**Travoprost 40 microgram per 1 ml** Travoprost 40micrograms/ml eye drops | 2.5 ml [PoM] £10.95 DT = £1.71

##### ▶ Travatan (Novartis Pharmaceuticals UK Ltd)

**Travoprost 40 microgram per 1 ml** Travatan 40micrograms/ml eye drops | 2.5 ml [PoM] £10.95 DT = £1.71

## Travoprost with timolol

02-Jun-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, travoprost p. 1275, timolol maleate p. 1270.

#### ● INDICATIONS AND DOSE

**Raised intra-ocular pressure in patients with open-angle glaucoma or ocular hypertension when beta-blocker or prostaglandin analogue alone not adequate**

▶ TO THE EYE

- ▶ Adult: Apply once daily

- **INTERACTIONS** → Appendix 1: beta blockers, non-selective

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

EXCIPIENTS: May contain Propylene glycol

##### ▶ Travoprost with timolol (Non-proprietary)

**Travoprost 40 microgram per 1 ml, Timolol (as Timolol maleate) 5 mg per 1 ml** Travoprost 40micrograms/ml / Timolol 5mg/ml eye drops | 2.5 ml [PoM] £13.95 DT = £6.04

##### ▶ DuoTrav (Novartis Pharmaceuticals UK Ltd)

**Travoprost 40 microgram per 1 ml, Timolol (as Timolol maleate) 5 mg per 1 ml** DuoTrav 40micrograms/ml / 5mg/ml eye drops | 2.5 ml [PoM] £13.95 DT = £6.04 | 7.5 ml [PoM] £39.68

## PROSTAMIDES

### Bimatoprost

03-Jun-2021

#### ● INDICATIONS AND DOSE

**Raised intra-ocular pressure in open-angle glaucoma | Ocular hypertension**

▶ TO THE EYE

- ▶ Adult: Apply once daily, to be administered preferably in the evening

- **CAUTIONS** Angle-closure glaucoma (no experience of use) · aphakia · asthma · chronic obstructive pulmonary disease · compromised respiratory function · congenital glaucoma (no experience of use) · contact lens wearers · history of significant ocular viral infections · inflammatory ocular conditions (no experience of use) · narrow-angle glaucoma (no experience of use) · neovascular glaucoma (no experience of use) · predisposition to bradycardia · predisposition to hypotension · pseudophakia with torn posterior lens capsule or anterior chamber lenses · risk factors for cystoid macular oedema · risk factors for iritis · risk factors for uveitis
- **SIDE-EFFECTS**
  - ▶ Common or very common Dry eye · eye discolouration · eye discomfort · eye disorders · eye inflammation · headache · hypertension · hypertrichosis · skin reactions · vision disorders
  - ▶ Uncommon Asthenia · dizziness · madarosis · nausea · retinal haemorrhage
  - ▶ Frequency not known Asthma · bradycardia · dyspnoea · hypotension · reactivation of infection
- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk.

- **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal* studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises use with caution in moderate-to-severe impairment—no information available.
- **RENAL IMPAIRMENT** [EvGr] Use with caution (no information available). ⚠
- **PRESCRIBING AND DISPENSING INFORMATION** Although multi-dose bimatoprost eye drops commonly contain preservatives, preservative-free unit dose vials may be available.
- **PATIENT AND CARER ADVICE**

**Changes to eye colour** Before initiating treatment, patients should be warned of a possible change in eye colour as an increase in the brown pigment in the iris can occur, which may be permanent; particular care is required in those with mixed coloured irides and those receiving treatment to one eye only. Changes in eyelashes and vellus hair can also occur, and patients should also be advised to avoid repeated contact of the eye drop solution with skin as this can lead to hair growth or skin pigmentation.

- **NATIONAL FUNDING/ACCESS DECISIONS**

**LUMIGAN®** For full details see funding body website

#### Scottish Medicines Consortium (SMC) decisions

- ▶ **Bimatoprost 300 micrograms/mL preservative-free eye drops (Lumigan® single-dose eye drops)** for reduction of elevated intraocular pressure in chronic open-angle glaucoma and ocular hypertension in adults (as monotherapy or as adjunctive therapy to beta-blockers) (March 2013) SMC No. 839/13 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Eye drops

EXCIPIENTS: May contain Benzalkonium chloride

##### ▶ Bimatoprost (Non-proprietary)

**Bimatoprost 100 microgram per 1 ml** Bimatoprost 100micrograms/ml eye drops | 3 ml [PoM] £11.71 DT = £2.92 | 9 ml [PoM] £10.61-£35.13

**Bimatoprost 300 microgram per 1 ml** Zimed 0.3mg/ml eye drops preservative free | 3 ml [PoM] £10.99 DT = £11.71

**Bimatoprost 300micrograms/ml eye drops 0.4ml unit dose preservative free | 30 unit dose** [PoM] £18.90 DT = £17.89

**Bimatoprost 300micrograms/ml eye drops | 3 ml** [PoM] £13.36 DT = £13.36

##### ▶ Eyreida (Aspire Pharma Ltd)

**Bimatoprost 300 microgram per 1 ml** Eyreida 0.3mg/ml eye drops | 3 ml [PoM] £11.71 DT = £11.71

##### ▶ Lumigan (AbbVie Ltd)

**Bimatoprost 100 microgram per 1 ml** Lumigan 100micrograms/ml eye drops | 3 ml [PoM] £11.71 DT = £2.92 | 9 ml [PoM] £35.13

**Bimatoprost 300 microgram per 1 ml** Lumigan 300micrograms/ml eye drops 0.4ml unit dose | 30 unit dose [PoM] £13.75 DT = £17.89

## Bimatoprost with timolol

02-Jun-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, bimatoprost above, timolol maleate p. 1270.

#### ● INDICATIONS AND DOSE

**Raised intra-ocular pressure in patients with open-angle glaucoma or ocular hypertension when beta-blocker or prostaglandin analogue alone not adequate**

▶ TO THE EYE

- ▶ Adult: Apply once daily

- **INTERACTIONS** → Appendix 1: beta blockers, non-selective

- **NATIONAL FUNDING/ACCESS DECISIONS**

**GANFORT® SINGLE USE** For full details see funding body website

**Scottish Medicines Consortium (SMC) decisions**

- ▶ **Bimatoprost with timolol (Ganfort<sup>®</sup>) unit dose eye drops for reduction of intraocular pressure (IOP) in adult patients with open-angle glaucoma or ocular hypertension who are insufficiently responsive to topical beta-blockers or prostaglandin analogues (October 2013) SMC No. 906/13**  
Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**

EXCIPIENTS: May contain Benzalkonium chloride

▶ **Bimatoprost with timolol (Non-proprietary)**

**Bimatoprost 300 microgram per 1 ml, Timolol (as Timolol maleate) 5 mg per 1 ml** Bimatoprost 300micrograms/ml / Timolol 5mg/ml eye drops | 3 ml [PoM] £14.16 DT = £14.16  
**Bimatoprost 300micrograms/ml / Timolol 5mg/ml eye drops 0.4ml unit dose preservative free** | 30 unit dose [PoM] £17.94 DT = £17.94  
**Bimatoprost 300micrograms/ml / Timolol 5mg/ml eye drops preservative free** | 3 ml [PoM] £17.07 DT = £14.16

▶ **Eyzeetan** (Aspire Pharma Ltd)

**Bimatoprost 300 microgram per 1 ml, Timolol (as Timolol maleate) 5 mg per 1 ml** Eyzeetan 0.3mg/ml / 5mg/ml eye drops preservative free | 3 ml [PoM] £14.16 DT = £14.16

▶ **Ganfort** (AbbVie Ltd)

**Bimatoprost 300 microgram per 1 ml, Timolol (as Timolol maleate) 5 mg per 1 ml** Ganfort 0.3mg/ml / 5mg/ml eye drops | 3 ml [PoM] £14.16 DT = £14.16 | 9 ml [PoM] £38.15  
**Ganfort 0.3mg/ml / 5mg/ml eye drops 0.4ml unit dose** | 30 unit dose [PoM] £17.94 DT = £17.94

**SYMPATHOMIMETICS > ALPHA<sub>2</sub>-ADRENOCEPTOR AGONISTS****Apraclonidine**

11-May-2021

- **DRUG ACTION** Apraclonidine is an alpha<sub>2</sub>-adrenoceptor agonist that lowers intra-ocular pressure by reducing aqueous humour formation. It is a derivative of clonidine.

● **INDICATIONS AND DOSE****Control or prevention of postoperative elevation of intra-ocular pressure after anterior segment laser surgery**

## ▶ TO THE EYE

- ▶ **Adult:** Apply 1 drop, 1 hour before laser procedure, then 1 drop, immediately after completion of procedure, 1% eye drops to be administered

**Short-term adjunctive treatment of chronic glaucoma in patients not adequately controlled by another drug**

## ▶ TO THE EYE

- ▶ **Adult:** Apply 1 drop 3 times a day usually for maximum 1 month, 0.5% eye drops to be administered, may not provide additional benefit if patient already using two drugs that suppress the production of aqueous humour

- **CONTRA-INDICATIONS** History of severe or unstable and uncontrolled cardiovascular disease

- **CAUTIONS** Cerebrovascular disease · depression · heart failure · history of angina · hypertension · loss of effect may occur over time · Parkinson's syndrome · Raynaud's syndrome · recent myocardial infarction · reduction in vision in end-stage glaucoma (suspend treatment) · severe coronary insufficiency · thromboangiitis obliterans · vasovagal attack

- **INTERACTIONS** → Appendix 1: apraclonidine

● **SIDE-EFFECTS**

- ▶ **Common or very common** Eye disorders

- ▶ **Uncommon** Bradycardia · conjunctival haemorrhage · diarrhoea · dry eye · eye discomfort · eye inflammation · gastrointestinal discomfort · irritability · libido decreased · nasal dryness · palpitations · postural hypotension · sensation abnormal · sleep disorders · syncope · vision disorders · vomiting

- ▶ **Rare or very rare** Chest pain · dry mouth · fatigue · headache · hyperhidrosis · pain in extremity · pruritus · taste altered · temperature sensation altered

**SIDE-EFFECTS, FURTHER INFORMATION** Since absorption may follow topical application, systemic effects may occur—see clonidine hydrochloride p. 161.

**Ocular intolerance** Manufacturer advises withdrawal if eye pruritus, ocular hyperaemia, increased lacrimation, or oedema of the eyelids and conjunctiva occur.

- **PREGNANCY** Manufacturer advises avoid—no information available.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises use with caution and monitor, including close monitoring of cardiovascular parameters—no information available.
- **RENAL IMPAIRMENT** [EvGr] Use with caution in chronic renal failure. ⚠
- **MONITORING REQUIREMENTS**
  - ▶ Monitor intra-ocular pressure and visual fields.
  - ▶ Monitor for excessive reduction in intra-ocular pressure following peri-operative use.
- **PATIENT AND CARER ADVICE**

**Driving and skilled tasks** Drowsiness may affect performance of skilled tasks (e.g. driving).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**

EXCIPIENTS: May contain Benzalkonium chloride

▶ **lopidine** (Novartis Pharmaceuticals UK Ltd)

**Apraclonidine (as Apraclonidine hydrochloride) 5 mg per 1 ml** lolidine 5mg/ml eye drops | 5 ml [PoM] £10.88 DT = £10.88

**Apraclonidine (as Apraclonidine hydrochloride) 10 mg per 1 ml** lolidine 1% eye drops 0.25ml unit dose | 24 unit dose [PoM] £77.85 DT = £77.85

**Brimonidine tartrate**

11-May-2021

- **DRUG ACTION** Brimonidine, an alpha<sub>2</sub>-adrenoceptor agonist, is thought to lower intra-ocular pressure by reducing aqueous humour formation and increasing uveoscleral outflow.

● **INDICATIONS AND DOSE**

**Raised intra-ocular pressure in open-angle glaucoma in patients for whom beta-blockers are inappropriate | Ocular hypertension in patients for whom beta-blockers are inappropriate | Adjunctive therapy when intra-ocular pressure is inadequately controlled by other antiglaucoma therapy**

## ▶ TO THE EYE

- ▶ **Adult:** Apply twice daily

- **CAUTIONS** Cerebral insufficiency · coronary insufficiency · depression · postural hypotension · Raynaud's syndrome · severe cardiovascular disease · thromboangiitis obliterans
- **INTERACTIONS** → Appendix 1: brimonidine
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Asthenia · dizziness · drowsiness · dry eye · dry mouth · eye discomfort · eye disorders · eye inflammation · gastrointestinal disorder · headache · hyperaemia · hypersensitivity · pulmonary reaction · sensation of foreign body · skin reactions · taste altered · vision disorders
  - ▶ **Uncommon** Arrhythmias · nasal dryness · palpitations
  - ▶ **Rare or very rare** Dyspnoea · hypertension · hypotension · insomnia · syncope
  - ▶ **Frequency not known** Face oedema · vasodilation
- **PREGNANCY** Manufacturer advises use only if benefit outweighs risk—limited information available.

- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (no information available).
- **RENAL IMPAIRMENT** Manufacturer advises use with caution.
- **PATIENT AND CARER ADVICE**  
Driving and skilled tasks Drowsiness or blurred vision may affect performance of skilled tasks (e.g. driving).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Eye drops**

EXCIPIENTS: May contain Benzalkonium chloride

| 15 ml [PoM] £27.00

## 6 Retinal disorders

### 6.1 Macular degeneration

#### Age-related macular degeneration

25-Apr-2018

**Description of condition**

Age-related macular degeneration is a progressive eye condition that affects the central area of the retina (macula). It occurs mainly in people aged 55 years and over and is a common cause of vision loss. The progressive loss of central vision affects the patient's ability to see well enough to

recognise faces, drive, and to read and write. Although the exact cause is unknown, known risk factors in addition to increasing age include smoking and a family history of age-related macular degeneration.

There are two types of age-related macular degeneration—dry and wet. Dry (non-neovascular) age-related macular degeneration progresses slowly as extensive wasting of macula cells occurs. Whereas, with wet (neovascular) age-related macular degeneration, new blood vessels develop beneath and within the retina, and can lead to a rapid deterioration of vision. Wet age-related macular degeneration is further classified as *wet-active* (neovascular lesions that may benefit from treatment) and *wet-inactive* (neovascular disease with irreversible structural change).

**Aims of treatment**

The aim of treatment is to slow down the progression of age-related macular degeneration and central vision loss; treatment is initiated under specialist care.

**Treatment**

Treatment is dependent on the stage and type of age-related macular degeneration, with drug treatment only recommended in patients with *wet-active* age-related macular degeneration. Counselling and support, advice on Smoking cessation p. 531, and use of visual aids is recommended in all patients with age related macular degeneration as appropriate.

**(EVG)** An intravitreal anti-vascular endothelial growth factor (anti-VEGF), such as aflibercept p. 1279, ranibizumab p. 1280, or bevacizumab p. 933 [unlicensed use], is first-line treatment for patients with *wet-active* age-related macular degeneration who have a visual acuity between 6/12 and 6/96. If visual acuity is less than 6/96, anti-VEGF treatment should only be given if the patient's overall visual function is likely to improve (e.g. if the affected eye is the patient's better-seeing eye). Anti-VEGF treatment should only be administered by healthcare professionals experienced in the use of intravitreal injections. See also National funding/access decisions for aflibercept p. 1279 and ranibizumab p. 1280.

Treatment should be stopped if the patient develops severe, progressive loss of visual acuity despite treatment, or if the patient's age-related macular degeneration develops into *wet-inactive* with no prospect of visual function improvement. A treatment-free period can be considered in patients whose age-related macular degeneration appears to be stable.

Photodynamic therapy alone should not be given to patients with *wet-active* age-related macular degeneration. It can be given as an adjunct to anti-VEGF treatment as a second-line option in the context of a randomised controlled trial. Intravitreal corticosteroids are not recommended in combination with anti-VEGF treatment because there is limited evidence of benefit to a patient's visual acuity.

Patients should be advised to attend routine sight tests, self-monitor, and to report any changes in vision such as appearance of grey patches or blurred vision, straight lines appearing distorted, and objects appearing smaller than normal.

## ANTINEOVASCULARISATION DRUGS > VASCULAR ENDOTHELIAL GROWTH FACTOR INHIBITORS

### Aflibercept

28-Jun-2021

- **DRUG ACTION** Aflibercept is a recombinant fusion protein that acts as a soluble decoy receptor and binds to vascular endothelial growth factors A and B (VEGF-A, VEGF-B) and placental growth factor (PlGF). Aflibercept inhibits the activation of VEGF receptors and the proliferation of endothelial cells, thereby inhibiting the growth of new vessels.

#### ● INDICATIONS AND DOSE

##### Neovascular (wet) age-related macular degeneration (specialist use only)

- ▶ BY INTRAVITREAL INJECTION
- ▶ Adult: Initially 2 mg once a month for 3 months, then 2 mg every 2 months, review treatment frequency after 12 months

##### Macular oedema secondary to retinal vein occlusion (specialist use only)

- ▶ BY INTRAVITREAL INJECTION
- ▶ Adult: Initially 2 mg once a month until maximum visual acuity is achieved or there are no signs of disease activity (discontinue treatment if no improvement in visual and anatomic outcomes)

##### Diabetic macular oedema (specialist use only)

- ▶ BY INTRAVITREAL INJECTION
- ▶ Adult: Initially 2 mg once a month for 5 months, then maintenance 2 mg every 2 months, review treatment frequency after 12 months (discontinue treatment if no improvement in visual and anatomic outcomes)

##### Myopic choroidal neovascularisation (specialist use only)

- ▶ BY INTRAVITREAL INJECTION
- ▶ Adult: 2 mg for 1 dose, if visual or anatomic outcomes indicate that disease persists, additional doses may be administered; the interval between 2 doses should be greater than 1 month

#### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: EYLEA® 40 MG/ML (AFLIBERCEPT SOLUTION FOR INTRAVITREAL INJECTION): HIGHER RISK OF INTRAOCULAR PRESSURE INCREASE WITH THE PRE-FILLED SYRINGE (APRIL 2021)

Cases of increased intra-ocular pressure have been reported more frequently when using the Eylea® pre-filled syringe compared with a luer-lock syringe used with Eylea® solution for injection in a vial. Incorrect handling in the preparation and injection is suspected as the cause of the observed cases of increased intra-ocular pressure with the Eylea® pre-filled syringe. Injections should be performed by healthcare professionals familiar with the handling of this presentation; the manufacturer has provided educational materials which include a *Prescriber Guide* and a training video on how to prepare and administer the intravitreal injection. The patient's vision and intra-ocular pressure should be evaluated and monitored immediately after the intravitreal injection.

- **CONTRA-INDICATIONS** Clinical signs of irreversible ischaemic visual function loss · ocular or periocular infection · severe intra-ocular inflammation
- **CAUTIONS** Active systemic infection · diabetic patients with uncontrolled hypertension · discontinue treatment if stage 3 or 4 macular holes develop—consult product literature for full details · discontinue treatment in the event of a retinal break—consult product literature for full details · discontinue treatment in the event of rhegmatogenous retinal detachment—consult product

literature for full details · patients at risk of retinal pigment epithelial tear · poorly controlled glaucoma · recent history of myocardial infarction · recent history of stroke · recent history of transient ischaemic attack

**CAUTIONS, FURTHER INFORMATION** Aflibercept is given by intravitreal injection by specialists experienced in the management of this condition. There is a potential risk of arterial thromboembolic events and non-ocular haemorrhage following the intravitreal injection of vascular endothelial growth factor inhibitors. Endophthalmitis can occur after intravitreal injections—patients should be advised to report any signs of infection immediately.

- **INTERACTIONS** → Appendix 1: aflibercept
- **SIDE-EFFECTS**
  - ▶ Common or very common Cataract · eye discomfort · eye disorders · eye inflammation · haemorrhage · retinal pigment epithelial tear · vision disorders
  - ▶ Uncommon Lens opacity
- **CONCEPTION AND CONTRACEPTION** Manufacturer recommends women use effective contraception during and for at least 3 months after treatment.
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **MONITORING REQUIREMENTS** Monitor intra-ocular pressure following injection.
- **DIRECTIONS FOR ADMINISTRATION** For further information on administration, consult product literature.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
- NICE decisions**
  - ▶ Aflibercept solution for injection for treating wet age-related macular degeneration (July 2013) NICE TA294 Recommended with restrictions
  - ▶ Aflibercept for treating visual impairment caused by macular oedema secondary to central retinal vein occlusion (February 2014) NICE TA305 Recommended
  - ▶ Aflibercept for treating diabetic macular oedema (July 2015) NICE TA346 Recommended with restrictions
  - ▶ Aflibercept for treating visual impairment caused by macular oedema after branch retinal vein occlusion (September 2016) NICE TA409 Recommended with restrictions
  - ▶ Aflibercept for treating choroidal neovascularisation (November 2017) NICE TA486 Recommended with restrictions
- Scottish Medicines Consortium (SMC) decisions**
  - ▶ Aflibercept (Eylea®) for adults for the treatment of visual impairment due to myopic choroidal neovascularisation (myopic CNV) (October 2016) SMC No. 1186/16 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ Eylea (Bayer Plc)

**Aflibercept 40 mg per 1 ml** Eylea 3.6mg/90microlitres solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £816.00 (Hospital only)  
Eylea 4mg/100microlitres solution for injection vials | 1 vial [PoM] £816.00 (Hospital only)

## Brolucizumab

15-Feb-2022

- **DRUG ACTION** Brolucizumab is a monoclonal antibody that inhibits vascular endothelial growth factor A (VEGF-A), thereby suppressing endothelial cell proliferation and inhibiting the growth of new vessels and decreasing vascular permeability.

### ● INDICATIONS AND DOSE

#### Neovascular (wet) age-related macular degeneration (specialist use only)

##### ► BY INTRAVITREAL INJECTION

- **Adult:** Initially 6 mg once a month for the first three doses, to be administered into the affected eye, for continued treatment and subsequent dose intervals—consult product literature, discontinue treatment if no improvement in visual and anatomic outcomes

### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: BROLUCIZUMAB (Beovu®); RISK OF INTRAOCULAR INFLAMMATION AND RETINAL VASCULAR OCCLUSION INCREASED WITH SHORT DOSING INTERVALS (JANUARY 2022)

Cases of intra-ocular inflammation, including retinal vasculitis and/or retinal vascular occlusion have been reported during treatment with brolucizumab, occurring more frequently early on during treatment. Intra-ocular inflammation events were seen more frequently among patients who developed antibodies against brolucizumab during treatment; female sex and Japanese origin were also identified as additional risk factors. Healthcare professionals are reminded that maintenance doses of brolucizumab (after the first 3 doses) should not be administered at intervals of less than 8 weeks.

Brolucizumab should be discontinued if these events occur and patients with a medical history of intra-ocular inflammation and/or retinal vascular occlusion in the year prior to treatment should be closely monitored. Healthcare professionals should advise patients on how to identify early signs and symptoms of intra-ocular inflammation, retinal vasculitis and retinal vascular occlusion and to seek medical attention without delay, if these side-effects are suspected.

- **CONTRA-INDICATIONS** Active intra-ocular inflammation—see also *Important safety information* - active or suspected ocular or periocular infection
- **CAUTIONS** History of myocardial infarction within the past 3 months · history of stroke within the past 3 months · history of transient ischaemic attack within the past 3 months · patients at risk of retinal pigment epithelial tear · poorly controlled glaucoma (do not use while intra-ocular pressure is 30 mmHg or higher) · retinal detachment or macular hole (discontinue treatment if rhegmatogenous retinal detachment or stage 3 or 4 macular holes develop)
- CAUTIONS, FURTHER INFORMATION** Brolucizumab is given by intravitreal injection by specialists experienced in the management of this condition. There is a potential risk of arterial thromboembolic events and non-ocular haemorrhage following the intravitreal injection of vascular endothelial growth factor inhibitors. Endophthalmitis can occur after intravitreal injections—patients should be advised to report any signs of infection immediately.
- **SIDE-EFFECTS**
  - **Common or very common** Cataract · eye discomfort · eye disorders · haemorrhage · hypersensitivity · retinal pigment epithelial tear · skin reactions · vision disorders
  - **Uncommon** Retinal occlusion (discontinue) · retinal vasculitis (discontinue)
  - **Frequency not known** Arterial thromboembolism · myocardial infarction · stroke

**SIDE-EFFECTS, FURTHER INFORMATION** Eye inflammation, including retinal vasculitis and/or retinal occlusion, may occur at any time of treatment. These events were observed more frequently at the beginning of the treatment. Discontinue treatment if patients develop these side-effects.

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises females of childbearing potential to use effective contraception during treatment and for 1 month after treatment.
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—limited information available.
- **BREAST FEEDING** Manufacturer advises avoid during and for 1 month after treatment—no information available.
- **MONITORING REQUIREMENTS**
  - Manufacturer advises monitor intra-ocular pressure, perfusion of the optic nerve head, and for signs of ocular infection following injection.
  - Manufacturer advises monitor visual acuity.
- **DIRECTIONS FOR ADMINISTRATION** For further information on administration, consult product literature.
- **PRESCRIBING AND DISPENSING INFORMATION** Brolucizumab is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1; manufacturer advises to record the brand name and batch number after each administration.
- **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator (2–8°C)—may be stored unopened at room temperature (below 25°C) for up to 24 hours before use; protect from light.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
- NICE decisions**
  - Brolucizumab for treating wet age-related macular degeneration (February 2021) NICE TA672 Recommended with restrictions
- Scottish Medicines Consortium (SMC) decisions**
  - Brolucizumab (Beovu®) for the treatment of neovascular (wet) age-related macular degeneration (wAMD) (September 2020) SMC No. SMC2272 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

EXCIPIENTS: May contain Polysorbates, sucrose

##### ► Beovu (Novartis Pharmaceuticals UK Ltd) ▼

Brolucizumab 120 mg per 1 ml Beovu 19.8mg/0.165ml solution for injection pre-filled syringes | 1 pre-filled disposable injection (POM) £816.00 (Hospital only)

## Ranibizumab

20-Oct-2020

### ● INDICATIONS AND DOSE

**Neovascular (wet) age-related macular degeneration (specialist use only) | Diabetic macular oedema (specialist use only) | Macular oedema secondary to retinal vein occlusion (specialist use only) | Choroidal neovascularisation (specialist use only)**

##### ► BY INTRAVITREAL INJECTION

- **Adult:** Initially 500 micrograms once a month, to be administered into the affected eye, until maximum visual acuity is achieved or there are no signs of disease activity, for continued treatment and subsequent dose intervals—consult product literature, discontinue treatment if no improvement in visual and anatomic outcomes

**Concomitant treatment of diabetic macular oedema, or macular oedema secondary to branch retinal vein occlusion, with laser photocoagulation (specialist use only)**

► BY INTRAVITREAL INJECTION

- Adult: 500 micrograms, to be administered at least 30 minutes after laser photocoagulation

● **CONTRA-INDICATIONS** Ocular or periocular infection · severe intra-ocular inflammation · signs of irreversible ischaemic visual function loss in patients with retinal vein occlusion (no information available)

● **CAUTIONS** Active systemic infection · diabetic macular oedema due to type 1 diabetes (limited information available) · diabetic patients with HbA1c over 12% · history of stroke · history of transient ischaemic attack · patients at risk of retinal pigment epithelial tear · previous intravitreal injections · retinal detachment or macular hole (discontinue treatment if rhegmatogenous retinal detachment or stage 3 or 4 macular holes develop) · uncontrolled hypertension

**CAUTIONS, FURTHER INFORMATION** Ranibizumab is given by intravitreal injection by specialists. There is a potential risk of arterial thromboembolic events and non-ocular haemorrhage following the intravitreal injection of vascular endothelial growth factor inhibitors.

Endophthalmitis can occur after intravitreal injections—patients should be advised to report any signs of infection immediately.

● **INTERACTIONS** → Appendix 1: ranibizumab

● **SIDE-EFFECTS**

► **Common or very common** Anaemia · anxiety · arthralgia · cataract · cough · dry eye · eye discomfort · eye disorders · eye inflammation · haemorrhage · headache · hypersensitivity · increased risk of infection · lens opacity · nausea · retinal pigment epithelial tear · vision disorders

► **Uncommon** Corneal deposits

► **Frequency not known** Arterial thromboembolism

● **CONCEPTION AND CONTRACEPTION** Manufacturer recommends women use effective contraception during and for at least 3 months after treatment.

● **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk.

● **BREAST FEEDING** Manufacturer advises avoid—no information available.

● **MONITORING REQUIREMENTS**

► Manufacturer advises monitor intra-ocular pressure, perfusion of the optic nerve head, and for signs of ocular infection following injection.

► Manufacturer advises monitor visual acuity.

● **DIRECTIONS FOR ADMINISTRATION** For further information on administration, consult product literature.

● **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**NICE decisions**

► Ranibizumab for treating choroidal neovascularisation associated with pathological myopia (November 2013) NICE TA298 Recommended

► Ranibizumab for the treating visual impairment caused by macular oedema secondary to retinal vein occlusion (May 2013) NICE TA283 Recommended with restrictions

► Ranibizumab for treating diabetic macular oedema (February 2013) NICE TA274 Recommended with restrictions

► Ranibizumab and pegaptanib for the treatment of age-related macular degeneration (updated May 2012) NICE TA155 Recommended with restrictions

**Scottish Medicines Consortium (SMC) decisions**

► Ranibizumab (*Lucentis*<sup>®</sup>) for the treatment of visual impairment due to Diabetic Macular Oedema (December 2012) SMC No. 711/11 Recommended with restrictions

- Ranibizumab (*Lucentis*<sup>®</sup>) for the treatment of visual impairment due to macular oedema secondary to branch retinal vein occlusion (BRVO) in adults (May 2013) SMC No. 732/11 Recommended
- Ranibizumab (*Lucentis*<sup>®</sup>) for treatment of visual impairment due to choroidal neovascularisation secondary to pathological myopia in adults (November 2013) SMC No. 907/13 Recommended

**All Wales Medicines Strategy Group (AWMSG) decisions**

- Ranibizumab (*Lucentis*<sup>®</sup>) for treatment of visual impairment in adults due to choroidal neovascularisation and not due to pathological myopia or wet age-related macular degeneration (June 2018) AWMSG No. 3233 Recommended

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

► *Lucentis* (Novartis Pharmaceuticals UK Ltd)

Ranibizumab 10 mg per 1 ml *Lucentis* 2.3mg/0.23ml solution for injection vials | 1 vial **PoM** £551.00 (Hospital only)

*Lucentis* 1.65mg/0.165ml solution for injection pre-filled syringes | 1 pre-filled disposable injection **PoM** £551.00

## PHOTOSENSITISERS

### Verteporfin

02-Sep-2020

● **DRUG ACTION** Following intravenous infusion, verteporfin is activated by local irradiation using non-thermal red light to produce cytotoxic derivatives.

● **INDICATIONS AND DOSE**

**Photodynamic treatment of age-related macular degeneration associated with predominantly classic subfoveal choroidal neovascularisation or with pathological myopia (specialist use only)**

► BY INTRAVENOUS INFUSION

► Adult: 6 mg/m<sup>2</sup>, dose to be given over 10 minutes

● **CONTRA-INDICATIONS** Acute porphyrias p. 1150

● **CAUTIONS** Avoid extravasation · biliary obstruction · photosensitivity

● **INTERACTIONS** → Appendix 1: verteporfin

● **SIDE-EFFECTS**

► **Common or very common** Asthenia · dizziness · dyspnoea · headache · hypercholesterolaemia · hypersensitivity · infusion related chest pain · infusion related reaction · nausea · photosensitivity reaction · syncope · vision disorders

► **Uncommon** Eye inflammation · fever · haemorrhage · hyperaesthesia · hypertension · pain · retinal detachment · skin reactions

► **Rare or very rare** Malaise · retinal ischaemia

► **Frequency not known** Myocardial infarction · retinal pigment epithelial tear

● **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk (teratogenic in *animal* studies).

● **BREAST FEEDING** No information available—manufacturer advises avoid breast-feeding for 48 hours after administration.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution in moderate impairment and avoid in severe impairment (no information available).

● **DIRECTIONS FOR ADMINISTRATION** For information on administration and light activation, consult product literature.

For *intravenous infusion* (*Visudyne*<sup>®</sup>), manufacturer advises give intermittently in Glucose 5%; reconstitute each 15 mg with 7 mL water for injections to produce a 2 mg/mL solution then dilute requisite dose with infusion fluid to a final volume of 30 mL and give over 10 minutes; protect infusion from light and administer within 4 hours

of reconstitution. Incompatible with sodium chloride infusion.

- **PATIENT AND CARER ADVICE** Photosensitivity—avoid exposure of unprotected skin and eyes to bright light during infusion and for 48 hours afterwards.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.  
**Powder for solution for infusion**  
EXCIPIENTS: May contain Butylated hydroxytoluene  
▶ **Visudyne** (Neon Healthcare Ltd)  
Verteporfin 15 mg Visudyne 15mg powder for solution for infusion vials | 1 vial [PoM] £850.00 (Hospital only)

## 6.2 Macular oedema

**Other drugs used for Macular oedema** Afibercept, p. 1279  
• Dexamethasone, p. 1252 • Ranibizumab, p. 1280

### CORTICOSTEROIDS

F 740

#### Fluocinolone acetonide

08-Mar-2022

##### ● INDICATIONS AND DOSE

**Treatment of visual impairment associated with chronic diabetic macular oedema which is insufficiently responsive to available therapies (specialist use only) | Prevention of relapse in recurrent non-infectious uveitis affecting the posterior segment of the eye (specialist use only)**

##### ▶ BY INTRAVITREAL INJECTION

- ▶ Adult: 190 micrograms, to be administered into the affected eye, concurrent administration to both eyes not recommended. For further information on pre-treatment, administration and repeat dosing, consult product literature

- **CONTRA-INDICATIONS** Active or suspected ocular infection · active or suspected peri-ocular infection · pre-existing glaucoma
- **CAUTIONS** Raised baseline intra-ocular pressure
- **INTERACTIONS** → Appendix 1: fluocinolone
- **SIDE-EFFECTS**
  - **Common or very common** Cataract · dry eye · eye discomfort · eye disorders · glaucoma · haemorrhage · vision disorders
  - ▶ **Uncommon** Corneal deposits · eye inflammation · headache · optic nerve disorder
  - ▶ **Frequency not known** Thromboembolism
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—no information available.
- **BREAST FEEDING** Manufacturer advises avoid unless essential.
- **MONITORING REQUIREMENTS**
  - ▶ Monitor for raised intra-ocular pressure (particularly if raised at baseline), retinal detachment, endophthalmitis, vitreous haemorrhage or detachment within 2–7 days following the procedure.
  - ▶ Monitor intra-ocular pressure at least every 3 months thereafter (for approximately 36 months).
- **DIRECTIONS FOR ADMINISTRATION**  Concurrent administration to both eyes not recommended.  For further information on administration and repeat dosing, consult product literature.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website
- **NICE decisions**
  - ▶ Fluocinolone acetonide intravitreal implant for treating chronic diabetic macular oedema after an inadequate

response to prior therapy (November 2013) NICE TA301 Recommended with restrictions

- ▶ Fluocinolone acetonide intravitreal implant for treating chronic diabetic macular oedema in phakic eyes after an inadequate response to previous therapy (November 2019) NICE TA613 Not recommended
- ▶ Fluocinolone acetonide intravitreal implant for treating recurrent non-infectious uveitis (July 2019) NICE TA590 Recommended with restrictions
- **Scottish Medicines Consortium (SMC) decisions**
- ▶ Fluocinolone acetonide (*Iluvien*<sup>®</sup>) for the treatment of vision impairment associated with chronic diabetic macular oedema, considered insufficiently responsive to available therapies (February 2014) SMC No. 864/13 Recommended with restrictions
- ▶ Fluocinolone acetonide (*Iluvien*<sup>®</sup>) for prevention of relapse in recurrent non-infectious uveitis affecting the posterior segment of the eye (September 2020) SMC No. SMC2260 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

##### Implant

##### ▶ *Iluvien* (Alimera Sciences Ltd)

Fluocinolone acetonide 190 microgram | IUVIEN 190microgram intravitreal implant in applicator | 1 device [PoM] £5,500.00 (Hospital only)

## 6.3 Optic neuropathy

### DRUGS FOR METABOLIC DISORDERS >

#### ANTIOXIDANTS

##### Idebenone

30-Mar-2021

- **DRUG ACTION** Idebenone is a nootropic and antioxidant that is thought to act by restoring cellular ATP generation, thereby reactivating retinal ganglion cells.

##### ● INDICATIONS AND DOSE

**Leber's hereditary optic neuropathy (initiated by a specialist)**

- ▶ BY MOUTH
- ▶ Adult: 300 mg 3 times a day

##### ● SIDE-EFFECTS

- ▶ **Common or very common** Cough · diarrhoea · increased risk of infection · pain
- ▶ **Frequency not known** Agranulocytosis · anaemia · anxiety · appetite decreased · azotaemia · delirium · dizziness · dyspepsia · hallucination · headache · hepatitis · leucopenia · malaise · movement disorders · nausea · neutropenia · poriomania · seizure · skin reactions · stupor · thrombocytopenia · urine discolouration · vomiting
- **SIDE-EFFECTS, FURTHER INFORMATION** The metabolites of idebenone may cause red-brown discolouration of the urine. This effect is harmless, but the manufacturer advises caution as this may mask colour changes due to other causes (e.g. renal or blood disorders).
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—no information available.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in animal studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (no information available).
- **RENAL IMPAIRMENT** Manufacturer advises use with caution—no information available.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website

**Scottish Medicines Consortium (SMC) decisions**

- ▶ **Idebenone (Raxone<sup>®</sup>)** for the treatment of visual impairment in adolescent and adult patients with Leber's Hereditary Optic Neuropathy (LHON) (May 2017) SMC No. 1226/17 Recommended with restrictions

**All Wales Medicines Strategy Group (AWMSG) decisions**

- ▶ **Idebenone (Raxone<sup>®</sup>)** for the treatment of visual impairment in adolescent and adult patients with Leber's hereditary optic neuropathy (March 2021) AWMSG No. 807 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: tablet

**Tablet**

CAUTIONARY AND ADVISORY LABELS 14, 21

£6,364.00 DT = £6,364.00

(August 2014) SMC No. 892/13 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

- ▶ **Jetrea** (Inceptua AB)  
Ocriciplasmin 1.25 mg per 1 ml Jetrea 0.375mg/0.3ml solution for injection vials | 1 vial [PoM] £2,500.00 (Hospital only)

## 6.4 Vitreomacular traction

### RECOMBINANT PROTEOLYTIC ENZYMES

#### Ocriciplasmin

03-Aug-2020

● **INDICATIONS AND DOSE****Treatment of vitreomacular traction, including when associated with a macular hole of diameter less than or equal to 400 microns (specialist use only)**

- ▶ BY INTRAVITREAL INJECTION
- ▶ **Adult:** 125 micrograms for 1 dose, to be administered into the affected eye, concurrent administration to both eyes is not recommended

- **CONTRA-INDICATIONS** Active or suspected ocular or periocular infection · aphakia · exudative age-related macular degeneration · high myopia · history of rhegmatogenous retinal detachment · ischaemic retinopathies · large diameter macular hole (> 400 microns) · lens zonule instability · proliferative diabetic retinopathy · recent intra-ocular injection (including laser therapy) · recent ocular surgery · retinal vein occlusions · vitreous haemorrhage
- **CAUTIONS** History of uveitis (including severe active inflammation) · non-proliferative diabetic retinopathy · significant eye trauma
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Dry eye · eye discomfort · eye disorders · eye inflammation · haemorrhage · retinal pigment epitheliopathy · vision disorders
- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk—no information available.
- **BREAST FEEDING** Manufacturer advises use only if potential benefit outweighs risk—no information available.
- **MONITORING REQUIREMENTS** Monitor intra-ocular pressure, visual acuity, and for signs of intra-ocular inflammation or infection following injection.
- **DIRECTIONS FOR ADMINISTRATION** For further information on administration, consult product literature.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
- **NICE decisions**
  - ▶ Ocriciplasmin for treating vitreomacular traction (October 2013) NICE TA297 Recommended with restrictions
- **Scottish Medicines Consortium (SMC) decisions**
  - ▶ Ocriciplasmin (*Jetrea*<sup>®</sup>) in adults for the treatment of vitreomacular traction, including when associated with macular hole of diameter less than or equal to 400 microns

## Ear

### Ear

23-Mar-2022

#### Otitis externa

Otitis externa refers to inflammation of the external ear canal which in some cases may involve oedema. It is primarily caused by bacterial infection. [EvGr](#) It is important to consider underlying otitis media as otitis externa may be secondary to otorrhoea from otitis media.

Any precipitating factors should be managed and cleaning the external ear canal should be considered (using dry swabbing, microsuction, or irrigation techniques) if ear wax or debris are blocking passage of topical medicine (may require specialist referral).

A solution of **acetic acid** 2% acts as an astringent in the external ear canal by reducing the pH and reducing bacterial and fungal cell growth. It may be used to treat mild otitis externa and is comparable to an anti-infective combined with a corticosteroid; efficacy is reduced if treatment extends beyond 1 week.

If infection is present, a topical anti-infective with or without a corticosteroid may be considered. These are used for a minimum of one week but if symptoms persist they can be used until they resolve, up to a maximum of 2 weeks. Prolonged and extensive use of topical anti-infective or corticosteroid treatment may affect the flora in the ear canal, increasing the risk of fungal infections. If a mild to moderate, uncomplicated fungal infection is suspected in the context of chronic otitis externa, a topical antifungal such as clotrimazole 1% solution p. 1287, acetic acid 2% spray [unlicensed indication], or clioquinol and a corticosteroid such as flumetasone pivalate with clioquinol p. 1287 can be offered. Sensitivity to topical ear preparations may also occur, especially with prolonged or recurrent use. Astringent agents such as aluminium acetate ear drops p. 1291 are also available. [A](#)

In view of reports of ototoxicity, treatment with topical **aminoglycosides** is contra-indicated in patients with a perforated tympanic membrane (eardrum). [EvGr](#) However, some specialists do use these drops cautiously in the presence of a perforation or patent grommet in patients with chronic suppurative otitis media and when other measures have failed for otitis externa; treatment should be considered only **by specialists** in the following circumstances:

- drops should only be used in the presence of obvious infection;
- treatment should be for no longer than 2 weeks;
- patients should be counselled on the risk of ototoxicity and given justification for the use of these topical antibiotics;
- baseline audiometry should be performed, if possible, before treatment is commenced.

Clinical expertise and judgement should be used to assess the risk of treatment versus the benefit to the patient in such circumstances. [E](#)

[EvGr](#) For severe pain associated with otitis externa, a simple analgesic, such as paracetamol p. 477 or ibuprofen p. 1232, is usually sufficient; codeine phosphate p. 487 may be used for severe pain. Oral antibacterials are rarely indicated but if they are required, consider seeking specialist advice. A systemic antibacterial may be considered if the infection is spreading outside the ear canal, the patient is systemically unwell, or in a high risk group (e.g. diabetics, immunocompromised patients, patients with severe infection or at high-risk of severe infection such as pseudomonas infections). Referral should be considered if there is extensive swelling of the auditory canal. [A](#) For further information, see *Otitis externa* in Ear infections, antibacterial therapy p. 547.

#### Otitis media

##### Acute otitis media

Acute otitis media is a self-limiting condition that mainly affects children. It is characterised by inflammation in the middle ear associated with effusion and accompanied by the rapid onset of signs and symptoms of an ear infection. The infection can be caused by viruses or bacteria; often both are present simultaneously.

Children with acute otitis media usually present with symptoms such as ear pain, rubbing of the ear, fever, irritability, crying, poor feeding, restlessness at night, cough, or rhinorrhoea. Symptoms usually resolve within 3 to 7 days without antibacterial drugs and they make little difference to the development of complications such as short-term hearing loss, perforated eardrum or recurrent infection. Acute complications such as mastoiditis, meningitis, intracranial abscess, sinus thrombosis, and facial nerve paralysis, are rare.

[EvGr](#) Children and their carers should be given advice about the usual duration of acute otitis media, self-care of symptoms such as pain and fever with paracetamol or ibuprofen p. 1232, and when to seek medical help. In addition to oral analgesics for pain relief, consider offering

an ear drop containing an anaesthetic and an analgesic such as phenazone with lidocaine p. 1291, if immediate antibacterial treatment is not given and there is no eardrum perforation or otorrhoea. Children and their carers should be reassured that antibacterial drugs are usually not required.

An immediate antibacterial drug should be given if the child is systemically very unwell, has signs or symptoms of a more serious illness, or is at high risk of complications such as significant heart, lung, renal, liver or neuromuscular disease, immunosuppression, cystic fibrosis, or young children who were born prematurely. An immediate antibacterial drug can also be considered if otorrhoea (discharge following perforation of the eardrum) is present, or in children under 2 years of age with bilateral otitis media. [▶](#) For further information, see *Otitis media* in Ear infections, antibacterial therapy p. 547.

**EVGr** Children with acute otitis media associated with a severe systemic infection or acute complications should be referred to hospital. [▶](#)

#### Otitis media with effusion

Otitis media with effusion (glue ear) is characterised by the collection of fluid within the middle ear without any signs of inflammation. It occurs most frequently in children, often in those aged 2 to 5 years; it is the most common cause of hearing impairment in children. It is more common in children with cleft palate, Down's syndrome, primary ciliary dyskinesia, and allergic rhinitis. **EVGr** Children with otitis media with effusion should be observed (for 6–12 weeks) as it commonly resolves spontaneously. Systemic antibacterials, antihistamines, mucolytics, decongestants, and corticosteroids are not recommended due to lack of evidence supporting their use. Referral to a specialist in certain circumstances (including in children with Down's syndrome and cleft palate) are warranted to avoid complications such as severe hearing impairment, and communication and developmental difficulties. [▶](#)

#### Chronic suppurative otitis media

Chronic suppurative otitis media is a chronic inflammation of the middle ear and mastoid cavity, and is thought to be a complication of acute otitis media. The usual presentation is otorrhoea through a tympanic perforation and can involve infection due to a number of different bacteria or fungi. **EVGr** Referral to an ear, nose and throat specialist is required and treatment is likely to involve antibacterials, corticosteroids (usually topical), and intensive aural cleaning. [▶](#)

#### Removal of ear wax

Ear wax (cerumen) is a normal bodily secretion which provides a protective film on the lining of the ear canal and need only be removed if it causes hearing loss or interferes with a proper view of the ear drum.

Ear wax can be softened using simple remedies such as **olive oil** ear drops or **almond oil** ear drops; sodium bicarbonate ear drops p. 1291 are also effective, but may cause dryness of the ear canal. The drops can be used three to four times daily for several days. Lying down with the affected ear uppermost, ear drops are instilled before waiting for 5 minutes.

If necessary, wax may be removed by irrigation with water (warmed to body temperature). Ear irrigation is generally best avoided in some cases including in young children (under 12 years of age), in patients unable to co-operate with the procedure, in those with otitis media in the last six weeks, in otitis externa, in patients with cleft palate, a history of ear drum perforation, or previous ear surgery. A person who has hearing in one ear only should not have that ear irrigated because even a very slight risk of damage may lead to permanent deafness.

## 1 Otitis externa

**Other drugs used for Otitis externa** Hydrocortisone with miconazole, p. 1344

### ANTIBACTERIALS > AMINOGLYCOSIDES

#### Framycetin sulfate

##### ● INDICATIONS AND DOSE

##### **Bacterial infection in otitis externa**

- ▶ TO THE EAR
- ▶ Adult: (consult product literature)

##### ● CONTRA-INDICATIONS Perforated tympanic membrane

##### ● CAUTIONS Avoid prolonged use

##### ● MEDICINAL FORMS No licensed medicines listed.

**Combinations available:** *Dexamethasone with framycetin sulfate and gramicidin*, p. 1289

599

#### Gentamicin

25-Oct-2021

##### ● INDICATIONS AND DOSE

##### **Bacterial infection in otitis externa**

- ▶ TO THE EAR
- ▶ Child: Apply 2–3 drops 4–5 times a day, (including a dose at bedtime)
- ▶ Adult: Apply 2–3 drops 4–5 times a day, (including a dose at bedtime)

##### ● UNLICENSED USE Gentamicin doses in BNF Publications may differ from those in product literature.

##### IMPORTANT SAFETY INFORMATION

**MHRA/CHM ADVICE: AMINOGLYCOSIDES (GENTAMICIN, AMIKACIN, TOBRAMYCIN, AND NEOMYCIN): INCREASED RISK OF DEAFNESS IN PATIENTS WITH MITOCHONDRIAL MUTATIONS (JANUARY 2021)**

The use of aminoglycosides is associated with rare cases of ototoxicity. A safety review found an increased risk of deafness in patients with mitochondrial mutations (particularly the m.1555A>G mutation), including cases where the patient's aminoglycoside serum levels were within the recommended range. Nevertheless, these mitochondrial mutations are considered rare and penetrance is uncertain. No cases were identified with topical preparations but, based on a shared mechanism of effect, there is a potential risk with gentamicin and other aminoglycosides administered at the site of toxicity i.e. the ear.

Healthcare professionals are advised to consider the need for aminoglycoside treatment versus alternative options in patients with susceptible mutations. The need for genetic testing especially in those requiring recurrent or long-term treatment with aminoglycosides should also be considered, however, urgent treatment should not be delayed. To minimise the risks of adverse effects, continuous monitoring of renal and auditory function, as well as hepatic and laboratory parameters, is recommended for all patients. Those with known mitochondrial mutations or a family history of ototoxicity are advised to inform their doctor or pharmacist before using an aminoglycoside.

##### ● CONTRA-INDICATIONS Patent grommet (although may be used by specialists, see Ear p. 1284) · perforated tympanic membrane (although may be used by specialists, see Ear p. 1284)

##### ● CAUTIONS Avoid prolonged use

• **INTERACTIONS** → Appendix 1: aminoglycosides

• **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Ear/eye drops solution

EXCIPIENTS: May contain Benzalkonium chloride

##### ► Gentamicin (Non-proprietary)

Gentamicin (as Gentamicin sulfate) 3 mg per 1 ml Gentamicin 0.3% ear/eye drops | 10 ml **[PoM]** £30.29 DT = £26.86

## Gentamicin with hydrocortisone

08-Mar-2022

### • INDICATIONS AND DOSE

#### Eczematous inflammation in otitis externa

##### ► TO THE EAR

- Child: Apply 2–4 drops 4–5 times a day, (including a dose at bedtime)
- Adult: Apply 2–4 drops 4–5 times a day, (including a dose at bedtime)

### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: CORTICOSTEROIDS: RARE RISK OF CENTRAL SEROUS CHORIORETINOPATHY WITH LOCAL AS WELL AS SYSTEMIC ADMINISTRATION (AUGUST 2017)

See Corticosteroids, general use p. 737.

NHS IMPROVEMENT PATIENT SAFETY ALERT: STEROID EMERGENCY CARD TO SUPPORT EARLY RECOGNITION AND TREATMENT OF ADRENAL CRISIS IN ADULTS (AUGUST 2020)  
See Adrenal insufficiency p. 738.

PAEDIATRIC STEROID TREATMENT CARD FOR CHILDREN WITH ADRENAL INSUFFICIENCY (NOVEMBER 2020)

The British Society for Paediatric Endocrinology and Diabetes (BSPED) has developed a Paediatric Steroid Treatment Card which should be issued to children with adrenal insufficiency and steroid dependence. The card includes a management summary for the emergency treatment of adrenal crisis and can be issued by any healthcare professional managing such patients. The BSPED Paediatric Steroid Treatment Card is available at: [www.endocrinology.org/adrenal-crisis](http://www.endocrinology.org/adrenal-crisis).

MHRA/CHM ADVICE: AMINOGLYCOSIDES (GENTAMICIN, AMIKACIN, TOBRAMYCIN, AND NEOMYCIN): INCREASED RISK OF DEAFNESS IN PATIENTS WITH MITOCHONDRIAL MUTATIONS (JANUARY 2021)

The use of aminoglycosides is associated with rare cases of ototoxicity. A safety review found an increased risk of deafness in patients with mitochondrial mutations (particularly the m.1555A>G mutation), including cases where the patient's aminoglycoside serum levels were within the recommended range. Nevertheless, these mitochondrial mutations are considered rare and penetrance is uncertain. No cases were identified with topical preparations but, based on a shared mechanism of effect, there is a potential risk with gentamicin and other aminoglycosides administered at the site of toxicity i.e. the ear.

Healthcare professionals are advised to consider the need for aminoglycoside treatment versus alternative options in patients with susceptible mutations. The need for genetic testing especially in those requiring recurrent or long-term treatment with aminoglycosides should also be considered, however, urgent treatment should not be delayed. To minimise the risks of adverse effects, continuous monitoring of renal and auditory function, as well as hepatic and laboratory parameters, is recommended for all patients. Those with known mitochondrial mutations or a family history of ototoxicity are advised to inform their doctor or pharmacist before using an aminoglycoside.

• **CONTRA-INDICATIONS** Patent grommet (although may be used by specialists, see Ear p. 1284) . perforated tympanic membrane (although may be used by specialists, see Ear p. 1284)

• **CAUTIONS** Avoid prolonged use

• **SIDE-EFFECTS** Local reaction

#### • PATIENT AND CARER ADVICE

- In adults If systemic absorption occurs following topical and local use, side-effects applicable to systemic corticosteroids may apply; a patient information leaflet should be supplied and the need for a Steroid Treatment Card and a Steroid Emergency Card considered, see Corticosteroids, general use p. 737.
- In children If systemic absorption occurs following topical and local use, side-effects applicable to systemic corticosteroids may apply; a patient information leaflet should be supplied and the need for a Steroid Treatment Card considered, see Corticosteroids, general use p. 737. Medicines for Children leaflet: Gentamicin and hydrocortisone ear drops for inflammatory ear infections [www.medicinesforchildren.org.uk/medicines/gentamicin-and-hydrocortisone-ear-drops-for-inflammatory-ear-infections/](http://www.medicinesforchildren.org.uk/medicines/gentamicin-and-hydrocortisone-ear-drops-for-inflammatory-ear-infections/)

#### • NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### Scottish Medicines Consortium (SMC) decisions

► Ciprofloxacin (Cetraxal<sup>®</sup>) for the treatment of acute otitis externa in adults and children older than 1 year with an intact tympanic membrane, caused by ciprofloxacin susceptible microorganisms (April 2018) SMC No. 1320/18 Recommended with restrictions

#### All Wales Medicines Strategy Group (AWMSG) decisions

► Ciprofloxacin (Cetraxal<sup>®</sup>) for the treatment of acute otitis externa in adults and children older than 1 year with an intact

tympanic membrane, caused by ciprofloxacin susceptible microorganisms (July 2018) AWM5G No. 1343 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ear drops

#### Ear drops

- ▶ **Cetraxal** (Aspire Pharma Ltd)  
Ciprofloxacin (as Ciprofloxacin hydrochloride) 2 mg per 1 ml Cetraxal 2mg/ml ear drops 0.25ml unit dose | 15 unit dose [PoM] £6.01 DT = £6.01

Combinations available: *Ciprofloxacin with dexamethasone*, p. 1288 · *Ciprofloxacin with fluocinolonone acetate*, p. 1289

## ANTIBACTERIALS > OTHER

### Chloramphenicol

04-Jan-2022

- **DRUG ACTION** Chloramphenicol is a potent broad-spectrum antibiotic.

#### ● INDICATIONS AND DOSE

##### Bacterial infection in otitis externa

- ▶ TO THE EAR
- ▶ Child: Apply 2–3 drops 2–3 times a day
- ▶ Adult: Apply 2–3 drops 2–3 times a day

- **CAUTIONS** Avoid prolonged use
- **INTERACTIONS** → Appendix 1: chloramphenicol
- **SIDE-EFFECTS** Blood disorder · bone marrow depression
- **PATIENT AND CARER ADVICE**  
Medicines for Children leaflet: Chloramphenicol ear drops for ear infections (otitis externa) [www.medicinesforchildren.org.uk/medicines/chloramphenicol-ear-drops-for-ear-infections-otitis-externa/](http://www.medicinesforchildren.org.uk/medicines/chloramphenicol-ear-drops-for-ear-infections-otitis-externa/)
- **LESS SUITABLE FOR PRESCRIBING** Chloramphenicol ear drops are less suitable for prescribing.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Ear drops

EXCIPIENTS: May contain Propylene glycol

- ▶ **Chloramphenicol (Non-proprietary)**  
Chloramphenicol 50 mg per 1 ml Chloramphenicol 5% ear drops | 10 ml [PoM] £99.34 DT = £99.34
- ▶ **Chloramphenicol 100 mg per 1 ml** Chloramphenicol 10% ear drops | 10 ml [PoM] £98.91 DT = £91.05

## ANTIFUNGALS > IMIDAZOLE ANTIFUNGALS

### Clotrimazole

10-Nov-2021

#### ● INDICATIONS AND DOSE

##### Fungal infection in otitis externa

- ▶ TO THE EAR
- ▶ Child: Apply 2–3 times a day continue for at least 14 days after disappearance of infection
- ▶ Adult: Apply 2–3 times a day continue for at least 14 days after disappearance of infection

- **INTERACTIONS** → Appendix 1: antifungals, azoles
- **SIDE-EFFECTS** Hypersensitivity · oedema · pain · paraesthesia · skin reactions
- **PATIENT AND CARER ADVICE**  
Medicines for Children leaflet: Clotrimazole for fungal infections [www.medicinesforchildren.org.uk/medicines/clotrimazole-for-fungal-infections/](http://www.medicinesforchildren.org.uk/medicines/clotrimazole-for-fungal-infections/)

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Liquid

- ▶ **Canesten (clotrimazole)** (Bayer Plc)  
Clotrimazole 10 mg per 1 ml Canesten 1% solution | 20 ml [P] £2.53 DT = £2.53

## CORTICOSTEROIDS

F 1333

### Betamethasone

08-Mar-2022

- **DRUG ACTION** Betamethasone has very high glucocorticoid activity and insignificant mineralocorticoid activity.

#### ● INDICATIONS AND DOSE

##### BETNESOL<sup>®</sup>

##### Ecematous inflammation in otitis externa

- ▶ TO THE EAR
- ▶ Adult: Apply 2–3 drops every 2–3 hours, reduce frequency when relief obtained

##### VISTAMETHASONE<sup>®</sup>

##### Ecematous inflammation in otitis externa

- ▶ TO THE EAR
- ▶ Adult: Apply 2–3 drops every 3–4 hours, reduce frequency when relief obtained

- **CONTRA-INDICATIONS** Avoid alone in the presence of untreated infection (combine with suitable anti-infective)
- **CAUTIONS** Avoid prolonged use
- **INTERACTIONS** → Appendix 1: corticosteroids

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Ear/eye/nose drops solution

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

- ▶ **Betnesol** (RPH Pharmaceuticals AB)  
Betamethasone sodium phosphate 1 mg per 1 ml Betnesol 0.1% eye/ear/nose drops | 10 ml [PoM] £2.32 DT = £2.32
- ▶ **Vistamethasone** (Martindale Pharmaceuticals Ltd)  
Betamethasone sodium phosphate 1 mg per 1 ml Vistamethasone 0.1% ear/eye/nose drops | 5 ml [PoM] £1.02 | 10 ml [PoM] £1.16 DT = £2.32

Combinations available: *Betamethasone with neomycin*, p. 1288

### Flumetasone pivalate with clioquinol

08-Mar-2022

#### ● INDICATIONS AND DOSE

##### Ecematous inflammation in otitis externa | Mild bacterial or fungal infections in otitis externa

- ▶ TO THE EAR
- ▶ Child 2–17 years: 2–3 drops twice daily for 7–10 days, to be instilled into the ear
- ▶ Adult: 2–3 drops twice daily for 7–10 days, to be instilled into the ear

#### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: CORTICOSTEROIDS: RARE RISK OF CENTRAL SEROUS CHORIORETINOPATHY WITH LOCAL AS WELL AS SYSTEMIC ADMINISTRATION (AUGUST 2017)

See Corticosteroids, general use p. 737.

NHS IMPROVEMENT PATIENT SAFETY ALERT: STEROID EMERGENCY CARD TO SUPPORT EARLY RECOGNITION AND TREATMENT OF ADRENAL CRISIS IN ADULTS (AUGUST 2020)

See Adrenal insufficiency p. 738.

PAEDIATRIC STEROID TREATMENT CARD FOR CHILDREN WITH ADRENAL INSUFFICIENCY (NOVEMBER 2020)

The British Society for Paediatric Endocrinology and Diabetes (BSPED) has developed a Paediatric Steroid

Treatment Card which should be issued to children with adrenal insufficiency and steroid dependence. The card includes a management summary for the emergency treatment of adrenal crisis and can be issued by any healthcare professional managing such patients. The BSPED Paediatric Steroid Treatment Card is available at: [www.endocrinology.org/adrenal-crisis](http://www.endocrinology.org/adrenal-crisis).

- **CONTRA-INDICATIONS** Iodine sensitivity
- **CAUTIONS** Avoid prolonged use - manufacturer advises avoid in perforated tympanic membrane (but used by specialists for short periods)
- **SIDE-EFFECTS** Paraesthesia - skin reactions
- **PATIENT AND CARER ADVICE** Clotrimazole stains skin and clothing.
- ▶ In adults If systemic absorption occurs following topical and local use, side-effects applicable to systemic corticosteroids may apply; a patient information leaflet should be supplied and the need for a Steroid Treatment Card and a Steroid Emergency Card considered, see Corticosteroids, general use p. 737.
- ▶ In children If systemic absorption occurs following topical and local use, side-effects applicable to systemic corticosteroids may apply; a patient information leaflet should be supplied and the need for a Steroid Treatment Card considered, see Corticosteroids, general use p. 737.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Ear drops

- ▶ **Flumetasone pivalate with clioquinol (Non-proprietary)**  
Flumetasone pivalate 200 microgram per 1 ml, Clioquinol 10 mg per 1 ml Flumetasone 0.02% / Clioquinol 1% ear drops | 7.5 ml **[PoM]** £11.34 DT = £11.34 | 10 ml **[PoM]** £15.13 DT = £15.13

1333

## Prednisolone

23-May-2022

- **DRUG ACTION** Prednisolone exerts predominantly glucocorticoid effects with minimal mineralocorticoid effects.
- **INDICATIONS AND DOSE**  
**Eczematous inflammation in otitis externa**  
▶ TO THE EAR  
▶ Child: Apply 2–3 drops every 2–3 hours, frequency to be reduced when relief obtained  
▶ Adult: Apply 2–3 drops every 2–3 hours, frequency to be reduced when relief obtained
- **CONTRA-INDICATIONS** Avoid alone in the presence of untreated infection (combine with suitable anti-infective)
- **CAUTIONS** Avoid prolonged use
- **INTERACTIONS** → Appendix 1: corticosteroids
- **SIDE-EFFECTS** Local reaction
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ear drops
- Ear drops**  
EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate
- Ear/eye drops solution**  
EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate
- ▶ **Prednisolone (Non-proprietary)**  
Prednisolone sodium phosphate 5 mg per 1 ml Prednisolone sodium phosphate 0.5% ear/eye drops | 10 ml **[PoM]** £2.57 DT = £2.57

## CORTICOSTEROIDS > CORTICOSTEROID COMBINATIONS WITH ANTI-INFECTIVES

### Betamethasone with neomycin

28-May-2021

The properties listed below are those particular to the combination only. For the properties of the components please consider, betamethasone p. 1287.

#### ● INDICATIONS AND DOSE

##### Eczematous inflammation in otitis externa

- ▶ TO THE EAR USING EAR DROPS
- ▶ Child: Apply 2–3 drops 3–4 times a day
- ▶ Adult: Apply 2–3 drops 3–4 times a day

#### ● IMPORTANT SAFETY INFORMATION

**MHRA/CHM ADVICE: AMINOGLYCOSIDES (GENTAMICIN, AMIKACIN, TOBRAMYCIN, AND NEOMYCIN): INCREASED RISK OF DEAFNESS IN PATIENTS WITH MITOCHONDRIAL MUTATIONS (JANUARY 2021)**

The use of aminoglycosides is associated with rare cases of ototoxicity. A safety review found an increased risk of deafness in patients with mitochondrial mutations (particularly the m.1555A>G mutation), including cases where the patient's aminoglycoside serum levels were within the recommended range. Nevertheless, these mitochondrial mutations are considered rare and penetrance is uncertain. No cases were identified with topical preparations but, based on a shared mechanism of effect, there is a potential risk with neomycin and other aminoglycosides administered at the site of toxicity i.e. the ear. Healthcare professionals are advised to consider the need for aminoglycoside treatment versus alternative options in patients with susceptible mutations. The need for genetic testing especially in those requiring recurrent or long-term treatment with aminoglycosides should also be considered, however, urgent treatment should not be delayed. To minimise the risks of adverse effects, continuous monitoring of renal and auditory function, as well as hepatic and laboratory parameters, is recommended for all patients. Those with known mitochondrial mutations or a family history of ototoxicity are advised to inform their doctor or pharmacist before using an aminoglycoside.

- **CONTRA-INDICATIONS** Patent grommet (although may be used by specialists, see Ear p. 1284) - perforated tympanic membrane (although may be used by specialists, see Ear p. 1284)
- **CAUTIONS** Avoid prolonged use
- **INTERACTIONS** → Appendix 1: corticosteroids - neomycin
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.  
**Ear/eye/nose drops solution**  
EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate  
▶ **Betnesol-N** (RPH Pharmaceuticals AB)  
Betamethasone (as Betamethasone sodium phosphate) 1 mg per 1 ml, Neomycin sulfate 5 mg per 1 ml Betnesol-N ear/eye/nose drops | 10 ml **[PoM]** £2.39 DT = £2.39

## Ciprofloxacin with dexamethasone

04-Nov-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, dexamethasone p. 743, ciprofloxacin p. 1286.

#### ● INDICATIONS AND DOSE

##### Acute otitis media in patients with tympanostomy tubes

- ▶ TO THE EAR
- ▶ Adult: Apply 4 drops twice daily for 7 days

**Acute otitis externa**

## ▶ TO THE EAR

▶ Adult: Apply 4 drops twice daily for 7 days

- **CONTRA-INDICATIONS** Fungal ear infections · viral ear infections
- **CAUTIONS** Avoid prolonged use
- **INTERACTIONS** → Appendix 1: corticosteroids · quinolones
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Ear discomfort
  - ▶ **Uncommon** Ear infection fungal · flushing · irritability · malaise · otorrhoea · paraesthesia · skin reactions · taste altered · vomiting
  - ▶ **Rare or very rare** Dizziness · headache · hearing loss · tinnitus
- SIDE-EFFECTS, FURTHER INFORMATION** Manufacturer advises further evaluation of underlying conditions if otorrhoea persists after a full course, or if at least two episodes of otorrhoea occur within 6 months.
- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk—no information available.
- **BREAST FEEDING** Manufacturer advises caution—no information available.
- **PATIENT AND CARER ADVICE** Manufacturer advises counselling on administration.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
- Scottish Medicines Consortium (SMC) decisions**
  - ▶ Ciprofloxacin with dexamethasone (*Cilodex*<sup>®</sup>) for treatment of the following infections in adults and children: Acute otitis media in patients with tympanostomy tubes (AOMT) (July 2017) SMC No. 1256/17 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Ear drops**

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

▶ **Ciprofloxacin with dexamethasone (Non-proprietary)**

Dexamethasone 1 mg per 1 ml, Ciprofloxacin (as Ciprofloxacin hydrochloride) 3 mg per 1 ml Ciprofloxacin 0.3% / Dexamethasone 0.1% ear drops | 5 ml [PoM] £6.12 DT = £6.12

## Ciprofloxacin with fluocinolone acetonide

08-Mar-2022

The properties listed below are those particular to the combination only. For the properties of the components please consider, ciprofloxacin p. 1286.

● **INDICATIONS AND DOSE****Acute otitis externa | Acute otitis media in patients with tympanostomy tubes**

## ▶ TO THE EAR

▶ Adult: Apply 0.25 mL twice daily for 7 days

**DOSE EQUIVALENCE AND CONVERSION**

▶ Each 0.25 mL dose contains 0.75 mg ciprofloxacin and 0.0625 mg of fluocinolone acetonide.

**IMPORTANT SAFETY INFORMATION**

MHRA/CHM ADVICE: CORTICOSTEROIDS: RARE RISK OF CENTRAL SEROUS CHORIORETINOPATHY WITH LOCAL AS WELL AS SYSTEMIC ADMINISTRATION (AUGUST 2017)

See Corticosteroids, general use p. 737.

NHS IMPROVEMENT PATIENT SAFETY ALERT: STEROID EMERGENCY CARD TO SUPPORT EARLY RECOGNITION AND TREATMENT OF ADRENAL CRISIS IN ADULTS (AUGUST 2020)

See Adrenal insufficiency p. 738.

- **CONTRA-INDICATIONS** Fungal ear infections · viral ear infections

- **INTERACTIONS** → Appendix 1: fluocinolone · quinolones

● **SIDE-EFFECTS**

- ▶ **Common or very common** Ear discomfort · taste altered
- ▶ **Uncommon** Crying · dizziness · fatigue · flushing · headache · hearing impairment · increased risk of infection · irritability · otorrhoea · paraesthesia · skin reactions · tinnitus · tympanic membrane disorder · vomiting
- SIDE-EFFECTS, FURTHER INFORMATION** Manufacturer advises further evaluation of underlying conditions if otorrhoea persists after a full course, or if at least two episodes of otorrhoea occur within 6 months.
- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk—limited information available.
- **BREAST FEEDING** Manufacturer advises caution.
- **PATIENT AND CARER ADVICE** Manufacturer advises counselling on administration.
  - If systemic absorption occurs following topical and local use, side-effects applicable to systemic corticosteroids may apply; a patient information leaflet should be supplied and the need for a Steroid Treatment Card and a Steroid Emergency Card considered, see Corticosteroids, general use p. 737.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Ear drops**

EXCIPIENTS: May contain Polysorbates

▶ **Cetralax Plus** (Aspire Pharma Ltd)

Fluocinolone acetonide 25 mg per 1 ml, Ciprofloxacin (as Ciprofloxacin hydrochloride) 3 mg per 1 ml Cetralax Plus 3mg/ml + 0.25mg/ml ear drops 0.25ml unit dose | 15 unit dose [PoM] £6.01 DT = £6.01

## Dexamethasone with framycetin sulfate and gramicidin

02-Mar-2021

The properties listed below are those particular to the combination only. For the properties of the components please consider, dexamethasone p. 743, framycetin sulfate p. 1285.

● **INDICATIONS AND DOSE****Eczematous inflammation in otitis externa**

## ▶ TO THE EAR

▶ Child: 2–3 drops 3–4 times a day

▶ Adult: 2–3 drops 3–4 times a day

- **CAUTIONS** Avoid prolonged use
- **INTERACTIONS** → Appendix 1: corticosteroids
- **LESS SUITABLE FOR PRESCRIBING** *Sofradex*<sup>®</sup> is less suitable for prescribing.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Ear/eye drops solution**

EXCIPIENTS: May contain Polysorbates

▶ **Sofradex ear/eye drops** (Sanofi)

Dexamethasone (as Dexamethasone sodium metasulfobenzoate) 500 microgram per 1 ml, Framycetin sulfate 5 mg per 1 ml, Gramicidin 50 microgram per 1 ml 8 ml [PoM] £7.50 DT = £7.50

## Dexamethasone with glacial acetic acid and neomycin sulfate

28-May-2021

The properties listed below are those particular to the combination only. For the properties of the components please consider, dexamethasone p. 743.

### ● INDICATIONS AND DOSE

#### Eczematous inflammation in otitis externa

- ▶ TO THE EAR
- ▶ Child 2-17 years: Apply 1 spray 3 times a day
- ▶ Adult: Apply 1 spray 3 times a day

### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: AMINOGLYCOSIDES (GENTAMICIN, AMIKACIN, TOBRAMYCIN, AND NEOMYCIN): INCREASED RISK OF DEAFNESS IN PATIENTS WITH MITOCHONDRIAL MUTATIONS (JANUARY 2021)

The use of aminoglycosides is associated with rare cases of ototoxicity. A safety review found an increased risk of deafness in patients with mitochondrial mutations (particularly the m.1555A>G mutation), including cases where the patient's aminoglycoside serum levels were within the recommended range. Nevertheless, these mitochondrial mutations are considered rare and penetrance is uncertain. No cases were identified with topical preparations but, based on a shared mechanism of effect, there is a potential risk with neomycin and other aminoglycosides administered at the site of toxicity i.e. the ear.

Healthcare professionals are advised to consider the need for aminoglycoside treatment versus alternative options in patients with susceptible mutations. The need for genetic testing especially in those requiring recurrent or long-term treatment with aminoglycosides should also be considered, however, urgent treatment should not be delayed. To minimise the risks of adverse effects, continuous monitoring of renal and auditory function, as well as hepatic and laboratory parameters, is recommended for all patients. Those with known mitochondrial mutations or a family history of ototoxicity are advised to inform their doctor or pharmacist before using an aminoglycoside.

- **CONTRA-INDICATIONS** Patent grommet (although may be used by specialists, see Ear p. 1284) · perforated tympanic membrane (although may be used by specialists, see Ear p. 1284)
- **CAUTIONS** Avoid prolonged use
- **INTERACTIONS** → Appendix 1: corticosteroids · neomycin
- **SIDE-EFFECTS** Paraesthesia · skin reactions · vision blurred
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Spray

EXCIPIENTS: May contain Hydroxybenzoates (parabens)

- ▶ **Otomize** (Teva UK Ltd)  
Dexamethasone 1 mg per 1 gram, Neomycin sulfate 5 mg per 1 gram, Acetic acid glacial 20 mg per 1 gram Otomize ear spray | 5 ml [PoM] £3.27

## Hydrocortisone with neomycin and polymyxin B sulfate

01-Jun-2021

The properties listed below are those particular to the combination only. For the properties of the components please consider, hydrocortisone p. 1339.

### ● INDICATIONS AND DOSE

#### Bacterial infection in otitis externa

- ▶ TO THE EAR
- ▶ Child 3-17 years: Apply 3 drops 3–4 times a day for 7 days (review treatment if there is no clinical improvement)
- ▶ Adult: Apply 3 drops 3–4 times a day for 7 days (review treatment if there is no clinical improvement)

### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: AMINOGLYCOSIDES (GENTAMICIN, AMIKACIN, TOBRAMYCIN, AND NEOMYCIN): INCREASED RISK OF DEAFNESS IN PATIENTS WITH MITOCHONDRIAL MUTATIONS (JANUARY 2021)

The use of aminoglycosides is associated with rare cases of ototoxicity. Those with known mitochondrial mutations or a family history of ototoxicity are advised to inform their doctor or pharmacist before using an aminoglycoside.

- **CONTRA-INDICATIONS** Patent grommet (although may be used by specialists, see Ear p. 1284) · perforated tympanic membrane (although may be used by specialists, see Ear p. 1284)
- **CAUTIONS** Avoid prolonged use
- **INTERACTIONS** → Appendix 1: corticosteroids · neomycin · polymyxin b
- **SIDE-EFFECTS**
- ▶ **Rare or very rare** Headache · paraesthesia · skin reactions · telangiectasia
- **RENAL IMPAIRMENT** Manufacturer advises avoid prolonged, unsupervised use.
- **Dose adjustments** Manufacturer advises reduce dose.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Ear drops

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens), polysorbates

- ▶ **Otosporin** (Phoenix Labs Ltd)  
Hydrocortisone 10 mg per 1 ml, Neomycin sulfate 3400 unit per 1 ml, Polymyxin B sulfate 10000 unit per 1 ml Otosporin ear drops | 10 ml [PoM] £7.45

## DERMATOLOGICAL DRUGS &gt; ASTRINGENTS

**Aluminium acetate**● **INDICATIONS AND DOSE****Inflammation in otitis externa**

- ▶ TO THE EAR
- ▶ Adult: To be inserted into meatus or apply on a ribbon gauze dressing or sponge wick which should be kept saturated with the ear drops

- **DIRECTIONS FOR ADMINISTRATION** For ear drops 8%—dilute 8 parts aluminium acetate ear drops (13%) with 5 parts purified water. Must be freshly prepared.

- **MEDICINAL FORMS** No licensed medicines listed.

**2 Otitis media**

**Other drugs used for Otitis media** Ciprofloxacin with dexamethasone, p. 1288 · Ciprofloxacin with flucloxacilone acetamide, p. 1289

## ANALGESICS &gt; NON-STEROIDAL ANTI-INFLAMMATORY DRUGS

**Phenazone with lidocaine**

26-Nov-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, lidocaine hydrochloride p. 1466.

● **INDICATIONS AND DOSE****Acute otitis media | Barotraumatic otitis**

- ▶ TO THE EAR
- ▶ Child: Apply 4 drops 2–3 times a day, re-evaluate therapy if symptoms do not improve within 7 days or worsen at any time
- ▶ Adult: Apply 4 drops 2–3 times a day, re-evaluate therapy if symptoms do not improve within 7 days or worsen at any time

- **CONTRA-INDICATIONS** Perforated tympanic membrane (risk of ototoxicity)
- **INTERACTIONS** → Appendix 1: antiarrhythmics · NSAIDs
- **SIDE-EFFECTS**
  - ▶ **Rare or very rare** Skin reactions · tympanic membrane hyperaemia
- **PREGNANCY**  Use with caution—no information available but systemic absorption unlikely with intact tympanic membrane. 
- **BREAST FEEDING**  Use with caution—no information available but systemic absorption unlikely with intact tympanic membrane. 

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Ear drops**

EXCIPIENTS: May contain Ethanol

- ▶ **Otigo** (Renaissance Pharma Ltd)  
Lidocaine hydrochloride 10 mg per 1 gram, Phenazone 40 mg per 1 gram Otigo 40mg/g / 10mg/g ear drops | 15 ml  £8.92 DT = £8.92

**3 Removal of earwax****BICARBONATE****Sodium bicarbonate**

19-Apr-2022

● **INDICATIONS AND DOSE****Removal of earwax (with 5% ear drop solution)**

- ▶ TO THE EAR
- ▶ Child: (consult product literature)
- ▶ Adult: (consult product literature)

- **INTERACTIONS** → Appendix 1: sodium bicarbonate
- **SIDE-EFFECTS** Dry ear

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Ear drops**

- ▶ **Sodium bicarbonate (Non-proprietary)**  
Sodium bicarbonate 50 mg per 1 ml Sodium bicarbonate 5% ear drops | 10 ml £1.23-£1.25
- ▶ **KliarVax Sodium Bicarbonate** (Essential-Healthcare Ltd)  
Sodium bicarbonate 50 mg per 1 ml KliarVax Sodium Bicarbonate ear drops | 10 ml £0.97

**SOFTENING DRUGS****Almond oil**

04-Aug-2020

● **INDICATIONS AND DOSE****Removal of earwax**

- ▶ TO THE EAR
- ▶ Child: Allow drops to warm to room temperature before use (consult product literature)
- ▶ Adult: Allow drops to warm to room temperature before use (consult product literature)

- **DIRECTIONS FOR ADMINISTRATION** Expert sources advise the patient should lie with the affected ear uppermost for 5 to 10 minutes after a generous amount of the softening remedy has been introduced into the ear.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Form unstated**

- ▶ **Almond oil (Non-proprietary)**  
Almond oil 1 ml per 1 ml Almond oil liquid | 70 ml £0.73-£0.94

**Docosate sodium****(Diocetyl sodium sulphosuccinate)**

30-Jul-2020

● **INDICATIONS AND DOSE****Removal of ear wax**

- ▶ TO THE EAR
- ▶ Adult: (consult product literature)

- **INTERACTIONS** → Appendix 1: docosates
- **SIDE-EFFECTS** Skin reactions
- **LESS SUITABLE FOR PRESCRIBING** Ear drops less suitable for prescribing.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Ear drops**

EXCIPIENTS: May contain Propylene glycol

- ▶ **Molcer** (Wallace Manufacturing Chemists Ltd)  
Docosate sodium 50 mg per 1 ml Molcer ear drops | 15 ml  £5.60
- ▶ **Waxsol** (Viatris UK Healthcare Ltd)  
Docosate sodium 5 mg per 1 ml Waxsol ear drops | 10 ml  £1.95 DT = £1.95

## Olive oil

04-Aug-2020

### • INDICATIONS AND DOSE

#### Removal of earwax

- ▶ TO THE EAR
- ▶ Child: Apply twice daily for several days (if wax is hard and impacted)
- ▶ Adult: Apply twice daily for several days (if wax is hard and impacted)

#### Removal of earwax (dose approved for use by community practitioner nurse prescribers)

- ▶ TO THE EAR
- ▶ Child: (consult product literature)
- ▶ Adult: (consult product literature)

- **DIRECTIONS FOR ADMINISTRATION** Expert sources advise the patient should lie with the affected ear uppermost for 5 to 10 minutes after a generous amount of the softening remedy has been introduced into the ear. Allow ear drops to warm to room temperature before use.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Spray

- ▶ **Earol** (HL Healthcare Ltd)  
Earol olive oil ear spray | 10 ml 

#### Ear drops

- ▶ **Olive oil (Non-proprietary)**  
Olive oil ear drops | 10 ml £1.35–£1.42
- ▶ **Arjun** (Arjun Products Ltd)  
Arjun ear drops | 10 ml £1.26
- ▶ **Cerumol (olive oil)** (Thornton & Ross Ltd)  
Cerumol olive oil ear drops | 10 ml 
- ▶ **KliarVax** (Essential-Healthcare Ltd)  
KliarVax Olive Oil ear drops | 10 ml £0.97
- ▶ **Olive oil** (Thornton & Ross Ltd)  
Care olive oil ear drops | 10 ml £1.42
- ▶ **Otadrop** (JFA Medical Ltd)  
Otadrop olive oil ear drops | 10 ml £0.80
- ▶ **St George's** (St Georges Medical Ltd)  
Olive oil ear drops | 10 ml £1.40 | 20 ml £2.70

## Urea hydrogen peroxide

02-Sep-2020

### • INDICATIONS AND DOSE

#### Softening and removal of earwax

- ▶ TO THE EAR
- ▶ Adult: (consult product literature)

- **PATIENT AND CARER ADVICE** The patient should lie with the affected ear uppermost for 5 to 10 minutes after a generous amount of the softening remedy has been introduced into the ear.
- **LESS SUITABLE FOR PRESCRIBING** Urea-hydrogen peroxide ear drops are less suitable for prescribing.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Ear drops

- ▶ **Exterol** (Dermal Laboratories Ltd)  
Urea hydrogen peroxide 50 mg per 1 gram Exterol 5% ear drops | 8 ml  £1.75 DT = £3.41
- ▶ **Otex** (Diomed Developments Ltd)  
Urea hydrogen peroxide 50 mg per 1 gram Otex 5% ear drops | 8 ml  £3.41 DT = £3.41

## Nose

### Nose

04-Nov-2021

#### Rhinitis

Rhinitis may be acute or chronic, allergic or non-allergic. Nasal spray and drop preparations often carry indications for the management of allergic rhinitis and perennial rhinitis. Many nasal preparations contain sympathomimetic drugs which may irritate the nasal mucosa.

Patients with nasal congestion and obstructive sleep apnoea/hypopnoea syndrome or obesity hypoventilation syndrome may have underlying allergic or vasomotor rhinitis. For guidance on the management of rhinitis in these patients, see NICE guideline: **Obstructive sleep apnoea/hypopnoea syndrome and obesity hypoventilation syndrome in over 16s** (available at: [www.nice.org.uk/guidance/ng202](http://www.nice.org.uk/guidance/ng202)).

#### Drugs used in nasal allergy

 Sodium chloride 0.9% solution p. 1131 may be used as nasal irrigation in allergic rhinitis for modest symptom reduction, and to reduce the need for other drug treatment.

Mild allergic rhinitis is controlled by **antihistamines** (see under Antihistamines, allergen immunotherapy and allergic emergencies p. 299) or topical **nasal corticosteroids**.

Topical antihistamines (e.g. azelastine hydrochloride p. 1296) are faster acting than oral antihistamines and therefore useful for controlling breakthrough symptoms in allergic rhinitis; they are less effective than topical nasal corticosteroids. Topical nasal decongestants can be used for a short period to provide quick relief from congestion and allow penetration of a topical nasal corticosteroid. Systemic nasal decongestants are weakly effective in reducing nasal obstruction but have considerable potential for side-effects, and therefore are not recommended. Sodium cromoglicate is a weakly effective alternative in patients with mild symptoms, sporadic seasonal problems, or limited allergen exposure.

Moderate to severe allergic rhinitis can be relieved by topical **nasal corticosteroids** during periods of allergen exposure. Severe allergic rhinitis causing very disabling symptoms despite conventional treatment may justify the use of **oral corticosteroids** for short periods. In severe cases, oral corticosteroids may also be used in combination with nasal corticosteroids during treatment initiation to relieve severe mucosal oedema and allow the spray to penetrate the nasal cavity.

Nasal ipratropium bromide p. 1296 may be added to allergic rhinitis treatment when watery rhinorrhoea persists despite treatment with topical nasal corticosteroids and antihistamines; it has no effect on other nasal symptoms.

In seasonal allergic rhinitis (e.g. hay fever), treatment should begin 2 to 3 weeks before the season commences and/or exposure to the allergen.

Montelukast p. 292 is less effective than topical nasal corticosteroids but can be used in patients with seasonal allergic rhinitis and concomitant asthma. 

#### Corticosteroids

 Topical nasal corticosteroid preparations should be avoided in the presence of untreated nasal infections, after nasal surgery (until healing has occurred), and in pulmonary tuberculosis. Systemic absorption may follow nasal administration particularly if high doses are used or if treatment is prolonged. The extent of absorption varies between steroids; mometasone furoate p. 1299 and fluticasone p. 1298 have negligible systemic absorption, others have modest absorption, whilst betamethasone p. 1297 has high systemic absorption and should only be

used short-term. The growth of children receiving treatment with corticosteroids should be monitored; especially in those receiving corticosteroids via multiple routes. [A](#)

### Nasal polyps

[EvGr](#) Patients presenting with nasal polyps should initially be reviewed by an ear, nose and throat specialist. Nasal polyps may be treated with topical nasal corticosteroids (drops or spray). There may be a higher risk of side-effects with use of nasal drops compared to nasal spray due to greater systemic absorption and incorrect administration of drops. To reduce the risk, the drops must be administered with the patient in the 'head down' position. A short course of a systemic corticosteroid can provide symptomatic relief but effects may be temporary and its use is rare due to concerns of systemic side-effects. If systemic corticosteroids are given, they should be used in combination with topical nasal corticosteroids. [A](#)

### Pregnancy

[EvGr](#) If a pregnant woman cannot tolerate the symptoms of allergic rhinitis, treatment may be given. [A](#) Although the safety of nasal corticosteroids in pregnancy has not been established through clinical trials, only minimal amounts of nasal corticosteroids are systemically absorbed. Beclomethasone dipropionate p. 1297, budesonide p. 1298, and fluticasone are widely used in asthmatic pregnant women; fluticasone has the lowest systemic absorption when used intra-nasally. [EvGr](#) Decongestants are not recommended however, some antihistamines and sodium cromoglicate may be used. [A](#)

### Topical nasal decongestants

The nasal mucosa is sensitive to changes in atmospheric temperature and humidity and these alone may cause slight nasal congestion. [EvGr](#) Sodium chloride 0.9% given as nasal drops, spray, or irrigation may relieve nasal congestion.

Steam inhalation may help to relieve congestion but care should be taken to avoid scalding (see under Aromatic inhalations, cough preparations and systemic nasal decongestants p. 320).

Symptoms of nasal congestion associated with allergic rhinitis, the common cold, and sinusitis may be relieved by the short-term use (usually not longer than 7 days) of decongestant nasal drops and sprays. [A](#) These all contain sympathomimetic drugs which exert their effect by vasoconstriction of the mucosal blood vessels which in turn reduces oedema of the nasal mucosa. Their use, especially with longer durations, can give rise to rebound congestion (rhinitis medicamentosa) on withdrawal, due to a secondary vasodilatation with a subsequent temporary increase in nasal congestion. This in turn tempts the further use of the decongestant, leading to a vicious cycle of events; tolerance with reduced effect may also be seen with excessive use.

[EvGr](#) Non-allergic watery rhinorrhoea often responds to treatment with nasal antimuscarinic ipratropium bromide. [A](#)

### Nasal preparations for infection

#### Nasal staphylococci

[EvGr](#) Elimination of organisms such as staphylococci from the nasal vestibule can be achieved by the use of antimicrobial preparations such as chlorhexidine with neomycin cream (*Naseptin*<sup>®</sup>) p. 1295. A nasal ointment containing mupirocin p. 1295 is available if *Naseptin*<sup>®</sup> is unsuitable or ineffective.

In hospitals or in care establishments, mupirocin nasal ointment can be used for the eradication of nasal carriage of methicillin-resistant *Staphylococcus aureus* (MRSA). [A](#)

For information on eradication of MRSA, consult local infection control policy. See also management of MRSA p. 630.

## 1 Nasal congestion

### SYMPATHOMIMETICS > VASOCONSTRICTOR

#### Ephedrine hydrochloride

29-Mar-2022

##### ● INDICATIONS AND DOSE

#### Nasal congestion | Sinusitis affecting the maxillary antrum

##### ▶ BY INTRANASAL ADMINISTRATION

- ▶ Child 12-17 years: Apply 1-2 drops up to 4 times a day as required for a maximum of 7 days, to be instilled into each nostril, administer ephedrine 0.5% nasal drops
- ▶ Adult: Apply 1-2 drops up to 4 times a day as required for a maximum of 7 days, to be instilled into each nostril

##### IMPORTANT SAFETY INFORMATION

#### CHM/MHRA Advice

The CHM/MHRA has stated that non-prescription cough and cold medicines containing ephedrine can be considered for up to 5 days' treatment in children aged 6-12 years after basic principles of best care have been tried; these medicines should not be used in children under 6 years of age.

- **CAUTIONS** Avoid excessive or prolonged use · cardiovascular disease (in children) · diabetes mellitus · elderly · hypertension · hyperthyroidism · ischaemic heart disease (in adults) · prostatic hypertrophy (risk of acute urinary retention) (in adults)
  - **INTERACTIONS** → Appendix 1: sympathomimetics, vasoconstrictor
  - **SIDE-EFFECTS**
    - ▶ **Common or very common** Anxiety · headache · insomnia · nausea
    - ▶ **Frequency not known** Appetite decreased · arrhythmia · circulation impaired · dermatitis · dizziness · drug dependence · dry mouth · dyspnoea · hallucination · hyperglycaemia · hyperhidrosis · hypersalivation · hypertension · hypokalaemia · hypotension · irritability · muscle weakness · mydriasis · pain · palpitations · paranoia · piloerection · rebound congestion · syncope · thirst · tremor · urinary disorders · vasoconstriction · vasodilatation · vomiting
  - **PREGNANCY** Manufacturer advises avoid.
  - **BREAST FEEDING** Present in milk; manufacturer advises avoid—irritability and disturbed sleep reported.
  - **PRESCRIBING AND DISPENSING INFORMATION** For nasal drops, the BP directs that if no strength is specified 0.5% drops should be supplied.
  - **PROFESSION SPECIFIC INFORMATION**
    - Dental practitioners' formulary** Ephedrine nasal drops may be prescribed.
    - **EXCEPTIONS TO LEGAL CATEGORY** Ephedrine nasal drops can be sold to the public provided no more than 180 mg of ephedrine base (or salts) are supplied at one time, and pseudoephedrine salts are not supplied at the same time; for conditions that apply to supplies made at the request of a patient, see *Medicines, Ethics and Practice*, London, Pharmaceutical Press (always consult latest edition).
  - **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: nasal drops
- Nasal drops**
- ▶ **Ephedrine hydrochloride (Non-proprietary)**
    - ▶ **Ephedrine hydrochloride 5 mg per 1 ml** Ephedrine 0.5% nasal drops | 10 ml [P](#) | £1.90 DT = £1.90

**Ephedrine hydrochloride 10 mg per 1 ml** Ephedrine 1% nasal drops  
| 10 ml  £1.94 DT = £1.94

## Pseudoephedrine hydrochloride

11-May-2021

### ● INDICATIONS AND DOSE

#### **Congestion of mucous membranes of upper respiratory tract**

- ▶ BY MOUTH
- ▶ Child 6-11 years: 30 mg 3-4 times a day
- ▶ Child 12-17 years: 60 mg 3-4 times a day
- ▶ Adult: 60 mg 3-4 times a day

### IMPORTANT SAFETY INFORMATION

**MHRA/CHM ADVICE: OVER-THE-COUNTER COUGH AND COLD MEDICINES FOR CHILDREN (APRIL 2009)**

Children under 6 years should not be given over-the-counter cough and cold medicines containing pseudoephedrine.

- **CAUTIONS** Diabetes · heart disease · hypertension · hyperthyroidism · ischaemic heart disease (in adults) · prostatic hypertrophy (in adults) · raised intra-ocular pressure (in children) · susceptibility to angle-closure glaucoma (in adults)
- **INTERACTIONS** → Appendix 1: sympathomimetics, vasoconstrictor
- **SIDE-EFFECTS** Angle closure glaucoma · anxiety · arrhythmias · circulation impaired · dry mouth · hallucination · headache · hypertension · irritability · nausea · palpitations · psychotic disorder · skin reactions · sleep disorders · tremor · urinary retention · vomiting
- **PREGNANCY** Defective closure of the abdominal wall (gastroschisis) reported very rarely in newborns after first trimester exposure.
- **BREAST FEEDING** May suppress lactation; avoid if lactation not well established or if milk production insufficient.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment.
- **RENAL IMPAIRMENT**  Use with caution in mild to moderate impairment; avoid in severe impairment. 
- **LESS SUITABLE FOR PRESCRIBING** Pseudoephedrine hydrochloride is less suitable for prescribing.
- **EXCEPTIONS TO LEGAL CATEGORY** *Galpseud*<sup>®</sup> and *Sudafed*<sup>®</sup> can be sold to the public provided no more than 720 mg of pseudoephedrine salts are supplied, and ephedrine base (or salts) are not supplied at the same time; for details see *Medicines, Ethics and Practice*, London, Pharmaceutical Press (always consult latest edition).
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Oral solution**

EXCIPIENTS: May contain Alcohol

- ▶ **Galpseud** (Thornton & Ross Ltd)

**Pseudoephedrine hydrochloride 6 mg per 1 ml** Galpseud  
30mg/5ml linctus sugar-free | 2000 ml  £14.00

#### **Tablet**

- ▶ **Galpseud** (Thornton & Ross Ltd)

**Pseudoephedrine hydrochloride 60 mg** Galpseud 60mg tablets |  
24 tablet  £2.25 DT = £2.25

## Xylometazoline hydrochloride

13-Feb-2020

- **DRUG ACTION** Xylometazoline is a sympathomimetic.

### ● INDICATIONS AND DOSE

#### **Nasal congestion**

- ▶ BY INTRANASAL ADMINISTRATION USING NASAL DROPS
  - ▶ Child 6-11 years: 1-2 drops 1-2 times a day as required for maximum duration of 5 days, 0.05% solution to be administered into each nostril
  - ▶ Child 12-17 years: 2-3 drops 2-3 times a day as required for maximum duration of 7 days, 0.1% solution to be administered into each nostril
  - ▶ Adult: 2-3 drops 2-3 times a day as required for maximum duration of 7 days, 0.1% solution to be administered into each nostril
- ▶ BY INTRANASAL ADMINISTRATION USING NASAL SPRAY
  - ▶ Child 12-17 years: 1 spray 1-3 times a day as required for maximum duration of 7 days, to be administered into each nostril
  - ▶ Adult: 1 spray 1-3 times a day as required for maximum duration of 7 days, to be administered into each nostril

### IMPORTANT SAFETY INFORMATION

The CHM/MHRA has stated that non-prescription cough and cold medicines containing oxymetazoline or xylometazoline can be considered for up to 5 days' treatment in children aged 6-12 years after basic principles of best care have been tried; these medicines should not be used in children under 6 years of age.

- **CAUTIONS** Angle-closure glaucoma · avoid excessive or prolonged use · cardiovascular disease (in children) · diabetes mellitus · elderly · hypertension · hyperthyroidism · ischaemic heart disease (in adults) · prostatic hypertrophy (risk of acute retention) (in adults) · rebound congestion

#### **CAUTIONS, FURTHER INFORMATION**

- ▶ **Rebound congestion** Sympathomimetic drugs are of limited value in the treatment of nasal congestion because they can, following prolonged use (more than 7 days), give rise to a rebound congestion (rhinitis medicamentosa) on withdrawal, due to a secondary vasodilatation with a subsequent temporary increase in nasal congestion. This in turn tempts the further use of the decongestant, leading to a vicious cycle of events.
- **INTERACTIONS** → Appendix 1: sympathomimetics, vasoconstrictor
- **SIDE-EFFECTS** Cardiovascular effects · headache · hypersensitivity · nasal dryness · nausea · paraesthesia · visual impairment
- **SIDE-EFFECTS, FURTHER INFORMATION** Use of decongestants in infants and children under 6 years has been associated with agitated psychosis, ataxia, hallucinations, and even death—avoid.
- **PREGNANCY** Manufacturer advises avoid.
- **BREAST FEEDING** Manufacturer advises caution—no information available.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Spray**

- ▶ **Otrivine** (GlaxoSmithKline Consumer Healthcare UK Ltd)

**Xylometazoline hydrochloride 1 mg per 1 ml** Otrivine Congestion Relief 0.1% nasal spray | 10 ml  £3.12 DT = £2.18

Otrivine Adult Measured Dose Sinusitis spray | 10 ml  £2.81 DT = £2.18

Otrivine Allergy Relief 0.1% nasal spray | 10 ml  £2.81 DT = £2.18

Otrivine Adult nasal spray | 10 ml  £2.49 DT = £2.18

Otrivine Adult Metered Dose 0.1% nasal spray | 10 ml  £2.81 DT = £2.18

- ▶ **Sudafed Congestion Relief** (McNeil Products Ltd)  
Xylometazoline hydrochloride 1 mg per 1 ml Sudafed Congestion Relief 0.1% nasal spray | 10 ml [GSL] £3.83 DT = £2.18
- ▶ **Sudafed Non-Drugs Decongestant (xylometazoline)** (McNeil Products Ltd)  
Xylometazoline hydrochloride 1 mg per 1 ml Sudafed Blocked Nose 0.1% spray | 15 ml [GSL] £3.10
- ▶ **Sudafed Sinus-Ease** (McNeil Products Ltd)  
Xylometazoline hydrochloride 1 mg per 1 ml Sudafed Sinus-Ease 0.1% nasal spray | 15 ml [GSL] £3.10

#### Nasal drops

- ▶ **Otrivine** (GlaxoSmithKline Consumer Healthcare UK Ltd)  
Xylometazoline hydrochloride 500 microgram per 1 ml Otrivine Child nasal drops | 10 ml [P] £2.49 DT = £1.91
- ▶ **Xylometazoline hydrochloride 1 mg per 1 ml Otrivine Adult 0.1% nasal drops** | 10 ml [GSL] £2.18 DT = £2.18

## 2 Nasal infection

### Sinusitis (acute)

31-Oct-2017

#### Description of condition

Sinusitis is an inflammation of the mucosal lining of the paranasal sinuses. Acute sinusitis (rhinosinusitis) is a self-limiting condition usually triggered by a viral upper-respiratory tract infection such as the 'common cold'. Occasionally, acute sinusitis may become complicated by a bacterial infection (see *Antibacterial therapy for acute sinusitis* in Nose infections, antibacterial therapy p. 550).

Patients with acute sinusitis usually present with symptoms of nasal blockage or congestion, nasal discharge, dental or facial pain or pressure, and reduction or loss of the sense of smell.

Symptoms usually improve within 2 to 3 weeks without requiring treatment.

Rarely, acute sinusitis may lead to orbital, intracranial or skeletal complications (e.g. periorbital cellulitis, symptoms or signs of meningitis).

#### Aims of treatment

Treatment is aimed at managing symptoms including pain, fever, and nasal congestion as well as treatment of bacterial infection if present.

#### Treatment

**[EvGr]** Patients presenting with symptoms for around 10 days or less, should be given advice about the usual duration of acute sinusitis, self-care of pain or fever with paracetamol p. 477 or ibuprofen p. 1232, and when to seek medical help. Patients should be reassured that antibiotics are usually not required. Some patients may try nasal saline or nasal decongestants, however there is limited evidence to show they help to relieve nasal congestion.

Patients presenting with symptoms for around 10 days or more with no improvement could be considered for treatment with a high-dose nasal corticosteroid, such as mometasone furoate p. 1299 [unlicensed use] or fluticasone p. 1298 [unlicensed use] for 14 days. Supply of a back-up antibiotic prescription could be considered and used if symptoms do not improve within 7 days, or if they worsen rapidly or significantly.

If the patient is systemically very unwell, has signs and symptoms of a more serious illness or condition, or is at high-risk of complications, an immediate antibiotic should be given. **[A]** (see *Antibacterial therapy for acute sinusitis* in Nose infections, antibacterial therapy p. 550).

**[EvGr]** Patients presenting with symptoms of acute sinusitis associated with a severe systemic infection or with orbital or intracranial complications should be referred to hospital. **[A]**

#### Useful Resources

Sinusitis (acute): antimicrobial prescribing. National Institute for Health and Care Excellence. NICE guideline 79. October 2017.  
[www.nice.org.uk/guidance/ng79](http://www.nice.org.uk/guidance/ng79)

### ANTIBACTERIALS > AMINOGLYCOSIDES

#### Chlorhexidine with neomycin

##### ● INDICATIONS AND DOSE

##### Eradication of nasal carriage of staphylococci

- ▶ BY INTRANASAL ADMINISTRATION
- ▶ Child: Apply 4 times a day for 10 days
- ▶ Adult: Apply 4 times a day for 10 days

##### Preventing nasal carriage of staphylococci

- ▶ BY INTRANASAL ADMINISTRATION
- ▶ Child: Apply twice daily
- ▶ Adult: Apply twice daily

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

##### Cream

EXCIPIENTS: May contain Arachis (peanut) oil, cetostearyl alcohol (including cetyl and stearyl alcohol)

- ▶ **Naseptin** (Alliance Pharmaceuticals Ltd)  
Chlorhexidine hydrochloride 1 mg per 1 gram, Neomycin sulfate 5 mg per 1 gram Naseptin nasal cream | 15 gram [PoM] £1.99 DT = £1.99

### ANTIBACTERIALS > OTHER

#### Mupirocin

07-May-2021

##### ● INDICATIONS AND DOSE

##### BACTROBAN NASAL<sup>®</sup>

##### For eradication of nasal carriage of staphylococci, including methicillin-resistant *Staphylococcus aureus* (MRSA)

- ▶ BY INTRANASAL ADMINISTRATION
- ▶ Child: Apply 2–3 times a day for 5 days; a sample should be taken 2 days after treatment to confirm eradication. Course may be repeated once if sample positive (and throat not colonised), dose to be applied to the inner surface of each nostril
- ▶ Adult: Apply 2–3 times a day for 5 days; a sample should be taken 2 days after treatment to confirm eradication. Course may be repeated once if sample positive (and throat not colonised), dose to be applied to the inner surface of each nostril

##### ● SIDE-EFFECTS

- ▶ **Common or very common** Skin reactions
- ▶ **Uncommon** Nasal mucosal disorder
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—no information available.
- **BREAST FEEDING** No information available.
- **RENAL IMPAIRMENT** **[EvGr]** Avoid using ointment in moderate to severe impairment when absorption of large quantities may occur (contains polyethylene glycol which is excreted renally). **[A]**

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

##### Nasal ointment

- ▶ **Bactroban** (GlaxoSmithKline UK Ltd)  
Mupirocin (as Mupirocin calcium) 20 mg per 1 gram Bactroban 2% nasal ointment | 3 gram [PoM] £4.24 DT = £4.24

## CORTICOSTEROIDS > CORTICOSTEROID COMBINATIONS WITH ANTI-INFECTIVES

### Betamethasone with neomycin 28-May-2021

The properties listed below are those particular to the combination only. For the properties of the components please consider, betamethasone p. 1297.

#### ● INDICATIONS AND DOSE

##### Nasal infection

- ▶ BY INTRANASAL ADMINISTRATION USING NASAL DROPS
- ▶ Child: Apply 2–3 drops 2–3 times a day, to be applied into each nostril
- ▶ Adult: Apply 2–3 drops 2–3 times a day, to be applied into each nostril

● **INTERACTIONS** → Appendix 1: corticosteroids · neomycin

● **SIDE-EFFECTS** Asthma · dizziness · epistaxis · growth retardation (in children) · headache · nasal complaints · nausea · smell altered · taste altered · urticaria

● **LESS SUITABLE FOR PRESCRIBING** Betamethasone with neomycin nasal-drops are less suitable for prescribing; there is no evidence that topical anti-infective nasal preparations have any therapeutic value in rhinitis or sinusitis.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

##### Ear/eye/nose drops solution

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

▶ **Betnesol-N** (RPH Pharmaceuticals AB)

Betamethasone (as Betamethasone sodium phosphate) 1 mg per 1 mL, Neomycin sulfate 5 mg per 1 mL Betnesol-N ear/eye/nose drops | 10 mL [PcM] £2.39 DT = £2.39

## 3 Nasal inflammation, nasal polyps and rhinitis

### Other drugs used for Nasal inflammation, nasal polyps and rhinitis

Desloratadine, p. 302 · Dupilumab, p. 1349 · Fexofenadine hydrochloride, p. 303 · Ketotifen, p. 308 · Rupatadine, p. 304

## ANTIHISTAMINES

### Azelastine hydrochloride 11-May-2020

#### ● INDICATIONS AND DOSE

##### Allergic rhinitis

- ▶ BY INTRANASAL ADMINISTRATION
- ▶ Child 6–17 years: 1 spray twice daily, to be administered into each nostril
- ▶ Adult: 1 spray twice daily, to be administered into each nostril

##### DOSE EQUIVALENCE AND CONVERSION

- ▶ 1 spray equivalent to 140 micrograms.

● **INTERACTIONS** → Appendix 1: antihistamines, non-sedating

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Taste bitter (if applied incorrectly)
- ▶ **Uncommon** Epistaxis · nasal complaints

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

##### Spray

▶ **Rhinolast** (Viatris UK Healthcare Ltd)

Azelastine hydrochloride 140 microgram per 1 actuation Rhinolast 140micrograms/dose nasal spray | 22 mL [PcM] £10.50 DT = £10.50

Combinations available: **Fluticasone with azelastine**, p. 1299

## ANTIMUSCARINICS

¶ 265

### Ipratropium bromide 05-May-2021

#### ● INDICATIONS AND DOSE

##### Rhinorrhoea associated with allergic and non-allergic rhinitis

- ▶ BY INTRANASAL ADMINISTRATION
- ▶ Child 12–17 years: 2 sprays 2–3 times a day, dose to be sprayed into each nostril
- ▶ Adult: 2 sprays 2–3 times a day, dose to be sprayed into each nostril

##### DOSE EQUIVALENCE AND CONVERSION

- ▶ 1 metered spray of nasal spray = 21 micrograms.

● **CAUTIONS** Avoid spraying near eyes · bladder outflow obstruction · cystic fibrosis · prostatic hyperplasia (in adults) · susceptibility to angle-closure glaucoma

● **INTERACTIONS** → Appendix 1: ipratropium

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Epistaxis · gastrointestinal motility disorder · headache · nasal complaints · throat complaints
- ▶ **Uncommon** Corneal oedema · eye disorders · eye pain · nausea · respiratory disorders · stomatitis · vision disorders
- ▶ **Rare or very rare** Palpitations

● **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with hypersensitivity to atropine or its derivatives.

● **PREGNANCY** Manufacturer advises only use if potential benefit outweighs the risk.

● **BREAST FEEDING** No information available—manufacturer advises only use if potential benefit outweighs risk.

● **PATIENT AND CARER ADVICE** Patients or carers should be counselled on appropriate administration technique and warned against accidental contact with the eye (due to risk of ocular complications).

**Driving and skilled tasks** Manufacturer advises patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of dizziness and vision disorders.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

##### Spray

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

▶ **Rinatec** (Sanofi)

Ipratropium bromide 21 microgram per 1 dose Rinatec 21micrograms/dose nasal spray | 180 dose [PcM] £6.54 DT = £6.54

## CORTICOSTEROIDS

### Corticosteroids (intranasal)

#### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: CORTICOSTEROIDS: RARE RISK OF CENTRAL SEROUS CHORIORETINOPATHY WITH LOCAL AS WELL AS SYSTEMIC ADMINISTRATION (AUGUST 2017)

Central serous chorioretinopathy is a retinal disorder that has been linked to the systemic use of corticosteroids. Recently, it has also been reported after local administration of corticosteroids via inhaled and

intranasal, epidural, intra-articular, topical dermal, and periocular routes. The MHRA recommends that patients should be advised to report any blurred vision or other visual disturbances with corticosteroid treatment given by any route; consider referral to an ophthalmologist for evaluation of possible causes if a patient presents with vision problems.

**NHS IMPROVEMENT PATIENT SAFETY ALERT: STEROID EMERGENCY CARD TO SUPPORT EARLY RECOGNITION AND TREATMENT OF ADRENAL CRISIS IN ADULTS (AUGUST 2020)**

A patient-held **Steroid Emergency Card** has been developed for patients with adrenal insufficiency and steroid dependence who are at risk of adrenal crisis. It aims to support healthcare staff with the early recognition of patients at risk of adrenal crisis and the emergency treatment of adrenal crisis. All eligible patients should be issued a Steroid Emergency Card. Providers that treat patients with acute physical illness or trauma, or who may require emergency treatment, elective surgery, or other invasive procedures, should establish processes to check for risk of adrenal crisis and confirm if the patient has a Steroid Emergency Card.

**PAEDIATRIC STEROID TREATMENT CARD FOR CHILDREN WITH ADRENAL INSUFFICIENCY (NOVEMBER 2020)**

The British Society for Paediatric Endocrinology and Diabetes (BSPED) has developed a Paediatric Steroid Treatment Card which should be issued to children with adrenal insufficiency and steroid dependence. The card includes a management summary for the emergency treatment of adrenal crisis and can be issued by any healthcare professional managing such patients. The BSPED Paediatric Steroid Treatment Card is available at: [www.endocrinology.org/adrenal-crisis](http://www.endocrinology.org/adrenal-crisis).

- **CAUTIONS** Avoid after nasal surgery (until healing has occurred) · avoid in pulmonary tuberculosis · avoid in the presence of untreated nasal infections · patients transferred from systemic corticosteroids may experience exacerbation of some symptoms
- CAUTIONS, FURTHER INFORMATION**
- ▶ **Systemic absorption** Systemic absorption may follow nasal administration particularly if high doses are used or if treatment is prolonged; therefore also consider the cautions and side-effects of systemic corticosteroids. The risk of systemic effects may be greater with nasal drops than with nasal sprays; drops are administered incorrectly more often than sprays.
- **SIDE-EFFECTS**
- ▶ **Common or very common** Altered smell sensation · epistaxis · headache · nasal complaints · taste altered · throat irritation
- ▶ **Rare or very rare** Glaucoma · nasal septum perforation (more common following nasal surgery) · vision blurred
- SIDE-EFFECTS, FURTHER INFORMATION** Systemic absorption may follow nasal administration particularly if high doses are used or if treatment is prolonged. Therefore also consider the side-effects of systemic corticosteroids.
- **MONITORING REQUIREMENTS**
- ▶ In children The height of children receiving prolonged treatment with nasal corticosteroids should be monitored; if growth is slowed, referral to a paediatrician should be considered.
- **PATIENT AND CARER ADVICE** If systemic absorption occurs following intranasal use, side-effects applicable to systemic corticosteroids may apply.

F 1296

## Beclometasone dipropionate

08-Mar-2022

### (Beclomethasone dipropionate)

#### ● INDICATIONS AND DOSE

##### Prophylaxis and treatment of allergic and vasomotor rhinitis

###### ▶ BY INTRANASAL ADMINISTRATION

- ▶ Child 6–17 years: 100 micrograms twice daily, dose to be administered into each nostril, reduced to 50 micrograms twice daily, dose to be administered into each nostril, dose to be reduced when symptoms controlled; maximum 400 micrograms per day
- ▶ Adult: 100 micrograms twice daily, dose to be administered into each nostril, reduced to 50 micrograms twice daily, dose to be administered into each nostril, dose to be reduced when symptoms controlled; maximum 400 micrograms per day

#### ● INTERACTIONS → Appendix 1: corticosteroids

#### ● EXCEPTIONS TO LEGAL CATEGORY

- ▶ In adults Preparations of beclometasone dipropionate can be sold to the public for nasal administration as a nasal spray if supplied for the prevention and treatment of allergic rhinitis in adults over 18 years subject to max. single dose of 100 micrograms per nostril, max. daily dose of 200 micrograms per nostril for max. 3 months, and a pack size of 20 mg.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

##### Spray

EXCIPIENTS: May contain Benzalkonium chloride, polysorbates

###### ▶ Beclometasone dipropionate (Non-proprietary)

###### Beclometasone dipropionate 50 microgram per

1 dose Beclometasone 50micrograms/dose nasal spray | 200 dose [PoM] [S] DT = £2.40

###### ▶ Beconase (GlaxoSmithKline UK Ltd, Omega Pharma Ltd)

Beclometasone dipropionate 50 microgram per 1 dose Beconase Aqueous 50micrograms/dose nasal spray | 200 dose [PoM] £2.63 DT = £2.40

###### ▶ Nasobec (Teva UK Ltd)

Beclometasone dipropionate 50 microgram per 1 dose Nasobec Aqueous 50micrograms/dose nasal spray | 200 dose [PoM] £1.99 DT = £2.40

F 1296

## Betamethasone

08-Mar-2022

- **DRUG ACTION** Betamethasone has very high glucocorticoid activity and insignificant mineralocorticoid activity.

#### ● INDICATIONS AND DOSE

##### BETNESOL<sup>®</sup>

##### Non-infected inflammatory conditions of nose

###### ▶ BY INTRANASAL ADMINISTRATION

- ▶ Adult: Apply 2–3 drops 2–3 times a day, dose to be applied into each nostril

##### VISTAMETHASONE<sup>®</sup>

##### Non-infected inflammatory conditions of nose

###### ▶ BY INTRANASAL ADMINISTRATION

- ▶ Adult: Apply 2–3 drops twice daily, dose to be applied into each nostril

- **INTERACTIONS** → Appendix 1: corticosteroids

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Ear/eye/nose drops solution

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate

- ▶ **Betnesol** (RPH Pharmaceuticals AB)

**Betamethasone sodium phosphate 1 mg per 1 ml** Betnesol 0.1% eye/ear/nose drops | 10 ml [PoM] £2.32 DT = £2.32

- ▶ **Vistamethasone** (Martindale Pharmaceuticals Ltd)

**Betamethasone sodium phosphate 1 mg per 1 ml** Vistamethasone 0.1% ear/eye/nose drops | 5 ml [PoM] £1.02 | 10 ml [PoM] £1.16 DT = £2.32

## Budesonide

08-Mar-2022

F 1296

- **DRUG ACTION** Budesonide is a glucocorticoid, which exerts significant local anti-inflammatory effects.

- **INDICATIONS AND DOSE**

#### Allergic rhinitis | Nasal polyps

- ▶ BY INTRANASAL ADMINISTRATION

- ▶ Child 6–17 years: 128 micrograms once daily, dose to be administered into each nostril in the morning, alternatively 64 micrograms twice daily, dose to be administered to each nostril, reduce dose when control achieved
- ▶ Adult: 128 micrograms once daily, dose to be administered into each nostril in the morning, alternatively 64 micrograms twice daily, dose to be administered to each nostril, reduce dose when control achieved

#### Prophylaxis and treatment of allergic and vasomotor rhinitis

- ▶ BY INTRANASAL ADMINISTRATION

- ▶ Child 12–17 years: Initially 200 micrograms once daily, dose to be administered into each nostril in the morning, alternatively initially 100 micrograms twice daily, dose to be administered to each nostril; reduced to 100 micrograms once daily, dose to be administered into each nostril, dose can be reduced when control achieved
- ▶ Adult: Initially 200 micrograms once daily, dose to be administered into each nostril in the morning, alternatively initially 100 micrograms twice daily, dose to be administered to each nostril; reduced to 100 micrograms once daily, dose to be administered into each nostril, dose can be reduced when control achieved

#### Nasal polyps

- ▶ BY INTRANASAL ADMINISTRATION

- ▶ Child 12–17 years: 100 micrograms twice daily for up to 3 months, dose to be administered into each nostril
- ▶ Adult: 100 micrograms twice daily for up to 3 months, dose to be administered into each nostril

#### RHINOCORT AQUA<sup>®</sup>

##### Rhinitis

- ▶ BY INTRANASAL ADMINISTRATION

- ▶ Adult: 128 micrograms once daily, dose to be administered into each nostril in the morning, alternatively 64 micrograms twice daily, dose to be administered into each nostril; reduced to 64 micrograms once daily when control achieved. Use for maximum 3 months, doses to be administered into each nostril

#### Nasal polyps

- ▶ BY INTRANASAL ADMINISTRATION

- ▶ Adult: 64 micrograms twice daily for up to 3 months, dose to be administered into each nostril

- **INTERACTIONS** → Appendix 1: corticosteroids

- **SIDE-EFFECTS**

- ▶ **Rare or very rare** Adrenal suppression

- **EXCEPTIONS TO LEGAL CATEGORY**

- ▶ In adults Preparations of budesonide can be sold to the public for nasal administration as a nasal spray if supplied for the prevention and treatment of seasonal allergic rhinitis in adults over 18 years subject to max. single dose of 200 micrograms per nostril, max. daily dose of 200 micrograms per nostril for max. period of 3 months, and a pack size of 10 mg.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Spray

EXCIPIENTS: May contain Disodium edetate, polysorbates, potassium sorbate

- ▶ **Budesonide (Non-proprietary)**

**Budesonide 64 microgram per 1 dose** Budesonide 64micrograms/dose nasal spray | 120 dose [PoM] £5.65 DT = £5.65

**Budesonide 100 microgram per 1 dose** Budeflam Aquanase 100micrograms/dose nasal spray | 150 dose [PoM] [S] Aircort 100micrograms/dose nasal spray | 200 dose [PoM] [S]

F 1296

08-Mar-2022

## Fluticasone

- **INDICATIONS AND DOSE**

#### Prophylaxis and treatment of allergic rhinitis and perennial rhinitis

- ▶ BY INTRANASAL ADMINISTRATION USING NASAL SPRAY

- ▶ Child 4–11 years: 50 micrograms once daily, to be administered into each nostril preferably in the morning, increased if necessary to 50 micrograms twice daily
- ▶ Child 12–17 years: 100 micrograms once daily, to be administered into each nostril preferably in the morning, increased if necessary to 100 micrograms twice daily; reduced to 50 micrograms once daily, dose to be administered into each nostril, dose to be reduced when control achieved
- ▶ Adult: 100 micrograms once daily, to be administered into each nostril preferably in the morning, increased if necessary to 100 micrograms twice daily; reduced to 50 micrograms once daily, dose to be administered into each nostril, dose to be reduced when control achieved

#### Nasal polyps

- ▶ BY INTRANASAL ADMINISTRATION USING NASAL DROPS

- ▶ Child 16–17 years: 200 micrograms 1–2 times a day, to be administered into each nostril, alternative treatment should be considered if no improvement after 4–6 weeks, (200 micrograms is equivalent to approximately 6 drops)
- ▶ Adult: 200 micrograms 1–2 times a day, to be administered into each nostril, alternative treatment should be considered if no improvement after 4–6 weeks, (200 micrograms is equivalent to approximately 6 drops)

#### AVAMYS<sup>®</sup> SPRAY

#### Prophylaxis and treatment of allergic rhinitis

- ▶ BY INTRANASAL ADMINISTRATION

- ▶ Child 6–11 years: 27.5 micrograms once daily, dose to be sprayed into each nostril, then increased if necessary to 55 micrograms once daily, dose to be sprayed into each nostril, reduced to 27.5 micrograms once daily, to be sprayed into each nostril, dose to be reduced once control achieved; use minimum effective dose
- ▶ Child 12–17 years: 55 micrograms once daily, dose to be sprayed into each nostril, reduced to 27.5 micrograms once daily, to be sprayed into each nostril, dose to be reduced once control achieved; use minimum effective dose

- ▶ **Adult:** 55 micrograms once daily, dose to be sprayed into each nostril, reduced to 27.5 micrograms once daily, to be sprayed into each nostril, dose to be reduced once control achieved; use minimum effective dose

#### DOSE EQUIVALENCE AND CONVERSION

- ▶ For *Avamys*<sup>®</sup> spray: 1 spray equivalent to 27.5 micrograms.

- **INTERACTIONS** → Appendix 1: corticosteroids
- **SIDE-EFFECTS** Adrenal suppression  
**SIDE-EFFECTS, FURTHER INFORMATION** Nasal ulceration occurs commonly with nasal preparations containing fluticasone furoate.
- **EXCEPTIONS TO LEGAL CATEGORY**  
In adults Preparations of fluticasone propionate can be sold to the public for nasal administration (other than by pressurised nasal spray) if supplied for the prevention and treatment of allergic rhinitis in adults over 18 years, subject to max. single dose of 100 micrograms per nostril, max. daily dose of 200 micrograms per nostril for max. 3 months, and a pack size of 3 mg.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Spray

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate, polysorbates

- ▶ **Avamys** (GlaxoSmithKline UK Ltd)  
**Fluticasone furoate 27.5 microgram per 1 dose** Avamys 27.5micrograms/dose nasal spray | 120 dose [PoM] £6.44 DT = £6.44
- ▶ **Flixonase** (GlaxoSmithKline Consumer Healthcare UK Ltd, GlaxoSmithKline UK Ltd)  
**Fluticasone propionate 50 microgram per 1 dose** Flixonase 50micrograms/dose aqueous nasal spray | 150 dose [PoM] £11.01 DT = £14.26
- ▶ **Nasofan** (Teva UK Ltd)  
**Fluticasone propionate 50 microgram per 1 dose** Nasofan 50micrograms/dose aqueous nasal spray | 150 dose [PoM] £8.04 DT = £14.26

#### Nasal drops

EXCIPIENTS: May contain Polysorbates

- ▶ **Flixonase** (GlaxoSmithKline UK Ltd)  
**Fluticasone propionate 400 microgram** Flixonase Nasule 400microgram/unit dose nasal drops | 28 unit dose [PoM] £12.99 DT = £12.99

## Fluticasone with azelastine

The properties listed below are those particular to the combination only. For the properties of the components please consider, fluticasone p. 1298, azelastine hydrochloride p. 1296.

#### ● INDICATIONS AND DOSE

**Moderate to severe seasonal and perennial allergic rhinitis, if monotherapy with antihistamine or corticosteroid is inadequate**

- ▶ BY INTRANASAL ADMINISTRATION
- ▶ **Child 12-17 years:** 1 spray twice daily, dose to be administered into each nostril
- ▶ **Adult:** 1 spray twice daily, dose to be administered into each nostril

- **INTERACTIONS** → Appendix 1: antihistamines, non-sedating · corticosteroids

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Spray

EXCIPIENTS: May contain Benzalkonium chloride, polysorbates

- ▶ **Dymista** (Viatris UK Healthcare Ltd)  
**Fluticasone propionate 50 microgram per 1 actuation, Azelastine hydrochloride 137 microgram per 1 actuation** Dymista

137micrograms/dose / 50micrograms/dose nasal spray | 120 dose [PoM] £14.80 DT = £14.80

F 1296

09-Mar-2022

## Mometasone furoate

#### ● INDICATIONS AND DOSE

**Prophylaxis and treatment of seasonal allergic or perennial rhinitis**

- ▶ BY INTRANASAL ADMINISTRATION
- ▶ **Child 3-11 years:** 50 micrograms daily, dose to be sprayed into each nostril
- ▶ **Child 12-17 years:** 100 micrograms daily, increased if necessary up to 200 micrograms daily, dose to be sprayed into each nostril; reduced to 50 micrograms daily, dose to be reduced when control achieved, dose to be sprayed into each nostril
- ▶ **Adult:** 100 micrograms daily, increased if necessary up to 200 micrograms daily, dose to be sprayed into each nostril; reduced to 50 micrograms daily, dose to be reduced when control achieved, dose to be sprayed into each nostril

#### Nasal polyps

- ▶ BY INTRANASAL ADMINISTRATION
- ▶ **Adult:** Initially 100 micrograms daily for 5-6 weeks, dose to be sprayed into each nostril, then increased if necessary to 100 micrograms twice daily, dose to be sprayed into each nostril, consider alternative treatment if no improvement after further 5-6 weeks, reduce to the lowest effective dose when control achieved

- **INTERACTIONS** → Appendix 1: corticosteroids
- **SIDE-EFFECTS** Nasal ulceration occurs commonly with preparations containing mometasone furoate.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Spray

EXCIPIENTS: May contain Benzalkonium chloride, polysorbates

- ▶ **Mometasone furoate (Non-proprietary)**  
**Mometasone furoate 50 microgram per 1 dose** Mometasone 50micrograms/dose nasal spray | 140 dose [PoM] £5.44 DT = £3.64
- ▶ **Nasonex** (Organon Pharma (UK) Ltd)  
**Mometasone furoate 50 microgram per 1 dose** Nasonex 50micrograms/dose nasal spray | 140 dose [PoM] £7.68 DT = £3.64

## Mometasone furoate with olopatadine

21-Jan-2022

The properties listed below are those particular to the combination only. For the properties of the components please consider, mometasone furoate above, olopatadine p. 1251.

#### ● INDICATIONS AND DOSE

**Moderate to severe allergic rhinitis**

- ▶ BY INTRANASAL ADMINISTRATION
- ▶ **Child 12-17 years:** 2 sprays twice daily into each nostril in the morning and evening
- ▶ **Adult:** 2 sprays twice daily into each nostril in the morning and evening

- **INTERACTIONS** → Appendix 1: corticosteroids
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Epistaxis · nasal complaints · taste altered
  - ▶ **Uncommon** Abdominal pain · dizziness · drowsiness · dry mouth · fatigue · headaches · nausea
  - ▶ **Rare or very rare** Anxiety · constipation · depression · dry eye · ear pain · eye discomfort · increased risk of infection ·

insomnia · laceration · oropharyngeal pain · throat irritation · tongue pain · vision blurred

- ▶ **Frequency not known** Cataract · glaucoma

**SIDE-EFFECTS, FURTHER INFORMATION** Systemic absorption can follow nasal administration particularly if high doses are used or if treatment is prolonged; therefore, also consider the side-effects of systemic corticosteroids.

- **PATIENT AND CARER ADVICE**

**Driving and skilled tasks** Patients and carers should be cautioned on the effects on driving and performance of skilled tasks—increased risk of dizziness, lethargy, fatigue, and somnolence.

- **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**Scottish Medicines Consortium (SMC) decisions**

- ▶ Olopatadine hydrochloride and mometasone furoate monohydrate (*Ryaltris*®) for the treatment of moderate to severe nasal symptoms associated with allergic rhinitis in adults and adolescents 12 years of age and older (December 2021) SMC No. SMC2418 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Spray**

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate, polysorbates

- ▶ *Ryaltris* (Glenmark Pharmaceuticals Europe Ltd)

Mometasone furoate 25 microgram per 1 dose, Olopatadine (as Olopatadine hydrochloride) 600 microgram per 1 dose *Ryaltris* 25micrograms/dose / 600micrograms/dose nasal spray | 240 dose [PoM] £13.32 DT = £13.32

F 1296

09-Mar-2022

## Triamcinolone acetonide

- **DRUG ACTION** Triamcinolone exerts predominantly glucocorticoid effects with minimal mineralcorticoid effect.

- **INDICATIONS AND DOSE**

**Prophylaxis and treatment of allergic rhinitis**

- ▶ BY INTRANASAL ADMINISTRATION

- ▶ Child 6–11 years: 55 micrograms once daily, dose to be sprayed into each nostril, increased if necessary to 110 micrograms once daily, dose to be sprayed into each nostril; reduced to 55 micrograms once daily, dose to be sprayed into each nostril, reduce dose when control achieved; maximum duration of treatment 3 months
- ▶ Child 12–17 years: 110 micrograms once daily, dose to be sprayed into each nostril, reduced to 55 micrograms once daily, dose to be sprayed into each nostril, reduce dose when control achieved
- ▶ Adult: 110 micrograms once daily, dose to be sprayed into each nostril, reduced to 55 micrograms once daily, dose to be sprayed into each nostril, reduce dose when control achieved

- **INTERACTIONS** → Appendix 1: corticosteroids

- **EXCEPTIONS TO LEGAL CATEGORY**

- ▶ In adults Preparations of triamcinolone acetonide can be sold to the public for nasal administration as a non-pressurised nasal spray if supplied for the symptomatic treatment of seasonal allergic rhinitis in adults over 18 years, subject to maximum daily dose of 110 micrograms per nostril for maximum 3 months, and a pack size of 3.575 mg.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Spray**

EXCIPIENTS: May contain Benzalkonium chloride, disodium edetate, polysorbates

- ▶ *Nasacort* (Sanofi)

Triamcinolone acetonide 55 microgram per 1 dose *Nasacort* 55micrograms/dose nasal spray | 120 dose [PoM] £7.39 DT = £7.39

# Oropharynx

## 1 Dry mouth

### Dry mouth

14-Dec-2020

#### Overview

Dry mouth (xerostomia) resulting from reduced saliva secretion may be caused by drugs such as antimuscarinics, antihistamines, tricyclic antidepressants, and some diuretics. It can also be caused by irradiation of the head and neck region, dehydration, anxiety, or Sjögren's syndrome. Patients with dry mouth may be at greater risk of developing dental caries, periodontal disease, and oral infections (particularly candidiasis).

**[EvGr]** Underlying causes of dry mouth such as dehydration, anxiety, infection, or drugs causing dry mouth should be managed if appropriate. Dry mouth may be relieved in many patients by simple measures that stimulate salivation such as frequent sips of cold unsweetened drinks, or sucking pieces of ice or sugar-free fruit pastilles, or chewing sugar-free gum.

An artificial saliva substitute can be considered if simple stimulatory measures are inadequate. **⚠** The acidic pH of some artificial saliva products may be inappropriate for some patients as it may damage the enamel of natural teeth. Artificial saliva products below are available in oral lozenges, oral gel, oral spray, and pastille forms.

Pilocarpine tablets p. 1302 are licensed for the treatment of xerostomia following irradiation for head and neck cancer, and dry mouth and dry eyes (xerophthalmia) in Sjögren's syndrome. **[EvGr]** They may take up to 3 months to be effective; treatment should be withdrawn if there is no response within this time. **⚠**

#### LUBRICANTS

### Artificial saliva products

- **ARTIFICIAL SALIVA PRODUCTS**

- **AS SALIVA ORTHANA® LOZENGES**

Mucin 65 mg, xylitol 59 mg, in a sorbitol basis, pH neutral

- **INDICATIONS AND DOSE**

**Dry mouth as a result of having (or having undergone) radiotherapy (ACBS) | Dry mouth as a result of sicca syndrome (ACBS)**

- ▶ BY MOUTH

- ▶ Adult: 1 lozenge as required, allow to dissolve slowly in the mouth

- **PRESCRIBING AND DISPENSING INFORMATION** *AS Saliva Orthana*® lozenges do not contain fluoride.

- **AS Saliva Orthana lozenges** (CCMed Ltd)

30 lozenge(ACBS) · NHS indicative price = £3.04 · Drug Tariff (Part VIII A Category C) price = £3.04

- **AS SALIVA ORTHANA® SPRAY**

Gastric mucin (porcine) 3.5%, xylitol 2%, sodium fluoride 4.2 mg/litre, with preservatives and flavouring agents, pH neutral.

### ● INDICATIONS AND DOSE

#### Symptomatic treatment of dry mouth

- ▶ BY MOUTH
- ▶ Adult: Apply 2–3 sprays as required, spray onto oral and pharyngeal mucosa

### ● PROFESSION SPECIFIC INFORMATION

Dental practitioners' formulary *AS Saliva Orthana*® Oral Spray may be prescribed.

**AS Saliva Orthana spray** (CCMed Ltd)  
50 ml • NHS indicative price = £4.92 • Drug Tariff (Part IXa)

### BIOXTRA® GEL

Lactoperoxidase, lactoferrin, lysozyme, whey colostrum, xylitol and other ingredients.

### ● INDICATIONS AND DOSE

#### Dry mouth as a result of having (or having undergone) radiotherapy | Dry mouth as a result of sicca syndrome

- ▶ BY MOUTH
- ▶ Adult: Apply as required, apply to oral mucosa

### ● PROFESSION SPECIFIC INFORMATION

Dental practitioners' formulary *BioXtra*® Gel may be prescribed.

**BioXtra Dry Mouth oral gel** (R.I.S. Products Ltd)  
40 ml • NHS indicative price = £3.98 • Drug Tariff (Part IXa)

### BIOTENE ORALBALANCE®

Lactoperoxidase, lactoferrin, lysozyme, glucose oxidase, xylitol in a gel basis

### ● INDICATIONS AND DOSE

#### Symptomatic treatment of dry mouth

- ▶ BY MOUTH
- ▶ Adult: Apply as required, apply to gums and tongue

- **PATIENT AND CARER ADVICE** Avoid use with toothpastes containing detergents (including foaming agents).

### ● PROFESSION SPECIFIC INFORMATION

Dental practitioners' formulary *Biotene Oralbalance*® Saliva Replacement Gel may be prescribed as Artificial Saliva Gel.

**Biotene Oralbalance dry mouth saliva replacement gel** (GlaxoSmithKline Consumer Healthcare UK Ltd) **Glucose oxidase 12000 unit, Lactoferrin 12 mg, Lactoperoxidase 12000 unit, Muramidase 12 mg** 50 gram • NHS indicative price = £4.46 • Drug Tariff (Part IXa)

### GLANDOSANE®

Carmellose sodium 500 mg, sorbitol 1.5 g, potassium chloride 60 mg, sodium chloride 42.2 mg, magnesium chloride 2.6 mg, calcium chloride 7.3 mg, and dipotassium hydrogen phosphate 17.1 mg/50 g, pH 5.75.

### ● INDICATIONS AND DOSE

#### Dry mouth as a result of having (or having undergone) radiotherapy (ACBS) | Dry mouth as a result of sicca syndrome (ACBS)

- ▶ BY MOUTH
- ▶ Adult: Apply as required, spray onto oral and pharyngeal mucosa

### ● PROFESSION SPECIFIC INFORMATION

Dental practitioners' formulary *Glandosane*® Aerosol Spray may be prescribed.

**Glandosane synthetic saliva spray lemon** (Fresenius Kabi Ltd)  
50 ml • NHS indicative price = £5.68 • Drug Tariff (Part IXa)

**Glandosane synthetic saliva spray natural** (Fresenius Kabi Ltd)  
50 ml • NHS indicative price = £5.68 • Drug Tariff (Part IXa)

**Glandosane synthetic saliva spray peppermint** (Fresenius Kabi Ltd)  
50 ml • NHS indicative price = £5.68 • Drug Tariff (Part IXa)

### ORALIEVE® MOISTURISING MOUTH SPRAY

Aqua, glycerin, xylitol, poloxamer 407, sodium benzoate, monosodium phosphate, xanthan gum, aroma, disodium phosphate, benzoic acid, whey protein, lactoferrin, lactoperoxidase, potassium thiocyanate, glucose oxidase, SLS free, alcohol free, pH 5.8

### ● INDICATIONS AND DOSE

#### Dry mouth

- ▶ BY MOUTH
- ▶ Adult: 1 spray as required, on the inside of each cheek, gums and tongue

**Oralieve moisturising mouth spray** (Oralieve UK)  
50 ml • NHS indicative price = £4.95 • Drug Tariff (Part IXa)

### ORALIEVE® GEL

### ● INDICATIONS AND DOSE

#### Symptomatic treatment of dry mouth

- ▶ BY MOUTH
- ▶ Adult: Apply as required, particularly at night, to oral mucosa

- **PRESCRIBING AND DISPENSING INFORMATION** Contains traces of milk protein and egg white protein.

**Oralieve moisturising mouth gel** (Oralieve UK)  
50 ml • NHS indicative price = £3.16 • Drug Tariff (Part IXa)

### SST®

Sugar-free, citric acid, malic acid and other ingredients in a sorbitol base.

### ● INDICATIONS AND DOSE

#### Symptomatic treatment of dry mouth in patients with impaired salivary gland function and patent salivary ducts

- ▶ BY MOUTH
- ▶ Adult: 1 tablet as required, allow tablet to dissolve slowly in the mouth

### ● PROFESSION SPECIFIC INFORMATION

Dental practitioners' formulary May be prescribed as Saliva Stimulating Tablets.

**SST saliva stimulating tablets** (Sinclair IS Pharma Plc)  
100 tablet • NHS indicative price = £4.86 • Drug Tariff (Part IXa)

### SALIVEZE®

Carmellose sodium (sodium carboxymethylcellulose), calcium chloride, magnesium chloride, potassium chloride, sodium chloride, and dibasic sodium phosphate, pH neutral

### ● INDICATIONS AND DOSE

#### Dry mouth as a result of having (or having undergone) radiotherapy (ACBS) | Dry mouth as a result of sicca syndrome (ACBS)

- ▶ BY MOUTH
- ▶ Adult: Apply 1 spray as required, spray onto oral mucosa

### ● PROFESSION SPECIFIC INFORMATION

Dental practitioners' formulary *Saliveze*® Oral Spray may be prescribed.

**Saliveze mouth spray** (Wyvern Medical Ltd)  
50 ml • NHS indicative price = £3.50 • Drug Tariff (Part IXa)

### SALIVIX®

Sugar-free, reddish-amber, acacia, malic acid and other ingredients.

### ● INDICATIONS AND DOSE

#### Symptomatic treatment of dry mouth

- ▶ BY MOUTH USING PASTILLES
- ▶ Adult: 1 unit as required, suck pastille

### ● PROFESSION SPECIFIC INFORMATION

Dental practitioners' formulary *Salivix*® Pastilles may be prescribed as Artificial Saliva Pastilles.

**Salivix pastilles** (Galen Ltd)

50 pastille · NHS indicative price = £3.64 · Drug Tariff (Part IXa)

### XEROTIN®

Sugar-free, water, sorbitol, carmellose (carboxymethylcellulose), potassium chloride, sodium chloride, potassium phosphate, magnesium chloride, calcium chloride and other ingredients, pH neutral.

### ● INDICATIONS AND DOSE

#### Symptomatic treatment of dry mouth

- ▶ BY MOUTH
- ▶ Adult: 1 spray as required

### ● PROFESSION SPECIFIC INFORMATION

Dental practitioners' formulary *Xerotin*® Oral Spray may be prescribed as Artificial Saliva Oral Spray.

**Xerotin spray** (SpePharm UK Ltd)

100 ml · NHS indicative price = £6.86 · Drug Tariff (Part IXa)

## PARASYMPATHOMIMETICS

### Pilocarpine

11-May-2021

### ● INDICATIONS AND DOSE

#### Xerostomia following irradiation for head and neck cancer

- ▶ BY MOUTH
- ▶ Adult: 5 mg 3 times a day for 4 weeks, then increased if tolerated to up to 30 mg daily in divided doses if required, dose to be taken with or immediately after meals (last dose always with evening meal), maximum therapeutic effect normally within 4–8 weeks; discontinue if no improvement after 2–3 months

#### Dry mouth and dry eyes in Sjögren's syndrome

- ▶ BY MOUTH
- ▶ Adult: 5 mg 4 times a day; increased if tolerated to up to 30 mg daily in divided doses if required, dose to be taken with meals and at bedtime, discontinue if no improvement after 2–3 months

- **CONTRA-INDICATIONS** Acute iritis · uncontrolled asthma (increased bronchial secretions and increased airways resistance) · uncontrolled cardiorenal disease · uncontrolled chronic obstructive pulmonary disease (increased bronchial secretions and increased airways resistance)

- **CAUTIONS** Asthma (avoid if uncontrolled) · biliary-tract disease · cardiovascular disease (avoid if uncontrolled) · cholelithiasis · chronic obstructive pulmonary disease (avoid if uncontrolled) · cognitive disturbances · maintain adequate fluid intake to avoid dehydration associated with excessive sweating · peptic ulceration · psychiatric disturbances · risk of increased renal colic · risk of increased urethral smooth muscle tone · susceptibility to angle-closure glaucoma

- **INTERACTIONS** → Appendix 1: pilocarpine

### ● SIDE-EFFECTS

- ▶ **Common or very common** Asthenia · conjunctivitis · constipation · diarrhoea · dizziness · excessive tearing · eye pain · flushing · gastrointestinal discomfort · headache · hyperhidrosis · hypersalivation · hypersensitivity · hypertension · increased risk of infection · nausea ·

- palpitations · skin reactions · urinary disorders · vision disorders · vomiting
- ▶ **Uncommon** Gastrointestinal disorders
- ▶ **Frequency not known** Affective disorder · agitation · arrhythmias · atrioventricular block · chills · confusion · hallucination · hypotension · memory loss · psychiatric disorder · respiratory distress · shock · tremor
- **PREGNANCY** Avoid—smooth muscle stimulant; toxicity in animal studies.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in animal studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in moderate to severe cirrhosis.  
**Dose adjustments** Manufacturer advises initial dose reduction in moderate to severe cirrhosis.
- **RENAL IMPAIRMENT** Manufacturer advises caution with tablets.
- **PATIENT AND CARER ADVICE**  
**Driving and skilled tasks** Blurred vision may affect performance of skilled tasks (e.g. driving) particularly at night or in reduced lighting.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral solution

#### Tablet

CAUTIONARY AND ADVISORY LABELS 21, 27

**Pilocarpine hydrochloride 5 mg** Salagen 5mg tablets84 tablet (POM) £41.14 DT = £41.14

## 2 Oral hygiene

### Mouthwashes and other preparations for oropharyngeal use

01-Sep-2020

#### Lozenges and sprays

**[EvGr]** Lozenges containing either a local anaesthetic, an antiseptic, or a non-steroidal anti-inflammatory drug may be trialled but may only lead to a small reduction in pain.

However, there is no evidence that non-medicated lozenges and local anaesthetic sprays have a beneficial action on their own in treating sore throat. ⚠

#### Mouthwashes, gargles, and dentifrices

Expert sources advise that a saline mouthwash may be used for cleaning or freshening the mouth and can be prepared by dissolving half a teaspoonful of salt in a glassful of warm water.

**[EvGr]** Mouthwashes containing an oxidising agent, such as hydrogen peroxide p. 1303, may be useful in the treatment of acute ulcerative gingivitis whilst awaiting to be seen by a dentist. ⚠

Chlorhexidine p. 1303 can be used as a mouthwash, spray, or gel and is licensed for the management of gingivitis and maintenance of oral hygiene, particularly where there is a painful periodontal condition or if the patient is unable to adequately brush their teeth (e.g. following dental procedures or due to disability). It is also licensed for the management of denture stomatitis, aphthous ulcers, oral candidiasis, and following post-periodontal treatment to promote healing. Chlorhexidine mouthwash should not be used for the prevention of endocarditis in patients undergoing dental procedures.

Chlorhexidine is an effective antiseptic which has the advantage of inhibiting plaque formation on the teeth but there is limited evidence to demonstrate efficacy in preventing dental caries. Public Health England advise to use other treatments for preventing dental caries, such as fluoride-based products.

Chlorhexidine is incompatible with anionic agents present in some toothpastes; it has therefore been suggested to wait 30 minutes between using these two preparations.

## ANTISEPTICS AND DISINFECTANTS > OTHER

### Chlorhexidine

23-Feb-2022

#### ● INDICATIONS AND DOSE

**Oral hygiene and plaque inhibition | Oral candidiasis | Gingivitis | Management of aphthous ulcers**

► BY MOUTH USING MOUTHWASH

- Child: Rinse or gargle 10 mL twice daily (rinse or gargle for about 1 minute)
- Adult: Rinse or gargle 10 mL twice daily (rinse or gargle for about 1 minute)

**Denture stomatitis**

► MOUTHWASH

- Adult: Cleanse and soak dentures in mouthwash solution for 15 minutes twice daily

**Oral hygiene and plaque inhibition and gingivitis**

► BY MOUTH USING DENTAL GEL

- Child: Apply 1–2 times a day, to be brushed on the teeth
- Adult: Apply 1–2 times a day, to be brushed on the teeth

**Oral candidiasis | Management of aphthous ulcers**

► BY MOUTH USING DENTAL GEL

- Child: Apply 1–2 times a day, to affected areas
- Adult: Apply 1–2 times a day, to affected areas

**Oral hygiene and plaque inhibition | Oral candidiasis | Gingivitis | Management of aphthous ulcers**

► BY MOUTH USING OROMUCOSAL SPRAY

- Child: Apply up to 12 sprays twice daily as required, to be applied on tooth, gingival, or ulcer surfaces
- Adult: Apply up to 12 sprays twice daily as required, to be applied on tooth, gingival, or ulcer surfaces

**DOSE EQUIVALENCE AND CONVERSION**

- Mouthwashes and oromucosal sprays contain chlorhexidine gluconate 0.2% w/v.

- **UNLICENSED USE** *Corsodyl*<sup>®</sup> not licensed for use in children under 12 years (unless on the advice of a healthcare professional).

#### ● SIDE-EFFECTS

- Common or very common

- With oromucosal use Dry mouth · hypersensitivity · oral disorders · taste altered · tongue discolouration · tooth discolouration

**SIDE-EFFECTS, FURTHER INFORMATION** If desquamation occurs with mucosal irritation, discontinue treatment.

#### ● PRESCRIBING AND DISPENSING

**INFORMATION** Chlorhexidine digluconate is a synonym for chlorhexidine gluconate.

- **PATIENT AND CARER ADVICE** Chlorhexidine gluconate may be incompatible with some ingredients in toothpaste; rinse the mouth thoroughly with water between using toothpaste and chlorhexidine-containing product.

#### ● PROFESSION SPECIFIC INFORMATION

**Dental practitioners' formulary** *Corsodyl*<sup>®</sup> dental gel may be prescribed as Chlorhexidine Gluconate Gel; *Corsodyl*<sup>®</sup> mouthwash may be prescribed as Chlorhexidine Mouthwash; *Corsodyl*<sup>®</sup> oral spray may be prescribed as Chlorhexidine Oral Spray.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Dental gel

- **Corsodyl** (GlaxoSmithKline Consumer Healthcare UK Ltd)

**Chlorhexidine gluconate 10 mg per 1 gram** Corsodyl 1% dental gel sugar-free | 50 gram [P] £2.23 DT = £2.23

#### Spray

- **Corsodyl** (GlaxoSmithKline Consumer Healthcare UK Ltd)

**Chlorhexidine gluconate 2 mg per 1 ml** Corsodyl 0.2% oral spray sugar-free | 60 ml [GSL] £4.28 DT = £4.28

#### Mouthwash

- **Chlorhexidine (Non-proprietary)**

**Chlorhexidine gluconate 2 mg per 1 ml** Chlorhexidine gluconate

0.2% mouthwash aniseed | 300 ml [GSL] £2.09 DT = £2.07

Chlorhexidine gluconate 0.2% mouthwash natural | 300 ml [GSL]

£4.18 DT = £2.07

Chlorhexidine gluconate 0.2% mouthwash plain | 300 ml [GSL] £2.07

DT = £2.07

Chlorhexidine gluconate 0.2% mouthwash peppermint | 300 ml [GSL]

£4.18 DT = £2.07

Chlorhexidine gluconate 0.2% mouthwash original | 300 ml [GSL]

£4.18 DT = £2.07

- **Corsodyl** (GlaxoSmithKline Consumer Healthcare UK Ltd)

**Chlorhexidine gluconate 2 mg per 1 ml** Corsodyl Mint 0.2%

mouthwash | 300 ml [GSL] £2.99 DT = £2.07 | 600 ml [GSL] £4.50

Corsodyl 0.2% mouthwash alcohol free | 300 ml [GSL] £3.16 DT =

£2.07

### Hexetidine

06-Aug-2018

#### ● INDICATIONS AND DOSE

**Oral hygiene**

► BY MOUTH USING MOUTHWASH

- Child 12–17 years: Rinse or gargle 15 mL 2–3 times a day, to be used undiluted
- Adult: Rinse or gargle 15 mL 2–3 times a day, to be used undiluted

#### ● SIDE-EFFECTS

- Rare or very rare Anaesthesia · taste altered
- Frequency not known Cough · dry mouth · dysphagia · dyspnoea · nausea · salivary gland enlargement · vomiting

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Mouthwash

- **Oraldene** (McNeil Products Ltd)

**Hexetidine 1 mg per 1 ml** Oraldene 0.1% mouthwash peppermint sugar-free | 200 ml [GSL] £2.92 DT = £2.92

### Hydrogen peroxide

03-Mar-2020

- **DRUG ACTION** Hydrogen peroxide is an oxidising agent.

#### ● INDICATIONS AND DOSE

**Oral hygiene (with hydrogen peroxide 6%)**

► BY MOUTH USING MOUTHWASH

- Child: Rinse or gargle 15 mL 2–3 times a day for 2–3 minutes, to be diluted in half a tumblerful of warm water
- Adult: Rinse or gargle 15 mL 2–3 times a day for 2–3 minutes, to be diluted in half a tumblerful of warm water

**PEROXYL**<sup>®</sup>

**Oral hygiene**

► BY MOUTH USING MOUTHWASH

- Child 6–17 years: Rinse or gargle 10 mL 3 times a day for about 1 minute, for maximum 7 days, to be used after meals and at bedtime
- Adult: Rinse or gargle 10 mL up to 4 times a day for about 1 minute, to be used after meals and at bedtime

- **PRESCRIBING AND DISPENSING INFORMATION** When prepared extemporaneously, the BP states Hydrogen Peroxide Mouthwash, BP consists of hydrogen peroxide 6% solution (= approx. 20 volume) BP.
- **HANDLING AND STORAGE** Hydrogen peroxide bleaches fabric.
- **PROFESSION SPECIFIC INFORMATION**  
**Dental practitioners' formulary** Hydrogen Peroxide Mouthwash may be prescribed.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Mouthwash**

- ▶ **Peroxyol** (Colgate-Palmolive (UK) Ltd)  
**Hydrogen peroxide 15 mg per 1 ml** Peroxyol 1.5% mouthwash sugar-free | 300 ml [GSE] £2.94 DT = £2.94

## Sodium bicarbonate with sodium chloride

25-Apr-2022

### ● INDICATIONS AND DOSE

**Oral hygiene**

- ▶ BY MOUTH USING MOUTHWASH
- ▶ Adult: Rinse or gargle as required

- **DIRECTIONS FOR ADMINISTRATION** To be diluted with an equal volume of warm water prior to use.
- **PRESCRIBING AND DISPENSING INFORMATION** Compound Sodium Chloride Mouthwash BP consists of sodium bicarbonate 1% and sodium chloride 1.5% in a suitable vehicle with peppermint flavour.  
Extemporaneous mouthwash preparations should be prepared according to the following formula: sodium chloride 1.5 g, sodium bicarbonate 1 g, concentrated peppermint emulsion 2.5 mL, double-strength chloroform water 50 mL, water to 100 mL.
- **PROFESSION SPECIFIC INFORMATION**  
**Dental practitioners' formulary** Compound sodium chloride mouthwash may be prescribed.

- **MEDICINAL FORMS** Forms available from special-order manufacturers include: mouthwash

## 2.1 Dental caries

### Fluoride

24-Apr-2020

**Overview**

Fluoride is a naturally occurring mineral found in water supplies in varying amounts and in some foods; it has beneficial topical effects on teeth. Public Health England advise that all adults and children brush their teeth with fluoridated toothpaste at least twice daily to help prevent tooth decay.

Individuals who are either particularly caries prone or medically compromised may be given additional protection. Public Health England recommends the daily use of a fluoride mouthwash in adults and children aged 7 years and over who are causing concern to their dentist (e.g. those with active caries, dry mouth, or special needs). They should be used at a different time to brushing to avoid removal of the beneficial effects of fluoride in toothpaste.

Fluoride varnish is also available and can be applied topically to both primary or permanent teeth. Public Health England recommends that all children aged 3 years and over have fluoride varnish applied (usually twice a year) regardless of their risk of caries. Application of fluoride varnish at least twice a year may also be considered in adults

and children aged under 3 years who are causing concern to their dentist.

**Useful resources**

Delivering better oral health: an evidence-based toolkit for prevention. Public Health England. March 2017.  
[www.gov.uk/government/publications/delivering-better-oral-health-an-evidence-based-toolkit-for-prevention](http://www.gov.uk/government/publications/delivering-better-oral-health-an-evidence-based-toolkit-for-prevention)

## VITAMINS AND TRACE ELEMENTS

### Sodium fluoride

25-Nov-2020

#### ● INDICATIONS AND DOSE

##### **Prophylaxis of dental caries for water content less than 300 micrograms/litre (0.3 parts per million) of fluoride ion**

- ▶ BY MOUTH USING TABLETS
- ▶ Child 6 months-2 years: 250 micrograms daily, doses expressed as fluoride ion (F<sup>-</sup>)
- ▶ Child 3-5 years: 500 micrograms daily, doses expressed as fluoride ion (F<sup>-</sup>)
- ▶ Child 6-17 years: 1 mg daily, doses expressed as fluoride ion (F<sup>-</sup>)
- ▶ Adult: 1 mg daily, doses expressed as fluoride ion (F<sup>-</sup>)

##### **Prophylaxis of dental caries for water content between 300 and 700 micrograms/litre (0.3-0.7 parts per million) of fluoride ion**

- ▶ BY MOUTH USING TABLETS
- ▶ Child 3-5 years: 250 micrograms daily, doses expressed as fluoride ion (F<sup>-</sup>)
- ▶ Child 6-17 years: 500 micrograms daily, doses expressed as fluoride ion (F<sup>-</sup>)
- ▶ Adult: 500 micrograms daily, doses expressed as fluoride ion (F<sup>-</sup>)

**Prophylaxis of dental caries**

- ▶ BY MOUTH USING MOUTHWASH
- ▶ Adult: Rinse or gargle 5-10 mL daily

**DOSE EQUIVALENCE AND CONVERSION**

- ▶ Sodium fluoride 2.2 mg provides approx. 1 mg fluoride ion.

#### COLGATE DURAPHAT® 2800PPM FLUORIDE TOOTHPASTE

**Prophylaxis of dental caries**

- ▶ BY MOUTH USING PASTE
- ▶ Child 10-17 years: Apply 1 centimetre twice daily, to be applied using a toothbrush
- ▶ Adult: Apply 1 centimetre twice daily, to be applied using a toothbrush

#### COLGATE DURAPHAT® 5000PPM FLUORIDE TOOTHPASTE

**Prophylaxis of dental caries**

- ▶ BY MOUTH USING PASTE
- ▶ Child 16-17 years: Apply 2 centimetres 3 times a day, to be applied after meals using a toothbrush
- ▶ Adult: Apply 2 centimetres 3 times a day, to be applied after meals using a toothbrush

#### EN-DE-KAY® FLUORINSE

**Prophylaxis of dental caries**

- ▶ BY MOUTH USING MOUTHWASH
- ▶ Adult: 5 drops daily, dilute 5 drops to 10 mL of water, alternatively 20 drops once weekly, dilute 20 drops to 10 mL

- **SIDE-EFFECTS** Dental fluorosis
- **DIRECTIONS FOR ADMINISTRATION**
  - ▶ With oral use Manufacturer advises tablets should be sucked or dissolved in the mouth at a different time of day to tooth brushing.
  - ▶ With oral (topical) use Manufacturer advises for mouthwash, rinse mouth for 1 minute and then spit out.

**COLGATE DURAPHAT® 5000PPM FLUORIDE**

**TOOTHPASTE** Manufacturer advises brush teeth for 3 minutes before spitting out.

**COLGATE DURAPHAT® 2800PPM FLUORIDE**

**TOOTHPASTE** Manufacturer advises brush teeth for 1 minute before spitting out.

- **PRESCRIBING AND DISPENSING INFORMATION** Flavours of oral tablet formulations may include orange.

● **PATIENT AND CARER ADVICE**

Mouthwash Avoid eating, drinking, or rinsing mouth for 15 minutes after use.

**COLGATE DURAPHAT® 5000PPM FLUORIDE**

**TOOTHPASTE** Patients or carers should be given advice on how to administer Sodium fluoride toothpaste.

**COLGATE DURAPHAT® 2800PPM FLUORIDE**

**TOOTHPASTE** Patients or carers should be given advice on how to administer sodium fluoride toothpaste.

Avoid drinking or rinsing mouth for 30 minutes after use.

● **PROFESSION SPECIFIC INFORMATION**

**Dental practitioners' formulary** Tablets may be prescribed as Sodium Fluoride Tablets.

Oral drops may be prescribed as Sodium Fluoride Oral Drops.

Mouthwashes may be prescribed as Sodium Fluoride Mouthwash 0.05% or Sodium Fluoride Mouthwash 2%.

**Dental information** Fluoride mouthwash, oral drops, tablets and toothpaste are prescribable on form FP10D (GP14 in Scotland, WP10D in Wales).

There are also arrangements for health authorities to supply fluoride tablets in the course of pre-school dental schemes, and they may also be supplied in school dental schemes.

Fluoride gels are not prescribable on form FP10D (GP14 in Scotland, WP10D in Wales).

**COLGATE DURAPHAT® 5000PPM FLUORIDE**

**TOOTHPASTE** Dental practitioners' formulary May be prescribed as Sodium Fluoride Toothpaste 1.1%.

**COLGATE DURAPHAT® 2800PPM FLUORIDE**

**TOOTHPASTE** Dental practitioners' formulary May be prescribed as Sodium Fluoride Toothpaste 0.619%.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: capsule, oral solution

**Tablet**

- ▶ **Endekay** (Manx Healthcare Ltd)

**Sodium fluoride 1.1 mg** Endekay Fluotabs 3-6 Years 1.1mg tablets | 200 tablet **P** £2.38 DT = £2.38

**Sodium fluoride 2.2 mg** Endekay Fluotabs 6+ Years 2.2mg tablets | 200 tablet **P** £2.38 DT = £2.38

**Paste**

- ▶ **Sodium fluoride (Non-proprietary)**

**Fluoride (as Sodium fluoride) 2.8 mg per 1 gram** Sodium fluoride 0.619% dental paste sugar free sugar-free | 75 ml **PoM** £4.03 DT = £2.80

**Fluoride (as Sodium fluoride) 5 mg per 1 gram** Sodium fluoride 1.1% dental paste sugar free sugar-free | 51 gram **PoM** £6.82 DT = £5.09

- ▶ **Colgate Duraphat** (Colgate-Palmolive (UK) Ltd)

**Fluoride (as Sodium fluoride) 2.8 mg per 1 gram** Colgate Duraphat 2800ppm fluoride toothpaste sugar-free | 75 ml **PoM** £3.26 DT = £2.80

**Fluoride (as Sodium fluoride) 5 mg per 1 gram** Colgate Duraphat 5000ppm fluoride toothpaste sugar-free | 51 gram **PoM** £6.50 DT = £5.09

**Oral drops**

- ▶ **Endekay** (Manx Healthcare Ltd)

**Sodium fluoride 3.7 mg per 1 ml** Endekay Fluodrops 0.37% drops paediatric sugar-free | 60 ml **P** £2.38 DT = £2.38

**Mouthwash**

- ▶ **Sodium fluoride (Non-proprietary)**

**Sodium fluoride 500 microgram per 1 ml** Sodium fluoride 0.05% mouthwash sugar free sugar-free | 250 ml **GSL** **N** DT = £1.51

- ▶ **Colgate FluoriGard** (Colgate-Palmolive (UK) Ltd)

**Sodium fluoride 500 microgram per 1 ml** Colgate FluoriGard 0.05% daily dental rinse sugar-free | 400 ml **GSL** £2.99

- ▶ **Endekay** (Manx Healthcare Ltd)

**Sodium fluoride 500 microgram per 1 ml** Endekay 0.05% daily fluoride mouthrinse sugar-free | 250 ml **GSL** £1.51 DT = £1.51 sugar-free | 500 ml **GSL** £2.45

## 3 Oral ulceration and inflammation

### Oral ulceration and inflammation

09-Dec-2020

#### Ulceration and inflammation

Ulceration of the oral mucosa is common and usually transient but may require treatment in some cases. Causes include mechanical trauma, infections, malignant lesions, inflammatory conditions, nutritional deficiencies (e.g. iron, folic acid, vitamin B12), immunodeficiency states, gastro-intestinal disease, and drug therapy (see also *Chemotherapy induced mucositis* and *myelosuppression* under Cytotoxic drugs p. 962).

Aphthous ulcers are often recurrent and are not associated with an underlying systemic disease; they are small, round or ovoid mouth ulcers with defined margins. Aphthous ulcers may be precipitated by triggers such as certain food and drinks, allergies, anxiety, or hormonal changes. It is important to consider and exclude any possible systemic disease; treatment may include correcting the underlying cause. Treatment aims to relieve pain, reduce ulcer duration, and reduce the frequency of recurrent episodes. Secondary bacterial infections may occur with mucosal ulceration; it can increase discomfort and delay healing.

**EvGr** Patients with an unexplained mouth ulcer of more than 3 weeks' duration should be referred urgently to a specialist to exclude oral cancer. **A**

#### Treatment of aphthous ulcers

**EvGr** Advise patients to avoid known triggers for ulceration, such as oral trauma (e.g. biting during chewing, ill-fitting dentures) or certain food and drinks (e.g. coffee, gluten-containing products). If the ulcers are mild, infrequent, and do not interfere with daily activities (such as eating), treatment may not be required. **A**

#### Corticosteroids

**EvGr** Topical corticosteroids are usually considered to be first-line treatment. **A** Expert sources advise that hydrocortisone oromucosal tablets p. 1308, beclomethasone dipropionate inhaler p. 278 [unlicensed indication] sprayed onto the oral mucosa, and betamethasone soluble tablets p. 1307 [unlicensed indication] used as a mouthwash are suitable options.

**EvGr** A short course of systemic corticosteroids may be prescribed for patients with severe recurrent aphthous ulcers. **A**

#### Other therapies

**EvGr** Other therapies that may be used alone or in combination with topical corticosteroids include topical anaesthetics (e.g. lidocaine hydrochloride p. 1306), topical analgesics/anti-inflammatory agents (e.g. benzydamine hydrochloride p. 1306), and topical antimicrobial agents (e.g. chlorhexidine mouthwash p. 1303). **A** **EvGr** Doxycycline p. 1309 [unlicensed indication], rinsed in the mouth and

expelled, may be considered for recurrent aphthous ulceration when other treatments are unsuccessful or unsuitable. 

Expert sources advise that a saline (with or without sodium bicarbonate) mouthwash may soothe ulcers, help to maintain oral hygiene, and prevent secondary infection. Tepid water appears to be more soothing than cold or warm water.

Expert sources advise that local anaesthetics have a short duration of action; there is limited evidence for their use in the management of oral ulceration. Lidocaine hydrochloride 5% ointment or lozenges containing the local anaesthetic may be applied to the ulcer. Lidocaine hydrochloride 10% solution [unlicensed indication] as spray can be applied thinly to the ulcer using a cotton bud. When local anaesthetics are used in the mouth, care must be taken to avoid causing anaesthesia of the pharynx before meals, as this might lead to choking.

Benzydamine hydrochloride and flurbiprofen p. 1307 are non-steroidal anti-inflammatory drugs (NSAIDs). Benzydamine hydrochloride mouthwash and spray are licensed for the relief of painful inflammatory conditions associated with a variety of ulcerative conditions, as well as for discomfort of tonsillectomy and post-irradiation mucositis. Benzydamine hydrochloride mouthwash should generally be used undiluted; it can be diluted with an equal volume of water if a stinging sensation occurs. Flurbiprofen lozenges are licensed for the relief of sore throat.

Choline salicylate p. 1308 is a derivative of salicylic acid and has some analgesic properties. The dental gel is licensed for pain relief in mouth ulcers including ulcers due to dentures and orthodontic devices.

 Consider offering or advising the use of a vitamin B12 supplement regardless of serum vitamin B12 levels. 

## ANAESTHETICS, LOCAL

### Lidocaine hydrochloride

17-Aug-2020

(Lignocaine hydrochloride)

#### ● INDICATIONS AND DOSE

##### Dental practice

- ▶ BY BUCCAL ADMINISTRATION USING OINTMENT
- ▶ Adult: Rub gently into dry gum

##### Relief of pain in oral lesions

- ▶ TO THE LESION USING OINTMENT
- ▶ Adult: Apply as required, rub sparingly and gently on affected areas

#### XYLOCAINE®

**Bronchoscopy | Laryngoscopy | Oesophagoscopy |**

##### Endotracheal intubation

- ▶ TO MUCOUS MEMBRANES
- ▶ Adult: Up to 20 doses

##### Dental practice

- ▶ TO MUCOUS MEMBRANES
- ▶ Adult: 1–5 doses

##### Maxillary sinus puncture

- ▶ TO MUCOUS MEMBRANES
- ▶ Adult: 3 doses

##### Relief of pain in oral lesions

- ▶ TO THE LESION
- ▶ Adult: Apply thinly to the ulcer using a cotton bud

- **UNLICENSED USE** Spray not licensed for the relief of pain in oral lesions.

- **CAUTIONS** Avoid anaesthesia of the pharynx before meals—risk of choking· can damage plastic cuffs of endotracheal tubes

- **INTERACTIONS** → Appendix 1: antiarrhythmics

#### ● ALLERGY AND CROSS-SENSITIVITY

- ▶ **Hypersensitivity and cross-sensitivity** Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.
- **PREGNANCY** Crosses the placenta but not known to be harmful in *animal* studies—use if benefit outweighs risk. When used as a local anaesthetic, large doses can cause fetal bradycardia; if given during delivery can also cause neonatal respiratory depression, hypotonia, or bradycardia after paracervical or epidural block.
- **BREAST FEEDING** Present in milk but amount too small to be harmful.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (risk of increased exposure).
- **RENAL IMPAIRMENT** Possible accumulation of lidocaine and active metabolite; caution in severe impairment.
- **PROFESSION SPECIFIC INFORMATION**
  - Dental practitioners' formulary** Lidocaine ointment 5% may be prescribed. Spray may be prescribed as Lidocaine Spray 10%
  - XYLOCAINE® Dental practitioners' formulary** May be prescribed as lidocaine spray 10%.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment

#### Spray

▶ **Xylocaine** (Aspen Pharma Trading Ltd)

**Lidocaine 10 mg per 1 actuation** Xylocaine 10mg/dose spray sugar-free | 50 mL  £6.29 DT = £6.29

#### Ointment

▶ **Lidocaine hydrochloride (Non-proprietary)**

**Lidocaine hydrochloride 50 mg per 1 gram** Lidocaine 5% ointment | 15 gram  £9.00 DT = £8.28

## ANALGESICS > NON-STEROIDAL ANTI-INFLAMMATORY DRUGS

### Benzydamine hydrochloride

21-Aug-2020

#### ● INDICATIONS AND DOSE

##### Painful inflammatory conditions of oropharynx

- ▶ TO THE LESION USING MOUTHWASH
- ▶ Child 13–17 years: Rinse or gargle 15 mL every 1.5–3 hours as required usually for not more than 7 days, dilute with an equal volume of water if stinging occurs
- ▶ Adult: Rinse or gargle 15 mL every 1.5–3 hours as required usually for not more than 7 days, dilute with an equal volume of water if stinging occurs
- ▶ TO THE LESION USING OROMUCOSAL SPRAY
- ▶ Child 1 month–5 years (body-weight 4–7 kg): 1 spray every 1.5–3 hours, to be administered onto the affected area
- ▶ Child 1 month–5 years (body-weight 8–11 kg): 2 sprays every 1.5–3 hours, to be administered onto the affected area
- ▶ Child 1 month–5 years (body-weight 12–15 kg): 3 sprays every 1.5–3 hours, to be administered onto the affected area
- ▶ Child 1 month–5 years (body-weight 16 kg and above): 4 sprays every 1.5–3 hours, to be administered onto the affected area
- ▶ Child 6–11 years: 4 sprays every 1.5–3 hours, to be administered onto affected area
- ▶ Child 12–17 years: 4–8 sprays every 1.5–3 hours, to be administered onto affected area

- Adult: 4–8 sprays every 1.5–3 hours, to be administered onto affected area

- INTERACTIONS** → Appendix 1: NSAIDs

- SIDE-EFFECTS**

- **Uncommon** Oral disorders
- **Rare or very rare** Photosensitivity reaction · respiratory disorders · skin reactions
- **Frequency not known** Angioedema

- PROFESSION SPECIFIC INFORMATION**

**Dental practitioners' formulary** Benzylamine Oromucosal Spray 0.15% may be prescribed.  
Benzylamine mouthwash may be prescribed as Benzylamine Mouthwash 0.15%.

- MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Spray**

- **Benzylamine hydrochloride (Non-proprietary)**  
Benzylamine hydrochloride 1.5 mg per 1 ml Benzylamine 0.15% oromucosal spray sugar free sugar-free | 30 ml [P] £4.24 DT = £2.08
- **Diffiam** (Viatris UK Healthcare Ltd)  
Benzylamine hydrochloride 1.5 mg per 1 ml Diffiam 0.15% spray sugar-free | 30 ml [P] £4.24 DT = £2.08

**Mouthwash**

- **Benzylamine hydrochloride (Non-proprietary)**  
Benzylamine hydrochloride 1.5 mg per 1 ml Benzylamine 0.15% mouthwash sugar free sugar-free | 300 ml [P] £7.65 DT = £4.84
- **Diffiam** (Viatris UK Healthcare Ltd)  
Benzylamine hydrochloride 1.5 mg per 1 ml Diffiam Oral Rinse 0.15% solution sugar-free | 300 ml [P] £6.50 DT = £4.84  
Diffiam 0.15% Sore Throat Rinse sugar-free | 200 ml [P] £4.64

## Diclofenac

28-Aug-2018

- INDICATIONS AND DOSE**

**Painful inflammatory conditions of the oral cavity and throat and/or following dental treatment or dental extraction**

- **BY MOUTH USING MOUTHWASH**
- **Adult:** Rinse or gargle 15 mL 2–3 times a day for 7 days, treatment may be extended to 6 weeks in mucositis caused by radiotherapy

- INTERACTIONS** → Appendix 1: NSAIDs
- PREGNANCY** Manufacturer advises avoid unless essential.
- BREAST FEEDING** Manufacturer advises avoid unless essential.
- DIRECTIONS FOR ADMINISTRATION** Manufacturer advises mouthwash may be diluted with a little water.

- MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Mouthwash**

- EXCIPIENTS: May contain Sorbitol
- **Diclofenac (Non-proprietary)**  
Diclofenac 74 mg per 1 ml Diclofenac 0.74mg/ml mouthwash sugar free sugar-free | 200 ml [PoM] £12.95 DT = £12.95

## Flurbiprofen

30-Nov-2021

- INDICATIONS AND DOSE**

**Relief of sore throat**

- **BY MOUTH USING LOZENGES**
- **Child 12–17 years:** 1 lozenge every 3–6 hours for maximum 3 days, allow lozenge to dissolve slowly in the mouth; maximum 5 lozenges per day
- **Adult:** 1 lozenge every 3–6 hours for maximum 3 days, allow lozenge to dissolve slowly in the mouth; maximum 5 lozenges per day

- INTERACTIONS** → Appendix 1: NSAIDs

- SIDE-EFFECTS** Oral ulceration (move lozenge around mouth) · taste altered
- ALLERGY AND CROSS-SENSITIVITY** [EvGr] Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. [M]

- MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Lozenge**

- **Strefen** (Reckitt Benckiser Healthcare (UK) Ltd)  
Flurbiprofen 8.75 mg Strefen Honey and Lemon 8.75mg lozenges | 16 lozenge [P] £3.42 DT = £3.42

## CORTICOSTEROIDS

F 740

### Beclometasone dipropionate

08-Mar-2022

(Beclomethasone dipropionate)

- INDICATIONS AND DOSE**

**Management of oral ulceration**

- **TO THE LESION**
- **Adult:** 50–100 micrograms twice daily, administered using an inhaler device

- UNLICENSED USE** Use of inhaler is unlicensed for oral ulceration.

- INTERACTIONS** → Appendix 1: corticosteroids

- MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. For preparations, see inhaled beclometasone, p. 278

F 740

### Betamethasone

08-Mar-2022

- DRUG ACTION** Betamethasone has very high glucocorticoid activity and insignificant mineralocorticoid activity.

- INDICATIONS AND DOSE**

**Oral ulceration**

- **TO THE LESION USING SOLUBLE TABLETS**
- **Child 12–17 years:** 500 micrograms 4 times a day, to be dissolved in 20 mL water and rinsed around the mouth; not to be swallowed
- **Adult:** 500 micrograms 4 times a day, to be dissolved in 20 mL water and rinsed around the mouth; not to be swallowed

- UNLICENSED USE**

- In children Betamethasone soluble tablets not licensed for use as mouthwash or in oral ulceration.

- CONTRA-INDICATIONS** Untreated local infection

- INTERACTIONS** → Appendix 1: corticosteroids

- PATIENT AND CARER ADVICE** Patient counselling is advised for betamethasone soluble tablets (administration).

- PROFESSION SPECIFIC INFORMATION**

**Dental practitioners' formulary** Betamethasone Soluble Tablets 500 micrograms may be prescribed.

- MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Soluble tablet**

CAUTIONARY AND ADVISORY LABELS 10, 13, 21 (not for use as mouthwash for oral ulceration)

- **Betamethasone (Non-proprietary)**

**Betamethasone (as Betamethasone sodium phosphate)**  
500 microgram Betamethasone 500microgram soluble tablets sugar free sugar-free | 30 tablet [PoM] £7.00 sugar-free | 100 tablet [PoM] £58.15 DT = £58.15

F 740

## Hydrocortisone

17-May-2022

- **DRUG ACTION** Hydrocortisone has equal glucocorticoid and mineralocorticoid activity.

### ● INDICATIONS AND DOSE

#### Oral and perioral lesions

- ▶ TO THE LESION USING BUCCAL TABLET
- ▶ Child 1 month-11 years: Only on medical advice
- ▶ Child 12-17 years: 1 lozenge 4 times a day, allowed to dissolve slowly in the mouth in contact with the ulcer
- ▶ Adult: 1 lozenge 4 times a day, allowed to dissolve slowly in the mouth in contact with the ulcer

- **UNLICENSED USE** *Hydrocortisone mucoadhesive buccal tablets* licensed for use in children (under 12 years—on medical advice only).

### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: HYDROCORTISONE MUCO-ADHESIVE BUCCAL TABLETS: SHOULD NOT BE USED OFF-LABEL FOR ADRENAL INSUFFICIENCY IN CHILDREN DUE TO SERIOUS RISKS (DECEMBER 2018)

The MHRA has received reports of off-label use of hydrocortisone muco-adhesive buccal tablets for adrenal insufficiency in children. Healthcare professionals are advised that:

- hydrocortisone muco-adhesive buccal tablets are indicated only for local use in the mouth for aphthous ulceration and should not be used to treat adrenal insufficiency;
- substitution of licensed oral hydrocortisone formulations with muco-adhesive buccal tablets can result in insufficient cortisol absorption and, in stress situations, life-threatening adrenal crisis;
- only hydrocortisone products licensed for adrenal replacement therapy should be used.

- **CONTRA-INDICATIONS** Untreated local infection
- **INTERACTIONS** → Appendix 1: corticosteroids
- **PROFESSION SPECIFIC INFORMATION**  
**Dental practitioners' formulary** Mucoadhesive buccal tablets may be prescribed as Hydrocortisone Oromucosal Tablets.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.  
**Muco-adhesive buccal tablet**  
▶ **Hydrocortisone (Non-proprietary)**  
Hydrocortisone (as Hydrocortisone sodium succinate)  
2.5 mg Hydrocortisone 2.5mg muco-adhesive buccal tablets sugar free sugar-free | 20 tablet [P] £8.99 DT = £8.98

## SALICYLIC ACID AND DERIVATIVES

### Choline salicylate

23-Nov-2020

#### ● INDICATIONS AND DOSE

##### Mild oral and perioral lesions

- ▶ TO THE LESION
- ▶ Child 16-17 years: Apply 0.5 inch, apply with gentle massage, not more often than every 3 hours
- ▶ Adult: Apply 0.5 inch, apply with gentle massage, not more often than every 3 hours

- **CONTRA-INDICATIONS** Children under 16 years

#### CONTRA-INDICATIONS, FURTHER INFORMATION

- ▶ **Reye's syndrome** The CHM has advised that topical oral pain relief products containing salicylate salts should not be used in children under 16 years, as a cautionary measure due to the theoretical risk of Reye's syndrome.
- **CAUTIONS** Frequent application, especially in children, may give rise to salicylate poisoning · not to be applied to dentures—leave at least 30 minutes before re-insertion of dentures (in adults)
- **INTERACTIONS** → Appendix 1: choline salicylate
- **SIDE-EFFECTS** Bronchospasm
- **PRESCRIBING AND DISPENSING INFORMATION** When prepared extemporaneously, the BP states Choline Salicylate Dental Gel, BP consists of choline salicylate 8.7% in a flavoured gel basis.
- **PROFESSION SPECIFIC INFORMATION**  
**Dental practitioners' formulary** Choline Salicylate Dental Gel may be prescribed.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Oromucosal gel

- ▶ **Bonjela** (Reckitt Benckiser Healthcare (UK) Ltd)  
Choline salicylate 87 mg per 1 gram Bonjela Cool Mint gel sugar-free | 15 gram [GSL] £3.55 DT = £2.91  
Bonjela Original gel sugar-free | 15 gram [GSL] £2.91 DT = £2.91

## Salicylic acid with rhubarb extract

23-Nov-2020

#### ● INDICATIONS AND DOSE

##### Mild oral and perioral lesions

- ▶ TO THE LESION
- ▶ Child 16-17 years: Apply 3-4 times a day maximum duration 7 days
- ▶ Adult: Apply 3-4 times a day maximum duration 7 days

- **CONTRA-INDICATIONS** Children under 16 years
- **CONTRA-INDICATIONS, FURTHER INFORMATION**  
**Reye's syndrome** The CHM has advised that topical oral pain relief products containing salicylate salts should not be used in children under 16 years, as a cautionary measure due to the theoretical risk of Reye's syndrome.
- **CAUTIONS** Frequent application, especially in children, may give rise to salicylate poisoning · not to be applied to dentures—leave at least 30 minutes before re-insertion of dentures (in adults)
- **SIDE-EFFECTS**
- ▶ **Common or very common** Oral discolouration · tooth discolouration
- **PATIENT AND CARER ADVICE** May cause temporary discolouration of teeth and oral mucosa.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.  
**Paint**  
EXCIPIENTS: May contain Ethanol  
▶ **Pyralvex** (Viatrix UK Healthcare Ltd)  
Salicylic acid 10 mg per 1 ml, Rhubarb extract 50 mg per 1 ml Pyralvex solution | 10 ml [P] £3.25

## 4 Oropharyngeal bacterial infections

### Oropharyngeal infections, antibacterial therapy

17-May-2022

#### Pericoronitis

Public Health England advises antibacterial use only in the presence of systemic features of infection, or persistent swelling.

- Metronidazole p. 590, or *alternatively*, amoxicillin p. 597
- ▶ *Suggested duration of treatment* 3 days or until pain reduction allows for oral hygiene.

#### Gingivitis (acute necrotising ulcerative)

Public Health England advises antibacterial use only in the presence of systemic features of infection.

- Metronidazole
- ▶ *Suggested duration of treatment* 3 days.

**EvGr** If metronidazole is contra-indicated, use *alternative*, amoxicillin. **A**

#### Abscess (periapical or periodontal)

Public Health England advises antibacterial use only if there are signs of severe infection, systemic symptoms, or a high risk of complications.

- Phenoxymethylpenicillin p. 596, or *alternatively*, amoxicillin
- ▶ Alternative in penicillin allergy: clarithromycin p. 584
- ▶ If signs of spreading infection (e.g. lymph node involvement, systemic signs), add metronidazole
- ▶ *Suggested duration of treatment* up to 5 days; review at 3 days.

#### Periodontitis

**EvGr** Antibacterials may be used as an adjunct to effective mechanical debridement in severe disease or disease unresponsive to local treatment alone on the advice of a specialist. **A**

#### Sore throat (acute)

Acute sore throat is usually triggered by a viral infection and is self-limiting. Symptoms can last for around 1 week, and most people will improve within this time without treatment with antibacterials, regardless of the cause.

**EvGr** Antibacterial therapy is required only in patients with severe systemic symptoms, signs and symptoms of a more serious illness or condition, or those at high risk of complications. Patients with severe systemic infection or severe suppurative complications (such as peri-tonsillar abscess (quinsy) or cellulitis) should be referred to hospital.

- Phenoxymethylpenicillin p. 596 **A**
- ▶ **EvGr** *Suggested duration of treatment* 5 to 10 days. **A**
- **EvGr** Alternative in penicillin allergy: clarithromycin p. 584 or erythromycin p. 587 (in pregnancy) **A**
- ▶ **EvGr** *Suggested duration of treatment* 5 days. **A**

#### Other infections

For further information on antibacterial treatment used in oropharyngeal infections, see Oral bacterial infections p. 550.

## ANTIBACTERIALS > TETRACYCLINES AND RELATED DRUGS

F 615

### Doxycycline

20-Jan-2022

#### ● INDICATIONS AND DOSE

##### Treatment of recurrent aphthous ulceration

- ▶ BY MOUTH USING SOLUBLE TABLETS
- ▶ Child 12-17 years: 100 mg 4 times a day usually for 3 days, dispersible tablet can be stirred into a small amount of water then rinsed around the mouth for 2-3 minutes, it should preferably not be swallowed
- ▶ Adult: 100 mg 4 times a day usually for 3 days, dispersible tablet can be stirred into a small amount of water then rinsed around the mouth for 2-3 minutes, it should preferably not be swallowed

- **UNLICENSED USE** Doxycycline may be used as detailed below, although considered outside the scope of its licence:

- recurrent aphthous ulceration.

- **CAUTIONS** Alcohol dependence
- **INTERACTIONS** → Appendix 1: tetracyclines
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Dyspnoea · hypotension · peripheral oedema · tachycardia
  - ▶ **Uncommon** Gastrointestinal discomfort
  - ▶ **Rare or very rare** Antibiotic associated colitis · anxiety · arthralgia · flushing · intracranial pressure increased with papilloedema · Jarisch-Herxheimer reaction · myalgia · photoonycholysis · severe cutaneous adverse reactions (SCARs) · skin hyperpigmentation (long term use) · tinnitus · vision disorders
- **PATIENT AND CARER ADVICE** Counselling on administration advised. Photosensitivity Patients should be advised to avoid exposure to sunlight or sun lamps.
- **PROFESSION SPECIFIC INFORMATION**
  - ▶ **Dental practitioners' formulary** Dispersible tablets may be prescribed as Dispersible Doxycycline Tablets.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Dispersible tablet

CAUTIONARY AND ADVISORY LABELS 6, 9, 11, 13

- ▶ **Vibramycin-D** (Pfizer Ltd)

**Doxycycline** (as Doxycycline monohydrate) 100 mg Vibramycin-D 100mg dispersible tablets sugar-free | 8 tablet **PoM** £4.91 DT = £4.91

## 5 Oropharyngeal fungal infections

### Oropharyngeal fungal infections

19-May-2022

#### Overview

Fungal infections of the mouth are usually caused by *Candida* spp. (candidiasis or candidosis). Different types of oropharyngeal candidiasis are managed as follows:

#### Thrush

Pseudomembranous candidiasis (thrush) is usually an acute infection but it may persist in chronic forms. Those at greater risk of candidal infections include patients receiving inhaled corticosteroids, chemotherapy, or broad-spectrum antibacterials, and in patients with serious systemic disease associated with reduced immunity such as leukaemia, other malignancies, and HIV infection. **EvGr** Any predisposing

condition should be managed appropriately. **⚠** The risk of oral candidiasis associated with corticosteroid inhaler use can be reduced by rinsing the mouth with water (or cleaning teeth) immediately after using the inhaler, use of a spacer, or using an inhaler at its lowest effective dose.

**EvGr** For mild and localised infections, treatment with miconazole oral gel below is recommended; if this is unsuitable, oral nystatin p. 1311 may be given. Oral antifungal treatment with fluconazole p. 649 can be considered for patients that have extensive or severe infection, or when miconazole or nystatin treatment is unsuitable or ineffective. If the infection fails to respond to treatment after 1 week, consider extending the course for another week or referring to a specialist as appropriate.

Patients with moderate to severe infections may be considered for referral to a specialist; patients with evidence of a systemic disease or widespread infections should be admitted to hospital. For immunocompromised patients receiving treatment with ciclosporin, oral tacrolimus, or chemotherapy, seek specialist advice before starting antifungal treatment. **⚠**

### Acute erythematous candidiasis

Acute erythematous (atrophic) candidiasis is usually associated with a burning sensation of the mouth or tongue and may be caused by corticosteroid or broad-spectrum antibacterial use. **EvGr** Treatment of acute erythematous candidiasis is the same as for pseudomembranous candidiasis **⚠**—for further information, see *Thrush*. Denture-related problems should be managed prior to antifungal treatment initiation.

### Denture stomatitis

**EvGr** Patients with denture stomatitis (chronic atrophic candidiasis) should cleanse their dentures thoroughly, soak them overnight in disinfectant solution, and allow to air dry. Dentures should not be worn for 6 hours or more in each 24-hour period to promote gum healing. Refer to a dentist for ill-fitting dentures. Patients should also brush the mucosal surface regularly with a soft brush. **⚠**

Denture stomatitis is not always associated with candidiasis and other factors such as mechanical or chemical irritation, bacterial infection, or allergy to the denture material, may be the cause. **EvGr** Miconazole oral gel may be used as treatment if needed. **⚠**

### Chronic hyperplastic candidiasis

**EvGr** Patients with chronic hyperplastic candidiasis (plaque-like candidiasis) should be referred to a specialist due to the increased risk of malignancy and potential need for a biopsy. The specialist may suggest treatment with a systemic antifungal to eliminate candidal overlay. **⚠**

### Angular cheilitis

Angular cheilitis (angular stomatitis) is characterised by soreness, erythema, and fissuring at the angles of the mouth. It may be associated with ill-fitting dentures, nutritional deficiency, or immunosuppression. Both yeasts (*Candida* spp.) and bacteria (*Staphylococcus aureus* and streptococci) are commonly involved as interacting, infective factors. **EvGr** Angular cheilitis is normally self-limiting. While the underlying cause is being identified and treated, it may be helpful to apply topical emollients, miconazole cream or ointment for mild candida infection, or fusidic acid ointment p. 623 if there is evidence of bacterial infection. If the angular cheilitis is unresponsive to treatment, hydrocortisone with miconazole cream or ointment can be used. **⚠**

### Drugs used in oropharyngeal candidiasis

Nystatin is not absorbed from the gastro-intestinal tract and is applied locally (as a suspension) to the mouth for treating local fungal infections. Miconazole is applied locally (as an oral gel) in the mouth but it is absorbed systemically so potential interactions need to be considered. Miconazole

also has some activity against Gram-positive bacteria including streptococci and staphylococci. Oral itraconazole p. 651 is licensed for the treatment of fluconazole-resistant oral candidiasis.

For further information on systemic antifungal treatment, see Antifungals, systemic use p. 645.

## ANTIFUNGALS > IMIDAZOLE ANTIFUNGALS

### Miconazole

09-Feb-2022

#### • INDICATIONS AND DOSE

##### Oral candidiasis

###### ▶ BY MOUTH USING ORAL GEL

- ▶ Child 2-17 years: 2.5 mL 4 times a day treatment should be continued for at least 7 days after lesions have healed or symptoms have cleared, to be administered after meals, retain near oral lesions before swallowing (dental prostheses and orthodontic appliances should be removed at night and brushed with gel)
- ▶ Adult: 2.5 mL 4 times a day treatment should be continued for at least 7 days after lesions have healed or symptoms have cleared, to be administered after meals, retain near oral lesions before swallowing (dental prostheses and orthodontic appliances should be removed at night and brushed with gel)

##### Prevention and treatment of oral candidiasis (dose approved for use by community practitioner nurse prescribers)

###### ▶ BY MOUTH USING ORAL GEL

- ▶ Child 4-23 months: 1.25 mL 4 times a day treatment should be continued for at least 7 days after lesions have healed or symptoms have cleared, to be smeared around the inside of the mouth after feeds
- ▶ Child 2-17 years: 2.5 mL 4 times a day treatment should be continued for at least 7 days after lesions have healed or symptoms have cleared, to be administered after meals, retain near oral lesions before swallowing (dental prostheses and orthodontic appliances should be removed at night and brushed with gel)
- ▶ Adult: 2.5 mL 4 times a day treatment should be continued for at least 7 days after lesions have healed or symptoms have cleared, to be administered after meals, retain near oral lesions before swallowing (dental prostheses and orthodontic appliances should be removed at night and brushed with gel)

#### DOSE EQUIVALENCE AND CONVERSION

- ▶ One 5-mL spoonful of oral gel equivalent to 124 mg miconazole.

- **UNLICENSED USE** Not licensed for use in children under 4 months of age or during first 5–6 months of life of an infant born pre-term.
- **CONTRA-INDICATIONS** Infants with impaired swallowing reflex
- **CAUTIONS** Avoid in Acute porphyrias p. 1150
- **INTERACTIONS** → Appendix 1: antifungals, azoles
- **SIDE-EFFECTS**
- ▶ **Common or very common** Skin reactions
- ▶ **Frequency not known** Angioedema
- **PREGNANCY** Manufacturer advises avoid if possible—toxicity at high doses in *animal* studies.
- **BREAST FEEDING** Manufacturer advises caution—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises oral gel should be held in mouth, after food.
- **PRESCRIBING AND DISPENSING INFORMATION** Flavours of oral gel may include orange.

- **PATIENT AND CARER ADVICE** Patients or carers should be given advice on how to administer miconazole oromucosal gel.
- **PROFESSION SPECIFIC INFORMATION**  
**Dental practitioners' formulary** Miconazole Oromucosal Gel may be prescribed.
- **EXCEPTIONS TO LEGAL CATEGORY** 15-g tube of oral gel can be sold to the public.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Oromucosal gel**

CAUTIONARY AND ADVISORY LABELS 9

▶ **Daktarin** (Johnson & Johnson Ltd, Janssen-Cilag Ltd)

**Miconazole 20 mg per 1 gram** Daktarin 20mg/g oromucosal gel  
sugar-free | 15 gram [P] £4.18 DT = £4.01 sugar-free |  
80 gram [POM] £4.38 DT = £4.38

**ANTIFUNGALS > POLYENE ANTIFUNGALS****Nystatin**

10-Nov-2021

● **INDICATIONS AND DOSE****Oral candidiasis**

▶ BY MOUTH

- ▶ **Child:** 100 000 units 4 times a day usually for 7 days, and continued for 48 hours after lesions have resolved
- ▶ **Adult:** 100 000 units 4 times a day usually for 7 days, and continued for 48 hours after lesions have resolved

**Oral and perioral fungal infections (dose approved for use by community practitioner nurse prescribers)**

▶ BY MOUTH

- ▶ **Neonate:** 100 000 units 4 times a day usually for 7 days, and continued for 48 hours after lesions have resolved, to be given after feeds.
- ▶ **Child:** 100 000 units 4 times a day usually for 7 days, and continued for 48 hours after lesions have resolved
- ▶ **Adult:** 100 000 units 4 times a day usually for 7 days, and continued for 48 hours after lesions have resolved

- **UNLICENSED USE** Suspension not licensed for use in neonates for the treatment of candidiasis but the Department of Health has advised that a Community Practitioner Nurse Prescriber may prescribe nystatin oral suspension for a neonate, in the doses provided in the BNF, provided that there is a clear diagnosis of oral thrush. The nurse prescriber must only prescribe within their own competence and must accept clinical and medicolegal responsibility for prescribing.
- **SIDE-EFFECTS** Abdominal distress · angioedema · diarrhoea · face oedema · nausea · sensitisation · skin reactions · Stevens-Johnson syndrome · vomiting
- **PATIENT AND CARER ADVICE** Counselling advised with oral suspension (use of pipette, hold in mouth, after food). Medicines for Children leaflet: Nystatin for Candida infections [www.medicinesforchildren.org.uk/medicines/nystatin-for-candida-infections/](http://www.medicinesforchildren.org.uk/medicines/nystatin-for-candida-infections/)
- **PROFESSION SPECIFIC INFORMATION**  
**Dental practitioners' formulary** Nystatin Oral Suspension may be prescribed.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: tablet, capsule, oral suspension

**Oral suspension**

CAUTIONARY AND ADVISORY LABELS 9

EXCIPIENTS: May contain Ethanol

▶ **Nystatin (Non-proprietary)**

**Nystatin 100000 unit per 1 ml** Nystatin 100,000units/ml oral  
suspension | 30 ml [POM] [N] DT = £1.80

## 6 Oropharyngeal viral infections

### Oropharyngeal viral infections

**Management**

Viral infections are the most common cause of a sore throat. They do not benefit from anti-infective treatment.

The management of primary herpetic gingivostomatitis is a soft diet, adequate fluid intake, and analgesics as required, including local use of benzydamine hydrochloride p. 1306. The use of chlorhexidine mouthwash p. 1303 will control plaque accumulation if toothbrushing is painful and will also help to control secondary infection in general.

In the case of severe herpetic stomatitis, a systemic antiviral such as aciclovir p. 687 is required. Valaciclovir p. 690 and famciclovir p. 689 are suitable alternatives for oral lesions associated with herpes zoster. Aciclovir and valaciclovir are also used for the prevention of frequently recurring herpes simplex lesions of the mouth, particularly when implicated in the initiation of erythema multiforme.

## Skin conditions, management

### Vehicles

The British Association of Dermatologists list of preferred unlicensed dermatological preparations (specials) is available at [www.bad.org.uk/specials](http://www.bad.org.uk/specials).

Both vehicle and active ingredients are important in the treatment of skin conditions; the vehicle alone may have more than a mere placebo effect. The vehicle affects the degree of hydration of the skin, has a mild anti-inflammatory effect, and aids the penetration of active drug.

**Applications** are usually viscous solutions, emulsions, or suspensions for application to the skin (including the scalp) or nails.

**Collodions** are painted on the skin and allowed to dry to leave a flexible film over the site of application.

**Creams** are emulsions of oil and water and are generally well absorbed into the skin. They may contain an antimicrobial preservative unless the active ingredient or basis is intrinsically bactericidal and fungicidal. Generally, creams are cosmetically more acceptable than ointments because they are less greasy and easier to apply.

**Gels** consist of active ingredients in suitable hydrophilic or hydrophobic bases; they generally have a high water content. Gels are particularly suitable for application to the face and scalp.

**Lotions** have a cooling effect and may be preferred to ointments or creams for application over a hairy area. Lotions in alcoholic basis can sting if used on broken skin. *Shake lotions* (such as calamine lotion) contain insoluble powders which leave a deposit on the skin surface.

**Ointments** are greasy preparations which are normally anhydrous and insoluble in water, and are more occlusive than creams. They are particularly suitable for chronic, dry lesions. The most commonly used ointment bases consist of soft paraffin or a combination of soft, liquid, and hard paraffin. Some ointment bases have both *hydrophilic and lipophilic* properties; they may have occlusive properties on the skin surface, encourage hydration, and also be miscible with water; they often have a mild anti-inflammatory effect. *Water-soluble ointments* contain macrogols which are freely soluble in water and are therefore readily washed off; they

have a limited but useful role where ready removal is desirable.

**Pastes** are stiff preparations containing a high proportion of finely powdered solids such as zinc oxide and starch suspended in an ointment. They are used for circumscribed lesions such as those which occur in lichen simplex, chronic eczema, or psoriasis. They are less occlusive than ointments and can be used to protect inflamed, lichenified, or excoriated skin.

**Dusting powders** are used only rarely. They reduce friction between opposing skin surfaces. Dusting powders should not be applied to moist areas because they can cake and abrade the skin. Talc is a lubricant but it does not absorb moisture; it can cause respiratory irritation. Starch is less lubricant but absorbs water.

### Dilution

The BP directs that creams and ointments should **not** normally be diluted but that should dilution be necessary care should be taken, in particular, to prevent microbial contamination. The appropriate diluent should be used and heating should be avoided during mixing; excessive dilution may affect the stability of some creams. Diluted creams should normally be used within 2 weeks of preparation.

### Suitable quantities for prescribing

#### Suitable quantities of dermatological preparations to be prescribed for specific areas of the body

Area of body	Creams and Ointments	Lotions
Face	15-30 g	100 mL
Both hands	25-50 g	200 mL
Scalp	50-100 g	200 mL
Both arms or both legs	100-200 g	200 mL
Trunk	400 g	500 mL
Groins and genitalia	15-25 g	100 mL

These amounts are usually suitable for an adult for twice daily application for 1 week. The recommendations **do not** apply to corticosteroid preparations. For suitable quantities of corticosteroid preparations, see relevant table.

## Excipients and sensitisation

Excipients in topical products rarely cause problems. If a patch test indicates allergy to an excipient, products containing the substance should be avoided. The following excipients in topical preparations are associated, rarely, with sensitisation; the presence of these excipients is indicated in the entries for topical products.

- Beeswax
- Benzyl alcohol
- Butylated hydroxyanisole
- Butylated hydroxytoluene
- Cetostearyl alcohol (including cetyl and stearyl alcohol)
- Chlorocresol
- Edetic acid (EDTA)
- Ethylenediamine
- Fragrances
- Hydroxybenzoates (parabens)
- Imidurea
- Isopropyl palmitate
- N-(3-Chloroallyl)hexaminium chloride (quaternium 15)
- Polysorbates
- Propylene glycol
- Sodium metabisulfite
- Sorbic acid
- Wool fat and related substances including lanolin (purified versions of wool fat have reduced the problem)

# 1 Dry and scaling skin disorders

## Emollient and barrier preparations

04-Sep-2020

### Borderline substances

The preparations marked 'ACBS' are regarded as drugs when prescribed in accordance with the advice of the Advisory Committee on Borderline Substances for the clinical conditions listed. Prescriptions issued in accordance with this advice and endorsed 'ACBS' will normally not be investigated.

### Emollients

Emollients soothe, smooth and hydrate the skin and are indicated for all dry or scaling disorders. Their effects are short lived and they should be applied frequently even after improvement occurs. They are useful in dry and eczematous disorders, and to a lesser extent in psoriasis. The choice of an appropriate emollient will depend on the severity of the condition, patient preference, and the site of application. Some ingredients rarely cause sensitisation and this should be suspected if an eczematous reaction occurs. The use of aqueous cream as a leave-on emollient may increase the risk of skin reactions, particularly in eczema.

Preparations such as **aqueous cream and emulsifying ointment** can be used as soap substitutes for hand washing and in the bath; the preparation is rubbed on the skin before rinsing off completely. The addition of a bath oil may also be helpful.

Urea is occasionally used with other topical agents such as corticosteroids to enhance penetration of the skin.

### Emollient bath and shower preparations

Emollient bath additives should be added to bath water; hydration can be improved by soaking in the bath for 10–20 minutes. Some bath emollients can be applied to wet skin undiluted and rinsed off. In dry skin conditions soap should be avoided.

The quantities of bath additives recommended for adults are suitable for an adult-size bath. Proportionately less should be used for a child-size bath or a washbasin; recommended bath additive quantities for children reflect this.

### MHRA/CHM advice (updated December 2018): Emollients: new information about risk of severe and fatal burns with paraffin-containing and paraffin-free emollients

Emollients are an important and effective treatment for chronic dry skin disorders and people should continue to use these products. However, healthcare professionals must ensure that patients and their carers understand the fire risk associated with the build-up of residue on clothing and bedding and can take action to minimise the risk. There is a fire risk with all paraffin-containing emollients, regardless of paraffin concentration, and it cannot be excluded with paraffin-free emollients. A similar risk may apply to products that are applied to the skin over large body areas, or in large volumes for repeated use for more than a few days.

Healthcare professionals should advise patients not to smoke or go near naked flames because clothing, bedding, dressings, and other fabrics that have been in contact with an emollient or emollient-treated skin can rapidly ignite. Washing these materials at high temperature may reduce emollient build-up but not totally remove it.

The MHRA/CHM (August 2020) have released a toolkit of resources for health and social care professionals to support the safe use of emollients, available at: [www.gov.uk/drug-safety-update/emollients-and-risk-of-severe-and-fatal-burns-new-resources-available](http://www.gov.uk/drug-safety-update/emollients-and-risk-of-severe-and-fatal-burns-new-resources-available).

### Barrier preparations

Barrier preparations often contain water-repellent substances such as dimeticone (see barrier creams and ointments p. 1314) or other silicones. They are used on the skin around stomas, bedsores, and pressure areas in the elderly where the skin is intact. Where the skin has broken down, barrier preparations have a limited role in protecting adjacent skin. Barrier preparations are not a substitute for adequate nursing care.

### Nappy rash

The first line of treatment is to ensure that nappies are changed frequently and that tightly fitting water-proof pants are avoided. The rash may clear when left exposed to the air and a barrier preparation, applied with each nappy change, can be helpful. A mild corticosteroid such as hydrocortisone 0.5% or 1% p. 1339 can be used if inflammation is causing discomfort, but it should be avoided in neonates. The barrier preparation should be applied after the corticosteroid preparation to prevent further damage. Preparations containing hydrocortisone should be applied for no more than a week; the hydrocortisone should be discontinued as soon as the inflammation subsides. The occlusive effect of nappies and waterproof pants may increase absorption of corticosteroids. If the rash is associated with candidal infection, a topical antifungal such as clotrimazole cream p. 1324 can be used. Topical antibacterial preparations can be used if bacterial infection is present; treatment with an oral antibacterial may occasionally be required in severe or recurrent infection. Hydrocortisone may be used in combination with antimicrobial preparations if there is considerable inflammation, erosion, and infection.

## DERMATOLOGICAL DRUGS > BARRIER PREPARATIONS

### Barrier creams and ointments

13-Feb-2020

#### ● INDICATIONS AND DOSE

##### For use as a barrier preparation

- ▶ TO THE SKIN
- ▶ Child: (consult product literature)
- ▶ Adult: (consult product literature)

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Ointment

EXCIPIENTS: May contain Woolfat and related substances (including lanolin)

##### ▶ Barrier creams and ointments (Non-proprietary)

Cetostearyl alcohol 20 mg per 1 gram, Zinc oxide 75 mg per 1 gram, Beeswax white 100 mg per 1 gram, Arachis oil 305 mg per 1 gram, Castor oil 500 mg per 1 gram Ovelle zinc and castor oil ointment | 100 gram £4.41 | 500 gram £14.45 DT = £5.15  
Zinc and Castor oil ointment | 500 gram [GSL] £5.14-£5.15 DT = £5.15  
Zinc and Castor oil cream | 100 gram [GSL] £1.46

##### ▶ Metanium (Thornton & Ross Ltd)

Titanium salicylate 30 mg per 1 gram, Titanium peroxide 50 mg per 1 gram, Titanium dioxide 200 mg per 1 gram Metanium Nappy Rash ointment | 30 gram [GSL] £2.24 DT = £2.24

#### Spray

CAUTIONARY AND ADVISORY LABELS 15

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens), woolfat and related substances (including lanolin)

##### ▶ Sprilon (J M Loveridge Ltd)

Dimeticone 10.4 mg per 1 gram, Zinc oxide 125 mg per 1 gram Sprilon aerosol spray | 115 gram [GSL] £8.90 DT = £8.90

#### Cream

EXCIPIENTS: May contain Beeswax, butylated hydroxyanisole, butylated hydroxytoluene, cetostearyl alcohol (including cetyl and stearyl alcohol), chlorocresol, fragrances, hydroxybenzoates (parabens), propylene glycol, woolfat and related substances (including lanolin)

##### ▶ Conotrane (Karo Pharma)

Benzalkonium chloride 1 mg per 1 gram, Dimeticone 220 mg per 1 gram Conotrane cream | 100 gram [GSL] £0.88 DT = £0.88 | 500 gram [GSL] £3.51

##### ▶ Drapolene (Supra Enterprises Ltd)

Benzalkonium chloride 100 microgram per 1 gram, Cetriride 2 mg per 1 gram Drapolene cream | 100 gram [GSL] £3.08 DT = £3.08 | 200 gram [GSL] £4.31 DT = £4.31 | 350 gram [GSL] £6.16 DT = £6.16

##### ▶ Siopel (Derma UK Ltd)

Cetriride 3 mg per 1 gram, Dimeticone 1000 100 mg per 1 gram Siopel cream | 50 gram [GSL] £4.65 DT = £4.65

##### ▶ Sudocrem (Teva UK Ltd)

Benzyl cinnamate 1.5 mg per 1 gram, Benzyl alcohol 3.9 mg per 1 gram, Benzyl benzoate 10.1 mg per 1 gram, Wool fat hydrous 40 mg per 1 gram, Zinc oxide 152.5 mg per 1 gram Sudocrem antiseptic healing cream | 60 gram [GSL] £1.74 | 125 gram [GSL] £2.58 | 250 gram [GSL] £4.40 | 400 gram [GSL] £6.30

## DERMATOLOGICAL DRUGS > EMOLLIENTS

### Emollient bath and shower products, antimicrobial-containing

19-Nov-2020

#### ● INDICATIONS AND DOSE

##### DERMOL<sup>®</sup> 200 SHOWER EMOLLIENT

##### Dry and pruritic skin conditions including eczema and dermatitis

- ▶ TO THE SKIN
- ▶ Child: To be applied to the skin or used as a soap substitute
- ▶ Adult: To be applied to the skin or used as a soap substitute

##### DERMOL<sup>®</sup> 600 BATH EMOLLIENT

##### Dry and pruritic skin conditions including eczema and dermatitis

- ▶ TO THE SKIN
- ▶ Child 1-23 months: 5–15 mL/bath, not to be used undiluted
- ▶ Child 2-17 years: 15–30 mL/bath, not to be used undiluted
- ▶ Adult: Up to 30 mL/bath, not to be used undiluted

##### DERMOL<sup>®</sup> WASH EMULSION

##### Dry and pruritic skin conditions including eczema and dermatitis

- ▶ TO THE SKIN
- ▶ Child: To be applied to the skin or used as a soap substitute
- ▶ Adult: To be applied to the skin or used as a soap substitute

##### EMULSIDERM<sup>®</sup>

##### Dry skin conditions including eczema and ichthyosis

- ▶ TO THE SKIN
- ▶ Child 1-23 months: 5–10 mL/bath, alternatively, to be rubbed into dry skin until absorbed
- ▶ Child 2-17 years: 7–30 mL/bath, alternatively, to be rubbed into dry skin until absorbed
- ▶ Adult: 7–30 mL/bath, alternatively, to be rubbed into dry skin until absorbed

##### OILATUM<sup>®</sup> PLUS

##### Topical treatment of eczema, including eczema at risk from infection

- ▶ TO THE SKIN
- ▶ Child 6-11 months: 1 mL/bath, not to be used undiluted
- ▶ Child 1-17 years: 1–2 capfuls/bath, not to be used undiluted
- ▶ Adult: 1–2 capfuls/bath, not to be used undiluted

#### IMPORTANT SAFETY INFORMATION

These preparations make skin and surfaces slippery—particular care is needed when bathing.

MHRA/CHM ADVICE (UPDATED DECEMBER 2018): EMOLLIENTS: NEW INFORMATION ABOUT RISK OF SEVERE AND FATAL BURNS WITH PARAFFIN-CONTAINING AND PARAFFIN-FREE EMOLLIENTS See Emollient and barrier preparations p. 1313.

- **DIRECTIONS FOR ADMINISTRATION** Emollient bath additives should be added to bath water; [EVCr](#) hydration can be improved by soaking in the bath for 5–20 minutes (consult product literature). Some bath emollients can be applied to wet skin undiluted and rinsed off. [⚠](#) Emollient preparations contained in tubs should be removed with a clean spoon or spatula to reduce bacterial contamination of the emollient. Emollients should be applied in the direction of hair growth to reduce the risk of folliculitis.
- **PRESCRIBING AND DISPENSING INFORMATION** Preparations containing an antibacterial should be avoided unless infection is present or is a frequent complication.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Bath additive

CAUTIONARY AND ADVISORY LABELS 15

EXCIPIENTS: May contain Acetylated lanolin alcohols, isopropyl palmitate, polysorbates

##### ▶ Dermal 600 (Dermal Laboratories Ltd)

Benzalkonium chloride 5 mg per 1 gram, Isopropyl myristate 250 mg per 1 gram, Liquid paraffin 250 mg per 1 gram Dermal 600 bath emollient | 600 ml [P] £7.55

##### ▶ Emulsiderm (Dermal Laboratories Ltd)

Benzalkonium chloride 5 mg per 1 gram, Isopropyl myristate 250 mg per 1 gram, Liquid paraffin 250 mg per

1 gram Emulsiderm emollient | 300 ml [P] £3.85 | 1000 ml [P] £12.00

- ▶ **Oilatum Plus** (Thornton & Ross Ltd)  
Triclosan 20 mg per 1 gram, Benzalkonium chloride 60 mg per 1 gram, Liquid paraffin light 525 mg per 1 gram Oilatum Plus bath additive | 500 ml [GSL] £7.94

### Liquid

CAUTIONARY AND ADVISORY LABELS 15

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol)

- ▶ **Dermol 200** (Dermal Laboratories Ltd)  
Benzalkonium chloride 1 mg per 1 gram, Chlorhexidine hydrochloride 1 mg per 1 gram, Isopropyl myristate 25 mg per 1 gram, Liquid paraffin 25 mg per 1 gram Dermol 200 shower emollient | 200 ml [P] £3.55
- ▶ **Dermol Wash** (Dermal Laboratories Ltd)  
Benzalkonium chloride 1 mg per 1 gram, Chlorhexidine hydrochloride 1 mg per 1 gram, Isopropyl myristate 25 mg per 1 gram, Liquid paraffin 25 mg per 1 gram Dermol Wash cutaneous emulsion | 200 ml [P] £3.55

## Emollient bath and shower products, paraffin-containing

19-Nov-2020

### ● INDICATIONS AND DOSE

#### Dry skin conditions (using Aqueous Cream BP)

- ▶ TO THE SKIN
- ▶ Child: To be used as a soap substitute
- ▶ Adult: To be used as a soap substitute

#### AQUAMAX<sup>®</sup> WASH

##### Dry skin conditions

- ▶ TO THE SKIN
- ▶ Child: To be applied to wet or dry skin and rinse
- ▶ Adult: To be applied to wet or dry skin and rinse

#### CETRABEN<sup>®</sup> BATH

##### Dry skin conditions, including eczema

- ▶ TO THE SKIN
- ▶ Child 1 month-11 years: 0.5–1 capful/bath, alternatively, to be applied to wet skin and rinse
- ▶ Child 12-17 years: 1–2 capfuls/bath, alternatively, to be applied to wet skin and rinse
- ▶ Adult: 1–2 capfuls/bath, alternatively, to be applied to wet skin and rinse

#### DERMALO<sup>®</sup>

##### Dermatitis | Dry skin conditions, including ichthyosis

- ▶ TO THE SKIN
- ▶ Child 1 month-11 years: 5–10 mL/bath, alternatively, to be applied to wet skin and rinse
- ▶ Child 12-17 years: 15–20 mL/bath, alternatively, to be applied to wet skin and rinse
- ▶ Adult: 15–20 mL/bath, alternatively, to be applied to wet skin and rinse

##### Pruritus of the elderly

- ▶ TO THE SKIN
- ▶ Elderly: 15–20 mL/bath, alternatively, to be applied to wet skin and rinse

#### DOUBLEBASE<sup>®</sup> EMOLLIENT BATH ADDITIVE

##### Dry skin conditions including dermatitis and ichthyosis

- ▶ TO THE SKIN
- ▶ Child 1 month-11 years: 5–10 mL/bath
- ▶ Child 12-17 years: 15–20 mL/bath
- ▶ Adult: 15–20 mL/bath

##### Pruritus of the elderly

- ▶ TO THE SKIN
- ▶ Elderly: 15–20 mL/bath

#### DOUBLEBASE<sup>®</sup> EMOLLIENT SHOWER GEL

##### Dry, chapped, or itchy skin conditions

- ▶ TO THE SKIN
- ▶ Child: To be applied to wet or dry skin and rinse, or apply to dry skin after showering
- ▶ Adult: To be applied to wet or dry skin and rinse, or apply to dry skin after showering

#### DOUBLEBASE<sup>®</sup> EMOLLIENT WASH GEL

##### Dry, chapped, or itchy skin conditions

- ▶ TO THE SKIN
- ▶ Child: To be used as a soap substitute
- ▶ Adult: To be used as a soap substitute

#### E45<sup>®</sup> BATH OIL

##### Endogenous and exogenous eczema, xeroderma, and ichthyosis

- ▶ TO THE SKIN
- ▶ Child 1 month-11 years: 5–10 mL/bath, alternatively, to be applied to wet skin and rinse
- ▶ Child 12-17 years: 15 mL/bath, alternatively, to be applied to wet skin and rinse
- ▶ Adult: 15 mL/bath, alternatively, to be applied to wet skin and rinse

##### Pruritus of the elderly associated with dry skin

- ▶ TO THE SKIN
- ▶ Elderly: 15 mL/bath, alternatively, to be applied to wet skin and rinse

#### E45<sup>®</sup> WASH CREAM

##### Endogenous and exogenous eczema, xeroderma, and ichthyosis

- ▶ TO THE SKIN
- ▶ Child: To be used as a soap substitute
- ▶ Adult: To be used as a soap substitute

##### Pruritus of the elderly associated with dry skin

- ▶ TO THE SKIN
- ▶ Elderly: To be used as a soap substitute

#### HYDROMOL<sup>®</sup> BATH AND SHOWER EMOLLIENT

##### Dry skin conditions | Eczema | Ichthyosis

- ▶ TO THE SKIN
- ▶ Child 1 month-11 years: 0.5–2 capfuls/bath, alternatively apply to wet skin and rinse
- ▶ Child 12-17 years: 1–3 capfuls/bath, alternatively apply to wet skin and rinse
- ▶ Adult: 1–3 capfuls/bath, alternatively apply to wet skin and rinse

##### Pruritus of the elderly

- ▶ TO THE SKIN
- ▶ Elderly: 1–3 capfuls/bath, alternatively apply to wet skin and rinse

#### LPL 63.4<sup>®</sup>

##### Dry skin conditions

- ▶ TO THE SKIN
- ▶ Child 1 month-11 years: 0.5–2 capfuls/bath, alternatively, to be applied to wet skin and rinse
- ▶ Child 12-17 years: 1–3 capfuls/bath, alternatively, to be applied to wet skin and rinse
- ▶ Adult: 1–3 capfuls/bath, alternatively, to be applied to wet skin and rinse

#### OILATUM<sup>®</sup> EMOLLIENT BATH ADDITIVE

##### Dry skin conditions including dermatitis and ichthyosis

- ▶ TO THE SKIN
- ▶ Child 1 month-11 years: 0.5–2 capfuls/bath, alternatively, to be applied to wet skin and rinse
- ▶ Child 12-17 years: 1–3 capfuls/bath, alternatively, to be applied to wet skin and rinse
- ▶ Adult: 1–3 capfuls/bath, alternatively, to be applied to wet skin and rinse

## Emollient bath and shower products, soya-bean oil-containing

19-Nov-2020

### ● INDICATIONS AND DOSE

#### BALNEUM<sup>®</sup> BATH OIL

##### Dry skin conditions including those associated with dermatitis and eczema

- ▶ TO THE SKIN
- ▶ Child 1-23 months: 5–15 mL/bath, not to be used undiluted
- ▶ Child 2-17 years: 20–60 mL/bath, not to be used undiluted
- ▶ Adult: 20–60 mL/bath, not to be used undiluted

#### BALNEUM<sup>®</sup> PLUS BATH OIL

##### Dry skin conditions including those associated with dermatitis and eczema where pruritus also experienced

- ▶ TO THE SKIN
- ▶ Child 1-23 months: 5 mL/bath, alternatively, to be applied to wet skin and rinse
- ▶ Child 2-17 years: 10–20 mL/bath, alternatively, to be applied to wet skin and rinse
- ▶ Adult: 20 mL/bath, alternatively, to be applied to wet skin and rinse

#### ZERONEUM<sup>®</sup>

##### Dry skin conditions, including eczema

- ▶ TO THE SKIN
- ▶ Child 1 month-11 years: 5 mL/bath
- ▶ Child 12-17 years: 20 mL/bath
- ▶ Adult: 20 mL/bath

### IMPORTANT SAFETY INFORMATION

These preparations make skin and surfaces slippery—particular care is needed when bathing.

MHRA/CHM ADVICE (UPDATED DECEMBER 2018): EMOLLIENTS: NEW INFORMATION ABOUT RISK OF SEVERE AND FATAL BURNS WITH PARAFFIN-CONTAINING AND PARAFFIN-FREE EMOLLIENTS See Emollient and barrier preparations p. 1313.

- **DIRECTIONS FOR ADMINISTRATION** Emollient bath additives should be added to bath water; [Evg](#) hydration can be improved by soaking in the bath for 5–20 minutes (consult product literature). Some bath emollients can be applied to wet skin undiluted and rinsed off. [M](#) Emollient preparations contained in tubs should be removed with a clean spoon or spatula to reduce bacterial contamination of the emollient. Emollients should be applied in the direction of hair growth to reduce the risk of folliculitis.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Bath additive

## Emollient creams and ointments, paraffin-containing

19-May-2022

### ● INDICATIONS AND DOSE

#### Dry skin conditions | Eczema | Psoriasis | Ichthyosis | Pruritus

##### ▶ TO THE SKIN

- ▶ Child: (consult product literature)
- ▶ Adult: (consult product literature)

### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE (UPDATED DECEMBER 2018): EMOLLIENTS: NEW INFORMATION ABOUT RISK OF SEVERE AND FATAL BURNS WITH PARAFFIN-CONTAINING AND PARAFFIN-FREE EMOLLIENTS See Emollient and barrier preparations p. 1313.

- **DIRECTIONS FOR ADMINISTRATION** Emollients should be applied immediately after washing or bathing to maximise the effect of skin hydration. Emollient preparations contained in tubs should be removed with a clean spoon or spatula to reduce bacterial contamination of the emollient. Emollients should be applied in the direction of hair growth to reduce the risk of folliculitis.
- **PRESCRIBING AND DISPENSING INFORMATION** Some preparations may contain other ingredients or additives—consult product literature.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

## 2 Infections of the skin

### Skin infections

22-Mar-2020

#### Antibacterial preparations for the skin

*Cellulitis, erysipelas, and leg ulcer* infections require systemic antibacterial treatment, see Skin infections, antibacterial therapy p. 554.

Impetigo requires topical antiseptic/antibacterial or systemic antibacterial treatment, see Skin infections, antibacterial therapy p. 554.

Although many antibacterial drugs are available in topical preparations, some are potentially hazardous and frequently their use is not necessary if adequate hygienic measures can be taken. Moreover, not all skin conditions that are oozing, crusted, or characterised by pustules are actually infected.

To minimise the development of resistant organisms it is advisable to limit the choice of antibacterials applied topically to those not used systemically. Unfortunately some of these, for example neomycin sulfate p. 1322, may cause sensitisation, and there is cross-sensitivity with other aminoglycoside antibiotics, such as gentamicin p. 561. If *large areas of skin* are being treated, ototoxicity may also be a hazard with aminoglycoside antibiotics, particularly in children, in the elderly, and in those with renal impairment. *Resistant organisms* are more common in hospitals, and whenever possible swabs should be taken for bacteriological examination before beginning treatment.

Mupirocin p. 1323 is not related to any other antibacterial in use; it is effective for skin infections, particularly those due to Gram-positive organisms but it is not indicated for pseudomonal infection. Although *Staphylococcus aureus* strains with low-level resistance to mupirocin are emerging, it is generally useful in infections resistant to other antibacterials. To avoid the development of resistance, mupirocin or fusidic acid p. 623 should not be used for longer than 10 days and local microbiology advice should be sought before using it in hospital. In the presence of mupirocin-resistant MRSA infection, a topical antiseptic such as povidone-iodine p. 1372, chlorhexidine p. 1372, or alcohol can be used; their use should be discussed with the local microbiologist.

Tedizolid p. 625 is licensed for the treatment of acute bacterial skin and skin structure infections.

Silver sulfadiazine p. 1323 is used in the treatment of infected burns.

#### Antibacterial preparations also used systemically

Fusidic acid is a narrow-spectrum antibacterial used for staphylococcal infections.

An ointment containing fusidic acid is used in the fissures of angular cheilitis when associated with staphylococcal infection. See Oropharyngeal fungal infections p. 1309 for further information on angular cheilitis.

Metronidazole p. 1322 is used topically for rosacea and to reduce the odour associated with anaerobic infections; oral metronidazole is used to treat wounds infected with anaerobic bacteria.

#### Antifungal preparations for the skin

Most localised fungal infections are treated with topical preparations. To prevent relapse, local antifungal treatment should be continued for 1–2 weeks after the disappearance of all signs of infection. Systemic therapy is necessary for scalp infection or if the skin infection is widespread, disseminated, or intractable; although topical therapy may be used to treat some nail infections, systemic therapy is more effective. Skin scrapings should be examined if systemic therapy is being considered or where there is doubt about the diagnosis.

#### Dermatophytoses

Ringworm infection can affect the scalp (*tinea capitis*), body (*tinea corporis*), groin (*tinea cruris*), hand (*tinea manuum*), foot (*tinea pedis*, athlete's foot), or nail (*tinea unguium*). Scalp infection requires systemic treatment; additional application of a topical antifungal, during the early stages of treatment, may reduce the risk of transmission. A topical antifungal can also be used to treat asymptomatic carriers of scalp ringworm. Most other local ringworm infections can be treated adequately with topical antifungal preparations (including shampoos). The imidazole antifungals clotrimazole p. 1324, econazole nitrate p. 1324, ketoconazole p. 1324, and miconazole p. 1325 are all effective. Terbinafine cream p. 1326 is also effective but it is more expensive. Other topical antifungals include griseofulvin p. 1326 and the **undecenoates**. **Compound benzoic acid ointment** (Whitfield's ointment) has been used for ringworm infections but it is cosmetically less acceptable than proprietary preparations. Topical preparations for athlete's foot containing **tolnaftate** are on sale to the public.

Antifungal dusting powders are of little therapeutic value in the treatment of fungal skin infections and may cause skin irritation; they may have some role in preventing reinfection.

Antifungal treatment may not be necessary in asymptomatic patients with tinea infection of the nails. If treatment is necessary, a systemic antifungal is more effective than topical therapy. However, topical application of amorolfine p. 1325 or tioconazole p. 1325 may be useful for treating early onychomycosis when involvement is limited to mild distal disease, or for superficial white onychomycosis, or where there are contra-indications to systemic therapy.

#### Pityriasis versicolor

Pityriasis (*tinea*) versicolor can be treated with ketoconazole shampoo. Alternatively, **selenium sulfide** shampoo [unlicensed indication] can be used as a lotion (diluting with a small amount of water can reduce irritation) and left on the affected area for 10 minutes before rinsing off; it should be applied once daily for 7 days, and the course repeated if necessary.

Topical imidazole antifungals such as clotrimazole, econazole nitrate, ketoconazole, and miconazole, or topical terbinafine are alternatives, but large quantities may be required.

If topical therapy fails, or if the infection is widespread, pityriasis versicolor is treated systemically with a triazole antifungal. Relapse is common, especially in the immunocompromised.

### Candidiasis

Candidal skin infections can be treated with a topical imidazole antifungal, such as clotrimazole, econazole nitrate, ketoconazole, or miconazole; topical terbinafine is an alternative. Topical application of nystatin p. 1311 is also effective for candidiasis but it is ineffective against dermatophytosis. Refractory candidiasis requires systemic treatment generally with a triazole such as fluconazole p. 649; systemic treatment with terbinafine is **not appropriate** for refractory candidiasis.

### Angular cheilitis

Miconazole cream is used in the fissures of angular cheilitis when associated with *Candida*.

### Compound topical preparations

Combination of an imidazole and a mild corticosteroid (such as hydrocortisone 1% p. 1339) may be of value in the treatment of eczematous intertrigo and, in the first few days only, of a severely inflamed patch of ringworm.

Combination of a mild corticosteroid with either an imidazole or nystatin may be of use in the treatment of intertrigo associated with candida.

### Antiviral preparations for the skin

Aciclovir cream p. 1329 is licensed for the treatment of initial and recurrent labial and genital *herpes simplex infections*; treatment should begin as early as possible. Systemic treatment is necessary for buccal or vaginal infections and for *herpes zoster (shingles)*.

### Herpes labialis

Aciclovir cream can be used for the treatment of initial and recurrent labial herpes simplex infections (cold sores). It is best applied at the earliest possible stage, usually when prodromal changes of sensation are felt in the lip and before vesicles appear.

Penciclovir cream is also licensed for the treatment of herpes labialis; it needs to be applied more frequently than aciclovir cream p. 1329.

Systemic treatment is necessary if cold sores recur frequently or for infections in the mouth.

### Parasitocidal preparations for the skin

Suitable quantities of parasitocidal preparations			
Area of body	Skin creams	Lotions	Cream rinses
Scalp (head lice)		50–100 mL	50–100 mL
Body (scabies)	30–60 g	100 mL	
Body (crab lice)	30–60 g	100 mL	
These amounts are usually suitable for an adult for single application.			

### Scabies

Permethrin p. 1329 is used for the treatment of *scabies (Sarcoptes scabiei)*; malathion p. 1328 can be used if permethrin is inappropriate.

Benzyl benzoate p. 1328 is an irritant and should be avoided in children; it is less effective than malathion and permethrin.

Ivermectin p. 1368 (available on a named patient basis from 'special-order' manufacturers or specialist importing companies) by mouth has been used, in combination with topical drugs, for the treatment of hyperkeratotic (crusted or 'Norwegian') scabies that does not respond to topical treatment alone; further doses may be required.

### Application

Although acaricides have traditionally been applied after a hot bath, this is **not** necessary and there is even evidence that a hot bath may increase absorption into the blood, removing them from their site of action on the skin.

All members of the affected household should be treated simultaneously. Treatment should be applied to the whole body including the scalp, neck, face, and ears. Particular attention should be paid to the webs of the fingers and toes and lotion brushed under the ends of nails. It is now recommended that malathion and permethrin should be applied twice, one week apart; in the case of benzyl benzoate in adults, up to 3 applications on consecutive days may be needed. It is important to warn users to reapply treatment to the hands if they are washed. Patients with hyperkeratotic scabies may require 2 or 3 applications of acaricide on consecutive days to ensure that enough penetrates the skin crusts to kill all the mites.

### Itching

The *itch* and *eczema* of scabies persists for some weeks after the infestation has been eliminated and treatment for pruritus and eczema may be required. Application of crotamiton p. 1360 can be used to control itching after treatment with more effective acaricides. A topical corticosteroid may help to reduce itch and inflammation after scabies has been treated successfully; however, persistent symptoms suggest that scabies eradication was not successful. Oral administration of a **sedating antihistamine** at night may also be useful.

### Head lice

Dimeticone p. 1328 is effective against head lice (*Pediculus humanus capitis*). It coats head lice and interferes with water balance in lice by preventing the excretion of water; it is less active against eggs and treatment should be repeated after 7 days. Malathion, an organophosphorus insecticide, is an alternative, but resistance has been reported. Benzyl benzoate is licensed for the treatment of head lice but it is less effective than other drugs and not recommended for use in children. Permethrin is active against head lice but the formulation and licensed methods of application of the current products make them unsuitable for the treatment of head lice.

Head lice infestation (pediculosis) should be treated using lotion or liquid formulations only if live lice are present. Shampoos are diluted too much in use to be effective. A contact time of 8–12 hours or overnight treatment is recommended for lotions and liquids; a 2-hour treatment is not sufficient to kill eggs.

In general, a course of treatment for head lice should be 2 applications of product 7 days apart to kill lice emerging from any eggs that survive the first application. All affected household members should be treated simultaneously.

**MHRA/CHM advice: Head lice eradication products: risk of serious burns if treated hair is exposed to open flames or other sources of ignition (March 2018)**

Some products for the eradication of head lice infestations are combustible/flammable when on the hair and can ignite and cause serious harm in the presence of an open flame or other source of ignition such as when lighting cigarettes.

Patients and carers should be advised on the safe and correct use of head lice eradication treatments and if appropriate, should be advised that they should not smoke around treated hair and that it should be kept away from open flames or other sources of ignition, including in the morning after overnight application until hair is washed.

### Wet combing methods

Head lice can be mechanically removed by combing wet hair meticulously with a plastic detection comb (probably for at least 30 minutes each time) over the whole scalp at 4-day intervals for a minimum of 2 weeks, and continued until no lice are found on 3 consecutive sessions; hair conditioner or vegetable oil can be used to facilitate the process.

Several devices for the removal of head lice such as combs and topical solutions, are available and some are prescribable on the NHS.

The Drug Tariffs can be accessed online at:

- National Health Service Drug Tariff for England and Wales: [www.ppa.org.uk/ppa/edt\\_intro.htm](http://www.ppa.org.uk/ppa/edt_intro.htm)
- Health and Personal Social Services for Northern Ireland Drug Tariff: [www.hscbusiness.hscni.net/services/2034.htm](http://www.hscbusiness.hscni.net/services/2034.htm)
- Scottish Drug Tariff: [www.isdscotland.org/Health-topics/Prescribing-and-Medicines/Scottish-Drug-Tariff/](http://www.isdscotland.org/Health-topics/Prescribing-and-Medicines/Scottish-Drug-Tariff/)

#### Crab lice

Permethrin and malathion are used to eliminate *crab lice* (*Phthirus pubis*). An aqueous preparation should be applied, allowed to dry naturally and washed off after 12 hours; a second treatment is needed after 7 days to kill lice emerging from surviving eggs. All surfaces of the body should be treated, including the scalp, neck, and face (paying particular attention to the eyebrows and other facial hair). A different insecticide should be used if a course of treatment fails.

## 2.1 Bacterial skin infections

### ANTIBACTERIALS > AMINOGLYCOSIDES

#### Neomycin sulfate

01-Jun-2021

##### ● INDICATIONS AND DOSE

##### Bacterial skin infections

- ▶ TO THE SKIN
- ▶ Child: Apply up to 3 times a day, for short-term use only
- ▶ Adult: Apply up to 3 times a day, for short-term use only

##### ● UNLICENSED USE

- ▶ In children *Neomycin Cream BPC*—no information available.

##### ● CONTRA-INDICATIONS Neonates

##### ● CAUTIONS

- ▶ Large areas
- ▶ In adults If large areas of skin are being treated ototoxicity may be a hazard, particularly in the elderly, and in those with renal impairment.
- ▶ In children If large areas of skin are being treated ototoxicity may be a hazard in children, particularly in those with renal impairment.

##### ● INTERACTIONS → Appendix 1: neomycin

##### ● SIDE-EFFECTS Sensitisation (cross sensitivity with other aminoglycosides may occur)

##### ● RENAL IMPAIRMENT Ototoxicity may be a hazard if large areas of skin are treated.

##### ● LESS SUITABLE FOR PRESCRIBING Neomycin sulfate cream is less suitable for prescribing.

##### ● MEDICINAL FORMS There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: cream

##### Cream

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), edetic acid (edta)

### ANTIBACTERIALS > NITROIMIDAZOLE DERIVATIVES

#### Metronidazole

10-Nov-2021

- **DRUG ACTION** Metronidazole is an antimicrobial drug with high activity against anaerobic bacteria and protozoa.

##### ● INDICATIONS AND DOSE

##### ACEA<sup>®</sup>

##### Acute inflammatory exacerbation of rosacea

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily for 8 weeks, to be applied thinly

##### ANABACT<sup>®</sup>

##### Malodorous fungating tumours and malodorous gravitational and decubitus ulcers

- ▶ TO THE SKIN
- ▶ Adult: Apply 1–2 times a day, to be applied to clean wound and covered with non-adherent dressing

##### METROGEL<sup>®</sup>

##### Acute inflammatory exacerbation of rosacea

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily for 8–9 weeks, to be applied thinly

##### Malodorous fungating tumours

- ▶ TO THE SKIN
- ▶ Adult: Apply 1–2 times a day, to be applied to clean wound and covered with non-adherent dressing

##### METROSA<sup>®</sup>

##### Acute exacerbation of rosacea

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily for up to 8 weeks, to be applied thinly

##### ROSICED<sup>®</sup>

##### Inflammatory papules and pustules of rosacea

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily for 6 weeks (longer if necessary)

##### ROZEX<sup>®</sup> CREAM

##### Inflammatory papules, pustules and erythema of rosacea

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily for 3–4 months

##### ROZEX<sup>®</sup> GEL

##### Inflammatory papules, pustules and erythema of rosacea

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily for 3–4 months

##### ZYOMET<sup>®</sup>

##### Acute inflammatory exacerbation of rosacea

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily for 8–9 weeks, to be applied thinly

- **CAUTIONS** Avoid exposure to strong sunlight or UV light
- **INTERACTIONS** → Appendix 1: metronidazole
- **SIDE-EFFECTS**
- ▶ **Common or very common** Skin reactions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

##### Gel

EXCIPIENTS: May contain Benzyl alcohol, disodium edetate, hydroxybenzoates (parabens), propylene glycol

- ▶ **Accea** (Ferndale Pharmaceuticals Ltd)

**Metronidazole 7.5 mg per 1 gram** Accea 0.75% gel | 40 gram [PoM]  
£9.95 DT = £22.63

**Cream**

EXCIPIENTS: May contain Benzyl alcohol, isopropyl palmitate, propylene glycol

- **Rosiced** (Pierre Fabre Dermo-Cosmetique)  
**Metronidazole 7.5 mg per 1 gram** Rosiced 0.75% cream | 30 gram [PoM] £6.60 DT = £6.60
- **Rozex** (Galderma (UK) Ltd)  
**Metronidazole 7.5 mg per 1 gram** Rozex 0.75% cream | 30 gram [PoM] £6.60 DT = £6.60 | 40 gram [PoM] £9.88 DT = £9.88

**ANTIBACTERIALS > SULFONAMIDES****Silver sulfadiazine**

14-Dec-2020

**● INDICATIONS AND DOSE****Prophylaxis and treatment of infection in burn wounds**

- ▶ TO THE SKIN
- ▶ Child: Apply daily, may be applied more frequently if very exudative
- ▶ Adult: Apply daily, may be applied more frequently if very exudative

**For conservative management of finger-tip injuries**

- ▶ TO THE SKIN
- ▶ Child: Apply every 2–3 days, consult product literature for details
- ▶ Adult: Apply every 2–3 days, consult product literature for details

**Adjunct to prophylaxis of infection in skin graft donor sites and extensive abrasions**

- ▶ TO THE SKIN
- ▶ Adult: (consult product literature)

**Adjunct to short-term treatment of infection in pressure sores**

- ▶ TO THE SKIN
- ▶ Adult: Apply once daily or on alternate days

**As an adjunct to short-term treatment of infection in leg ulcers**

- ▶ TO THE SKIN
- ▶ Adult: Apply once daily or on alternate days, not recommended if ulcer is very exudative

**● UNLICENSED USE**

- In children: No age range specified by manufacturer.
- **CONTRA-INDICATIONS** Not recommended for neonates
- **CAUTIONS** G6PD deficiency

**CAUTIONS, FURTHER INFORMATION**

- ▶ Large areas: Plasma-sulfadiazine concentrations may approach therapeutic levels with *side-effects* and *interactions* as for sulfonamides if large areas of skin are treated.

**● INTERACTIONS** → Appendix 1: silver sulfadiazine**● SIDE-EFFECTS**

- ▶ **Common or very common** Leucopenia · skin reactions
- ▶ **Rare or very rare** Argyria (following treatment of large areas of skin or long term use) · renal failure

**SIDE-EFFECTS, FURTHER INFORMATION**

- ▶ Leucopenia developing 2–3 days after starting treatment of burns: patients is reported usually to be self-limiting and silver sulfadiazine need not usually be discontinued provided

blood counts are monitored carefully to ensure return to normality within a few days.

- **ALLERGY AND CROSS-SENSITIVITY** [EvGr] Caution in patients with sensitivity to sulfonamides. ⚠ See, *Cautions, further information.*
- **PREGNANCY** Risk of neonatal haemolysis and methaemoglobinaemia in third trimester.
- **BREAST FEEDING** Small risk of kernicterus in jaundiced infants and of haemolysis in G6PD-deficient infants.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in significant hepatic impairment.
- **RENAL IMPAIRMENT** Manufacturer advises caution if significant impairment.
- **MONITORING REQUIREMENTS** Monitor for leucopenia.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises apply with sterile applicator.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Cream**

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), polysorbates, propylene glycol

- ▶ **Flamazine** (Smith & Nephew Healthcare Ltd)  
**Sulfadiazine silver 10 mg per 1 gram** Flamazine 1% cream | 50 gram [PoM] £3.85 DT = £3.85 | 250 gram [PoM] £10.32 DT = £10.32 | 500 gram [PoM] £18.27 DT = £18.27

**ANTIBACTERIALS > OTHER****Mupirocin**

07-May-2021

**● INDICATIONS AND DOSE****Bacterial skin infections, particularly those caused by Gram-positive organisms (except pseudomonal infection)**

- ▶ TO THE SKIN
- ▶ Child: Apply up to 3 times a day for up to 10 days
- ▶ Adult: Apply up to 3 times a day for up to 10 days

**Non-bullous impetigo [in patients who are not systemically unwell or at high risk of complications]**

- ▶ TO THE SKIN
- ▶ Child: Apply 3 times a day for 5–7 days
- ▶ Adult: Apply 3 times a day for 5–7 days

- **UNLICENSED USE** Mupirocin ointment licensed for use in children (age range not specified by manufacturer). *Bactroban*® cream not recommended for use in children under 1 year.

**● SIDE-EFFECTS**

- ▶ **Common or very common** Skin reactions
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—no information available.
- **BREAST FEEDING** No information available.
- **RENAL IMPAIRMENT** [EvGr] Avoid using ointment in moderate to severe impairment when absorption of large quantities may occur (contains polyethylene glycol which is excreted renally). ⚠

- **PRESCRIBING AND DISPENSING INFORMATION** For choice of antibacterial therapy, see Skin infections, antibacterial therapy p. 554.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Ointment**▶ **Mupirocin (Non-proprietary)**

- ▶ **Mupirocin 20 mg per 1 gram** Mupirocin 2% ointment | 15 gram [PoM] £12.50 DT = £8.33
- ▶ **Bactroban** (GlaxoSmithKline UK Ltd)  
**Mupirocin 20 mg per 1 gram** Bactroban 2% ointment | 15 gram [PoM] £5.26 DT = £8.33

**Cream**

EXCIPIENTS: May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol)

- ▶ **Bactroban** (GlaxoSmithKline UK Ltd)

**Mupirocin (as Mupirocin calcium) 20 mg per 1 gram** Bactroban 2% cream | 15 gram [PoM] £5.26 DT = £5.26

## 2.2 Fungal skin infections

### Other drugs used for Fungal skin infections

Hydrocortisone with clotrimazole, p. 1343

## ANTIFUNGALS > IMIDAZOLE ANTIFUNGALS

### Clotrimazole

10-Nov-2021

#### ● INDICATIONS AND DOSE

##### Fungal skin infections

- ▶ TO THE SKIN

- ▶ Child: Apply 2–3 times a day
- ▶ Adult: Apply 2–3 times a day

- **CAUTIONS** Contact with eyes and mucous membranes should be avoided
- **INTERACTIONS** → Appendix 1: antifungals, azoles
- **SIDE-EFFECTS** Oedema · pain · paraesthesia · skin reactions
- **PREGNANCY** Minimal absorption from skin; not known to be harmful.
- **PRESCRIBING AND DISPENSING INFORMATION** Spray may be useful for application of clotrimazole to large or hairy areas of the skin.
- **PATIENT AND CARER ADVICE**  
Medicines for Children leaflet: Clotrimazole for fungal infections [www.medicinesforchildren.org.uk/medicines/clotrimazole-for-fungal-infections/](http://www.medicinesforchildren.org.uk/medicines/clotrimazole-for-fungal-infections/)

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: powder

**Cream**

EXCIPIENTS: May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol), polysorbates

**Spray**

CAUTIONARY AND ADVISORY LABELS 15

EXCIPIENTS: May contain Propylene glycol

- ▶ **Canesten (clotrimazole)** (Bayer Plc)

**Clotrimazole 10 mg per 1 ml** Canesten Dermatological 1% spray | 40 ml [P] £4.99 DT = £4.99

Combinations available: **Hydrocortisone with clotrimazole**, p. 1343

### Econazole nitrate

08-May-2020

#### ● INDICATIONS AND DOSE

##### Fungal skin infections

- ▶ TO THE SKIN

- ▶ Child: Apply twice daily
- ▶ Adult: Apply twice daily

#### Fungal nail infections

- ▶ BY TRANSUNGUAL APPLICATION

- ▶ Child: Apply once daily, applied under occlusive dressing
- ▶ Adult: Apply once daily, applied under occlusive dressing

- **CAUTIONS** Avoid contact with eyes and mucous membranes

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Pain · skin reactions
- ▶ **Uncommon** Swelling
- ▶ **Frequency not known** Angioedema

**SIDE-EFFECTS, FURTHER INFORMATION** Treatment should be discontinued if side-effects are severe.

- **PREGNANCY** Minimal absorption from skin; not known to be harmful.
- **PRESCRIBING AND DISPENSING INFORMATION** *Pevaryl*<sup>®</sup> 1% cream should be used.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Cream**

EXCIPIENTS: May contain Butylated hydroxyanisole, fragrances

- ▶ **Pevaryl** (Karo Pharma)

**Econazole nitrate 10 mg per 1 gram** Pevaryl 1% cream | 30 gram [P] £3.71 DT = £3.78

### Ketoconazole

04-Feb-2020

#### ● INDICATIONS AND DOSE

##### Tinea pedis

- ▶ TO THE SKIN USING CREAM
- ▶ Adult: Apply twice daily

##### Fungal skin infection (not Tinea pedis)

- ▶ TO THE SKIN USING CREAM
- ▶ Adult: Apply 1–2 times a day

##### Treatment of seborrhoeic dermatitis and dandruff

- ▶ TO THE SKIN USING SHAMPOO
- ▶ Child 12–17 years: Apply twice weekly for 2–4 weeks, leave preparation on for 3–5 minutes before rinsing
- ▶ Adult: Apply twice weekly for 2–4 weeks, leave preparation on for 3–5 minutes before rinsing

##### Prophylaxis of seborrhoeic dermatitis and dandruff

- ▶ TO THE SKIN USING SHAMPOO
- ▶ Child 12–17 years: Apply every 1–2 weeks, leave preparation on for 3–5 minutes before rinsing
- ▶ Adult: Apply every 1–2 weeks, leave preparation on for 3–5 minutes before rinsing

##### Treatment of pityriasis versicolor

- ▶ TO THE SKIN USING SHAMPOO
- ▶ Child 12–17 years: Apply once daily for maximum 5 days, leave preparation on for 3–5 minutes before rinsing
- ▶ Adult: Apply once daily for maximum 5 days, leave preparation on for 3–5 minutes before rinsing

##### Prophylaxis of pityriasis versicolor

- ▶ TO THE SKIN USING SHAMPOO
- ▶ Child 12–17 years: Apply once daily for up to 3 days before sun exposure, leave preparation on for 3–5 minutes before rinsing
- ▶ Adult: Apply once daily for up to 3 days before sun exposure, leave preparation on for 3–5 minutes before rinsing

- **CONTRA-INDICATIONS** Acute porphyrias p. 1150

- **CAUTIONS** Avoid contact with eyes · avoid contact with mucous membranes

- **INTERACTIONS** → Appendix 1: antifungals, azoles

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Skin reactions

- ▶ **Uncommon** Alopecia · angioedema · excessive tearing · folliculitis · hair changes
- ▶ **Rare or very rare** Eye irritation · taste altered
- **NATIONAL FUNDING/ACCESS DECISIONS**  
**NHS restrictions** *Nizoral*<sup>®</sup> cream is not prescribable in NHS primary care except for the treatment of seborrhoeic dermatitis and pityriasis versicolor; endorse prescription 'SLS'.
- **EXCEPTIONS TO LEGAL CATEGORY** A 15-g tube is available for sale to the public for the treatment of tinea pedis, tinea cruris, and candidal intertrigo.  
 Can be sold to the public for the prevention and treatment of dandruff and seborrhoeic dermatitis of the scalp as a shampoo formulation containing ketoconazole maximum 2%, in a pack containing maximum 120 mL and labelled to show a maximum frequency of application of once every 3 days.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Cream**

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), polysorbates, propylene glycol

- ▶ **Nizoral** (Janssen-Cilag Ltd)  
**Ketoconazole 20 mg per 1 gram** Nizoral 2% cream | 30 gram [PoM] £4.24 DT = £4.24

**Shampoo**

EXCIPIENTS: May contain Imidurea

- ▶ **Ketoconazole (Non-proprietary)**  
**Ketoconazole 20 mg per 1 gram** Ketoconazole 2% shampoo | 120 ml [PoM] £6.93 DT = £6.93
- ▶ **Dandrazol** (Transdermal Ltd)  
**Ketoconazole 20 mg per 1 gram** Dandrazol 2% shampoo | 120 ml [PoM] £5.20 DT = £6.93
- ▶ **Nizoral** (Thornton & Ross Ltd)  
**Ketoconazole 20 mg per 1 gram** Nizoral 2% shampoo | 120 ml [PoM] £3.59 DT = £6.93

**Miconazole**

09-Feb-2022

● **INDICATIONS AND DOSE****Fungal skin infections**

- ▶ **TO THE SKIN**
- ▶ **Child:** Apply twice daily continuing for 10 days after lesions have healed
- ▶ **Adult:** Apply twice daily continuing for 10 days after lesions have healed

**Fungal nail infections**

- ▶ **TO THE SKIN**
- ▶ **Child:** Apply 1–2 times a day
- ▶ **Adult:** Apply 1–2 times a day

- **UNLICENSED USE** Licensed for use in children (age range not specified by manufacturer).
- **CAUTIONS** Avoid in Acute porphyrias p. 1150 · contact with eyes and mucous membranes should be avoided
- **INTERACTIONS** → Appendix 1: antifungals, azoles
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Skin reactions
  - ▶ **Frequency not known** Angioedema
- **PREGNANCY** Absorbed from the skin in small amounts; manufacturer advises caution.
- **BREAST FEEDING** Manufacturer advises caution—no information available.
- **PROFESSION SPECIFIC INFORMATION**  
**Dental practitioners' formulary** Miconazole cream may be prescribed.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
**NHS restrictions** *Daktarin*<sup>®</sup> powder and *Daktarin*<sup>®</sup> cream 15 g are not prescribable in NHS primary care.

**Griseofulvin**

16-Jan-2020

● **INDICATIONS AND DOSE****Tinea pedis**▶ **TO THE SKIN**

- ▶ **Adult:** Apply 400 micrograms once daily, apply to an area approximately 13 cm<sup>2</sup>; increased if necessary to 1.2 mg once daily for maximum treatment duration of 4 weeks, allow each spray to dry between application

- **CAUTIONS** Avoid contact with eyes and mucous membranes
- **INTERACTIONS** → Appendix 1: griseofulvin
- **SIDE-EFFECTS** Paraesthesia · skin irritation
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk.
- **BREAST FEEDING** Manufacturer advises avoid unless potential benefit outweighs risk.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Spray**

CAUTIONARY AND ADVISORY LABELS 15

EXCIPIENTS: May contain Benzyl alcohol

▶ **Grisol** (Transdermal Ltd)

**Griseofulvin 10 mg per 1 gram** Grisol 1% spray | 20 ml [GS] £9.60 DT = £9.60

**Terbinafine**

16-Aug-2021

● **INDICATIONS AND DOSE****Tinea pedis**▶ **TO THE SKIN USING CREAM**

- ▶ **Adult:** Apply 1–2 times a day for up to 1 week, to be applied thinly

- ▶ **BY MOUTH USING TABLETS**
- ▶ **Adult:** 250 mg once daily for 2–6 weeks

**Tinea corporis**▶ **TO THE SKIN USING CREAM**

- ▶ **Adult:** Apply 1–2 times a day for up to 1–2 weeks, to be applied thinly, review treatment after 2 weeks

▶ **BY MOUTH USING TABLETS**

- ▶ **Adult:** 250 mg once daily for 4 weeks

**Tinea cruris**▶ **TO THE SKIN USING CREAM**

- ▶ **Adult:** Apply 1–2 times a day for up to 1–2 weeks, to be applied thinly, review treatment after 2 weeks

▶ **BY MOUTH USING TABLETS**

- ▶ **Adult:** 250 mg once daily for 2–4 weeks

**Dermatophyte infections of the nails**▶ **BY MOUTH USING TABLETS**

- ▶ **Adult:** 250 mg once daily for 6 weeks–3 months (occasionally longer in toenail infections)

**Cutaneous candidiasis | Pityriasis versicolor**▶ **TO THE SKIN USING CREAM**

- ▶ **Adult:** Apply 1–2 times a day for 2 weeks, to be applied thinly, review treatment after 2 weeks

- **CAUTIONS**
  - ▶ With oral use Psoriasis (risk of exacerbation) · risk of lupus erythematosus
  - ▶ With topical use Contact with eyes and mucous membranes should be avoided
- **INTERACTIONS** → Appendix 1: terbinafine

● **SIDE-EFFECTS**● **GENERAL SIDE-EFFECTS**

- ▶ **Common or very common** Skin reactions

● **SPECIFIC SIDE-EFFECTS**▶ **Common or very common**

- ▶ With oral use Appetite decreased · arthralgia · diarrhoea · gastrointestinal discomfort · gastrointestinal disorder · headache · myalgia · nausea

▶ **Uncommon**

- ▶ With oral use Taste altered
- ▶ With topical use Pain
- ▶ **Rare or very rare**
  - ▶ With oral use Agranulocytosis · alopecia · cutaneous lupus erythematosus · dizziness · hepatic disorders · malaise · neutropenia · photosensitivity reaction · sensation abnormal · severe cutaneous adverse reactions (SCARs) · systemic lupus erythematosus (SLE) · thrombocytopenia · vertigo
- ▶ **Frequency not known**
  - ▶ With oral use Anaemia · anxiety · depressive symptom · fatigue · fever · hearing impairment · influenza like illness · pancreatitis · pancytopenia · rhabdomyolysis · serum sickness-like reaction · smell altered · tinnitus · vasculitis · vision disorders
  - ▶ With topical use Hypersensitivity

**SIDE-EFFECTS, FURTHER INFORMATION** **Liver toxicity** With oral use; discontinue treatment if liver toxicity develops (including jaundice, cholestasis and hepatitis).

**Serious skin reactions** With oral use; discontinue treatment in progressive skin rash (including Stevens-Johnson syndrome and toxic epidermal necrolysis).

● **PREGNANCY**

- ▶ With topical use Manufacturer advises use only if potential benefit outweighs risk—*animal* studies suggest no adverse effects.
- ▶ With oral use Manufacturer advises use only if potential benefit outweighs risk—no information available.

● **BREAST FEEDING**

- ▶ With topical use Manufacturer advises avoid—present in milk. Less than 5% of the dose is absorbed after topical

application of terbinafine; avoid application to mother's chest.

- ▶ With oral use Avoid—present in milk.
- **HEPATIC IMPAIRMENT**
  - ▶ With oral use Manufacturer advises avoid (risk of increased exposure).
- **RENAL IMPAIRMENT**
  - ▶ With oral use [EVL](#) Caution if creatinine clearance less than 50 mL/minute or serum creatinine concentration greater than 300 micromol/litre (limited information available).
    - ◆ See p. 21.
- **MONITORING REQUIREMENTS**
  - ▶ With oral use Monitor hepatic function before treatment and then periodically after 4–6 weeks of treatment—discontinue if abnormalities in liver function tests.
- **PATIENT AND CARER ADVICE**
  - ▶ With oral use Manufacturer advises that patients should immediately report any signs or symptoms suggestive of liver dysfunction such as pruritus, unexplained persistent nausea, decreased appetite, anorexia, jaundice, vomiting, fatigue, right upper abdominal pain, dark urine, or pale stools. Patients with these symptoms should discontinue taking terbinafine and the patient's liver function should be immediately evaluated.
- **EXCEPTIONS TO LEGAL CATEGORY**
  - ▶ With topical use Preparations of terbinafine hydrochloride (maximum 1%) can be sold to the public for use in those over 16 years for external use for the treatment of tinea pedis as a cream in a pack containing maximum 15 g, or for the treatment of tinea pedis and cruris as a cream in a pack containing maximum 15 g, or for the treatment of tinea pedis, cruris, and corporis as a spray in a pack containing maximum 30 mL spray or as a gel in a pack containing maximum 30 g gel.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

## ANTISEPTICS AND DISINFECTANTS > UNDECENOATES

### Undecenoic acid with zinc undecenoate

05-Oct-2021

#### ● INDICATIONS AND DOSE

##### Treatment of athletes foot

- ▶ TO THE SKIN
- ▶ Child: Apply twice daily, continue use for 7 days after lesions have healed
- ▶ Adult: Apply twice daily, continue use for 7 days after lesions have healed

#### Prevention of athletes foot

- ▶ TO THE SKIN
- ▶ Child: Apply once daily
- ▶ Adult: Apply once daily

#### ● UNLICENSED USE

- ▶ In children *Mycota*® licensed for use in children (age range not specified by manufacturer).
  - **CAUTIONS** Avoid broken skin · contact with eyes should be avoided · contact with mucous membranes should be avoided
  - **SIDE-EFFECTS**
    - ▶ Rare or very rare Skin irritation
- SIDE-EFFECTS, FURTHER INFORMATION** Treatment should be discontinued if irritation is severe.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Cream

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), fragrances

#### ▶ *Mycota* (zinc undecenoate / undecenoic acid) (Thornton & Ross Ltd)

**Undecenoic acid 50 mg per 1 gram, Zinc undecenoate 200 mg per 1 gram** *Mycota* cream | 25 gram [GSL](#) £2.01 DT = £2.01

#### Powder

EXCIPIENTS: May contain Fragrances

#### ▶ *Mycota* (zinc undecenoate / undecenoic acid) (Thornton & Ross Ltd)

**Undecenoic acid 20 mg per 1 gram, Zinc undecenoate 200 mg per 1 gram** *Mycota* powder | 70 gram [GSL](#) £3.04 DT = £3.04

## ANTISEPTICS AND DISINFECTANTS > OTHER

### Chlorhexidine with nystatin

01-Mar-2021

#### ● INDICATIONS AND DOSE

##### Skin infections due to *Candida* spp.

- ▶ TO THE SKIN
- ▶ Child: Apply 2–3 times a day, continuing for 7 days after lesions have healed
- ▶ Adult: Apply 2–3 times a day, continuing for 7 days after lesions have healed

- **UNLICENSED USE** Licensed for use in children (age range not specified by manufacturer).

- **CAUTIONS** Avoid contact with eyes and mucous membranes

- **SIDE-EFFECTS** Hypersensitivity · skin reactions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Cream

EXCIPIENTS: May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol), polysorbates

#### ▶ Chlorhexidine with nystatin (Non-proprietary)

**Chlorhexidine hydrochloride 10 mg per 1 gram, Nystatin 100000 unit per 1 gram** Nystatin 100,000units/g / Chlorhexidine hydrochloride 1% cream | 30 gram [PoM](#) £9.50–£11.29 DT = £10.40

#### ▶ Nystaform (Typharm Ltd)

**Chlorhexidine hydrochloride 10 mg per 1 gram, Nystatin 100000 unit per 1 gram** Nystaform cream | 30 gram [PoM](#) £9.50 DT = £10.40

## BENZOATES

### Benzoic acid with salicylic acid

22-Nov-2020

#### ● INDICATIONS AND DOSE

##### Ringworm (tinea)

- ▶ TO THE SKIN
- ▶ Child: Apply twice daily
- ▶ Adult: Apply twice daily

- **UNLICENSED USE** Licensed for use in children (age range not specified by manufacturer).
- **CAUTIONS** Avoid broken or inflamed skin · avoid contact with eyes · avoid contact with mucous membranes
- **CAUTIONS, FURTHER INFORMATION**
  - ▶ Salicylate toxicity Salicylate toxicity may occur particularly if applied on large areas of skin.
- **SIDE-EFFECTS** Drug toxicity · eye irritation · mucosal irritation · skin reactions
- **PRESCRIBING AND DISPENSING INFORMATION** Benzoic Acid Ointment, Compound, BP has also been referred to as Whitfield's ointment.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: cream, ointment
- **Ointment**  
EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol)

## 2.3 Parasitic skin infections

**Other drugs used for Parasitic skin infections** Ivermectin, p. 1368

### PARASITICIDES

#### Benzyl benzoate

19-May-2020

##### • INDICATIONS AND DOSE

###### Scabies

###### ▶ TO THE SKIN

- ▶ Adult: Apply over the whole body; repeat without bathing on the following day and wash off 24 hours later; a third application may be required in some cases

- **CAUTIONS** Avoid contact with eyes and mucous membranes · do not use on broken or secondarily infected skin

- **SIDE-EFFECTS** Eye irritation · mucosal irritation · skin irritation

- **BREAST FEEDING** Suspend feeding until product has been washed off.

- **PRESCRIBING AND DISPENSING INFORMATION** When prepared extemporaneously, the BP states Benzyl Benzoate Application, BP consists of benzyl benzoate 25% in an emulsion basis.

Some manufacturers recommend application to the body but to exclude the head and neck. However, application should be extended to the scalp, neck, face, and ears. Note—dilution to reduce irritant effect also reduces efficacy.

- **LESS SUITABLE FOR PRESCRIBING** Benzyl benzoate is less suitable for prescribing.

- **MEDICINAL FORMS** Forms available from special-order manufacturers include: liquid

#### Dimeticone

04-Feb-2020

##### • INDICATIONS AND DOSE

###### Head lice

###### ▶ TO THE SKIN

- ▶ Child: Apply once weekly for 2 doses, rub into dry hair and scalp, allow to dry naturally, shampoo after minimum 8 hours (or overnight)

- ▶ Adult: Apply once weekly for 2 doses, rub into dry hair and scalp, allow to dry naturally, shampoo after minimum 8 hours (or overnight)

- **UNLICENSED USE** Not licensed for use in children under 6 months except under medical supervision.

##### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: HEAD LICE ERADICATION PRODUCTS: RISK OF SERIOUS BURNS IF TREATED HAIR IS EXPOSED TO OPEN FLAMES OR OTHER SOURCES OF IGNITION (MARCH 2018)  
See Skin infections p. 1320.

- **CAUTIONS** Avoid contact with eyes · children under 6 months, medical supervision required

- **SIDE-EFFECTS** Alopecia · dyspnoea · eye irritation · hypersensitivity · scalp changes · skin reactions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

##### Liquid

- ▶ **Hedrin** (Thornton & Ross Ltd)

Dimeticone 40 mg per 1 gram Hedrin 4% lotion | 50 ml £3.28  
DT = £3.28 | 150 ml £7.62 DT = £7.62

- ▶ **Lyclear (dimeticone)** (Omega Pharma Ltd)

Dimeticone 40 mg per 1 gram Lyclear lotion | 100 ml

##### Cutaneous spray solution

- ▶ **Hedrin** (Thornton & Ross Ltd)

Dimeticone 40 mg per 1 gram Hedrin 4% spray | 120 ml £7.85  
DT = £7.85

#### Malathion

04-Feb-2020

##### • INDICATIONS AND DOSE

###### Head lice

###### ▶ TO THE SKIN

- ▶ Child: Apply once weekly for 2 doses, rub preparation into dry hair and scalp, allow to dry naturally, remove by washing after 12 hours
- ▶ Adult: Apply once weekly for 2 doses, rub preparation into dry hair and scalp, allow to dry naturally, remove by washing after 12 hours

###### Crab lice

###### ▶ TO THE SKIN

- ▶ Child: Apply once weekly for 2 doses, apply preparation over whole body, allow to dry naturally, wash off after 12 hours or overnight
- ▶ Adult: Apply once weekly for 2 doses, apply preparation over whole body, allow to dry naturally, wash off after 12 hours or overnight

###### Scabies

###### ▶ TO THE SKIN

- ▶ Child: Apply once weekly for 2 doses, apply preparation over whole body, and wash off after 24 hours, if hands are washed with soap within 24 hours, they should be retreated
- ▶ Adult: Apply once weekly for 2 doses, apply preparation over whole body, and wash off after 24 hours, if hands are washed with soap within 24 hours, they should be retreated

- **UNLICENSED USE** Not licensed for use in children under 6 months except under medical supervision.

##### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: HEAD LICE ERADICATION PRODUCTS: RISK OF SERIOUS BURNS IF TREATED HAIR IS EXPOSED TO OPEN FLAMES OR OTHER SOURCES OF IGNITION (MARCH 2018)  
See Skin infections p. 1320.

- **CAUTIONS** Alcoholic lotions **not** recommended for head lice in children with severe eczema or asthma, or for

scabies or crab lice · avoid contact with eyes · children under 6 months, medical supervision required · do not use lotion more than once a week for 3 consecutive weeks · do not use on broken or secondarily infected skin

- **SIDE-EFFECTS** Angioedema · eye swelling · hypersensitivity · skin reactions

- **PRESCRIBING AND DISPENSING INFORMATION** For scabies, manufacturer recommends application to the body but not necessarily to the head and neck. However, application should be extended to the scalp, neck, face, and ears.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Liquid

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), fragrances, hydroxybenzoates (parabens)

- ▶ **Derbac-M** (G.R. Lane Health Products Ltd)  
**Malathion 5 mg per 1 gram** Derbac-M 0.5% liquid | 150 ml [P]  
£10.07 DT = £10.07

## Permethrin

04-Feb-2020

### ● INDICATIONS AND DOSE

#### Scabies

- ▶ TO THE SKIN
- ▶ **Child:** Apply once weekly for 2 doses, apply 5% preparation over whole body including face, neck, scalp and ears then wash off after 8–12 hours. If hands are washed with soap within 8 hours of application, they should be treated again with cream
- ▶ **Adult:** Apply once weekly for 2 doses, apply 5% preparation over whole body including face, neck, scalp and ears then wash off after 8–12 hours. If hands are washed with soap within 8 hours of application, they should be treated again with cream

#### Crab lice

- ▶ TO THE SKIN
- ▶ **Adult:** Apply once weekly for 2 doses, apply 5% cream over whole body, allow to dry naturally and wash off after 12 hours or after leaving on overnight

#### Head lice

- ▶ TO THE SKIN
- ▶ **Adult:** Not recommended; no information given

- **UNLICENSED USE** *Dermal Cream* (scabies), not licensed for use in children under 2 months; not licensed for treatment of crab lice in children under 18 years.

### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: HEAD LICE ERADICATION PRODUCTS: RISK OF SERIOUS BURNS IF TREATED HAIR IS EXPOSED TO OPEN FLAMES OR OTHER SOURCES OF IGNITION (MARCH 2018)

See Skin infections p. 1320.

- **CAUTIONS** Avoid contact with eyes · children aged 2 months–2 years, medical supervision required for dermal cream (scabies) · do not use on broken or secondarily infected skin

- **SIDE-EFFECTS** Scalp irritation · skin reactions

### ● PRESCRIBING AND DISPENSING INFORMATION

Manufacturer recommends application to the body but to exclude head and neck. However, application should be extended to the scalp, neck, face, and ears.

Larger patients may require up to two 30-g packs for adequate treatment.

- **LESS SUITABLE FOR PRESCRIBING** *Lyclear® Creme Rinse* is less suitable for prescribing.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Cream

CAUTIONARY AND ADVISORY LABELS 10 (Dermal cream only)

EXCIPIENTS: May contain Butylated hydroxytoluene, woolfat and related substances (including lanolin)

- ▶ **Permethrin (Non-proprietary)**

**Permethrin 50 mg per 1 gram** Permethrin 5% cream | 30 gram [P]  
£8.84 DT = £8.32

- ▶ **Lyclear** (Omega Pharma Ltd)

- ▶ **Lyclear** (Omega Pharma Ltd)

**Permethrin 10 mg per 1 gram** Lyclear 1% creme rinse | 118 ml [P]  
£7.75 DT = £7.11

## 2.4 Viral skin infections

### ANTIVIRALS > NUCLEOSIDE ANALOGUES

## Aciclovir

27-Apr-2022

### (Acyclovir)

### ● INDICATIONS AND DOSE

#### Herpes simplex infection (local treatment)

- ▶ TO THE SKIN
- ▶ **Adult:** Apply 5 times a day for 5–10 days, to be applied to lesions approximately every 4 hours, starting at first sign of attack

- **CAUTIONS** Avoid cream coming in to contact with eyes and mucous membranes

- **INTERACTIONS** → Appendix 1: aciclovir

### ● SIDE-EFFECTS

- ▶ **Uncommon** Skin reactions

- **PREGNANCY** Limited absorption from topical aciclovir preparations.

### ● PROFESSION SPECIFIC INFORMATION

**Dental practitioners' formulary** Aciclovir Cream may be prescribed.

- **EXCEPTIONS TO LEGAL CATEGORY** A 2-g tube and a pump pack are on sale to the public for the treatment of cold sores.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Cream

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), propylene glycol

- ▶ **Aciclovir (Non-proprietary)**

**Aciclovir 50 mg per 1 gram** Aciclovir 5% cream | 2 gram [PoM]  
£1.71 DT = £1.71 | 10 gram [PoM] £10.52 DT = £8.52

- ▶ **Zovirax** (GlaxoSmithKline UK Ltd, GlaxoSmithKline Consumer Healthcare UK Ltd)

**Aciclovir 50 mg per 1 gram** Zovirax 5% cream | 2 gram [PoM] £4.63  
DT = £1.71 | 10 gram [PoM] £13.96 DT = £8.52

## 3 Inflammatory skin conditions

### 3.1 Eczema and psoriasis

#### Eczema

06-May-2021

##### Types and management

Eczema (dermatitis) refers to a variety of skin conditions characterised by epidermal inflammation and itching. The main types of eczema are irritant, allergic contact, atopic, venous and discoid. Lichenification, due to scratching and rubbing, often presents in chronic eczema. *Atopic eczema* is one of the most common types and it usually involves itchy, red, dry skin which can become infected and lichenified.

**EvGr** Management of eczema involves the removal or treatment of contributory factors including occupational and domestic irritants. Known or suspected contact allergens should be avoided. **A** Rarely, ingredients in topical medicinal products may sensitise the skin; the BNF lists active ingredients together with excipients that have been associated with skin sensitisation.

**EvGr** Frequent and liberal use of emollients is advised for dry skin and itching associated with eczema. The choice of emollient is dependent on the dryness of the skin, and patient preference; this can be supplemented with bath or shower emollients. Emollients increase the efficacy of topical corticosteroids and have a steroid sparing action. The use of emollients should continue even if the eczema improves or if other treatment is being used. Aqueous cream is generally not recommended due to the high risk of developing skin reactions.

Topical corticosteroids are also often required in the management of eczema; the potency of the corticosteroid should be used in accordance to the severity and site of the condition. For eczema on the face, genitals, or axillae, consider a mild potency topical corticosteroid and only increase to a moderate potency topical corticosteroid if necessary. Moderate to potent topical corticosteroids are generally required for use in adults with moderate or severe eczema on the scalp, limbs, and trunk. Treatment should be reviewed regularly, especially if a potent topical corticosteroid is required. In patients with frequent flares, a topical corticosteroid can be applied to prevent further flares using various regimens (e.g. on 2 consecutive days each week). Emollient therapy should be continued during treatment with topical corticosteroids.

Under the care of a specialist, bandages (including those containing ichthammol with zinc oxide p. 1345) are sometimes applied over topical corticosteroids or emollients to treat eczema of the limbs. Dry-wrap dressings can be used to provide a physical barrier to help prevent scratching and improve retention of emollients. **A** See Wound management products and elasticated garments p. 1767 for details of elasticated viscose stockinette tubular bandages and garments, and silk clothing.

Topical pimecrolimus p. 1347 is licensed for the treatment of mild to moderate atopic eczema. Tacrolimus p. 1347 is licensed for topical use in the treatment of moderate to severe atopic eczema. **EvGr** Both are calcineurin inhibitors and should be considered as a second-line treatment option only, unless there is a specific reason to avoid or reduce the use of topical corticosteroids. Treatment of atopic eczema with topical pimecrolimus or topical tacrolimus should be initiated by a specialist.

Antihistamines are not recommended for routine use in the management of atopic eczema. However, if there is severe itching or urticaria, consider a non-sedating

antihistamine. A sedating antihistamine can be considered if itching causes sleep disturbance. **A**

##### Infection

**EvGr** Breaks in the skin caused by eczema are susceptible to bacterial infection (commonly with *Staphylococcus aureus* and occasionally with *Streptococcus pyogenes*) and may require treatment with a topical or systemic antibacterial. For further information, see *Secondary bacterial infection of common skin conditions* in Skin infections, antibacterial therapy p. 554. Episodes of infected eczema usually co-exist with a flare and will require management with treatments such as emollients and topical corticosteroids. **A**

Eczema can also be infected with herpes simplex virus.

**EvGr** Immediate referral to secondary care is required in patients presenting with suspected eczema herpeticum. **A**

##### Severe refractory eczema

**EvGr** Systemic drugs acting on the immune system (such as ciclosporin p. 904, azathioprine p. 902 [unlicensed indication], and mycophenolate mofetil p. 911 [unlicensed indication]) and phototherapy are available for the management of some cases of severe refractory eczema; they are used under specialist supervision. Dupilumab p. 1349 and baricitinib p. 1198 are options for the treatment of moderate to severe atopic eczema. **A**

Alitretinoin p. 1356 is licensed for the treatment of severe chronic hand eczema refractory to potent topical corticosteroids; patients with hyperkeratotic features are more likely to respond to alitretinoin than those with pompholyx.

##### Seborrhoeic dermatitis

*Seborrhoeic dermatitis (seborrhoeic eczema)* is associated with species of the yeast *Malassezia* and affects the scalp, paranasal areas, and eyebrows. **EvGr** Shampoos active against the yeast (including those containing ketoconazole p. 1324 or coal tar p. 1345) and combinations of mild topical corticosteroids with suitable antimicrobials are used. **A**

## Psoriasis

07-Oct-2021

### Overview

Psoriasis is an inflammatory skin disease that usually follows a relapsing and remitting course and may have nail or joint involvement. Different forms of psoriasis exist; chronic plaque psoriasis is the most common, and is characterised by epidermal thickening and scaling, usually affecting extensor surfaces and the scalp.

Occasionally, psoriasis is provoked or exacerbated by drugs such as lithium, chloroquine and hydroxychloroquine, beta-blockers, non-steroidal anti-inflammatory drugs, and ACE inhibitors. Psoriasis may not be seen until the drug has been taken for weeks or months.

### Treatment

**EvGr** Offer topical treatment first-line to all patients with psoriasis. Topical treatment options include emollients, topical corticosteroids, coal tar preparations, and topical vitamin D or vitamin D analogues. When choosing topical treatment, consider patient preference, practical aspects of application, extent of psoriasis, and the variety of preparation forms available. **A**

Emollients are widely used in psoriasis; they moisturise dry skin, reduce scaling, and relieve itching. They also soften cracked areas and help other topical treatments absorb through the skin to work more effectively. Some cases of mild psoriasis may settle with the use of emollients alone.

**EvGr** Emollients may also be useful adjuncts to other more specific treatment. **A**

Continuous long-term use of potent or very potent topical corticosteroids may cause psoriasis to become unstable, and

lead to irreversible skin atrophy and striae. Widespread use (greater than 10% of body surface area affected) can also lead to systemic and local side-effects. [EvGr](#) Patients who have been on intermittent or short courses of potent or very potent topical corticosteroids should be offered a review of treatment at least annually.

Consecutive use of potent topical corticosteroids should not be used for more than 8 weeks at any one site; 4 weeks for very potent topical corticosteroids. Application may be restarted after a 4-week 'treatment break'; non-steroid treatments, such as topical vitamin D and vitamin D analogues, may be continued during this time. [▲](#)

Coal tar p. 1345 has anti-inflammatory, antipruritic, and anti-scaling properties and is often combined with other topical treatments for psoriasis. Several coal tar preparations are available including ointments, shampoos, and bath additives. [EvGr](#) Newer products are preferred to older products containing crude coal tar (coal tar BP), which is malodorous and usually messier to apply. [▲](#)

Topical vitamin D and vitamin D analogue preparations are available as ointments, gels, scalp solutions, and lotions. Tacalcitol p. 1358 and calcitriol p. 1358 may be less irritating than calcipotriol p. 1357.

### Psoriasis of the trunk and limbs

[EvGr](#) Offer a potent topical corticosteroid and a topical vitamin D or vitamin D analogue applied once daily (at different times of the day) for up to 4 weeks as initial treatment. If satisfactory control is not achieved after a maximum of 8 weeks, offer a topical vitamin D or vitamin D analogue alone applied twice daily. If satisfactory control is not achieved after 8–12 weeks of twice-daily topical vitamin D or vitamin D analogue, offer either a potent topical corticosteroid applied twice daily for up to 4 weeks, or a coal tar preparation. A combination product containing calcipotriol with betamethasone p. 1336 for up to 4 weeks is an alternative in patients unable to use twice-daily potent topical corticosteroids, a coal tar preparation, or in patients where a once-daily application would improve adherence. A very potent topical corticosteroid can be offered under specialist supervision for a maximum of 4 weeks when other topical treatments have failed.

In patients with treatment-resistant psoriasis of the trunk or limbs, consider treatment with short-contact dithranol p. 1345. Treatment should be given in a specialist setting or the patient should be provided with educational support for self-use. [▲](#)

### Scalp psoriasis

[EvGr](#) Offer a potent topical corticosteroid applied once daily for up to 4 weeks as initial treatment. If satisfactory control is not achieved after 4 weeks, consider a different formulation of the potent topical corticosteroid (e.g. a shampoo or mousse) and/or topical agents to remove or soften adherent scale (e.g. agents containing salicylic acid, emollients, oils). These agents should be used prior to applying the potent topical corticosteroid to allow effective penetration. If response to potent topical corticosteroid treatment remains unsatisfactory after a further 4 weeks of treatment, offer a combination product containing calcipotriol with betamethasone for up to 4 weeks. If treatment with calcipotriol with betamethasone for up to 4 weeks does not give a satisfactory response, offer either a very potent corticosteroid applied twice daily for 2 weeks, or a coal tar preparation, or refer the patient to a specialist.

In patients with mild to moderate scalp psoriasis who cannot use topical corticosteroids, offer treatment with a topical vitamin D or vitamin D analogue only. If treatment with a vitamin D or vitamin D analogue for up to 8 weeks does not give a satisfactory response, either offer a coal tar preparation or refer the patient to a specialist. The use of coal tar-based shampoos alone for the treatment of severe scalp psoriasis is not recommended. [▲](#)

### Facial, flexural, and genital psoriasis

[EvGr](#) Offer a mild or moderate potency topical corticosteroid as initial treatment. The face, flexures, and genitals are particularly vulnerable to steroid atrophy therefore topical corticosteroids should only be used short-term (e.g. 1–2 weeks per month). If response to a moderate potency topical corticosteroid is inadequate, or there is serious risk of side-effects from continuous use, offer a topical calcineurin inhibitor, such as pimecrolimus p. 1347 or tacrolimus p. 1347 [unlicensed indications], for up to 4 weeks (initiated under specialist supervision). [▲](#)

### Pustular or erythrodermic psoriasis

[EvGr](#) Widespread unstable psoriasis of erythrodermic or generalised pustular types requires urgent same-day specialist assessment and should be managed as a medical emergency. [▲](#)

### Phototherapy

Phototherapy is available under the supervision of an appropriately trained healthcare professional. [EvGr](#) Narrowband ultraviolet B (UVB) phototherapy can be offered to patients with plaque or guttate psoriasis in whom topical treatment has failed to achieve control. [▲](#)

Photochemotherapy combining psoralen with ultraviolet A (PUVA) is available in specialist centres, given under the supervision of an appropriately trained healthcare professional. Psoralen enhances the effects of UVA and is administered either by mouth or topically. [EvGr](#) PUVA irradiation can be considered for the treatment of localised palmoplantar pustulosis and plaque-type psoriasis. [▲](#) Cumulative doses increase the risk of dysplastic and neoplastic skin lesions, especially squamous cell cancer.

[EvGr](#) Topical adjunctive therapy may be considered in patients receiving broadband or narrowband UVB phototherapy who have plaques that are resistant, or show an inadequate response to phototherapy alone, or are at difficult-to-treat sites, or in patients unable to take systemic treatment. Concomitant treatment of acitretin and PUVA is not routinely recommended. [▲](#)

### Systemic treatment

#### Non-biological treatment

[EvGr](#) Under the supervision of a specialist, systemic non-biological treatment with methotrexate p. 987 or ciclosporin p. 904 may be offered to some patients with psoriasis that cannot be controlled with topical treatment *and* if the psoriasis has a significant impact on physical, psychological or social well-being. In addition, the psoriasis would have to be extensive, or localised with significant distress or functional impairment, or have failed phototherapy treatment.

Ciclosporin can be considered first-line in patients who need rapid or short-term disease control, have palmoplantar pustulosis, or who are considering conception (both men and women).

Only consider acitretin p. 1355 in patients where methotrexate and ciclosporin are not appropriate or have failed, or in patients with pustular forms of psoriasis. [▲](#)

Apremilast p. 1211 is licensed for the treatment of moderate to severe chronic plaque psoriasis in patients who failed to respond to other systemic treatments including ciclosporin, methotrexate, or PUVA, or in those who have contra-indications to or intolerance to these treatments.

#### Biological treatment

[EvGr](#) Biological drugs should be initiated and supervised only by specialists experienced in the diagnosis and management of psoriasis. [▲](#) For guidance on biological therapies for the treatment of psoriasis, see NICE pathway: **Psoriasis** (available at: [pathways.nice.org.uk/pathways/psoriasis](http://pathways.nice.org.uk/pathways/psoriasis)).

**Other drugs used for Eczema and psoriasis** Adalimumab, p. 1204 · Certolizumab pegol, p. 1205 · Dimethyl fumarate, p. 918 · Etanercept, p. 1206 · Infliximab, p. 1209 · Secukinumab, p. 1194 · Upadacitinib, p. 1202 · Ustekinumab, p. 1197

## CORTICOSTEROIDS

### Topical corticosteroids

28-Oct-2021

#### Overview

Topical corticosteroids are used for the treatment of inflammatory conditions of the skin (other than those arising from an infection), in particular eczema, contact dermatitis, insect stings, and eczema of scabies. They are generally used to relieve symptoms and suppress signs of the disorder when other measures such as emollients are ineffective. Corticosteroids suppress the inflammatory reaction during use; they are not curative and on discontinuation a withdrawal reaction (rebound or flare) may occur. Withdrawal reactions are thought to occur after long-term continuous or inappropriate use of topical corticosteroids (particularly those of moderate to high potency). Signs and symptoms are reported to happen within days to weeks of stopping long-term topical corticosteroid treatment. A flare of the underlying skin disorder is the most common withdrawal reaction. Rarely, a specific type of withdrawal reaction may occur in which skin redness extends beyond the initial area of treatment, with burning or stinging that is worse than the original condition. For further information on topical corticosteroid withdrawal reactions, see *Important safety information* in the individual drug monograph).

Topical corticosteroids are not recommended in the routine treatment of urticaria; treatment should only be initiated and supervised by a specialist. They should not be used indiscriminately in pruritus (where they will only benefit if inflammation is causing the itch) and are **not** recommended for acne vulgaris.

Systemic or very potent topical corticosteroids should be avoided or given only under specialist supervision in *psoriasis* because, although they may suppress the psoriasis in the short term, relapse or vigorous rebound occurs on withdrawal (sometimes precipitating severe pustular psoriasis). See the role of topical corticosteroids in the treatment of psoriasis.

In general, the most potent topical corticosteroids should be reserved for recalcitrant dermatoses such as *chronic discoid lupus erythematosus*, *lichen simplex chronicus*, *hypertrophic lichen planus*, and *palmoplantar pustulosis*. Potent corticosteroids should generally be avoided on the face and skin flexures, but specialists occasionally prescribe them for use on these areas in certain circumstances.

When topical treatment has failed, intralesional corticosteroid injections may be used. These are more effective than the very potent topical corticosteroid preparations and should be reserved for severe cases where there are localised lesions such as *keloid scars*, *hypertrophic lichen planus*, or *localised alopecia areata*.

#### Perioral lesions

Hydrocortisone cream 1% p. 1339 can be used for up to 7 days to treat uninfected inflammatory lesions on the lips. Hydrocortisone with miconazole cream or ointment p. 1344 is useful where infection by susceptible organisms and inflammation co-exist, particularly for initial treatment (up to 7 days) e.g. in angular cheilitis. Organisms susceptible to miconazole include *Candida* spp. and many Gram-positive bacteria including streptococci and staphylococci.

#### Choice of formulation

Water-miscible corticosteroid *creams* are suitable for moist or weeping lesions whereas *ointments* are generally chosen for dry, lichenified or scaly lesions or where a more occlusive effect is required. *Lotions* may be useful when minimal application to a large or hair-bearing area is required or for the treatment of exudative lesions. *Occlusive polythene or hydrocolloid dressings* increase absorption, but also increase the risk of side effects; they are therefore used only under supervision on a short-term basis for areas of very thick skin (such as the palms and soles). The inclusion of urea or salicylic acid also increases the penetration of the corticosteroid.

In the BNF publications topical corticosteroids for the skin are categorised as 'mild', 'moderately potent', 'potent' or 'very potent'; the **least potent** preparation which is effective should be chosen but dilution should be avoided whenever possible.

#### Absorption through the skin

*Mild* and *moderately potent* topical corticosteroids are associated with few side-effects but care is required in the use of *potent* and *very potent* corticosteroids. Absorption through the skin can rarely cause adrenal suppression and even Cushing's syndrome, depending on the area of the body being treated and the duration of treatment. Absorption is greatest where the skin is thin or raw, and from intertriginous areas; it is increased by occlusion.

For further information on side-effects that may occur from absorption through the skin, see Corticosteroids, general use p. 737.

#### Suitable quantities of corticosteroid preparations to be prescribed for specific areas of the body

Area of body	Creams and Ointments
Face and neck	15 to 30 g
Both hands	15 to 30 g
Scalp	15 to 30 g
Both arms	30 to 60 g
Both legs	100 g
Trunk	100 g
Groins and genitalia	15 to 30 g
These amounts are usually suitable for an adult for a single daily application for 2 weeks	

#### Compound preparations

The advantages of including other substances (such as antibacterials or antifungals) with corticosteroids in topical preparations are uncertain, but such combinations may have a place where inflammatory skin conditions are associated with bacterial or fungal infection, such as infected eczema. In these cases the antimicrobial drug should be chosen according to the sensitivity of the infecting organism and used regularly for a short period (typically twice daily for 1 week). Longer use increases the likelihood of resistance and of sensitisation.

The keratolytic effect of salicylic acid p. 1381 facilitates the absorption of topical corticosteroids; however, excessive and prolonged use of topical preparations containing salicylic acid may cause salicylism.

#### Topical corticosteroid preparation potencies

Potency of a topical corticosteroid preparation is a result of the formulation as well as the corticosteroid. Therefore, proprietary names are shown.

##### Mild

- Hydrocortisone 0.1–2.5%

- Dioderm
- Mildison
- Synalar 1 in 10 dilution

#### Mild with antimicrobials

- Canesten HC
- Dakta cort
- Econacort
- Fucidin H
- Hydrocortisone with chlorhexidine hydrochloride and nystatin
- Terra-Cortril
- Timodine

#### Moderate

- Betnovate-RD
- Eumovate
- Haelan
- Modrasone
- Synalar 1 in 4 Dilution
- Ultralanum Plain

#### Moderate with antimicrobials

- Trimovate

#### Moderate with urea

- Alphaderm

#### Potent

- Beclomethasone dipropionate 0.025%
- Betamethasone valerate 0.1%
- Betacap
- Betesil
- Bettamousse
- Betnovate
- Cutivate
- Diprosone
- Elocon
- Hydrocortisone butyrate
- Locoid
- Locoid Crelo
- Metosyn
- Mometasone furoate 0.1%
- Nerisone
- Synalar

#### Potent with antimicrobials

- Aureocort
- Betamethasone and clioquinol
- Betamethasone and neomycin
- Fucibet
- Lotriderm
- Synalar C
- Synalar N

#### Potent with salicylic acid

- Diprosalic

#### Very potent

- Clarelux
- Dermovate
- Etrivex
- Nerisone Forte

#### Very potent with antimicrobials

- Clobetasol with neomycin and nystatin

#### Use in children

Children, especially infants, are particularly susceptible to side-effects. However, concern about the safety of topical corticosteroids in children should not result in the child being undertreated. The aim is to control the condition as well as possible; inadequate treatment will perpetuate the condition. A mild corticosteroid such as hydrocortisone 0.5% or 1% p. 1339 is useful for treating nappy rash and hydrocortisone 1% for atopic eczema in childhood. A moderately potent or potent corticosteroid may be appropriate for severe atopic eczema on the limbs, for

1–2 weeks only, switching to a less potent preparation as the condition improves. In an acute flare-up of atopic eczema, it may be appropriate to use more potent formulations of topical corticosteroids for a short period to regain control of the condition. A very potent corticosteroid should be initiated under the supervision of a specialist. Carers of young children should be advised that treatment should **not** necessarily be reserved to 'treat only the worst areas' and they may need to be advised that patient information leaflets may contain inappropriate advice for the patient's condition.

## Corticosteroids (topical)

### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: CORTICOSTEROIDS: RARE RISK OF CENTRAL SEROUS CHORIORETINOPATHY WITH LOCAL AS WELL AS SYSTEMIC ADMINISTRATION (AUGUST 2017)

Central serous chorioretinopathy is a retinal disorder that has been linked to the systemic use of corticosteroids. Recently, it has also been reported after local administration of corticosteroids via inhaled and intranasal, epidural, intra-articular, topical dermal, and periocular routes. The MHRA recommends that patients should be advised to report any blurred vision or other visual disturbances with corticosteroid treatment given by any route; consider referral to an ophthalmologist for evaluation of possible causes if a patient presents with vision problems.

NHS IMPROVEMENT PATIENT SAFETY ALERT: STEROID EMERGENCY CARD TO SUPPORT EARLY RECOGNITION AND TREATMENT OF ADRENAL CRISIS IN ADULTS (AUGUST 2020)

A patient-held **Steroid Emergency Card** has been developed for patients with adrenal insufficiency and steroid dependence who are at risk of adrenal crisis. It aims to support healthcare staff with the early recognition of patients at risk of adrenal crisis and the emergency treatment of adrenal crisis. All eligible patients should be issued a Steroid Emergency Card. Providers that treat patients with acute physical illness or trauma, or who may require emergency treatment, elective surgery, or other invasive procedures, should establish processes to check for risk of adrenal crisis and confirm if the patient has a Steroid Emergency Card.

PAEDIATRIC STEROID TREATMENT CARD FOR CHILDREN WITH ADRENAL INSUFFICIENCY (NOVEMBER 2020)

The British Society for Paediatric Endocrinology and Diabetes (BSPED) has developed a Paediatric Steroid Treatment Card which should be issued to children with adrenal insufficiency and steroid dependence. The card includes a management summary for the emergency treatment of adrenal crisis and can be issued by any healthcare professional managing such patients. The BSPED Paediatric Steroid Treatment Card is available at: [www.endocrinology.org/adrenal-crisis](http://www.endocrinology.org/adrenal-crisis).

MHRA/CHM ADVICE: TOPICAL CORTICOSTEROIDS: INFORMATION ON THE RISK OF TOPICAL STEROID WITHDRAWAL REACTIONS (SEPTEMBER 2021)

Rarely, long-term continuous or inappropriate use of topical corticosteroids, particularly those of moderate to high potency, can result in the development of rebound flares, reported as dermatitis with intense redness, stinging, and burning that can spread beyond the initial treatment area.

The MHRA advises that the lowest potency topical corticosteroid needed should be used. For patients who are currently on long-term topical corticosteroid treatment, consider reducing potency or frequency of application (or both). Healthcare professionals should also be vigilant for the signs and symptoms of topical corticosteroid withdrawal reactions and review the position statement from the National Eczema Society

and British Association of Dermatologists [eczema.org/wp-content/uploads/Topical-Steroid-Withdrawal-position-statement.pdf](http://eczema.org/wp-content/uploads/Topical-Steroid-Withdrawal-position-statement.pdf).

Healthcare professionals should inform patients:

- how much should be applied, as under-use can prolong treatment duration;
- how long they should use a topical corticosteroid for, especially on sensitive areas such as the face and genitals;
- to always apply topical corticosteroids as instructed and consult the patient information leaflet provided;
- to seek medical advice before using a topical corticosteroid on a new body area, as some areas of the body are more prone to side-effects;
- to return for medical advice if their skin condition worsens while using topical corticosteroid, and advise them when it would be appropriate to re-treat without a consultation and;
- if their skin worsens within 2 weeks of stopping a topical corticosteroid, treatment should not be started again without consulting their doctor unless they have previously been advised to do so

The MHRA advises healthcare professionals to report any suspected adverse effects, via the Yellow Card Scheme, even when the adverse effects occur after stopping corticosteroid treatment.

- **CONTRA-INDICATIONS** Acne · perioral dermatitis · potent corticosteroids in widespread plaque psoriasis · rosacea · untreated bacterial, fungal or viral skin lesions
  - **CAUTIONS** Avoid prolonged use (particularly on the face) · cautions applicable to systemic corticosteroids may also apply if absorption occurs following topical and local use · dermatoses of infancy, including nappy rash (extreme caution required—treatment should be limited to 5–7 days) (in children) · infection · keep away from eyes · use potent or very potent topical corticosteroids under specialist supervision (in children) · use potent or very potent topical corticosteroids under specialist supervision in psoriasis (can result in rebound relapse, development of generalised pustular psoriasis, and local and systemic toxicity) (in adults)
  - **SIDE-EFFECTS**
    - ▶ **Common or very common** Skin reactions · telangiectasia
    - ▶ **Rare or very rare** Adrenal suppression · hypertrichosis · skin depigmentation (may be reversible)
    - ▶ **Frequency not known** Local reaction · vasodilation
- SIDE-EFFECTS, FURTHER INFORMATION** Side-effects applicable to systemic corticosteroids may also apply if absorption occurs following topical and local use. In order to minimise the side-effects of a topical corticosteroid, it is important to apply it thinly to affected areas only, no more frequently than twice daily, and to use the least potent formulation which is fully effective.
- **DIRECTIONS FOR ADMINISTRATION** [EvGr](#) Topical corticosteroid preparations should be applied no more frequently than twice daily; once daily is often sufficient.
    - ◆ Topical corticosteroids should be applied in sufficient quantity to cover the affected areas. The length of cream or ointment expelled from a tube may be used to specify the quantity to be applied to a given area of skin. This length can be measured in terms of a *finger tip unit* (the distance from the tip of the adult index finger to the first crease). One fingertip unit (approximately 500 mg from a tube with a standard 5 mm diameter nozzle) is sufficient to cover an area that is twice that of the flat adult handprint (palm and fingers). [EvGr](#) Several minutes should elapse between application of topical corticosteroids and emollients. ◆

- ▶ In children 'Wet-wrap bandaging' increases absorption into the skin, but should be initiated under the supervision of a trained healthcare professional.
- **PRESCRIBING AND DISPENSING INFORMATION** The potency of each topical corticosteroid should be included on the label with the directions for use. The label should be attached to the container (for example, the tube) rather than the outer packaging.
- **PATIENT AND CARER ADVICE** If a patient is using topical corticosteroids of different potencies, the patient should be told when to use each corticosteroid. Patients and their carers should be reassured that side effects such as skin thinning and systemic effects rarely occur when topical corticosteroids are used appropriately.
  - ▶ If systemic absorption occurs following topical and local use, side-effects applicable to systemic corticosteroids may apply.

## Alclometasone dipropionate

F 1333

08-Mar-2022

### • INDICATIONS AND DOSE

**Inflammatory skin disorders such as eczemas**

- ▶ TO THE SKIN
- ▶ **Child:** Apply 1–2 times a day, to be applied thinly
- ▶ **Adult:** Apply 1–2 times a day, to be applied thinly

### POTENCY

- ▶ Alclometasone dipropionate cream 0.05%: moderate

- **UNLICENSED USE** Licensed for use in children (age range not specified by manufacturer).
- **PATIENT AND CARER ADVICE** Patients or carers should be counselled on the application of alclometasone dipropionate cream.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), chlorocresol, propylene glycol

### ▶ Alclometasone dipropionate (Non-proprietary)

Alclometasone dipropionate 500 microgram per 1 gram Alclometasone 0.05% cream | 50 gram [PoM](#) £16.72 DT = £16.72

## Beclometasone dipropionate

F 1333

08-Mar-2022

### (Beclomethasone dipropionate)

### • INDICATIONS AND DOSE

**Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids | Psoriasis**

- ▶ TO THE SKIN
- ▶ **Child:** Apply 1–2 times a day, to be applied thinly
- ▶ **Adult:** Apply 1–2 times a day, to be applied thinly

### POTENCY

- ▶ Beclometasone dipropionate cream and ointment 0.025%: potent.

- **UNLICENSED USE** Not licensed for use in children under 1 year.
- **INTERACTIONS** → Appendix 1: corticosteroids
- **SIDE-EFFECTS** Vision blurred

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: cream, ointment  
**Cream**

CAUTIONARY AND ADVISORY LABELS 28

- ▶ **Beclometasone dipropionate (Non-proprietary)**

**Beclometasone dipropionate 250 microgram per 1 gram** Beclometasone 0.025% cream | 30 gram [PoM] £68.00 DT = £68.00

**Ointment**

CAUTIONARY AND ADVISORY LABELS 28

- ▶ **Beclometasone dipropionate (Non-proprietary)**

**Beclometasone dipropionate 250 microgram per 1 gram** Beclometasone 0.025% ointment | 30 gram [PoM] £68.00 DT = £68.00

## Betamethasone

08-Mar-2022

- **DRUG ACTION** Betamethasone has very high glucocorticoid activity and insignificant mineralocorticoid activity.

### ● INDICATIONS AND DOSE

**Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids | Psoriasis**

## ▶ TO THE SKIN

- ▶ Child: Apply 1–2 times a day, to be applied thinly
- ▶ Adult: Apply 1–2 times a day, to be applied thinly

**POTENCY**

- ▶ **Betamethasone valerate 0.025% cream and ointment:** moderate. **Betamethasone valerate 0.1% cream, lotion, ointment, and scalp application:** potent. **Betamethasone valerate 0.12% foam:** potent. **Betamethasone dipropionate 0.05% cream, lotion, and ointment:** potent.

**BETESIL®**

**Inflammatory skin disorders [unresponsive to less potent corticosteroids]**

## ▶ TO THE SKIN

- ▶ Adult: Apply every 24 hours for up to 30 days, wait at least 30 minutes between applications, up to 6 medicated plasters may be used per day

- **UNLICENSED USE** *Betacap®*, *Betnovate®* and *Betnovate-RD®* are not licensed for use in children under 1 year. *Bettamousse®* is not licensed for use in children under 6 years.

- **CAUTIONS** Use of more than 100 g per week of 0.1% preparation likely to cause adrenal suppression

- **INTERACTIONS** → Appendix 1: corticosteroids

- **SIDE-EFFECTS** Colloid milia

- **DIRECTIONS FOR ADMINISTRATION**

**BETESIL®** Manufacturer advises cleanse and dry skin prior to plaster application. Plaster may be cut to fit area to be treated.

- **PATIENT AND CARER ADVICE** Patient counselling is advised for betamethasone cream, ointment, scalp application and foam (application).

**BETESIL®** Manufacturer advises avoid contact with water after plaster applied.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: cream, ointment  
**Foam**

14-Jul-2021

The properties listed below are those particular to the combination only. For the properties of the components please consider, calcipotriol p. 1357, betamethasone p. 1335.

### ● INDICATIONS AND DOSE

#### DOVOBET<sup>®</sup> GEL

##### Scalp psoriasis

###### ▶ TO THE SKIN

- ▶ Adult: Apply 1–4 g once daily usual duration of therapy 4 weeks; if necessary, treatment may be continued beyond 4 weeks or repeated, on the advice of a specialist, shampoo off after leaving on scalp overnight or during day, when different preparations containing calcipotriol used together, maximum total calcipotriol 5 mg in any one week

##### Mild to moderate plaque psoriasis

###### ▶ TO THE SKIN

- ▶ Adult: Apply once daily for 8 weeks; if necessary, treatment may be continued beyond 8 weeks or repeated, on the advice of a specialist, apply to maximum 30% of body surface, when different preparations containing calcipotriol used together, max. total calcipotriol 5 mg in any one week; maximum 15 g per day

#### DOVOBET<sup>®</sup> OINTMENT

##### Stable plaque psoriasis

###### ▶ TO THE SKIN

- ▶ Adult: Apply once daily for 4 weeks; if necessary, treatment may be continued beyond 4 weeks or repeated, on the advice of a specialist, apply to a maximum 30% of body surface, when different preparations containing calcipotriol used together, max. total calcipotriol 5 mg in any one week; maximum 15 g per day

#### ENSTILAR<sup>®</sup>

##### Psoriasis [flare treatment]

###### ▶ TO THE SKIN

- ▶ Adult: Apply once daily for 4 weeks; if necessary, treatment may be continued beyond 4 weeks or repeated, on the advice of a specialist, apply to a maximum 30% of body surface; maximum 15 g per day

##### Psoriasis [maintenance treatment]

###### ▶ TO THE SKIN

- ▶ Adult: Apply twice weekly if adequate response is achieved after 4 weeks of once-daily treatment, apply on 2 non-consecutive days to previously affected areas and to a maximum 30% of body surface, once-daily treatment should be restarted if relapse occurs; maximum 15 g per day

- **CONTRA-INDICATIONS** Erythrodermic psoriasis · pustular psoriasis

- **INTERACTIONS** → Appendix 1: corticosteroids · vitamin D substances

## Clobetasol propionate

08-Mar-2022

### ● INDICATIONS AND DOSE

#### Short-term treatment only of severe resistant inflammatory skin disorders such as recalcitrant eczemas unresponsive to less potent corticosteroids | Psoriasis

##### ▶ TO THE SKIN

- ▶ Child 1-17 years: Apply 1–2 times a day for up to 4 weeks, to be applied thinly
- ▶ Adult: Apply 1–2 times a day for up to 4 weeks, to be applied thinly, maximum 50 g of 0.05% preparation per week

#### POTENCY

- ▶ Clobetasol propionate 0.05% cream, foam, ointment, scalp application, and shampoo: very potent.

#### ETRIVEX<sup>®</sup>

##### Moderate scalp psoriasis

###### ▶ TO THE SKIN

- ▶ Adult: Apply once daily maximum duration of treatment 4 weeks, to be applied thinly then rinsed off after 15 minutes; frequency of application should be reduced after clinical improvement

- **PATIENT AND CARER ADVICE** Patients or carers should be given advice on how to administer clobetasol propionate foam, liquid (scalp application), cream, ointment and shampoo.

Scalp application Patients or carers should be advised to apply foam directly to scalp lesions (foam begins to subside immediately on contact with skin).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: cream, ointment, paste

#### Shampoo

## Hydrocortisone

- **DRUG ACTION** Hydrocortisone has equal glucocorticoid and mineralocorticoid activity.

### ● INDICATIONS AND DOSE

**Mild inflammatory skin disorders such as eczemas**

- ▶ TO THE SKIN
- ▶ Child: Apply 1–2 times a day, to be applied thinly
- ▶ Adult: Apply 1–2 times a day, to be applied thinly

### Nappy rash

- ▶ TO THE SKIN
- ▶ Child: Apply 1–2 times a day for no longer than 1 week, discontinued as soon as the inflammation subsides

### POTENCY

- ▶ Hydrocortisone cream and ointment 0.5 to 2.5%: mild

- **INTERACTIONS** → Appendix 1: corticosteroids
- **PRESCRIBING AND DISPENSING INFORMATION** When hydrocortisone cream or ointment is prescribed and no strength is stated, the 1% strength should be supplied. Although *Dioderm*<sup>®</sup> contains only 0.1% hydrocortisone, the formulation is designed to provide a clinical activity comparable to that of Hydrocortisone Cream 1% BP.
- **PATIENT AND CARER ADVICE** Patient counselling is advised for hydrocortisone cream and ointment (application).
- **PROFESSION SPECIFIC INFORMATION**

Dental practitioners' formulary Hydrocortisone Cream 1% 15 g may be prescribed.

- **EXCEPTIONS TO LEGAL CATEGORY**
- Over-the-counter hydrocortisone preparations Skin creams and ointments containing hydrocortisone (alone or with other ingredients) can be sold to the public for the treatment of allergic contact dermatitis, irritant dermatitis, insect bite reactions and mild to moderate eczema in patients over 10 years, to be applied sparingly over the affected area

1–2 times daily for max. 1 week. Over-the-counter hydrocortisone preparations should not be sold without medical advice for children under 10 years or for pregnant women; they should **not** be sold for application to the face, anogenital region, broken or infected skin (including cold sores, acne, and athlete's foot).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: liquid, cream, ointment

## Betamethasone with neomycin

28-May-2021

The properties listed below are those particular to the combination only. For the properties of the components please consider, betamethasone p. 1335.

- **INDICATIONS AND DOSE**

**Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids | Psoriasis**

- ▶ TO THE SKIN USING OINTMENT, OR TO THE SKIN USING CREAM
- ▶ Child 2-17 years: Apply 1-2 times a day, to be applied thinly
- ▶ Adult: Apply 1-2 times a day, to be applied thinly

**POTENCY**

- ▶ Betamethasone (as valerate) 0.1% with neomycin cream and ointment: potent.

- **INTERACTIONS** → Appendix 1: corticosteroids · neomycin
- **PATIENT AND CARER ADVICE** Patient counselling is advised for betamethasone with neomycin cream and ointment (application).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Ointment**

CAUTIONARY AND ADVISORY LABELS 28

- ▶ **Betamethasone with neomycin (Non-proprietary)**  
 Betamethasone (as Betamethasone valerate) 1 mg per 1 gram,  
 Neomycin sulfate 5 mg per 1 gram Betamethasone valerate 0.1% /  
 Neomycin 0.5% ointment | 30 gram **[PoM]** £38.88 DT = £31.36 |  
 100 gram **[PoM]** £97.00 DT = £104.52

**Cream**

CAUTIONARY AND ADVISORY LABELS 28  
 EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), chlorocresol

- ▶ **Betamethasone with neomycin (Non-proprietary)**  
 Betamethasone (as Betamethasone valerate) 1 mg per 1 gram,  
 Neomycin sulfate 5 mg per 1 gram Betamethasone valerate 0.1% /  
 Neomycin 0.5% cream | 30 gram **[PoM]** £38.88 DT = £31.36 |  
 100 gram **[PoM]** £97.00 DT = £104.52

## Betamethasone with salicylic acid

11-Mar-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, betamethasone p. 1335, salicylic acid p. 1381.

- **INDICATIONS AND DOSE**

**DIPROSALIC® OINTMENT**

**Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids | Psoriasis**

- ▶ TO THE SKIN
- ▶ Child: Apply 1-2 times a day, max. 60 g per week
- ▶ Adult: Apply 1-2 times a day, max. 60 g per week

**POTENCY**

- ▶ Betamethasone (as dipropionate) 0.05% with salicylic acid 3%: potent.

**DIPROSALIC® SCALP APPLICATION**

**Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids | Psoriasis**

- ▶ TO THE SKIN
- ▶ Child: Apply 1-2 times a day, apply a few drops
- ▶ Adult: Apply 1-2 times a day, apply a few drops

**POTENCY**

- ▶ Betamethasone (as dipropionate) 0.05% with salicylic acid 2%: potent.

- **INTERACTIONS** → Appendix 1: corticosteroids
- **PATIENT AND CARER ADVICE**  
**DIPROSALIC® OINTMENT** Patients or carers should be counselled on application of betamethasone and salicylic acid preparations.  
**DIPROSALIC® SCALP APPLICATION** Patients or carers should be counselled on application of betamethasone and salicylic acid scalp application.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Ointment**

CAUTIONARY AND ADVISORY LABELS 28

- ▶ **Diprosalic** (Organon Pharma (UK) Ltd)  
 Betamethasone (as Betamethasone dipropionate)  
 500 microgram per 1 gram, Salicylic acid 30 mg per

1 gram Diprosalic 0.05%/3% ointment | 30 gram [PoM] £3.18 DT = £3.18 | 100 gram [PoM] £9.14 DT = £9.14

### Liquid

CAUTIONARY AND ADVISORY LABELS 28  
EXCIPIENTS: May contain Disodium edetate

- ▶ **Diprosalic** (Organon Pharma (UK) Ltd)  
**Betamethasone (as Betamethasone dipropionate)**  
500 microgram per 1 ml, Salicylic acid 20 mg per 1 ml Diprosalic 0.05%/2% scalp application | 100 ml [PoM] £10.10 DT = £10.10

## Clobetasol propionate with neomycin sulfate and nystatin

The properties listed below are those particular to the combination only. For the properties of the components please consider, clobetasol propionate p. 1336, neomycin sulfate p. 1322.

### ● INDICATIONS AND DOSE

**Short-term treatment only of severe resistant inflammatory skin disorders such as recalcitrant eczemas associated with infection and unresponsive to less potent corticosteroids | Psoriasis associated with infection**

- ▶ TO THE SKIN
- ▶ Adult: (consult product literature)

### POTENCY

- ▶ Clobetasol propionate 0.05% with neomycin sulfate and nystatin cream and ointment: very potent.

- **INTERACTIONS** → Appendix 1: neomycin
- **PATIENT AND CARER ADVICE** Patients or carers should be advised on application of clobetasol propionate, neomycin sulfate and nystatin containing preparations.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Ointment

- CAUTIONARY AND ADVISORY LABELS 28
- ▶ **Clobetasol propionate with neomycin sulfate and nystatin (Non-proprietary)**

Clobetasol propionate 500 microgram per 1 gram, Neomycin sulfate 5 mg per 1 gram, Nystatin 100000 unit per 1 gram Clobetasol 500microgram / Neomycin 5mg / Nystatin 100,000units/g ointment | 30 gram [PoM] £95.35 DT = £95.35

### Cream

- CAUTIONARY AND ADVISORY LABELS 28
- ▶ **Clobetasol propionate with neomycin sulfate and nystatin (Non-proprietary)**

Clobetasol propionate 500 microgram per 1 gram, Neomycin sulfate 5 mg per 1 gram, Nystatin 100000 unit per 1 gram Clobetasol 500microgram / Neomycin 5mg / Nystatin 100,000units/g cream | 30 gram [PoM] £95.35 DT = £95.35

## Clobetasone butyrate with nystatin and oxytetracycline

01-Sep-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, clobetasone butyrate p. 1337, oxytetracycline p. 618.

### ● INDICATIONS AND DOSE

**Steroid-responsive dermatoses where candidal or bacterial infection is present**

- ▶ TO THE SKIN
- ▶ Adult: (consult product literature)

### POTENCY

- ▶ Clobetasone butyrate 0.05% with nystatin and oxytetracycline cream: moderate.

- **INTERACTIONS** → Appendix 1: tetracyclines

- **PATIENT AND CARER ADVICE** Stains clothing.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Cream

CAUTIONARY AND ADVISORY LABELS 28  
EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), chlorocresol, sodium metabisulfite

- ▶ **Trimovate** (Ennogen Healthcare Ltd)  
**Clobetasone butyrate 500 microgram per 1 gram, Oxytetracycline (as Oxytetracycline calcium) 30 mg per 1 gram, Nystatin 100000 unit per 1 gram Trimovate cream | 30 gram [PoM] £12.45 DT = £12.45**

## Fluocinolone acetonide with clioquinol

20-Mar-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, fluocinolone acetonide p. 1338.

### ● INDICATIONS AND DOSE

**Inflammatory skin disorders such as eczemas associated with infection**

- ▶ TO THE SKIN
- ▶ Adult: Apply 2–3 times a day, to be applied thinly

### POTENCY

- ▶ Clioquinol 3% with fluocinolone acetonide 0.025% cream and ointment: potent

- **INTERACTIONS** → Appendix 1: fluocinolone
- **PATIENT AND CARER ADVICE** Patient counselling is advised for clioquinol with fluocinolone acetonide cream and ointment (application). Ointment stains clothing.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Ointment

CAUTIONARY AND ADVISORY LABELS 28  
EXCIPIENTS: May contain Propylene glycol, woolfat and related substances (including lanolin)

- ▶ **Synalar C** (Reig Jofre UK Ltd)  
**Fluocinolone acetonide 250 microgram per 1 gram, Clioquinol 30 mg per 1 gram Synalar C ointment | 15 gram [PoM] £2.66 DT = £2.66**

### Cream

CAUTIONARY AND ADVISORY LABELS 28  
EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), disodium edetate, hydroxybenzoates (parabens), polysorbates, propylene glycol

- ▶ **Synalar C** (Reig Jofre UK Ltd)  
**Fluocinolone acetonide 250 microgram per 1 gram, Clioquinol 30 mg per 1 gram Synalar C cream | 15 gram [PoM] £2.66 DT = £2.66**

## Fluocinolone acetonide with neomycin

The properties listed below are those particular to the combination only. For the properties of the components please consider, fluocinolone acetonide p. 1338, neomycin sulfate p. 1322.

### ● INDICATIONS AND DOSE

**Inflammatory skin disorders such as eczemas associated with infection | Psoriasis associated with infection**

- ▶ TO THE SKIN
- ▶ Child 1-17 years: Apply 1–2 times a day, to be applied thinly, reducing strength as condition responds
- ▶ Adult: Apply 1–2 times a day, to be applied thinly, reducing strength as condition responds

### POTENCY

- ▶ Fluocinolone acetonide 0.025% with neomycin 0.5% cream and ointment: potent.

- **INTERACTIONS** → Appendix 1: fluocinolone · neomycin
- **PATIENT AND CARER ADVICE** Patients or carers should be counselled on the application of fluocinolone acetonide with neomycin preparations.
- **MEDICINAL FORMS** No licensed medicines listed.

## Hydrocortisone with benzalkonium chloride, dimeticone and nystatin

06-Mar-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, hydrocortisone p. 1339, dimeticone p. 1328.

### ● INDICATIONS AND DOSE

#### Mild inflammatory skin disorders such as eczemas associated with infection

- ▶ TO THE SKIN
- ▶ Child: Apply 3 times a day until lesion has healed, to be applied thinly
- ▶ Adult: Apply 3 times a day until lesion has healed, to be applied thinly

### POTENCY

- ▶ Benzalkonium with dimeticone, hydrocortisone acetate 0.5%, and nystatin cream: mild.

- **INTERACTIONS** → Appendix 1: corticosteroids
- **PATIENT AND CARER ADVICE** Patients or carers should be advised on application of benzalkonium with dimeticone and hydrocortisone and nystatin preparations.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Butylated hydroxyanisole, cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens), sodium metabisulfite, sorbic acid

- ▶ **Timodine** (Alliance Pharmaceuticals Ltd)  
Benzalkonium chloride 1 mg per 1 gram, Hydrocortisone 5 mg per 1 gram, Dimeticone 350 100 mg per 1 gram, Nystatin 100000 unit per 1 gram Timodine cream | 30 gram [PoM] £3.37

## Hydrocortisone with chlorhexidine hydrochloride and nystatin

10-Mar-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, hydrocortisone p. 1339, chlorhexidine p. 1372.

### ● INDICATIONS AND DOSE

#### Mild inflammatory skin disorders such as eczemas associated with infection

- ▶ TO THE SKIN
- ▶ Child: (consult product literature)
- ▶ Adult: (consult product literature)

### POTENCY

- ▶ Hydrocortisone 0.5% with chlorhexidine hydrochloride 1% and nystatin cream: mild
- ▶ Hydrocortisone 1% with chlorhexidine hydrochloride 1% and nystatin ointment: mild

- **INTERACTIONS** → Appendix 1: corticosteroids
- **PATIENT AND CARER ADVICE** Patients or carers should be given advice on application of chlorhexidine hydrochloride with hydrocortisone and nystatin preparations.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Ointment

CAUTIONARY AND ADVISORY LABELS 28

- ▶ **Hydrocortisone with chlorhexidine hydrochloride and nystatin (Non-proprietary)**  
Chlorhexidine acetate 10 mg per 1 gram, Hydrocortisone 10 mg per 1 gram, Nystatin 100000 unit per 1 gram Nystatin 100,000units/g / Chlorhexidine acetate 1% / Hydrocortisone 1% ointment | 30 gram [PoM] £9.66-£11.49 DT = £10.58
- ▶ **Nystaform HC** (Typharm Ltd)  
Chlorhexidine acetate 10 mg per 1 gram, Hydrocortisone 10 mg per 1 gram, Nystatin 100000 unit per 1 gram Nystaform HC ointment | 30 gram [PoM] £9.66 DT = £10.58

### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol), polysorbates

- ▶ **Hydrocortisone with chlorhexidine hydrochloride and nystatin (Non-proprietary)**  
Hydrocortisone 5 mg per 1 gram, Chlorhexidine hydrochloride 10 mg per 1 gram, Nystatin 100000 unit per 1 gram Nystatin 100,000units/g / Chlorhexidine hydrochloride 1% / Hydrocortisone 0.5% cream | 30 gram [PoM] £9.66-£11.49 DT = £10.58
- ▶ **Nystaform HC** (Typharm Ltd)  
Hydrocortisone 5 mg per 1 gram, Chlorhexidine hydrochloride 10 mg per 1 gram, Nystatin 100000 unit per 1 gram Nystaform HC cream | 30 gram [PoM] £9.66 DT = £10.58

## Hydrocortisone with clotrimazole

17-Mar-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, hydrocortisone p. 1339, clotrimazole p. 1324.

### ● INDICATIONS AND DOSE

#### Mild inflammatory skin disorders such as eczemas (associated with fungal infection)

- ▶ TO THE SKIN
- ▶ Child: (consult product literature)
- ▶ Adult: (consult product literature)

### POTENCY

- ▶ Clotrimazole with hydrocortisone 1% cream: mild

- **INTERACTIONS** → Appendix 1: antifungals, azoles · corticosteroids
- **PATIENT AND CARER ADVICE** Patients or carers should be given advice on how to administer clotrimazole with hydrocortisone cream.
- **EXCEPTIONS TO LEGAL CATEGORY** A 15-g tube is on sale to the public for the treatment of athlete's foot and fungal infection of skin folds with associated inflammation in patients 10 years and over.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol)

- ▶ **Canesten HC** (Bayer Plc)  
Clotrimazole 10 mg per 1 gram, Hydrocortisone (as Hydrocortisone acetate) 10 mg per 1 gram Canesten HC cream | 30 gram [PoM] £2.42 DT = £2.42

## Hydrocortisone with fusidic acid

13-Mar-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, hydrocortisone p. 1339, fusidic acid p. 623.

### ● INDICATIONS AND DOSE

**Mild inflammatory skin disorders such as eczemas associated with infection**

- ▶ TO THE SKIN
- ▶ Child: (consult product literature)
- ▶ Adult: (consult product literature)

### POTENCY

- ▶ Hydrocortisone with fusidic acid cream: mild

- **INTERACTIONS** → Appendix 1: corticosteroids · fusidate
- **PATIENT AND CARER ADVICE** Patients or carers should be advised on application of hydrocortisone with fusidic acid preparations.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Butylated hydroxyanisole, cetostearyl alcohol (including cetyl and stearyl alcohol), polysorbates, potassium sorbate

- ▶ **Fucidin H (Fusidic acid / Hydrocortisone)** (LEO Pharma)

Hydrocortisone acetate 10 mg per 1 gram, Fusidic acid 20 mg per 1 gram Fucidin H Cream | 30 gram [PoM] £6.02 DT = £6.02 | 60 gram [PoM] £12.05 DT = £12.05

## Hydrocortisone with miconazole

17-Mar-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, hydrocortisone p. 1339, miconazole p. 1325.

### ● INDICATIONS AND DOSE

**Mild inflammatory skin disorders such as eczemas associated with infections**

- ▶ TO THE SKIN
- ▶ Adult: (consult product literature)

### POTENCY

- ▶ Hydrocortisone 1% with miconazole cream and ointment: mild

- **INTERACTIONS** → Appendix 1: antifungals, azoles · corticosteroids
- **PATIENT AND CARER ADVICE** Patients or carers should be advised on application of hydrocortisone with miconazole preparations.
- **PROFESSION SPECIFIC INFORMATION**

**Dental practitioners' formulary** May be prescribed as Miconazole and Hydrocortisone Cream or Ointment for max. 7 days.

- **EXCEPTIONS TO LEGAL CATEGORY** A 15-g tube of hydrocortisone with miconazole cream is on sale to the public for the treatment of athlete's foot and candidal intertrigo.
  - **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.
- Ointment**
- CAUTIONARY AND ADVISORY LABELS 28
- ▶ **Daktacort** (Janssen-Cilag Ltd)
- Hydrocortisone 10 mg per 1 gram, Miconazole nitrate 20 mg per 1 gram Daktacort ointment | 30 gram [PoM] £2.50 DT = £2.50

### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Butylated hydroxyanisole, disodium edetate

- ▶ **Daktacort** (McNeil Products Ltd, Janssen-Cilag Ltd)

Hydrocortisone 10 mg per 1 gram, Miconazole nitrate 20 mg per 1 gram Daktacort 2%/1% cream | 30 gram [PoM] £2.49 DT = £2.49

## Hydrocortisone with oxytetracycline

The properties listed below are those particular to the combination only. For the properties of the components please consider, hydrocortisone p. 1339, oxytetracycline p. 618.

### ● INDICATIONS AND DOSE

**Mild inflammatory skin disorders such as eczemas**

- ▶ TO THE SKIN
- ▶ Child 12-17 years: (consult product literature)
- ▶ Adult: (consult product literature)

### POTENCY

- ▶ Hydrocortisone 1% with oxytetracycline ointment: mild.

- **INTERACTIONS** → Appendix 1: corticosteroids · tetracyclines
- **PREGNANCY** Tetracyclines should not be given to pregnant women. Effects on skeletal development have been documented when tetracyclines have been used in the first trimester in animal studies. Administration during the second or third trimester may cause discoloration of the child's teeth.
- **BREAST FEEDING** Tetracyclines should not be given to women who are breast-feeding (although absorption and therefore discoloration of teeth in the infant is probably usually prevented by chelation with calcium in milk).
- **PATIENT AND CARER ADVICE** Patients should be given advice on the application of hydrocortisone with oxytetracycline ointment.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Ointment

CAUTIONARY AND ADVISORY LABELS 28

- ▶ **Terra-Cortril** (Esteve Pharmaceuticals Ltd)

Hydrocortisone 10 mg per 1 gram, Oxytetracycline (as Oxytetracycline hydrochloride) 30 mg per 1 gram Terra-Cortril ointment | 30 gram [PoM] £5.01 DT = £5.01

## DERMATOLOGICAL DRUGS > ANTI-INFECTIVES

### Ichthammol

#### ● INDICATIONS AND DOSE

**Chronic lichenified eczema**

- ▶ TO THE SKIN
- ▶ Child 1-17 years: Apply 1-3 times a day
- ▶ Adult: Apply 1-3 times a day

- **UNLICENSED USE**
  - ▶ In children No information available.
  - **SIDE-EFFECTS** Skin irritation
  - **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment, paste
- Form unlisted**
- ▶ **Ichthammol (Non-proprietary)**
- Ichthammol 1 mg per 1 mg Ichthammol liquid | 100 gram [GSL] £12.99 DT = £12.99 | 500 gram [GSL] £41.88

## Ichthammol with zinc oxide

The properties listed below are those particular to the combination only. For the properties of the components please consider, ichthammol p. 1344.

### ● INDICATIONS AND DOSE

#### Chronic lichenified eczema

- ▶ TO THE SKIN
- ▶ Adult: (consult product literature)

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: cream, ointment

#### Impregnated dressing

- ▶ **Ichthopaste** (Evolan Pharma AB)  
Ichthopaste bandage 7.5cm × 6m | 1 bandage £3.92

## DERMATOLOGICAL DRUGS > ANTRACEN DERIVATIVES

### Dithranol

23-Nov-2020

#### (Anthralin)

### ● INDICATIONS AND DOSE

#### Subacute and chronic psoriasis

- ▶ TO THE SKIN
- ▶ Adult: (consult product literature)

#### DITHROCREAM®

#### Subacute and chronic psoriasis

- ▶ TO THE SKIN
- ▶ Adult: For application to skin or scalp, 0.1–0.5% cream suitable for overnight treatment, 1–2% cream for maximum 1 hour (consult product literature)

- **CONTRA-INDICATIONS** Acute and pustular psoriasis · hypersensitivity
- **CAUTIONS** Avoid sensitive areas of skin · avoid use near eyes
- **SIDE-EFFECTS** Skin reactions
- **PREGNANCY** No adverse effects reported.
- **BREAST FEEDING** No adverse effects reported.
- **DIRECTIONS FOR ADMINISTRATION** When applying dithranol, manufacturer advises hands should be protected by gloves or they should be washed thoroughly afterwards. Dithranol should be applied to chronic extensor plaques only, carefully avoiding normal skin.
- **PRESCRIBING AND DISPENSING INFORMATION** Treatment should be started with a low concentration such as dithranol 0.1%, and the strength increased gradually every few days up to 3%, according to tolerance.
- **PATIENT AND CARER ADVICE** Dithranol can stain the skin, hair and fabrics.
- **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine if dithranol content more than 1%, otherwise may be sold to the public.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment

#### Ointment

CAUTIONARY AND ADVISORY LABELS 28

#### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), chlorocresol

- ▶ **Dithrocream** (Dermal Laboratories Ltd)

**Dithranol 1 mg per 1 gram** Dithrocream 0.1% cream | 50 gram [P]  
£3.77 DT = £3.77

Combinations available: *Coal tar with dithranol and salicylic acid*, p. 1346

## Dithranol with salicylic acid and zinc oxide

The properties listed below are those particular to the combination only. For the properties of the components please consider, dithranol above, salicylic acid p. 1381.

### ● INDICATIONS AND DOSE

#### Subacute and chronic psoriasis

- ▶ TO THE SKIN
- ▶ Adult: (consult local protocol)

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment, paste

#### Paste

CAUTIONARY AND ADVISORY LABELS 28

## DERMATOLOGICAL DRUGS > TARS

### Coal tar

01-Sep-2020

### ● INDICATIONS AND DOSE

#### Psoriasis | Scaly scalp disorders such as psoriasis, eczema, seborrhoeic dermatitis and dandruff

- ▶ TO THE SKIN
- ▶ Adult: (consult product literature)
- ▶ Child: (consult product literature)

- **CONTRA-INDICATIONS** Avoid broken or inflamed skin · avoid eye area · avoid genital area · avoid mucosal areas · avoid rectal area · infection · sore, acute, or pustular psoriasis
- **CAUTIONS**  
**GENERAL CAUTIONS** Application to face  
**SPECIFIC CAUTIONS**
  - ▶ When used for scaly scalp disorders, using shampoo Children under 12 years (consult product literature)
- **SIDE-EFFECTS** Photosensitivity reaction · skin reactions
- **PRESCRIBING AND DISPENSING INFORMATION** Coal Tar Solution BP contains coal tar 20%, Strong Coal Tar Solution BP contains coal tar 40%.
- **HANDLING AND STORAGE** Use suitable chemical protection gloves for extemporaneous preparation. May stain skin, hair and fabric.
- **PATIENT AND CARER ADVICE** May stain skin, hair and fabric.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: cream, ointment, paste

#### Cutaneous emulsion

EXCIPIENTS: May contain Hydroxybenzoates (parabens)

- ▶ **Exorex** (Teva UK Ltd)

**Coal tar solution 50 mg per 1 gram** Exorex lotion | 100 ml [GSL]  
£8.11 DT = £8.11 | 250 ml [GSL] £16.24 DT = £16.24

#### Shampoo

EXCIPIENTS: May contain Fragrances, hydroxybenzoates (parabens)

- ▶ **Alphosyl 2 in 1** (Omega Pharma Ltd)

**Coal tar extract alcoholic 50 mg per 1 gram** Alphosyl 2 in 1 shampoo | 250 ml [GSL] £6.46 DT = £5.81

- ▶ **Neutrogena T/Gel Therapeutic** (Johnson & Johnson Ltd)  
Coal tar extract 20 mg per 1 gram Neutrogena T/Gel Therapeutic shampoo | 125 ml [GSL] £4.36 DT = £4.11 | 250 ml [GSL] £6.61 DT = £6.18
- ▶ **Polytar Scalp** (Thornton & Ross Ltd)  
Coal tar solution 40 mg per 1 ml Polytar Scalp shampoo | 150 ml [GSL] £3.46 DT = £3.46
- ▶ **Psoriderm** (Dermal Laboratories Ltd)  
Coal tar distilled 25 mg per 1 ml Psoriderm scalp lotion | 250 ml [P] £4.74 DT = £4.74

**Cream**

EXCIPIENTS: May contain Isopropyl palmitate, lecithin, propylene glycol

- ▶ **Psoriderm** (Dermal Laboratories Ltd)  
Coal tar distilled 60 mg per 1 gram Psoriderm cream | 225 ml [P] £9.42 DT = £9.42

**Coal tar with calamine**

15-Jan-2019

The properties listed below are those particular to the combination only. For the properties of the components please consider, coal tar p. 1345.

**INDICATIONS AND DOSE****Psoriasis | Chronic atopic eczema (occasionally)**

- ▶ TO THE SKIN
- ▶ Adult: Apply 1–2 times a day

**IMPORTANT SAFETY INFORMATION**

MHRA/CHM ADVICE (UPDATED DECEMBER 2018): EMOLLIENTS: NEW INFORMATION ABOUT RISK OF SEVERE AND FATAL BURNS WITH PARAFFIN-CONTAINING AND PARAFFIN-FREE EMOLLIENTS  
See Emollient and barrier preparations p. 1313.

- **PRESCRIBING AND DISPENSING INFORMATION** When prepared extemporaneously, the BP states Calamine and Coal Tar Ointment BP, consists of calamine 12.5 g, strong coal tar solution 2.5 g, zinc oxide 12.5 g, hydrous wool fat 25 g, white soft paraffin 47.5 g.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment

**Ointment**

CAUTIONARY AND ADVISORY LABELS 15

EXCIPIENTS: May contain Woolfat and related substances (including lanolin)

**Coal tar with coconut oil and salicylic acid**

19-Mar-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, coal tar p. 1345, salicylic acid p. 1381.

**INDICATIONS AND DOSE****Scaly scalp disorders | Psoriasis | Seborrhoeic dermatitis | Dandruff | Cradle cap**

- ▶ TO THE SKIN USING SHAMPOO
- ▶ Child: Apply daily as required
- ▶ Adult: Apply daily as required

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Shampoo**

- ▶ **Capasal** (Dermal Laboratories Ltd)  
Salicylic acid 5 mg per 1 gram, Coal tar distilled 10 mg per 1 gram, Coconut oil 10 mg per 1 gram Casasal Therapeutic shampoo | 250 ml [P] £4.69

**Coal tar with dithranol and salicylic acid**

The properties listed below are those particular to the combination only. For the properties of the components please consider, coal tar p. 1345, dithranol p. 1345, salicylic acid p. 1381.

**INDICATIONS AND DOSE****Subacute and chronic psoriasis**

- ▶ TO THE SKIN
- ▶ Child: Apply up to twice daily
- ▶ Adult: Apply up to twice daily

- **UNLICENSED USE** *Psorin*<sup>®</sup> is licensed for use in children (age range not specified by manufacturer).

- **MEDICINAL FORMS** Forms available from special-order manufacturers include: ointment

**Coal tar with salicylic acid**

16-Jan-2019

The properties listed below are those particular to the combination only. For the properties of the components please consider, coal tar p. 1345, salicylic acid p. 1381.

**INDICATIONS AND DOSE****Psoriasis | Chronic atopic eczema**

- ▶ TO THE SKIN USING OINTMENT
- ▶ Adult: Apply 1–2 times a day

**IMPORTANT SAFETY INFORMATION**

MHRA/CHM ADVICE (UPDATED DECEMBER 2018): EMOLLIENTS: NEW INFORMATION ABOUT RISK OF SEVERE AND FATAL BURNS WITH PARAFFIN-CONTAINING AND PARAFFIN-FREE EMOLLIENTS  
See Emollient and barrier preparations p. 1313.

- **PRESCRIBING AND DISPENSING INFORMATION** When prepared extemporaneously, the BP states Coal Tar and Salicylic Acid Ointment, BP consists of coal tar 2 g, salicylic acid 2 g, emulsifying wax 11.4 g, white soft paraffin 19 g, coconut oil 54 g, polysorbate '80' 4 g, liquid paraffin 7.6 g.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment

**Ointment**

CAUTIONARY AND ADVISORY LABELS 15

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol)

**Coal tar with salicylic acid and precipitated sulfur**

20-Mar-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, coal tar p. 1345, salicylic acid p. 1381.

**INDICATIONS AND DOSE****COCOIS<sup>®</sup> OINTMENT****Scaly scalp disorders including psoriasis, eczema, seborrhoeic dermatitis and dandruff**

- ▶ TO THE SKIN USING SCALP OINTMENT
- ▶ Child 6–11 years: Medical supervision required
- ▶ Child 12–17 years: Apply once weekly as required, alternatively apply daily for the first 3–7 days (if severe), shampoo off after 1 hour
- ▶ Adult: Apply once weekly as required, alternatively apply daily for the first 3–7 days (if severe), shampoo off after 1 hour

**SEBCO® OINTMENT****Scaly scalp disorders including psoriasis, eczema, seborrhoeic dermatitis and dandruff**

- ▶ TO THE SKIN USING SCALP OINTMENT
- ▶ Child 6–11 years: Medical supervision required
- ▶ Child 12–17 years: Apply as required, alternatively apply daily for the first 3–7 days (if severe), shampoo off after 1 hour
- ▶ Adult: Apply as required, alternatively apply daily for the first 3–7 days (if severe), shampoo off after 1 hour

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Ointment**

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol)

▶ **Cocois** (RPH Pharmaceuticals AB)

Salicylic acid 20 mg per 1 gram, Sulfur precipitated 40 mg per 1 gram, Coal tar solution 120 mg per 1 gram Cocois ointment | 40 gram [GSL] £6.22 | 100 gram [GSL] £11.69

▶ **SebcO** (Derma UK Ltd)

Salicylic acid 20 mg per 1 gram, Sulfur precipitated 40 mg per 1 gram, Coal tar solution 120 mg per 1 gram SebcO ointment | 40 gram [GSL] £9.41 | 100 gram [GSL] £14.88

**Coal tar with zinc oxide**

16-Jan-2019

The properties listed below are those particular to the combination only. For the properties of the components please consider, coal tar p. 1345.

● **INDICATIONS AND DOSE****Psoriasis | Chronic atopic eczema**

## ▶ TO THE SKIN

- ▶ Child: Apply 1–2 times a day
- ▶ Adult: Apply 1–2 times a day

**IMPORTANT SAFETY INFORMATION**

MHRA/CHM ADVICE (UPDATED DECEMBER 2018): EMOLLIENTS: NEW INFORMATION ABOUT RISK OF SEVERE AND FATAL BURNS WITH PARAFFIN-CONTAINING AND PARAFFIN-FREE EMOLLIENTS See Emollient and barrier preparations p. 1313.

- **PRESCRIBING AND DISPENSING INFORMATION** No preparations available—when prepared extemporaneously, the BP states Zinc and Coal Tar Paste, BP consists of zinc oxide 6%, coal tar 6%, emulsifying wax 5%, starch 38%, yellow soft paraffin 45%.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment, paste

CAUTIONARY AND ADVISORY LABELS 15

**Paste**

CAUTIONARY AND ADVISORY LABELS 15

**IMMUNOSUPPRESSANTS > CALCINEURIN INHIBITORS AND RELATED DRUGS****Pimecrolimus**

20-Oct-2020

● **INDICATIONS AND DOSE****Short-term treatment of mild to moderate atopic eczema (including flares) when topical corticosteroids cannot be used (initiated by a specialist)**

## ▶ TO THE SKIN

- ▶ Adult: Apply twice daily until symptoms resolve (stop treatment if eczema worsens or no response after 6 weeks)

**Short-term treatment of facial, flexural, or genital psoriasis in patients unresponsive to, or intolerant of other topical therapy (initiated by a specialist)**

## ▶ TO THE SKIN

- ▶ Adult: Apply twice daily until symptoms resolve (maximum duration of treatment 4 weeks)

- **UNLICENSED USE** Pimecrolimus is not licensed for short-term treatment of facial, flexural, or genital psoriasis in patients unresponsive to, or intolerant of other topical therapy.
- **CONTRA-INDICATIONS** Application to malignant or potentially malignant skin lesions · application under occlusion · congenital epidermal barrier defects · contact with eyes · contact with mucous membranes · generalised erythroderma · immunodeficiency · infection at treatment site
- **CAUTIONS** Alcohol consumption (risk of facial flushing and skin irritation) · avoid other topical treatments except emollients at treatment site · UV light (avoid excessive exposure to sunlight and sunlamps)
- **INTERACTIONS** → Appendix 1: pimecrolimus
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Increased risk of infection
  - ▶ **Rare or very rare** Skin discolouration
  - ▶ **Frequency not known** Skin papilloma
- **PREGNANCY** Manufacturer advises avoid; toxicity in *animal* studies following systemic administration.
- **BREAST FEEDING** Manufacturer advises caution; ensure infant does not come in contact with treated areas.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
- **NICE decisions**
  - ▶ Tacrolimus and pimecrolimus for atopic eczema [for patients with mild atopic eczema or as first-line treatment for atopic eczema of any severity] (August 2004) NICE TA82 Not recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Cream**

CAUTIONARY AND ADVISORY LABELS 4, 11, 28

EXCIPIENTS: May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol), propylene glycol

▶ **Elidel** (Viatris UK Healthcare Ltd)

Pimecrolimus 10 mg per 1 gram Elidel 1% cream | 30 gram [PoM] £19.69 DT = £19.69 | 60 gram [PoM] £37.41 DT = £37.41 | 100 gram [PoM] £59.07 DT = £59.07

**Tacrolimus**

02-Dec-2020

- **DRUG ACTION** Tacrolimus is a calcineurin inhibitor.

● **INDICATIONS AND DOSE****Short-term treatment of moderate to severe atopic eczema (including flares) in patients unresponsive to, or intolerant of conventional therapy (initiated by a specialist)**

## ▶ TO THE SKIN

- ▶ Adult: Apply twice daily until lesion clears (consider other treatment if eczema worsens or no improvement after 2 weeks), initially 0.1% ointment to be applied thinly, reduce frequency to once daily or strength of ointment to 0.03% if condition allows

continued →

**Prevention of flares in patients with moderate to severe atopic eczema and 4 or more flares a year who have responded to initial treatment with topical tacrolimus (initiated by a specialist)**

▶ TO THE SKIN

- ▶ Adult: Apply twice weekly, 0.1% ointment to be applied thinly, with an interval of 2–3 days between applications, use short-term treatment regimen during an acute flare; review need for preventative therapy after 1 year

**Short-term treatment of facial, flexural, or genital psoriasis in patients unresponsive to, or intolerant of other topical therapy (initiated under specialist supervision)**

▶ TO THE SKIN

- ▶ Adult: Apply twice daily until symptoms resolve, 0.1% ointment to be applied thinly, reduce to once daily or switch to 0.03% ointment if condition allows, maximum duration of treatment 4 weeks

- **UNLICENSED USE** Short-term treatment of facial, flexural, or genital psoriasis is unlicensed.
- **CONTRA-INDICATIONS** Application to malignant or potentially malignant skin lesions · application under occlusion · avoid contact with eyes · avoid contact with mucous membranes · congenital epidermal barrier defects · generalised erythroderma · immunodeficiency · infection at treatment site
- **CAUTIONS** UV light (avoid excessive exposure to sunlight and sunlamps)
- **INTERACTIONS** → Appendix 1: tacrolimus
- **SIDE-EFFECTS**
  - ▶ Common or very common Alcohol intolerance · increased risk of infection · sensation abnormal · skin reactions
  - ▶ Uncommon Lymphadenopathy
  - ▶ Frequency not known Malignancy · neoplasms
- **ALLERGY AND CROSS-SENSITIVITY** [EvGr](#) Contra-indicated if history of hypersensitivity to macrolides. [⚠](#)
- **PREGNANCY** Manufacturer advises avoid unless essential; toxicity in *animal* studies following systemic administration.
- **BREAST FEEDING** Avoid—present in breast milk (following systemic administration).
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in hepatic failure.
- **PATIENT AND CARER ADVICE** Avoid excessive exposure to UV light including sunlight.

**Bimekizumab**

23-Nov-2021

- **DRUG ACTION** Bimekizumab is a humanised monoclonal antibody that binds with high affinity to interleukin-17A, 17F and 17AF to block the activity of pro-inflammatory cytokines.

● **INDICATIONS AND DOSE**

**Moderate-to-severe plaque psoriasis (under expert supervision)**

▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: 320 mg every 4 weeks for 5 doses (at weeks 0, 4, 8, 12 and 16), followed by maintenance 320 mg every 8 weeks, dose given as 2 injections of 160 mg each, consider discontinuing treatment if no response after 16 weeks. Patients weighing ≥ 120 kg who do not achieve completely clear skin after 16 weeks of treatment may be considered for maintenance dosing given every 4 weeks

- **CONTRA-INDICATIONS** Clinically significant active infection · inflammatory bowel disease
- **CAUTIONS** Chronic infection · history of recurrent infection

**CAUTIONS, FURTHER INFORMATION**

- ▶ Infection [EvGr](#) Consider anti-tuberculosis therapy before initiation of bimekizumab in patients with a history of tuberculosis in whom an adequate course of treatment cannot be confirmed.

Consider completing appropriate immunisations according to current guidelines before starting. [⚠](#)

- **INTERACTIONS** → Appendix 1: monoclonal antibodies
- **SIDE-EFFECTS**
  - ▶ Common or very common Fatigue · headache · increased risk of infection · skin reactions
  - ▶ Uncommon Conjunctivitis · inflammatory bowel disease · neutropenia
  - ▶ Frequency not known Hypersensitivity
- **CONCEPTION AND CONTRACEPTION** [EvGr](#) Females of childbearing potential should use effective contraception during treatment and for at least 17 weeks after last treatment. [⚠](#)
- **PREGNANCY** [EvGr](#) Avoid—no information available. [⚠](#)
- **BREAST FEEDING** [EvGr](#) Avoid—no information available. [⚠](#)
- **PRE-TREATMENT SCREENING** [EvGr](#) Patients should be evaluated for tuberculosis infection before treatment. [⚠](#)
- **MONITORING REQUIREMENTS** [EvGr](#) Monitor for signs and symptoms of infection (suspended treatment if infection is clinically significant or unresponsive to treatment). [⚠](#)
- **DIRECTIONS FOR ADMINISTRATION** [EvGr](#) Inject into the thigh, abdomen or upper arm and rotate injection site; avoid injecting into areas of the skin that are tender, bruised, or affected by psoriasis. Patients may self-administer *Bimzelx*<sup>®</sup>, after appropriate training in subcutaneous injection technique. [⚠](#)
- **PRESCRIBING AND DISPENSING INFORMATION** Bimekizumab is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1; record the brand name and batch number after each administration.
- **HANDLING AND STORAGE** [EvGr](#) Store in a refrigerator (2–8°C) and protect from light. Once removed from

refrigerator, may be stored at room temperature for 25 days, then discarded. 

- **PATIENT AND CARER ADVICE** Patients and their carers should be advised to seek medical attention if signs or symptoms of infection occur.
- **NATIONAL FUNDING/ACCESS DECISIONS**

## Brodalumab

03-Nov-2020

- **DRUG ACTION** Brodalumab is a recombinant human monoclonal antibody that binds with high affinity to interleukin-17RA and blocks the activity of pro-inflammatory cytokines.

