin abbreviations

Directions should be in English without abbreviation. However, Latin abbreviations have been used when prescribing.

The following is a list of appropriate abbreviations. It should be noted that the English version is not always an exact translation.

<b>a. c.</b>	= ante cibum (before food)
<b>b. d.</b>	= bis die (twice daily)
<b>o. d.</b>	= omni die (every day)
<b>o. m.</b>	= omni mane (every morning)
<b>o. n.</b>	= omni nocte (every night)
<b>p. c.</b>	= post cibum (after food)
<b>p. r. n.</b>	= pro re nata (when required)
<b>q. d. s.</b>	= quater die sumendum (to be taken four times daily)
<b>q. q. h.</b>	= quarta quaque hora (every four hours)
<b>stat</b>	= immediately
<b>t. d. s.</b>	= ter die sumendum (to be taken three times daily)
<b>t. i. d.</b>	= ter in die (three times daily)

## E numbers

The following is a list of common E numbers and the inactive ingredients to which they correspond.

E102	Tartrazine
E104	Quinoline Yellow
E110	Sunset Yellow FCF
E123	Amaranth
E124	Ponceau 4R
E127	Erythrosine BS
E132	Indigo Carmine
E142	Green S
E171	Titanium Dioxide
E172	Iron oxides, iron hydroxides
E200	Sorbic Acid
E211	Sodium Benzoate
E223	Sodium Metabisulfite
E320	Butylated Hydroxyanisole
E321	Butylated Hydroxytoluene
E322	Lecithins
E420	Sorbitol
E421	Mannitol
E422	Glycerol
E901	Beeswax (white and yellow)
E1520	Propylene Glycol

# Medical emergencies in the community

13-Oct-2021

## Overview

Drug treatment outlined below is intended for use by appropriately qualified healthcare professionals. Only drugs that are used for immediate relief are shown; advice on supporting care is not given. Where the patient's condition requires investigation and further treatment, the patient should be transferred to hospital promptly.

## Acute coronary syndromes

### ▶ ANGINA: UNSTABLE

**Aspirin dispersible tablets p. 133** (75 mg, 300 mg)

BY MOUTH (DISPERSED IN WATER OR CHEWED)

▶ Adult: 300 mg

### ▶ PLUS

### ▶ EITHER **Glyceryl trinitrate aerosol spray p. 237**

(400 micrograms/metered dose)

SUBLINGUALLY

▶ Adult: 1–2 sprays, repeated as required

### ▶ OR **Glyceryl trinitrate tablets** (300 micrograms,

500 micrograms, 600 micrograms)

SUBLINGUALLY

▶ Adult: 0.3–1 mg, repeated as required

### ▶ MYOCARDIAL INFARCTION: NON-ST-SEGMENT ELEVATION

Treat as for Angina: unstable

### ▶ MYOCARDIAL INFARCTION: ST-SEGMENT ELEVATION

**Aspirin dispersible tablets** (75 mg, 300 mg)

BY MOUTH (DISPERSED IN WATER OR CHEWED)

▶ Adult: 300 mg

**Glyceryl trinitrate aerosol spray** (400 micrograms/metered dose)

SUBLINGUALLY

▶ Adult: 1–2 sprays, repeated as required

### ▶ OR **Glyceryl trinitrate tablets** (300 micrograms,

500 micrograms, 600 micrograms)

SUBLINGUALLY

▶ Adult: 0.3–1 mg, repeated as required

**Metoclopramide hydrochloride injection p. 464** (5 mg/mL)

BY INTRAVENOUS INJECTION

▶ Adult 18–19 years (body-weight up to 60 kg): 5 mg

▶ Adult 18–19 years (body-weight 60 kg and over): 10 mg

▶ Adult over 19 years: 10 mg

**Diamorphine hydrochloride injection p. 488** (5 mg powder for reconstitution)

BY SLOW INTRAVENOUS INJECTION (1–2 MG/MINUTE)

▶ Adult: 5 mg followed by a further 2.5–5 mg if necessary

▶ Elderly or frail patients: reduce dose by half

### ▶ OR **Morphine sulfate injection p. 496** (10 mg/mL)

BY SLOW INTRAVENOUS INJECTION (1–2 MG/MINUTE)

▶ Adult: 5–10 mg followed by a further 5–10 mg if necessary

▶ Elderly or frail patients: reduce dose by half

**Oxygen**, if appropriate

## Airways disease, obstructive

### ▶ **ASTHMA: ACUTE**

**EvG** Emergency asthma consultations should be regarded as being for severe acute asthma until shown otherwise.

Patients with features of severe or life-threatening acute asthma, and patients who fail to respond adequately at any time should be referred to hospital immediately. Acute asthma in children aged under 2 years should be managed in hospital. 

High-flow **oxygen** should be given if available (via tight-fitting face mask in children) to achieve and maintain an SpO<sub>2</sub> level of 94–98%.

### ▶ **EITHER Salbutamol aerosol inhaler p. 273**

(100 micrograms/metered inhalation)

BY AEROSOL INHALATION VIA LARGE-VOLUME SPACER

(AND A CLOSE-FITTING FACE MASK IF CHILD UNDER 3 YEARS)

▶ Adult and child: 2–10 puffs each inhaled separately, repeated every 10–20 minutes or as necessary

### ▶ **OR Salbutamol nebuliser solution** (1 mg/mL, 2 mg/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

▶ Child 4 years and below: 2.5 mg every 20–30 minutes

or as necessary

▶ Child 5–11 years: 2.5–5 mg every 20–30 minutes

or as necessary

▶ Child 12–17 years: 5 mg every 20–30 minutes

or as necessary

▶ Adult: 5 mg every 20–30 minutes or as necessary

### ▶ **OR Terbutaline sulfate nebuliser solution p. 275** (2.5 mg/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

▶ Child 4 years and below: 5 mg every 20–30 minutes or as necessary

▶ Child 5–11 years: 5–10 mg every 20–30 minutes or as necessary

▶ Child 12–17 years: 10 mg every 20–30 minutes or as necessary

▶ Adult: 10 mg every 20–30 minutes or as necessary

### ▶ **PLUS (in all cases)**

### ▶ **EITHER Prednisolone tablets p. 747 (or prednisolone soluble tablets)** (5 mg)

BY MOUTH

▶ Child 11 years and below: 1–2 mg/kg (max. 40 mg) once daily for up to 3 days or longer if necessary; if child has been taking an oral corticosteroid for more than a few days, give prednisolone 2 mg/kg (max. 60 mg) once daily

▶ Child 12–17 years: 40–50 mg once daily for at least 5 days

▶ Adult: 40–50 mg once daily for at least 5 days

### ▶ **OR Hydrocortisone p. 744 (preferably as sodium succinate)**

BY INTRAVENOUS INJECTION

▶ Child 17 years and below: 4 mg/kg (max. 100 mg) every 6 hours until conversion to oral prednisolone is possible; alternative dose if weight unavailable:

▶ Child 1 year and below: 25 mg

▶ Child 2–4 years: 50 mg

▶ Child 5–17 years: 100 mg

▶ Adult: 100 mg every 6 hours until conversion to oral prednisolone is possible

Monitor response 15 to 30 minutes after nebulisation; if any signs of acute asthma persist, arrange hospital admission. While awaiting ambulance, repeat **nebulised beta<sub>2</sub> agonist** (as above) and give with

**Ipratropium bromide nebuliser solution p. 267**  
(250 micrograms/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

- ▶ Child 11 years and below: 250 micrograms, repeated every 20–30 minutes for the first 2 hours, then every 4–6 hours as necessary
- ▶ Child 12–17 years: 500 micrograms every 4–6 hours as necessary
- ▶ Adult: 500 micrograms every 4–6 hours as necessary

**▶ CROUP****Dexamethasone oral solution p. 743** (2 mg/5 mL)

BY MOUTH

- ▶ Child 1 month–2 years: 150 micrograms/kg as a single dose

**Anaphylaxis****▶ ANAPHYLAXIS****Adrenaline/epinephrine injection p. 241** (1 mg/mL (1 in 1000))

BY INTRAMUSCULAR INJECTION

- ▶ Child up to 6 months: 100–150 micrograms (0.1–0.15 mL), repeated after 5 minutes if necessary
- ▶ Child 6 months–5 years: 150 micrograms (0.15 mL), repeated after 5 minutes if necessary
- ▶ Child 6–11 years: 300 micrograms (0.3 mL), repeated after 5 minutes if necessary
- ▶ Child 12–17 years: 500 micrograms (0.5 mL), repeated after 5 minutes if necessary; 300 micrograms (0.3 mL) should be given if child is small or prepubertal
- ▶ Adult: 500 micrograms (0.5 mL), repeated after 5 minutes if necessary

If life-threatening features persist, further doses of intramuscular adrenaline/epinephrine can be given every 5 minutes until specialist critical care available.

High-flow oxygen should be given as soon as available. For guidance on other treatment that may be used for the management of anaphylaxis, see Antihistamines, allergen immunotherapy and allergic emergencies p. 299.