### ● INDICATIONS AND DOSE

#### Moderate-to-severe plaque psoriasis (under expert supervision)

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Adult: 210 mg every week for 3 doses, followed by 210 mg every 2 weeks, consider discontinuing treatment if no response after 16 weeks
- **CONTRA-INDICATIONS** Active Crohn's disease · clinically significant active infection
- **CAUTIONS** Chronic infection · history of Crohn's disease (monitor for exacerbations) · history of depressive disorders (discontinue if new or worsening symptoms develop) · history of recurrent infection · history of suicidal ideation or behaviour (discontinue if new or worsening symptoms develop)
- **CAUTIONS, FURTHER INFORMATION**  
▶ Infection. Manufacturer advises to consider anti-tuberculosis therapy for patients with latent tuberculosis before starting treatment with brodalumab.  
Manufacturer advises patients should be brought up-to-date with current immunisation schedule before initiating treatment.
- **INTERACTIONS** → Appendix 1: monoclonal antibodies
- **SIDE-EFFECTS**  
▶ **Common or very common** Arthralgia · diarrhoea · fatigue · headache · increased risk of infection · myalgia · nausea · oropharyngeal pain  
▶ **Uncommon** Conjunctivitis  
▶ **Frequency not known** Meningitis cryptococcal · suicidal behaviours
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises that women of childbearing potential should use effective contraception during treatment and for at least 12 weeks after stopping treatment.

- **PREGNANCY** Manufacturer advises avoid—limited information available.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises to take the syringe out of the refrigerator at least 30 minutes before administration, and to avoid injecting into areas of the skin that are tender, bruised, or affected by psoriasis. Patients may self-administer *Kyntheum*<sup>®</sup>, after appropriate training in subcutaneous injection technique.
- **PRESCRIBING AND DISPENSING INFORMATION** Brodalumab is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1; manufacturer advises to record the brand name and batch number after each administration.
- **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator (2–8°C) and protect from light—consult product literature for further information regarding storage outside refrigerator.
- **PATIENT AND CARER ADVICE** Manufacturer advises patients and their carers should be given training in subcutaneous injection technique. Manufacturer advises patients and their carers should seek medical advice if new or worsening symptoms of depression, suicidal ideation, or behaviour occur; they should also be advised to report signs and symptoms of infection.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website  
**NICE decisions**  
▶ **Brodalumab** for treating moderate to severe plaque psoriasis (March 2018) NICE TA511 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.  
**Solution for injection**  
▶ **Kyntheum** (LEO Pharma) ▼  
**Brodalumab 140 mg per 1 ml** Kyntheum 210mg/1.5ml solution for injection pre-filled syringes | 2 pre-filled disposable injection [PoM](#) £1,280.00

## Dupilumab

04-Jan-2022

- **DRUG ACTION** Dupilumab is a recombinant human monoclonal antibody that inhibits interleukin-4 and interleukin-13 signaling.
- **INDICATIONS AND DOSE**  
**Moderate-to-severe atopic eczema (initiated by a specialist)**  
▶ BY SUBCUTANEOUS INJECTION  
▶ Adult: Initially 600 mg, followed by 300 mg every 2 weeks, the initial dose should be administered as two consecutive 300 mg injections at different injection sites, review treatment if no response after 16 weeks  
**Severe asthma with type 2 inflammation [add-on maintenance therapy] (initiated by a specialist)**  
▶ BY SUBCUTANEOUS INJECTION  
▶ Adult: Initially 400 mg, followed by 200 mg every 2 weeks, the initial dose should be administered as two consecutive 200 mg injections at different injection sites, review need for treatment yearly continued →

**Severe asthma with type 2 inflammation [add-on maintenance therapy for patients currently treated with oral corticosteroids or patients with co-morbid moderate-to-severe atopic eczema or patients with co-morbid severe chronic rhinosinusitis with nasal polyps] (initiated by a specialist)**

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Adult: Initially 600 mg, followed by 300 mg every 2 weeks, the initial dose should be administered as two consecutive 300 mg injections at different injection sites, review need for treatment yearly

**Severe chronic rhinosinusitis with nasal polyps (initiated by a specialist)**

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Adult: Initially 300 mg, followed by 300 mg every 2 weeks, review treatment if no response after 24 weeks

● **CAUTIONS** Helminth infection

**CAUTIONS, FURTHER INFORMATION**

- ▶ Risk of infection Dupilumab may influence the immune response to helminth infections. Resolve pre-existing infection before initiating treatment; suspend treatment if resistant infection develops during therapy.

Manufacturer advises patients should be brought up-to-date with live and live attenuated vaccines before initiating treatment.

● **INTERACTIONS** → Appendix 1: monoclonal antibodies

● **SIDE-EFFECTS**

- ▶ **Common or very common** Eosinophilia · eye inflammation · eye pruritus · oral herpes
- ▶ **Frequency not known** Anaphylactic reaction (discontinue immediately) · angioedema · arthralgia · pneumonia eosinophilic · vasculitis

**SIDE-EFFECTS, FURTHER INFORMATION Eosinophilic granulomatosis with polyangiitis (Churg-Strauss syndrome)** Churg-Strauss syndrome has occurred in patients given dupilumab; the reaction may be associated with the reduction of oral corticosteroid therapy. Churg-Strauss syndrome can present as vasculitic rash, cardiac complications, worsening pulmonary symptoms, or peripheral neuropathy in patients with eosinophilia.

● **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk—limited information available.

● **BREAST FEEDING** Manufacturer advises avoid—no information available.

● **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises to inject into the thigh or abdomen (except for the 5 cm around the navel), or upper arm (if not self-administered); rotate injection site and avoid skin that is tender, damaged or scarred. Patients may self-administer *Dupilumab*® after appropriate training in preparation and administration.

● **PRESCRIBING AND DISPENSING INFORMATION** Dupilumab is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1; record the brand name and batch number after each administration.

- ▶ When used for Asthma For choice of therapy, see Asthma, acute p. 260 and Asthma, chronic p. 256.

● **HANDLING AND STORAGE** Store in a refrigerator (2–8°C) and protect from light; may be kept at room temperature (max. 25°C) for max. 14 days.

● **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website

**NICE decisions**

- ▶ Dupilumab for treating moderate to severe atopic dermatitis (August 2018) NICE TA534 Recommended with restrictions
- ▶ Dupilumab for treating severe asthma with type 2 inflammation (December 2021) NICE TA751 Recommended with restrictions

**Scottish Medicines Consortium (SMC) decisions**

- ▶ Dupilumab (*Dupilumab*®) for treatment of moderate-to-severe atopic dermatitis (September 2018) SMC No. SMC2011 Recommended with restrictions
- ▶ Dupilumab (*Dupilumab*®) as add-on maintenance treatment in adults and adolescents 12 years and older for severe asthma with type 2 inflammation, who are inadequately controlled with high dose inhaled corticosteroids plus another medicinal product for maintenance treatment (April 2021) SMC No. SMC2317 Recommended with restrictions

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

EXCIPIENTS: May contain Polysorbates

▶ **Dupilumab** (Sanofi Genzyme) ▼

**Dupilumab 150 mg per 1 ml** Dupilumab 300mg/2ml solution for injection pre-filled syringes | 2 pre-filled disposable injection [PoM] £1,264.89 (Hospital only)

Dupilumab 300mg/2ml solution for injection pre-filled pens | 2 pre-filled disposable injection [PoM] £1,264.89 (Hospital only)

**Dupilumab 175 mg per 1 ml** Dupilumab 200mg/1.14ml solution for injection pre-filled syringes | 2 pre-filled disposable injection [PoM] £1,264.89 (Hospital only)

Dupilumab 200mg/1.14ml solution for injection pre-filled pens | 2 pre-filled disposable injection [PoM] £1,264.89 (Hospital only)

## Guselkumab

10-Sep-2021

- **DRUG ACTION** Guselkumab is a recombinant human monoclonal antibody that binds selectively to interleukin-23 and blocks the activity of pro-inflammatory cytokines.

● **INDICATIONS AND DOSE**

**Moderate-to-severe plaque psoriasis (specialist use only)**

▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: Initially 100 mg, then 100 mg after 4 weeks, then maintenance 100 mg every 8 weeks, consider discontinuation of treatment if no response after 16 weeks

**Psoriatic arthritis (specialist use only)**

▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: Initially 100 mg, then 100 mg after 4 weeks, then maintenance 100 mg every 8 weeks, a maintenance dose of 100 mg every 4 weeks may be considered in patients at high risk for joint damage, consider discontinuation of treatment if no response after 24 weeks

● **CONTRA-INDICATIONS** Clinically significant active infection

● **CAUTIONS** Risk of infection

**CAUTIONS, FURTHER INFORMATION**

- ▶ Risk of infection Manufacturer advises consider anti-tuberculosis therapy before initiation of guselkumab in patients with a past history of latent or active tuberculosis in whom an adequate course of treatment cannot be confirmed.

Manufacturer advises consider completion of appropriate immunisations according to current guidelines before initiating treatment (consult product literature for appropriate interval between vaccination and administration of guselkumab).

● **INTERACTIONS** → Appendix 1: monoclonal antibodies

● **SIDE-EFFECTS**

- ▶ **Common or very common** Arthralgia · diarrhoea · headache · increased risk of infection
- ▶ **Uncommon** Skin reactions

● **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception in women of childbearing potential during treatment and for at least 12 weeks after treatment.

- **PREGNANCY** Manufacturer advises avoid—no information available.
- **BREAST FEEDING** Manufacturer advises avoid during treatment and for up to 12 weeks after discontinuing treatment—no information available.
- **PRE-TREATMENT SCREENING** Manufacturer advises that patients should be evaluated for tuberculosis infection before treatment.
- **MONITORING REQUIREMENTS**
  - ▶ **EVGr** Monitor for signs and symptoms of active tuberculosis during and after treatment. (M)
  - ▶ When used for psoriatic arthritis **EVGr** In patients receiving maintenance treatment every 4 weeks, monitor liver enzymes before starting treatment, and as clinically indicated thereafter—interrupt treatment if drug-induced liver injury suspected. (M)
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises to avoid injecting into areas of the skin that show psoriasis. Patients may self-administer *Tremfya*<sup>®</sup>, after appropriate training in subcutaneous injection technique.
- **PRESCRIBING AND DISPENSING INFORMATION** Guselkumab is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1; record the brand name and batch number after each administration.
- **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator (2–8°C) and protect from light.
- **PATIENT AND CARER ADVICE** Manufacturer advises patients and their carers should be advised to seek medical attention if signs or symptoms of infection occur (monitor closely and suspend treatment if infection is clinically significant or unresponsive to treatment). Self-administration Manufacturer advises patients may self-administer following training in subcutaneous injection technique.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
  - NICE decisions**
    - ▶ **Guselkumab for treating moderate to severe plaque psoriasis (June 2018)** NICE TA521 Recommended with restrictions
    - ▶ **Guselkumab for treating active psoriatic arthritis after inadequate response to DMARDs (June 2021)** NICE TA711 Recommended with restrictions
  - Scottish Medicines Consortium (SMC) decisions**
    - ▶ **Guselkumab (*Tremfya*<sup>®</sup>) for the treatment of moderate to severe plaque psoriasis in adults who are candidates for systemic therapy (June 2018)** SMC No. 1340/18 Recommended with restrictions
    - ▶ **Guselkumab (*Tremfya*<sup>®</sup>) for the treatment of active psoriatic arthritis in adults who have had an inadequate response or who have been intolerant to a prior disease-modifying antirheumatic drug therapy, alone or in combination with methotrexate (August 2021)** SMC No. SMC2360 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Tremfya** (Janssen-Cilag Ltd) ▼
  - Guselkumab 100 mg per 1 ml** Tremfya 100mg/1ml solution for injection pre-filled pens | 1 pre-filled disposable injection **PoM** £2,250.00

## Ixekizumab

31-Aug-2021

- **DRUG ACTION** Ixekizumab is a human monoclonal antibody that binds to interleukin-17A and inhibits the release of pro-inflammatory cytokines and chemokines.

### INDICATIONS AND DOSE

**Moderate-to-severe plaque psoriasis (under expert supervision) | Psoriatic arthritis with concomitant moderate-to-severe plaque psoriasis (under expert supervision)**

#### BY SUBCUTANEOUS INJECTION

- ▶ **Adult:** Initially 160 mg for 1 dose, followed by 80 mg after 2 weeks, then 80 mg every 2 weeks for 5 further doses (at weeks 4, 6, 8, 10 and 12), then maintenance 80 mg every 4 weeks, consider discontinuation of treatment if no response after 16–20 weeks

**Psoriatic arthritis (under expert supervision) | Ankylosing spondylitis (under expert supervision) | Non-radiographic axial spondyloarthritis (under expert supervision)**

#### BY SUBCUTANEOUS INJECTION

- ▶ **Adult:** Initially 160 mg for 1 dose, then maintenance 80 mg every 4 weeks, consider discontinuation of treatment if no response after 16–20 weeks

- **CONTRA-INDICATIONS** Active infections (including active tuberculosis) - inflammatory bowel disease (discontinue if signs or symptoms develop, or an exacerbation occurs)
- **CAUTIONS** Chronic or recurrent infection—monitor carefully and discontinue if serious, unresponsive infection develops
  - CAUTIONS, FURTHER INFORMATION**
    - ▶ Latent tuberculosis **EVGr** Patients with latent tuberculosis should complete anti-tuberculosis therapy before starting ixekizumab. (M)
- **INTERACTIONS** → Appendix 1: monoclonal antibodies
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Conjunctivitis · increased risk of infection · nausea · oropharyngeal pain
  - ▶ **Uncommon** Angioedema · inflammatory bowel disease · neutropenia · skin reactions · thrombocytopenia
  - ▶ **Rare or very rare** Anaphylactic reaction
  - ▶ **Frequency not known** Hypersensitivity (occasionally late-onset)
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during treatment and for at least 10 weeks after treatment in women of childbearing potential.
- **PREGNANCY** Manufacturer advises avoid—limited information available.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal* studies.
- **DIRECTIONS FOR ADMINISTRATION** **EVGr** Avoid injecting into areas of the skin that show psoriasis; injection sites may be alternated. (M) Patients may self-administer *Taltz*<sup>®</sup>, after appropriate training in subcutaneous injection technique; doses less than 80 mg must be prepared and administered by a healthcare professional.
- **PRESCRIBING AND DISPENSING INFORMATION** Ixekizumab is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1; record the brand name and batch number after each administration.
- **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator (2–8°C).
- **PATIENT AND CARER ADVICE** **EVGr** Patients and their carers should be advised to seek medical attention if symptoms of infection develop during treatment. (M)

Self-administration If appropriate, patients and their carers should be given training in subcutaneous injection technique.

A Patient Leaflet and User Manual should be provided.

#### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

#### NICE decisions

- ▶ Ixekizumab for treating moderate to severe plaque psoriasis (April 2017) NICE TA442 Recommended with restrictions
- ▶ Ixekizumab for treating active psoriatic arthritis after inadequate response to DMARDs (August 2018) NICE TA537 Recommended with restrictions
- ▶ Ixekizumab for treating axial spondyloarthritis (July 2021) NICE TA718 Recommended with restrictions
- Scottish Medicines Consortium (SMC) decisions**
- ▶ Ixekizumab (*Taltz*<sup>®</sup>) for moderate to severe plaque psoriasis in adults who are candidates for systemic therapy (April 2017) SMC No. 1223/17 Recommended with restrictions
- ▶ Ixekizumab (*Taltz*<sup>®</sup>) alone or in combination with methotrexate for the treatment of active psoriatic arthritis in adult patients who have responded inadequately to, or who are intolerant to one or more disease-modifying anti-rheumatic drug therapies (October 2018) SMC No. SMC2097 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

EXCIPIENTS: May contain Polysorbates

- ▶ *Taltz* (Eli Lilly and Company Ltd)

Ixekizumab 80 mg per 1 ml *Taltz* 80mg/1ml solution for injection pre-filled pens | 1 pre-filled disposable injection [PoM] £1,125.00 (Hospital only)  
*Taltz* 80mg/1ml solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £1,125.00 (Hospital only)

## Risankizumab

04-May-2022

- **DRUG ACTION** Risankizumab is a humanised monoclonal antibody that binds selectively to interleukin-23 and blocks the activity of pro-inflammatory cytokines.

#### ● INDICATIONS AND DOSE

**Moderate-to-severe plaque psoriasis (specialist use only) | Psoriatic arthritis (specialist use only)**

- ▶ BY SUBCUTANEOUS INJECTION

Adult: Initially 150 mg, then 150 mg after 4 weeks, then maintenance 150 mg every 12 weeks, consider discontinuation if no response after 16 weeks

- **CONTRA-INDICATIONS** Clinically significant active infection

- **CAUTIONS** Chronic infection · history of recurrent infection · risk of infection

#### CAUTIONS, FURTHER INFORMATION

- ▶ Risk of infection Manufacturer advises consider anti-tuberculosis therapy before initiation of risankizumab in patients with a history of latent or active tuberculosis in whom an adequate course of treatment cannot be confirmed.

Manufacturer advises consider completion of immunisations according to current guidelines before initiating treatment (consult product literature for appropriate interval between vaccination and administration of risankizumab).

- **INTERACTIONS** → Appendix 1: monoclonal antibodies

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Asthenia · headaches · increased risk of infection · pruritus

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception in women of childbearing potential during treatment and for at least 21 weeks after treatment.

- **PREGNANCY** Manufacturer advises avoid (limited information available).

- **BREAST FEEDING** Manufacturer advises avoid (no information available).

- **PRE-TREATMENT SCREENING** Manufacturer advises patients should be evaluated for tuberculosis infection before treatment.

- **MONITORING REQUIREMENTS** Manufacturer advises monitor for signs and symptoms of active tuberculosis during treatment.

- **DIRECTIONS FOR ADMINISTRATION** [EVR](#) For *prefilled syringe*, take carton out of the refrigerator at least 15 minutes before administration. For *prefilled pen*, take carton out of the refrigerator at least 30 minutes before administration. Inject preparations into the thigh or abdomen; avoid injecting into areas of the skin that are tender, bruised or affected by psoriasis.  Patients may self-administer *Skyrizi*<sup>®</sup> after appropriate training in subcutaneous injection technique.

#### ● PRESCRIBING AND DISPENSING INFORMATION

Risankizumab is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1; manufacturer advises to record the brand name and batch number after each administration.

- **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator (2–8°C) and protect from light.

- **PATIENT AND CARER ADVICE** Manufacturer advises patients and their carers should be advised to seek medical attention if signs or symptoms of infection occur.

- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website

#### NICE decisions

- ▶ Risankizumab for treating moderate to severe plaque psoriasis (August 2019) NICE TA596 Recommended with restrictions

#### Scottish Medicines Consortium (SMC) decisions

- ▶ Risankizumab (*Skyrizi*<sup>®</sup>) for the treatment of moderate to severe plaque psoriasis in adults who are candidates for systemic therapy (October 2019) SMC No. SMC2196 Recommended with restrictions
- ▶ Risankizumab (*Skyrizi*<sup>®</sup>) alone or in combination with methotrexate for the treatment of active psoriatic arthritis in adults who have had an inadequate response or who have been intolerant to one or more disease-modifying antirheumatic drugs (April 2022) SMC No. SMC2459 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

EXCIPIENTS: May contain Polysorbates

- ▶ *Skyrizi* (AbbVie Ltd) ▼

Risankizumab 150 mg per 1 ml *Skyrizi* 150mg/1ml solution for injection pre-filled pens | 1 pre-filled disposable injection [PoM] £3,326.09 (Hospital only)  
*Skyrizi* 150mg/1ml solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £3,326.09 (Hospital only)

## Tildrakizumab

16-Nov-2020

- **DRUG ACTION** Tildrakizumab is a recombinant human monoclonal antibody that specifically binds to interleukin-23 and inhibits the release of pro-inflammatory cytokines and chemokines.

### ● INDICATIONS AND DOSE

#### Moderate-to-severe plaque psoriasis (under expert supervision)

##### ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: Initially 100 mg, then 100 mg after 4 weeks, then maintenance 100 mg every 12 weeks, consider discontinuation if no response after 28 weeks, in patients with a high disease burden, or with a body weight  $\geq$  90kg, a dose of 200 mg may provide greater efficacy

- **CONTRA-INDICATIONS** Clinically significant active infection
- **CAUTIONS** Chronic infection · history of recurrent infection · recent serious infection
- **CAUTIONS, FURTHER INFORMATION**
  - ▶ Risk of infection Manufacturer advises consider anti-tuberculosis therapy before initiation of tildrakizumab in patients with a history of tuberculosis, in whom an adequate course of treatment cannot be confirmed. Manufacturer advises consider completion of immunisations according to current guidelines before initiating treatment (consult product literature for appropriate interval between vaccination and administration of tildrakizumab).
- **INTERACTIONS** → Appendix 1: monoclonal antibodies
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Back pain · diarrhoea · headache · increased risk of infection · nausea
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises that women of childbearing potential should use effective contraception during treatment and for at least 17 weeks after stopping treatment.
- **PREGNANCY** Manufacturer advises avoid—limited information available.
- **BREAST FEEDING** Manufacturer advises avoid—limited information available.
- **PRE-TREATMENT SCREENING** Manufacturer advises patients should be evaluated for tuberculosis infection before treatment.
- **MONITORING REQUIREMENTS** Manufacturer advises monitor for signs and symptoms of active tuberculosis during and after treatment
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises to take the syringe out of the refrigerator at least 30 minutes before administration, and to avoid injecting into areas of the skin that are affected by psoriasis or are tender, bruised, red, hard, thick, or scaly. Patients may self-administer *Ilumetri*<sup>®</sup>, after appropriate training in subcutaneous injection technique.
- **PRESCRIBING AND DISPENSING INFORMATION** Tildrakizumab is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1; manufacturer advises to record the brand name and batch number after each administration.
- **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator (2–8°C) and protect from light—consult product literature for further information regarding storage outside refrigerator.

- **PATIENT AND CARER ADVICE** Manufacturer advises patients and their carers should be advised to seek medical advice if signs or symptoms of infection occur.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
- **NICE decisions**
  - ▶ Tildrakizumab for treating moderate to severe plaque psoriasis (April 2019) NICE TA575 Recommended with restrictions
- **Scottish Medicines Consortium (SMC) decisions**
  - ▶ Tildrakizumab (*Ilumetri*<sup>®</sup>) for the treatment of adults with moderate to severe plaque psoriasis who are candidates for systemic therapy (August 2019) SMC No. SMC2167 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Solution for injection

EXCIPIENTS: May contain Polysorbates

#### ▶ *Ilumetri* (Almirall Ltd) ▼

Tildrakizumab 100 mg per 1 ml *Ilumetri* 100mg/1ml solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £3,241.00 | 2 pre-filled disposable injection [PoM] £3,241.00

## Tralokinumab

28-Jan-2022

- **DRUG ACTION** Tralokinumab is a human monoclonal antibody that inhibits the interleukin-13 pathway.

### ● INDICATIONS AND DOSE

#### Moderate-to-severe atopic eczema (initiated by a specialist)

##### ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: Initially 600 mg, followed by maintenance 300 mg every 2 weeks, patients who achieve clear or almost clear skin after 16 weeks of treatment may be considered for maintenance dosing given every 4 weeks; this may not be appropriate in patients weighing over 100kg. Consider discontinuation of treatment if no response after 16 weeks

- **CAUTIONS** Helminth infection
- **CAUTIONS, FURTHER INFORMATION**
  - ▶ Risk of infection [EvGr] Patients with pre-existing helminth infections should be treated before initiating treatment with tralokinumab. If patients become infected while receiving tralokinumab and do not respond to anthelmintic treatment, tralokinumab should be discontinued until infection resolves. Patients should be brought up-to-date with live and live attenuated vaccines before initiating treatment. ⚠
- **INTERACTIONS** → Appendix 1: monoclonal antibodies
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Eosinophilia · eye inflammation · increased risk of infection
- **PREGNANCY** [EvGr] Avoid—limited information available. ⚠
- **BREAST FEEDING** [EvGr] Avoid—no information available. ⚠
- **DIRECTIONS FOR ADMINISTRATION** [EvGr] Remove syringe from the refrigerator 30 minutes before administration. Inject into the thigh or abdomen (except for the 5cm around the navel), or upper arm (if not self-administered); rotate injection site and avoid skin that is tender, damaged, or scarred. ⚠ Patients may self-administer *Adtralza*<sup>®</sup> after appropriate training in preparation and administration.
- **PRESCRIBING AND DISPENSING INFORMATION** Tralokinumab is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*,

under Guidance on prescribing p. 1; record the brand name and batch number after each administration.

- **HANDLING AND STORAGE** Store in a refrigerator (2–8°C) and protect from light—consult product literature for further information regarding storage outside refrigerator.
- **PATIENT AND CARER ADVICE**  
Self-administration If appropriate, patients and their carers should be given training in subcutaneous injection technique.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website  
**Scottish Medicines Consortium (SMC) decisions**  
▶ **Tralokinumab (Adtralza®)** for the treatment of moderate-to-severe atopic dermatitis in adult patients who are candidates for systemic therapy (January 2022) SMC No. SMC2403 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

EXCIPIENTS: May contain Polysorbates

- ▶ **Adtralza** (LEO Pharma) ▼

**Tralokinumab 150 mg per 1 ml** Adtralza 150mg/1ml solution for injection pre-filled syringes | 4 pre-filled disposable injection [PoM] £1,070.00 (Hospital only)

## IMMUNOSUPPRESSANTS > JAK INHIBITORS

### Abrocitinib

22-Nov-2021

- **DRUG ACTION** Abrocitinib is a selective inhibitor of the Janus-associated tyrosine kinase JAK1.

#### INDICATIONS AND DOSE

##### Moderate-to-severe atopic eczema (under expert supervision)

###### ▶ BY MOUTH

- ▶ **Adult:** 200 mg once daily, a reduced initial dose of 100 mg once daily is recommended for patients less likely to tolerate treatment, consider discontinuation of treatment if no response after 12 weeks in all patients, for dose adjustments, interruption or discontinuation due to clinical response or side-effects—consult product literature; maximum 200 mg per day
- ▶ **Elderly:** Initially 100 mg once daily, increased to 200 mg once daily if necessary and, if tolerated, consider discontinuation of treatment if no response after 12 weeks, for dose adjustments, interruption or discontinuation due to clinical response or side-effects—consult product literature; maximum 200 mg per day

#### DOSE ADJUSTMENTS DUE TO INTERACTIONS

- ▶ [EvGr] Reduce initial dose by half with concurrent use of potent CYP2C19 inhibitors. ⚠

- **CONTRA-INDICATIONS** Absolute lymphocyte count less than  $0.5 \times 10^9$  cells/litre (do not initiate) · absolute neutrophil count less than  $1 \times 10^9$  cells/litre (do not initiate) · clinically significant active infection · haemoglobin less than 8 g/dL (do not initiate) · platelet count less than  $150 \times 10^9$  cells/litre (do not initiate)

- **CAUTIONS** Chronic or recurrent infection · known malignancy · risk factors for deep-vein thrombosis or pulmonary embolism

#### CAUTIONS, FURTHER INFORMATION

- ▶ Tuberculosis [EvGr] Consider anti-tuberculosis therapy prior to initiation of abrocitinib in patients with previously untreated latent tuberculosis. ⚠
- ▶ Immunisation [EvGr] Patients should receive all recommended vaccinations before starting treatment; live

vaccines are not recommended immediately before, or during, treatment. ⚠

- ▶ Deep-vein thrombosis or pulmonary embolism [EvGr] If deep-vein thrombosis or pulmonary embolism occurs during treatment, discontinuation of abrocitinib is recommended. ⚠
- **INTERACTIONS** → Appendix 1: abrocitinib
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Abdominal pain upper · acne · dizziness · headache · increased risk of infection · nausea · vomiting
  - ▶ **Uncommon** Dyslipidaemia · embolism and thrombosis · lymphopenia · thrombocytopenia
  - ▶ **Frequency not known** Herpes virus reactivation
- **CONCEPTION AND CONTRACEPTION** [EvGr] Females of childbearing potential should use effective contraception during treatment and for 1 month after last treatment. Female fertility may be temporarily reduced during treatment—studies in *animals* show that the effects on fertility are reversible 1 month after stopping treatment. ⚠
- **PREGNANCY** [EvGr] Avoid—toxicity in *animal* studies. ⚠
- **BREAST FEEDING** [EvGr] Avoid—present in milk in *animal* studies. ⚠
- **HEPATIC IMPAIRMENT** [EvGr] Avoid in severe impairment (no information available). ⚠
- **RENAL IMPAIRMENT** [EvGr] Caution in moderate and severe impairment. ⚠  
**Dose adjustments** [EvGr] Reduce dose by half in moderate impairment.  
Reduce initial dose to 50 mg once daily, and increase to maximum 100 mg once daily, in severe impairment. ⚠
- **PRE-TREATMENT SCREENING** [EvGr] Patients should be evaluated for tuberculosis and viral hepatitis before treatment. ⚠
- **MONITORING REQUIREMENTS**
  - ▶ [EvGr] Monitor lipid profile at baseline, 4 weeks after treatment initiation, and then periodically—hyperlipidaemia should be managed according to clinical guidelines.
  - ▶ Monitor for haematological abnormalities at baseline, 4 weeks after treatment initiation, and then periodically; interrupt treatment if absolute neutrophil count less than  $1 \times 10^9$  cells/litre, absolute lymphocyte count less than  $0.5 \times 10^9$  cells/litre, or haemoglobin less than 8 g/dL—treatment may be restarted when levels return above these values. Discontinue treatment if platelet count less than  $50 \times 10^9$  cells/litre.
  - ▶ Monitor for viral hepatitis during treatment. ⚠
- **PRESCRIBING AND DISPENSING INFORMATION** The manufacturer of *Cibinqo*® has provided a *Prescriber Brochure*.
- **PATIENT AND CARER ADVICE** Patients and carers should be advised that taking *Cibinqo*® with food may improve nausea.  
**Risk minimisation materials** A patient card should be provided.  
**Missed doses** If a dose is more than 12 hours late, the missed dose should not be taken and the next dose should be taken at the normal time.  
**Driving and skilled tasks** Patients and carers should be cautioned on the effects on driving and performance of skilled tasks—increased risk of dizziness.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.  
**Tablet**
  - ▶ **Cibinqo** (Pfizer Ltd) ▼  
**Abrocitinib 50 mg** Cibinqo 50mg tablets | 28 tablet [PoM] £893.76 (Hospital only)  
**Abrocitinib 100 mg** Cibinqo 100mg tablets | 28 tablet [PoM] £893.76 (Hospital only)

Abrocitinib 200 mg Cibinqo 200mg tablets | 28 tablet **[PoM]**  
 £893.76 (Hospital only)

## RETINOID AND RELATED DRUGS

### Acitretin

04-Nov-2021

● **DRUG ACTION** Acitretin is a metabolite of etretinate.

#### ● INDICATIONS AND DOSE

**Severe extensive psoriasis resistant to other forms of therapy (under expert supervision) | Palmoplantar pustular psoriasis (under expert supervision) | Severe congenital ichthyosis (under expert supervision)**

##### ▶ BY MOUTH

▶ **Adult:** Initially 25–30 mg daily for 2–4 weeks, then adjusted according to response to 25–50 mg daily, increased to up to 75 mg daily, dose only increased to 75 mg daily for short periods in psoriasis

**Severe Darier's disease (keratosis follicularis) (under expert supervision)**

##### ▶ BY MOUTH

▶ **Adult:** Initially 10 mg daily for 2–4 weeks, then adjusted according to response to 25–50 mg daily

#### IMPORTANT SAFETY INFORMATION

**MHRA/CHM ADVICE: ORAL RETINOID MEDICINES: REVISED AND SIMPLIFIED PREGNANCY PREVENTION EDUCATIONAL MATERIALS FOR HEALTHCARE PROFESSIONALS AND WOMEN (JUNE 2019)**

New prescriber checklists, patient reminder cards, and pharmacy checklists are available to support the Pregnancy Prevention Programme in women and girls of childbearing potential taking oral acitretin, alitretinoin, or isotretinoin. Healthcare professionals are reminded that the use of oral retinoids is contra-indicated in pregnancy due to a high risk of serious congenital malformations, and any use in females must be within the conditions of the Pregnancy Prevention Programme (see *Conception and contraception and Prescribing and dispensing information*).

Neuropsychiatric reactions have been reported in patients taking oral retinoids. Healthcare professionals are advised to monitor patients for signs of depression or suicidal ideation and refer for appropriate treatment, if necessary; particular care is needed in those with a history of depression. Patients should be advised to speak to their doctor if they experience any changes in mood or behaviour, and encouraged to ask family and friends to look out for any change in mood.

**MHRA/CHM ADVICE: ORAL RETINOID MEDICINES (ISOTRETINOIN, ALITRETINOIN, AND ACITRETIN): TEMPORARY MONITORING ADVICE DURING CORONAVIRUS (COVID-19) PANDEMIC (JULY 2021)**

The MHRA has issued temporary guidance about the use of remote consultations for female patients taking acitretin to support adherence to the Pregnancy Prevention Programme (see *Conception and contraception and Prescribing and dispensing information*) and ensuring continued monitoring for signs of psychiatric reactions (especially depression) and other safety risks during the coronavirus (COVID-19) pandemic. The guidance also includes advice that can be provided to patients to help them understand the monitoring requirements. The temporary guidance is available at: [www.gov.uk/guidance/temporary-advice-for-management-of-oral-retinoid-medicines-during-the-covid-19-pandemic](http://www.gov.uk/guidance/temporary-advice-for-management-of-oral-retinoid-medicines-during-the-covid-19-pandemic).

● **CONTRA-INDICATIONS** Hyperlipidaemia

● **CAUTIONS** Avoid excessive exposure to sunlight and unsupervised use of sunlamps · diabetes (can alter glucose tolerance—initial frequent blood glucose checks) · do not donate blood during and for 3 years after stopping therapy (teratogenic risk) · history of depression (risk of

neuropsychiatric reactions) · investigate atypical musculoskeletal symptoms

● **INTERACTIONS** → Appendix 1: retinoids

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Abdominal pain · arthralgia · brittle nails · conjunctivitis · diarrhoea · dry mouth · gastrointestinal disorder · haemorrhage · hair texture abnormal · headache · increased risk of infection · mucosal abnormalities · myalgia · nausea · oral disorders · peripheral oedema · skin reactions · thirst · vomiting · xerophthalmia
- ▶ **Uncommon** Dizziness · hepatic disorders · photosensitivity reaction · vision disorders
- ▶ **Rare or very rare** Bone pain · exostosis · idiopathic intracranial hypertension · peripheral neuropathy
- ▶ **Frequency not known** Angioedema · anxiety · capillary leak syndrome · depression · drowsiness · dysphonia · flushing · glucose tolerance impaired · granuloma · hearing impairment · hyperhidrosis · malaise · mood altered · psychiatric disorder · pyogenic granuloma · retinoic acid syndrome · taste altered · tinnitus

**SIDE-EFFECTS, FURTHER INFORMATION** **Exostosis** Skeletal hyperostosis and extra-osseous calcification reported following long-term treatment with etretinate (of which acitretin is a metabolite) and premature epiphyseal closure in children.

**Benign intracranial hypertension** Discontinue if severe headache, nausea, vomiting, or visual disturbances occur.

● **CONCEPTION AND CONTRACEPTION** The MHRA advises that women and girls of childbearing potential being treated with the oral retinoids acitretin, alitretinoin, or isotretinoin must be supported on a Pregnancy Prevention Programme with regular follow-up and pregnancy testing. Pregnancy prevention Effective contraception must be used.

In females of childbearing potential (including those with a history of infertility), exclude pregnancy up to 3 days before treatment, every month during treatment (unless there are compelling reasons to indicate that there is no risk of pregnancy), and every 1–3 months for 3 years after stopping treatment. Treatment should be started on day 2 or 3 of menstrual cycle. Females of childbearing age must practise effective contraception for at least 1 month before starting treatment, during treatment, and for at least 3 years after stopping treatment. Females should be advised to use at least 1 highly effective method of contraception (i.e. a user-independent form such as an intra-uterine device or implant) or 2 complementary user-dependent forms of contraception (e.g. combined oral contraceptives and barrier method). Oral progestogen-only contraceptives are not considered effective. Females should be advised to seek medical attention immediately if they become pregnant during treatment or within 3 years of stopping treatment. They should also be advised to avoid alcohol during treatment and for 2 months after stopping treatment.

● **PREGNANCY** Manufacturer advises avoid—teratogenic.

● **BREAST FEEDING** Avoid.

● **HEPATIC IMPAIRMENT** Manufacturer advises avoid in severe impairment.

● **RENAL IMPAIRMENT** **[EvGr]** Avoid in severe impairment (increased risk of toxicity). **[M]**

#### ● MONITORING REQUIREMENTS

- ▶ Monitor serum-triglyceride and serum-cholesterol concentrations before treatment, 1 month after starting, then every 3 months.
- ▶ Check liver function at start, then every 2–4 weeks for first 2 months and then every 3 months.

#### ● PRESCRIBING AND DISPENSING INFORMATION

Prescribing for females of childbearing potential The Pregnancy Prevention Programme is supported by the following

materials provided by the manufacturer: *Checklists for prescribers and pharmacists*, and *Patient reminder cards*.

Each prescription for oral acitretin should be limited to a supply of up to 30 days' treatment. Pregnancy testing should ideally be carried out on the same day as prescription issuing and dispensing.

#### ● PATIENT AND CARER ADVICE

**Risk of neuropsychiatric reactions** The MHRA advises patients and carers to seek medical attention if changes in mood or behaviour occur.

**Pregnancy Prevention Programme** Pharmacists must ensure that female patients have a patient card—see also *Important safety information*.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

#### Capsule

CAUTIONARY AND ADVISORY LABELS 10, 11, 21

## Alitretinoin

04-Nov-2021

#### ● INDICATIONS AND DOSE

##### Severe chronic hand eczema refractory to potent topical corticosteroids

#### ▶ BY MOUTH

- ▶ **Adult** (prescribed by or under supervision of a consultant dermatologist): 30 mg once daily; reduced if not tolerated to 10 mg once daily for 12–24 weeks total duration of treatment, discontinue if no response after 12 weeks, course may be repeated in those who relapse

#### DOSE ADJUSTMENTS DUE TO INTERACTIONS

- ▶ Manufacturer advises reduce dose to 10 mg once daily with concurrent use of potent inhibitors of CYP3A4, CYP2C8 and moderate inhibitors of CYP2C9.

#### IMPORTANT SAFETY INFORMATION

**MHRA/CHM ADVICE: ORAL RETINOID MEDICINES: REVISED AND SIMPLIFIED PREGNANCY PREVENTION EDUCATIONAL MATERIALS FOR HEALTHCARE PROFESSIONALS AND WOMEN (JUNE 2019)**

New prescriber checklists, patient reminder cards, and pharmacy checklists are available to help the Pregnancy Prevention Programme in women and girls of childbearing potential taking oral acitretin, alitretinoin, or isotretinoin. Healthcare professionals are reminded that the use of oral retinoids is contra-indicated in pregnancy due to a high risk of serious congenital malformations, and any use in females must be within the conditions of the Pregnancy Prevention Programme (see *Conception and contraception* and *Prescribing and dispensing information*).

Neuropsychiatric reactions have been reported in patients taking oral retinoids. Healthcare professionals are advised to monitor patients for signs of depression or suicidal ideation and refer for appropriate treatment, if necessary; particular care is needed in those with a history of depression. Patients should be advised to speak to their doctor if they experience any changes in mood or behaviour, and encouraged to ask family and friends to look out for any change in mood.

**MHRA/CHM ADVICE: ORAL RETINOID MEDICINES (ISOTRETINOIN, ALITRETINOIN, AND ACITRETIN): TEMPORARY MONITORING ADVICE DURING CORONAVIRUS (COVID-19) PANDEMIC (JULY 2021)**

The MHRA has issued temporary guidance about the use of remote consultations for female patients taking alitretinoin to support adherence to the Pregnancy Prevention Programme (see *Conception and contraception* and *Prescribing and dispensing information*) and ensuring continued monitoring for signs of psychiatric reactions (especially depression) and other safety risks during the coronavirus (COVID-19) pandemic. The guidance also includes advice that can be provided to patients to help them understand the monitoring requirements. The temporary guidance is available at: [www.gov.uk/guidance/temporary-advice-for-management-of-oral-retinoid-medicines-during-the-covid-19-pandemic](http://www.gov.uk/guidance/temporary-advice-for-management-of-oral-retinoid-medicines-during-the-covid-19-pandemic).

- **CONTRA-INDICATIONS** Hypervitaminosis A · uncontrolled hyperlipidaemia · uncontrolled hypothyroidism
- **CAUTIONS** Avoid blood donation during treatment and for at least 1 month after stopping treatment · dry eye syndrome · history of depression (risk of neuropsychiatric reactions)
- **INTERACTIONS** → Appendix 1: retinoids
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Alopecia · anaemia · conjunctivitis · dizziness · dry eye · dry mouth · eye irritation · fatigue · flushing · headache · hypercholesterolaemia · hypertension · hypertriglyceridaemia (risk of pancreatitis if triglycerides above 9 mmol/litre) · joint disorders · myalgia · nausea · oral disorders · skin reactions · tinnitus · vomiting
  - ▶ **Uncommon** Bone disorders · cataract · dyspepsia · epistaxis · vision disorders
  - ▶ **Rare or very rare** Anxiety · behaviour abnormal · depression · hair texture abnormal · idiopathic intracranial hypertension · mood altered · nail disorder · photosensitivity reaction · psychotic disorder · suicidal behaviours · vasculitis
  - ▶ **Frequency not known** Inflammatory bowel disease · peripheral oedema

**SIDE-EFFECTS, FURTHER INFORMATION** Dry eyes may respond to lubricating eye ointment or tear replacement therapy.

Discontinue treatment if signs or symptoms of idiopathic intracranial hypertension such as headache, nausea, vomiting, papilloedema, or visual disturbances occur.

Risk of pancreatitis if triglycerides above 9 mmol/litre—discontinue if uncontrolled hypertriglyceridaemia or pancreatitis.

- **CONCEPTION AND CONTRACEPTION** The MHRA advises that women and girls of childbearing potential being treated with the oral retinoids acitretin, alitretinoin, or isotretinoin must be supported on a Pregnancy Prevention Programme with regular follow-up and pregnancy testing. Pregnancy prevention Effective contraception must be used. In females of childbearing potential, exclude pregnancy a few days before treatment, every month during treatment (unless there are compelling reasons to indicate that there is no risk of pregnancy), and 1 month after stopping treatment. Females of childbearing age must practise effective contraception for at least 1 month before starting treatment, during treatment, and for at least 1 month after stopping treatment. They should be advised to use at least 1 highly effective method of contraception (i.e. a user-independent form such as an intra-uterine device or implant) or 2 complementary user-dependent forms of contraception (e.g. combined oral contraceptives and barrier method). Oral progestogen-only contraceptives are not considered effective. Females

should be advised to discontinue treatment and to seek prompt medical attention if they become pregnant during treatment or within 1 month of stopping treatment.

- **PREGNANCY** Manufacturer advises avoid—teratogenic.
- **BREAST FEEDING** Manufacturer advises avoid.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid—limited information available.
- **RENAL IMPAIRMENT** [EvGr] Avoid in moderate to severe impairment (no information available). ⚠
- **MONITORING REQUIREMENTS** Monitor serum lipids (more frequently in those with diabetes, history of hyperlipidaemia, or risk factors for cardiovascular disease)—discontinue if uncontrolled hyperlipidaemia.
- **PRESCRIBING AND DISPENSING INFORMATION**  
Prescribing for females of childbearing potential The Pregnancy Prevention Programme is supported by the following materials provided by the manufacturer: *Checklists for prescribers and pharmacists*, and *Patient reminder cards*.  
Each prescription for oral alitretinoin should be limited to a supply of up to 30 days' treatment. Pregnancy testing should ideally be carried out on the same day as prescription issuing and dispensing.

- **PATIENT AND CARER ADVICE**  
Risk of neuropsychiatric reactions The MHRA advises patients and carers to seek medical attention if changes in mood or behaviour occur.  
UV light Manufacturer advises patients to avoid excessive exposure to UV light (including sunlight, solariums)—sunscreens with a high protection factor should be applied. Pregnancy Prevention Programme Pharmacists must ensure that female patients have a patient card—see also *Important safety information*.

£493.72 DT = £493.72

## Tazarotene

14-Feb-2020

#### ● INDICATIONS AND DOSE

**Mild to moderate plaque psoriasis affecting up to 10% of skin area**

- ▶ TO THE SKIN
- ▶ Adult: Apply once daily usually for up to 12 weeks, apply in the evening

- **CAUTIONS** Avoid contact with eczematous skin · avoid contact with eyes · avoid contact with face · avoid contact with hair-covered scalp · avoid contact with inflamed skin · avoid contact with intertriginous areas
- **INTERACTIONS** → Appendix 1: retinoids
- **SIDE-EFFECTS**  
▶ **Common or very common** Paraesthesia · skin reactions

**SIDE-EFFECTS, FURTHER INFORMATION** Local irritation is more common with higher concentration and may require treatment interruption.

- **CONCEPTION AND CONTRACEPTION** Effective contraception required (oral progestogen-only contraceptives not considered effective).
- **PREGNANCY** Avoid.
- **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal* studies.
- **PATIENT AND CARER ADVICE** Avoid excessive exposure to UV light (including sunlight, solariums, PUVA or UVB treatment). Do not apply emollients or cosmetics within 1 hour of application. Wash hands immediately after use.
- **MEDICINAL FORMS** No licensed medicines listed.

## SALICYLIC ACID AND DERIVATIVES

### Salicylic acid with zinc oxide

23-Nov-2020

#### ● INDICATIONS AND DOSE

##### Hyperkeratotic skin disorders

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily

- **CAUTIONS** Avoid broken skin · avoid inflamed skin
- **CAUTIONS, FURTHER INFORMATION**  
▶ Salicylate toxicity Salicylate toxicity may occur particularly if applied on large areas of skin.
- **SIDE-EFFECTS** Skin irritation
- **PRESCRIBING AND DISPENSING INFORMATION** Zinc and Salicylic Acid Paste BP is also referred to as Lassar's Paste. When prepared extemporaneously, the BP states Zinc and Salicylic Acid Paste, BP (Lassar's Paste) consists of zinc oxide 24%, salicylic acid 2%, starch 24%, white soft paraffin 50%.
- **MEDICINAL FORMS** Forms available from special-order manufacturers include: paste

## VITAMINS AND TRACE ELEMENTS > VITAMIN D AND ANALOGUES

### Calcipotriol

28-Jun-2021

#### ● INDICATIONS AND DOSE

##### Plaque psoriasis

- ▶ TO THE SKIN USING OINTMENT
- ▶ Adult: Apply 1–2 times a day, when preparations are used together maximum total calcipotriol 5 mg in any one week (e.g. scalp solution 60 mL with ointment 30 g or scalp solution 30 mL with ointment 60 g); maximum 100 g per week

##### Scalp psoriasis

- ▶ TO THE SKIN USING SCALP LOTION
- ▶ Adult: Apply twice daily, when preparations are used together maximum total calcipotriol 5 mg in any one week (e.g. scalp solution 60 mL with ointment 30 g or scalp solution 30 mL with ointment 60 g); maximum 60 mL per week

- **CONTRA-INDICATIONS** Calcium metabolism disorders
- **CAUTIONS** Avoid excessive exposure to sunlight and sunlamps · avoid use on face · erythrodermic exfoliative psoriasis (enhanced risk of hypercalcaemia) · generalised pustular psoriasis (enhanced risk of hypercalcaemia)
- **INTERACTIONS** → Appendix 1: vitamin D substances
- **SIDE-EFFECTS**  
▶ **Common or very common** Skin reactions
- ▶ **Uncommon** Hypercalcaemia · increased risk of infection

- ▶ **Rare or very rare** Hypercalciuria · photosensitivity reaction
- **PREGNANCY** Manufacturers advise avoid unless essential.
- **BREAST FEEDING** No information available.
- **HEPATIC IMPAIRMENT** Manufacturers advise avoid in severe impairment (no information available).
- **RENAL IMPAIRMENT** [EvGr](#) Avoid in severe impairment (no information available). [M](#)
- **PATIENT AND CARER ADVICE**  
Advice on application Patient information leaflet for *Dovonex*® ointment advises liberal application. However, patients should be advised of maximum recommended weekly dose.

Hands should be washed thoroughly after application to avoid inadvertent transfer to other body areas.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment

#### Ointment

EXCIPIENTS: May contain Disodium edetate, propylene glycol

##### ▶ Calcipotriol (Non-proprietary)

**Calcipotriol 50 microgram per 1 gram** Calcipotriol 50micrograms/g ointment | 30 gram [PoM](#) £7.48 DT = £7.48 | 60 gram [PoM](#) £11.56-£14.96 | 120 gram [PoM](#) £23.10-£29.92

##### ▶ Dovonex (LEO Pharma)

**Calcipotriol 50 microgram per 1 gram** Dovonex 50micrograms/g ointment | 30 gram [PoM](#) £5.78 DT = £7.48 | 60 gram [PoM](#) £11.56

#### Liquid

##### ▶ Calcipotriol (Non-proprietary)

**Calcipotriol (as Calcipotriol hydrate) 50 microgram per 1 ml** Calcipotriol 50micrograms/ml scalp solution | 60 ml [PoM](#) £70.46 DT = £70.46 | 120 ml [PoM](#) £140.93 DT = £140.93

Combinations available: *Calcipotriol with betamethasone*, p. 1336

## Calcitriol

16-Feb-2021

### (1,25-Dihydroxycholecalciferol)

#### ● INDICATIONS AND DOSE

##### Mild to moderate plaque psoriasis

###### ▶ TO THE SKIN

- ▶ **Adult:** Apply twice daily, not more than 35% of body surface to be treated daily; maximum 30 g per day

- **CONTRA-INDICATIONS** Do not apply under occlusion · patients with calcium metabolism disorders
- **CAUTIONS** Erythrodermic exfoliative psoriasis (enhanced risk of hypercalcaemia) · generalised pustular psoriasis (enhanced risk of hypercalcaemia)
- **INTERACTIONS** → Appendix 1: vitamin D substances
- **PREGNANCY** Manufacturer advises use in restricted amounts only if clearly necessary.  
**Monitoring** Monitor urine- and serum-calcium concentration in pregnancy.
- **BREAST FEEDING** Manufacturer advises avoid.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid.
- **RENAL IMPAIRMENT** Manufacturer advises avoid—no information available.
- **HANDLING AND STORAGE** Hands should be washed thoroughly after application to avoid inadvertent transfer to other body areas.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Ointment

##### ▶ Silkis (Galderma (UK) Ltd)

**Calcitriol 3 microgram per 1 gram** Silkis ointment | 100 gram [PoM](#) £18.06 DT = £18.06

## Tacalcitol

16-Feb-2021

#### ● INDICATIONS AND DOSE

##### Plaque psoriasis

###### ▶ TO THE SKIN

- ▶ **Adult:** Apply once daily, preferably at bedtime, maximum 10 g ointment or 10 mL lotion daily, when lotion and ointment used together, maximum total tacalcitol 280 micrograms in any one week (e.g. lotion 30 mL with ointment 40 g)

- **CONTRA-INDICATIONS** Calcium metabolism disorders
- **CAUTIONS** Avoid eyes · erythrodermic exfoliative psoriasis (enhanced risk of hypercalcaemia) · generalised pustular psoriasis (enhanced risk of hypercalcaemia) · if used in conjunction with UV treatment

#### CAUTIONS, FURTHER INFORMATION

- ▶ **UV treatment** [EvGr](#) If tacalcitol is used in conjunction with UV treatment, UV radiation should be given in the morning and tacalcitol applied at bedtime. [M](#)
- **INTERACTIONS** → Appendix 1: vitamin D substances
- **SIDE-EFFECTS**
- ▶ **Uncommon** Skin reactions
- ▶ **Frequency not known** Hypercalcaemia
- **PREGNANCY** Manufacturer advises avoid unless no safer alternative—no information available.
- **BREAST FEEDING** Manufacturer advises avoid application to breast area; no information available on presence in milk.
- **MONITORING REQUIREMENTS** Monitor serum calcium if risk of hypercalcaemia.
- **PATIENT AND CARER ADVICE** Hands should be washed thoroughly after application to avoid inadvertent transfer to other body areas.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Ointment

##### ▶ Curatoderm (Almirall Ltd)

#### Liquid

EXCIPIENTS: May contain Disodium edetate, propylene glycol

##### ▶ Curatoderm (Almirall Ltd)

**Tacalcitol (as Tacalcitol monohydrate) 4 microgram per 1 gram** Curatoderm 4micrograms/g lotion | 30 ml [PoM](#) £12.73 DT = £12.73

## 4 Perspiration

### 4.1 Hyperhidrosis

#### Hyperhidrosis

16-Jun-2020

##### Overview

Hyperhidrosis is defined as sweating in excess of normal body temperature regulation. It can be localised (focal) or affect the entire skin area, and can be classified by the absence (primary) or presence (secondary) of an underlying cause.

[EvGr](#) Patients with primary focal hyperhidrosis affecting axillae, palmar, or plantar areas, should be offered a topical preparation containing 20% aluminium chloride hexahydrate p. 1359. [A](#) This is a more potent antiperspirant compared to commercially available preparations and is available as a spray, roll-on, or solution. [EvGr](#) If the response to treatment is inadequate or not tolerated after 6 weeks, consider referral to a specialist.

Specialist management may also be appropriate in more severe cases of hyperhidrosis. Topical glycopyrronium bromide p. 1359 as a 0.05% solution, may be used in the iontophoretic treatment of hyperhidrosis of plantar and palmar areas. Botox<sup>®</sup> contains botulinum toxin type A complex p. 440 and is licensed for intradermal use for severe hyperhidrosis of the axillae unresponsive to topical antiperspirant or other antihidrotic treatment. Oxybutynin hydrochloride p. 841 [unlicensed indication] can cause a reduction in sweat secretion through its effects on muscarinic receptors near the sweat glands; its use is limited due to antimuscarinic adverse effects. ⚠

## ANTIMUSCARINICS

839

### Glycopyrronium bromide

05-Oct-2021

(Glycopyrrolate)

#### ● INDICATIONS AND DOSE

##### Iontophoretic treatment of hyperhidrosis

###### ▶ TO THE SKIN

- ▶ Adult: Only 1 site to be treated at a time, maximum 2 sites treated in any 24 hours, treatment not to be repeated within 7 days (consult product literature)

- **CONTRA-INDICATIONS** Infections affecting the treatment site

**CONTRA-INDICATIONS, FURTHER INFORMATION** Contra-indications applicable to systemic use should be considered; however, glycopyrronium is poorly absorbed and systemic effects unlikely with topical use.

- **CAUTIONS** Cautions applicable to systemic use should be considered; however, glycopyrronium is poorly absorbed and systemic effects unlikely with topical use.

- **INTERACTIONS** → Appendix 1: glycopyrronium

- **SIDE-EFFECTS** Abdominal discomfort · eating disorder · pain · paraesthesia

**SIDE-EFFECTS, FURTHER INFORMATION** The possibility of systemic side-effects should be considered; however, glycopyrronium is poorly absorbed and systemic effects are unlikely with topical use.

- **MEDICINAL FORMS** No licensed medicines listed.

## DERMATOLOGICAL DRUGS > ASTRINGENTS

### Aluminium chloride hexahydrate

21-Nov-2020

#### ● INDICATIONS AND DOSE

##### Hyperhidrosis affecting axillae, hands or feet

###### ▶ TO THE SKIN

- ▶ Adult: Apply once daily, apply liquid formulation at night to dry skin, wash off the following morning, reduce frequency as condition improves—do not bathe immediately before use

##### Hyperhidrosis | Bromidrosis | Intertrigo | Prevention of tinea pedis and related conditions

###### ▶ TO THE SKIN

- ▶ Adult: Apply powder to dry skin

- **CAUTIONS** Avoid contact with eyes · avoid contact with mucous membranes · avoid use on broken or irritated skin · do not shave axillae or use depilatories within 12 hours of application

- **SIDE-EFFECTS** Skin reactions

- **PATIENT AND CARER ADVICE** Avoid contact with clothing.

- **EXCEPTIONS TO LEGAL CATEGORY** A 30 mL pack of aluminium chloride hexahydrate 20% is on sale to the public.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Liquid

##### CAUTIONARY AND ADVISORY LABELS 15

- ▶ **Anhydrol** (Dermal Laboratories Ltd)

**Aluminium chloride hexahydrate 200 mg per 1 ml** Anhydrol Forte 20% solution | 60 ml [P] £2.51 DT = £2.51

- ▶ **Driclor** (GlaxoSmithKline Consumer Healthcare UK Ltd)

**Aluminium chloride hexahydrate 200 mg per 1 ml** Driclor 20% solution | 60 ml [P] £5.41 DT = £2.51

## 5 Pruritus

### Topical local antipruritics

#### Overview

*Pruritus* may be caused by systemic disease (such as obstructive jaundice, endocrine disease, chronic renal disease, iron deficiency, and certain malignant diseases), skin disease (e.g. psoriasis, eczema, urticaria, and scabies), drug hypersensitivity, or as a side-effect of opioid analgesics. Where possible, the underlying causes should be treated. An **emollient** may be of value where the pruritus is associated with dry skin. Pruritus that occurs in otherwise healthy elderly people can also be treated with an emollient. Levomenthol **cream** p. 1360 can be used to relieve pruritus; it exerts a cooling effect on the skin. Local antipruritics have a role in the treatment of pruritus in palliative care.

Preparations containing crothamiton p. 1360 are sometimes used but are of uncertain value. Preparations containing calamine are often ineffective.

A topical preparation containing doxepin 5% p. 1360 is licensed for the relief of pruritus in eczema; it can cause drowsiness and there may be a risk of sensitisation.

Pruritus is common in biliary obstruction, especially in primary biliary cirrhosis and drug-induced cholestasis. Oral administration of colestyramine p. 215 is the treatment of choice.

Topical antihistamines and local anaesthetics are only marginally effective and occasionally cause hypersensitivity. For *insect stings* and *insect bites*, a short course of a topical corticosteroid is appropriate. Short-term treatment with a **sedating antihistamine** may help in insect stings and in intractable pruritus where sedation is desirable. Calamine preparations are of little value for the treatment of insect stings or bites.

Topical local anaesthetics are indicated for the relief of local pain. Preparations may be absorbed, especially through mucosal surfaces, therefore excessive application should be avoided and they should preferably not be used for more than 3 days; not generally suitable for young children and are less suitable for prescribing.

Topical antihistamines should be avoided in eczema and are not recommended for longer than 3 days. They are less suitable for prescribing.

**Other drugs used for Pruritus** Alimemazine tartrate, p. 305 · Cetirizine hydrochloride, p. 301 · Chlorphenamine maleate, p. 305 · Coal tar with calamine, p. 1346 · Hydroxyzine hydrochloride, p. 307 · Levocetirizine hydrochloride, p. 303

## ANTIPRURITICS

£3.85 | 500 gram £15.99 DT = £16.97

## 6 Rosacea and acne

### Acne

20-Sep-2021

#### Description of condition

Acne is a common inflammatory skin condition that leads to lesions which consist of non-inflammatory comedones, and inflammatory papules, pustules, nodules and cysts. In patients with acne, lesions and/or scarring may be seen and severity can range from mild lesions to permanent disfiguration. It can also have a psychological and social impact on the patient.

Acne vulgaris is a common type of acne that primarily affects the face, back, and chest; it is most common in adolescence, but may affect those in any age group. Other types of acne include acne conglobata, a severe form of nodulo-cystic acne with interconnecting sinuses and abscesses; and acne fulminans, a very serious form of acne conglobata that is associated with systemic symptoms (such as fever and arthralgia).

The severity of acne varies along a continuum from mild to moderate to severe, that is characterised by the lesion type (s) and quantity. Patients with mild to moderate acne are those with 1 or more of the following: non-inflammatory lesions (of any number), up to 34 inflammatory lesions, up to 2 nodules. Patients with moderate to severe acne are those who have 35 or more inflammatory lesions and/or 3 or more nodules.

#### Aims of treatment

Treatment aims to reduce the severity of skin lesions and other complications, and to prevent recurrence and scarring.

#### Management of acne

Patients with acne fulminans should be urgently referred to hospital for assessment by the dermatology team within 24 hours.

Patients with acne conglobata, nodulo-cystic acne, or those with diagnostic uncertainty about their acne, should be referred to a consultant dermatologist-led team.

For patients with acne vulgaris, referral to a consultant dermatologist-led team should be considered if they have scarring or persistent pigmentary changes, or if their acne or acne-related scarring is causing or contributing to persistent psychological distress or a mental health disorder.

Referral to a mental health service should also be considered for patients whose acne is contributing to psychological distress or a mental health disorder (including those who have a current or past history of suicidal ideation or self-harm, body morphic disorder, or a severe depressive or anxiety disorder).

**EvGr** Consider condition-specific management or specialist referral if a medication or medical disorder is contributing to the patient's acne. **▲** Specialist referral should also be considered for individuals with acne and polycystic ovary syndrome (PCOS) with features of hyperandrogenism.

#### Non-drug treatment

**EvGr** Patients with acne vulgaris should be advised on appropriate skin care such as using a non-alkaline, synthetic detergent cleansing product twice daily on acne-prone areas, removing make up at the end of the day, and avoiding the use of oil-based or comedogenic skincare products, sunscreens, and make-up. They should also be advised to avoid persistent picking or scratching of lesions.

Photodynamic therapy should be considered for patients with moderate to severe acne vulgaris if other treatments are ineffective, contra-indicated, or not tolerated. **▲**

#### Drug treatment

**EvGr** Patients with mild to moderate and moderate to severe acne vulgaris should be offered a 12-week course of a first line treatment option, taking into account the severity and distribution of their acne, their preferences, and that the risk of scarring increases with acne severity and duration. Any potential use of oral isotretinoin in the future for severe forms of acne will be dependent on the completion of adequate courses of first line treatments including systemic antibacterials and topical therapy, and should also be taken into consideration when deciding on initial treatment options. The use of antibacterial monotherapy or a combination of a topical and oral antibacterial are not recommended. Patients should be informed that the benefits of treatment may take between 6-8 weeks to become noticeable and hence the importance of completing the course.

Females receiving acne treatment who wish to use hormonal contraception could consider using an oral combined hormonal contraceptive, **▲** as combined hormonal contraceptive use may be associated with improvement of acne.

**EvGr** When considering treatment options that include known teratogenic drugs or drugs with teratogenic potential (such as topical or oral retinoids, or oral tetracyclines), specific contraception requirements should be taken into consideration and discussed with patients, see individual drug monographs for further information. **▲**

#### First line treatment options for acne vulgaris

- Acne of any severity:
  - ▶ **EvGr** Fixed combination topical adapalene with benzoyl peroxide p. 1365, or
  - ▶ Fixed combination topical tretinoin with clindamycin p. 1367. **▲**
- Mild to moderate acne:
  - ▶ **EvGr** Fixed combination topical benzoyl peroxide with clindamycin p. 1364. **▲**
- Moderate to severe acne:
  - ▶ **EvGr** Fixed combination topical adapalene with benzoyl peroxide **with** oral lymecycline p. 617 or doxycycline p. 616, or
  - ▶ Topical azelaic acid p. 1364 **with** oral lymecycline or doxycycline. **▲**
  - ▶ Alternative antibacterial options if lymecycline or doxycycline unsuitable: **EvGr** trimethoprim p. 625 [unlicensed] or a macrolide (such as erythromycin p. 587). **▲**
- Alternative if first line options are contra-indicated, or the patient wishes to avoid antibacterials or topical retinoids: **EvGr** topical benzoyl peroxide p. 1364 monotherapy. **▲**

For further information on the management of acne vulgaris, such as the advantages and disadvantages of each treatment option, see NICE guideline: **Acne** (see *Useful resources*).

#### Reassessment and further treatment

**EvGr** Review first line treatment after 12 weeks. For patients whose acne has cleared, maintenance options should also be considered **▲** (see *Maintenance*).

**EvGr** For patients whose treatment included an oral antibacterial and their acne has completely cleared, consider continuing their topical treatment and stopping the oral antibacterial. If their acne has improved but not cleared, consider continuing the course for up to a further 12 weeks. Treatment courses that include an antibacterial should only be continued for more than 6 months in exceptional circumstances, and should be reviewed every 3 months.

For patients with mild to moderate acne who have had an inadequate response to treatment after 12 weeks, offer another first line option. **⚠** Consider referral to a consultant dermatologist-led team for those who have mild to moderate acne unresponsive to 2 completed treatment courses.

**EvGr** For patients with moderate to severe acne who have had an inadequate response to treatment that did not include an oral antibacterial, offer another first line option which includes an oral antibacterial. **⚠** For those whose treatment included an oral antibacterial, consider referral to a consultant dermatologist-led team.

**EvGr** For females with PCOS that have not improved following treatment with a first line option, consider adding ethinylestradiol with cyproterone (co-cyprindiol below) and review at 6 months, or an alternative combined oral contraceptive pill [unlicensed]. **⚠**

For further information on the drug treatment of acne vulgaris, including the use of intralesional corticosteroids and the management of acne-related scarring, see NICE guideline: **Acne** (see *Useful resources*).

### Isotretinoin

**EvGr** For patients with severe acne (such as acne conglobata or fulminans, nodulo-cystic acne, or acne at risk of permanent scarring) that is resistant to adequate courses of oral antibiotic-containing first line treatments, consider oral isotretinoin p. 1365 (specialist use). Take into account the patient's psychological wellbeing, and refer them to mental health services before starting treatment if appropriate. **⚠**

Isotretinoin is a powerful teratogen; for females of childbearing potential isotretinoin must only be used if the conditions of the Pregnancy Prevention Programme are met. For further information, see *Important safety information*, *Conception and contraception*, and *Prescribing and dispensing information* in the isotretinoin monograph, and *Contraception in patients taking medication with teratogenic potential* in *Contraceptives*, hormonal p. 854.

**EvGr** For acne flares that occur after starting isotretinoin, a course of oral prednisolone p. 747 may be considered. **⚠** For further information on acne flares, see NICE guideline: **Acne** (see *Useful resources*).

### Relapse

**EvGr** For acne that responds adequately to a course of first line treatment but then relapses, consider another 12-week course of either the same treatment or an alternative treatment option. **⚠** For treatment options, see *First line treatment options*.

**EvGr** If acne relapses after an adequate response to oral isotretinoin and is currently mild to moderate, offer an appropriate first line treatment option. If acne relapses after an adequate response to oral isotretinoin and is currently moderate to severe, offer either a 12-week course of an appropriate first line treatment option or re-referral if the patient is no longer under the care of a consultant dermatologist-led team. For individuals with moderate to severe acne that relapses after a second course of oral isotretinoin, further care should be provided by their dermatology team; offer re-referral if the patient is no longer under the care of the consultant dermatologist-led team. **⚠**

### Maintenance

**EvGr** On completion of treatment, the need for maintenance treatment is not always necessary; advise patients that appropriate skin care should be continued. In patients with a

history of frequent relapse, consider maintenance treatment using a fixed combination of topical adapalene with benzoyl peroxide p. 1365. If this is not tolerated or one component of the combination is contra-indicated, consider topical monotherapy with either adapalene p. 1365, azelaic acid p. 1364, or benzoyl peroxide p. 1364. Maintenance treatments should be reviewed after 12 weeks and a decision made about continuation. **⚠**

### Useful Resources

Acne vulgaris: management. National Institute for Health and Care Excellence. NICE guideline 198. June 2021. [www.nice.org.uk/guidance/ng198](http://www.nice.org.uk/guidance/ng198)

## Rosacea

29-Sep-2020

### Rosacea

Rosacea is not comedonal (but may exist with acne which may be comedonal). Brimonidine tartrate p. 1368 is licensed for the treatment of facial erythema in rosacea. The pustules and papules of rosacea respond to topical azelaic acid p. 1364, topical ivermectin p. 1368 or to topical metronidazole p. 1322. Alternatively oral administration of oxytetracycline p. 618 or tetracycline p. 619, or erythromycin p. 587, can be used; courses usually last 6–12 weeks and are repeated intermittently. Doxycycline p. 616 can be used [unlicensed indication] if oxytetracycline or tetracycline is inappropriate (e.g. in renal impairment). A modified-release preparation of doxycycline is licensed in low daily doses for the treatment of facial rosacea. Camouflagers may be required for the redness.

## 6.1 Acne

**Other drugs used for Acne** Minocycline, p. 618 · Oxytetracycline, p. 618

## ANTI-ANDROGENS

### Co-cyprindiol

25-Oct-2021

#### • INDICATIONS AND DOSE

**Moderate to severe acne vulgaris related to hyperandrogenism caused by polycystic ovary syndrome [adjunct in refractory acne] | Moderately severe hirsutism**

#### ► BY MOUTH

- Females of childbearing potential: 1 tablet daily for 21 days, to be started on day 1 of menstrual cycle; subsequent courses repeated after a 7-day interval (during which withdrawal bleeding occurs), time to symptom remission, at least 3 months; review need for treatment regularly

#### IMPORTANT SAFETY INFORMATION

**MHRA/CHM ADVICE: CYPROTERONE ACETATE: NEW ADVICE TO MINIMISE RISK OF MENINGIOMA (JUNE 2020)**

Cyproterone acetate has been associated with an overall rare, but cumulative dose-dependent, increased risk of meningioma (single and multiple), mainly at doses of 25 mg/day and higher. Healthcare professionals are advised to monitor patients for meningiomas, and to permanently discontinue treatment if diagnosed. Use of cyproterone acetate, including co-cyprindiol, for all indications is contra-indicated in those with meningioma or a history of meningioma.

- **CONTRA-INDICATIONS** Acute porphyrias p. 1150 · current breast cancer · heart disease associated with pulmonary hypertension or risk of embolus · history of stroke (including transient ischaemic attack) · ischaemic heart disease · known thrombogenic mutations (e.g. factor V Leiden, prothrombin mutation, protein S, protein C and antithrombin deficiencies) · medical treatment for varicose veins · migraine with aura · positive antiphospholipid antibodies · presence or history of liver tumours · previous or current venous or arterial thrombosis · severe or multiple risk factors for arterial or venous thromboembolism · systemic lupus erythematosus with antiphospholipid antibodies
- **CAUTIONS** Cardiac disease · cervical cancer · cholestasis with previous use of combined oral contraception—seek specialist advice before use · gallbladder disease—seek specialist advice before use · gene mutations associated with breast cancer (e.g. BRCA 1)—seek specialist advice before use · history of breast cancer—seek specialist advice before use · history of cholestasis during pregnancy · history of depression · hyperprolactinaemia—seek specialist advice before use · inflammatory bowel disease including Crohn's disease · migraine · personal or family history of hypertriglyceridaemia (increased risk of pancreatitis) · risk factors for arterial thromboembolism · risk factors for venous thromboembolism · sickle-cell disease · systemic lupus erythematosus · undiagnosed breast mass—seek specialist advice before use · undiagnosed vaginal bleeding
- CAUTIONS, FURTHER INFORMATION**
  - ▶ Venous thromboembolism There is an increased risk of venous thromboembolism in women taking co-cyprindiol, particularly during the first year of use. The incidence of venous thromboembolism is 1.5–2 times higher in women using co-cyprindiol than in women using combined oral contraceptives containing levonorgestrel, but the risk may be similar to that associated with use of combined oral contraceptives containing third generation progestogens (desogestrel and gestodene) or drospirenone. Women requiring co-cyprindiol may have an inherently increased risk of cardiovascular disease.
  - For more information about the risk factors for venous thromboembolism, see combined hormonal contraceptive preparations.
- **INTERACTIONS** → Appendix 1: anti-androgens · ethinylestradiol
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Abdominal pain · breast abnormalities · depression · headaches · mood altered · nausea · weight changes
  - ▶ **Uncommon** Diarrhoea · fluid retention · sexual dysfunction · skin reactions · vomiting
  - ▶ **Rare or very rare** Contact lens intolerance · erythema nodosum · thromboembolism · vaginal discharge
  - ▶ **Frequency not known** Amenorrhoea (on discontinuation) · angioedema aggravated · chorea exacerbated · hepatic function abnormal · hepatic neoplasm · hypertension · hypertriglyceridaemia · inflammatory bowel disease · menstrual cycle irregularities · suicidal behaviours
- **CONCEPTION AND CONTRACEPTION** [EVCr](#) Co-cyprindiol contains an anti-androgen and is an effective hormonal contraceptive. However, it should not be used solely for contraception but reserved for women who require treatment for androgen-dependent skin conditions. Patients should not take other hormonal contraceptives while being treated with co-cyprindiol. 
- **PREGNANCY** Avoid—risk of feminisation of male fetus with cyproterone.
- **BREAST FEEDING** Manufacturer advises avoid; possibility of anti-androgen effects in neonate with cyproterone.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution; avoid in severe or active disease
- **PRESCRIBING AND DISPENSING INFORMATION** A mixture of cyproterone acetate and ethinylestradiol in the mass proportions 2000 parts to 35 parts, respectively.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Tablet**▶ **Co-cyprindiol (Non-proprietary)**

Clindamycin (as Clindamycin phosphate) 10 mg per 1 ml Dalacin T 1% topical lotion | 30 ml [PoM](#) £5.08 DT = £5.08 | 60 ml [PoM](#) £10.16

Combinations available: **Benzoyl peroxide with clindamycin**, p. 1364 · **Tretinoin with clindamycin**, p. 1367

## ANTIBACTERIALS &gt; MACROLIDES

Erythromycin with zinc acetate 20-Apr-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, erythromycin p. 587.

## ● INDICATIONS AND DOSE

**Acne vulgaris**

- ▶ TO THE SKIN
- ▶ Child: Apply twice daily
- ▶ Adult: Apply twice daily

## ● INTERACTIONS → Appendix 1: macrolides

## ● MEDICINAL FORMS There can be variation in the licensing of different medicines containing the same drug.

**Liquid**

- ▶ **Zineryt** (Neon Healthcare Ltd)  
Zinc acetate 12 mg per 1 ml, Erythromycin 40 mg per 1 ml. Zineryt lotion | 30 ml [PoM] £9.25 DT = £9.25 | 90 ml [PoM] £20.02 DT = £20.02

## ANTISEPTICS AND DISINFECTANTS &gt; PEROXIDES

Benzoyl peroxide 01-Nov-2021

## ● INDICATIONS AND DOSE

**Acne vulgaris**

- ▶ TO THE SKIN
- ▶ Child 12-17 years: Apply 1-2 times a day, preferably apply after washing with soap and water
- ▶ Adult: Apply 1-2 times a day, preferably apply after washing with soap and water

## ● CAUTIONS Avoid contact with broken skin · avoid contact with eyes · avoid contact with mouth · avoid contact with mucous membranes · avoid excessive exposure to sunlight

## ● SIDE-EFFECTS

- ▶ **Common or very common** Skin reactions
- ▶ **Frequency not known** Facial swelling
- **PATIENT AND CARER ADVICE** May bleach fabrics and hair. If sun exposure is unavoidable, an appropriate sunscreen or protective clothing should be used. Patients and carers should be warned that some redness and skin peeling can occur initially but settles with time. To reduce the risk of skin irritation, treatment may be started with alternate-day or short-contact application (e.g. washing off after an hour) and progressed to standard application if tolerated. If severe irritation occurs, the frequency of application should be reduced, or treatment temporarily discontinued or stopped altogether.

## ● MEDICINAL FORMS There can be variation in the licensing of different medicines containing the same drug.

**Gel**

**Isotretinoin**

04-Nov-2021

**INDICATIONS AND DOSE**

**Severe acne [(such as nodular or conglobate acne or acne at risk of permanent scarring) resistant to adequate courses of standard therapy with systemic antibacterials and topical therapy] (under expert supervision)**

- ▶ BY MOUTH

- ▶ Adult: Initially 500 micrograms/kg daily in 1–2 divided doses, increased if necessary to 1 mg/kg daily and continued until a total cumulative dose of 120–150 mg/kg is reached—treatment may be discontinued sooner if there has been an adequate response and no new lesions for 4–8 weeks, treatment course may be repeated after a period of at least 8 weeks if relapse after first course, consider dose reduction to less than 500 micrograms/kg daily for patients at increased risk of, or experiencing, side-effects; maximum 150 mg/kg per course

**IMPORTANT SAFETY INFORMATION**

**MHRA/CHM ADVICE: ISOTRETINOIN (ROACCUTANE<sup>®</sup>): RARE REPORTS OF ERECTILE DYSFUNCTION AND DECREASED LIBIDO (OCTOBER 2017)**

An EU-wide review has concluded that on rare occasions, oral isotretinoin, indicated for severe acne, may cause sexual side-effects, including erectile dysfunction and decreased libido.

**MHRA/CHM ADVICE: ORAL RETINOID MEDICINES: REVISED AND SIMPLIFIED PREGNANCY PREVENTION EDUCATIONAL MATERIALS FOR HEALTHCARE PROFESSIONALS AND WOMEN (JUNE 2019)**

New prescriber checklists, patient reminder cards, and pharmacy checklists are available to support the Pregnancy Prevention Programme in women and girls of childbearing potential taking oral acitretin, alitretinoin, or isotretinoin. Healthcare professionals are reminded that the use of oral retinoids is contra-indicated in pregnancy due to a high risk of serious congenital malformations, and any use in females must be within the conditions of the Pregnancy Prevention Programme (see *Conception and contraception and Prescribing and dispensing information*).

Neuropsychiatric reactions have been reported in patients taking oral retinoids. Healthcare professionals are advised to monitor patients for signs of depression or suicidal ideation and refer for appropriate treatment, if necessary; particular care is needed in those with a history of depression. Patients should be advised to speak to their doctor if they experience any changes in mood or behaviour, and encouraged to ask family and friends to look out for any change in mood.

**MHRA/CHM ADVICE: ISOTRETINOIN (ROACCUTANE®): REMINDER OF IMPORTANT RISKS AND PRECAUTIONS (AUGUST 2020)**

The MHRA reminds healthcare professionals that isotretinoin should only be prescribed for the treatment of severe forms of acne resistant to adequate courses of standard therapy with systemic antibacterials and topical therapy. Isotretinoin should be given under the supervision of physicians with expertise in the use of systemic retinoids, and a complete understanding of the risks of therapy and monitoring requirements (including signs of depression).

Healthcare professionals are also advised to counsel patients on the potential risks of isotretinoin, including neuropsychiatric reactions and sexual dysfunction.

The MHRA further reminds healthcare professionals that isotretinoin is a powerful teratogen associated with a high frequency of severe and life-threatening birth defects if there is exposure in utero; females of childbearing potential must meet the conditions of the Pregnancy Prevention Programme (see *Conception and contraception and Prescribing and dispensing information*).

**MHRA/CHM ADVICE: ORAL RETINOID MEDICINES (ISOTRETINOIN, ALITRETINOIN, AND ACITRETIN): TEMPORARY MONITORING ADVICE DURING CORONAVIRUS (COVID-19) PANDEMIC (JULY 2021)**

The MHRA has issued temporary guidance about the use of remote consultations for female patients taking isotretinoin to support adherence to the Pregnancy Prevention Programme (see *Conception and contraception and Prescribing and dispensing information*) and ensuring continued monitoring for signs of psychiatric reactions (especially depression) and other safety risks during the coronavirus (COVID-19) pandemic. The guidance also includes advice that can be provided to patients to help them understand the monitoring requirements. The temporary guidance is available at: [www.gov.uk/guidance/temporary-advice-for-management-of-oral-retinoid-medicines-during-the-covid-19-pandemic](http://www.gov.uk/guidance/temporary-advice-for-management-of-oral-retinoid-medicines-during-the-covid-19-pandemic).

- **CONTRA-INDICATIONS** Hyperlipidaemia · hypervitaminosis A
- **CAUTIONS** Avoid blood donation during treatment and for at least 1 month after treatment · diabetes · dry eye syndrome (associated with risk of keratitis) · history of depression (risk of neuropsychiatric reactions)
- **INTERACTIONS** → Appendix 1: retinoids
- **SIDE-EFFECTS**
- ▶ **Common or very common** Anaemia · arthralgia · back pain · cheilitis · dry eye · eye discomfort · eye inflammation · haemorrhage · headache · increased risk of infection ·

myalgia · nasal dryness · neutropenia · proteinuria · skin fragility (trauma may cause blistering) · skin reactions · thrombocytopenia · thrombocytosis

- ▶ **Rare or very rare** Alopecia · anxiety · arthritis · behaviour abnormal · bronchospasm · cataract · corneal opacity · depression · diabetes mellitus · dizziness · drowsiness · dry throat · epiphyses premature fusion (following long-term use of high doses) · exostosis (following long-term use of high doses) · gastrointestinal disorders · glomerulonephritis · hair changes · hearing impairment · hepatitis · hoarseness · hyperhidrosis · hyperuricaemia · idiopathic intracranial hypertension · inflammatory bowel disease · ligament calcification (following long-term use of high doses) · lymphadenopathy · malaise · mood altered · nail dystrophy · nausea · pancreatitis · photosensitivity reaction · psychotic disorder · pyogenic granuloma · seizure · suicidal behaviours · tendinitis · tendon calcification (following long-term use of high doses) · vasculitis · vision disorders
- ▶ **Frequency not known** Psychiatric disorder · rhabdomyolysis · severe cutaneous adverse reactions (SCARs) · sexual dysfunction · vulvovaginal dryness

**SIDE-EFFECTS, FURTHER INFORMATION** Risk of pancreatitis if triglycerides above 9 mmol/litre—discontinue if uncontrolled hypertriglyceridaemia or pancreatitis.

Discontinue treatment if skin peeling severe or haemorrhagic diarrhoea develops.

Visual disturbances require expert referral and possible withdrawal.

Psychiatric side-effects could require expert referral.

- **CONCEPTION AND CONTRACEPTION** The MHRA advises that women and girls of childbearing potential being treated with the oral retinoids acitretin, alitretinoin, or isotretinoin must be supported on a Pregnancy Prevention Programme with regular follow-up and pregnancy testing. Pregnancy prevention Effective contraception must be used.

In females of childbearing potential, exclude pregnancy a few days before treatment, every month during treatment (unless there are compelling reasons to indicate that there is no risk of pregnancy), and 1 month after stopping treatment. Females of childbearing age must practise effective contraception for at least 1 month before starting treatment, during treatment, and for at least 1 month after stopping treatment. They should be advised to use at least 1 highly effective method of contraception (i.e. a user-independent form such as an intra-uterine device or implant) or 2 complementary user-dependent forms of contraception (e.g. combined oral contraceptives and barrier method). Oral progestogen-only contraceptives are not considered effective. Females should be advised to discontinue treatment and to seek prompt medical attention if they become pregnant during treatment or within 1 month of stopping treatment.

- **PREGNANCY** Manufacturer advises avoid—teratogenic.
- **BREAST FEEDING** Avoid.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid—limited information available.
- **RENAL IMPAIRMENT**  
**Dose adjustments** EvGr In severe impairment, reduce initial dose (e.g. 10 mg daily) and increase gradually up to 1 mg/kg daily as tolerated. M
- **MONITORING REQUIREMENTS** Measure hepatic function and serum lipids before treatment, 1 month after starting and then every 3 months (reduce dose or discontinue if transaminase or serum lipids persistently raised).
- **PRESCRIBING AND DISPENSING INFORMATION** Isotretinoin is an isomer of tretinoin.  
Prescribing for females of childbearing potential The Pregnancy Prevention Programme is supported by the following materials provided by the manufacturer: *Checklists for prescribers and pharmacists*, and *Patient reminder cards*.

Each prescription for oral isotretinoin should be limited to a supply of up to 30 days' treatment. Pregnancy testing should ideally be carried out on the same day as prescription issuing and dispensing.

- **PATIENT AND CARER ADVICE** Warn patient to avoid wax epilation (risk of epidermal stripping), dermabrasion, and laser skin treatments (risk of scarring) during treatment and for at least 6 months after stopping; patient should avoid exposure to UV light (including sunlight) and use sunscreen and emollient (including lip balm) preparations from the start of treatment. Risk of neuropsychiatric reactions The MHRA advises patients and carers to seek medical attention if changes in mood or behaviour occur. Pregnancy Prevention Programme Pharmacists must ensure that female patients have a patient card—see also *Important safety information*.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Capable

CAUTIONARY AND ADVISORY LABELS 10, 11, 21

#### Isotretinoin (non-proprietary) ▼

**Isotretinoin 5 mg** Isotretinoin 5mg capsules | 56 capsule [PoM](#)

£19.74 DT = £16.80

**Isotretinoin 10 mg** Isotretinoin 10mg capsules | 30 capsule [PoM](#)

## Tretinoin with clindamycin

13-Oct-2021

The properties listed below are those particular to the combination only. For the properties of the components please consider, tretinoin p. 1014, clindamycin p. 1363.

### ● INDICATIONS AND DOSE

#### Acne vulgaris

##### ▶ TO THE SKIN

- ▶ Child 12-17 years: Apply once daily, to be applied thinly at bedtime
- ▶ Adult: Apply once daily, to be applied thinly at bedtime

- **CONTRA-INDICATIONS** Perioral dermatitis · personal or familial history of skin cancer · rosacea
- **CAUTIONS** Allow peeling (resulting from other irritant treatments) to subside before using a topical retinoid · avoid accumulation in angles of the nose · avoid contact with eyes, nostrils, mouth and mucous membranes, eczematous, broken or sunburned skin · avoid exposure to UV light (including sunlight, solariums) · avoid use of topical retinoids with keratolytic agents, abrasive cleaners, comedogenic or astringent cosmetics · caution in sensitive areas such as the neck · severe acne
- **INTERACTIONS** → Appendix 1: clindamycin · retinoids
- **SIDE-EFFECTS** Dry skin (discontinue if severe) · eye irritation · oedema · photosensitivity reaction · skin pigmentation change (transient) · skin reactions
- **CONCEPTION AND CONTRACEPTION** Females of child-bearing age must use effective contraception (oral progestogen-only contraceptives not considered effective).
- **PREGNANCY** Contra-indicated in pregnancy.
- **BREAST FEEDING** Amount of drug in milk after topical application probably too small to be harmful; ensure infant does not come in contact with treated areas.

- **PATIENT AND CARER ADVICE** If sun exposure is unavoidable, an appropriate sunscreen or protective clothing should be used.

Patients and carers should be warned that some redness and skin peeling can occur initially but settles with time. To reduce the risk of skin irritation, treatment may be started with alternate-day or short-contact application (e.g. washing off after an hour) and progressed to standard application if tolerated. If severe irritation occurs, the frequency of application should be reduced or treatment suspended until the reaction subsides; if irritation persists, discontinue treatment. Several months of treatment may be needed to achieve an optimal response and the treatment should be continued until no new lesions develop.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Gel

CAUTIONARY AND ADVISORY LABELS 11

EXCIPIENTS: May contain Butylated hydroxytoluene, hydroxybenzoates (parabens), polysorbates

#### ▶ Tretinoin (Unipharm (DialAChemist))

## VITAMINS AND TRACE ELEMENTS > VITAMIN B GROUP

### Nicotinamide

05-Oct-2021

#### ● INDICATIONS AND DOSE

##### Inflammatory acne vulgaris

- ▶ TO THE SKIN

▶ Adult: Apply twice daily, reduced to once daily or on alternate days, dose reduced if irritation occurs

- **CAUTIONS** Avoid contact with eyes · avoid contact with mucous membranes (including nose and mouth) · reduce frequency of application if excessive dryness, irritation or peeling

- **SIDE-EFFECTS** Paraesthesia · skin reactions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Gel

- ▶ **Frederm** (Diomed Developments Ltd)

Nicotinamide 40 mg per 1 gram Frederm Treatment 4% gel | 25 gram [P] £5.56 DT = £5.56

- ▶ **Nicam** (Dermal Laboratories Ltd)

Nicotinamide 40 mg per 1 gram Nicam 4% gel | 60 gram [P] £7.10 DT = £7.10

## 6.2 Rosacea

### ANTHELMINTICS

#### Ivermectin

20-Aug-2020

#### ● INDICATIONS AND DOSE

##### Papulopustular rosacea

- ▶ TO THE SKIN

▶ Adult: Apply daily for up to 4 months, the treatment course may be repeated; discontinue if no improvement after 3 months

- **INTERACTIONS** → Appendix 1: ivermectin
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Skin reactions
- **PREGNANCY** Manufacturer advises avoid—limited information but toxicity following *oral* use in *animal* studies.
- **BREAST FEEDING** Manufacturer advises avoid—limited information but present in milk following *oral* use.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment (no information available).
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises apply thinly to the face only, avoiding contact with eyes, lips and mucosa.
- **PATIENT AND CARER ADVICE** Wash hands immediately after use.

#### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

##### Scottish Medicines Consortium (SMC) decisions

- ▶ Ivermectin (*Soolantra*<sup>®</sup>) for topical treatment of inflammatory lesions of rosacea (papulopustular) in adult patients (December 2015) SMC No. 1104/15 Recommended with restrictions

##### All Wales Medicines Strategy Group (AWMSG) decisions

- ▶ Ivermectin (*Soolantra*<sup>®</sup>) for treatment of inflammatory lesions of rosacea (papulopustular) in adult patients (April 2016) AWMSG No. 1627 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), disodium edetate, isopropyl palmitate, propylene glycol

- ▶ **Soolantra** (Galderma (UK) Ltd)

Ivermectin 10 mg per 1 gram Soolantra 10mg/g cream | 45 gram [PoM] £27.43 DT = £27.43

## SYMPATHOMIMETICS > ALPHA<sub>2</sub>-ADRENOCEPTOR AGONISTS

### Brimonidine tartrate

11-May-2021

- **DRUG ACTION** Brimonidine, an alpha<sub>2</sub>-adrenoceptor agonist, is used to reduce erythema in rosacea by cutaneous vasoconstriction.

#### ● INDICATIONS AND DOSE

##### Facial erythema in rosacea

- ▶ TO THE SKIN

▶ Adult: Apply once daily until erythema subsides, apply thinly, divide dose over forehead, chin, nose, and cheeks, max. 1 g of gel per day

##### DOSE EQUIVALENCE AND CONVERSION

▶ 1 g of gel contains 5 mg of brimonidine tartrate (equivalent to 3.3 mg of brimonidine).

#### IMPORTANT SAFETY INFORMATION

##### MHRA/CHM ADVICE: BRIMONIDINE GEL (*MIRVASO*<sup>®</sup>): RISK OF SYSTEMIC CARDIOVASCULAR EFFECTS (JUNE 2017)

Systemic cardiovascular effects including bradycardia, hypotension, and dizziness have been reported after application of brimonidine gel. To minimise the possibility of systemic absorption, it is important to avoid application to irritated or damaged skin, including after laser therapy.

##### MHRA/CHM ADVICE: BRIMONIDINE GEL (*MIRVASO*<sup>®</sup>): RISK OF EXACERBATION OF ROSACEA (NOVEMBER 2016)

Symptom exacerbation has been reported very commonly in patients treated with brimonidine gel. Treatment should be initiated with a small amount of gel (less than the maximum dose) for at least 1 week, then increased gradually, based on tolerability and response. Patients should be counselled on the importance of not exceeding the maximum daily dose, and advised to stop treatment and seek medical advice if symptoms worsen during treatment.

- **CAUTIONS** Cerebral insufficiency · coronary insufficiency · depression · postural hypotension · Raynaud's syndrome · severe cardiovascular disease · thromboangitis obliterans
- **INTERACTIONS** → Appendix 1: brimonidine
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Dizziness · dry mouth · flushing · headache · skin reactions
  - ▶ **Uncommon** Angioedema · eyelid oedema · feeling hot · nasal congestion · paraesthesia · peripheral coldness
  - ▶ **Rare or very rare** Bradycardia · hypotension

- **PREGNANCY** Manufacturer advises avoid—limited information available.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (no information available).
- **RENAL IMPAIRMENT** Manufacturer advises use with caution.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises avoid contact with eyes, mouth, and mucous membranes; avoid use on irritated or damaged skin or open wounds; apply other topical preparations (including cosmetics) only after brimonidine gel has dried on skin.
- **PATIENT AND CARER ADVICE** Patients should be advised on administration of gel.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website  
**Scottish Medicines Consortium (SMC) decisions**

## 7 Scalp and hair conditions

### Scalp and hair conditions

14-Aug-2020

**Overview**

*Dandruff* is considered to be a mild form of seborrhoeic dermatitis. Shampoos containing antimicrobial agents such as **pyrithione zinc** (which are widely available) and selenium p. 1370 may have beneficial effects. Shampoos containing **tar** extracts may be useful and they are also used in *psoriasis*. Ketoconazole shampoo p. 1324 should be considered for more persistent or severe dandruff or for seborrhoeic dermatitis of the scalp.

**Corticosteroid** gels and lotions can also be used.

Shampoos containing coal tar with salicylic acid p. 1346 may also be useful. A cream or an ointment containing coal tar with salicylic acid is very helpful in Psoriasis p. 1330 that affects the scalp. Patients who do not respond to these treatments may need to be referred to exclude the possibility of other skin conditions.

*Cradle cap* in infants may be treated with **coconut oil** or **olive oil** applications followed by shampooing.

**Hirsutism**

Hirsutism may result from hormonal disorders or as a side-effect of drugs such as minoxidil p. 1370, corticosteroids, anabolic steroids, androgens, danazol, and progestogens.

Weight loss can reduce hirsutism in obese women.

Women should be advised about local methods of hair removal, and in the mildest cases this may be all that is required.

Eflornithine p. 1370 an antiprotozoal drug, inhibits the enzyme ornithine decarboxylase in hair follicles. Topical

eflornithine can be used as an adjunct to laser therapy for facial hirsutism in women.

Co-cyprindiol p. 1362 (cyproterone acetate with ethinylestradiol) may be effective for moderately severe hirsutism. Metformin hydrochloride p. 761 is an alternative in women with polycystic ovary syndrome [unlicensed indication]. Systemic treatment is required for 6–12 months before benefit is seen. The MHRA/CHM have released important safety information regarding the use of cyproterone acetate and the risk of meningioma. For further information, see *Important safety information for co-cyprindiol*. The Faculty of Sexual and Reproductive Healthcare have released a statement in response to the MHRA/CHM information (available at: [www.fsrh.org/standards-and-guidance/documents/fsrh-ceu-statement-new-advice-from-the-mhra-regarding/](http://www.fsrh.org/standards-and-guidance/documents/fsrh-ceu-statement-new-advice-from-the-mhra-regarding/)).

**Androgenetic alopecia**

Finasteride p. 850 is licensed for the treatment of androgenetic alopecia in men. Continuous use for 3–6 months is required before benefit is seen, and effects are reversed 6–12 months after treatment is discontinued.

Topical application of minoxidil may stimulate limited hair growth in a small proportion of adults but only for as long as it is used.

**Other drugs used for Scalp and hair conditions** Coal tar, p. 1345 · Coal tar with salicylic acid and precipitated sulfur, p. 1346

### ANTISEPTICS AND DISINFECTANTS > UNDECENOATES

#### Cetrimide with undecenoic acid

- **INDICATIONS AND DOSE**

**Scalp psoriasis | Seborrhoeic dermatitis | Dandruff**

▶ TO THE SKIN

▶ Child: Apply 3 times a week for 1 week, then apply twice weekly

▶ Adult: Apply 3 times a week for 1 week, then apply twice weekly

- **MEDICINAL FORMS** No licensed medicines listed.

### ANTISEPTICS AND DISINFECTANTS > OTHER

#### Benzalkonium chloride

26-Mar-2020

- **INDICATIONS AND DOSE**

**Seborrhoeic scalp conditions associated with dandruff and scaling**

▶ TO THE SKIN

▶ Child: Apply as required

▶ Adult: Apply as required

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Shampoo**

▶ **Dermax** (Dermal Laboratories Ltd)

**Benzalkonium chloride 5 mg per 1 ml** Dermax Therapeutic 0.5% shampoo | 250 ml **[P]** £5.69 DT = £5.69

## VITAMINS AND TRACE ELEMENTS

## Selenium

## ● INDICATIONS AND DOSE

**Seborrhoeic dermatitis | Dandruff**

## ▶ TO THE SKIN USING SHAMPOO

- ▶ Child 5-17 years: Apply twice weekly for 2 weeks, then apply once weekly for 2 weeks, then apply as required
- ▶ Adult: Apply twice weekly for 2 weeks, then apply once weekly for 2 weeks, then apply as required

**Pityriasis versicolor**

## ▶ TO THE SKIN USING SHAMPOO

- ▶ Adult: Apply once daily for 7 days, apply to the affected area and leave on for 10 minutes before rinsing off. The course may be repeated if necessary. Diluting with a small amount of water prior to application can reduce irritation

● **UNLICENSED USE** The use of selenium sulfide shampoo as a lotion for the treatment of pityriasis (tinea) versicolor is an unlicensed indication.

● **INTERACTIONS** → Appendix 1: selenium

● **PATIENT AND CARER ADVICE** Avoid using 48 hours before or after applying hair colouring, straightening or waving preparations.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Shampoo**

EXCIPIENTS: May contain Fragrances

▶ **Selsun** (Chattem (U.K.) Ltd)

**Selenium sulfide 25 mg per 1 ml** Selsun 2.5% shampoo | 50 ml [P] £1.61 DT = £1.61 | 100 ml [P] £2.15 DT = £2.15 | 150 ml [P] £3.06 DT = £3.06

## 7.1 Alopecia

## VASODILATORS &gt; POTASSIUM-CHANNEL OPENERS

## Minoxidil

08-Nov-2021

## ● INDICATIONS AND DOSE

**REGAINE® FOR MEN EXTRA STRENGTH FOAM****Androgenetic alopecia**

## ▶ TO THE SKIN

- ▶ Adult: Apply 0.5 capful twice daily, to be applied to the affected areas of scalp; discontinue if no improvement after 16 weeks

**REGAINE® FOR MEN EXTRA STRENGTH SOLUTION****Androgenetic alopecia**

## ▶ TO THE SKIN

- ▶ Adult: Apply 1 mL twice daily, to be applied to the affected areas of scalp; discontinue if no improvement after 1 year

**REGAINE® FOR WOMEN REGULAR STRENGTH****Androgenetic alopecia**

## ▶ TO THE SKIN

- ▶ Adult: Apply 1 mL twice daily, to be applied to the affected areas of scalp; discontinue if no improvement after 1 year

● **CONTRA-INDICATIONS** Phaeochromocytoma

● **CAUTIONS** Avoid contact with broken, infected, shaved, or inflamed skin · avoid contact with eyes · avoid contact with mouth · avoid contact with mucous membranes · avoid inhalation of spray mist · avoid occlusive dressings

● **INTERACTIONS** → Appendix 1: minoxidil

## ● SIDE-EFFECTS

▶ **Common or very common** Hair changes

▶ **Uncommon** Hypotension

**SIDE-EFFECTS, FURTHER INFORMATION** When used topically systemic effects unlikely; only about 1–2% absorbed (greater absorption may occur with use on inflamed skin).

● **PREGNANCY** Avoid—possible toxicity including reduced placental perfusion. Neonatal hirsutism reported.

● **BREAST FEEDING** Present in milk but not known to be harmful.

● **PATIENT AND CARER ADVICE** Ensure hair and scalp dry before application. Patients and their carers should be advised to wash hands after application of liquid or foam.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Liquid**

CAUTIONARY AND ADVISORY LABELS 15

EXCIPIENTS: May contain Propylene glycol

Eflornithine (as Eflornithine hydrochloride monohydrate) 115 mg per 1 gram Vaniqa 11.5% cream | 60 gram [POM] £56.87 DT = £56.87

## 8 Skin cleansers, antiseptics and desloughing agents

### Skin cleansers, antiseptics and desloughing agents

#### Skin cleansers and antiseptics

Soap or detergent is used with water to cleanse intact skin; emollient preparations such as aqueous cream or emulsifying ointment can be used in place of soap or detergent for cleansing dry skin.

An antiseptic is used for skin that is infected or that is susceptible to recurrent infection. Detergent preparations containing chlorhexidine p. 1372 or povidone-iodine p. 1372, which should be thoroughly rinsed off, are used. Emollients may also contain antiseptics.

Antiseptics such as chlorhexidine or povidone-iodine are used on intact skin before surgical procedures; their antiseptic effect is enhanced by an alcoholic solvent. Antiseptic solutions containing cetrimide can be used if a detergent effect is also required.

Hydrogen peroxide p. 1374, an oxidising agent, can be used in solutions of up to 6% for skin disinfection, such as cleansing and deodorising wounds and ulcers. Hydrogen peroxide is also available as a cream for superficial bacterial skin infections.

For irrigating ulcers or wounds, lukewarm sterile sodium chloride 0.9% solution is used, but tap water is often appropriate.

Potassium permanganate solution 1 in 10 000 below, a mild antiseptic with astringent properties, can be used for exudative eczematous areas; treatment should be stopped when the skin becomes dry.

#### Desloughing agents

Alginate, hydrogel and hydrocolloid dressings are effective at wound debridement. Sterile larvae (maggots) (available from BioMonde) are also used for managing sloughing wounds and are prescribable on the NHS.

Desloughing solutions and creams are of little clinical value. Substances applied to an open area are easily absorbed and perilesional skin is easily sensitised. Gravitational dermatitis may be complicated by superimposed contact sensitivity to substances such as neomycin sulfate p. 1322 or lanolin.

### ANTISEPTICS AND DISINFECTANTS

#### Potassium permanganate

22-Apr-2022

##### ● INDICATIONS AND DOSE

##### Cleansing and deodorising suppurating eczematous reactions and wounds

- ▶ TO THE SKIN
- ▶ Adult: For wet dressings or baths, use approximately 0.01% (1 in 10 000) solution

##### IMPORTANT SAFETY INFORMATION

**NHS IMPROVEMENT PATIENT SAFETY ALERT: RISK OF DEATH OR SERIOUS HARM FROM ACCIDENTAL INGESTION OF POTASSIUM PERMANGANATE PREPARATIONS (DECEMBER 2014)**

Potassium permanganate is for external use only. Oral ingestion can cause fatality due to local inflammatory reactions that block the airways or cause perforations of the gastrointestinal tract, or through toxicity and organ failure. Potassium permanganate is subject to the requirements of Control of Substances Hazardous to Health including: separate storage, additional hazard labelling, and issue only to staff and patients who have been educated to understand its safe use. Accidental ingestion should be treated as a medical emergency.

**NHS IMPROVEMENT PATIENT SAFETY ALERT: INADVERTENT ORAL ADMINISTRATION OF POTASSIUM PERMANGANATE (APRIL 2022)**

A review of reported incidents over a two-year period identified 35 cases of inadvertent ingestion of potassium permanganate. Of these, 15 cases were of healthcare staff administering potassium permanganate orally to patients and 9 cases, one fatal, of patients self-administering orally. To minimise the risk of harm from potassium permanganate, the British Association of Dermatologists (BAD) has issued advice on formulary management, prescribing, dispensing, storage, preparation and use, and waste [www.bad.org.uk/healthcare-professionals/clinical-standards/](http://www.bad.org.uk/healthcare-professionals/clinical-standards/).

The overall use of potassium permanganate should be reviewed locally and protocols for its use should be aligned with all BAD recommendations, including:

In primary care:

- patients are not on repeat prescriptions for potassium permanganate;
- prescriptions include clear instructions to dilute before use;
- dispensing label includes the warning 'harmful if swallowed'.

In secondary care:

- remove all stock supply (except for use within outpatient departments) and supply on a named patient basis only;
- potassium permanganate is prescribed as 'potassium permanganate 0.01% topical solution' and the dispensing label must include the warning 'harmful if swallowed';
- potassium permanganate is not stored with medicines for oral/internal use, including the ward drug trolley; dilution should occur away from the patient, and neither the concentrated form nor the diluted form should be left near the patient.

In all settings:

- prescriptions are only issued by an appropriate prescriber;
- if potassium permanganate is to be used in a patient's home, a risk assessment must be undertaken before prescribing;
- all patients must be supplied with a patient information leaflet.

- **CAUTIONS** Irritant to mucous membranes

- **DIRECTIONS FOR ADMINISTRATION** With potassium permanganate tablets for solution, 1 tablet dissolved in 4 litres of water provides a 0.01% (1 in 10 000) solution.
- **PATIENT AND CARER ADVICE** Can stain clothing, skin and nails (especially with prolonged use).
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: liquid

**Tablet for cutaneous solution**

- ▶ **Potassium permanganate (Non-proprietary)**
- ▶ **Potassium permanganate 400 mg** EN-Potab 400mg tablets for cutaneous solution | 30 tablet  $\boxtimes$  DT = £23.65

**IMPORTANT SAFETY INFORMATION**

MHRA/CHM ADVICE: CHLORHEXIDINE SOLUTIONS: REMINDER OF THE RISK OF CHEMICAL BURNS IN PREMATURE INFANTS (NOVEMBER 2014)

In premature infants, use sparingly, monitor for skin reactions, and do not allow solution to pool—risk of severe chemical burns.

- **CONTRA-INDICATIONS** Not for use in body cavities
- **CAUTIONS** Avoid contact with brain · avoid contact with eyes · avoid contact with meninges · avoid contact with middle ear · use prior to diathermy (alcohol containing skin disinfectants)
- **SIDE-EFFECTS** Skin reactions
- **DIRECTIONS FOR ADMINISTRATION**  
**HIBITANE® PLUS 5% CONCENTRATE SOLUTION** For pre-operative skin preparation, dilute 1 in 10 (0.5%) with alcohol 70%. For general skin disinfection, dilute 1 in 100 (0.05%) with water. Alcoholic solutions not suitable for use before diathermy or on neonatal skin.
- **PRESCRIBING AND DISPENSING INFORMATION**  
Chlorhexidine digluconate is a synonym for chlorhexidine gluconate.

## Hydrogen peroxide

29-Apr-2020

- **DRUG ACTION** Hydrogen peroxide is an oxidising agent.

#### ● INDICATIONS AND DOSE

##### For skin disinfection, particularly cleansing and deodorising wounds and ulcers

- ▶ TO THE SKIN
- ▶ Adult: Use 3% and 6% solutions (consult product literature)

#### CRYSTACIDE®

##### Superficial bacterial skin infection

- ▶ TO THE SKIN
- ▶ Child: Apply 2–3 times a day for up to 3 weeks
- ▶ Adult: Apply 2–3 times a day for up to 3 weeks

##### Localised non-bullous impetigo [in patients who are not systemically unwell or at high risk of complications]

- ▶ TO THE SKIN
- ▶ Child: Apply 2–3 times a day for 5–7 days
- ▶ Adult: Apply 2–3 times a day for 5–7 days

- **UNLICENSED USE** Licensed for use in children (age range not specified by manufacturer).
- **CONTRA-INDICATIONS** Closed body cavities (in adults) · deep wounds · large wounds · use as disinfection agent for surgical instruments (in adults) · use as enema (in adults) · use during surgery (in adults)
- **CAUTIONS** Avoid on eyes · avoid on healthy skin · incompatible with products containing iodine or potassium permanganate
- **PRESCRIBING AND DISPENSING INFORMATION** The BP directs that when hydrogen peroxide is prescribed,

hydrogen peroxide solution 6% (20 vols) should be dispensed.

Strong solutions of hydrogen peroxide which contain 27% (90 vols) and 30% (100 vols) are only for the preparation of weaker solutions.

**CRYSTACIDE®** For choice of therapy, see Skin infections, antibacterial therapy p. 554.

- **HANDLING AND STORAGE** Hydrogen peroxide bleaches fabric.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: liquid

#### Cream

**LiquiBand tissue adhesive** (Advanced Medical Solutions Ltd) 0.5 gram - NHS indicative price = £5.50 • Drug Tariff (Part IXa)

## 9 Skin disfigurement

### Camouflagers

#### Overview

Disfigurement of the skin can be very distressing to patients and may have a marked psychological effect. In skilled hands, or with experience, camouflage cosmetics can be very effective in concealing scars and birthmarks. The depigmented patches in vitiligo are also very disfiguring and camouflage creams are of great cosmetic value.

Opaque cover foundation or cream is used to mask skin pigment abnormalities; careful application using a combination of dark- and light-coloured cover creams set with powder helps to minimise the appearance of skin deformities.

#### Borderline substances

The preparations marked 'ACBS' can be prescribed on the NHS for postoperative scars and other deformities and as adjunctive therapy in the relief of emotional disturbances due to disfiguring skin disease, such as vitiligo.

## Camouflages

### • CAMOUFLAGES

**Covermark classic foundation** (Colour Not Specified)

15 ml(ACBS) • NHS indicative price = £11.86

**Dermacolor camouflage creme** (Colour Not Specified)

30 gram • NHS indicative price = £11.00

**Veil finishing powder** (Colour Not Specified)

35 gram(ACBS) • NHS indicative price = £24.58

Sunscreen preparations may cause contact dermatitis as a result of an allergy to one of its ingredients.

For optimum photoprotection, sunscreen preparations should be applied **liberally** and **frequently** as per manufacturer instructions. As maximum protection from sunlight is desirable in patients with photodermatoses, sunscreen with the highest SPF is essential.

### Borderline substances

Some sunscreen products (see *About Borderline Substances*) are regarded as drugs when prescribed for skin protection against ultraviolet radiation and/or visible light in abnormal cutaneous photosensitivity causing severe cutaneous reactions in genetic disorders (including xeroderma pigmentosum and porphyrias), severe photodermatoses (both idiopathic and acquired) and in those with increased risk of ultraviolet radiation causing adverse effects due to chronic disease (such as haematological malignancies), medical therapies and/or procedures.

## 10 Sun protection and photodamage

### Sunscreen

15-Sep-2021

#### Overview

Solar ultraviolet irradiation can be harmful to the skin. It is responsible for skin disorders such as *polymorphic light eruption*, *solar urticaria*, and it provokes the various *cutaneous porphyrias*. It may also trigger or aggravate skin lesions of *lupus erythematosus*, *rosacea*, and other *dermatoses*. Certain drugs, such as demeclocycline, phenothiazines, or amiodarone, can cause photosensitivity. Solar ultraviolet irradiation may also trigger attacks of recurrent herpes labialis.

The effects of exposure over longer periods include *ageing changes*, and more importantly the initiation of *skin cancer*.

Solar ultraviolet radiation is approximately 200–400 nm in wavelength. The medium wavelengths (290–320 nm, known as UVB) are the main cause of *sunburn*. The long wavelengths (320–400 nm, known as UVA) are responsible for many *photosensitivity reactions* and *photodermatoses*. Both UVA and UVB contribute to long-term *photodamage* and to the changes responsible for *skin cancer* and ageing.

Sunscreen preparations contain substances that protect the skin against UVA and UVB radiation, but they are not a substitute for covering the skin and avoiding sunlight. The sun protection factor (SPF, usually indicated in the preparation title) provides guidance on the degree of protection offered against UVB; it indicates the multiples of protection provided against burning, compared with unprotected skin; for example, an SPF of 8 should enable a person to remain 8 times longer in the sun without burning. However, in practice, most users do not apply sufficient sunscreen product. The amount of sunscreen needed to cover the body of an average adult to achieve the stated SPF is around 35 mL or 6–8 teaspoons of lotion.

The EU Commission (September 2006) has recommended that the UVA protection factor for a sunscreen should be at least one-third of the sun protection factor (SPF); products that achieve this requirement will be labelled with a UVA logo alongside the SPF classification. [EVCr](#) Sunscreens should meet the minimum standards for UVA protection and the label should state that it provides good UVA protection (e.g. at least '4-star UVA protection'). They should also provide a SPF of at least 15 for UVB protection. [A](#) Preparations that also contain reflective substances, such as titanium dioxide, provide the most effective protection against UVA.

### Photodamage

18-Nov-2020

#### Overview

[EVCr](#) Patients should be advised on the harms of prolonged sunlight exposure and how to adequately protect their skin from strong sunlight (e.g. use of topical sun protection preparations).

Topical treatments can be used for actinic (solar) keratoses. An emollient can be used as part of the management regimen for dry, sun-damaged elderly skin although the direct effect of emollient treatment is unclear; addition of urea or salicylic acid may provide benefit. Diclofenac sodium p. 1377 gel may be suitable for the treatment of superficial lesions in mild disease. Fluorouracil cream p. 1377 is effective against most types of non-hypertrophic actinic keratosis; a solution containing fluorouracil with salicylic acid p. 1377 can be used for the treatment of low or moderately thick hyperkeratotic actinic keratosis. Imiquimod p. 1381 can be used for lesions on the face and scalp when cryotherapy or other topical treatments cannot be used. Fluorouracil and imiquimod produce a more marked inflammatory reaction than diclofenac sodium but lesions resolve faster. Photodynamic therapy in combination with methyl-5-aminolevulinic acid (Metvix<sup>®</sup>) or 5-aminolevulinic acid gel (Ameluz<sup>®</sup>) is used in specialist centres for treating superficial and confluent, non-hypertrophic actinic keratosis when other treatments are inadequate or unsuitable; it is particularly suitable for multiple and large-area lesions, cosmetically sensitive sites, lesions located at sites of poor healing, or where pain is likely to be an issue. [A](#)

Imiquimod and topical fluorouracil are licensed for treating superficial basal cell carcinomas. [EVCr](#) Patients with skin lesions suspected to be a basal cell carcinoma should be considered for routine referral; a suspected cancer pathway referral should only be considered if there are concerns that delay may have a significant impact (due to factors such as lesion size and site). Photodynamic therapy in combination with methyl-5-aminolevulinic acid is used in specialist centres for treating thin nodular basal cell carcinomas when other treatments are unsuitable. It may also be used for superficial basal cell carcinomas, particularly for multiple and large-area lesions, cosmetically sensitive sites, and lesions located at sites of poor healing. [A](#)

## ANALGESICS > NON-STEROIDAL ANTI-INFLAMMATORY DRUGS

### Diclofenac sodium

21-Apr-2022

#### ● INDICATIONS AND DOSE

SOLARAZE®

#### Actinic keratosis

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily for 60–90 days, to be applied thinly; maximum 8 g per day

● **CAUTIONS** Avoid contact with eyes · avoid contact with inflamed or broken skin · avoid contact with mucous membranes · not for use with occlusive dressings · topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported)

● **INTERACTIONS** → Appendix 1: NSAIDs

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Conjunctivitis · muscle tone increased · oedema · rash (discontinue) · sensation abnormal · skin reactions · skin ulcer
- ▶ **Uncommon** Abdominal pain · alopecia · diarrhoea · eye pain · haemorrhage · lacrimation disorder · nausea · seborrhoea
- ▶ **Rare or very rare** Acute kidney injury · angioedema · asthma · hypersensitivity · photosensitivity reaction · rash pustular
- ▶ **Frequency not known** Hair colour changes

**SIDE-EFFECTS, FURTHER INFORMATION** Topical application of large amounts of diclofenac can result in systemic effects.

● **ALLERGY AND CROSS-SENSITIVITY** EvGr Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. M

● **PREGNANCY** Patient packs for topical preparations carry a warning to avoid during pregnancy.

● **BREAST FEEDING** Patient packs for topical preparations carry a warning to avoid during breast-feeding.

● **RENAL IMPAIRMENT** In general, manufacturers advise caution (deterioration in renal function has also been reported after topical use).

● **DIRECTIONS FOR ADMINISTRATION** For topical preparations, apply with gentle massage only.

● **PATIENT AND CARER ADVICE** For topical preparations, patients and their carers should be advised to wash hands immediately after use.

**Photosensitivity** Patients should be advised against excessive exposure to sunlight of area treated in order to avoid possibility of photosensitivity.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Gel

EXCIPIENTS: May contain Benzyl alcohol, fragrances, propylene glycol

▶ **Solaraze** (Almirall Ltd)

**Diclofenac sodium 30 mg per 1 gram** Solaraze 3% gel | 50 gram PoM £38.30 DT = £38.30 | 100 gram PoM £76.60

## ANTINEOPLASTIC DRUGS > ANTIMETABOLITES

### Fluorouracil

19-Jan-2021

#### ● INDICATIONS AND DOSE

#### Superficial malignant and pre-malignant skin lesions

▶ TO THE SKIN USING CREAM

- ▶ **Adult:** Apply 1–2 times a day for 3–4 weeks (usual duration of initial therapy), apply thinly to the affected area, maximum area of skin 500 cm<sup>2</sup> (e.g. 23 cm × 23 cm) treated at one time, alternative regimens may be used in some settings

● **CAUTIONS** Avoid contact with eyes and mucous membranes · dihydropyrimidine dehydrogenase deficiency · do not apply to bleeding lesions

● **INTERACTIONS** → Appendix 1: fluorouracil

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Alopecia · diarrhoea · mucositis · nausea · neutropenia · skin reactions · stomatitis · thrombocytopenia · vomiting
- ▶ **Uncommon** Dizziness · headache
- ▶ **Rare or very rare** Abdominal pain · chills · diarrhoea · haemorrhagic · fever · leucocytosis · pancytopenia · skin irritation (use a topical corticosteroid for severe discomfort associated with inflammatory reactions) · skin ulcer
- ▶ **Frequency not known** Conjunctival irritation · excessive tearing · keratitis · taste altered

● **CONCEPTION AND CONTRACEPTION** Contraceptive advice required, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 962.

● **PREGNANCY** Manufacturers advise avoid (teratogenic).

● **BREAST FEEDING** Manufacturers advise avoid.

● **HANDLING AND STORAGE** Caution in handling—irritant to tissues.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Cream

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens), polysorbates, propylene glycol

▶ **Fluorouracil (Non-proprietary)**

**Fluorouracil 5 mg per 1 gram** Caror 0.5% cream | 30 gram PoM S

▶ **Efudix** (Viatris UK Healthcare Ltd)

**Fluorouracil 50 mg per 1 gram** Efudix 5% cream | 40 gram PoM

£32.90 DT = £32.90

### Fluorouracil with salicylic acid

The properties listed below are those particular to the combination only. For the properties of the components please consider, fluorouracil above, salicylic acid p. 1381.

#### ● INDICATIONS AND DOSE

#### Low or moderately thick hyperkeratotic actinic keratosis

▶ TO THE SKIN

- ▶ **Adult:** Apply once daily for up to 12 weeks, reduced to 3 times a week if severe side effects occur and until side-effects improve, to be applied to the affected area, if treating area with thin epidermis, reduce frequency of application and monitor response more often; maximum area of skin treated at one time, 25 cm<sup>2</sup> (e.g. 5 cm × 5 cm)

● **INTERACTIONS** → Appendix 1: fluorouracil

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Cutaneous solution

CAUTIONARY AND ADVISORY LABELS 15

- ▶ **Actikerall** (Almirall Ltd)

Fluorouracil 5 mg/g, Salicylic acid 100 mg/g Actikerall 5mg/g / 100mg/g cutaneous solution | 25 ml **[PoM]** £38.30 DT = £38.30

## ANTINEOPLASTIC DRUGS > PROTEIN KINASE INHIBITORS

### Tirbanibulin

12-Apr-2022

- **DRUG ACTION** Tirbanibulin is a tyrosine kinase inhibitor which binds to tubulin thereby inducing death of proliferating cells.

#### ● INDICATIONS AND DOSE

##### Actinic keratosis on face or scalp

- ▶ TO THE SKIN
- ▶ Adult: Apply once daily for 5 consecutive days, consider other treatment options if treated area does not show complete clearance after about 8 weeks

- **CAUTIONS** Avoid contact with eyes · avoid contact with inside of ears · avoid contact with inside of nostrils · avoid contact with lips · avoid contact with open wounds or broken skin · avoid occlusive dressings on treated area · immunocompromised patients

- **PREGNANCY** **[EvGr]** Avoid—toxicity in *animal* studies. **[M]**

- **BREAST FEEDING** Specialist sources indicate use with caution—amount in milk is likely to be low. Do not apply to breast or nipple and avoid contact with infant's skin.

- **DIRECTIONS FOR ADMINISTRATION** **[EvGr]** Each sachet is for single use only and for a treatment area of up to 25 cm<sup>2</sup>. Avoid applying on skin which has not healed from any previous treatment. Before applying, wash the treatment area with mild soap and water and dry. Avoid washing or touching the treated area for 8 hours after application; after this time, area may be washed with mild soap and water. **[M]**

- **PATIENT AND CARER ADVICE** Patients and carers should be advised that excessive exposure to direct sunlight, including the use of sunlamps and sunbeds, are to be avoided. If sun exposure is unavoidable, protective clothing should be worn.

Patients and carers should be advised on the application of *Klisyri*<sup>®</sup> ointment.

**Missed doses** If a dose is missed, apply the ointment as soon as remembered and continue with the regular schedule. Avoid applying more than once a day.

#### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

##### Scottish Medicines Consortium (SMC) decisions

- ▶ Tirbanibulin (*Klisyri*<sup>®</sup>) for field treatment of non-hyperkeratotic, non-hypertrophic actinic keratosis (Olsen grade 1) of the face or scalp in adults (December 2021) SMC No. SMC2395 Recommended

##### All Wales Medicines Strategy Group (AWMSG) decisions

- ▶ Tirbanibulin (*Klisyri*<sup>®</sup>) for the field treatment of non-hyperkeratotic, non-hypertrophic actinic keratosis (Olsen grade 1) of the face or scalp in adults (February 2022) AWMSG No. 4076 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Ointment

CAUTIONARY AND ADVISORY LABELS 10, 11, 28

EXCIPIENTS: May contain Propylene glycol

- ▶ **Klisyri** (Almirall Ltd) ▼

Tirbanibulin 10 mg per 1 gram Klisyri 10mg/g ointment 250mg sachets | 5 sachet **[PoM]** £59.00

## PROTEIN KINASE C ACTIVATORS

### Ingenol mebutate

09-Mar-2020

#### ● INDICATIONS AND DOSE

##### Actinic keratosis on face and scalp

- ▶ TO THE SKIN
- ▶ Adult: Apply once daily for 3 days, use the 150 microgram/g gel

##### Actinic keratosis on trunk and extremities

- ▶ TO THE SKIN
- ▶ Adult: Apply once daily for 2 days, use the 500 microgram/g gel

#### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE (UPDATED FEBRUARY 2020): INGENOL MEBUGATE GEL (*PICATO*<sup>®</sup>): SUSPENSION OF THE LICENCE DUE TO RISK OF SKIN MALIGNANCY

Clinical studies have shown an increased incidence of benign and malignant skin tumours (such as basal and squamous cell carcinoma, Bowen's disease, and keratoacanthoma) in patients using ingenol mebutate gel; cases of neuroendocrine carcinoma of the skin, and atypical fibroxanthoma have also been reported. Healthcare professionals are advised to stop prescribing ingenol mebutate gel and consider alternative treatment options for actinic keratosis. The licence of ingenol mebutate has been suspended as a precautionary measure while investigations are carried out. Healthcare professionals should advise patients to be vigilant for the development of any new skin lesions within the treatment area and to seek immediate medical advice if any occur.

- **CAUTIONS** Avoid contact with broken skin · avoid contact with eyes · avoid contact with inside of ears · avoid contact with inside of nostrils · avoid contact with lips · avoid occlusive dressings on treated area

#### ● SIDE-EFFECTS

- ▶ Common or very common Headache
- ▶ Frequency not known Neoplasms · skin eruption localised

- **PREGNANCY** Not absorbed from skin, but manufacturer advises avoid.

- **BREAST FEEDING** Not absorbed from skin; ensure infant does not come in contact with treated area for 6 hours after application.

- **DIRECTIONS FOR ADMINISTRATION** One tube covers skin area of 25 cm<sup>2</sup>. Allow gel to dry on treatment area for 15 minutes. Avoid washing or touching the treated area for 6 hours after application; after this time, area may be washed with mild soap and water. Avoid use immediately after shower or less than 2 hours before bedtime.

- **MEDICINAL FORMS** No licensed medicines listed.

## 11 Superficial soft-tissue injuries and superficial thrombophlebitis

### HEPARINOIDS

#### Heparinoid

#### ● INDICATIONS AND DOSE

##### Superficial thrombophlebitis | Bruising | Haematoma

- ▶ TO THE SKIN
- ▶ Adult: Apply up to 4 times a day

- **CONTRA-INDICATIONS** Should not be used on large areas of skin, broken or sensitive skin, or mucous membranes
- **LESS SUITABLE FOR PRESCRIBING** Hirudoid® is less suitable for prescribing.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Cream**

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens)

- ▶ **Hirudoid** (Genus Pharmaceuticals Ltd)

**Heparinoid 3 mg per 1 gram** Hirudoid 0.3% cream | 50 gram **P**  
£3.99 DT = £3.99

**Gel**

EXCIPIENTS: May contain Fragrances, propylene glycol

- ▶ **Hirudoid** (Genus Pharmaceuticals Ltd)

**Heparinoid 3 mg per 1 gram** Hirudoid 0.3% gel | 50 gram **P** £3.99  
DT = £3.99

## 12 Warts and calluses

### Warts and calluses

12-Feb-2021

#### Cutaneous warts

Cutaneous warts are caused by infection of keratinocytes with the human papillomavirus (HPV). They can appear on any part of the body but commonly affect the feet (also known as plantar warts or verrucas) and hands. In most cases, warts resolve spontaneously usually within 2 years; sometimes within months. **EvGr** Treatment is required only if the warts are painful, unsightly, persistent, or are causing distress and the patient requests treatment.

Treatment choice is dependent on patient preference and response to previous treatments. Patients with facial warts should be referred to a specialist for treatment. Options for non-facial warts include either the topical keratolytic salicylic acid p. 1381 (or salicylic acid with lactic acid p. 1382), or cryotherapy using liquid nitrogen, or a combination of both. A shorter cryotherapy freeze or weaker salicylic acid preparation is recommended for warts on the back of the hands, as scarring is more likely to occur. Cryotherapy is unlikely to help in the treatment of plantar warts as they can be difficult to treat. When indicated, cryotherapy should be provided by an appropriately trained healthcare professional. **⚠**

Preparations of formaldehyde p. 1380, glutaraldehyde p. 1380, and silver nitrate p. 1380 are also licensed for the treatment of warts on hands and feet.

Salicylic acid with lactic acid p. 1382 is also licensed for the removal of *corns* and *calluses*.

#### Anogenital warts

Anogenital warts (condylomata acuminata) are caused by the human papillomavirus. **EvGr** Patients with anogenital warts should be referred to a sexual health specialist where possible, and treatment should be accompanied by screening for other sexually transmitted infections. Treatment is not always required, as warts may resolve spontaneously, usually within 6 months.

Topical podophyllotoxin p. 1380 (the major active ingredient of podophyllum) may be used to treat soft, non-keratinised external anogenital warts. Topical imiquimod cream p. 1381 may also be used to treat external anogenital warts; it is suitable for both keratinised and non-keratinised lesions. Cryotherapy or other forms of physical ablative therapy (e.g. surgery, laser treatment) may also be considered, particularly for patients with a small number of low-volume warts, irrespective of type. **⚠**

Camellia sinensis below ointment is licensed for the treatment of external anogenital warts.

### ANTINEOPLASTIC DRUGS > PLANT ALKALOIDS

#### Camellia sinensis

20-Aug-2020

- **DRUG ACTION** Camellia sinensis is an extract from green tea leaves. The exact mechanism of action is not known; non-clinical studies have shown inhibition of the growth of activated keratinocytes, and anti-oxidative effects at the site of application.

#### INDICATIONS AND DOSE

##### Warts (external genital and perianal) in immunocompetent patients

###### ▶ TO THE LESION

- ▶ **Adult:** Apply up to 250 mg 3 times a day until complete clearance of warts (maximum 16 weeks), do not exceed treatment period even if new warts develop; maximum 750 mg per day

##### DOSE EQUIVALENCE AND CONVERSION

- ▶ 250 mg is equivalent to 0.5 cm of ointment.

- **CAUTIONS** Avoid broken skin · avoid contact with eyes · avoid contact with lips · avoid contact with mouth · avoid contact with nostrils · avoid inflamed skin · uncircumcised males (risk of phimosis) · vulvar region

#### ● SIDE-EFFECTS

- ▶ **Uncommon** Balanoposthitis · increased risk of infection · lymphatic abnormalities · necrosis · painful sexual intercourse · phimosis · skin reactions · urinary disorders
- ▶ **Frequency not known** Urinary tract stenosis · vaginal discharge

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises *Catephen*® may weaken condoms and vaginal diaphragms—alternative methods of contraception should be considered.

- **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies.

- **BREAST FEEDING** Manufacturer advises risk to infant cannot be excluded—no information available.

- **HEPATIC IMPAIRMENT** Manufacturer advises avoid in severe impairment (limited information available).

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises apply to each wart, ensuring a thin layer is left on the wart. It is not necessary to wash off the ointment from the area before next application.

- **PATIENT AND CARER ADVICE** Manufacturer advises the ointment should be washed off before sexual activity. Manufacturer advises female patients using tampons should insert tampon before applying the ointment.

#### ● NATIONAL FUNDING/ACCESS DECISIONS

For full details see funding body website

##### Scottish Medicines Consortium (SMC) decisions

- ▶ Camellia sinensis (green tea leaf) (*Catephen*®) for the cutaneous treatment of external genital and perianal warts (condylomata acuminata) in immunocompetent patients from the age of 18 years (April 2016) SMC No. 1133/16 Recommended with restrictions

##### All Wales Medicines Strategy Group (AWMSG) decisions

- ▶ Green tea leaf extract (*Catephen*®) for cutaneous treatment of external genital and perianal warts (condylomata acuminata) in immunocompetent patients from the age of 18 years (October 2016) AWMSG No. 2739 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Ointment

- ▶ **Catephen** (Kora Healthcare)

**Camellia sinensis extract 100 mg per 1 gram** Catephen 10% ointment | 15 gram **PoM** £39.00 DT = £39.00

## Podophyllotoxin

28-Jul-2020

### ● INDICATIONS AND DOSE

#### CONDYLIN®

#### Condylomata acuminata affecting the penis or the female external genitalia

##### ▶ TO THE LESION

- ▶ Adult: Apply twice daily for 3 consecutive days, treatment may be repeated at weekly intervals if necessary for a total of five 3-day treatment courses, direct medical supervision for lesions in the female and for lesions greater than 4 cm<sup>2</sup> in the male, maximum 50 single applications ('loops') per session (consult product literature)

#### WARTICON® CREAM

#### Condylomata acuminata affecting the penis or the female external genitalia

##### ▶ TO THE LESION

- ▶ Adult: Apply twice daily for 3 consecutive days, treatment may be repeated at weekly intervals if necessary for a total of four 3-day treatment courses, direct medical supervision for lesions greater than 4 cm<sup>2</sup>

#### WARTICON® LIQUID

#### Condylomata acuminata affecting the penis or the female external genitalia

##### ▶ TO THE LESION

- ▶ Adult: Apply twice daily for 3 consecutive days, treatment may be repeated at weekly intervals if necessary for a total of four 3-day treatment courses, direct medical supervision for lesions greater than 4 cm<sup>2</sup>, maximum 50 single applications ('loops') per session (consult product literature)

- **CAUTIONS** Avoid normal skin · avoid open wounds · keep away from face · very irritant to eyes
- **SIDE-EFFECTS** Balanoposthitis · skin irritation
- **PREGNANCY** Avoid.
- **BREAST FEEDING** Avoid.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Cream

EXCIPIENTS: May contain Butylated hydroxyanisole, cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens), sorbic acid

#### ▶ Warton (Phoenix Labs Ltd)

Podophyllotoxin 5 mg per 1 ml Warton 0.5% solution | 3 ml [PoM] £14.86 DT = £14.86

## ANTISEPTICS AND DISINFECTANTS > ALDEHYDES AND DERIVATIVES

### Formaldehyde

#### ● INDICATIONS AND DOSE

#### Warts, particularly plantar warts

##### ▶ TO THE LESION

- ▶ Child: Apply twice daily
- ▶ Adult: Apply twice daily

- **UNLICENSED USE** Licensed for use in children (age range not specified by manufacturer).

- **CAUTIONS** Impaired peripheral circulation · not suitable for application to anogenital region · not suitable for application to face · not suitable for application to large areas · patients with diabetes at risk of neuropathic ulcers · protect surrounding skin and avoid broken skin · significant peripheral neuropathy
- **SIDE-EFFECTS** Asthma · cough · dysphagia · eye irritation · increased risk of infection · laryngospasm · skin reactions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: liquid

#### Liquid

##### ▶ Formaldehyde (Non-proprietary)

Formaldehyde 40 mg per 1 ml Formaldehyde (Buffered) 4% solution | 1000 ml £3.90-£4.91 DT = £4.41

## Glutaraldehyde

01-Mar-2021

### ● INDICATIONS AND DOSE

#### Warts, particularly plantar warts

##### ▶ TO THE LESION

- ▶ Child: Apply twice daily
- ▶ Adult: Apply twice daily

- **UNLICENSED USE** Licensed for use in children (age range not specified by manufacturer).

- **CAUTIONS** Not for application to anogenital areas · not for application to face · not for application to mucosa · protect surrounding skin

#### ● SIDE-EFFECTS

- ▶ **Rare or very rare** Severe cutaneous adverse reactions (SCARs)
- ▶ **Frequency not known** Rash · skin irritation (discontinue if severe)

- **MEDICINAL FORMS** No licensed medicines listed.

## ANTISEPTICS AND DISINFECTANTS > OTHER

### Silver nitrate

#### ● INDICATIONS AND DOSE

#### Common warts

##### ▶ TO THE LESION

- ▶ Child: Apply every 24 hours for up to 3 applications, apply moistened caustic pencil tip for 1–2 minutes. Instructions in proprietary packs generally incorporate advice to remove dead skin before use by gentle filing and to cover with adhesive dressing after application
- ▶ Adult: Apply every 24 hours for up to 3 applications, apply moistened caustic pencil tip for 1–2 minutes. Instructions in proprietary packs generally incorporate advice to remove dead skin before use by gentle filing and to cover with adhesive dressing after application

#### Verrucae

##### ▶ TO THE LESION

- ▶ Child: Apply every 24 hours for up to 6 applications, apply moistened caustic pencil tip for 1–2 minutes. Instructions in proprietary packs generally incorporate advice to remove dead skin before use by gentle filing and to cover with adhesive dressing after application
- ▶ Adult: Apply every 24 hours for up to 6 applications, apply moistened caustic pencil tip for 1–2 minutes. Instructions in proprietary packs generally incorporate advice to remove dead skin before use by gentle filing and to cover with adhesive dressing after application

**Umbilical granulomas**

- ▶ TO THE SKIN
- ▶ Child: Apply moistened caustic pencil tip (usually containing silver nitrate 40%) for 1–2 minutes, protect surrounding skin with soft paraffin
- ▶ Adult: Apply moistened caustic pencil tip (usually containing silver nitrate 40%) for 1–2 minutes, protect surrounding skin with soft paraffin

**● UNLICENSED USE**

- ▶ In children No age range specified by manufacturer.
- **CAUTIONS** Avoid broken skin · not suitable for application to ano-genital region · not suitable for application to face · not suitable for application to large areas · protect surrounding skin

**● SIDE-EFFECTS**

- ▶ Rare or very rare Argyria · methaemoglobinemia
- **PATIENT AND CARER ADVICE** Patients should be advised that silver nitrate may stain fabric.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Stick**

- ▶ Avoca (Bray Group Ltd)
  - Silver nitrate **400 mg per 1 gram** Avoca 40% silver nitrate pencils | 1 applicator [P] £1.36 DT = £1.36
  - Silver nitrate **750 mg per 1 gram** Avoca 75% silver nitrate applicators | 100 applicator [P] £57.33 DT = £57.33
  - Avoca 75% silver nitrate applicators with thick handles | 50 applicator [P] £56.56
  - Silver nitrate **950 mg per 1 gram** Avoca 95% silver nitrate applicators | 100 applicator [P] £61.33 DT = £61.33

  - Avoca wart and verruca treatment set | 1 applicator [P] £3.60 DT = £3.60

**ANTIVIRALS > IMMUNE RESPONSE MODIFIERS****Imiquimod**

09-Nov-2020

**● INDICATIONS AND DOSE****ALDARA<sup>®</sup>****Warts (external genital and perianal)**

- ▶ TO THE LESION
- ▶ Adult: Apply 3 times a week until lesions resolve (maximum 16 weeks), to be applied thinly at night

**Superficial basal cell carcinoma**

- ▶ TO THE LESION
- ▶ Adult: Apply daily for 5 nights of each week for 6 weeks, to be applied to lesion and 1 cm beyond it, assess response 12 weeks after completing treatment

**Actinic keratosis**

- ▶ TO THE LESION
- ▶ Adult: Apply 3 times a week for 4 weeks, to be applied to lesion at night, assess response after a 4 week treatment-free interval; repeat 4-week course if lesions persist, maximum 2 courses

**ZYCLARA<sup>®</sup>****Actinic keratosis**

- ▶ TO THE SKIN
- ▶ Adult: Apply once daily for 2 weeks, to be applied at bedtime to lesion on face or balding scalp, repeat course after a 2-week treatment-free interval, assess response 8 weeks after second course; maximum 2 sachets per day

- **CAUTIONS** Autoimmune disease · avoid broken skin · avoid contact with eyes · avoid contact with lips · avoid contact with nostrils · avoid open wounds · immunosuppressed patients · not suitable for internal genital warts · uncircumcised males (risk of phimosis or stricture of foreskin)

**● SIDE-EFFECTS**

- ▶ **Common or very common** Appetite decreased · arthralgia · asthenia · headaches · increased risk of infection · lymphadenopathy · myalgia · nausea · pain
- ▶ **Uncommon** Anorectal disorder · chills · conjunctival irritation · depression · diarrhoea · dizziness · drowsiness · dry mouth · dysuria · erectile dysfunction · eyelid oedema · face oedema · fever · flushing · gastrointestinal discomfort · genital pain · hyperhidrosis · inflammation · influenza like illness · insomnia · irritability · laryngeal pain · malaise · nasal congestion · painful sexual intercourse · paraesthesia · penis disorder · skin reactions · skin ulcer · tinnitus · uterovaginal prolapse · vomiting · vulvovaginal disorders
- ▶ **Rare or very rare** Autoimmune disorder exacerbated
- ▶ **Frequency not known** Alopecia · cutaneous lupus erythematosus · severe cutaneous adverse reactions (SCARs)
- **CONCEPTION AND CONTRACEPTION** May damage latex condoms and diaphragms.
- **PREGNANCY** No evidence of teratogenicity or toxicity in animal studies; manufacturer advises caution.
- **BREAST FEEDING** No information available.
- **DIRECTIONS FOR ADMINISTRATION**

- ZYCLARA<sup>®</sup>** ▶ **Important** Manufacturer advises cream should be rubbed in and allowed to stay on the treated area for 8 hours, then washed off with mild soap and water.
- ALDARA<sup>®</sup>** ▶ **Important** Manufacturer advises cream should be rubbed in and allowed to stay on the treated area for 6–10 hours for warts or for 8 hours for basal cell carcinoma and actinic keratosis, then washed off with mild soap and water (uncircumcised males treating warts under foreskin should wash the area daily). The cream should be washed off before sexual contact.

- **PATIENT AND CARER ADVICE** A patient information leaflet should be provided.
- **NATIONAL FUNDING/ACCESS DECISIONS** For full details see funding body website
- Scottish Medicines Consortium (SMC) decisions**
- ▶ Imiquimod (Zyclara<sup>®</sup>) for the topical treatment of clinically typical, nonhyperkeratotic, nonhypertrophic, visible or palpable actinic keratosis (AK) of the full face or balding scalp in immunocompetent adults when other topical treatment options are contra-indicated or less appropriate (November 2019) SMC No. SMC2211 Recommended with restrictions

### IMMUNE SERA AND IMMUNOGLOBULINS > IMMUNOGLOBULINS

#### Immunoglobulins

19-Jul-2021

##### Passive immunity

Immunity with protection against certain infective organisms can be obtained by injecting preparations made from the plasma of immune individuals with adequate levels of antibody to the disease for which protection is sought. The duration of this passive immunity varies according to the dose and the type of immunoglobulin. Passive immunity may last only a few weeks; when necessary, passive immunisation can be repeated. Antibodies of human origin are usually termed immunoglobulins. The term antiserum is applied to material prepared in animals. Because of serum sickness and other allergic-type reactions that may follow injections of antisera, this therapy has been replaced wherever possible by the use of immunoglobulins. Reactions are theoretically possible after injection of human immunoglobulins but reports of such reactions are very rare.

Two types of human immunoglobulin preparation are available, normal immunoglobulin p. 1387 and **disease-specific immunoglobulins**.

Human normal immunoglobulin (HNIG) is prepared from pooled plasma obtained from donors outside the UK, tested and found non-reactive for hepatitis B surface antigen and for antibodies against hepatitis C virus and human immunodeficiency virus (types 1 and 2). A global shortage of human immunoglobulin and the rapidly increasing range of clinical indications for treatment with immunoglobulins has resulted in the need for a Demand Management programme in the UK, for further information consult the Department of Health and Social Care's **National Demand Management Programme for Immunoglobulin and Clinical Guidelines for Immunoglobulin Use** (both available at: [igd.mdsas.com](http://igd.mdsas.com)).

For further information on the use of immunoglobulins, see Public Health England (PHE) guidance: **Immunoglobulin: when to use** ([www.gov.uk/government/publications/immunoglobulin-when-to-use](http://www.gov.uk/government/publications/immunoglobulin-when-to-use)) and **Immunisation against Infectious Disease** ([www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)).

##### Availability

Human normal immunoglobulin for intramuscular administration is available from the Immunisation, Hepatitis and Blood Safety Department of PHE's Centre for Infectious Disease Surveillance and some regional PHE and NHS laboratories, for the protection of contacts and the control of outbreaks of hepatitis A, measles, and rubella only. For other indications, subcutaneous or intravenous normal

immunoglobulin may be purchased from the manufacturer (see Index of manufacturers p. 1798).

Various **disease-specific immunoglobulins** for intramuscular use are available from either the Immunisation, Hepatitis and Blood Safety Department of PHE's Centre for Infectious Disease Surveillance; some regional PHE and NHS laboratories; PHE's Rabies and Immunoglobulin Service; and/or through Bio Products Laboratory (BPL). Tetanus immunoglobulin p. 1390 is available from BPL, hospital pharmacies, or blood transfusion departments. Hepatitis B immunoglobulin p. 1387 required by transplant centres should be obtained commercially.

In Scotland all immunoglobulins are available from the *Scottish National Blood Transfusion Service* (SNBTS).

In Wales all immunoglobulins are available from the *Welsh Blood Service* (WBS).

In Northern Ireland all immunoglobulins are available from the *Northern Ireland Blood Transfusion Service* (NIBTS).

##### Normal immunoglobulin

Human normal immunoglobulin is prepared from pools of at least 1000 donations of human plasma; it contains immunoglobulin G (IgG) and antibodies to hepatitis A, measles, mumps, rubella, varicella, and other viruses that are currently prevalent in the general population.

##### Uses

Normal immunoglobulin (containing 10%–18% protein) is administered by *intramuscular injection* for the protection of susceptible contacts against **hepatitis A** virus (infectious hepatitis), **measles** and, to a lesser extent, **rubella**. Injection of immunoglobulin produces immediate protection lasting several weeks.

Normal immunoglobulin (containing 3%–12% protein) for *intravenous administration* is used as *replacement therapy* for patients with congenital agammaglobulinaemia and hypogammaglobulinaemia, and for the short-term treatment of idiopathic thrombocytopenic purpura and Kawasaki disease; it is also used for the prophylaxis of infection following bone-marrow transplantation and in children with symptomatic HIV infection who have recurrent bacterial infections. Normal immunoglobulin for replacement therapy may also be given intramuscularly or subcutaneously, but intravenous formulations are normally preferred. Intravenous immunoglobulin is also used in the treatment of Guillain-Barré syndrome as an alternative to plasma exchange.

For information on the use of intravenous normal immunoglobulin and alternative therapies for certain conditions, see the Department of Health and Social Care guideline: **Immunoglobulin Use** ([www.gov.uk/government/publications/clinical-guidelines-for-immunoglobulin-use-second-edition-update](http://www.gov.uk/government/publications/clinical-guidelines-for-immunoglobulin-use-second-edition-update)).

##### Hepatitis A

For close contacts (of the index case) who have chronic liver disease (including chronic hepatitis B or C infection), HIV infection (with a CD4 count < 200 cells per microlitre), are

immunosuppressed, or are aged 60 years or over, normal immunoglobulin in addition to the monovalent hepatitis A vaccine p. 1427 is recommended within 14 days of exposure to the index case (up to 28 days in those with chronic liver disease). Normal immunoglobulin and the monovalent hepatitis A vaccine can be given at the same time, but should be given at separate injection sites.

For further information on post-exposure prophylaxis and information on risk assessment, see Hepatitis A vaccine p. 1401.

### Measles

Intravenous or subcutaneous normal immunoglobulin may be given to prevent or attenuate an attack of measles in individuals who do not have adequate immunity. Patients with compromised immunity who have come into contact with measles should receive intravenous or subcutaneous normal immunoglobulin as soon as possible after exposure. It is most effective if given within 72 hours but can be effective if given within 6 days.

Subcutaneous or intramuscular normal immunoglobulin should also be considered for the following individuals if they have been in contact with a confirmed case of measles or with a person associated with a local outbreak:

- non-immune pregnant women
- infants under 9 months

Further advice should be sought from the Centre for Infections, Public Health England (tel. (020) 8200 6868).

Individuals with normal immunity who are not in the above categories and who have not been fully immunised against measles, can be given measles, mumps and rubella vaccine, live p. 1433 for prophylaxis following exposure to measles.

### Rubella

Intramuscular immunoglobulin after exposure to rubella does **not** prevent infection in non-immune contacts and is **not** recommended for protection of pregnant women exposed to rubella. It may, however, reduce the likelihood of a clinical attack which may possibly reduce the risk to the fetus. Risk of intra-uterine transmission is greatest in the first 11 weeks of pregnancy, between 16 and 20 weeks there is minimal risk of deafness only, after 20 weeks there is no increased risk. Intramuscular normal immunoglobulin should be used only if termination of pregnancy would be unacceptable to the pregnant woman—it should be given as soon as possible after exposure. Serological follow-up of recipients is essential to determine if the woman has become infected despite receiving immunoglobulin.

For routine prophylaxis against Rubella, see measles, mumps and rubella vaccine, live p. 1433.

### Tetanus

Normal immunoglobulin [unlicensed] can be used as an alternative when tetanus immunoglobulin is not available (see *Tetanus immunoglobulin in Disease-specific immunoglobulins*).

### Disease-specific immunoglobulins

Specific immunoglobulins are prepared by pooling the plasma of selected human donors with high levels of the specific antibody required. For further information, see PHE guidance: **Immunoglobulin: when to use** ([www.gov.uk/government/publications/immunoglobulin-when-to-use](http://www.gov.uk/government/publications/immunoglobulin-when-to-use)).

There are no specific immunoglobulins for hepatitis A, measles, or rubella—normal immunoglobulin p. 1387 is used in certain circumstances. There is no specific immunoglobulin for mumps; neither normal immunoglobulin nor measles, mumps and rubella vaccine, live is effective as post-exposure prophylaxis.

### Hepatitis B immunoglobulin

Hepatitis B immunoglobulin p. 1387 (HBIG) in addition to the hepatitis B vaccine p. 1429 is recommended for post-

exposure prophylaxis of individuals in certain high-risk groups to provide rapid protection against hepatitis B until the vaccine becomes effective. HBIG is also recommended in some known non-responders to the hepatitis B vaccine. The administration of HBIG at the same time as the vaccine will not inhibit the antibody response, but they should be given at different sites. For further information on high-risk groups and post-exposure management, see Hepatitis B vaccine p. 1402.

An intravenous and subcutaneous preparation of hepatitis B immunoglobulin is licensed for the prevention of hepatitis B recurrence in HBV-DNA negative patients who have undergone liver transplantation for liver failure caused by the virus.

### Rabies immunoglobulin

Rabies immunoglobulin p. 1389 should be considered following high risk exposure to rabies to give rapid protection until rabies vaccine p. 1434 (administered at a separate site) becomes effective. When indicated for post-exposure treatment, rabies immunoglobulin should be injected around the site of the wound where possible, rather than intramuscularly, as it neutralises rabies virus before the immune system can respond. There is limited benefit of intramuscular administration away from the wound site. For information about dosing and administration, see rabies immunoglobulin.

Rabies immunoglobulin is not recommended if:

- an individual is already partially or previously immunised (unless immunocompromised);
- more than 7 days have passed since the first dose of rabies vaccine or more than 1 day since the second dose of rabies vaccine;
- the rabies exposure was more than 12 months prior.

For further information on risk assessment and post-exposure treatment, see Rabies vaccine p. 1411.

### Tetanus immunoglobulin

Intravenous tetanus immunoglobulin is no longer available in the UK and the volume of intramuscular tetanus immunoglobulin required to reach a therapeutic dose would be too large in most individuals with tetanus. Therefore, for the management of suspected or confirmed tetanus infection (including localised tetanus), intravenous normal immunoglobulin [unlicensed] is recommended. For further guidance on the management of confirmed and suspected cases of tetanus (including localised tetanus), see Chapter 30, Tetanus, in *Immisation against infectious disease*—‘The Green Book’ (available at: [www.gov.uk/government/publications/tetanus-the-green-book-chapter-30](http://www.gov.uk/government/publications/tetanus-the-green-book-chapter-30)) and Public Health England (PHE) guidance: **Tetanus** (available at: [www.gov.uk/government/publications/tetanus-advice-for-health-professionals](http://www.gov.uk/government/publications/tetanus-advice-for-health-professionals)).

For the management of tetanus-prone wounds, tetanus immunoglobulin p. 1390 should be considered based on an individual’s immunisation status and wound category. If tetanus immunoglobulin is not available, normal immunoglobulin [unlicensed] may be used. For further guidance on the management of tetanus-prone wounds, see PHE guidance: **Tetanus** (available at: [www.gov.uk/government/publications/tetanus-advice-for-health-professionals](http://www.gov.uk/government/publications/tetanus-advice-for-health-professionals)). When indicated for post-exposure prophylaxis, tetanus immunoglobulin should be used in addition to the other preventative measures of thorough wound cleansing and administration of a tetanus-containing vaccine (depending on immunisation status). Antibacterial therapy may also be warranted depending on clinical severity. For further information, see *Post-exposure management* in Tetanus vaccine p. 1413.

### Varicella-zoster immunoglobulin

Varicella infection in immunosuppressed individuals and pregnant women can lead to severe and even life-threatening varicella disease. Post-exposure prophylaxis is

recommended to attenuate disease and to reduce the risk of complications.

Varicella-zoster immunoglobulin p. 1390 (VZIG) is recommended for individuals who have:

- had a significant exposure to varicella (chickenpox) or herpes zoster (shingles)—this depends on the type of varicella-zoster infection in the index case, the timing of the exposure in relation to onset of rash in the index case, and/or closeness and duration of contact; **and**
- a clinical condition that increases the risk of severe chickenpox; **and**
- no antibodies to varicella-zoster virus.

Due to a significant shortage of varicella-zoster immunoglobulin, stock has been prioritised for the most vulnerable groups, such as susceptible women exposed in the first 20 weeks of pregnancy. For susceptible pregnant women exposed after 20 weeks (from 21 weeks to delivery), either varicella-zoster immunoglobulin or aciclovir p. 687 [unlicensed] is recommended; valaciclovir p. 690 [unlicensed] may be used as an alternative. Varicella-zoster immunoglobulin may also be considered in susceptible individuals with renal impairment or intestinal malabsorption (such as inflammatory bowel disease).

For susceptible immunosuppressed individuals, an antiviral [unlicensed] is recommended unless there are significant concerns about renal toxicity or malabsorption. Aciclovir [unlicensed] is recommended first-line; valaciclovir [unlicensed] may be used as an alternative. Immunosuppressed individuals on long term aciclovir or valaciclovir prophylaxis, may require their dose to be temporarily increased.

For further information on risk assessment and the use of VZIG or an antiviral for post-exposure prophylaxis, see the PHE guidance: **Varicella-zoster immunoglobulin** (available at: [www.gov.uk/government/publications/varicella-zoster-immunoglobulin](http://www.gov.uk/government/publications/varicella-zoster-immunoglobulin)). Refer to the British HIV Association for use of VZIG in individuals with HIV infection. See [www.bhiva.org/guidelines](http://www.bhiva.org/guidelines) for further information.

Individuals who develop chickenpox despite post-exposure prophylaxis require treatment with an antiviral; there is no evidence that VZIG is effective in the treatment of disease. For information on the treatment of chickenpox or shingles, see *Varicella-zoster infections* in Herpesvirus infections p. 686.

### Anti-D (Rh<sub>0</sub>) immunoglobulin

Anti-D (Rh<sub>0</sub>) immunoglobulin below is prepared from plasma taken from rhesus-negative donors who have been immunised against the anti-D-antigen. Anti-D (Rh<sub>0</sub>) immunoglobulin is used to prevent a rhesus-negative mother from forming antibodies to fetal rhesus-positive cells which may pass into the maternal circulation. The objective is to protect any subsequent child from the hazard of haemolytic disease of the newborn.

Anti-D (Rh<sub>0</sub>) immunoglobulin should be administered to the mother following any sensitising episode (e.g. abortion, miscarriage and birth); it should be injected within 72 hours of the episode but even if a longer period has elapsed it may still give protection and should be administered. Anti-D (Rh<sub>0</sub>) immunoglobulin is also given when significant foeto-maternal haemorrhage occurs in rhesus-negative women during delivery. The dose of anti-D (Rh<sub>0</sub>) immunoglobulin is determined according to the level of exposure to rhesus-positive blood.

Use of routine *antenatal* anti-D prophylaxis should be given irrespective of previous anti-D prophylaxis for a sensitising event early in the same pregnancy. Similarly, *postpartum* anti-D prophylaxis should be given irrespective of previous routine antenatal anti-D prophylaxis or antenatal anti-D prophylaxis for a sensitising event in the same pregnancy.

Anti-D (Rh<sub>0</sub>) immunoglobulin below is also given to women of child-bearing potential after the inadvertent transfusion of rhesus-incompatible blood components and is used for the treatment of idiopathic thrombocytopenia purpura.

### MMR vaccine

Measles, mumps and rubella vaccine, live p. 1433 may be given in the postpartum period with anti-D (Rh<sub>0</sub>) immunoglobulin injection provided that separate syringes are used and the products are administered into different limbs. If blood is transfused, the antibody response to the vaccine may be inhibited—measure rubella antibodies after 6–8 weeks and revaccinate if necessary.

## Anti-D (Rh<sub>0</sub>) immunoglobulin

03-Mar-2020

### ● INDICATIONS AND DOSE

#### To rhesus-negative woman for prevention of Rh<sub>0</sub>(D) sensitisation, following birth of rhesus-positive infant

##### ▶ BY DEEP INTRAMUSCULAR INJECTION

- ▶ Females of childbearing potential: 500 units, dose to be administered immediately or within 72 hours; for transplacental bleed of over 4 mL fetal red cells, extra 100–125 units per mL fetal red cells, subcutaneous route used for patients with bleeding disorders

#### To rhesus-negative woman for prevention of Rh<sub>0</sub>(D) sensitisation, following any potentially sensitising episode (e.g. stillbirth, abortion, amniocentesis) up to 20 weeks' gestation

##### ▶ BY DEEP INTRAMUSCULAR INJECTION

- ▶ Females of childbearing potential: 250 units per episode, dose to be administered immediately or within 72 hours, subcutaneous route used for patients with bleeding disorders

#### To rhesus-negative woman for prevention of Rh<sub>0</sub>(D) sensitisation, following any potentially sensitising episode (e.g. stillbirth, abortion, amniocentesis) after 20 weeks' gestation

##### ▶ BY DEEP INTRAMUSCULAR INJECTION

- ▶ Females of childbearing potential: 500 units per episode, dose to be administered immediately or within 72 hours, subcutaneous route used for patients with bleeding disorders

#### To rhesus-negative woman for prevention of Rh<sub>0</sub>(D) sensitisation, antenatal prophylaxis

##### ▶ BY DEEP INTRAMUSCULAR INJECTION

- ▶ Females of childbearing potential: 500 units, dose to be given at weeks 28 and 34 of pregnancy, if infant rhesus-positive, a further dose is still needed immediately or within 72 hours of delivery, subcutaneous route used for patients with bleeding disorders

#### To rhesus-negative woman for prevention of Rh<sub>0</sub>(D) sensitisation, antenatal prophylaxis (alternative NICE recommendation)

##### ▶ BY DEEP INTRAMUSCULAR INJECTION

- ▶ Females of childbearing potential: 1000–1650 units, dose to be given at weeks 28 and 34 of pregnancy, alternatively 1500 units for 1 dose, dose to be given between 28 and 30 weeks gestation

#### To rhesus-negative woman for prevention of Rh<sub>0</sub>(D) sensitisation, following Rh<sub>0</sub>(D) incompatible blood transfusion

##### ▶ BY DEEP INTRAMUSCULAR INJECTION

- ▶ Females of childbearing potential: 100–125 units per mL of transfused rhesus-positive red cells, subcutaneous route used for patients with bleeding disorders

continued →

## RHOPHYLAC®

**To rhesus-negative woman for prevention of Rh<sub>0</sub>(D) sensitisation, following birth of rhesus-positive infant**

- ▶ BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION
- ▶ Females of childbearing potential: 1000–1500 units, dose to administered immediately or within 72 hours; for large transplacental bleed, extra 100 units per mL fetal red cells (preferably by intravenous injection), intravenous route recommended for patients with bleeding disorders

**To rhesus-negative woman for prevention of Rh<sub>0</sub>(D) sensitisation, following any potentially sensitising episode (e.g. abortion, amniocentesis, chorionic villous sampling) up to 12 weeks' gestation**

- ▶ BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION
- ▶ Females of childbearing potential: 1000 units per episode, dose to be administered immediately or within 72 hours, intravenous route recommended for patients with bleeding disorders, higher doses may be required after 12 weeks gestation

**To rhesus-negative woman for prevention of Rh<sub>0</sub>(D) sensitisation, antenatal prophylaxis**

- ▶ BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION
- ▶ Females of childbearing potential: 1500 units, dose to be given between weeks 28–30 of pregnancy; if infant rhesus-positive, a further dose is still needed immediately or within 72 hours of delivery, intravenous route recommended for patients with bleeding disorders

**To rhesus-negative woman for prevention of Rh<sub>0</sub>(D) sensitisation, following Rh<sub>0</sub>(D) incompatible blood transfusion**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Females of childbearing potential: 50 units per mL of transfused rhesus-positive blood, alternatively 100 units per mL of erythrocyte concentrate, intravenous route recommended for patients with bleeding disorders

- **CAUTIONS** Immunoglobulin A deficiency · possible interference with live virus vaccines
- **CAUTIONS, FURTHER INFORMATION**
- ▶ MMR vaccine MMR vaccine may be given in the postpartum period with anti-D (Rh<sub>0</sub>) immunoglobulin injection provided that separate syringes are used and the products are administered into different limbs. If blood is transfused, the antibody response to the vaccine may be inhibited—measure rubella antibodies after 6–8 weeks and revaccinate if necessary.
- **INTERACTIONS** → Appendix 1: immunoglobulins
- **SIDE-EFFECTS**
- ▶ **Uncommon** Chills · fever · headache · malaise · skin reactions
- ▶ **Rare or very rare** Arthralgia · dyspnoea · hypersensitivity · hypotension · nausea · tachycardia · vomiting
- ▶ **Frequency not known** Intravascular haemolysis
- **HANDLING AND STORAGE** Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website

**NICE decisions**

- ▶ Routine antenatal anti-D prophylaxis for rhesus-negative women (August 2008) NICE TA156 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

- ▶ **D-Gam** (Bio Products Laboratory Ltd)  
**Anti-D (RHO) immunoglobulin 500 unit** D-Gam Anti-D immunoglobulin 500unit solution for injection vials | 1 vial **[PoM]** £54.00
- Anti-D (RHO) immunoglobulin 1500 unit** D-Gam Anti-D immunoglobulin 1,500unit solution for injection vials | 1 vial **[PoM]** £58.00
- ▶ **Rhophylac** (CSL Behring UK Ltd)  
**Anti-D (RHO) immunoglobulin 750 unit per 1 ml** Rhophylac 1,500units/2ml solution for injection pre-filled syringes | 1 pre-filled disposable injection **[PoM]** £76.50

**Cytomegalovirus immunoglobulin**

16-Apr-2020

● **INDICATIONS AND DOSE****Prophylaxis of cytomegalovirus infection in patients taking immunosuppressants, particularly transplant recipients (specialist use only)**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: (consult product literature)

- **CONTRA-INDICATIONS** Selective IgA deficiency with IgA antibodies
- **CAUTIONS** Interference with live virus vaccines
- **CAUTIONS, FURTHER INFORMATION**
- ▶ Interference with live virus vaccines Cytomegalovirus immunoglobulin may impair the immune response to live virus vaccines; such vaccines should only be given 3 months after CMV immunoglobulin treatment. Patients receiving measles vaccines should have their antibody status checked as impairment of immune response may persist for up to 1 year.
- **INTERACTIONS** → Appendix 1: immunoglobulins
- **SIDE-EFFECTS** Arthralgia · back pain · chills · cutaneous lupus erythematosus · dizziness · embolism and thrombosis · fatigue · fever · haemolysis · haemolytic anaemia · headache · hypotension · infusion related reaction · meningitis aseptic · myocardial infarction · nausea · neutropenia · renal impairment · skin reactions · stroke · transfusion-related acute lung injury · vomiting
- **MONITORING REQUIREMENTS**
- ▶ Manufacturer advises monitor for signs of infusion-related reactions during and for at least one hour after each infusion in patients receiving cytomegalovirus immunoglobulin for the first time, or following a prolonged period between treatments, or when a different human immunoglobulin has been used previously; monitor all other patients for at least 20 minutes after each infusion—in case of reaction, reduce rate or stop infusion as clinically appropriate.
- ▶ Manufacturer advises monitor urine output and serum creatinine.
- **HANDLING AND STORAGE** Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for infusion

- ▶ **Cytotect CP Biotest** (Biotest (UK) Ltd)  
Cytomegalovirus immunoglobulin human 100 unit per 1 ml Cytotect CP Biotest 5,000units/50ml solution for infusion vials | 1 vial [PoM] £917.70 (Hospital only)  
Cytotect CP Biotest 1,000units/10ml solution for infusion vials | 1 vial [PoM] £183.54 (Hospital only)

## Hepatitis B immunoglobulin

17-Mar-2022

### ● INDICATIONS AND DOSE

#### Prophylaxis against hepatitis B infection

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult: 500 units, dose to be administered as soon as possible after exposure; ideally within 24–48 hours, but no later than 7 days after exposure

#### Prophylaxis against hepatitis B infection, after exposure to hepatitis B virus-contaminated material

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: Dose to be administered as soon as possible after exposure, but no later than 72 hours (consult product literature)

#### Prevention of hepatitis B in haemodialysed patients

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: (consult product literature)

#### Prophylaxis against re-infection of transplanted liver

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: (consult product literature)

#### Prevention of hepatitis B re-infection more than 6 months after liver transplantation in stable HBV-DNA negative patients

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Adult (body-weight up to 75 kg): 500 units once weekly, increased if necessary up to 1000 units once weekly, dose to be started 2–3 weeks after last dose of intravenous hepatitis B immunoglobulin
- ▶ Adult (body-weight 75 kg and above): 1000 units once weekly, dose to be started 2–3 weeks after last dose of intravenous hepatitis B immunoglobulin

- **CAUTIONS** IgA deficiency · interference with live virus vaccines

- **INTERACTIONS** → Appendix 1: immunoglobulins

#### ● SIDE-EFFECTS

- ▶ **Uncommon** Abdominal pain upper · headache
- ▶ **Rare or very rare** Cardiac discomfort · fatigue · hypersensitivity · hypertension · hypotension · muscle spasms · nasopharyngitis · oropharyngeal pain · palpitations · skin reactions

- **PRESCRIBING AND DISPENSING INFORMATION** Vials containing 500 units (for intramuscular injection), available from selected Public Health England and NHS laboratories (except for Transplant Centres), also available from BPL.

- **HANDLING AND STORAGE** Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Hepatitis B immunoglobulin (Non-proprietary)**
- ▶ **Hepatitis B immunoglobulin human 200 unit** Hepatitis B immunoglobulin human 200unit solution for injection vials | 1 vial [PoM] £200.00
- ▶ **Hepatitis B immunoglobulin human 500 unit** Hepatitis B immunoglobulin human 500unit solution for injection vials | 1 vial [PoM] £500.00
- ▶ **Zutectra** (Biotest (UK) Ltd)  
Zutectra 500units/1ml solution for injection pre-filled syringes | 5 syringe [PoM] £1,500.00 (Hospital only)

#### Solution for infusion

- ▶ **Hepatect CP** (Biotest (UK) Ltd)  
**Hepatitis B immunoglobulin human 50 unit per 1 ml** Hepatect CP 100units/2ml solution for infusion vials | 1 vial [PoM] £55.00 (Hospital only)  
Hepatect CP 2000units/40ml solution for infusion vials | 1 vial [PoM] £1,100.00 (Hospital only)  
Hepatect CP 500units/10ml solution for infusion vials | 1 vial [PoM] £275.00 (Hospital only)  
Hepatect CP 5000units/100ml solution for infusion vials | 1 vial [PoM] £2,750.00 (Hospital only)
- ▶ **Omri-Hep-B** (Imported (Israel))  
**Hepatitis B immunoglobulin human 50 unit per 1 ml** Omri-Hep-B 5000units/100ml solution for infusion vials | 1 vial [PoM] (Hospital only)

## Normal immunoglobulin

01-Apr-2022

### ● INDICATIONS AND DOSE

#### Post-exposure prophylaxis against hepatitis A infection [using Subgam<sup>®</sup>]

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Adult: 1000 mg for 1 dose

#### Rubella in pregnancy, prevention of clinical attack

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Females of childbearing potential: 750 mg

#### Replacement therapy in primary immunodeficiency disorders (specialist use only) | Replacement therapy in secondary immunodeficiency disorders (specialist use only)

- ▶ BY SUBCUTANEOUS INFUSION, OR BY INTRAVENOUS INFUSION
- ▶ Adult: (consult product literature)

#### Immune-mediated disorders (specialist use only)

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: For some indications, subcutaneous infusion may be used for maintenance treatment—consult product information (consult product literature)

- **UNLICENSED USE** PHE advises normal immunoglobulin (as Subgam<sup>®</sup>) is used for post-exposure prophylaxis against hepatitis A infection, but it is not licensed for this indication. PHE advises normal immunoglobulin is used for rubella in pregnancy for prevention of clinical attack, but it is not licensed for this indication.

- **CONTRA-INDICATIONS** Patients with selective IgA deficiency who have known antibodies against IgA

#### CONTRA-INDICATIONS, FURTHER INFORMATION

For full details on contra-indications, consult product literature.

- **CAUTIONS**

**GENERAL CAUTIONS** Agammaglobulinaemia with or without IgA deficiency · hypogammaglobulinaemia with or without IgA deficiency

#### SPECIFIC CAUTIONS

- ▶ With intravenous use Ensure adequate hydration · obesity · renal insufficiency · risk factors for arterial or venous thromboembolic events · thrombophilic disorders
- CAUTIONS, FURTHER INFORMATION** For full details on cautions, consult product literature.

● **INTERACTIONS** → Appendix 1: immunoglobulins

● **SIDE-EFFECTS**

**GENERAL SIDE-EFFECTS**

- ▶ **Common or very common** Diarrhoea · dizziness · fatigue · gastrointestinal discomfort · myalgia · nausea · pain · skin reactions

**SPECIFIC SIDE-EFFECTS**

- ▶ **Common or very common**
- ▶ With intravenous use Arthralgia · chills · embolism and thrombosis · feeling hot · fever · haemolysis · headache · hyperaemia · hypersensitivity · hypertension · infusion related reaction · palpitations · sensory disorder · taste altered · vomiting
- ▶ With subcutaneous use Drowsiness · headaches · hypotension · local reaction
- ▶ **Uncommon**
- ▶ With intravenous use Hypothermia
- ▶ With subcutaneous use Paraesthesia
- ▶ **Frequency not known**
- ▶ With intravenous use Acute kidney injury · angina pectoris · cutaneous lupus erythematosus · dyspnoea · leucopenia · meningitis aseptic · neutropenia · shock · transfusion-related acute lung injury

**SIDE-EFFECTS, FURTHER INFORMATION** Adverse reactions are more likely to occur in patients receiving normal immunoglobulin for the first time, or following a prolonged period between treatments, or when a different brand of normal immunoglobulin is administered.

- **MONITORING REQUIREMENTS** Monitor for acute renal failure; consider discontinuation if renal function deteriorates. Intravenous preparations with added sucrose have been associated with cases of renal dysfunction and acute renal failure.

- **DIRECTIONS FOR ADMINISTRATION** Administration advice (including licensed route of administration, recommended rate of infusion and reconstitution requirements) varies widely between normal immunoglobulin preparations from different manufacturers—formulations are **not interchangeable**; consult product literature.

- **PRESCRIBING AND DISPENSING INFORMATION** Antibody titres can vary widely between normal immunoglobulin preparations from different manufacturers—formulations are **not interchangeable**; patients should be maintained on the same formulation throughout long-term treatment to avoid adverse effects.

**[EvGr]** The brand name and batch number should be recorded after each administration (in case of transmission of infective agents). 

Indications, licensed age groups, and excipients differ between preparations. Some manufacturers also provide hyaluronidase to enhance the absorption of normal immunoglobulin. Further information can be found in the product literature for the individual preparations.

- ▶ With intramuscular use Available from ImmForm and from some Public Health England and NHS laboratories (for hepatitis A and rubella prophylaxis).

- **HANDLING AND STORAGE** Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

**Rabies immunoglobulin**

16-Mar-2020

**● INDICATIONS AND DOSE****Post-exposure treatment against rabies infection**

- ▶ BY LOCAL INFILTRATION, OR BY INTRAMUSCULAR INJECTION
- ▶ **Child:** 20 units/kg, dose administered by infiltration in and around the cleansed wound; if wound not visible or healed or if infiltration of whole volume not possible, give remainder by intramuscular injection into anterolateral thigh (remote from vaccination site). If more than 2 mL to be given by intramuscular injection then give in divided doses at different sites, to be given in combination with rabies vaccine, not required if more than 7 days have elapsed after the first dose of vaccine, or more than 1 day after the second dose of vaccine
- ▶ **Adult:** 20 units/kg, dose administered by infiltration in and around the cleansed wound; if wound not visible or healed or if infiltration of whole volume not possible, give remainder by intramuscular injection into anterolateral thigh (remote from vaccination site). If more than 5 mL to be given by intramuscular injection then give in divided doses at different sites, to be given in combination with rabies vaccine, not required if more than 7 days have elapsed after the first dose of vaccine, or more than 1 day after the second dose of vaccine

- **CAUTIONS** IgA deficiency · interference with live virus vaccines
- **INTERACTIONS** → Appendix 1: immunoglobulins
- **SIDE-EFFECTS**
  - ▶ **Rare or very rare** Arthralgia · chills · fatigue · fever · headache · hypersensitivity · hypotension · influenza like illness · malaise · nausea · skin reactions · tachycardia · vomiting
- **PRESCRIBING AND DISPENSING INFORMATION** The potency of individual batches of rabies immunoglobulin from the manufacturer may vary; potency may also be described differently by different manufacturers. It is therefore

critical to know the potency of the batch to be used and the weight of the patient in order to calculate the specific volume required to provide the necessary dose.

Available from Specialist and Reference Microbiology Division, Public Health England (also from BPL).

- **HANDLING AND STORAGE** Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Rabies immunoglobulin (Non-proprietary)**  
Rabies immunoglobulin human 500unit solution for injection vials | 1 vial [PoM] £1,000.00

## Tetanus immunoglobulin

18-Mar-2021

### ● INDICATIONS AND DOSE

#### Post-exposure prophylaxis

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child: 250 units, alternatively 500 units, higher dose used if more than 24 hours have elapsed since injury, or there is risk of heavy contamination, or following burns
- ▶ Adult: 250 units, alternatively 500 units, higher dose used if more than 24 hours have elapsed since injury, or there is risk of heavy contamination, or following burns

- **CAUTIONS** IgA deficiency · interference with live virus vaccines
- **INTERACTIONS** → Appendix 1: immunoglobulins
- **SIDE-EFFECTS**
  - ▶ Rare or very rare Anaphylactic reaction · hypotension
  - ▶ Frequency not known Arthralgia · chest pain · dizziness · dyspnoea · face oedema · oral disorders · tremor
- **HANDLING AND STORAGE** Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Tetanus immunoglobulin (Non-proprietary)**  
Tetanus immunoglobulin human 250 unit human 250unit solution for injection vials | 1 vial [PoM] £250.00 DT = £250.00

## Varicella-zoster immunoglobulin

16-Oct-2020

### (Antivaricella-zoster Immunoglobulin)

### ● INDICATIONS AND DOSE

#### Prophylaxis against varicella infection

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult: 1 g, to be administered as soon as possible—not later than 10 days after exposure, second dose to be given if further exposure occurs more than 3 weeks after first dose

- **CAUTIONS** IgA deficiency · interference with live virus vaccines
- **INTERACTIONS** → Appendix 1: immunoglobulins
- **SIDE-EFFECTS** Arthralgia · chills · fever · headache · hypersensitivity · hypotension · malaise · nausea · skin reactions · tachycardia · vomiting
- **DIRECTIONS FOR ADMINISTRATION** Public Health England advises normal immunoglobulin for intravenous use may be used in those unable to receive intramuscular injections.  
Manufacturer advises if a large volume (>5 mL) is to be given by intramuscular injection then administer in divided doses at different sites.
- **PRESCRIBING AND DISPENSING INFORMATION** Available from selected Public Health England and NHS laboratories (also from Bio Products Laboratory).
- **HANDLING AND STORAGE** Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Varicella-Zoster** (Bio Products Laboratory Ltd)  
Varicella-Zoster immunoglobulin human 250 mg Varicella-Zoster immunoglobulin human 250mg solution for injection vials | 1 vial [PoM] £750.00 DT = £750.00

## 2 Post-exposure prophylaxis

### Botulism antitoxin

12-Jan-2021

#### Overview

Botulism antitoxin (botulinum antitoxin) p. 1391 [unlicensed] is a polyvalent preparation that contains equine-derived immune globulins against multiple *Clostridium botulinum* serotypes. It is used for the treatment of suspected cases of botulism, such as foodborne (pre-formed toxins ingested from contaminated food) and wound botulism (associated with parenteral drug abuse). Human-derived botulism immune globulin [unlicensed] is used for the treatment of infant botulism as part of the Infant Botulism Treatment and Prevention Program. In infant botulism, neurotoxins are formed in the large intestine after ingestion of *Clostridium botulinum* spores, which are harmless to older children and adults.

Botulism is a notifiable disease in the UK, especially foodborne botulism, which is considered a public health emergency as contaminated food may be available to other individuals. For further information on reporting of

suspected cases, see *Notifiable diseases* in Antibacterials, principles of therapy p. 540.

All cases of suspected botulism should be managed promptly—treatment should not be delayed while awaiting laboratory diagnosis. Supportive care (including artificial ventilation) and symptomatic treatment may also be necessary.

For individuals with wound botulism, surgical debridement and antibacterial therapy are recommended in addition to botulism antitoxin, to help reduce the organism load and toxin production.

For further information on the management of infant, foodborne and wound botulism, see Public Health England guidance: **Botulism: clinical and public health management** (see *Useful resources*).

### Useful Resources

Recommendations reflect Botulism: clinical and public health management. Public Health England, December 2018. [www.gov.uk/government/publications/botulism-clinical-and-public-health-management](http://www.gov.uk/government/publications/botulism-clinical-and-public-health-management)

## IMMUNE SERA AND IMMUNOGLOBULINS > ANTITOXINS

### Bezlotoxumab

18-Aug-2017

- **DRUG ACTION** Bezlotoxumab is a human monoclonal antitoxin antibody; it binds to *Clostridioides difficile* toxin B and neutralises its activity, preventing recurrence of *Clostridioides difficile* infection.

#### ● INDICATIONS AND DOSE

##### Prevention of recurrence of *Clostridioides difficile* infection in patients at high risk of reinfection

###### ▶ BY INTRAVENOUS INFUSION

- ▶ Adult: 10 mg/kg for 1 dose, to be administered during the course of antibacterial therapy for *Clostridioides difficile* infection

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Fever · headache · infusion related reaction · nausea
- ▶ **Frequency not known** Dizziness · dyspnoea · fatigue · hypertension

- **PREGNANCY** Manufacturer advises avoid unless essential—limited information available.

- **BREAST FEEDING** Manufacturer advises avoid—no information available.

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises for *intravenous infusion* (Zinplava®), give intermittently in Glucose 5% or Sodium Chloride 0.9%; dilute requisite dose to a concentration of 1–10 mg/mL with infusion fluid; give over 60 minutes via a central venous catheter or peripheral catheter using a low-protein binding filter (0.2–5 micron).

- **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator (2–8 °C)—consult product literature for further information regarding storage conditions outside refrigerator and after preparation of the infusion.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for infusion

EXCIPIENTS: May contain Polysorbates

ELECTROLYTES: May contain Sodium

- ▶ **Zinplava** (Merck Sharp & Dohme (UK) Ltd)

Bezlotoxumab 25 mg per 1 ml Zinplava 1g/40ml concentrate for solution for infusion vials | 1 vial PoM £2,470.00 (Hospital only)

## Botulism antitoxin

13-May-2021

### ● INDICATIONS AND DOSE

#### Treatment of botulism [suspected or confirmed]

##### ▶ BY INTRAVENOUS INFUSION

- ▶ Adult: (consult product literature)

- **SIDE-EFFECTS** Hypersensitivity

**SIDE-EFFECTS, FURTHER INFORMATION** It is essential to read the contra-indications, warnings, and details of sensitivity tests on the package insert. Prior to treatment checks should be made regarding previous administration of any antitoxin and history of any allergic condition, e.g. asthma, hay fever, etc.

- **PRE-TREATMENT SCREENING** All patients should be tested for sensitivity (diluting the antitoxin if history of allergy).

- **PRESCRIBING AND DISPENSING INFORMATION** Available from designated centres after discussion with the on-call duty doctor at Colindale, Public Health England (during and outside of working hours) for risk assessment and further advice on treatment (Tel: (020) 8200 4400).

For non-urgent queries, contact Botulism@phe.gov.uk.

- **MEDICINAL FORMS** No licensed medicines listed.

## Diphtheria antitoxin

03-Jun-2021

### (Dip/Ser)

### ● INDICATIONS AND DOSE

#### Treatment of diphtheria [suspected or confirmed]

##### ▶ BY INTRAVENOUS INFUSION

- ▶ Adult: Dose should be given without waiting for bacteriological confirmation (consult local protocol)

- **CAUTIONS**

- ▶ **Hypersensitivity** Hypersensitivity is common after administration; resuscitation facilities should be available. Diphtheria antitoxin is no longer used for prophylaxis because of the risk of hypersensitivity; unimmunised contacts should be promptly investigated and given antibacterial prophylaxis and vaccine.

- **SIDE-EFFECTS**

- ▶ **Common or very common** Hypersensitivity

- **PRE-TREATMENT SCREENING** Diphtheria antitoxin is derived from horse serum and reactions are common. Public Health England advises hypersensitivity testing should be carried out before use in certain individuals (e.g. those who have a positive history of animal allergy, or prior exposure to equine-derived immunoglobulin).

- **PRESCRIBING AND DISPENSING INFORMATION** Available from designated centres after discussion with the Duty Doctor at Colindale, Public Health England (during and outside of working hours) for risk assessment and further advice on treatment (Tel: (020) 8200 4400). In Northern Ireland, available from Public Health Laboratory, Belfast City Hospital (Tel (028) 9032 9241).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Diphtheria antitoxin (Non-proprietary)**

Diphtheria antitoxin 1000 unit per 1 ml Antidiphtheria serum 10,000units/10ml solution for injection ampoules | 1 ampoule PoM H (Hospital only)

### 3 Tuberculosis diagnostic test

#### DIAGNOSTIC AGENTS

#### Tuberculin purified protein derivative (Tuberculin PPD)

##### ● INDICATIONS AND DOSE

##### Mantoux test

- ▶ BY INTRADERMAL INJECTION
- ▶ Child: 2 units for one dose
- ▶ Adult: 2 units for one dose

##### Mantoux test (if first test is negative and a further test is considered appropriate)

- ▶ BY INTRADERMAL INJECTION
- ▶ Child: 10 units for 1 dose
- ▶ Adult: 10 units for 1 dose

##### DOSE EQUIVALENCE AND CONVERSION

- ▶ 2 units is equivalent to 0.1 mL of 20 units/mL strength.
- ▶ 10 units is equivalent to 0.1 mL of 100 units/mL strength.

##### ● CAUTIONS

- ▶ Mantoux test Response to tuberculin may be suppressed by viral infection, sarcoidosis, corticosteroid therapy, or immunosuppression due to disease or treatment and the MMR vaccine. If a tuberculin skin test has already been initiated, then the MMR should be delayed until the skin test has been read unless protection against measles is required urgently. If a child has had a recent MMR, and requires a tuberculin test, then a 4 week interval should be observed. Apart from tuberculin and MMR, all other live vaccines can be administered at any time before or after tuberculin.

- **PRESCRIBING AND DISPENSING INFORMATION** Available from ImmForm (SSI brand).

The strength of tuberculin PPD in currently available products may be different to the strengths of products used previously for the Mantoux test; care is required to select the correct strength.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

##### Solution for injection

- ▶ **Tuberculin purified protein derivative (Non-proprietary)**

**Tuberculin purified protein derivative 20 tuberculin unit per 1 ml** Tuberculin PPD RT 23 SSI 20 tuberculin units/ml solution for injection 1.5ml vials | 1 vial 

**Tuberculin purified protein derivative 100 tuberculin unit per 1 ml** Tuberculin PPD RT 23 SSI 100 tuberculin units/ml solution for injection 1.5ml vials | 1 vial 

### 4 Vaccination

#### Vaccination, general principles

09-Feb-2021

##### Active immunity

Active immunity can be acquired by natural disease or by vaccination. Vaccines induce active immunity and provide immunological memory by stimulating the production of antibodies and cells involved in the immune response. As a result, the immune system is able to recognise and respond

rapidly to natural infection at a later date. Antibodies can be detected in the patient's blood or serum, but even in the absence of detectable antibodies, immunological memory may still be present. Vaccines consist of either:

- a *live attenuated* form of the virus (e.g. measles, mumps and rubella vaccine) or bacteria (e.g. Bacillus Calmette-Guérin vaccine);
- *inactivated* preparations of the virus (e.g. tick-borne encephalitis vaccine) or bacteria (e.g. meningococcal vaccine);
- *inactivated toxins (toxoids)* produced by a micro-organism (e.g. tetanus and diphtheria vaccines);
- *extracts* of a micro-organism which may be derived from the organism (e.g. pneumococcal vaccine), or produced by recombinant DNA technology (e.g. hepatitis B vaccine);
- *viral vectors* of replicating (attenuated or low pathogenicity viruses) or non-replicating viruses (e.g. Oxford/AstraZeneca COVID-19 vaccine), produced using recombinant technology; or
- *nucleic acid (DNA or RNA)* of an antigen derived from the virus (e.g. Pfizer/BioNTech or Moderna COVID-19 vaccines) or bacteria.

Live attenuated and replicating viral vector vaccines usually promote a full, long-lasting antibody response. In rare cases, a mild form of the disease may occur with some vaccines, such as a rash following a measles-containing vaccine.

Inactivated or non-replicating vaccines (including toxoids) produce an antibody response following a primary course, which may last for months or years. In most cases booster (reinforcing) injections are required for long-term protection. To stimulate the immune system more broadly, some polysaccharide vaccines have been enhanced by conjugation (such as the *Haemophilus influenzae* type B and meningococcal group C vaccines), while some inactivated vaccines contain an adjuvant (such as aluminium hydroxide or aluminium phosphate) to enhance the antibody response. Inactivated vaccines cannot cause the disease that they are designed to prevent.

For further information on how vaccines are made and what they contain, see Chapter 1, Immunity and how vaccines work, in *Immunisation against infectious disease* – 'The Green Book' (see *Useful resources*).

##### Passive immunity

Passive immunity is acquired through the transfer of antibodies from immune individuals either across the placenta, or from the transfusion of blood or blood products including immunoglobulins (for further information, see Immunoglobulins p. 1383). Protection provided by the cross-placental transfer of antibodies provides the infant with temporary protection (commonly for a few weeks to months), and is more effective against some infections (e.g. tetanus and measles) than others (e.g. polio and pertussis).

##### Vaccination during pregnancy

Live vaccines should not be administered routinely to pregnant females due to the theoretical risk of fetal infection; these should generally be delayed until after delivery. The Immunisation Department of Public Health England (PHE) run a UK-wide surveillance programme on the safety of certain vaccines (measles, mumps, rubella, varicella-zoster, COVID-19, and human papillomavirus) given inadvertently during pregnancy or shortly before conception. For advice on the reporting, risk assessment, and management of inadvertent vaccination in pregnancy, see PHE guidance: **Vaccination in pregnancy** (available at: [www.gov.uk/guidance/vaccination-in-pregnancy-vip](http://www.gov.uk/guidance/vaccination-in-pregnancy-vip)).

There is no evidence of risk from vaccinating pregnant females with inactivated vaccines; they do not replicate so cannot harm the fetus. Some inactivated vaccines are actively recommended to prevent severe complications during pregnancy or to the new-born infant, such as the

influenza vaccine, and diphtheria with tetanus, pertussis and poliomyelitis vaccine.

For further information on vaccination in pregnancy, see individual vaccine treatment summaries.

### Vaccines in immunosuppression and HIV infection

Almost all individuals can be safely vaccinated; in only a few individuals is vaccination either contra-indicated or should be deferred. Specialist advice should be sought when in doubt, if using live vaccines, or if there are queries about an individual's degree of immunosuppression. In some situations, the specialist may decide that the risk of a specific disease outweighs any potential risk from the vaccine. Antibody responses may be lower in immunosuppressed individuals, therefore additional vaccine doses may be required.

Live vaccines can cause severe or fatal infections in some immunosuppressed individuals due to extensive replication of the vaccine strain. Live vaccines are therefore not recommended for individuals with some types of severe primary or acquired immunodeficiency, or for those who are on or have recently received high doses of certain immunosuppressive or biological therapies.

Inactivated vaccines cannot replicate so may be given to immunosuppressed individuals.

Wherever possible, immunisation or additional booster doses for individuals with immunosuppression, should be carried out either before immunosuppression occurs or deferred until an improvement in immunity has been seen. The optimal timing for any vaccination should be based upon a judgement about the relative need for rapid protection and the likely response. For infants born to females taking immunosuppressive biological therapy during pregnancy, live vaccines should be delayed by 6 months; therefore, the infant will not be eligible to receive the rotavirus vaccine, and if indicated, will need to have their Bacillus Calmette-Guérin vaccine deferred.

Most live vaccines used in the UK immunisation schedule can be safely given to close contacts of an immunosuppressed individual. They carry a low risk of transmission (or the risk can be minimised with simple precautions) from a recently vaccinated close contact to an immunosuppressed individual. Close contacts of immunosuppressed individuals should be fully immunised according to the national Immunisation schedule p. 1394 to reduce the risk of exposure to vaccine preventable conditions, and they should also be offered the annual Influenza vaccine p. 1404.

For further information on vaccines in immunosuppression, see Chapter 6, Contra-indications and special considerations, and Chapter 7, Immunisation of individuals with underlying medical conditions in *Immunisation against infectious disease*- 'The Green Book' (see *Useful resources*).

For further information on vaccines for individuals with HIV infection, see the British HIV Association guideline: **Use of vaccines in HIV-positive adults** (available at: [www.bhiva.org/vaccination-guidelines](http://www.bhiva.org/vaccination-guidelines)), or the Children's HIV Association guidelines: **Vaccination of HIV infected children and Preparing HIV-infected children and adolescents for travel** (available at: [www.chiva.org.uk](http://www.chiva.org.uk)).

### Vaccines and asplenia, splenic dysfunction, or complement disorders

The following vaccines are recommended for individuals with asplenia, splenic dysfunction, or complement disorders (including those taking complement inhibitors) depending on the age at which their condition is diagnosed:

- Influenza vaccine p. 1432;
- Meningococcal groups A with C and W135 and Y vaccine p. 1423 and meningococcal group B vaccine (rDNA, component, adsorbed) p. 1422;

- 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) p. 1424 and/or 23-valent pneumococcal polysaccharide vaccine p. 1424. Patients on complement inhibitor therapy with eculizumab p. 1104 are not at increased risk of pneumococcal disease and do not require 23-valent pneumococcal polysaccharide vaccine or additional doses of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

Additional booster doses of other vaccines should be considered depending on the individual's underlying condition—specialist advice may be required. For information on specific indications for immunisation of vulnerable groups, see Chapter 7, Immunisation of individuals with underlying medical conditions, in *Immunisation against infectious disease*- 'The Green Book' (see *Useful resources*).

**Children first diagnosed or presenting aged under 1 year** should be immunised according to the Immunisation schedule p. 1394. During their first year they should also be given 2 doses of meningococcal groups A with C and W135 and Y vaccine at least 4 weeks apart, and a dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) p. 1424 (in order to have received a total of 2 doses of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) with an 8 week interval). 8 weeks following their routine 1 year booster vaccines, they should receive a booster dose of meningococcal groups A with C and W135 and Y vaccine. An additional dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) should be given at least 8 weeks after the routine 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) booster scheduled at 1 year. After their second birthday, a dose of 23-valent pneumococcal polysaccharide vaccine p. 1424 should be given at least 8 weeks after the last dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed). The influenza vaccine should be given annually in children aged 6 months or older.

**Children first diagnosed or presenting aged 1 year to under 2 years** should be immunised according to the Immunisation schedule p. 1394, including any routine vaccines due at 1 year of age if not yet administered. 8 weeks following the routine 1 year booster vaccines a dose of meningococcal groups A with C and W135 and Y vaccine should be given. An additional dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) p. 1424 should be given at least 8 weeks after the 1 year 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) booster dose. After their second birthday, a dose of 23-valent pneumococcal polysaccharide vaccine p. 1424 should be given at least 8 weeks after the last dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed). The influenza vaccine should be given annually.

**Children first diagnosed or presenting aged 2 years to under 10 years** should be immunised according to the Immunisation schedule p. 1394. Additionally, they should be given a dose of meningococcal groups A with C and W135 and Y vaccine and 23-valent pneumococcal polysaccharide vaccine p. 1424. For children who have not received the full routine immunisation for meningococcal group B vaccine (rDNA, component, adsorbed), ensure that 2 doses, 8 weeks apart have been given since their first birthday. For children who have not received any 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) p. 1424 previously, a single dose should be given, followed by a dose of 23-valent pneumococcal polysaccharide vaccine at least 8 weeks later. The influenza vaccine should be given annually.

**Individuals first diagnosed aged 10 years and over** regardless of previous immunisations, should be given a dose of 23-valent pneumococcal polysaccharide vaccine p. 1424, meningococcal group B vaccine (rDNA, component, adsorbed) and meningococcal groups A with C and W135 and

Y vaccine. After 4 weeks, an additional dose of meningococcal group B vaccine (rDNA, component, adsorbed) should be given. The influenza vaccine should be given annually.

### Vaccines and antitoxins availability

For information on availability of vaccines and antitoxins, see individual monographs.

For antivenom, see Poisoning, emergency treatment p. 1473.

Enquiries for vaccines not available commercially can also be made to:

Vaccines and Countermeasures Response Department  
Public Health England  
vaccinesupply@phe.gov.uk

In Northern Ireland, enquiries for vaccines not available commercially should be directed to Northern Health and Social Care Trust's Pharmacy Services ([www.northerntrust.hscni.net/services/pharmaceutical-services/](http://www.northerntrust.hscni.net/services/pharmaceutical-services/)).

In Scotland, information about availability of vaccines can be obtained from a Specialist in Pharmaceutical Public Health.

In Wales, enquiries for vaccines not available commercially should be directed to the Welsh Medicines Information Centre ([www.wmic.wales.nhs.uk/about/contactus/](http://www.wmic.wales.nhs.uk/about/contactus/)).

### Useful Resources

Recommendations reflect advice from *Immunisation against infectious disease* - 'The Green Book'. Public Health England, 2013. Chapters from the handbook (including updates since 2013) are available at:

[www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Immunisation schedule

06-May-2022

### Routine immunisations, sources of information

The following recommendations reflect advice from UKHSA. Recommendations specific to each vaccine can be found in *Immunisation against infectious disease* - 'The Green Book'. UKHSA at: [www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book).

The immunisation schedule reflects advice from 'The complete routine immunisation schedule' produced by UKHSA (2022). For the most up to date immunisation schedule, see: [www.gov.uk/government/publications/the-complete-routine-immunisation-schedule](http://www.gov.uk/government/publications/the-complete-routine-immunisation-schedule).

The Influenza immunisation recommendations reflect advice from the 'National flu immunisation programme plan 2022/2023 produced by UKHSA, Department of Health and Social Care, and NHS England. For the most up to date letter, see: [www.gov.uk/government/publications/national-flu-immunisation-programme-plan](http://www.gov.uk/government/publications/national-flu-immunisation-programme-plan).

Vaccines for the immunisation schedule should be obtained from ImmForm at: [portal.immform.phe.gov.uk](http://portal.immform.phe.gov.uk).

### Preterm birth

Babies born preterm should receive all routine immunisations based on their actual date of birth. The risk of apnoea following vaccination is increased in preterm babies, particularly in those born at or before 28 weeks gestational age. If babies at risk of apnoea are in hospital at the time of their first immunisation, they should be monitored for respiratory complications for 48–72 hours after immunisation. If a baby develops apnoea, bradycardia, or desaturation after the first immunisation, the second immunisation should also be given in hospital with similar monitoring.

### Routine immunisation schedule

When to immunise	Vaccine given and dose schedule (for details of dose, see under individual vaccines)
Neonates at risk only	<ul style="list-style-type: none"> <li>▶ Bacillus Calmette-Guérin vaccine p. 1421 (around 4 weeks). Check severe combined immunodeficiency (SCID) screening outcome before giving, see Bacillus Calmette-Guérin vaccine p. 1396.</li> <li>▶ Hepatitis B vaccine p. 1429 (at birth, 4 weeks, and 1 year, see Hepatitis B vaccine p. 1402).</li> </ul>
8 weeks	<ul style="list-style-type: none"> <li>▶ Diphtheria with tetanus, pertussis, hepatitis B, poliomyelitis and haemophilus influenzae type b vaccine p. 1420 (<i>Infanrix hexa</i><sup>®</sup> or <i>Vaxelis</i><sup>®</sup>). First dose.</li> <li>▶ Meningococcal group B vaccine (rDNA, component, adsorbed) p. 1422 (<i>Bexsero</i><sup>®</sup>). First dose.</li> <li>▶ Rotavirus vaccine p. 1435 (<i>Rotarix</i><sup>®</sup>). Check SCID screening outcome before giving. First dose.</li> </ul>
12 weeks	<ul style="list-style-type: none"> <li>▶ Diphtheria with tetanus, pertussis, hepatitis B, poliomyelitis and haemophilus influenzae type b vaccine (<i>Infanrix hexa</i><sup>®</sup> or <i>Vaxelis</i><sup>®</sup>). Second dose.</li> <li>▶ Pneumococcal polysaccharide conjugate vaccine (adsorbed) p. 1424 (<i>Prevenar 13</i><sup>®</sup>). Single dose.</li> <li>▶ Rotavirus vaccine (<i>Rotarix</i><sup>®</sup>). Check SCID screening outcome before giving. Second dose.</li> </ul>
16 weeks	<ul style="list-style-type: none"> <li>▶ Diphtheria with tetanus, pertussis, hepatitis B, poliomyelitis and haemophilus influenzae type b vaccine (<i>Infanrix hexa</i><sup>®</sup> or <i>Vaxelis</i><sup>®</sup>). Third dose.</li> <li>▶ Meningococcal group B vaccine (rDNA, component, adsorbed) (<i>Bexsero</i><sup>®</sup>). Second dose.</li> </ul>
1 year (on or after first birthday)	<ul style="list-style-type: none"> <li>▶ Measles, mumps and rubella vaccine, live p. 1433 (<i>MMR VaxPRO</i><sup>®</sup> or <i>Priorix</i><sup>®</sup>). First dose.</li> <li>▶ Meningococcal group B vaccine (rDNA, component, adsorbed) (<i>Bexsero</i><sup>®</sup>). Single booster dose.</li> <li>▶ Pneumococcal polysaccharide conjugate vaccine (adsorbed) (<i>Prevenar 13</i><sup>®</sup>). Single booster dose.</li> <li>▶ Haemophilus influenzae type b with meningococcal group C vaccine p. 1422 (<i>Menitorix</i><sup>®</sup>). Single booster dose.</li> </ul>
2-3 years on 31st August 2022, and all primary school aged children from reception to year 6	<ul style="list-style-type: none"> <li>▶ Influenza vaccine p. 1432. Each year from September. <b>Note:</b> live attenuated influenza nasal spray is recommended (<i>Fluenz Tetra</i><sup>®</sup>); if contra-indicated or unsuitable, see Influenza vaccine p. 1404.</li> </ul>

When to immunise	Vaccine given and dose schedule (for details of dose, see under individual vaccines)
3 years and 4 months, or soon after	<ul style="list-style-type: none"> <li>▶ Diphtheria with tetanus, pertussis and poliomyelitis vaccine p. 1419 (<i>Boostrix-IPV</i><sup>®</sup>). Single booster dose.</li> <li>▶ Measles, mumps and rubella vaccine, live (<i>MMR VaxPRO</i><sup>®</sup> or <i>Priorix</i><sup>®</sup>). Second dose.</li> </ul>
11–14 years. First dose of HPV vaccine will be offered to individuals aged 12–13 years in England, Wales, and Northern Ireland, and those aged 11–13 years in Scotland. For individuals aged 15 years and over, see Human papillomavirus vaccine p. 1403.	▶ Human papillomavirus vaccines p. 1431 ( <i>Gardasil</i> <sup>®</sup> or <i>Gardasil 9</i> <sup>®</sup> ). 2 dose schedule; second dose 6–24 months after first dose. For individuals with immunosuppression or HIV infection, see Human papillomavirus vaccine p. 1403.
13–15 years	▶ Meningococcal groups A with C and W135 and Y vaccine p. 1423 ( <i>Nimenrix</i> <sup>®</sup> ). Single booster dose.
13–18 years	▶ Diphtheria with tetanus and poliomyelitis vaccine p. 1419 ( <i>Revaxis</i> <sup>®</sup> ). Single booster dose. <b>Note:</b> Can be given at the same time as the dose of meningococcal groups A with C and W135 and Y vaccine at 13–15 years of age.
Females of child-bearing age susceptible to rubella	▶ Measles, mumps and rubella vaccine, live. Females of child-bearing age who have not received 2 doses of a rubella-containing vaccine or who do not have a positive antibody test for rubella should be offered rubella immunisation (using the MMR vaccine)—exclude pregnancy before immunisation, and avoid pregnancy for one month after vaccination.
Pregnant females	<ul style="list-style-type: none"> <li>▶ Acellular pertussis-containing vaccine administered as diphtheria with tetanus, pertussis and poliomyelitis vaccine (<i>Boostrix-IPV</i><sup>®</sup>). 1 dose from the 16th week of pregnancy, preferably after the fetal anomaly scan (weeks 18–20).</li> <li>▶ Influenza vaccine (inactivated). Single dose administered from September, regardless of the stage of pregnancy (see Influenza vaccine p. 1404).</li> </ul>

### Routine immunisations during adult life

When to immunise	Vaccine given and dose schedule (for details of dose, see under individual vaccines)
Under 25 years, those entering university who are at risk of meningococcal disease	▶ Meningococcal groups A with C and W135 and Y vaccine ( <i>Nimenrix</i> <sup>®</sup> or <i>Menveo</i> <sup>®</sup> ). Single dose. <b>Note:</b> Should be offered to those aged under 25 years entering university who have not received the meningococcal groups A with C and W135 and Y vaccine over the age of 10 years.
During adult life, if not previously immunised or 5 dose course is incomplete	▶ Diphtheria with tetanus and poliomyelitis vaccine.
65 years	▶ Pneumococcal polysaccharide vaccine p. 1424.
From 65 years	▶ Influenza vaccine (inactivated). Each year from September (see Influenza vaccine p. 1404).
70–79 years	▶ Herpes-zoster vaccine, live p. 1431. <b>Note:</b> live attenuated vaccine is recommended ( <i>Zostavax</i> <sup>®</sup> ); if contra-indicated or unsuitable, offer herpes-zoster vaccine (recombinant, adjuvanted) p. 1431 ( <i>Shingrix</i> <sup>®</sup> ), see Varicella-zoster vaccines p. 1415.

### Individuals with unknown or incomplete immunisation history

For children born in the UK who present with an inadequate or unknown immunisation history, investigation into immunisations received should be carried out. Outstanding doses should be administered where the routine childhood immunisation schedule has not been completed.

For advice on dosing schedules for missed vaccinations, and the immunisation of individuals coming to the UK, consult Chapter 11, The UK immunisation schedule, in *Immunisation against infectious disease*—‘The Green Book’. UKHSA, available at: [www.gov.uk/government/publications/immunisation-schedule-the-green-book-chapter-11](http://www.gov.uk/government/publications/immunisation-schedule-the-green-book-chapter-11), and UKHSA guidance: **Vaccination of individuals with uncertain or incomplete immunisation status**, available at: [www.gov.uk/government/publications/vaccination-of-individuals-with-uncertain-or-incomplete-immunisation-status](http://www.gov.uk/government/publications/vaccination-of-individuals-with-uncertain-or-incomplete-immunisation-status).

### Immunisations for healthcare and laboratory staff

Vaccine-preventable diseases that can be transmitted from person to person are a risk for staff and patients in healthcare environments, and staff in laboratory environments. Therefore, all staff must be up-to-date with their routine immunisations. In addition, specific immunisations are recommended for certain staff groups due to the risk of acquiring or passing on infection. For detailed recommendations, consult Chapter 12, Immunisation of healthcare and laboratory staff in

*Immunisation against infectious disease*—‘The Green Book’. UKHSA, available at: [www.gov.uk/government/publications/immunisation-of-healthcare-and-laboratory-staff-the-green-book-chapter-12](http://www.gov.uk/government/publications/immunisation-of-healthcare-and-laboratory-staff-the-green-book-chapter-12).

## Anthrax vaccine

04-May-2021

### Overview

Anthrax vaccine p. 1420 is made from antigens from inactivated *Bacillus anthracis* adsorbed onto an adjuvant. Anthrax immunisation is indicated for individuals who handle infected animals or process infected animal products where there is a potential risk of occupational exposure to *B. anthracis*. It is also recommended for occupations where workers are at risk of one-off high level exposures to anthrax (e.g. following a deliberate or accidental release of spores).

A 4-dose regimen is used for primary immunisation; a single booster dose should be given at 10-year intervals on up to 3 occasions to workers at potential continuous low level risk of exposure to anthrax. In those with potential intermittent high level exposure, a single booster dose should be offered just before entering situations with a specific high exposure risk. If such opportunities do not arise, a single booster dose should be given at 10-year intervals on up to 3 occasions to sustain protection.

In the event of proven or high probability of exposure to anthrax spores, a single booster dose should be given, in

addition to antibacterial prophylaxis, except when a dose has been given in the preceding 12 months.

Advice on the treatment of previously unvaccinated individuals with a proven or high probability of exposure to anthrax spores can be found at: [www.gov.uk/government/publications/chemical-biological-radiological-and-nuclear-incidents-recognise-and-respond](http://www.gov.uk/government/publications/chemical-biological-radiological-and-nuclear-incidents-recognise-and-respond).

Anthrax is a notifiable disease in the UK. For further information, see *Notifiable diseases* in Antibacterials, principles of therapy p. 540.

### Useful Resources

Recommendations reflect Chapter 13, Anthrax, in *Immunisation against infectious disease* – ‘The Green Book’. Public Health England, February 2017. [www.gov.uk/government/publications/anthrax-the-green-book-chapter-13](http://www.gov.uk/government/publications/anthrax-the-green-book-chapter-13)

## Bacillus Calmette-Guérin vaccine

08-Oct-2021

### Overview

The Bacillus Calmette-Guérin vaccine p. 1421 (BCG vaccine) contains a live attenuated strain derived from *Mycobacterium bovis* and is indicated for the prevention of Tuberculosis p. 630.

BCG immunisation is recommended for the following individuals if immunisation has not previously been carried out and they are tuberculin-negative:

- all neonates and infants (aged 0–12 months) living in areas of the UK where the annual incidence of tuberculosis is 40 cases per 100 000 or greater;
- all neonates and infants (aged 0–12 months) with a parent or grandparent born in a country where the annual incidence of tuberculosis is 40 cases per 100 000 or greater;
- previously unvaccinated children (aged 1–5 years) with a parent or grandparent born in a country where the annual incidence of tuberculosis is 40 cases per 100 000 or greater (tuberculin testing is not usually required);
- previously unvaccinated children (aged 6–15 years) with a parent or grandparent born in a country where the annual incidence of tuberculosis is 40 cases per 100 000 or greater;
- previously unvaccinated children (aged under 16 years) with close contact to cases of sputum smear-positive pulmonary or laryngeal tuberculosis;
- previously unvaccinated children (aged under 16 years) who were born in, or lived for at least 3 months in a country where the annual incidence of tuberculosis is 40 cases per 100 000 or greater;
- previously unvaccinated individuals at occupational risk (irrespective of age). This includes healthcare workers or laboratory staff who have direct contact with patients with tuberculosis or potentially infectious clinical materials, and veterinary and abattoir staff handling animals or animal materials that could be infected with tuberculosis. BCG vaccination can also be considered for staff working with prisoners, homeless people, people with drug and alcohol misuse, and those who work with refugees and asylum seekers.

As part of the neonatal BCG immunisation programme, immunisation is recommended for eligible neonates at 28 days of age (or soon after), to ensure that the result of the severe combined immunodeficiency (SCID) screening is available and checked prior to it being given. Vaccination may be given earlier than 28 days of age, provided that the SCID screening result is available. For further information, see UKHSA guidance: **Changing the timing of the neonatal BCG immunisation programme to a 28 day immunisation programme: effective from 1 September 2021** (see *Useful resources*).

Although protection provided by BCG vaccine may decrease with time, there is no evidence that repeat vaccination offers significant additional protection and therefore repeat BCG vaccination is not recommended.

The Bacillus Calmette-Guérin vaccine is contra-indicated in all HIV-infected individuals. For advice on BCG vaccination in immunosuppressed individuals, consult Chapter 32: Tuberculosis - ‘The Green Book’, Public Health England (see *Useful resources*).

For advice on drug treatment, see Tuberculosis p. 630; for the treatment of infection following vaccination, seek expert advice.

### Travel

The risk of a traveller acquiring tuberculosis infection depends on several factors including the incidence of tuberculosis in that country, the duration of travel, the degree of contact with the local population, the work setting of the traveller (if any), the reason for travel, and the susceptibility and age of the traveller.

BCG vaccine is recommended for previously unvaccinated, tuberculin-negative individuals aged under 16 years, or for healthcare workers at high risk of exposure to patients with tuberculosis, who intend to travel for 3 months or more in a country where the annual incidence of tuberculosis is 40 cases per 100 000 or greater, or where the risk of multi-drug resistant tuberculosis is high. The risk of tourists acquiring tuberculosis infection is low and BCG vaccine is not required if no other factors are present.

A list of countries where the annual incidence of tuberculosis is 40 cases per 100 000 or greater, is available at [www.gov.uk/government/publications/tuberculosis-tb-by-country-rates-per-100000-people](http://www.gov.uk/government/publications/tuberculosis-tb-by-country-rates-per-100000-people).

### Tuberculin skin testing

The tuberculin skin test (*Mantoux test*) is used to assess an individual’s sensitivity to tuberculin protein when BCG vaccination is being considered or as an aid to diagnosis of tuberculosis. A tuberculin skin test involves administration of tuberculin purified protein derivative p. 1392 by intradermal injection. It is necessary before BCG vaccination for:

- individuals aged 6 years and over;
- children aged under 6 years living in a country for more than 3 months with an annual tuberculosis incidence of 40 cases per 100 000 or greater;
- those who have had close contact with a person with known tuberculosis;
- those who have a family history of tuberculosis within the last 5 years.

BCG vaccination can be given up to three months following a negative tuberculin test.

The BCG vaccine should not be administered to an individual with a positive tuberculin test—it is unnecessary and may cause a more severe local reaction. Those with a *Mantoux test* induration of 5 mm and greater should be referred to a tuberculosis clinic for assessment of the need for further investigation and treatment.

Tuberculosis is a notifiable disease in the UK. For further information, see *Notifiable diseases* in Antibacterials, principles of therapy p. 540.

### Useful Resources

Recommendations reflect Chapter 32, Tuberculosis, in *Immunisation against infectious disease* – ‘The Green Book’. Public Health England, August 2018. [www.gov.uk/government/publications/tuberculosis-the-green-book-chapter-32](http://www.gov.uk/government/publications/tuberculosis-the-green-book-chapter-32)

Changing the timing of the neonatal BCG immunisation programme to a 28 day immunisation programme: effective from 1 September 2021. UK Health Security Agency, October 2021.

[www.gov.uk/government/publications/bcg-vaccine-information-on-the-28-day-immunisation-programme](http://www.gov.uk/government/publications/bcg-vaccine-information-on-the-28-day-immunisation-programme)

## Cholera vaccine

07-Nov-2018

### Overview

Oral cholera vaccine p. 1421 contains inactivated Inaba (including El-Tor biotype) and Ogawa strains of *Vibrio cholerae*, serotype O1 together with recombinant B-subunit of the cholera toxin produced in Inaba strains of *V. cholerae*, serotype O1.

Oral cholera vaccine is licensed for adults and children from 2 years of age who are travelling to endemic or epidemic areas on the basis of current recommendations. Immunisation should be completed at least one week before potential exposure. However, there is no requirement for cholera vaccination for international travel. After a full risk assessment, immunisation can be considered for the following individuals:

- relief or disaster aid workers;
- persons with remote itineraries in areas where cholera epidemics are occurring and there is limited access to medical care;
- travellers to potential cholera risk areas, for whom vaccination is considered potentially beneficial;
- individuals at occupational risk, such as laboratory workers who may be regularly exposed to cholera.

For dosing schedule, see cholera vaccine.

Immunisation with cholera vaccine does not provide complete protection and all travellers to a country where cholera exists should be warned that scrupulous attention to food, water, and personal hygiene is essential.

All suspected cases of cholera must be notified to the local health protection unit. Where there is a community level outbreak, specialist advice should be sought from Public Health England (tel. 020 8200 4400) or, in Scotland, Health Protection Scotland (tel. 0140 300 1191).

### Contacts

Contacts of patients with cholera should maintain high standards of personal hygiene to avoid becoming infected. Cholera vaccine should not be used in the management of contacts of cases or in controlling the spread of infection.

### Useful Resources

Recommendations reflect Chapter 14, Cholera, in *Immunisation against infectious disease* – 'The Green Book'. Public Health England, December 2013.  
[www.gov.uk/government/publications/cholera-the-green-book-chapter-14](http://www.gov.uk/government/publications/cholera-the-green-book-chapter-14)

## COVID-19 vaccines

05-May-2022

### Overview

There are 5 COVID-19 vaccines authorised for use in the UK—the messenger RNA (mRNA) vaccines, Pfizer/BioNTech (Comirnaty<sup>®</sup>) and Moderna (Spikevax<sup>®</sup>); the adenovirus vector vaccines, AstraZeneca (Vaxzevria<sup>®</sup>) and Janssen (Ad26.COV2-S [recombinant]); and the recombinant, adjuvanted protein-based vaccine, Novavax (Nuvaxovid<sup>®</sup>). The Janssen and Nuvaxovid<sup>®</sup> vaccines are not currently being supplied routinely in the UK.

There have been reports of a rare condition involving serious thromboembolic events with thrombocytopenia following vaccination with the AstraZeneca and Janssen vaccines. This condition, known as vaccine-induced immune thrombocytopenia and thrombosis (VITT), is a syndrome that develops within 5 to 30 days of receiving vaccination. For further information on blood clotting following COVID-19 vaccination, see UKHSA guidance: **Information for healthcare professionals on blood clotting following COVID-19 vaccination** (available at: [www.gov.uk/government/publications/covid-19-vaccination-blood-clotting](http://www.gov.uk/government/publications/covid-19-vaccination-blood-clotting)).

[information-for-healthcare-professionals/information-for-healthcare-professionals-on-blood-clotting-following-covid-19-vaccination](#)), and for guidance on the diagnosis and management of VITT, see NICE rapid guideline: **Vaccine-induced immune thrombocytopenia and thrombosis** (available at: [www.nice.org.uk/guidance/ng200](http://www.nice.org.uk/guidance/ng200)). For guidance on vaccine choice, see *Age specific recommendations for vaccine choice*.

### Primary immunisation

The COVID-19 vaccination programme consists of a primary vaccination course followed by a booster dose/s in eligible individuals. The vaccination programme aims to provide protection for individuals who are considered at highest risk of severe illness or death from COVID-19 infection, as well as protecting frontline health and social care staff from exposure. JCVI have provided advice on priority groups for vaccination as part of phase 1 and 2 of the programme according to risk. The risk of poorer outcomes from infection increases with age in both healthy adults and in adults with underlying health conditions. Older adults, particularly those aged over 65 years, are at highest risk.

There is also an increased risk of hospitalisation in males, individuals from certain ethnic minority backgrounds, individuals from socio-economically deprived areas, and those who are obese or morbidly obese. In children, the risk of severe disease or death from COVID-19 infection is very low. However, some children with certain underlying health conditions are at higher risk of severe COVID-19 disease.

Based on JCVI advice, the following groups were eligible for immunisation in phase 1:

- residents of, and staff working in care homes for older adults;
- all individuals aged 50 years and over;
- frontline health and social care workers;
- individuals aged 16 years and over in clinical at-risk groups;
- individuals aged 16 years and over who are eligible for a carer's allowance, or who are the main carer for a clinically vulnerable older or disabled individual;
- individuals aged 16 years and over who are household contacts of immunosuppressed individuals (of any age);
- individuals experiencing homelessness.

Based on JCVI advice, all individuals aged 5 years and over are eligible for immunisation in phase 2.

For further information on priority groups in phase 1 and 2 (such as group rankings in order of priority, definition of frontline health and social care workers, and underlying health conditions included in clinical at-risk groups), see Chapter 14a: COVID-19 - SARS-CoV-2, in *Immunisation against infectious disease* – 'The Green Book' (see *Useful resources*).

Most eligible individuals should receive 2 doses of COVID-19 vaccine p. 1425 for their primary course; 3 doses are required for individuals aged 5 years and over who were severely immunosuppressed at the time of their vaccination. For further information on vaccination in individuals with severe immunosuppression (including vaccine choice), see *Immunosuppression and HIV*. For most individuals, JCVI recommend a minimum 8 week interval between doses for all available vaccines where a multi-dose primary schedule is used, unless rapid immunisation is required in specific circumstances (such as individuals about to receive immunosuppressive treatment). However, for healthy individuals aged under 18 years who are not health and social care workers, carers, or household contacts of immunosuppressed individuals, a minimum 12 week interval between doses is recommended. Vaccine choice is dependent on age and comorbidities, (see *Age specific recommendations for vaccine choice*).

In individuals with confirmed COVID-19 infection, vaccination should be deferred. For all adults, and children

who are in clinical at-risk groups, are health and social care workers, or household contacts of immunosuppressed individuals, vaccination should ideally be deferred until clinical recovery (approximately 4 weeks after the onset of symptoms, or 4 weeks from the first confirmed positive result in those who are asymptomatic). For healthy individuals aged under 18 years who are not health and social care workers or household contacts of immunosuppressed individuals, vaccination should ideally be deferred for a minimum of 12 weeks from infection onset or sample date.

The same COVID-19 vaccine should ideally be used for the entire course, where possible. If the same vaccine is not available or suitable, or if the first product received is unknown, a suitable available product should be given to complete the primary course. If the course is delayed, it should be resumed, but the 1st dose should not be repeated. Individuals presenting for vaccination who have participated in a COVID-19 vaccine clinical trial should have written advice provided by their clinical trial investigators about vaccination in the routine programme. For further information on the COVID-19 vaccine (such as inadvertent administration errors, delayed administration of the 2nd dose, or exceptional circumstances for administration of a different second vaccine), see UKHSA guidance: **COVID-19 vaccination programme** (see *Useful resources*); and for guidance on completing vaccination in individuals who received vaccine doses abroad, see UKHSA: **Vaccination of those who received COVID-19 vaccination overseas** (available at: [www.gov.uk/government/publications/covid-19-vaccinations-received-overseas](http://www.gov.uk/government/publications/covid-19-vaccinations-received-overseas)).

Although there is no data on co-administration of COVID-19 vaccines with other vaccines, interference would likely be minimal. Whilst co-administration may make the attribution of adverse effects more difficult, it is generally better to proceed with vaccination to avoid further delay in protection or risk of the patient not returning for a later appointment. An exception to this is the herpes zoster (shingles) vaccines, where an interval period of 7 days should ideally be observed.

All vaccinated individuals should be advised to continue to follow the advice in place regarding social distancing, regular handwashing, and use of face coverings following immunisation.

COVID-19 vaccines are an area of ongoing research and recommendations may change as more data and other vaccines become available. For further information on the COVID-19 vaccination programme, see the UKHSA collection (available at: [www.gov.uk/government/collections/covid-19-vaccination-programme](http://www.gov.uk/government/collections/covid-19-vaccination-programme)).

## Age specific recommendations for vaccine choice

### Individuals aged under 18 years

Although the Moderna vaccine is authorised for use in children aged 12 years and over, the preferred COVID-19 vaccine p. 1425 for use in children is the Pfizer/BioNTech vaccine due to a lower reported rate of myocarditis. Individuals aged 16-17 years who have already received their 1st dose with the AstraZeneca [unlicensed] vaccine can complete the course with the same vaccine or with an mRNA vaccine.

### Individuals aged 18-39 years (not in clinical at-risk groups)

For healthy individuals aged 18-39 years (including health and social care workers, carers, and household contacts of immunosuppressed individuals), JCVI advises that it is preferable to offer an mRNA COVID-19 vaccine rather than the AstraZeneca vaccine where available. If an mRNA vaccine is not available, individuals can make an informed choice to receive the AstraZeneca COVID-19 vaccine (provided they understand the relative risks and benefits). Individuals who have already received their 1st dose with the AstraZeneca vaccine can complete the course with the same vaccine or with an mRNA vaccine.

### Individuals aged 40 years and over (not in clinical at-risk groups) or individuals aged 18 years and over in clinical at-risk groups

For individuals aged 40 years and over, and those aged 18 years and over in clinical at-risk groups, the JCVI, MHRA and the WHO consider the benefits of vaccination to outweigh the risk from rare adverse events seen after vaccination with the AstraZeneca vaccine. All individuals can be offered vaccination with any available COVID-19 vaccine, unless otherwise contra-indicated.

### Booster doses

JCVI advise that a booster dose should be offered at least 3 months after completion of primary immunisation (2 or 3 doses) to all individuals aged 16 years and over, and to children aged 12-15 years in clinical at-risk groups or who are household contacts of immunosuppressed individuals.

A further booster dose (spring booster) should be offered around 6 months after the previous booster to individuals aged 75 years and over, residents in care home for older adults, and those aged 12 years and over who are immunosuppressed. For individuals who received their 1st booster dose more recently, the spring booster should also be offered provided it has been at least 3 months since the last dose. For individuals who receive their 1st booster dose during the spring booster campaign, an additional booster dose is not recommended before the autumn (an autumn booster campaign is expected).

For individuals aged 18 years and over, the Pfizer/BioNTech or Moderna COVID-19 vaccine should be offered for the booster dose/s irrespective of the vaccine used for the primary course. For eligible individuals aged under 18 years, the Pfizer/BioNTech vaccine is preferred. For individuals in whom mRNA vaccines are unsuitable and who have received at least one dose of AstraZeneca vaccine previously, the AstraZeneca vaccine may be considered. In exceptional circumstances, individuals aged 40 years and over who have previously received an mRNA vaccine may be offered the AstraZeneca vaccine; this should be on a case-by-case basis.

Individuals who have participated in a COVID-19 vaccine clinical trial should have written advice provided by their clinical trial investigators about vaccination in the routine programme. For further information on booster doses (including dosing intervals for those about to receive immunosuppressive treatment), see Chapter 14a: COVID-19 - SARS-CoV-2, in *Immunisation against infectious disease* 'The Green Book' (see *Useful resources*); and for guidance in individuals who received vaccine doses abroad, see UKHSA: **Vaccination of those who received COVID-19 vaccination overseas** (available at: [www.gov.uk/government/publications/covid-19-vaccinations-received-overseas](http://www.gov.uk/government/publications/covid-19-vaccinations-received-overseas)).

### Pregnancy

JCVI advise that pregnant females should be offered immunisation against COVID-19 as pregnancy is a clinical risk factor for severe COVID-19 infection. The preferred COVID-19 vaccine for use in pregnant females aged 18 years and over is the Pfizer/BioNTech or Moderna vaccine. The preferred vaccine for use in pregnant females aged under 18 years is the Pfizer/BioNTech vaccine. Females who are planning a pregnancy or are immediately post-partum should also be offered vaccination with a suitable COVID-19 vaccine.

If started prior to, or given inadvertently during early pregnancy, vaccination should be completed during pregnancy at the recommended intervals; pregnant females who have already received a dose of the AstraZeneca vaccine can complete the course with the same vaccine or with an mRNA vaccine. Any inadvertent exposure to the COVID-19 vaccine from the first day of the last menstrual period to any time during pregnancy, should be reported to the

Immunisation Department of PHE who run UK-wide surveillance on the safety of vaccines given in pregnancy. For advice on the reporting of inadvertent vaccination in pregnancy, see PHE guidance: **Inadvertent vaccination in pregnancy (VIP)** (available at: [www.gov.uk/guidance/vaccination-in-pregnancy-vip](http://www.gov.uk/guidance/vaccination-in-pregnancy-vip)). For further information on COVID-19 vaccination and disease in pregnancy, see [www.gov.uk/government/publications/safety-of-covid-19-vaccines-when-given-in-pregnancy](http://www.gov.uk/government/publications/safety-of-covid-19-vaccines-when-given-in-pregnancy).

### Immunosuppression and HIV

Individuals with immunosuppression and HIV infection (regardless of CD4 count) are considered at-risk and should be vaccinated against COVID-19 in accordance with JCVI recommendations (see *Primary immunisation* and *Booster doses*).

Individuals with severe immunosuppression may have an inadequate immune response to a primary course of vaccination and may therefore remain at high risk. JCVI advise that individuals aged 5 years and over who were severely immunosuppressed at the time of receiving their 1st or 2nd dose of COVID-19 vaccine, should be offered a 3rd dose as part of their primary course (ideally at least 8 weeks after the 2nd dose). For vaccine choice, see *Age specific recommendations for vaccine choice for the 3rd primary dose*; and for further information on 3rd primary dose vaccination (including the definition of severe immunosuppression), see Chapter 14a: COVID-19 - SARS-CoV-2, in *Immunisation against infectious disease* - 'The Green Book' (see *Useful resources*). Individuals aged 12 years and over with severe immunosuppression should also be offered booster doses to extend protection from their primary course. For further guidance, see *Booster doses*.

As there is limited evidence on response to immunisation in individuals with immunosuppression, specialists may advise their patients on optimal timing of vaccine delivery based on the patient's immune status, likely response to vaccination, risk of COVID-19 and of exposure. Post-vaccination testing for individuals with severe immunosuppression may be considered by specialists managing their care; advice on whether further precautions are required to reduce their risk can then be given if appropriate.

Refer to the British HIV Association for further information on the use of COVID-19 vaccine in HIV-positive individuals. See [www.bhiva.org/SARS-CoV-2-vaccine-advice-for-adults-living-with-HIV-update](http://www.bhiva.org/SARS-CoV-2-vaccine-advice-for-adults-living-with-HIV-update) for further information.

#### Age specific recommendations for vaccine choice for the 3rd primary dose

For individuals aged 5-17 years with severe immunosuppression, the Pfizer/BioNTech COVID-19 vaccine p. 1425 is preferred.

For individuals aged 18 years and over with severe immunosuppression, either the Pfizer/BioNTech or Moderna COVID-19 vaccine are preferred. The AstraZeneca vaccine is an alternative option for individuals who have already received this previously if mRNA vaccines are clinically unsuitable. In exceptional circumstances, individuals aged 40 years and over who have previously received an mRNA vaccine may be offered the AstraZeneca vaccine; this should be on a case-by-case basis.

### Post-exposure management

COVID-19 is a notifiable disease in the UK. For further information, see *Notifiable diseases* in *Antibacterials*, principles of therapy p. 540.

There is limited evidence on the use of COVID-19 vaccines as post-exposure prophylaxis or to prevent transmission during outbreaks. For vulnerable individuals who require direct protection during prolonged community outbreaks, advice on post-exposure management can be sought from local health protection teams.

For the management of COVID-19 infection and links to other resources, see COVID-19 p. 674.

## Diphtheria vaccine

### Overview

Diphtheria-containing vaccines are prepared from the toxin of *Corynebacterium diphtheriae* and adsorption on aluminium hydroxide or aluminium phosphate improves antigenicity. The vaccine stimulates the production of the protective antibody. The quantity of diphtheria toxoid in a preparation determines whether the vaccine is defined as 'high dose' or 'low dose'. Vaccines containing the higher dose of diphtheria toxoid are used for primary immunisation of children under 10 years of age. Vaccines containing the lower dose of diphtheria toxoid are used for primary immunisation in adults and children over 10 years. Single-antigen diphtheria vaccine is not available and adsorbed diphtheria vaccine is given as a combination product containing other vaccines.

For primary immunisation of children aged between 2 months and 10 years, vaccination is recommended usually in the form of 3 doses (separated by 1-month intervals) of diphtheria with tetanus, pertussis, hepatitis B, poliomyelitis and haemophilus influenzae type b vaccine p. 1420 (*Infanrix hexa*<sup>®</sup>) (see Immunisation schedule). In unimmunised individuals aged over 10 years the primary course comprises of 3 doses of **adsorbed diphtheria [low dose], tetanus and poliomyelitis (inactivated) vaccine**.

A booster dose should be given 3 years after the primary course (this interval can be reduced to a minimum of 1 year if the primary course was delayed). Children under 10 years should receive **either adsorbed diphtheria, tetanus, pertussis (acellular, component) and poliomyelitis (inactivated) vaccine or adsorbed diphtheria [low dose], tetanus, pertussis (acellular, component) and poliomyelitis (inactivated) vaccine**. Individuals aged over 10 years should receive **adsorbed diphtheria [low dose], tetanus, and poliomyelitis (inactivated) vaccine**.

A second booster dose, of adsorbed diphtheria [low dose], tetanus and poliomyelitis (inactivated) vaccine, should be given 10 years after the previous booster dose (this interval can be reduced to a minimum of 5 years if previous doses were delayed).

#### Diphtheria-containing vaccines for children over 10 years and adults

A **low dose** of diphtheria toxoid is sufficient to recall immunity in individuals previously immunised against diphtheria but whose immunity may have diminished with time; it is insufficient to cause serious reactions in an individual who is already immune. Preparations containing low dose diphtheria should be used for adults and children over 10 years, for both primary immunisation and booster doses.

#### Travel

Those intending to travel to areas with a risk of diphtheria infection should be fully immunised according to the UK schedule. If more than 10 years have lapsed since completion of the UK schedule, a dose of **adsorbed diphtheria [low**

dose), **tetanus and poliomyelitis (inactivated) vaccine** should be administered.

### Contacts

Staff in contact with diphtheria patients or with potentially pathogenic clinical specimens or working directly with *C. diphtheriae* or *C. ulcerans* should receive a booster dose if fully immunised (with 5 doses of diphtheria-containing vaccine given at appropriate intervals); further doses should be given at 10-year intervals if risk persists. Individuals at risk who are not fully immunised should complete the primary course; a booster dose should be given after 5 years and then at 10-year intervals. **Adsorbed diphtheria** [low dose], **tetanus and poliomyelitis (inactivated) vaccine** is used for this purpose; immunity should be checked by antibody testing at least 3 months after completion of immunisation.

Advice on the management of cases, carriers, contacts and outbreaks must be sought from health protection units. The immunisation history of infected individuals and their contacts should be determined; those who have been incompletely immunised should complete their immunisation and fully immunised individuals should receive a reinforcing dose. See advice on antibacterial treatment to prevent a secondary case of diphtheria in a non-immune individual.

### Useful Resources

Advice reflects that in the handbook Immunisation against Infectious Disease (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at:

[www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Haemophilus influenzae type b conjugate vaccine

25-Nov-2020

### Overview

*Haemophilus influenzae* type b (Hib) containing vaccines are inactivated, and are made from capsular polysaccharide extracted from cultures of Hib bacteria. The polysaccharide is conjugated with a protein (such as tetanus toxoid) to increase immunogenicity, especially in young children. The Hib conjugate vaccine is only available as a combination preparation containing other vaccines.

Hib vaccination is given as a component of the routine childhood immunisation programme to provide protection against invasive Hib disease for children aged under 10 years (see Immunisation schedule p. 1394). If the child's routine immunisation is delayed, children aged under 10 years should be immunised at the earliest opportunity. Hib vaccination may also be given to individuals aged 10 years and over who are considered to be at increased risk of invasive Hib disease.

A primary course consists of 3 doses of the diphtheria with tetanus, pertussis, hepatitis B, poliomyelitis and haemophilus influenzae type b vaccine p. 1420, given at 4 weekly intervals.

Children aged under 1 year should be given a primary course, followed by a booster dose of the haemophilus influenzae type b with meningococcal group C vaccine p. 1422 at 1 year of age (usually on or after the child's first birthday). This should be given at least 4 weeks after the last dose of Hib-containing vaccine, and where there has been a delay, can be given up until 10 years of age. Early immunisation with a primary course may be considered for children from 6 weeks of age if required in certain

circumstances, such as for travel reasons (immunisation may be given at an interval of 3 weeks for 1 dose only, with the other 2 doses completed at an interval of at least 4 weeks).

If the primary course was commenced with the pentavalent diphtheria with tetanus, pertussis, poliomyelitis and haemophilus influenzae type b vaccine p. 1420, it can be completed with the diphtheria with tetanus, pertussis, hepatitis B, poliomyelitis and haemophilus influenzae type b vaccine. If interrupted, the primary course should be resumed but not repeated, allowing a 4 week interval between doses.

Children aged 1 year to under 10 years who have not been immunised against Hib need to only receive 1 dose of the haemophilus influenzae type b with meningococcal group C vaccine. However, children who have not completed a primary course of diphtheria, tetanus, pertussis and polio, should be given 3 doses of the diphtheria with tetanus, pertussis, hepatitis B, poliomyelitis and haemophilus influenzae type b vaccine at 4 weekly intervals, in order to be fully protected against diphtheria, tetanus, pertussis and polio.

For further information on vaccination of children with uncertain or incomplete immunisation status, see Chapter 11, The UK immunisation schedule, in *Immunisation against infectious disease* - 'The Green Book'.

For information on immunisation of individuals with neurological conditions, see Chapter 16, *Haemophilus influenzae* type b (Hib), in *Immunisation against infectious disease* - 'The Green Book'.

Children with immunosuppression and HIV infection (regardless of CD4 count) should be given Hib-containing vaccines according to the routine immunisation schedule (see Immunisation schedule p. 1394). Consider re-immunisation after treatment completion—specialist advice may be required. Refer to the British HIV Association and Children's HIV Association for further information on the use of Hib-containing vaccines in individuals with HIV infection. See [www.bhiva.org/guidelines](http://www.bhiva.org/guidelines) and [www.chiva.org.uk/](http://www.chiva.org.uk/) for further information.

### Post-exposure management of invasive *Haemophilus influenzae* type b disease

Acute meningitis caused by Hib is a notifiable disease in England, Northern Ireland and Wales. For further information, see *Notifiable diseases* in *Antibacterials*, principles of therapy p. 540.

To reduce the risk of secondary invasive Hib disease in the index case and their close contacts (such as contacts in a household, or a pre-school or primary school setting), antibacterial prophylaxis and vaccination may be required. Individual risk is determined by factors such as age, health status, and immunisation history. For information on antibacterial prophylaxis, see *Haemophilus influenzae* type b infection: prevention of secondary disease in *Antibacterials*, use for prophylaxis p. 542.

Children aged under 10 years who are unimmunised or partially immunised against Hib disease and are either the index case, a household contact of the index case, or a contact of the index case in a pre-school or primary school setting, should complete their primary immunisation. Vaccination of the index case should occur after recovery from invasive Hib infection. For further information on primary immunisation, see *Overview*. Children aged under 10 years who have completed their age-specific primary immunisation, and individuals of any age with asplenia or splenic dysfunction, may need an additional dose of a Hib-containing vaccine. For further information on vaccination following a case of invasive Hib disease, see Public Health England guidance: ***Haemophilus influenzae* type b** (see *Useful resources*).

## Useful Resources

Recommendations reflect Chapter 16, *Haemophilus influenzae* type b (Hib), in *Immunisation against infectious disease* - 'The Green Book'. Public Health England. March 2011.

[www.gov.uk/government/publications/haemophilus-influenzae-type-b-hib-the-green-book-chapter-16](http://www.gov.uk/government/publications/haemophilus-influenzae-type-b-hib-the-green-book-chapter-16)

Revised recommendations for the prevention of secondary *Haemophilus influenzae* type b (Hib) disease. Public Health England. 2009, updated July 2013.

[www.gov.uk/government/publications/haemophilus-influenzae-type-b-hib-revised-recommendations-for-the-prevention-of-secondary-cases](http://www.gov.uk/government/publications/haemophilus-influenzae-type-b-hib-revised-recommendations-for-the-prevention-of-secondary-cases)

## Hepatitis A vaccine

22-Sep-2020

### Overview

The hepatitis A vaccine p. 1427 is prepared from different strains of the virus grown in human diploid cells. The inactivated vaccine is available as a monovalent vaccine (different monovalent vaccines can be used interchangeably), or in combination with hepatitis B or typhoid—vaccine choice is dependent on which infection(s) the individual requires protection from. Immunisation with normal immunoglobulin p. 1387 can be used to provide immediate protection against hepatitis A.

### Pre-exposure prophylaxis

Immunisation against hepatitis A is recommended for individuals at high risk of hepatitis A exposure, those with certain underlying medical conditions, and those at risk of complications, as listed:

- laboratory staff who may be exposed to the virus;
- staff and residents of homes for those with severe learning difficulties, or where personal hygiene among patients may be poor;
- workers at risk of repeated exposure to untreated sewage;
- individuals who work with primates;
- patients with haemophilia being treated with plasma-derived clotting factors;
- patients with severe liver disease regardless of the cause (consider for those with chronic hepatitis B or C infection and for patients with milder liver disease);
- individuals travelling to or going to reside in areas of intermediate or high prevalence, see *Travel* below;
- individuals who are at risk due to their sexual behaviour (such as men who have sex with men);
- parenteral drug misusers.

Immunisation may be considered under certain circumstances for:

- food packagers and handlers where a case or outbreak occurs—advice should be sought from the local Health Protection Team;
- staff in day-care facilities where there is a community outbreak—advice should be sought from the local Health Protection Team;
- healthcare workers.

Immunisation against hepatitis A infection requires a primary pre-exposure course. The immunisation regimens for monovalent hepatitis A vaccine and hepatitis A with typhoid vaccine p. 1428 consist of a single dose. For immunisation using the combined hepatitis A and B vaccine, the dosing regimen depends on the product used, see hepatitis A and B vaccine p. 1426 for dosing schedules (including accelerated course information).

Individuals with immunosuppression and HIV infection can be given hepatitis A-containing vaccines. Consider re-immunisation—specialist advice may be required. Refer to the British HIV Association or Children's HIV Association for

further information on the use of hepatitis A vaccine in HIV-positive individuals. See [www.bhiva.org](http://www.bhiva.org) or [www.chiva.org.uk](http://www.chiva.org.uk) for further information.

### Boosters

A booster dose is usually given 6–12 months after the initial dose of hepatitis A-containing vaccine, and ensures immunity beyond 10 years; however, successful boosting can occur even if the second dose is delayed by several years. A further booster dose 25 years after full primary immunisation is only considered necessary if the risk of hepatitis A infection is still present.

### Travel

Pre-exposure immunisation is recommended for individuals travelling to or going to reside in areas of high or intermediate prevalence. Immunisation should ideally be given 2 weeks prior to departure, but can be given up to the day of departure; the use of normal immunoglobulin for travel prophylaxis is no longer recommended. Care should also be taken to avoid hepatitis A exposure through food and water. Further information on country-specific hepatitis A risk is available from the National Travel Health Network and Centre ([travelhealthpro.org.uk/](http://travelhealthpro.org.uk/)) and Health Protection Scotland ([www.travax.nhs.uk](http://www.travax.nhs.uk)).

### Post-exposure prophylaxis

Hepatitis A (acute infectious hepatitis) is a notifiable disease in the UK. For further information, see *Notifiable diseases in Antibacterials, principles of therapy* p. 540.

A risk assessment should be carried out for the index case (particularly if infection occurs in a non-household setting), and the national standard questionnaire also completed for all probable and confirmed cases. Verbal and written guidance on the importance of good hygiene practices (such as hand washing after using the toilet, changing nappies, and before preparing food) should be given to the index case, their family and other close contacts. If sexual transmission is the likely route (particularly between men who have sex with men), advice on prevention of hepatitis A spread during sex should also be given. For further information on the management of index cases and link to the national standard questionnaire, see Public Health England (PHE) guidance: **Public Health control and management of hepatitis A** (see *Useful resources*).

Close contacts of the index case(s) should have a risk assessment as soon as possible within 14 days of exposure. Prophylactic treatment choice for close contacts depends on susceptibility (determined by age and health status) and time since exposure. There should be a low threshold for considering someone a close contact.

Close contacts should be considered immune if they have a documented history of either a completed primary course within the past 10 years, or a single dose of monovalent vaccine within the past year, or if they have previously had laboratory-confirmed hepatitis A.

Post-exposure prophylaxis is **not** required for healthy close contacts aged under 1 year not attending childcare; immunisation should be offered to all those who assist in the child's toileting to prevent tertiary infection. For close contacts aged 2–12 months attending childcare, a dose of monovalent hepatitis A vaccine [unlicensed use] should be given within 14 days of exposure. If the child contact cannot be immunised, appropriate advice should be given on enhanced hygiene in the childcare setting; if enhanced hygiene standards cannot be met, the child should be excluded from childcare for 30 days. If exclusion of the child is not possible, all carers and children aged 2 months and above in the childcare setting should be immunised. In these cases, any child that goes on to require long-term protection against hepatitis A after their first birthday, should be given the full course of 2 doses.

For healthy close contacts aged 1–59 years, a single dose of monovalent hepatitis A vaccine is recommended within

14 days of exposure. A risk assessment is required to determine any continued risk of hepatitis A infection. To ensure long term protection, a second dose should be given after 6–12 months.

For close contacts who have chronic liver disease (including chronic hepatitis B or C infection), HIV infection (with a CD4 count < 200 cells per microlitre), are immunosuppressed, or are aged 60 years or over, normal immunoglobulin in addition to monovalent hepatitis A vaccine is recommended within 14 days of exposure (up to 28 days in those with chronic liver disease). To provide long term protection, a second dose should be given after 6–12 months.

Refer to the British HIV Association or Children's HIV Association for further information on the use of hepatitis A vaccine p. 1427 in HIV-positive individuals. See [www.bhiva.org](http://www.bhiva.org) or [www.chiva.org.uk](http://www.chiva.org.uk) for further information.

In households with more than one close contact, all unvaccinated household contacts seen within 8 weeks of jaundice onset in the index case, should be given the monovalent hepatitis A vaccine to prevent tertiary spread within the household.

For further information on the management of susceptible close contacts and for information on outbreaks, see PHE guidance: **Public Health control and management of hepatitis A** (see *Useful resources*); and for further information on normal immunoglobulin, see Immunoglobulins p. 1383.

### Useful Resources

Recommendations reflect Chapter 17, Hepatitis A, in *Immunisation against infectious disease* - 'The Green Book'. Public Health England. December 2013.

[www.gov.uk/government/publications/hepatitis-a-the-green-book-chapter-17](http://www.gov.uk/government/publications/hepatitis-a-the-green-book-chapter-17)

Public health control and management of hepatitis A. Public Health England. June 2017.

[www.gov.uk/government/publications/hepatitis-a-infection-prevention-and-control-guidance](http://www.gov.uk/government/publications/hepatitis-a-infection-prevention-and-control-guidance)

## Hepatitis B vaccine

09-May-2022

### Overview

Hepatitis B vaccines contain inactivated hepatitis B surface antigen (HBsAg) prepared from yeast cells using recombinant DNA technology, which are adsorbed onto an adjuvant. The vaccine is available as a monovalent vaccine, a bivalent vaccine in combination with hepatitis A, and a hexavalent vaccine in combination with diphtheria, tetanus, acellular pertussis, inactivated poliomyelitis, and *Haemophilus influenzae* type b (Hib).

### Pre-exposure prophylaxis

Hepatitis B vaccination is given as a component of the routine childhood immunisation programme to provide long-term protection against hepatitis B for children aged under 1 year. Children aged under 1 year should be given a primary course consisting of 3 doses of the diphtheria with tetanus, pertussis, hepatitis B, poliomyelitis and haemophilus influenzae type b vaccine p. 1420, given at 4 weekly intervals (see Immunisation schedule p. 1394). If interrupted, the primary course should be resumed but not repeated, allowing a 4 week interval between doses. Early immunisation with a primary course may be considered for children from 6 weeks of age if required in certain circumstances, such as for travel reasons (immunisation may be given at an interval of 3 weeks for 1 dose only, with the other 2 doses completed at an interval of at least 4 weeks).

If the child's routine immunisation is delayed, children aged under 10 years should be immunised at the earliest opportunity.

If the primary course was commenced with the pentavalent diphtheria with tetanus, pertussis, poliomyelitis and haemophilus influenzae type b vaccine p. 1420, it can be completed with the hexavalent diphtheria with tetanus, pertussis, hepatitis B, poliomyelitis and haemophilus influenzae type b vaccine.

Children aged 1 year to under 10 years who have completed a primary course with the pentavalent vaccine but have not received any hepatitis B-containing vaccine, do not require a hepatitis B-containing vaccine unless they are in a high risk group (see below) or are exposed to hepatitis B (see *Post-exposure management*).

Immunisation against hepatitis B is also recommended for individuals in high risk groups (those at high risk of exposure or those at risk of complications), as listed:

- parenteral drug misusers and their sexual partners, other household and close family contacts;
- non-parenteral drug misusers who are likely to 'progress' to parenteral drug misuse;
- close family, household, or sexual contacts of an individual with chronic hepatitis B infection;
- individuals who change sexual partners frequently (such as commercial sex workers);
- men who have sex with men;
- individuals receiving regular blood transfusions or blood products (such as those with haemophilia), and carers responsible for the administration of such products;
- patients with chronic renal failure who are on haemodialysis or a renal transplantation programme, and those predicted to require these interventions—use vaccines specifically formulated for patients with renal insufficiency. Haemodialysis patients should be monitored for antibodies annually and re-immunised if necessary;
- patients with severe liver disease regardless of the cause, or those with milder liver disease who may share risk factors for acquiring hepatitis B infection (such as individuals with chronic hepatitis C);
- healthcare workers (including students and trainees) who may have direct contact with patients' blood, blood-stained body fluids or tissues;
- laboratory staff who handle material that may contain the virus;
- other occupational risk groups (such as morticians and embalmers);
- staff and residents of homes for those with learning difficulties (consideration may also be given for those in day care, schools and centres for those with severe learning disability);
- staff and inmates of custodial institutions;
- individuals travelling to or going to reside in areas of high or intermediate prevalence of hepatitis B, see *Travel* below;
- families adopting children from countries with a high or intermediate prevalence of hepatitis B;
- some foster carers and their families.

For immunisation of individuals in a high-risk group, the primary course dosing regimen depends on how rapidly protection is required, the likelihood of patient compliance, and the product used. For most individuals, an accelerated schedule should be given (particularly in individuals where compliance with immunisation is difficult). Alternative non-accelerated schedules are available, but should only be used when rapid protection is not required and there is a high likelihood of patient attendance for immunisation. In certain circumstances, a very rapid schedule may be given to individuals who are at immediate risk where a more rapid induction of protection is required. See hepatitis B vaccine p. 1429 and hepatitis A and B vaccine p. 1426 for information on dosing schedules.

During vaccination, advice should be provided on other preventative measures (such as condom use and needle

exchange), and referral to specialist services arranged if appropriate.

Immunosuppressed individuals with HIV infection have higher rates of developing chronic infection; HIV-positive patients and those at risk of HIV infection should be offered vaccination. Refer to the British HIV Association and Children's HIV Association for further information on the use of hepatitis B-containing vaccines in individuals with HIV infection. See [www.bhiva.org/guidelines](http://www.bhiva.org/guidelines) and [www.chiva.org.uk/](http://www.chiva.org.uk/) for further information.

### Boosters

Following a primary course of immunisation, most individuals do not require a reinforcing dose of a hepatitis B-containing vaccine. For healthcare workers (including students and trainees) a single booster dose (once only) should be offered approximately 5 years after primary immunisation. For patients with renal failure and for individuals at the time of a subsequent significant exposure, a booster dose may be required. For further information, see Chapter 18: Hepatitis B, in *Immunisation against infectious disease* - 'The Green Book'.

### Travel

Pre-exposure immunisation is recommended for individuals travelling to or going to reside in areas of high or intermediate prevalence of hepatitis B and who, through their behaviour/activities may put themselves at risk while abroad. These include sexual activity, parenteral drug use, undertaking relief aid work, and/or playing contact sports. Travellers are also at risk of acquiring infection as a result of medical or dental procedures carried out in countries where unsafe therapeutic injections (e.g. the re-use of contaminated needles and syringes without sterilisation) are a risk factor for hepatitis B. Individuals at high risk of requiring medical or dental procedures in such countries should therefore be immunised, including:

- those staying for lengthy periods;
- those with chronic medical conditions that may require hospitalisation;
- those travelling for medical or dental procedures.

Further information on country-specific hepatitis B risk is available from the National Travel Health Network and Centre ([travelhealthpro.org.uk/](http://travelhealthpro.org.uk/)) and Health Protection Scotland ([www.travax.nhs.uk](http://www.travax.nhs.uk)).

### Post-exposure prophylaxis

Hepatitis B (acute infectious hepatitis) is a notifiable disease in the UK. For further information, see *Notifiable diseases in Antibacterials*, principles of therapy p. 540.

Post-exposure prophylaxis should be given immediately to neonates born to mothers infected with hepatitis B, see *Selective neonatal immunisation programme* below for further information. Immediate post-exposure prophylaxis should also be offered to any individual who has potentially been exposed to hepatitis B infected blood or bodily fluids, such as sexual partners/close contacts of an individual with acute hepatitis B or newly diagnosed chronic hepatitis B, or those exposed through a needle stick injury or bites from a known hepatitis B individual. Advice should be sought from the nearest public health laboratory, health protection team, or on-call virologist. The recommended vaccine course (including use of a booster dose) is dependent on the individual's vaccination history, source of exposure, and continued risk. For further information, see Chapter 18: Hepatitis B, in *Immunisation against infectious disease* - 'The Green Book'.

Hepatitis B immunoglobulin p. 1387 may also be given to individuals at the same time as the hepatitis B vaccine following accidental exposure to hepatitis B-infected blood or bodily fluids through percutaneous inoculation, contamination of mucous membranes or non-intact skin. It is also recommended for use with the vaccine in sexual

partners/contacts of an individual with acute hepatitis B or newly diagnosed chronic hepatitis B, if seen within 1 week. Hepatitis B immunoglobulin is also recommended in some known non-responders to the hepatitis B vaccine. For further information, see UKHSA: **Hepatitis B immunoglobulin** (see *Useful resources*).

### Selective neonatal immunisation programme

Neonates born to mothers who have chronic hepatitis B infection or who had acute hepatitis B during pregnancy, should be vaccinated with a dose of the monovalent hepatitis B vaccine p. 1429 as soon as possible (ideally within 24 hours of birth), followed by a second dose at 4 weeks. Routine childhood immunisation with the hexavalent diphtheria with tetanus, pertussis, hepatitis B, poliomyelitis and haemophilus influenzae type b vaccine p. 1420 should then be given as scheduled (see Immunisation schedule p. 1394), followed by a further dose of the monovalent hepatitis B vaccine and blood test (to exclude infection) at 1 year of age. For further information on the selective immunisation programme, see UKHSA: **Hexavalent combination vaccine: information for healthcare practitioners** and PHE: **Guidance on the hepatitis B antenatal screening and selective neonatal immunisation pathway** (see *Useful resources*).

For neonates with a birth weight below 1.5 kg born to an infected mother, or neonates born to a highly infectious mother, hepatitis B immunoglobulin should be given at the same time as the first dose of monovalent hepatitis B vaccine (administered at different sites) in order to provide rapid protection until the vaccine becomes effective. For further information on the use of hepatitis B immunoglobulin, and which mothers are considered to be highly infectious, see UKHSA guidance: **Hepatitis B immunoglobulin** (see *Useful resources*).

## Human papillomavirus vaccine

11-Apr-2022

### Overview

The human papillomavirus vaccines p. 1431 (HPV vaccines) consist of virus-like particles prepared from the major protein of the viral capsid and mimic the structure of the native virus, but do not contain any viral DNA. The quadrivalent vaccine (*Gardasil*<sup>®</sup>) contains HPV types 6, 11, 16 and 18, and the nine-valent vaccine (*Gardasil 9*<sup>®</sup>) contains HPV types 6, 11, 16, 18, 31, 33, 45, 52 and 58. Both are adjuvanted and are used for the prevention of cervical and anal cancers, and pre-cancerous genital (cervical, vulvar, and vaginal) and anal lesions associated with HPV types 16

and 18. *Gardasil*<sup>®</sup> and *Gardasil 9*<sup>®</sup> are also effective at preventing genital warts, and may also provide some cross-protection against infection caused by other high-risk HPV types.

During 2022, *Gardasil 9*<sup>®</sup> will replace *Gardasil*<sup>®</sup> as the HPV vaccine supplied for the national HPV vaccination programme. The two vaccines are considered interchangeable by the JCVI, and vaccination should not be delayed while awaiting supply of either vaccine.

As the vaccines do not protect against all strains of HPV, safe sex precautions should always be practiced; and for all females, routine cervical screening should continue at the scheduled age.

#### Children aged 9 to 14 years

The HPV vaccines are licensed for individuals from 9 years of age, however vaccination of children aged 9 to 10 years is not offered as part of the national vaccination programme. Immunisation is routinely recommended for children aged 11 to 14 years (the eligible age for vaccine administration varies within different countries within the UK, see Immunisation schedule p. 1394 for further guidance).

For guidance on the vaccination schedule to be given (2 dose or 3 dose schedule), see *Vaccination schedule*.

#### Individuals aged 15 to 25 years

Under the national programme in England, individuals remain eligible to receive the HPV vaccine up to the age of 25 years if they did not receive the vaccine when scheduled (age eligibility differs in different countries in the UK), see Chapter 18a, Human papillomavirus, in *Immunisation against infectious disease* - 'The Green Book' (see *Useful resources*) for further information. Where appropriate, immunisation with the HPV vaccine should also be offered to individuals coming into the UK if they have not been offered protection in their country of origin.

For individuals who started but did not complete their vaccination before reaching the age of 25 years, the vaccination course should be completed where possible.

For guidance on the vaccination schedule to be given (2 dose or 3 dose schedule), see *Vaccination schedule*.

#### Vaccination of males who have sex with males and other at risk individuals

Males who have sex with other males (MSM), who are aged 15 to 45 years and attend specialist sexual health services or HIV services, are eligible for vaccination if they have not previously been vaccinated. If the course has not been completed before the age of 46 years, it can still be completed provided the first dose was given as part of the pilot or national vaccination programme.

There may be considerable benefit in offering HPV vaccination to other individuals who attend specialist sexual health services or HIV services who are not eligible under the national programme, but are deemed to have a similar risk profile to that seen in males who have sex with males. This includes some transgender individuals, sex workers, and men and women living with HIV infection.

Refer to the British HIV Association for further information on the use of human papillomavirus vaccines in individuals with HIV infection. See [www.bhiva.org/guidelines](http://www.bhiva.org/guidelines).

For guidance on the vaccination schedule to be given (2 dose or 3 dose schedule), see *Vaccination schedule*.

#### Vaccination schedule

A 2 dose schedule is now recommended for all children and adults except for those with immunosuppression or HIV infection. For guidance on vaccination scheduling for individuals aged 15 years and over who commenced their course prior to April 2022, see UKHSA: **HPV vaccination: guidance for healthcare practitioners** (see *Useful resources*).

#### Individuals without immunosuppression or HIV infection

Eligible individuals who do not have immunosuppression or HIV infection should be offered a 2 dose schedule of human

papillomavirus vaccines, with the second dose given 6–24 months after the first dose.

2 doses given less than 6 months apart for *Gardasil*<sup>®</sup> or less than 5 months apart for *Gardasil 9*<sup>®</sup> should not be considered adequate to provide long term protection, therefore the dose that was given early should be discounted and a third dose given once the recommended time period has elapsed and at least 4 weeks after the dose that was given early. If different vaccines have been administered, the minimum recommended time interval between doses should be 6 months.

#### Individuals with immunosuppression or HIV infection

A 3 dose schedule of human papillomavirus vaccines should be offered to eligible individuals who are known to be immunocompromised at the time of immunisation. Re-immunisation may be considered after treatment is finished and/or recovery has occurred depending on the treatment received—specialist advice may be required.

A 3 dose schedule of human papillomavirus vaccines is also recommended for eligible individuals with HIV infection who attend HIV services, and should be given regardless of CD4 cell count, antiretroviral therapy use, or viral load.

The second dose in the 3 dose schedule should be given at least 1 month after the first dose, followed by a third dose at least 3 months after the second dose; ideally the course should be completed within a 12 month period. In cases where the second dose is given late and there is a high likelihood that the individual will not return, or it is not practical for the third dose to be given after 3 months, then the third dose can be given at least 1 month after the second dose.

For eligible individuals of the MSM vaccination program, variable administration intervals are possible in order to align administration of doses with existing clinic appointments, provided that for these individuals the course is completed within 24 months and the minimum interval between doses is followed where possible.

#### Booster doses

Protection from human papillomavirus vaccines is maintained for at least 10 years, although protection is expected to last longer. There is no recommendation for the need for booster doses.

## Influenza vaccine

06-May-2022

### Overview

While most viruses are antigenically stable, the influenza viruses A and B (especially A) are constantly altering their antigenic structure as indicated by changes in the haemagglutinins (H) and neuraminidases (N) on the surface of the viruses. It is essential that influenza vaccines in use target the prevalent strain or strains as recommended each year by the WHO.

The influenza vaccines recommended for immunisation are the adjuvanted egg-grown quadrivalent influenza

vaccine (inactivated), cell-grown quadrivalent influenza vaccine (inactivated), egg-grown quadrivalent influenza vaccine (inactivated), recombinant quadrivalent influenza vaccine, and the live attenuated influenza vaccine. The choice of vaccine is dependent on the person's age and contra-indications.

The ideal time for immunisation is between September and early November.

Immunisation is recommended for individuals at high risk of serious complications from influenza, and to reduce transmission of infection. In the national flu immunisation programme 2022/2023, influenza vaccination is recommended for the following eligible groups:

- Individuals aged 6 months and over in a clinical risk group, such as those with:
  - ▶ chronic respiratory disease;
  - ▶ chronic heart disease;
  - ▶ chronic liver disease;
  - ▶ chronic kidney disease;
  - ▶ chronic neurological disease;
  - ▶ diabetes mellitus;
  - ▶ splenic dysfunction or asplenia;
  - ▶ immunosuppression because of disease or treatment (including prolonged systemic corticosteroid treatment [for over 1 month at dose equivalents of prednisolone p. 747: *adult and child over 20 kg, 20 mg or more daily; child under 20 kg, 1 mg/kg or more daily*], and chemotherapy);
  - ▶ HIV infection (regardless of immune status);
  - ▶ morbid obesity (BMI of 40 kg/m<sup>2</sup> and above);
  - ▶ learning disability.
- All children aged 2–3 years on 31st August 2022.
- All primary school aged children (from reception to year 6).
- All pregnant females (including those who become pregnant during the flu season).
- All adults aged 65 years and over (including those who turn 65 by 31st March 2023).
- Residents of long-stay residential homes or other specific long-stay facilities, where rapid spread is likely to follow introduction of infection and cause high morbidity and mortality (this does not include, for instance, prisons, young offender institutions, or university halls of residence).
- Individuals who receive a carer's allowance, or who are the main carer of an older or disabled individual whose welfare may be at risk if the carer falls ill.
- Household contacts of immunocompromised individuals.
- Frontline health and social care workers.

### Vaccine choice

Children aged 6 months to less than 2 years who are in a clinical risk group should be offered the egg-grown quadrivalent (inactivated) influenza vaccine p. 1432. For children with an allergy to eggs, the cell-grown quadrivalent (inactivated) influenza vaccine should be offered [unlicensed use].

Eligible children aged 2–17 years should be offered the live attenuated influenza vaccine, administered as a nasal spray (*Fluenz tetra*<sup>®</sup>). The live attenuated vaccine has been shown to be more effective than inactivated vaccines. Where parents decline the live attenuated vaccine for their child due to the porcine gelatine content, and for children in whom the live attenuated influenza vaccine is contra-indicated or otherwise unsuitable, the cell-grown quadrivalent (inactivated) influenza vaccine should be offered, with the egg-grown quadrivalent (inactivated) influenza vaccine offered as a second option. Children who have a very severely immunocompromised household contact should also be offered the cell-grown quadrivalent (inactivated) influenza vaccine, or the egg-grown quadrivalent (inactivated) influenza vaccine, instead of the live attenuated influenza vaccine.

Children aged 6 months to less than 9 years in a clinical risk group, and those aged 2 years to less than 9 years who are household contacts of immunocompromised individuals, should be offered 2 doses of the appropriate influenza vaccine (at least 4 weeks apart) if they have never had the influenza vaccine previously.

Adults aged 18 to 64 years in a clinical risk group or other eligible groups, should be offered either the cell-grown quadrivalent (inactivated) influenza vaccine, or the recombinant quadrivalent influenza vaccine. If these options are unavailable, the egg-grown quadrivalent (inactivated) influenza vaccine may be offered.

Pregnant females should be offered either the cell-grown quadrivalent (inactivated) influenza vaccine, or the recombinant quadrivalent influenza vaccine (if aged 18 years and over). If these options are unavailable, the egg-grown quadrivalent (inactivated) influenza vaccine may be offered.

Adults aged 65 years and over (including those who turn 65 by 31st March 2023) should be offered the adjuvanted egg-grown quadrivalent (inactivated) influenza vaccine, or the recombinant quadrivalent influenza vaccine; if unavailable or unsuitable, the cell-grown quadrivalent (inactivated) influenza vaccine is a suitable alternative.

For further information on the annual influenza programme, see UKHSA collection: **Annual flu programme** (available at: [www.gov.uk/government/collections/annual-flu-programme](http://www.gov.uk/government/collections/annual-flu-programme)).

For the management of influenza, see Influenza p. 716.

## Japanese encephalitis vaccine

14-Nov-2018

### Overview

Japanese encephalitis is a mosquito-borne viral encephalitis caused by a *Flavivirus*.

Japanese encephalitis vaccine p. 1433 (*IXIARO*)<sup>®</sup> is an inactivated vaccine adsorbed onto an adjuvant. It is recommended for individuals who are going to reside in an area where Japanese encephalitis is endemic or epidemic. Travellers to South and South-East Asia and the Far East should be immunised if staying for a month or longer in endemic areas during the transmission season. Other travellers with shorter exposure periods should also be immunised if the risk is considered sufficient. Immunisation is also recommended for laboratory staff at risk of exposure to the virus.

The primary immunisation course of 2 doses should be completed at least one week before potential exposure to Japanese encephalitis virus.

In adults (aged under 65 years) and children (aged 2 months and over) at ongoing risk (including laboratory staff and long-term travellers), a single booster dose should be given 12 months after the primary immunisation course. A booster dose can be considered in adults aged 65 years and over, but the immune response is lower than in younger adults. For other travellers, a single booster dose should be given within 12–24 months after primary immunisation, before potential re-exposure to the Japanese encephalitis

virus. Travellers aged 18–64 years should be offered a second booster dose at 10 years if they remain at risk.

Cases of Japanese encephalitis should be managed with supportive treatment.

Up-to-date information on the risk of Japanese encephalitis in specific countries can be obtained from the National Travel Health Network and Centre.

### Useful Resources

Recommendations reflect Chapter 20, Japanese encephalitis, in *Immunisation against infectious disease* – ‘The Green book’. Public Health England, June 2018.

## 14 Measles, Mumps and Rubella vaccine

Vaccines

### Overview

**Measles vaccine** has been replaced by a combined measles, mumps and rubella vaccine, live p. 1433 (MMR vaccine).

Measles, mumps and rubella vaccine, live aims to eliminate measles, mumps, and rubella (German measles) and congenital rubella syndrome. Every child should receive two doses of measles, mumps and rubella vaccine, live by entry to primary school, unless there is a valid contra-indication. Measles, mumps and rubella vaccine, live should be given irrespective of previous measles, mumps, or rubella infection or vaccination.

The first dose of measles, mumps and rubella vaccine, live is given to children at 1 year of age, on or after their first birthday. A second dose is given before starting school at 3 years and 4 months of age, or soon after (see Immunisation Schedule).

Children presenting for pre-school booster who have not received the first dose of measles, mumps and rubella vaccine, live should be given a dose of measles, mumps and rubella vaccine, live followed 3 months later by a second dose.

At school-leaving age or at entry into further education, measles, mumps and rubella vaccine, live immunisation should be offered to individuals of both sexes who have not received 2 doses during childhood. In those who have received only a single dose of measles, mumps and rubella vaccine, live in childhood, a second dose is recommended to achieve full protection. If 2 doses of measles, mumps and rubella vaccine, live are required, the second dose should be given one month after the initial dose. The decision on whether to vaccinate adults should take into consideration their vaccination history, the likelihood of the individual remaining susceptible, and the future risk of exposure and disease.

Measles, mumps and rubella vaccine, live should be used to protect against rubella in *seronegative women of child-bearing age* (see Immunisation Schedule); unimmunised healthcare workers who might put pregnant women and other vulnerable groups at risk of rubella or measles should be vaccinated. Measles, mumps and rubella vaccine, live may also be offered to previously *unimmunised and seronegative post-partum women* (see measles, mumps and rubella vaccine, live)—vaccination a few days after delivery is important because about 60% of congenital abnormalities from rubella infection occur in babies of women who have borne more than one child. Immigrants arriving after the age of school immunisation are particularly likely to require immunisation.

### Contacts

Measles, mumps and rubella vaccine, live may also be used in the control of outbreaks of measles and should be offered to susceptible children aged over 6 months who are contacts of a case, within 3 days of exposure to infection. Children immunised before 12 months of age should still receive two doses of measles, mumps and rubella vaccine, live at the recommended ages. If one dose of measles, mumps and rubella vaccine, live has already been given to a child, then the second dose may be brought forward to at least one month after the first, to ensure complete protection. If the child is under 18 months of age and the second dose is given within 3 months of the first, then the routine dose before starting school at 3 years and 4 months of age (or soon after) should still be given. Children aged under 9 months for whom avoidance of measles infection is particularly important (such as those with history of recent severe illness) can be given normal immunoglobulin after exposure to measles; routine measles, mumps and rubella vaccine, live immunisation should then be given after at least 3 months at the appropriate age.

Measles, mumps and rubella vaccine, live is **not suitable** for prophylaxis following exposure to mumps or rubella since the antibody response to the mumps and rubella components is too slow for effective prophylaxis.

Children and adults with impaired immune response should not receive live vaccines (see advice on HIV). If they have been exposed to measles infection they should be given normal immunoglobulin.

### Travel

Unimmunised travellers, including children over 6 months, to areas where measles is endemic or epidemic should receive measles, mumps and rubella vaccine, live. Children immunised before 12 months of age should still receive two doses of measles, mumps and rubella vaccine, live at the recommended ages. If one dose of measles, mumps and rubella vaccine, live has already been given to a child, then the second dose should be brought forward to at least one month after the first, to ensure complete protection. If the child is under 18 months of age and the second dose is given within 3 months of the first, then the routine dose before starting school at 3 years and 4 months of age (or soon after) should still be given.

### Useful Resources

Advice reflects that in the handbook *Immunisation against Infectious Disease* (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at:

[www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Meningococcal vaccine

### Overview

Almost all childhood meningococcal disease in the UK is caused by *Neisseria meningitidis* serogroups B and C.

**Meningococcal group C conjugate vaccine** protects only against infection by serogroup C and **Meningococcal group B vaccine** protects only against infection by serogroup B. The risk of meningococcal disease declines with age—immunisation is not generally recommended after the age of 25 years.

Tetravalent meningococcal vaccines that cover serogroups A, C, W135, and Y are available. Although the duration of protection has not been established, the **meningococcal groups A, C, W135, and Y conjugate vaccine** is likely to

provide longer-lasting protection than the unconjugated meningococcal polysaccharide vaccine. The antibody response to serogroup C in unconjugated meningococcal polysaccharide vaccines in young children may be suboptimal [not currently available in the UK].

**Meningococcal group B vaccines**, *Bexsero*<sup>®</sup>, and *Trumenba*<sup>®</sup> are licensed in the UK against infection caused by *Neisseria meningitidis* serogroup B. The use of *Bexsero*<sup>®</sup> is recommended in the Immunisation Schedule. *Bexsero*<sup>®</sup> contains 3 recombinant *Neisseria meningitidis* serogroup B proteins and the outer membrane vesicles from the NZ 98/254 strain, in order to achieve broad protection against *Neisseria meningitidis* serogroup B. *Trumenba*<sup>®</sup> contains 2 recombinant *Neisseria meningitidis* serogroup B proteins. The proteins are adsorbed onto an aluminium compound to stimulate an enhanced immune response.

#### Childhood immunisation

**Meningococcal group C conjugate vaccine** provides long-term protection against infection by serogroup C of *Neisseria meningitidis*. Immunisation consists of 1 dose given at 12 months of age (as the haemophilus influenzae type b with meningococcal group C vaccine p. 1422) and a second dose given at 13–15 years of age (as the meningococcal groups A with C and W135 and Y vaccine p. 1423) (see Immunisation Schedule).

**Meningococcal group B vaccine** provides protection against infection by serogroup B of *Neisseria meningitidis*. Immunisation consists of 1 dose given at 2 months of age, a second dose at 4 months of age, and a booster dose at 12 months of age (see Immunisation Schedule).

Unimmunised children aged under 12 months should be given 1 dose of meningococcal group B vaccine (rDNA, component, adsorbed) p. 1422 followed by a second dose of meningococcal group B vaccine (rDNA, component, adsorbed) two months later. They should then be vaccinated according to the Immunisation Schedule (ensuring at least a two month interval between doses of meningococcal group B vaccines). Unimmunised children aged 12–23 months should be given 2 doses of meningococcal group B vaccine (rDNA, component, adsorbed) separated by an interval of two months if they have received less than 2 doses in the first year of life. Unimmunised children aged 2–9 years should be given a single dose of meningococcal group C vaccine (as the haemophilus influenzae type b with meningococcal group C vaccine) followed by a booster dose of meningococcal groups A with C and W135 and Y vaccine at 13–15 years of age.

From 2015, unimmunised individuals aged 10–25 years, including those aged under 25 years who are attending university for the first time, should be given a single dose of meningococcal groups A with C and W135 and Y vaccine; a booster dose is not required.

Patients under 25 years of age with confirmed serogroup C disease, who have previously been immunised with meningococcal group C vaccine, should be offered meningococcal group C conjugate vaccine before discharge from hospital.

#### Travel

Individuals travelling to countries of risk should be immunised with meningococcal groups A, C, W135, and Y conjugate vaccine, even if they have previously received meningococcal group C conjugate vaccine. If an individual has recently received meningococcal group C conjugate vaccine, an interval of at least 4 weeks should be allowed before administration of the tetravalent (meningococcal groups A, C, W135, and Y) vaccine.

Vaccination is particularly important for those living or working with local people or visiting an area of risk during outbreaks.

Immunisation recommendations and requirements for visa entry for individual countries should be checked before travelling, particularly to countries in Sub-Saharan Africa, Asia, and the Indian sub-continent where epidemics of

meningococcal outbreaks and infection are reported. Country-by-country information is available from the National Travel Health Network and Centre ([www.nathnac.org/](http://www.nathnac.org/)).

Proof of vaccination with the tetravalent meningococcal groups A with C and W135 and Y vaccine is required for those travelling to Saudi Arabia during the Hajj and Umrah pilgrimages (where outbreaks of the W135 strain have occurred).

#### Contacts

For advice on the immunisation of *laboratory workers and close contacts* of cases of meningococcal disease in the UK and on the role of the vaccine in the control of *local outbreaks*, consult Guidance for Public Health Management of Meningococcal Disease in the UK at [www.gov.uk/phe](http://www.gov.uk/phe). Also see for antibacterial prophylaxis for prevention of secondary cases of meningococcal meningitis.

The need for immunisation of laboratory staff who work directly with *Neisseria meningitidis* should be considered.

#### Useful Resources

Advice reflects that in the handbook Immunisation against Infectious Disease (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at: [www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Pertussis vaccine

28-May-2020

### Overview

**Pertussis vaccine** is given as a combination preparation containing other vaccines. Acellular vaccines are derived from highly purified components of *Bordetella pertussis*. Primary immunisation against pertussis (whooping cough) requires 3 doses of an acellular pertussis-containing vaccine (see Immunisation schedule), given at intervals of 1 month from the age of 2 months.

All children up to the age of 10 years should receive primary immunisation with a combination vaccine of diphtheria with tetanus, pertussis, hepatitis B, poliomyelitis and haemophilus influenzae type b vaccine p. 1420 (*Infanrix hexa*<sup>®</sup>).

A booster dose of an acellular pertussis-containing vaccine should ideally be given 3 years after the primary course, although, the interval can be reduced to 1 year if the primary course was delayed. Children aged 1–10 years who have not received a *pertussis-containing vaccine* as part of their primary immunisation should be offered 1 dose of a suitable pertussis-containing vaccine; after an interval of at least 1 year, a booster dose of a suitable pertussis-containing vaccine should be given. Immunisation against pertussis is not routinely recommended in individuals over 10 years of age.

#### Vaccination of pregnant women against pertussis

In response to the pertussis outbreak, the UK health departments introduced a temporary programme (October 2012) to vaccinate pregnant women against pertussis, and this programme will continue until further notice. The aim of the programme is to boost the levels of pertussis-specific antibodies that are transferred through the placenta, from the mother to the fetus, so that the newborn is protected before routine immunisation begins at 2 months of age.

Pregnant women should be offered a single dose of acellular pertussis-containing vaccine (as adsorbed diphtheria [low dose], tetanus, pertussis [acellular, component] and poliomyelitis [inactivated] vaccine;

*Boostrix-IPV®* or *Repevax®*) between 16 and 32 weeks of pregnancy. Public Health England has advised (2016) that the vaccine is probably best offered after the fetal anomaly scan at around 18–20 weeks. Pregnant women should be offered a single dose of acellular pertussis-containing vaccine up to the onset of labour if they missed the opportunity for vaccination at 16–32 weeks of pregnancy. A single dose of acellular pertussis-containing vaccine may also be offered to new mothers, who have never previously been vaccinated against pertussis, until the child receives the first vaccination.

While this programme is in place, women who become pregnant again should be offered vaccination during each pregnancy to maximise transplacental transfer of antibody.

#### Contacts

Vaccination against pertussis should be considered for close contacts of cases with pertussis who have been offered antibacterial prophylaxis. Unimmunised or partially immunised contacts under 10 years of age should complete their vaccination against pertussis. A booster dose of an acellular pertussis-containing vaccine is recommended for contacts aged over 10 years who have not received a pertussis-containing vaccine in the last 5 years and who have not received adsorbed diphtheria [low dose], tetanus, and poliomyelitis (inactivated) vaccine in the last month.

#### Side-effects

Local reactions do not contra-indicate further doses.

The vaccine should not be withheld from children with a history to a preceding dose of:

- fever, irrespective of severity;
- persistent crying or screaming for more than 3 hours;
- severe local reaction, irrespective of extent.

#### Useful Resources

Advice reflects that in the handbook *Immunisation against Infectious Disease* (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at:

[www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Pneumococcal vaccine

25-Feb-2022

### Overview

The pneumococcal polysaccharide conjugate vaccine (adsorbed) p. 1424 and the pneumococcal polysaccharide vaccine p. 1424 protect against infection with *Streptococcus pneumoniae* (pneumococcus). Both vaccines contain polysaccharide from capsular pneumococci. The pneumococcal polysaccharide vaccine contains purified polysaccharide from **23 capsular types** of pneumococcus, whereas the pneumococcal polysaccharide conjugate vaccine (adsorbed) contains polysaccharide from **13 capsular types** (*Prevenar 13®*). Both vaccines are inactivated.

*Prevenar 13®* is the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) used for childhood immunisation. In January 2020, the routine immunisation schedule was changed from a 3-dose to a 2-dose schedule, given at separate intervals (see Immunisation schedule p. 1394 for further information). Children who present late for vaccination should be immunised according to *Children with unknown or incomplete vaccination histories*.

For further information on the use of *Prevenar 13®* pneumococcal polysaccharide conjugate vaccine (adsorbed) (including guidance on early immunisation, or shortened dosing intervals; and the management of children given the

incorrect pneumococcal vaccine, or if vaccinated overseas), see PHE guidance: **Pneumococcal vaccination: guidance for health professionals** (available from: [www.gov.uk/government/publications/pneumococcal-vaccination-guidance-for-health-professionals](http://www.gov.uk/government/publications/pneumococcal-vaccination-guidance-for-health-professionals)).

The 23-valent pneumococcal polysaccharide vaccine is recommended for all adults aged 65 years and over (including those immunised during the influenza season and who turn 65 by the 31st March), and for adults and children aged 2 years and over in the following at-risk groups:

- asplenia or splenic dysfunction (including homozygous sickle cell disease and coeliac syndrome which could lead to splenic dysfunction);
- chronic respiratory disease (including severe asthma treated with continuous or frequent use of a systemic corticosteroid);
- chronic heart disease;
- chronic renal disease;
- chronic liver disease;
- chronic neurological disease;
- diabetes mellitus requiring insulin or anti-diabetic medication;
- immunosuppression because of disease (e.g. HIV infection, and genetic disorders affecting the immune system) or treatment (including prolonged systemic corticosteroid treatment for over 1 month at dose equivalents of prednisolone: *adult and child 20 kg and over*, 20 mg or more daily; *child under 20 kg*, 1 mg/kg or more daily, and chemotherapy);
- presence of cochlear implant;
- conditions where leakage of cerebrospinal fluid may occur.

The 23-valent pneumococcal polysaccharide vaccine should also be considered for those at risk of occupational exposure to metal fume (e.g. welders).

Where possible, the vaccine should be given at least 2 weeks (ideally 4–6 weeks) before splenectomy, chemotherapy or radiotherapy; patients should be given advice about the increased risk of pneumococcal infection. If it is not possible to vaccinate at least 2 weeks before splenectomy, chemotherapy or radiotherapy, the vaccine should be given at least 2 weeks after the splenectomy, and at least 3 months after completion of chemotherapy or radiotherapy. Vaccination advice for patients with leukaemia or those who have had a bone marrow transplant, and information on patient cards and leaflets for individuals with asplenia, is available in Chapter 25, Pneumococcal, in *Immunisation against infectious disease* - 'The Green Book' (see *Useful resources*).

Vaccination regimens may differ depending on the individual's age, risk of pneumococcal disease, vaccination history, and immune status. Individuals in at-risk groups may require additional protection.

For information on revaccination with 23-valent pneumococcal polysaccharide vaccine for individuals in whom the antibody concentration is likely to decline rapidly, see *Revaccination*.

### Children with unknown or incomplete vaccination histories

Unimmunised or partially immunised children who present late for vaccination and before the age of 1 year should receive a single dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed), followed by a booster dose on or after their first birthday, at least 4 weeks after the 1st dose.

Children aged 1 year to under 2 years who are unimmunised or partially immunised should receive a single dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

For the management of children who received one or more doses of 10-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) in another country, refer to Chapter 25

(for infants born on or after 1 January 2020), Pneumococcal, in *Immunisation against infectious disease*- 'The Green Book' (see *Useful resources*).

### Individuals with an at-risk condition born on or before December 31st 2019

#### Children diagnosed with at-risk conditions aged under 2 years

Children who were aged under 1 year when diagnosed with an at-risk condition, should have received 3 doses of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) (1 dose at 8 weeks, then at 16 weeks, and a booster dose at 1 year). Those who presented late for vaccination should have been immunised according to Chapter 25 (for infants born up to and including 31 December 2019), *Pneumococcal, in Immunisation against infectious disease*- 'The Green Book' (see *Useful resources*).

Children aged under 2 years who were severely immunocompromised, or those with asplenia, splenic dysfunction or complement disorders, should have received an additional dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) after the 1 year booster dose.

A single dose of the 23-valent pneumococcal polysaccharide vaccine should then have been given at 2 years of age.

For further information on vaccination in individuals with asplenia, splenic dysfunction, or complement disorders, see Vaccination, general principles p. 1392.

#### Children diagnosed with at-risk conditions aged 2 years to under 10 years

Children diagnosed or first presenting with an at-risk condition who have completed their routine immunisation schedule should receive a single dose of 23-valent pneumococcal polysaccharide vaccine, at least 2 months after the last dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

Children previously unvaccinated or partially vaccinated with the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) should receive a single dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed), followed by a single dose of the 23-valent pneumococcal polysaccharide vaccine at least 2 months later.

For further information on vaccination in individuals with asplenia, splenic dysfunction, or complement disorders, see Vaccination, general principles p. 1392.

Severely immunocompromised children may have a sub-optimal immunological response to the vaccine and should be given an additional dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed), even if they are fully vaccinated. This should be followed by a single dose of the 23-valent pneumococcal polysaccharide vaccine, at least 2 months after the last dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed). If the 23-valent pneumococcal polysaccharide vaccine has already been given, the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) should be given at least 6 months after.

#### Individuals diagnosed with at-risk conditions aged 10 years and over

Individuals diagnosed or first presenting with an at-risk condition should be given a single dose of the 23-valent pneumococcal polysaccharide vaccine; no additional 23-valent pneumococcal polysaccharide vaccine is required at 65 years of age.

For further information on vaccination in individuals with asplenia, splenic dysfunction, or complement disorders, see Vaccination, general principles p. 1392.

Severely immunocompromised individuals should be given a single dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) followed by the 23-valent

pneumococcal polysaccharide vaccine at least 2 months after, irrespective of their previous pneumococcal vaccinations. If the 23-valent pneumococcal polysaccharide vaccine p. 1424 has already been given, the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) p. 1424 should be given at least 6 months after.

### Individuals with an at-risk condition born on or after January 1st 2020

#### Children diagnosed with at-risk conditions aged under 1 year

Children in an at-risk group (excluding those with asplenia, splenic dysfunction or complement disorder, or who are severely immunocompromised) should receive the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) according to the Immunisation schedule p. 1394. Those who present late for vaccination should be immunised according to *Children with unknown or incomplete vaccination histories*. A single dose of the 23-valent pneumococcal polysaccharide vaccine should then be given at 2 years of age, at least 8 weeks after the last dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

Children who are severely immunocompromised, or those with asplenia, splenic dysfunction or complement disorders, should receive 2 doses of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) at least 8 weeks apart (commencing no earlier than 6 weeks of age), followed by a single booster dose given on or after their first birthday. An additional dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) should be given at least 8 weeks after the booster dose. A single dose of the 23-valent pneumococcal polysaccharide vaccine should then be given at 2 years of age, at least 8 weeks after the last dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

For further information on vaccination in individuals with asplenia, splenic dysfunction, or complement disorders, see Vaccination, general principles p. 1392.

#### Children diagnosed with at-risk conditions aged 1 year to under 2 years

Children in an at-risk group (excluding those with asplenia, splenic dysfunction or complement disorder, or who are severely immunocompromised) should receive their 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) booster dose according to the Immunisation schedule p. 1394. Those who present late for vaccination should be immunised according to *Children with unknown or incomplete vaccination histories*. A single dose of the 23-valent pneumococcal polysaccharide vaccine should then be given at 2 years of age, at least 8 weeks after the last dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

Children who are severely immunocompromised, or those with asplenia, splenic dysfunction or complement disorders, should receive their 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) booster dose according to the Immunisation schedule p. 1394. Those who present late for vaccination should be immunised according to *Children with unknown or incomplete vaccination histories*. An additional dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) should be given at least 8 weeks after the booster dose. A single dose of the 23-valent pneumococcal polysaccharide vaccine should then be given at 2 years of age, at least 8 weeks after the last dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

For further information on vaccination in individuals with asplenia, splenic dysfunction, or complement disorders, see Vaccination, general principles p. 1392.

**Children diagnosed with at-risk conditions aged 2 years to under 10 years**

Children diagnosed or first presenting with an at-risk condition (excluding those severely immunocompromised) who have completed their routine immunisation schedule should receive a single dose of 23-valent pneumococcal polysaccharide vaccine, at least 8 weeks after the last dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

Children diagnosed or first presenting with an at-risk condition (excluding those severely immunocompromised) who are previously unimmunised or partially immunised with the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed), should receive a single dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed), followed by a single dose of the 23-valent pneumococcal polysaccharide vaccine at least 8 weeks later.

For further information on vaccination in individuals with asplenia, splenic dysfunction, or complement disorders, see Vaccination, general principles p. 1392.

Severely immunocompromised children should be given a single dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed), regardless of immunisation status. This should be followed by a single dose of the 23-valent pneumococcal polysaccharide vaccine, at least 8 weeks after the last dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

**Individuals diagnosed with at-risk conditions aged 10 years and over**

Individuals diagnosed or first presenting with an at-risk condition (excluding those who are severely immunocompromised) should be given a single dose of the 23-valent pneumococcal polysaccharide vaccine. The 23-valent pneumococcal polysaccharide vaccine is not required for individuals with asplenia, splenic dysfunction or complement disorders if they have already received a dose within the previous 2 years (due to a theoretical risk of pneumococcal serotype-specific hypo-responsiveness with revaccination).

For further information on vaccination in individuals with asplenia, splenic dysfunction, or complement disorders, see Vaccination, general principles p. 1392.

Severely immunocompromised individuals should be given a single dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed), followed by a single dose of the 23-valent pneumococcal polysaccharide vaccine at least 8 weeks after. The 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) or additional 23-valent pneumococcal polysaccharide vaccine are not required if a 23-valent pneumococcal polysaccharide vaccine has already been received within the previous 2 years, due to a theoretical risk of pneumococcal serotype-specific hypo-responsiveness with re-vaccination.

**Revaccination**

Revaccination is not recommended for any clinical risk groups or age groups, except for individuals in whom the antibody concentration is likely to decline rapidly (e.g. asplenia, splenic dysfunction, or chronic renal disease), where revaccination is recommended every 5 years.

**Management of cases**

For the management of cases, contacts and outbreaks, refer to Chapter 25, Pneumococcal, in *Immunisation against infectious disease* - 'The Green Book' (see *Useful resources*).

**Useful Resources**

Recommendations reflect Chapter 25 (for infants born up to and including 31 December 2019), Pneumococcal, in *Immunisation against infectious disease* - 'The Green Book'. UK Health Security Agency, January 2018.

[www.gov.uk/government/publications/pneumococcal-the-green-book-chapter-25](http://www.gov.uk/government/publications/pneumococcal-the-green-book-chapter-25)

Chapter 25 (for infants born on or after 1 January 2020), Pneumococcal, in *Immunisation against infectious disease* - 'The Green Book'. UK Health Security Agency, January 2020. [www.gov.uk/government/publications/pneumococcal-the-green-book-chapter-25](http://www.gov.uk/government/publications/pneumococcal-the-green-book-chapter-25)

## Poliomyelitis vaccine

### Overview

Two types of poliomyelitis vaccines (containing strains of poliovirus types 1, 2, and 3) are available, inactivated poliomyelitis vaccine (for injection) and live (oral) poliomyelitis vaccine. **Inactivated** poliomyelitis vaccines, only available in combined preparation, is recommended for routine immunisation.

A course of primary immunisation consists of 3 doses of a combined preparation containing inactivated poliomyelitis vaccines, starting at 2 months of age with intervals of 1 month between doses (see Immunisation schedule). A course of 3 doses should also be given to all unimmunised adults; no adult should remain unimmunised against poliomyelitis.

Two booster doses of a preparation containing inactivated poliomyelitis vaccines are recommended, the first before school entry and the second before leaving school (see Immunisation schedule). Further booster doses are only necessary for adults at special risk, such as travellers to endemic areas, or laboratory staff likely to be exposed to the viruses, or healthcare workers in possible contact with cases; booster doses should be given to such individuals every 10 years.

**Live (oral) poliomyelitis vaccine** is no longer available for routine use; its use may be considered during large outbreaks, but advice should be sought from Public Health England. The live (oral) vaccine poses a very rare risk of vaccine-associated paralytic polio because the attenuated strain of the virus can revert to a virulent form. For this reason the live (oral) vaccine must **not** be used for immunosuppressed individuals or their household contacts. The use of inactivated poliomyelitis vaccines removes the risk of vaccine-associated paralytic polio altogether.

### Travel

Unimmunised travellers to areas with a high incidence of poliomyelitis should receive a full 3-dose course of a preparation containing inactivated poliomyelitis vaccines. Those who have not been vaccinated in the last 10 years should receive a booster dose of **adsorbed diphtheria [low dose], tetanus and poliomyelitis (inactivated) vaccine**. Information about countries with a high incidence of poliomyelitis can be obtained from [www.travax.nhs.uk/](http://www.travax.nhs.uk/) or from the National Travel Health Network and Centre ([www.nathnac.org/](http://www.nathnac.org/)).

### Useful Resources

Advice reflects that in the handbook *Immunisation against Infectious Disease* (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at:

[www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Rabies vaccine

01-Jun-2021

### Overview

The rabies vaccine p. 1434 contains inactivated rabies virus cultured in either human diploid cells or purified chick embryo cells; vaccines may be used interchangeably to provide protection for pre-exposure prophylaxis and post-exposure treatment.

### Pre-exposure prophylaxis

Immunisation with the rabies vaccine should be offered to those considered to be at risk of exposure to rabies within the UK, as listed:

- laboratory staff who routinely handle the rabies virus;
- workers at Defra-authorized quarantine premises and carriers;
- those who regularly handle bats, including on a voluntary basis;
- veterinary and technical staff who, by reason of their employment, encounter enhanced risk.

Immunisation is also recommended for those considered to be at risk of exposure to rabies travelling outside the UK, including:

- animal control and wildlife workers, veterinary staff or zoologists who regularly work in rabies enzootic (high risk) areas;
- travellers to rabies enzootic areas, especially if:
  - ▶ post-exposure medical care and rabies biologists at the destination are lacking or in short supply;
  - ▶ they are undertaking higher risk activities such as cycling or running;
  - ▶ they are living or staying there for more than 1 month.

Immunisation against rabies requires a primary pre-exposure course of 3 doses administered over 21 or 28 days (preferred schedule if time allows), or an accelerated course of 3 doses over 7 days with an additional dose at 1 year. For dosing schedules, see rabies vaccine.

For further information on pre-exposure prophylaxis in individuals with immunosuppression and/or HIV infection, see *Immunosuppression and HIV infection*.

### Boosters

The requirement for booster doses is dependent on an individual's indication for pre-exposure prophylaxis and the likely frequency of ongoing exposures.

For laboratory workers who handle lyssavirus containing material (includes the rabies virus) a single booster dose of rabies vaccine should be given 1 year after the primary course has been completed. Further booster doses should be given based on 6-monthly antibody levels.

For individuals who may have frequent unrecognised exposures to the virus (such as bat handlers) a single booster dose of rabies vaccine should be given 1 year after the primary course has been completed. Further booster doses should then be given every 3–5 years or based on antibody levels.

For individuals at infrequent risk of exposure, but who are likely to have an unrecognised exposure (such as recreational cavers, veterinarians investigating suspect rabies cases and non-compliant imported pets, engineers maintaining rabies laboratory equipment or those entering rabies laboratories), should be given booster doses of rabies vaccine based on antibody levels from at least 1 year after the primary course has been completed.

For further information on antibody testing and booster doses, see PHE guidance: **Guidelines on timing of rabies boosters based on antibody levels** (see *Useful resources*).

### Travel

Routine booster doses are not recommended for most travellers. A single booster dose of rabies vaccine can be considered, following a risk assessment, in those who have

completed a primary course over 1 year ago and are travelling again to an enzootic area. Only 1 booster is needed in a traveller's lifetime.

Further information on country-specific rabies travel risk is available from the National Travel Health Network and Centre ([travelhealthpro.org.uk/](http://travelhealthpro.org.uk/)) and, in Scotland, from Health Protection Scotland ([www.hps.scot.nhs.uk](http://www.hps.scot.nhs.uk)).

### Post-exposure management

Rabies is a notifiable disease in the UK. For further information, see *Notifiable diseases* in Antibacterials, principles of therapy p. 540.

Following potential exposure to rabies, the wound or site of exposure (e.g. mucous membrane) should be cleansed under running water and washed for several minutes with soapy water as soon as possible. Disinfectant and a simple dressing can be applied, but suturing should be delayed until post-exposure treatment has begun otherwise it may increase the risk of introducing rabies virus into the nerves. Antibacterial therapy may be required for some animal bites, see *Human and animal bites* in Skin infections, antibacterial therapy p. 554 for further guidance. For puncture wounds, tetanus risk should be also be assessed, see Tetanus vaccine p. 1413 for information on the management of tetanus-prone wounds.

A full, rapid post-exposure risk assessment (based on detailed information about the circumstances of the potential exposure) is required so that post-exposure treatment, if indicated, can be started promptly. When post-exposure treatment is indicated, this should always be started without delay, even in the presence of other illness. If the exposure occurred many months or years previously, a full risk assessment should always be done and treatment considered as the incubation period for rabies can be prolonged.

The regimen used for post-exposure management depends on the composite rabies risk (assessed as a green, amber, or red rating using a combination of the country where the incident occurred and the type of animal involved, and the category of exposure), and the individual's past medical history (including immune status). For further information on risk assessment (including composite rabies risk) and the management of potential rabies exposure, see PHE guidance: **Guidelines on managing rabies post-exposure** (see *Useful resources*).

For individuals arriving in the UK who started post-exposure treatment via the intradermal route, the remaining doses should be given intramuscularly. If the regimen started was different to the UK regimen—seek specialist advice.

For post-exposure management in individuals with immunosuppression, see *Immunosuppression and HIV infection*; and for country-specific specialist contact details in England, Wales, Scotland and Northern Ireland, see Chapter 27: Rabies, in *Immunisation against infectious disease*—'The Green Book'.

### Post-exposure treatment of individuals who are fully immunised

**Fully immunised** individuals are those who have received at least 3 documented doses of rabies vaccine (on at least two separate days either as a primary pre-exposure prophylaxis course or as part of a previous post-exposure treatment course), or documented rabies virus neutralising antibody (VNA) titres of at least 0.5 IU/ml.

For **fully immunised** individuals with a **green** composite rabies risk or who have completed a rabies post-exposure treatment course in the last 3 months, no treatment is required.

For **fully immunised** individuals with an **amber** or **red** composite rabies risk, give 2 doses of rabies vaccine (first dose on day 0 and second dose between days 3–7). Rabies immunoglobulin is not needed for these individuals. If rabies immunoglobulin is inadvertently given, individuals will need

to complete a 4 dose course of rabies vaccine (on days 0, 3, 7 and 21).

#### Post-exposure treatment of individuals who are partially immunised

*Partially immunised* individuals are those who have had an incomplete/inadequate primary pre-exposure prophylaxis course or documented rabies virus neutralising antibody titres consistently less than 0.5 IU/mL.

For *partially immunised* individuals with a *green* composite rabies risk, no treatment is required.

For *partially immunised* individuals with an *amber* or *red* composite rabies risk, give 4 doses in total of rabies vaccine p. 1434 (on days 0, 3, 7 and 21). If the 4th dose of rabies vaccine is given before day 21, a 5th dose of vaccine should be administered 2 weeks after the 4th dose. Rabies immunoglobulin is not needed for these individuals.

#### Post-exposure treatment of individuals who are non-immunised

*Non-immunised* individuals are those who have never received rabies pre- or post-exposure immunisation.

For *non-immunised* individuals with a *green* composite rabies risk, no treatment is required.

For *non-immunised* individuals, with an *amber* or *red* composite rabies risk, give 4 doses in total of rabies vaccine (on days 0, 3, 7 and 21). If the 4th dose of rabies vaccine is given before day 21, a 5th dose of vaccine should be administered 2 weeks after the 4th dose.

Individuals with a *red* composite rabies risk should also be given rabies immunoglobulin p. 1389. This is not required if more than 7 days has passed since the first dose of rabies vaccine or more than 1 day since the second dose, or if the exposure was more than 12 months ago.

#### Immunosuppression and HIV infection

Refer to the British HIV Association for further information on the use of *rabies vaccine* and *rabies immunoglobulin* in individuals with HIV infection. See [www.bhiva.org/guidelines](http://www.bhiva.org/guidelines) for further information.

#### Pre-exposure prophylaxis

Pre-exposure prophylaxis may be given to individuals with immunosuppression and HIV infection (regardless of CD4 count). These individuals may not develop a full antibody response so re-immunisation should be considered upon completion of treatment and recovery has occurred, or in those with HIV when there has been immune recovery following commencement of antiretroviral treatment (such as a CD4 count  $>200$  per mm<sup>3</sup>).

Individuals who become immunosuppressed after receiving a primary course of immunisation, or having an antibody test or booster should be advised to seek medical advice for review of testing/booster vaccination frequency. They may no longer be able to produce an effective immune response following a rabies virus exposure and should be informed about the potential risks of continuing with activities that might lead to rabies virus exposures.

#### Post-exposure management

For *immunosuppressed* individuals with a *green* composite rabies risk, no treatment is required.

For *immunosuppressed* individuals with an *amber* or *red* composite rabies risk, give 5 doses in total of rabies vaccine (on days 0, 3, 7, 14, and 28 or 30) and rabies immunoglobulin. Post-exposure treatment response should be confirmed using antibody testing at the same time as the 4th dose (day 14); further antibody tests may be required depending on the results. Rabies immunoglobulin is not indicated if more than 7 days have passed since the first dose of rabies vaccine or more than 1 day since the second dose, or if the exposure was more than 12 months previously.

#### Useful Resources

Recommendations reflect Chapter 27, Rabies, in *Immunisation against infectious disease* - 'The Green Book'. Public Health England, June 2018.

## Rotavirus vaccine

11-Jan-2022

### Overview

Rotavirus vaccine p. 1435 is a live, oral vaccine that protects young children against gastro-enteritis caused by rotavirus infection.

Prior to vaccination with the rotavirus vaccine, the result of the severe combined immunodeficiency (SCID) screening should be checked. For further information, see PHE guidance: **The rotavirus vaccination programme: information for healthcare professionals** (see *Useful resources*).

The recommended schedule consists of 2 doses, the first at 8 weeks of age, and the second at 12 weeks of age (see Immunisation schedule p. 1394). The first dose of rotavirus vaccine must be given between 6 weeks and under 15 weeks of age and the second dose should be given after an interval of at least 4 weeks; the vaccine should not be started in children 15 weeks of age or older. Ideally, the full course should be completed before 16 weeks of age to provide protection before the main burden of disease, and to avoid a temporal association between vaccination and intussusception; the course must be completed before 24 weeks of age.

Children who inadvertently receive the first dose of rotavirus vaccine at 15 weeks of age or older should still receive a second dose after at least 4 weeks, providing that they will still be under 24 weeks of age at the time.

The rotavirus vaccine virus is excreted in the stool and may be transmitted to close contacts; however, vaccination of children with *immunosuppressed* close contacts may protect the contacts from wild-type rotavirus disease and outweigh any risk from transmission of vaccine virus. Carers of a recently vaccinated child should be advised of the need to wash their hands after changing the child's nappies.

### Useful Resources

Recommendations reflect Chapter 27b, Rotavirus, in *Immunisation against infectious disease* - 'The Green book'. UK Health Security Agency, August 2015.

[www.gov.uk/government/publications/rotavirus-the-green-book-chapter-27b](http://www.gov.uk/government/publications/rotavirus-the-green-book-chapter-27b)

The rotavirus vaccination programme: information for healthcare professionals. Public Health England, September 2021.

## Smallpox vaccine

25-Jun-2020

### Overview

The smallpox vaccine is prepared from the live vaccinia virus (a pox virus similar to smallpox, but less harmful). Routine immunisation against smallpox is not indicated, but should be considered for workers in laboratories where pox viruses (such as monkeypox or genetically modified vaccinia) are handled, and for others whose work involves an identifiable risk of exposure to pox viruses. For further information on the need for smallpox immunisation and for information on contra-indications and supply, contact the Public Health England Virus Reference Department (contact details available at: [www.gov.uk/government/collections/virus-reference-department-vrd](http://www.gov.uk/government/collections/virus-reference-department-vrd)). In Scotland, information can be obtained from Health Protection Scotland (contact details available at: [www.hps.scot.nhs.uk/about-us/contact-us/](http://www.hps.scot.nhs.uk/about-us/contact-us/)).

Refer to the British HIV Association for information on the use of smallpox vaccine in individuals with HIV. See [www.bhiva.org/guidelines](http://www.bhiva.org/guidelines) for further information.

A 24 hour on-call service for urgent diagnosis of smallpox is available; contact the Colindale Duty Doctor (Tel: 020 8200 4400). Medical practitioners must notify the proper officer at their local council or local health protection team of all suspected cases of smallpox. For further information, see *Notifiable diseases* in *Antibacterials, principles of therapy* p. 540.

### Useful Resources

Recommendations reflect Chapter 29, Smallpox and vaccinia, in *Immunisation against infectious disease* - 'The Green Book', Public Health England, March 2013. [www.gov.uk/government/publications/smallpox-and-vaccinia-the-green-book-chapter-29](http://www.gov.uk/government/publications/smallpox-and-vaccinia-the-green-book-chapter-29)

## Tetanus vaccine

19-Jul-2021

### Overview

Tetanus-containing vaccines are inactivated and are made from a cell-free purified toxin of *Clostridium tetani* adsorbed on aluminium hydroxide or aluminium phosphate to improve immunogenicity. The tetanus vaccine is only available as a combination preparation containing other vaccines.

### Prophylaxis

In most circumstances, the recommended vaccination schedule, comprising of a total of 5 doses of tetanus-containing vaccine, is considered sufficient to provide long-term protection against tetanus infection.

Individuals due for their routine tetanus immunisation may not require their routine dose if, they have a history of vaccination (such as for a tetanus-prone wound) with the same tetanus-containing vaccine that is due, and it was administered at an appropriate interval.

Parenteral drug misusers are at a greater risk of tetanus infection—every opportunity should be taken to ensure that they are fully vaccinated against tetanus.

For information on immunisation of individuals with neurological conditions, see Chapter 30, Tetanus, in *Immunisation against infectious disease*- 'The Green Book'.

For information on immunisation in pregnant females, see *Pregnancy*.

Individuals with immunosuppression or HIV infection (regardless of CD4 count) should be given the recommended vaccination schedule of 5 doses of a tetanus-containing vaccine (see *Primary Immunisation and Boosters*). Consider re-immunisation after treatment completion—specialist advice may be required. Refer to the British HIV Association and the Children's HIV Association for further information

on the use of tetanus-containing vaccines in individuals with HIV infection. See [www.bhiva.org/guidelines](http://www.bhiva.org/guidelines) or [www.chiva.org.uk/](http://www.chiva.org.uk/) for further information.

### Primary immunisation

Tetanus vaccination is given as a component of the routine childhood immunisation programme for children aged under 10 years (see Immunisation schedule p. 1394). If the child's routine immunisation is delayed, children aged under 10 years should be immunised at the earliest opportunity.

Children aged under 10 years, should be given a primary course consisting of 3 doses of the hexavalent diphtheria with tetanus, pertussis, hepatitis B, poliomyelitis and haemophilus influenzae type b vaccine p. 1420 at intervals of 4 weeks (it is the only suitable vaccine containing high dose tetanus for priming children of this age). If interrupted, the primary course should be resumed but not repeated, allowing a 4 weekly interval between doses. Early immunisation with a primary course may be considered for children from 6 weeks of age if required in certain circumstances, such as for travel reasons (immunisation may be given at an interval of 3 weeks for 1 dose only, with the other 2 doses completed at intervals of at least 4 weeks).

If the primary course was commenced with the pentavalent diphtheria with tetanus, pertussis, poliomyelitis and haemophilus influenzae type b vaccine p. 1420, it can be completed with the hexavalent diphtheria with tetanus, pertussis, hepatitis B, poliomyelitis and haemophilus influenzae type b vaccine.

Individuals aged 10 years and over who have not been immunised previously or have an unknown or incomplete history, should be given a primary course consisting of 3 doses of the diphtheria with tetanus and poliomyelitis vaccine p. 1419 at 1 month intervals. If interrupted, the primary course should be resumed but not repeated, allowing an interval of 1 month between doses.

For further information on vaccination of individuals with uncertain or incomplete immunisation status, see Chapter 11, The UK immunisation schedule, in *Immunisation against infectious disease*- 'The Green Book'.

### Boosters

Following a primary course, 2 doses of a tetanus-containing booster vaccine should be given. When an individual presents for a booster dose but has a history of being vaccinated following a tetanus-prone wound, the vaccine preparation administered at the time of injury should be determined. If this is not possible, or the vaccine administered was not the same as the vaccine due at the current visit or was not given after an appropriate interval, the scheduled booster should still be given to ensure long-term protection against all antigens.

Children aged under 10 years should be given the diphtheria with tetanus, pertussis and poliomyelitis vaccine p. 1419 for their 1st booster dose. This is usually given 3 years after completing the primary course (before school entry)—see Immunisation schedule p. 1394. However, when primary immunisation has been delayed, it may be given at the scheduled visit provided it has been 1 year since the 3rd dose of their primary course.

Individuals aged 10 years and over should be given the diphtheria with tetanus and poliomyelitis vaccine for their 1st booster dose. This should be at least 5 years after the 3rd dose of their primary course.

All individuals should be given the diphtheria with tetanus and poliomyelitis vaccine for their 2nd booster dose. This is usually given 10 years after the 1st booster, but if previous doses have been delayed, it may be given at the school session or scheduled visit provided there has been at least a 5 year interval since the 1st booster dose.

Parenteral drug misusers should be given booster doses if there is any doubt about their immunisation status.

### Travel

All travellers should ensure they are fully immunised (or age up-to-date) with their tetanus vaccination (see *Primary Immunisation and Boosters*). Travellers who last received a tetanus booster dose more than 10 years ago and are travelling to areas where medical attention may not be accessible, should be given a booster dose of tetanus-containing vaccine prior to travel, even if they have previously received 5 doses of tetanus-containing vaccines. This is a precautionary measure in case immunoglobulin is not available to the individual in the event of a tetanus-prone injury.

### Post-exposure management

#### Cases

Tetanus is a notifiable disease in the UK. For further information, see *Notifiable diseases* in *Antibacterials*, principles of therapy p. 540.

Intravenous normal immunoglobulin [unlicensed] is used for the treatment of tetanus (for further information, see *Immunoglobulins* p. 1383). Antibacterials (such as benzylpenicillin sodium p. 595 and metronidazole p. 590) may also be required—discuss with the microbiology team. Tetanus infection may not result in immunity and vaccination is recommended following recovery (see *Prophylaxis*). For further guidance on the management of confirmed and suspected cases of tetanus (including localised tetanus), see Chapter 30, Tetanus, in *Immunisation against infectious disease*—‘The Green Book’ and Public Health England (PHE) guidance: **Tetanus** (see *Useful resources*).

#### Prophylaxis of tetanus-prone wounds

Any wound can give rise to tetanus. *Clean wounds* (less than 6 hours old, non-penetrating and have negligible tissue damage) are considered to have a low likelihood of harbouring tetanus spores and of developing conditions that promote spore germination. *Tetanus-prone* wounds include compound fractures, certain animal bites and scratches, puncture-type injuries acquired in a contaminated environment (these are likely to contain tetanus spores), wounds or burns with systemic sepsis, and wounds containing foreign bodies—this list is not exhaustive. *High-risk tetanus-prone* wounds include any *tetanus-prone* wounds or burns that either show extensive devitalised tissue or require surgical intervention that is delayed more than 6 hours, or wounds that are heavily contaminated with material likely to contain tetanus spores (such as soil or manure).

Post-exposure management of tetanus-prone wounds depends on the individual’s immunisation status and wound category (*clean*, *tetanus-prone*, or *high-risk tetanus-prone*). For the risk-assessment of tetanus-prone wounds, an *adequate priming course* of tetanus vaccine is considered to be at least 3 doses of tetanus-containing vaccine at appropriate intervals.

All wounds should be thoroughly cleaned, and surgical debridement of devitalised tissue in *high-risk tetanus-prone* wounds is essential for the prevention of tetanus infection.

For individuals aged 11 years and over who have received an adequate priming course of tetanus vaccine with the last dose given within 10 years, for children aged 5–10 years whose tetanus immunisation is up to date, and for children aged under 5 years who have received an adequate priming course, no immediate treatment is required regardless of wound category.

For individuals who have received an adequate priming course of tetanus vaccine but the last dose was given more than 10 years ago (includes those born in the UK after 1961 with a history of accepting vaccinations), and for children aged 5–10 years who have received an adequate priming course but no booster, give an immediate booster dose of a suitable tetanus-containing vaccine to individuals with a

wound that is *tetanus-prone* or *high-risk tetanus-prone*. In addition, for a *high-risk tetanus-prone* wound, give a single dose of tetanus immunoglobulin p. 1390 at a different site (or if unavailable, normal immunoglobulin [unlicensed] may be used—for further guidance, see PHE guidance: **Tetanus** (see *Useful resources*)).

For individuals who have not received an adequate priming course of tetanus vaccine (includes those with uncertain immunisation status and/or born before 1961), give an immediate booster dose of a suitable tetanus-containing vaccine regardless of wound category. In addition, for a *tetanus-prone* or *high-risk tetanus-prone* wound, give a single dose of tetanus immunoglobulin at a different site (or if unavailable, normal immunoglobulin [unlicensed] may be used—for further guidance, see PHE guidance: **Tetanus** (see *Useful resources*)).

Individuals who are severely immunosuppressed may not be adequately protected against tetanus, despite being fully immunised. An additional booster dose of a suitable tetanus-containing vaccine and/or immunoglobulin may be required.

To ensure immunity against future exposure, all individuals who are not completely immunised should be given further doses of a suitable tetanus-containing vaccine as required to complete their recommended schedule (see *Prophylaxis*).

Antibacterial therapy may also be considered for tetanus-prone wounds depending on clinical severity, to prevent tetanus. For further guidance on the management of tetanus-prone wounds, see Chapter 30, Tetanus, in *Immunisation against infectious disease*—‘The Green Book’ and PHE guidance: **Tetanus** (see *Useful resources*).

### Pregnancy

Routine vaccination of pregnant females with diphtheria with tetanus, pertussis and poliomyelitis vaccine p. 1419 is recommended from week 16 of each pregnancy as part of the maternal pertussis programme (for further guidance, see PHE guidance: **Pertussis (whooping cough) vaccination programme for pregnant women**, available at: [www.gov.uk/government/publications/vaccination-against-pertussis-whooping-cough-for-pregnant-women](http://www.gov.uk/government/publications/vaccination-against-pertussis-whooping-cough-for-pregnant-women)). For pregnant females who have not been immunised previously or have an unknown or incomplete history, they should be given the diphtheria with tetanus and poliomyelitis vaccine p. 1419 at appropriate intervals as needed to complete a primary course. For information on tetanus-containing booster vaccines following a primary course, see *Boosters* in *Prophylaxis*.

Pregnant females may be given tetanus-containing vaccines where protection is needed without delay. For information on the management of cases and prophylaxis of tetanus-prone wounds, see *Post-exposure management*.

### Useful Resources

Recommendations reflect Chapter 30, Tetanus, in *Immunisation against infectious disease*—‘The Green Book’. Public Health England, January 2020. [www.gov.uk/government/publications/tetanus-the-green-book-chapter-30](http://www.gov.uk/government/publications/tetanus-the-green-book-chapter-30)

Tetanus: Guidance on the management of suspected cases and on the assessment and management tetanus-prone wounds. Public Health England, July 2019. [www.gov.uk/government/publications/tetanus-advice-for-health-professionals](http://www.gov.uk/government/publications/tetanus-advice-for-health-professionals)

## Tick-borne encephalitis vaccine

08-Jul-2020

### Overview

The tick-borne encephalitis (TBE) vaccine contains inactivated TBE virus (Neudörfli strain) grown in chick embryo cells. It is recommended for the protection of individuals at high risk of exposure to the TBE virus through their work or travel.

Immunisation with the tick-borne encephalitis vaccine, inactivated p. 1436 is therefore recommended for:

- individuals who travel, particularly in spring and summer, to endemic forested areas where ticks are most prevalent (including those who hike, camp, hunt, and undertake fieldwork);
  - individuals who will be residing in an area where TBE is endemic or epidemic, especially those working in forestry, woodcutting, farming, and the military;
  - laboratory workers who may be exposed to the TBE virus.
- A 3 dose schedule of the tick-borne encephalitis vaccine, inactivated is recommended for children aged 1 year and over, and for adults. Sufficient protection can be expected for the ongoing tick season after the first 2 doses, and for at least 3 years after the 3rd dose. Booster doses are required every 3–5 years for those still at risk of TBE exposure. For dosing schedules, see tick-borne encephalitis vaccine, inactivated.

Refer to the British HIV Association for information on the use of tick-borne encephalitis vaccine, inactivated in individuals with HIV infection. See [www.bhiva.org/guidelines](http://www.bhiva.org/guidelines) for further information.

Further information on preventing or reducing the risk of TBE is available from the National Travel Health Network and Centre ([nathnac.net/](http://nathnac.net/)) and Health Protection Scotland ([www.travax.nhs.uk/](http://www.travax.nhs.uk/)).

### Post-exposure management

Unvaccinated individuals bitten by ticks in endemic areas should seek local medical advice. No specific therapy is available following exposure to tick-borne encephalitis; supportive treatment can significantly reduce morbidity and mortality. If tick-borne encephalitis is suspected, the referring clinician should discuss the case with a clinician at the Public Health England Rare and Imported Pathogens Laboratory (contact details are available at: [www.gov.uk/guidance/tick-borne-encephalitis-epidemiology-diagnosis-and-prevention](http://www.gov.uk/guidance/tick-borne-encephalitis-epidemiology-diagnosis-and-prevention)).

Medical practitioners must notify the proper officer at their local council or local health protection team of all suspected cases of acute encephalitis of any cause. For further information, see *Notifiable diseases* in *Antibacterials*, principles of therapy p. 540.

### Useful Resources

Recommendations reflect Chapter 31, Tick-borne encephalitis, in *Immunisation against infectious disease*—‘The Green Book’. Public Health England, April 2013. [www.gov.uk/government/publications/tick-borne-encephalitis-the-green-book-chapter-31](http://www.gov.uk/government/publications/tick-borne-encephalitis-the-green-book-chapter-31)

## Typhoid vaccine

29-Jul-2019

### Overview

Typhoid vaccine p. 1425 is available as a Vi capsular polysaccharide (from *Salmonella typhi*) vaccine for injection and a live, attenuated *Salmonella typhi* vaccine for oral use.

Typhoid immunisation is advised for:

- travellers to areas where typhoid is endemic and whose planned activities put them at higher risk (country-by-country information is available from the National Travel Health Network and Centre);

- travellers to endemic areas where frequent or prolonged exposure to poor sanitation and poor food hygiene is likely;
- laboratory personnel who, in the course of their work, may be exposed to *Salmonella typhi*.

Capsular polysaccharide typhoid vaccine is given as a single dose, usually by intramuscular injection. Children under 2 years [unlicensed] may respond suboptimally to the vaccine, but children aged between 1–2 years should be immunised if the risk of typhoid fever is considered high (immunisation is not recommended for infants under 12 months). A single booster dose should be given at 3-year intervals in adults and children over 2 years of age who remain at risk from typhoid fever.

Oral typhoid vaccine is a live, attenuated vaccine contained in an enteric-coated capsule recommended in individuals aged 5 years and over. One capsule taken on alternate days for a total of 3 doses, provides protection 7–10 days after the last dose. If travelling from a non-endemic area to an area where typhoid is endemic, a booster consisting of 3 doses is recommended every 3 years. The oral typhoid vaccine should be avoided in immunosuppressed and HIV-infected individuals.

Prevention of typhoid primarily depends on improving sanitation and water supplies in endemic areas and on scrupulous personal, food and water hygiene.

All suspected cases of typhoid fever must be notified to the local health protection unit. Where there is a community level outbreak, specialist advice should be sought from Public Health England (tel. 020 8200 4400) or, in Scotland, Health Protection Scotland (tel. 0140 300 1191).

### Useful Resources

Recommendations reflect Chapter 33, Typhoid, in *Immunisation against infectious disease*—‘The Green Book’. Public Health England, May 2019. [www.gov.uk/government/publications/typhoid-the-green-book-chapter-33](http://www.gov.uk/government/publications/typhoid-the-green-book-chapter-33)

National Travel Health Network and Centre [nathnac.net](http://nathnac.net)

## Varicella-zoster vaccines

27-Sep-2021

### Overview

The vaccine preparations *Varilrix*<sup>®</sup>, *Varivax*<sup>®</sup> and *Zostavax*<sup>®</sup> contain live, attenuated virus derived from the Oka strain of varicella-zoster virus, whereas *Shingrix*<sup>®</sup> is a recombinant, adjuvanted vaccine that contains varicella-zoster virus glycoprotein E antigen—it does not contain any live virus.

The *Varilrix*<sup>®</sup> and *Varivax*<sup>®</sup> vaccines provide protection against varicella (chickenpox)—these vaccines have a significantly lower antigen content than the *Zostavax*<sup>®</sup> vaccine.

The *Zostavax*<sup>®</sup> and *Shingrix*<sup>®</sup> vaccines provide protection against herpes zoster (shingles).

### Pre-exposure prophylaxis against varicella (chickenpox)

Varicella immunisation aims to protect individuals who are at most risk of serious illness from exposure to the varicella-zoster virus, by vaccinating specific individuals who are in regular or close contact with those at risk. Individuals with a definite history of chickenpox or shingles can be considered immune. However, for individuals born and raised overseas, a history of chickenpox is a less reliable predictor of immunity and routine testing should be considered.

Vaccination with the chickenpox varicella-zoster vaccine p. 1437 (*Varilrix*<sup>®</sup> or *Varivax*<sup>®</sup>) is recommended for:

- non-immune or varicella-zoster antibody-negative healthcare workers who have patient contact (including cleaners, catering staff, and receptionists);
- non-immune laboratory staff who may be exposed to varicella-zoster virus in the course of their work in virology laboratories and clinical infectious disease units;
- non-immune healthy susceptible contacts of immunocompromised patients where continuing close contact is unavoidable.

Children aged 1 year and over and adults, should receive 2 doses of the chickenpox varicella-zoster vaccine at least 4–8 weeks apart. Vaccination should be postponed in acutely unwell individuals until they have fully recovered, unless protection is urgently required. There is no data on interchangeability between the *Varilrix*<sup>®</sup> or *Varivax*<sup>®</sup> vaccines, but it is likely that a course can be completed effectively with the different vaccine.

Within 1 month of vaccination, some individuals may develop a localised rash at the injection site or a generalised rash (papular or vesicular). Healthcare workers who develop a post-vaccine rash should consult their occupational health department for assessment before commencing work. The vaccine virus strain can also establish latent infection and reactivate to cause shingles in some individuals (the risk is substantially lower than with wild chickenpox infection)—cases of shingles should be investigated. For further information on vaccine-related cutaneous rashes, see *Cautions, further information in varicella-zoster vaccine*, and Chapter 34, *Varicella, in Immunisation against infectious disease*—‘The Green Book’ (see *Useful resources*).

The chickenpox vaccines are not recommended for individuals with immunosuppression—seek specialist advice for those who require protection against chickenpox. Refer to the British HIV Association or Children’s HIV Association for guidance in individuals with HIV infection (available at: [www.bhiva.org/guidelines](http://www.bhiva.org/guidelines) and [www.chiva.org.uk](http://www.chiva.org.uk)).

For information on post-exposure management, see *Varicella-zoster immunoglobulin in Immunoglobulins* p. 1383. Chickenpox is only a notifiable disease in Northern Ireland. For further information, see *Notifiable diseases in Antibacterials, principles of therapy* p. 540.

### Immunisation against herpes zoster (shingles)

The national shingles vaccination programme (launched in September 2013) aims to lower the incidence and severity of shingles in older people, in whom the risk and severity of disease and of subsequent post herpetic neuralgia (PHN) is higher. As part of the national programme, immunisation is only recommended for individuals aged 70–79 years. This is because the burden of shingles disease is generally not as severe in individuals aged 50–69 years, and because of the limited vaccine effectiveness in older individuals. For guidance on the vaccination of individuals who have received vaccination before 70 years of age, see PHE guidance: **Shingles vaccination: guidance for healthcare professionals** (see *Useful resources*).

The herpes zoster (shingles) vaccines (*Zostavax*<sup>®</sup> and *Shingrix*<sup>®</sup>) are not recommended for shingles post-exposure prophylaxis or for the treatment of shingles or PHN, but they can be given to those with a previous history of shingles or who experience residual nerve pain that may be permanent. For further information, see Chapter 28a, *Shingles (herpes zoster)*, in *Immunisation against infectious disease*—‘The Green Book’ (see *Useful resources*).

#### Non-immunosuppressed individuals

Non-immunosuppressed individuals should be offered a single dose of the herpes-zoster vaccine, live p. 1431 (*Zostavax*<sup>®</sup>). The need for a booster dose has not been established. For information on shingles immunisation in individuals with immunosuppression and/or HIV infection, see *Immunosuppression and HIV*.

Administration of herpes-zoster vaccine, live (*Zostavax*<sup>®</sup>) should be delayed in individuals who are being treated with oral or intravenous antivirals (such as aciclovir) until 48 hours after cessation of treatment.

There is a theoretical risk that individuals who develop a rash following vaccination with herpes-zoster vaccine, live (*Zostavax*<sup>®</sup>) could transmit the attenuated vaccine virus to a susceptible individual. Individuals who develop a vesicular rash or varicella-zoster virus-like rash after vaccination should seek medical attention, be tested, and take precautionary measures. For further guidance, see Chapter 28a, *Shingles (herpes zoster)*, in *Immunisation against infectious disease*—‘The Green Book’, and PHE guidance: **Shingles vaccination: guidance for healthcare professionals** (see *Useful resources*).

For information on post-exposure management, see *Varicella-zoster immunoglobulin in Immunoglobulins* p. 1383.

#### Immunosuppression and HIV

The decision on which shingles vaccine to administer to individuals who are immunosuppressed should be based on a full clinical assessment. Seek specialist advice if there are doubts or concerns about an individual’s immunosuppressive treatment, degree of immunosuppression, or vaccine suitability. Refer to the British HIV Association for guidance in individuals with HIV infection (available at: [www.bhiva.org/guidelines](http://www.bhiva.org/guidelines)).

Individuals with non-severe immunosuppression aged 70–79 years who are eligible for the shingles immunisation, should be offered herpes-zoster vaccine, live (*Zostavax*<sup>®</sup>). Individuals anticipating immunosuppressive therapy should receive the *Zostavax*<sup>®</sup> vaccine at the earliest opportunity and at least 14 days before starting immunosuppressive therapy, although leaving 1 month would be preferable if a delay is possible. For guidance on vaccination with the *Zostavax*<sup>®</sup> vaccine, see *Non-immunosuppressed individuals*.

Individuals with severe immunosuppression aged 70–79 years who are eligible for the shingles immunisation, should be offered 2 doses of the herpes-zoster vaccine (recombinant, adjuvanted) p. 1431 (*Shingrix*<sup>®</sup>), given 2 months apart. Individuals who have turned 80 years of age following their 1st dose, should be given a 2nd dose to complete the 2 dose schedule. If the course of *Shingrix*<sup>®</sup> is interrupted or delayed, it should be resumed but not repeated. The need for a booster dose has not been established.

For further information on shingles immunisation in immunosuppressed individuals, including the definition of severe immunosuppression and management if herpes-zoster vaccine, live p. 1431 (*Zostavax*<sup>®</sup>) is inadvertently administered to an immunosuppressed individual, see Chapter 28a, *Shingles (herpes zoster)*, in *Immunisation against infectious disease*—‘The Green Book’, and PHE guidance: **Shingles vaccination: guidance for healthcare professionals** (see *Useful resources*).

For information on post-exposure management, see *Varicella-zoster immunoglobulin in Immunoglobulins* p. 1383.

#### Pregnancy

The live *Varilrix*<sup>®</sup>, *Varivax*<sup>®</sup>, and *Zostavax*<sup>®</sup> vaccines are not recommended during pregnancy. All exposure to live vaccines from 3 months before conception to any time during pregnancy, should be reported to the Immunisation Department of PHE who run UK-wide surveillance on the safety of vaccines given in pregnancy. Pregnant women should be advised to seek prompt medical advice if they develop a vesicular rash following inadvertent vaccination. For advice on the reporting, risk assessment, and management of inadvertent vaccination in pregnancy, see PHE guidance: **Vaccination in pregnancy (VIP)** (available at: [www.gov.uk/guidance/vaccination-in-pregnancy-vip](http://www.gov.uk/guidance/vaccination-in-pregnancy-vip)).

There is no evidence of risk from vaccinating pregnant females with inactivated vaccines.

## Useful Resources

Recommendations reflect Chapter 34, Varicella, in *Immunisation against infectious disease* - 'The Green Book'. UK Health Security Agency, August 2015.  
[www.gov.uk/government/publications/varicella-the-green-book-chapter-34](http://www.gov.uk/government/publications/varicella-the-green-book-chapter-34)

## Yellow fever vaccine

23-Jan-2020

### MHRA/CHM advice: stronger precautions in people with weakened immunity and in those aged 60 years or older

The MHRA and CHM have released important safety information regarding the use of the live yellow fever vaccine in those with weakened immunity, and in those aged 60 years or older. For further information, see *Important safety information* for yellow fever vaccine, live p. 1437.

### Overview

Yellow fever vaccine, live is an attenuated preparation of yellow fever virus grown in chick eggs. Yellow fever vaccine, live is recommended for:

- laboratory workers handling infected material;
- individuals aged 9 months or older who are travelling to, or living in areas or countries with a risk of yellow fever transmission;
- individuals aged 9 months or older who are travelling to, or living in countries that require an International Certificate of Vaccination or Prophylaxis (ICVP) for entry (information about countries at risk of yellow fever is available from the National Travel Health Network and Centre).

Children aged under 9 months are at higher risk of vaccine-associated encephalitis, with the risk being inversely proportional to age. Children aged under 6 months should **not** be vaccinated. Children aged 6–9 months should only be vaccinated following a detailed risk assessment, and vaccination is generally only recommended if the risk of yellow fever transmission is high (such as during epidemics/outbreaks). If travel is unavoidable, seek expert advice on whether to vaccinate.

Yellow fever vaccine, live should be avoided in individuals with primary or acquired immunodeficiency due to a congenital condition or disease process, and in individuals who are immunosuppressed as a result of treatment.

If the yellow fever risk is unavoidable in HIV-infected individuals, consult the British HIV Association ([bhiva.org/vaccination-guidelines](http://bhiva.org/vaccination-guidelines)) or other specialist advice.

For additional guidance on the suitability of immunisation against yellow fever, standardised checklists are available from: National Travel Health Network and Centre (see *Useful resources*) or Health Protection Scotland ([www.Travax.nhs.uk](http://www.Travax.nhs.uk)).

A single-dose of yellow fever vaccine, live confers life-long immunity against yellow fever disease. Immunisation should be performed at least 10 days before travelling to an endemic area to allow protective immunity to develop and for the ICVP (if required) to become valid.

Reinforcing immunisation is not needed, except for a small subset of individuals at continued risk who may not

have developed long-term protection from their initial yellow fever vaccine, live vaccination—seek expert advice.

All suspected cases of yellow fever must be notified to the local health protection unit. Where there is a community level outbreak, specialist advice should be sought from Public Health England (tel. 020 8200 4400) or, in Scotland, Health Protection Scotland (tel. 0140 300 1191).

## Travel vaccinations and precautions

14-Jul-2021

### Immunisation for travel

The National Travel Health Network and Centre have issued guidance on how to manage interrupted vaccination schedules which includes general principles for consideration, such as keeping to the recommended schedules, lengthening and shortening schedules, off-label administration and re-starting courses. For further information, see [travelhealthpro.org.uk/news/517/interrupted-vaccination-schedules-general-principles-for-travel-health-professionals](http://travelhealthpro.org.uk/news/517/interrupted-vaccination-schedules-general-principles-for-travel-health-professionals).

No special immunisation is required for travellers to the United States, Europe, Australia, or New Zealand, although all travellers should have immunity to tetanus and poliomyelitis (and childhood immunisations should be up to date); the tick-borne encephalitis vaccine is recommended for immunisation of those working in, or visiting, high-risk areas. Certain special precautions are required in non-European areas surrounding the Mediterranean, in Africa, the Middle East, Asia, and South America.

Travellers to areas that have a high incidence of **poliomyelitis** should be immunised with the appropriate vaccine; previously immunised travellers may be given a booster dose of a preparation containing inactivated poliomyelitis vaccine.

Immunisation against **meningococcal meningitis** is recommended for a number of areas of the world.

There is no requirement for cholera vaccination as a condition for entry into any country, but **oral cholera vaccine** should be considered for backpackers and those travelling to situations where the risk is greatest (e.g. refugee camps). Regardless of vaccination, travellers to areas where cholera is endemic should take special care with food hygiene.

Advice on **diphtheria** is available from the National Travel Health Network and Centre (see *Useful resources*).

For guidance on immunisation against the following infectious diseases, refer to the individual treatment summaries listed:

- Hepatitis A (see Hepatitis A vaccine p. 1401).
- Hepatitis B (see Hepatitis B vaccine p. 1402).
- Japanese encephalitis (see Japanese encephalitis vaccine p. 1405).
- Rabies (see Rabies vaccine p. 1411).
- Tetanus (see Tetanus vaccine p. 1413).
- Tick-borne encephalitis (see Tick-borne encephalitis vaccine p. 1415).
- Tuberculosis (see Bacillus Calmette-Guérin vaccine p. 1396).
- Typhoid (see Typhoid vaccine p. 1415).
- Yellow fever (see Yellow fever vaccine above).

Immunisation requirements change from time to time, and information on the current requirements for any particular country may be obtained from the embassy or legation of the appropriate country; or the National Travel Health Network and Centre, Health Protection Scotland, the Welsh Government, or the Department of Health Northern Ireland (see *Useful resources*).

### Precautions for avoiding infectious disease

In areas where sanitation is poor, good food hygiene is important to help prevent hepatitis A, typhoid, cholera, and other diarrhoeal diseases (including travellers' diarrhoea). Food should be freshly prepared and hot, and uncooked vegetables (including green salads) should be avoided; only fruits which can be peeled should be eaten. Only suitable bottled water, or tap water that has been boiled or treated with sterilising tablets, should be used for drinking.

For guidance on malaria precautions, see Malaria, prophylaxis p. 661 and Malaria, treatment p. 667.

Further information on preventing or reducing the risk of infectious diseases when travelling, visiting, working, or living in high risk areas is available from the National Travel Health Network and Centre and Health Protection Scotland (see *Useful resources*).

## VACCINES

### Vaccines

#### IMPORTANT SAFETY INFORMATION

##### MHRA/CHM ADVICE (UPDATED NOVEMBER 2017)

Following reports of death in neonates who received a live attenuated vaccine after exposure to a tumor necrosis factor alpha (TNF- $\alpha$ ) inhibitor in utero, the MHRA has issued the following advice:

- any infant who has been exposed to immunosuppressive treatment from the mother either in utero during pregnancy or via breastfeeding should have any live attenuated vaccination deferred for as long as a postnatal influence on the immune status of the infant remains possible;
- in the case of infants who have been exposed to TNF- $\alpha$  inhibitors and other immunosuppressive biological medicines in utero, PHE advise that any live attenuated vaccination (e.g. BCG vaccine) should be deferred until the infant is age 6 months;
- PHE advise if there is any doubt as to whether an infant due to receive a live attenuated vaccine may be immunosuppressed due to the mother's therapy, including exposure through breast-feeding, specialist advice should be sought.

#### • CONTRA-INDICATIONS

- ▶ Impaired immune response Public Health England advises severely immunosuppressed patients should not be given live vaccines (including those with severe primary immunodeficiency).

- **CAUTIONS** Acute illness · minor illnesses

**CAUTIONS, FURTHER INFORMATION** PHE advises vaccination may be postponed if the individual is suffering from an acute illness; however, it is not necessary to postpone immunisation in patients with minor illnesses without fever or systemic upset.

- ▶ Impaired immune response and drugs affecting immune response Immune response to vaccines may be reduced in immunosuppressed patients and there is also a risk of generalised infection with live vaccines.

PHE advises:

- specialist advice should be sought for immunosuppressed patients, or those being treated with high doses of corticosteroids (dose equivalents of prednisolone: **adults**, at least 40 mg daily for more than 1 week or at least 20 mg daily for more than 14 days; **children**, 2 mg/kg (or more than 40 mg) daily for more than 1 week or 1 mg/kg (or more than 20 mg) daily for more than 14 days) or other immunosuppressive drugs, or those being treated for malignant or non-malignant conditions with chemotherapy or generalised radiotherapy. Live vaccines should be postponed until at least 3 months after stopping high-dose systemic corticosteroids or non-biological oral immune modulating drugs, and at least 6 months after stopping other immunosuppressive drugs or generalised radiotherapy (at least 12 months after discontinuing immunosuppressive biological therapy).
- ▶ Predisposition to neurological problems PHE advises:
  - when there is a personal or family history of *febrile* convulsions, there is an increased risk of these occurring during fever from any cause including immunisation, but this is not a contra-indication to immunisation. In children who have had a seizure associated with fever without neurological deterioration, immunisation is *recommended*; advice on the *management of fever* should be given before immunisation. When a child has had a convulsion not associated with fever, and the neurological condition is not deteriorating, immunisation is *recommended*;
  - children with stable neurological disorders (e.g. spina bifida, congenital brain abnormality, and peri-natal hypoxic-ischaemic encephalopathy) should be immunised according to the recommended schedule;
  - when there is a *still evolving neurological problem*, including poorly controlled epilepsy, immunisation should be deferred and the child referred to a specialist. Immunisation is recommended if a cause for the neurological disorder is identified. If a cause is not identified, immunisation should be deferred until the condition is stable.
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Abdominal pain · appetite decreased · arthralgia · diarrhoea · fatigue · fever · headache · lymphadenopathy · malaise · myalgia · nausea · skin reactions · vomiting
  - ▶ **Uncommon** Hypersensitivity
- **ALLERGY AND CROSS-SENSITIVITY** PHE advises contra-indicated in patients with a confirmed anaphylactic reaction to a preceding dose of a vaccine containing the same antigens or vaccine component (such as antibacterials in viral vaccines).
- **PREGNANCY** Live vaccines should not be administered routinely to pregnant women because of the theoretical risk of fetal infection but where there is a significant risk of exposure to disease, the need for vaccination usually outweighs any possible risk to the fetus. Termination of pregnancy following inadvertent immunisation is not recommended. There is no evidence of risk from vaccinating pregnant women with inactivated viral or bacterial vaccines or toxoids.

● **BREAST FEEDING** Although there is a theoretical risk of live vaccine being present in breast milk, vaccination is not contra-indicated for women who are breast-feeding when there is significant risk of exposure to disease. There is no evidence of risk from vaccinating women who are breast-feeding, with inactivated viral or bacterial vaccines or toxoids.

● **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises if alcohol or disinfectant is used for cleansing the skin it should be allowed to evaporate before vaccination to prevent possible inactivation of live vaccines.

Public Health England advises when 2 or more live vaccines are required (and are not available as a combined preparation), they can be administered at any time before or after each other at different sites, preferably in a different limb; if more than one injection is to be given in the same limb, they should be administered at least 2.5 cm apart. See also Cautions, further information in Bacillus Calmette-Guérin vaccine p. 1421 and in measles, mumps and rubella vaccine, live p. 1433.

Vaccines should not be given intravenously. Most vaccines are given by the intramuscular route, although some are given by either the intradermal, deep subcutaneous, or oral route. Public Health England advises the intramuscular route is usually avoided in patients with **bleeding disorders** such as haemophilia or thrombocytopenia; vaccines usually given by the intramuscular route can be given by deep subcutaneous injection instead.

Particular attention must be paid to instructions on the use of diluents. Vaccines which are liquid suspensions or are reconstituted before use should be adequately mixed to ensure uniformity of the material to be injected.

● **HANDLING AND STORAGE** Care must be taken to store all vaccines under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many vaccines need to be stored at 2–8°C and not allowed to freeze. Vaccines should be protected from light. Reconstituted vaccines and opened multidose vials must be used within the period recommended in the product literature. Unused vaccines should be disposed of by incineration at a registered disposal contractor.

## VACCINES > BACTERIAL AND VIRAL VACCINES, COMBINED

F 1418

### Diphtheria with tetanus and poliomyelitis vaccine

05-Oct-2021

#### ● INDICATIONS AND DOSE

##### Primary immunisation

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 10–17 years: 0.5 mL every month for 3 doses
- ▶ Adult: 0.5 mL every month for 3 doses

##### Booster doses

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 10–17 years: 0.5 mL for 1 dose, first booster dose—should be given at least 5 years after primary course, then 0.5 mL for 1 dose, second booster dose—should be given 10 years after first booster dose (this interval can be reduced to a minimum of 5 years if previous doses were delayed)
- ▶ Adult: 0.5 mL for 1 dose, first booster dose—should be given at least 5 years after primary course, then 0.5 mL for 1 dose, second booster dose—should be given 10 years after first booster dose (this interval can be reduced to a minimum of 5 years if previous doses were delayed)

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Vertigo
- ▶ **Frequency not known** Asthenia · chills · face oedema · influenza like illness · nerve disorders · pallor · seizure · shock · syncope · vaccination reactions

● **PRESCRIBING AND DISPENSING INFORMATION** Available as part of childhood schedule from health organisations or ImmForm.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

##### Suspension for injection

EXCIPIENTS: May contain Neomycin, polymyxin b, streptomycin

##### ▶ Revaxis (Sanofi Pasteur)

- ▶ Revaxis vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £7.80 DT = £7.80

F 1418

### Diphtheria with tetanus, pertussis and poliomyelitis vaccine

05-Oct-2021

#### ● INDICATIONS AND DOSE

##### First booster dose

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 3–9 years: 0.5 mL, to be given 3 years after primary immunisation

##### Vaccination of pregnant women against pertussis (using low dose vaccines)

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Females of childbearing potential: 0.5 mL for 1 dose

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Irritability (in children)
- ▶ **Uncommon** Apathy (in children) · asthma · chills · dizziness · drowsiness (very common in children) · dry throat (in children) · extensive swelling of vaccinated limb (very common in children) · oral herpes · pain · paraesthesia · sleep disorder (in children)
- ▶ **Frequency not known** Angioedema · asthenia · hypotonic-hyporesponsiveness episode · seizure

**SIDE-EFFECTS, FURTHER INFORMATION** The incidence of local and systemic reactions is lower with acellular pertussis vaccines than with whole-cell pertussis vaccines used previously.

Compared with primary vaccination, injection site reactions are more common with booster doses of vaccines containing acellular pertussis.

Public Health England has advised (2016) that the vaccine should not be withheld from children with a history to a preceding dose of: fever, irrespective of severity; hypotonic-hyporesponsive episodes; persistent crying or screaming for more than 3 hours; severe local reaction, irrespective of extent.

● **PREGNANCY** Contra-indicated in pregnant women with a history of encephalopathy of unknown origin within 7 days of previous immunisation with a pertussis-containing vaccine. Contra-indicated in pregnant women with a history of transient thrombocytopenia or neurological complications following previous immunisation against diphtheria or tetanus.

● **PRESCRIBING AND DISPENSING INFORMATION** Pregnant women should be vaccinated using low dose vaccines (brands may include *Boostrix-IPV*® or *Repevax*®).

Available as part of childhood immunisation schedule from health organisations or ImmForm.

Available for vaccination of pregnant women from ImmForm.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Suspension for injection

EXCIPIENTS: May contain Neomycin, polymyxin b, streptomycin

- ▶ **Boostrix-IPV** (GlaxoSmithKline UK Ltd)  
Boostrix-IPV suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £22.74 DT = £20.00
- ▶ **Repevax** (Sanofi Pasteur)  
Repevax vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £20.00 DT = £20.00

F 1418

## Diphtheria with tetanus, pertussis, hepatitis B, poliomyelitis and haemophilus influenzae type b vaccine

09-Mar-2022

### INDICATIONS AND DOSE

#### Primary immunisation

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 8 weeks-9 years: 0.5 mL every 4 weeks for 3 doses, preferably administer each dose at a different injection site to that of previous dose

### SIDE-EFFECTS

- **Common or very common** Anxiety · crying abnormal · drowsiness · irritability
- ▶ **Uncommon** Appetite increased · cough · extensive swelling of vaccinated limb · hyperhidrosis · increased risk of infection · neuromuscular dysfunction · pallor · sleep disorders
- ▶ **Rare or very rare** Angioedema · apnoea · seizure · swelling · thrombocytopenia
- **PRESCRIBING AND DISPENSING INFORMATION** Available as part of childhood schedule from health organisations or ImmForm.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder and suspension for suspension for injection

EXCIPIENTS: May contain Neomycin, polymyxin b

- ▶ **Infanrix Hexa** (GlaxoSmithKline UK Ltd)  
Infanrix Hexa vaccine powder and suspension for suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] [X]

#### Suspension for injection

EXCIPIENTS: May contain Neomycin, polymyxin b, streptomycin

- ▶ **Vaxelis** (Sanofi)  
Vaxelis vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £45.31

F 1418

## Diphtheria with tetanus, pertussis, poliomyelitis and haemophilus influenzae type b vaccine

05-Oct-2021

### INDICATIONS AND DOSE

#### Primary immunisation

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 2 months-9 years: 0.5 mL every month for 3 doses

### SIDE-EFFECTS

- **Common or very common** Crying abnormal · drowsiness · irritability · restlessness
- ▶ **Uncommon** Cough · extensive swelling of vaccinated limb · increased risk of infection · rhinorrhoea
- ▶ **Frequency not known** Angioedema · apnoea · hypotonic-hyporesponsiveness episode · seizure

**SIDE-EFFECTS, FURTHER INFORMATION** The incidence of local and systemic reactions is lower with acellular

pertussis vaccines than with whole-cell pertussis vaccines used previously.

Compared with primary vaccination, injection site reactions are more common with booster doses of vaccines containing acellular pertussis.

Public Health England has advised (2016) that the vaccine should not be withheld from children with a history to a preceding dose of: fever, irrespective of severity; hypotonic-hyporesponsive episodes; persistent crying or screaming for more than 3 hours; severe local reaction, irrespective of extent.

- **PRESCRIBING AND DISPENSING INFORMATION** Public Health England advises from Autumn 2017, all babies born on or after 1 August 2017 became eligible for the hexavalent vaccine, diphtheria with tetanus, pertussis, hepatitis B, poliomyelitis and haemophilus influenzae type b vaccine above, which replaces the pentavalent vaccine in the routine childhood immunisation schedule.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder and suspension for suspension for injection

- ▶ **Infanrix-IPV + Hib** (GlaxoSmithKline UK Ltd)  
Infanrix-IPV + Hib vaccine powder and suspension for suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £27.86

## VACCINES > BACTERIAL VACCINES

F 1418

### Anthrax vaccine

05-Oct-2021

### INDICATIONS AND DOSE

#### Immunisation against anthrax

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ **Adult:** Initially 0.5 mL every 3 weeks for 3 doses, followed by 0.5 mL after 6 months, to be administered in the deltoid region

#### Booster

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ **Adult:** 0.5 mL every 10 years for up to 3 doses, to be administered in deltoid region

### SIDE-EFFECTS

- ▶ **Common or very common** Febrile disorders · influenza like illness
- ▶ **Rare or very rare** Angioedema · asthenia · dizziness · hyperhidrosis · paraesthesia
- ▶ **Frequency not known** Bronchospasm · circulatory collapse · hypotension
- **PRESCRIBING AND DISPENSING INFORMATION** Available from Public Health England's Centre for Emergency Preparedness and Response (Porton Down).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Suspension for injection

EXCIPIENTS: May contain Thiomersal

- ▶ **Anthrax vaccine (Non-proprietary)**  
Anthrax vaccine (alum precipitated sterile filtrate) suspension for injection 0.5ml ampoules | 5 ampoule [PoM] [X] (Hospital only)
- ▶ **BioThrax** (Secretary of State for Health) ▼  
BioThrax suspension for injection 5ml multidose vials | 1 vial [PoM] [X] (Hospital only)

F 1418

## Bacillus Calmette-Guérin vaccine

18-Jan-2022

### (BCG Vaccine)

- **DRUG ACTION** BCG (Bacillus Calmette-Guérin) is a live attenuated strain derived from *Mycobacterium bovis* which stimulates the development of immunity to *M. tuberculosis*.