**Bacterial infection****▶ MENINGOCOCCAL DISEASE****Benzylpenicillin sodium injection p. 595** (600 mg, 1.2 g)

BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)

- ▶ Neonate: 300 mg
- ▶ Child 1 month–11 months: 300 mg
- ▶ Child 1–9 years: 600 mg
- ▶ Child 10–17 years: 1.2 g
- ▶ Adult: 1.2 g

**NOTE** A single dose should be given before urgent transfer to hospital, so long as this does not delay the transfer.

**▶ OR if history of allergy to penicillin****Cefotaxime injection p. 572** (1 g)

BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)

- ▶ Neonate: 50 mg/kg
- ▶ Child 1 month–11 years: 50 mg/kg (max. 1 g)
- ▶ Child 12–17 years: 1 g
- ▶ Adult: 1 g

**NOTE** A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

- ▶ **OR if history of immediate hypersensitivity reaction (including anaphylaxis, angioedema, urticaria, or rash immediately after administration) to penicillin or to cephalosporins**

**Chloramphenicol injection p. 620** (1 g)

BY INTRAVENOUS INJECTION

- ▶ Child: 12.5–25 mg/kg
- ▶ Adult: 12.5–25 mg/kg

**NOTE** A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

See also Central nervous system infections, antibacterial therapy p. 546.

**Hypoglycaemia****▶ DIABETIC HYPOGLYCAEMIA****Fast-acting carbohydrate (glucose p. 1132 is preferred)**

CHILD UP TO 5 YEARS

By mouth

- ▶ 5 g (20 mL *Lift*<sup>®</sup> (previously *Glucosource*<sup>®</sup>) oral glucose liquid or 1.5 glucose tablets or half a tube of glucose 40% oral gel or 1 teaspoonful of sugar dissolved in an appropriate volume of water), repeated after 15 minutes if necessary

*Or* by buccal administration [in conscious but uncooperative children]

- ▶ 5 g (half a tube of glucose 40% oral gel), repeated after 15 minutes if necessary

CHILD 5–11 YEARS

By mouth

- ▶ 10 g (40 mL *Lift*<sup>®</sup> (previously *Glucosource*<sup>®</sup>) oral glucose liquid or 5 glucose tablets or 1 tube of glucose 40% oral gel or 2 teaspoonfuls of sugar dissolved in an appropriate volume of water), repeated after 15 minutes if necessary

*Or* by buccal administration [in conscious but uncooperative children]

- ▶ 10 g (1 tube of glucose 40% oral gel), repeated after 15 minutes if necessary

CHILD 12–17 YEARS

By mouth

- ▶ 15 g (60 mL *Lift*<sup>®</sup> (previously *Glucosource*<sup>®</sup>) oral glucose liquid or 4 glucose tablets or 1.5 tubes of glucose 40% oral gel or 3 teaspoonfuls of sugar dissolved in an appropriate volume of water), repeated after 15 minutes if necessary

*Or* by buccal administration [in conscious but uncooperative children]

- ▶ 15 g (1.5 tubes of glucose 40% oral gel), repeated after 15 minutes if necessary

ADULT

By mouth

- ▶ 15–20 g (60–80 mL *Lift*<sup>®</sup> (previously *Glucosource*<sup>®</sup>) oral glucose liquid or 4–5 glucose tablets or 1.5–2 tubes of glucose 40% oral gel or 150–200 mL pure fruit juice or 3–4 heaped teaspoonfuls of sugar dissolved in an appropriate volume of water), repeated after 15 minutes if necessary

*Or* by buccal administration [in conscious but uncooperative patients]

- ▶ 15–20 g (1.5–2 tubes of glucose 40% oral gel), repeated after 15 minutes if necessary

**NOTE** Examples of glucose preparations which can be used to give oral doses are based on the use of oral liquid containing glucose 250 mg/mL and tablets containing glucose 4 g per tablet. Buccal dosing is based on tubes of 40% oral gel containing glucose 10 g per tube.

- ▶ **OR if hypoglycaemia unresponsive or if oral route cannot be used**

**Glucagon injection p. 793** (1 mg/mL)

BY INTRAMUSCULAR INJECTION

- ▶ Child 8 years and below or body-weight up to 25 kg: 500 micrograms (0.5 mL)
- ▶ Child 9–17 years or body-weight 25 kg and over: 1 mg (1 mL)
- ▶ Adult: 1 mg (1 mL)

- ▶ **OR if hypoglycaemia prolonged or unresponsive to glucagon after 10 minutes**

**Glucose 10% intravenous infusion**

BY INTRAVENOUS INJECTION INTO LARGE VEIN

- ▶ Child: 5 mL/kg (glucose 500 mg/kg)
- ▶ Adult: 150–200 mL infused over 15 minutes

- ▶ **OR Glucose 20% intravenous infusion**

BY INTRAVENOUS INJECTION INTO LARGE VEIN

- ▶ Adult: 75–100 mL infused over 15 minutes

---

## Seizures

- ▶ **CONVULSIVE (INCLUDING FEBRILE) SEIZURES LASTING LONGER THAN 5 MINUTES**

- ▶ **EITHER Diazepam rectal solution p. 375** (2 mg/mL, 4 mg/mL)