#### ● INDICATIONS AND DOSE

##### Immunisation against tuberculosis

- ▶ **BY INTRADERMAL INJECTION**
  - ▶ Child 1-11 months: 0.05 mL, to be injected at insertion of deltoid muscle onto humerus (keloid formation more likely with sites higher on arm); tip of shoulder should be **avoided**
  - ▶ Child 1-17 years: 0.1 mL, to be injected at insertion of deltoid muscle onto humerus (keloid formation more likely with sites higher on arm); tip of shoulder should be **avoided**
  - ▶ Adult: 0.1 mL, to be injected at insertion of deltoid muscle onto humerus (keloid formation more likely with sites higher on arm); tip of shoulder should be **avoided**

- **CONTRA-INDICATIONS** Children less than 2 years of age in household contact with known or suspected case of active tuberculosis · generalised septic skin conditions · history of active or latent tuberculosis · severe combined immunodeficiency disorder

#### CONTRA-INDICATIONS, FURTHER INFORMATION

Manufacturer advises using a lesion-free site to administer BCG vaccine to patients with eczema.

- **CAUTIONS** When BCG is given to infants, there is no need to delay routine primary immunisations. No further vaccination should be given in the arm used for BCG vaccination for at least 3 months because of the risk of regional lymphadenitis.

- **INTERACTIONS** → Appendix 1: live vaccines

#### ● SIDE-EFFECTS

- ▶ **Uncommon** Lymphadenitis suppurative
- ▶ **Rare or very rare** Osteitis · osteomyelitis
- ▶ **Frequency not known** Seizure · syncope

- **PRE-TREATMENT SCREENING** Apart from children under 6 years, any person being considered for BCG immunisation must first be given a skin test for hypersensitivity to tuberculin protein (see tuberculin purified protein derivative p. 1392). A skin test is not necessary for a child under 6 years provided that the child has not stayed for longer than 3 months in a country with an incidence of tuberculosis greater than 40 per 100 000, the child has not had contact with a person with tuberculosis, and there is no family history of tuberculosis within the last 5 years.

- ▶ In children PHE advise that the results of the severe combined immunodeficiency (SCID) screening should be checked before administering BCG vaccine.

#### ● DIRECTIONS FOR ADMINISTRATION

Intradermal injection technique Public Health England advises skin is stretched between thumb and forefinger and needle (size 26G) inserted (bevel upwards) for about 3 mm into superficial layers of dermis (almost parallel with surface). Needle should be short with short bevel (can usually be seen through epidermis during insertion). Tense raised blanched bleb is sign of correct injection; 7 mm bleb ≡ 0.1 mL injection, 3 mm bleb ≡ 0.05 mL injection; if considerable resistance not felt, needle too deep and should be removed and reinserted before giving more vaccine. Jet injectors and multiple puncture devices should not be used.

- **PRESCRIBING AND DISPENSING INFORMATION** Available from health organisations or direct from ImmForm portal. [immform.phe.gov.uk](http://immform.phe.gov.uk) (SSI brand, multidose vial with diluent).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for injection

- ▶ **Bacillus calmette-guérin vaccine (Non-proprietary)**  
BCG Vaccine AJV powder for suspension for injection 1ml vials | 10 vial (PoM) S

F 1418

## Cholera vaccine

05-Oct-2021

#### ● INDICATIONS AND DOSE

##### Immunisation against cholera (for travellers to endemic or epidemic areas on the basis of current recommendations)

- ▶ **BY MOUTH**
  - ▶ Child 2-5 years: 1 dose every 1-6 weeks for 3 doses, if more than 6 weeks have elapsed between doses, the primary course should be restarted, immunisation should be completed at least one week before potential exposure
  - ▶ Child 6-17 years: 1 dose every 1-6 weeks for 2 doses, if more than 6 weeks have elapsed between doses, the primary course should be restarted, immunisation should be completed at least one week before potential exposure
  - ▶ Adult: 1 dose every 1-6 weeks for 2 doses, if more than 6 weeks have elapsed between doses, the primary course should be restarted, immunisation should be completed at least one week before potential exposure

#### Booster

- ▶ **BY MOUTH**
  - ▶ Child 2-5 years: A single booster dose can be given within 6 months after primary course, if more than 6 months have elapsed since the last vaccination, the primary course should be repeated
  - ▶ Child 6-17 years: A single booster dose can be given within 2 years after primary course, if more than 2 years have elapsed since the last vaccination, the primary course should be repeated
  - ▶ Adult: A single booster dose can be given within 2 years after primary course, if more than 2 years have elapsed since the last vaccination, the primary course should be repeated

- **CONTRA-INDICATIONS** Acute gastro-intestinal illness

- **INTERACTIONS** → Appendix 1: cholera vaccine

#### ● SIDE-EFFECTS

- ▶ **Uncommon** Gastrointestinal discomfort · gastrointestinal disorders
- ▶ **Rare or very rare** Chills · cough · dehydration · dizziness · drowsiness · hyperhidrosis · increased risk of infection · insomnia · pulmonary reaction · syncope · taste altered · throat pain
- ▶ **Frequency not known** Angioedema · asthenia · dyspnoea · hypertension · influenza like illness · lymphadenitis · pain · paraesthesia · sputum increased

#### ● DIRECTIONS FOR ADMINISTRATION

- ▶ In children Manufacturer advises dissolve effervescent sodium bicarbonate granules in a glassful of water or chlorinated water (approximately 150 mL). For children over 6 years, add vaccine suspension to make one dose. For child 2-5 years, discard half (approximately 75 mL) of the solution, then add vaccine suspension to make one dose. Drink within 2 hours. Food, drink, and other oral medicines should be avoided for 1 hour before and after vaccination.

14

Vaccines

- ▶ In adults Manufacturer advises dissolve effervescent sodium bicarbonate granules in a glassful of water or chlorinated water (approximately 150 mL). Add vaccine suspension to make one dose. Drink within 2 hours. Food, drink, and other oral medicines should be avoided for 1 hour before and after vaccination.
- **PATIENT AND CARER ADVICE** Counselling on administration advised. Immunisation with cholera vaccine does not provide complete protection and all travellers to a country where cholera exists should be warned that scrupulous attention to food, water, and personal hygiene is **essential**.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Oral suspension

- ▶ **Dukoral** (Valneva UK Ltd)  
Dukoral cholera vaccine oral suspension | 2 dose [PoM] £43.20 DT = £43.20

14

Vaccines

## Haemophilus influenzae type b with meningococcal group C vaccine

05-Oct-2021

F 1418

### ● INDICATIONS AND DOSE

**Booster dose (for infants who have received primary immunisation with a vaccine containing *Haemophilus influenzae* type b component) and primary immunisation against *Neisseria meningitidis***

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 12-13 months: 0.5 mL for 1 dose

**Immunisation against *Neisseria meningitidis* in an unimmunised patient**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 1-9 years: 0.5 mL for 1 dose

**Booster dose (for children who have not been immunised against *Haemophilus influenzae* type b) | Booster dose after recovery from *Haemophilus influenzae* type b disease (for index cases previously vaccinated, with low Hib antibody concentration or if it is not possible to measure antibody concentration)**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 1-9 years: 0.5 mL for 1 dose

**Booster dose after recovery from *Haemophilus influenzae* type b disease (for fully vaccinated index cases with asplenia or splenic dysfunction, if previous dose received over 1 year ago)**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 1-17 years: 0.5 mL for 1 dose
- ▶ Adult: 0.5 mL for 1 dose

**Booster dose (for patients diagnosed with asplenia, splenic dysfunction or complement deficiency at under 2 years of age)**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 2-17 years: 0.5 mL for 1 dose, this booster dose should be given after the second birthday, this is the second dose of haemophilus influenzae type B vaccine combined with meningococcal group C conjugate vaccine (the first dose is given during the routine immunisation schedule)

**Booster dose (for patients diagnosed with asplenia, splenic dysfunction or complement deficiency at over 2 years of age)**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 2-17 years: 0.5 mL for 1 dose, this booster dose should be followed 2 months later by one dose of meningococcal A, C, W135, and Y conjugate vaccine (in patients from 11 years of age, this interval can be reduced to one month)

- ▶ Adult: 0.5 mL for 1 dose, this booster dose should be followed 1 month later by one dose of meningococcal A, C, W135, and Y conjugate vaccine

- **UNLICENSED USE** Not licensed for use in patients over 2 years.

### ● SIDE-EFFECTS

- ▶ **Common or very common** Drowsiness · irritability
- ▶ **Uncommon** Crying
- ▶ **Rare or very rare** Insomnia
- ▶ **Frequency not known** Dizziness · febrile seizure · meningism (but no evidence that vaccine causes meningococcal C meningitis) · muscle tone decreased
- **PRESCRIBING AND DISPENSING INFORMATION** Available as part of the childhood immunisation schedule from ImmForm.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder and solvent for solution for injection

- ▶ **Mentorix** (GlaxoSmithKline UK Ltd)  
Mentorix vaccine powder and solvent for solution for injection 0.5ml vials | 1 vial [PoM] £37.76 DT = £37.76

## Meningococcal group B vaccine (rDNA, component, adsorbed)

19-Oct-2017

### ● INDICATIONS AND DOSE

#### BEXSERO®

**Immunisation against *Neisseria meningitidis*, primary immunisation**

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Child 2 months: 0.5 mL for 1 dose, injected preferably into deltoid region (or anterolateral thigh in infants), for information about the use of paracetamol for prophylaxis of post-immunisation pyrexia, see paracetamol p. 477.
- ▶ Child 4 months: 0.5 mL for 1 dose, injected preferably into deltoid region (or anterolateral thigh in infants), for information about the use of paracetamol for prophylaxis of post-immunisation pyrexia, see paracetamol p. 477.

**Immunisation against *Neisseria meningitidis*, primary immunisation booster dose**

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Child 12-23 months: 0.5 mL for 1 dose, injected preferably into deltoid region (or anterolateral thigh in infants)

**Immunisation against *Neisseria meningitidis*, primary immunisation (in unimmunised patients)**

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Child 6-11 months: 0.5 mL for 2 doses, separated by an interval of at least 2 months; booster dose of 0.5 mL given between 1-2 years of age and at least 2 months after completion of primary immunisation, injected preferably into deltoid region (or anterolateral thigh in infants)
- ▶ Child 12-23 months: 0.5 mL for 2 doses, separated by an interval of at least 2 months; booster dose of 0.5 mL given 12-24 months after completion of primary immunisation, injected preferably into deltoid region (or anterolateral thigh in infants)
- ▶ Child 2-10 years: 0.5 mL for 2 doses, separated by an interval of at least 2 months. Injected preferably into deltoid region (or anterolateral thigh in infants)
- ▶ Child 11-17 years: 0.5 mL for 2 doses, separated by an interval of at least 1 month. Injected preferably into deltoid region

- ▶ Adult: 0.5 mL for 2 doses, separated by an interval of at least 1 month. Injected preferably into deltoid region

**TRUMENBA®****Immunisation against *Neisseria meningitidis*, primary immunisation**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 10–17 years: 0.5 mL for 2 doses, separated by an interval of 6 months, alternatively 0.5 mL for 2 doses, separated by an interval of at least 1 month, followed by 0.5 mL as a third dose, given at least 4 months after the second dose, injected preferably into deltoid region, a booster dose should be considered for individuals at continued risk—consult product literature
- ▶ Adult: 0.5 mL for 2 doses, separated by an interval of 6 months, alternatively 0.5 mL for 2 doses, separated by an interval of at least 1 month, followed by 0.5 mL as a third dose, given at least 4 months after the second dose, injected preferably into deltoid region, a booster dose should be considered for individuals at continued risk—consult product literature

**● SIDE-EFFECTS**

- ▶ **Common or very common** Crying abnormal (in children) · drowsiness (in children) · eating disorder (in children) · irritability (in children)
- ▶ **Uncommon** Seizures (in children) · vascular disorders (in children)
- ▶ **Frequency not known** Extensive swelling of vaccinated limb · hypotonic-hyporesponsiveness episode (in children) · meningism

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Suspension for injection**

EXCIPIENTS: May contain Kanamycin

- ▶ **Bexsero** (GlaxoSmithKline UK Ltd)

Nimenrix vaccine powder and solvent for solution for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £30.00 DT = £30.00

## Pneumococcal polysaccharide conjugate vaccine (adsorbed)

F 1418

07-Jan-2022

### ● INDICATIONS AND DOSE

#### PREVENAR 13<sup>®</sup>

##### Primary immunisation against pneumococcal infection—first dose

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 12 weeks: 0.5 mL for 1 dose, anterolateral thigh is preferred site of injection in infants under 1 year

##### Primary immunisation against pneumococcal infection—booster dose

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 1 year: 0.5 mL for 1 dose, anterolateral thigh is preferred site of injection in infants under 1 year; deltoid muscle is preferred in older children

##### Primary immunisation against pneumococcal infection—those with asplenia, splenic dysfunction, complement disorder or severe immunocompromise

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 6 weeks–11 months: 0.5 mL for 4 doses, the first two doses to be given at least 8 weeks apart, the third dose to be given on or after their first birthday, and the fourth dose to be given at least 8 weeks later. Anterolateral thigh is preferred site of injection in infants under 1 year; deltoid muscle is preferred in children
- ▶ Child 1–2 years: 0.5 mL for 2 doses, the first dose to be given on or after their first birthday and the second dose to be given at least 8 weeks later. Deltoid muscle is preferred site of injection in children

##### Immunisation against pneumococcal infection—unimmunised or partially immunised patients

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 3–11 months: 0.5 mL for 1 dose, followed by 0.5 mL for 1 dose on or after their first birthday, given at least 4 weeks after the first dose. Anterolateral thigh is preferred site of injection in infants under 1 year
- ▶ Child 12–23 months: 0.5 mL for 1 dose, deltoid muscle is preferred site of injection in children

##### Immunisation against pneumococcal infection—unimmunised or partially immunised patients at increased risk [born on or after 1 January 2020]

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 2–9 years: 0.5 mL for 1 dose, deltoid muscle is preferred site of injection in children

##### Immunisation against pneumococcal infection—immunised patients with severe immunocompromise [born on or after 1 January 2020]

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 2–17 years: 0.5 mL for 1 dose, deltoid muscle is preferred site of injection in children
- ▶ Adult: 0.5 mL for 1 dose, deltoid muscle is preferred site of injection in adults

##### Immunisation against pneumococcal infection—immunised patients at increased risk [born on or before 31 December 2019]

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 14 months–17 years: 0.5 mL for 1 dose, given at least 2 months after primary immunisation booster dose, deltoid muscle is preferred site of injection in children
- ▶ Adult: 0.5 mL for 1 dose, deltoid muscle is preferred site of injection in adults

##### Immunisation against pneumococcal infection—unimmunised or partially immunised patients at increased risk [born on or before 31 December 2019]

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 1–9 years: 0.5 mL for 1 dose, an additional dose is recommended (at least 2 months later) in those who are severely immunocompromised. Deltoid muscle is preferred site of injection in children
- ▶ Child 10–17 years: 0.5 mL for 1 dose, deltoid muscle is preferred site of injection in children
- ▶ Adult: 0.5 mL for 1 dose, deltoid muscle is preferred site of injection in adults

### ● UNLICENSED USE

**PREVENAR 13<sup>®</sup>** The dose in BNF Publications may differ from that in product literature.

### ● SIDE-EFFECTS

- ▶ **Common or very common** Chills (in adults) · drowsiness (in children) · irritability (in children) · sleep disorder (in children)
- ▶ **Uncommon** Crying abnormal (in children) · regional lymphadenopathy (in adults) · seizures (in children)
- ▶ **Rare or very rare** Hypotonic-hyposensitiveness episode (in children)
- ▶ **Frequency not known** Angioedema (in adults)
- ▶ **PRESCRIBING AND DISPENSING INFORMATION**  
**PREVENAR 13<sup>®</sup>** Available as part of childhood immunisation schedule from ImmForm [portal.immform.phe.gov.uk](http://portal.immform.phe.gov.uk).

- ▶ **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Suspension for injection

- ▶ **Prevenar** (Pfizer Ltd)  
Prevenar 13 vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [POM] £49.10 DT = £49.10 | 10 pre-filled disposable injection [POM] £491.00

F 1418

## Pneumococcal polysaccharide vaccine

01-May-2019

### ● INDICATIONS AND DOSE

##### Primary immunisation against pneumococcal infection

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Elderly: 0.5 mL for 1 dose, deltoid muscle is preferred site of injection in adults

##### Immunisation against pneumococcal infection [in patients at increased risk]

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 2–17 years: 0.5 mL for 1 dose, dose should be administered at least 2 months after the last dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed), deltoid muscle is preferred site of injection in children and adults
- ▶ Adult: 0.5 mL for 1 dose, deltoid muscle is preferred site of injection in adults, primary immunisation with the pneumococcal polysaccharide vaccine is not required when these patients reach 65 years of age

##### Immunisation against pneumococcal infection [revaccination; booster dose in patients with no spleen, splenic dysfunction or chronic kidney disease]

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 7–17 years: 0.5 mL every 5 years, deltoid muscle is preferred site of injection in children and adults
- ▶ Adult: 0.5 mL every 5 years, deltoid muscle is preferred site of injection in adults

- ▶ **SIDE-EFFECTS** Angioedema · arthritis · asthenia · chills · febrile seizure · haemolytic anaemia · injected limb mobility decreased · leucocytosis · lymphadenitis · nerve

disorders · paraesthesia · peripheral oedema · thrombocytopenia

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Pneumovax 23** (Merck Sharp & Dohme (UK) Ltd)  
Pneumovax 23 solution for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £16.80 DT = £16.80

1418

## Typhoid vaccine

05-Oct-2021

- **DRUG ACTION** Typhoid vaccine protects against typhoid fever caused by *Salmonella typhi* infection; it is available as an oral live attenuated vaccine and an injectable polysaccharide vaccine.

#### ● INDICATIONS AND DOSE

##### Immunisation against typhoid fever [in children at high risk of typhoid fever]

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 12-23 months: 0.5 mL for 1 dose, dose should be given at least 2 weeks before potential exposure to typhoid infection, response may be suboptimal

##### Immunisation against typhoid fever

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 2-17 years: 0.5 mL for 1 dose, dose should be given at least 2 weeks before potential exposure to typhoid infection
- ▶ Adult: 0.5 mL for 1 dose, dose should be given at least 2 weeks before potential exposure to typhoid infection
- ▶ BY MOUTH
- ▶ Child 5-17 years: 1 capsule every 2 days for 3 doses (on days 1, 3, and 5), course should be completed at least 1 week before potential exposure to typhoid infection
- ▶ Adult: 1 capsule every 2 days for 3 doses (on days 1, 3, and 5), course should be completed at least 1 week before potential exposure to typhoid infection

#### Booster

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 2-17 years: 0.5 mL for 1 dose every 3 years
- ▶ Adult: 0.5 mL for 1 dose every 3 years
- ▶ BY MOUTH
- ▶ Child 5-17 years: 1 capsule every 2 days for 3 doses (on days 1, 3, and 5) every 3 years
- ▶ Adult: 1 capsule every 2 days for 3 doses (on days 1, 3, and 5) every 3 years

#### ● UNLICENSED USE

- ▶ With intramuscular use in children Not licensed for use in children under 2 years.

#### ● CONTRA-INDICATIONS

- ▶ With oral use Acute gastro-intestinal illness

#### ● INTERACTIONS

- Appendix 1: live vaccines

#### ● SIDE-EFFECTS

##### GENERAL SIDE-EFFECTS Shock

##### SPECIFIC SIDE-EFFECTS

- ▶ With oral use Abdominal distension · asthenia · back pain · chills · dizziness · flatulence · influenza like illness · paraesthesia
- ▶ With parenteral use Asthma · syncope

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises capsule should be taken one hour before a meal. Swallow as soon as possible after placing in mouth with a cold or lukewarm drink.

#### ● HANDLING AND STORAGE

- ▶ With oral use It is important to store capsules in a refrigerator.

#### ● PATIENT AND CARER ADVICE

- ▶ With oral use Patients or carers should be given advice on how to administer and store typhoid vaccine capsules.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Typhim Vi** (Sanofi Pasteur)  
**Salmonella typhi Vi capsular polysaccharide 50 microgram per 1 ml** Typhim Vi 25micrograms/0.5ml vaccine solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £11.16 DT = £11.16 | 10 pre-filled disposable injection [PoM] £111.60 DT = £111.60

#### Gastro-resistant capsule

##### CAUTIONARY AND ADVISORY LABELS 25

- ▶ **Vivotif** (Emergent BioSolutions UK Ltd)  
Vivotif vaccine gastro-resistant capsules | 3 capsule [PoM] £14.77 DT = £14.77

Combinations available: **Hepatitis A with typhoid vaccine**, p. 1428

## VACCINES > VIRAL VACCINES

1418

## COVID-19 vaccine

16-May-2022

- **DRUG ACTION** COVID-19 vaccines use the spike protein of the SARS-CoV-2 virus to act as an intracellular antigen and produce an antibody response, thereby protecting against COVID-19 infection. Pfizer/BioNTech (*Comirnaty*<sup>®</sup>) and Moderna (*Spikevax*<sup>®</sup>) are nucleoside-modified messenger RNA (mRNA) vaccines that deliver viral RNA into host cells to enable expression of the spike protein. AstraZeneca vaccine (*Vaxzevria*<sup>®</sup>) uses a chimpanzee-derived adenovirus vector to incorporate the spike protein into host cells.

The r1N for the Pfizer/BioNTech vaccine (*Comirnaty*<sup>®</sup>) is tozinameran.

#### ● INDICATIONS AND DOSE

##### ASTRAZENECA VACCINE (VAXZEVRIA<sup>®</sup>)

##### Immunisation against COVID-19

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult: (consult local protocol)

##### MODERNA VACCINE (SPIKEVAX<sup>®</sup>)

##### Immunisation against COVID-19

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult: (consult local protocol)

##### PFIZER/BIONTECH VACCINE (COMIRNATY<sup>®</sup>)

##### Immunisation against COVID-19

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult: (consult local protocol)

#### ● CONTRA-INDICATIONS

- ▶ **ASTRAZENECA VACCINE (VAXZEVRIA<sup>®</sup>)** History of capillary leak syndrome · thrombosis with thrombocytopenia syndrome following previous dose · transverse myelitis following previous dose

#### ● CAUTIONS

- ▶ **ASTRAZENECA VACCINE (VAXZEVRIA<sup>®</sup>)** History of cerebral venous sinus thrombosis · history of heparin-induced thrombocytopenia with thrombosis · patients under 40 years (higher risk of thrombotic side-effects; Pfizer/BioNTech (*Comirnaty*<sup>®</sup>) and Moderna (*Spikevax*<sup>®</sup>) vaccines preferred)

#### CAUTIONS, FURTHER INFORMATION

- ▶ Medical conditions predisposing to blood clots The MHRA advises that administration in individuals of any age at higher risk of blood clots because of a medical condition (such as antiphospholipid syndrome) should only be considered if the benefits outweigh the risks.
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Axillary lymph node tenderness · chills · influenza like illness · pain in extremity
  - ▶ **Uncommon** Asthenia · dizziness · drowsiness · insomnia · sweat changes

- ▶ **Rare or very rare** Angioedema - facial paralysis - Guillain-Barre syndrome (following AstraZeneca vaccine) - myocarditis (following Moderna and Pfizer/BioNTech vaccines) - pericarditis (following Moderna and Pfizer/BioNTech vaccines) - sensation abnormal
- ▶ **Frequency not known** Arterial thrombosis (following AstraZeneca vaccine) - capillary leak syndrome (following AstraZeneca vaccine) - cerebral venous sinus thrombosis (following AstraZeneca vaccine) - extensive swelling of vaccinated limb - thrombocytopenia (following AstraZeneca vaccine) - thromboembolism (following AstraZeneca vaccine) - transverse myelitis (following AstraZeneca vaccine) - venous thrombosis (following AstraZeneca vaccine) - visceral venous thrombosis (following AstraZeneca vaccine)

- **ALLERGY AND CROSS-SENSITIVITY** PHE advises individuals with a history of anaphylaxis to food, an identified drug or vaccine, or an insect sting can receive any COVID-19 vaccine, as long as they are not allergic to any of its ingredients; consider observation for 15 minutes. Individuals who had a non-allergic reaction to a first dose of COVID-19 vaccine can receive a second dose, followed by an observation period of 15 minutes.

PHE advises individuals with a history of immediate onset anaphylaxis to multiple classes of drugs, or unexplained anaphylaxis, should not be vaccinated with Pfizer/BioNTech (*Comirnaty*<sup>®</sup>) or Moderna (*Spikevax*<sup>®</sup>) vaccines, except on advice of an allergy specialist. The AstraZeneca (*Vaxzevria*<sup>®</sup>) vaccine can be used as an alternative (if not otherwise contra-indicated); it should be administered in a setting with full resuscitation facilities, followed by an observation period of 30 minutes.

PHE advises individuals with a localised allergic reaction or with systemic symptoms, but not anaphylaxis, to the first dose of a COVID-19 vaccine can receive further doses with an observation period of 30 minutes. In these individuals, or if the reaction was delayed and self-limiting, or resolved with an oral antihistamine, consider pre-treatment with a non-sedating antihistamine 30 minutes before giving further doses. Seek advice from an allergy specialist if the reaction presented with anaphylaxis or required medical attention. If the anaphylactic reaction was to a previous dose of AstraZeneca (*Vaxzevria*<sup>®</sup>) vaccine, complete vaccination with an mRNA vaccine; if the reaction was to an mRNA vaccine, give the same or a different mRNA vaccine in a hospital setting—an observation period of at least 30 minutes is recommended.

- **PREGNANCY** PHE advises COVID-19 vaccines should be offered—Pfizer/BioNTech (*Comirnaty*<sup>®</sup>) and Moderna (*Spikevax*<sup>®</sup>) vaccines preferred due to more clinical experience. See also *Pregnancy* in COVID-19 vaccines p. 1397.
- **BREAST FEEDING** PHE advises that COVID-19 vaccines are suitable.
- **MONITORING REQUIREMENTS**
  - ▶ PHE advises healthcare professionals to monitor platelets 2 to 5 days after vaccination in patients with a history of immune thrombocytopenia.
  - ▶ PHE advises healthcare professionals to be alert for signs and symptoms of myocarditis and pericarditis and inform vaccinated patients to seek immediate medical attention if they experience a new onset of chest pain, shortness of breath, palpitations or arrhythmias within 10 days of vaccination.
  - ▶ [\[EvGr\]](#) For AstraZeneca vaccine (*Vaxzevria*<sup>®</sup>): healthcare professionals are advised to be alert for signs and symptoms of Guillain-Barré syndrome. [\[N\]](#)
  - ▶ For advice on further doses for those who have suspected Guillain-Barré syndrome, myocarditis, or pericarditis after vaccination, see Chapter 14a: COVID-19 - SARS-CoV-2, in *Immunisation against infectious disease* - 'The Green Book'.

- **DIRECTIONS FOR ADMINISTRATION** Public Health England advises that individuals with **bleeding disorders** may be vaccinated by the intramuscular route, on the advice of a doctor familiar with their bleeding risk. Patients treated with medicines to reduce bleeding (e.g. for haemophilia) are advised to administer their medicine shortly prior to intramuscular vaccination.

- **HANDLING AND STORAGE**

**PFIZER/BIONTECH VACCINE (COMIRNATY<sup>®</sup>)** Store in a freezer at -90°C to -60°C—consult product literature about thawing and storage after thawing.

**MODERNA VACCINE (SPIKEVAX<sup>®</sup>)** Store in a freezer at -25°C to -15°C—consult product literature about thawing and storage after thawing.

- **PATIENT AND CARER ADVICE**

**Driving and skilled tasks** Healthcare professionals are advised to inform patients not to drive for 15 minutes after vaccination—increased risk of fainting.

**ASTRAZENECA VACCINE (VAXZEVRIA<sup>®</sup>)** Healthcare professionals are advised to inform patients to seek immediate medical advice if symptoms of thromboembolism and/or thrombocytopenia develop 4 days or more after vaccination.

Leaflet for patients The leaflet *COVID-19 vaccination and blood clotting* is available from PHE ([www.gov.uk/government/publications/covid-19-vaccination-and-blood-clotting](http://www.gov.uk/government/publications/covid-19-vaccination-and-blood-clotting)).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

## Hepatitis A and B vaccine

05-Oct-2021

The properties listed below are those particular to the combination only. For the properties of the components please consider, hepatitis A vaccine p. 1427, hepatitis B vaccine p. 1429.

- **INDICATIONS AND DOSE**

**AMBIRIX<sup>®</sup>**

**Immunisation against hepatitis A and hepatitis B infection [primary course]**

- ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 1-15 years: Initially 1 mL for 1 dose, then 1 mL after 6-12 months for 1 dose, the deltoid region is the preferred site of injection in older children; anterolateral thigh may be used in infants; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)

**Post-exposure prophylaxis against hepatitis A infection [for rapid protection]**

- ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 1-15 years: 1 mL for 1 dose, the deltoid region is the preferred site of injection in older children; anterolateral thigh may be used in infants; not to be injected into the buttock (vaccine efficacy reduced),

subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)

#### TWINRIX<sup>®</sup> ADULT

##### Immunisation against hepatitis A and hepatitis B infection [primary course]

###### ► BY INTRAMUSCULAR INJECTION

- Child 16–17 years: Initially 1 mL every month for 2 doses, then 1 mL after 5 months for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)
- Adult: Initially 1 mL every month for 2 doses, then 1 mL after 5 months for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)

##### Immunisation against hepatitis A and hepatitis B infection [accelerated schedule for travellers departing within 1 month]

###### ► BY INTRAMUSCULAR INJECTION

- Child 16–17 years: Initially 1 mL for 1 dose, then 1 mL after 7 days for 1 dose, then 1 mL after 14 days for 1 dose, then 1 mL for 1 dose given 12 months after the first dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)
- Adult: Initially 1 mL for 1 dose, then 1 mL after 7 days for 1 dose, then 1 mL after 14 days for 1 dose, then 1 mL for 1 dose given 12 months after the first dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)

#### TWINRIX<sup>®</sup> PAEDIATRIC

##### Immunisation against hepatitis A and hepatitis B infection [primary course]

###### ► BY INTRAMUSCULAR INJECTION

- Child 1–15 years: Initially 0.5 mL every month for 2 doses, then 0.5 mL after 5 months for 1 dose, the deltoid region is the preferred site of injection in older children; anterolateral thigh is the preferred site in infants; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)

#### ● UNLICENSED USE

**AMBIRIX<sup>®</sup>** Public Health England advises that *Ambirix<sup>®</sup>* may be used for post-exposure prophylaxis against hepatitis A infection where rapid protection is required, but is not licensed for this indication.

#### IMPORTANT SAFETY INFORMATION

*Ambirix<sup>®</sup>* and *Twinrix<sup>®</sup>* are not recommended for post-exposure prophylaxis following percutaneous (needle-stick), ocular, or mucous membrane exposure to hepatitis B virus.

#### ● PRESCRIBING AND DISPENSING INFORMATION

**TWINRIX<sup>®</sup> PAEDIATRIC** Primary course should be completed with *Twinrix<sup>®</sup>* (single component vaccines given at appropriate intervals may be used for booster dose).

**TWINRIX<sup>®</sup> ADULT** Primary course should be completed with *Twinrix<sup>®</sup>* (single component vaccines given at appropriate intervals may be used for booster dose).

**AMBIRIX<sup>®</sup>** Primary course should be completed with *Ambirix<sup>®</sup>* (single component vaccines given at appropriate intervals may be used for booster dose).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Suspension for injection

EXCIPIENTS: May contain Neomycin

- **Ambirix** (GlaxoSmithKline UK Ltd)  
Ambirix vaccine suspension for injection 1ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £31.18 DT = £31.18
- **Twinrix** (GlaxoSmithKline UK Ltd)  
Twinrix Paediatric vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £20.79 DT = £20.79  
Twinrix Adult vaccine suspension for injection 1ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £33.31 DT = £31.18 | 10 pre-filled disposable injection [PoM] £333.13

## Hepatitis A vaccine

#### ● INDICATIONS AND DOSE

##### AVAXIM<sup>®</sup>

##### Immunisation against hepatitis A infection

###### ► BY INTRAMUSCULAR INJECTION

- Child 16–17 years: Initially 0.5 mL for 1 dose, then 0.5 mL after 6–12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders; not to be injected into the buttock (vaccine efficacy reduced)
- Adult: Initially 0.5 mL for 1 dose, then 0.5 mL after 6–12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders; not to be injected into the buttock (vaccine efficacy reduced)

##### HAVRIX JUNIOR MONODOSE<sup>®</sup>

##### Immunisation against hepatitis A infection

###### ► BY INTRAMUSCULAR INJECTION

- Child 1–15 years: Initially 0.5 mL for 1 dose, then 0.5 mL after 6–12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, deltoid muscle is preferred site of injection in older children; anterolateral thigh is preferred site in infants and young children; not to be injected into the gluteal region. The subcutaneous route may be used for patients with bleeding disorders

##### HAVRIX MONODOSE<sup>®</sup>

##### Immunisation against hepatitis A infection

###### ► BY INTRAMUSCULAR INJECTION

- Child 16–17 years: Initially 1 mL for 1 dose, then 1 mL after 6–12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection; not to be injected into the gluteal region. The subcutaneous route may be used for patients with bleeding disorders
- Adult: Initially 1 mL for 1 dose, then 1 mL after 6–12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection; not to be injected into the gluteal region. The subcutaneous route may be used for patients with bleeding disorders

continued →

VAQTA<sup>®</sup> ADULT**Immunisation against hepatitis A infection**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult: Initially 1 mL for 1 dose, then 1 mL after 6–18 months, dose given as booster, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders (but immune response may be delayed)

VAQTA<sup>®</sup> PAEDIATRIC**Immunisation against hepatitis A infection**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 1–17 years: Initially 0.5 mL for 1 dose, then 0.5 mL after 6–18 months, dose given as booster, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders (but immune response may be reduced)

● **SIDE-EFFECTS**

- ▶ **Common or very common** Asthenia (uncommon in children) · pain (uncommon in children)
- ▶ **Uncommon** Anxiety (in children) · chills (in adults) · cough · crying (in children) · dizziness · ear pain (rare in children) · gastrointestinal disorders (rare in children) · increased risk of infection (in adults) · influenza like illness (rare in children) · muscle weakness (in adults) · musculoskeletal stiffness (rare in children) · nasal complaints · paraesthesia (rare in children) · respiratory disorders (rare in children) · sensation of tightness (rare in children) · temperature sensation altered (rare in children) · vasodilation (rare in children)
- ▶ **Rare or very rare** Allergic rhinitis (in children) · apathy (in adults) · asthma (in children) · ataxia (in children) · burping (in children) · chest pain · constipation (in children) · dehydration (in children) · drowsiness (uncommon in children) · dry mouth (in adults) · eye discomfort · gait abnormal (in children) · gastrointestinal discomfort · infantile spitting up (in children) · irritability (very common in children) · menstrual disorder (in adults) · migraine (in adults) · muscle complaints (in adults) · oral ulceration (in adults) · oropharyngeal pain (in children) · photophobia (in adults) · screaming (in children) · sleep disorders (uncommon in children) · sweat changes · synovitis (in children) · throat oedema (in adults) · tremor (in adults) · vertigo (in adults) · watering eye (in adults)
- ▶ **Frequency not known** Guillain-Barre syndrome · thrombocytopenia

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Suspension for injection**

EXCIPIENTS: May contain Neomycin

- ▶ **Avaxim** (Sanofi Pasteur)  
Avaxim vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £21.72 | 10 pre-filled disposable injection [PoM] £217.20
- ▶ **Havrix** (GlaxoSmithKline UK Ltd)  
Havrix Monodose vaccine suspension for injection 1ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £22.14 DT = £22.14 | 10 pre-filled disposable injection [PoM] £221.43  
Havrix Junior Monodose vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £16.77 | 10 pre-filled disposable injection [PoM] £167.68
- ▶ **VAQTA** (Merck Sharp & Dohme (UK) Ltd)  
VAQTA Adult vaccine suspension for injection 1ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £18.10 DT = £22.14  
VAQTA Paediatric vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £14.74

**Hepatitis A with typhoid vaccine**

05-Oct-2021

The properties listed below are those particular to the combination only. For the properties of the components please consider, hepatitis A vaccine p. 1427, typhoid vaccine p. 1425.

● **INDICATIONS AND DOSE**VIATIM<sup>®</sup>**Immunisation against hepatitis A and typhoid infection [primary course]**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 16–17 years: 1 mL for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced). The subcutaneous route may be used for patients with bleeding disorders, booster dose may be given using single or multicomponent vaccines
- ▶ Adult: 1 mL for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced). The subcutaneous route may be used for patients with bleeding disorders, booster dose may be given using single or multicomponent vaccines

**Immunisation against hepatitis A (booster dose for individuals who have received primary immunisation with monovalent hepatitis A vaccine, where protection against typhoid is also required)**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 16–17 years: 1 mL for 1 dose, within 36 months (preferably 6–12 months) of primary immunisation, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced). The subcutaneous route may be used for patients with bleeding disorders
- ▶ Adult: 1 mL for 1 dose, within 36 months (preferably 6–12 months) of primary immunisation, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced). The subcutaneous route may be used for patients with bleeding disorders

**Immunisation against typhoid (booster dose for individuals who have received primary immunisation with hepatitis A and typhoid vaccine, where continued protection against typhoid is required)**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 16–17 years: 1 mL for 1 dose, 36 months after primary immunisation, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced). The subcutaneous route may be used for patients with bleeding disorders
- ▶ Adult: 1 mL for 1 dose, 36 months after primary immunisation, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced). The subcutaneous route may be used for patients with bleeding disorders

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Suspension for injection**

EXCIPIENTS: May contain Neomycin

- ▶ **VIATIM** (Sanofi Pasteur)  
VIATIM vaccine suspension for injection 1ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £35.76 DT = £35.76

## Hepatitis B vaccine

### ● INDICATIONS AND DOSE

#### ENGERIX B<sup>®</sup>

##### Immunisation against hepatitis B infection

###### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 1 month-15 years: 10 micrograms for 1 dose, then 10 micrograms after 1 month for 1 dose, followed by 10 micrograms after 5 months for 1 dose, deltoid muscle is preferred site of injection in older children; anterolateral thigh is preferred site in infants and young children; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Child 16-17 years: 20 micrograms for 1 dose, then 20 micrograms after 1 month for 1 dose, followed by 20 micrograms after 5 months for 1 dose, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Adult: 20 micrograms for 1 dose, then 20 micrograms after 1 month for 1 dose, followed by 20 micrograms after 5 months for 1 dose, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

##### Immunisation against hepatitis B infection (accelerated schedule for pre- and post-exposure prophylaxis)

###### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Neonate: 10 micrograms every month for 3 doses, followed by 10 micrograms after 10 months for 1 dose, for post-exposure prophylaxis, PHE advises dose at 12 months not required if patient is at low risk, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced), this dose should not be given to neonates born to hepatitis B surface antigen-positive mothers.
- ▶ Child 1 month-15 years: 10 micrograms every month for 3 doses, followed by 10 micrograms after 10 months for 1 dose, for post-exposure prophylaxis, PHE advises dose at 12 months not required if patient is at low risk, deltoid muscle is preferred site of injection in older children; anterolateral thigh is preferred site in infants and young children; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Child 16-17 years: 20 micrograms every month for 3 doses, followed by 20 micrograms after 10 months for 1 dose, for post-exposure prophylaxis, PHE advises dose at 12 months not required if patient is at low risk, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Adult: 20 micrograms every month for 3 doses, followed by 20 micrograms after 10 months for 1 dose, for post-exposure prophylaxis, PHE advises dose at 12 months not required if patient is at low risk, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

##### Immunisation against hepatitis B infection (alternative accelerated schedule)

###### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 11-15 years: 20 micrograms for 1 dose, followed by 20 micrograms after 6 months for 1 dose, this schedule is not suitable if high risk of infection between doses or if compliance with second dose uncertain, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

##### Immunisation against hepatitis B infection (very rapid schedule)

###### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 16-17 years: 20 micrograms for 1 dose, then 20 micrograms after 7 days for 1 dose, followed by

20 micrograms after 14 days for 1 dose, followed by 20 micrograms for 1 dose, to be given 12 months after the first dose, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

- ▶ Adult: 20 micrograms for 1 dose, then 20 micrograms after 7 days for 1 dose, followed by 20 micrograms after 14 days for 1 dose, followed by 20 micrograms for 1 dose, to be given 12 months after the first dose, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

##### Immunisation against hepatitis B infection (in renal insufficiency, including haemodialysis patients)

###### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 1 month-15 years: 10 micrograms every month for 2 doses, followed by 10 micrograms after 5 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection in older children; anterolateral thigh is preferred site in infants and young children; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Child 16-17 years: 40 micrograms every month for 3 doses, followed by 40 micrograms after 4 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Adult: 40 micrograms every month for 3 doses, followed by 40 micrograms after 4 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

##### Immunisation against hepatitis B infection (accelerated schedule for pre- and post-exposure prophylaxis in renal insufficiency, including haemodialysis patients)

###### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 1 month-15 years: 10 micrograms every month for 3 doses, followed by 10 micrograms after 10 months for 1 dose, for post-exposure prophylaxis, PHE advises dose at 12 months not required if patient is at low risk, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection in older children; anterolateral thigh is preferred site in infants and young children; not to be injected into the buttock (vaccine efficacy reduced)

#### FENDRIX<sup>®</sup>

##### Immunisation against hepatitis B infection in renal insufficiency (including pre-haemodialysis and haemodialysis patients)

###### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 15-17 years: 20 micrograms every month for 3 doses, followed by 20 micrograms after 4 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Adult: 20 micrograms every month for 3 doses, followed by 20 micrograms after 4 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

continued →

## HBVAXPRO®

**Immunisation against hepatitis B infection**

## ▶ BY INTRAMUSCULAR INJECTION

▶ Neonate: 5 micrograms for 1 dose, followed by 5 micrograms after 1 month for 1 dose, then 5 micrograms after 5 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced), dose not to be used in neonates born to hepatitis B surface antigen-positive mothers.

▶ Child 1 month-15 years: 5 micrograms for 1 dose, followed by 5 micrograms after 1 month for 1 dose, then 5 micrograms after 5 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in adults and older children; anterolateral thigh is preferred site in infants; not to be injected into the buttock (vaccine efficacy reduced)

▶ Child 16-17 years: 10 micrograms for 1 dose, followed by 10 micrograms after 5 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in adults and older children; not to be injected into the buttock (vaccine efficacy reduced)

▶ Adult: 10 micrograms for 1 dose, followed by 10 micrograms after 1 month for 1 dose, followed by 10 micrograms after 5 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in adults and older children; not to be injected into the buttock (vaccine efficacy reduced)

**Immunisation against hepatitis B infection (accelerated schedule for pre- and post-exposure prophylaxis)**

## ▶ BY INTRAMUSCULAR INJECTION

▶ Neonate: 5 micrograms every month for 3 doses, followed by 5 micrograms after 10 months for 1 dose, for post-exposure prophylaxis, PHE advises dose at 12 months not required if patient is at low risk, booster doses may be required in immunocompromised patients with low antibody concentration, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced), dose not to be used in neonates born to hepatitis B surface antigen-positive mothers.

▶ Child 1 month-15 years: 5 micrograms every month for 3 doses, followed by 5 micrograms after 10 months for 1 dose, for post-exposure prophylaxis, PHE advises dose at 12 months not required if patient is at low risk, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in older children; anterolateral thigh is preferred site in infants; not to be injected into the buttock (vaccine efficacy reduced)

▶ Child 16-17 years: 10 micrograms every month for 3 doses, followed by 10 micrograms after 10 months for 1 dose, for post-exposure prophylaxis, PHE advises dose at 12 months not required if patient is at low risk, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in older children; not to be injected into the buttock (vaccine efficacy reduced)

▶ Adult: 10 micrograms every month for 3 doses, followed by 10 micrograms after 10 months for 1 dose, for post-exposure prophylaxis, PHE advises dose at

12 months not required if patient is at low risk, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

**Immunisation against hepatitis B infection (in chronic haemodialysis patients)**

## ▶ BY INTRAMUSCULAR INJECTION

▶ Child 16-17 years: 40 micrograms every month for 2 doses, followed by 40 micrograms after 5 months for 1 dose, booster doses may be required in those with low antibody concentration, deltoid muscle is preferred site of injection in older children; not to be injected into the buttock (vaccine efficacy reduced)

▶ Adult: 40 micrograms every month for 2 doses, followed by 40 micrograms after 5 months for 1 dose, booster doses may be required in those with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

● **UNLICENSED USE**

● **ENGERIX B®** PHE advises *Engerix B®* is used in the doses provided in BNF Publications for immunisation against hepatitis B infection (very rapid schedule) in children aged 16-17 years, but these are considered unlicensed.

● **SIDE-EFFECTS**

- ▶ **Common or very common** Drowsiness · gastrointestinal disorder · irritability
- ▶ **Uncommon** Dizziness · influenza like illness
- ▶ **Rare or very rare** Sensation abnormal
- ▶ **Frequency not known** Angioedema · apnoea · arthritis · encephalitis · encephalopathy · hypotension · meningitis · multiple sclerosis · muscle weakness · nerve disorders · paralysis · seizure · thrombocytopenia · vasculitis

● **PRESCRIBING AND DISPENSING INFORMATION** PHE advises different hepatitis B vaccine preparations can be used to complete a primary immunisation course, or to administer a booster dose.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Suspension for injection**

EXCIPIENTS: May contain Thiomersal

▶ **Engerix B** (GlaxoSmithKline UK Ltd)

**Hepatitis B virus surface antigen 20 microgram per 1 ml** Engerix B 10micrograms/0.5ml vaccine suspension for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £9.67 DT = £9.67  
 Engerix B 20micrograms/1ml vaccine suspension for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £12.99 DT = £12.99 | 10 pre-filled disposable injection [PoM] £129.92

▶ **Fendrix** (GlaxoSmithKline UK Ltd)

**Hepatitis B virus surface antigen 40 microgram per 1 ml** Fendrix 20micrograms/0.5ml vaccine suspension for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £38.10 DT = £38.10

▶ **HBVAXPRO** (Merck Sharp & Dohme (UK) Ltd)

**Hepatitis B virus surface antigen 10 microgram per 1 ml** HBVAXPRO 10micrograms/1ml vaccine suspension for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £12.20  
 HBVAXPRO 5micrograms/0.5ml vaccine suspension for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £8.95 DT = £8.95

**Hepatitis B virus surface antigen 40 microgram per**

**1 ml** HBVaxPRO 40micrograms/1ml vaccine suspension for injection vials | 1 vial [PoM] £27.60 DT = £27.60

F 1418

## Herpes-zoster vaccine, live

11-Jan-2022

- **DRUG ACTION** *Zostavax*<sup>®</sup> is a live, attenuated vaccine that protects against herpes zoster (shingles) caused by varicella-zoster virus infection.

### ● INDICATIONS AND DOSE

#### ZOSTAVAX<sup>®</sup>

##### Immunisation against herpes zoster (shingles)

- ▶ BY INTRAMUSCULAR INJECTION, OR BY SUBCUTANEOUS INJECTION
- ▶ Adult 70–79 years: 0.65 mL for 1 dose, intramuscular route preferred, to be administered preferably into the deltoid region

- **CAUTIONS** Post-vaccination close contact with susceptible individuals

**CAUTIONS, FURTHER INFORMATION** Rarely, the varicella-zoster vaccine virus has been transmitted from individuals vaccinated with live vaccine to susceptible contacts.

Public Health England advises that individuals who develop a vesicular rash following live herpes-zoster vaccination should be tested for wild-type virus and, if in contact with susceptible individuals, also ensure the rash is kept covered until dry and crusted; immunosuppressed persons should avoid contact with susceptible individuals during this time.

- **INTERACTIONS** → Appendix 1: live vaccines
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Pain in extremity
  - ▶ **Uncommon** Lymphatic abnormalities
  - ▶ **Rare or very rare** Increased risk of infection
- **CONCEPTION AND CONTRACEPTION** [\[EVGr\]](#) Avoid pregnancy for 1 month after vaccination. ⚠
- **PRESCRIBING AND DISPENSING INFORMATION**

**ZOSTAVAX<sup>®</sup>** Advice in the BNF may differ from that in product literature.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

##### **Powder and solvent for suspension for injection**

- EXCIPIENTS: May contain Gelatin, neomycin
- ▶ **Zostavax** (Merck Sharp & Dohme (UK) Ltd)
  - Zostavax vaccine powder and solvent for suspension for injection 0.65ml pre-filled syringes | 1 pre-filled disposable injection [\[PoM\]](#) £99.96 DT = £99.96

F 1418

## Herpes-zoster vaccine (recombinant, adjuvanted)

17-Jan-2022

- **DRUG ACTION** *Shingrix*<sup>®</sup> is a non-live recombinant, adjuvanted vaccine that protects against herpes zoster (shingles) caused by varicella-zoster virus infection

### ● INDICATIONS AND DOSE

#### SHINGRIX<sup>®</sup>

##### Immunisation against herpes zoster (shingles) in patients with severe immunosuppression

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult 70–79 years: 0.5 mL for 2 doses, separated by an interval of at least 2 months, to be administered preferably into the deltoid region

- **SIDE-EFFECTS**
  - ▶ **Common or very common** Chills · gastrointestinal disorder
  - ▶ **Rare or very rare** Angioedema

### ● PRESCRIBING AND DISPENSING INFORMATION

**SHINGRIX<sup>®</sup>** Advice in the BNF may differ from that in product literature.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

##### **Powder and suspension for suspension for injection**

- EXCIPIENTS: May contain Polysorbates
- ▶ **Shingrix** (GlaxoSmithKline UK Ltd) ▼
  - Shingrix (Herpes Zoster) adjuvanted recombinant vaccine powder and suspension for suspension for injection 0.5ml vials | 1 vial [\[PoM\]](#) £160.00

F 1418

## Human papillomavirus vaccines

13-Apr-2022

### ● INDICATIONS AND DOSE

##### Immunisation against HPV-related premalignant lesions and cancer (cervical, vulvar, vaginal, and anal) and genital warts [2-dose schedule]

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 9–17 years: 0.5 mL for 1 dose, followed by 0.5 mL after 6–24 months for 1 dose, to be administered preferably into deltoid region or higher anterolateral thigh, if the 2-dose schedule is interrupted, it should be resumed but not repeated, even if more than 24 months have elapsed since the first dose
- ▶ Adult: 0.5 mL for 1 dose, followed by 0.5 mL after 6–24 months for 1 dose, to be administered preferably into deltoid region or higher anterolateral thigh, if the 2-dose schedule is interrupted, it should be resumed but not repeated, even if more than 24 months have elapsed since the first dose

##### Immunisation against HPV-related premalignant lesions and cancer (cervical, vulvar, vaginal, and anal) and genital warts [3-dose schedule for immunocompromised or HIV-positive patients]

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 9–17 years: 0.5 mL for 1 dose, followed by 0.5 mL for 1 dose, second dose to be given at least 1 month after the first dose, then 0.5 mL for 1 dose, third dose to be given at least 3 months after the second dose, to be administered preferably into deltoid region or higher anterolateral thigh, the 3-dose schedule should be completed within 12 months of the first dose, if the schedule is interrupted, it should be resumed but not repeated, allowing the appropriate interval between the remaining doses
- ▶ Adult: 0.5 mL for 1 dose, followed by 0.5 mL for 1 dose, second dose to be given at least 1 month after the first dose, then 0.5 mL for 1 dose, third dose to be given at least 3 months after the second dose, to be administered preferably into deltoid region or higher anterolateral thigh, the 3-dose schedule should be completed within 12 months of the first dose, if the schedule is interrupted, it should be resumed but not repeated, allowing the appropriate interval between the remaining doses

- **UNLICENSED USE** [\[EVGr\]](#) Human papillomavirus vaccines are used in a 2-dose immunisation schedule, ⚠ but the interval between doses may differ from licensing. [\[EVGr\]](#) For *Gardasil*<sup>®</sup>, the 2-dose immunisation schedule is not licensed for use in individuals aged 14 years and older. For *Gardasil 9*<sup>®</sup>, the 2-dose immunisation schedule is not licensed for use in individuals aged 15 years and older. ⚠

### ● SIDE-EFFECTS

- ▶ **Common or very common** Dizziness · gastrointestinal disorder · pain in extremity
- ▶ **Uncommon** Upper respiratory tract infection
- ▶ **Frequency not known** Acute disseminated encephalomyelitis · angioedema · asthma · bronchospasm · chills · Guillain-Barre syndrome · immune thrombocytopenic purpura · syncope

- **PREGNANCY** Not known to be harmful, but vaccination should be postponed until completion of pregnancy.
- **DIRECTIONS FOR ADMINISTRATION** PHE advises that individuals with **bleeding disorders** may be vaccinated by the intramuscular route, on the advice of a doctor familiar with their bleeding risk. Patients treated with medicines to reduce bleeding (e.g. for haemophilia) are advised to administer their medicine shortly prior to intramuscular vaccination.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Suspension for injection

- ▶ **Gardasil** (Merck Sharp & Dohme (UK) Ltd)  
Gardasil vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £86.50 DT = £86.50
- ▶ **Gardasil 9** (Merck Sharp & Dohme (UK) Ltd)  
Gardasil 9 vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £105.00 DT = £105.00

## Influenza vaccine

08-Oct-2021

F 1418

- **DRUG ACTION** Influenza vaccines protect people at high risk from influenza and reduce transmission of infection; the nasal spray contains live attenuated strains, all other vaccines are inactivated or produced by recombinant DNA technology.

#### INDICATIONS AND DOSE

##### Annual immunisation against seasonal influenza

- ▶ BY INTRAMUSCULAR INJECTION
  - ▶ Child 6 months–17 years: 0.5 mL for 1 dose
  - ▶ Adult: 0.5 mL for 1 dose
- ▶ BY INTRANASAL ADMINISTRATION
  - ▶ Child 2–17 years: 0.2 mL for 1 dose, to be administered as 0.1 mL into each nostril

##### Annual immunisation against seasonal influenza (for children in clinical risk groups, or who are household contacts of others in clinical risk groups, and who have not received seasonal influenza vaccine previously)

- ▶ BY INTRAMUSCULAR INJECTION
  - ▶ Child 6 months–8 years: 0.5 mL for 1 dose, followed by 0.5 mL for 1 dose, after at least 4 weeks
- ▶ BY INTRANASAL ADMINISTRATION
  - ▶ Child 2–8 years: 0.2 mL for 1 dose, followed by 0.2 mL for 1 dose, after at least 4 weeks. Dose to be administered as 0.1 mL into each nostril

- **UNLICENSED USE** The Joint Committee on Vaccination and Immunisation advises offering a second dose of vaccine for annual immunisation against seasonal influenza to children in clinical risk groups only, but this differs from licensed advice.
- **CONTRA-INDICATIONS**
  - FLUENZ TETRA**® Active wheezing · concomitant use with antiviral therapy for influenza · severe asthma

#### CONTRA-INDICATIONS, FURTHER INFORMATION

- ▶ Concomitant use with antiviral therapy for influenza PHE advises avoid immunisation for at least 48 hours after stopping the influenza antiviral agent. Administration of influenza antiviral agents within two weeks of *Fluenz Tetra*® administration may reduce the effectiveness of the vaccine.
- **INTERACTIONS** → Appendix 1: live vaccines
- **SIDE-EFFECTS**
  - ▶ **Common or very common**
  - ▶ With intramuscular use Chills · hyperhidrosis · induration · local reactions · pain
  - ▶ With intranasal use Nasal complaints
  - ▶ **Uncommon**
  - ▶ With intranasal use Epistaxis · face oedema

- ▶ **Frequency not known**
- ▶ With intramuscular use Angioedema · encephalomyelitis · extensive swelling of vaccinated limb · febrile seizure · nerve disorders · nervous system disorder · paraesthesia · presyncope · shock · syncope · thrombocytopenia · vasculitis
- ▶ With intranasal use Guillain-Barre syndrome

**SIDE-EFFECTS, FURTHER INFORMATION** Elderly patients might be more susceptible to side-effects.

- **ALLERGY AND CROSS-SENSITIVITY** PHE advises individuals with a history of egg allergy can be immunised with either an egg free influenza vaccine, if available, or an influenza vaccine with an ovalbumin content less than 120 nanograms/mL (facilities should be available to treat anaphylaxis). If an influenza vaccine containing ovalbumin is being considered in those with a history of severe anaphylaxis to egg which has previously required intensive care, these individuals should be referred to a specialist in hospital.
- **PREGNANCY** [EvGr] Inactivated vaccines not known to be harmful. [M]
  - SUPEMTEK**® [EvGr] Use only if potential benefit outweighs risk—limited information available. [M] PHE advises that it may be given during pregnancy.
  - FLUENZ TETRA**® [EvGr] Avoid—limited information available. [M]
- **BREAST FEEDING** [EvGr] Inactivated vaccines not known to be harmful. [M]
  - SUPEMTEK**® [EvGr] Use only if potential benefit outweighs risk—no information available. [M] PHE advises that it may be given during breast-feeding.
  - FLUENZ TETRA**® [EvGr] Avoid—limited information available. [M]
- **DIRECTIONS FOR ADMINISTRATION** PHE advises that individuals with **bleeding disorders** may be vaccinated by the intramuscular route, on the advice of a doctor familiar with their bleeding risk. Patients treated with medicines to reduce bleeding (e.g. for haemophilia) are advised to administer their medicine shortly prior to intramuscular vaccination.
- **PRESCRIBING AND DISPENSING INFORMATION** The available preparations are not licensed for use in all age-groups—further information can be found in the product literature for the individual vaccines. For choice of vaccine, see Influenza vaccine p. 1404.
  - Ovalbumin content**
  - ▶ In adults Preparations with ovalbumin content of less than 120 nanograms/mL: *Fluenz Tetra*® and Quadrivalent influenza vaccine (split virion, inactivated) manufactured by Sanofi Pasteur. Preparations that are egg-free: *Flucelvax Tetra*® and *Supemtek*®.
  - ▶ In children Preparations with ovalbumin content of less than 120 nanograms/mL: *Fluenz Tetra*® and Quadrivalent influenza vaccine (split virion, inactivated) manufactured by Sanofi Pasteur. Preparations that are egg-free: *Flucelvax Tetra*®.
- **PATIENT AND CARER ADVICE**
  - FLUENZ TETRA**® Avoid close contact with severely immunocompromised patients for 1–2 weeks after vaccination.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

EXCIPIENTS: May contain Polysorbates

- ▶ **Supemtek Quadrivalent** (Sanofi Pasteur) ▼  
Supemtek Quadrivalent vaccine (recombinant) solution for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £22.00 | 10 pre-filled disposable injection [PoM] £220.00

**Spray**

EXCIPIENTS: May contain Gelatin, gentamicin, sucrose

- ▶ **Fluenz Tetra** (AstraZeneca UK Ltd)  
Fluenz Tetra vaccine nasal suspension 0.2ml unit dose | 10 unit dose [PoM] £180.00

**Suspension for injection**

EXCIPIENTS: May contain Gentamicin, kanamycin, neomycin, polysorbates

- ▶ **Influenza vaccine (non-proprietary)** ▼  
Trivalent influenza vaccine (split virion, inactivated) High Dose suspension for injection 0.5ml pre-filled syringes | 5 pre-filled disposable injection [PoM] £100.00  
Influenza vaccine (split virion, inactivated) suspension for injection 0.5ml pre-filled syringes | 10 pre-filled disposable injection [PoM] £65.90  
Quadrivalent influenza vaccine (split virion, inactivated) suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £8.00 | 10 pre-filled disposable injection [PoM] £80.00  
Influenza Tetra MYL vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £8.00 | 10 pre-filled disposable injection [PoM] £80.00  
Adjuvanted quadrivalent influenza vaccine (surface antigen, inactivated) suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £13.50 | 10 pre-filled disposable injection [PoM] £135.00  
Cell-based quadrivalent influenza vaccine (surface antigen, inactivated) suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £12.50 | 10 pre-filled disposable injection [PoM] £125.00
- ▶ **Fluad Tetra** (Seqirus UK Ltd) ▼  
Fluad Tetra vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £11.88 | 10 pre-filled disposable injection [PoM] £118.80
- ▶ **Fluarix Tetra** (GlaxoSmithKline UK Ltd)  
Fluarix Tetra vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £9.94

Flucelvac Tetra vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £9.94 | 10 pre-filled disposable injection [PoM] £99.40
- ▶ **Imuvac** (Viatris UK Healthcare Ltd)  
Imuvac vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £6.59 | 10 pre-filled disposable injection [PoM] £65.90
- ▶ **Influvac Sub-unit** (Viatris UK Healthcare Ltd) ▼  
Influvac sub-unit Tetra vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £9.94 | 10 pre-filled disposable injection [PoM] £99.40

- ▶ **Elderly:** 0.5 mL after 1 year, for those at continued risk, deltoid muscle is preferred site of injection

**Second booster**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ **Adult:** 0.5 mL after 10 years, for those at continued risk, deltoid muscle is preferred site of injection

**• UNLICENSED USE**

- ▶ When used for immunisation against Japanese encephalitis The rapid schedule administered at days 0 and 7 is not licensed in children or the elderly.

**• SIDE-EFFECTS**

- ▶ **Common or very common** Influenza like illness (frequency not known in children)
- ▶ **Uncommon** Asthenia (in adults) · chills (in adults) · dizziness (in adults) · hyperhidrosis (in adults) · migraine (in adults) · musculoskeletal stiffness (in adults) · vertigo (in adults)
- ▶ **Rare or very rare** Dyspnoea (in adults) · eyelid oedema (in adults) · neuritis (in adults) · pain in extremity (in adults) · palpitations (in adults) · paraesthesia (in adults) · peripheral oedema (in adults) · tachycardia (in adults) · taste altered (in adults) · thrombocytopenia (in adults)
- ▶ **Frequency not known** Cough (in children) · irritability (in children)
- **PREGNANCY** Although manufacturer advises avoid because of limited information, miscarriage has been associated with Japanese encephalitis virus infection acquired during the first 2 trimesters of pregnancy.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

- ▶ **Japanese encephalitis vaccine (Non-proprietary)**  
Japanese encephalitis GCVC vaccine solution for injection 1ml vials | 1 vial [X]  
Japanese encephalitis GCVC vaccine solution for injection 20ml vials | 1 vial [X]  
Japanese encephalitis GCVC vaccine solution for injection 10ml vials | 1 vial [X]

**Suspension for injection**

- ▶ **Lixiaro** (Valneva UK Ltd)  
Lixiaro vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £62.48 DT = £62.48

**Japanese encephalitis vaccine**

1418

22-Feb-2019

**• INDICATIONS AND DOSE****Immunisation against Japanese encephalitis**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ **Child 2-35 months:** 0.25 mL every 28 days for 2 doses, alternatively 0.25 mL every 7 days for 2 doses, anterolateral thigh may be used as the injection site in infants; deltoid muscle is preferred site in older children, immunisation should be completed at least 1 week before potential exposure
- ▶ **Child 3-17 years:** 0.5 mL every 28 days for 2 doses, alternatively 0.5 mL every 7 days for 2 doses, deltoid muscle is preferred site in older children, immunisation should be completed at least 1 week before potential exposure
- ▶ **Adult:** 0.5 mL every 28 days for 2 doses, alternatively 0.5 mL every 7 days for 2 doses, deltoid muscle is preferred site of injection, immunisation should be completed at least 1 week before potential exposure

**First booster**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ **Adult:** 0.5 mL after 1-2 years, deltoid muscle is preferred site of injection, for those at continued risk, the booster dose should be given 1 year after completing the primary course

**Measles, mumps and rubella vaccine, live**

05-Oct-2021

**• INDICATIONS AND DOSE****Primary immunisation against measles, mumps, and rubella (first dose)**

- ▶ BY INTRAMUSCULAR INJECTION, OR BY DEEP SUBCUTANEOUS INJECTION
- ▶ **Child 12-13 months:** 0.5 mL for 1 dose

**Primary immunisation against measles, mumps, and rubella (second dose)**

- ▶ BY INTRAMUSCULAR INJECTION, OR BY DEEP SUBCUTANEOUS INJECTION
- ▶ **Child 40 months-5 years:** 0.5 mL for 1 dose

**Rubella immunisation (in seronegative women, susceptible to rubella and in unimmunised, seronegative women, post-partum)**

- ▶ BY INTRAMUSCULAR INJECTION, OR BY DEEP SUBCUTANEOUS INJECTION
- ▶ **Females of childbearing potential:** (consult product literature or local protocols) continued →

**Children presenting for pre-school booster, who have not received the primary immunisation (first dose) | Immunisation for patients at school-leaving age or at entry into further education, who have not completed the primary immunisation course | Control of measles outbreak | Immunisation for patients travelling to areas where measles is endemic or epidemic, who have not completed the primary immunisation**

- ▶ BY INTRAMUSCULAR INJECTION, OR BY DEEP SUBCUTANEOUS INJECTION
- ▶ Child 6 months–17 years: (consult product literature or local protocols)
- ▶ Adult: (consult product literature or local protocols)

- **UNLICENSED USE** Not licensed for use in children under 9 months.

#### IMPORTANT SAFETY INFORMATION

##### MMR VACCINATION AND BOWEL DISEASE OR AUTISM

Reviews undertaken on behalf of the CSM, the Medical Research Council, and the Cochrane Collaboration, have not found any evidence of a link between MMR vaccination and bowel disease or autism. Information (including fact sheets and a list of references) may be obtained from [www.dh.gov.uk/immunisation](http://www.dh.gov.uk/immunisation).

- **CAUTIONS** Antibody response to measles component may be reduced after immunoglobulin administration or blood transfusion—leave an interval of at least 3 months before MMR immunisation

#### CAUTIONS, FURTHER INFORMATION

- ▶ Administration with other vaccines Public Health England advises MMR and yellow fever vaccines should not be administered on the same day; there should be a 4-week minimum interval between the vaccines. When protection is rapidly required, the vaccines can be given at any interval; an additional dose of MMR should be considered and re-vaccination with the yellow fever vaccine can also be considered in those at on-going risk.

Public Health England advises MMR and varicella-zoster vaccines can be given on the same day or separated by a 4-week minimum interval. When protection is rapidly required, the vaccines can be given at any interval and an additional dose of the vaccine given second may be considered.

- **INTERACTIONS** → Appendix 1: live vaccines
- **SIDE-EFFECTS**
- ▶ **Uncommon** Increased risk of infection · rhinorrhoea
- ▶ **Frequency not known** Angioedema · arthritis · ataxia · cough · dizziness · encephalopathy · eye inflammation · irritability · meningitis aseptic · nerve deafness · nerve disorders · oculomotor nerve paralysis · oedema · panniculitis · papillitis · paraesthesia · regional lymphadenopathy · respiratory disorders · seizures · Stevens-Johnson syndrome · subacute sclerosing panencephalitis · syncope · throat pain · thrombocytopenia · vasculitis

**SIDE-EFFECTS, FURTHER INFORMATION** Malaise, fever, or a rash can occur after the first dose of MMR vaccine—most commonly about a week after vaccination and lasting about 2 to 3 days.

Febrile seizures occur rarely 6 to 11 days after MMR vaccination (the incidence is lower than that following measles infection).

**Idiopathic thrombocytopenic purpura** Idiopathic thrombocytopenic purpura has occurred rarely following MMR vaccination, usually within 6 weeks of the first dose. The risk of idiopathic thrombocytopenic purpura after MMR vaccine is much less than the risk after infection with wild measles or rubella virus. Children who develop idiopathic thrombocytopenic purpura within 6 weeks of

the first dose of MMR should undergo serological testing before the second dose is due; if the results suggest incomplete immunity against measles, mumps or rubella then a second dose of MMR is recommended. Samples should be sent to the Virus Reference Laboratory of the Health Protection Agency.

**Frequency of side effects** Adverse reactions are considerably less frequent after the second dose of MMR vaccine than after the first.

- **ALLERGY AND CROSS-SENSITIVITY** PHE advises MMR vaccine can be given safely even when the child has had an anaphylactic reaction to food containing egg. Children with a confirmed anaphylactic reaction to the MMR vaccine should be assessed by a specialist. Dislike of eggs, refusal to eat egg, or confirmed anaphylactic reactions to egg-containing food is not a contra-indication to MMR vaccination.
- **CONCEPTION AND CONTRACEPTION** Exclude pregnancy before immunisation. Avoid pregnancy for at least 1 month after vaccination.
- **PRESCRIBING AND DISPENSING INFORMATION** Available as part of childhood immunisation schedule from health organisations or ImmForm [portal.immform.phe.gov.uk](http://portal.immform.phe.gov.uk).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder and solvent for suspension for injection

EXCIPIENTS: May contain Gelatin, neomycin

- ▶ **M-M-RVAXPRO** (Merck Sharp & Dohme (UK) Ltd)  
M-M-RVAXPRO vaccine powder and solvent for suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM]  
£11.00 DT = £11.00

1418

## Rabies vaccine

05-Oct-2021

### ● INDICATIONS AND DOSE

#### Primary pre-exposure immunisation against rabies infection

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child: 1 mL for 3 doses (on days 0, 7, and 28), to be administered into deltoid region; in infants anterolateral thigh is recommended, final dose may be given from day 21 if insufficient time before travel
- ▶ Adult: 1 mL for 3 doses (on days 0, 7, and 28), to be administered into deltoid region, final dose may be given from day 21 if insufficient time before travel

#### Primary pre-exposure immunisation against rabies infection [accelerated course]

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child: 1 mL for 3 doses (on days 0, 3, and 7), followed by 1 mL for 1 dose at 1 year if continued travel to high-risk areas, to be administered into deltoid region; in infants anterolateral thigh is recommended
- ▶ Adult: 1 mL for 3 doses (on days 0, 3, and 7), followed by 1 mL for 1 dose at 1 year if continued travel to high-risk areas, to be administered into deltoid region

#### Pre-exposure immunisation booster dose [patients at frequent risk of exposure e.g. laboratory workers who handle lyssavirus-containing material]

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child: 1 mL for 1 dose, to be given 1 year after primary course is completed, then 1 mL, repeated if necessary, based on six-monthly antibody levels. To be administered into deltoid region; in infants anterolateral thigh is recommended

- ▶ Adult: 1 mL for 1 dose, to be given 1 year after primary course is completed, then 1 mL, repeated if necessary, based on six-monthly antibody levels. To be administered into deltoid region

**Pre-exposure immunisation booster dose [patients who may have frequent, unrecognised exposures e.g. bat handlers]**

▶ BY INTRAMUSCULAR INJECTION

- ▶ Child: 1 mL for 1 dose, to be given 1 year after primary course is completed, then 1 mL every 3–5 years, to be administered into deltoid region; in infants anterolateral thigh is recommended, the frequency of booster doses may alternatively be based on antibody levels
- ▶ Adult: 1 mL for 1 dose, to be given 1 year after primary course is completed, then 1 mL every 3–5 years, repeated if necessary, to be administered into deltoid region, the frequency of booster doses may alternatively be based on antibody levels

**Pre-exposure immunisation booster dose [patients at infrequent risk of exposure]**

▶ BY INTRAMUSCULAR INJECTION

- ▶ Child: 1 mL for 1 dose, to be given at least 1 year after primary course is completed based on antibody levels, to be administered into deltoid region; in infants anterolateral thigh is recommended
- ▶ Adult: 1 mL for 1 dose, to be given at least 1 year after primary course is completed based on antibody levels, to be administered into deltoid region

**Post-exposure treatment [fully immunised patients with amber or red composite rabies risk] (administered on expert advice)**

▶ BY INTRAMUSCULAR INJECTION

- ▶ Child: 1 mL for 1 dose, followed by 1 mL after 3–7 days for 1 dose, to be administered into deltoid region; in infants anterolateral thigh is recommended, rabies immunoglobulin is not necessary
- ▶ Adult: 1 mL for 1 dose, followed by 1 mL after 3–7 days for 1 dose, to be administered into deltoid region, rabies immunoglobulin is not necessary

**Post-exposure treatment [partially immunised patients with amber or red composite rabies risk] (administered on expert advice)**

▶ BY INTRAMUSCULAR INJECTION

- ▶ Child: 1 mL for 4 doses (on days 0, 3, 7, and 21), to be administered into deltoid region; in infants anterolateral thigh is recommended, rabies immunoglobulin is not necessary
- ▶ Adult: 1 mL for 4 doses (on days 0, 3, 7, and 21), to be administered into deltoid region, rabies immunoglobulin is not necessary

**Post-exposure treatment [non-immunised patients with amber or red composite rabies risk] (administered on expert advice)**

▶ BY INTRAMUSCULAR INJECTION

- ▶ Child: 1 mL for 4 doses (on days 0, 3, 7, and 21), to be administered into deltoid region; in infants anterolateral thigh is recommended, rabies immunoglobulin also to be given to patients with red composite rabies risk (but is not required if more than 7 days have elapsed after the first dose of vaccine, or more than 1 day after the second dose of vaccine)
- ▶ Adult: 1 mL for 4 doses (on days 0, 3, 7, and 21), to be administered into deltoid region, rabies immunoglobulin also to be given to patients with red composite rabies risk (but is not required if more than 7 days have elapsed after the first dose of vaccine, or more than 1 day after the second dose of vaccine)

**Post-exposure treatment [immunosuppressed patients with amber or red composite rabies risk, regardless of immunisation status] (administered on expert advice)**

▶ BY INTRAMUSCULAR INJECTION

- ▶ Child: 1 mL for 5 doses (on days 0, 3, 7, 14, and 28 or 30), to be administered into deltoid region; in infants anterolateral thigh is recommended, rabies immunoglobulin also to be given (but is not required if more than 7 days have elapsed after the first dose of vaccine, or more than 1 day after the second dose of vaccine)
- ▶ Adult: 1 mL for 5 doses (on days 0, 3, 7, 14, and 28 or 30), to be administered into deltoid region, rabies immunoglobulin also to be given (but is not required if more than 7 days have elapsed after the first dose of vaccine, or more than 1 day after the second dose of vaccine)

- **UNLICENSED USE** Public Health England advises rabies vaccine may be used as detailed below, although these situations are considered unlicensed:
  - dosing regimens for post-exposure treatment.
- **INTERACTIONS** → Appendix 1: rabies vaccine
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Abdominal discomfort · asthenia · dizziness
  - ▶ **Rare or very rare** Angioedema · chills · encephalitis · Guillain-Barre syndrome · hyperhidrosis · paraesthesia · syncope · vertigo
- **PREGNANCY** Because of the potential consequences of untreated rabies exposure and because rabies vaccination has not been associated with fetal abnormalities, pregnancy is not considered a contra-indication to post-exposure prophylaxis. Immunisation against rabies is indicated during pregnancy if there is substantial risk of exposure to rabies and rapid access to post-exposure prophylaxis is likely to be limited.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.
 

**Powder and solvent for suspension for injection**  
EXCIPIENTS: May contain Neomycin

  - ▶ **Rabies vaccine (Non-proprietary)**  
Verorab powder and solvent for suspension for injection 0.5ml vials | 1 vial [PoM] £
  - Rabies vaccine powder and solvent for suspension for injection 1ml vials | 1 vial [PoM] £40.84

**Powder and solvent for solution for injection**  
EXCIPIENTS: May contain Neomycin

  - ▶ **Rabipur** (Valneva UK Ltd)  
Rabipur vaccine powder and solvent for solution for injection 1ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £34.56

F 1418

11-Jan-2022

## Rotavirus vaccine

- **DRUG ACTION** Rotavirus vaccine is a live, oral vaccine that protects young children against gastro-enteritis caused by rotavirus infection.

● **INDICATIONS AND DOSE**

**Immunisation against gastro-enteritis caused by rotavirus**

▶ BY MOUTH

- ▶ Child 6–23 weeks: 1.5 mL for 2 doses separated by an interval of at least 4 weeks, first dose must be given between 6–14 weeks of age; course should be

continued →

completed before 24 weeks of age (preferably before 16 weeks)

#### IMPORTANT SAFETY INFORMATION

**PUBLIC HEALTH ENGLAND: UPDATE TO GREEN BOOK (OCTOBER 2017)**

Public Health England advises that immunisation with live vaccines should be delayed until 6 months of age in children born to mothers who received immunosuppressive biological therapy during pregnancy. In practice, this means that children born to mothers who were on immunosuppressive biological therapy during pregnancy will not be eligible to receive rotavirus vaccine.

- **CONTRA-INDICATIONS** History of intussusception · predisposition to intussusception · severe combined immunodeficiency disorder

#### CONTRA-INDICATIONS, FURTHER INFORMATION

- ▶ **Immunosuppression** With the exception of severe combined immunodeficiency disorder (and children born to mothers who received immunosuppressive biological therapy during pregnancy, see *Important safety information*), rotavirus vaccine is not contra-indicated in immunosuppressed patients—benefit from vaccination is likely to outweigh the risk, if there is any doubt, Public Health England recommends seek specialist advice.

- **CAUTIONS** Diarrhoea (postpone vaccination) · immunosuppressed close contacts · vomiting (postpone vaccination)

**CAUTIONS, FURTHER INFORMATION** The rotavirus vaccine virus is excreted in the stool and may be transmitted to close contacts; however, Public Health England advises vaccination of those with immunosuppressed close contacts may protect the contacts from wild-type rotavirus disease and outweigh any risk from transmission of vaccine virus.

- **INTERACTIONS** → Appendix 1: live vaccines
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Irritability
  - ▶ **Uncommon** Gastrointestinal disorders
  - ▶ **Frequency not known** Apnoea · haematochezia
- **PRE-TREATMENT SCREENING** PHE advise that the results of the severe combined immunodeficiency (SCID) screening should be checked before administering rotavirus vaccine.
- **PATIENT AND CARER ADVICE** The rotavirus vaccine virus is excreted in the stool and may be transmitted to close contacts; carers of a recently vaccinated baby should be advised of the need to wash their hands after changing the baby's nappies.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Oral suspension

- ▶ **Rotarix** (GlaxoSmithKline UK Ltd)  
Rotarix vaccine live oral suspension 1.5ml tube | 1 tube [POM] £34.76  
DT = £34.76

1418

## Tick-borne encephalitis vaccine, inactivated

05-Oct-2021

#### INDICATIONS AND DOSE

##### Initial immunisation against tick-borne encephalitis

- ▶ **BY INTRAMUSCULAR INJECTION**
- ▶ **Child 1-15 years:** 0.25 mL for 1 dose, followed by 0.25 mL after 1–3 months for 1 dose, then 0.25 mL after further 5–12 months for 1 dose, to achieve more rapid protection, second dose may be given 14 days after first dose, dose to be administered in deltoid region or

anterolateral thigh in infants, in immunocompromised patients (including those receiving immunosuppressants), antibody concentration may be measured 4 weeks after second dose and dose repeated if protective levels not achieved

- ▶ **Child 16-17 years:** 0.5 mL for 1 dose, followed by 0.5 mL after 1–3 months for 1 dose, then 0.5 mL after further 5–12 months for 1 dose, to achieve more rapid protection, second dose may be given 14 days after first dose, dose to be administered in deltoid region, in immunocompromised patients (including those receiving immunosuppressants), antibody concentration may be measured 4 weeks after second dose and dose repeated if protective levels not achieved
- ▶ **Adult:** 0.5 mL for 1 dose, followed by 0.5 mL after 1–3 months for 1 dose, then 0.5 mL after further 5–12 months for 1 dose, to achieve more rapid protection, second dose may be given 14 days after first dose, dose to be administered in deltoid region, in immunocompromised patients (including those receiving immunosuppressants), antibody concentration may be measured 4 weeks after second dose and dose repeated if protective levels not achieved
- ▶ **Elderly:** 0.5 mL for 1 dose, followed by 0.5 mL after 1–3 months for 1 dose, then 0.5 mL after further 5–12 months for 1 dose, to achieve more rapid protection, second dose may be given 14 days after first dose, dose to be administered in deltoid region, antibody concentration may be measured 4 weeks after second dose and dose repeated if protective levels not achieved

#### Immunisation against tick-borne encephalitis, booster doses

##### ▶ BY INTRAMUSCULAR INJECTION

- ▶ **Child 1-17 years:** First dose to be given within 3 years after initial course completed and then every 3–5 years, dose to be administered in deltoid region or anterolateral thigh in infants (consult product literature)
- ▶ **Adult:** First dose to be given within 3 years after initial course completed and then every 3–5 years, dose to be administered in deltoid region (consult product literature)

#### SIDE-EFFECTS

- **Common or very common** Restlessness (in children) · sleep disorder (in children)
- ▶ **Rare or very rare** Asthenia · autoimmune disorder (in adults) · chills (uncommon in children) · demyelination (in adults) · dizziness · drowsiness (in adults) · dyspepsia (in children) · dyspnoea · eye pain · gait abnormal · hyperhidrosis · increased risk of infection · influenza like illness · joint swelling (in adults) · meningism · meningitis aseptic (in adults) · motor dysfunction · musculoskeletal stiffness · nerve disorders · oedema · pain · seizures · sensory disorder · tachycardia (in adults) · tinnitus · vertigo · vision disorders
- **ALLERGY AND CROSS-SENSITIVITY** PHE advises individuals with evidence of previous anaphylactic reaction to egg should not be given tick-borne encephalitis vaccine.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Suspension for injection

EXCIPIENTS: May contain Gentamicin, neomycin

##### ▶ TicoVac (Pfizer Ltd)

TicoVac Junior vaccine suspension for injection 0.25ml pre-filled syringes | 1 pre-filled disposable injection [POM] £28.00

TicoVac vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [POM] £32.00

F 1418

## Varicella-zoster vaccine

11-Jan-2022

- **DRUG ACTION** *Varilrix*<sup>®</sup> and *Varivax*<sup>®</sup> are live attenuated vaccines that protect against varicella (chickenpox) caused by varicella-zoster virus infection.

### ● INDICATIONS AND DOSE

#### VARILRIX<sup>®</sup>

##### Prevention of varicella infection (chickenpox)

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Child 1–17 years: 0.5 mL every 4–6 weeks for 2 doses, to be administered into the deltoid region or anterolateral thigh
- ▶ Adult: 0.5 mL every 4–6 weeks for 2 doses, to be administered into the deltoid region or anterolateral thigh

#### VARIVAX<sup>®</sup>

##### Prevention of varicella infection (chickenpox)

- ▶ BY SUBCUTANEOUS INJECTION, OR BY INTRAMUSCULAR INJECTION
- ▶ Child 1–12 years: 0.5 mL for 2 doses, interval of at least 4 weeks between each dose, to be administered into the deltoid region (or higher anterolateral thigh in young children)
- ▶ Child 13–17 years: 0.5 mL for 2 doses, interval of 4–8 weeks between each dose, to be administered preferably into the deltoid region
- ▶ Adult: 0.5 mL for 2 doses, interval of 4–8 weeks between each dose, to be administered preferably into the deltoid region

##### Prevention of varicella infection (chickenpox) in children with asymptomatic HIV infection

- ▶ BY SUBCUTANEOUS INJECTION, OR BY INTRAMUSCULAR INJECTION
- ▶ Child 1–12 years: 0.5 mL for 2 doses, interval of 12 weeks between each dose, to be administered into the deltoid region (or higher anterolateral thigh in young children)

- **CAUTIONS** Post-vaccination close contact with susceptible individuals

**CAUTIONS, FURTHER INFORMATION** Rarely, the varicella-zoster vaccine virus has been transmitted from the vaccinated individual to close contacts. Therefore, manufacturer advises contact with the following should be avoided if a vaccine-related cutaneous rash develops within 4–6 weeks of the first or second dose:

- varicella-susceptible pregnant women;
- individuals at high risk of severe varicella, including those with immunodeficiency or those receiving immunosuppressive therapy.

Public Health England advises healthcare workers who develop a generalised papular or vesicular rash on vaccination should avoid contact with patients until the lesions have crusted. Those who develop a localised rash after vaccination should cover the lesions and be allowed to continue working unless in contact with patients at high risk of severe varicella.

- ▶ Administration with MMR vaccine Public Health England advises varicella-zoster and MMR vaccines can be given on the same day or separated by a 4-week minimum interval. When protection is rapidly required, the vaccines can be given at any interval and an additional dose of the vaccine given second may be considered.

- **INTERACTIONS** → Appendix 1: live vaccines

#### ● SIDE-EFFECTS

- ▶ **Uncommon** Cough · drowsiness · increased risk of infection · irritability
- ▶ **Rare or very rare** Conjunctivitis · Kawasaki disease · seizure · stroke · thrombocytopenia · vasculitis

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises avoid pregnancy for 1 month after vaccination.

#### ● PRESCRIBING AND DISPENSING INFORMATION

## Yellow fever vaccine, live

21-Apr-2022

### ● INDICATIONS AND DOSE

#### Immunisation against yellow fever

- ▶ BY DEEP SUBCUTANEOUS INJECTION
- ▶ Child 6–8 months (administered on expert advice): Infants under 9 months should be vaccinated only if the risk of yellow fever is high and unavoidable (consult product literature or local protocols)
- ▶ Child 9 months–17 years: 0.5 mL for 1 dose
- ▶ Adult: 0.5 mL for 1 dose

### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE (UPDATED NOVEMBER 2019): YELLOW FEVER VACCINE: STRONGER PRECAUTIONS IN PEOPLE WITH WEAKENED IMMUNITY AND IN THOSE AGED 60 YEARS OR OLDER

The yellow fever vaccine (*Stamaril*<sup>®</sup>) has been associated with the very rare, life-threatening reactions viscerotropic disease (YEL-AVD) and neurotropic disease (YEL-AND), which both resemble yellow fever infection. It must not be given to patients who have had a thymectomy, who are taking immunosuppressive or immunomodulating biological drugs, or who have a first-degree family history of YEL-AVD or YEL-AND following vaccination that was unrelated to a known medical risk factor. In patients aged 60 years and older, the vaccine should only be administered when there is a significant and unavoidable risk of acquiring yellow fever infection. It must only be administered by healthcare professionals specifically trained in the benefit-risk evaluation of yellow fever vaccine. Healthcare professionals must inform patients and carers about the early signs and symptoms of YEL-AVD and YEL-AND, and advise them to seek urgent medical attention if they occur; the manufacturer's patient information leaflet should also be provided. Healthcare professionals administering vaccines should consult information in the YF Vaccine Centre code of practice and strengthen protocols and checklists to avoid inappropriate administration.

MHRA/CHM ADVICE: YELLOW FEVER VACCINE (*STAMARIL*<sup>®</sup>): NEW PRE-VACCINATION CHECKLIST (NOVEMBER 2021)

A standardised pre-vaccination checklist has been introduced to ensure the yellow fever vaccine is indicated for the intended travel destination and to enable vaccinators to identify existing contra-indications or precautions in individuals before vaccination. Healthcare professionals are reminded to adhere to the contra-indications (for example, in people

with immunosuppression or thymus dysfunction or thymectomy) and precautions (in infants aged 6 months to 9 months, in people aged 60 years or older, and pregnant or breast-feeding women) as this is essential to reduce the risk of very rare but potentially fatal adverse reactions. The new checklist should be used in vaccination consultations to ensure systematic evaluation of benefits and risks for individual travellers, this however is not a replacement for the full travel health risk assessment by a qualified practitioner and additional checklists or materials that may also be used prior to vaccination, depending on clinical guidance. Patients and carers should be provided with the patient information leaflet and advised to seek emergency medical attention if they develop signs or symptoms of a severe reaction following vaccination.

● **CONTRA-INDICATIONS** Children under 6 months · history of thymus dysfunction · thymectomy

● **CAUTIONS** Individuals over 60 years—greater risk of vaccine-associated adverse effects

**CAUTIONS, FURTHER INFORMATION**

▶ Administration with MMR vaccine Public Health England advises yellow fever and MMR vaccines should not be administered on the same day; there should be a 4-week minimum interval between the vaccines. When protection is rapidly required, the vaccines can be given at any interval; an additional dose of MMR should be considered and re-vaccination with the yellow fever vaccine can also be considered in those at on-going risk.

● **INTERACTIONS** → Appendix 1: live vaccines

● **SIDE-EFFECTS**

▶ **Common or very common** Asthenia · crying (in children) · drowsiness (in children) · irritability (in children)

▶ **Uncommon** Dizziness

▶ **Rare or very rare** Rhinitis · yellow fever vaccine-associated neurotropic disease · yellow fever vaccine-associated viscerotropic disease

▶ **Frequency not known** Angioedema · influenza like illness · paraesthesia

**SIDE-EFFECTS, FURTHER INFORMATION** Very rare vaccine-associated adverse effects may occur, such as viscerotropic disease (yellow-fever vaccine-associated viscerotropic disease, YEL-AVD), a syndrome which may include metabolic acidosis, muscle and liver cirrhosis, and multi-organ failure. Neurological disorders (yellow fever vaccine-associated neurotropic disease, YEL-AND) such as encephalitis have also been reported. These very rare adverse effects usually occur after the first dose of yellow fever vaccine in those with no previous immunity. Increased risk of fatal reactions reported in patients aged 60 years and older and those who are immunosuppressed.

● **ALLERGY AND CROSS-SENSITIVITY** [EvGr](#) In individuals with a history of confirmed anaphylactic reaction to eggs and who are currently avoiding eggs due to ongoing hypersensitivity reactions, yellow fever vaccine should only be considered under the guidance of an allergy specialist. [ⓔ](#)

● **PREGNANCY** Live yellow fever vaccine should not be given during pregnancy because there is a theoretical risk of fetal infection. Pregnant women should be advised not to travel to areas at high risk of yellow fever. If exposure cannot be avoided during pregnancy, then the vaccine should be given if the risk from disease in the mother outweighs the risk to the fetus from vaccination.

● **BREAST FEEDING** Avoid; seek specialist advice if exposure to virus cannot be avoided.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Powder and solvent for suspension for injection**

▶ **Stamaril** (Sanofi Pasteur)

Stamaril vaccine powder and solvent for suspension for injection 0.5ml vials | 1 vial [PoM](#) £39.72 DT = £39.72

## General anaesthesia

### Anaesthesia (general)

#### Overview

Several different types of drug are given together during general anaesthesia. Anaesthesia is induced with either a volatile drug given by inhalation or with an intravenously administered drug; anaesthesia is maintained with an intravenous or inhalational anaesthetic. Analgesics, usually short-acting opioids, are also used. The use of neuromuscular blocking drugs necessitates intermittent positive-pressure ventilation. Following surgery, anticholinesterases can be given to reverse the effects of neuromuscular blocking drugs; specific antagonists can be used to reverse central and respiratory depression caused by some drugs used in surgery. A local topical anaesthetic can be used to reduce pain at the injection site.

Individual requirements vary considerably and the recommended doses are only a guide. Smaller doses are indicated in ill, shocked, or debilitated patients and in significant hepatic impairment, while robust individuals may require larger doses. The required dose of induction agent may be less if the patient has been premedicated with a sedative agent or if an opioid analgesic has been used.

#### Intravenous anaesthetics

Intravenous anaesthetics may be used either to induce anaesthesia or for maintenance of anaesthesia throughout surgery. Intravenous anaesthetics nearly all produce their effect in one arm-brain circulation time. Extreme care is required in surgery of the mouth, pharynx, or larynx where the airway may be difficult to maintain (e.g. in the presence of a tumour in the pharynx or larynx).

To facilitate tracheal intubation, induction is usually followed by a neuromuscular blocking drug or a short-acting opioid.

The doses of all intravenous anaesthetic drugs should be titrated to effect (except when using 'rapid sequence induction'); lower doses may be required in premedicated patients.

#### Total intravenous anaesthesia

This is a technique in which major surgery is carried out with all drugs given intravenously. Respiration can be spontaneous, or controlled with oxygen-enriched air. Neuromuscular blocking drugs can be used to provide relaxation and prevent reflex muscle movements. The main problem to be overcome is the assessment of depth of anaesthesia. Target Controlled Infusion (TCI) systems can be used to titrate intravenous anaesthetic infusions to

predicted plasma-drug concentrations in ventilated adult patients.

#### Drugs used for intravenous anaesthesia

Propofol p. 1441, the most widely used intravenous anaesthetic, can be used for induction or maintenance of anaesthesia in adults and children, but it is not commonly used in neonates. Propofol is associated with rapid recovery and less hangover effect than other intravenous anaesthetics. Propofol can also be used for sedation during diagnostic procedures and sedation in adults in intensive care.

Thiopental sodium p. 369 is a barbiturate that is used for induction of anaesthesia, but has no analgesic properties. Induction is generally smooth and rapid, but dose-related cardiovascular and respiratory depression can occur. Awakening from a moderate dose of thiopental sodium is rapid because the drug redistributes into other tissues, particularly fat. However, metabolism is slow and sedative effects can persist for 24 hours. Repeated doses have a cumulative effect and recovery is much slower.

Etomidate p. 1441 is an intravenous agent associated with rapid recovery without a hangover effect. Etomidate causes less hypotension than thiopental sodium and propofol during induction. It produces a high incidence of extraneous muscle movements, which can be minimised by an opioid analgesic or a short-acting benzodiazepine given just before induction.

Ketamine p. 1458 is used rarely. Ketamine causes less hypotension than thiopental sodium and propofol during induction. It is used mainly for paediatric anaesthesia, particularly when repeated administration is required (such as for serial burns dressings); recovery is relatively slow and there is a high incidence of extraneous muscle movements. The main disadvantage of ketamine is the high incidence of hallucinations, nightmares, and other transient psychotic effects; these can be reduced by a benzodiazepine such as diazepam p. 375 or midazolam p. 371.

#### Inhalational anaesthetics

Inhalational anaesthetics include gases and volatile liquids. *Gaseous anaesthetics* require suitable equipment for storage and administration. *Volatile liquid anaesthetics* are administered using calibrated vaporisers, using air, oxygen, or nitrous oxide-oxygen mixtures as the carrier gas. To prevent hypoxia, the inspired gas mixture should contain a minimum of 25% oxygen at all times. Higher concentrations of oxygen (greater than 30%) are usually required during inhalational anaesthesia when nitrous oxide p. 1444 is being administered.

**Volatile liquid anaesthetics**

Volatile liquid anaesthetics can be used for induction and maintenance of anaesthesia, and following induction with an intravenous anaesthetic.

Isflurane p. 1443 is a volatile liquid anaesthetic. Heart rhythm is generally stable during isoflurane anaesthesia, but heart-rate can rise, particularly in younger patients. Systemic arterial pressure and cardiac output can fall, owing to a decrease in systemic vascular resistance. Muscle relaxation occurs and the effects of muscle relaxant drugs are potentiated. Isoflurane is the preferred inhalational anaesthetic for use in obstetrics.

Desflurane p. 1443 is a rapid acting volatile liquid anaesthetic; it is reported to have about one-fifth the potency of isoflurane. Emergence and recovery from anaesthesia are particularly rapid because of its low solubility. Desflurane is not recommended for induction of anaesthesia as it is irritant to the upper respiratory tract.

Sevoflurane p. 1444 is a rapid acting volatile liquid anaesthetic and is more potent than desflurane. Emergence and recovery are particularly rapid, but slower than desflurane. Sevoflurane is non-irritant and is therefore often used for inhalational induction of anaesthesia; it has little effect on heart rhythm compared with other volatile liquid anaesthetics.

**Nitrous oxide**

Nitrous oxide is used for maintenance of anaesthesia and, in sub-anaesthetic concentrations, for analgesia. For anaesthesia, nitrous oxide is commonly used in a concentration of 50 to 66% in oxygen as part of a balanced technique in association with other inhalational or intravenous agents. Nitrous oxide is unsatisfactory as a sole anaesthetic owing to lack of potency, but is useful as part of a combination of drugs since it allows a significant reduction in dosage.

For analgesia (without loss of consciousness), a mixture of nitrous oxide and oxygen containing 50% of each gas (Entonox<sup>®</sup>, Equanox<sup>®</sup>) is used. Self-administration using a demand valve is popular in obstetric practice, for changing painful dressings, as an aid to postoperative physiotherapy, and in emergency ambulances.

Nitrous oxide may have a deleterious effect if used in patients with an air-containing closed space since nitrous oxide diffuses into such a space with a resulting increase in pressure. This effect may be dangerous in conditions such as pneumothorax, which may enlarge to compromise respiration, or in the presence of intracranial air after head injury, entrapped air following recent underwater dive, or recent intra-ocular gas injection.

**Malignant hyperthermia**

Malignant hyperthermia is a rare but potentially lethal complication of anaesthesia. It is characterised by a rapid rise in temperature, increased muscle rigidity, tachycardia, and acidosis. The most common triggers of malignant hyperthermia are the volatile anaesthetics. Suxamethonium chloride p. 1448 has also been implicated, but malignant hyperthermia is more likely if it is given following a volatile anaesthetic. Volatile anaesthetics and suxamethonium chloride should be avoided during anaesthesia in patients at high risk of malignant hyperthermia.

Dantrolene sodium p. 1460 is used in the treatment of malignant hyperthermia.

**Sedation, anaesthesia, and resuscitation in dental practice****Overview**

Sedation for dental procedures should be limited to conscious sedation. Diazepam p. 375 and temazepam p. 520 are effective anxiolytics for dental treatment in adults.

For details of sedation, anaesthesia, and resuscitation in dental practice see *A Conscious Decision: A review of the use of general anaesthesia and conscious sedation in primary dental care*; report by a group chaired by the Chief Medical Officer and Chief Dental Officer, July 2000 and associated documents. Further details can also be found in *Standards for Conscious Sedation in the Provision of Dental Care*; report of an Intercollegiate Advisory Committee for Sedation in Dentistry, 2020 [www.rcseng.ac.uk/dental-faculties/fds/publications-guidelines/standards-for-conscious-sedation-in-the-provision-of-dental-care-and-accreditation/](http://www.rcseng.ac.uk/dental-faculties/fds/publications-guidelines/standards-for-conscious-sedation-in-the-provision-of-dental-care-and-accreditation/).

**Surgery and long-term medication**

26-Mar-2021

**Overview**

The risk of losing disease control on stopping long-term medication before surgery is often greater than the risk posed by continuing it during surgery. It is vital that the anaesthetist knows about **all** drugs that a patient is (or has been) taking.

Patients with adrenal atrophy resulting from long-term corticosteroid use may suffer a precipitous fall in blood pressure unless corticosteroid cover is provided during anaesthesia and in the immediate postoperative period. Anaesthetists must therefore know whether a patient is, or has been, receiving corticosteroids (including high-dose inhaled corticosteroids). For further information, see *Glucocorticoid replacement during stress* in Adrenal insufficiency p. 738.

Other drugs that should normally not be stopped before surgery include antiepileptics, antiparkinsonian drugs, antipsychotics, anxiolytics, bronchodilators, cardiovascular drugs (but see potassium-sparing diuretics, angiotensin-converting enzyme inhibitors, and angiotensin-II receptor antagonists), glaucoma drugs, immunosuppressants, drugs of dependence, and thyroid or antithyroid drugs. Expert advice is required for patients receiving antivirals for HIV infection. See general advice on surgery in diabetic patients in Diabetes, surgery and medical illness p. 758.

Patients taking antiplatelet medication or an oral anticoagulant present an increased risk for surgery. In these circumstances, the anaesthetist and surgeon should assess the relative risks and decide jointly whether the antiplatelet or the anticoagulant drug should be stopped or replaced with heparin (unfractionated) p. 147 or low molecular weight heparin therapy. [EVCr](#) In patients with stable angina, perioperative aspirin p. 133 should be only continued where there is a high thrombotic risk (e.g. patients with a recent acute coronary syndrome, coronary artery stents, or an ischaemic stroke). [⚠](#)

Drugs that should be stopped before surgery include combined hormonal contraceptives, see Contraceptives, hormonal p. 854; for advice on hormone replacement therapy, see Sex hormones p. 808. MAOIs can have important interactions with some drugs used during surgery, such as pethidine hydrochloride p. 502. Tricyclic antidepressants need not be stopped, but there may be an increased risk of arrhythmias and hypotension (and dangerous interactions with vasopressor drugs); therefore, the anaesthetist should be informed if they are not stopped. Lithium should be stopped 24 hours before major surgery but

the normal dose can be continued for minor surgery (with careful monitoring of fluids and electrolytes). Potassium-sparing diuretics may need to be withheld on the morning of surgery because hyperkalaemia may develop if renal perfusion is impaired or if there is tissue damage. Angiotensin-converting enzyme (ACE) inhibitors and angiotensin-II receptor antagonists can be associated with severe hypotension after induction of anaesthesia; these drugs may need to be discontinued 24 hours before surgery. Herbal medicines may be associated with adverse effects when given with anaesthetic drugs and consideration should be given to stopping them before surgery.

## ANAESTHETICS, GENERAL > INTRAVENOUS ANAESTHETICS

### Etomidate

04-Sep-2020

#### ● INDICATIONS AND DOSE

##### Induction of anaesthesia

- ▶ BY SLOW INTRAVENOUS INJECTION
- ▶ Adult: 150–300 micrograms/kg (max. per dose 60 mg), to be administered over 30–60 seconds (60 seconds in patients in whom hypotension might be hazardous)
- ▶ Elderly: 150–200 micrograms/kg (max. per dose 60 mg), to be administered over 30–60 seconds (60 seconds in patients in whom hypotension might be hazardous)

#### IMPORTANT SAFETY INFORMATION

Etomidate should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CAUTIONS** Acute circulatory failure (shock) · adrenal insufficiency · avoid in Acute porphyrias p. 1150 · cardiovascular disease · elderly · fixed cardiac output · hypovolaemia

#### CAUTIONS, FURTHER INFORMATION

- ▶ Adrenal insufficiency Etomidate suppresses adrenocortical function, particularly during continuous administration, and it should not be used for maintenance of anaesthesia. It should be used with caution in patients with underlying adrenal insufficiency, for example, those with sepsis.

- **INTERACTIONS** → Appendix 1: etomidate

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Apnoea · hypotension · movement disorders · nausea · respiratory disorders · skin reactions · vascular pain · vomiting
- ▶ **Uncommon** Arrhythmias · cough · hiccups · hypersalivation · hypertension · muscle rigidity · neuromuscular dysfunction · nystagmus · procedural complications
- ▶ **Frequency not known** Adrenal insufficiency · atrioventricular block · cardiac arrest · embolism and thrombosis · seizures · shock · Stevens-Johnson syndrome · trismus

**SIDE-EFFECTS, FURTHER INFORMATION Pain on injection** Can be reduced by injecting into a larger vein or by giving an opioid analgesic just before induction.

**Extraneous muscle movements** Extraneous muscle movements can be minimised by an opioid analgesic or a short-acting benzodiazepine given just before induction.

- **PREGNANCY** May depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.
- **HEPATIC IMPAIRMENT**  
**Dose adjustments** Manufacturer advises reduce dose in liver cirrhosis.

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises give over 30–60 seconds (60 seconds in patients in whom hypotension might be hazardous).

#### ● PATIENT AND CARER ADVICE

**Driving and skilled tasks** Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks afterwards. For a short general anaesthetic the risk extends to **at least 24 hours** after administration. Responsible persons should be available to take patients home. The dangers of taking **alcohol** should also be emphasised.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

EXCIPIENTS: May contain Propylene glycol

- ▶ **Hypnomidate** (Piramal Critical Care Ltd)  
**Etomidate 2 mg per 1 ml** Hypnomidate 20mg/10ml solution for injection ampoules | 5 ampoule [PbM] £12.00

#### Emulsion for injection

- ▶ **Etomidate-Lipuro** (B.Braun Medical Ltd)

**Etomidate 2 mg per 1 ml** Etomidate-Lipuro 20mg/10ml emulsion for injection ampoules | 10 ampoule [PbM] £17.57 (Hospital only)

### Propofol

13-Aug-2020

#### ● INDICATIONS AND DOSE

##### Induction of anaesthesia using 0.5% or 1% injection

- ▶ BY SLOW INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION
- ▶ Adult 18–54 years: Usual dose 1.5–2.5 mg/kg, to be administered at a rate of 20–40 mg every 10 seconds until response, for debilitated patients use dose for 55 years and over
- ▶ Adult 55 years and over: Usual dose 1–1.5 mg/kg, to be administered at a rate of 20 mg every 10 seconds until response

##### Induction of anaesthesia using 2% injection

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult 18–54 years: Usual dose 1.5–2.5 mg/kg, to be administered at a rate of 20–40 mg every 10 seconds until response. For debilitated patients use dose for 55 years and over
- ▶ Adult 55 years and over: Usual dose 1–1.5 mg/kg, to be administered at a rate of 20 mg every 10 seconds until response

##### Maintenance of anaesthesia using 1% injection

- ▶ INITIALLY BY INTRAVENOUS INFUSION
- ▶ Adult: Usual dose 4–12 mg/kg/hour, alternatively (by slow intravenous injection) 25–50 mg, dose may be repeated according to response, for debilitated patients use dose for elderly
- ▶ Elderly: Usual dose 3–6 mg/kg/hour, alternatively (by slow intravenous injection) 25–50 mg, dose may be repeated according to response

##### Maintenance of anaesthesia using 2% injection

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: Usual dose 4–12 mg/kg/hour, for debilitated patients use dose for elderly
- ▶ Elderly: Usual dose 3–6 mg/kg/hour

##### Sedation of ventilated patients in intensive care using 1% or 2% injection

- ▶ BY CONTINUOUS INTRAVENOUS INFUSION
- ▶ Adult: Usual dose 0.3–4 mg/kg/hour, adjusted according to response

continued →

**Induction of sedation for surgical and diagnostic procedures using 0.5% or 1% injection**

- ▶ BY SLOW INTRAVENOUS INJECTION
- ▶ Adult: Initially 0.5–1 mg/kg, to be administered over 1–5 minutes, dose and rate of administration adjusted according to desired level of sedation and response

**Maintenance of sedation for surgical and diagnostic procedures using 0.5% injection**

- ▶ INITIALLY BY INTRAVENOUS INFUSION
- ▶ Adult: Initially 1.5–4.5 mg/kg/hour, dose and rate of administration adjusted according to desired level of sedation and response, followed by (by slow intravenous injection) 10–20 mg, (if rapid increase in sedation required), patients over 55 years or debilitated may require lower initial dose and rate of administration

**Maintenance of sedation for surgical and diagnostic procedures using 1% injection**

- ▶ INITIALLY BY INTRAVENOUS INFUSION
- ▶ Adult: Initially 1.5–4.5 mg/kg/hour, dose and rate of administration adjusted according to desired level of sedation and response, followed by (by slow intravenous injection) 10–20 mg, (if rapid increase in sedation required), patients over 55 years or debilitated may require lower initial dose and rate of administration

**Maintenance of sedation for surgical and diagnostic procedures using 2% injection**

- ▶ INITIALLY BY INTRAVENOUS INFUSION
- ▶ Adult: Initially 1.5–4.5 mg/kg/hour, dose and rate of administration adjusted according to desired level of sedation and response, followed by (by slow intravenous injection) 10–20 mg, using 0.5% or 1% injection (if rapid increase in sedation required), patients over 55 years or debilitated may require lower initial dose and rate of administration

**IMPORTANT SAFETY INFORMATION**

Propofol should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CAUTIONS** Acute circulatory failure (shock) · cardiac impairment · cardiovascular disease · elderly · epilepsy · fixed cardiac output · hypotension · hypovolaemia · raised intracranial pressure · respiratory impairment
- **INTERACTIONS** → Appendix 1: propofol
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Apnoea · arrhythmias · headache · hypotension · localised pain · nausea · vomiting
  - ▶ **Uncommon** Thrombosis
  - ▶ **Rare or very rare** Epileptiform seizure (may be delayed) · pancreatitis · post procedural complications · pulmonary oedema · sexual disinhibition · soft tissue necrosis · urine discolouration
  - ▶ **Frequency not known** Drug use disorders · dyskinesia · euphoric mood · heart failure · hepatomegaly · hyperkalaemia · hyperlipidaemia · metabolic acidosis · renal failure · respiratory depression · rhabdomyolysis

**SIDE-EFFECTS, FURTHER INFORMATION Bradycardia**

Bradycardia may be profound and may be treated with intravenous administration of an antimuscarinic drug.

**Pain on injection** Pain on injection can be reduced by intravenous lidocaine.

**Propofol infusion syndrome** Prolonged infusion of propofol doses exceeding 4mg/kg/hour may result in potentially fatal effects, including metabolic acidosis, arrhythmias, cardiac failure, rhabdomyolysis,

hyperlipidaemia, hyperkalaemia, hepatomegaly, and renal failure.

- **PREGNANCY** May depress neonatal respiration if used during delivery.  
**Dose adjustments** Max. dose for maintenance of anaesthesia 6 mg/kg/hour.
- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution.
- **RENAL IMPAIRMENT** Use with caution.
- **MONITORING REQUIREMENTS** Monitor blood-lipid concentration if risk of fat overload or if sedation longer than 3 days.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises shake before use; microbiological filter not recommended; may be administered via a Y-piece close to injection site co-administered with Glucose 5% or Sodium chloride 0.9%. 0.5% **emulsion** for injection or intermittent infusion; manufacturer advises may be administered undiluted, or diluted with Glucose 5% or Sodium chloride 0.9%; dilute to a concentration not less than 1 mg/mL. 1% **emulsion** for injection or infusion; manufacturer advises may be administered undiluted, or diluted with Glucose 5% (*Diprivan*<sup>®</sup>) or (*Propofol-Lipuro*<sup>®</sup>) or Sodium chloride 0.9% (*Propofol-Lipuro*<sup>®</sup> only); dilute to a concentration not less than 2 mg/mL; use within 6 hours of preparation. 2% **emulsion** for infusion; manufacturer advises do not dilute.
- **PATIENT AND CARER ADVICE**  
**Driving and skilled tasks** Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks afterwards. For a short general anaesthetic the risk extends to **at least 24 hours** after administration. Responsible persons should be available to take patients home. The dangers of taking **alcohol** should also be emphasised.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Emulsion for infusion**▶ **Propofol (Non-proprietary)**

**Propofol 10 mg per 1 ml** Propofol 500mg/50ml emulsion for infusion vials | 1 vial [PoM](#) £12.00 (Hospital only)

Propofol-Lipuro 1% emulsion for infusion 50ml vials | 10 vial [PoM](#) £97.55 (Hospital only)

## ANAESTHETICS, GENERAL > VOLATILE LIQUID ANAESTHETICS

### Volatile halogenated anaesthetics

#### IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CONTRA-INDICATIONS** Susceptibility to malignant hyperthermia
- **CAUTIONS** Can trigger malignant hyperthermia · raised intracranial pressure (can increase cerebrospinal pressure)
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Agitation · apnoea · arrhythmias · chills · cough · dizziness · headache · hypersalivation · hypertension · hypotension · nausea · respiratory disorders · vomiting
  - ▶ **Uncommon** Hypoxia
  - ▶ **Frequency not known** Breath holding · cardiac arrest · haemorrhage · hepatic disorders · hyperkalaemia · malignant hyperthermia · QT interval prolongation · rhabdomyolysis · seizure
- **ALLERGY AND CROSS-SENSITIVITY** Can cause hepatotoxicity in those sensitised to halogenated anaesthetics.
- **DIRECTIONS FOR ADMINISTRATION** Volatile liquid anaesthetics are administered using calibrated vaporisers, using oxygen, oxygen-enriched air, or nitrous oxide-oxygen mixtures as the carrier gas (consult product literature).
- **PATIENT AND CARER ADVICE**  
**Driving and skilled tasks** Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risks of driving or undertaking skilled tasks afterwards. For a short general anaesthetic, the risk extends **to at least 24 hours** after administration. Responsible persons should be available to take patients home. The dangers of taking **alcohol** should also be emphasised.

### Desflurane

#### ● INDICATIONS AND DOSE

##### Induction of anaesthesia (but not recommended)

- ▶ BY INHALATION
- ▶ Adult: 4–11 %, to be inhaled through specifically calibrated vaporiser

##### Maintenance of anaesthesia (in nitrous oxide–oxygen)

- ▶ BY INHALATION
- ▶ Adult: 2–6 %, to be inhaled through a specifically calibrated vaporiser

##### Maintenance of anaesthesia (in oxygen or oxygen-enriched air)

- ▶ BY INHALATION
- ▶ Adult: 2.5–8.5 %, to be inhaled through a specifically calibrated vaporiser

- **INTERACTIONS** → Appendix 1: volatile halogenated anaesthetics
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Coagulation disorder · conjunctivitis
  - ▶ **Uncommon** Myalgia · myocardial infarction · myocardial ischaemia · vasodilation
  - ▶ **Frequency not known** Abdominal pain · asthenia · heart failure · hypokalaemia · malaise · metabolic acidosis · pancreatitis acute · shock · skin reactions · ventricular dysfunction · visual acuity decreased
- **PREGNANCY** May depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.  
**Inhalation vapour**
  - ▶ **Desflurane (Non-proprietary)**  
**Desflurane 1 ml per 1 ml** Desflurane volatile liquid | 240 ml [PoM] [X] (Hospital only)

### Isoflurane

above

12-Dec-2019

#### ● INDICATIONS AND DOSE

##### Induction of anaesthesia (in oxygen or nitrous oxide-oxygen)

- ▶ BY INHALATION
- ▶ Adult: Initially 0.5 %, increased to 3 %, adjusted according to response, administered using specifically calibrated vaporiser

##### Maintenance of anaesthesia (in nitrous oxide–oxygen)

- ▶ BY INHALATION
- ▶ Adult: 1–2.5 %, to be administered using specifically calibrated vaporiser; an additional 0.5–1% may be required when given with oxygen alone

##### Maintenance of anaesthesia in caesarean section (in nitrous oxide–oxygen)

- ▶ BY INHALATION
- ▶ Adult: 0.5–0.75 %, to be administered using specifically calibrated vaporiser

- **INTERACTIONS** → Appendix 1: volatile halogenated anaesthetics
- **SIDE-EFFECTS** Carboxyhaemoglobinaemia · chest discomfort · cognitive impairment · delirium · dyspnoea · ileus · mood altered (that can last several days) · myoglobinuria · skin reactions
- **PREGNANCY** May depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.  
**Inhalation vapour**
  - ▶ **Isoflurane (Non-proprietary)**  
**Isoflurane 1 ml per 1 ml** Isoflurane inhalation vapour | 250 ml [PoM] £35.29 (Hospital only)
  - ▶ **AErrane** (Baxter Healthcare Ltd)  
**Isoflurane 1 ml per 1 ml** AErrane volatile liquid | 250 ml [PoM] [X] (Hospital only)

## Nitrous oxide

12-Aug-2020

### ● INDICATIONS AND DOSE

#### Maintenance of anaesthesia in conjunction with other anaesthetic agents

- ▶ BY INHALATION
- ▶ Adult: 50–66 %, to be administered using suitable anaesthetic apparatus in oxygen

#### Analgesia

- ▶ BY INHALATION
- ▶ Adult: Up to 50 %, to be administered using suitable anaesthetic apparatus in oxygen, adjusted according to the patient's needs

### IMPORTANT SAFETY INFORMATION

Nitrous oxide should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CAUTIONS** Entrapped air following recent underwater dive · pneumothorax · presence of intracranial air after head injury · recent intra-ocular gas injection

**CAUTIONS, FURTHER INFORMATION** Nitrous oxide may have a deleterious effect if used in patients with an air-containing closed space since nitrous oxide diffuses into such a space with a resulting increase in pressure. This effect may be dangerous in conditions such as pneumothorax, which may enlarge to compromise respiration, or in the presence of intracranial air after head injury, entrapped air following recent underwater dive, or recent intra-ocular gas injection.

- **INTERACTIONS** → Appendix 1: nitrous oxide
- **SIDE-EFFECTS** Abdominal distension · addiction · agranulocytosis · disorientation · dizziness · euphoric mood · megaloblastic anaemia · middle ear damage · myeloneuropathy · nausea · paraesthesia · sedation · subacute combined cord degeneration · tympanic membrane perforation · vomiting

**SIDE-EFFECTS, FURTHER INFORMATION** Exposure of patients to nitrous oxide for prolonged periods, either by continuous or by intermittent administration, may result in megaloblastic anaemia owing to interference with the action of vitamin B<sub>12</sub>; neurological toxic effects can occur without preceding overt haematological changes. Depression of white cell formation may also occur.

- **PREGNANCY** May depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.
- **MONITORING REQUIREMENTS**
  - ▶ Assessment of plasma-vitamin B<sub>12</sub> concentration should be considered in those at risk of deficiency, including the elderly, those who have a poor, vegetarian, or vegan diet, and those with a history of anaemia.
  - ▶ Nitrous oxide should **not** be given continuously for longer than 24 hours or more frequently than every 4 days without close supervision and haematological monitoring.
- **DIRECTIONS FOR ADMINISTRATION** For analgesia (without loss of consciousness), manufacturer advises a mixture of nitrous oxide and oxygen containing 50% of each gas (*Entonox*<sup>®</sup>) is used.

- **HANDLING AND STORAGE** Exposure of theatre staff to nitrous oxide should be minimised (risk of serious side-effects).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

## Sevoflurane

### ● INDICATIONS AND DOSE

#### Induction of anaesthesia (in oxygen or nitrous oxide-oxygen)

- ▶ BY INHALATION
- ▶ Adult: Initially 0.5–1 %, then increased to up to 8 %, increased gradually, according to response, to be administered using specifically calibrated vaporiser

#### Maintenance of anaesthesia (in oxygen or nitrous oxide-oxygen)

- ▶ BY INHALATION
- ▶ Adult: 0.5–3 %, adjusted according to response, to be administered using specifically calibrated vaporiser

- **CAUTIONS** Susceptibility to QT-interval prolongation
- **INTERACTIONS** → Appendix 1: volatile halogenated anaesthetics
- **SIDE-EFFECTS**
  - ▶ Common or very common Drowsiness · fever · hypothermia
  - ▶ Uncommon Asthma · atrioventricular block · confusion
  - ▶ Frequency not known Dystonia · intracranial pressure increased · muscle rigidity · nephritis tubulointerstitial · oedema · pancreatitis
- **PREGNANCY** May depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.
- **RENAL IMPAIRMENT** Use with caution.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

 £123.00 (Hospital only)

# 1 Anaesthesia adjuvants

## Pre-medication and peri-operative drugs

01-Sep-2020

### Drugs that affect gastric pH

Regurgitation and aspiration of gastric contents (Mendelson's syndrome) can be an important complication of general anaesthesia, particularly in obstetrics and during emergency surgery, and requires prophylaxis against acid aspiration. Prophylaxis is also needed in those with gastro-oesophageal reflux disease and in circumstances where gastric emptying may be delayed.

An **H<sub>2</sub>-receptor antagonist** can be used before surgery to increase the pH and reduce the volume of gastric fluid. It does not affect the pH of fluid already in the stomach and this limits its value in emergency procedures; an oral H<sub>2</sub>-receptor antagonist can be given 1–2 hours before the procedure. Antacids are frequently used to neutralise the acidity of the fluid already in the stomach; 'clear' (non-

particulate) antacids such as sodium citrate p. 851 are preferred.

### Antimuscarinic drugs

Antimuscarinic drugs are used (less commonly nowadays) as premedicants to dry bronchial and salivary secretions which are increased by intubation, upper airway surgery, or some inhalational anaesthetics. They are also used before or with neostigmine p. 1218 to prevent bradycardia, excessive salivation, and other muscarinic actions of neostigmine. They also prevent bradycardia and hypotension associated with drugs such as propofol p. 1441 and suxamethonium chloride p. 1448.

Atropine sulfate below is now rarely used for premedication but still has an emergency role in the treatment of vagotonic side-effects. Atropine sulfate may have a role in acute arrhythmias after myocardial infarction.

Hyoscine hydrobromide p. 470 reduces secretions and also provides a degree of amnesia, sedation, and anti-emesis. Unlike atropine sulfate it may produce bradycardia rather than tachycardia.

Glycopyrronium bromide p. 1446 reduces salivary secretions. When given intravenously it produces less tachycardia than atropine sulfate. It is widely used with neostigmine for reversal of non-depolarising neuromuscular blocking drugs.

**Phenothiazines** do not effectively reduce secretions when used alone.

### Sedative drugs

Fear and anxiety before a procedure (including the night before) can be minimised by using a sedative drug, usually a **benzodiazepine**. Premedication may also augment the action of anaesthetics and provide some degree of pre-operative amnesia. The choice of drug depends on the individual, the nature of the procedure, the anaesthetic to be used, and other prevailing circumstances such as outpatients, obstetrics, and availability of recovery facilities. The choice also varies between elective and emergency procedures.

Premedicants can be given the night before major surgery; a further, smaller dose may be required before surgery. Alternatively, the first dose may be given on the day of the procedure.

### Benzodiazepines

Benzodiazepines possess useful properties for premedication including relief of anxiety, sedation, and amnesia; short-acting benzodiazepines taken by mouth are the most common premedicants. Benzodiazepines are also used in intensive care units for sedation, particularly in those receiving assisted ventilation. Flumazenil p. 1482 is used to antagonise the effects of benzodiazepines.

Diazepam p. 375 is used to produce mild sedation with amnesia. It is a long-acting drug with active metabolites and a second period of drowsiness can occur several hours after its administration. Peri-operative use of diazepam in children is not recommended; its effect and timing of response are unreliable and paradoxical effects may occur.

Diazepam is relatively insoluble in water and preparations formulated in organic solvents are painful on intravenous injection and give rise to a high incidence of venous thrombosis (which may not be noticed for several days after the injection). Intramuscular injection of diazepam is painful and absorption is erratic. An emulsion formulated for intravenous injection is less irritant and reduces the risk of venous thrombosis; it is not suitable for intramuscular injection.

Temazepam p. 520 is given by mouth for premedication and has a shorter duration of action and a more rapid onset than oral diazepam; anxiolytic and sedative effects last about 90 minutes although there may be residual drowsiness.

Lorazepam p. 369 produces more prolonged sedation than temazepam and it has marked amnesic effects.

Midazolam p. 371 is a water-soluble benzodiazepine that is often used in preference to intravenous diazepam; recovery is faster than from diazepam, but may be significantly longer in the elderly, in patients with a low cardiac output, or after repeated dosing. Midazolam is associated with profound sedation when high doses are given intravenously or when it is used with certain other drugs.

### Other drugs for sedation

Dexmedetomidine p. 1459 and clonidine hydrochloride p. 161 are  $\alpha_2$ -adrenergic agonists with sedative properties. Dexmedetomidine is licensed for the sedation of patients receiving intensive care who need to remain responsive to verbal stimulation. Clonidine hydrochloride [unlicensed indication] can be used by mouth or by intravenous injection as a sedative agent when adequate sedation cannot be achieved with standard treatment.

### Analgesia

For guidance on the use of analgesics before, during, or after surgery, see Peri-operative analgesia p. 1452.

### Antagonists for central and respiratory depression

Respiratory depression is a major concern with opioid analgesics and it may be treated by artificial ventilation or be reversed by naloxone hydrochloride p. 1484. Naloxone hydrochloride will immediately reverse opioid-induced respiratory depression but the dose may have to be repeated because of the short duration of action of naloxone hydrochloride; however, naloxone hydrochloride will also antagonise the analgesic effect.

Flumazenil is a benzodiazepine antagonist for the reversal of the central sedative effects of benzodiazepines after anaesthetic and similar procedures. Flumazenil has a shorter half-life and duration of action than diazepam or midazolam so patients may become re-sedated.

Doxapram hydrochloride p. 323 is a central and respiratory stimulant but is of limited value in anaesthesia.

## ANTIMUSCARINICS

### Atropine sulfate

22-Jan-2021

F 839

#### ● INDICATIONS AND DOSE

##### Symptomatic bradycardia due to acute overdosage of beta-blockers

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child: 0.02 mg/kg (max. per dose 1.2 mg), repeat doses may be necessary
- ▶ Adult: 0.5–1.2 mg, repeat doses may be necessary

##### Treatment of poisoning by organophosphorus insecticide or nerve agent (in combination with pralidoxime chloride)

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child: 20 micrograms/kg every 5–10 minutes (max. per dose 2 mg) until the skin becomes flushed and dry, the pupils dilate, and bradycardia is abolished, frequency of administration dependent on the severity of poisoning
- ▶ Adult: 2 mg every 5–10 minutes until the skin becomes flushed and dry, the pupils dilate, and bradycardia is abolished, frequency of administration dependent on the severity of poisoning

##### Symptomatic relief of gastro-intestinal disorders characterised by smooth muscle spasm

- ▶ BY MOUTH
- ▶ Adult: 0.6–1.2 mg daily, dose to be taken at night

continued →

**Premedication**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child 12–17 years: 300–600 micrograms, to be administered immediately before induction of anaesthesia
- ▶ Adult: 300–600 micrograms, to be administered immediately before induction of anaesthesia
- ▶ BY SUBCUTANEOUS INJECTION, OR BY INTRAMUSCULAR INJECTION
- ▶ Child 12–17 years: 300–600 micrograms, to be administered 30–60 minutes before induction of anaesthesia
- ▶ Adult: 300–600 micrograms, to be administered 30–60 minutes before induction of anaesthesia

**Intra-operative bradycardia**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child 12–17 years: 300–600 micrograms, larger doses may be used in emergencies
- ▶ Adult: 300–600 micrograms, larger doses may be used in emergencies

**Control of muscarinic side-effects of neostigmine in reversal of competitive neuromuscular block**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child 12–17 years: 0.6–1.2 mg
- ▶ Adult: 0.6–1.2 mg

**Excessive bradycardia associated with beta-blocker use**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: 0.6–2.4 mg in divided doses (max. per dose 600 micrograms)

**Bradycardia following myocardial infarction (particularly if complicated by hypotension)**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: 500 micrograms every 3–5 minutes; maximum 3 mg per course

**● UNLICENSED USE**

- ▶ With intravenous use TOXBASE advises atropine sulfate is used in the doses provided for the treatment of symptomatic bradycardia due to acute overdosage of beta-blockers, but these may vary from those licensed.

**IMPORTANT SAFETY INFORMATION**

Antimuscarinic drugs used for premedication to general anaesthesia should only be administered by, or under the direct supervision of, personnel experienced in their use.

**● INTERACTIONS** → Appendix 1: atropine**● SIDE-EFFECTS**

- ▶ **Common or very common**
- ▶ With intravenous use Abdominal distension · anhidrosis · anxiety · arrhythmias · bronchial secretion decreased · dysphagia · gastrointestinal disorders · hallucination · hyperthermia · movement disorders · mydriasis · speech disorder · taste loss · thirst
- ▶ **Uncommon**
- ▶ With intravenous use Psychotic disorder
- ▶ **Rare or very rare**
- ▶ With intravenous use Angina pectoris · hypertensive crisis · seizure
- ▶ **Frequency not known**
- ▶ With intravenous use Insomnia
- ▶ With oral use Angle closure glaucoma · arrhythmias · bronchial secretion altered · chest pain · dysphagia · fever · gastrointestinal disorders · mydriasis · staggering · thirst
- **PREGNANCY** Not known to be harmful; manufacturer advises caution.
- **BREAST FEEDING** May suppress lactation; small amount present in milk—manufacturer advises caution.

**● MONITORING REQUIREMENTS**

- ▶ Control of muscarinic side-effects of neostigmine in reversal of competitive neuromuscular block Since atropine has a shorter duration of action than neostigmine, late unopposed bradycardia may result; close monitoring of the patient is necessary.

**● LESS SUITABLE FOR PRESCRIBING**

- ▶ With oral use Atropine tablets less suitable for prescribing. Any clinical benefit as a gastro-intestinal antispasmodic is outweighed by atropinic side-effects.

**● EXCEPTIONS TO LEGAL CATEGORY**

- ▶ With intramuscular use or intravenous use or subcutaneous use Prescription only medicine restriction does not apply where administration is for saving life in emergency.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution, solution for injection, solution for infusion

**Solution for injection****▶ Atropine sulfate (Non-proprietary)**

P 839

**Glycopyrronium bromide**

05-Oct-2021

**(Glycopyrrolate)****● INDICATIONS AND DOSE****Premedication at induction**

- ▶ BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION
- ▶ Adult: 200–400 micrograms, alternatively 4–5 micrograms/kg (max. per dose 400 micrograms)

**Intra-operative bradycardia**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: 200–400 micrograms, alternatively 4–5 micrograms/kg (max. per dose 400 micrograms), repeated if necessary

**Control of muscarinic side-effects of neostigmine in reversal of non-depolarising neuromuscular block**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: 10–15 micrograms/kg, alternatively, 200 micrograms per 1 mg of neostigmine to be administered

**Bowel colic in palliative care | Excessive respiratory secretions in palliative care**

- ▶ BY SUBCUTANEOUS INJECTION
- ▶ Adult: 200 micrograms every 4 hours and when required, hourly use is occasionally necessary, particularly in excessive respiratory secretions

- ▶ BY SUBCUTANEOUS INFUSION
- ▶ Adult: 0.6–1.2 mg/24 hours

#### IMPORTANT SAFETY INFORMATION

Antimuscarinic drugs used for premedication to general anaesthesia should only be administered by, or under the direct supervision of, personnel experienced in their use.

- **INTERACTIONS** → Appendix 1: glycopyrronium
- **SIDE-EFFECTS** Anhidrosis · bronchial secretion decreased · mydriasis
- **PRESCRIBING AND DISPENSING INFORMATION**

**Palliative care** For further information on the use of glycopyrronium bromide in palliative care, see [www.medicinescomplete.com/#/content/palliative/glycopyrronium](http://www.medicinescomplete.com/#/content/palliative/glycopyrronium).
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.
  - ▶ **Solution for injection**

## 1.1 Neuromuscular blockade

### Neuromuscular blockade

#### Neuromuscular blocking drugs

Neuromuscular blocking drugs used in anaesthesia are also known as **muscle relaxants**. By specific blockade of the neuromuscular junction they enable light anaesthesia to be used with adequate relaxation of the muscles of the abdomen and diaphragm. They also relax the vocal cords and allow the passage of a tracheal tube. Their action differs from the muscle relaxants used in musculoskeletal disorders that act on the spinal cord or brain.

Patients who have received a neuromuscular blocking drug should **always** have their respiration assisted or controlled until the drug has been inactivated or antagonised. They should also receive sufficient concomitant inhalational or intravenous anaesthetic or sedative drugs to prevent awareness.

#### Non-depolarising neuromuscular blocking drugs

Non-depolarising neuromuscular blocking drugs (also known as competitive muscle relaxants) compete with acetylcholine for receptor sites at the neuromuscular junction and their action can be reversed with anticholinesterases such as neostigmine p. 1218. Non-depolarising neuromuscular blocking drugs can be divided into the **aminosteroid** group, comprising pancuronium bromide p. 1450, rocuronium bromide p. 1450, and vecuronium bromide p. 1450, and the **benzylisoquinolinium** group, comprising atracurium besilate p. 1448, cisatracurium p. 1449, and mivacurium p. 1449.

Non-depolarising neuromuscular blocking drugs have a slower onset of action than suxamethonium chloride p. 1448. These drugs can be classified by their duration of action as short-acting (15–30 minutes), intermediate-acting (30–40 minutes), and long-acting (60–120 minutes), although duration of action is dose-dependent. Drugs with a shorter or intermediate duration of action, such as

atracurium besilate and vecuronium bromide, are more widely used than those with a longer duration of action, such as pancuronium bromide.

Non-depolarising neuromuscular blocking drugs have no sedative or analgesic effects and are not considered to trigger malignant hyperthermia.

For patients receiving intensive care and who require tracheal intubation and mechanical ventilation, a non-depolarising neuromuscular blocking drug is chosen according to its onset of effect, duration of action, and side-effects. Rocuronium bromide, with a rapid onset of effect, may facilitate intubation. Atracurium besilate or cisatracurium may be suitable for long-term neuromuscular blockade since their duration of action is not dependent on elimination by the liver or the kidneys.

Atracurium besilate, a mixture of 10 isomers, is a benzylisoquinolinium neuromuscular blocking drug with an intermediate duration of action. It undergoes non-enzymatic metabolism which is independent of liver and kidney function, thus allowing its use in patients with hepatic or renal impairment. Cardiovascular effects are associated with significant histamine release; histamine release can be minimised by administering slowly or in divided doses over at least 1 minute.

Cisatracurium is a single isomer of atracurium besilate. It is more potent and has a slightly longer duration of action than atracurium besilate and provides greater cardiovascular stability because cisatracurium lacks histamine-releasing effects.

Mivacurium, a benzylisoquinolinium neuromuscular blocking drug, has a short duration of action. It is metabolised by plasma cholinesterase and muscle paralysis is prolonged in individuals deficient in this enzyme. It is not associated with vagolytic activity or ganglionic blockade although histamine release can occur, particularly with rapid injection.

Pancuronium bromide, an aminosteroid neuromuscular blocking drug, has a long duration of action and is often used in patients receiving long-term mechanical ventilation in intensive care units. It lacks a histamine-releasing effect, but vagolytic and sympathomimetic effects can cause tachycardia and hypertension.

Rocuronium bromide exerts an effect within 2 minutes and has the most rapid onset of any of the non-depolarising neuromuscular blocking drugs. It is an aminosteroid neuromuscular blocking drug with an intermediate duration of action. It is reported to have minimal cardiovascular effects; high doses produce mild vagolytic activity.

Vecuronium bromide p. 1450, an aminosteroid neuromuscular blocking drug, has an intermediate duration of action. It does not generally produce histamine release and lacks cardiovascular effects.

#### Depolarising neuromuscular blocking drugs

Suxamethonium chloride has the most rapid onset of action of any of the neuromuscular blocking drugs and is ideal if fast onset and brief duration of action are required, e.g. with tracheal intubation. Unlike the non-depolarising neuromuscular blocking drugs, its action cannot be reversed and recovery is spontaneous; anticholinesterases such as neostigmine potentiate the neuromuscular block.

Suxamethonium chloride should be given after anaesthetic induction because paralysis is usually preceded by painful muscle fasciculations. While tachycardia occurs with single use, bradycardia may occur with repeated doses in adults and with the first dose in children. Premedication with atropine reduces bradycardia as well as the excessive salivation associated with suxamethonium chloride use.

Prolonged paralysis may occur in **dual block**, which occurs with high or repeated doses of suxamethonium chloride and is caused by the development of a non-depolarising block following the initial depolarising block. Individuals with myasthenia gravis are resistant to suxamethonium chloride

but can develop dual block resulting in delayed recovery. Prolonged paralysis may also occur in those with low or atypical plasma cholinesterase. Assisted ventilation should be continued until muscle function is restored.

## NEUROMUSCULAR BLOCKING DRUGS > DEPOLARISING

### Suxamethonium chloride (Succinylcholine chloride)

02-Dec-2020

● **DRUG ACTION** Suxamethonium acts by mimicking acetylcholine at the neuromuscular junction but hydrolysis is much slower than for acetylcholine; depolarisation is therefore prolonged, resulting in neuromuscular blockade.

#### ● INDICATIONS AND DOSE

##### Neuromuscular blockade (short duration) during surgery and intubation

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: 1–1.5 mg/kg

● **UNLICENSED USE** Doses of suxamethonium in BNF may differ from those in product literature.

#### IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in its use.

● **CONTRA-INDICATIONS** Hyperkalaemia · low plasma-cholinesterase activity (including severe liver disease) · major trauma · neurological disease involving acute wasting of major muscle · personal or family history of congenital myotonic disease · personal or family history of malignant hyperthermia · prolonged immobilisation (risk of hyperkalaemia) · severe burns · skeletal muscle myopathies (e.g. Duchenne muscular dystrophy)

● **CAUTIONS** Cardiac disease · neuromuscular disease · raised intra-ocular pressure (avoid in penetrating eye injury) · respiratory disease · severe sepsis (risk of hyperkalaemia)

● **INTERACTIONS** → Appendix 1: suxamethonium

#### ● SIDE-EFFECTS

▶ **Common or very common** Arrhythmias · bradycardia (may occur with repeated doses) · flushing · muscle contractions involuntary · myoglobinaemia · myoglobinuria · post procedural muscle pain · rash

▶ **Rare or very rare** Apnoea · cardiac arrest · hypersensitivity · malignant hyperthermia · respiratory disorders · trismus

**SIDE-EFFECTS, FURTHER INFORMATION** Premedication with atropine reduces bradycardia associated with suxamethonium use.

● **ALLERGY AND CROSS-SENSITIVITY** <sup>EvGr</sup> Allergic cross-reactivity between neuromuscular blocking drugs has been reported; caution is advised in cases of hypersensitivity to these drugs. 

● **PREGNANCY** Mildly prolonged maternal neuromuscular blockade may occur.

● **BREAST FEEDING** Unlikely to be present in breast milk in significant amounts (ionised at physiological pH). Breast-feeding may be resumed once the mother recovered from neuromuscular block.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution, particularly in end stage hepatic failure (increased risk of prolonged apnoea due to reduced hepatic synthesis of plasma cholinesterase).

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

#### Solution for injection

##### ▶ Suxamethonium chloride (Non-proprietary)

**Suxamethonium chloride 50 mg per 1 ml** Suxamethonium chloride 100mg/2ml solution for injection ampoules | 10 ampoule <sup>PoM</sup> £28.80–£50.00

##### ▶ Anectine (Aspen Pharma Trading Ltd)

**Suxamethonium chloride 50 mg per 1 ml** Anectine 100mg/2ml solution for injection ampoules | 5 ampoule <sup>PoM</sup> £3.57 (Hospital only)

## NEUROMUSCULAR BLOCKING DRUGS > NON-DEPOLARISING

### Non-depolarising neuromuscular blocking drugs

#### IMPORTANT SAFETY INFORMATION

Non-depolarising neuromuscular blocking drugs should only be administered by, or under direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management.

● **CAUTIONS** Burns (resistance can develop, increased doses may be required) · cardiovascular disease (reduce rate of administration) · electrolyte disturbances (response unpredictable) · fluid disturbances (response unpredictable) · hypothermia (activity prolonged, lower doses required) · myasthenia gravis (activity prolonged, lower doses required) · neuromuscular disorders (response unpredictable)

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Flushing · hypotension
- ▶ **Uncommon** Bronchospasm · hypersensitivity · skin reactions · tachycardia
- ▶ **Rare or very rare** Circulatory collapse · muscle weakness (after prolonged use in intensive care) · myopathy (after prolonged use in intensive care) · shock

● **ALLERGY AND CROSS-SENSITIVITY** Allergic cross-reactivity between neuromuscular blocking drugs has been reported; caution is advised in cases of hypersensitivity to these drugs.

● **PREGNANCY** Non-depolarising neuromuscular blocking drugs are highly ionised at physiological pH and are therefore unlikely to cross the placenta in significant amounts.

● **BREAST FEEDING** Non-depolarising neuromuscular blocking drugs are ionised at physiological pH and are unlikely to be present in milk in significant amounts. Breast-feeding may be resumed once the mother has recovered from neuromuscular block.

above

### Atracurium besilate (Atracurium besylate)

#### ● INDICATIONS AND DOSE

##### Neuromuscular blockade (short to intermediate duration) for surgery and intubation

▶ INITIALLY BY INTRAVENOUS INJECTION

▶ **Adult:** Initially 300–600 micrograms/kg, then (by intravenous injection) 100–200 micrograms/kg as required, alternatively (by intravenous injection) initially 300–600 micrograms/kg, followed by (by intravenous infusion) 300–600 micrograms/kg/hour

**Neuromuscular blockade during intensive care**

## ▶ INITIALLY BY INTRAVENOUS INJECTION

- ▶ **Adult:** Initially 300–600 micrograms/kg, initial dose is optional, then (by intravenous infusion) 270–1770 micrograms/kg/hour; (by intravenous infusion) usual dose 650–780 micrograms/kg/hour

**DOSES AT EXTREMES OF BODY-WEIGHT**

- ▶ To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **INTERACTIONS** → Appendix 1: neuromuscular blocking drugs, non-depolarising

● **SIDE-EFFECTS**

- ▶ **Rare or very rare** Cardiac arrest
- ▶ **Frequency not known** Seizure

**SIDE-EFFECTS, FURTHER INFORMATION** Hypotension, skin flushing, and bronchospasm is associated with histamine release. Manufacturer advises minimising effects of histamine release by administering over 1 minute in patients with cardiovascular disease or sensitivity to hypotension.

- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion* (*Tracrium*<sup>®</sup>; Atracurium besilate injection, Hospira; Atracurium injection/infusion, Genus), give continuously in Glucose 5% or Sodium Chloride 0.9%; stability varies with diluent; dilute requisite dose with infusion fluid to a concentration of 0.5–5 mg/mL.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

**Solution for injection**▶ **Atracurium besilate (Non-proprietary)**

**Atracurium besilate 10 mg per 1 ml** Atracurium besilate 250mg/25ml solution for injection vials | 1 vial [PoM](#) £16.50 (Hospital only)

Atracurium besilate 25mg/2.5ml solution for injection ampoules | 5 ampoule [PoM](#) £9.25 (Hospital only) | 10 ampoule [PoM](#) £16.56-£27.50 (Hospital only)

Atracurium besilate 50mg/5ml solution for injection ampoules | 5 ampoule [PoM](#) £17.50 (Hospital only) | 10 ampoule [PoM](#) £30.04-£42.35 (Hospital only)

▶ **Tracrium** (Aspen Pharma Trading Ltd)

**Atracurium besilate 10 mg per 1 ml** Tracrium 250mg/25ml solution for injection vials | 2 vial [PoM](#) £25.81 (Hospital only)

Tracrium 25mg/2.5ml solution for injection ampoules | 5 ampoule [PoM](#) £8.28 (Hospital only)

Tracrium 50mg/5ml solution for injection ampoules | 5 ampoule [PoM](#) £15.02 (Hospital only)

## Pancuronium bromide

10-May-2021

### • INDICATIONS AND DOSE

#### Neuromuscular blockade (long duration) during surgery and intubation

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: Initially 100 micrograms/kg, then 20 micrograms/kg as required

#### Neuromuscular blockade (long duration) during intensive care

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: Initially 100 micrograms/kg, initial dose is optional, then 60 micrograms/kg every 60–90 minutes

#### DOSES AT EXTREMES OF BODY-WEIGHT

- ▶ To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **INTERACTIONS** → Appendix 1: neuromuscular blocking drugs, non-depolarising

- **SIDE-EFFECTS** Apnoea · arrhythmia · hypersalivation · increased cardiac output · miosis

**SIDE-EFFECTS, FURTHER INFORMATION** Pancuronium lacks histamine-releasing effect, but vagolytic and sympathomimetic effects can cause tachycardia.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution (possibly slower onset and higher dose requirements due to resistance to neuromuscular blocking action which may lead to a prolonged recovery time).

- **RENAL IMPAIRMENT** [EvGr](#) Use with caution (may prolong duration of block). [M](#)

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Pancuronium bromide (Non-proprietary)**  
**Pancuronium bromide 2 mg per 1 ml** Pancuronium bromide 4mg/2ml solution for injection ampoules | 10 ampoule [PoM](#) £50.00 (Hospital only)

F 1448

## Rocuronium bromide

10-May-2021

### • INDICATIONS AND DOSE

#### Neuromuscular blockade (intermediate duration) during surgery and intubation

- ▶ INITIALLY BY INTRAVENOUS INJECTION
- ▶ Adult: Initially 600 micrograms/kg; (by intravenous injection) maintenance 150 micrograms/kg, alternatively (by intravenous infusion) maintenance 300–600 micrograms/kg/hour, adjusted according to response
- ▶ Elderly: Initially 600 micrograms/kg; (by intravenous injection) maintenance 75–100 micrograms/kg, alternatively (by intravenous infusion) maintenance up to 400 micrograms/kg/hour, adjusted according to response

#### Neuromuscular blockade (intermediate duration) during intensive care

- ▶ INITIALLY BY INTRAVENOUS INJECTION
- ▶ Adult: Initially 600 micrograms/kg, initial dose is optional; (by intravenous infusion) maintenance 300–600 micrograms/kg/hour for first hour, then (by intravenous infusion), adjusted according to response

#### DOSES AT EXTREMES OF BODY-WEIGHT

- ▶ To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **INTERACTIONS** → Appendix 1: neuromuscular blocking drugs, non-depolarising

#### • SIDE-EFFECTS

- ▶ **Uncommon** Procedural complications
- ▶ **Rare or very rare** Angioedema · face oedema · malignant hyperthermia · paralysis

- **HEPATIC IMPAIRMENT** Manufacturer advises caution (may prolong duration of action).

**Dose adjustments** Manufacturer advises consider dose reduction—consult product literature.

- **RENAL IMPAIRMENT** [EvGr](#) Use with caution (may prolong duration of block). [M](#)

**Dose adjustments** [EvGr](#) Reduce maintenance dose (consult product literature). [M](#)

- **DIRECTIONS FOR ADMINISTRATION** [EvGr](#) For *continuous intravenous infusion* or via drip tubing, may be diluted with Glucose 5% or Sodium Chloride 0.9%. [M](#)

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ▶ Rocuronium bromide (Non-proprietary)

- Rocuronium bromide 10 mg per 1 ml** Rocuronium bromide 50mg/5ml solution for injection ampoules | 10 ampoule [PoM](#) £28.00
- Rocuronium bromide 50mg/5ml solution for injection vials | 10 vial [PoM](#) £28.00–£41.80 (Hospital only)
- Rocuronium bromide 100mg/10ml solution for injection vials | 10 vial [PoM](#) £57.00–£83.70 (Hospital only)
- Rocuronium bromide 100mg/10ml solution for injection ampoules | 10 ampoule [PoM](#) £57.00

##### ▶ Esmeron (Merck Sharp & Dohme (UK) Ltd)

F 1448

## Vecuronium bromide

10-May-2021

### • INDICATIONS AND DOSE

#### Neuromuscular blockade (intermediate duration) during surgery and intubation

- ▶ INITIALLY BY INTRAVENOUS INJECTION
- ▶ Adult: 80–100 micrograms/kg; (by intravenous injection) maintenance 20–30 micrograms/kg, adjusted according to response, max. 100 micrograms/kg in caesarean section, alternatively (by intravenous infusion) maintenance 0.8–1.4 micrograms/kg/minute, adjusted according to response

#### DOSES AT EXTREMES OF BODY-WEIGHT

- ▶ To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **INTERACTIONS** → Appendix 1: neuromuscular blocking drugs, non-depolarising

#### • SIDE-EFFECTS

- ▶ **Uncommon** Procedural complications
- ▶ **Rare or very rare** Angioedema · face oedema · paralysis

- **HEPATIC IMPAIRMENT** Manufacturer advises caution in significant impairment.

- **RENAL IMPAIRMENT** [EvGr](#) Use with caution. [M](#)

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises reconstitute each vial with 5 mL Water for Injections to

give 2 mg/mL solution; *alternatively* reconstitute with up to 10 mL Glucose 5% or Sodium Chloride 0.9% or Water for Injections—unsuitable for further dilution if not reconstituted with Water for Injections. For *continuous intravenous infusion*, manufacturer advises dilute reconstituted solution to a concentration up to 40 micrograms/mL with Glucose 5% or Sodium Chloride 0.9%; reconstituted solution can also be given via drip tubing.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for solution for injection

- ▶ **Vecuronium bromide (Non-proprietary)**  
Vecuronium bromide 10 mg Vecuronium bromide 10mg powder for solution for injection vials | 10 vial [PoM](#) £57.85 (Hospital only)

## 1.2 Neuromuscular blockade reversal

### Neuromuscular blockade reversal

#### Neuromuscular blockade reversal

##### Anticholinesterases

Anticholinesterases reverse the effects of the non-depolarising (competitive) neuromuscular blocking drugs such as pancuronium bromide p. 1450 but they prolong the action of the depolarising neuromuscular blocking drug suxamethonium chloride p. 1448.

Neostigmine p. 1218 is used specifically for reversal of non-depolarising (competitive) blockade. It acts within one minute of intravenous injection and its effects last for 20 to 30 minutes; a second dose may then be necessary. Glycopyrronium bromide p. 1446 or alternatively atropine sulfate p. 1445, given before or with neostigmine, prevent bradycardia, excessive salivation, and other muscarinic effects of neostigmine.

##### Other drugs for reversal of neuromuscular blockade

Sugammadex below is a modified gamma cyclodextrin that can be used for rapid reversal of neuromuscular blockade induced by rocuronium bromide p. 1450 or vecuronium bromide p. 1450. In practice, sugammadex is used mainly for rapid reversal of neuromuscular blockade in an emergency.

#### ANTICHOLINESTERASES

### Neostigmine with glycopyrronium bromide

17-Jul-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, neostigmine p. 1218, glycopyrronium bromide p. 1446.

#### ● INDICATIONS AND DOSE

##### Reversal of non-depolarising neuromuscular blockade

- ▶ **BY INTRAVENOUS INJECTION**
- ▶ Adult: 1–2 mL, repeated if necessary, alternatively 0.02 mL/kg/ kilogram, repeated if necessary; maximum 2 mL per course

- **INTERACTIONS** → Appendix 1: glycopyrronium · neostigmine

- **DIRECTIONS FOR ADMINISTRATION** For *intravenous injection*, manufacturer advises give over 10–30 seconds.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Neostigmine with glycopyrronium bromide (Non-proprietary)**  
Glycopyrronium bromide 500 microgram per 1 ml, Neostigmine metilsulfate 2.5 mg per 1 ml Neostigmine 2.5mg/1ml / Glycopyrronium bromide 500micrograms/1ml solution for injection ampoules | 10 ampoule [PoM](#) £11.50

#### ANTIDOTES AND CHELATORS

### Sugammadex

10-Aug-2021

#### ● INDICATIONS AND DOSE

##### Routine reversal of neuromuscular blockade induced by rocuronium or vecuronium

- ▶ **BY INTRAVENOUS INJECTION**
- ▶ Adult: Initially 2–4 mg/kg, then 4 mg/kg if required, administered if recurrence of neuromuscular blockade occurs; consult product literature for further details

##### Immediate reversal of neuromuscular blockade induced by rocuronium

- ▶ **BY INTRAVENOUS INJECTION**
- ▶ Adult: 16 mg/kg (consult product literature)

#### IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in its use.

- **CAUTIONS** Cardiovascular disease (recovery may be delayed) · elderly (recovery may be delayed) · pre-existing coagulation disorders · recurrence of neuromuscular blockade—monitor respiratory function until fully recovered · use of anticoagulants (unrelated to surgery) · wait 24 hours before re-administering rocuronium · wait 24 hours before re-administering vecuronium

- **INTERACTIONS** → Appendix 1: sugammadex

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Abdominal pain · arrhythmias · cough · dizziness · headache · nausea · procedural complications · skin reactions · taste altered · vomiting
- ▶ **Uncommon** Hypersensitivity
- ▶ **Frequency not known** Bronchospasm

- **PREGNANCY** Use with caution—no information available.

- **RENAL IMPAIRMENT** [EvGr](#) Avoid if creatinine clearance less than 30 mL/minute. [⚠](#) See p. 21.

- **NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

#### Scottish Medicines Consortium (SMC) decisions

- ▶ Sugammadex (*Bridion*<sup>®</sup>) for the routine reversal of neuromuscular blockade induced by rocuronium or vecuronium in adults and rocuronium in paediatric patients (March 2013) SMC No. 527/09 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

**ELECTROLYTES:** May contain Sodium

- ▶ **Bridion** (Merck Sharp & Dohme (UK) Ltd)  
Sugammadex (as Sugammadex sodium) 100 mg per 1 ml Bridion 500mg/5ml solution for injection vials | 10 vial [PoM](#) £1,491.10 (Hospital only)  
Bridion 200mg/2ml solution for injection vials | 10 vial [PoM](#) £596.40 (Hospital only)

## 1.3 Peri-operative analgesia

### Peri-operative analgesia

01-Sep-2020

#### Overview

**EvGr** Postoperative pain management options should be discussed with patients prior to surgery. Take into account the patient's clinical features and the type of surgery, and discuss the patient's pain history, preferences and expectations, likely impact of the procedure on their pain, potential benefits and risks of treatment, and discharge plan. A multimodal approach using a combination of analgesics from different classes to manage postoperative pain should be offered.

Consider prescribing pre-emptive analgesia to ensure that the patient's pain is managed when the effects of local anaesthesia wears off. **A**

#### Non-opioid analgesics

**EvGr** Oral paracetamol p. 477 should be offered before and after surgery irrespective of pain severity, with intravenous paracetamol reserved for patients unable to take oral medication.

Offer oral ibuprofen p. 1232 to manage immediate postoperative pain (pain during the first 24 hours after surgery) of all severities, except for patients who have had surgery for a hip fracture—see NICE guideline: **Hip fractures: management** for guidance, available at: [www.nice.org.uk/guidance/cg124](http://www.nice.org.uk/guidance/cg124). Intravenous NSAIDs should be reserved for patients unable to take oral medication; if offering intravenous NSAIDs, choose a traditional NSAID rather than a COX-2 (cyclo-oxygenase-2) inhibitor. **A**

Intramuscular injections of diclofenac sodium p. 1227 and ketoprofen p. 1236 are rarely used; they are given deep into the gluteal muscle to minimise pain and tissue damage. Ketorolac trometamol p. 1455 is less irritant on intramuscular injection but pain has been reported; it can also be given by intravenous injection. Suppositories of diclofenac sodium and ketoprofen may be effective alternatives to the parenteral use of these drugs.

Since non-steroidal anti-inflammatory drugs (NSAIDs) do not depress respiration, do not impair gastro-intestinal motility, and do not cause dependence, they may be useful alternatives or adjuncts to opioids for the relief of postoperative pain.

#### Opioid analgesics

Opioid analgesics are now rarely used as premedicants; they are more likely to be administered at induction. Pre-operative use of opioid analgesics is generally limited to those patients who require control of existing pain.

**EvGr** An oral opioid should only be offered if immediate postoperative pain is expected to be moderate to severe. It should be given as soon as the patient can eat and drink after surgery, and the dose adjusted to help achieve functional recovery (such as coughing and mobilising) as soon as possible. Patients unable to take oral opioids should be offered either a patient-controlled analgesia (PCA) or continuous epidural. The benefit of a continuous epidural should be taken into consideration for patients who are having major or complex open-torso surgery, are expected to have severe pain, or those who have cognitive impairment. If opioids are used, see NICE guideline: **Controlled drugs: safe use and management** (available at: [www.nice.org.uk/guidance/ng46](http://www.nice.org.uk/guidance/ng46)) for information on prescribing controlled drugs. **A**

For guidance on the management of opioid-induced respiratory depression, see Pre-medication and peri-operative drugs p. 1444.

#### Intra-operative analgesia

Opioid analgesics given in small doses before or with induction reduce the dose requirement of some drugs used during anaesthesia.

Alfentanil p. 1456, fentanyl p. 490, and remifentanyl p. 1457 are particularly useful because they act within 1–2 minutes and have short durations of action. The initial doses of alfentanil or fentanyl are followed either by successive intravenous injections or by an intravenous infusion; prolonged infusions increase the duration of effect. Repeated intra-operative doses of alfentanil or fentanyl should be given with care since the resulting respiratory depression can persist postoperatively and occasionally it may become apparent for the first time postoperatively when monitoring of the patient might be less intensive. Alfentanil, fentanyl, and remifentanyl can cause muscle rigidity, particularly of the chest wall or jaw; this can be managed by the use of neuromuscular blocking drugs.

In contrast to other opioids which are metabolised in the liver, remifentanyl undergoes rapid metabolism by nonspecific blood and tissue esterases; its short duration of action allows prolonged administration at high dosage, without accumulation, and with little risk of residual postoperative respiratory depression. Remifentanyl should not be given by intravenous injection intraoperatively, but it is well suited to continuous infusion; a supplementary analgesic is given before stopping the infusion of remifentanyl.

**EvGr** A single dose of intravenous ketamine p. 1458 [unlicensed] should be considered either during or immediately after surgery to supplement other types of pain relief if, the patient's pain is expected to be moderate to severe and an intravenous opioid alone does not provide adequate pain relief, or the patient has opioid sensitivity. **A**

#### Useful resources

Perioperative care in adults. National Institute for Health and Care Excellence. NICE guideline 180. August 2020. [www.nice.org.uk/guidance/ng180](http://www.nice.org.uk/guidance/ng180)

### ANAESTHETICS, GENERAL > NMDA RECEPTOR ANTAGONISTS

#### Esketamine

10-May-2022

- **DRUG ACTION** Esketamine is an isomer of ketamine that blocks N-methyl-D-aspartate (NMDA) receptors and interrupts the association pathways of the brain, resulting in dissociative anaesthesia and analgesia and in restoration of neural pathways regulating mood and emotional behaviour.

#### ● INDICATIONS AND DOSE

##### Induction and maintenance of anaesthesia (specialist use only)

- ▶ BY SLOW INTRAVENOUS INJECTION
  - ▶ Adult: 0.5–1 mg/kg, then maintenance 0.25–0.5 mg/kg every 10–15 minutes, adjusted according to response
- ▶ BY INTRAMUSCULAR INJECTION
  - ▶ Adult: 2–4 mg/kg, then maintenance 1–2 mg/kg every 10–15 minutes, adjusted according to response
- ▶ BY CONTINUOUS INTRAVENOUS INFUSION
  - ▶ Adult: 0.5–3 mg/kg/hour, adjusted according to response

##### Analgesic supplementation of regional and local anaesthesia (specialist use only)

- ▶ BY CONTINUOUS INTRAVENOUS INFUSION
  - ▶ Adult: 0.125–0.25 mg/kg/hour, adjusted according to response

**Analgesia in emergency medicine (specialist use only)**

- ▶ BY INTRAMUSCULAR INJECTION
  - ▶ Adult: 0.25–0.5 mg/kg, adjusted according to response
- ▶ BY SLOW INTRAVENOUS INJECTION
  - ▶ Adult: 0.125–0.25 mg/kg, adjusted according to response

**Major depressive disorder (specialist use only)**

- ▶ BY INTRANASAL ADMINISTRATION
  - ▶ Adult: Initially 56 mg on day 1, then 56–84 mg twice weekly for weeks 1–4, then 56–84 mg once weekly for weeks 5–8, then 56–84 mg every 1–2 weeks from week 9 onwards, review continued treatment periodically, treatment is recommended for at least 6 months after depressive symptoms improve, all dose adjustments to be made in 28 mg increments
- ▶ BY INTRANASAL ADMINISTRATION
  - ▶ Elderly: Initially 28 mg on day 1, then 28–84 mg twice weekly for weeks 1–4, then 28–84 mg once weekly for weeks 5–8, then 28–84 mg every 1–2 weeks from week 9 onwards, review continued treatment periodically, treatment is recommended for at least 6 months after depressive symptoms improve, all dose adjustments to be made in 28 mg increments

**Major depressive disorder (patients of Japanese origin) (specialist use only)**

- ▶ BY INTRANASAL ADMINISTRATION
  - ▶ Adult: Initially 28 mg on day 1, then 28–84 mg twice weekly for weeks 1–4, then 28–84 mg once weekly for weeks 5–8, then 28–84 mg every 1–2 weeks from week 9 onwards, review continued treatment periodically, treatment is recommended for at least 6 months after depressive symptoms improve, all dose adjustments to be made in 28 mg increments

**DOSE EQUIVALENCE AND CONVERSION**

- ▶ With intranasal use
  - ▶ 28 mg equivalent to 2 sprays (1 spray administered into each nostril).

**IMPORTANT SAFETY INFORMATION**

Esketamine should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

**● CONTRA-INDICATIONS**

**GENERAL CONTRA-INDICATIONS** Acute porphyrias p. 1150 · patients in whom hypertension or raised intracranial pressure forms a serious risk

**SPECIFIC CONTRA-INDICATIONS**

- ▶ When used for Induction and maintenance of anaesthesia or Analgesic supplementation of regional and local anaesthesia or Analgesia in emergency medicine Eclampsia · ischaemic cardiac disorders (when used as sole anaesthetic agent) · pre-eclampsia
- ▶ When used for Major depressive disorder Aneurysmal vascular disease · cardiovascular events, including myocardial infarction (within 6 weeks) · intracerebral haemorrhage

**● CAUTIONS**

**GENERAL CAUTIONS** History of drug abuse · hypertension · raised intracranial pressure · thyroid dysfunction

**SPECIFIC CAUTIONS**

- ▶ When used for Induction and maintenance of anaesthesia or Analgesic supplementation of regional and local anaesthesia or Analgesia in emergency medicine Chronic or acute alcohol consumption · decompensated cardiac failure · increased cerebrospinal fluid pressure · patients with multiple injuries or in poor condition—consult product literature · prolapsed umbilical cord · raised intra-ocular pressure ·

severe psychotic disorders · unstable angina pectoris · uterine rupture

- ▶ When used for Major depressive disorder Bipolar disorder (active or previous history) · cardiovascular conditions (clinically significant or unstable) · mania (active or previous history) · psychosis (active or previous history) · respiratory conditions (clinically significant or unstable)

**CAUTIONS, FURTHER INFORMATION**

- ▶ History of drug abuse
- ▶ When used for Major depressive disorder [EVR](#) Patients should be assessed for the risk of drug abuse prior to starting treatment, and monitored for signs of this during therapy.

- ▶ Cardiovascular or respiratory conditions
- ▶ When used for Major depressive disorder Esketamine should be administered where appropriately trained staff and resuscitation facilities are available.

- **INTERACTIONS** → Appendix 1: esketamine

**● SIDE-EFFECTS****GENERAL SIDE-EFFECTS**

- ▶ **Common or very common** Anxiety · dizziness · nausea · vomiting

**SPECIFIC SIDE-EFFECTS**

- ▶ **Common or very common**

- ▶ With intranasal use Drowsiness · dry mouth · dysarthria · feeling abnormal · feeling of body temperature change · hallucinations · headache · hyperacusis · hyperhidrosis · hypertension · mood altered · nasal complaints · oral disorders · perception altered · psychiatric disorders · sensation abnormal · tachycardia · taste altered · tinnitus · tremor · urinary disorders · vertigo · vision blurred
- ▶ With parenteral use Arrhythmias · hypersalivation · movement disorders · respiratory disorders · respiratory secretion increased · sleep disorders · vision disorders
- ▶ **Uncommon**
- ▶ With parenteral use Muscle tone increased · nystagmus · skin reactions

- ▶ **Rare or very rare**

- ▶ With parenteral use Hypertension

- ▶ **Frequency not known**

- ▶ With intranasal use Cystitis

- ▶ With parenteral use Disorientation · drug-induced liver injury · dysphoria · hallucination

**● PREGNANCY**

- ▶ When used for Induction and maintenance of anaesthesia or Analgesic supplementation of regional and local anaesthesia or Analgesia in emergency medicine Manufacturer advises use only if potential benefit outweighs risk—may depress neonatal respiration if used during delivery.
- ▶ When used for Major depressive disorder Manufacturer advises avoid—no information available.

**● BREAST FEEDING**

- ▶ When used for Induction and maintenance of anaesthesia or Analgesic supplementation of regional and local anaesthesia or Analgesia in emergency medicine Manufacturer advises present in milk—not thought to be harmful at therapeutic doses.
- ▶ When used for Major depressive disorder Manufacturer advises avoid—present in milk in *animal* studies.

**● HEPATIC IMPAIRMENT**

- ▶ When used for Induction and maintenance of anaesthesia or Analgesic supplementation of regional and local anaesthesia or Analgesia in emergency medicine Manufacturer advises caution (risk of prolonged action).
- ▶ When used for Major depressive disorder Manufacturer advises caution in moderate impairment when using maximum dose (84 mg); avoid in severe impairment—no information available.

**Dose adjustments** ▶ When used for Induction and maintenance of anaesthesia or Analgesic supplementation of regional and local anaesthesia or Analgesia in emergency medicine Manufacturer advises consider dose reduction.

**● MONITORING REQUIREMENTS**

- ▶ When used for Major depressive disorder Manufacturer advises monitor blood pressure at baseline, approximately 40 minutes after treatment, and as clinically indicated thereafter. Manufacturer advises monitor for urinary tract and bladder symptoms during treatment and refer to an appropriate healthcare provider if symptoms persist.

**● DIRECTIONS FOR ADMINISTRATION**

- ▶ With intramuscular use or intravenous use Manufacturer advises solution can be diluted with Glucose 5% or Sodium Chloride 0.9%.
- ▶ With intranasal use Manufacturer advises dose is administered via a single-use device delivering 28 mg as 2 sprays (1 spray per nostril). A second device is required for a 56 mg dose, and a third device is required for an 84 mg dose. Allow a break of 5 minutes between use of each device.

**● PRESCRIBING AND DISPENSING INFORMATION**

- ▶ When used for Major depressive disorder The manufacturer of *Spravato*<sup>®</sup> has provided the following materials: *Guide for Healthcare Professionals*, *Checklist for Healthcare Professionals* and *Patient Guide*. Patients must be enrolled onto the *Spravato*<sup>®</sup> Register and Alert System (available at: [spravatoregister.clinpal.com](http://spravatoregister.clinpal.com)) before first prescription or within 24 hours of the first administration for new patients, or before the next prescription for existing patients.

**● PATIENT AND CARER ADVICE**

- ▶ When used for Major depressive disorder Manufacturer advises patients should be informed not to eat for at least 2 hours before and not to drink liquids for at least 30 minutes before treatment. Manufacturer advises patients who require a nasal corticosteroid or nasal decongestant on a dosing day should be informed not to administer these within 1 hour prior to treatment. Manufacturer advises patients and carers should seek immediate medical advice if symptoms worsen, or if suicidal behaviour or thoughts and unusual changes in behaviour occur.
- ▶ When used for Major depressive disorder A patient guide should be provided.

**Missed doses** ▶ When used for Major depressive disorder Manufacturer advises if more than 2 treatment sessions are missed, adjustment of the dose or frequency of treatment may be clinically appropriate.

**Driving and skilled tasks**

- ▶ When used for induction and maintenance of anaesthesia or Analgesic supplementation of regional and local anaesthesia or Analgesia in emergency medicine Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks afterwards. For a short general anaesthetic the risk extends to **at least 24 hours** after administration. Responsible persons should be available to take patients home. The dangers of taking **alcohol** should also be emphasised. For information on 2015 legislation regarding driving whilst taking certain controlled drugs, including ketamine which has similar pharmacokinetic properties to esketamine, see *Drugs and driving* under Guidance on prescribing p. 1.
- ▶ When used for Major depressive disorder Manufacturer advises patients and carers should be counselled on the effects on driving and performance of skilled tasks—increased risk of somnolence, sedation, dissociative symptoms, perception disturbances, dizziness, vertigo and anxiety. For information on 2015 legislation regarding driving whilst taking certain controlled drugs, including ketamine which has similar pharmacokinetic properties to esketamine, see *Drugs and driving* under Guidance on prescribing p. 1.

**● NATIONAL FUNDING/ACCESS DECISIONS**

For full details see funding body website

**Scottish Medicines Consortium (SMC) decisions**

- ▶ Esketamine nasal spray (*Spravato*<sup>®</sup>) in combination with a selective serotonin reuptake inhibitor (SSRI) or serotonin-norepinephrine reuptake inhibitor (SNRI), for adults with treatment-resistant Major Depressive Disorder, who have not responded to at least two different treatments with antidepressants in the current moderate to severe depressive episode (September 2020) SMC No. SMC2258 Recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection****▶ Esketamine (Non-proprietary)**

**Esketamine (as Esketamine hydrochloride) 5 mg per**

1 ml Esketamine 25mg/5ml solution for injection ampoules | 10 ampoule [PoM] £28.50 (Hospital only) [CD2]

## ANALGESICS > NON-STEROIDAL ANTI-INFLAMMATORY DRUGS

### Ketorolac trometamol

24-Nov-2021

#### ● INDICATIONS AND DOSE

**Short-term management of moderate to severe acute postoperative pain only**

► BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION

- Adult (body-weight up to 50 kg): Initially 10 mg, then 10–30 mg every 4–6 hours as required for maximum duration of treatment 2 days, frequency may be increased to up to every 2 hours during initial postoperative period; maximum 60 mg per day
- Adult (body-weight 50 kg and above): Initially 10 mg, then 10–30 mg every 4–6 hours as required for maximum duration of treatment 2 days, frequency may be increased to up to every 2 hours during initial postoperative period; maximum 90 mg per day
- Elderly: Initially 10 mg, then 10–30 mg every 4–6 hours as required for maximum duration of treatment 2 days, frequency may be increased to up to every 2 hours during initial postoperative period; maximum 60 mg per day

- **CONTRA-INDICATIONS** Active or history of gastro-intestinal bleeding · active or history of gastro-intestinal ulceration · coagulation disorders · complete or partial syndrome of nasal polyps · confirmed or suspected cerebrovascular bleeding · dehydration · following operations with high risk of haemorrhage or incomplete haemostasis · haemorrhagic diatheses · history of gastro-intestinal bleeding related to previous NSAID therapy · history of gastro-intestinal perforation related to previous NSAID therapy · hypovolaemia · severe heart failure
- **CAUTIONS** Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · cerebrovascular disease · connective-tissue disorders · elderly (risk of serious side-effects and fatalities) · heart failure · history of gastro-intestinal disorders (e.g. ulcerative colitis, Crohn's disease) · ischaemic heart disease · may mask symptoms of infection · peripheral arterial disease · risk factors for cardiovascular events · uncontrolled hypertension
- **INTERACTIONS** → Appendix 1: NSAIDs
- **SIDE-EFFECTS** Agranulocytosis · angioedema · anxiety · aplastic anaemia · appetite decreased · asthenia · asthma · azotaemia · bradycardia · burping · chest pain · concentration impaired · confusion · constipation · Crohn's disease aggravated · depression · diarrhoea · dizziness · drowsiness · dry mouth · dyspnoea · electrolyte imbalance · embolism and thrombosis · euphoric mood · fever · flank pain · fluid retention · flushing · gastrointestinal discomfort · gastrointestinal disorders · haemolytic anaemia · haemorrhage · hallucination · headache · hearing loss · heart failure · hepatic disorders · hyperhidrosis · hyperkinesia · hypersensitivity · hypertension · hypotension · infertility female · malaise · meningitis aseptic (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · musculoskeletal disorder · myalgia · myocardial infarction · nausea · nephritis tubulointerstitial · nephropathy · neutropenia · oedema · optic neuritis · oral disorders · pallor · palpitations · pancreatitis · paraesthesia · perforation · photosensitivity reaction · platelet

aggregation inhibition · psychotic disorder · pulmonary oedema · renal impairment · respiratory disorders · seizure · severe cutaneous adverse reactions (SCARs) · skin reactions · sleep disorders · stroke · taste altered · thinking abnormal · thirst · thrombocytopenia · tinnitus · ulcer · urinary disorders · vertigo · visual impairment · vomiting · weight increased · wound haemorrhage

**SIDE-EFFECTS, FURTHER INFORMATION** For information about cardiovascular and gastrointestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs. p. 1222

- **ALLERGY AND CROSS-SENSITIVITY** [EvGr] Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. [M]
- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.
- **PREGNANCY** Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.
- **BREAST FEEDING** Amount too small to be harmful.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution—may increase risk of renal impairment; avoid in hepatic failure.
- **RENAL IMPAIRMENT** In general, for NSAIDs the MHRA advises to avoid where possible; if necessary, use with caution (risk of fluid retention and further renal impairment, including renal failure). [EvGr] For *ketorolac*, avoid if serum creatinine greater than 160 micromol/litre. [M]
- **Dose adjustments** [EvGr] Max. 60 mg daily if serum creatinine 160 micromol/litre or less. [M]
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous injection*, manufacturer advises give over at least 15 seconds.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

► **Ketorolac trometamol (Non-proprietary)**

**Ketorolac trometamol 30 mg per 1 ml** Ketorolac 30mg/1ml solution for injection ampoules | 5 ampoule [PoM] £1.10 DT = £5.36 (Hospital only)

► **Toradol** (Atnabs Pharma UK Ltd)

**Ketorolac trometamol 30 mg per 1 ml** Toradol 30mg/1ml solution for injection ampoules | 5 ampoule [PoM] £5.36 DT = £5.36 (Hospital only)

### Parecoxib

22-Nov-2021

- **DRUG ACTION** Parecoxib is a selective inhibitor of cyclo-oxygenase-2.