BY RECTUM

- ▶ Neonate: 1.25–2.5 mg, repeated once after 10–15 minutes if necessary
- ▶ Child 1 month–1 year: 5 mg, repeated once after 10–15 minutes if necessary
- ▶ Child 2–11 years: 5–10 mg, repeated once after 10–15 minutes if necessary
- ▶ Child 12–17 years: 10–20 mg, repeated once after 10–15 minutes if necessary
- ▶ Adult: 10–20 mg, repeated once after 10–15 minutes if necessary
- ▶ Elderly: 10 mg, repeated once after 10–15 minutes if necessary

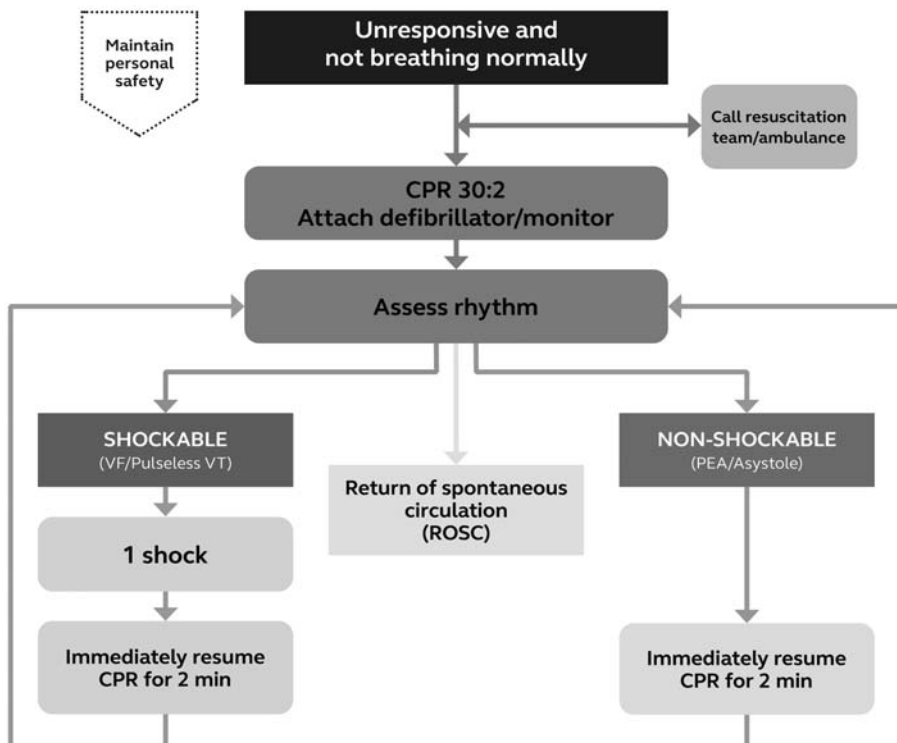

- ▶ **OR Midazolam oromucosal solution p. 371**

BY BUCCAL ADMINISTRATION, REPEATED ONCE AFTER 10 MINUTES IF NECESSARY

- ▶ Neonate: 300 micrograms/kg [unlicensed]
- ▶ Child 1–2 months: 300 micrograms/kg (max. 2.5 mg) [unlicensed]
- ▶ Child 3 months–11 months: 2.5 mg
- ▶ Child 1–4 years: 5 mg
- ▶ Child 5–9 years: 7.5 mg
- ▶ Child 10–17 years: 10 mg
- ▶ Adult: 10 mg [unlicensed]

# Adult Advanced Life Support Algorithm

## Adult advanced life support

### Give high-quality chest compressions, and:

- Give oxygen
- Use waveform capnography
- Continuous compressions if advanced airway
- Minimise interruptions to compressions
- Intravenous or intraosseous access
- Give adrenaline every 3–5 min
- Give amiodarone after 3 shocks
- Identify and treat reversible causes

### Identify and treat reversible causes

- Hypoxia
  - Hypovolaemia
  - Hypo-/hyperkalaemia/metabolic
  - Hypo/hyperthermia
  - Thrombosis – coronary or pulmonary
  - Tension pneumothorax
  - Tamponade – cardiac
  - Toxins
- Consider ultrasound imaging to identify reversible causes

### Consider

- Coronary angiography/percutaneous coronary intervention
- Mechanical chest compressions to facilitate transfer/treatment
- Extracorporeal CPR

### After ROSC

- Use an ABCDE approach
- Aim for SpO<sub>2</sub> of 94–98% and normal PaCO<sub>2</sub>
- 12-lead ECG
- Identify and treat cause
- Targeted temperature management