#### ● INDICATIONS AND DOSE

**Short-term management of acute postoperative pain**

► BY DEEP INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION

- Adult: Initially 40 mg, then 20–40 mg every 6–12 hours as required for up to 3 days; maximum 80 mg per day
- Elderly (body-weight up to 50 kg): Initially 20 mg; maximum 40 mg per day

- **CONTRA-INDICATIONS** Active gastro-intestinal bleeding · active gastro-intestinal ulceration · cerebrovascular disease · following coronary artery bypass graft surgery · inflammatory bowel disease · ischaemic heart disease · mild to severe heart failure · peripheral arterial disease

- **CAUTIONS** Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · coagulation defects · connective-tissue disorders · dehydration (risk of renal impairment) · elderly (risk of serious side-effects and fatalities) · history of cardiac failure · history of gastrointestinal disorders · hypertension · may mask symptoms of infection · oedema · risk factors for cardiovascular events

● **INTERACTIONS** → Appendix 1: NSAIDs

● **SIDE-EFFECTS**

- ▶ **Common or very common** Agitation · back pain · constipation · dizziness · gastrointestinal discomfort · gastrointestinal disorders · hyperhidrosis · hypertension · hypokalaemia · hypotension · increased risk of infection · insomnia · nausea · numbness · peripheral oedema · post procedural complications · renal impairment · respiratory disorders · skin reactions · vomiting
- ▶ **Uncommon** Appetite decreased · arrhythmias · arthralgia · asthma · cerebrovascular insufficiency · dry mouth · ear pain · embolism and thrombosis · hyperglycaemia · myocardial infarction · thrombocytopenia
- ▶ **Rare or very rare** Hypersensitivity · pancreatitis · perioral swelling
- ▶ **Frequency not known** Angioedema · cardiovascular event · circulatory collapse · congestive heart failure · dyspnoea · fluid retention · hepatitis · renal failure (more common in patients with pre-existing renal impairment) · severe cutaneous adverse reactions (SCARs)

**SIDE-EFFECTS, FURTHER INFORMATION** For information about cardiovascular and gastrointestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs. p. 1222

- **ALLERGY AND CROSS-SENSITIVITY** [E<sub>VG</sub>](#) Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. Contra-indicated in patients with a history of allergic drug reactions including sulfonamide hypersensitivity. [M](#)
- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.
- **PREGNANCY** Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.
- **BREAST FEEDING** Avoid—present in milk.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in moderate impairment (risk of increased exposure); avoid in severe impairment (no information available).  
**Dose adjustments** Manufacturer advises dose reduction to half the usual recommended dose in moderate impairment; maximum 40 mg daily.
- **RENAL IMPAIRMENT** In general, for NSAIDs the MHRA advises to avoid where possible; if necessary, use with caution (risk of fluid retention and further renal impairment, including renal failure).  
**Dose adjustments** [E<sub>VG</sub>](#) Reduce initial dose to 20 mg if creatinine clearance less than 30 mL/minute. [M](#) See p. 21.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website  
**Scottish Medicines Consortium (SMC) decisions**  
▶ Parecoxib (*Dynastat*<sup>®</sup>) for the short-term treatment of postoperative pain (January 2003) SMC No. 27/02 Not recommended

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Powder and solvent for solution for injection**

▶ **Dynastat** (Pfizer Ltd)

**Parecoxib (as Parecoxib sodium) 40 mg** Dynastat 40mg powder and solvent for solution for injection vials | 5 vial [PoM](#) £28.34 DT = £28.34

**Powder for solution for injection**

▶ **Parecoxib (Non-proprietary)**

**Parecoxib (as Parecoxib sodium) 40 mg** Parecoxib 40mg powder for solution for injection vials | 10 vial [PoM](#) £49.60 DT = £49.60 (Hospital only)

▶ **Dynastat** (Pfizer Ltd)

**Parecoxib (as Parecoxib sodium) 40 mg** Dynastat 40mg powder for solution for injection vials | 10 vial [PoM](#) £49.60 DT = £49.60

## ANALGESICS > OPIOIDS

F 479

10-May-2021

### Alfentanil

● **INDICATIONS AND DOSE**

**Spontaneous respiration: analgesia and enhancement of anaesthesia for short procedures**

▶ **BY INTRAVENOUS INJECTION**

- ▶ **Adult:** Initially up to 500 micrograms, dose to be administered over 30 seconds; supplemental doses 250 micrograms

**Assisted ventilation: analgesia and enhancement of anaesthesia for short procedures**

▶ **BY INTRAVENOUS INJECTION**

- ▶ **Adult:** Initially 30–50 micrograms/kg, supplemental doses 15 micrograms/kg

**Assisted ventilation: analgesia and enhancement of anaesthesia during maintenance of anaesthesia for longer procedures**

▶ **BY INTRAVENOUS INFUSION**

- ▶ **Adult:** Initially 50–100 micrograms/kg, dose to be administered over 10 minutes or as a bolus, followed by maintenance 30–60 micrograms/kg/hour

**Assisted ventilation: analgesia and suppression of respiratory activity during intensive care for up to 4 days**

▶ **BY INTRAVENOUS INFUSION**

- ▶ **Adult:** Initially 2 mg/hour, adjusted according to response; usual dose 0.5–10 mg/hour, alternatively initially 5 mg in divided doses, to be administered over 10 minutes; dose used for more rapid initial control, reduce rate of administration if hypotension or bradycardia occur; additional doses of 0.5–1 mg may be given by intravenous injection during short painful procedures

**DOSES AT EXTREMES OF BODY-WEIGHT**

- ▶ To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

● **CAUTIONS**

- ▶ Repeated intra-operative doses [E<sub>VG</sub>](#) Repeated intra-operative doses of alfentanil should be given with care since the resulting respiratory depression can persist postoperatively and occasionally it may become apparent for the first time postoperatively when monitoring of the patient might be less intensive. [M](#)

● **INTERACTIONS** → Appendix 1: opioids

● **SIDE-EFFECTS**

- ▶ **Common or very common** Apnoea · chills · fatigue · hypertension · hypotension · movement disorders · muscle rigidity · procedural complications · visual impairment
- ▶ **Uncommon** Coma · hiccups · hypercapnia · pain · post procedural complications · respiratory disorders
- ▶ **Rare or very rare** Agitation · crying · epistaxis · vascular pain

- ▶ **Frequency not known** Cardiac arrest · cough · fever · loss of consciousness · seizure

**SIDE-EFFECTS, FURTHER INFORMATION** Alfentanil can cause muscle rigidity, particularly of the chest wall or jaw; this can be managed by the use of neuromuscular blocking drugs.

- **BREAST FEEDING** Present in milk—withhold breast-feeding for 24 hours.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution. **Dose adjustments** Manufacturer advises dose reduction and cautious titration.
- **RENAL IMPAIRMENT** **[EvGr]** Use with caution and titrate carefully (risk of increased and prolonged effects). **[M]** **Dose adjustments** **[EvGr]** Dose reduction may be required in renal failure. **[M]**
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises 5 mg/mL injection should be diluted in Glucose 5% or Sodium Chloride 0.9% before use.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

#### Solution for injection

##### ▶ Alfentanil (Non-proprietary)

- Alfentanil (as Alfentanil hydrochloride) 5 mg per 1 mL Rapifen Intensive Care 5mg/1ml solution for injection ampoules | 10 ampoule **[PoM]** £25.00 DT = £25.00 (Hospital only) **[CD2]**

479

12-May-2021

## Remifentanil

### ● INDICATIONS AND DOSE

#### Analgesia and enhancement of anaesthesia at induction (initial bolus injection)

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: Initially 0.25–1 microgram/kg, dose to be administered over at least 30 seconds, if patient is to be intubated more than 8 minutes after start of intravenous infusion, initial bolus intravenous injection dose is not necessary

#### Analgesia and enhancement of anaesthesia at induction with or without initial bolus dose

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: 30–60 micrograms/kg/hour, if patient is to be intubated more than 8 minutes after start of intravenous infusion, initial bolus intravenous injection dose is not necessary

#### Assisted ventilation: analgesia and enhancement of anaesthesia during maintenance of anaesthesia (initial bolus injection)

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: Initially 0.25–1 microgram/kg, dose to be administered over at least 30 seconds

#### Assisted ventilation: analgesia and enhancement of anaesthesia during maintenance of anaesthesia with or without initial bolus dose

##### ▶ BY INTRAVENOUS INFUSION

- ▶ Adult: 3–120 micrograms/kg/hour, dose to be administered according to anaesthetic technique and adjusted according to response, in light anaesthesia additional doses can be given by intravenous injection every 2–5 minutes during the intravenous infusion

#### Spontaneous respiration: analgesia and enhancement of anaesthesia during maintenance of anaesthesia

##### ▶ BY INTRAVENOUS INFUSION

- ▶ Adult: Initially 2.4 micrograms/kg/hour, adjusted according to response; usual dose 1.5–6 micrograms/kg/hour

#### Assisted ventilation: analgesia and sedation in intensive-care patients (for max 3 days)

##### ▶ BY INTRAVENOUS INFUSION

- ▶ Adult: Initially 6–9 micrograms/kg/hour, then adjusted in steps of 1.5 micrograms/kg/hour, allow at least 5 minutes between dose adjustments; usual dose 0.36–44.4 micrograms/kg/hour, if an infusion rate of 12 micrograms/kg/hour does not produce adequate sedation add another sedative (consult product literature for details)

#### Assisted ventilation: additional analgesia during stimulating or painful procedures in intensive-care patients

##### ▶ BY INTRAVENOUS INFUSION

- ▶ Adult: Usual dose 15–45 micrograms/kg/hour, maintain infusion rate of at least 6 micrograms/kg/hour for at least 5 minutes before procedure and adjust every 2–5 minutes according to requirements

#### Cardiac surgery

- ▶ Adult: (consult product literature)

#### DOSES AT EXTREMES OF BODY-WEIGHT

- ▶ To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **UNLICENSED USE** Remifentanil doses in BNF may differ from those in product literature.

- **CONTRA-INDICATIONS** Analgesia in conscious patients

- **INTERACTIONS** → Appendix 1: opioids

#### ● SIDE-EFFECTS

- ▶ Common or very common Apnoea · hypotension · muscle rigidity · post procedural complications

- ▶ Uncommon Hypoxia

- ▶ Rare or very rare Cardiac arrest

- ▶ Frequency not known Agitation · atrioventricular block · hypertension · seizure

**SIDE-EFFECTS, FURTHER INFORMATION** In contrast to other opioids which are metabolised in the liver, remifentanil undergoes rapid metabolism by plasma esterases; it has short duration of action which is independent of dose and duration of infusion.

**Muscle rigidity** Remifentanil can cause muscle rigidity that can be managed by the use of neuromuscular blocking drugs.

- **PREGNANCY** No information available.

- **BREAST FEEDING** Avoid breast-feeding for 24 hours after administration—present in milk in animal studies.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment (limited information available).

#### ● RENAL IMPAIRMENT

- Dose adjustments **[EvGr]** No dose adjustment necessary in renal impairment. **[M]**

#### ● DIRECTIONS FOR ADMINISTRATION

- ▶ With intravenous use For intravenous infusion (*Ultiva*®), manufacturer advises give continuously in Glucose 5% or

Sodium Chloride 0.9% or Water for Injections; reconstitute with infusion fluid to a concentration of 1 mg/mL then dilute further to a concentration of 20–250 micrograms/mL (50 micrograms/mL recommended for general anaesthesia, 20–50 micrograms/mL recommended when used with target controlled infusion (TCI) device).

#### ● PRESCRIBING AND DISPENSING INFORMATION

Remifentanyl should not be given by intravenous injection intra-operatively, but it is well suited to continuous infusion; a supplementary analgesic is given before stopping the infusion of remifentanyl.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for solution for injection

##### ▶ Remifentanyl (Non-proprietary)

**Remifentanyl (as Remifentanyl hydrochloride) 1 mg** Remifentanyl 1mg powder for concentrate for solution for injection vials | 5 vial [PoM](#) £25.60-£33.70 (Hospital only) [CD2](#)

**Remifentanyl (as Remifentanyl hydrochloride) 2 mg** Remifentanyl 2mg powder for concentrate for solution for injection vials | 5 vial [PoM](#) £51.13-£67.40 (Hospital only) [CD2](#)

**Remifentanyl (as Remifentanyl hydrochloride) 5 mg** Remifentanyl 5mg powder for concentrate for solution for injection vials | 5 vial [PoM](#) £127.90-£168.45 (Hospital only) [CD2](#)

##### ▶ **Ultiva** (Aspen Pharma Trading Ltd)

**Remifentanyl (as Remifentanyl hydrochloride) 1 mg** Ultiva 1mg powder for solution for injection vials | 5 vial [PoM](#) £25.58 (Hospital only) [CD2](#)

**Remifentanyl (as Remifentanyl hydrochloride) 2 mg** Ultiva 2mg powder for solution for injection vials | 5 vial [PoM](#) £51.15 (Hospital only) [CD2](#)

**Remifentanyl (as Remifentanyl hydrochloride) 5 mg** Ultiva 5mg powder for solution for injection vials | 5 vial [PoM](#) £127.88 (Hospital only) [CD2](#)

#### Diagnostic manoeuvres and procedures not involving intense pain

▶ BY INTRAMUSCULAR INJECTION

▶ Adult: Initially 4 mg/kg

#### Induction and maintenance of anaesthesia for long procedures

▶ BY INTRAVENOUS INFUSION

▶ Adult: Initially 0.5–2 mg/kg, using an infusion solution containing 1 mg/ml; maintenance 10–45 micrograms/kg/minute, adjusted according to response

#### IMPORTANT SAFETY INFORMATION

Ketamine should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CONTRA-INDICATIONS** Acute porphyrias p. 1150 · eclampsia · head trauma · hypertension · pre-eclampsia · raised intracranial pressure · severe cardiac disease · stroke
- **CAUTIONS** Acute circulatory failure (shock) · cardiovascular disease · dehydration · elderly · fixed cardiac output · hallucinations · head injury · hypertension · hypovolaemia · increased cerebrospinal fluid pressure · intracranial mass lesions · nightmares · predisposition to seizures · psychotic disorders · raised intra-ocular pressure · respiratory tract infection · thyroid dysfunction
- **INTERACTIONS** → Appendix 1: ketamine
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Anxiety · behaviour abnormal · confusion · diplopia · hallucination · muscle tone increased · nausea · nystagmus · skin reactions · sleep disorders · tonic clonic movements · vomiting
  - ▶ **Uncommon** Appetite decreased · arrhythmias · hypotension · respiratory disorders
  - ▶ **Rare or very rare** Apnoea · cystitis · cystitis haemorrhagic · delirium · dysphoria · flashback · hypersalivation
  - ▶ **Frequency not known** Drug-induced liver injury

**SIDE-EFFECTS, FURTHER INFORMATION** Incidence of hallucinations can be reduced by premedication with a benzodiazepine (such as midazolam).

- **PREGNANCY** May depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Avoid for at least 12 hours after last dose.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (risk of prolonged duration of action).  
**Dose adjustments** Manufacturer advises consider dose reduction.
- **DIRECTIONS FOR ADMINISTRATION** For *continuous intravenous infusion*, dilute to a concentration of 1 mg/mL with Glucose 5% or Sodium Chloride 0.9%; use microdrip infusion for maintenance of anaesthesia. For *intravenous injection*, dilute 100 mg/mL strength to a concentration of not more than 50 mg/mL with Glucose 5% or Sodium Chloride 0.9% or Water for Injections.

#### ● PATIENT AND CARER ADVICE

**Driving and skilled tasks** Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks afterwards. For a short general anaesthetic the risk extends to **at least 24 hours** after administration. Responsible persons should be available to take patients home. The dangers of taking **alcohol** should also be emphasised.

For information on 2015 legislation regarding driving whilst taking certain controlled drugs, including ketamine, see *Drugs and driving* under Guidance on prescribing p. 1.

## 1.4 Peri-operative sedation

### Conscious sedation for clinical procedures

#### Overview

Sedation of patients during diagnostic and therapeutic procedures is used to reduce fear and anxiety, to control pain, and to minimise excessive movement. The choice of sedative drug will depend upon the intended procedure; some procedures are safer and more successful under anaesthesia. The patient should be *monitored carefully*; monitoring should begin as soon as the sedative is given or when the patient becomes drowsy, and should be continued until the patient wakes up.

#### • INDICATIONS AND DOSE

##### Conscious sedation for procedures

###### ▶ BY INTRAVENOUS INJECTION

- ▶ Adult: (consult product literature)

#### IMPORTANT SAFETY INFORMATION

##### ANAESTHESIA

Benzodiazepines should only be administered for anaesthesia by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management.

#### • CAUTIONS

Cardiac disease

##### CAUTIONS, FURTHER INFORMATION

- ▶ Recovery when used for sedation Remimazolam has a fast onset of action, recovery is faster than for other benzodiazepines such as diazepam, but may be significantly longer in the elderly, in patients with severe hepatic impairment, or with body weight less than 50 kg.
- **INTERACTIONS** → Appendix 1: benzodiazepines
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Arrhythmias · dyspnoea · gas exchange abnormal · respiratory disorders · vomiting
  - ▶ **Uncommon** Chills · feeling cold · hiccups
- **PREGNANCY** [EvGr] Avoid—limited information available. 
- **BREAST FEEDING** [EvGr] Avoid breast feeding for 24 hours after administration—present in milk in *animal* studies. 
- **HEPATIC IMPAIRMENT** [EvGr] Caution in severe impairment (more pronounced and prolonged effects). 
- Dose adjustments** [EvGr] Titrate doses with caution in severe impairment. 
- **PATIENT AND CARER ADVICE** Patients should be advised to avoid alcohol intake for 24 hours before the procedure. **Driving and skilled tasks** Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risks of undertaking skilled tasks (e.g. driving) afterwards. For intravenous benzodiazepines the risk extends to **at least 24 hours**

after administration. Responsible persons should be available to take patients home afterwards. The dangers of taking **alcohol** should be emphasised.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for solution for injection

##### ▶ Byfavo (PAION Netherlands B.V.) ▼

## HYPNOTICS, SEDATIVES AND ANXIOLYTICS > NON-BENZODIAZEPINE HYPNOTICS AND SEDATIVES

### Dexmedetomidine

07-Aug-2020

#### • INDICATIONS AND DOSE

##### Maintenance of sedation during intensive care

###### ▶ BY INTRAVENOUS INFUSION

- ▶ Adult: 0.7 microgram/kg/hour, adjusted according to response; usual dose 0.2–1.4 micrograms/kg/hour

#### IMPORTANT SAFETY INFORMATION

Dexmedetomidine should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management.

- **CONTRA-INDICATIONS** Acute cerebrovascular disorders · second- or third-degree AV block (unless pacemaker fitted) · uncontrolled hypotension
- **CAUTIONS** Abrupt withdrawal after prolonged use · bradycardia · elderly (risk of hypotension) · ischaemic heart disease (especially at higher doses) · malignant hyperthermia · severe cerebrovascular disease (especially at higher doses) · severe neurological disorders · spinal cord injury
- **INTERACTIONS** → Appendix 1: dexmedetomidine
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Agitation · arrhythmias · dry mouth · hyperglycaemia · hypertension · hyperthermia · hypoglycaemia · hypotension · myocardial infarction · myocardial ischaemia · nausea · respiratory depression · vomiting
  - ▶ **Uncommon** Abdominal distension · apnoea · atriocentric block · dyspnoea · hallucination · hypoalbuminaemia · metabolic acidosis · thirst
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—*toxicity in animal* studies.
- **BREAST FEEDING** Manufacturer advises avoid unless potential benefit outweighs risk—present in milk in *animal* studies.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (increased risk of toxicity due to decreased clearance). **Dose adjustments** Manufacturer advises consider dose reduction.
- **MONITORING REQUIREMENTS**
  - ▶ Monitor cardiac function.
  - ▶ Monitor respiratory function in non-intubated patients.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises to be diluted before use. For *intravenous infusion* given continuously in Glucose 5% or Sodium Chloride 0.9%, dilute to a concentration of 4 micrograms/mL.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for infusion

- ▶ **Dexmedetomidine (Non-proprietary)**

- ▶ **Dexmedetomidine (as Dexmedetomidine hydrochloride)**

- ▶ **100 microgram per 1 ml** Dexmedetomidine 1mg/10ml concentrate for solution for infusion ampoules | 4 ampoule [PoM] £313.10 (Hospital only)

- ▶ **Dexmedetomidine 200micrograms/2ml concentrate for solution for infusion ampoules** | 5 ampoule [PoM] £78.30 (Hospital only)

- ▶ **Dexmedetomidine 1mg/10ml concentrate for solution for infusion vials** | 4 vial [PoM] £313.20 (Hospital only) | 5 vial [PoM] £391.50 (Hospital only)

- ▶ **Dexmedetomidine 400micrograms/4ml concentrate for solution for infusion vials** | 4 vial [PoM] £125.28-£125.30 (Hospital only)

- ▶ **Dexmedetomidine 400micrograms/4ml concentrate for solution for infusion ampoules** | 4 ampoule [PoM] £125.30 (Hospital only)

- ▶ **Dexdor** (Orion Pharma (UK) Ltd)

- ▶ **Dexmedetomidine (as Dexmedetomidine hydrochloride)**

- ▶ **100 microgram per 1 ml** Dexdor 1mg/10ml concentrate for solution for infusion vials | 4 vial [PoM] £313.20 (Hospital only)

- ▶ **Dexdor 400micrograms/4ml concentrate for solution for infusion vials** | 4 vial [PoM] £125.28 (Hospital only)

- ▶ **Dexdor 200micrograms/2ml concentrate for solution for infusion ampoules** | 5 ampoule [PoM] £78.30 (Hospital only)

## 2 Malignant hyperthermia

### MUSCLE RELAXANTS > DIRECTLY ACTING

#### Dantrolene sodium

08-Mar-2021

- **DRUG ACTION** Acts on skeletal muscle cells by interfering with calcium efflux, thereby stopping the contractile process.

- **INDICATIONS AND DOSE**

- **Malignant hyperthermia**

- ▶ **BY RAPID INTRAVENOUS INJECTION**

- ▶ **Adult:** Initially 2–3 mg/kg, then 1 mg/kg, repeated if necessary; maximum 10 mg/kg per course

- **Chronic severe spasticity of voluntary muscle**

- ▶ **BY MOUTH**

- ▶ **Adult:** Initially 25 mg daily, then increased to up to 100 mg 4 times a day, dose increased at weekly intervals; usual dose 75 mg 3 times a day

- **Muscle cramps in motor neurone disease (specialist use only)**

- ▶ **BY MOUTH**

- ▶ **Adult:** Initially 25 mg daily, then increased to up to 100 mg 4 times a day, dose increased at weekly intervals

- **UNLICENSED USE**

- ▶ With oral use [EvGr] Dantrolene sodium is used for the treatment of muscle cramps in motor neurone disease, but is not licensed for this indication. 

#### IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in the use of dantrolene when used for malignant hyperthermia.

- **CONTRA-INDICATIONS**

- ▶ With oral use Acute muscle spasm · avoid when spasticity is useful, for example, locomotion

- **CAUTIONS**

- ▶ With intravenous use Avoid extravasation (risk of tissue necrosis)
- ▶ With oral use Females (hepatotoxicity) · history of liver disorders (hepatotoxicity) · if doses greater than 400 mg daily (hepatotoxicity) · impaired cardiac function · impaired pulmonary function · patients over 50 years

(hepatotoxicity) · therapeutic effect may take a few weeks to develop—discontinue if no response within 6–8 weeks

- **INTERACTIONS** → Appendix 1: dantrolene

- **SIDE-EFFECTS**

- **GENERAL SIDE-EFFECTS**

- ▶ **Common or very common** Abdominal pain · hepatic disorders · nausea · respiratory disorders · skin reactions · speech disorder · vomiting

- ▶ **Uncommon** Crystalluria · hyperhidrosis

- ▶ **Frequency not known** Arrhythmias · dizziness · drowsiness

- **SPECIFIC SIDE-EFFECTS**

- ▶ **Common or very common**

- ▶ With oral use Appetite decreased · chills · confusion · depression · eosinophilia · fever · headache · insomnia · nervousness · pericarditis · visual impairment

- ▶ **Uncommon**

- ▶ With oral use Constipation · dysphagia · haemorrhage · heart failure aggravated · urinary disorders

- ▶ **Frequency not known**

- ▶ With intravenous use Gastrointestinal haemorrhage · heart failure · localised pain · pulmonary oedema · seizure · thrombophlebitis

- ▶ With oral use Asthenia · diarrhoea · dyspnoea · hypertension · malaise

- **PREGNANCY**

- ▶ With intravenous use Use only if potential benefit outweighs risk.

- ▶ With oral use Although teratological studies in *animals* have proved satisfactory, dantrolene sodium does cross the placenta, therefore manufacturer advises avoid.

- **BREAST FEEDING**

- ▶ With intravenous use Present in milk—use only if potential benefit outweighs risk.

- ▶ With oral use Present in milk—manufacturer advises avoid.

- **HEPATIC IMPAIRMENT**

- ▶ With oral use Manufacturer advises avoid in hepatic impairment.

- **MONITORING REQUIREMENTS**

- ▶ With oral use Test liver function before and at intervals during therapy.

- **PATIENT AND CARER ADVICE**

- ▶ **Hepatotoxicity** ▶ With oral use Patients should be told how to recognise signs of liver disorder and advised to seek prompt medical attention if symptoms such as anorexia, nausea, vomiting, fatigue, abdominal pain, dark urine, or pruritus develop.

- ▶ **Driving and skilled tasks** ▶ With oral use Drowsiness may affect performance of skilled tasks (e.g. driving); effects of alcohol enhanced.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

#### Powder for solution for injection

- ▶ **Dantrium** (Forum Health Products Ltd)

- ▶ **Dantrolene sodium 20 mg** Dantrium Intravenous 20mg powder for solution for injection vials | 12 vial [PoM] £612.00 (Hospital only) | 36 vial [PoM] £1,836.00 (Hospital only)

#### Capsule

CAUTIONARY AND ADVISORY LABELS 2

- ▶ **Dantrium** (Forum Health Products Ltd)

- ▶ **Dantrolene sodium 25 mg** Dantrium 25mg capsules |

- 100 capsule [PoM] £16.87 DT = £16.87

- ▶ **Dantrolene sodium 100 mg** Dantrium 100mg capsules |

- 100 capsule [PoM] £43.07 DT = £43.07

# Local anaesthesia

## Anaesthesia (local)

### Local anaesthetic drugs

The use of local anaesthetics by injection or by application to mucous membranes to produce local analgesia is discussed in this section.

Local anaesthetic drugs act by causing a reversible block to conduction along nerve fibres. They vary widely in their potency, toxicity, duration of action, stability, solubility in water, and ability to penetrate mucous membranes. These factors determine their application, e.g. topical (surface), infiltration, peripheral nerve block, intravenous regional anaesthesia (Bier's block), plexus, epidural (extradural), or spinal (intrathecal or subarachnoid) block. Local anaesthetics may also be used for postoperative pain relief, thereby reducing the need for analgesics such as opioids.

Bupivacaine hydrochloride p. 1462 has a longer duration of action than other local anaesthetics. It has a slow onset of action, taking up to 30 minutes for full effect. It is often used in lumbar epidural blockade and is particularly suitable for continuous epidural analgesia in labour, or for postoperative pain relief. It is the principal drug used for spinal anaesthesia. Hyperbaric solutions containing glucose may be used for spinal block.

Levobupivacaine p. 1465, an isomer of bupivacaine, has anaesthetic and analgesic properties similar to bupivacaine hydrochloride, but is thought to have fewer adverse effects.

Lidocaine hydrochloride p. 1466 is effectively absorbed from mucous membranes and is a useful surface anaesthetic in concentrations up to 10%. Except for surface anaesthesia and dental anaesthesia, solutions should **not** usually exceed 1% in strength. The duration of the block (with adrenaline/epinephrine p. 241) is about 90 minutes.

Prilocaine hydrochloride p. 1470 is a local anaesthetic of low toxicity which is similar to lidocaine hydrochloride. A hyperbaric solution of prilocaine hydrochloride (containing glucose) may be used for spinal anaesthesia.

Ropivacaine hydrochloride p. 1471 is an amide-type local anaesthetic agent similar to bupivacaine hydrochloride. It is less cardiotoxic than bupivacaine hydrochloride, but also less potent.

Tetracaine p. 1472, a para-aminobenzoic acid ester, is an effective local anaesthetic for topical application; a 4% gel is indicated for anaesthesia before venepuncture or venous cannulation. It is rapidly absorbed from mucous membranes and should **never** be applied to inflamed, traumatised, or highly vascular surfaces. It should never be used to provide anaesthesia for bronchoscopy or cystoscopy because lidocaine hydrochloride is a safer alternative.

### Administration by injection

The dose of local anaesthetic depends on the injection site and the procedure used. In determining the safe dosage, it is important to take account of the rate of absorption and excretion, and of the potency. The patient's age, weight, physique, and clinical condition, and the vascularity of the administration site and the duration of administration, must also be considered.

Uptake of local anaesthetics into the systemic circulation determines their duration of action and produces toxicity.

NHS Improvement has advised (September 2016) that, prior to administration, all injectable medicines must be drawn directly from their original ampoule or container into a syringe and should **never** be decanted into gallipots or open containers. This is to avoid the risk of medicines being confused with other substances, e.g. skin disinfectants, and to reduce the risk of contamination.

Great care must be taken to avoid accidental intravascular injection; local anaesthetic injections should be given slowly in order to detect inadvertent intravascular administration. When prolonged analgesia is required, a long-acting local anaesthetic is preferred to minimise the likelihood of cumulative systemic toxicity. Local anaesthesia around the oral cavity may impair swallowing and therefore increases the risk of aspiration.

Epidural anaesthesia is commonly used during surgery, often combined with general anaesthesia, because of its protective effect against the stress response of surgery. It is often used when good postoperative pain relief is essential.

### Vasoconstrictors in combination with local anaesthetics

Local anaesthetics cause dilatation of blood vessels. The addition of a vasoconstrictor such as adrenaline/epinephrine to the local anaesthetic preparation diminishes local blood flow, slowing the rate of absorption and thereby prolonging the anaesthetic effect. Great care should be taken to avoid inadvertent intravenous administration of a preparation containing adrenaline/epinephrine, and it is **not** advisable to give adrenaline/epinephrine with a local anaesthetic injection in digits or appendages because of the risk of ischaemic necrosis.

Adrenaline/epinephrine must be used in a low concentration when administered with a local anaesthetic. Care must also be taken to calculate a safe maximum dose of local anaesthetic when using combination products.

In patients with severe hypertension or unstable cardiac rhythm, the use of adrenaline/epinephrine with a local anaesthetic may be hazardous. For these patients an anaesthetic without adrenaline/epinephrine should be used.

### Dental anaesthesia

Lidocaine hydrochloride is widely used in dental procedures; it is most often used in combination with adrenaline/epinephrine. Lidocaine hydrochloride 2% combined with adrenaline/epinephrine 1 in 80 000 (12.5 micrograms/mL) is a safe and effective preparation; there is no justification for using higher concentrations of adrenaline/epinephrine.

The amide-type local anaesthetics **articaine** and mepivacaine hydrochloride p. 1469 are also used in dentistry; they are available in cartridges suitable for dental use. Mepivacaine hydrochloride is available with or without adrenaline/epinephrine and articaine is available with adrenaline.

In patients with severe hypertension or unstable cardiac rhythm, mepivacaine hydrochloride without adrenaline/epinephrine may be used. Alternatively, prilocaine hydrochloride with or without felypressin can be used but there is no evidence that it is any safer. Felypressin can cause coronary vasoconstriction when used at high doses; limit dose in patients with coronary artery disease.

### Toxicity induced by local anaesthesia

For management of toxicity see Severe local anaesthetic-induced cardiovascular toxicity below.

## Severe local anaesthetic-induced cardiovascular toxicity

### Overview

After injection of a bolus of local anaesthetic, toxicity may develop at any time in the following hour. In the event of signs of toxicity during injection, the administration of the local anaesthetic must be stopped immediately.

Cardiovascular status must be assessed and cardiopulmonary resuscitation procedures must be followed.

In the event of local anaesthetic-induced cardiac arrest, standard cardiopulmonary resuscitation should be initiated immediately. Lidocaine must not be used as anti-arrhythmic therapy.

If the patient does not respond rapidly to standard procedures, 20% lipid emulsion such as *Intralipid*® [unlicensed indication] should be given intravenously at an initial bolus dose of 1.5 mL/kg over 1 minute, followed by an infusion of 15 mL/kg/hour. After 5 minutes, if cardiovascular stability has not been restored or circulation deteriorates, give a maximum of two further bolus doses of 1.5 mL/kg over 1 minute, 5 minutes apart, and increase the infusion rate to 30 mL/kg/hour. Continue infusion until cardiovascular stability and adequate circulation are restored or maximum cumulative dose of 12 mL/kg is given.

Standard cardiopulmonary resuscitation must be maintained throughout lipid emulsion treatment.

Propofol is not a suitable alternative to lipid emulsion.

Further advice on ongoing treatment should be obtained from the National Poisons Information Service.

Detailed treatment algorithms and accompanying notes are available at [www.tobase.org](http://www.tobase.org) can be found in the Association of Anaesthetists of Great Britain and Ireland safety guideline, Management of Severe Local Anaesthetic Toxicity and Management of Severe Local Anaesthetic Toxicity – Accompanying notes.

## ANAESTHETICS, LOCAL

### Adrenaline with articaine hydrochloride

19-Dec-2019

(Carticaine hydrochloride with epinephrine)

#### ● INDICATIONS AND DOSE

##### Infiltration anaesthesia in dentistry

###### ► BY REGIONAL ADMINISTRATION

► Adult: Consult expert dental sources

##### DOSES AT EXTREMES OF BODY-WEIGHT

► To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

#### IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Injection into infected tissues · injection into inflamed tissues · preparations containing preservatives should not be used for caudal, epidural, or spinal block

#### CONTRA-INDICATIONS, FURTHER INFORMATION

- Injection site Manufacturer advises the local anaesthetic effect may be reduced when injected into an inflamed or infected area, due to altered local pH. Increased absorption into the blood also increases the possibility of systemic side-effects.
- **CAUTIONS** Arrhythmias · arteriosclerosis · cardiovascular disease · cerebrovascular disease · cor pulmonale · debilitated patients (consider dose reduction) · diabetes mellitus · elderly (consider dose reduction) · epilepsy · hypercalcaemia · hyperreflexia · hypertension · hyperthyroidism · hypokalaemia · hypovolaemia · impaired cardiac conduction · impaired respiratory function · ischaemic heart disease · myasthenia gravis · obstructive cardiomyopathy · occlusive vascular disease · organic brain damage · phaeochromocytoma · prostate disorders ·

psychoneurosis · severe angina · shock · susceptibility to angle-closure glaucoma

#### CAUTIONS, FURTHER INFORMATION

- Use of vasoconstrictors In patients with severe hypertension or unstable cardiac rhythm, the use of adrenaline with a local anaesthetic may be hazardous. For these patients an anaesthetic without adrenaline should be used.
- **INTERACTIONS** → Appendix 1: articaïne · sympathomimetics, vasoconstrictor
- **SIDE-EFFECTS** Face oedema · gingivitis · headache · nausea · sensation abnormal

**SIDE-EFFECTS, FURTHER INFORMATION** Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection. The toxicity mainly involves the central nervous and cardiovascular systems. The onset of toxicity can be unpredictable and delayed. Monitor as per local protocol for at least 30 minutes after administration.

- **ALLERGY AND CROSS-SENSITIVITY**
  - Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.
- **PREGNANCY** Use only if potential benefit outweighs risk—no information available.
- **BREAST FEEDING** Avoid breast-feeding for 48 hours after administration.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (increased risk of toxicity in severe impairment).
- **RENAL IMPAIRMENT** Manufacturers advise use with caution in severe impairment.
- **MONITORING REQUIREMENTS** Consider monitoring blood pressure and ECG (advised with systemic adrenaline/epinephrine).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

EXCIPIENTS: May contain Sulfités

##### ► *Septanest* (Septodont Ltd)

**Adrenaline (as Adrenaline acid tartrate) 10 microgram per 1 ml, Articaine hydrochloride 40 mg per 1 ml** *Septanest 1* in 100,000 solution for injection cartridges | 50 cartridge [POM] £24.95 (Hospital only)

**Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 ml, Articaine hydrochloride 40 mg per 1 ml** *Septanest 1* in 200,000 solution for injection cartridges | 50 cartridge [POM] £24.95 (Hospital only)

## Bupivacaine hydrochloride

09-Dec-2019

#### ● INDICATIONS AND DOSE

##### Surgical anaesthesia, lumbar epidural block

###### ► BY REGIONAL ADMINISTRATION

► Adult: 75–150 mg, dose administered using a 5 mg/mL (0.5%) solution

##### Surgical anaesthesia, field block

###### ► BY REGIONAL ADMINISTRATION

► Adult: Up to 150 mg, dose administered using a 2.5 mg/mL (0.25%) or 5 mg/mL (0.5%) solution

##### Surgical anaesthesia, thoracic epidural block

###### ► BY THORACIC EPIDURAL

► Adult: 12.5–50 mg, dose administered using a 2.5 mg/mL (0.25%) or 5 mg/mL (0.5%) solution

**Surgical anaesthesia, caudal epidural block**

## ▶ BY REGIONAL ADMINISTRATION

- ▶ Adult: 50–150 mg, dose administered using a 2.5 mg/mL (0.25%) or 5 mg/mL (0.5%) solution

**Surgical anaesthesia, major nerve block**

## ▶ BY REGIONAL ADMINISTRATION

- ▶ Adult: 50–175 mg, dose administered using 5 mg/mL (0.5%) solution

**Acute pain, intra-articular block**

## ▶ BY INTRA-ARTICULAR INJECTION

- ▶ Adult: Up to 100 mg, dose administered using a 2.5 mg/mL (0.25%) solution; when co-administered with bupivacaine by another route, total max. 150 mg

**Acute pain, thoracic epidural block**

## ▶ BY CONTINUOUS EPIDURAL INFUSION

- ▶ Adult: 6.3–18.8 mg/hour, dose administered using a 1.25 mg/mL (0.125%) or 2.5 mg/mL (0.25%) solution; maximum 400 mg per day

**Acute pain, labour**

## ▶ BY CONTINUOUS EPIDURAL INFUSION

- ▶ Adult: 6.25–12.5 mg/hour, dose administered using a 1.25 mg/mL (0.125%) solution; maximum 400 mg per day

**Acute pain, lumbar epidural block**

## ▶ INITIALLY BY LUMBAR EPIDURAL

- ▶ Adult: 15–37.5 mg, then (by lumbar epidural) 15–37.5 mg, repeated when required at intervals of at least 30 minutes, dose administered by intermittent injection using a 2.5 mg/mL (0.25%) solution, alternatively (by continuous epidural infusion) 12.5–18.8 mg/hour, dose administered using a 1.25 mg/mL (0.125%) or 2.5 mg/mL (0.25%) solution; maximum 400 mg per day

**Acute pain, field block**

## ▶ BY REGIONAL ADMINISTRATION

- ▶ Adult: Up to 150 mg, dose administered using a 2.5 mg/mL (0.25%) solution

**DOSES AT EXTREMES OF BODY-WEIGHT**

- ▶ To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

**MARCAIN HEAVY®****Intrathecal anaesthesia for surgery**

## ▶ BY INTRATHECAL INJECTION

- ▶ Adult: 10–20 mg

**IMPORTANT SAFETY INFORMATION**

The licensed doses stated may not be appropriate in some settings and expert advice should be sought.

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Avoid injection into infected tissues · avoid injection into inflamed tissues · intravenous regional anaesthesia (Bier's block) · preparations containing preservatives should not be used for caudal, epidural, or spinal block

**CONTRA-INDICATIONS, FURTHER INFORMATION**

- ▶ Injection site Manufacturer advises local anaesthetics should not be injected into inflamed or infected tissues. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.
- **CAUTIONS** Cardiovascular disease · cerebral atheroma · complete heart block · debilitated patients (consider dose reduction) · elderly (consider dose reduction) · epilepsy ·

hypertension · hypotension · hypovolaemia · impaired cardiac conduction · impaired respiratory function · myasthenia gravis · myocardial depression may be more severe and more resistant to treatment · shock

- **INTERACTIONS** → Appendix 1: anaesthetics, local

● **SIDE-EFFECTS**

- ▶ **Common or very common** Arrhythmias · dizziness · hypertension · hypotension · nausea · paraesthesia · urinary retention · vomiting
- ▶ **Uncommon** Neurotoxicity
- ▶ **Rare or very rare** Arachnoiditis · cardiac arrest · diplopia · nerve disorders · paraplegia · paresis · respiratory depression

**SIDE-EFFECTS, FURTHER INFORMATION** Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection. The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems. The onset of toxicity can be unpredictable and delayed. Monitor as per local protocol for at least 30 minutes after administration.

● **ALLERGY AND CROSS-SENSITIVITY**

- ▶ Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- **PREGNANCY** Large doses during delivery can cause neonatal respiratory depression, hypotonia, and bradycardia after epidural block.

**Dose adjustments** Use lower doses for intrathecal use during late pregnancy.

- **BREAST FEEDING** Amount too small to be harmful.

- **HEPATIC IMPAIRMENT** Manufacturer advises use with caution in advanced liver dysfunction.

- **RENAL IMPAIRMENT** Use with caution in severe impairment.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection, infusion, solution for infusion

**Solution for injection**▶ **Bupivacaine hydrochloride (Non-proprietary)**

**Bupivacaine hydrochloride 2.5 mg per 1 ml** Bupivacaine 25mg/10ml (0.25%) solution for injection vials | 10 vial [PoM](#)  (Hospital only)

Bupivacaine 0.25% solution for injection 10ml Sure-Amp ampoules | 20 ampoule [PoM](#) £17.50 DT = £17.50

**Bupivacaine hydrochloride 5 mg per 1 ml** Bupivacaine 0.5% solution for injection 10ml Sure-Amp ampoules | 20 ampoule [PoM](#) £18.30 DT = £18.30 (Hospital only)

Bupivacaine 100mg/20ml (0.5%) solution for injection vials | 10 vial [PoM](#)  (Hospital only)

Bupivacaine 50mg/10ml (0.5%) solution for injection ampoules | 10 ampoule [PoM](#) £7.56-£17.58 DT = £7.56 (Hospital only)

**Bupivacaine hydrochloride anhydrous 40 mg per 1 ml** Bupivacaine Sintetica 40mg/ml (4%) solution for injection ampoules | 10 ampoule [PoM](#)  (Hospital only)

▶ **Marcain (Aspen Pharma Trading Ltd)**

**Bupivacaine hydrochloride 2.5 mg per 1 ml** Marcain 0.25% solution for injection 10ml Polyamp Steripack ampoules | 5 ampoule [PoM](#) £7.92 DT = £7.92 (Hospital only)

**Bupivacaine hydrochloride 5 mg per 1 ml** Marcain 0.5% solution for injection 10ml Polyamp Steripack ampoules | 5 ampoule [PoM](#) £9.25 DT = £9.25 (Hospital only)

**Infusion**▶ **Bupivacaine hydrochloride (Non-proprietary)**

**Bupivacaine hydrochloride 1 mg per 1 ml** Bupivacaine 250mg/250ml (0.1%) infusion bags | 5 bag [PoM](#) £60.87

Bupivacaine hydrochloride 1.25 mg per 1 ml Bupivacaine  
312.5mg/250ml (0.125%) infusion bags | 5 bag [PoM] £62.12

## Bupivacaine with adrenaline

19-Dec-2019

The properties listed below are those particular to the combination only. For the properties of the components please consider, bupivacaine hydrochloride p. 1462, adrenaline/epinephrine p. 241.

### ● INDICATIONS AND DOSE

#### Surgical anaesthesia

- ▶ BY LUMBAR EPIDURAL, OR BY LOCAL INFILTRATION, OR BY CAUDAL EPIDURAL
- ▶ Adult: (consult product literature)

#### Acute pain management

- ▶ BY LUMBAR EPIDURAL, OR BY LOCAL INFILTRATION
- ▶ Adult: (consult product literature)

- **CAUTIONS** In patients with severe hypertension or unstable cardiac rhythm, the use of adrenaline with a local anaesthetic may be hazardous. For these patients an anaesthetic without adrenaline should be used.

- **INTERACTIONS** → Appendix 1: anaesthetics, local · sympathomimetics, vasoconstrictor

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ▶ Bupivacaine with adrenaline (Non-proprietary)

Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 ml, Bupivacaine hydrochloride 2.5 mg per 1 ml Bupivacaine 25mg/10ml (0.25%) / Adrenaline (base) 50micrograms/10ml (1 in 200,000) solution for injection ampoules | 10 ampoule [PoM] £46.00 DT = £46.00

Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 ml, Bupivacaine hydrochloride anhydrous 2.5 mg per 1 ml Carbostesin-adrenaline 0.25% / 100micrograms/20ml (1 in 200,000) solution for injection ampoules | 1 ampoule [PoM] ☒ (Hospital only)

Carbostesin-adrenaline 0.25% / 25micrograms/5ml (1 in 200,000) solution for injection ampoules | 1 ampoule [PoM] ☒ (Hospital only)

Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 ml, Bupivacaine hydrochloride 5 mg per 1 ml Bupivacaine 50mg/10ml (0.5%) / Adrenaline (base) 50micrograms/10ml (1 in 200,000) solution for injection ampoules | 10 ampoule [PoM] £51.75 DT = £51.75

Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 ml, Bupivacaine hydrochloride anhydrous 5 mg per 1 ml Carbostesin-adrenaline 0.5% / 25micrograms/5ml (1 in 200,000) solution for injection ampoules | 1 ampoule [PoM] ☒ (Hospital only)

Carbostesin-adrenaline 0.5% / 100micrograms/20ml (1 in 200,000) solution for injection ampoules | 1 ampoule [PoM] ☒ (Hospital only)

## Chlorprocaine hydrochloride

07-Nov-2021

- **DRUG ACTION** Chlorprocaine is an ester-type local anaesthetic that blocks the generation and conduction of nerve impulses.

### ● INDICATIONS AND DOSE

#### Spinal anaesthesia for surgical procedures lasting 40 minutes or less (using 10 mg/ml solution) (specialist use only)

- ▶ BY SLOW INTRATHECAL INJECTION
- ▶ Adult: 40–50 mg (max. per dose 50 mg), dose depends on desired length of block

#### Surgical anaesthesia for procedures lasting 60 minutes or less, peripheral nerve block (using 20 mg/ml solution) (specialist use only)

- ▶ BY REGIONAL ADMINISTRATION
- ▶ Adult: (consult product literature)

#### IMPORTANT SAFETY INFORMATION

The licensed doses stated above may not be appropriate in some settings and expert advice should be sought.

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Avoid injection into infected tissues · avoid injection into inflamed tissues · hypovolaemia · impaired cardiac conduction · intravenous regional anaesthesia (Bier's block) · severe anaemia

#### CONTRA-INDICATIONS, FURTHER INFORMATION

- ▶ Injection site Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.

- **CAUTIONS** Acute porphyrias p. 1150 · cardiovascular disease · complete heart block · debilitated patients (consider dose reduction) · elderly (consider dose reduction) · low plasma-cholinesterase activity (including severe liver disease) · neurological disorders · neuromuscular disorders · partial heart block

- **INTERACTIONS** → Appendix 1: chlorprocaine

#### ● SIDE-EFFECTS

##### GENERAL SIDE-EFFECTS

- ▶ **Common or very common** Anxiety · dizziness · hypotension · nausea · vomiting
- ▶ **Uncommon** Arrhythmias · hearing impairment · hypotension · loss of consciousness · neurotoxicity · oral disorders · seizure · speech disorder · tinnitus · tremor · vision disorders
- ▶ **Rare or very rare** Cardiac arrest · drowsiness · faecal incontinence · myocardial contractility decreased · nerve disorders · neurological injury · perineal numbness · sexual dysfunction · urinary incontinence

##### SPECIFIC SIDE-EFFECTS

- ▶ **Common or very common**
- ▶ With intrathecal use Sensation abnormal
- ▶ When used by regional administration Anaesthetic complication · paraesthesia
- ▶ **Uncommon**
- ▶ With intrathecal use Headache · pain
- ▶ **Rare or very rare**
- ▶ With intrathecal use Motor dysfunction · respiratory disorders · spinal block
- ▶ When used by regional administration Dyspnoea · respiratory arrest

**SIDE-EFFECTS, FURTHER INFORMATION** Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection. The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems. The onset of toxicity can be unpredictable and delayed. Monitor as per local protocol for at least 30 minutes after administration.

- **ALLERGY AND CROSS-SENSITIVITY**

- ▶ Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local

anaesthetics, such as tetracaine and chlorprocaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk (limited information available); this does not preclude use at term for obstetrical anaesthesia.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment.
- **RENAL IMPAIRMENT** Manufacturer advises use with caution.
- **HANDLING AND STORAGE** Manufacturer advises protect from light.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
For full details see funding body website

#### Scottish Medicines Consortium (SMC) decisions

- ▶ Chlorprocaine hydrochloride (*Ampres*<sup>®</sup>) for spinal anaesthesia in adults where the planned surgical procedure should not exceed 40 minutes (October 2021) SMC No. SMC2373 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ *Ampres* (Sintetica Ltd)  
Chlorprocaine hydrochloride 10 mg per 1 ml Ampres 50mg/5ml solution for injection ampoules | 10 ampoule [POM] £87.50  
Chlorprocaine hydrochloride 20 mg per 1 ml Ampres 400mg/20ml solution for injection vials | 1 vial [POM] £14.72 DT = £14.72

## Levobupivacaine

08-Sep-2020

### ● INDICATIONS AND DOSE

#### Acute postoperative pain

- ▶ BY CONTINUOUS EPIDURAL INFUSION
- ▶ Adult: 12.5–18.75 mg/hour, dose administered using a 1.25 mg/mL (0.125%) or 2.5 mg/mL (0.25%) solution; maximum 400 mg per day

#### Acute labour pain

- ▶ BY LUMBAR EPIDURAL
- ▶ Adult: 15–25 mg, repeated at intervals of at least 15 minutes, dose administered using a 2.5 mg/mL (0.25%) solution; maximum 400 mg per day
- ▶ BY CONTINUOUS EPIDURAL INFUSION
- ▶ Adult: 5–12.5 mg/hour, dose administered using a 1.25 mg/mL (0.125%) solution; maximum 400 mg per day

#### Surgical anaesthesia, peripheral nerve block

- ▶ BY REGIONAL ADMINISTRATION
- ▶ Adult: 2.5–150 mg, dose administered using a 2.5 mg/mL (0.25%) or 5 mg/mL (0.5%) solution

#### Surgical anaesthesia, peribulbar nerve block

- ▶ BY REGIONAL ADMINISTRATION
- ▶ Adult: 37.5–112.5 mg, dose administered using a 7.5 mg/mL (0.75%) solution

#### Surgical anaesthesia for caesarean section

- ▶ BY LUMBAR EPIDURAL
- ▶ Adult: 75–150 mg, to be given over 15–20 minutes, dose administered using a 5 mg/mL (0.5%) solution

#### Surgical anaesthesia

- ▶ BY LUMBAR EPIDURAL
- ▶ Adult: 50–150 mg, to be given over 5 minutes, dose administered using a 5 mg/mL (0.5%) or 7.5 mg/mL (0.75%) solution

#### ▶ BY INTRATHECAL INJECTION

- ▶ Adult: 15 mg, dose administered using a 5 mg/mL (0.5%) solution

#### ▶ BY LOCAL INFILTRATION

- ▶ Adult: 2.5–150 mg, dose administered using a 2.5 mg/mL (0.25%) solution

#### DOSES AT EXTREMES OF BODY-WEIGHT

- ▶ To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

### IMPORTANT SAFETY INFORMATION

The licensed doses stated may not be appropriate in some settings and expert advice should be sought.

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Avoid injection into infected tissues · avoid injection into inflamed tissues · intravenous regional anaesthesia (Bier's block) · preparations containing preservatives should not be used for caudal, epidural, or spinal block

#### CONTRA-INDICATIONS, FURTHER INFORMATION

- ▶ Injection site Manufacturer advises local anaesthetics should not be injected into inflamed or infected tissues. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.
- **CAUTIONS** Cardiovascular disease · complete heart block · debilitated patients (consider dose reduction) · elderly (consider dose reduction) · epilepsy · hypovolaemia · impaired cardiac conduction · impaired respiratory function · myasthenia gravis · shock

- **INTERACTIONS** → Appendix 1: anaesthetics, local

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Anaemia · back pain · dizziness · fever · headache · hypotension · nausea · procedural pain · vomiting
- ▶ **Frequency not known** Angioedema · apnoea · arrhythmias · asthenia · atrioventricular block · bladder disorder · cardiac arrest · drowsiness · eye disorders · faecal incontinence · flushing · loss of consciousness · muscle twitching · muscle weakness · nerve disorders · neurological injury · oral hypoaesthesia · paralysis · priapism · respiratory disorders · seizure · sensation abnormal · skin reactions · sneezing · sweat changes · syncope · vision blurred

**SIDE-EFFECTS, FURTHER INFORMATION** The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems. Systemic toxicity can occur due to inadvertent intravascular injection. The onset of toxicity can be unpredictable and delayed. Monitor as per local protocol for at least 30 minutes after administration.

#### ● ALLERGY AND CROSS-SENSITIVITY

- ▶ Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- **PREGNANCY** Large doses during delivery can cause neonatal respiratory depression, hypotonia, and bradycardia after epidural block. Avoid if possible in the first trimester—toxicity in *animal* studies. May cause fetal distress syndrome. Do not use for paracervical block in obstetrics. Do not use 7.5 mg/mL strength in obstetrics.

- **BREAST FEEDING** Amount too small to be harmful.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in impairment or patients with reduced hepatic blood flow (no information available).
- **PRESCRIBING AND DISPENSING INFORMATION** Levobupivacaine is an isomer of bupivacaine.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**▶ **Levobupivacaine (Non-proprietary)**

**Levobupivacaine (as Levobupivacaine hydrochloride) 2.5 mg per 1 ml** Levobupivacaine 25mg/10ml solution for injection ampoules | 5 ampoule [PoM] £9.45-£10.30 (Hospital only)

**Levobupivacaine (as Levobupivacaine hydrochloride) 5 mg per 1 ml** Levobupivacaine 50mg/10ml solution for injection ampoules | 5 ampoule [PoM] £11.85-£16.15 (Hospital only)

**Levobupivacaine (as Levobupivacaine hydrochloride) 7.5 mg per 1 ml** Levobupivacaine 75mg/10ml solution for injection ampoules | 5 ampoule [PoM] £16.20-£17.70 (Hospital only)

▶ **Chirocaine (AbbVie Ltd)**

**Levobupivacaine (as Levobupivacaine hydrochloride) 2.5 mg per 1 ml** Chirocaine 25mg/10ml solution for injection ampoules | 10 ampoule [PoM] £14.11 (Hospital only)

**Levobupivacaine (as Levobupivacaine hydrochloride) 5 mg per 1 ml** Chirocaine 50mg/10ml solution for injection ampoules | 10 ampoule [PoM] £16.15 (Hospital only)

**Levobupivacaine (as Levobupivacaine hydrochloride) 7.5 mg per 1 ml** Chirocaine 75mg/10ml solution for injection ampoules | 10 ampoule [PoM] £24.23 (Hospital only)

**Infusion**▶ **Levobupivacaine (Non-proprietary)**

**Levobupivacaine (as Levobupivacaine hydrochloride) 625 mg per 1 ml** Levobupivacaine 62.5mg/100ml infusion bags | 5 bag [PoM] £45.15 (Hospital only)

**Levobupivacaine (as Levobupivacaine hydrochloride) 1.25 mg per 1 ml** Levobupivacaine 125mg/100ml infusion bags | 5 bag [PoM] £50.55-£174.22 (Hospital only)

**Levobupivacaine (as Levobupivacaine hydrochloride) 1.25 mg per 1 ml** Levobupivacaine 125mg/100ml infusion bags | 12 bag [PoM] £145.18 (Hospital only)

▶ **Chirocaine (AbbVie Ltd)**

**Levobupivacaine (as Levobupivacaine hydrochloride) 1.25 mg per 1 ml** Chirocaine 125mg/100ml infusion bags | 24 bag [PoM] £174.22 (Hospital only)

**Chirocaine 250mg/200ml infusion bags | 12 bag [PoM] £124.44 (Hospital only)**

**Lidocaine hydrochloride**

10-Nov-2020

**(Lignocaine hydrochloride)**● **INDICATIONS AND DOSE****Infiltration anaesthesia**▶ **BY LOCAL INFILTRATION**

- ▶ **Adult:** Dose to be given according to patient's weight and nature of procedure; max. 200 mg, maximum dose 500 mg if given in solutions containing adrenaline

**DOSES AT EXTREMES OF BODY-WEIGHT**

- ▶ When used by local infiltration To avoid excessive dosage in obese patients, weight-based doses for non-emergency indications may need to be calculated on the basis of ideal body-weight.

**Intravenous regional anaesthesia and nerve block**▶ **BY REGIONAL ADMINISTRATION**

- ▶ **Adult:** Seek expert advice

**Pain relief (in anal fissures, haemorrhoids, pruritus ani, pruritus vulvae, herpes zoster, or herpes labialis) | Lubricant in cystoscopy | Lubricant in proctoscopy**▶ **TO THE SKIN USING OINTMENT**

- ▶ **Adult:** Apply 1–2 mL as required, avoid long-term use

**Sore nipples from breast-feeding**▶ **TO THE SKIN USING OINTMENT**

- ▶ **Adult:** Apply using gauze and wash off immediately before next feed

LMX 4<sup>®</sup>**Anaesthesia before venous cannulation or venepuncture**▶ **TO THE SKIN**

- ▶ **Child 1–2 months:** Apply up to 1 g, apply thick layer to small area (2.5 cm × 2.5 cm) of non-irritated skin at least 30 minutes before procedure; may be applied under an occlusive dressing; max. application time 60 minutes, remove cream with gauze and perform procedure after approximately 5 minutes
- ▶ **Child 3–11 months:** Apply up to 1 g, apply thick layer to small area (2.5 cm × 2.5 cm) of non-irritated skin at least 30 minutes before procedure; may be applied under an occlusive dressing; max. application time 4 hours, remove cream with gauze and perform procedure after approximately 5 minutes
- ▶ **Child 1–17 years:** Apply 1–2.5 g, apply thick layer to small area (2.5 cm × 2.5 cm) of non-irritated skin at least 30 minutes before procedure; may be applied under an occlusive dressing; max. application time 5 hours, remove cream with gauze and perform procedure after approximately 5 minutes
- ▶ **Adult:** Apply 1–2.5 g, apply thick layer to small area (2.5 cm × 2.5 cm) of non-irritated skin at least 30 minutes before procedure; may be applied under an occlusive dressing; max. application time 5 hours, remove cream with gauze and perform procedure after approximately 5 minutes

VERSATIS<sup>®</sup>**Postherpetic neuralgia**▶ **TO THE SKIN**

- ▶ **Adult:** Apply once daily for up to 12 hours, followed by a 12-hour plaster-free period; discontinue if no response after 4 weeks, to be applied to intact, dry, non-hairy, non-irritated skin, up to 3 plasters may be used to cover large areas; plasters may be cut

XYLOCAINE<sup>®</sup>**During delivery in obstetrics**▶ **TO THE SKIN**

- ▶ **Adult:** Up to 20 doses

**IMPORTANT SAFETY INFORMATION**

## ▶ When used by local infiltration

The licensed doses stated may not be appropriate in some settings and expert advice should be sought. Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

● **CONTRA-INDICATIONS**

- ▶ When used by regional administration Avoid injection into infected tissues · avoid injection into inflamed tissues · complete heart block · preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier's block)
  - ▶ With topical use Application to the middle ear (can cause ototoxicity) · should not be applied to damaged skin
- CONTRA-INDICATIONS, FURTHER INFORMATION**
- ▶ With topical use or when used by regional administration Manufacturer advises local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects,

and the local anaesthetic effect may also be reduced by altered local pH.

#### • CAUTIONS

- When used by regional administration Acute porphyrias p. 1150 (consider infusion with glucose for its anti-porphyrinogenic effects) · congestive cardiac failure (consider lower dose) · debilitated patients (consider dose reduction) · elderly (consider dose reduction) · epilepsy · hypovolaemia · impaired cardiac conduction · impaired respiratory function · myasthenia gravis · post cardiac surgery (consider lower dose) · shock

- **INTERACTIONS** → Appendix 1: antiarrhythmics

#### • SIDE-EFFECTS

- With parenteral use Anxiety · arrhythmias · atrioventricular block · cardiac arrest · circulatory collapse · confusion · dizziness · drowsiness · euphoric mood · headache · hypotension (may lead to cardiac arrest) · loss of consciousness · methaemoglobinemia · muscle twitching · myocardial contractility decreased · nausea · neurological effects · nystagmus · pain · psychosis · respiratory disorders · seizure · sensation abnormal · temperature sensation altered · tinnitus · tremor · vision blurred · vomiting

**SIDE-EFFECTS, FURTHER INFORMATION Toxic effects** The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems.

**Methaemoglobinemia** Methylthionium chloride is licensed for the acute symptomatic treatment of drug-induced methaemoglobinemia.

#### • ALLERGY AND CROSS-SENSITIVITY

- Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.
- PREGNANCY** Crosses the placenta but not known to be harmful in *animal* studies—use if benefit outweighs risk. When used as a local anaesthetic, large doses can cause fetal bradycardia; if given during delivery can also cause neonatal respiratory depression, hypotonia, or bradycardia after paracervical or epidural block.
- BREAST FEEDING** Present in milk but amount too small to be harmful.
- HEPATIC IMPAIRMENT** Manufacturer advises caution (risk of increased exposure).
- RENAL IMPAIRMENT** Possible accumulation of lidocaine and active metabolite; caution in severe impairment.
- MONITORING REQUIREMENTS**
  - With systemic use Monitor ECG and have resuscitation facilities available.
- NATIONAL FUNDING/ACCESS DECISIONS**

**VERSATIS<sup>®</sup>** For full details see funding body website

**Scottish Medicines Consortium (SMC) decisions**

  - Lidocaine hydrochloride (*Versatis<sup>®</sup>*) for the treatment of neuropathic pain associated with previous herpes zoster infection (post-herpetic neuralgia, PHN) (August 2008) SMC No. 334/06 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection, ointment

#### Solution for injection

##### ↳ Lidocaine hydrochloride (Non-proprietary)

Lidocaine hydrochloride 5 mg per 1 ml Lidocaine 50mg/10ml (0.5%) solution for injection ampoules | 10 ampoule [PoM] £10.00 DT = £10.00

Lidocaine hydrochloride 10 mg per 1 ml Lidocaine 100mg/10ml (1%) solution for injection Mini-Plasco ampoules | 20 ampoule [PoM] £13.80 | 100 ampoule [PoM] £61.26

Lidocaine 100mg/10ml (1%) solution for injection ampoules | 10 ampoule [PoM] £5.00-£6.55 DT = £5.00 | 20 ampoule [PoM] £192.20 (Hospital only)

Lidocaine 200mg/20ml (1%) solution for injection vials | 10 vial [PoM] £22.00-£26.40 DT = £26.40

Lidocaine 200mg/20ml (1%) solution for injection ampoules | 1 ampoule [PoM] £20.97 (Hospital only) | 10 ampoule [PoM] £10.00-£14.00 DT = £14.00 | 20 ampoule [PoM] £419.40 (Hospital only)

Lidocaine 50mg/5ml (1%) solution for injection ampoules | 1 ampoule [PoM] £6.55 (Hospital only) | 10 ampoule [PoM] £3.00-£4.00 DT = £3.00 | 20 ampoule [PoM] £131.00 (Hospital only)

Lidocaine 200mg/20ml (1%) solution for injection Mini-Plasco ampoules | 100 ampoule [PoM] £8.05

Lidocaine 20mg/2ml (1%) solution for injection ampoules | 10 ampoule [PoM] £3.50 DT = £2.50

Lidocaine 50mg/5ml (1%) solution for injection Mini-Plasco ampoules | 20 ampoule [PoM] £8.05

**Lidocaine hydrochloride 20 mg per 1 ml** Lidocaine 100mg/5ml (2%) solution for injection ampoules | 10 ampoule (Hospital only) £3.20-£4.40 DT = £3.20 | 20 ampoule [PoM] £131.00 (Hospital only)

Lidocaine 400mg/20ml (2%) solution for injection vials | 10 vial [PoM] £23.00-£27.50 DT = £27.50

Lidocaine 200mg/10ml (2%) solution for injection Mini-Plasco ampoules | 100 ampoule [PoM] £81.69

Lidocaine 400mg/20ml (2%) solution for injection Mini-Plasco ampoules | 100 ampoule [PoM] £8.05

Lidocaine 40mg/2ml (2%) solution for injection ampoules | 10 ampoule [PoM] £4.00 DT = £2.70

Lidocaine 100mg/5ml (2%) solution for injection Mini-Plasco ampoules | 20 ampoule [PoM] £9.40

Lidocaine 200mg/10ml (2%) solution for injection ampoules | 20 ampoule [PoM] £317.20 DT = £14.95 (Hospital only)

Lidocaine 400mg/20ml (2%) solution for injection ampoules | 10 ampoule [PoM] £11.00-£13.64 DT = £13.64 | 20 ampoule [PoM] £432.40 (Hospital only)

**Medicated plaster**

EXCIPIENTS: May contain Hydroxybenzoates (parabens), propylene glycol

- ↳ **Versatis** (Grünenthal Ltd)

**Lidocaine 50 mg per 1 gram** Versatis 700mg medicated plasters | 30 plaster [PoM] £72.40 DT = £72.40

#### Cream

EXCIPIENTS: May contain Benzyl alcohol, propylene glycol

- ↳ **LMX 4** (Ferndale Pharmaceuticals Ltd)

**Lidocaine 40 mg per 1 gram** LMX 4 cream | 5 gram [P] £2.98 DT = £2.98 | 30 gram [P] £14.90 DT = £14.90

#### Ointment

- ↳ **Lidocaine hydrochloride (Non-proprietary)**

Lidocaine hydrochloride 50 mg per 1 gram Lidocaine 5% ointment | 15 gram [P] £9.00 DT = £8.28

#### Spray

- ↳ **Xylocaine 10mg/dose spray** (Aspen Pharma Trading Ltd)

Lidocaine 10 mg per 1 actuation | 50 ml [P] £6.29 DT = £6.29

#### Medicated plaster

EXCIPIENTS: May contain Hydroxybenzoates (parabens), propylene glycol

- ↳ **Versatis** (Grünenthal Ltd)

**Lidocaine 50 mg per 1 gram** Versatis 700mg medicated plasters | 30 plaster [PoM] £72.40 DT = £72.40

#### Cream

EXCIPIENTS: May contain Benzyl alcohol, propylene glycol

- ↳ **LMX 4** (Ferndale Pharmaceuticals Ltd)

**Lidocaine 40 mg per 1 gram** LMX 4 cream | 5 gram [P] £2.98 DT = £2.98 | 30 gram [P] £14.90 DT = £14.90

#### Ointment

- ↳ **Lidocaine hydrochloride (Non-proprietary)**

Lidocaine hydrochloride 50 mg per 1 gram Lidocaine 5% ointment | 15 gram [P] £9.00 DT = £8.28

#### Spray

- ↳ **Xylocaine 10mg/dose spray** (Aspen Pharma Trading Ltd)

Lidocaine 10 mg per 1 actuation | 50 ml [P] £6.29 DT = £6.29

## Lidocaine with adrenaline

19-Dec-2019

The properties listed below are those particular to the combination only. For the properties of the components please consider, lidocaine hydrochloride p. 1466, adrenaline/epinephrine p. 241.

#### • INDICATIONS AND DOSE

##### Local anaesthesia

- ↳ BY LOCAL INFILTRATION

- ↳ Adult: Dosed according to the type of nerve block required (consult product literature)

- **INTERACTIONS** → Appendix 1: antiarrhythmics · sympathomimetics, vasoconstrictor

#### • PROFESSION SPECIFIC INFORMATION

**Dental information** A variety of lidocaine injections with adrenaline is available in dental cartridges.

Consult expert dental sources for specific advice in relation to dose of lidocaine for dental anaesthesia.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

#### Solution for injection

EXCIPIENTS: May contain Sulfites

- ▶ **Lignospas Special** (Septodont Ltd)

**Adrenaline (as Adrenaline acid tartrate) 12.5 microgram per 1 ml, Lidocaine hydrochloride 20 mg per 1 ml** Lignospas Special 20mg/ml / 12.5micrograms/ml solution for injection 2.2ml cartridges | 50 cartridge [PoM] £21.95 DT = £21.95

Lignospas Special 20mg/ml / 12.5micrograms/ml solution for injection 1.8ml cartridges | 50 cartridge [PoM] £21.95 DT = £21.95

- ▶ **Rexocaine** (Henry Schein Ltd)

**Adrenaline (as Adrenaline acid tartrate) 12.5 microgram per 1 ml, Lidocaine hydrochloride 20 mg per 1 ml** Rexocaine 2% injection 2.2ml cartridges | 50 cartridge [PoM] £23.29 DT = £21.95

- ▶ **Xylocaine with Adrenaline** (Aspen Pharma Trading Ltd)

**Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 ml, Lidocaine hydrochloride 10 mg per 1 ml** Xylocaine 1% with Adrenaline 100micrograms/20ml (1 in 200,000) solution for injection vials | 5 vial [PoM] £9.66 DT = £9.66

**Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 ml, Lidocaine hydrochloride 20 mg per 1 ml** Xylocaine 2% with Adrenaline 100micrograms/20ml (1 in 200,000) solution for injection vials | 5 vial [PoM] £8.85 DT = £8.85 (Hospital only)

## Lidocaine with cetrimide

27-Apr-2018

The properties listed below are those particular to the combination only. For the properties of the components please consider, lidocaine hydrochloride p. 1466.

### ● INDICATIONS AND DOSE

#### Anaesthesia and disinfection in dental practice

- ▶ TO MUCOUS MEMBRANES USING OROMUCOSAL SPRAY
- ▶ Adult: 10–20 mg, no more than 30 mg should be applied to the same quadrant of the buccal cavity—consult product literature, dose expressed as lidocaine

#### Anaesthesia in dental practice

- ▶ TO MUCOUS MEMBRANES USING DENTAL GEL
- ▶ Adult: Apply 100–500 mg, use cotton pellet for application to dried mucosa, dose expressed as weight of gel

#### DOSE EQUIVALENCE AND CONVERSION

- ▶ 1 metered dose of Xylonor<sup>®</sup> spray is equivalent to 10 mg of lidocaine.
- ▶ 2 millimetres of Xylonor<sup>®</sup> gel is approximately equivalent to 100 mg of gel (approximately equivalent to 5 mg of lidocaine).

- **CAUTIONS** Sepsis (risk of rapid systemic absorption) • traumatised mucosa (risk of rapid systemic absorption)
- **INTERACTIONS** → Appendix 1: antiarrhythmics
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Oromucosal gel

- ▶ **Xylonor** (Septodont Ltd)

**Cetrimide 1.5 mg per 1 gram, Lidocaine 50 mg per 1 gram** Xylonor 50mg/g / 1.5mg/g gel sugar-free | 15 gram [PoM] £4.00

#### Spray

- ▶ **Xylonor** (Septodont Ltd)

**Cetrimide 100 microgram per 1 gram, Lidocaine 10 mg per 1 gram** Xylonor 150mg/g / 1.5mg/g oromucosal spray sugar-free | 36 gram [PoM] £20.15

## Lidocaine with phenylephrine

The properties listed below are those particular to the combination only. For the properties of the components please consider, lidocaine hydrochloride p. 1466, phenylephrine hydrochloride p. 205.

### ● INDICATIONS AND DOSE

#### Anaesthesia before nasal surgery, endoscopy, laryngoscopy, or removal of foreign bodies from the nose

- ▶ BY INTRANASAL ADMINISTRATION

- ▶ Adult: Up to 8 sprays

- **INTERACTIONS** → Appendix 1: antiarrhythmics • sympathomimetics, vasoconstrictor

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Spray

- ▶ **Lidocaine with phenylephrine (Non-proprietary)**

**Phenylephrine hydrochloride 5 mg per 1 ml, Lidocaine hydrochloride 50 mg per 1 ml** Lidocaine 5% / Phenylephrine 0.5% nasal spray | 2.5 ml [PoM] £16.39 DT = £16.39

## Lidocaine with prilocaine

10-Nov-2021

The properties listed below are those particular to the combination only. For the properties of the components please consider, lidocaine hydrochloride p. 1466, prilocaine hydrochloride p. 1470.

### ● INDICATIONS AND DOSE

#### Anaesthesia before minor skin procedures including venepuncture

- ▶ TO THE SKIN
- ▶ Child 1-2 months: Apply up to 1 g for maximum 1 hour before procedure, to be applied under occlusive dressing, shorter application time of 15–30 minutes is recommended for children with atopic dermatitis (30 minutes before removal of mollusca); maximum 1 dose per day
- ▶ Child 3-11 months: Apply up to 2 g for maximum 1 hour before procedure, to be applied under occlusive dressing, shorter application time of 15–30 minutes is recommended for children with atopic dermatitis (30 minutes before removal of mollusca); maximum 2 doses per day
- ▶ Child 1-11 years: Apply 1–5 hours before procedure, a thick layer should be applied under occlusive dressing, shorter application time of 15–30 minutes is recommended for children with atopic dermatitis (30 minutes before removal of mollusca); maximum 2 doses per day
- ▶ Child 12-17 years: Apply 1–5 hours before procedure (2–5 hours before procedures on large areas e.g. split skin grafting), a thick layer should be applied under occlusive dressing, shorter application time of 15–30 minutes is recommended for children with atopic dermatitis (30 minutes before removal of mollusca)
- ▶ Adult: Apply 1–5 hours before procedure (2–5 hours before procedures on large areas e.g. split skin grafting), a thick layer should be applied under occlusive dressing

#### Anaesthesia on genital skin before injection of local anaesthetics

- ▶ TO THE SKIN

- ▶ Adult: Apply under occlusive dressing for 15 minutes (males) or 60 minutes (females) before procedure

**Anaesthesia before surgical treatment of lesions on genital mucosa**

## ▶ TO THE SKIN

- ▶ Adult: Apply up to 10 g, to be applied 5–10 minutes before procedure

**Anaesthesia before cervical curettage**

## ▶ TO THE SKIN

- ▶ Adult: Apply 10 g in lateral vaginal fornices for 10 minutes

**Anaesthesia before mechanical cleansing or debridement of leg ulcer**

## ▶ TO THE SKIN

- ▶ Adult: Apply up to 10 g for 30–60 minutes, to be applied under occlusive dressing

**FORTACIN®****Primary premature ejaculation**

## ▶ TO THE SKIN

- ▶ Adult: 3 sprays every 4 hours as required, to be applied to cover the glans penis (excess spray should be removed after 5 minutes and before intercourse); maximum 9 sprays per day

**DOSE EQUIVALENCE AND CONVERSION**

- ▶ For *Fortacin*®: each dose of 3 sprays is equivalent to lidocaine 22.5 mg and prilocaine 7.5 mg.

- **CONTRA-INDICATIONS** Use in child less than 37 weeks corrected gestational age

● **CAUTIONS**

**FORTACIN**® Acquired methaemoglobinaemia · anaemia · congenital methaemoglobinaemia

- **INTERACTIONS** → Appendix 1: anaesthetics, local · antiarrhythmics

● **SIDE-EFFECTS**

- ▶ **Common or very common** Sexual dysfunction (in adults)
  - ▶ **Uncommon** Fever (in adults) · headache (in adults) · penis disorder (in adults)
  - ▶ **Rare or very rare** Methaemoglobinaemia · skin reactions
- SIDE-EFFECTS, FURTHER INFORMATION** When applied to the glans penis, side-effects for sexual partners should be considered. Side-effects reported in female partners include vaginal candidiasis and dysuria.

● **CONCEPTION AND CONTRACEPTION**

**FORTACIN**® Deterioration of polyurethane-based female and male condoms has been observed. Manufacturer advises avoid in patients planning to conceive, or if it is essential to achieve penetration, then the glans penis should be washed thoroughly 5 minutes after application but before intercourse.

● **PREGNANCY**

**FORTACIN**® Manufacturer advises preferably avoid unless an effective male barrier contraceptive is used—limited information available.

● **HEPATIC IMPAIRMENT**

**FORTACIN**® Manufacturer advises caution in severe impairment (no information available).

● **DIRECTIONS FOR ADMINISTRATION**

**FORTACIN**® Manufacturer advises when using the spray for the first time, shake and prime the unit with 3 sprays, and before each subsequent use, shake and prime the unit with 1 spray.

● **PATIENT AND CARER ADVICE**

Medicines for Children leaflet: EMLA cream for local anaesthesia [www.medicinesforchildren.org.uk/medicines/emla-cream-for-local-anaesthesia/](http://www.medicinesforchildren.org.uk/medicines/emla-cream-for-local-anaesthesia/)

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Cream**

- ▶ **Denela** (Teva UK Ltd)

**Lidocaine 25 mg per 1 gram, Prilocaine 25 mg per 1 gram** Denela 5% cream | 5 gram [P] £3.29 | 25 gram [P] £12.99 | 30 gram [P] £14.75 DT = £12.30

- ▶ **Emla** (Aspen Pharma Trading Ltd)

**Lidocaine 25 mg per 1 gram, Prilocaine 25 mg per 1 gram** Emla 5% cream | 5 gram [P] £2.25-£2.99 | 25 gram [P] £11.70 | 30 gram [P] £12.30 DT = £12.30

- ▶ **Nulbia** (Glenmark Pharmaceuticals Europe Ltd)

**Lidocaine 25 mg per 1 gram, Prilocaine 25 mg per 1 gram** Nulbia 5% cream | 5 gram [P] £1.58 | 25 gram [P] £7.88 | 30 gram [P] £8.61 DT = £12.30

**Cutaneous spray solution**

- ▶ **Fortacin** (Recordati Pharmaceuticals Ltd)

**Prilocaine 50 mg per 1 ml, Lidocaine 150 mg per 1 ml** Fortacin 150mg/ml | 5 gram [P] £1.58 | 25 gram [P] £59.99 DT = £59.99

Anaesthesia

● **INDICATIONS AND DOSE****Infiltration anaesthesia and nerve block in dentistry**

- ▶ Child 3-17 years: Consult expert dental sources
- ▶ Adult: Consult expert dental sources

**DOSES AT EXTREMES OF BODY-WEIGHT**

- ▶ To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

**IMPORTANT SAFETY INFORMATION**

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Avoid injection into infected tissues · avoid injection into inflamed tissues · intravenous regional anaesthesia (Bier's block) · preparations containing preservatives should not be used for caudal, epidural, or spinal block · severe atrio-ventricular conduction disorders not controlled by a pacemaker

**CONTRA-INDICATIONS, FURTHER INFORMATION**

- ▶ Injection site Manufacturer advises the local anaesthetic effect may be reduced when injected into an inflamed or infected area, due to altered local pH. Increased absorption into the blood also increases the possibility of systemic side-effects.
  - **CAUTIONS** Cardiovascular disease · children (consider dose reduction) · debilitated patients (consider dose reduction) · elderly (consider dose reduction) · epilepsy · hypovolaemia · impaired cardiac conduction · impaired respiratory function · myasthenia gravis · shock
  - **INTERACTIONS** → Appendix 1: anaesthetics, local
  - **SIDE-EFFECTS**
    - ▶ **Common or very common** Arrhythmias · dizziness · hypertension · hypotension · nausea · paraesthesia · vomiting
    - ▶ **Uncommon** Neurotoxicity
    - ▶ **Rare or very rare** Arachnoiditis · cardiac arrest · diplopia · nerve disorders · respiratory depression
- SIDE-EFFECTS, FURTHER INFORMATION** Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection or too rapid injection. The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems. The onset of toxicity can be

unpredictable and delayed. Monitor as per local protocol for at least 30 minutes after administration.

#### ● ALLERGY AND CROSS-SENSITIVITY

▶ Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

● **PREGNANCY** Use with caution in early pregnancy.

● **BREAST FEEDING** Use with caution.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution; increased risk of toxic plasma concentrations in severe impairment.

● **RENAL IMPAIRMENT** Use with caution; increased risk of side-effects.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

▶ **Scandonest plain** (Septodont Ltd)

Mepivacaine hydrochloride 30 mg per 1 ml Scandonest plain 3% solution for injection 2.2ml cartridges | 50 cartridge **[PoM]** £21.95

## Mepivacaine with adrenaline

19-Dec-2019

The properties listed below are those particular to the combination only. For the properties of the components please consider, mepivacaine hydrochloride p. 1469, adrenaline/epinephrine p. 241.

#### ● INDICATIONS AND DOSE

##### Infiltration anaesthesia and nerve block in dentistry

▶ BY LOCAL INFILTRATION

▶ Adult: (consult product literature)

● **INTERACTIONS** → Appendix 1: anaesthetics, local · sympathomimetics, vasoconstrictor

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

EXCIPIENTS: May contain Sulfites

▶ **Scandonest special** (Septodont Ltd)

Adrenaline 10 microgram per 1 ml, Mepivacaine hydrochloride 20 mg per 1 ml Scandonest special 2% solution for injection 2.2ml cartridges | 50 cartridge **[PoM]** £21.95

## Prilocaine hydrochloride

12-Nov-2020

#### ● INDICATIONS AND DOSE

CITANEST 1%®

##### Infiltration anaesthesia | Nerve block

▶ BY REGIONAL ADMINISTRATION

▶ Adult: 100–200 mg/minute, alternatively may be given in incremental doses; dose adjusted according to site of administration and response, and in elderly and debilitated patients (smaller doses may be required); maximum 400 mg per course

PRILOTEKAL®

##### Spinal anaesthesia

▶ BY INTRATHECAL INJECTION

▶ Adult: Usual dose 40–60 mg (max. per dose 80 mg), dose may need to be reduced in elderly or debilitated patients, or in late pregnancy

#### DOSES AT EXTREMES OF BODY-WEIGHT

▶ To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

#### IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

#### ● CONTRA-INDICATIONS

**GENERAL CONTRA-INDICATIONS** Acquired methaemoglobinaemia · anaemia · avoid injection into infected tissues · avoid injection into inflamed tissues · congenital methaemoglobinaemia · preparations containing preservatives should not be used for caudal, epidural, or spinal block

#### SPECIFIC CONTRA-INDICATIONS

▶ With intrathecal use Serious cardiac conduction disorders

#### CONTRA-INDICATIONS, FURTHER INFORMATION

▶ Injection site Manufacturer advises local anaesthetics should not be injected into inflamed or infected tissues. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.

● **CAUTIONS** Cardiovascular disease · debilitated patients (consider dose reduction) · elderly (consider dose reduction) · epilepsy · hypovolaemia · impaired cardiac conduction · impaired respiratory function · myasthenia gravis · severe or untreated hypertension · shock

● **INTERACTIONS** → Appendix 1: anaesthetics, local

#### ● SIDE-EFFECTS

▶ **Common or very common** Arrhythmias · dizziness · hypertension · hypotension · nausea · paraesthesia · vomiting

▶ **Uncommon** Neurotoxicity

▶ **Rare or very rare** Cardiac arrest · methaemoglobinaemia · nerve disorders

▶ **Frequency not known** Diplopia · respiratory depression

#### SIDE-EFFECTS, FURTHER INFORMATION Toxic effects

Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection or too rapid injection. The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems. The onset of toxicity can be unpredictable and delayed. Monitor as per local protocol for at least 30 minutes after administration.

**Methaemoglobinaemia** Methaemoglobinaemia can be treated with an intravenous injection of methylthionium chloride.

#### ● ALLERGY AND CROSS-SENSITIVITY

▶ Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

● **PREGNANCY** Large doses during delivery can cause neonatal respiratory depression, hypotonia, and bradycardia after epidural block. Avoid paracervical or pudendal block in obstetrics (neonatal methaemoglobinaemia reported).

**Dose adjustments** Use lower doses for intrathecal use during late pregnancy.

● **BREAST FEEDING** Present in milk but not known to be harmful.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution.  
**Dose adjustments** ▶ With intrathecal use Manufacturer advises consider dose reduction.
- **RENAL IMPAIRMENT** Use with caution.  
**Dose adjustments** Lower doses may be required for intrathecal anaesthesia.
- **NATIONAL FUNDING/ACCESS DECISIONS**  
**PRILOTEKAL**® For full details see funding body website  
**Scottish Medicines Consortium (SMC) decisions**  
▶ **Prilocaine hydrochloride (Prilotekal**®) for spinal anaesthesia (January 2011) SMC No. 665/10 Recommended with restrictions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

- ▶ **Citanest** (Aspen Pharma Trading Ltd)  
**Prilocaine hydrochloride 10 mg per 1 ml** Citanest 1% solution for injection 50ml vials | 1 vial (PoM) £5.06
- ▶ **Prilotekal** (Sintetica Ltd)  
**Prilocaine hydrochloride 20 mg per 1 ml** Prilotekal 100mg/5ml solution for injection ampoules | 10 ampoule (PoM) £78.80 (Hospital only)

## Prilocaine with felypressin

The properties listed below are those particular to the combination only. For the properties of the components please consider, prilocaine hydrochloride p. 1470.

**INDICATIONS AND DOSE****Dental anaesthesia**

- ▶ BY REGIONAL ADMINISTRATION
- ▶ Adult: Consult expert dental sources for specific advice

- **INTERACTIONS** → Appendix 1: anaesthetics, local
- **SIDE-EFFECTS** Bradycardia · cardiac arrest · dizziness · drowsiness · hypotension · loss of consciousness · methaemoglobinaemia · myocardial contractility decreased · nervousness · respiratory arrest · seizure · tremor · vision blurred

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

- ▶ **Citanest with Octapressin** (Dentsply Ltd)  
**Prilocaine hydrochloride 30 mg per 1 ml, Felypressin.03 unit per 1 ml** Citanest 3% with Octapressin Dental 0.066units/2.2ml solution for injection self aspirating cartridges | 50 cartridge (PoM) 

## Ropivacaine hydrochloride

09-Dec-2019

**INDICATIONS AND DOSE****Acute pain, peripheral nerve block**

- ▶ BY REGIONAL ADMINISTRATION
- ▶ Adult: 10–20 mg/hour, dose administered as a continuous infusion or by intermittent injection using a 2 mg/mL (0.2%) solution

**Acute pain, field block**

- ▶ BY REGIONAL ADMINISTRATION
- ▶ Adult: 2–200 mg, dose administered using a 2 mg/mL (0.2%) solution

**Acute pain, lumbar epidural block**

- ▶ BY LUMBAR EPIDURAL
- ▶ Adult: 20–40 mg, followed by 20–30 mg at least every 30 minutes, dose administered using a 2 mg/mL (0.2%) solution

**Acute labour pain**

- ▶ BY CONTINUOUS EPIDURAL INFUSION
- ▶ Adult: 12–20 mg/hour, dose administered using a 2 mg/mL (0.2%) solution

**Acute postoperative pain**

- ▶ BY CONTINUOUS EPIDURAL INFUSION
- ▶ Adult: Up to 28 mg/hour, dose administered using a 2 mg/mL (0.2%) solution

**Postoperative pain, thoracic epidural block**

- ▶ BY CONTINUOUS EPIDURAL INFUSION
- ▶ Adult: 12–28 mg/hour, dose administered using a 2 mg/mL (0.2%) solution

**Surgical anaesthesia, field block**

- ▶ BY REGIONAL ADMINISTRATION
- ▶ Adult: 7.5–225 mg, dose administered using a 7.5 mg/mL (0.75%) solution

**Surgical anaesthesia, major nerve block (brachial plexus block)**

- ▶ BY REGIONAL ADMINISTRATION
- ▶ Adult: 225–300 mg, dose administered using a 7.5 mg/mL (0.75%) solution

**Surgical anaesthesia, thoracic epidural block (to establish block for postoperative pain)**

- ▶ BY THORACIC EPIDURAL
- ▶ Adult: 38–113 mg, dose administered using a 7.5 mg/mL (0.75%) solution

**Surgical anaesthesia for caesarean section**

- ▶ BY LUMBAR EPIDURAL
- ▶ Adult: 113–150 mg, to be administered in incremental doses using a 7.5 mg/mL (0.75%) solution

**Surgical anaesthesia, lumbar epidural block**

- ▶ BY LUMBAR EPIDURAL
- ▶ Adult: 113–200 mg, dose administered using a 7.5 mg/mL (0.75%) or 10 mg/mL (1%) solution

**DOSES AT EXTREMES OF BODY-WEIGHT**

- ▶ To avoid excessive dosage in obese patients, dose may need to be calculated on the basis of ideal bodyweight.

**IMPORTANT SAFETY INFORMATION**

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Avoid injection into infected tissues · avoid injection into inflamed tissues · intravenous regional anaesthesia (Bier's block) · preparations containing preservatives should not be used for caudal, epidural, or spinal block

**CONTRA-INDICATIONS, FURTHER INFORMATION**

- ▶ Injection site Manufacturer advises local anaesthetics should not be injected into inflamed or infected tissues. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.
- **CAUTIONS** Acute porphyrias p. 1150 · cardiovascular disease · complete heart block · debilitated patients (consider dose reduction) · elderly (consider dose reduction) · epilepsy · hypovolaemia · impaired cardiac conduction · impaired respiratory function · myasthenia gravis · shock
- **INTERACTIONS** → Appendix 1: anaesthetics, local
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Arrhythmias · back pain · chills · dizziness · headache · hypertension · hypotension · nausea · sensation abnormal · urinary retention · vomiting
  - ▶ **Uncommon** Anxiety · dyspnoea · hypothermia · neurotoxicity · syncope
  - ▶ **Rare or very rare** Cardiac arrest
  - ▶ **Frequency not known** Dyskinesia

**SIDE-EFFECTS, FURTHER INFORMATION** Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection. The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems. The onset of toxicity can be unpredictable and delayed. Monitor as per local protocol for at least 30 minutes after administration.

● **ALLERGY AND CROSS-SENSITIVITY**

- ▶ Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- **PREGNANCY** Not known to be harmful. Do not use for paracervical block in obstetrics.

- **BREAST FEEDING** Not known to be harmful.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment.

**Dose adjustments** Manufacturer advises consider dose reduction for repeat doses in severe impairment.

- **RENAL IMPAIRMENT** Caution in severe impairment. Increased risk of systemic toxicity in chronic renal failure.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

ELECTROLYTES: May contain Sodium

- ▶ **Ropivacaine hydrochloride (Non-proprietary)**

**Ropivacaine hydrochloride 2 mg per 1 ml** Ropivacaine 20mg/10ml solution for injection ampoules | 5 ampoule [PoM] £27.84 (Hospital only) | 10 ampoule [PoM] £27.84 (Hospital only)

**Ropivacaine hydrochloride 7.5 mg per 1 ml** Ropivacaine 75mg/10ml solution for injection ampoules | 5 ampoule [PoM] £15.90 (Hospital only) | 10 ampoule [PoM] £28.40 (Hospital only)

**Ropivacaine hydrochloride 10 mg per 1 ml** Ropivacaine 100mg/10ml solution for injection ampoules | 5 ampoule [PoM] £15.87 (Hospital only) | 10 ampoule [PoM] £31.74 (Hospital only)

- ▶ **Naropin** (Aspen Pharma Trading Ltd)

**Ropivacaine hydrochloride 7.5 mg per 1 ml** Naropin 75mg/10ml solution for injection ampoules | 5 ampoule [PoM] £15.90 (Hospital only)

**Ropivacaine hydrochloride 10 mg per 1 ml** Naropin 100mg/10ml solution for injection ampoules | 5 ampoule [PoM] £19.22 (Hospital only)

**Infusion**

ELECTROLYTES: May contain Sodium

- ▶ **Ropivacaine hydrochloride (Non-proprietary)**

**Ropivacaine hydrochloride 2 mg per 1 ml** Ropivacaine 400mg/200ml infusion bags | 5 bag [PoM] £82.05-£86.70 (Hospital only)

- ▶ **Naropin** (Aspen Pharma Trading Ltd)

**Ropivacaine hydrochloride 2 mg per 1 ml** Naropin 400mg/200ml infusion Polybags | 5 bag [PoM] £86.70 (Hospital only)

gel and dressing after 30 minutes for venepuncture and after 45 minutes for venous cannulation

- ▶ **Child 5-17 years:** Apply contents of up to 5 tubes (applied at separate sites at a single time or appropriate proportion) to site of venepuncture or venous cannulation and cover with occlusive dressing; remove gel and dressing after 30 minutes for venepuncture and after 45 minutes for venous cannulation
- ▶ **Adult:** Apply contents of up to 5 tubes (applied at separate sites at a single time or appropriate proportion) to site of venepuncture or venous cannulation and cover with occlusive dressing; remove gel and dressing after 30 minutes for venepuncture and after 45 minutes for venous cannulation

- **CONTRA-INDICATIONS** Should not be applied to damaged skin

- **INTERACTIONS** → Appendix 1: anaesthetics, local

- **SIDE-EFFECTS** Oedema · skin reactions

**SIDE-EFFECTS, FURTHER INFORMATION** The systemic toxicity of local anaesthetics mainly involves the central nervous system; systemic side effects unlikely as minimal absorption following topical application.

● **ALLERGY AND CROSS-SENSITIVITY**

- ▶ Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- **BREAST FEEDING** Not known to be harmful.

## Poisoning, emergency treatment

11-Jan-2022

### Overview

These notes provide only an overview of the treatment of poisoning, and it is strongly recommended that either **TOXBASE** or the **UK National Poisons Information Service** be consulted when there is doubt about the degree of risk or about management.

### Hospital admission

Patients who have features of poisoning should generally be admitted to hospital. Patients who have taken poisons with delayed action should also be admitted, even if they appear well. Delayed-action poisons include aspirin p. 133, iron, paracetamol p. 477, tricyclic antidepressants, and co-phenotrope (diphenoxylate with atropine, *Lomotil*<sup>®</sup>) p. 68; the effects of modified-release preparations are also delayed. A note of all relevant information, including what treatment has been given, should accompany the patient to hospital.

### Further information

**TOXBASE**, the primary clinical toxicology database of the National Poisons Information Service, is available on the internet to registered users at [www.toxbase.org](http://www.toxbase.org) (a backup site is available at [www.toxbasebackup.org](http://www.toxbasebackup.org) if the main site cannot be accessed). It provides information about routine diagnosis, treatment, and management of patients exposed to drugs, household products, and industrial and agricultural chemicals.

Specialist information and advice on the treatment of poisoning is available day and night from the **UK National Poisons Information Service** on the following number: Tel: 0344 892 0111.

Advice on laboratory analytical services can be obtained from **TOXBASE** or from the National Poisons Information Service. Help with identifying capsules or tablets may be available from a regional medicines information centre or from the National Poisons Information Service (out of hours).

### Storage of specialist antidotes

Due to the risk of unintended administration, NHS England advises emergency departments and pharmacies to ensure that 'specialist antidotes' are stored either in automatic dispensing cabinets/systems, or in a separate area specifically designated for antidotes. Those requiring refrigeration should be separated from other medicines in the medication fridge and clearly identified as antidotes. If 'specialist antidotes' are kept in the emergency/out-of-hours

medicine cupboards, they should be separated from other medicines and clearly identified as antidotes.

'Specialist antidotes' are defined as those on the **Royal College of Emergency Medicine/UK National Poisons Information Service** list (available at [www.npis.org/Publications.html](http://www.npis.org/Publications.html)) and only used in emergency departments as a specific antidote.

### General care

It is often impossible to establish with certainty the identity of the poison and the size of the dose. This is not usually important because only a few poisons (such as opioids, paracetamol, and iron) have specific antidotes; few patients require active removal of the poison. In most patients, treatment is directed at managing symptoms as they arise. Nevertheless, knowledge of the type and timing of poisoning can help in anticipating the course of events. All relevant information should be sought from the poisoned individual and from carers or parents. However, such information should be interpreted with care because it may not be complete or entirely reliable. Sometimes symptoms arise from other illnesses and patients should be assessed carefully. Accidents may involve domestic and industrial products (the contents of which are not generally known). The **National Poisons Information Service** should be consulted when there is doubt about any aspect of suspected poisoning.

### Respiration

Respiration is often impaired in unconscious patients. An obstructed airway requires immediate attention. In the absence of trauma, the airway should be opened with simple measures such as chin lift or jaw thrust. An oropharyngeal or nasopharyngeal airway may be useful in patients with reduced consciousness to prevent obstruction, provided ventilation is adequate. Intubation and ventilation should be considered in patients whose airway cannot be protected or who have respiratory acidosis because of inadequate ventilation; such patients should be monitored in a critical care area.

Most poisons that impair consciousness also depress respiration. Assisted ventilation (either mouth-to-mouth or using a bag-valve-mask device) may be needed. Oxygen is not a substitute for adequate ventilation, although it should be given in the highest concentration possible in poisoning with carbon monoxide and irritant gases.

### Blood pressure

Hypotension is common in severe poisoning with central nervous system depressants. A systolic blood pressure of less than 70 mmHg may lead to irreversible brain damage or renal

tubular necrosis. Hypotension should be corrected initially by raising the foot of the bed and administration of an infusion of either sodium chloride p. 1131 or a colloid. Vasoconstrictor sympathomimetics are rarely required and their use may be discussed with the National Poisons Information Service.

Fluid depletion without hypotension is common after prolonged coma and after aspirin poisoning due to vomiting, sweating, and hyperpnoea.

Hypertension, often transient, occurs less frequently than hypotension in poisoning; it may be associated with sympathomimetic drugs such as amfetamines, phencyclidine, and cocaine.

## Heart

Cardiac conduction defects and arrhythmias can occur in acute poisoning, notably with tricyclic antidepressants, some antipsychotics, and some antihistamines. Arrhythmias often respond to correction of underlying hypoxia, acidosis, or other biochemical abnormalities, but ventricular arrhythmias that cause serious hypotension require treatment. If the QT interval is prolonged, specialist advice should be sought because the use of some anti-arrhythmic drugs may be inappropriate. Supraventricular arrhythmias are seldom life-threatening and drug treatment is best withheld until the patient reaches hospital.

## Body temperature

Hypothermia may develop in patients of any age who have been deeply unconscious for some hours, particularly following overdose with barbiturates or phenothiazines. It may be missed unless core temperature is measured using a low-reading rectal thermometer or by some other means. Hypothermia should be managed by prevention of further heat loss and appropriate re-warming as clinically indicated.

Hyperthermia can develop in patients taking CNS stimulants; children and the elderly are also at risk when taking therapeutic doses of drugs with antimuscarinic properties. Hyperthermia is initially managed by removing all unnecessary clothing and using a fan. Sponging with tepid water will promote evaporation. Advice should be sought from the National Poisons Information Service on the management of severe hyperthermia resulting from conditions such as the serotonin syndrome.

Both hypothermia and hyperthermia require **urgent** hospitalisation for assessment and supportive treatment.

## Convulsions during poisoning

Single short-lived convulsions (lasting less than 5 minutes) do not require treatment. If convulsions are protracted or recur frequently, lorazepam p. 369 or diazepam p. 375 (preferably as emulsion) should be given by slow intravenous injection into a large vein. Benzodiazepines should not be given by the intramuscular route for convulsions. If the intravenous route is not readily available, midazolam oromucosal solution p. 371 [unlicensed use in adults and children under 3 months] can be given by the buccal route or diazepam p. 375 can be administered as a rectal solution.

## Methaemoglobinaemia

Drug- or chemical-induced methaemoglobinaemia should be treated with methylthionium chloride p. 1486 if the methaemoglobin concentration is 30% or higher, or if symptoms of tissue hypoxia are present despite oxygen therapy. Methylthionium chloride reduces the ferric iron of methaemoglobin back to the ferrous iron of haemoglobin; in high doses, methylthionium chloride can itself cause methaemoglobinaemia.

## Poison removal and elimination

### Prevention of absorption

Given by mouth, charcoal, activated p. 1481 can bind many poisons in the gastro-intestinal system, thereby reducing their absorption. The **sooner** it is given the **more effective** it is, but it may still be effective up to 1 hour after ingestion of the poison—longer in the case of modified-release preparations or of drugs with antimuscarinic (anticholinergic) properties. It is particularly useful for the prevention of absorption of poisons that are toxic in small amounts, such as antidepressants.

### Active elimination techniques

Repeated doses of charcoal, activated by mouth *enhance the elimination* of some drugs after they have been absorbed; repeated doses are given after overdose with:

- Carbamazepine
- Dapsone
- Phenobarbital
- Quinine
- Theophylline

If vomiting occurs after dosing it should be treated (e.g. with an antiemetic drug) since it may reduce the efficacy of charcoal treatment. In cases of intolerance, the dose may be reduced and the frequency increased but this may compromise efficacy.

Charcoal, activated should **not** be used for poisoning with petroleum distillates, corrosive substances, alcohols, malathion, cyanides and metal salts including iron and lithium salts.

Other techniques intended to enhance the elimination of poisons after absorption are only practicable in hospital and are only suitable for a small number of severely poisoned patients. Moreover, they only apply to a limited number of poisons. Examples include:

- haemodialysis for ethylene glycol, lithium, methanol, phenobarbital, salicylates, and sodium valproate;
- alkalinisation of the urine for salicylates.

### Removal from the gastro-intestinal tract

Gastric lavage is rarely required; for substances that cannot be removed effectively by other means (e.g. iron), it should be considered only if a life-threatening amount has been ingested within the previous hour. It should be carried out only if the airway can be protected adequately. Gastric lavage is contra-indicated if a corrosive substance or a petroleum distillate has been ingested, but it may occasionally be considered in patients who have ingested drugs that are not adsorbed by charcoal, such as iron or lithium. Induction of *emesis* (e.g. with ipecacuanha) is **not** recommended because there is no evidence that it affects absorption and it may increase the risk of aspiration.

*Whole bowel irrigation* (by means of a bowel cleansing preparation) has been used in poisoning with certain modified-release or enteric-coated formulations, in severe poisoning with iron and lithium salts, and if illicit drugs are carried in the gastro-intestinal tract ('body-packing'). However, it is not clear that the procedure improves outcome and advice should be sought from the National Poisons Information Service.

## Alcohol, acute intoxication

Acute intoxication with alcohol (ethanol) is common in adults but also occurs in children. The features include ataxia, dysarthria, nystagmus, and drowsiness, which may progress to coma, with hypotension and acidosis. Aspiration of vomit is a special hazard and hypoglycaemia may occur in children and some adults. Patients are managed supportively, with particular attention to maintaining a clear airway and measures to reduce the risk of aspiration of gastric contents. The blood glucose is measured and glucose given if indicated.

Patients whose plasma-paracetamol concentrations are on or above the **treatment line** should be treated with acetylcysteine by intravenous infusion.

The prognostic accuracy after 15 hours is uncertain, but a plasma-paracetamol concentration on or above the treatment line should be regarded as carrying a serious risk of liver damage.

### Aspirin poisoning

The main features of salicylate poisoning are hyperventilation, tinnitus, deafness, vasodilatation, and sweating. Coma is uncommon but indicates very severe poisoning. The associated acid-base disturbances are complex.

Treatment must be in hospital, where plasma salicylate, pH, and electrolytes can be measured; absorption of aspirin may be slow and the plasma-salicylate concentration may continue to rise for several hours, requiring repeated measurement. Plasma-salicylate concentration may not correlate with clinical severity in the young and the elderly, and clinical and biochemical assessment is necessary. Generally, the clinical severity of poisoning is less below a plasma-salicylate concentration of 500 mg/litre (3.6 mmol/litre), unless there is evidence of metabolic acidosis. Activated charcoal can be given within 1 hour of ingesting more than 125 mg/kg of aspirin. Fluid losses should be replaced and intravenous sodium bicarbonate may be given (ensuring plasma-potassium concentration is within the reference range) to enhance urinary salicylate excretion (optimum urinary pH 7.5–8.5).

Plasma-potassium concentration should be corrected before giving sodium bicarbonate as hypokalaemia may complicate alkalinisation of the urine.

Haemodialysis is the treatment of choice for severe salicylate poisoning and should be considered when the plasma-salicylate concentration exceeds 700 mg/litre (5.1 mmol/litre) or in the presence of severe metabolic acidosis.

### Opioid poisoning

Opioids (narcotic analgesics) cause coma, respiratory depression, and pinpoint pupils. The specific antidote naloxone hydrochloride p. 1484 is indicated if there is coma or bradypnoea. Since naloxone has a shorter duration of action than many opioids, close monitoring and repeated injections are necessary according to the respiratory rate and depth of coma. When repeated administration of naloxone is required, it can be given by continuous intravenous infusion instead and the rate of infusion adjusted according to vital signs. The effects of some opioids, such as buprenorphine, are only partially reversed by naloxone.

Dextropropoxyphene and methadone have very long durations of action; patients may need to be monitored for long periods following large overdoses.

Naloxone reverses the opioid effects of dextropropoxyphene. The long duration of action of dextropropoxyphene calls for prolonged monitoring and further doses of naloxone may be required. Norpropoxyphene, a metabolite of dextropropoxyphene, also has cardiotoxic effects which may require treatment with sodium bicarbonate p. 1128 or magnesium sulfate p. 1142, or both. Arrhythmias may occur for up to 12 hours.

### Paracetamol poisoning

In all cases of **intravenous paracetamol poisoning** clinicians are encouraged to contact the National Poisons Information Service for advice on risk assessment and management.

Toxic doses of paracetamol p. 477 may cause severe hepatocellular necrosis and, much less frequently, renal

tubular necrosis. Nausea and vomiting, the early features of poisoning, usually settle within 24 hours. The recurrence of nausea and vomiting after 2–3 days, often associated with the onset of right subcostal pain and tenderness, usually indicates development of hepatic necrosis. Liver damage is maximal 3–4 days after paracetamol p. 477 overdose and may lead to liver failure, encephalopathy, coma, and death.

The following guidance provides only an overview of the management of paracetamol overdose from the *National Poisons Information Service TOXBASE* database.

To avoid underestimating the potentially toxic paracetamol dose ingested by obese patients who weigh more than 110 kg, use a body-weight of 110 kg (rather than their actual body-weight) when calculating the total dose of paracetamol ingested (in mg/kg).

Acetylcysteine p. 1485 prevents or reduces the severity of liver damage if given up to, and possibly beyond (in patients at risk of severe liver disease) 24 hours of ingesting paracetamol. It is most effective if given within 8 hours of paracetamol ingestion, after which effectiveness declines. Very rarely, giving acetylcysteine by mouth [unlicensed] is an alternative if intravenous access is not possible (for further information, see **Acetylcysteine—oral doses**, available from TOXBASE).

#### Acute overdose

Acute overdose involves ingestion of a potentially toxic dose of paracetamol in 1 hour or less.

For **adults and children aged 6 years and over**, serious toxicity is unlikely to occur from a single ingestion of less than 75 mg/kg of paracetamol taken in less than 1 hour.

Refer patients to hospital for medical assessment if they meet any of the following criteria:

- have ingested paracetamol in the context of self-harm,
- are symptomatic,
- have ingested 75 mg/kg or more of paracetamol in 1 hour or less, or
- where the time of ingestion is uncertain but the dose ingested is 75 mg/kg or more.

For **children aged under 6 years**, serious toxicity is unlikely to occur from a single ingestion of less than 150 mg/kg of paracetamol taken in less than 1 hour. Refer children to hospital for medical assessment if they meet any of the following criteria:

- are symptomatic,
- have ingested 150 mg/kg or more of paracetamol in 1 hour or less, or
- where there is uncertainty about the dose ingested or circumstance of ingestion.

Although the benefit of gastric decontamination is uncertain, charcoal, activated p. 1481 should be considered if the patient presents within 1 hour of ingesting paracetamol in excess of 150 mg/kg.

Patients at risk of liver damage and therefore requiring acetylcysteine, can be identified from a single measurement of the plasma-paracetamol concentration related to the time from ingestion, provided this time interval is not less than 4 hours; earlier samples cannot be interpreted. The concentration is plotted on a paracetamol treatment graph, with a reference line ('treatment line') joining plots of 100 mg/litre (0.66 mmol/litre) at 4 hours and 3.13 mg/litre (0.02 mmol/litre) at 24 hours, see *Paracetamol overdose treatment graph*.

Acetylcysteine treatment should commence in patients:

- whose plasma-paracetamol concentration falls on or above the *treatment line* on the paracetamol treatment graph;
- who present within 8 hours of ingestion of more than 150 mg/kg of paracetamol if there is going to be a delay of 8 hours or more in obtaining the paracetamol concentration after the overdose;

- who present 8–24 hours after ingestion of an acute overdose of more than 150 mg/kg of paracetamol even if the plasma-paracetamol concentration is not yet available;
- who present more than 24 hours after ingestion of an overdose if they are clearly jaundiced or have hepatic tenderness, their ALT is above the upper limit of normal (patients with chronically elevated ALT should be discussed with the National Poisons Information Service), their INR is greater than 1.3 (in the absence of another cause), or the paracetamol concentration is detectable.

Consider acetylcysteine treatment in patients who present within 24 hours of an overdose if biochemical tests suggest acute liver injury, even if the plasma paracetamol concentration is below the treatment line on the paracetamol treatment graph.

If the patient is not at risk of liver toxicity (i.e. the paracetamol concentration is below the treatment line or undetectable; the INR and ALT are normal; and the patient is asymptomatic) no treatment with an antidote is indicated; acetylcysteine may be discontinued if it has been started.

Where the time of ingestion is unknown, patients should be managed as a *staggered overdose*.

#### Therapeutic excess or staggered overdose

Patients who have ingested more than 150 mg/kg of paracetamol in any 24-hour period are at risk of serious toxicity. Toxicity rarely occurs with paracetamol doses between 75–150 mg/kg in any 24-hour period. Doses consistently less than 75 mg/kg in any 24-hour period are very unlikely to be toxic; however risk may be increased if this dose is repeatedly ingested over 2 or more days. Ingestion of a licensed dose of paracetamol is not considered an overdose.

**Therapeutic excess** is the ingestion of a potentially toxic dose of paracetamol with intent to treat pain or fever and without self-harm intent during its clinical use. All patients should be referred to hospital for medical assessment if they meet any of the following criteria:

- are symptomatic,
- have ingested more than a licensed dose and more than or equal to 75 mg/kg in any 24-hour period, or
- have ingested more than the licensed dose but less than 75 mg/kg/24 hours on each of the preceding 2 or more days.

Patients with clinical features of hepatic injury such as jaundice or hepatic tenderness should be treated urgently with acetylcysteine. For other patients, management is determined by the maximum dose of paracetamol ingested in any 24-hour period.

When there is uncertainty about whether the presentation was due to therapeutic excess, the patient should be managed as a *staggered overdose*.

A **staggered overdose** involves ingestion of a potentially toxic dose of paracetamol over more than 1 hour, with the possible intention of causing self-harm. All patients who have taken a staggered overdose should be referred to hospital for medical assessment. The MHRA advises that all patients who have ingested a staggered overdose should be treated with acetylcysteine without delay.

Clinically significant hepatotoxicity is unlikely and the patient is not considered to be at risk if, there has been at least 4 hours or more since the last paracetamol ingestion, the patient has no symptoms suggesting liver damage, the paracetamol concentration is less than 10 mg/L, their ALT is within the normal range, and their INR is 1.3 or less. Acetylcysteine can be discontinued in patients not considered to be at risk of clinically significant liver damage. If there is uncertainty about a patient's risk of toxicity after paracetamol overdose, advice should be sought from the National Poisons Information Service.

### Acetylcysteine dose and administration

For paracetamol overdose, there are two intravenous acetylcysteine p. 1485 regimens: the standard 21-hour regimen and the modified 12-hour regimen (also known as the Scottish and Newcastle Acetylcysteine Protocol (SNAP)). The SNAP regimen [unlicensed] is not endorsed by the MHRA, and its efficacy with regard to preventing liver toxicity is not fully established in all patterns of paracetamol overdose—it should only be used after discussion with a senior clinician. For further information, see **Acetylcysteine SNAP Doses—Adult and Acetylcysteine SNAP Doses—Children**, available from TOXBASE.

For the standard 21-hour regimen, acetylcysteine is given in a total dose that is divided into 3 consecutive intravenous infusions over a total of 21 hours. The tables below include the dose of acetylcysteine for adults and children of body-weight 40 kg and over, in terms of the volume of acetylcysteine Concentrate for Intravenous Infusion required for each of the 3 infusions. The requisite dose of acetylcysteine is added to glucose 5% p. 1132 or sodium chloride 0.9% Intravenous Infusion p. 1131. For information on dosing/administration for adults and children who weigh less than 40 kg, see **Acetylcysteine Doses—Children**, available from TOXBASE.

First infusion	
Body-weight	Volume of Acetylcysteine Concentrate for Intravenous Infusion 200 mg/mL required to prepare first infusion
40–49 kg	34 mL
50–59 kg	42 mL
60–69 kg	49 mL
70–79 kg	57 mL
80–89 kg	64 mL
90–99 kg	72 mL
100–109 kg	79 mL
≥110 kg	83 mL (max. dose)

*First infusion* (based on an acetylcysteine dose of approx. 150 mg/kg)—add requisite volume of Acetylcysteine Concentrate for Intravenous Infusion to 200 mL Glucose 5% or sodium chloride 0.9% Intravenous Infusion; infuse over 1 hour.

Second infusion	
Body-weight	Volume of Acetylcysteine Concentrate for Intravenous Infusion 200 mg/mL required to prepare second infusion
40–49 kg	12 mL
50–59 kg	14 mL
60–69 kg	17 mL
70–79 kg	19 mL
80–89 kg	22 mL
90–99 kg	24 mL
100–109 kg	27 mL
≥110 kg	28 mL (max. dose)

*Second infusion* (based on an acetylcysteine dose of approx. 50 mg/kg; start immediately after completion of first infusion)—add requisite volume of Acetylcysteine Concentrate for Intravenous Infusion to 500 mL Glucose 5% or sodium chloride 0.9% Intravenous Infusion; infuse over 4 hours.

Third infusion	
Body-weight	Volume of Acetylcysteine Concentrate for Intravenous Infusion 200 mg/mL required to prepare third infusion
40–49 kg	23 mL
50–59 kg	28 mL
60–69 kg	33 mL
70–79 kg	38 mL
80–89 kg	43 mL
90–99 kg	48 mL
100–109 kg	53 mL
≥110 kg	55 mL (max. dose)

*Third infusion* (based on an acetylcysteine dose of approx. 100 mg/kg; start immediately after completion of second infusion)—add requisite volume of Acetylcysteine Concentrate for Intravenous Infusion to 1 litre Glucose 5% or sodium chloride 0.9% Intravenous Infusion; infuse over 16 hours.

### Antidepressant poisoning

#### Tricyclic and related antidepressants

Tricyclic and related antidepressants cause dry mouth, coma of varying degree, hypotension, hypothermia, hyperreflexia, extensor plantar responses, convulsions, respiratory failure, cardiac conduction defects, and arrhythmias. Dilated pupils and urinary retention also occur. Metabolic acidosis may complicate severe poisoning; delirium with confusion, agitation, and visual and auditory hallucinations are common during recovery.

Assessment in hospital is strongly advised in case of poisoning by tricyclic and related antidepressants but symptomatic treatment can be given before transfer. Supportive measures to ensure a clear airway and adequate ventilation during transfer are mandatory. Intravenous lorazepam or intravenous diazepam (preferably in emulsion form) may be required to treat convulsions. Activated charcoal given within 1 hour of the overdose reduces absorption of the drug. Although arrhythmias are worrying, some will respond to correction of hypoxia and acidosis. The use of anti-arrhythmic drugs is best avoided, but intravenous infusion of sodium bicarbonate can arrest arrhythmias or prevent them in those with an extended QRS duration. Diazepam given by mouth is usually adequate to sedate delirious patients but large doses may be required.

#### Selective serotonin re-uptake inhibitors (SSRIs)

Symptoms of poisoning by selective serotonin re-uptake inhibitors include nausea, vomiting, agitation, tremor, nystagmus, drowsiness, and sinus tachycardia; convulsions may occur. Rarely, severe poisoning results in the serotonin syndrome, with marked neuropsychiatric effects, neuromuscular hyperactivity, and autonomic instability; hyperthermia, rhabdomyolysis, renal failure, and coagulopathies may develop.

Management of SSRI poisoning is supportive. Activated charcoal given within 1 hour of the overdose reduces absorption of the drug. Convulsions can be treated with lorazepam, diazepam, or midazolam oromucosal solution [unlicensed use in adults and children under 3 months] (see *Convulsions*). Contact the National Poisons Information Service for the management of hyperthermia or the serotonin syndrome.

#### Antimalarial poisoning

Overdose with quinine, chloroquine, or hydroxychloroquine is extremely hazardous and difficult to treat. Urgent advice from the National Poisons Information Service is essential. Life-threatening features include

arrhythmias (which can have a very rapid onset) and convulsions (which can be intractable).

## Antipsychotic poisoning

### Phenothiazines and related drugs

Phenothiazines cause less depression of consciousness and respiration than other sedatives. Hypotension, hypothermia, sinus tachycardia, and arrhythmias may complicate poisoning. Dystonic reactions can occur with therapeutic doses (particularly with prochlorperazine and trifluoperazine), and convulsions may occur in severe cases. Arrhythmias may respond to correction of hypoxia, acidosis, and other biochemical abnormalities, but specialist advice should be sought if arrhythmias result from a prolonged QT interval; the use of some anti-arrhythmic drugs can worsen such arrhythmias. Dystonic reactions are rapidly abolished by injection of drugs such as procyclidine hydrochloride p. 444 or diazepam p. 375 (emulsion preferred).

### Second-generation antipsychotic drugs

Features of poisoning by second-generation antipsychotic drugs include drowsiness, convulsions, extrapyramidal symptoms, hypotension, and ECG abnormalities (including prolongation of the QT interval). Management is supportive. Charcoal, activated p. 1481 can be given within 1 hour of ingesting a significant quantity of a second-generation antipsychotic drug.

### Benzodiazepine poisoning

Benzodiazepines taken alone cause drowsiness, ataxia, dysarthria, nystagmus, and occasionally respiratory depression, and coma. Charcoal, activated can be given within 1 hour of ingesting a significant quantity of benzodiazepine, provided the patient is awake and the airway is protected. Benzodiazepines potentiate the effects of other central nervous system depressants taken concomitantly. Use of the benzodiazepine antagonist flumazenil p. 1482 [unlicensed indication] can be hazardous, particularly in mixed overdoses involving tricyclic antidepressants or in benzodiazepine-dependent patients. Flumazenil may prevent the need for ventilation, particularly in patients with severe respiratory disorders; it should be used on expert advice only and not as a diagnostic test in patients with a reduced level of consciousness.

### Beta-blockers poisoning

Overdoses with beta-blockers may cause cardiac effects such as bradycardia, hypotension, syncope, conduction abnormalities, and heart failure. Bradycardia is the most common arrhythmia, but some beta-blockers may induce ventricular tachyarrhythmias secondary to prolongation of QT interval (e.g. sotalol) or QRS duration (e.g. propranolol). Although the predominant effects of beta-blocker overdose are on the heart, other features may also occur, such as central nervous system effects (including drowsiness, confusion, convulsions, hallucinations, and in severe cases coma), respiratory depression, and bronchospasm. The effects of overdose can vary from one beta-blocker to another; propranolol overdose in particular may cause coma and convulsions.

The following guidance provides only an overview of the management of beta-blocker overdose from the *National Poisons Information Service TOXBASE database*.

All patients who have been exposed to beta-blockers as a result of self-harm should be referred for assessment. Medical assessment is recommended for all patients who are symptomatic or have ingested more than a toxic dose; and in those who are treatment naive or have taken more than their therapeutic dose, and have a significant cardiac history, asthma, chronic obstructive pulmonary disease, or are elderly. All patients who have exceeded their prescribed daily dose of 2 or more cardiotoxic agents should also be referred for medical assessment irrespective of the dose

ingested. Hospital clinicians are encouraged to discuss all serious cases with the UK National Poisons Information Service.

For patients presenting with overdose, maintain a clear airway and adequate ventilation. Although the benefit of gastric decontamination is uncertain, charcoal, activated p. 1481 can be considered if the patient presents within 1 hour of ingestion of more than a potentially toxic dose.

For the management of hypotension, ensure adequate fluid resuscitation; in an emergency, vasopressors and inotropes can be initiated under the advice of an experienced physician. Intravenous glucagon p. 793 [unlicensed] is a treatment option for severe hypotension, heart failure, or cardiogenic shock. In severe cases, an insulin and glucose infusion can improve myocardial contractility and systemic perfusion, especially in the presence of acidosis. Consider intravenous sodium bicarbonate p. 1128 for correction of metabolic acidosis that persists despite correction of hypoxia and adequate fluid resuscitation—rapid correction is particularly important if QRS duration is prolonged. For symptomatic bradycardia, give intravenous atropine sulfate p. 1445; dobutamine p. 240 [unlicensed] or isoprenaline [unlicensed] (available from 'special-order' manufacturers or specialist importing companies) may be considered if bradycardia is associated with hypotension. A temporary cardiac pacemaker can be used to increase the heart rate.

Treat bronchospasm with nebulised bronchodilators and corticosteroids.

If convulsions occur give oxygen, and correct acid-base and metabolic disturbances as required. Prolonged or frequent convulsions should be controlled with intravenous diazepam p. 375, lorazepam p. 369, or midazolam p. 371. If convulsions are unresponsive to treatment, the patient should be referred urgently to critical care.

### Calcium-channel blockers poisoning

Features of calcium-channel blocker poisoning include nausea, vomiting, dizziness, agitation, confusion, and coma in severe poisoning. Metabolic acidosis and hyperglycaemia may occur. Verapamil and diltiazem have a profound cardiac depressant effect causing hypotension and arrhythmias, including complete heart block and asystole. The dihydropyridine calcium-channel blockers cause severe hypotension secondary to profound peripheral vasodilatation.

Charcoal, activated should be considered if the patient presents within 1 hour of overdose with a calcium-channel blocker; repeated doses of activated charcoal are considered if a modified-release preparation is involved. In patients with significant features of poisoning, calcium chloride p. 1138 or calcium gluconate p. 1139 is given by injection; atropine sulfate is given to correct symptomatic bradycardia. In severe cases, an insulin and glucose infusion may be required in the management of hypotension and myocardial failure. For the management of hypotension, the choice of inotropic sympathomimetic depends on whether hypotension is secondary to vasodilatation or to myocardial depression—advice should be sought from the National Poisons Information Service.

### Iron salts poisoning

Iron poisoning in childhood is usually accidental. The symptoms are nausea, vomiting, abdominal pain, diarrhoea, haematemesis, and rectal bleeding. Hypotension and hepatocellular necrosis can occur later. Coma, shock, and metabolic acidosis indicate severe poisoning.

Advice should be sought from the National Poisons Information Service if a significant quantity of iron has been ingested within the previous hour.

Mortality is reduced by intensive and specific therapy with desferrioxamine mesilate p. 1116, which chelates iron. The serum-iron concentration is measured as an emergency and

intravenous desferrioxamine mesilate given to chelate absorbed iron in excess of the expected iron binding capacity. In severe toxicity intravenous desferrioxamine mesilate should be given immediately without waiting for the result of the serum-iron measurement.

### Lithium poisoning

Most cases of lithium intoxication occur as a complication of long-term therapy and are caused by reduced excretion of the drug because of a variety of factors including dehydration, deterioration of renal function, infections, and co-administration of diuretics or NSAIDs (or other drugs that interact). Acute deliberate overdoses may also occur with delayed onset of symptoms (12 hours or more) owing to slow entry of lithium into the tissues and continuing absorption from modified-release formulations.

The early clinical features are non-specific and may include apathy and restlessness which could be confused with mental changes arising from the patient's depressive illness. Vomiting, diarrhoea, ataxia, weakness, dysarthria, muscle twitching, and tremor may follow. Severe poisoning is associated with convulsions, coma, renal failure, electrolyte imbalance, dehydration, and hypotension.

Therapeutic serum-lithium concentrations are within the range of 0.4–1 mmol/litre; concentrations in excess of 2 mmol/litre are usually associated with serious toxicity and such cases may need treatment with haemodialysis if neurological symptoms or renal failure are present. In acute overdosage much higher serum-lithium concentrations may be present without features of toxicity and all that is usually necessary is to take measures to increase urine output (e.g. by increasing fluid intake but avoiding diuretics). Otherwise, treatment is supportive with special regard to electrolyte balance, renal function, and control of convulsions. Gastric lavage may be considered if it can be performed within 1 hour of ingesting significant quantities of lithium. Whole-bowel irrigation should be considered for significant ingestion, but advice should be sought from the National Poisons Information Service.

### Stimulant-drug poisoning

Amfetamines cause wakefulness, excessive activity, paranoia, hallucinations, and hypertension followed by exhaustion, convulsions, hyperthermia, and coma. The early stages can be controlled by diazepam or lorazepam; advice should be sought from the National Poisons Information Service on the management of hypertension. Later, tepid sponging, anticonvulsants, and artificial respiration may be needed.

### Cocaine

Cocaine stimulates the central nervous system, causing agitation, dilated pupils, tachycardia, hypertension, hallucinations, hyperthermia, hypertonia, and hyperreflexia; cardiac effects include chest pain, myocardial infarction, and arrhythmias.

Initial treatment of cocaine poisoning involves intravenous administration of diazepam to control agitation and cooling measures for hyperthermia (see Body temperature); hypertension and cardiac effects require specific treatment and expert advice should be sought.

### Ecstasy

Ecstasy (methylenedioxymethamphetamine, MDMA) may cause severe reactions, even at doses that were previously tolerated. The most serious effects are delirium, coma, convulsions, ventricular arrhythmias, hyperthermia, rhabdomyolysis, acute renal failure, acute hepatitis, disseminated intravascular coagulation, adult respiratory distress syndrome, hyperreflexia, hypotension and intracerebral haemorrhage; hyponatraemia has also been associated with ecstasy use.

Treatment of methylenedioxymethamphetamine poisoning is supportive, with diazepam p. 375 to control severe

agitation or persistent convulsions and close monitoring including ECG. Self-induced water intoxication should be considered in patients with ecstasy poisoning.

'Liquid ecstasy' is a term used for sodium oxybate (gamma-hydroxybutyrate, GHB), which is a sedative.

### Theophylline poisoning

Theophylline and related drugs are often prescribed as modified-release formulations and toxicity can therefore be delayed. They cause vomiting (which may be severe and intractable), agitation, restlessness, dilated pupils, sinus tachycardia, and hyperglycaemia. More serious effects are haematemesis, convulsions, and supraventricular and ventricular arrhythmias. Severe hypokalaemia may develop rapidly.

Repeated doses of activated charcoal can be used to eliminate theophylline even if more than 1 hour has elapsed after ingestion and especially if a modified-release preparation has been taken (see also under Active Elimination Techniques). Ondansetron p. 466 may be effective for severe vomiting that is resistant to other antiemetics [unlicensed indication]. Hypokalaemia is corrected by intravenous infusion of potassium chloride p. 1149 and may be so severe as to require 60 mmol/hour (high doses require ECG monitoring). Convulsions should be controlled by intravenous administration of lorazepam p. 369 or diazepam (see Convulsions). Sedation with diazepam may be necessary in agitated patients.

Provided the patient does not suffer from asthma, a short-acting beta-blocker can be administered intravenously to reverse severe tachycardia, hypokalaemia, and hyperglycaemia.

### Cyanide poisoning

Oxygen should be administered to patients with cyanide poisoning. The choice of antidote depends on the severity of poisoning, certainty of diagnosis, and the cause. Dicobalt edetate p. 1481 is the antidote of choice when there is a strong clinical suspicion of severe cyanide poisoning, but it should **not** be used as a precautionary measure. Dicobalt edetate itself is toxic, associated with anaphylactoid reactions, and is potentially fatal if administered in the absence of cyanide poisoning. A regimen of sodium nitrite p. 1481 followed by sodium thiosulfate p. 1482 is an alternative if dicobalt edetate is not available.

Hydroxocobalamin p. 1114 (Cyanokit®—no other preparation of hydroxocobalamin is suitable) can be considered for use in victims of smoke inhalation who show signs of significant cyanide poisoning.

### Ethylene glycol and methanol poisoning

Fomepizole (available from 'special-order' manufacturers or specialist importing companies) is the treatment of choice for ethylene glycol and methanol (methyl alcohol) poisoning. If necessary, ethanol (by mouth or by intravenous infusion) can be used, but with caution. Advice on the treatment of ethylene glycol and methanol poisoning should be obtained from the National Poisons Information Service. It is important to start antidote treatment promptly in cases of suspected poisoning with these agents.

### Heavy metal poisoning

Heavy metal antidotes include succimer (DMSA) [unlicensed], unithiol (DMPS) [unlicensed], sodium calcium edetate [unlicensed], and dimercaprol. Dimercaprol in the management of heavy metal poisoning has been superseded by other chelating agents. In all cases of heavy metal poisoning, the advice of the National Poisons Information Service should be sought.

## Noxious gases poisoning

### Carbon monoxide

Carbon monoxide poisoning is usually due to inhalation of smoke, car exhaust, or fumes caused by blocked flues or incomplete combustion of fuel gases in confined spaces.

Immediate treatment of carbon monoxide poisoning is essential. The person should be moved to fresh air, the airway cleared, and high-flow oxygen 100% administered through a tight-fitting mask with an inflated face seal. Artificial respiration should be given as necessary and continued until adequate spontaneous breathing starts, or stopped only after persistent and efficient treatment of cardiac arrest has failed. The patient should be admitted to hospital because complications may arise after a delay of hours or days. Cerebral oedema may occur in severe poisoning and is treated with an intravenous infusion of mannitol p. 248. Referral for hyperbaric oxygen treatment should be discussed with the National Poisons Information Service if the patient is pregnant or in cases of severe poisoning, such as if the patient is or has been unconscious, or has psychiatric or neurological features other than a headache, or has myocardial ischaemia or an arrhythmia, or has a blood carboxyhaemoglobin concentration of more than 20%.

### Sulfur dioxide, chlorine, phosgene, and ammonia

All of these gases can cause upper respiratory tract and conjunctival irritation. Pulmonary oedema, with severe breathlessness and cyanosis may develop suddenly up to 36 hours after exposure. Death may occur. Patients are kept under observation and those who develop pulmonary oedema are given oxygen. Assisted ventilation may be necessary in the most serious cases.

### CS Spray poisoning

CS spray, which is used for riot control, irritates the eyes (hence 'tear gas') and the respiratory tract; symptoms normally settle spontaneously within 15 minutes. If symptoms persist, the patient should be removed to a well-ventilated area, and the exposed skin washed with soap and water after removal of contaminated clothing. Contact lenses should be removed and rigid ones washed (soft ones should be discarded). Eye symptoms should be treated by irrigating the eyes with physiological saline (or water if saline is not available) and advice sought from an ophthalmologist. Patients with features of severe poisoning, particularly respiratory complications, should be admitted to hospital for symptomatic treatment.

## Pesticide poisoning

### Organophosphorus insecticides

Organophosphorus insecticides are usually supplied as powders or dissolved in organic solvents. All are absorbed through the bronchi and intact skin as well as through the gut and inhibit cholinesterase activity, thereby prolonging and intensifying the effects of acetylcholine. Toxicity between different compounds varies considerably, and onset may be delayed after skin exposure.

Anxiety, restlessness, dizziness, headache, miosis, nausea, hypersalivation, vomiting, abdominal colic, diarrhoea, bradycardia, and sweating are common features of organophosphorus poisoning. Muscle weakness and fasciculation may develop and progress to generalised flaccid paralysis, including the ocular and respiratory muscles. Convulsions, coma, pulmonary oedema with copious bronchial secretions, hypoxia, and arrhythmias occur in severe cases. Hyperglycaemia and glycosuria without ketonuria may also be present.

Further absorption of the organophosphorus insecticide should be prevented by moving the patient to fresh air, removing soiled clothing, and washing contaminated skin. In severe poisoning it is vital to ensure a clear airway, frequent

removal of bronchial secretions, and adequate ventilation and oxygenation; gastric lavage may be considered provided that the airway is protected. Atropine sulfate p. 1445 will reverse the muscarinic effects of acetylcholine and is given by intravenous injection until the skin becomes flushed and dry, the pupils dilate, and bradycardia is abolished.

Pralidoxime chloride p. 1482, a cholinesterase reactivator, is used as an adjunct to atropine sulfate p. 1445 in moderate or severe poisoning. It improves muscle tone within 30 minutes of administration. Pralidoxime chloride is continued until the patient has not required atropine sulfate for 12 hours. Pralidoxime chloride can be obtained from designated centres, the names of which are held by the National Poisons Information Service.

## Snake bites and animal stings

### Snake bites

Envenoming from snake bite is uncommon in the UK. Many exotic snakes are kept, some illegally, but the only indigenous venomous snake is the adder (*Vipera berus*). The bite may cause local and systemic effects. Local effects include pain, swelling, bruising, and tender enlargement of regional lymph nodes. Systemic effects include early anaphylactic symptoms (transient hypotension with syncope, angioedema, urticaria, abdominal colic, diarrhoea, and vomiting), with later persistent or recurrent hypotension, ECG abnormalities, spontaneous systemic bleeding, coagulopathy, adult respiratory distress syndrome, and acute renal failure. Fatal envenoming is rare but the potential for severe envenoming must not be underestimated.

Early anaphylactic symptoms should be treated with intramuscular adrenaline/epinephrine p. 241, see Antihistamines, allergen immunotherapy and allergic emergencies p. 299 for further guidance on anaphylaxis management. Indications for european viper snake venom antiserum p. 1487 treatment include *systemic envenoming*, especially hypotension, ECG abnormalities, vomiting, haemostatic abnormalities, and marked local envenoming such that after bites on the hand or foot, swelling extends beyond the wrist or ankle within 4 hours of the bite. For those patients who present with clinical features of *severe envenoming* (e.g. shock, ECG abnormalities, or local swelling that has advanced from the foot to above the knee or from the hand to above the elbow within 2 hours of the bite), a higher initial dose of the european viper snake venom antiserum is recommended; if symptoms of *systemic envenoming* persist contact the National Poisons Information Service. Adrenaline/epinephrine injection must be immediately to hand for treatment of anaphylactic reactions to the european viper snake venom antiserum.

Antivenom is available for bites by certain foreign snakes and spiders, stings by scorpions and fish. For information on identification, management, and for supply in an emergency, telephone the National Poisons Information Service. Whenever possible the TOXBASE entry should be read, and relevant information collected, before telephoning the National Poisons Information Service.

### Insect stings

Stings from ants, wasps, hornets, and bees cause local pain and swelling but seldom cause severe direct toxicity unless many stings are inflicted at the same time. If the sting is in the mouth or on the tongue local swelling may threaten the upper airway. The stings from these insects are usually treated by cleaning the area with a topical antiseptic. Bee stings should be removed as quickly as possible.

Anaphylactic reactions require immediate treatment with intramuscular **adrenaline/epinephrine**; self-administered intramuscular adrenaline/epinephrine is the best first-aid treatment for patients with severe hypersensitivity. An inhaled bronchodilator may also be considered for patients with persisting respiratory problems, see Antihistamines,

allergen immunotherapy and allergic emergencies p. 299 for further guidance on anaphylaxis management. A short course of an **oral antihistamine** or a **topical corticosteroid** may help to reduce inflammation and relieve itching. A vaccine containing extracts of bee and wasp venom can be used to reduce the risk of anaphylaxis and systemic reactions in patients with systemic hypersensitivity to bee or wasp stings.

#### Marine stings

The severe pain of weeverfish (*Trachinus vipera*) and Portuguese man-o'-war stings can be relieved by immersing the stung area immediately in uncomfortably hot, but not scalding, water (not more than 45° C). People stung by jellyfish and Portuguese man-o'-war around the UK coast should be removed from the sea as soon as possible. Adherent tentacles should be lifted off carefully (wearing gloves or using tweezers) or washed off with seawater. Alcoholic solutions, including suntan lotions, should not be applied because they can cause further discharge of stinging hairs. Ice packs can be used to reduce pain.

#### Other poisons

Consult either the National Poisons Information Service day and night or TOXBASE.

The **National Poisons Information Service** (Tel: 0344 892 0111) will provide specialist advice on all aspects of poisoning day and night.

## 1 Active elimination from the gastro-intestinal tract

### ANTIDOTES AND CHELATORS > INTESTINAL ADSORBENTS

#### Charcoal, activated

23-Jul-2020

##### ● INDICATIONS AND DOSE

##### Reduction of absorption of poisons in the gastro-intestinal system

▶ BY MOUTH

▶ Neonate: 1 g/kg.

- ▶ Child 1 month–11 years: 1 g/kg (max. per dose 50 g)
- ▶ Child 12–17 years: 50 g
- ▶ Adult: 50 g

##### Active elimination of poisons

▶ BY MOUTH

- ▶ Neonate: 1 g/kg every 4 hours, dose may be reduced and the frequency increased if not tolerated, reduced dose may compromise efficacy.
- ▶ Child 1 month–11 years: 1 g/kg every 4 hours (max. per dose 50 g), dose may be reduced and the frequency increased if not tolerated, reduced dose may compromise efficacy
- ▶ Child 12–17 years: Initially 50 g, then 50 g every 4 hours, reduced if not tolerated to 25 g every 2 hours, alternatively 12.5 g every 1 hour, reduced dose may compromise efficacy
- ▶ Adult: Initially 50 g, then 50 g every 4 hours, reduced if not tolerated to 25 g every 2 hours, alternatively 12.5 g every 1 hour, reduced dose may compromise efficacy

##### Accelerated elimination of tetriflunomide

▶ BY MOUTH USING GRANULES

▶ Adult: 50 g every 12 hours for 11 days

##### Accelerated elimination of leflunomide (washout procedure)

▶ BY MOUTH USING GRANULES

▶ Adult: 50 g 4 times a day for 11 days

##### ● UNLICENSED USE

▶ In adults Activated charcoal doses in BNF may differ from those in product literature.

● **CAUTIONS** Comatose patient (risk of aspiration—ensure airway is protected) · drowsy patient (risk of aspiration—ensure airway protected) · reduced gastrointestinal motility (risk of obstruction)

● **SIDE-EFFECTS** Bezoar · constipation · diarrhoea · gastrointestinal disorders

● **DIRECTIONS FOR ADMINISTRATION** TOXBASE advises suspension or reconstituted powder may be mixed with soft drinks (e.g. caffeine-free diet cola) or fruit juices to mask the taste.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

##### Oral suspension

▶ **Charcodote** (Teva UK Ltd)

▶ **Activated charcoal 200 mg per 1 ml** Charcodote 200mg/ml oral suspension sugar-free | 250 ml **P** | £11.88 DT = £11.88

##### Granules

▶ **Carbomix** (Kent Pharma (UK) Ltd)

▶ **Activated charcoal 813 mg per 1 gram** Carbomix 81.3% granules sugar-free | 50 gram **P** | £11.90 DT = £11.90

## 2 Chemical toxicity

### 2.1 Cyanide toxicity

#### ANTIDOTES AND CHELATORS

#### Dicobalt edetate

07-Oct-2021

##### ● INDICATIONS AND DOSE

##### Severe poisoning with cyanides

▶ BY INTRAVENOUS INJECTION

▶ Child: Consult the National Poisons Information Service

▶ Adult: 300 mg, to be given over 1 minute (or 5 minutes if condition less serious), dose to be followed immediately by 50 mL of glucose intravenous infusion 50%; if response inadequate a second dose of both may be given, but risk of cobalt toxicity

● **CAUTIONS** Owing to toxicity to be used only for definite cyanide poisoning when patient tending to lose, or has lost, consciousness

● **SIDE-EFFECTS** Reflex tachycardia · vomiting

● **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine restriction does not apply where administration is for saving life in emergency.

● **MEDICINAL FORMS** No licensed medicines listed.

#### Sodium nitrite

05-May-2021

##### ● INDICATIONS AND DOSE

##### Poisoning with cyanides (used in conjunction with sodium thiosulfate)

▶ BY INTRAVENOUS INJECTION

▶ Child: Consult the National Poisons Information Service

continued →

▶ Adult: 300 mg

#### IMPORTANT SAFETY INFORMATION

**NHS IMPROVEMENT PATIENT SAFETY ALERT: RISK OF DEATH FROM UNINTENDED ADMINISTRATION OF SODIUM NITRITE (AUGUST 2020)**

Cases of unintended administration of sodium nitrite have been reported, including 2 fatalities. Sodium nitrite can cause significant side-effects such as methaemoglobinaemia and nitric oxide-induced vasodilation.

Acute trusts are advised to check all clinical areas to ensure that sodium nitrite injection has not been inadvertently supplied, and to only retain stock in emergency departments. Unlicensed sodium nitrite ampoules in emergency departments should also be destroyed appropriately and replaced with licensed vials.

For information on the storage of 'specialist antidotes', see Poisoning, emergency treatment p. 1473.

- **SIDE-EFFECTS** Arrhythmias · dizziness · headache · hypotension · methaemoglobinaemia · palpitations
- **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine restriction does not apply where administration is for saving life in emergency.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### Sodium nitrite (Non-proprietary)

**Sodium nitrite 30 mg per 1 mL** Sodium nitrite 300mg/10mL solution for injection vials | 1 vial  (Hospital only)

## Sodium thiosulfate

16-Mar-2018

#### ● INDICATIONS AND DOSE

##### Poisoning with cyanides

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child: Consult the National Poisons Information Service
- ▶ Adult: 12.5 g, to be given over 10 minutes, dose may be repeated in severe cyanide poisoning

#### DOSE EQUIVALENCE AND CONVERSION

- ▶ 12.5 g equates to 50 mL of a 25% solution or 25 mL of a 50% solution.

- **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine restriction does not apply where administration is for saving life in emergency.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

#### Solution for injection

##### Sodium thiosulfate (Non-proprietary)

**Sodium thiosulfate 250 mg per 1 mL** Sodium thiosulfate 12.5g/50mL solution for injection vials | 1 vial  (Hospital only)

## 2.2 Organophosphorus toxicity

**Other drugs used for Organophosphorus toxicity** Atropine sulfate, p. 1445

## ANTIDOTES AND CHELATORS

### Pralidoxime chloride

31-Jan-2022

#### ● INDICATIONS AND DOSE

##### Adjunct to atropine in the treatment of poisoning by organophosphorus insecticide or nerve agent

- ▶ BY INTRAVENOUS INFUSION
- ▶ Child: Initially 30 mg/kg, to be given over 20 minutes, followed by 8 mg/kg/hour; maximum 12 g per day
- ▶ Adult: Initially 30 mg/kg, to be given over 20 minutes, followed by 8 mg/kg/hour; maximum 12 g per day

- **UNLICENSED USE** Pralidoxime chloride doses may differ from those in product literature.

- ▶ In children Licensed for use in children (age range not specified by manufacturer).

- **CONTRA-INDICATIONS** Poisoning with carbamates · poisoning with organophosphorus compounds without anticholinesterase activity

- **CAUTIONS** Myasthenia gravis

- **SIDE-EFFECTS** Dizziness · drowsiness · headache · hyperventilation · muscle weakness · nausea · tachycardia · vision disorders

- **RENAL IMPAIRMENT**  Use with caution. 

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises the loading dose may be administered by intravenous injection (diluted to a concentration of 50 mg/mL with water for injections) over at least 5 minutes if pulmonary oedema is present or if it is not practical to administer an intravenous infusion.

- ▶ In children For *intravenous infusion*, manufacturer advises reconstitute each vial with 20 mL Water for Injections, then dilute to a concentration of 10–20 mg/mL with Sodium Chloride 0.9%.

- **PRESCRIBING AND DISPENSING INFORMATION** Available from designated centres for organophosphorus insecticide poisoning—see TOXBASE for list of holding centres.

- **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine restriction does not apply where administration is for saving life in emergency.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for solution for injection

##### ▶ Pralidoxime chloride (Non-proprietary)

**Pralidoxime chloride 1 gram** Protopam Chloride 1g powder for solution for injection vials | 6 vial  (Hospital only)

## 3 Drug toxicity

### 3.1 Benzodiazepine toxicity

#### ANTIDOTES AND CHELATORS > BENZODIAZEPINE ANTAGONISTS

### Flumazenil

24-Jul-2020

#### ● INDICATIONS AND DOSE

##### Reversal of sedative effects of benzodiazepines in anaesthesia and clinical procedures

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: 200 micrograms, dose to be administered over 15 seconds, then 100 micrograms every 1 minute if required; usual dose 300–600 micrograms; maximum 1 mg per course

**Reversal of sedative effects of benzodiazepines in intensive care**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: 300 micrograms, dose to be administered over 15 seconds, then 100 micrograms every 1 minute if required; maximum 2 mg per course

**Reversal of sedative effects of benzodiazepines in intensive care (if drowsiness recurs after injection)**

- ▶ INITIALLY BY INTRAVENOUS INFUSION
- ▶ Adult: 100–400 micrograms/hour, adjusted according to response, alternatively (by intravenous injection) 300 micrograms, adjusted according to response

**IMPORTANT SAFETY INFORMATION**

Flumazenil should only be administered by, or under the direct supervision of, personnel experienced in its use.

- **CONTRA-INDICATIONS** Life-threatening condition (e.g. raised intracranial pressure, status epilepticus) controlled by benzodiazepines
- **CAUTIONS** Avoid rapid injection following major surgery - avoid rapid injection in high-risk or anxious patients - benzodiazepine dependence (may precipitate withdrawal symptoms) - elderly - ensure neuromuscular blockade cleared before giving - head injury (rapid reversal of benzodiazepine sedation may cause convulsions) - history of panic disorders (risk of recurrence) - prolonged benzodiazepine therapy for epilepsy (risk of convulsions) - short-acting (repeat doses may be necessary—benzodiazepine effects may persist for at least 24 hours)
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Anxiety · diplopia · dry mouth · eye disorders · flushing · headache · hiccups · hyperhidrosis · hyperventilation · hypotension · insomnia · nausea · palpitations · paraesthesia · speech disorder · tremor · vertigo · vomiting
  - ▶ **Uncommon** Abnormal hearing · arrhythmias · chest pain · chills · cough · dyspnoea · nasal congestion · seizure (more common in patients with epilepsy)
  - ▶ **Frequency not known** Withdrawal syndrome
- **PREGNANCY** Not known to be harmful.
- **BREAST FEEDING** Avoid breast-feeding for 24 hours.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (risk of increased half-life).  
**Dose adjustments** Manufacturer advises cautious dose titration.
- **DIRECTIONS FOR ADMINISTRATION** For *continuous intravenous infusion*, manufacturer advises dilute with Glucose 5% or Sodium Chloride 0.9%.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.  
**Solution for injection**
  - ▶ **Flumazenil (Non-proprietary)**  
Flumazenil 100 microgram per 1 ml Flumazenil 500micrograms/5ml solution for injection ampoules | 5 ampoule [PoM] £65.50-£72.46 (Hospital only) | 10 ampoule [PoM] £140.00 (Hospital only)

## 3.2 Digoxin toxicity

**ANTIDOTES AND CHELATORS** > **ANTIBODIES****Digoxin-specific antibody**

20-Jul-2020

**● INDICATIONS AND DOSE**

**Treatment of known or strongly suspected life-threatening digoxin toxicity associated with ventricular arrhythmias or bradyarrhythmias unresponsive to atropine and when measures beyond the withdrawal of digoxin and correction of any electrolyte abnormalities are considered necessary**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Child: Serious cases of digoxin toxicity should be discussed with the National Poisons Information Service (consult product literature)
- ▶ Adult: Serious cases of digoxin toxicity should be discussed with the National Poisons Information Service (consult product literature)

**● DIRECTIONS FOR ADMINISTRATION**

- ▶ In adults For *intravenous infusion (DigiFab<sup>®</sup>)*, manufacturer advises give intermittently in Sodium chloride 0.9%. Reconstitute with water for injections (4 mL/vial), then dilute with infusion fluid and give over 30 minutes.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Powder for solution for infusion**

- ▶ **DigiFab** (Protherics Medicines Development Ltd)  
**Digoxin-specific antibody fragments 40 mg** DigiFab 40mg powder for solution for infusion vials | 1 vial [PoM] £750.00 (Hospital only)

## 3.3 Heparin toxicity

**ANTIDOTES AND CHELATORS****Protamine sulfate**

02-Dec-2020

**● INDICATIONS AND DOSE**

**Overdosage with intravenous injection of unfractionated heparin**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: Dose to be administered at a rate not exceeding 5 mg/minute, 1 mg neutralises 80–100 units heparin when given within 15 minutes; if longer than 15 minute since heparin, less protamine required (consult product literature for details) as heparin rapidly excreted; maximum 50 mg

**Overdosage with intravenous infusion of unfractionated heparin**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: 25–50 mg, to be administered once heparin infusion stopped at a rate not exceeding 5 mg/minute

**Overdosage with subcutaneous injection of unfractionated heparin**

- ▶ INITIALLY BY INTRAVENOUS INJECTION
- ▶ Adult: Initially 25–50 mg, to be administered at a rate not exceeding 5 mg/minute, 1 mg neutralises 100 units heparin, then (by intravenous infusion), any remaining dose to be administered over 8–16 hours; maximum 50 mg per course

continued →

**Overdosage with subcutaneous injection of low molecular weight heparin**

- ▶ BY INTRAVENOUS INJECTION, OR BY CONTINUOUS INTRAVENOUS INFUSION
- ▶ Adult: Dose to be administered by intermittent intravenous injection at a rate not exceeding 5 mg/minute, 1 mg neutralises approx. 100 units low molecular weight heparin (consult product literature of low molecular weight heparin for details); maximum 50 mg

- **CAUTIONS** Excessive doses can have an anticoagulant effect
- **SIDE-EFFECTS**
  - ▶ Rare or very rare Pulmonary oedema non-cardiogenic
  - ▶ Frequency not known Acute pulmonary vasoconstriction · back pain · bradycardia · circulatory collapse · dyspnoea · fatigue · feeling hot · flushing · hypertension · hypotension · nausea · pulmonary hypertension · vomiting
- **ALLERGY AND CROSS-SENSITIVITY** [EvGr](#) Caution if increased risk of allergic reaction to protamine (includes previous treatment with protamine or protamine insulin, allergy to fish, men who are infertile or who have had a vasectomy and who may have antibodies to protamine). [M](#)
- **MONITORING REQUIREMENTS** Monitor activated partial thromboplastin time or other appropriate blood clotting parameters.
- **PRESCRIBING AND DISPENSING INFORMATION** The long half-life of low molecular weight heparins should be taken into consideration when determining the dose of protamine sulfate; the effects of low molecular weight heparins can persist for up to 24 hours after administration.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.
  - Solution for injection**
    - ▶ Protamine sulfate (Non-proprietary)
      - Protamine sulfate 10 mg per 1 ml Protamine sulfate 50mg/5ml solution for injection ampoules | 10 ampoule [POM](#) £49.55

## 3.4 Opioid toxicity

### OPIOID RECEPTOR ANTAGONISTS

#### Naloxone hydrochloride

16-Jun-2021

**● INDICATIONS AND DOSE****Acute opioid overdose–high-dose regimen [when rapid titration with naloxone is necessary to reverse potentially life-threatening effects]**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child 1 month–11 years: Initially 100 micrograms/kg (max. per dose 2 mg), if no response, repeat at intervals of 1 minute to a total max. of 2 mg, then review diagnosis; further doses may be required if respiratory function deteriorates following initial response, intravenous administration has more rapid onset of action, doses may be given by intramuscular route but only if intravenous route is not feasible
- ▶ Child 12–17 years: Initially 400 micrograms, then 800 micrograms for up to 2 doses at 1 minute intervals if no response to preceding dose, then increased to 2 mg for 1 dose if still no response (4 mg dose may be required in seriously poisoned patients), then review diagnosis; further doses may be required if respiratory function deteriorates following initial response, intravenous administration has more rapid onset of action, doses may be given by intramuscular route but only if intravenous route is not feasible

- ▶ Adult: Initially 400 micrograms, then 800 micrograms for up to 2 doses at 1 minute intervals if no response to preceding dose, then increased to 2 mg for 1 dose if still no response (4 mg dose may be required in seriously poisoned patients), then review diagnosis; further doses may be required if respiratory function deteriorates following initial response, intravenous administration has more rapid onset of action, doses may be given by intramuscular route but only if intravenous route is not feasible
- ▶ BY CONTINUOUS INTRAVENOUS INFUSION
- ▶ Child: Using an infusion pump, adjust rate according to response (initially, rate may be set at 60% of the initial resuscitative intravenous injection dose per hour). The initial resuscitative intravenous injection dose is that which maintained satisfactory respiratory effort for at least 15 minutes
- ▶ Adult: Using an infusion pump, adjust rate according to response (initially, rate may be set at 60% of the initial resuscitative intravenous injection dose per hour). The initial resuscitative intravenous injection dose is that which maintained satisfactory respiratory effort for at least 15 minutes

**Opioid overdose–low-dose regimen [when there is risk of acute withdrawal, or when a continued therapeutic effect is required (e.g. postoperative use, palliative care)]**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child 1 month–11 years: Initially 1–10 micrograms/kg (max. per dose 200 micrograms), if no response, repeat at intervals of 1 minute up to 5 times, if no response then give a single dose of 100 micrograms/kg (max. dose 2 mg) then review diagnosis if still no response, further doses may be required if respiratory function deteriorates following initial response, intravenous administration has a more rapid onset of action, doses may be given by intramuscular route but only if intravenous route is not feasible
- ▶ Child 12–17 years: Initially 100–200 micrograms, then 100 micrograms for up to 2 doses at 1 minute intervals if no response to preceding dose, continue titrating up to a max. of 2 mg until adequate response achieved. If still no response, give a further 2 mg dose (4 mg dose may be required in seriously poisoned patients), then review diagnosis; further doses may be required if respiratory function deteriorates following initial response, intravenous administration has a more rapid onset of action, doses may be given by intramuscular route but only if intravenous route is not feasible
- ▶ Adult: Initially 100–200 micrograms, then 100 micrograms for up to 2 doses at 1 minute intervals if no response to preceding dose, continue titrating up to a max. of 2 mg until adequate response achieved. If still no response, give a further 2 mg dose (4 mg dose may be required in seriously poisoned patients), then review diagnosis; further doses may be required if respiratory function deteriorates following initial response, intravenous administration has a more rapid onset of action, doses may be given by intramuscular route but only if intravenous route is not feasible

**Opioid overdose in non-medical and medical settings**

- ▶ BY INTRANASAL ADMINISTRATION
- ▶ Child 14–17 years: 1.8 mg, administered into one nostril, if no response, give a second dose after 2–3 minutes. If the patient responds to the first dose then relapses into respiratory depression, give the second dose immediately. Further doses should be administered into alternate nostrils
- ▶ Adult: 1.8 mg, administered into one nostril, if no response, give a second dose after 2–3 minutes. If the patient responds to the first dose then relapses into

respiratory depression, give the second dose immediately. Further doses should be administered into alternate nostrils

#### Opioid overdose in a non-medical setting

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult: 400 micrograms every 2–3 minutes, each dose given in subsequent resuscitation cycles if patient not breathing normally, continue until consciousness regained, breathing normally, medical assistance available, or contents of syringe used up; to be injected into deltoid region or anterolateral thigh

#### DOSE EQUIVALENCE AND CONVERSION

- ▶ With intranasal use
- ▶ 1 spray equivalent to 1.8 mg.

#### PHARMACOKINETICS

▶ Naloxone has a short duration of action; repeated doses or infusion may be necessary to reverse effects of opioids with longer duration of action.

- **UNLICENSED USE** TOXBASE advises naloxone is used in both high- and low-dose regimens for the management of opioid overdose, but these may differ from those licensed.

#### IMPORTANT SAFETY INFORMATION

##### SAFE PRACTICE

Doses used in acute opioid overdose may not be appropriate when there is risk of acute withdrawal (e.g. chronic opioid use), or when a continued therapeutic effect is required (e.g. postoperative use, palliative care).

- **CAUTIONS** Cardiovascular disease or those receiving cardiotoxic drugs (serious adverse cardiovascular effects reported) · chronic opioid use (risk of acute withdrawal) · maternal chronic opioid use (risk of acute withdrawal in newborn) · palliative care (risk of returning pain and acute withdrawal) · postoperative use (risk of returning pain)

##### CAUTIONS, FURTHER INFORMATION

- ▶ Titration of dose [\(EvG\)](#) In postoperative use, the dose should be titrated for each patient in order to obtain sufficient respiratory response; however, naloxone antagonises analgesia. [\(M\)](#)

##### SIDE-EFFECTS

##### GENERAL SIDE-EFFECTS

- ▶ **Common or very common** Arrhythmias · dizziness · headache · hypertension · hypotension · nausea · vomiting
- ▶ **Uncommon** Diarrhoea · dry mouth · hyperhidrosis · hyperventilation · tremor
- ▶ **Rare or very rare** Cardiac arrest · erythema multiforme · pulmonary oedema

##### SPECIFIC SIDE-EFFECTS

- ▶ **Uncommon**
- ▶ With parenteral use Inflammation localised · pain · vascular irritation
- ▶ **Rare or very rare**
- ▶ With parenteral use Anxiety · seizure
- ▶ **Frequency not known**
- ▶ With parenteral use Analgesia reversed · asthenia · chills · death · dyspnoea · fever · irritability · nasal complaints · piloerection · yawning

- **PREGNANCY** Use only if potential benefit outweighs risk.

- **BREAST FEEDING** Not orally bioavailable.

##### DIRECTIONS FOR ADMINISTRATION

- ▶ With intravenous use in children For *continuous intravenous infusion*, dilute to a concentration of up to 200 micrograms/mL with Glucose 5% or Sodium Chloride 0.9%.
- ▶ With intravenous use in adults For *intravenous infusion* (*Minijet*<sup>®</sup> Naloxone Hydrochloride), give continuously in Glucose 5% or Sodium Chloride 0.9%. Dilute to a

concentration of up to 200 micrograms/mL and administer via an infusion pump.

##### ● PRESCRIBING AND DISPENSING INFORMATION

- ▶ With intranasal use The manufacturer has provided a *Healthcare Professional Guidance Document*.

##### ● PATIENT AND CARER ADVICE

- ▶ With intranasal use Patients and carers should be given advice on how to administer naloxone nasal spray. Patient training and information cards should be provided.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

##### Solution for injection

##### ▶ Naloxone hydrochloride (Non-proprietary)

**Naloxone hydrochloride (as Naloxone hydrochloride dihydrate) 400 microgram per 1 mL** Naloxone 400micrograms/1ml solution for injection ampoules | 10 ampoule [\(PoM\)](#) £37.45-£49.00 DT = £40.86

**Naloxone hydrochloride 1 mg per 1 mL** Naloxone 2mg/2ml solution for injection pre-filled syringes | 1 pre-filled disposable injection [\(PoM\)](#) £16.80 DT = £18.00

##### ▶ Prenoxad (Martindale Pharmaceuticals Ltd)

**Naloxone hydrochloride 1 mg per 1 mL** Prenoxad 2mg/2ml solution for injection pre-filled syringes | 1 pre-filled disposable injection [\(PoM\)](#) £18.00 DT = £18.00

##### Spray

##### ▶ Nyxoid (Napp Pharmaceuticals Ltd)

**Naloxone (as Naloxone hydrochloride dihydrate) 18 mg per 1 mL** Nyxoid 1.8mg/0.1ml nasal spray 0.1ml unit dose | 2 unit dose [\(PoM\)](#) £26.00

## 3.5 Paracetamol toxicity

### ANTIDOTES AND CHELATORS

#### Acetylcysteine

05-Oct-2020

##### ● INDICATIONS AND DOSE

##### Paracetamol overdosage

- ▶ BY INTRAVENOUS INFUSION
- ▶ Child (body-weight up to 20 kg): Initially 150 mg/kg over 1 hour, dose to be administered in 3 mL/kg glucose 5%, followed by 50 mg/kg over 4 hours, dose to be administered in 7 mL/kg glucose 5%, then 100 mg/kg over 16 hours, dose to be administered in 14 mL/kg glucose 5%
- ▶ Child (body-weight 20–39 kg): Initially 150 mg/kg over 1 hour, dose to be administered in 100 mL glucose 5%, followed by 50 mg/kg over 4 hours, dose to be administered in 250 mL glucose 5%, then 100 mg/kg over 16 hours, dose to be administered in 500 mL glucose 5%
- ▶ Child (body-weight 40 kg and above): 150 mg/kg over 1 hour, dose to be administered in 200 mL glucose 5%, then 50 mg/kg over 4 hours, to be started immediately after completion of first infusion, dose to be administered in 500 mL glucose 5%, then 100 mg/kg over 16 hours, to be started immediately after completion of second infusion, dose to be administered in 1 litre glucose 5%
- ▶ Adult (body-weight 40 kg and above): 150 mg/kg over 1 hour, dose to be administered in 200 mL glucose 5%, then 50 mg/kg over 4 hours, to be started immediately after completion of first infusion, dose to be administered in 500 mL glucose 5%, then 100 mg/kg over 16 hours, to be started immediately after completion of second infusion, dose to be administered in 1 litre glucose 5%

continued →

**DOSES AT EXTREMES OF BODY-WEIGHT**

- ▶ To avoid excessive dosage in obese patients, a ceiling weight of 110 kg should be used when calculating the dose for paracetamol overdose.

**IMPORTANT SAFETY INFORMATION**

MHRA/CHM ADVICE: INTRAVENOUS ACETYLCYSTEINE FOR PARACETAMOL OVERDOSE: REMINDER OF AUTHORISED DOSE REGIMEN; POSSIBLE NEED FOR CONTINUED TREATMENT (JANUARY 2017)

The authorised dose regimen for acetylcysteine in paracetamol overdose is 3 consecutive intravenous infusions given over a total of 21 hours.

Continued treatment (given at the dose and rate as used in the third infusion) may be necessary depending on the clinical evaluation of the individual patient.

- **CAUTIONS** Asthma (see Side-effects for management of asthma but do not delay acetylcysteine treatment) · atopy · may slightly increase INR · may slightly increase prothrombin time
- **INTERACTIONS** → Appendix 1: acetylcysteine
- **SIDE-EFFECTS**
- ▶ **Frequency not known** Acidosis · anaphylactoid reaction · angioedema · anxiety · arrhythmias · cardiac arrest · chest discomfort · cough · cyanosis · eye pain · eye swelling · generalised seizure · hyperhidrosis · hypertension · hypotension · joint disorders · malaise · nausea · pain facial · respiratory disorders · skin reactions · syncope · thrombocytopenia · vasodilation · vision blurred · vomiting
- SIDE-EFFECTS, FURTHER INFORMATION** Anaphylactoid reactions can be managed by suspending treatment and initiating appropriate management. Treatment may then be restarted at lower rate.
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion*, manufacturer advises Glucose 5% is preferred fluid; Sodium Chloride 0.9% is an alternative if Glucose 5% unsuitable.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for infusion

**Solution for infusion**

ELECTROLYTES: May contain Sodium

▶ **Acetylcysteine (Non-proprietary)**

**Acetylcysteine 200 mg per 1 ml** Acetylcysteine 6g/30ml solution for infusion vials | 4 vial [PoM](#) [X](#) (Hospital only)

Acetadote 6g/30ml solution for infusion vials | 4 vial [PoM](#) [X](#) (Hospital only)

Acetylcysteine 2g/10ml solution for infusion ampoules | 10 ampoule [PoM](#) £21.26-£31.83 DT = £21.26

▶ **Parvolex** (Phoenix Labs Ltd)

**Acetylcysteine 200 mg per 1 ml** Parvolex 2g/10ml concentrate for solution for infusion ampoules | 10 ampoule [PoM](#) £22.50 DT = £21.26

Information Service if further repeat doses are required; maximum 7 mg/kg per course

- ▶ **Adult:** Initially 1–2 mg/kg, then 1–2 mg/kg after 30–60 minutes if required, to be given over 5 minutes, seek advice from National Poisons Information Service if further repeat doses are required; maximum 7 mg/kg per course

**Aniline- or dapsone-induced methaemoglobinaemia**▶ **BY SLOW INTRAVENOUS INJECTION**

- ▶ **Child 3 months–17 years:** Initially 1–2 mg/kg, then 1–2 mg/kg after 30–60 minutes if required, to be given over 5 minutes, seek advice from National Poisons Information Service if further repeat doses are required; maximum 4 mg/kg per course
- ▶ **Adult:** Initially 1–2 mg/kg, then 1–2 mg/kg after 30–60 minutes if required, to be given over 5 minutes, seek advice from National Poisons Information Service if further repeat doses are required; maximum 4 mg/kg per course

- **CAUTIONS** Chlorate poisoning (reduces efficacy of methylthionium) · G6PD deficiency (seek advice from National Poisons Information Service) · methaemoglobinaemia due to treatment of cyanide poisoning with sodium nitrite (seek advice from National Poisons Information Service) · pulse oximetry may give false estimation of oxygen saturation
- **INTERACTIONS** → Appendix 1: methylthionium chloride
- **SIDE-EFFECTS**
- ▶ **Common or very common** Abdominal pain · anxiety · chest pain · dizziness · headache · hyperhidrosis · nausea · pain in extremity · paraesthesia · skin reactions · taste altered · urine discolouration · vomiting
- ▶ **Frequency not known** Aphasia · arrhythmias · confusion · faeces discoloured · fever · haemolytic anaemia · hyperbilirubinaemia (in infants) · hypertension · hypotension · injection site necrosis · mydriasis · tremor
- **PREGNANCY** No information available, but risk to fetus of untreated methaemoglobinaemia likely to be significantly higher than risk of treatment.
- **BREAST FEEDING** Manufacturer advises avoid breastfeeding for up to 6 days after administration—no information available.
- **RENAL IMPAIRMENT** National Poisons Information Service advises caution in severe impairment.  
**Dose adjustments** Manufacturer advises lower doses may be required (consult product literature).
- **DIRECTIONS FOR ADMINISTRATION**
- ▶ In children For *intravenous injection*, manufacturer advises may be diluted with Glucose 5% to minimise injection-site pain; not compatible with Sodium Chloride 0.9%.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

**Solution for injection**▶ **Methylthionium chloride (Non-proprietary)**

**Methylthionium chloride 5 mg per 1 ml** Methylthionium chloride Provelblue 50mg/10ml solution for injection ampoules | 5 ampoule [PoM](#) £196.89 (Hospital only)

**Methylthionium chloride 10 mg per 1 ml** Methylthionium chloride 50mg/5ml concentrate for solution for injection vials | 5 vial [PoM](#) £150.00 (Hospital only)

## 4 Methaemoglobinaemia

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for infusion.

# Appendix 1

## Interactions

Two or more drugs given at the same time can exert their effects independently or they can interact. Interactions may be beneficial and exploited therapeutically; this type of interaction is not within the scope of this appendix. Many interactions are harmless, and even those that are potentially harmful can often be managed, allowing the drugs to be used safely together. Nevertheless, adverse drug interactions should be reported to the Medicines and Healthcare products Regulatory Agency (MHRA), through the Yellow Card Scheme (see Adverse reactions to drugs p. 10), as for other adverse drug reactions.

Potentially harmful drug interactions may occur in only a small number of patients, but the true incidence is often hard to establish. Furthermore the severity of a harmful interaction is likely to vary from one patient to another. Patients at increased risk from drug interactions include the elderly and those with impaired renal or hepatic function.

Interactions can result in the potentiation or antagonism of one drug by another, or result in another effect, such as renal impairment. Drug interactions may develop either through pharmacokinetic or pharmacodynamic mechanisms.

### Pharmacodynamic interactions

These are interactions between drugs which have similar or antagonistic pharmacological effects or side-effects. They might be due to competition at receptor sites, or occur between drugs acting on the same physiological system. They are usually predictable from a knowledge of the pharmacology of the interacting drugs; in general, those demonstrated with one drug are likely to occur with related drugs.

### Pharmacokinetic interactions

These occur when one drug alters the absorption, distribution, metabolism, or excretion of another, thus increasing or decreasing the amount of drug available to produce its pharmacological effects. Pharmacokinetic interactions occurring with one drug do not necessarily occur uniformly across a group of related drugs.

**Affecting absorption** The rate of absorption and the total amount absorbed can both be altered by drug interactions. Delayed absorption is rarely of clinical importance unless a rapid effect is required (e.g. when giving an analgesic). Reduction in the total amount absorbed, however, can result in ineffective therapy.

**Affecting distribution** *Due to changes in protein binding:* To a variable extent most drugs are loosely bound to plasma proteins. Protein-binding sites are non-specific and one drug can displace another thereby increasing the proportion free to diffuse from plasma to its site of action. This only produces a detectable increase in effect if it is an extensively bound drug (more than 90%) that is not widely distributed throughout the body. Even so displacement rarely produces more than transient potentiation because this increased concentration of free drug will usually be eliminated.

Displacement from protein binding plays a part in the potentiation of warfarin by sulfonamides but these interactions become clinically relevant mainly because warfarin metabolism is also inhibited.

**Induction or inhibition of drug transporter proteins:** Drug transporter proteins, such as P-glycoprotein, actively transport drugs across biological membranes. Transporters can be induced or inhibited, resulting in changes in the concentrations of drugs that are substrates for the transporter. For example, rifampicin induces P-glycoprotein, particularly in the gut wall, resulting in decreased plasma concentrations of digoxin, a P-glycoprotein substrate.

**Affecting metabolism** Many drugs are metabolised in the liver. Drugs are either metabolised by phase I reactions (oxidation, reduction, or hydrolysis) or by phase II reactions (e.g. glucuronidation).

Phase I reactions are mainly carried out by the cytochrome P450 family of isoenzymes, of which CYP3A4 is the most important isoenzyme involved in the metabolism of drugs. Induction of cytochrome P450 isoenzymes by one drug can increase the rate of metabolism of another, resulting in lower plasma concentrations and a reduced effect. On withdrawal of the inducing drug, plasma concentrations increase and toxicity can occur.

Conversely when one drug inhibits cytochrome P450 isoenzymes, it can decrease the metabolism of another, leading to higher plasma concentrations, resulting in an increased effect with a risk of toxicity.

Isoenzymes of the hepatic cytochrome P450 system interact with a wide range of drugs. With knowledge of which isoenzymes are involved in a drug's metabolism, it is possible to predict whether certain pharmacokinetic interactions will occur. For example, carbamazepine is a potent inducer of CYP3A4, ketoconazole is potent inhibitor of CYP3A4, and midazolam is a substrate of CYP3A4. Carbamazepine reduces midazolam concentrations, and it is therefore likely that other drugs that are potent inducers of CYP3A4 will interact similarly with midazolam. Ketoconazole, however, increases midazolam concentrations, and it can be predicted that other drugs that are potent inhibitors of CYP3A4 will interact similarly.

Less is known about the enzymes involved in phase II reactions. These include UDP-glucuronyltransferases which, for example, might be induced by rifampicin, resulting in decreased metabolism of mycophenolate (a substrate for this enzyme) to its active form, mycophenolic acid.

**Affecting renal excretion** Drugs are eliminated through the kidney both by glomerular filtration and by active tubular secretion. Competition occurs between those which share active transport mechanisms in the proximal tubule. For example, salicylates and some other NSAIDs delay the excretion of methotrexate; serious methotrexate toxicity is possible. Changes in urinary pH can also affect the reabsorption of a small number of drugs, including methenamine.

### Relative importance of interactions

**Levels of severity:** Most interactions have been assigned a severity; this describes the likely effect of an unmanaged interaction on the patient.

**Severe**—the result may be a life-threatening event or have a permanent detrimental effect.

**Moderate**—the result could cause considerable distress or partially incapacitate a patient; they are unlikely to be life-threatening or result in long-term effects.

**Mild**—the result is unlikely to cause concern or incapacitate the majority of patients.

**Unknown**—used for those interactions that are predicted, but there is insufficient evidence to hazard a guess at the outcome.

**Levels of evidence:** Most interactions have been assigned a rating to indicate the weight of evidence behind the interaction.

**Study**—for interactions where the information is based on formal study including those for other drugs with same mechanism (e.g. known inducers, inhibitors, or substrates of cytochrome P450 isoenzymes or P-glycoprotein).

**Anecdotal**—interactions based on either a single case report or a limited number of case reports.

**Theoretical**—interactions that are predicted based on sound theoretical considerations. The information may have been derived from *in vitro* studies or based on the way other members in the same class act.

**Action messages:** Each interaction describes the effect that occurs, and the action to be taken, either based on manufacturer's advice from the relevant Summary of Product Characteristics or advice from a relevant authority (e.g. MHRA). An action message is only included where the combination is to be avoided, where a dose adjustment is required, or where specific administration requirements (e.g. timing of doses) are recommended. **Pharmacodynamic interactions**, with the exception of interactions with drugs that may prolong the QT interval, do not have an action message included as these will depend on individual patient circumstances.

## Appendix 1 structure

### 1 Drugs

Drugs are listed alphabetically. If a drug is a member of a drug class, all interactions for that drug will be listed under the drug class entry; in this case the drug entry provides direction to the relevant drug class where its interactions can be found.

Within a drug or drug class entry, interactions are listed alphabetically by the interacting drug or drug class. The interactions describe the effect that occurs, and the action to be taken, either based on manufacturer's advice from the relevant Summary of Product Characteristics or advice from a relevant authority (e.g. MHRA). An action message is only included where the combination is to be avoided, where a dose adjustment is required, or where specific administration requirements (e.g. timing of doses) are recommended. If two drugs have a pharmacodynamic effect in addition to a pharmacokinetic interaction, a cross-reference to the relevant pharmacodynamic effect table is included at the end of the pharmacokinetic message.

### 2 Drug classes

The drugs that are members of a drug class are listed underneath the drug class entry in a blue box. Interactions for the class are then listed alphabetically by the interacting drug or drug class. If the interaction only applies to certain drugs in the class, these drugs will be shown in brackets after the drug class name.

### 3 Supplementary information

If a drug has additional important information to be considered, this is shown in a blue box underneath the drug or drug class entry. This information might be drug and lifestyle advice (including smoking and alcohol consumption), relate to the pharmacology of the drug or applicability of interactions to certain routes of administration, or it might be advice about separating administration times.

### 4 Pharmacodynamic effects

Tables at the beginning of Appendix 1 cover pharmacodynamic effects. If a drug is included in one or more of these tables, this will be indicated at the top of the

##### Name of pharmacodynamic effect

##### Explanation of the effect

Drug	Drug	Drug
Drug	Drug	Drug

list of interactions for the drug or drug class. In addition to the list of interactions for a drug or drug class, these tables should always be consulted.

Each table describes the relevant pharmacodynamic effect and lists those drugs that are commonly associated with the effect. Concurrent use of two or more drugs from the same table is expected to increase the risk of the pharmacodynamic effect occurring. Please note these tables are not exhaustive.

TABLE 1

**Drugs that cause hepatotoxicity**

The following is a list of some drugs that cause hepatotoxicity (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

alcohol	dantrolene	lenalidomide	paracetamol	tetracycline
alectinib	demeclocycline	lomitapide	pegaspargase	tigecycline
asparaginase	doxycycline	lymecycline	pravastatin	trabectedin
atorvastatin	flucloxacillin	mercaptopurine	rosuvastatin	valproate
bedaquiline	fluconazole	methotrexate	simvastatin	vincristine
carbamazepine	fluvastatin	miconazole	sotorasib	
clavulanate	isoniazid	minocycline	streptozocin	
crisantaspase	itraconazole	neratinib	sulfasalazine	
dactinomycin	leflunomide	oxytetracycline	teriflunomide	

TABLE 2

**Drugs that cause nephrotoxicity**

The following is a list of some drugs that cause nephrotoxicity (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

aceclofenac	cefoxitin	diclofenac	methotrexate	tacrolimus
aciclovir	cefradine	etodolac	nabumetone	tenofovir disoproxil
adefovir	ceftazidime	etoricoxib	naproxen	tenoxicam
amikacin	ceftazidime	flurbiprofen	neomycin	tiaprofenic acid
amphotericin B	ceftriaxone	foscarnet	oxaliplatin	tobramycin
bacitracin	cefuroxime	ganciclovir	parecoxib	tolfenamic acid
capreomycin	celecoxib	gentamicin	pemetrexed	trimethoprim
carboplatin	ciclosporin	ibuprofen	penicillamine	valaciclovir
cefaclor	cidofovir	ifosfamide	pentamidine	valganciclovir
cefadroxil	cisplatin	indometacin	phenazone	vancomycin
cefalexin	colistemetate (particularly intravenous)	inotersen	piroxicam	zidovudine
cefazolin	dexketoprofen	ketoprofen	polymyxin b	zoledronate
cefepime		ketorolac	streptomycin	
cefixime		mefenamic acid	streptozocin	
cefotaxime		meloxicam	sulindac	

TABLE 3

**Drugs with anticoagulant effects**

The following is a list of drugs that have anticoagulant effects. Concurrent use of two or more drugs from this list might increase the risk of bleeding; concurrent use of drugs with antiplatelet effects (see table of drugs with antiplatelet effects) might also increase this risk.

acenocoumarol	bivalirudin	enoxaparin	phenindione	tirofiban
alteplase	dabigatran	epitifibatide	rivaroxaban	urokinase
apixaban	dalteparin	fondaparinux	streptokinase	warfarin
argatroban	danaparoid	heparin	tencatepase	
bemiparin	edoxaban	nicotinic acid	tinzaparin	

TABLE 4

**Drugs with antiplatelet effects**

The following is a list of drugs that have antiplatelet effects (note that this list is not exhaustive). Concurrent use of two or more drugs from this list might increase the risk of bleeding; concurrent use of drugs with anticoagulant effects (see table of drugs with anticoagulant effects) might also increase this risk.

acalabrutinib	clopidogrel	flurbiprofen	naproxen	sulindac
aceclofenac	dapoxetine	fluvoxamine	nintedanib	sunitinib
alprostadil	dasatinib	ibrutinib	omega-3-acid ethyl esters	tenoxicam
anagrelide	dexketoprofen	ibuprofen	parecoxib	tiaprofenic acid
aspirin	diclofenac	iloprost	paroxetine	ticagrelor
axitinib	dipyridamole	imatinib	pazopanib	tolfenamic acid
benzylamine	duloxetine	indometacin	phenazone	treprostinil
bosutinib	eicosapentaenoic acid	ketoprofen	ketoprofen	venlafaxine
bromfenac	epoprostenol	ketorolac	ponatinib	vortioxetine
cangrelor	escitalopram	lenvatinib	prasugrel	
celecoxib	etodolac	mefenamic acid	regorafenib	
cilostazol	etoricoxib	meloxicam	sertraline	
citalopram	fluoxetine	nabumetone	sorafenib	

**TABLE 5****Drugs that cause thromboembolism**

The following is a list of some drugs that cause thromboembolism (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

bleomycin	epoetin zeta	methoxy polyethylene	strontium	tretinoin
cyclophosphamide	flurouracil	glycol-epoetin beta	tamoxifen	vinblastine
darbepoetin alfa	fulvestrant	mitomycin	thalidomide	vincristine
doxorubicin	lenalidomide	pentostatin	tibolone	vindesine
epoetin alfa	methotrexate	pomalidomide	toremifene	vinflunine
epoetin beta		raloxifene	tranexamic acid	vinorelbine

**TABLE 6****Drugs that cause bradycardia**

The following is a list of drugs that cause bradycardia (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

acebutolol	carvedilol	fentanyl	neostigmine	rivastigmine
alectinib	celiprolol	flingolimod	ozanimod	selegiline
alfentanil	ceritinib	flecainide	pasireotide	siponimod
amiodarone	clonidine	galantamine	pindolol	sotalol
apraclonidine	crizotinib	ivabradine	propafenone	suxamethonium
atenolol	digoxin	labetalol	propafenone	thalidomide
betaxolol	diltiazem	levobunolol	propofol	ticagrelor
bisoprolol	donepezil	metoprolol	propranolol	timolol
brigatinib	dronedarone	nadolol	pyridostigmine	tizanidine
brimonidine	esmolol	neбивolol	remifentanyl	verapamil

**TABLE 7****Drugs that cause first dose hypotension**

The following is a list of some drugs that can cause first-dose hypotension (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

alfuzosin	eprosartan	isosorbide dinitrate	prazosin	trandolapril
azilsartan	fosinopril	isosorbide mononitrate	quinapril	valsartan
candesartan	glyceryl trinitrate	lisinopril	ramipril	
captopril	imidapril	losartan	tamsulosin	
doxazosin	indoramin	olmesartan	telmisartan	
enalapril	irbesartan	perindopril	terazosin	

**TABLE 8****Drugs that cause hypotension**

The following is a list of some drugs that cause hypotension (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

acebutolol	chlorothiazide	hydralazine	moxislyte	ropinirole
alcohol	chlormpromazine	hydrochlorothiazide	moxonidine	rotigotine
alfuzosin	chlortalidone	hydroflumethiazide	nadolol	sacubitril
aliskiren	clomipramine	iloprost	neбивolol	sapropterin
alprostadil	clonidine	imidapril	nicardipine	selegiline
amantadine	clozapine	imipramine	nicorandil	sevoflurane
amitriptyline	dapagliflozin	indapamide	nifedipine	sildenafil
amlodipine	desflurane	indoramin	nimodipine	sodium oxybate
apomorphine	diazoxide	irbesartan	nitroprusside	sotalol
apraclonidine	diltiazem	isocarboxazid	nitrous oxide	spironolactone
aripiprazole	dipyridamole	isoflurane	nortriptyline	sulpiride
asenapine	dosulepin	isosorbide dinitrate	olanzapine	tadalafil
atenolol	doxazosin	isosorbide mononitrate	olmesartan	tamsulosin
avanafil	doxepin	ketamine	paliperidone	telmisartan
azilsartan	droperidol	labetalol	pericyazine	terazosin
baclofen	empagliflozin	lacidipine	perindopril	thiopental
bendroflumethiazide	enalapril	lercanidipine	phenelzine	timolol
benperidol	eperlenone	levobunolol	pimozide	tizanidine
betaxolol	epoprostenol	levodopa	pramipexole	torasemide
bisoprolol	eprosartan	levomepromazine	prazosin	trandolapril
bortezomib	ertugliflozin	lisinopril	prochlorperazine	tranylcypromine
brimonidine	esketamine	lofepramine	promazine	treprostinil
bromocriptine	esmolol	lofedidine	propofol	trifluoperazine
bumetanide	etomidate	losartan	propofol	trimipramine
cabergoline	felodipine	loxapine	propranolol	valsartan
canagliflozin	flupentixol	lurasidone	quinagolide	verdenafil
candesartan	fosinopril	methoxyflurane	quinapril	verapamil
captopril	furosemide	methyl dopa	quinapril	vericiguat
cariprazine	glyceryl trinitrate	metolazone	ramipril	venakalant
carvedilol	guanfacine	metoprolol	riociguat	xipamide
celiprolol	haloperidol	minoxidil	risperidone	zuclopenthixol

TABLE 9

**Drugs that prolong the QT interval**

The following is a list of some drugs that prolong the QT-interval (note that this list is not exhaustive). In general, manufacturers advise that the use of two or more drugs that are associated with QT prolongation should be avoided. Increasing age, female sex, cardiac disease, and some metabolic disturbances (notably hypokalaemia) predispose to QT prolongation—concurrent use of drugs that reduce serum potassium might further increase this risk (see table of drugs that reduce serum potassium).

Drugs that are not known to prolong the QT interval but are predicted (by the manufacturer) to increase the risk of QT prolongation include: domperidone, fingolimod, granisetron, ivabradine, mefloquine, mizolastine, ozanimod, palonosetron, intravenous pentamidine, and siponimod. Most manufacturers advise avoiding concurrent use with drugs that prolong the QT interval.

amifampridine	clomipramine	glasdegib	osimertinib	sunitinib
amiodarone	crizotinib	haloperidol	paliperidone	tetrabenazine
amisulpride	dasatinib	hydroxychloroquine	panobinostat	tizanidine
anagrelide	delamanid	hydroxyzine	pasireotide	tolterodine
apalutamide	desflurane	inotuzumab ozogamicin	pazopanib	toremifene
apomorphine	disopyramide	isoflurane	pimozide	vandetanib
arsenic trioxide	dronedarone	lapatinib	quinine	varidenafil
artemether	droperidol	lenvatinib	ranolazine	vemurafenib
artenimol	efavirenz	levomepromazine	ribociclib	venlafaxine
bedaquiline	encorafenib	lithium	risperidone	venkalkant
bosutinib	entrectinib	lofexidine	selpircatinib	vinflunine
cabozantinib	eribulin	methadone	sevoflurane	voriconazole
ceritinib	erythromycin	moxifloxacin	sildenafil	zuclopenthixol
chlorpromazine	escitalopram	nilotinib	sorafenib	
citalopram	flecainide	ondansetron	sotalol	
clarithromycin	fluconazole	osilodrostat	sulpiride	

TABLE 10

**Drugs with antimuscarinic effects**

The following is a list of some drugs that have antimuscarinic effects (note that this list is not exhaustive). Concurrent use of two or more drugs from this list might increase the risk of these effects occurring.

acclidinium	cyclopentolate	haloperidol	orphenadrine	tiotropium
amantadine	cyproheptadine	homatropine	oxybutynin	tolterodine
amitriptyline	darifenacin	hydroxyzine	pimozide	trifluoperazine
atropine	dicycloverine	hyoscine	pridinol	trihexphenidyl
baclofen	dimenhydrinate	imipramine	prochlorperazine	trimipramine
chlorphenamine	disopyramide	ipratropium	procyclidine	tropicamide
chlorpromazine	dosulepin	levomepromazine	promethazine	trospium
clemastine	doxepin	lofepramine	propafenone	umecidinium
clomipramine	fesoterodine	loxapine	propranolol	
clozapine	flavoxate	nefopam	propiverine	
cyclizine	glycopyrronium	nortriptyline	solifenacin	

TABLE 11

**Drugs with CNS depressant effects**

The following is a list of some drugs with CNS depressant effects (note that this list is not exhaustive). Concurrent use of two or more drugs from this list might increase the risk of CNS depressant effects, such as drowsiness, which might affect the ability to perform skilled tasks (see 'Drugs and Driving' in Guidance on Prescribing p. 1).

agomelatine	clemastine	guanfacine	midazolam	quetiapine
alcohol	clobazam	haloperidol	mirtazapine	remifentanyl
alfentanil	clomethiazole	hydromorphone	morphine	remimazolam
alimemazine	clomipramine	hydroxyzine	moxonidine	risperidone
alprazolam	clonazepam	imipramine	nabilone	ropivacaine
amisulpride	clonidine	isoflurane	nitrazepam	sevoflurane
amitriptyline	clozapine	ketamine	nitrous oxide	sodium oxybate
apraclonidine	codeine	ketotifen	nortriptyline	sulpiride
aripiprazole	cyclizine	lamotrigine	olanzapine	tapentadol
articaine	cyproheptadine	levetiracetam	oxazepam	temazepam
asenapine	desflurane	levomepromazine	oxycodone	tetrabenazine
baclofen	dexmedetomidine	lidocaine	paliperidone	tetracaine
benperidol	diamorphine	lofepramine	pentazocine	thalidomide
brimonidine	diazepam	lofexidine	perampnel	thiopental
buclizine	dihydrocodeine	loprazolam	pericyazine	tizanidine
bupivacaine	dipipanone	lorazepam	pthidine	tramadol
buprenorphine	dosulepin	lormetazepam	phenobarbital	trazodone
cannabidiol	doxepin	loxapine	pimozide	trifluoperazine
cariprazine	dronabinol	lurasidone	pizotifen	trimipramine
cenobamate	droperidol	melatonin	pregabalin	venlafaxine
chloral hydrate	esketamine	mepivacaine	prilocaline	zolpidem
chlordiazepoxide	etomidate	meptazinol	primidone	zopiclone
chlorprocaine	fentanyl	methadone	prochlorperazine	zuclopenthixol
chlorphenamine	flupentixol	methocarbamol	promazine	
chlorpromazine	flurazepam	methoxyflurane	promethazine	
cinnarizine	gabapentin	mianserin	propofol	

TABLE 12

**Drugs that cause peripheral neuropathy**

The following is a list of some drugs that cause peripheral neuropathy (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

amiodarone	disulfiram	lamivudine	thalidomide	vinorelbine
bortezomib	docetaxel	metronidazole	vinblastine	
brentuximab vedotin	eribulin	nitrofurantoin	vincristine	
cabazitaxel	fosphenytoin	paclitaxel	vindesine	
cisplatin	isoniazid	phenytoin	vinflunine	

TABLE 13

**Drugs that cause serotonin syndrome**

The following is a list of some drugs that cause serotonin syndrome (note that this list is not exhaustive). See 'Serotonin Syndrome' and 'Monoamine-Oxidase Inhibitors' under Antidepressant drugs p. 390 for more information and for specific advice on avoiding monoamine-oxidase inhibitors during and after administration of other serotonergic drugs.

almotriptan	fentanyl	lithium	pentazocine	sumatriptan
citalopram	fluoxetine	methadone	pethidine	tramadol
clomipramine	fluvoxamine	methylthioninium chloride	phenelzine	tranylcypromine
dapoxetine	frovoatriptan	mirtazapine	rasagiline	trazodone
dexamfetamine	granisetron	moclobemide	rizatriptan	tryptophan
duloxetine	imipramine	naratriptan	safinamide	venlafaxine
eletriptan	isocarboxazid	ondansetron	selegiline	vortioxetine
escitalopram	linezolid	palonosetron	sertraline	zolmitriptan
fenfluramine	lisdexamfetamine	paroxetine	St John's wort	

TABLE 14

**Antidiabetic drugs**

The following is a list of antidiabetic drugs (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase the risk of hypoglycaemia.

acarbose	empagliflozin	glimepiride	lixisenatide	semaglutide
alogliptin	ertugliflozin	glipizide	metformin	sitagliptin
canagliflozin	exenatide	insulin	pioglitazone	tolbutamide
dapagliflozin	glibenclamide	linagliptin	repaglinide	vildagliptin
dulaglutide	gliclazide	liraglutide	saxagliptin	

TABLE 15

**Drugs that cause myelosuppression**

The following is a list of some drugs that cause myelosuppression (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

adalimumab	carmustine	fluorouracil	nelarabine	ruxolitinib
aldesleukin	ceritinib	ganciclovir	nilotinib	sorafenib
alemtuzumab	certolizumab pegol	gemcitabine	niraparib	streptozocin
amsacrine	chlorambucil	gemtuzumab ozogamicin	nivolumab	sulfasalazine
arsenic trioxide	cisplatin	golimumab	obinutuzumab	sunitinib
asparaginase	cladribine	hydroxycarbamide	olaparib	talazoparib
axitinib	clofarabine	ibrutinib	oxaliplatin	tegafur
azacitidine	crisantaspase	idarubicin	paclitaxel	temozolomide
azathioprine	cyclophosphamide	ifosfamide	paubiciclib	temsirolimus
belatacept	cytarabine	imatinib	panobinostat	thalidomide
bendamustine	dacarbazine	infiximab	pegaspargase	thiotepa
bevacizumab	dactinomycin	inotuzumab ozogamicin	peginterferon alfa	tioguanine
bexarotene	daratumumab	ipilimumab	pembrolizumab	topotecan
bleomycin	dasatinib	irinotecan	pemetrexed	trabectedin
blinatumomab	daunorubicin	leflunomide	pentostatin	trastuzumab
bortezomib	decitabine	lenalidomide	paxantrone	trastuzumab deruxtecan
bosutinib	dexrazoxane	lomustine	pomalidomide	trastuzumab emtansine
brentuximab vedotin	dinutuximab	mifalphan	procarbazine	treosulfan
busulfan	docetaxel	mercaptopurine	ralitrexed	valganciclovir
cabazitaxel	doxorubicin	methotrexate	ramucirumab	vinblastine
cabozantinib	epirubicin	mifamurtide	regorafenib	vincristine
canakinumab	eribulin	mitomycin	ribociclib	vindesine
capecitabine	estramustine	mitotane	rituximab	vinflunine
carboplatin	etoposide	mitoxantrone	ropeginterferon alfa	vinorelbine
carfilzomib	fludarabine	mogamulizumab	rucaparib	

TABLE 16

**Drugs that increase serum potassium**

The following is a list of some drugs that increase serum potassium concentrations (note that this list is not exhaustive). Concurrent use of two or more drugs from this list might increase the risk of hyperkalaemia (hyperkalaemia is particularly notable when ACE inhibitors or angiotensin-II receptor antagonists are given with spironolactone or eplerenone).

aceclofenac	diclofenac	heparin	naproxen	sulindac
aliskiren	drospirenone	ibuprofen	olmesartan	tacrolimus
amiloride	enalapril	imidapril	parecoxib	telmisartan
azilsartan	enoxaparin	indometacin	perindopril	tenoxicam
bemiparin	eplerenone	irbesartan	phenazone	tiaprofenic acid
candesartan	epoetin alfa	ketoprofen	piroxicam	tinzaparin
captopril	epoetin beta	ketorolac	potassium aminobenzoate	tolfenamic acid
celecoxib	epoetin zeta	lisinopril	potassium canrenoate	tolvaptan
ciclosporin	eprosartan	losartan	potassium chloride	trandolapril
dalteparin	etodolac	mefenamic acid	quinapril	triamterene
darbepoetin alfa	etoricoxib	meloxicam	ramipril	trimethoprim
dexketoprofen	flurbiprofen	nabumetone	spironolactone	valsartan

TABLE 17

**Drugs that reduce serum potassium**

The following is a list of some drugs that reduce serum potassium concentrations (note that this list is not exhaustive and that other drugs can cause hypokalaemia in overdose). Concurrent use of two or more drugs from this list might increase the risk of hypokalaemia. Hypokalaemia can increase the risk of torsade de pointes, which might be additive with the effects of drugs that prolong the QT interval (see table of drugs that prolong the QT interval).

aminophylline	bumetanide	furosemide	metolazone	torasemide
amphotericin B	chlorothiazide	hydrochlorothiazide	olodaterol	triamcinolone
bambuterol	chlortalidone	hydrocortisone	prednisolone	vilanterol
beclometasone	deflazacort	hydroflumethiazide	salbutamol	xipamide
bendroflumethiazide	dexamethasone	indacaterol	salmeterol	
betamethasone	fludrocortisone	indapamide	terbutaline	
budesonide	formoterol	methylprednisolone	theophylline	

TABLE 18

**Drugs that cause hyponatraemia**

The following is a list of some drugs that reduce sodium concentrations (note that this list is not exhaustive). Concurrent use of two or more drugs from this list might increase the risk of hyponatraemia.

aceclofenac	desmopressin	flvoxamine	meloxicam	sulindac
amiloride	dexketoprofen	furosemide	metolazone	tenoxicam
amitriptyline	diclofenac	gabapentin	nabumetone	tiaprofenic acid
bendroflumethiazide	dosulepin	hydrochlorothiazide	naproxen	tolfenamic acid
bumetanide	doxepin	hydroflumethiazide	nortriptyline	torasemide
carbamazepine	duloxetine	ibuprofen	parecoxib	triamterene
celecoxib	eplerenone	imipramine	paroxetine	trimethoprim
chlorothiazide	escitalopram	indapamide	phenazone	trimipramine
chlortalidone	etodolac	indometacin	piroxicam	xipamide
citalopram	etoricoxib	ketoprofen	sertraline	
clomipramine	flouxetine	ketorolac	sodium picosulfate	
dapoxetine	flurbiprofen	mefenamic acid	spironolactone	

TABLE 19

**Drugs that cause ototoxicity**

The following is a list of some drugs that cause ototoxicity (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

amikacin	cisplatin	oxalipatin	vancomycin	vinflunine
bumetanide	furosemide	streptomycin	vinblastine	vinorelbine
capreomycin	gentamicin	tobramycin	vincristine	
carboplatin	neomycin	torasemide	vindesine	

TABLE 20

**Drugs with neuromuscular blocking effects**

The following is a list of some drugs with neuromuscular blocking effects (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

amikacin	cisatracurium	neomycin	streptomycin
atracurium	colistimethate	pancuronium	suxamethonium
botulinum toxin type A	gentamicin	polymyxin b	tobramycin
botulinum toxin type B	mivacurium	rocuronium	vecuronium

## List of drug interactions

The following is an alphabetical list of drugs and their interactions; to avoid excessive cross-referencing each drug or group is listed twice: in the alphabetical list and also against the drug or group with which it interacts.

**5-HT<sub>3</sub>-receptor antagonists** → see TABLE 13 p. 1493 (serotonin syndrome), TABLE 9 p. 1492 (QT-interval prolongation)

granisetron · ondansetron · palonosetron

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **ondansetron**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ondansetron**. [Moderate] Study
- ▶ **Dopamine receptor agonists (apomorphine)** increase the risk of severe hypotension when given with **ondansetron**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Dopamine receptor agonists (apomorphine)** are predicted to increase the risk of severe hypotension when given with 5-HT<sub>3</sub>-receptor antagonists (**granisetron, palonosetron**). [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **ondansetron**. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **ondansetron**. [Moderate] Study

**Abacavir** → see NRTIs

### Abatacept

- ▶ **Anakinra** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **abatacept**. [Severe] Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **abatacept**. Avoid. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **abatacept**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Monoclonal antibodies (certolizumab pegol)** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **abatacept**. Avoid. [Severe] Theoretical
- ▶ **Abatacept** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **monoclonal antibodies (golimumab)**. Avoid. [Severe] Theoretical

### Abemaciclib

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 1042. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 1042. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Grapefruit** juice is predicted to increase the exposure to **abemaciclib**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 1042. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 1042. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 1042. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 1042. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **abemaciclib**. Avoid. [Severe] Study

**Abiraterone** → see anti-androgens

### Abrocitinib

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **abrocitinib**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **abrocitinib**. Avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to **abrocitinib**. Adjust **abrocitinib** dose, p. 1354. [Severe] Study
- ▶ **Abrocitinib** might increase the exposure to **ciclosporin**. [Moderate] Theoretical
- ▶ **Abrocitinib** might increase the exposure to **digoxin**. [Moderate] Theoretical
- ▶ **Abrocitinib** might increase the exposure to **everolimus**. [Moderate] Theoretical
- ▶ **Abrocitinib** might increase the exposure to **factor XA inhibitors (edoxaban, rivaroxaban)**. [Moderate] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **abrocitinib**. Avoid. [Severe] Theoretical
- ▶ **NRTIs (efavirenz)** are predicted to decrease the exposure to **abrocitinib**. Avoid. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **abrocitinib**. Avoid. [Moderate] Study
- ▶ **Abrocitinib** might increase the exposure to **sirolimus**. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine, fluvoxamine)** are predicted to increase the exposure to **abrocitinib**. Adjust **abrocitinib** dose, p. 1354. [Severe] Study
- ▶ **Abrocitinib** slightly increases the exposure to **thrombin inhibitors (dabigatran)**. [Moderate] Study

**Acalabrutinib** → see TABLE 4 p. 1490 (antiplatelet effects)

- ▶ Oral **antacids** are predicted to decrease the exposure to oral **acalabrutinib**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **acalabrutinib**. Avoid. [Severe] Study
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **acalabrutinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **acalabrutinib**. Avoid. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. [Severe] Study

## Acalabrutinib (continued)

- ▶ Oral **calcium salts (calcium carbonate)** –containing antacids modestly decrease the exposure to oral **acalabrutinib**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **acalabrutinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. [\[Severe\]](#) Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **acalabrutinib**. [\[Severe\]](#) Study
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **acalabrutinib**. [\[Severe\]](#) Study
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **acalabrutinib**. **Acalabrutinib** should be taken 2 hours before or 10 hours after **H<sub>2</sub> receptor antagonists**. [\[Moderate\]](#) Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **acalabrutinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **acalabrutinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Imatinib** is predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. [\[Severe\]](#) Study → Also see [TABLE 4](#) p. 1490
  - ▶ **Letermovir** is predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. [\[Severe\]](#) Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **acalabrutinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. [\[Severe\]](#) Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **acalabrutinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. [\[Severe\]](#) Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. [\[Severe\]](#) Study
  - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **acalabrutinib**. [\[Severe\]](#) Study
  - ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **acalabrutinib**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **acalabrutinib**. Avoid. [\[Severe\]](#) Study
  - ▶ Oral **sodium bicarbonate** –containing antacids are predicted to decrease the exposure to oral **acalabrutinib**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **acalabrutinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Acarbose** → see [TABLE 14](#) p. 1493 (antidiabetic drugs)
  - ▶ **Acarbose** decreases the concentration of **digoxin**. [\[Moderate\]](#) Study
  - ▶ **Fenfluramine** might decrease blood glucose concentrations when given with **acarbose**. [\[Moderate\]](#) Theoretical
  - ▶ **Pancreatin** is predicted to decrease the effects of **acarbose**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **ACE inhibitors** → see [TABLE 7](#) p. 1491 (first-dose hypotension), [TABLE 8](#) p. 1491 (hypotension), [TABLE 16](#) p. 1494 (increased serum potassium)
- captopril · enalapril · fosinopril · imidapril · lisinopril · perindopril · quinapril · ramipril · trandolapril
- ▶ **ACE inhibitors** increase the risk of renal impairment when given with **alskiren**. Use with caution or avoid **alskiren** in selected patients, p. 195. [\[Severe\]](#) Study → Also see [TABLE 8](#) p. 1491 → Also see [TABLE 16](#) p. 1494
  - ▶ **ACE inhibitors** are predicted to increase the risk of hypersensitivity and haematological reactions when given with **allopurinol**. [\[Severe\]](#) Anecdotal
  - ▶ **ACE inhibitors** are predicted to increase the risk of anaemia and/or leucopenia when given with **azathioprine**. [\[Severe\]](#) Anecdotal
  - ▶ **Everolimus** potentially increases the risk of angioedema when given with **ACE inhibitors**. [\[Severe\]](#) Anecdotal
  - ▶ **ACE inhibitors** are predicted to decrease the efficacy of **icatibant** and **icatibant** is predicted to decrease the efficacy of **ACE inhibitors**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **ACE inhibitors** are predicted to increase the concentration of **lithium**. Monitor and adjust dose. [\[Severe\]](#) Anecdotal

- ▶ **ACE inhibitors** are predicted to increase the risk of angioedema when given with **temsirolimus**. [\[Moderate\]](#) Theoretical
- ▶ Oral **quinapril** (magnesium carbonate-containing forms) might decrease the absorption of oral **tetracyclines**. Avoid. [\[Moderate\]](#) Study

**Acebutolol** → see beta blockers, selective

**Acetofenac** → see NSAIDs

**Acenocoumarol** → see coumarins

**Acetazolamide**

- ▶ **Acetazolamide** potentially increases the risk of toxicity when given with **antiepileptics (valproate)**. [\[Severe\]](#) Study
- ▶ **Acetazolamide** potentially increases the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [\[Severe\]](#) Theoretical
- ▶ **Acetazolamide** increases the risk of severe toxic reaction when given with **aspirin** (high-dose). [\[Severe\]](#) Study
- ▶ **Acetazolamide** alters the concentration of **lithium**. [\[Severe\]](#) Anecdotal
- ▶ **Acetazolamide** is predicted to decrease the efficacy of **methenamine**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Acetazolamide** increases the urinary excretion of **methotrexate**. [\[Moderate\]](#) Study

**Acetylcysteine**

▶ **Acetylcysteine** might increase the vasodilatory effects of **nitrates (glyceryl trinitrate)**. [\[Moderate\]](#) Theoretical

**Aciclovir** → see [TABLE 2](#) p. 1490 (nephrotoxicity)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Aciclovir** increases the exposure to **aminophylline**. Monitor and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Aciclovir** is predicted to decrease the efficacy of **live vaccines (herpes-zoster vaccine, live)**. [\[Moderate\]](#) Theoretical
- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **aciclovir**. [\[Moderate\]](#) Theoretical
- ▶ **Aciclovir** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [\[Severe\]](#) Theoretical

**Acipimox**

- ▶ **Acipimox** is predicted to increase the risk of rhabdomyolysis when given with **fibrates**. [\[Severe\]](#) Theoretical
- ▶ **Acipimox** is predicted to increase the risk of rhabdomyolysis when given with **statins**. [\[Severe\]](#) Theoretical

**Acitretin** → see retinoids

**Acidinium** → see [TABLE 10](#) p. 1492 (antimuscarinics)

- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **acidinium**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see [TABLE 10](#) p. 1492

**Acrivastine** → see antihistamines, non-sedating

**Adalimumab** → see monoclonal antibodies

**Adapalene** → see retinoids

**Adefovir** → see [TABLE 2](#) p. 1490 (nephrotoxicity)

- ▶ **Leflunomide** is predicted to increase the exposure to **adefovir**. [\[Moderate\]](#) Theoretical

▶ **Nitisinone** is predicted to increase the exposure to **adefovir**. [\[Moderate\]](#) Study

- ▶ **Teriflunomide** is predicted to increase the exposure to **adefovir**. [\[Moderate\]](#) Study

**Adenosine** → see antiarrhythmics

**Adrenaline/epinephrine** → see sympathomimetics, vasoconstrictor

**Afatinib**

- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **afatinib**. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **afatinib**. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (phenobarbital, phenytoin)** are predicted to decrease the exposure to **afatinib**. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **afatinib**. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **afatinib**. [\[Moderate\]](#) Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **afatinib**. [\[Moderate\]](#) Study

- ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the exposure to **afatinib**. [Moderate] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **afatinib**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **afatinib**. [Moderate] Study
- ▶ **Macrolides** are predicted to increase the exposure to **afatinib**. [Moderate] Study
- ▶ **Neratinib** is predicted to increase the exposure to **afatinib**. [Moderate] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **afatinib**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **afatinib**. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **afatinib**. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **afatinib**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **afatinib**. [Moderate] Study
- ▶ **Tacrolimus** is predicted to increase the exposure to **afatinib**. [Moderate] Theoretical
- ▶ **Vandetanib** is predicted to increase the exposure to **afatinib**. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **afatinib**. [Moderate] Study

#### Aflibercept

**ROUTE-SPECIFIC INFORMATION** Interactions do not generally apply to topical use unless specified.

#### Agalsidase alfa

- ▶ **Aminoglycosides** are predicted to decrease the effects of **agalsidase alfa**. Avoid. [Moderate] Theoretical
- ▶ **Antiarrhythmics (amiodarone)** are predicted to decrease the effects of **agalsidase alfa**. Avoid. [Moderate] Theoretical
- ▶ **Antimalarials (chloroquine)** are predicted to decrease the effects of **agalsidase alfa**. Avoid. [Moderate] Theoretical
- ▶ **Hydroxychloroquine** is predicted to decrease the effects of **agalsidase alfa**. [Moderate] Theoretical

#### Agalsidase beta

- ▶ **Aminoglycosides** are predicted to decrease the effects of **agalsidase beta**. Avoid. [Moderate] Theoretical
- ▶ **Antiarrhythmics (amiodarone)** are predicted to decrease the effects of **agalsidase beta**. Avoid. [Moderate] Theoretical
- ▶ **Antimalarials (chloroquine)** are predicted to decrease the effects of **agalsidase beta**. Avoid. [Moderate] Theoretical
- ▶ **Hydroxychloroquine** is predicted to decrease the exposure to **agalsidase beta**. [Moderate] Theoretical

#### Agomelatine → see TABLE 11 p. 1492 (CNS depressant effects)

- ▶ Dose adjustment might be necessary if smoking started or stopped during treatment.
- ▶ Caution with concomitant use of drugs associated with hepatic injury.
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **Axitinib** is predicted to increase the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **agomelatine**. [Moderate] Study
- ▶ **Givosiran** is predicted to increase the exposure to **agomelatine**. Use with caution and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **agomelatine**. [Moderate] Study
- ▶ **Oslodrostat** is predicted to increase the exposure to **agomelatine**. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **agomelatine**. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **agomelatine**. [Moderate] Study

- ▶ **SSRIs (fluvoxamine)** very markedly increase the exposure to **agomelatine**. Avoid. [Severe] Study
  - ▶ **Teriflunomide** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
  - ▶ **Vemurafenib** is predicted to increase the exposure to **agomelatine**. [Moderate] Study
- #### Albendazole
- ▶ **Antiepileptics (primidone, fosphenytoin, phenobarbital, phenytoin, carbimazole)** decrease the concentration of **albendazole**. [Moderate] Study
  - ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** decrease the clearance of **albendazole**. [Moderate] Study
  - ▶ **HIV-protease inhibitors (ritonavir)** decrease the exposure to **albendazole**. [Moderate] Study
  - ▶ **Albendazole** slightly decreases the exposure to **levamisole** and **levamisole** moderately decreases the exposure to **albendazole**. [Moderate] Study

**Alcohol** → see TABLE 1 p. 1490 (hepatotoxicity), TABLE 8 p. 1491 (hypotension), TABLE 11 p. 1492 (CNS depressant effects)

**ROUTE-SPECIFIC INFORMATION** Interactions do not generally apply to alcohol used for topical action unless specified.

- ▶ **Alcohol** potentially increases the risk of visual disturbances when given with **antiepileptics (retigabine)**. [Moderate] Study
  - ▶ **Alcohol** potentially causes a disulfiram-like reaction when given with **antifungals, azoles (ketoconazole)**. Avoid. [Moderate] Anecdotal
  - ▶ **Alcohol** causes serious, potentially fatal, CNS depression when given with **clomethiazole**. Avoid. [Severe] Study → Also see TABLE 11 p. 1492
  - ▶ **Alcohol** (in those who drink heavily) potentially decreases the anticoagulant effect of **coumarins**. [Severe] Study
  - ▶ **Alcohol** (excessive consumption) potentially increases the risk of gastrointestinal adverse effects when given with **dimethyl fumarate**. Avoid. [Moderate] Theoretical
  - ▶ **Alcohol** causes an extremely unpleasant systemic reaction when given with **disulfiram**. Avoid for at least 24 hours before and up to 14 days after stopping treatment. [Severe] Study
  - ▶ **Alcohol** potentially causes a disulfiram-like reaction when given with **griseofulvin**. [Moderate] Anecdotal
  - ▶ **Alcohol** potentially causes a disulfiram-like reaction when given with **levamisole**. [Moderate] Study
  - ▶ **Alcohol** (excessive consumption) potentially increases the risk of lactic acidosis when given with **metformin**. Avoid excessive alcohol consumption. [Moderate] Theoretical
  - ▶ **Alcohol** might increase the concentration of **methylphenidate**. Avoid. [Moderate] Study
  - ▶ **Alcohol** potentially causes a disulfiram-like reaction when given with **metronidazole**. Avoid for at least 48 hours after stopping treatment. [Moderate] Study
  - ▶ **Alcohol** causes rapid release of **opioids (hydromorphone, morphine)** from extended-release preparations. Avoid. [Severe] Study → Also see TABLE 11 p. 1492
  - ▶ **Alcohol** (in those who drink heavily) causes severe liver damage when given with **paracetamol**. [Severe] Study → Also see TABLE 1 p. 1490
  - ▶ **Alcohol** increases the risk of facial flushing and skin irritation when given with topical **pimecrolimus**. [Moderate] Study
  - ▶ **Alcohol** potentially causes a disulfiram-like reaction when given with **procarbazine**. [Moderate] Anecdotal
  - ▶ **Alcohol** potentially increases the concentration of **retinoids (acitretin)**. Avoid and for 2 months after stopping **acitretin**. [Moderate] Study
  - ▶ **Alcohol** increases the risk of facial flushing and skin irritation when given with topical **tacrolimus**. [Moderate] Study
- Aldesleukin** → see TABLE 15 p. 1493 (myelosuppression)
- Aldosterone antagonists** → see TABLE 18 p. 1494 (hyponatraemia), TABLE 8 p. 1491 (hypotension), TABLE 16 p. 1494 (increased serum potassium)
- eplerenone - spironolactone
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **eplerenone**. Avoid. [Moderate] Theoretical
  - ▶ **Spironolactone** is predicted to oppose the effects of **anti-androgens (abiraterone)**. Avoid. [Severe] Theoretical

## Aldosterone antagonists (continued)

- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 210. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 210. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **eplerenone**. Avoid. [Moderate] Theoretical → Also see TABLE 18 p. 1494
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 210. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **eplerenone**. Avoid. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 210. [Severe] Study → Also see TABLE 8 p. 1491
- ▶ **Cenobamate** is predicted to decrease the exposure to **eplerenone**. Adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **eplerenone**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 210. [Severe] Study
- ▶ **Eplerenone** very slightly increases the exposure to **digoxin**. [Mid] Study
- ▶ **Spironolactone** increases the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **eplerenone**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **eplerenone**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 210. [Severe] Study
- ▶ **Letermovir** is predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 210. [Severe] Study
- ▶ **Eplerenone** potentially increases the concentration of **lithium**. Avoid. [Moderate] Theoretical
- ▶ **Spironolactone** potentially increases the concentration of **lithium**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **eplerenone**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 210. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **eplerenone**. Avoid. [Moderate] Theoretical
- ▶ **Spironolactone** is predicted to decrease the effects of **mitotane**. Avoid. [Severe] Anecdotal
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 210. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 210. [Severe] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **eplerenone**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to slightly decrease the exposure to **eplerenone**. Avoid. [Moderate] Study
- Alectinib** → see TABLE 6 p. 1491 (bradycardia), TABLE 1 p. 1490 (hepatotoxicity)
- Alemtuzumab** → see monoclonal antibodies
- Alendronate** → see bisphosphonates
- Alfacalcidol** → see vitamin D substances
- Alfentanil** → see opioids
- Alfuzosin** → see alpha blockers
- Alimemazine** → see antihistamines, sedating
- Aliskiren** → see TABLE 8 p. 1491 (hypotension), TABLE 16 p. 1494 (increased serum potassium)

**FOOD AND LIFESTYLE** Avoid apple juice and orange juice as they greatly decrease aliskiren concentrations and plasma renin activity.

- ▶ **ACE inhibitors** increase the risk of renal impairment when given with **aliskiren**. Use with caution or avoid **aliskiren** in

selected patients, p. 195. [Severe] Study → Also see TABLE 8 p. 1491 → Also see TABLE 16 p. 1494

- ▶ **Angiotensin-II receptor antagonists** increase the risk of renal impairment when given with **aliskiren**. Use with caution or avoid **aliskiren** in selected patients, p. 195. [Severe] Study → Also see TABLE 8 p. 1491 → Also see TABLE 16 p. 1494
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **aliskiren**. [Severe] Study
- ▶ **Antiepileptics (carbamazepine)** decrease the exposure to **aliskiren**. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole)** markedly increase the exposure to **aliskiren**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (ketoconazole)** moderately increase the exposure to **aliskiren**. [Moderate] Study
- ▶ **Bertronalstat** is predicted to increase the concentration of **aliskiren**. Monitor and adjust dose. [Moderate] Study
- ▶ **Calcium channel blockers (verapamil)** moderately increase the exposure to **aliskiren**. [Moderate] Study → Also see TABLE 8 p. 1491
- ▶ **Ceritinib** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **Ciclosporin** markedly increases the exposure to **aliskiren**. Avoid. [Severe] Study → Also see TABLE 16 p. 1494
- ▶ **Eliglustat** is predicted to increase the exposure to **aliskiren**. Adjust dose. [Moderate] Study
- ▶ **Grapefruit** juice moderately decreases the exposure to **aliskiren**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **Ibrutinib** is predicted to increase the exposure to **aliskiren**. Separate administration by at least 6 hours. [Moderate] Theoretical
- ▶ **Ivacaftor** is predicted to increase the exposure to **aliskiren**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **Aliskiren** slightly decreases the exposure to **loop diuretics (furosemide)**. [Moderate] Study → Also see TABLE 8 p. 1491
- ▶ **Lorlatinib** is predicted to decrease the exposure to **aliskiren**. [Moderate] Study
- ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **aliskiren**. [Moderate] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **aliskiren**. [Mid] Theoretical
- ▶ **Neratinib** is predicted to increase the exposure to **aliskiren**. [Moderate] Study
- ▶ **Olaparib** might increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **Osimertinib** is predicted to increase the exposure to **aliskiren**. [Moderate] Study
- ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **aliskiren**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **aliskiren**. [Mid] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** decrease the exposure to **aliskiren**. [Moderate] Study
- ▶ **Sotorasib** is predicted to increase the exposure to **aliskiren**. Avoid or adjust dose. [Moderate] Study
- ▶ **St John's wort** decreases the exposure to **aliskiren**. [Moderate] Study
- ▶ **Statins (atorvastatin)** slightly to moderately increase the exposure to **aliskiren**. [Moderate] Study
- ▶ **Teptotinib** is predicted to increase the concentration of **aliskiren**. [Severe] Study
- ▶ **Tucatinib** is predicted to increase the exposure to **aliskiren**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Vandetanib** is predicted to increase the exposure to **aliskiren**. [Moderate] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **aliskiren**. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **aliskiren**. Use with caution and adjust dose. [Moderate] Theoretical

**Alitreinoin** → see retinoids

**Alkylating agents** → see TABLE 15 p. 1493 (myelosuppression), TABLE 2 p. 1490 (nephrotoxicity), TABLE 5 p. 1491 (thromboembolism)

bendamustine · busulfan · carmustine · chlorambucil · cyclophosphamide · dacarbazine · estramustine · ifosfamide · lomustine · melphalan · temozolomide · thiotepa · treosulfan

- ▶ Oral **antacids** are predicted to decrease the absorption of oral **estramustine**. Avoid. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **cyclophosphamide**. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole)** increase the risk of busulfan toxicity when given with **busulfan**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **busulfan**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ Oral **calcium salts** decrease the absorption of **estramustine**. [\[Severe\]](#) Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **alkylating agents**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Metronidazole** increases the risk of toxicity when given with **busulfan**. [\[Severe\]](#) Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant)** are predicted to increase the exposure to **ifosfamide**. [\[Severe\]](#) Theoretical
- ▶ **Neurokinin-1 receptor antagonists (netupitant)** very slightly increase the exposure to **cyclophosphamide**. [\[Moderate\]](#) Study
- ▶ **Neurokinin-1 receptor antagonists (netupitant)** are predicted to increase the exposure to **ifosfamide**. [\[Moderate\]](#) Study
- ▶ **Paracetamol** is predicted to decrease the clearance of **busulfan**. [\[Moderate\]](#) Theoretical
- ▶ **Pemigatinib** might increase the exposure to the active metabolite of **cyclophosphamide**. [\[Moderate\]](#) Theoretical
- ▶ **Pemigatinib** might decrease the exposure to **ifosfamide**. [\[Moderate\]](#) Theoretical
- ▶ **Cyclophosphamide (high-dose)** increases the risk of toxicity when given with **pentostatin**. Avoid. [\[Severe\]](#) Anecdotal → Also see TABLE 15 p. 1493 → Also see TABLE 5 p. 1491
- ▶ **Cyclophosphamide** increases the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [\[Moderate\]](#) Study

#### Allopurinol

- ▶ **ACE inhibitors** are predicted to increase the risk of hypersensitivity and haematological reactions when given with **allopurinol**. [\[Severe\]](#) Anecdotal
- ▶ **Allopurinol** potentially increases the risk of haematological toxicity when given with **azathioprine**. Adjust **azathioprine** dose, p. 902. [\[Severe\]](#) Study
- ▶ **Allopurinol** is predicted to decrease the effects of **capecitabine**. Avoid. [\[Severe\]](#) Study
- ▶ **Allopurinol** potentially increases the risk of haematological toxicity when given with **mercaptopurine**. Adjust **mercaptopurine** dose, p. 986. [\[Severe\]](#) Study
- ▶ **Allopurinol** increases the risk of skin rash when given with **penicillins (amoxicillin, ampicillin)**. [\[Moderate\]](#) Study
- ▶ **Allopurinol** is predicted to increase the risk of hyperuricaemia when given with **pyrazinamide**. [\[Moderate\]](#) Theoretical
- ▶ **Thiazide diuretics** are predicted to increase the risk of hypersensitivity reactions when given with **allopurinol**. [\[Severe\]](#) Theoretical

**Almotriptan** → see triptans

**Alogliptin** → see dipeptidylpeptidase-4 inhibitors

#### Alpelisib

- ▶ **Alpelisib** is predicted to decrease the efficacy of **bupropion**. [\[Mid\]](#) Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **alpelisib**. [\[Moderate\]](#) Theoretical
- ▶ **Alpelisib** is predicted to decrease the efficacy of **coumarins (warfarin)**. [\[Moderate\]](#) Theoretical
- ▶ **Eltrombopag** is predicted to increase the exposure to **alpelisib**. [\[Moderate\]](#) Theoretical

- ▶ **Lapatinib** is predicted to increase the exposure to **alpelisib**. [\[Moderate\]](#) Theoretical
  - ▶ **Lefunomide** is predicted to increase the exposure to **alpelisib**. [\[Moderate\]](#) Theoretical
  - ▶ **Proton pump inhibitors (pantoprazole)** are predicted to increase the exposure to **alpelisib**. [\[Moderate\]](#) Theoretical
  - ▶ **Teriflunomide** is predicted to increase the exposure to **alpelisib**. [\[Moderate\]](#) Theoretical
- Alpha blockers** → see TABLE 7 p. 1491 (first-dose hypotension), TABLE 8 p. 1491 (hypotension)
- alfuzosin · doxazosin · indoramin · prazosin · tamsulosin · terazosin
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **tamsulosin**. [\[Moderate\]](#) Theoretical
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tamsulosin**. [\[Moderate\]](#) Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **doxazosin**. [\[Moderate\]](#) Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to alpha blockers (**alfuzosin, tamsulosin**). Use with caution or avoid. [\[Moderate\]](#) Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tamsulosin**. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1491
  - ▶ **Cobicistat** is predicted to moderately increase the exposure to alpha blockers (**alfuzosin, tamsulosin**). Use with caution or avoid. [\[Moderate\]](#) Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **doxazosin**. [\[Moderate\]](#) Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **tamsulosin**. [\[Moderate\]](#) Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to alpha blockers (**alfuzosin, tamsulosin**). Use with caution or avoid. [\[Moderate\]](#) Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **doxazosin**. [\[Moderate\]](#) Study
  - ▶ **Idelalisib** is predicted to moderately increase the exposure to alpha blockers (**alfuzosin, tamsulosin**). Use with caution or avoid. [\[Moderate\]](#) Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **doxazosin**. [\[Moderate\]](#) Study
  - ▶ **Imatinib** is predicted to increase the exposure to **tamsulosin**. [\[Moderate\]](#) Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **tamsulosin**. [\[Moderate\]](#) Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **doxazosin**. [\[Moderate\]](#) Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **tamsulosin**. [\[Moderate\]](#) Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to alpha blockers (**alfuzosin, tamsulosin**). Use with caution or avoid. [\[Moderate\]](#) Study
  - ▶ **MAOIs, irreversible** are predicted to increase the effects of **indoramin**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1491
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **tamsulosin**. [\[Moderate\]](#) Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to **tamsulosin**. [\[Moderate\]](#) Theoretical
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **alfuzosin**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Alpha blockers** cause significant hypotensive effects when given with **phosphodiesterase type-5 inhibitors**. Patient should be stabilised on first drug then second drug should be added at the lowest recommended dose. [\[Severe\]](#) Study → Also see TABLE 8 p. 1491
  - ▶ **Ribociclib (high-dose)** is predicted to increase the exposure to **alfuzosin**. Avoid. [\[Moderate\]](#) Theoretical
- Alprazolam** → see benzodiazepines
- Alprostadil** → see TABLE 8 p. 1491 (hypotension), TABLE 4 p. 1490 (atriplatelet effects)
- Alteplase** → see TABLE 3 p. 1490 (anticoagulant effects)

**Aluminium hydroxide**

**SEPARATION OF ADMINISTRATION** Aluminium-containing antacids should preferably not be taken at the same time as other drugs since they might impair absorption. Aluminium-containing antacids might damage enteric coatings designed to prevent dissolution in the stomach.

- ▶ Oral aluminium hydroxide might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. [Severe] Theoretical
- ▶ Oral aluminium hydroxide decreases the absorption of **chenodeoxycholic acid**. [Moderate] Study
- ▶ Aluminium hydroxide increases the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. [Moderate] Study
- ▶ Aluminium hydroxide is predicted to decrease the exposure to **iron chelators (deferasirox)**. Avoid. [Moderate] Theoretical
- ▶ Aluminium hydroxide is predicted to decrease the absorption of **iron chelators (deferiprone)**. Avoid. [Moderate] Theoretical
- ▶ Aluminium hydroxide might decrease the exposure to **roxadustat**. Roxadustat should be taken at least 1 hour after aluminium hydroxide. [Moderate] Theoretical

**Amantadine** → see dopamine receptor agonists

**Ambrisentan** → see endothelin receptor antagonists

**Amfetamines** → see TABLE 13 p. 1493 (serotonin syndrome)

dexamfetamine · lisdexamfetamine

- ▶ Amfetamines are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
  - ▶ Amfetamines are predicted to increase the risk of adverse effects when given with **atomoxetine**. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors (ritonavir, tipranavir)** are predicted to increase the exposure to amfetamines. [Severe] Theoretical
  - ▶ **MAO-B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of severe hypertension when given with amfetamines. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1493
  - ▶ **MAO-B inhibitors (safinamide)** are predicted to increase the risk of severe hypertension when given with amfetamines. [Severe] Theoretical → Also see TABLE 13 p. 1493
  - ▶ Amfetamines are predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Anecdotal → Also see TABLE 13 p. 1493
  - ▶ Amfetamines are predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1493
  - ▶ **Nabilone** is predicted to increase the risk of cardiovascular adverse effects when given with amfetamines. [Severe] Theoretical
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of amfetamines. [Severe] Theoretical
  - ▶ **Phenothiazines** are predicted to decrease the effects of amfetamines and amfetamines are predicted to decrease the effects of phenothiazines. [Moderate] Study
  - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to amfetamines. [Severe] Theoretical → Also see TABLE 13 p. 1493
- Amifampridine** → see TABLE 9 p. 1492 (QT-interval prolongation)
- Amikacin** → see aminoglycosides
- Amiloride** → see potassium-sparing diuretics
- Aminoglycosides** → see TABLE 2 p. 1490 (nephrotoxicity), TABLE 19 p. 1494 (ototoxicity), TABLE 20 p. 1494 (neuromuscular blocking effects)
- amikacin · gentamicin · streptomycin · tobramycin

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions with topical **gentamicin** and **tobramycin** should be borne in mind.

- ▶ Aminoglycosides are predicted to decrease the effects of **agalsidase alfa**. Avoid. [Moderate] Theoretical
- ▶ Aminoglycosides are predicted to decrease the effects of **agalsidase beta**. Avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (miconazole)** potentially decrease the exposure to tobramycin. [Moderate] Anecdotal

- ▶ **Ataluren** is predicted to increase the risk of nephrotoxicity when given with intravenous aminoglycosides. Avoid. [Severe] Study
  - ▶ Aminoglycosides increase the risk of hypocalcaemia when given with **bisphosphonates**. [Moderate] Anecdotal → Also see TABLE 2 p. 1490
  - ▶ Aminoglycosides potentially increase the concentration of **digoxin**. Monitor and adjust dose. [Mid] Study
  - ▶ **Loop diuretics** increase the risk of nephrotoxicity when given with aminoglycosides. Avoid. [Moderate] Study → Also see TABLE 19 p. 1494
  - ▶ Aminoglycosides are predicted to decrease the effects of **neostigmine**. [Moderate] Theoretical
  - ▶ Aminoglycosides are predicted to decrease the effects of **pyridostigmine**. [Moderate] Theoretical
  - ▶ **Gentamicin** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Theoretical
- Amionophylline** → see TABLE 17 p. 1494 (reduced serum potassium)

**FOOD AND LIFESTYLE** Smoking can increase aminophylline clearance and increased doses of aminophylline are therefore required; dose adjustments are likely to be necessary if smoking started or stopped during treatment.

- ▶ **Aciclovir** increases the exposure to aminophylline. Monitor and adjust dose. [Severe] Anecdotal
- ▶ Aminophylline is predicted to decrease the efficacy of **antiarrhythmics (adenosine)**. Separate administration by 24 hours. [Mid] Theoretical
- ▶ **Antiepileptics (fosphenytoin)** are predicted to decrease the exposure to aminophylline. Adjust dose. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital)** are predicted to decrease the exposure to aminophylline. Adjust dose. [Moderate] Theoretical
- ▶ **Antiepileptics (phenytoin)** decrease the exposure to aminophylline. Adjust dose. [Moderate] Study
- ▶ **Antiepileptics (primidone)** are predicted to increase the clearance of aminophylline. Adjust dose. [Moderate] Theoretical
- ▶ **Antiepileptics (stiripentol)** are predicted to increase the exposure to aminophylline. Avoid. [Moderate] Theoretical
- ▶ **Axitinib** is predicted to increase the exposure to aminophylline. [Moderate] Theoretical
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with aminophylline. Avoid. [Severe] Theoretical
- ▶ **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with aminophylline. Avoid. [Severe] Theoretical
- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to aminophylline. Adjust dose. [Moderate] Theoretical
- ▶ Aminophylline increases the risk of agitation when given with **doxapram**. [Moderate] Study
- ▶ **Esketamine** is predicted to increase the risk of seizures when given with aminophylline. Avoid. [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the concentration of aminophylline. Adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** decrease the exposure to aminophylline. Adjust dose. [Moderate] Study
- ▶ **Interferons** are predicted to slightly increase the exposure to aminophylline. Adjust dose. [Moderate] Theoretical
- ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to aminophylline. Avoid. [Moderate] Theoretical
- ▶ **Isoniazid** is predicted to affect the clearance of aminophylline. [Severe] Theoretical
- ▶ **Leflunomide** decreases the exposure to aminophylline. Adjust dose. [Moderate] Study
- ▶ Aminophylline is predicted to decrease the concentration of **lithium**. [Moderate] Theoretical
- ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to aminophylline. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to aminophylline. Adjust dose. [Moderate] Theoretical
- ▶ Aminophylline is predicted to decrease the exposure to macrolides (**erythromycin**). Adjust dose. [Severe] Study
- ▶ **Methotrexate** is predicted to decrease the clearance of aminophylline. [Moderate] Theoretical

- ▶ **Metreleptin** might alter the exposure to aminophylline. [Severe] Theoretical
  - ▶ **Mexiletine** is predicted to increase the exposure to aminophylline. Adjust dose. [Moderate] Theoretical
  - ▶ **Monoclonal antibodies (blinatumomab)** are predicted to transiently increase the exposure to aminophylline. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to aminophylline. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to aminophylline. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of aminophylline. Adjust dose. [Moderate] Theoretical
  - ▶ **Osilodrostat** is predicted to increase the exposure to aminophylline. Adjust dose. [Moderate] Theoretical
  - ▶ **Pentoxifylline** is predicted to increase the concentration of aminophylline. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Aminophylline** is predicted to slightly increase the exposure to phosphodiesterase type-4 inhibitors (**roflumilast**). Avoid. [Moderate] Theoretical
  - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to aminophylline. Adjust dose. [Moderate] Theoretical
  - ▶ **Rifamycins (rifampicin)** decrease the exposure to aminophylline. Adjust dose. [Moderate] Study
  - ▶ **Rucaparib** is predicted to increase the exposure to aminophylline. Adjust dose. [Moderate] Theoretical
  - ▶ **SSRIs (fluvoxamine)** moderately to markedly increase the exposure to aminophylline. Avoid. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the concentration of aminophylline. [Severe] Theoretical
  - ▶ **Sympathomimetics, vasoconstrictor (ephedrine)** increase the risk of adverse effects when given with aminophylline. Avoid in children. [Moderate] Study
  - ▶ **Teriflunomide** decreases the exposure to aminophylline. Adjust dose. [Moderate] Study
  - ▶ **Valaciclovir** is predicted to increase the exposure to aminophylline. [Severe] Anecdotal
  - ▶ **Vemurafenib** is predicted to increase the exposure to aminophylline. Adjust dose. [Moderate] Theoretical
  - Aminosalicilic acid**
    - ▶ **Aminosalicilic acid** is predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Theoretical
    - ▶ **Aminosalicilic acid** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
  - Amiodarone** → see antiarrhythmics
  - Amisulpride** → see antipsychotics, second generation
  - Amitriptyline** → see tricyclic antidepressants
  - Amlodipine** → see calcium channel blockers
  - Amoxicillin** → see penicillins
  - Amphotericin B** → see TABLE 2 p. 1490 (nephrotoxicity), TABLE 17 p. 1494 (reduced serum potassium)
  - ▶ **Amphotericin B** increases the risk of toxicity when given with **flucytosine**. [Severe] Study
  - ▶ **Micafungin** slightly increases the exposure to amphotericin B. Avoid or monitor toxicity. [Moderate] Study
  - Ampicillin** → see penicillins
  - Amsciline** → see TABLE 15 p. 1493 (myelosuppression)
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **amscrine**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
  - Anaesthetics, local** → see TABLE 11 p. 1492 (CNS depressant effects)
    - butipivacaine · levobupivacaine · mepivacaine · oxybuprocaine · ropivacaine · proxymetacaine · ropivacaine · tetracaine
- ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- ▶ **Aminosalicilic acid** is predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Anaesthetics, local** are predicted to increase the risk of cardiodepression when given with **antiarrhythmics**. [Severe] Theoretical → Also see TABLE 11 p. 1492
  - ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 11 p. 1492
  - ▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to **ropivacaine**. [Moderate] Theoretical
  - ▶ **Antimalarials (chloroquine, primaquine)** are predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Axitinib** is predicted to increase the exposure to **ropivacaine**. [Moderate] Theoretical
  - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **ropivacaine**. [Moderate] Theoretical
  - ▶ **Dapsone** is predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **ropivacaine**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to decrease the exposure to **ropivacaine**. [Moderate] Theoretical
  - ▶ **Metoclopramide** is predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Avoid. [Severe] Theoretical
  - ▶ **Mexiletine** is predicted to increase the exposure to **ropivacaine**. [Moderate] Theoretical
  - ▶ **Nitrates** are predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Avoid. [Severe] Theoretical
  - ▶ **Nitrofurantoin** is predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Nitroprusside** is predicted to increase the risk of methaemoglobinaemia when given with **prilocaine**. [Severe] Theoretical
  - ▶ **Osilodrostat** is predicted to increase the exposure to **ropivacaine**. [Moderate] Theoretical
  - ▶ **Paracetamol** is predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **ropivacaine**. [Moderate] Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **ropivacaine**. [Moderate] Theoretical
  - ▶ **Rucaparib** is predicted to increase the exposure to **ropivacaine**. [Moderate] Theoretical
  - ▶ **SSRIs (fluvoxamine)** decrease the clearance of **ropivacaine**. Avoid prolonged use. [Moderate] Study
  - ▶ **Sulfonamides** potentially increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Anecdotal
  - ▶ **Teriflunomide** is predicted to decrease the exposure to **ropivacaine**. [Moderate] Theoretical
  - ▶ **Vemurafenib** is predicted to increase the exposure to **ropivacaine**. [Moderate] Theoretical
  - Anagrelide** → see TABLE 9 p. 1492 (QT-interval prolongation), TABLE 4 p. 1490 (antiplatelet effects)
    - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical
    - ▶ **Mexiletine** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical
    - ▶ **Osilodrostat** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical → Also see TABLE 9 p. 1492
    - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical
    - ▶ **Rucaparib** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical
    - ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical → Also see TABLE 4 p. 1490

## Anagrelide (continued)

- ▶ **Vemurafenib** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical → Also see TABLE 9 p. 1492

**Anakinra**

- ▶ **Anakinra** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **abatacept**. [Severe] Theoretical
- ▶ **Anakinra** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etanercept**. Avoid. [Severe] Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **anakinra**. Avoid. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **anakinra**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Monoclonal antibodies (certolizumab pegol)** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **anakinra**. Avoid. [Severe] Theoretical
- ▶ **Anakinra** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **monoclonal antibodies (golimumab)**. Avoid. [Severe] Theoretical

**Andexanet alfa**

- ▶ **Andexanet alfa** has been reported to affect the anticoagulant effect of **heparin**. Avoid. [Severe] Anecdotal
- ▶ **Andexanet alfa** is predicted to affect the anticoagulant effect of **low molecular-weight heparins**. Avoid. [Severe] Theoretical

- ▶ **Angiotensin-II receptor antagonists** → see TABLE 7 p. 1491 (first-dose hypotension), TABLE 8 p. 1491 (hypotension), TABLE 16 p. 1494 (increased serum potassium)

azilsartan · candesartan · eprosartan · irbesartan · losartan · olmesartan · telmisartan · valsartan

- ▶ **Angiotensin-II receptor antagonists** increase the risk of renal impairment when given with **aliskiren**. Use with caution or avoid **aliskiren** in selected patients, p. 195. [Severe] Study → Also see TABLE 8 p. 1491 → Also see TABLE 16 p. 1494
- ▶ **Angiotensin-II receptor antagonists** potentially increase the concentration of **lithium**. Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ **Taxanes (cabazitaxel)** are predicted to affect the exposure to **valsartan**. Manufacturer advises take 12 hours before or 3 hours after **cabazitaxel**. [Moderate] Theoretical

**Antacids**

**SEPARATION OF ADMINISTRATION** Aluminium- and magnesium-containing antacids should preferably not be taken at the same time as other drugs since they might impair absorption. Aluminium- and magnesium-containing antacids might damage enteric coatings designed to prevent dissolution in the stomach.

- ▶ Oral antacids are predicted to decrease the exposure to oral **acalabrutinib**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral antacids are predicted to decrease the absorption of oral **alkylating agents (estramustine)**. Avoid. [Moderate] Study
- ▶ Oral antacids decrease the absorption of oral **antiepileptics (gabapentin)**. **Gabapentin** should be taken 2 hours after antacids. [Moderate] Study
- ▶ Oral antacids decrease the absorption of oral **antifungals, azoles (itraconazole)** capsules. **Itraconazole** should be taken 2 hours before or 1 hour after antacids. [Moderate] Study
- ▶ Oral antacids decrease the absorption of oral **antifungals, azoles (ketoconazole)**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral antacids decrease the absorption of oral **antihistamines, non-sedating (fexofenadine)**. Separate administration by 2 hours. [Mid] Study
- ▶ Oral antacids are predicted to decrease the absorption of oral **antimalarials (chloroquine)**. Separate administration by at least 4 hours. [Moderate] Theoretical
- ▶ Oral antacids are predicted to decrease the absorption of oral **antimalarials (proguanil)**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral antacids decrease the absorption of oral **aspirin** (high-dose). [Moderate] Study
- ▶ Oral antacids might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Avoid. [Severe] Theoretical
- ▶ Oral antacids decrease the exposure to oral **bictegravir**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral antacids decrease the absorption of oral **bisphosphonates (alendronate)**. **Alendronate** should be taken at least 30 minutes before antacids. [Moderate] Study
- ▶ Oral antacids decrease the absorption of oral **bisphosphonates (clodronate)**. Avoid antacids for 2 hours before or 1 hour after **clodronate**. [Moderate] Study
- ▶ Oral antacids are predicted to decrease the absorption of oral **bisphosphonates (ibandronate)**. Avoid antacids for at least 6 hours before or 1 hour after **ibandronate**. [Moderate] Theoretical
- ▶ Oral antacids decrease the absorption of oral **bisphosphonates (risedronate)**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral antacids are predicted to decrease the absorption of oral **bosutinib**. **Bosutinib** should be taken at least 12 hours before antacids. [Moderate] Theoretical
- ▶ Oral antacids are predicted to decrease the concentration of oral **cabotegravir**. **Cabotegravir** should be taken 4 hours before or 2 hours after antacids. [Moderate] Theoretical
- ▶ Oral antacids are predicted to decrease the absorption of oral **ceritinib**. Separate administration by 2 hours. [Moderate] Theoretical
- ▶ Oral antacids are predicted to decrease the absorption of oral **cholic acid**. Separate administration by 5 hours. [Mid] Theoretical
- ▶ Oral antacids are predicted to decrease the absorption of oral **corticosteroids (deflazacort)**. Separate administration by 2 hours. [Moderate] Theoretical
- ▶ Oral antacids decrease the absorption of oral **corticosteroids (dexamethasone)**. [Moderate] Study
- ▶ Oral antacids decrease the absorption of oral **dasatinib**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral antacids decrease the absorption of oral **digoxin**. Separate administration by 2 hours. [Mid] Study
- ▶ Oral antacids are predicted to decrease the absorption of oral **dipyridamole** (immediate release tablets). [Moderate] Theoretical
- ▶ Oral antacids decrease the exposure to oral **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after antacids. [Moderate] Study
- ▶ Oral antacids decrease the absorption of oral **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after antacids. [Severe] Study
- ▶ Oral antacids decrease the exposure to oral **elvitegravir**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ Oral antacids are predicted to decrease the absorption of oral **erlotinib**. **Erlotinib** should be taken 2 hours before or 4 hours after antacids. [Moderate] Theoretical
- ▶ Oral antacids decrease the exposure to oral **fibrate (gemfibrozil)**. [Moderate] Study
- ▶ Oral antacids are predicted to decrease the exposure to oral **gefinitib**. [Moderate] Theoretical
- ▶ Oral antacids are predicted to decrease the absorption of oral **HIV-protease inhibitors (atazanavir)**. **Atazanavir** should be taken 2 hours before or 1 hour after antacids. [Severe] Theoretical
- ▶ Oral antacids are predicted to decrease the absorption of oral **HIV-protease inhibitors (tipranavir)**. Separate administration by 2 hours. [Moderate] Study
- ▶ Oral antacids are predicted to decrease the absorption of oral **hydroxychloroquine**. Separate administration by at least 4 hours. [Moderate] Theoretical
- ▶ Oral antacids decrease the absorption of oral **iron**. Manufacturer advises iron should be taken 1 hour before or 2 hours after antacids. [Moderate] Study
- ▶ Oral antacids is predicted to decrease the absorption of oral **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ Oral antacids are predicted to decrease the exposure to oral **ledipasvir**. Separate administration by 4 hours. [Moderate] Theoretical
- ▶ Oral antacids decrease the exposure to oral **mycophenolate**. [Moderate] Study

- Oral **antacids** are predicted to decrease the exposure to oral **neratinib**. Separate administration by at least 3 hours. [Mild] Theoretical
- Oral **antacids** might affect the absorption of oral **nilotinib**. Separate administration by at least 2 hours. [Moderate] Theoretical
- Oral **antacids** are predicted to decrease the exposure to oral **NNRTIs (rilpivirine)**. **Rilpivirine** should be taken 4 hours before or 2 hours after antacids. [Severe] Theoretical
- Oral **antacids** are predicted to decrease the absorption of oral **pazopanib**. **Pazopanib** should be taken 1 hour before or 2 hours after antacids. [Moderate] Theoretical
- Oral **antacids** decrease the absorption of oral **penicillamine**. Separate administration by 2 hours. [Mild] Study
- Oral **antacids** decrease the absorption of oral **phenothiazines**. [Moderate] Anecdotal
- Oral **antacids** increase the risk of metabolic alkalosis when given with oral **polystyrene sulfonate**. [Severe] Anecdotal
- Oral **antacids** decrease the absorption of oral **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after antacids. [Moderate] Study
- Oral **antacids** decrease the exposure to oral **raltegravir**. Avoid. [Moderate] Study
- Oral **antacids** decrease the absorption of oral **rifamycins (rifampicin)**. **Rifampicin** should be taken 1 hour before antacids. [Moderate] Study
- Oral **antacids** decrease the exposure to oral **riociguat**. **Riociguat** should be taken 1 hour before or 2 hours after antacids. [Mild] Study
- Antacids** might decrease the exposure to **roxadustat**. **Roxadustat** should be taken at least 1 hour after antacids. [Moderate] Theoretical
- Antacids** are predicted to decrease the exposure to **selpercitinib**. [Moderate] Theoretical
- Oral **antacids** are predicted to decrease the exposure to oral **sotorasib**. **Sotorasib** should be taken 4 hours before or 10 hours after antacids. [Moderate] Theoretical
- Oral **antacids** decrease the absorption of oral **statins (rosuvastatin)**. Separate administration by 2 hours. [Moderate] Study
- Oral **antacids** decrease the absorption of oral **strontium**. Separate administration by 2 hours. [Moderate] Study
- Oral **antacids** decrease the absorption of oral **supliride**. Separate administration by 2 hours. [Moderate] Study
- Oral **antacids** greatly decrease the absorption of oral **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Study
- Oral **antacids** are predicted to decrease the absorption of oral **thyroid hormones (levothyroxine)**. Separate administration by at least 4 hours. [Moderate] Anecdotal
- Oral **antacids** are predicted to decrease the absorption of oral **ursodeoxycholic acid**. Separate administration by 2 hours. [Moderate] Theoretical
- Oral **antacids** are predicted to decrease the concentration of oral **velpatasvir**. Separate administration by 4 hours. [Moderate] Theoretical

**Antazoline** → see antihistamines, sedating

**Anthracyclines** → see TABLE 15 p. 1493 (myelosuppression), TABLE 5 p. 1491 (thromboembolism)

daunorubicin · doxorubicin · epirubicin · idarubicin · mitoxantrone · pixantrone

**GENERAL INFORMATION** Caution is necessary with concurrent use of **anthracyclines** with cardiotoxic drugs, or drugs that reduce cardiac contractility.

- Calcium channel blockers (verapamil)** moderately increase the exposure to **doxorubicin**. [Moderate] Study
- Ciclosporin** increases the concentration of anthracyclines (daunorubicin, doxorubicin, epirubicin, idarubicin, mitoxantrone). [Severe] Study
- H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **epirubicin**. Avoid. [Moderate] Study
- Leflunomide** is predicted to increase the exposure to anthracyclines (daunorubicin, doxorubicin, mitoxantrone). [Moderate] Theoretical → Also see TABLE 15 p. 1493

- Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **anthracyclines**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- Anthracyclines** are predicted to increase the risk of cardiotoxicity when given with **monoclonal antibodies (trastuzumab, trastuzumab emtansine)**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1493
- Anthracyclines** are predicted to increase the risk of cardiotoxicity when given with **monoclonal antibodies (trastuzumab deruxtecan)**. [Severe] Theoretical → Also see TABLE 15 p. 1493
- Teriflunomide** is predicted to increase the exposure to anthracyclines (daunorubicin, doxorubicin, mitoxantrone). [Moderate] Theoretical

**Anti-androgens** → see TABLE 9 p. 1492 (QT-interval prolongation)

abiraterone · apalutamide · bicalutamide · cyproterone · darolutamide · enzalutamide · flutamide

**GENERAL INFORMATION** Caution with concurrent chemotherapy—safety and efficacy with **abiraterone** and **enzalutamide** not established.

- Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **5-HT<sub>3</sub>-receptor antagonists (ondansetron)**. [Moderate] Study → Also see TABLE 9 p. 1492
- Anti-androgens (**apalutamide, enzalutamide**) are predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
- Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **abrocitinib**. Avoid. [Moderate] Study
- Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **acalabrutinib**. Avoid. [Severe] Study
- Aldosterone antagonists (spironolactone)** are predicted to oppose the effects of **abiraterone**. Avoid. [Severe] Theoretical
- Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Theoretical
- Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to anti-androgens (**abiraterone**). Avoid. [Severe] Study
- Anti-androgens (**apalutamide**) are predicted to decrease the exposure to anti-androgens (**darolutamide**). Avoid. [Moderate] Study
- Anti-androgens (**enzalutamide**) are predicted to decrease the exposure to anti-androgens (**darolutamide**). Avoid. [Moderate] Study
- Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the efficacy of **antiarrhythmics (propafenone)**. [Moderate] Study
- Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **anticholinesterases, centrally acting (donepezil)**. [Mild] Study
- Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **cyproterone** with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. [Severe] Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **abiraterone**. Avoid. [Severe] Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **darolutamide**. Avoid. [Moderate] Study
- Enzalutamide** is predicted to slightly decrease the exposure to **antiepileptics (brivaracetam)**. [Moderate] Theoretical
- Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **antiepileptics (perampanel)**. Monitor and adjust dose. [Moderate] Study
- Apalutamide** potentially decreases the exposure to **antiepileptics (valproate)**. [Mild] Theoretical

## Anti-androgens (continued)

- ▶ **Antifungals, azoles (itraconazole)** slightly increase the exposure to **darolutamide**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **apalutamide**. [Mild] Study → Also see TABLE 9 p. 1492
- ▶ **Antifungals, azoles (ketoconazole)** are predicted to increase the exposure to **darolutamide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Study
- ▶ **Apalutamide** slightly decreases the exposure to **antihistamines, non-sedating (fexofenadine)**. [Mild] Study
- ▶ **Darolutamide** is predicted to increase the concentration of **antihistamines, non-sedating (fexofenadine)**. [Moderate] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **antimalarials (artemether)** with lumefantrine. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the concentration of **antimalarials (piperaquine)**. Avoid. [Moderate] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to moderately decrease the exposure to **antipsychotics, second generation (aripiprazole)**. Adjust aripiprazole dose, p. 427. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **antipsychotics, second generation (clozapine)**. [Moderate] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **antipsychotics, second generation (lurasidone)**. Avoid. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **antipsychotics, second generation (paliperidone)**. Monitor and adjust dose. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **antipsychotics, second generation (quetiapine)**. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **antipsychotics, second generation (risperidone)**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **avtrombopag**. Adjust avtrombopag dose with moderate CYP2C9 inducers in chronic immune thrombocytopenia, p. 1120. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) decrease the exposure to **bedaquiline**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **benzodiazepines (alprazolam)**. Adjust dose. [Moderate] Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to **benzodiazepines (diazepam)**. Avoid or monitor. [Mild] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **benzodiazepines (midazolam)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Abiraterone** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **beta<sub>2</sub> agonists (salmeterol)**. Avoid or monitor. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) slightly decrease the exposure to **bortezomib**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **brigitatinib**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **buspiron**. Use with caution and adjust dose. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) moderately decrease the exposure to **cabozantinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Enzalutamide** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, ncaridipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, ncaridipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **certinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ Anti-androgens (**apalutamide, enzalutamide**) decrease the concentration of **ciclosporin**. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to alter the effects of **clostazol**. [Moderate] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) decrease the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clopidogrel** is predicted to increase the exposure to **apalutamide** and **apalutamide** is predicted to increase the exposure to the active metabolite of **clopidogrel**. Avoid or monitor. [Moderate] Study
- ▶ **Clopidogrel** moderately increases the exposure to **enzalutamide**. Avoid or adjust enzalutamide dose, p. 1023. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **apalutamide**. [Mild] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to **colchicine**. [Mild] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **corticosteroids (budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **corticosteroids (fluticasone)**. [Unknown] Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to **coumarins**. Avoid or monitor. [Mild] Study
- ▶ **Enzalutamide** potentially decreases the exposure to **coumarins**. Avoid or adjust dose and monitor INR. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **darolutamide**. Avoid. [Moderate] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical

- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to markedly decrease the exposure to **dienogest**. [Severe] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **digoxin**. [Mild] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **dipeptidylpeptidase-4 inhibitors (inagliptin)**. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to moderately decrease the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **dolutegravir**. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [Mild] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) is predicted to decrease the exposure to **elxacaftor**. Avoid. [Severe] Theoretical
- ▶ **Abiraterone** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the efficacy of **cyproterone** with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. [Severe] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **darolutamide**. Avoid. [Moderate] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) affect the exposure to **endothelin receptor antagonists (bosentan)**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **endothelin receptor antagonists (macitentan)**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **erlotinib**. Avoid or adjust erlotinib dose, p. 1057. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **esketamine**. Adjust dose. [Moderate] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) moderately decrease the exposure to **exemestane**. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **factor XA inhibitors (apixaban)**. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **factor XA inhibitors (rivaroxaban)**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **fedratinib**. Avoid. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **Fibrates (gemfibrozil)** slightly increase the exposure to **apalutamide**. [Mild] Study
- ▶ **Fibrates (gemfibrozil)** moderately increase the exposure to **enzalutamide**. Avoid or adjust enzalutamide dose, p. 1023. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **fofostatinib**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **fofostatinib**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to the active metabolite of **fofostatinib**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **glasdegib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Enzalutamide** is predicted to greatly decrease the concentration of **glecaprevir**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Griseofulvin** is predicted to decrease the efficacy of **cyproterone** with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 384. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) decrease the concentration of **haloperidol**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **apalutamide**. [Mild] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the exposure to **darolutamide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **cyproterone** with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **ibrutinib**. Avoid or monitor. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **apalutamide**. [Mild] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **imatinitib**. Avoid. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Bicalutamide** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **apalutamide**. [Mild] Study → Also see TABLE 9 p. 1492

## Anti-androgens (continued)

- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **darolutamide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Darolutamide** is predicted to increase the concentration of **meglitinides (repaglinide)**. [Moderate] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **meglitinides (repaglinide)**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **methotrexate**. [Mild] Study
- ▶ **Darolutamide** is predicted to increase the concentration of **methotrexate**. [Moderate] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **abiraterone**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **darolutamide**. Avoid. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **moclobemide**. Avoid or monitor. [Mild] Study
- ▶ **Modafinil** is predicted to decrease the efficacy of **cyproterone** with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **monoclonal antibodies (polatumumab vedotin)**. [Moderate] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **montelukast**. [Mild] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant)** are predicted to decrease the efficacy of **cyproterone** with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to markedly decrease the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. Avoid. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **neurokinin-1 receptor antagonists (fosaprepitant)**. Avoid. [Moderate] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **neurokinin-1 receptor antagonists (netupitant)**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **nirmatrelvir** boosted with ritonavir. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the efficacy of **cyproterone** with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. [Severe] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **darolutamide**. Avoid. [Moderate] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **NNRTIs (doravirine)**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **NNRTIs (etravirine)**. Avoid. [Severe] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **NNRTIs (nevirapine)**. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) markedly decrease the exposure to **NNRTIs (rilpivirine)**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) decrease the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **osilodrostat**. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **pemigatinib**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) moderately decrease the exposure to **phosphodiesterase type-4 inhibitors (apremilast)**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. Avoid. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) might decrease the exposure to **ponesimod**. [Moderate] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **proton pump inhibitors (lansoprazole, rabeprazole)**. Avoid or monitor. [Mild] Study
- ▶ **Apalutamide** markedly decreases the exposure to **proton pump inhibitors (omeprazole)**. Avoid or monitor. [Moderate] Study

- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **relugolix**. Avoid. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) might decrease the exposure to **remdesivir**. Avoid. [Moderate] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **abiraterone**. Avoid. [Severe] Study
- ▶ **Rifamycins** are predicted to decrease the efficacy of **cyproterone** with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. [Severe] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **darolutamide**. Avoid. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **seliperatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **siponimod**. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **sotorasib**. Avoid. [Severe] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **SSRIs (citalopram)**. Avoid or monitor. [Mild] Study → Also see TABLE 9 p. 1492
- ▶ **St John's wort** is predicted to decrease the exposure to **darolutamide**. Avoid. [Moderate] Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to **statins (atorvastatin)**. [Moderate] Study
- ▶ **Darolutamide** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin, rosuvastatin)**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Study
- ▶ **Darolutamide** is predicted to increase the concentration of **statins (pravastatin, simvastatin)**. [Moderate] Theoretical
- ▶ **Apalutamide** slightly decreases the exposure to **statins (rosuvastatin)**. [Mild] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **statins (simvastatin)**. Avoid or monitor. [Moderate] Study
- ▶ **Darolutamide** is predicted to increase the exposure to **sulfasalazine**. Avoid. [Severe] Theoretical
- ▶ **Darolutamide** is predicted to increase the concentration of **sulfonylureas (glibenclamide)**. [Moderate] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **sunitinib**. Avoid or adjust sunitinib dose, p. 1080. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Anti-androgens (**apalutamide, enzalutamide**) decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **taxanes (paclitaxel)**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) might decrease the exposure to **tepotinib**. Avoid. [Severe] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to **thrombin inhibitors (dabigatran)**. [Mild] Study
- ▶ **Apalutamide** potentially decreases the exposure to **thyroid hormones (levothyroxine)**. [Mild] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **Darolutamide** is predicted to increase the exposure to **topotecan**. Avoid. [Severe] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **tucatinib**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the efficacy of **ulipristal**. Avoid and for 4 weeks after stopping **ulipristal**. [Severe] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **venmurfenib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **vinca alkaloids (vinorelbine)**. Use with caution or avoid. [Severe] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ Anti-androgens (**apalutamide, enzalutamide**) are predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study

**Anti-D (Rh<sub>0</sub>) immunoglobulin** → see immunoglobulins

**Antiarrhythmics** → see TABLE 6 p. 1491 (bradycardia), TABLE 8 p. 1491 (hypotension), TABLE 12 p. 1493 (peripheral neuropathy), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 11 p. 1492 (CNS depressant effects), TABLE 10 p. 1492 (antimuscarinics)

## Antiarrhythmics (continued)

adenosine · amiodarone · disopyramide · dronedarone · flecainide · lidocaine · propafenone · vernakalant

- ▶ **Amiodarone** has a long half-life; there is potential for drug interactions to occur for several weeks (or even months) after treatment with it has been stopped.
- ▶ Since systemic absorption can follow topical application of **lidocaine**, the possibility of interactions should be borne in mind.
- ▶ Avoid intravenous class I and class III antiarrhythmics for 4 hours before and after **vernakalant**.
- ▶ **Dronedarone** is predicted to increase the exposure to **abemaciclib**. [\[Moderate\]](#) Study
- ▶ **Dronedarone** is predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. [\[Severe\]](#) Study
- ▶ Antiarrhythmics (**amiodarone**, **dronedarone**) are predicted to increase the exposure to **afatinib**. [\[Moderate\]](#) Study
- ▶ **Amiodarone** is predicted to decrease the effects of **agalsidase alfa**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Amiodarone** is predicted to decrease the effects of **agalsidase beta**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Amiodarone** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose, p. 210. [\[Severe\]](#) Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose, p. 210. [\[Severe\]](#) Study
- ▶ Antiarrhythmics (**amiodarone**, **dronedarone**) are predicted to increase the exposure to **aliskiren**. [\[Severe\]](#) Study
- ▶ **Dronedarone** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [\[Moderate\]](#) Theoretical
- ▶ **Aminophylline** is predicted to decrease the efficacy of **adenosine**. Separate administration by 24 hours. [\[Mild\]](#) Theoretical
- ▶ **Anaesthetics, local** are predicted to increase the risk of cardiodepression when given with **antiarrhythmics**. [\[Severe\]](#) Theoretical → Also see **TABLE 11** p. 1492
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the efficacy of **propafenone**. [\[Moderate\]](#) Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to antiarrhythmics (**disopyramide**, **dronedarone**). Avoid. [\[Severe\]](#) Study → Also see **TABLE 9** p. 1492
- ▶ Antiarrhythmics (**propafenone**) are predicted to increase the risk of cardiodepression when given with antiarrhythmics (**amiodarone**). Monitor and adjust dose. [\[Severe\]](#) Theoretical → Also see **TABLE 6** p. 1491
- ▶ Antiarrhythmics (**amiodarone**) increase the concentration of antiarrhythmics (**flecainide**). Adjust **flecainide** dose and monitor adverse effects. [\[Severe\]](#) Study → Also see **TABLE 6** p. 1491 → Also see **TABLE 9** p. 1492
- ▶ Antiarrhythmics (**propafenone**) are predicted to increase the risk of cardiodepression when given with antiarrhythmics (**lidocaine**). [\[Moderate\]](#) Study
- ▶ Antiarrhythmics (**dronedarone**) are predicted to increase the exposure to antiarrhythmics (**propafenone**). Monitor and adjust dose. [\[Moderate\]](#) Study → Also see **TABLE 6** p. 1491
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the efficacy of **propafenone**. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **lidocaine**. [\[Severe\]](#) Anecdotal
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to antiarrhythmics (**disopyramide**, **dronedarone**). Avoid. [\[Severe\]](#) Study
- ▶ **Amiodarone** is predicted to slightly increase the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor and adjust dose. [\[Severe\]](#) Study → Also see **TABLE 12** p. 1493
- ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to **dronedarone**. [\[Severe\]](#) Theoretical → Also see **TABLE 9** p. 1492
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **disopyramide**. Avoid. [\[Severe\]](#) Theoretical → Also see **TABLE 9** p. 1492
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** very markedly increase the exposure to **dronedarone**. Avoid. [\[Severe\]](#) Study → Also see **TABLE 9** p. 1492
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **disopyramide**. Use with caution and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to antiarrhythmics (**disopyramide**, **dronedarone**). Avoid. [\[Severe\]](#) Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to antihistamines, **non-sedating (fexofenadine, mizolastine)**. [\[Severe\]](#) Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [\[Moderate\]](#) Study
- ▶ **Dronedarone** is predicted to increase the concentration of **antimalarials (piperaquine)**. [\[Severe\]](#) Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [\[Severe\]](#) Study
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can antiarrhythmics (**disopyramide**, **propafenone**); concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see **TABLE 10** p. 1492
- ▶ **Dronedarone** is predicted to increase the exposure to **antipsychotics, second generation (lurasidone)**. Adjust **lurasidone** dose. [\[Moderate\]](#) Study
- ▶ **Dronedarone** is predicted to increase the exposure to **antipsychotics, second generation (quetiapine)**. Avoid. [\[Moderate\]](#) Study
- ▶ **Dronedarone** is predicted to increase the exposure to **avapritinib**. Avoid or adjust **avapritinib** dose, p. 1045. [\[Moderate\]](#) Study
- ▶ **Amiodarone** is predicted to increase the exposure to **avatrombopag**. Adjust **avatrombopag** dose with moderate CYP2C9 inhibitors in chronic immune thrombocytopenia, p. 1120. [\[Moderate\]](#) Study
- ▶ **Dronedarone** is predicted to increase the exposure to **axitinib**. [\[Moderate\]](#) Study
- ▶ **Dronedarone** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [\[Mild\]](#) Theoretical → Also see **TABLE 9** p. 1492
- ▶ **Dronedarone** is predicted to increase the exposure to **benzodiazepines (alprazolam)**. [\[Severe\]](#) Study
- ▶ **Dronedarone** is predicted to increase the exposure to **benzodiazepines (midazolam)**. Monitor adverse effects and adjust dose. [\[Severe\]](#) Study
- ▶ Antiarrhythmics (**amiodarone**, **dronedarone**) are predicted to increase the exposure to **berotralstat**. [\[Severe\]](#) Study
- ▶ Antiarrhythmics (**amiodarone**, **disopyramide**, **dronedarone**, **flecainide**, **lidocaine**) are predicted to increase the risk of cardiovascular adverse effects when given with **beta blockers, non-selective**. Use with caution or avoid. [\[Severe\]](#) Study → Also see **TABLE 6** p. 1491 → Also see **TABLE 9** p. 1492
- ▶ **Propafenone** is predicted to increase the risk of cardiovascular adverse effects when given with **beta blockers, non-selective (labetalol, levobunolol, nadolol, pindolol, sotalol)**. Use with caution or avoid. [\[Severe\]](#) Study → Also see **TABLE 6** p. 1491
- ▶ **Propafenone** increases the risk of cardiovascular adverse effects when given with **beta blockers, non-selective (propranolol)**. Use with caution or avoid. [\[Severe\]](#) Study → Also see **TABLE 6** p. 1491
- ▶ **Propafenone** is predicted to increase the exposure to **beta blockers, non-selective (timolol)** and **beta blockers, non-selective (timolol)** are predicted to increase the risk of cardiodepression when given with **propafenone**. [\[Severe\]](#) Anecdotal → Also see **TABLE 6** p. 1491
- ▶ Antiarrhythmics (**amiodarone**, **disopyramide**, **dronedarone**, **flecainide**, **lidocaine**) are predicted to increase the risk of

- cardiovascular adverse effects when given with **beta blockers, selective**. Use with caution or avoid. [Severe] Study → Also see TABLE 6 p. 1491
- ▶ **Propafenone** is predicted to increase the risk of cardiovascular adverse effects when given with **beta blockers, selective (acebutolol, atenolol, betaxolol, bisoprolol, celiprolol, esmolol)**. Use with caution or avoid. [Severe] Study → Also see TABLE 6 p. 1491
  - ▶ **Propafenone** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. [Moderate] Study → Also see TABLE 6 p. 1491
  - ▶ **Propafenone** is predicted to increase the exposure to **beta blockers, selective (nebivolol)** and **beta blockers, selective (nebivolol)** are predicted to increase the risk of cardiodepression when given with **propafenone**. Avoid. [Severe] Theoretical → Also see TABLE 6 p. 1491
  - ▶ Antiarrhythmics (**amiodarone, dronedarone**) are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
  - ▶ **Dronedarone** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 1492
  - ▶ **Dronedarone** is predicted to increase the exposure to **brigatinib**. [Moderate] Study → Also see TABLE 6 p. 1491
  - ▶ **Dronedarone** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Dronedarone** is predicted to increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ **Caffeine citrate** decreases the efficacy of **adenosine**. Separate administration by 24 hours. [Mild] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** increase the exposure to **dronedarone** and **dronedarone** increases the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate] Study → Also see TABLE 6 p. 1491
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p. 1491
  - ▶ **Calcium channel blockers (verapamil)** increase the risk of cardiodepression when given with **flecainide**. [Severe] Anecdotal → Also see TABLE 6 p. 1491
  - ▶ **Dronedarone** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Amiodarone** is predicted to increase the risk of cardiodepression when given with **calcium channel blockers (diltiazem, verapamil)**. Avoid. [Severe] Theoretical → Also see TABLE 6 p. 1491
  - ▶ **Disopyramide** is predicted to increase the risk of cardiodepression when given with **calcium channel blockers (verapamil)**. [Severe] Theoretical
  - ▶ **Dronedarone** is predicted to increase the exposure to **ceritinib**. [Moderate] Study → Also see TABLE 6 p. 1491 → Also see TABLE 9 p. 1492
  - ▶ **Chlorprocaine** is predicted to increase the risk of cardiovascular adverse effects when given with antiarrhythmics (**amiodarone, dronedarone, vernakalant**). [Severe] Theoretical
  - ▶ **Amiodarone** increases the concentration of **ciclosporin**. Monitor concentration and adjust dose. [Severe] Study
  - ▶ **Dronedarone** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
  - ▶ **Cobicistat** potentially increases the concentration of antiarrhythmics (**amiodarone, disopyramide, flecainide, lidocaine**). [Severe] Theoretical
  - ▶ **Cobicistat** very markedly increases the exposure to **dronedarone**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Severe] Study
  - ▶ **Dronedarone** is predicted to increase the exposure to **cobimetinib**. [Severe] Study
  - ▶ **Amiodarone** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust colchicine dose, p. 1212. [Severe] Theoretical
  - ▶ **Dronedarone** is predicted to increase the exposure to **colchicine**. Adjust colchicine dose with moderate CYP3A4 inhibitors, p. 1212. [Severe] Study
  - ▶ **Dronedarone** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Amiodarone** increases the anticoagulant effect of **coumarins**. [Severe] Study
  - ▶ **Propafenone** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Moderate] Study
  - ▶ **Dronedarone** is predicted to increase the exposure to **crizotinib**. [Moderate] Study → Also see TABLE 6 p. 1491 → Also see TABLE 9 p. 1492
  - ▶ **Crizotinib** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p. 1491
  - ▶ **Dronedarone** is predicted to increase the exposure to **dabrafenib**. [Moderate] Study
  - ▶ **Dronedarone** is predicted to increase the exposure to **darifenacin**. [Moderate] Study
  - ▶ **Darifenacin** is predicted to increase the concentration of **flecainide**. [Moderate] Theoretical
  - ▶ **Dronedarone** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1492
  - ▶ **Dronedarone** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
  - ▶ Antiarrhythmics (**amiodarone, dronedarone**) are predicted to moderately increase the exposure to **digoxin**. Monitor and adjust digoxin dose, p. 117. [Severe] Study → Also see TABLE 6 p. 1491
  - ▶ **Propafenone** increases the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study → Also see TABLE 6 p. 1491
  - ▶ **Dronedarone** is predicted to increase the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [Mild] Study
  - ▶ **Dipyridamole** increases the exposure to **adenosine**. Avoid or adjust dose. [Severe] Study
  - ▶ **Dronedarone** is predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
  - ▶ **Dronedarone** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
  - ▶ **Dronedarone** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Severe] Anecdotal
  - ▶ **Dronedarone** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
  - ▶ **Dronedarone** is predicted to increase the exposure to **elxacaftor**. Adjust tezacaftor with ivacaftor and elxacaftor p. 320 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
  - ▶ Antiarrhythmics (**dronedarone, propafenone**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Dronedarone** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **dronedarone**. [Severe] Theoretical
  - ▶ **Dronedarone** is predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust entrectinib dose, p. 1056. [Severe] Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Dronedarone** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
  - ▶ **Dronedarone** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
  - ▶ **Amiodarone** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
  - ▶ **Dronedarone** is predicted to increase the exposure to **erlotinib**. [Moderate] Study
  - ▶ **Dronedarone** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
  - ▶ Antiarrhythmics (**amiodarone, dronedarone**) are predicted to increase the exposure to **factor XA inhibitors (apixaban)**. [Moderate] Theoretical
  - ▶ **Amiodarone** slightly increases the exposure to **factor XA inhibitors (edoxaban)**. [Severe] Study
  - ▶ **Dronedarone** slightly increases the exposure to **factor XA inhibitors (edoxaban)**. Adjust edoxaban dose, p. 138. [Severe] Study
  - ▶ **Amiodarone** might increase the exposure to **factor XA inhibitors (rivaroxaban)**. [Moderate] Study
  - ▶ **Dronedarone** might increase the exposure to **factor XA inhibitors (rivaroxaban)**. Avoid. [Moderate] Study

## Antiarrhythmics (continued)

- ▶ **Dronedaron** is predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment, p. 840. [Mild] Study
- ▶ Antiarrhythmics (**amiodarone**, **dronedaron**) are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **gefatinib**. [Moderate] Study
- ▶ Antiarrhythmics (**amiodarone**, **dronedaron**) are predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
- ▶ **Dronedaron** potentially increases the exposure to **glecaprevir**. [Moderate] Theoretical
- ▶ **Grapefruit** juice increases the exposure to **amiodarone**. Avoid. [Moderate] Study
- ▶ **Grapefruit** juice moderately increases the exposure to **dronedaron**. Avoid. [Severe] Study
- ▶ **Grapefruit** juice increases the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 384. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **amiodarone**. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **flecainide**. Monitor and adjust dose. [Mild] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **lidocaine**. Monitor and adjust dose. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **amiodarone**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **disopyramide**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** very markedly increase the exposure to **dronedaron**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **flecainide**. Avoid or monitor adverse effects. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **lidocaine**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Severe] Study
- ▶ **Amiodarone** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose, p. 1062. [Severe] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors, p. 1062. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **amiodarone**. Avoid. [Moderate] Theoretical
- ▶ **Idelalisib** very markedly increases the exposure to **dronedaron**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dronedaron**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 231. [Severe] Theoretical → Also see TABLE 6 p. 1491
- ▶ **Dronedaron** is predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see **ivacaftor** p. 317, **tezaaftor** with **ivacaftor** p. 319, and **tezaaftor** with **ivacaftor** and **elxacaftor** p. 320. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Antiarrhythmics (**amiodarone**, **dronedaron**) are predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Ledipasvir** increases the risk of severe bradycardia or heart block when given with **amiodarone**. Refer to specialist literature. [Severe] Anecdotal
- ▶ **Letermovir** is predicted to increase the concentration of **amiodarone**. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Amiodarone** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **loperamide**. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** very markedly increase the exposure to **dronedaron**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Severe] Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **lidocaine**. [Moderate] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to moderately increase the exposure to **dronedaron**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the risk of torsade de pointes when given with antiarrhythmics. Avoid. [Severe] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to antiarrhythmics (**disopyramide**, **dronedaron**). Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the efficacy of **propafenone**. [Moderate] Study
- ▶ **Dronedaron** increases the risk of neutropenia when given with **monoclonal antibodies (brentuximab vedotin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ Antiarrhythmics (**amiodarone**, **dronedaron**) are predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects, p. 67. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant)** increase the exposure to **dronedaron**. [Severe] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiarrhythmics (**amiodarone**, **dronedaron**) are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of antiarrhythmics (**amiodarone**, **dronedaron**, **flecainide**, **propafenone**). Avoid. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **lidocaine**. [Severe] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **dronedaron**. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **NSAIDs (celecoxib)** are predicted to increase the exposure to antiarrhythmics (**flecainide**, **propafenone**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p. 1491
- ▶ **Amiodarone** is predicted to increase the concentration of **opioids (fentanyl)**. [Moderate] Theoretical → Also see TABLE 6 p. 1491
- ▶ **Dronedaron** is predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical → Also see TABLE 9 p. 1492

- ▶ Antiarrhythmics (**amiodarone**, **dronedarone**) are predicted to increase the exposure to **panobinostat**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1492
- ▶ **Dronedarone** is predicted to increase the exposure to **pazopanib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
- ▶ **Dronedarone** is predicted to increase the exposure to **pemigatinib**. [\[Severe\]](#) Study
- ▶ **Propafenone** is predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 878. [\[Moderate\]](#) Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
- ▶ **Dronedarone** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [\[Severe\]](#) Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1492
- ▶ **Amiodarone** is predicted to increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
- ▶ **Dronedarone** potentially increases the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **pimozide**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1492
- ▶ **Dronedarone** is predicted to increase the exposure to **ponatinib**. [\[Moderate\]](#) Study
- ▶ **Quinolones (ciprofloxacin)** slightly increase the exposure to **lidocaine**. [\[Mild\]](#) Study
- ▶ **Dronedarone** is predicted to increase the exposure to **ranolazine**. [\[Severe\]](#) Study → Also see TABLE 9 p. 1492
- ▶ **Dronedarone** is predicted to increase the exposure to **regorafenib**. [\[Moderate\]](#) Study
- ▶ Antiarrhythmics (**amiodarone**, **dronedarone**) are predicted to increase the exposure to **relugolix**. Avoid or take **relugolix** first and separate administration by at least 6 hours. [\[Moderate\]](#) Study
- ▶ **Propafenone** is predicted to increase the exposure to **relugolix**. Avoid or take **relugolix** first and separate administration by at least 6 hours. [\[Moderate\]](#) Theoretical
- ▶ **Amiodarone** is predicted to increase the exposure to **retinoids (allitretinoin)**. Adjust **allitretinoin** dose, p. 1356. [\[Moderate\]](#) Theoretical
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **amiodarone**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 1492
- ▶ **Dronedarone** is predicted to increase the exposure to **ribociclib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the efficacy of **propafenone**. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to antiarrhythmics (**disopyramide**, **dronedarone**). Avoid. [\[Severe\]](#) Study
- ▶ **Dronedarone** is predicted to increase the exposure to **roxilitinib**. [\[Moderate\]](#) Study
- ▶ **Dronedarone** is predicted to increase the exposure to **selpercatinib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
- ▶ **Dronedarone** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ Antiarrhythmics (**amiodarone**, **dronedarone**) are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [\[Severe\]](#) Study → Also see TABLE 6 p. 1491
- ▶ **Amiodarone** is predicted to increase the concentration of **sirolimus**. [\[Severe\]](#) Anecdotal
- ▶ **Dronedarone** increases the concentration of **sirolimus**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Sofosbuvir** is predicted to increase the risk of severe bradycardia or heart block when given with **amiodarone**. Refer to specialist literature. [\[Severe\]](#) Anecdotal
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Dronedarone** is predicted to increase the exposure to **SSRIs (citalopram, escitalopram, fluoxetine, fluvoxamine, paroxetine, sertraline)**. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1492
- ▶ **Dronedarone** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. [\[Moderate\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **dronedarone**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Amiodarone** is predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Dronedarone** slightly increases the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Amiodarone** is predicted to increase the exposure to **statins (fluvastatin)**. [\[Moderate\]](#) Study
- ▶ **Dronedarone** slightly increases the exposure to **statins (rosuvastatin)**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Amiodarone** increases the exposure to **statins (simvastatin)**. Adjust **simvastatin** dose, p. 222. [\[Severe\]](#) Study
- ▶ **Dronedarone** moderately increases the exposure to **statins (simvastatin)**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Amiodarone** is predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Dronedarone** is predicted to increase the exposure to **sunitinib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
- ▶ **Lidocaine** is predicted to increase the effects of **suxamethonium**. [\[Moderate\]](#) Study
- ▶ **Amiodarone** is predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Anecdotal
- ▶ **Dronedarone** is predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
- ▶ Antiarrhythmics (**amiodarone**, **dronedarone**) are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [\[Severe\]](#) Study
- ▶ **Propafenone** is predicted to increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [\[Moderate\]](#) Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [\[Moderate\]](#) Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **taxanes (docetaxel)**. [\[Severe\]](#) Study
- ▶ **Amiodarone** is predicted to increase the exposure to **taxanes (docetaxel, paclitaxel)** (oral). [\[Unknown\]](#) Theoretical → Also see TABLE 12 p. 1493
- ▶ **Dronedarone** is predicted to increase the exposure to **taxanes (paclitaxel)**. [\[Moderate\]](#) Anecdotal
- ▶ **Dronedarone** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see **tezacaftor** with **ivacaftor** p. 319 and **tezacaftor** with **ivacaftor** and **elxacaftor** p. 320. [\[Severe\]](#) Study
- ▶ **Theophylline** decreases the efficacy of **adenosine**. Separate administration by 24 hours. [\[Mild\]](#) Study
- ▶ **Amiodarone** increases the exposure to **thrombin inhibitors (dabigatran)**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Dronedarone** moderately increases the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [\[Severe\]](#) Study
- ▶ **Amiodarone** is predicted to increase the risk of thyroid dysfunction when given with **thyroid hormones**. Avoid. [\[Moderate\]](#) Study
- ▶ **Amiodarone** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [\[Severe\]](#) Study → Also see TABLE 6 p. 1491
- ▶ Antiarrhythmics (**amiodarone**, **dronedarone**) might increase the exposure to **tigecycline**. [\[Mild\]](#) Anecdotal
- ▶ **Dronedarone** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1200. [\[Moderate\]](#) Study
- ▶ **Dronedarone** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. [\[Moderate\]](#) Study
- ▶ Antiarrhythmics (**amiodarone**, **dronedarone**) are predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ Antiarrhythmics (**amiodarone**, **dronedarone**) are predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical

## Antiarrhythmics (continued)

- ▶ **Dronedaron** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **tricyclic antidepressants**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Propafenone** is predicted to increase the concentration of **tricyclic antidepressants**. [Moderate] Theoretical → Also see TABLE 10 p. 1492
- ▶ **Dronedaron** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Amiodaron** is predicted to increase the concentration of **velpatasvir**. Avoid or monitor. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Amiodaron** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Amiodaron** might increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 12 p. 1493 → Also see TABLE 9 p. 1492
- ▶ **Dronedaron** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Dronedaron** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

**Anticholinesterases, centrally acting** → see TABLE 6 p. 1491 (bradycardia)

donepezil · galantamine · rivastigmine

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **donepezil**. [Mild] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **donepezil**. [Mild] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cinacalcet** is predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **donepezil**. [Mild] Study
- ▶ **Anticholinesterases, centrally acting** are predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **donepezil**. [Mild] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Anticholinesterases, centrally acting** increase the effects of **suxamethonium**. [Moderate] Theoretical → Also see TABLE 6 p. 1491
- ▶ **Terbinafine** is predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study

**Antiepileptics** → see TABLE 1 p. 1490 (hepatotoxicity), TABLE 18 p. 1494 (hyponatraemia), TABLE 12 p. 1493 (peripheral neuropathy), TABLE 11 p. 1492 (CNS depressant effects)

brivaracetam · carbamazepine · eslicarbazepine · ethosuximide · fosphenytoin · gabapentin · lacosamide · lamotrigine · levetiracetam · oxcarbazepine · paraldehyde · perampanel · phenobarbital · phenytoin · pregabalin · primidone · retigabine · rufinamide · stiripentol · tiagabine · topiramate · valproate · vigabatrin · zonisamide

▶ Manufacturer advises caution on concurrent use of **eslicarbazepine** with drugs that prolong the PR interval

▶ Avoid taking milk, dairy products, carbonated drinks, fruit juices, or caffeine-containing food and drinks at the same time as **stiripentol**.

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **5-HT<sub>3</sub>-receptor antagonists (ondansetron)**. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **abrocitinib**. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **acalabrutinib**. Avoid. [Severe] Study
- ▶ **Acetazolamide** potentially increases the risk of toxicity when given with **valproate**. [Severe] Study
- ▶ **Acetazolamide** potentially increases the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [Severe] Theoretical
- ▶ **Antiepileptics (phenobarbital, phenytoin)** are predicted to decrease the exposure to **afatinib**. [Moderate] Theoretical
- ▶ **Carbamazepine** is predicted to decrease the exposure to **afatinib**. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the concentration of **albendazole**. [Moderate] Study
- ▶ **Alcohol** potentially increases the risk of visual disturbances when given with **retigabine**. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Theoretical → Also see TABLE 18 p. 1494
- ▶ **Carbamazepine** decreases the exposure to **aliskiren**. [Moderate] Study
- ▶ **Fosphenytoin** is predicted to decrease the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Phenobarbital** is predicted to decrease the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Phenytoin** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Primidone** is predicted to increase the clearance of **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Stiripentol** is predicted to increase the exposure to **aminophylline**. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to increase the risk of methaemoglobinemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 11 p. 1492
- ▶ **Phenytoin** is predicted to decrease the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
- ▶ Oral **antacids** decrease the absorption of oral **gabapentin**. **Gabapentin** should be taken 2 hours after antacids. [Moderate] Study
- ▶ **Anti-androgens (apalutamide)** potentially decrease the exposure to **valproate**. [Mild] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **perampanel**. Monitor and adjust dose. [Moderate] Study
- ▶ **Anti-androgens (enzalutamide)** are predicted to slightly decrease the exposure to **brivaracetam**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **anti-androgens (abiraterone)**. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **anti-androgens (cyproterone)** with ethinylestradiol (co-cyprindiol). Use alternative methods

- during treatment with, and for 28 days after, the enzyme inducing drug is stopped. [\[Severe\]](#) Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **anti-androgens (darolutamide)**. Avoid. [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [\[Severe\]](#) Study
  - ▶ **Antiarrhythmics (amiodarone)** are predicted to slightly increase the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor and adjust dose. [\[Severe\]](#) Study → Also see TABLE 12 p. 1493
  - ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the exposure to **antiarrhythmics (lidocaine)**. [\[Severe\]](#) Anecdotal
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the efficacy of **antiarrhythmics (propafenone)**. [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **anticholinesterases, centrally acting (donepezil)**. [\[Mild\]](#) Study
  - ▶ Antiepileptics (**carbamazepine**) decrease the concentration of antiepileptics (**brivaracetam**). [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**fosphenytoin, phenytoin**) decrease the concentration of antiepileptics (**brivaracetam**). [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**lamotrigine**) potentially increase the concentration of antiepileptics (**carbamazepine**) and antiepileptics (**carbamazepine**) decrease the concentration of antiepileptics (**lamotrigine**). Adjust lamotrigine dose and monitor carbamazepine concentration, p. 346, p. 336. [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**phenobarbital**) affect the concentration of antiepileptics (**carbamazepine**) and antiepileptics (**carbamazepine**) increase the concentration of antiepileptics (**phenobarbital**). Adjust dose. [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**topiramate**) increase the risk of carbamazepine toxicity when given with antiepileptics (**carbamazepine**). [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**stiripentol**) increase the concentration of antiepileptics (**carbamazepine, phenobarbital**). Avoid in Dravet syndrome. [\[Severe\]](#) Study
  - ▶ Antiepileptics (**carbamazepine**) slightly decrease the exposure to antiepileptics (**eslicarbazepine, oxcarbazepine**). Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**oxcarbazepine**) are predicted to increase the concentration of antiepileptics (**fosphenytoin**). Monitor concentration and adjust dose. [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**stiripentol**) are predicted to increase the concentration of antiepileptics (**fosphenytoin**). [\[Severe\]](#) Study
  - ▶ Antiepileptics (**carbamazepine**) affect the concentration of antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) decrease the concentration of antiepileptics (**carbamazepine**). Monitor and adjust dose. [\[Severe\]](#) Study
  - ▶ Antiepileptics (**eslicarbazepine**) increase the exposure to antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) decrease the exposure to antiepileptics (**eslicarbazepine**). Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**valproate**) affect the concentration of antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) decrease the concentration of antiepileptics (**valproate**). [\[Severe\]](#) Study
  - ▶ Antiepileptics (**vigabatrin**) decrease the concentration of antiepileptics (**fosphenytoin, phenytoin**). [\[Mild\]](#) Study
  - ▶ Antiepileptics (**fosphenytoin**) decrease the concentration of antiepileptics (**lamotrigine**). Monitor and adjust lamotrigine dose, p. 346. [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**phenobarbital, phenytoin, primidone**) decrease the concentration of antiepileptics (**lamotrigine**). Monitor and adjust lamotrigine dose, p. 346. [\[Moderate\]](#) Study → Also see TABLE 11 p. 1492
  - ▶ Antiepileptics (**valproate**) increase the exposure to antiepileptics (**lamotrigine**). Adjust lamotrigine dose and monitor rash, p. 346. [\[Severe\]](#) Study
  - ▶ Antiepileptics (**lamotrigine**) are predicted to increase the concentration of antiepileptics (**oxcarbazepine**) and antiepileptics (**oxcarbazepine**) are predicted to decrease the concentration of antiepileptics (**lamotrigine**). Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin**) are predicted to decrease the exposure to antiepileptics (**perampanel**). Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**oxcarbazepine**) decrease the concentration of antiepileptics (**perampanel**) and antiepileptics (**perampanel**) increase the concentration of antiepileptics (**oxcarbazepine**). Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to antiepileptics (**perampanel**). Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 11 p. 1492
  - ▶ Antiepileptics (**phenytoin**) increase the concentration of antiepileptics (**phenobarbital**) and antiepileptics (**phenobarbital**) affect the concentration of antiepileptics (**phenytoin**). [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**fosphenytoin**) increase the concentration of antiepileptics (**phenobarbital, primidone**) and antiepileptics (**phenobarbital, primidone**) affect the concentration of antiepileptics (**fosphenytoin**). [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**oxcarbazepine**) are predicted to increase the concentration of antiepileptics (**phenytoin**). Monitor concentration and adjust dose. [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**stiripentol**) are predicted to increase the concentration of antiepileptics (**phenytoin**). Avoid in Dravet syndrome. [\[Severe\]](#) Study
  - ▶ Antiepileptics (**carbamazepine**) potentially decrease the concentration of antiepileptics (**primidone**) and antiepileptics (**primidone**) potentially decrease the concentration of antiepileptics (**carbamazepine**). Adjust dose. [\[Moderate\]](#) Anecdotal
  - ▶ Antiepileptics (**phenytoin**) increase the concentration of antiepileptics (**primidone**) and antiepileptics (**primidone**) affect the concentration of antiepileptics (**phenytoin**). [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**stiripentol**) are predicted to increase the concentration of antiepileptics (**primidone**). [\[Severe\]](#) Theoretical
  - ▶ Antiepileptics (**valproate**) affect the concentration of antiepileptics (**primidone**). Monitor and adjust dose. [\[Severe\]](#) Study
  - ▶ Antiepileptics (**carbamazepine**) slightly increase the clearance of antiepileptics (**retigabine**). [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to slightly increase the clearance of antiepileptics (**retigabine**). [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**valproate**) increase the exposure to antiepileptics (**rufinamide**). Adjust rufinamide dose, p. 355. [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the exposure to antiepileptics (**tiagabine**). Monitor and adjust tiagabine dose, p. 361. [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**fosphenytoin, phenytoin**) decrease the concentration of antiepileptics (**topiramate**) and antiepileptics (**topiramate**) increase the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the concentration of antiepileptics (**topiramate**). [\[Mild\]](#) Study
  - ▶ Antiepileptics (**phenobarbital**) decrease the concentration of antiepileptics (**valproate**) and antiepileptics (**valproate**) increase the concentration of antiepileptics (**phenobarbital**). Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**topiramate**) increase the risk of toxicity when given with antiepileptics (**valproate**). [\[Severe\]](#) Study
  - ▶ Antiepileptics (**carbamazepine**) slightly to moderately decrease the concentration of antiepileptics (**zonisamide**) and antiepileptics (**zonisamide**) affect the concentration of antiepileptics (**carbamazepine**). Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**fosphenytoin, phenytoin**) slightly to moderately decrease the concentration of antiepileptics (**zonisamide**). Monitor and adjust dose. [\[Moderate\]](#) Study

## Antiepileptics (continued)

- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the concentration of antiepileptics (**zonisamide**). Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**topiramate**) potentially increase the risk of overheating and dehydration when given with antiepileptics (**zonisamide**). Avoid in children. [Severe] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to very slightly increase the exposure to **perampanel**. [Mild] Study
- ▶ **Antifungals, azoles (miconazole)** increase the risk of carbamazepine toxicity when given with **carbamazepine**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Antifungals, azoles (miconazole)** increase the risk of phenytoin toxicity when given with **fosphenytoin**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Antifungals, azoles (miconazole)** increase the risk of phenytoin toxicity when given with **phenytoin**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Carbamazepine** is predicted to decrease the efficacy of **antifungals, azoles (fluconazole)** and **antifungals, azoles (fluconazole)** increase the concentration of **carbamazepine**. Avoid or monitor **carbamazepine** concentration and adjust dose accordingly, p. 336. [Severe] Theoretical → Also see TABLE 1 p. 1490
- ▶ **Antifungals, azoles (fluconazole)** increase the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor concentration and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Study
- ▶ **Fosphenytoin** very markedly decreases the exposure to **antifungals, azoles (itraconazole)**. Avoid and for 14 days after stopping **fosphenytoin**. [Moderate] Study
- ▶ **Phenobarbital** decreases the concentration of **antifungals, azoles (itraconazole)**. Avoid and for 14 days after stopping **phenobarbital**. [Moderate] Study
- ▶ **Phenytoin** very markedly decreases the exposure to **antifungals, azoles (itraconazole)**. Avoid and for 14 days after stopping **phenytoin**. [Moderate] Study
- ▶ **Primidone** is predicted to decrease the concentration of **antifungals, azoles (itraconazole)**. [Moderate] Theoretical
- ▶ **Carbamazepine** is predicted to decrease the efficacy of **antifungals, azoles (itraconazole, voriconazole)** and **antifungals, azoles (itraconazole, voriconazole)** increase the concentration of **carbamazepine**. Avoid or adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 1490
- ▶ **Carbamazepine** is predicted to decrease the efficacy of **antifungals, azoles (ketoconazole)** and **antifungals, azoles (ketoconazole)** slightly increase the concentration of **carbamazepine**. Avoid or monitor **carbamazepine** concentration and adjust dose accordingly, p. 336. [Moderate] Study
- ▶ **Phenobarbital** is predicted to decrease the concentration of **antifungals, azoles (ketoconazole)**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) decrease the exposure to **antifungals, azoles (ketoconazole)**. Avoid. [Moderate] Study
- ▶ **Primidone** is predicted to decrease the concentration of **antifungals, azoles (ketoconazole, posaconazole)**. Avoid. [Moderate] Study
- ▶ **Carbamazepine** is predicted to decrease the efficacy of **antifungals, azoles (posaconazole)** and **antifungals, azoles (posaconazole)** increase the concentration of **carbamazepine**. Avoid. [Moderate] Theoretical
- ▶ **Phenobarbital** is predicted to decrease the concentration of **antifungals, azoles (posaconazole)**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the exposure to **antifungals, azoles (posaconazole)**. Avoid. [Moderate] Study
- ▶ **Fosphenytoin** decreases the exposure to **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** increase the exposure to **fosphenytoin**. Avoid or adjust **voriconazole** dose and monitor **phenytoin** concentration, p. 654. [Moderate] Study
- ▶ **Phenytoin** decreases the exposure to **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** increase the exposure to **phenytoin**. Avoid or adjust **voriconazole** dose and monitor **phenytoin** concentration, p. 654, p. 351. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the concentration of **antifungals, azoles (voriconazole)**. Avoid. [Moderate] Theoretical
- ▶ **Antihistamines, sedating (hydroxyzine)** potentially increase the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **antimalarials (artemether)** with lumefantrine. Avoid. [Severe] Study
- ▶ **Antimalarials (pyrimethamine)** increase the risk of haematological toxicity when given with antiepileptics (**fosphenytoin, phenytoin**). [Severe] Study
- ▶ **Antimalarials (pyrimethamine)** are predicted to increase the risk of haematological toxicity when given with antiepileptics (**phenobarbital, primidone**). [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **antimalarials (piperazine)**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, phenobarbital, primidone**) potentially increase the risk of toxicity when given with **antimalarials (quinine)**. [Unknown] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **antipsychotics, second generation (aripiprazole)**. Adjust **aripiprazole** dose, p. 427. [Moderate] Study → Also see TABLE 11 p. 1492
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Theoretical → Also see TABLE 11 p. 1492
- ▶ **Carbamazepine** is predicted to increase the risk of myelosuppression when given with **antipsychotics, second generation (clozapine)**. Avoid. [Severe] Anecdotal
- ▶ Antiepileptics (**fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **antipsychotics, second generation (clozapine)**. [Moderate] Anecdotal → Also see TABLE 11 p. 1492
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **antipsychotics, second generation (lurasidone)**. Avoid. [Moderate] Study → Also see TABLE 11 p. 1492
- ▶ **Carbamazepine** potentially decreases the exposure to **antipsychotics, second generation (olanzapine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Phenytoin** is predicted to decrease the exposure to **antipsychotics, second generation (olanzapine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Valproate** increases the risk of adverse effects when given with **antipsychotics, second generation (olanzapine)**. [Severe] Study
- ▶ **Valproate** slightly increases the exposure to **antipsychotics, second generation (paliperidone)**. Adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **antipsychotics, second generation (paliperidone)**. Monitor and adjust dose. [Severe] Study → Also see TABLE 11 p. 1492
- ▶ **Valproate** potentially increases the risk of neutropenia when given with **antipsychotics, second generation (quetiapine)**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **antipsychotics, second generation (quetiapine)**. [Moderate] Study → Also see TABLE 11 p. 1492
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **antipsychotics, second generation (risperidone)**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1492

- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **avapritinib**. Avoid. [\[Severe\]](#) Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **bazedoxifene**. [\[Moderate\]](#) Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the exposure to **bedaquiline**. Avoid. [\[Severe\]](#) Study → Also see TABLE 1 p. 1490
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **benzodiazepines (alprazolam)**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 11 p. 1492
- ▶ **Stiripentol** increases the concentration of **benzodiazepines (clobazam)**. [\[Severe\]](#) Study
- ▶ **Benzodiazepines (chloridazepoxide)** affect the concentration of antiepileptics (**fosphenytoin, phenytoin**). [\[Severe\]](#) Study
- ▶ **Benzodiazepines (clobazam, clonazepam)** potentially affect the concentration of antiepileptics (**fosphenytoin, phenytoin**). [\[Severe\]](#) Anecdotal
- ▶ **Benzodiazepines (diazepam)** potentially affect the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor concentration and adjust dose. [\[Severe\]](#) Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **benzodiazepines (midazolam)**. Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 11 p. 1492
- ▶ **Carbamazepine** is predicted to decrease the concentration of **berotralstat**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **beta blockers, non-selective (carvedilol, labetalol)**. [\[Moderate\]](#) Theoretical
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **beta blockers, non-selective (propranolol)**. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **beta blockers, selective (acebutolol, bisoprolol, metoprolol, nebivolol)**. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **bictegravir**. Avoid. [\[Moderate\]](#) Study
- ▶ **Oxcarbazepine** is predicted to decrease the exposure to **bictegravir**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) slightly decrease the exposure to **bortezomib**. Avoid. [\[Severe\]](#) Study → Also see TABLE 12 p. 1493
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [\[Severe\]](#) Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **brigatinib**. Avoid. [\[Severe\]](#) Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **bupropion**. [\[Severe\]](#) Study
- ▶ **Valproate** increases the exposure to **bupropion**. [\[Severe\]](#) Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. [\[Severe\]](#) Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone**) might decrease the concentration of **cabotegravir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) moderately decrease the exposure to **cabozantinib**. Avoid. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (diltiazem)** increase the concentration of carbamazepine and carbamazepine is predicted to decrease the exposure to **calcium channel blockers (diltiazem)**. Monitor concentration and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Calcium channel blockers (verapamil)** increase the concentration of carbamazepine and carbamazepine is predicted to decrease the exposure to **calcium channel blockers (verapamil)**. [\[Severe\]](#) Anecdotal
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nifedipine, nimodipine)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [\[Severe\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** potentially increase the concentration of antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [\[Severe\]](#) Study
- ▶ **Valproate** increases the exposure to **calcium channel blockers (nimodipine)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **cannabidiol**. Adjust dose. [\[Moderate\]](#) Study → Also see TABLE 11 p. 1492
- ▶ **Cannabidiol** increases the risk of increased ALT concentrations when given with **valproate**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Capecitabine** increases the concentration of antiepileptics (**fosphenytoin, phenytoin**). [\[Severe\]](#) Anecdotal
- ▶ **Carbapenems** decrease the concentration of **valproate**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenytoin**) are predicted to decrease the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 646. [\[Moderate\]](#) Theoretical
- ▶ **Cenobamate** might increase the exposure to antiepileptics (**fosphenytoin, primidone**). [\[Moderate\]](#) Theoretical → Also see TABLE 11 p. 1492
- ▶ **Cenobamate** slightly increases the exposure to antiepileptics (**phenobarbital, phenytoin**). Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 11 p. 1492
- ▶ **Cenobamate** is predicted to decrease the concentration of **lamotrigine** and **lamotrigine** might affect the efficacy of **cenobamate**. Adjust dose. [\[Moderate\]](#) Study → Also see TABLE 11 p. 1492
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **ceritinib**. Avoid. [\[Severe\]](#) Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ Antiepileptics (**phenobarbital, primidone**) decrease the concentration of **chloramphenicol**. [\[Moderate\]](#) Study
- ▶ Intravenous **chloramphenicol** increases the concentration of antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) affect the concentration of intravenous **chloramphenicol**. Monitor concentration and adjust dose. [\[Severe\]](#) Study
- ▶ **Phenobarbital** decreases the effects of **cholic acid**. Avoid. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the concentration of **ciclosporin**. [\[Severe\]](#) Study
- ▶ **Oxcarbazepine** decreases the concentration of **ciclosporin**. [\[Severe\]](#) Anecdotal
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to alter the effects of **clostazol**. [\[Moderate\]](#) Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Carbamazepine** is predicted to increase the risk of haematological toxicity when given with oral **cladribine**. [\[Moderate\]](#) Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the exposure to **clomethiazole**. Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 11 p. 1492

## Antiepileptics (continued)

- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Study
- ▶ Antiepileptics (**eslicarbazepine, oxcarbazepine**) are predicted to decrease the concentration of **cobicistat**. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to very slightly increase the exposure to **perampanel**. [Mild] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate**) are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Study
- ▶ **Combined hormonal contraceptives** alter the exposure to **lamotrigine** and **lamotrigine** might decrease the efficacy of **combined hormonal contraceptives**. Adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **corticosteroids (budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **corticosteroids (fluticasone)**. [Unknown] Theoretical
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to alter the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
- ▶ Antiepileptics (**phenobarbital, primidone**) decrease the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Moderate] Study
- ▶ **Carbamazepine** decreases the effects of **coumarins**. Monitor and adjust dose. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to  **dabrafenib**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **Lamotrigine** is predicted to increase the risk of hyponatraemia when given with **desmopressin**. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate**) are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ▶ **Desogestrel** is predicted to increase the exposure to **lamotrigine**. [Moderate] Study
- ▶ **Diazoxide** decreases the concentration of antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the effects of **diazoxide**. Monitor concentration and adjust dose. [Moderate] Anecdotal
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **dienogest**. [Severe] Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the concentration of **digoxin**. [Moderate] Anecdotal
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **dipeptidylpeptidase-4 inhibitors (linagliptin)**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [Moderate] Study
- ▶ **Disulfiram** increases the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor concentration and adjust dose. [Severe] Study → Also see TABLE 12 p. 1493
- ▶ Antiepileptics (**fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **dolutegravir**. Adjust dolutegravir dose, p. 696. [Severe] Study
- ▶ **Carbamazepine** decreases the exposure to **dolutegravir**. Adjust dolutegravir dose, p. 696. [Severe] Study
- ▶ **Oxcarbazepine** is predicted to decrease the exposure to **dolutegravir**. Adjust dolutegravir dose, p. 696. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [Mild] Study → Also see TABLE 11 p. 1492
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) is predicted to decrease the exposure to **elxacaftor**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) affect the exposure to **endothelin receptor antagonists (bosentan)**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **endothelin receptor antagonists (macitentan)**. Avoid. [Severe] Study
- ▶ **Enteral feeds** decrease the absorption of **phenytoin**. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **erlotinib**. Avoid or adjust erlotinib dose, p. 1057. [Severe] Study
- ▶ **Eslicarbazepine** is predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical
- ▶ **Oxcarbazepine** decreases the exposure to **erlotinib**. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **esketamine**. Adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 1492
- ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate**) are predicted to decrease the efficacy of **estradiol**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate**) are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the efficacy of **etoposide**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study

- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) moderately decrease the exposure to **exemestane**. [Moderate] Study
- ▶ **Phenobarbital** is predicted to decrease the exposure to **factor XA inhibitors (apixaban)**. Use with caution or avoid. [Severe] Anecdotal
- ▶ Antiepileptics (**carbamazepine, phenytoin**) are predicted to decrease the exposure to **factor XA inhibitors (apixaban)**. Use with caution or avoid. [Severe] Study
- ▶ Antiepileptics (**fosphenytoin, primidone**) are predicted to decrease the exposure to **factor XA inhibitors (apixaban)**. [Severe] Study
- ▶ **Carbamazepine** is predicted to decrease the exposure to **factor XA inhibitors (edoxaban)**. [Moderate] Study
- ▶ Antiepileptics (**fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **factor XA inhibitors (edoxaban)**. [Severe] Theoretical
- ▶ **Fosphenytoin** is predicted to decrease the exposure to **factor XA inhibitors (rivaroxaban)**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Theoretical
- ▶ **Oxcarbazepine** is predicted to decrease the exposure to **factor XA inhibitors (rivaroxaban)**. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **factor XA inhibitors (rivaroxaban)**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **fedratinib**. Avoid. [Moderate] Study
- ▶ **Carbamazepine** is predicted to decrease the concentration of **fenfluramine**. Adjust dose. [Severe] Theoretical
- ▶ **Stripentol** (given with clobazam, and with or without valproate) modestly increases the exposure to **fenfluramine**. Adjust fenfluramine dose, p. 341. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **Fluorouracil** increases the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ **Folates** are predicted to decrease the concentration of antiepileptics (**fosphenytoin, phenobarbital, phenytoin, primidone**). Monitor concentration and adjust dose. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **fostamatinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to the active metabolite of **fostemsavir**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **gefinitinib**. Avoid. [Severe] Study
- ▶ **Eslicarbazepine** is predicted to decrease the exposure to **gefinitinib**. [Moderate] Theoretical
- ▶ **Oxcarbazepine** decreases the exposure to **gefinitinib**. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenytoin**) are predicted to decrease the exposure to **gilteritinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **glasdegib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ Antiepileptics (**eslicarbazepine, oxcarbazepine**) potentially decrease the exposure to **glecaprevir**. Avoid. [Severe] Theoretical
- ▶ **Valproate** potentially opposes the effects of **glycerol phenylbutyrate**. [Moderate] Theoretical
- ▶ **Grapefruit** juice slightly increases the exposure to **carbamazepine**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ Antiepileptics (**phenobarbital, primidone**) decrease the effects of **griseofulvin**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 384. [Moderate] Study → Also see TABLE 11 p. 1492
- ▶ **Oxcarbazepine** is predicted to decrease the concentration of **guanfacine**. Monitor and adjust **guanfacine** dose, p. 384. [Moderate] Theoretical
- ▶ **Guanfacine** increases the concentration of **valproate**. Monitor and adjust dose. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** transiently increase the concentration of **carbamazepine**. Monitor concentration and adjust dose. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor concentration and adjust dose. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the concentration of **haloperidol**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1492
- ▶ **Haloperidol** potentially increases the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to affect the concentration of antiepileptics (**phenobarbital, primidone**) and antiepileptics (**phenobarbital, primidone**) are predicted to decrease the concentration of **HIV-protease inhibitors**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **carbamazepine** and **carbamazepine** is predicted to decrease the exposure to **HIV-protease inhibitors**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** slightly decrease the exposure to **lamotrigine**. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the concentration of **valproate**. [Severe] Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to affect the exposure to antiepileptics (**fosphenytoin, phenytoin**) and antiepileptics (**fosphenytoin, phenytoin**) decrease the concentration of **HIV-protease inhibitors**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to very slightly increase the exposure to **perampanel**. [Mid] Study
- ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate**) are predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Hormone replacement therapy** is predicted to alter the exposure to **lamotrigine**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **ibrutinib**. Avoid or monitor. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to very slightly increase the exposure to **perampanel**. [Mid] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Eslicarbazepine** is predicted to decrease the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Topiramate** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **iron chelators (deferasirox)**. Monitor serum ferritin and adjust dose. [Moderate] Theoretical
- ▶ **Iron chelators (dextrazoxane)** might decrease the absorption of antiepileptics (**fosphenytoin, phenytoin**). Avoid. [Severe] Theoretical

## Antiepileptics (continued)

- ▶ **Isoniazid** increases the concentration of antiepileptics (fosphenytoin, phenytoin). [Moderate] Study → Also see TABLE 12 p. 1493
- ▶ **Isoniazid** markedly increases the concentration of carbamazepine and carbamazepine increases the risk of hepatotoxicity when given with **isoniazid**. Monitor concentration and adjust dose. [Severe] Study → Also see TABLE 1 p. 1490
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ Antiepileptics (fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- ▶ Carbamazepine is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, phenobarbital, primidone) are predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to decrease the concentration of antiepileptics (fosphenytoin, phenytoin) and antiepileptics (fosphenytoin, phenytoin) are predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ Antiepileptics (fosphenytoin, phenytoin) decrease the effects of **levodopa**. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate) are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, oxcarbazepine) are predicted to increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 1490
- ▶ Antiepileptics (fosphenytoin, phenytoin) decrease the effects of loop diuretics (**furosemide**). [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study
- ▶ **Lumacaftor** is predicted to decrease the exposure to antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone). Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** slightly increase the concentration of carbamazepine. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to very slightly increase the exposure to **perampanel**. [Mild] Study
- ▶ **Macrolides (erythromycin)** markedly increase the concentration of carbamazepine. Monitor concentration and adjust dose. [Severe] Study
- ▶ Antiepileptics (phenobarbital, primidone) are predicted to increase the effects of **MAOIs, irreversible**. [Severe] Theoretical
- ▶ Carbamazepine is predicted to increase the risk of severe toxic reaction when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **mequitinides (repaglinide)**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ Phenytoin is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Leviteracetam** decreases the clearance of **methotrexate**. [Severe] Anecdotal
- ▶ Carbamazepine might decrease the concentration of **methylphenidate**. [Moderate] Anecdotal
- ▶ **Valproate** might enhance the effects of **methylphenidate**. [Severe] Anecdotal
- ▶ Antiepileptics (phenobarbital, primidone) are predicted to decrease the exposure to **metronidazole**. [Moderate] Study
- ▶ Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the effects of **metryrapone**. Avoid. [Moderate] Study
- ▶ Phenytoin is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (phenobarbital, primidone) are predicted to decrease the exposure to **mianserin**. [Moderate] Study → Also see TABLE 11 p. 1492
- ▶ Carbamazepine markedly decreases the exposure to **mianserin**. Adjust dose. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1492
- ▶ **Mitotane** is predicted to decrease the exposure to **perampanel**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, phenobarbital, primidone) are predicted to decrease the exposure to **modafinil**. [Mild] Theoretical
- ▶ Antiepileptics (fosphenytoin, phenytoin) are predicted to decrease the exposure to **modafinil** and **modafinil** is predicted to increase the concentration of antiepileptics (fosphenytoin, phenytoin). Monitor concentration and adjust dose. [Moderate] Theoretical
- ▶ Carbamazepine is predicted to decrease the effects of **monoclonal antibodies (brentuximab vedotin)**. [Severe] Theoretical
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to antiepileptics (fosphenytoin, phenytoin). Monitor and adjust dose. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **montelukast**. [Mild] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study → Also see TABLE 1 p. 1490
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. Avoid. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **neurokinin-1 receptor antagonists (fosaprepitant)**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure

- to neurokinin-1 receptor antagonists (**netupitant**). Avoid. [\[Severe\]](#) Study
- ▶ **Carbamazepine** is predicted to decrease the effects of (but acute use increases the effects of) **neuromuscular blocking drugs, non-depolarising (atracurium, cisatracurium, pancuronium, rocuronium, vecuronium)**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**fosphenytoin, phenytoin**) decrease the effects of (but acute use increases the effects of) **neuromuscular blocking drugs, non-depolarising (atracurium, cisatracurium, pancuronium, rocuronium, vecuronium)**. [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **nilotinib**. Avoid. [\[Severe\]](#) Study
  - ▶ Antiepileptics (**phenobarbital, phenytoin**) are predicted to decrease the exposure to **nintedanib**. [\[Severe\]](#) Theoretical
  - ▶ **Carbamazepine** is predicted to decrease the exposure to **nintedanib**. [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **nirmatrelvir** boosted with ritonavir. Avoid. [\[Severe\]](#) Study
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of antiepileptics (**lamotrigine, valproate**). [\[Severe\]](#) Theoretical
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **nifisisonone**. Adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **NNRTIs (efavirenz)** are predicted to affect the efficacy of **primidone and primidone** is predicted to slightly decrease the exposure to **NNRTIs (efavirenz)**. [\[Severe\]](#) Theoretical
  - ▶ **NNRTIs (nevirapine)** are predicted to decrease the concentration of antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) and antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **NNRTIs (nevirapine)**. [\[Severe\]](#) Study
  - ▶ **Oxcarbazepine** is predicted to decrease the exposure to **NNRTIs (doravirine)**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **NNRTIs (doravirine)**. Avoid. [\[Severe\]](#) Study
  - ▶ **Carbamazepine** slightly decreases the exposure to **NNRTIs (efavirenz)** and **NNRTIs (efavirenz)** slightly decrease the exposure to **carbamazepine**. [\[Severe\]](#) Study
  - ▶ **Phenobarbital** is predicted to decrease the exposure to **NNRTIs (efavirenz)** and **NNRTIs (efavirenz)** affect the concentration of **phenobarbital**. [\[Severe\]](#) Theoretical
  - ▶ Antiepileptics (**fosphenytoin, phenytoin**) slightly decrease the exposure to **NNRTIs (efavirenz)** and **NNRTIs (efavirenz)** affect the concentration of antiepileptics (**fosphenytoin, phenytoin**). [\[Severe\]](#) Theoretical
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **NNRTIs (etravirine)**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Oxcarbazepine** is predicted to decrease the concentration of **NNRTIs (rilpivirine)**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) markedly decrease the exposure to **NNRTIs (rilpivirine)**. Avoid. [\[Severe\]](#) Study
  - ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampamil, phenobarbital, phenytoin, primidone, rufinamide, topiramate**) are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. [\[Severe\]](#) Anecdotal
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **NRTIs (abacavir)**. [\[Moderate\]](#) Theoretical
  - ▶ **Valproate** slightly increases the exposure to **NRTIs (zidovudine)**. [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **olaparib**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [\[Moderate\]](#) Study → Also see [TABLE 11 p. 1492](#)
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical → Also see [TABLE 11 p. 1492](#)
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the exposure to **opioids (methadone)**. Monitor and adjust dose. [\[Severe\]](#) Study → Also see [TABLE 11 p. 1492](#)
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [\[Moderate\]](#) Study → Also see [TABLE 11 p. 1492](#)
  - ▶ **Carbamazepine** decreases the concentration of **opioids (tramadol)**. Adjust dose. [\[Severe\]](#) Study
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **osilodrostat**. [\[Moderate\]](#) Theoretical
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **osimertinib**. Avoid. [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **ospemifene**. [\[Moderate\]](#) Study
  - ▶ **Oxybutynin** potentially increases the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [\[Severe\]](#) Theoretical
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **palbociclib**. Avoid. [\[Severe\]](#) Study
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **panobinostat**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the exposure to **paracetamol**. [\[Moderate\]](#) Study → Also see [TABLE 1 p. 1490](#)
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **pazopanib**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **pemigatinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Valproate** increases the risk of adverse effects when given with **penicillins (pivmecillinam)**. Avoid. [\[Severe\]](#) Anecdotal
  - ▶ **Phenothiazines (chlorpromazine)** decrease the concentration of antiepileptics (**phenobarbital, primidone**) and antiepileptics (**phenobarbital, primidone**) decrease the concentration of **phenothiazines (chlorpromazine)**. [\[Moderate\]](#) Study → Also see [TABLE 11 p. 1492](#)
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) moderately decrease the exposure to **phosphodiesterase type-4 inhibitors (apremilast)**. Avoid. [\[Severe\]](#) Study
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. Avoid. [\[Moderate\]](#) Study
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [\[Severe\]](#) Study
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [\[Moderate\]](#) Theoretical
  - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
  - ▶ Antiepileptics (**eslicarbazepine, oxcarbazepine**) potentially decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the exposure to **pirfenidone**. [\[Moderate\]](#) Theoretical

## Antiepileptics (continued)

- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) might decrease the exposure to **ponesimod**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, phenobarbital, phenytoin, primidone**) are predicted to increase the risk of hypersensitivity reactions when given with **procarbazine**. [Severe] Anecdotal
- ▶ **Fosphenytoin** is predicted to increase the risk of hypersensitivity when given with **procarbazine**. [Severe] Anecdotal
- ▶ **Valproate** potentially increases the concentration of **propofol**. Adjust dose. [Severe] Theoretical
- ▶ **Quinolones (ciprofloxacin)** affect the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor concentration and adjust dose. [Severe] Study
- ▶ Antiepileptics (**fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to affect the exposure to **raltegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Carbamazepine** is predicted to affect the exposure to **raltegravir**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **relugolix**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**oxcarbazepine, topiramate**) are predicted to decrease the exposure to **relugolix**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) might decrease the exposure to **remdesivir**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **ribiciclib**. Avoid. [Severe] Study
- ▶ **Rifamycins (rifampicin)** slightly decrease the exposure to **brivaracetam**. Adjust dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** markedly increase the clearance of **lamotrigine**. Adjust lamotrigine dose, p. 346. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **perampanel**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** decrease the concentration of antiepileptics (**fosphenytoin, phenytoin**). Use with caution and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **rifamycins (rifampicin)** and **rifamycins (rifampicin)** are predicted to decrease the exposure to antiepileptics (**phenobarbital, primidone**). Use with caution and adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **phenytoin**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenytoin**) are predicted to decrease the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenytoin**) are predicted to decrease the exposure to the active metabolite of **selexipag**. Adjust dose. [Moderate] Study
- ▶ **Valproate** is predicted to increase the exposure to **selexipag**. [Unknown] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **selpercatinib**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **siponimod**. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Phenytoin** is predicted to decrease the exposure to **SNRIs (duloxetine)**. [Moderate] Theoretical
- ▶ **Phenytoin** might decrease the exposure to **sodium glucose co-transporter 2 inhibitors (empagliflozin)**. Avoid or monitor diabetic control. [Moderate] Theoretical
- ▶ **Valproate** increases the exposure to **sodium oxybate**. Adjust **sodium oxybate** dose, p. 524. [Moderate] Study
- ▶ **Valproate** potentially decreases the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
- ▶ Antiepileptics (**fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **Carbamazepine** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical
- ▶ **Oxcarbazepine** is predicted to decrease the exposure to **sorafenib**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **sotorasib**. Avoid. [Severe] Study → Also see TABLE 1 p. 1490
- ▶ **SSRIs (fluoxetine, fluvoxamine)** are predicted to increase the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor and adjust dose. [Severe] Anecdotal
- ▶ **SSRIs (sertraline)** potentially increase the risk of toxicity when given with antiepileptics (**fosphenytoin, phenytoin**). Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) decrease the concentration of **SSRIs (paroxetine)**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the concentration of antiepileptics (**fosphenytoin, phenobarbital, phenytoin, primidone**). Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **brivaracetam**. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the concentration of **carbamazepine**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **perampanel**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **tiagabine**. Avoid. [Mild] Theoretical
- ▶ **Carbamazepine** is predicted to decrease the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 1 p. 1490
- ▶ **Eslicarbazepine** is predicted to decrease the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Phenytoin** moderately decreases the exposure to **statins (atorvastatin)**. [Moderate] Study
- ▶ **Oxcarbazepine** is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Theoretical
- ▶ Antiepileptics (**fosphenytoin, phenobarbital, primidone**) are predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Study
- ▶ **Eslicarbazepine** decreases the exposure to **statins (rosuvastatin)**. [Moderate] Study
- ▶ **Phenytoin** is predicted to decrease the exposure to **statins (simvastatin)**. [Moderate] Study

- ▶ Antiepileptics (**carbamazepine, eslicarbazepine**) moderately decrease the exposure to **statins (simvastatin)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 1 p. 1490
- ▶ **Sulfonamides (sulfadiazine)** are predicted to increase the concentration of **fosphenytoin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Sulfonamides (sulfadiazine)** increase the concentration of **phenytoin**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1080. [Moderate] Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) increase the effects of **suxamethonium**. [Moderate] Study
- ▶ **Carbamazepine** increases the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Tamoxifen** (high-dose) might increase the concentration of **fosphenytoin** and **fosphenytoin** might decrease the concentration of **tamoxifen** (high-dose). [Severe] Theoretical
- ▶ **Tamoxifen** (high-dose) might increase the concentration of **phenytoin** and **phenytoin** might decrease the concentration of **tamoxifen** (high-dose). [Severe] Anecdotal
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [Moderate] Study → Also see TABLE 12 p. 1493
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical → Also see TABLE 12 p. 1493
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **taxanes (paclitaxel)**. Avoid. [Severe] Study → Also see TABLE 12 p. 1493
- ▶ **Tegafur** potentially increases the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) might decrease the exposure to **tepotinib**. Avoid. [Severe] Theoretical
- ▶ **Fosphenytoin** is predicted to decrease the concentration of **tetracyclines (doxycycline)**. Adjust dose. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, phenobarbital, phenytoin, primidone**) decrease the concentration of **tetracyclines (doxycycline)**. Adjust dose. [Moderate] Study → Also see TABLE 1 p. 1490
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to increase the clearance of **theophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Carbamazepine** potentially increases the clearance of **theophylline** and **theophylline** decreases the exposure to **carbamazepine**. Adjust dose. [Moderate] Anecdotal
- ▶ **Stiripentol** is predicted to increase the exposure to **theophylline**. Avoid. [Moderate] Theoretical
- ▶ **Carbamazepine** is predicted to decrease the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Study
- ▶ **Phenytoin** is predicted to decrease the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to increase the risk of hypothyroidism when given with **thyroid hormones**. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the effects of **thyroid hormones**. [Moderate] Theoretical
- ▶ **Carbamazepine** is predicted to increase the risk of hypothyroidism when given with **thyroid hormones**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Carbamazepine** might decrease the exposure to **tigecycline**. [Mil] Theoretical → Also see TABLE 1 p. 1490
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) moderately decrease the exposure to **tizanidine**. [Mil] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) increase the clearance of **topotecan**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical → Also see TABLE 1 p. 1490
- ▶ **Carbamazepine** decreases the concentration of **trazodone**. Adjust dose. [Moderate] Anecdotal
- ▶ Antiepileptics (**carbamazepine, phenobarbital, phenytoin**) are predicted to decrease the exposure to **treprostinil**. Adjust dose. [Mil] Theoretical
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **tricyclic antidepressants**. [Moderate] Study → Also see TABLE 11 p. 1492
- ▶ **Carbamazepine** decreases the exposure to **tricyclic antidepressants**. Adjust dose. [Moderate] Study → Also see TABLE 18 p. 1494
- ▶ **Tricyclic antidepressants (clomipramine, imipramine)** potentially increase the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [Severe] Theoretical
- ▶ **Valproate** increases the concentration of **tricyclic antidepressants (nortriptyline)**. [Severe] Study
- ▶ **Trimethoprim** increases the concentration of antiepileptics (**fosphenytoin, phenytoin**). [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **tucatinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampamel, phenobarbital, phenytoin, primidone, rufinamide, topiramate**) decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
- ▶ **Oxcarbazepine** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Study

## Antiepileptics (continued)

- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical → Also see TABLE 1 p. 1490 → Also see TABLE 12 p. 1493
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [Severe] Theoretical → Also see TABLE 12 p. 1493
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vinca alkaloids (vinorelbine)**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 12 p. 1493
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) decrease the effects of **vitamin D substances**. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the effects of **vitamin D substances**. [Moderate] Theoretical
- ▶ **Carbamazepine** is predicted to decrease the effects of **vitamin D substances**. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital, primidone**) potentially increase the risk of nephrotoxicity when given with **volatile halogenated anaesthetics (methoxyflurane)**. Avoid. [Severe] Theoretical → Also see TABLE 11 p. 1492
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Oxcarbazepine** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Carbamazepine** moderately decreases the exposure to **zolidem**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1492

**Antifungals, azoles** → see TABLE 1 p. 1490 (hepatotoxicity), TABLE 9 p. 1492 (QT-interval prolongation)

clotrimazole · fluconazole · isavuconazole · itraconazole · ketoconazole · miconazole · posaconazole · voriconazole

- ▶ Since systemic absorption can follow topical application, the possibility of interactions with topical **clotrimazole** and **ketoconazole** should be borne in mind.
- ▶ In general, **fluconazole** interactions relate to multiple-dose treatment.
- ▶ The use of carbonated drinks, such as cola, improves **itraconazole, ketoconazole, and posaconazole** bioavailability.
- ▶ Interactions of **miconazole** apply to the oral gel formulation, as a sufficient quantity can be absorbed to cause systemic effects. Systemic absorption from intravaginal and topical formulations might also occur.
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 1042. [Severe] Study
- ▶ **Fluconazole** is predicted to increase the exposure to **abrocitinib**. Adjust **abrocitinib** dose, p. 1354. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **acalabrutinib**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **afatinib**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole**) are predicted to increase the exposure to **afatinib**. [Moderate] Study
- ▶ **Alcohol** potentially causes a disulfiram-like reaction when given with **ketoconazole**. Avoid. [Moderate] Anecdotal
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose, p. 210. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Severe] Study
- ▶ **Itraconazole** markedly increases the exposure to **aliskiren**. Avoid. [Severe] Study
- ▶ **Ketoconazole** moderately increases the exposure to **aliskiren**. [Moderate] Study
- ▶ **Itraconazole** increases the risk of busulfan toxicity when given with **alkylating agents (busulfan)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Miconazole** is predicted to increase the concentration of **alkylating agents (busulfan)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Isavuconazole** is predicted to increase the exposure to **alkylating agents (cyclophosphamide)**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **alpha blockers (doxazosin)**. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- ▶ **Miconazole** potentially decreases the exposure to **aminoglycosides (tobramycin)**. [Moderate] Anecdotal
- ▶ Oral **antacids** decrease the absorption of oral **itraconazole** capsules. **Itraconazole** should be taken 2 hours before or 1 hour after antacids. [Moderate] Study
- ▶ Oral **antacids** decrease the absorption of oral **ketoconazole**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **anti-androgens (apalutamide)**. [Mid] Study → Also see TABLE 9 p. 1492
- ▶ **Itraconazole** slightly increases the exposure to **anti-androgens (darolutamide)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Ketoconazole** is predicted to increase the exposure to **anti-androgens (darolutamide)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to **antiarrhythmics (disopyramide)**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **antiarrhythmics (disopyramide)**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Posaconazole** is predicted to increase the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [Severe] Theoretical
- ▶ **Fluconazole** is predicted to increase the exposure to **antiarrhythmics (dronedarone)**. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) very markedly increase the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Severe] Study

- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **anticholinesterases**, **centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine**) are predicted to decrease the efficacy of **fluconazole** and **fluconazole** increases the concentration of **antiepileptics (carbamazepine)**. Avoid or monitor **carbamazepine** concentration and adjust dose accordingly, p. 336. [Severe] Theoretical → Also see TABLE 1 p. 1490
- ▶ Antiepileptics (**carbamazepine**) are predicted to decrease the efficacy of **ketoconazole** and **ketoconazole** slightly increases the concentration of **antiepileptics (carbamazepine)**. Avoid or monitor **carbamazepine** concentration and adjust dose accordingly, p. 336. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine**) are predicted to decrease the efficacy of **posaconazole** and **posaconazole** increases the concentration of **antiepileptics (carbamazepine)**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine**, **fospheytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Study
- ▶ Antiepileptics (**fospheytoin**) very markedly decrease the exposure to **itraconazole**. Avoid and for 14 days after stopping **fospheytoin**. [Moderate] Study
- ▶ Antiepileptics (**fospheytoin**) decrease the exposure to **voriconazole** and **voriconazole** increases the exposure to **antiepileptics (fospheytoin)**. Avoid or adjust **voriconazole** dose and monitor **phenytoin** concentration, p. 654. [Moderate] Study
- ▶ Antiepileptics (**fospheytoin**, **phenytoin**) decrease the exposure to **ketoconazole**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**fospheytoin**, **phenytoin**) are predicted to decrease the exposure to **posaconazole**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital**) decrease the concentration of **itraconazole**. Avoid and for 14 days after stopping **phenobarbital**. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital**) are predicted to decrease the concentration of **ketoconazole**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital**) are predicted to decrease the concentration of **posaconazole**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital**, **primidone**) are predicted to decrease the concentration of **voriconazole**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**phenytoin**) very markedly decrease the exposure to **itraconazole**. Avoid and for 14 days after stopping **phenytoin**. [Moderate] Study
- ▶ Antiepileptics (**phenytoin**) decrease the exposure to **voriconazole** and **voriconazole** increases the exposure to **antiepileptics (phenytoin)**. Avoid or adjust **voriconazole** dose and monitor **phenytoin** concentration, p. 654, p. 351. [Moderate] Study
- ▶ Antiepileptics (**primidone**) are predicted to decrease the concentration of **itraconazole**. [Moderate] Theoretical
- ▶ Miconazole increases the risk of carbamazepine toxicity when given with **antiepileptics (carbamazepine)**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ Miconazole increases the risk of phenytoin toxicity when given with **antiepileptics (fospheytoin)**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ Fluconazole increases the concentration of **antiepileptics (fospheytoin, phenytoin)**. Monitor concentration and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine**) are predicted to decrease the efficacy of antifungals, azoles (**itraconazole**, **voriconazole**) and antifungals, azoles (**itraconazole**, **voriconazole**) increase the concentration of **antiepileptics (carbamazepine)**. Avoid or adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 1490
- ▶ Antiepileptics (**primidone**) are predicted to decrease the concentration of antifungals, azoles (**ketoconazole**, **posaconazole**). Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to very slightly increase the exposure to **antiepileptics (perampanel)**. [Mid] Study
- ▶ Miconazole increases the risk of phenytoin toxicity when given with **antiepileptics (phenytoin)**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ Antifungals, azoles (**fluconazole**) are predicted to increase the exposure to antifungals, azoles (**isavuconazole**). [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to antifungals, azoles (**isavuconazole**). Avoid or monitor adverse effects. [Severe] Study
- ▶ Antifungals, azoles (**posaconazole**) are predicted to increase the exposure to antifungals, azoles (**isavuconazole**). [Moderate] Theoretical
- ▶ Miconazole is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ Ketoconazole increases the exposure to **antimalarials (mefloquine)**. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **itraconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **antimalarials (mefloquine)**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the concentration of **antimalarials (piperazine)**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to slightly increase the exposure to **antipsychotics, second generation (aripiprazole)**. Adjust aripiprazole dose, p. 427. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Study
- ▶ Posaconazole moderately increases the exposure to **antipsychotics, second generation (lurasidone)**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**) are predicted to increase the exposure to **antipsychotics, second generation (lurasidone)**. Adjust lurasidone dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **antipsychotics, second generation (lurasidone, quetiapine)**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **antipsychotics, second generation (quetiapine)**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **antipsychotics, second generation (risperidone)**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **avapritinib**. Avoid or adjust **avapritinib** dose, p. 1045. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **avapritinib**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **miconazole**) are predicted to increase the exposure to **avatorombopag**. Adjust **avatorombopag** dose with moderate CYP2C9 inhibitors in chronic immune thrombocytopenia, p. 1120. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **axitinib**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **bedaquiline**. Avoid

**Antifungals, azoles** (continued)

- prolonged use. [Mild] Theoretical → Also see TABLE 1 p. 1490 → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study → Also see TABLE 1 p. 1490 → Also see TABLE 9 p. 1492
  - ▶ **Miconazole** is predicted to increase the exposure to **benzodiazepines** (**alprazolam**). Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **benzodiazepines** (**alprazolam**). [Severe] Study
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) moderately increase the exposure to **benzodiazepines** (**alprazolam**). Avoid. [Moderate] Study
  - ▶ Antifungals, azoles (**fluconazole**, **voriconazole**) potentially increase the exposure to **benzodiazepines** (**clobazam**). Adjust dose. [Moderate] Theoretical
  - ▶ Antifungals, azoles (**fluconazole**, **voriconazole**) moderately increase the exposure to **benzodiazepines** (**diazepam**). Monitor and adjust dose. [Moderate] Study
  - ▶ **Miconazole** is predicted to increase the exposure to intravenous **benzodiazepines** (**midazolam**). Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ **Miconazole** is predicted to increase the exposure to oral **benzodiazepines** (**midazolam**). Avoid. [Moderate] Theoretical
  - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **benzodiazepines** (**midazolam**). Monitor adverse effects and adjust dose. [Severe] Study
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly to very markedly increase the exposure to **benzodiazepines** (**midazolam**). Avoid or adjust dose. [Severe] Study
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **berotralstat**. [Severe] Study
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **beta blockers, non-selective** (**nadolol**). [Moderate] Study
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **beta<sub>2</sub> agonists** (**salmeterol**). Avoid. [Severe] Study
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
  - ▶ **Posaconazole** is predicted to increase the exposure to **bictegravir**. [Moderate] Theoretical
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) slightly increase the exposure to **bortezomib**. [Moderate] Study
  - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 1492
  - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **brigatinib**. [Moderate] Study
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **brigatinib**. Avoid or adjust **brigatinib** dose, p. 1048. [Severe] Study
  - ▶ **Isavuconazole** slightly increases the exposure to **bupropion**. Adjust dose. [Moderate] Study
  - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [Moderate] Study
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **bupirone**. Adjust **bupirone** dose, p. 373. [Severe] Study
  - ▶ **Miconazole** is predicted to increase the concentration of **bupirone**. Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **isavuconazole**. [Moderate] Theoretical
  - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **calcium channel blockers** (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
  - ▶ **Miconazole** is predicted to increase the exposure to **calcium channel blockers** (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**, **verapamil**). Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **calcium channel blockers** (**amlodipine**, **felodipine**, **lacidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
  - ▶ **Miconazole** is predicted to increase the exposure to **calcium channel blockers** (**diltiazem**). [Moderate] Theoretical
  - ▶ **Fluconazole** (high-dose) is predicted to increase the exposure to **calcium channel blockers** (**diltiazem**, **verapamil**). [Moderate] Theoretical
  - ▶ **Posaconazole** is predicted to increase the exposure to **calcium channel blockers** (**diltiazem**, **verapamil**). [Moderate] Theoretical
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **calcium channel blockers** (**diltiazem**, **verapamil**). [Severe] Study
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **calcium channel blockers** (**lercanidipine**). Avoid. [Severe] Study
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study
  - ▶ **Fluconazole** is predicted to increase the exposure to **cannabidiol**. [Moderate] Theoretical
  - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ceritinib**. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 1050. [Severe] Study → Also see TABLE 9 p. 1492
  - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **ciclosporin**. [Severe] Study
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) increase the concentration of **ciclosporin**. [Severe] Study
  - ▶ **Miconazole** increases the concentration of **ciclosporin**. Monitor and adjust dose. [Severe] Anecdotal
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 252. [Moderate] Study
  - ▶ **Fluconazole** is predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 252. [Moderate] Theoretical
  - ▶ **Miconazole** is predicted to increase the exposure to **cilostazol**. Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
  - ▶ **Fluconazole** is predicted to decrease the efficacy of **clopidogrel**. Avoid. [Severe] Theoretical
  - ▶ **Voriconazole** is predicted to decrease the efficacy of **clopidogrel**. Avoid. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to antifungals, azoles (**fluconazole**, **posaconazole**). [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to antifungals, azoles (**itraconazole**, **ketoconazole**). Adjust dose. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **isavuconazole**. Avoid or monitor adverse effects. [Severe] Study
  - ▶ **Cobicistat** is predicted to affect the exposure to **voriconazole**. Avoid. [Moderate] Theoretical
  - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **cobimetinib**. [Severe] Study
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study

- ▶ **Miconazole** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors, p. 1212. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **colchicine**. Avoid potent CYP3A4 inhibitors or adjust **colchicine** dose, p. 1212. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **corticosteroids** (**beclometasone**) (risk with beclometasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **corticosteroids** (**betamethasone**, **budesonide**, **ciclesonide**, **deflazacort**, **dexamethasone**, **fludrocortisone**, **fluticasone**, **hydrocortisone**, **methylprednisolone**, **mometasone**, **prednisolone**, **triamcinolone**). Avoid or monitor adverse effects. [Severe] Study
- ▶ **Miconazole** is predicted to increase the concentration of **corticosteroids** (**methylprednisolone**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **corticosteroids** (**methylprednisolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Fluconazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Itraconazole** potentially increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Ketoconazole** potentially increases the anticoagulant effect of **coumarins** (**warfarin**). Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Miconazole** greatly increases the anticoagulant effect of **coumarins**. MHRA advises avoid unless INR can be monitored closely; monitor for signs of bleeding. [Severe] Study
- ▶ **Voriconazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**) are predicted to increase the exposure to **crizotinib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **dabrafenib**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- ▶ Antifungals, azoles (**isavuconazole**, **posaconazole**) are predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Fluconazole** slightly increases the exposure to **darifenacin**. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) very slightly increase the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Isavuconazole** slightly increases the exposure to **digoxin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Itraconazole** is predicted to markedly increase the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study
- ▶ **Ketoconazole** is predicted to markedly increase the concentration of **digoxin**. [Severe] Study
- ▶ **Posaconazole** is predicted to increase the concentration of **digoxin**. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **dipeptidylpeptidase-4 inhibitors** (**saxagliptin**). [Mild] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **dipeptidylpeptidase-4 inhibitors** (**saxagliptin**). [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **dopamine receptor agonists** (**bromocriptine**). [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) increase the exposure to **dopamine receptor agonists** (**bromocriptine**). [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the concentration of **dopamine receptor agonists** (**cabergoline**). [Moderate] Anecdotal
- ▶ **Isavuconazole** is predicted to increase the exposure to **dopamine receptor agonists** (**pramipexole**). Adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **dronabinol**. Adjust dose. [Mild] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **drospirenone**. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **dutasteride**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **elxacaftor**. Adjust tezacaftor with ivacaftor and elxacaftor p. 320 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **elxacaftor**. Adjust tezacaftor with ivacaftor and elxacaftor p. 320 dose with potent CYP3A4 inhibitors. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Endothelin receptor antagonists** (**bosentan**) are predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- ▶ **Fluconazole** is predicted to increase the exposure to **endothelin receptor antagonists** (**bosentan**). Avoid. [Severe] Study
- ▶ **Itraconazole** is predicted to increase the exposure to **endothelin receptor antagonists** (**bosentan**). [Moderate] Theoretical
- ▶ **Ketoconazole** moderately increases the exposure to **endothelin receptor antagonists** (**bosentan**). [Moderate] Study
- ▶ **Voriconazole** is predicted to increase the exposure to **endothelin receptor antagonists** (**bosentan**). Avoid. [Severe] Theoretical

## Antifungals, azoles (continued)

- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **endothelin receptor antagonists (macitentan)**. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust entrectinib dose, p. 1056. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **entrectinib**. Avoid potent CYP3A4 inhibitors or adjust entrectinib dose, p. 1056. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to **ergometrine**. Avoid. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to **ergotamine**. Avoid. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **erlotinib**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **erlotinib**. Use with caution and adjust dose. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **esketamine**. Adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of subdermal **etonogestrel**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **everolimus**. Avoid. [Severe] Study
- ▶ **Fluconazole** might increase the risk of bleeding when given with **factor XA inhibitors (apixaban)**. [Moderate] Study
- ▶ Antifungals, azoles (**posaconazole**, **voriconazole**) are predicted to increase the exposure to **factor XA inhibitors (apixaban)**. Avoid. [Moderate] Theoretical
- ▶ **Itraconazole** is predicted to increase the exposure to **factor XA inhibitors (apixaban, rivaroxaban)**. Avoid. [Severe] Theoretical
- ▶ **Ketoconazole** moderately increases the exposure to **factor XA inhibitors (apixaban, rivaroxaban)**. Avoid. [Severe] Study
- ▶ **Itraconazole** is predicted to increase the exposure to **factor XA inhibitors (edoxaban)**. [Severe] Theoretical
- ▶ **Ketoconazole** slightly increases the exposure to **factor XA inhibitors (edoxaban)**. Adjust edoxaban dose, p. 138. [Severe] Study
- ▶ Antifungals, azoles (**posaconazole**, **voriconazole**) are predicted to increase the exposure to **factor XA inhibitors (rivaroxaban)**. Avoid. [Severe] Theoretical
- ▶ Antifungals, azoles (**isavuconazole**, **posaconazole**) are predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **fedratinib**. Adjust **fedratinib** dose, but avoid depending on other drugs taken—consult product literature, p. 1060. [Moderate] Study
- ▶ **Fluconazole** is predicted to increase the exposure to **fedratinib**. Avoid. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment, p. 840. [Mild] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent CYP3A4 inhibitors; avoid in hepatic and renal impairment, p. 840. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **fostamatinib**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Posaconazole** is predicted to increase the exposure to **fostamatinib**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **gefitinib**. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **gilteritinib**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Posaconazole** is predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) potentially increase the exposure to **glecaprevir**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 384. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 384. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **itraconazole**. Administer itraconazole capsules with an acidic beverage. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **ketoconazole**. Administer ketoconazole with an acidic beverage. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **posaconazole**. Avoid use of posaconazole oral suspension. [Moderate] Study
- ▶ **Itraconazole** increases the concentration of **haloperidol**. [Moderate] Study
- ▶ **Fluconazole** slightly increases the exposure to **HIV-protease inhibitors (tipranavir)**. Avoid or adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **isavuconazole**. Avoid or monitor adverse effects. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **itraconazole**. Use with caution and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ketoconazole**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Miconazole** is predicted to increase the concentration of **HIV-protease inhibitors**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Posaconazole** is predicted to increase the exposure to **HIV-protease inhibitors**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to affect the exposure to **voriconazole** and **voriconazole** potentially affects the exposure to **HIV-protease inhibitors**. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors, p. 1062. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ibrutinib**. Avoid potent CYP3A4 inhibitors or adjust **ibrutinib** dose, p. 1062. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **isavuconazole**. Avoid or monitor adverse effects. [Severe] Study

- ▶ Antifungals, azoles (**fluconazole**, **posaconazole**) are predicted to increase the exposure to **imatinitib**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **imatinitib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **isavuconazole**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 231. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see **ivacaftor** p. 317, **tezacaftor** with **ivacaftor** p. 319, and **tezacaftor** with **ivacaftor** and **elixacaftor** p. 320. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ivacaftor**. Adjust dose with potent CYP3A4 inhibitors, see **ivacaftor** p. 317, **lumacaftor** with **ivacaftor** p. 318, **tezacaftor** with **ivacaftor** p. 319, and **tezacaftor** with **ivacaftor** and **elixacaftor** p. 320. [Severe] Study
- ▶ **Lanthanum** is predicted to decrease the absorption of **ketoconazole**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 1065. [Moderate] Study
- ▶ **Letermovir** slightly decreases the exposure to **voriconazole**. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical → Also see TABLE 1 p. 1490
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study → Also see TABLE 1 p. 1490
- ▶ **Clotrimazole** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose, p. 1067. [Severe] Study
- ▶ **Lumacaftor** is predicted to decrease the exposure to antifungals, azoles (**itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**). Avoid or monitor efficacy. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **isavuconazole**. Avoid or monitor adverse effects. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **isavuconazole**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of intramuscular **medroxyprogesterone**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **meglitinides (repaglinide)**. [Moderate] Study
- ▶ **Metoclopramide** potentially decreases the absorption of **posaconazole** oral suspension. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **mifepristone**. [Moderate] Study
- ▶ **Posaconazole** is predicted to increase the exposure to **mifepristone**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 843. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **modafinil**. [Mid] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) increase the risk of neutropenia when given with **monoclonal antibodies (brentuximab vedotin)**. Monitor and adjust dose. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [Severe] Theoretical
- ▶ **Isavuconazole** increases the exposure to **mycophenolate**. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects, p. 67. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. [Severe] Study → Also see TABLE 1 p. 1490
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **neratinib**. Avoid potent CYP3A4 inhibitors or adjust **neratinib** dose, p. 1069. [Severe] Study → Also see TABLE 1 p. 1490
- ▶ **Neurokinin-1 receptor antagonists (aprepitant)** are predicted to increase the exposure to **isavuconazole**. [Moderate] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (netupitant)** are predicted to decrease the exposure to **isavuconazole**. [Moderate] Theoretical
- ▶ **Fluconazole** is predicted to increase the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. [Moderate] Study
- ▶ **Posaconazole** is predicted to increase the exposure to **neurokinin-1 receptor antagonists (aprepitant, fosaprepitant)**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **neurokinin-1 receptor antagonists (fosaprepitant)**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **nilotinib**. [Moderate] Study → Also see TABLE 9 p. 1492

## Antifungals, azoles (continued)

- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Voriconazole** is predicted to increase the exposure to **nintedanib**. [Moderate] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **isavuconazole**. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir increases the exposure to **itraconazole**. [Severe] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ketoconazole**. Adjust dose. [Moderate] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **voriconazole**. Avoid. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **nitisnone**. Adjust dose. [Moderate] Theoretical
- ▶ **NNRTIs (efavirenz)** slightly decrease the exposure to **itraconazole**. Avoid and for 14 days after stopping **efavirenz**. [Moderate] Study
- ▶ **NNRTIs (efavirenz)** moderately decrease the exposure to **ketoconazole**. [Severe] Study
- ▶ **NNRTIs (efavirenz)** slightly decrease the exposure to **posaconazole**. Avoid. [Moderate] Study
- ▶ **NNRTIs (efavirenz)** moderately decrease the exposure to **voriconazole** and **voriconazole** slightly increases the exposure to **NNRTIs (efavirenz)**. Adjust dose. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- ▶ **NNRTIs (nevirapine)** moderately decrease the exposure to **itraconazole**. Avoid and for 14 days after stopping **nevirapine**. [Moderate] Study
- ▶ **NNRTIs (nevirapine)** moderately decrease the exposure to **ketoconazole**. Avoid. [Severe] Study
- ▶ **NNRTIs (nevirapine)** are predicted to decrease the exposure to **voriconazole** and **voriconazole** increases the exposure to **NNRTIs (nevirapine)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Fluconazole** slightly to moderately increases the exposure to **NNRTIs (nevirapine)**. [Moderate] Study
- ▶ **Fluconazole** slightly increases the exposure to **NRTIs (zidovudine)**. [Moderate] Study
- ▶ **Fluconazole** moderately increases the exposure to **NSAIDs (celecoxib)**. Adjust **celecoxib** dose, p. 1225. [Moderate] Study
- ▶ **Voriconazole** slightly increases the exposure to **NSAIDs (diclofenac)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Voriconazole** moderately increases the exposure to **NSAIDs (ibuprofen)**. Adjust dose. [Moderate] Study
- ▶ **Fluconazole** increases the exposure to **NSAIDs (parecoxib)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **olaparib**. Avoid potent CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [Moderate] Study
- ▶ **Miconazole** is predicted to increase the exposure to **opioids (alfentanil)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **opioids (methadone)**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **osilodrostat**. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- ▶ **Fluconazole** increases the exposure to **ospemifene**. Use with caution or avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **oxybutynin**. [Mild] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1072. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 1009. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Posaconazole** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **pazopanib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 1073. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **pemigatinib**. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **pemigatinib**. Avoid or adjust **pemigatinib** dose, p. 1074. [Severe] Study
- ▶ **Miconazole** greatly increases the anticoagulant effect of **phenindione**. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 878. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Miconazole** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 879. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492

- ▶ **Miconazole** is predicted to increase the exposure to **pimozide**. Avoid. [Moderate] Theoretical
- ▶ **Pioglitazone** potentially decreases the exposure to **isavuconazole**. Use with caution or avoid. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ponatinib**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1075. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) given with carbimazole are predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical
- ▶ **Proton pump inhibitors** decrease the absorption of **itraconazole**. Administer itraconazole capsules with an acidic beverage. [Moderate] Study
- ▶ **Proton pump inhibitors** decrease the absorption of **ketoconazole**. Administer ketoconazole with an acidic beverage. [Moderate] Study
- ▶ **Proton pump inhibitors** decrease the absorption of **posaconazole** oral suspension. Avoid. [Moderate] Study
- ▶ **Voriconazole** increases the exposure to **proton pump inhibitors** (**esomeprazole**, **omeprazole**). Adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
- ▶ **Miconazole** is predicted to increase the concentration of **reboxetine**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **regorafenib**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **itraconazole**, **ketoconazole**, **miconazole**, **voriconazole**) are predicted to increase the exposure to **retinoids** (**alitretinoin**). Adjust alitretinoin dose, p. 1356. [Moderate] Theoretical
- ▶ **Posaconazole** is predicted to increase the risk of tretinoin toxicity when given with **retinoids** (**tretinoin**). Monitor and adjust dose. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the risk of tretinoin toxicity when given with **retinoids** (**tretinoin**). [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1077. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Rifamycins** (**rifabutin**) are predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- ▶ **Rifamycins** (**rifabutin**) decrease the concentration of **voriconazole** and **voriconazole** increases the concentration of **rifamycins** (**rifabutin**). Avoid or adjust **voriconazole** dose, p. 654. [Severe] Study
- ▶ **Rifamycins** (**rifampicin**) slightly decrease the exposure to **fluconazole**. Adjust dose. [Moderate] Study
- ▶ **Rifamycins** (**rifampicin**) are predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Study
- ▶ **Rifamycins** (**rifampicin**) markedly decrease the exposure to **itraconazole**. Avoid and for 14 days after stopping **rifampicin**. [Moderate] Study
- ▶ **Rifamycins** (**rifampicin**) markedly decrease the exposure to **ketoconazole** and **ketoconazole** potentially decreases the exposure to **rifamycins** (**rifampicin**). Avoid. [Moderate] Study
- ▶ **Rifamycins** (**rifampicin**) are predicted to decrease the exposure to **posaconazole**. Avoid. [Moderate] Anecdotal
- ▶ **Rifamycins** (**rifampicin**) very markedly decrease the exposure to **voriconazole**. Avoid. [Moderate] Study
- ▶ **Fluconazole** increases the risk of uveitis when given with **rifamycins** (**rifabutin**). Adjust dose. [Severe] Study
- ▶ **Ketoconazole** is predicted to increase the concentration of **rifamycins** (**rifabutin**) and **rifamycins** (**rifabutin**) are predicted to decrease the concentration of **ketoconazole**. Avoid. [Severe] Theoretical
- ▶ **Miconazole** is predicted to increase the concentration of **rifamycins** (**rifabutin**). Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **posaconazole**) increase the concentration of **rifamycins** (**rifabutin**) and **rifamycins** (**rifabutin**) decrease the concentration of antifungals, azoles (**itraconazole**, **posaconazole**). Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **posaconazole**) are predicted to increase the exposure to **riociguat**. Adjust **riociguat** dose and monitor blood pressure, p. 200. [Moderate] Theoretical
- ▶ **Ketoconazole** moderately increases the exposure to **riociguat**. Adjust **riociguat** dose and monitor blood pressure, p. 200. [Moderate] Study
- ▶ Antifungals, azoles (**isavuconazole**, **posaconazole**) are predicted to increase the exposure to **roxolitinib**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **roxolitinib**. Adjust dose and monitor adverse effects. [Moderate] Study
- ▶ **Fluconazole** is predicted to increase the exposure to **roxolitinib**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Ketoconazole** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. [Severe] Theoretical
- ▶ **Fluconazole** is predicted to increase the exposure to **selexipag**. [Unknown] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**) are predicted to increase the exposure to **selpercatinib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **selpercatinib**. Adjust **selpercatinib** dose, p. 1079. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **miconazole**, **posaconazole**) are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Miconazole** is predicted to increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **SNRIs** (**venlafaxine**). [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Oral **sodium bicarbonate** decreases the absorption of **ketoconazole**. [Moderate] Study
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to antifungals, azoles. Separate administration by at least 2 hours. [Moderate] Theoretical

## Antifungals, azoles (continued)

- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **solifenacin**. Adjust solifenacin p. 842 or tamsulosin with solifenacin p. 848 dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Voriconazole** is predicted to increase the exposure to **SSRIs (citalopram)**. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **SSRIs (dapoxetine)**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose, p. 887. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **voriconazole**) are predicted to increase the exposure to **SSRIs (escitalopram)**. Use with caution and adjust dose. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **St John's wort** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** moderately decreases the exposure to **voriconazole**. Avoid. [Moderate] Study
- ▶ **Isavuconazole** slightly increases the exposure to **statins (atorvastatin)**. [Moderate] Study
- ▶ **Miconazole** (including the oral gel) might increase the exposure to **statins (atorvastatin)**. [Moderate] Theoretical
- ▶ **Posaconazole** is predicted to increase the exposure to **statins (atorvastatin)**. Avoid. [Severe] Anecdotal
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study → Also see TABLE 1 p. 1490
- ▶ **Fluconazole** is predicted to increase the exposure to **statins (atorvastatin, simvastatin)**. Monitor and adjust dose. [Severe] Anecdotal → Also see TABLE 1 p. 1490
- ▶ Antifungals, azoles (**fluconazole**, **miconazole**) are predicted to increase the exposure to **statins (fluvastatin)**. [Moderate] Study → Also see TABLE 1 p. 1490
- ▶ **Isavuconazole** is predicted to increase the exposure to **statins (fluvastatin, rosuvastatin)**. [Moderate] Theoretical
- ▶ **Isavuconazole** is predicted to increase the exposure to **statins (simvastatin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Miconazole** (including the oral gel) is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Anecdotal
- ▶ **Posaconazole** markedly to very markedly increases the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study → Also see TABLE 1 p. 1490
- ▶ **Isavuconazole** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **miconazole**) are predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Voriconazole** is predicted to increase the concentration of **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **sunitinib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1080. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Miconazole** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid or monitor—consult product literature. [Severe] Study
- ▶ **Miconazole** is predicted to increase the concentration of **taxanes (docetaxel)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **taxanes (docetaxel)**. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Anecdotal
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) might increase the exposure to **tepotinib**. Avoid. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
- ▶ **Isavuconazole** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) might increase the exposure to **tigecycline**. [Mild] Anecdotal → Also see TABLE 1 p. 1490
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1200. [Moderate] Study
- ▶ **Isavuconazole** increases the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1200. [Moderate] Study
- ▶ **Isavuconazole** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1200. [Moderate] Study
- ▶ **Posaconazole** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1200. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors, p. 724. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **topotecan**. [Severe] Study

- ▶ **Isavuconazole** is predicted to increase the exposure to **topotecan**. [Moderate] Theoretical
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 1492
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 1 p. 1490
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
  - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) increase the exposure to **triptans (almotriptan)**. [Mid] Study
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **triptans (eletriptan)**. Avoid. [Severe] Study
  - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
  - ▶ **Posaconazole** is predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Moderate] Study
  - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1492
  - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 1 p. 1490 → Also see TABLE 9 p. 1492
  - ▶ **Miconazole** is predicted to increase the concentration of **vinca alkaloids**. Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ Antifungals, azoles (**clotrimazole**, **ketoconazole**) are predicted to decrease the exposure to **vitamin D substances (colecalciferol)**. [Moderate] Theoretical
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [Moderate] Study
  - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
  - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- Antihistamines, non-sedating** → see TABLE 9 p. 1492 (QT-interval prolongation)
- acrivastine · azelastine · bilastine · cetirizine · desloratadine · fexofenadine · levocetirizine · loratadine · mizolastine · rupatadine
- ▶ Since systemic absorption can follow topical application, the possibility of interactions with topical **azelastine** should be borne in mind.
  - ▶ Apple juice and orange juice decrease the exposure to **fexofenadine**.
- ▶ Oral **antacids** decrease the absorption of oral **fexofenadine**. Separate administration by 2 hours. [Mid] Study
  - ▶ **Anti-androgens (apalutamide)** slightly decrease the exposure to **fexofenadine**. [Mid] Study
  - ▶ **Anti-androgens (darolutamide)** are predicted to increase the concentration of **fexofenadine**. [Moderate] Theoretical
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to antihistamines, non-sedating (**fexofenadine**, **mizolastine**). [Severe] Theoretical
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **mizolastine**. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **mizolastine**. Avoid. [Moderate] Theoretical
  - ▶ **Berotrastat** is predicted to increase the concentration of **fexofenadine**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Antihistamines, non-sedating** are predicted to decrease the effects of **betahistine**. [Moderate] Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
  - ▶ **Ceritinib** is predicted to increase the exposure to **fexofenadine**. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **mizolastine**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
  - ▶ **Crizotinib** is predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
  - ▶ **Elhexacftor** is predicted to increase the exposure to **fexofenadine**. [Moderate] Theoretical
  - ▶ **Eliglustat** is predicted to increase the exposure to **fexofenadine**. Adjust dose. [Moderate] Study
  - ▶ **Grapefruit juice** slightly decreases the exposure to **bilastine**. **Bilastine** should be taken 1 hour before or 2 hours after grapefruit. [Moderate] Study
  - ▶ **Grapefruit juice** increases the exposure to **rupatadine**. Avoid. [Moderate] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **mizolastine**. Avoid. [Severe] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
  - ▶ **Ibrutinib** is predicted to increase the exposure to **fexofenadine**. Separate administration by at least 6 hours. [Moderate] Theoretical
  - ▶ **Idelalisib** is predicted to increase the exposure to **mizolastine**. Avoid. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
  - ▶ **Imatinib** is predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
  - ▶ **Ivacaftor** is predicted to increase the exposure to **fexofenadine**. [Moderate] Study
  - ▶ **Lapatinib** is predicted to increase the exposure to **fexofenadine**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **fexofenadine**. [Moderate] Study
  - ▶ **Letermovir** is predicted to increase the concentration of **fexofenadine**. [Moderate] Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
  - ▶ **Lorlatinib** decreases the exposure to **fexofenadine**. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **mizolastine**. Avoid. [Severe] Study

**Antihistamines, non-sedating** (continued)

- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **rupatadine**. Avoid. [\[Moderate\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **mizolastine**. [\[Severe\]](#) Theoretical
- ▶ **MAOIs, irreversible** are predicted to increase the risk of antimuscarinic adverse effects when given with **antihistamines, non-sedating**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **foxfenadine**. [\[Mild\]](#) Theoretical
- ▶ **Neratinib** is predicted to increase the exposure to **foxfenadine**. [\[Moderate\]](#) Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **mizolastine**. [\[Severe\]](#) Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **rupatadine**. Avoid. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **mizolastine**. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **rupatadine**. Avoid. [\[Moderate\]](#) Study
- ▶ **Olaparib** might increase the exposure to **foxfenadine**. [\[Moderate\]](#) Theoretical
- ▶ **Osimertinib** is predicted to increase the exposure to **foxfenadine**. [\[Moderate\]](#) Study
- ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **foxfenadine**. [\[Moderate\]](#) Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **foxfenadine**. [\[Mild\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **bilastine**. [\[Moderate\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** increase the clearance of **foxfenadine**. [\[Moderate\]](#) Study
- ▶ **Roxadustat** is predicted to increase the exposure to **foxfenadine**. Monitor adverse effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **Sotorasib** is predicted to increase the exposure to **foxfenadine**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Taxanes (cabazitaxel)** are predicted to affect the exposure to **foxfenadine**. Manufacturer advises take 12 hours before or 3 hours after **cabazitaxel**. [\[Moderate\]](#) Theoretical
- ▶ **Tepotinib** is predicted to increase the concentration of **foxfenadine**. [\[Severe\]](#) Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **foxfenadine**. [\[Moderate\]](#) Study
- ▶ **Tucatinib** is predicted to increase the exposure to **foxfenadine**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Vandetanib** is predicted to increase the exposure to **foxfenadine**. [\[Moderate\]](#) Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **foxfenadine**. [\[Severe\]](#) Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **foxfenadine**. Use with caution and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **foxfenadine**. [\[Moderate\]](#) Theoretical

**Antihistamines, sedating** → see TABLE 9 p. 1492 (QT-interval prolongation), TABLE 11 p. 1492 (CNS depressant effects), TABLE 10 p. 1492 (antimuscarinics)

alimemazine · antazoline · buclizine · chlorphenamine · cinnarizine · clemastine · cyclizine · cyproheptadine · doxylamine · hydroxyzine · ketotifen · pizotifen · promethazine

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application of **ketotifen**, the possibility of interactions should be borne in mind.

- ▶ **Hydroxyzine** potentially increases the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [\[Severe\]](#) Theoretical
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can antihistamines, sedating (**chlorphenamine, clemastine, cyclizine, cyproheptadine, hydroxyzine, promethazine**); concurrent use might increase the risk of

developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see TABLE 11 p. 1492 → Also see TABLE 10 p. 1492

- ▶ **Antihistamines, sedating** are predicted to decrease the effects of **betahistine**. [\[Moderate\]](#) Theoretical
- ▶ **Cyproheptadine** might decrease the efficacy of **fenfluramine**. [\[Severe\]](#) Theoretical
- ▶ **MAOIs, irreversible** are predicted to increase the risk of antimuscarinic adverse effects when given with **antihistamines, sedating**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Cyproheptadine** decreases the effects of **metypalone**. Avoid. [\[Moderate\]](#) Study
- ▶ **Antihistamines, sedating** are predicted to decrease the efficacy of **pitolisant**. [\[Moderate\]](#) Theoretical
- ▶ **Cyproheptadine** potentially decreases the effects of **SSRIs**. [\[Moderate\]](#) Anecdotal

**Antimalarials** → see TABLE 9 p. 1492 (QT-interval prolongation)

artemether · artemimol · atovaquone · chloroquine · lumefantrine · mefloquine · piperaquine · primaquine · proguanil · pyrimethamine · quinine

**PHARMACOLOGY** **Piperaquine** has a long half-life; there is a potential for drug interactions to occur for up to 3 months after treatment has been stopped.

- ▶ **Chloroquine** is predicted to decrease the effects of **agalsidase alfa**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Chloroquine** is predicted to decrease the effects of **agalsidase beta**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Antimalarials (chloroquine, primaquine)** are predicted to increase the risk of methaemoglobinemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [\[Severe\]](#) Theoretical
- ▶ **Oral antacids** are predicted to decrease the absorption of oral **chloroquine**. Separate administration by at least 4 hours. [\[Moderate\]](#) Theoretical
- ▶ **Oral antacids** are predicted to decrease the absorption of oral **proguanil**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **artemether** with lumefantrine. Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 1492
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the concentration of **piperaquine**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the concentration of **piperaquine**. [\[Severe\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **artemether** with lumefantrine. Avoid. [\[Severe\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **piperaquine**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, phenobarbital, primidone)** potentially increase the risk of toxicity when given with **quinine**. [\[Unknown\]](#) Study
- ▶ **Pyrimethamine** increases the risk of haematological toxicity when given with **antiepileptics (fosphenytoin, phenytoin)**. [\[Severe\]](#) Study
- ▶ **Pyrimethamine** is predicted to increase the risk of haematological toxicity when given with **antiepileptics (phenobarbital, primidone)**. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the concentration of **piperaquine**. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole, itraconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **mefloquine**. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (ketoconazole)** increase the exposure to **mefloquine**. [\[Moderate\]](#) Study
- ▶ **Antimalarials (proguanil)** are predicted to increase the risk of adverse effects when given with antimalarials (**pyrimethamine**). [\[Severe\]](#) Theoretical
- ▶ **Mefloquine** is predicted to increase the risk of bradycardia when given with **beta blockers, non-selective**. [\[Severe\]](#) Theoretical
- ▶ **Mefloquine** is predicted to increase the risk of bradycardia when given with **beta blockers, selective**. [\[Severe\]](#) Theoretical

- ▶ **Mefloquine** is predicted to increase the risk of bradycardia when given with **calcium channel blockers**. [Severe] Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **piperazine**. [Severe] Theoretical
  - ▶ **Calcium salts (calcium carbonate)** might decrease the absorption of **chloroquine**. Separate administration by at least 4 hours. [Moderate] Study
  - ▶ **Calcium salts (calcium carbonate)** are predicted to decrease the absorption of **proguanil**. Separate administration by at least 2 hours. [Moderate] Study
  - ▶ **Chloroquine** decreases the efficacy of oral **cholera vaccine**. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the concentration of **piperazine**. [Severe] Theoretical
  - ▶ **Crizotinib** is predicted to increase the concentration of **piperazine**. [Severe] Theoretical
  - ▶ Antimalarials (**chloroquine, primaquine**) are predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [Severe] Theoretical
  - ▶ **Mefloquine** is predicted to increase the risk of bradycardia when given with **digoxin**. [Severe] Theoretical
  - ▶ **Quinine** increases the concentration of **digoxin**. Monitor and adjust **digoxin** dose, p. 117. [Severe] Anecdotal
  - ▶ **Grapefruit** juice increases the exposure to **artemether**. [Unknown] Study
  - ▶ **Grapefruit** juice is predicted to increase the concentration of **piperazine**. Avoid. [Severe] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** decrease the clearance of **chloroquine**. [Moderate] Study
  - ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **quinine**. [Moderate] Study
  - ▶ **HIV-protease inhibitors** decrease the exposure to **atovaquone**. Avoid if boosted with ritonavir. [Moderate] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **piperazine**. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to decrease the exposure to **proguanil**. Avoid. [Moderate] Study
  - ▶ **HIV-protease inhibitors** are predicted to affect the exposure to **quinine**. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the concentration of **piperazine**. [Severe] Theoretical
  - ▶ **Imatinib** is predicted to increase the concentration of **piperazine**. [Severe] Theoretical
  - ▶ Oral **kaolin** decreases the absorption of oral **chloroquine**. Separate administration by at least 4 hours. [Moderate] Study
  - ▶ **Lanthanum** is predicted to decrease the absorption of **chloroquine**. Separate administration by at least 2 hours. [Moderate] Theoretical
  - ▶ **Chloroquine** is predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. [Severe] Theoretical
  - ▶ **Letermovir** is predicted to increase the concentration of **piperazine**. [Severe] Theoretical
  - ▶ **Macrolides** might increase the risk of serious cardiovascular adverse effects when given with **chloroquine**. [Severe] Theoretical
  - ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the concentration of **piperazine**. [Severe] Theoretical
  - ▶ Oral **magnesium** trisilicate decreases the absorption of oral **chloroquine**. Separate administration by at least 4 hours. [Moderate] Study
  - ▶ **Mepacrine** is predicted to increase the concentration of **primaquine**. Avoid. [Moderate] Theoretical
  - ▶ **Pyrimethamine** is predicted to increase the risk of adverse effects when given with **methotrexate**. [Severe] Theoretical
  - ▶ **Metoclopramide** decreases the concentration of **atovaquone**. Avoid. [Moderate] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **artemether** with lumefantrine. Avoid. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the concentration of **piperazine**. Avoid. [Moderate] Theoretical
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the concentration of **piperazine**. [Severe] Theoretical
  - ▶ **Nilotinib** is predicted to increase the concentration of **piperazine**. [Severe] Theoretical
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **atovaquone**. [Moderate] Theoretical
  - ▶ **NRTIs (efavirenz)** decrease the concentration of **artemether**. [Severe] Study → Also see TABLE 9 p. 1492
  - ▶ **NRTIs (efavirenz)** moderately decrease the exposure to **atovaquone**. Avoid. [Moderate] Study
  - ▶ **NRTIs (efavirenz)** affect the exposure to **proguanil**. Avoid. [Moderate] Study
  - ▶ **NRTIs (etravirine)** decrease the exposure to **artemether**. [Moderate] Study
  - ▶ **Pyrimethamine** is predicted to increase the risk of adverse effects when given with **NRTIs (zidovudine)**. [Severe] Theoretical
  - ▶ **Pyrimethamine** is predicted to increase the risk of adverse effects when given with **pemtrexed**. [Severe] Theoretical
  - ▶ **Chloroquine** is predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [Severe] Theoretical
  - ▶ **Chloroquine** moderately decreases the exposure to **praziquantel**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Chloroquine** decreases the efficacy of **rabies vaccine** (intra-dermal). Avoid. [Moderate] Study
  - ▶ **Chloroquine** might decrease the effects of **remdesivir**. Avoid. [Moderate] Theoretical
  - ▶ **Rifamycins (rifabutin)** slightly decrease the exposure to **atovaquone**. Avoid. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **artemether** with lumefantrine. Avoid. [Severe] Study
  - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **atovaquone** and **atovaquone** slightly increases the exposure to **rifamycins (rifampicin)**. Avoid. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **mefloquine**. [Severe] Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the concentration of **piperazine**. Avoid. [Moderate] Theoretical
  - ▶ **Rifamycins (rifampicin)** decrease the exposure to **quinine**. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the concentration of **piperazine**. Avoid. [Moderate] Theoretical
  - ▶ **Pyrimethamine** increases the risk of adverse effects when given with **sulfonamides**. [Severe] Study
  - ▶ **Tetracyclines (tetracycline)** decrease the concentration of **atovaquone**. [Moderate] Study
  - ▶ **Pyrimethamine** increases the risk of adverse effects when given with **trimethoprim**. [Severe] Study
- Antipsychotics, second generation** → see TABLE 8 p. 1491 (hypotension), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 11 p. 1492 (CNS depressant effects), TABLE 10 p. 1492 (antimuscarinics)
- amisulpride • aripiprazole • asenapine • cariprazine • clozapine • lurasidone • olanzapine • paliperidone • quetiapine • risperidone
- ▶ **Clozapine** and **olanzapine** dose adjustment might be necessary if smoking started or stopped during treatment.
  - ▶ Avoid concomitant use of **clozapine** with drugs that have a substantial potential for causing agranulocytosis or a substantial potential to depress bone marrow function.
- ▶ **Clozapine** can cause constipation, as can **acidinium**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to moderately decrease the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 427. [Moderate] Study
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [Severe] Study → Also see TABLE 9 p. 1492
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **quetiapine**. [Moderate] Study
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1492

## Antipsychotics, second generation (continued)

- ▶ **Anti-androgens (enzalutamide)** are predicted to decrease the exposure to **clozapine**. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 430. [Moderate] Study
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Clozapine** can cause constipation, as can **antiarrhythmics (disopyramide, propafenone)**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
- ▶ **Antiepileptics (carbamazepine)** are predicted to increase the risk of myelosuppression when given with **clozapine**. Avoid. [Severe] Anecdotal
- ▶ **Antiepileptics (carbamazepine)** potentially decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 427. [Moderate] Study → Also see TABLE 11 p. 1492
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical → Also see TABLE 11 p. 1492
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study → Also see TABLE 11 p. 1492
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [Severe] Study → Also see TABLE 11 p. 1492
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **quetiapine**. [Moderate] Study → Also see TABLE 11 p. 1492
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1492
- ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **clozapine**. [Moderate] Anecdotal → Also see TABLE 11 p. 1492
- ▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (valproate)** increase the risk of adverse effects when given with **olanzapine**. [Severe] Study
- ▶ **Antiepileptics (valproate)** slightly increase the exposure to **paliperidone**. Adjust dose. [Moderate] Study
- ▶ **Antiepileptics (valproate)** potentially increase the risk of neutropenia when given with **quetiapine**. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole)** are predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 430. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 427. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (posaconazole)** moderately increase the exposure to **lurasidone**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to antipsychotics, second generation (**lurasidone, quetiapine**). Avoid. [Severe] Study
- ▶ **Clozapine** can cause constipation, as can **antihistamines, sedating (chlorphenamine, clemastine, cyclizine, cyproheptadine, hydroxyzine, promethazine)**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
- ▶ Antipsychotics, second generation (**clozapine**) can cause constipation, as can antipsychotics, second generation (**olanzapine, quetiapine**); concurrent use might increase the risk of developing intestinal obstruction. [Severe] Anecdotal → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492
- ▶ **Clozapine** can cause constipation, as can **atropine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
- ▶ **Axitinib** is predicted to increase the exposure to antipsychotics, second generation (**clozapine, olanzapine**). [Moderate] Theoretical
- ▶ **Clozapine** can cause constipation, as can **baclofen**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492
- ▶ **Bupropion** is predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 427. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study → Also see TABLE 8 p. 1491
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 430. [Moderate] Study → Also see TABLE 8 p. 1491
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study → Also see TABLE 8 p. 1491
- ▶ **Cenobamate** is predicted to decrease the exposure to antipsychotics, second generation (**lurasidone, quetiapine**). Adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 1492
- ▶ **Cinacalcet** is predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 427. [Moderate] Study
- ▶ **Cinacalcet** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to antipsychotics, second generation (**lurasidone, quetiapine**). Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 427. [Moderate] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ **Combined hormonal contraceptives** increases the concentration of **clozapine**. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **olanzapine**. Adjust dose. [Moderate] Anecdotal
- ▶ **Crizotinib** is predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 430. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Clozapine** can cause constipation, as can **cyclopentolate**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
- ▶ **Dabrafenib** is predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ **Clozapine** can cause constipation, as can **darifenacin**; concurrent use might increase the risk of developing

- intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
- ▶ **Clozapine** can cause constipation, as can **dicycloverine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
  - ▶ **Clozapine** can cause constipation, as can **dimenhydrinate**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
  - ▶ Antipsychotics, second generation (**amisulpride, olanzapine, paliperidone, quetiapine, risperidone**) are predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 9 p. 1492
  - ▶ Antipsychotics, second generation (**aripiprazole, clozapine**) are predicted to decrease the effects of **dopamine receptor agonists**. [Moderate] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 10 p. 1492
  - ▶ **Asenapine** is predicted to decrease the effects of **dopamine receptor agonists**. Adjust dose. [Moderate] Theoretical → Also see TABLE 8 p. 1491
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **quetiapine**. [Moderate] Study
  - ▶ **Clozapine** can cause constipation, as can **fesoterodine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
  - ▶ **Clozapine** can cause constipation, as can **flavoxate**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
  - ▶ **Clozapine** can cause constipation, as can **flupentixol**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492
  - ▶ **Clozapine** can cause constipation, as can **glycopyrronium**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
  - ▶ **Grapefruit** juice is predicted to increase the exposure to antipsychotics, second generation (**lurasidone, quetiapine**). Avoid. [Severe] Theoretical
  - ▶ **Grapefruit** juice is predicted to increase the exposure to **cariprazine**. Avoid. [Moderate] Study
  - ▶ **Clozapine** can cause constipation, as can **haloperidol**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492 → Also see TABLE 10 p. 1492
  - ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 427. [Moderate] Study
  - ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to affect the exposure to **clozapine**. Avoid. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to antipsychotics, second generation (**lurasidone, quetiapine**). Avoid. [Severe] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
  - ▶ **Clozapine** can cause constipation, as can **homatropine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
  - ▶ **Clozapine** can cause constipation, as can **hyoscine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
  - ▶ **Idelalisib** is predicted to increase the exposure to antipsychotics, second generation (**lurasidone, quetiapine**). Avoid. [Severe] Study
  - ▶ **Idelalisib** is predicted to slightly increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 427. [Moderate] Study
  - ▶ **Idelalisib** is predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **lurasidone**. Adjust lurasidone dose, p. 430. [Moderate] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
  - ▶ **Interferons (ropeginterferon alfa)** are predicted to increase the exposure to **risperidone**. [Moderate] Theoretical
  - ▶ **Clozapine** can cause constipation, as can **ipratropium**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
  - ▶ **Clozapine** can cause constipation, as can **iron**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Anecdotal
  - ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **clozapine**. Avoid. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to decrease the exposure to **clozapine**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
  - ▶ **Amisulpride** is predicted to decrease the effects of **levodopa**. Avoid. [Severe] Theoretical
  - ▶ Antipsychotics, second generation (**aripiprazole, clozapine, lurasidone, paliperidone**) are predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1491
  - ▶ **Asenapine** is predicted to decrease the effects of **levodopa**. Adjust dose. [Severe] Theoretical → Also see TABLE 8 p. 1491
  - ▶ **Olanzapine** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Anecdotal → Also see TABLE 8 p. 1491
  - ▶ **Quetiapine** decreases the effects of **levodopa**. [Severe] Anecdotal → Also see TABLE 8 p. 1491
  - ▶ **Risperidone** is predicted to decrease the effects of **levodopa**. Avoid or adjust dose. [Severe] Anecdotal → Also see TABLE 8 p. 1491
  - ▶ Antipsychotics, second generation (**quetiapine, risperidone**) potentially increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1492
  - ▶ **Clozapine** can cause constipation, as can **loperamide**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Anecdotal
  - ▶ **Clozapine** can cause constipation, as can **loxapine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492 → Also see TABLE 10 p. 1492
  - ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 427. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
  - ▶ **Macrolides (erythromycin)** potentially increase the risk of toxicity when given with **clozapine**. [Severe] Anecdotal
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **lurasidone**. Adjust lurasidone dose, p. 430. [Moderate] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study

## Antipsychotics, second generation (continued)

- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to antipsychotics, second generation (**lurasidone, quetiapine**). Avoid. [\[Severe\]](#) Study
- ▶ **Methyphenidate** might increase the risk of dyskinesias when given with **paliperidone**. [\[Severe\]](#) Theoretical
- ▶ **Methyphenidate** increases the risk of dyskinesias when given with **risperidone**. [\[Severe\]](#) Anecdotal
- ▶ **Mexiletine** increases the concentration of **clozapine**. Monitor adverse effects and adjust dose. [\[Severe\]](#) Study
- ▶ **Mexiletine** is predicted to increase the exposure to **olanzapine**. Adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 427. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **lurasidone**. Avoid. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **quetiapine**. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **risperidone**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 430. [\[Moderate\]](#) Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **quetiapine**. Avoid. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 430. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **quetiapine**. Avoid. [\[Moderate\]](#) Study
- ▶ **Nirmatrelvir** boosted with **ritonavir** is predicted to increase the concentration of antipsychotics, second generation (**clozapine, lurasidone, quetiapine**). Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with **ritonavir** is predicted to increase the concentration of **risperidone**. [\[Severe\]](#) Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **quetiapine**. [\[Moderate\]](#) Study
- ▶ **Olaparib** might alter the exposure to **quetiapine**. [\[Moderate\]](#) Theoretical
- ▶ **Clozapine** can cause constipation, as can **opioids**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Anecdotal → Also see **TABLE 11** p. 1492
- ▶ **Clozapine** can cause constipation, as can **orphenadrine**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see **TABLE 10** p. 1492
- ▶ **Osilodrostat** increases the concentration of **clozapine**. Monitor adverse effects and adjust dose. [\[Severe\]](#) Study
- ▶ **Osilodrostat** is predicted to increase the exposure to **olanzapine**. Adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Clozapine** can cause constipation, as can **oxybutynin**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see **TABLE 10** p. 1492
- ▶ **Clozapine** can cause constipation, as can **phenothiazines**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see **TABLE 8** p. 1491 → Also see **TABLE 11** p. 1492 → Also see **TABLE 10** p. 1492
- ▶ **Clozapine** can cause constipation, as can **pimozide**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see **TABLE 8** p. 1491 → Also see **TABLE 10** p. 1492
- ▶ **Clozapine** can cause constipation, as can **propiverine**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see **TABLE 10** p. 1492
- ▶ **Clozapine** can cause constipation, as can **propranolol**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see **TABLE 10** p. 1492
- ▶ **Quinolones (ciprofloxacin)** increase the concentration of **clozapine**. Monitor adverse effects and adjust dose. [\[Severe\]](#) Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **olanzapine**. Adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **quetiapine**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to moderately decrease the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 427. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** decrease the exposure to **clozapine**. [\[Severe\]](#) Anecdotal
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **lurasidone**. Avoid. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **quetiapine**. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **risperidone**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Rucaparib** increases the concentration of **clozapine**. Monitor adverse effects and adjust dose. [\[Severe\]](#) Study
- ▶ **Rucaparib** is predicted to increase the exposure to **olanzapine**. Adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Clozapine** can cause constipation, as can **solifenacin**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see **TABLE 10** p. 1492
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 427. [\[Moderate\]](#) Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **risperidone**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **SSRIs (fluvoxamine)** increase the exposure to **asenapine**. [\[Moderate\]](#) Study
- ▶ **SSRIs (fluvoxamine)** increase the concentration of **clozapine**. Monitor adverse effects and adjust dose. [\[Severe\]](#) Study
- ▶ **SSRIs (fluvoxamine)** moderately increase the exposure to **olanzapine**. Adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **SSRIs (paroxetine)** moderately increase the exposure to **asenapine**. [\[Moderate\]](#) Study
- ▶ **St John's wort** is predicted to decrease the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **paliperidone**. [\[Severe\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **quetiapine**. [\[Moderate\]](#) Study
- ▶ **Terbinafine** is predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 427. [\[Moderate\]](#) Study
- ▶ **Terbinafine** is predicted to increase the exposure to **risperidone**. Adjust dose. [\[Moderate\]](#) Study

- ▶ **Teriflunomide** is predicted to decrease the exposure to **clozapine**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clozapine** can cause constipation, as can **tiotropium**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
- ▶ **Clozapine** can cause constipation, as can **tolterodine**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
- ▶ **Clozapine** can cause constipation, as can **tricyclic antidepressants**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492 → Also see TABLE 10 p. 1492
- ▶ **Clozapine** can cause constipation, as can **trihyphenidyl**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
- ▶ **Clozapine** can cause constipation, as can **tropicamide**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
- ▶ **Clozapine** can cause constipation, as can **trospium**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
- ▶ **Clozapine** can cause constipation, as can **umeclidinium**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
- ▶ **Vemurafenib** increases the concentration of **clozapine**. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **olanzapine**. Adjust dose. [Moderate] Anecdotal
- ▶ **Clozapine** can cause constipation, as can **zuclophenthixol**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492
- Antihypermucocytin immunoglobulin (rabbit)** → see immunoglobulins
- Apalutamide** → see anti-androgens
- Apixaban** → see factor XA inhibitors
- Apomorphine** → see dopamine receptor agonists
- Apraclonidine** → see TABLE 6 p. 1491 (bradycardia), TABLE 8 p. 1491 (hypotension), TABLE 11 p. 1492 (CNS depressant effects)
- ▶ **Amfetamines** are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
- ▶ **Methylphenidate** is predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
- ▶ **Sympathomimetics, inotropic** are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
- ▶ **Sympathomimetics, vasoconstrictor** are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
- Apremilast** → see phosphodiesterase type-4 inhibitors
- Apreritant** → see neurokinin-1 receptor antagonists
- Argatroban** → see thrombin inhibitors
- Aripiprazole** → see antipsychotics, second generation
- Arsenic trioxide** → see TABLE 15 p. 1493 (myelosuppression), TABLE 9 p. 1492 (QT-interval prolongation)
- Artemether** → see antimalarials
- Artenimol** → see antimalarials
- Articaine** → see TABLE 11 p. 1492 (CNS depressant effects)
- Ascorbic acid**
  - ▶ **Ascorbic acid** is predicted to increase the risk of cardiovascular adverse effects when given with **iron chelators (deferiprone)**. [Severe] Theoretical
  - ▶ **Ascorbic acid** might increase the risk of cardiovascular adverse effects when given with **iron chelators (desferrioxamine)**. Manufacturer advises caution or adjust ascorbic acid dose; monitor cardiac function and avoid concurrent use in those with cardiac failure. [Severe] Theoretical
- Asenapine** → see antipsychotics, second generation
- Asparaginase** → see TABLE 1 p. 1490 (hepatotoxicity), TABLE 15 p. 1493 (myelosuppression)
  - ▶ **Asparaginase** is predicted to increase the risk of hepatotoxicity when given with **imatnib**. [Severe] Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Asparaginase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1490 → Also see TABLE 15 p. 1493
  - ▶ **Asparaginase** potentially increases the risk of neurotoxicity when given with **vinca alkaloids (vincristine)**. **Vincristine** should be taken 3 to 24 hours before **asparaginase**. [Severe] Anecdotal → Also see TABLE 1 p. 1490 → Also see TABLE 15 p. 1493
- Aspirin** → see TABLE 4 p. 1490 (antiplatelet effects)
  - ▶ **Acetazolamide** increases the risk of severe toxic reaction when given with **aspirin** (high-dose). [Severe] Study
  - ▶ Oral **antacids** decrease the absorption of oral **aspirin** (high-dose). [Moderate] Study
  - ▶ **Bismuth subsalicylate** is predicted to increase the risk of adverse effects when given with **aspirin**. Avoid. [Moderate] Theoretical
  - ▶ **Aspirin** (high-dose) is predicted to increase the risk of gastrointestinal irritation when given with **bisphosphonates (alendronate, ibandronate)**. [Moderate] Study
  - ▶ **Aspirin** (high-dose) is predicted to increase the risk of renal impairment when given with **bisphosphonates (clodronate)**. [Severe] Theoretical
  - ▶ **Corticosteroids** are predicted to decrease the concentration of **aspirin** (high-dose) and **aspirin** (high-dose) increases the risk of gastrointestinal bleeding when given with **corticosteroids**. [Moderate] Study
  - ▶ **Aspirin** (high-dose) increases the risk of renal impairment when given with **daptomycin**. [Moderate] Theoretical
  - ▶ **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **aspirin** (high-dose). [Severe] Theoretical
  - ▶ **Aspirin** (high-dose) increases the exposure to **factor XA inhibitors (edoxaban)**. Avoid. [Severe] Study
  - ▶ **Aspirin** (high-dose) is predicted to increase the risk of gastrointestinal bleeds when given with **iron chelators (deferasirox)**. [Severe] Theoretical
  - ▶ **Aspirin** (high-dose) is predicted to increase the risk of toxicity when given with **methotrexate**. [Severe] Study
  - ▶ **Aspirin** is predicted to increase the risk of gastrointestinal perforation when given with **nicorandil**. [Severe] Theoretical
  - ▶ **NRTIs (zidovudine)** increase the risk of haematological toxicity when given with **aspirin** (high-dose). [Severe] Study
  - ▶ **Aspirin** (high-dose) potentially increases the exposure to **pemetrexed**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Selumetinib** might increase the risk of bleeding when given with **aspirin**. [Severe] Theoretical
  - ▶ **Aspirin** (high-dose) increases the risk of acute renal failure when given with **thiazide diuretics**. [Severe] Theoretical
- Ataluren**
  - ▶ **Ataluren** is predicted to increase the risk of nephrotoxicity when given with intravenous **aminoglycosides**. Avoid. [Severe] Study
  - ▶ **Rifamycins (rifampicin)** decrease the exposure to **ataluren**. [Moderate] Study
- Atazanavir** → see HIV-protease inhibitors
- Atenolol** → see beta blockers, selective
- Atezolizumab** → see monoclonal antibodies
- Atomoxetine**
  - ▶ **Amfetamines** are predicted to increase the risk of adverse effects when given with **atomoxetine**. [Severe] Theoretical
  - ▶ **Berotrastat** is predicted to increase the exposure to **atomoxetine**. Adjust dose. [Moderate] Study
  - ▶ **Atomoxetine** is predicted to increase the risk of cardiovascular adverse effects when given with **beta<sub>2</sub> agonists** (high-dose). [Moderate] Study
  - ▶ **Bupropion** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study
  - ▶ **Cinacalcet** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study
  - ▶ **Dacomitinib** is predicted to markedly increase the exposure to **atomoxetine**. Avoid or adjust dose. [Severe] Study
  - ▶ **Eliglustat** is predicted to increase the exposure to **atomoxetine**. Adjust dose. [Moderate] Theoretical

## Atomoxetine (continued)

- ▶ **Fedratinib** is predicted to increase the exposure to atomoxetine. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Givosiran** is predicted to increase the exposure to atomoxetine. Use with caution and adjust dose. [Moderate] Study
- ▶ **Interferons (ropeginterferon alfa)** are predicted to increase the exposure to atomoxetine. [Moderate] Theoretical
- ▶ **MAOIs, irreversible** are predicted to increase the risk of adverse effects when given with atomoxetine. Avoid and for 2 weeks after stopping the MAOI. [Severe] Theoretical
- ▶ **Panobinostat** is predicted to increase the exposure to atomoxetine. Monitor and adjust dose. [Severe] Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to markedly increase the exposure to atomoxetine. Adjust dose. [Severe] Study
- ▶ **Terbinafine** is predicted to markedly increase the exposure to atomoxetine. Adjust dose. [Severe] Study

**Atorvastatin** → see statins

**Atovaquone** → see antimalarials

**Atracurium** → see neuromuscular blocking drugs, non-depolarising

**Atropine** → see TABLE 10 p. 1492 (antimuscarinics)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application of atropine, the possibility of interactions should be borne in mind.

- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can atropine; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
- ▶ **Atropine** increases the risk of severe hypertension when given with **sympathomimetics, vasoconstrictor (phenylephrine)**. [Severe] Study

**Avanafil** → see phosphodiesterase type-5 inhibitors

**Avapritinib**

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to avapritinib. Avoid. [Severe] Study
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to avapritinib. Avoid or adjust avapritinib dose, p. 1045. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to avapritinib. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to avapritinib. Avoid or adjust avapritinib dose, p. 1045. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to avapritinib. Avoid. [Moderate] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to avapritinib. Avoid or adjust avapritinib dose, p. 1045. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to avapritinib. Avoid. [Moderate] Study
  - ▶ **Corticosteroids (dexamethasone)** are predicted to decrease the exposure to avapritinib. Avoid. [Severe] Theoretical
  - ▶ **Crizotinib** is predicted to increase the exposure to avapritinib. Avoid or adjust avapritinib dose, p. 1045. [Moderate] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to avapritinib. Avoid. [Severe] Study
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to avapritinib. Avoid. [Severe] Study
  - ▶ **Grapefruit juice** is predicted to increase the exposure to avapritinib. Avoid. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to avapritinib. Avoid. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to avapritinib. Avoid. [Moderate] Study
  - ▶ **Imatinib** is predicted to increase the exposure to avapritinib. Avoid or adjust avapritinib dose, p. 1045. [Moderate] Study
  - ▶ **Letermovir** is predicted to increase the exposure to avapritinib. Avoid or adjust avapritinib dose, p. 1045. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to avapritinib. Avoid. [Moderate] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to avapritinib. Avoid or adjust avapritinib dose, p. 1045. [Moderate] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to avapritinib. Avoid. [Severe] Study
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to avapritinib. Avoid or adjust avapritinib dose, p. 1045. [Moderate] Study
  - ▶ **Nilotinib** is predicted to increase the exposure to avapritinib. Avoid or adjust avapritinib dose, p. 1045. [Moderate] Study
  - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to avapritinib. Avoid. [Severe] Study
  - ▶ **NNRTIs (etravirine)** are predicted to decrease the exposure to avapritinib. Avoid. [Severe] Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to avapritinib. Avoid. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to avapritinib. Avoid. [Severe] Study
- Avatrombopag**
- ▶ **Anti-androgens (enzalutamide)** are predicted to decrease the exposure to avatrombopag. Adjust avatrombopag dose with moderate CYP2C9 inducers in chronic immune thrombocytopenia, p. 1120. [Moderate] Study
  - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to avatrombopag. Adjust avatrombopag dose with moderate CYP2C9 inhibitors in chronic immune thrombocytopenia, p. 1120. [Moderate] Study
  - ▶ **Antifungals, azoles (fluconazole, miconazole)** are predicted to increase the exposure to avatrombopag. Adjust avatrombopag dose with moderate CYP2C9 inhibitors in chronic immune thrombocytopenia, p. 1120. [Moderate] Study
  - ▶ **Mifepristone** is predicted to increase the exposure to avatrombopag. [Moderate] Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to avatrombopag. Adjust avatrombopag dose with moderate CYP2C9 inducers in chronic immune thrombocytopenia, p. 1120. [Moderate] Study
- Avelumab** → see monoclonal antibodies
- Axitinib** → see TABLE 15 p. 1493 (myelosuppression), TABLE 4 p. 1490 (antiplatelet effects)
- ▶ **Axitinib** is predicted to increase the exposure to **agomelatine**. [Moderate] Theoretical
  - ▶ **Axitinib** is predicted to increase the exposure to **aminophylline**. [Moderate] Theoretical
  - ▶ **Axitinib** is predicted to increase the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to axitinib. Avoid or adjust dose. [Moderate] Study
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to axitinib. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to axitinib. Avoid or adjust dose. [Moderate] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to axitinib. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to axitinib. Avoid or adjust dose. [Moderate] Study
  - ▶ **Axitinib** is predicted to increase the exposure to **antipsychotics, second generation (clozapine, olanzapine)**. [Moderate] Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to axitinib. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to axitinib. Avoid or adjust dose. [Moderate] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to axitinib. [Moderate] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to axitinib. [Moderate] Study
  - ▶ **Axitinib** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. [Moderate] Theoretical
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to axitinib. [Moderate] Study
  - ▶ **Grapefruit juice** is predicted to increase the exposure to axitinib. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to axitinib. Avoid or adjust dose. [Moderate] Study

- ▶ **Idelalisib** is predicted to increase the exposure to axitinib. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to axitinib. [\[Moderate\]](#) Study → Also see TABLE 15 p. 1493 → Also see TABLE 4 p. 1490
- ▶ **Letermovir** is predicted to increase the exposure to axitinib. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to axitinib. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to axitinib. [\[Moderate\]](#) Study
- ▶ **Axitinib** is predicted to increase the exposure to **MAO-B inhibitors (rasagiline)**. [\[Moderate\]](#) Theoretical
- ▶ **Axitinib** is predicted to increase the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to axitinib. Avoid or adjust dose. [\[Moderate\]](#) Study → Also see TABLE 15 p. 1493
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, nuputinant)** are predicted to increase the exposure to axitinib. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to axitinib. [\[Moderate\]](#) Study → Also see TABLE 15 p. 1493
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to axitinib. [\[Moderate\]](#) Study
- ▶ **Axitinib** is predicted to increase the exposure to **pirfenidone**. [\[Moderate\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to axitinib. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Axitinib** is predicted to increase the exposure to **SNRIs (duloxetine)**. [\[Moderate\]](#) Theoretical → Also see TABLE 4 p. 1490
- ▶ **St John's wort** is predicted to decrease the exposure to axitinib. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Axitinib** is predicted to increase the exposure to **theophylline**. [\[Moderate\]](#) Theoretical
- ▶ **Axitinib** is predicted to increase the exposure to **tizanidine**. [\[Moderate\]](#) Theoretical
- Azathioprine** → see TABLE 15 p. 1493 (myelosuppression)
- Azathioprine** → see TABLE 15 p. 1493 (myelosuppression)
- ▶ **ACE inhibitors** are predicted to increase the risk of anaemia and/or leucopenia when given with azathioprine. [\[Severe\]](#) Anecdotal
- ▶ **Allopurinol** potentially increases the risk of haematological toxicity when given with azathioprine. Adjust azathioprine dose, p. 902. [\[Severe\]](#) Study
- ▶ **Baricitinib** is predicted to enhance the risk of immunosuppression when given with azathioprine. [\[Severe\]](#) Theoretical
- ▶ **Azathioprine** decreases the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Study
- ▶ **Febuxostat** is predicted to increase the exposure to azathioprine. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with azathioprine. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with azathioprine (high-dose). UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Trimethoprim** might increase the risk of haematological toxicity when given with azathioprine in renal transplant patients. [\[Severe\]](#) Anecdotal
- Azelastine** → see antihistamines, non-sedating
- Azilsartan** → see angiotensin-II receptor antagonists
- Azithromycin** → see macrolides
- Bacillus Calmette-Guérin vaccine** → see live vaccines
- Bacitracin** → see TABLE 2 p. 1490 (nephrotoxicity)
- Baclofen** → see TABLE 8 p. 1491 (hypotension), TABLE 11 p. 1492 (CNS depressant effects), TABLE 10 p. 1492 (antimutagenic)
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **baclofen**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492 → Also see TABLE 10 p. 1492
- ▶ **Baclofen** is predicted to increase the risk of adverse effects when given with **levodopa**. [\[Severe\]](#) Anecdotal → Also see TABLE 8 p. 1491

## Baloxavir marboxil

- ▶ Oral **aluminium hydroxide** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. [\[Severe\]](#) Theoretical
- ▶ Oral **antacids** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Oral **calcium salts** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Oral **docusates** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. [\[Severe\]](#) Theoretical
- ▶ Oral **iron** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Oral **magnesium** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Oral **selenium** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Oral **sodium picosulfate** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. [\[Severe\]](#) Theoretical
- ▶ Oral **zinc** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Avoid. [\[Severe\]](#) Theoretical

## Balsalazide

- ▶ **Balsalazide** is predicted to decrease the concentration of **digoxin**. [\[Moderate\]](#) Theoretical

**Bambuterol** → see beta<sub>2</sub> agonists

## Baricitinib

- ▶ **Baricitinib** is predicted to enhance the risk of immunosuppression when given with **azathioprine**. [\[Severe\]](#) Theoretical
- ▶ **Baricitinib** is predicted to enhance the risk of immunosuppression when given with **ciclosporin**. Manufacturer advises caution or avoid—consult product literature. [\[Severe\]](#) Theoretical
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **baricitinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **baricitinib**. [\[Moderate\]](#) Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **baricitinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Baricitinib** is predicted to enhance the risk of immunosuppression when given with **methotrexate**. [\[Severe\]](#) Study
- ▶ **Baricitinib** is predicted to enhance the risk of immunosuppression when given with **tacrolimus**. [\[Severe\]](#) Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **baricitinib**. [\[Moderate\]](#) Study

**Basiliximab** → see monoclonal antibodies

## Bazedoxifene

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **bazedoxifene**. [\[Moderate\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **bazedoxifene**. [\[Moderate\]](#) Theoretical

**Beclometasone** → see corticosteroids

**Bedaquiline** → see TABLE 1 p. 1490 (hepatotoxicity), TABLE 9 p. 1492 (QT-interval prolongation)

- ▶ **Anti-androgens (apalutamide, enzalutamide)** decrease the exposure to **bedaquiline**. Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 1492
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [\[Mid\]](#) Theoretical → Also see TABLE 9 p. 1492
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **bedaquiline**. Avoid. [\[Severe\]](#) Study → Also see TABLE 1 p. 1490
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [\[Mid\]](#) Theoretical → Also see TABLE 1 p. 1490 → Also see TABLE 9 p. 1492

## Bedaquiline (continued)

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study → Also see TABLE 1 p. 1490 → Also see TABLE 9 p. 1492
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Clofazimine** potentially increases the risk of QT-prolongation when given with **bedaquiline**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Dabrafenib** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Ethanol receptor antagonists (bosentan)** are predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study
- ▶ **Imatinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study → Also see TABLE 9 p. 1492
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Mitotane** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **bedaquiline**. Avoid or monitor. [Moderate] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **NNRTIs (etravirine)** are predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study

**Bee venom extract**

**GENERAL INFORMATION** Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

**Belatacept** → see TABLE 15 p. 1493 (myelosuppression)

▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **belatacept**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical

**Belimumab** → see monoclonal antibodies

**Belmaparin** → see low molecular-weight heparins

**Bempedoic acid**

▶ **Bempedoic acid** increases the exposure to **statins (pravastatin)**. [Moderate] Study

▶ **Bempedoic acid** increases the exposure to **statins (simvastatin)**. Adjust **simvastatin** dose, p. 222. [Moderate] Study

**Bendamustine** → see alkylating agents

**Bendroflumethiazide** → see thiazide diuretics

**Benperidol** → see TABLE 8 p. 1491 (hypotension), TABLE 11 p. 1492 (CNS depressant effects)

▶ **Benperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1491

▶ **Benperidol** is predicted to decrease the effects of **levodopa**.

[Severe] Study → Also see TABLE 8 p. 1491

**Benzathine benzylpenicillin** → see penicillins

**Benzodiazepines** → see TABLE 11 p. 1492 (CNS depressant effects)

alprazolam · chlordiazepoxide · clobazam · clonazepam · diazepam · flurazepam · loprazolam · lorazepam · lormetazepam · midazolam · nitrazepam · oxazepam · remimazolam · temazepam

▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **diazepam**. Avoid or monitor. [Mild] Study

▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical

▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study

▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **alprazolam**. [Severe] Study

▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **midazolam**. Monitor adverse effects and adjust dose. [Severe] Study

▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 1492

▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 1492

▶ **Antiepileptics (stiripentol)** increase the concentration of **clobazam**. [Severe] Study

▶ **Chlordiazepoxide** affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Severe] Study

▶ **Diazepam** potentially affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Study

▶ Benzodiazepines (**clobazam, clonazepam**) potentially affect the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Severe] Anecdotal

▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **alprazolam**. [Severe] Study

▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **midazolam**. Monitor adverse effects and adjust dose. [Severe] Study

▶ **Antifungals, azoles (fluconazole, voriconazole)** potentially increase the exposure to **clobazam**. Adjust dose. [Moderate] Theoretical

▶ **Antifungals, azoles (fluconazole, voriconazole)** moderately increase the exposure to **diazepam**. Monitor and adjust dose. [Moderate] Study

▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** moderately increase the exposure to **alprazolam**. Avoid. [Moderate] Study

▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study

▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **alprazolam**. Use with caution and adjust dose. [Moderate] Theoretical

▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to intravenous **midazolam**. Use with caution and adjust dose. [Moderate] Theoretical

▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to oral **midazolam**. Avoid. [Moderate] Theoretical

▶ **Bertrastal** moderately increases the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study

▶ **Cabozantinib** is predicted to increase the exposure to **midazolam**. [Moderate] Theoretical

▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **alprazolam**. [Severe] Study

▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **midazolam**. Monitor adverse effects and adjust dose. [Severe] Study

▶ **Cannabidiol** increases the exposure to the active metabolite of **clobazam** and **clobazam** increases the exposure to the active

- metabolite of **cannabidiol**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1492
- ▶ **Cenobamate** might increase the concentration of **clobazam**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 1492
  - ▶ **Cenobamate** moderately decreases the exposure to **midazolam**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1492
  - ▶ **Cobicistat** moderately increases the exposure to **alprazolam**. Avoid. [Moderate] Study
  - ▶ **Cobicistat** is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **alprazolam**. [Severe] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **midazolam**. Monitor adverse effects and adjust dose. [Severe] Study
  - ▶ **Dabrafenib** decreases the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the concentration of **midazolam**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Entrectinib** slightly increases the exposure to **midazolam**. [Mild] Study
  - ▶ **Fedratinib** moderately increases the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
  - ▶ **HIV-protease inhibitors** moderately increase the exposure to **alprazolam**. Avoid. [Moderate] Study
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to benzodiazepines (**diazepam**, **flurazepam**). Avoid. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
  - ▶ **Idelalisib** moderately increases the exposure to **alprazolam**. Avoid. [Moderate] Study
  - ▶ **Idelalisib** is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **alprazolam**. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **midazolam**. Monitor adverse effects and adjust dose. [Severe] Study
  - ▶ **Larotrectinib** slightly increases the exposure to **midazolam**. Use with caution and adjust dose. [Mild] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **alprazolam**. [Severe] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **midazolam**. Monitor adverse effects and adjust dose. [Severe] Study
  - ▶ **Alprazolam** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
  - ▶ **Lorlatinib** moderately decreases the exposure to **midazolam**. Avoid. [Moderate] Study
  - ▶ **Lumacaftor** is predicted to decrease the exposure to **midazolam**. Avoid. [Severe] Theoretical
  - ▶ **Macrolides (clarithromycin)** moderately increase the exposure to **alprazolam**. Avoid. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **alprazolam**. [Severe] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **midazolam**. Monitor adverse effects and adjust dose. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Moclobemide** potentially increases the exposure to **clobazam**. Adjust dose. [Moderate] Theoretical
  - ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to benzodiazepines (**alprazolam**, **diazepam**, **midazolam**). Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **alprazolam**. [Severe] Study
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **midazolam**. Monitor adverse effects and adjust dose. [Severe] Study
  - ▶ **Neurokinin-1 receptor antagonists (fosaprepitant)** are predicted to increase the exposure to **alprazolam**. [Moderate] Study
  - ▶ **Neurokinin-1 receptor antagonists (fosaprepitant)** slightly increase the exposure to **midazolam**. [Moderate] Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **alprazolam**. [Severe] Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **midazolam**. Monitor adverse effects and adjust dose. [Severe] Study
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **alprazolam**. [Moderate] Theoretical
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of benzodiazepines (**clonazepam**, **diazepam**, **flurazepam**). Avoid. [Severe] Theoretical
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **midazolam**. Avoid or adjust dose. [Severe] Theoretical
  - ▶ **NRRTIs (efavirenz)** are predicted to alter the effects of **midazolam**. Avoid. [Moderate] Theoretical
  - ▶ **NRRTIs (efavirenz, nevirapine)** are predicted to decrease the concentration of **alprazolam**. [Moderate] Theoretical
  - ▶ **NRRTIs (etravirine)** have been reported to increase the concentration of **clobazam**. [Moderate] Anecdotal
  - ▶ **NRRTIs (etravirine)** are predicted to increase the exposure to **diazepam**. Avoid. [Severe] Theoretical
  - ▶ **NRRTIs (nevirapine)** are predicted to decrease the concentration of **clonazepam** and **clonazepam** is predicted to decrease the concentration of **NRRTIs (nevirapine)**. [Moderate] Theoretical
  - ▶ **NRRTIs (nevirapine)** decrease the concentration of **midazolam**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Palbociclib** increases the exposure to **midazolam**. [Moderate] Study
  - ▶ **Proton pump inhibitors (esomeprazole, omeprazole)** potentially increase the exposure to **clobazam**. Adjust dose. [Moderate] Theoretical
  - ▶ **Ribociclib** moderately increases the exposure to **midazolam**. Avoid. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **chlordiazepoxide**. [Moderate] Theoretical
  - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **diazepam**. Avoid. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** increase the clearance of benzodiazepines (**lorazepam**, **nitrazepam**). [Moderate] Study
  - ▶ **Rucaparib** slightly increases the exposure to **midazolam**. Monitor and adjust dose. [Severe] Study
  - ▶ **Sotorasib** moderately decreases the exposure to **midazolam**. [Moderate] Study
  - ▶ **SSRIs (fluoxetine, fluvoxamine)** potentially increase the exposure to **clobazam**. Adjust dose. [Moderate] Theoretical
  - ▶ **SSRIs (fluvoxamine)** moderately increase the exposure to **alprazolam**. Adjust dose. [Moderate] Study
  - ▶ **SSRIs (fluvoxamine)** moderately increase the exposure to **diazepam**. [Moderate] Study
  - ▶ **St John's wort** moderately decreases the exposure to **alprazolam**. [Moderate] Study
  - ▶ **St John's wort** moderately decreases the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Telotristat ethyl** decreases the exposure to **midazolam**. [Moderate] Study
  - ▶ **Tucatinib** markedly increases the exposure to **midazolam**. Avoid or adjust dose. [Moderate] Study
  - ▶ **Vemurafenib** slightly to moderately decreases the exposure to **midazolam**. [Moderate] Study
- Benzylpencillin** → see NSAIDs
- Benzylpenicillin** → see penicillins
- Berotrastat**
- ▶ **Berotrastat** is predicted to increase the concentration of **aliskiren**. Monitor and adjust dose. [Moderate] Study

## Bertralstat (continued)

- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to bertralstat. [\[Severe\]](#) Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the concentration of bertralstat. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to bertralstat. [\[Severe\]](#) Study
- ▶ **Bertralstat** is predicted to increase the concentration of **antihistamines, non-sedating (fexofenadine)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Bertralstat** is predicted to increase the exposure to **atomoxetine**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Bertralstat** moderately increases the exposure to **benzodiazepines (midazolam)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Bertralstat** is predicted to increase the exposure to **beta blockers, selective (nebivolol)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to bertralstat. [\[Severe\]](#) Study
- ▶ **Ciclosporin** is predicted to increase the exposure to bertralstat. [\[Severe\]](#) Study
- ▶ **Bertralstat** is predicted to increase the concentration of **colchicine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Bertralstat** might decrease the efficacy of **desogestrel**-containing contraceptives. Use alternatives to desogestrel-only contraceptives. [\[Severe\]](#) Theoretical
- ▶ **Bertralstat** is predicted to increase the concentration of **digoxin**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Bertralstat** is predicted to increase the exposure to **eliglustat**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Eltrombopag** is predicted to increase the exposure to bertralstat. [\[Severe\]](#) Theoretical
- ▶ **Bertralstat** is predicted to increase the exposure to **ergotamine**. [\[Moderate\]](#) Study
- ▶ **Bertralstat** is predicted to increase the concentration of **everolimus**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Bertralstat** is predicted to increase the concentration of **factor XA inhibitors (edoxaban, rivaroxaban)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to bertralstat. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the exposure to bertralstat. [\[Severe\]](#) Study
- ▶ **Ivacaftor** is predicted to increase the exposure to bertralstat. [\[Severe\]](#) Study
- ▶ **Lapatinib** is predicted to increase the exposure to bertralstat. [\[Severe\]](#) Study
- ▶ **Leflunomide** is predicted to increase the exposure to bertralstat. [\[Severe\]](#) Theoretical
- ▶ **Bertralstat** is predicted to increase the concentration of **loperamide**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Macrolides** are predicted to increase the exposure to bertralstat. [\[Severe\]](#) Study
- ▶ **Neratinib** is predicted to increase the exposure to bertralstat. [\[Severe\]](#) Study
- ▶ **Bertralstat** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Bertralstat** is predicted to increase the exposure to **pimozide**. Avoid. [\[Moderate\]](#) Study
- ▶ **Ranolazine** is predicted to increase the exposure to bertralstat. [\[Severe\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the concentration of bertralstat. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to bertralstat. [\[Severe\]](#) Study
- ▶ **Bertralstat** is predicted to increase the concentration of **sirolimus**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **St John's wort** is predicted to decrease the concentration of bertralstat. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Bertralstat** is predicted to increase the exposure to **tacrolimus**. [\[Moderate\]](#) Study
- ▶ **Bertralstat** is predicted to increase the concentration of **talazoparib**. Monitor and adjust dose. [\[Moderate\]](#) Study

- ▶ **Bertralstat** is predicted to increase the concentration of **taxanes (docetaxel, paclitaxel)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Bertralstat** is predicted to increase the exposure to **temsirolimus**. Use with caution or avoid. [\[Moderate\]](#) Study
- ▶ **Teriflunomide** is predicted to increase the exposure to bertralstat. [\[Severe\]](#) Theoretical
- ▶ **Bertralstat** is predicted to increase the concentration of **thrombin inhibitors (dabigatran)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Bertralstat** is predicted to increase the concentration of **topotecan**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Vandetanib** is predicted to increase the exposure to bertralstat. [\[Severe\]](#) Study
- ▶ **Vemurafenib** is predicted to increase the exposure to bertralstat. [\[Severe\]](#) Study

**Beta blockers, non-selective** → see TABLE 6 p. 1491 (bradycardia), TABLE 8 p. 1491 (hypotension), TABLE 9 p. 1492 (QT-interval prolongation)

carvedilol · labetalol · levobunolol · nadolol · pindolol · propranolol · sotalol · timolol

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application of **levobunolol** and **timolol**, the possibility of interactions should be borne in mind.

- ▶ **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with **aminophylline**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Antiarrhythmics (amiodarone, disopyramide, dronedarone, flecainide, lidocaine)** are predicted to increase the risk of cardiovascular adverse effects when given with **beta blockers, non-selective**. Use with caution or avoid. [\[Severe\]](#) Study → Also see TABLE 6 p. 1491 → Also see TABLE 9 p. 1492
- ▶ **Antiarrhythmics (propafenone)** increase the risk of cardiovascular adverse effects when given with **propranolol**. Use with caution or avoid. [\[Severe\]](#) Study → Also see TABLE 6 p. 1491
- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the exposure to **timolol** and **timolol** is predicted to increase the risk of cardiodepression when given with **antiarrhythmics (propafenone)**. [\[Severe\]](#) Anecdotal → Also see TABLE 6 p. 1491
- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the risk of cardiovascular adverse effects when given with **beta blockers, non-selective (labetalol, levobunolol, nadolol, pindolol, sotalol)**. Use with caution or avoid. [\[Severe\]](#) Study → Also see TABLE 6 p. 1491
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **propranolol**. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **beta blockers, non-selective (carvedilol, labetalol)**. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **nadolol**. [\[Moderate\]](#) Study
- ▶ **Antimalarials (mefloquine)** are predicted to increase the risk of bradycardia when given with **beta blockers, non-selective**. [\[Severe\]](#) Theoretical
- ▶ **Calcium channel blockers (diltiazem)** are predicted to increase the risk of cardiodepression when given with **beta blockers, non-selective**. [\[Severe\]](#) Study → Also see TABLE 6 p. 1491 → Also see TABLE 8 p. 1491
- ▶ **Calcium channel blockers (verapamil)** increase the risk of cardiovascular adverse effects when given with **beta blockers, non-selective**. Avoid intravenous verapamil. [\[Severe\]](#) Study → Also see TABLE 6 p. 1491 → Also see TABLE 8 p. 1491
- ▶ **Chlorprocaine** is predicted to increase the risk of cardiovascular adverse effects when given with **sotalol**. [\[Severe\]](#) Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **nadolol**. [\[Moderate\]](#) Study
- ▶ **Dacomitinib** is predicted to markedly increase the exposure to **propranolol**. Avoid. [\[Severe\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **propranolol**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergometrine**. [\[Severe\]](#) Study

- ▶ **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergotamine**. [\[Severe\]](#) Study
  - ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the exposure to **nadolol**. [\[Moderate\]](#) Study
  - ▶ **Beta blockers, non-selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. [\[Moderate\]](#) Theoretical
  - ▶ **Lapatinib** is predicted to increase the exposure to **nadolol**. [\[Moderate\]](#) Study
  - ▶ **Macrolides** are predicted to increase the exposure to **nadolol**. [\[Moderate\]](#) Study
  - ▶ **Mexiletine** potentially increases the risk of cardiovascular adverse effects when given with **beta blockers, non-selective**. Avoid or monitor. [\[Severe\]](#) Theoretical
  - ▶ **Omega-3-acid ethyl esters** might enhance the blood pressure-lowering effects of **beta blockers, non-selective**. [\[Moderate\]](#) Study
  - ▶ **Ranolazine** is predicted to increase the exposure to **nadolol**. [\[Moderate\]](#) Study
  - ▶ **Carvedilol** is predicted to increase the exposure to **relugolix**. Avoid or take **relugolix** first and separate administration by at least 6 hours. [\[Moderate\]](#) Theoretical
  - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **carvedilol**. [\[Moderate\]](#) Study
  - ▶ **Rifamycins (rifampicin)** decrease the exposure to **propranolol**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **SSRIs (fluvoxamine)** moderately increase the concentration of **propranolol**. [\[Moderate\]](#) Study
  - ▶ **Beta blockers, non-selective** increase the risk of hypertension and bradycardia when given with **sympathomimetics, inotropic (dobutamine)**. [\[Severe\]](#) Theoretical
  - ▶ **Beta blockers, non-selective** are predicted to increase the risk of hypertension and bradycardia when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [\[Severe\]](#) Study
  - ▶ **Carvedilol** causes a small increase in the bioavailability of **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [\[Moderate\]](#) Study
  - ▶ **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Propranolol** slightly to moderately increases the exposure to **triptans (rizatriptan)**. Adjust **rizatriptan** dose and separate administration by at least 2 hours, p. 513. [\[Moderate\]](#) Study
  - ▶ **Vemurafenib** is predicted to increase the exposure to **nadolol**. [\[Moderate\]](#) Study
- Beta blockers, selective** → see TABLE 6 p. 1491 (bradycardia), TABLE 8 p. 1491 (hypertension)
- acebutolol · atenolol · betaxolol · bisoprolol · celiprolol · esmolol · metoprolol · nebivolol
- ▶ Since systemic absorption can follow topical application of **betaxolol**, the possibility of interactions should be borne in mind.
  - ▶ Orange juice greatly decreases the exposure to **celiprolol**.
- ▶ **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with **aminophylline**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Anti-androgens (abiraterone)** are predicted to increase the exposure to **metoprolol**. [\[Moderate\]](#) Study
  - ▶ **Antiarrhythmics (amiodarone, disopyramide, dronedarone, flecainide, lidocaine)** are predicted to increase the risk of cardiovascular adverse effects when given with **beta blockers, selective**. Use with caution or avoid. [\[Severe\]](#) Study → Also see TABLE 6 p. 1491
  - ▶ **Antiarrhythmics (propafenone)** are predicted to increase the exposure to **metoprolol**. [\[Moderate\]](#) Study → Also see TABLE 6 p. 1491
  - ▶ **Antiarrhythmics (propafenone)** are predicted to increase the exposure to **nebivolol** and **nebivolol** is predicted to increase the risk of cardiodepression when given with **antiarrhythmics (propafenone)**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 6 p. 1491
  - ▶ **Antiarrhythmics (propafenone)** are predicted to increase the risk of cardiovascular adverse effects when given with **beta blockers, selective (acebutolol, atenolol, betaxolol, bisoprolol, celiprolol, esmolol)**. Use with caution or avoid. [\[Severe\]](#) Study → Also see TABLE 6 p. 1491
  - ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **beta blockers, selective (acebutolol, bisoprolol, metoprolol, nebivolol)**. [\[Moderate\]](#) Study
  - ▶ **Antimalarials (mefloquine)** are predicted to increase the risk of bradycardia when given with **beta blockers, selective**. [\[Severe\]](#) Theoretical
  - ▶ **Berotrastat** is predicted to increase the exposure to **nebivolol**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ **Bupropion** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [\[Moderate\]](#) Study
  - ▶ **Calcium channel blockers (diltiazem)** are predicted to increase the risk of cardiodepression when given with **beta blockers, selective**. [\[Severe\]](#) Study → Also see TABLE 6 p. 1491 → Also see TABLE 8 p. 1491
  - ▶ **Calcium channel blockers (verapamil)** increase the risk of cardiovascular adverse effects when given with **beta blockers, selective**. Avoid intravenous **verapamil**. [\[Severe\]](#) Study → Also see TABLE 6 p. 1491 → Also see TABLE 8 p. 1491
  - ▶ **Cinacalcet** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [\[Moderate\]](#) Study
  - ▶ **Dacomitinib** is predicted to markedly increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. Avoid. [\[Severe\]](#) Study
  - ▶ **Eliglustat** is predicted to increase the exposure to **metoprolol**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergometrine**. [\[Severe\]](#) Study
  - ▶ **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergotamine**. [\[Severe\]](#) Study
  - ▶ **Fedratinib** moderately increases the exposure to **metoprolol**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Fedratinib** is predicted to increase the exposure to **nebivolol**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Givosiran** is predicted to increase the exposure to **nebivolol**. Use with caution and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Grapefruit** juice greatly decreases the exposure to **celiprolol**. [\[Moderate\]](#) Study
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **metoprolol**. [\[Moderate\]](#) Study
  - ▶ **Interferons (ropeginterferon alfa)** are predicted to increase the exposure to **nebivolol**. [\[Moderate\]](#) Theoretical
  - ▶ **Beta blockers, selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. [\[Moderate\]](#) Theoretical
  - ▶ **Mexiletine** potentially increases the risk of cardiovascular adverse effects when given with **beta blockers, selective**. Avoid or monitor. [\[Severe\]](#) Theoretical
  - ▶ **Mirabegron** is predicted to increase the exposure to **metoprolol**. [\[Moderate\]](#) Study
  - ▶ **Omega-3-acid ethyl esters** might enhance the blood pressure-lowering effects of **beta blockers, selective**. [\[Moderate\]](#) Study
  - ▶ **Panobinostat** is predicted to increase the exposure to **metoprolol**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Panobinostat** is predicted to increase the exposure to **nebivolol**. Monitor and adjust dose. [\[Mild\]](#) Theoretical
  - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **celiprolol**. [\[Moderate\]](#) Study
  - ▶ **Rifamycins (rifampicin)** slightly decrease the exposure to **beta blockers, selective (bisoprolol, metoprolol)**. [\[Mild\]](#) Study
  - ▶ **SNRIs (duloxetine)** are predicted to increase the exposure to **metoprolol**. [\[Moderate\]](#) Study
  - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [\[Moderate\]](#) Study
  - ▶ **Beta blockers, selective** increase the risk of hypertension and bradycardia when given with **sympathomimetics, inotropic (dobutamine)**. [\[Moderate\]](#) Theoretical
  - ▶ **Beta blockers, selective** are predicted to increase the risk of hypertension and bradycardia when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [\[Severe\]](#) Study
  - ▶ **Terbinafine** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [\[Moderate\]](#) Study

## Beta blockers, selective (continued)

- ▶ **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Vaborbactam** is predicted to increase the concentration of **metoprolol**. [\[Unknown\]](#) Theoretical
- Beta<sub>2</sub> agonists** → see TABLE 17 p. 1494 (reduced serum potassium)
  - bambuterol · formoterol · indacaterol · olodaterol · salbutamol · salmeterol · terbutaline · vilanterol
- ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **salmeterol**. Avoid or monitor. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **salmeterol**. Avoid. [\[Severe\]](#) Study
- ▶ **Atomoxetine** is predicted to increase the risk of cardiovascular adverse effects when given with **beta<sub>2</sub> agonists** (high-dose). [\[Moderate\]](#) Study
- ▶ **Enobamate** is predicted to decrease the exposure to **salmeterol**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **salmeterol**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **salmeterol**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **salmeterol**. Avoid. [\[Severe\]](#) Study
- ▶ **Beta<sub>2</sub> agonists** are predicted to increase the risk of glaucoma when given with **ipratropium**. [\[Moderate\]](#) Anecdotal
- ▶ **Beta<sub>2</sub> agonists** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **salmeterol**. Avoid. [\[Severe\]](#) Study
- ▶ **MAO-B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of severe hypertension when given with **beta<sub>2</sub> agonists**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **MAO-B inhibitors (safinamide)** are predicted to increase the risk of severe hypertension when given with **beta<sub>2</sub> agonists**. [\[Severe\]](#) Theoretical
- ▶ **MAOs, irreversible** are predicted to increase the risk of cardiovascular adverse effects when given with **beta<sub>2</sub> agonists**. [\[Moderate\]](#) Anecdotal
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **salmeterol**. [\[Moderate\]](#) Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **salmeterol**. Avoid. [\[Severe\]](#) Theoretical
- Betahistine**
  - ▶ **Antihistamines, non-sedating** are predicted to decrease the effects of **betahistine**. [\[Moderate\]](#) Theoretical
  - ▶ **Antihistamines, sedating** are predicted to decrease the effects of **betahistine**. [\[Moderate\]](#) Theoretical
- Betamethasone** → see corticosteroids
- Betaxolol** → see beta blockers, selective
- Bevacizumab** → see monoclonal antibodies
- Bexarotene** → see retinoids
- Bezafibrate** → see fibrates
- Bicalutamide** → see anti-androgens
- Bictegravir**
  - ▶ Oral **antacids** decrease the exposure to oral **bictegravir**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **bictegravir**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **bictegravir**. Avoid. [\[Moderate\]](#) Study
  - ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to **bictegravir**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **bictegravir**. [\[Moderate\]](#) Theoretical

- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors (atazanavir)** moderately increase the exposure to **bictegravir**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir)** are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ Oral **iron** decreases the exposure to oral **bictegravir**. Manufacturer advises **bictegravir** should be taken 2 hours before iron. [\[Moderate\]](#) Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides** are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **Bictegravir** slightly increases the exposure to **metformin**. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **bictegravir**. Avoid. [\[Moderate\]](#) Study
- ▶ **Neratinib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **Bictegravir** is predicted to increase the exposure to **opioids (methadone)**. [\[Moderate\]](#) Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **Rifamycins (rifabutin)** slightly decrease the exposure to **bictegravir**. Avoid. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **bictegravir**. Avoid. [\[Moderate\]](#) Study
- ▶ **Rucaparib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **bictegravir**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Sucralfate** is predicted to decrease the exposure to **bictegravir**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Vandetanib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- Bilastine** → see antihistamines, non-sedating
- Bimekizumab** → see monoclonal antibodies
- Bismuth**
  - ▶ **Bismuth subsalicylate** is predicted to increase the risk of adverse effects when given with **aspirin**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Bismuth subsalicylate** is predicted to increase the risk of bleeding events when given with **drugs with anticoagulant effects** (see TABLE 3 p. 1490). [\[Moderate\]](#) Theoretical
  - ▶ **Bismuth** greatly decreases the efficacy of **tetracyclines**. Separate administration by 2 hours. [\[Moderate\]](#) Study
- Bisoprolol** → see beta blockers, selective
- Bisphosphonates** → see TABLE 2 p. 1490 (nephrotoxicity)
  - alendronate · clodronate · ibandronate · pamidronate · risedronate · zoledronate
  - ▶ **Aminoglycosides** increase the risk of hypocalcaemia when given with **bisphosphonates**. [\[Moderate\]](#) Anecdotal → Also see TABLE 2 p. 1490
  - ▶ Oral **antacids** decrease the absorption of oral **alendronate**. **Alendronate** should be taken at least 30 minutes before antacids. [\[Moderate\]](#) Study
  - ▶ Oral **antacids** decrease the absorption of oral **clodronate**. Avoid antacids for 2 hours before or 1 hour after **clodronate**. [\[Moderate\]](#) Study
  - ▶ Oral **antacids** are predicted to decrease the absorption of oral **ibandronate**. Avoid antacids for at least 6 hours before or 1 hour after **ibandronate**. [\[Moderate\]](#) Theoretical
  - ▶ Oral **antacids** decrease the absorption of oral **risedronate**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
  - ▶ **Aspirin** (high-dose) is predicted to increase the risk of gastrointestinal irritation when given with bisphosphonates (**alendronate, ibandronate**). [\[Moderate\]](#) Study

- ▶ **Aspirin** (high-dose) is predicted to increase the risk of renal impairment when given with **clodronate**. [Severe] Theoretical
- ▶ Oral **calcium salts** decrease the absorption of **alendronate**. **Alendronate** should be taken at least 30 minutes before **calcium salts**. [Moderate] Study
- ▶ Oral **calcium salts** decrease the absorption of **clodronate**. Avoid **calcium salts** for 2 hours before or 1 hour after **clodronate**. [Moderate] Study
- ▶ Oral **calcium salts** are predicted to decrease the absorption of oral **ibandronate**. Avoid **calcium salts** for at least 6 hours before or 1 hour after **ibandronate**. [Moderate] Theoretical
- ▶ Oral **calcium salts** decrease the absorption of **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral **iron** decreases the absorption of oral **clodronate**. **Clodronate** should be taken 1 hour before or 2 hours after iron. [Moderate] Study
- ▶ Oral **iron** is predicted to decrease the absorption of oral **ibandronate**. **Ibandronate** should be taken 1 hour before or 6 hours after iron. [Moderate] Theoretical
- ▶ Oral **iron** decreases the absorption of oral **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Bisphosphonates** are predicted to increase the risk of gastrointestinal bleeding when given with **iron chelators (deferasirox)**. [Severe] Theoretical
- ▶ Oral **magnesium** decreases the absorption of oral **alendronate**. **Alendronate** should be taken at least 30 minutes before magnesium. [Moderate] Study
- ▶ Oral **magnesium** decreases the absorption of oral **clodronate**. Avoid magnesium for 2 hours before or 1 hour after **clodronate**. [Moderate] Study
- ▶ Oral **magnesium** is predicted to decrease the absorption of oral **ibandronate**. Avoid for at least 6 hours before or 1 hour after **ibandronate**. [Moderate] Theoretical
- ▶ Oral **magnesium** decreases the absorption of oral **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **NSAIDs** are predicted to increase the risk of gastrointestinal irritation when given with bisphosphonates (**alendronate, ibandronate**). [Moderate] Study
- ▶ **NSAIDs** are predicted to increase the risk of renal impairment when given with **clodronate**. [Moderate] Study
- ▶ **Bisphosphonates** are predicted to decrease the effects of **parathyroid hormone**. Avoid. [Moderate] Study
- ▶ Oral **zinc** decreases the absorption of oral **alendronate**. **Alendronate** should be taken at least 30 minutes before zinc. [Moderate] Study
- ▶ Oral **zinc** decreases the absorption of oral **clodronate**. Avoid zinc for 2 hours before or 1 hour after **clodronate**. [Moderate] Study
- ▶ Oral **zinc** is predicted to decrease the absorption of oral **ibandronate**. Avoid **zinc** for at least 6 hours before or 1 hour after **ibandronate**. [Moderate] Theoretical
- ▶ Oral **zinc** decreases the absorption of oral **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
- Bivalirudin** → see thrombin inhibitors
- Bleomycin** → see TABLE 15 p. 1493 (myelosuppression), TABLE 5 p. 1491 (thromboembolism)
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **bleomycin**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Monoclonal antibodies (brentuximab vedotin)** increase the risk of pulmonary toxicity when given with **bleomycin**. Avoid. [Severe] Study → Also see TABLE 15 p. 1493
- ▶ **Platinum compounds (cisplatin)** increase the risk of pulmonary toxicity when given with **bleomycin**. [Severe] Study → Also see TABLE 15 p. 1493
- Blinatumomab** → see monoclonal antibodies
- Bortezomib** → see TABLE 8 p. 1491 (hypotension), TABLE 15 p. 1493 (myelosuppression), TABLE 12 p. 1493 (peripheral neuropathy)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** slightly decrease the exposure to **bortezomib**. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** slightly decrease the exposure to **bortezomib**. Avoid. [Severe] Study → Also see TABLE 12 p. 1493
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** slightly increase the exposure to **bortezomib**. [Moderate] Study
- ▶ **Cobicistat** slightly increases the exposure to **bortezomib**. [Moderate] Study
- ▶ **HIV-protease inhibitors** slightly increase the exposure to **bortezomib**. [Moderate] Study
- ▶ **Idelalisib** slightly increases the exposure to **bortezomib**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** slightly increase the exposure to **bortezomib**. [Moderate] Study
- ▶ **Mitotane** slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1493
- ▶ **Rifamycins (rifampicin)** slightly decrease the exposure to **bortezomib**. Avoid. [Severe] Study
- Bosentan** → see endothelin receptor antagonists
- Bosutinib** → see TABLE 15 p. 1493 (myelosuppression), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 4 p. 1490 (antiplatelet effects)
- ▶ Oral **antacids** are predicted to decrease the absorption of oral **bosutinib**. **Bosutinib** should be taken at least 12 hours before antacids. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (flucanazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study
- ▶ Oral **calcium salts (calcium carbonate)** -containing antacids are predicted to decrease the absorption of oral **bosutinib**. **Bosutinib** should be taken at least 12 hours before antacids. [Moderate] Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to **bosutinib**. Adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Dabrafenib** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **bosutinib**. Avoid. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **bosutinib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 1493 → Also see TABLE 4 p. 1490
- ▶ **Letermovir** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Mitotane** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1493
- ▶ **Modafinil** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study

**Bosutinib** (continued)

- ▶ **Neurokinin-1 receptor antagonists (fosaprepitant)** are predicted to increase the exposure to **bosutinib**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 1493 → Also see TABLE 9 p. 1492
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **NRRTIs (etravirine)** are predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **bosutinib**. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ Oral **sodium bicarbonate**-containing antacids are predicted to decrease the absorption of oral **bosutinib**. **Bosutinib** should be taken at least 12 hours before antacids. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Study

**Botulinum toxin type A** → see botulinum toxins

**Botulinum toxin type B** → see botulinum toxins

**Botulinum toxins** → see TABLE 20 p. 1494 (neuromuscular blocking effects)

botulinum toxin type A · botulinum toxin type B

**Bowel cleansing preparations**

**SEPARATION OF ADMINISTRATION** Other oral drugs should not be taken 1 hour before, or after, administration of bowel cleansing preparations because absorption might be impaired. Consider withholding ACE inhibitors, angiotensin-II receptor antagonists, and NSAIDs on the day that bowel cleansing preparations are given and for up to 72 hours after the procedure. Also consider withholding diuretics on the day that bowel cleansing preparations are given.

**Brentuximab vedotin** → see monoclonal antibodies

**Brigatinib** → see TABLE 6 p. 1491 (bradycardia)

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **brigatinib**. [Moderate] Study → Also see TABLE 6 p. 1491
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **brigatinib**. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **brigatinib**. Avoid or adjust **brigatinib** dose, p. 1048. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **brigatinib**. [Moderate] Study → Also see TABLE 6 p. 1491
- ▶ **Cobicistat** is predicted to increase the exposure to **brigatinib**. Avoid or adjust **brigatinib** dose, p. 1048. [Severe] Study
- ▶ **Brigatinib** is predicted to decrease the exposure to **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **brigatinib**. [Moderate] Study → Also see TABLE 6 p. 1491
- ▶ **Dabrafenib** is predicted to decrease the exposure to **brigatinib**. Avoid. [Moderate] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **brigatinib**. Avoid. [Moderate] Study
- ▶ **Grapefruit** juice is predicted to increase the concentration of **brigatinib**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **brigatinib**. Avoid or adjust **brigatinib** dose, p. 1048. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **brigatinib**. Avoid or adjust **brigatinib** dose, p. 1048. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **brigatinib**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **brigatinib**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **brigatinib**. Avoid or adjust **brigatinib** dose, p. 1048. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **brigatinib**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **brigatinib**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **brigatinib**. [Moderate] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **brigatinib**. Avoid. [Moderate] Study
- ▶ **Brigatinib** potentially decreases the concentration of **opioids (alfentanil, fentanyl)**. Avoid. [Moderate] Theoretical → Also see TABLE 6 p. 1491
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
- ▶ **Brigatinib** potentially decreases the concentration of **sirolimus**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **brigatinib**. Avoid. [Moderate] Study
- ▶ **Brigatinib** potentially decreases the concentration of **tacrolimus**. Avoid. [Moderate] Theoretical

**Brimonidine** → see TABLE 6 p. 1491 (bradycardia), TABLE 8 p. 1491 (hypotension), TABLE 11 p. 1492 (CNS depressant effects)

**Brinzolamide**

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application of **brinzolamide**, the possibility of interactions should be borne in mind.

**Brivaracetam** → see antiepileptics

**Brodalumab** → see monoclonal antibodies

**Bromfenac** → see NSAIDs

**Bromocriptine** → see dopamine receptor agonists

**Bucizine** → see antihistamines, sedating

**Budesonide** → see corticosteroids

**Bumetanide** → see loop diuretics

**Bupivacaine** → see anaesthetics, local

**Buprenorphine** → see opioids

**Bupropion**

▶ **Alpelisib** is predicted to decrease the efficacy of **bupropion**.

[Mid] Theoretical

▶ **Bupropion** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study

▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **bupropion**. [Severe] Study

▶ **Antiepileptics (valproate)** increase the exposure to **bupropion**. [Severe] Study

▶ **Antifungals, azoles (isavuconazole)** slightly increase the exposure to **bupropion**. Adjust dose. [Moderate] Study

▶ **Bupropion** is predicted to moderately increase the exposure to **antipsychotics, second generation (aripiprazole)**. Adjust **aripiprazole** dose, p. 427. [Moderate] Study

▶ **Bupropion** is predicted to increase the exposure to **antipsychotics, second generation (risperidone)**. Adjust dose. [Moderate] Study

▶ **Bupropion** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study

▶ **Bupropion** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study

▶ **Bupropion** is predicted to slightly increase the exposure to **darifenacin**. [Mid] Study

▶ **Bupropion** increases the risk of adverse effects when given with **dopamine receptor agonists (amantadine)**. [Moderate] Study

▶ **Bupropion** might enhance the risk of serotonin syndrome when given with **drugs that cause serotonin syndrome** (see TABLE 13 p. 1493). [Severe] Anecdotal

▶ **Bupropion** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study

- ▶ **Bupropion** is predicted to increase the exposure to **fesoterodine**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **Bupropion** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **bupropion**. [Moderate] Study
- ▶ **Bupropion** increases the risk of adverse effects when given with **levodopa**. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the risk of intraoperative hypertension when given with **linezolid**. [Severe] Anecdotal
- ▶ **Lumacaftor** is predicted to decrease the exposure to **bupropion**. Adjust dose. [Moderate] Theoretical
- ▶ **Bupropion** is predicted to increase the risk of severe hypertension when given with **MAO-B inhibitors**. Avoid. [Moderate] Theoretical
- ▶ **Bupropion** is predicted to increase the risk of severe hypertension when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Methylthioninium chloride** is predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. [Severe] Theoretical
- ▶ **Bupropion** is predicted to increase the exposure to **mexiletine**. [Moderate] Study
- ▶ **Midostaurin** moderately decreases the exposure to the active metabolite of **bupropion**. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the risk of severe hypertension when given with **moclobemide**. Avoid. [Severe] Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **bupropion**. [Moderate] Theoretical
- ▶ **NNRTIs (efavirenz)** are predicted to decrease the exposure to **bupropion**. [Moderate] Study
- ▶ **Bupropion** is predicted to decrease the efficacy of **opioids (codeine)**. [Moderate] theoretical
- ▶ **Bupropion** is predicted to decrease the efficacy of **opioids (tramadol)**. [Severe] Study
- ▶ **Bupropion** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **bupropion**. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the exposure to **SSRIs (dapoxetine)**. [Moderate] Theoretical
- ▶ **Bupropion** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
- ▶ **Bupropion** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study
- ▶ **Vemurafenib** is predicted to decrease the concentration of **bupropion**. [Moderate] Theoretical
- ▶ **Bupropion** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- Bupirone**
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **bupirone**. Use with caution and adjust dose. [Severe] Study
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **bupirone**. Use with caution and adjust dose. [Severe] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **bupirone**. Adjust **bupirone** dose, p. 373. [Severe] Study
  - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **bupirone**. Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Benobamate** is predicted to decrease the exposure to **bupirone**. Adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **bupirone**. Adjust **bupirone** dose, p. 373. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Grapefruit** juice increases the exposure to **bupirone**. Avoid. [Mild] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **bupirone**. Adjust **bupirone** dose, p. 373. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **bupirone**. Adjust **bupirone** dose, p. 373. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Bupirone** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **bupirone**. Adjust **bupirone** dose, p. 373. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Bupirone** is predicted to increase the risk of elevated blood pressure when given with **MAOIs, irreversible**. Avoid. [Severe] Anecdotal
- ▶ **Mitotane** is predicted to decrease the exposure to **bupirone**. Use with caution and adjust dose. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **bupirone**. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **bupirone**. Use with caution and adjust dose. [Severe] Study
- ▶ **Tucatinib** is predicted to increase the exposure to **bupirone**. Avoid or adjust dose. [Moderate] Theoretical
- Busulfan** → see alkylating agents
- Cabazitaxel** → see taxanes
- Cabergoline** → see dopamine receptor agonists
- Cabotegravir**
  - ▶ Oral **antacids** are predicted to decrease the concentration of oral **cabotegravir**. **Cabotegravir** should be taken 4 hours before or 2 hours after antacids. [Moderate] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** might decrease the concentration of **cabotegravir**. Avoid. [Severe] Theoretical
  - ▶ **Rifamycins (rifabutin)** have been reported to cause a small decrease in the exposure to **cabotegravir**. Avoid intramuscular **cabotegravir**, p. 696. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** modestly decrease the exposure to **cabotegravir**. Avoid. [Severe] Study
- Cabozantinib** → see TABLE 15 p. 1493 (myelosuppression), TABLE 9 p. 1492 (QT-interval prolongation)
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** moderately decrease the exposure to **cabozantinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** moderately decrease the exposure to **cabozantinib**. Avoid. [Moderate] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ **Cabozantinib** is predicted to increase the exposure to benzodiazepines (**midazolam**). [Moderate] Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **cabozantinib**. [Moderate] Study

## Cabozantinib (continued)

- ▶ **Cobicistat** is predicted to increase the exposure to cabozantinib. [Moderate] Study
- ▶ Cabozantinib might affect the effects of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to cabozantinib. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Dabrafenib** is predicted to decrease the exposure to cabozantinib. [Moderate] Study
- ▶ **Drugs with anticoagulant effects** (see TABLE 3 p. 1490) cause bleeding, as can cabozantinib; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
- ▶ **Drugs with antiplatelet effects** (see TABLE 4 p. 1490) cause bleeding, as can cabozantinib; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to cabozantinib. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to cabozantinib. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to cabozantinib. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to cabozantinib. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to cabozantinib. [Moderate] Study → Also see TABLE 15 p. 1493
- ▶ **Letermovir** is predicted to increase the exposure to cabozantinib. [Moderate] Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to cabozantinib. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Mitotane** moderately decreases the exposure to cabozantinib. Avoid. [Moderate] Study → Also see TABLE 15 p. 1493
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to cabozantinib. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to cabozantinib. [Moderate] Study → Also see TABLE 15 p. 1493 → Also see TABLE 9 p. 1492
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to cabozantinib. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to cabozantinib. Avoid. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to cabozantinib. [Moderate] Study

## Caffeine citrate

- ▶ **Caffeine citrate** decreases the efficacy of **antiarrhythmics (adenosine)**. Separate administration by 24 hours. [Mild] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to moderately increase the clearance of caffeine citrate. Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to moderately increase the clearance of caffeine citrate. Monitor and adjust dose. [Moderate] Study
- ▶ **Leflunomide** is predicted to moderately increase the clearance of caffeine citrate. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to moderately increase the clearance of caffeine citrate. Monitor and adjust dose. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** markedly decrease the clearance of caffeine citrate. Monitor and adjust dose. [Severe] Study
- ▶ **Teriflunomide** is predicted to moderately increase the clearance of caffeine citrate. Monitor and adjust dose. [Moderate] Study
- ▶ **Caffeine citrate** decreases the clearance of **theophylline**. [Moderate] Study

**Calcipotriol** → see vitamin D substances

## Calcitonins

- ▶ **Calcitonins** decrease the concentration of **lithium**. Adjust dose. [Moderate] Study

**Calcitriol** → see vitamin D substances

**Calcium acetate** → see calcium salts

**Calcium carbonate** → see calcium salts

**Calcium channel blockers** → see TABLE 6 p. 1491 (bradycardia), TABLE 8 p. 1491 (hypotension)

amlodipine · diltiazem · felodipine · lacidipine · lercanidipine · nicardipine · nifedipine · nimodipine · verapamil

- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. [Severe] Study
- ▶ **Verapamil** is predicted to increase the exposure to **afatinib**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **aldosterone antagonists (epplerenone)**. Adjust **epplerenone** dose, p. 210. [Severe] Study → Also see TABLE 8 p. 1491
- ▶ **Verapamil** moderately increases the exposure to **aliskiren**. [Moderate] Study → Also see TABLE 8 p. 1491
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical → Also see TABLE 8 p. 1491
- ▶ **Verapamil** moderately increases the exposure to **anthracyclines (doxorubicin)**. [Moderate] Study
- ▶ **Anti-androgens (enzalutamide)** are predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Anti-androgens (enzalutamide)** are predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ **Antiarrhythmics (disopyramide)** are predicted to increase the risk of cardiodepression when given with **verapamil**. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the risk of cardiodepression when given with calcium channel blockers (**diltiazem, verapamil**). Avoid. [Severe] Theoretical → Also see TABLE 6 p. 1491
- ▶ Calcium channel blockers (**diltiazem, verapamil**) increase the exposure to **antiarrhythmics (dronedarone)** and **antiarrhythmics (dronedarone)** increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Study → Also see TABLE 6 p. 1491
- ▶ **Verapamil** increases the risk of cardiodepression when given with **antiarrhythmics (flecainide)**. [Severe] Anecdotal → Also see TABLE 6 p. 1491
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p. 1491
- ▶ **Antiepileptics (valproate)** increase the exposure to **nimodipine**. Adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Diltiazem** increases the concentration of **antiepileptics (carbamazepine)** and **antiepileptics (carbamazepine)** are predicted to decrease the exposure to **diltiazem**. Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ **Verapamil** increases the concentration of **antiepileptics (carbamazepine)** and **antiepileptics (carbamazepine)** are predicted to decrease the exposure to **verapamil**. [Severe] Anecdotal
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study

- ▶ Calcium channel blockers (**diltiazem, verapamil**) potentially increase the concentration of **antiepileptics (fosphenytoin, phenytoin)** and **antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **diltiazem**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine, verapamil**). Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole)** (high-dose) are predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Antimalarials (mefloquine)** are predicted to increase the risk of bradycardia when given with **calcium channel blockers**. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Study → Also see TABLE 8 p. 1491
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **antipsychotics, second generation (lurasidone)**. Adjust lurasidone dose. [Moderate] Study → Also see TABLE 8 p. 1491
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **antipsychotics, second generation (quetiapine)**. Avoid. [Moderate] Study → Also see TABLE 8 p. 1491
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **avapritinib**. Avoid or adjust **avapritinib** dose, p. 1045. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **axitinib**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **benzodiazepines (alprazolam)**. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **benzodiazepines (midazolam)**. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Verapamil** is predicted to increase the exposure to **berotralstat**. [Severe] Study
- ▶ **Diltiazem** is predicted to increase the risk of cardiodepression when given with **beta blockers, non-selective**. [Severe] Study → Also see TABLE 6 p. 1491 → Also see TABLE 8 p. 1491
- ▶ **Verapamil** increases the risk of cardiovascular adverse effects when given with **beta blockers, non-selective**. Avoid intravenous **verapamil**, p. 180. [Severe] Study → Also see TABLE 6 p. 1491 → Also see TABLE 8 p. 1491
- ▶ **Diltiazem** is predicted to increase the risk of cardiodepression when given with **beta blockers, selective**. [Severe] Study → Also see TABLE 6 p. 1491 → Also see TABLE 8 p. 1491
- ▶ **Verapamil** increases the risk of cardiovascular adverse effects when given with **beta blockers, selective**. Avoid intravenous **verapamil**, p. 180. [Severe] Study → Also see TABLE 6 p. 1491 → Also see TABLE 8 p. 1491
- ▶ **Verapamil** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **brigatinib**. [Moderate] Study → Also see TABLE 6 p. 1491
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **cabozantinib**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem**) are predicted to increase the exposure to calcium channel blockers (**amlodipine**). Monitor and adjust dose. [Moderate] Study → Also see TABLE 8 p. 1491
- ▶ Calcium channel blockers (**verapamil**) are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study → Also see TABLE 8 p. 1491
- ▶ Calcium channel blockers (**diltiazem**) are predicted to increase the exposure to calcium channel blockers (**felodipine, lacidipine, lercanidipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study → Also see TABLE 8 p. 1491
- ▶ **Cenobamate** is predicted to decrease the exposure to calcium channel blockers (**felodipine, lercanidipine**). Adjust dose. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ceritinib**. [Moderate] Study → Also see TABLE 6 p. 1491
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **lercanidipine**. Use with caution or avoid. [Severe] Study
- ▶ **Nicardipine** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ Calcium channel blockers (**nifedipine, nimodipine**) might increase the exposure to **cladribine**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **cobimetinib**. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors, p. 1212. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 6 p. 1491
- ▶ **Crizotinib** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine,**

## Calcium channel blockers (continued)

- lercanidipine, nifedipine, nifedipine, nimodipine). Monitor and adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **dabrafenib**. [Moderate] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
- ▶ Intravenous **dantrolene** potentially increases the risk of acute hyperkalaemia and cardiovascular collapse when given with calcium channel blockers (**diltiazem, verapamil**). Avoid. [Severe] Anecdotal
- ▶ **Diltiazem** is predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Verapamil** is predicted to increase the exposure to **darifenacin**. Avoid. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) increase the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study → Also see TABLE 6 p. 1491
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [Mild] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical → Also see TABLE 8 p. 1491
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal → Also see TABLE 8 p. 1491
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **elxacaftor**. Adjust tezacaftor with ivacaftor and elxacaftor p. 320 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 1056. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **erlotinib**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Verapamil** is predicted to increase the exposure to **factor XA inhibitors (apixaban)**. [Moderate] Theoretical
- ▶ **Verapamil** slightly increases the exposure to **factor XA inhibitors (edoxaban)**. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **fosfoterodine**. Adjust **fosfoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment, p. 840. [Mild] Study
- ▶ **Verapamil** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Diltiazem** is predicted to increase the exposure to **fofostatinib**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **gefinitib**. [Moderate] Study
- ▶ **Verapamil** is predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
- ▶ **Grapefruit** juice very slightly increases the exposure to **amlodipine**. Avoid. [Mild] Study
- ▶ **Grapefruit** juice increases the exposure to calcium channel blockers (**nifedipine, verapamil**). Avoid. [Mild] Study
- ▶ **Grapefruit** juice increases the exposure to **felodipine**. Avoid. [Moderate] Study
- ▶ **Grapefruit** juice is predicted to increase the exposure to **lercanidipine**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit** juice increases the exposure to **nicardipine**. [Mild] Study
- ▶ **Grazoprevir** is predicted to increase the concentration of **calcium channel blockers**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 384. [Moderate] Theoretical → Also see TABLE 8 p. 1491
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** (high-dose) are predicted to increase the exposure to **lercanidipine**. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** moderately increase the exposure to **nifedipine**. Monitor and adjust dose. [Severe] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **verapamil**. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to calcium channel blockers (**diltiazem, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, nifedipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors, p. 1062. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **imatinitib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ivabradine**. Avoid. [Moderate] Study → Also see TABLE 6 p. 1491
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 317, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elxacaftor p. 320. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **lapatinib**. [Moderate] Study

- ▶ **Verapamil** is predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ Calcium channel blockers (**amlodipine, lacidipine**) are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **diltiazem**. [Severe] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **verapamil**. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ Intravenous **magnesium** potentially increases the risk of hypotension when given with calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine, verapamil**) in pregnant women. [Severe] Anecdotal
- ▶ **Mexiletine** increases the risk of cardiovascular adverse effects when given with **diltiazem**. Avoid or monitor. [Severe] Theoretical
- ▶ **Mexiletine** potentially increases the risk of cardiovascular adverse effects when given with **verapamil**. Avoid or monitor. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **diltiazem**. [Severe] Study
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to calcium channel blockers. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects, p. 67. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **neurokinin-1 receptor antagonists (aprepitant)** and **neurokinin-1 receptor antagonists (aprepitant)** are predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Verapamil** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of calcium channel blockers. [Severe] Theoretical
- ▶ **NRRTs (efavirenz, nevirapine)** are predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **NRRTs (efavirenz, nevirapine)** are predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p. 1491
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical
- ▶ **Verapamil** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **pazopanib**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **pemigatinib**. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 878. [Moderate] Theoretical → Also see TABLE 8 p. 1491
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. [Moderate] Study → Also see TABLE 8 p. 1491
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical → Also see TABLE 8 p. 1491
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 8 p. 1491
- ▶ **Verapamil** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1491
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ponatinib**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **regorafenib**. [Moderate] Study
- ▶ **Verapamil** is predicted to increase the exposure to **relugolix**. Avoid or take **relugolix** first and separate administration by at least 6 hours. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **nifedipine**. Avoid. [Severe] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** greatly decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **rufoxitinib**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **selpercatinib**. [Moderate] Study

## Calcium channel blockers (continued)

- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study → Also see TABLE 6 p. 1491
- ▶ Calcium channel blockers (**diltiazem, verapamil**) increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
- ▶ **Diltiazem** slightly increases the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Study
- ▶ **Verapamil** is predicted to slightly to moderately increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Amlodipine** slightly increases the exposure to **statins (simvastatin)**. Adjust **simvastatin** dose, p. 222. [Mild] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) moderately increase the exposure to **statins (simvastatin)**. Monitor and adjust dose. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **sunitinib**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Nicardipine** potentially increases the concentration of **tacrolimus**. Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ Calcium channel blockers (**diltiazem, felodipine**) very slightly increase the exposure to **talazoparib**. [Moderate] Study
- ▶ **Verapamil** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **taxanes (docetaxel)**. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Anecdotal
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the concentration of and the risk of angioedema when given with **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Temsirolimus** is predicted to increase the risk of angioedema when given with calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see **tezacaftor** with **ivacaftor** p. 319 and **tezacaftor** with **ivacaftor** and **elixacaftor** p. 320. [Severe] Study
- ▶ **Verapamil** increases the exposure to **thrombin inhibitors (dabigatran)**. Monitor and adjust dose. [Severe] Study
- ▶ **Verapamil** might increase the exposure to **tigecycline**. [Mild] Anecdotal
- ▶ Calcium channel blockers (**diltiazem, verapamil**) given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. [Moderate] Study

- ▶ **Verapamil** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Verapamil** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

**Calcium chloride** → see calcium salts

**Calcium gluconate** → see calcium salts

**Calcium lactate** → see calcium salts

**Calcium phosphate** → see calcium salts

**Calcium salts**

calcium acetate · calcium carbonate · calcium chloride · calcium gluconate · calcium lactate · calcium phosphate

**SEPARATION OF ADMINISTRATION** **Calcium carbonate-containing antacids** should preferably not be taken at the same time as other drugs since they might impair absorption. **Antacids** might damage enteric coatings designed to prevent dissolution in the stomach.

- ▶ Oral **calcium carbonate** -containing antacids modestly decreases the exposure to oral **acalabrutinib**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral **calcium salts** decrease the absorption of **alkylating agents (estramustine)**. [Severe] Study
- ▶ **Calcium carbonate** might decrease the absorption of **antimalarials (chloroquine)**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ **Calcium carbonate** is predicted to decrease the absorption of **antimalarials (proguanil)**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral **calcium salts** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Avoid. [Severe] Theoretical
- ▶ Oral **calcium salts** decrease the absorption of **bisphosphonates (alendronate)**. **Alendronate** should be taken at least 30 minutes before **calcium salts**. [Moderate] Study
- ▶ Oral **calcium salts** decrease the absorption of **bisphosphonates (clodronate)**. Avoid **calcium salts** for 2 hours before or 1 hour after **clodronate**. [Moderate] Study
- ▶ Oral **calcium salts** are predicted to decrease the absorption of oral **bisphosphonates (ibandronate)**. Avoid **calcium salts** for at least 6 hours before or 1 hour after **ibandronate**. [Moderate] Theoretical
- ▶ Oral **calcium salts** decrease the absorption of **bisphosphonates (risedronate)**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Oral **calcium carbonate**-containing antacids are predicted to decrease the absorption of oral **bosutinib**. **Bosutinib** should be taken at least 12 hours before antacids. [Moderate] Theoretical
- ▶ **Cephalosporins (ceftriaxone)** increase the risk of cardio-respiratory arrest when given with **calcium chloride**. Avoid. [Severe] Anecdotal
- ▶ **Cephalosporins (ceftriaxone)** increase the risk of cardio-respiratory arrest when given with intravenous **calcium gluconate**. Avoid. [Severe] Anecdotal
- ▶ Oral **calcium carbonate** -containing antacids are predicted to decrease the exposure to oral **dasatinib**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Intravenous **calcium salts** increase the effects of **digoxin**. Avoid. [Moderate] Anecdotal
- ▶ Oral **calcium salts** decrease the absorption of **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after **calcium salts**. [Moderate] Study

- ▶ Oral calcium salts decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after calcium salts. [Severe] Study
  - ▶ Oral calcium carbonate-containing antacids are predicted to decrease the absorption of oral **erlotinib**. **Erlotinib** should be taken 2 hours before or 4 hours after antacids. [Moderate] Theoretical
  - ▶ Oral calcium carbonate-containing antacids are predicted to decrease the exposure to oral **gefitinib**. [Moderate] Theoretical
  - ▶ Calcium carbonate is predicted to decrease the absorption of **hydroxychloroquine**. [Moderate] Theoretical
  - ▶ Oral calcium carbonate decreases the absorption of oral **iron**. Calcium carbonate should be taken 1 hour before or 2 hours after iron. [Moderate] Study
  - ▶ Oral calcium carbonate-containing antacids are predicted to decrease the absorption of oral **lapatinib**. Avoid. [Moderate] Theoretical
  - ▶ Calcium carbonate is predicted to decrease the exposure to **ledipasvir**. Separate administration by 4 hours. [Moderate] Theoretical
  - ▶ Oral calcium carbonate-containing antacids are predicted to decrease the exposure to oral **neratinib**. Separate administration by at least 3 hours. [Mild] Theoretical
  - ▶ Oral calcium carbonate-containing antacids might affect the exposure to oral **nilotinib**. Separate administration by at least 2 hours. [Moderate] Study
  - ▶ Oral calcium carbonate-containing antacids are predicted to decrease the exposure to oral **NNRTIs (rilpivirine)**. **Rilpivirine** should be taken 4 hours before or 2 hours after antacids. [Severe] Theoretical
  - ▶ Oral calcium carbonate-containing antacids might decrease the absorption of oral **pazopanib**. **Pazopanib** should be taken 1 hour before or 2 hours after antacids. [Moderate] Theoretical
  - ▶ Calcium carbonate decreases the absorption of **quinolones (ciprofloxacin)**. Separate administration by 2 hours. [Moderate] Study
  - ▶ Calcium carbonate greatly decreases the exposure to **raltegravir** (high-dose). Avoid. [Severe] Study
  - ▶ Calcium acetate minimally decreases the exposure to **roxadustat**. **Roxadustat** should be taken at least 1 hour after calcium acetate. [Moderate] Study
  - ▶ Oral calcium carbonate is predicted to decrease the exposure to oral **sotorasib**. **Sotorasib** should be taken 4 hours before or 10 hours after antacids. [Moderate] Theoretical
  - ▶ Oral calcium salts decrease the exposure to **strontium**. Separate administration by 2 hours. [Moderate] Study
  - ▶ Calcium carbonate is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Theoretical
  - ▶ **Thiazide diuretics** increase the risk of hypercalcaemia when given with calcium salts. [Severe] Anecdotal
  - ▶ Oral calcium salts are predicted to decrease the absorption of **thyroid hormones (levothyroxine)**. Separate administration by at least 4 hours. [Moderate] Anecdotal
  - ▶ Calcium carbonate is predicted to decrease the concentration of **veltapasvir**. Separate administration by 4 hours. [Moderate] Anecdotal
  - ▶ Oral calcium salts decrease the absorption of **zinc**. [Moderate] Study
- Canagliflozin** → see sodium glucose co-transporter 2 inhibitors
- Canakinumab** → see monoclonal antibodies
- Candesartan** → see angiotensin-II receptor antagonists
- Cangrelor** → see TABLE 4 p. 1490 (antiplatelet effects)
- ▶ **Selumetinib** might increase the risk of bleeding when given with **cangrelor**. [Severe] Theoretical
- Cannabidiol** → see TABLE 11 p. 1492 (CNS depressant effects)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1492
- ▶ **Cannabidiol** increases the risk of increased ALT concentrations when given with **antiepileptics (valproate)**. Avoid or adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to **cannabidiol**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study
- ▶ **Cannabidiol** increases the exposure to the active metabolite of **benzodiazepines (clobazam)** and **benzodiazepines (clobazam)** increase the exposure to the active metabolite of **cannabidiol**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1492
- ▶ **Cobicistat** is predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Moderate] Study
- ▶ **Moclobemide** is predicted to increase the exposure to **cannabidiol**. [Moderate] Theoretical
- ▶ **Proton pump inhibitors (esomeprazole)** are predicted to increase the exposure to **cannabidiol**. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Moderate] Study
- ▶ **SSRIs (fluoxetine, fluvoxamine)** are predicted to increase the exposure to **cannabidiol**. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Mild] Study
- Capecitabine** → see TABLE 15 p. 1493 (myelosuppression)
- ▶ **Allopurinol** is predicted to decrease the effects of **capecitabine**. Avoid. [Severe] Study
- ▶ **Capecitabine** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Severe] Anecdotal
- ▶ **Capecitabine** increases the effects of **coumarins**. Monitor INR and adjust dose. [Moderate] Anecdotal
- ▶ **Folates** are predicted to increase the risk of toxicity when given with **capecitabine**. [Severe] Anecdotal
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** are predicted to slightly increase the exposure to **capecitabine**. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **capecitabine**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Metronidazole** is predicted to increase the risk of capecitabine toxicity when given with **capecitabine**. [Severe] Theoretical
- Caplacizumab**
- ▶ **Drugs with anticoagulant effects** (see TABLE 3 p. 1490) cause bleeding, as can **caplacizumab**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
- ▶ **Drugs with antiplatelet effects** (see TABLE 4 p. 1490) cause bleeding, as can **caplacizumab**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
- Capreomycin** → see TABLE 2 p. 1490 (nephrotoxicity), TABLE 19 p. 1494 (ototoxicity)
- Captopril** → see ACE inhibitors
- Carbamazepine** → see antiepileptics
- Carbapenems**
- ertapenem · imipenem · meropenem
- ▶ **Carbapenems** decrease the concentration of **antiepileptics (valproate)**. Avoid. [Severe] Anecdotal
- ▶ **Ganciclovir** is predicted to increase the risk of seizures when given with **imipenem**. Avoid. [Severe] Anecdotal
- ▶ **Valganciclovir** is predicted to increase the risk of seizures when given with **imipenem**. Avoid. [Severe] Anecdotal
- Carbidopa**
- ▶ Oral **iron** is predicted to decrease the exposure to oral **carbidopa**. [Moderate] Theoretical
- Carbimazole**
- ▶ **Carbimazole** affects the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Theoretical

## Carbimazole (continued)

- ▶ Carbimazole decreases the effects of **metyrapone**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ Carbimazole given with a potent CYP3A4 inhibitor is predicted to increase the exposure to **propiverine**. Adjust starting dose. [\[Moderate\]](#) Theoretical

**Carboplatin** → see platinum compounds**Carfilzomib** → see TABLE 15 p. 1493 (myelosuppression)

- ▶ Carfilzomib potentially decreases the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical

**Cariprazine** → see antipsychotics, second generation**Carmustine** → see alkylating agents**Carvedilol** → see beta blockers, non-selective**Caspofungin**

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenytoin)** are predicted to decrease the concentration of **casprofungin**. Adjust **casprofungin** dose, p. 646. [\[Moderate\]](#) Theoretical
- ▶ **Ciclosporin** slightly increases the exposure to **casprofungin**. [\[Severe\]](#) Study
- ▶ **Corticosteroids (dexamethasone)** are predicted to decrease the concentration of **casprofungin**. Adjust **casprofungin** dose, p. 646. [\[Moderate\]](#) Theoretical
- ▶ **NNRTIs (efavirenz)** are predicted to decrease the concentration of **casprofungin**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **NNRTIs (nevirapine)** are predicted to decrease the concentration of **casprofungin**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** decrease the concentration of **casprofungin**. Adjust **casprofungin** dose, p. 646. [\[Moderate\]](#) Study

**Cefaclor** → see cephalosporins**Cefadroxil** → see cephalosporins**Cefalexin** → see cephalosporins**Cefazolin** → see cephalosporins**Cefepime** → see cephalosporins**Cefiderocol** → see cephalosporins**Cefixime** → see cephalosporins**Cefotaxime** → see cephalosporins**Cefoxitin** → see cephalosporins**Cefradine** → see cephalosporins**Ceftaroline** → see cephalosporins**Ceftazidime** → see cephalosporins**Ceftobiprole** → see cephalosporins**Ceftolozane** → see cephalosporins**Ceftriaxone** → see cephalosporins**Cefuroxime** → see cephalosporins**Celecoxib** → see NSAIDs**Celiprolol** → see beta blockers, selective**Cemiplimab** → see monoclonal antibodies**Cenobamate** → see TABLE 11 p. 1492 (CNS depressant effects)

- ▶ **Cenobamate** is predicted to decrease the exposure to **aldosterone antagonists (eplerenone)**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cenobamate** might increase the exposure to **antiepileptics (fosphenytoin, primidone)**. [\[Moderate\]](#) Theoretical → Also see TABLE 11 p. 1492
- ▶ **Cenobamate** is predicted to decrease the concentration of **antiepileptics (lamotrigine)** and **antiepileptics (lamotrigine)** might affect the efficacy of **cenobamate**. Adjust dose. [\[Moderate\]](#) Study → Also see TABLE 11 p. 1492
- ▶ **Cenobamate** slightly increases the exposure to **antiepileptics (phenobarbital, phenytoin)**. Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 11 p. 1492
- ▶ **Cenobamate** is predicted to decrease the exposure to **antipsychotics, second generation (lurasidone, quetiapine)**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 11 p. 1492
- ▶ **Cenobamate** might increase the concentration of **benzodiazepines (clobazam)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 11 p. 1492
- ▶ **Cenobamate** moderately decreases the exposure to **benzodiazepines (midazolam)**. Adjust dose. [\[Moderate\]](#) Study → Also see TABLE 11 p. 1492
- ▶ **Cenobamate** is predicted to decrease the exposure to **beta<sub>2</sub> agonists (salmeterol)**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to **bosutinib**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to **buspirone**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to **calcium channel blockers (felodipine, lercanidipine)**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to **cobimetinib**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cenobamate** might decrease the efficacy of oral **combined hormonal contraceptives**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to oral **corticosteroids (budesonide)**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to **corticosteroids (fluticasone)**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to **darifenacin**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to **dasatinib**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to **everolimus**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to **ibrutinib**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to **ibrutinib**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to **lomitapide**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to **naloxegol**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to **opioids (alfentanil)**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 11 p. 1492
- ▶ **Cenobamate** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, sildenafil, vardenafil)**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cenobamate** moderately increases the exposure to **proton pump inhibitors (omeprazole)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Cenobamate** is predicted to decrease the exposure to **sirolimus**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to **statins (simvastatin)**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to oral **temsirolimus**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to **ticagrelor**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to **tolvaptan**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cenobamate** is predicted to decrease the exposure to **triptans (eletriptan)**. Adjust dose. [\[Moderate\]](#) Theoretical

**Cephalosporins** → see TABLE 2 p. 1490 (nephrotoxicity)

cefaclor · cefadroxil · cefalexin · cefazolin · cefepime · cefiderocol · cefixime · cefotaxime · cefoxitin · cefradine · ceftaroline · ceftazidime · ceftobiprole · ceftolozane · ceftriaxone · cefuroxime

**ROUTE-SPECIFIC INFORMATION** Interactions do not generally apply to topical use of **cefuroxime** unless specified.

- ▶ **Ceftriaxone** increases the risk of cardio-respiratory arrest when given with **calcium salts (calcium chloride)**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Ceftriaxone** increases the risk of cardio-respiratory arrest when given with intravenous **calcium salts (calcium gluconate)**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ Cephalosporins (**cefazolin, ceftriaxone**) potentially increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Ceftobiprole** is predicted to increase the exposure to **endothelin receptor antagonists (bosentan)**. [\[Moderate\]](#) Theoretical
- ▶ **Lefflunomide** is predicted to increase the exposure to **cefaclor**. [\[Moderate\]](#) Theoretical
- ▶ **Nitisinone** is predicted to increase the exposure to **cefaclor**. [\[Moderate\]](#) Study
- ▶ Cephalosporins (**cefazolin, ceftriaxone**) potentially increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Anecdotal

- ▶ **Ceftobiprole** is predicted to increase the concentration of **statins**. [Moderate] Theoretical
  - ▶ **Ceftobiprole** is predicted to increase the concentration of **sulfonylureas (glibenclamide)**. [Moderate] Theoretical
  - ▶ **Teriflunomide** is predicted to increase the exposure to **cefcafor**. [Moderate] Study
  - Ceritinib** → see TABLE 6 p. 1491 (bradycardia), TABLE 15 p. 1493 (myelosuppression), TABLE 9 p. 1492 (QT-interval prolongation)
  - ▶ **Ceritinib** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
  - ▶ Oral **antacids** are predicted to decrease the absorption of oral **ceritinib**. Separate administration by 2 hours. [Moderate] Theoretical
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
  - ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **ceritinib**. [Moderate] Study → Also see TABLE 6 p. 1491 → Also see TABLE 9 p. 1492
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ceritinib**. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 1050. [Severe] Study → Also see TABLE 9 p. 1492
  - ▶ **Ceritinib** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ceritinib**. [Moderate] Study → Also see TABLE 6 p. 1491
  - ▶ **Ceritinib** is predicted to increase the exposure to **ciclosporin**. Avoid. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 1050. [Severe] Study
  - ▶ **Ceritinib** is predicted to increase the exposure to **colchicine**. [Moderate] Theoretical
  - ▶ **Ceritinib** is predicted to increase the exposure to **coumarins (acenocoumarol)**. [Severe] Theoretical
  - ▶ **Ceritinib** is predicted to increase the exposure to **coumarins (warfarin)**. Avoid. [Severe] Theoretical
  - ▶ **Crizotinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Study → Also see TABLE 6 p. 1491 → Also see TABLE 9 p. 1492
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **ceritinib**. [Severe] Study
  - ▶ **Ceritinib** is predicted to increase the risk of bradycardia when given with **digoxin**. Avoid. [Severe] Theoretical → Also see TABLE 6 p. 1491
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **ceritinib**. [Severe] Study
  - ▶ **Ceritinib** is predicted to increase the exposure to **ergotamine**. Avoid. [Severe] Theoretical
  - ▶ **Ceritinib** is predicted to increase the exposure to **everolimus**. [Moderate] Theoretical
  - ▶ **Ceritinib** is predicted to increase the exposure to **factor XA inhibitors (edoxaban)**. [Moderate] Theoretical
  - ▶ **Grapefruit** juice is predicted to increase the exposure to **ceritinib**. Avoid. [Severe] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **ceritinib**. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 1050. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 1050. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Study → Also see TABLE 15 p. 1493
  - ▶ **Lapatinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Letermovir** is predicted to increase the exposure to **ceritinib**. [Moderate] Study
  - ▶ **Ceritinib** is predicted to increase the exposure to **loperamide**. [Moderate] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 1050. [Severe] Study → Also see TABLE 9 p. 1492
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ceritinib**. [Moderate] Study → Also see TABLE 9 p. 1492
  - ▶ **Mitotane** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1493
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **ceritinib**. [Moderate] Study
  - ▶ **Neurokinin-1 receptor antagonists (fosaprepitant)** are predicted to increase the exposure to **ceritinib**. [Severe] Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Study → Also see TABLE 15 p. 1493 → Also see TABLE 9 p. 1492
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ceritinib**. Avoid or adjust **ceritinib** dose, p. 1050. [Severe] Theoretical
  - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **ceritinib**. [Severe] Study → Also see TABLE 9 p. 1492
  - ▶ **Ceritinib** is predicted to increase the exposure to **NSAIDs (celecoxib, diclofenac)**. Adjust dose. [Moderate] Theoretical
  - ▶ **Ceritinib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Avoid. [Severe] Theoretical → Also see TABLE 6 p. 1491
  - ▶ **Ceritinib** is predicted to increase the exposure to **phenindione**. [Severe] Theoretical
  - ▶ **Ceritinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **ceritinib**. [Moderate] Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study
  - ▶ **Ceritinib** is predicted to increase the exposure to **sirolimus**. Avoid. [Severe] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Theoretical
  - ▶ **Ceritinib** is predicted to increase the exposure to **sulfonylureas (glimipiride)**. Adjust dose. [Moderate] Theoretical
  - ▶ **Ceritinib** is predicted to increase the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
  - ▶ **Ceritinib** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Theoretical → Also see TABLE 15 p. 1493
  - ▶ **Ceritinib** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. [Moderate] Theoretical
  - ▶ **Ceritinib** is predicted to increase the exposure to **topotecan**. [Moderate] Theoretical → Also see TABLE 15 p. 1493
- Certolizumab pegol** → see monoclonal antibodies
- Cetirizine** → see antihistamines, non-sedating
- Cetuximab** → see monoclonal antibodies
- Chenodeoxycholic acid**
- ▶ Oral **aluminium hydroxide** decreases the absorption of **chenodeoxycholic acid**. [Moderate] Study
  - ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Ciclosporin** is predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ Oral **combined hormonal contraceptives** potentially decrease the efficacy of oral **chenodeoxycholic acid**. Avoid. [Moderate] Theoretical
  - ▶ **Sirolimus** is predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [Moderate] Theoretical
- Chloral hydrate** → see TABLE 11 p. 1492 (CNS depressant effects)
- ▶ Intravenous **loop diuretics (furosemide)** potentially increase the risk of sweating, variable blood pressure, and tachycardia when given after **chloral hydrate**. [Moderate] Anecdotal
- Chlorambucil** → see alkylating agents
- Chloramphenicol**
- ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- ▶ **Antiepileptics (phenobarbital, primidone)** decrease the concentration of **chloramphenicol**. [Moderate] Study

**Chloramphenicol** (continued)

- ▶ Intravenous **chloramphenicol** increases the concentration of antiepileptics (**fosphenytoin**, **phenytoin**) and antiepileptics (**fosphenytoin**, **phenytoin**) affect the concentration of intravenous **chloramphenicol**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Chloramphenicol** potentially increases the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
- ▶ **Chloramphenicol** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 384. [Moderate] Theoretical
- ▶ **Chloramphenicol** decreases the efficacy of **iron**. [Moderate] Anecdotal
- ▶ **Rifamycins** (**rifampicin**) decrease the concentration of **chloramphenicol**. [Moderate] Study
- ▶ **Chloramphenicol** is predicted to increase the exposure to **sulfonyleureas**. [Severe] Study
- ▶ **Chloramphenicol** increases the concentration of **tacrolimus**. [Severe] Study

**Chloridiazepoxide** → see benzodiazepines

**Chlormethine**

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

**Chloroprocaine** → see TABLE 11 p. 1492 (CNS depressant effects)

- ▶ **Chloroprocaine** is predicted to increase the risk of cardiovascular adverse effects when given with **antiarrhythmics** (**amiodarone**, **dronedarone**, **vernakalant**). [Severe] Theoretical
- ▶ **Chloroprocaine** is predicted to increase the risk of cardiovascular adverse effects when given with **beta blockers**, **non-selective** (**sotalol**). [Severe] Theoretical
- ▶ **Chloroprocaine** is predicted to decrease the effects of **sulfonamides**. Avoid. [Severe] Theoretical

**Chloroquine** → see antimalarials

**Chlorothiazide** → see thiazide diuretics

**Chlorphenamine** → see antihistamines, sedating

**Chlorpromazine** → see phenothiazines

**Chlortalidone** → see thiazide diuretics

**Cholera vaccine**

- ▶ **Antimalarials** (**chloroquine**) decrease the efficacy of oral **cholera vaccine**. [Moderate] Study
- ▶ **Hydroxychloroquine** is predicted to decrease the efficacy of oral **cholera vaccine**. [Moderate] Theoretical

**Cholic acid**

- ▶ Oral **antacids** are predicted to decrease the absorption of oral **cholic acid**. Separate administration by 5 hours. [Mid] Theoretical
- ▶ **Antiepileptics** (**phenobarbital**) decrease the effects of **cholic acid**. Avoid. [Moderate] Study
- ▶ **Ciclosporin** affects the concentration of **cholic acid**. Avoid. [Moderate] Study

**Choline salicylate**

- ▶ **Corticosteroids** are predicted to decrease the concentration of **choline salicylate**. [Moderate] Study

**Ciclesonide** → see corticosteroids

**Ciclosporin** → see TABLE 2 p. 1490 (nephrotoxicity), TABLE 16 p. 1494 (increased serum potassium)

- ▶ Pomelo juice is predicted to increase ciclosporin exposure, and purple grape juice is predicted to decrease ciclosporin exposure.

▶ Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Abrocitinib** might increase the exposure to **ciclosporin**.

[Moderate] Theoretical

- ▶ **Ciclosporin** is predicted to increase the exposure to **afatinib**.

[Moderate] Study

- ▶ **Ciclosporin** markedly increases the exposure to **aliskiren**.

Avoid. [Severe] Study → Also see TABLE 16 p. 1494

- ▶ **Ciclosporin** is predicted to increase the exposure to **alpelisib**.

[Moderate] Theoretical

- ▶ **Ciclosporin** increases the concentration of **anthracyclines** (**daunorubicin**, **doxorubicin**, **epirubicin**, **idarubicin**, **mitoxantrone**). [Severe] Study

- ▶ **Anti-androgens** (**apalutamide**, **enzalutamide**) decrease the concentration of **ciclosporin**. [Severe] Study

- ▶ **Antiarrhythmics** (**amiodarone**) increase the concentration of **ciclosporin**. Monitor concentration and adjust dose. [Severe] Study

- ▶ **Antiarrhythmics** (**dronedarone**) are predicted to increase the concentration of **ciclosporin**. [Severe] Study

- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) decrease the concentration of **ciclosporin**. [Severe] Study

- ▶ **Antiepileptics** (**oxcarbazepine**) decrease the concentration of **ciclosporin**. [Severe] Anecdotal

- ▶ **Antifungals**, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **ciclosporin**. [Severe] Study

- ▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) increase the concentration of **ciclosporin**. [Severe] Study

- ▶ **Antifungals**, azoles (**miconazole**) increase the concentration of **ciclosporin**. Monitor and adjust dose. [Severe] Anecdotal

- ▶ **Baricitinib** is predicted to enhance the risk of immunosuppression when given with **ciclosporin**.

Manufacturer advises caution or avoid—consult product literature. [Severe] Theoretical

- ▶ **Ciclosporin** is predicted to increase the exposure to **bertrastat**. [Severe] Study

- ▶ **Ciclosporin** is predicted to increase the exposure to **beta blockers**, **non-selective** (**nadolol**). [Moderate] Study

- ▶ **Ciclosporin** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical

- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the concentration of **ciclosporin**. [Severe] Study

- ▶ **Calcium channel blockers** (**nicardipine**) increase the concentration of **ciclosporin**. [Severe] Study

- ▶ **Ciclosporin** moderately increases the exposure to **calcium channel blockers** (**lercanidipine**). Use with caution or avoid.

[Severe] Study

- ▶ **Ciclosporin** slightly increases the exposure to **caspofungin**. [Severe] Study

- ▶ **Ceritinib** is predicted to increase the exposure to **ciclosporin**.

Avoid. [Severe] Theoretical

- ▶ **Ciclosporin** is predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [Moderate] Theoretical

- ▶ **Ciclosporin** affects the concentration of **cholic acid**. Avoid. [Moderate] Study

- ▶ **Ciclosporin** is predicted to increase the exposure to **cladribine**. Avoid or adjust dose. [Moderate] Theoretical

- ▶ **Cobicistat** increases the concentration of **ciclosporin**. [Severe] Study

- ▶ **Ciclosporin** increases the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose, p. 1212. [Severe] Study

- ▶ **Crizotinib** is predicted to increase the concentration of **ciclosporin**. [Severe] Study

- ▶ **Ciclosporin** is predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical

- ▶ **Ciclosporin** is predicted to increase the exposure to **darifenacin**. Avoid. [Moderate] Theoretical

- ▶ **Ciclosporin** increases the concentration of **digoxin**. Monitor and adjust dose. [Severe] Theoretical

- ▶ **Ciclosporin** causes a small decrease in the exposure to **eltrombopag**. Monitor platelet count and adjust dose.

[Moderate] Study

- ▶ **Endothelin receptor antagonists** (**bosentan**) moderately decrease the exposure to **ciclosporin** and **ciclosporin** moderately increases the exposure to **endothelin receptor antagonists** (**bosentan**). Avoid. [Severe] Study

- ▶ **Ciclosporin** moderately increases the exposure to **endothelin receptor antagonists** (**ambrisentan**). Adjust **ambrisentan** dose, p. 199. [Moderate] Study

- ▶ **Entrectinib** is predicted to increase the exposure to **ciclosporin**.

[Mid] Theoretical

- ▶ **Ciclosporin** is predicted to increase the exposure to **ertotinib**.

[Moderate] Theoretical

- ▶ **Ciclosporin** increases the exposure to **etoposide**. Monitor and adjust dose. [Severe] Study

- ▶ **Ciclosporin** moderately increases the exposure to **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **ezetimibe** and **ezetimibe** slightly increases the exposure to **ciclosporin**. [Moderate] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **factor XA inhibitors (apixaban)**. [Moderate] Theoretical
- ▶ **Ciclosporin** slightly increases the exposure to **factor XA inhibitors (edoxaban)**. Adjust **edoxaban** dose, p. 138. [Severe] Study
- ▶ **Ciclosporin** slightly increases the exposure to **factor XA inhibitors (rivaroxaban)**. [Moderate] Study
- ▶ **Fibrates (bezafibrate)** are predicted to increase the risk of nephrotoxicity when given with **ciclosporin**. [Severe] Theoretical
- ▶ **Fibrates (fenofibrate)** increase the risk of nephrotoxicity when given with **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **ciclosporin**. Avoid. [Severe] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
- ▶ **Ciclosporin** increases the exposure to **glecaprevir**. Avoid or monitor. [Severe] Study
- ▶ **Grapefruit** juice increases the concentration of **ciclosporin**. Avoid. [Severe] Study
- ▶ **Ciclosporin** greatly increases the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the concentration of **ciclosporin**. [Mild] Study
- ▶ **HIV-protease inhibitors** increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Idelalisib** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Imatinib** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Iron chelators (dexrazoxane)** might increase the risk of immunosuppression when given with **ciclosporin**. [Severe] Theoretical
- ▶ **Ivacaftor** is predicted to increase the exposure to **ciclosporin**. [Moderate] Theoretical
- ▶ **Lanreotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. [Severe] Theoretical
- ▶ **Ciclosporin** might increase the concentration of **lapatinib**. [Severe] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **larotrectinib**. [Mild] Study
- ▶ **Letermovir** increases the exposure to **ciclosporin** and **ciclosporin** increases the exposure to **letermovir**. Monitor and adjust **letermovir** dose, p. 693. [Severe] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **ciclosporin**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Lorlatinib** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Moderate] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Macrolides (erythromycin)** greatly increase the exposure to **ciclosporin**. Avoid or monitor. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **meglitinides (repaglinide)**. [Moderate] Study
- ▶ **Ciclosporin** might alter the exposure to **ciclosporin**. Monitor concentration and adjust dose. [Severe] Theoretical
- ▶ **Midostaurin** might increase the concentration of **ciclosporin**. [Severe] Anecdotal
- ▶ **Ciclosporin** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** decreases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Monoclonal antibodies (blinatumomab)** are predicted to transiently increase the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **neratinib**. Avoid or adjust **neratinib** dose, and monitor for gastrointestinal adverse effects, p. 1069. [Severe] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ciclosporin**. [Severe] Theoretical
- ▶ **NNRTIs (efavirenz)** decrease the concentration of **ciclosporin**. Monitor concentration and adjust dose. [Moderate] Study
- ▶ **NNRTIs (nevirapine)** are predicted to decrease the concentration of **ciclosporin**. [Moderate] Study
- ▶ **Ciclosporin** increases the concentration of **NSAIDs (diclofenac)**. [Severe] Study → Also see TABLE 2 p. 1490 → Also see TABLE 16 p. 1494
- ▶ **Octreotide** decreases the absorption of oral **ciclosporin**. Adjust **ciclosporin** dose, p. 904. [Severe] Anecdotal
- ▶ **Olaparib** might alter the exposure to **ciclosporin**. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to the active metabolites of **ozanimod**. Avoid. [Moderate] Study
- ▶ **Palbociclib** is predicted to increase the exposure to **ciclosporin**. Adjust dose. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical
- ▶ **Pasireotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Severe] Theoretical
- ▶ **Ciclosporin** is predicted to increase the concentration of **ranolazine** and **ranolazine** is predicted to increase the concentration of **ciclosporin**. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **relugolix**. Avoid or take **relugolix** first and separate administration by at least 6 hours. [Moderate] Study
- ▶ **Ribociclib** is predicted to increase the exposure to **ciclosporin**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** decrease the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** very markedly increases the exposure to **rifaximin**. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **riociguat**. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Ciclosporin** moderately increases the exposure to **sirolimus**. Separate administration by 4 hours. [Severe] Study
- ▶ **St John's wort** decreases the concentration of **ciclosporin**. Avoid. [Moderate] Study
- ▶ **Ciclosporin** markedly to very markedly increases the exposure to **statins (atorvastatin)**. Avoid or adjust **atorvastatin** dose, p. 220. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **statins (fluvastatin)**. [Severe] Study
- ▶ **Ciclosporin** markedly to very markedly increases the exposure to **statins (pravastatin)**. Adjust dose. [Severe] Study
- ▶ **Ciclosporin** markedly increases the exposure to **statins (rosuvastatin)**. Avoid. [Severe] Study
- ▶ **Ciclosporin** markedly to very markedly increases the exposure to **statins (simvastatin)**. Avoid. [Severe] Study

## Cyclosporin (continued)

- ▶ **Cyclosporin** increases the concentration of **tacrolimus**. Avoid. [\[Severe\]](#) Study → Also see TABLE 2 p. 1490 → Also see TABLE 16 p. 1494
- ▶ **Cyclosporin** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [\[Severe\]](#) Study
- ▶ **Cyclosporin** increases the concentration of **taxanes (docetaxel, paclitaxel)** (oral). [\[Unknown\]](#) Study
- ▶ **Cyclosporin** is predicted to increase the exposure to **tenofovir alafenamide**. [\[Moderate\]](#) Theoretical
- ▶ **Cyclosporin** is predicted to increase the exposure to **tenofovir disoproxil**. [\[Moderate\]](#) Theoretical → Also see TABLE 2 p. 1490
- ▶ **Tetracyclines (doxycycline)** are predicted to increase the concentration of **cyclosporin**. [\[Severe\]](#) Theoretical
- ▶ **Cyclosporin** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [\[Severe\]](#) Study
- ▶ **Cyclosporin** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **Cyclosporin** might increase the exposure to **tigecycline** and **tigecycline** has been reported to increase the concentration of **cyclosporin**. [\[Severe\]](#) Anecdotal
- ▶ **Cyclosporin** increases the exposure to **tofacinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Cyclosporin** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **Cyclosporin** is predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
- ▶ **Ursodeoxycholic acid** affects the concentration of **cyclosporin**. Use with caution and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Cyclosporin** might affect the exposure to **vemurafenib**. [\[Severe\]](#) Theoretical
- ▶ **Cyclosporin** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [\[Severe\]](#) Theoretical
- ▶ **Cyclosporin** might increase the exposure to **vinca alkaloids**. [\[Severe\]](#) Theoretical
- ▶ **Vitamin E substances** affect the exposure to **cyclosporin**. [\[Moderate\]](#) Study
- ▶ **Cyclosporin** increases the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Study

**Cidofovir** → see TABLE 2 p. 1490 (nephrotoxicity)

**Cilostazol** → see TABLE 4 p. 1490 (antiplatelet effects)

**GENERAL INFORMATION** Concurrent use with 2 or more antiplatelets or anticoagulants is contra-indicated.

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to alter the effects of **cilostazol**. [\[Moderate\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to alter the effects of **cilostazol**. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 252. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 252. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **cilostazol**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cilostazol** might increase the exposure to **cladribine**. Avoid or adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 252. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 252. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 252. [\[Moderate\]](#) Study
- ▶ **Cilostazol** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 252. [\[Moderate\]](#) Study
- ▶ **Macrolides (erythromycin)** slightly increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 252. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to alter the effects of **cilostazol**. [\[Moderate\]](#) Theoretical

- ▶ **Moclobemide** is predicted to increase the exposure to **cilostazol**. [\[Moderate\]](#) Theoretical
- ▶ **Proton pump inhibitors (esomeprazole)** are predicted to increase the exposure to **cilostazol**. [\[Moderate\]](#) Theoretical
- ▶ **Proton pump inhibitors (omeprazole)** are predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 252. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to alter the effects of **cilostazol**. [\[Moderate\]](#) Theoretical
- ▶ **Selumetinib** might increase the risk of bleeding when given with **cilostazol**. [\[Severe\]](#) Theoretical
- ▶ **SSRIs (fluoxetine, fluvoxamine)** are predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 252. [\[Moderate\]](#) Theoretical → Also see TABLE 4 p. 1490
- ▶ **St John's wort** is predicted to alter the effects of **cilostazol**. [\[Moderate\]](#) Theoretical
- ▶ **Cilostazol** is predicted to increase the exposure to **statins (atorvastatin)**. [\[Moderate\]](#) Theoretical
- ▶ **Cilostazol** slightly increases the exposure to **statins (simvastatin)**. [\[Moderate\]](#) Study

**Cimetidine** → see H<sub>2</sub> receptor antagonists

**Cinacalcet**

**FOOD AND LIFESTYLE** Dose adjustment might be necessary if smoking started or stopped during treatment.

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Cinacalcet** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Cinacalcet** is predicted to moderately increase the exposure to **antipsychotics, second generation (aripiprazole)**. Adjust **aripiprazole** dose, p. 427. [\[Moderate\]](#) Study
- ▶ **Cinacalcet** is predicted to increase the exposure to **antipsychotics, second generation (risperidone)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Cinacalcet** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Cinacalcet** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [\[Moderate\]](#) Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Cinacalcet** is predicted to slightly increase the exposure to **darifenacin**. [\[Mild\]](#) Study
- ▶ **Cinacalcet** might increase the risk of hypocalcaemia when given with **denosumab**. [\[Severe\]](#) Theoretical
- ▶ **Cinacalcet** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Cinacalcet** increases the risk of hypocalcaemia when given with **etelcalcetide**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Cinacalcet** is predicted to increase the exposure to **fesoterodine**. Use with caution and adjust dose. [\[Mild\]](#) Theoretical
- ▶ **Cinacalcet** is predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Cinacalcet** is predicted to increase the exposure to **mexiletine**. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Cinacalcet** is predicted to decrease the efficacy of **opioids (codeine)**. [\[Moderate\]](#) Theoretical
- ▶ **Cinacalcet** is predicted to decrease the efficacy of **opioids (tramadol)**. [\[Severe\]](#) Study

- ▶ **Cinacalcet** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
  - ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Theoretical
  - ▶ **Cinacalcet** is predicted to increase the exposure to **SSRIs (dapoxetine)**. [Moderate] Theoretical
  - ▶ **Cinacalcet** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
  - ▶ **Cinacalcet** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
  - ▶ **Cinacalcet** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study
  - ▶ **Cinacalcet** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- Cinnarizine** → see antihistamines, sedating
- Ciprofibrate** → see fibrates
- Ciprofloxacin** → see quinolones
- Cisatracurium** → see neuromuscular blocking drugs, non-depolarising
- Cisplatin** → see platinum compounds
- Citalopram** → see SSRIs
- Cladribine** → see TABLE 15 p. 1493 (myelosuppression)

**SEPARATION OF ADMINISTRATION** Oral cladribine might affect the absorption of concurrently administered drugs—consider separating administration by at least 3 hours.

- ▶ **Antiepileptics (carbamazepine)** are predicted to increase the risk of haematological toxicity when given with oral **cladribine**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (nifedipine, nimodipine)** might increase the exposure to **cladribine**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **cladribine**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Clostrazol** might increase the exposure to **cladribine**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Dipyridamole** might increase the exposure to **cladribine**. [Moderate] Theoretical
- ▶ **Eltrombopag** is predicted to increase the exposure to **cladribine**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** might increase the exposure to **cladribine**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **cladribine**. Avoid or adjust dose. [Moderate] Theoretical → Also see TABLE 15 p. 1493
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **cladribine**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **NSAIDs (sulindac)** might increase the exposure to **cladribine**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **cladribine**. Avoid or adjust dose. [Moderate] Theoretical

**Clarithromycin** → see macrolides

**Clavulanate** → see TABLE 1 p. 1490 (hepatotoxicity)

**Clemastine** → see antihistamines, sedating

#### Clindamycin

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application of **clindamycin**, the possibility of interactions should be borne in mind.

- ▶ **Clindamycin** increases the effects of **neuromuscular blocking drugs, non-depolarising**. [Severe] Anecdotal
- ▶ **Clindamycin** increases the effects of **suxamethonium**. [Severe] Anecdotal
- ▶ **Clobazam** → see benzodiazepines
- ▶ **Clostronate** → see bisphosphonates
- ▶ **Clofarabine** → see TABLE 15 p. 1493 (myelosuppression)
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **clofarabine**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical

#### Clofazimine

- ▶ **Clofazimine** potentially increases the risk of QT-prolongation when given with **bedaquiline**. [Severe] Study
- ▶ **Clomethiazole** → see TABLE 11 p. 1492 (CNS depressant effects)
- ▶ **Alcohol** causes serious, potentially fatal, CNS depression when given with **clomethiazole**. Avoid. [Severe] Study → Also see TABLE 11 p. 1492
- ▶ **Anti-androgens (apalutamide, enzalutamide)** decrease the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 1492
- ▶ **Mitotane** decreases the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** decrease the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clomipramine** → see tricyclic antidepressants
- ▶ **Clonazepam** → see benzodiazepines
- ▶ **Clonidine** → see TABLE 6 p. 1491 (bradycardia), TABLE 8 p. 1491 (hypotension), TABLE 11 p. 1492 (CNS depressant effects)
- ▶ **Tricyclic antidepressants** decrease the antihypertensive effects of **clonidine**. Monitor and adjust dose. [Moderate] Anecdotal → Also see TABLE 8 p. 1491 → Also see TABLE 11 p. 1492
- ▶ **Clopidogrel** → see TABLE 4 p. 1490 (antiplatelet effects)
- ▶ **Clopidogrel** is predicted to increase the exposure to **anti-androgens (apalutamide)** and **anti-androgens (apalutamide)** are predicted to increase the exposure to the active metabolite of **clopidogrel**. Avoid or monitor. [Moderate] Study
- ▶ **Clopidogrel** moderately increases the exposure to **anti-androgens (enzalutamide)**. Avoid or adjust **enzalutamide** dose, p. 1023. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole)** are predicted to decrease the efficacy of **clopidogrel**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (voriconazole)** are predicted to decrease the efficacy of **clopidogrel**. Avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to decrease the concentration of the active metabolite of **clopidogrel**. Avoid. [Severe] Theoretical
- ▶ **Clopidogrel** is predicted to increase the exposure to **dabrafenib**. [Moderate] Theoretical
- ▶ **Grapefruit** juice markedly decreases the exposure to **clopidogrel**. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** might decrease the efficacy of **clopidogrel**. Avoid. [Moderate] Theoretical
- ▶ **Clopidogrel** increases the exposure to **meglitinides (repaglinide)**. Avoid. [Severe] Study
- ▶ **Moclobemide** is predicted to decrease the efficacy of **clopidogrel**. Avoid. [Moderate] Study
- ▶ **Clopidogrel** is predicted to moderately increase the exposure to **montelukast**. [Moderate] Study
- ▶ **Clopidogrel** is predicted to increase the exposure to the active metabolites of **ozanimod**. [Moderate] Study
- ▶ **Clopidogrel** increases the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. [Severe] Study
- ▶ **Proton pump inhibitors (esomeprazole, omeprazole)** are predicted to decrease the efficacy of **clopidogrel**. Avoid. [Moderate] Study
- ▶ **Clopidogrel** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust alitretinoin dose, p. 1356. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** moderately increase the exposure to the active metabolite of **clopidogrel**. Avoid. [Moderate] Study
- ▶ **Clopidogrel** is predicted to increase the exposure to **selexipag**. Adjust selexipag dose, p. 198. [Moderate] Study
- ▶ **Selumetinib** might increase the risk of bleeding when given with **clopidogrel**. [Severe] Theoretical
- ▶ **SSRIs (fluoxetine, fluvoxamine)** are predicted to decrease the efficacy of **clopidogrel**. Avoid. [Severe] Theoretical → Also see TABLE 4 p. 1490
- ▶ **Clopidogrel** increases the exposure to **statins (rosuvastatin)**. Adjust **rosuvastatin** dose, p. 221. [Moderate] Study
- ▶ **Clopidogrel** is predicted to increase the concentration of **taxanes (paclitaxel)**. [Severe] Anecdotal

## Clopidogrel (continued)

► **Clopidogrel** is predicted to increase the exposure to **treprostinil**. Adjust dose. [Moderate] Theoretical → Also see TABLE 4 p. 1490

► **Clopidogrel** is predicted to increase the exposure to **tucatinib**. Avoid or adjust **tucatinib** dose, p. 1085. [Severe] Study

**Clotrimazole** → see antifungals, azoles

**Clozapine** → see antipsychotics, second generation

**Cobicistat**

► **Cobicistat** is predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 1042. [Severe] Study

► **Cobicistat** is predicted to increase the exposure to **acalabrutinib**. Avoid. [Severe] Study

► **Cobicistat** is predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Severe] Study

► **Cobicistat** is predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [Moderate] Study

► **Cobicistat** is predicted to increase the exposure to **alpha blockers (doxazosin)**. [Moderate] Study

► **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Study

► **Cobicistat** is predicted to increase the exposure to **anti-androgens (apalutamide)**. [Mild] Study

► **Cobicistat** potentially increases the concentration of **antiarrhythmics (amiodarone, disopyramide, flecainide, lidocaine)**. [Severe] Theoretical

► **Cobicistat** very markedly increases the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Study

► **Cobicistat** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Severe] Study

► **Cobicistat** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study

► **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Study

► **Antiepileptics (eslicarbazepine, oxcarbazepine)** are predicted to decrease the concentration of **cobicistat**. [Severe] Theoretical

► **Cobicistat** is predicted to very slightly increase the exposure to **antiepileptics (perampanel)**. [Mild] Study

► **Cobicistat** is predicted to increase the exposure to **antifungals, azoles (fluconazole, posaconazole)**. [Moderate] Theoretical

► **Cobicistat** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. Avoid or monitor adverse effects. [Severe] Study

► **Cobicistat** is predicted to increase the exposure to **antifungals, azoles (itraconazole, ketoconazole)**. Adjust dose. [Moderate] Theoretical

► **Cobicistat** is predicted to affect the exposure to **antifungals, azoles (voriconazole)**. Avoid. [Moderate] Theoretical

► **Cobicistat** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Severe] Study

► **Cobicistat** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study

► **Cobicistat** is predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical

► **Cobicistat** is predicted to slightly increase the exposure to **antipsychotics, second generation (aripiprazole)**. Adjust **aripiprazole** dose, p. 427. [Moderate] Study

► **Cobicistat** is predicted to moderately increase the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Study

► **Cobicistat** is predicted to increase the exposure to **antipsychotics, second generation (lurasidone, quetiapine)**. Avoid. [Severe] Study

► **Cobicistat** is predicted to increase the exposure to **antipsychotics, second generation (risperidone)**. Adjust dose. [Moderate] Study

► **Cobicistat** is predicted to increase the exposure to **avapritinib**. Avoid. [Moderate] Study

► **Cobicistat** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study

► **Cobicistat** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study

► **Cobicistat** moderately increases the exposure to **benzodiazepines (alprazolam)**. Avoid. [Moderate] Study

► **Cobicistat** is predicted to markedly to very markedly increase the exposure to **benzodiazepines (midazolam)**. Avoid or adjust dose. [Severe] Study

► **Cobicistat** is predicted to increase the exposure to **beta<sub>2</sub> agonists (salmeterol)**. Avoid. [Severe] Study

► **Cobicistat** slightly increases the exposure to **bortezomib**. [Moderate] Study

► **Cobicistat** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study

► **Cobicistat** is predicted to increase the exposure to **brigatinib**. Avoid or adjust **brigatinib** dose, p. 1048. [Severe] Study

► **Cobicistat** is predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 373. [Severe] Study

► **Cobicistat** is predicted to increase the exposure to **cabozantinib**. [Moderate] Study

► **Cobicistat** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study

► **Cobicistat** is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study

► **Cobicistat** is predicted to markedly increase the exposure to **calcium channel blockers (ercanodipine)**. Avoid. [Severe] Study

► **Cobicistat** is predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study

► **Cobicistat** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 1050. [Severe] Study

► **Cobicistat** increases the concentration of **ciclosporin**. [Severe] Study

► **Cobicistat** is predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 252. [Moderate] Study

► **Cobicistat** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study

► **Cobicistat** is predicted to decrease the concentration of the active metabolite of **clopidogrel**. Avoid. [Severe] Theoretical

► **Cobicistat** is predicted to increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study

► **Cobicistat** is predicted to increase the exposure to **colchicine**. Avoid potent CYP3A4 inhibitors or adjust **colchicine** dose, p. 1212. [Severe] Study

► **Cobicistat** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [Severe] Study

► **Cobicistat** is predicted to increase the exposure to **corticosteroids (beclometasone)** (risk with beclometasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical

► **Cobicistat** is predicted to increase the exposure to **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone)**. Avoid or monitor adverse effects. [Severe] Study

► **Cobicistat** is predicted to affect the exposure to **coumarins (warfarin)**. [Moderate] Theoretical

► **Cobicistat** is predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Study

► **Dabrafenib** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical

► **Cobicistat** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study

► **Cobicistat** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study

► **Cobicistat** is predicted to increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study

► **Cobicistat** very slightly increases the exposure to **delamanid**. [Severe] Study

► **Cobicistat** is predicted to moderately increase the exposure to **dienogest**. [Moderate] Study

► **Cobicistat** is predicted to increase the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [Moderate] Study

- ▶ **Cobicistat** is predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
- ▶ **Cobicistat** increases the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Cobicistat** is predicted to increase the exposure to **dronabinol**. Adjust dose. [Mild] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **drospirenone**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **dutasteride**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **elexacaftor**. Adjust tezacaftor with ivacaftor and elexacaftor p. 320 dose with potent CYP3A4 inhibitors. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **endothelin receptor antagonists (macitentan)**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **entrectinib**. Avoid potent CYP3A4 inhibitors or adjust entrectinib dose, p. 1056. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **erlotinib**. Use with caution and adjust dose. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **esketamine**. Adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the concentration of subdermal **etonogestrel**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **everolimus**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **factor XA inhibitors (apixaban, edoxaban, rivaroxaban)**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **fedratinib**. Adjust fedratinib dose, but avoid depending on other drugs taken—consult product literature, p. 1060. [Moderate] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **fesoterodine**. Adjust fesoterodine dose with potent CYP3A4 inhibitors; avoid in hepatic and renal impairment, p. 840. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **fostamatinib**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **gefitinib**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **gilteritinib**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **glasdegib**. Use with caution or avoid. [Severe] Study
- ▶ **Cobicistat** potentially increases the exposure to **glecaprevir**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **guanfacine**. Adjust guanfacine dose, p. 384. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **ibrutinib**. Avoid potent CYP3A4 inhibitors or adjust ibrutinib dose, p. 1062. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **imatinitib**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **ivacaftor**. Adjust dose with potent CYP3A4 inhibitors, see ivacaftor p. 317, lumacaftor with ivacaftor p. 318, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust larotrectinib dose, p. 1065. [Moderate] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **lorlatinib**. Avoid or adjust lorlatinib dose, p. 1067. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the concentration of **macrolides (erythromycin)**. [Moderate] Theoretical
- ▶ **Cobicistat** markedly increases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the concentration of intramuscular **medroxyprogesterone**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **meglitinides (repaglinide)**. [Moderate] Study
- ▶ **Cobicistat** potentially increases the exposure to **mexiletine**. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **mifepristone**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **mirabegron**. Adjust mirabegron dose in hepatic and renal impairment, p. 843. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **monoclonal antibodies (polutuzumab vedotin)**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **neratinib**. Avoid potent CYP3A4 inhibitors or adjust neratinib dose, p. 1069. [Severe] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **neurokinin-1 receptor antagonists (fosaprepitant)**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **neurokinin-1 receptor antagonists (netupitant)**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **nintedanib**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **nitisnone**. Adjust dose. [Moderate] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **olaparib**. Avoid potent CYP3A4 inhibitors or adjust olaparib dose, p. 1088. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **osilodrostat**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **oxybutynin**. [Mild] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **palbociclib**. Avoid or adjust palbociclib dose, p. 1072. [Severe] Study

## Cobicistat (continued)

- ▶ **Cobicistat** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 1009. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 1073. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **pemigatinib**. Avoid or adjust **pemigatinib** dose, p. 1074. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 879. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1075. [Moderate] Study
  - ▶ **Cobicistat** is predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
  - ▶ **Cobicistat** given with carbimazole is predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust **alitretinoin** dose, p. 1356. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1077. [Moderate] Study
  - ▶ **Rifamycins (rifabutin)** decrease the concentration of **cobicistat** and **cobicistat** increases the exposure to **rifamycins (rifabutin)**. Avoid or adjust dose. [Severe] Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **selpercatinib**. Adjust **selpercatinib** dose, p. 1079. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **SNRIs (venlafaxine)**. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 842 or **tamsulosin** with **solifenacin** p. 848 dose; avoid in hepatic and renal impairment. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **SSRIs (citalopram, escitalopram, fluoxetine, fluvoxamine, paroxetine, sertraline)**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to moderately increase the exposure to **SSRIs (dapoxetine)**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose, p. 887. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1080. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid or monitor—consult product literature. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Anecdotal
  - ▶ **Cobicistat** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see **tezacaftor** with **ivacaftor** p. 319 and **tezacaftor** with **ivacaftor** and **elxacaftor** p. 320. [Severe] Study
  - ▶ **Cobicistat** moderately increases the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1200. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors, p. 724. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
  - ▶ **Cobicistat** is predicted to slightly increase the exposure to **tricyclic antidepressants**. [Mild] Study
  - ▶ **Cobicistat** increases the exposure to **triptans (almotriptan)**. [Mild] Study
  - ▶ **Cobicistat** is predicted to markedly increase the exposure to **triptans (eletriptan)**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- Cobimetinib**
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **cobimetinib**. [Severe] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **cobimetinib**. [Severe] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **cobimetinib**. [Severe] Study
  - ▶ **Cenobamate** is predicted to decrease the exposure to **cobimetinib**. Adjust dose. [Moderate] Theoretical

- ▶ **Cobicistat** is predicted to increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **Drugs with anticoagulant effects** (see TABLE 3 p. 1490) cause bleeding, as can **cobimetinib**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
  - ▶ **Drugs with antiplatelet effects** (see TABLE 4 p. 1490) cause bleeding, as can **cobimetinib**; concurrent use might increase the risk of developing this effect. [Severe] Theoretical
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **Grapefruit** juice is predicted to increase the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **cobimetinib**. [Severe] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **cobimetinib**. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **cobimetinib**. [Severe] Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Study
  - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- Codeine** → see opioids
- Colchicine**
- ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **colchicine**. [Mild] Study
  - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose, p. 1212. [Severe] Theoretical
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors, p. 1212. [Severe] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors, p. 1212. [Severe] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **colchicine**. Avoid potent CYP3A4 inhibitors or adjust **colchicine** dose, p. 1212. [Severe] Study
  - ▶ **Bertralstat** is predicted to increase the concentration of **colchicine**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors, p. 1212. [Severe] Study
  - ▶ **Ceritinib** is predicted to increase the exposure to **colchicine**. [Moderate] Theoretical
  - ▶ **Ciclosporin** increases the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose, p. 1212. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **colchicine**. Avoid potent CYP3A4 inhibitors or adjust **colchicine** dose, p. 1212. [Severe] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors, p. 1212. [Severe] Study
  - ▶ **Eliglustat** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1212. [Severe] Theoretical
  - ▶ **Colchicine** increases the risk of rhabdomyolysis when given with **fibrates**. [Severe] Anecdotal
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **colchicine**. Avoid potent CYP3A4 inhibitors or adjust **colchicine** dose, p. 1212. [Severe] Study
  - ▶ **Ibrutinib** is predicted to increase the exposure to **colchicine**. Separate administration by at least 6 hours. [Moderate] Theoretical
  - ▶ **Idelalisib** is predicted to increase the exposure to **colchicine**. Avoid potent CYP3A4 inhibitors or adjust **colchicine** dose, p. 1212. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors, p. 1212. [Severe] Study
  - ▶ **Ivacafur** is predicted to increase the exposure to **colchicine**. [Moderate] Study
  - ▶ **Lapatinib** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose, p. 1212. [Moderate] Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors, p. 1212. [Severe] Study
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **colchicine**. [Moderate] Study
  - ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose, p. 1212. [Severe] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **colchicine**. Avoid potent CYP3A4 inhibitors or adjust **colchicine** dose, p. 1212. [Severe] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors, p. 1212. [Severe] Study
  - ▶ **Mirabegron** is predicted to increase the exposure to **colchicine**. [Mild] Theoretical
  - ▶ **Neratinib** is predicted to increase the exposure to **colchicine**. [Moderate] Study
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors, p. 1212. [Severe] Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors, p. 1212. [Severe] Study
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **colchicine**. Avoid. [Severe] Theoretical
  - ▶ **Olaparib** might increase the exposure to **colchicine**. [Moderate] Theoretical
  - ▶ **Osimertinib** is predicted to increase the exposure to **colchicine**. [Moderate] Study
  - ▶ **Pemigatinib** might increase the exposure to **colchicine**. Separate administration by at least 6 hours. [Moderate] Theoretical
  - ▶ **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **colchicine**. [Moderate] Study
  - ▶ **Pitolisant** is predicted to decrease the exposure to **colchicine**. [Mild] Theoretical
  - ▶ **Ranolazine** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose, p. 1212. [Severe] Theoretical
  - ▶ **Sotorasib** is predicted to increase the exposure to **colchicine**. Avoid or adjust dose. [Moderate] Study
  - ▶ **Colchicine** has been reported to cause rhabdomyolysis when given with **statins**. [Severe] Anecdotal
  - ▶ **Tepotinib** is predicted to increase the concentration of **colchicine**. [Severe] Study
  - ▶ **Tucatinib** is predicted to increase the exposure to **colchicine**. Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ **Vandetanib** is predicted to increase the exposure to **colchicine**. [Moderate] Study
  - ▶ **Velpatasvir** is predicted to increase the exposure to **colchicine**. [Severe] Theoretical

## Colchicine (continued)

- ▶ **Vemurafenib** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose, p. 1212. [Severe] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **colchicine**. Avoid or adjust dose. [Severe] Study

**Colcalciferol** → see vitamin D substances

**Colesevelam**

SEPARATION OF ADMINISTRATION Manufacturer advises take 4 hours before, or after, other drugs.

**Colestipol**

SEPARATION OF ADMINISTRATION Manufacturer advises take other drugs at least 1 hour before, or 4 hours after, colestipol.

**Colestyramine**

SEPARATION OF ADMINISTRATION Manufacturer advises take other drugs at least 1 hour before, or 4–6 hours after, colestyramine.

**Colistimethate** → see TABLE 2 p. 1490 (nephrotoxicity), TABLE 20 p. 1494 (neuromuscular blocking effects)

**Combined hormonal contraceptives**

- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **agomelatine**. [Moderate] Study
- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Study
- ▶ **Combined hormonal contraceptives** alter the exposure to **antiepileptics (lamotrigine)** and **antiepileptics (lamotrigine)** might decrease the efficacy of **combined hormonal contraceptives**. Adjust dose. [Moderate] Study
- ▶ **Combined hormonal contraceptives** increases the concentration of **antipsychotics, second generation (clozapine)**. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **antipsychotics, second generation (olanzapine)**. Adjust dose. [Moderate] Anecdotal
- ▶ **Brigatinib** is predicted to decrease the exposure to **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Cabozantinib** might affect the effects of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Carfilzomib** potentially decreases the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Cenobamate** might decrease the efficacy of oral **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ Oral **combined hormonal contraceptives** potentially decrease the efficacy of oral **chenodeoxycholic acid**. Avoid. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [Severe] Study
- ▶ **Dabrafenib** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [Moderate] Study
- ▶ **Encorafenib** is predicted to affect the exposure to **combined hormonal contraceptives**. [Severe] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **glecaprevir**. Avoid. [Severe] Study
- ▶ **Griseofulvin** potentially decreases the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ▶ **HIV-protease inhibitors (atazanavir)** affect the exposure to **combined hormonal contraceptives**. Adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Study
- ▶ **Larotrectinib** potentially decreases the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. Avoid. [Severe] Theoretical
- ▶ Oral **combined hormonal contraceptives** slightly increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Lorlatinib** is predicted to decrease the exposure to **combined hormonal contraceptives**. Avoid. [Moderate] Theoretical
- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Combined hormonal contraceptives** slightly increases the exposure to **MAO-B inhibitors (rasagiline)**. [Moderate] Study
- ▶ **Combined hormonal contraceptives** increase the exposure to **MAO-B inhibitors (selegiline)**. Avoid. [Severe] Study
- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Metreleptin** might decrease the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Combined hormonal contraceptives** decrease the effects of **metyrapone**. Avoid. [Moderate] Theoretical
- ▶ **Modafinil** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Study
- ▶ **Monoclonal antibodies (sarilumab)** potentially decrease the exposure to **combined hormonal contraceptives**. [Severe] Theoretical
- ▶ **Neratinib** might affect the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant)** are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **combined hormonal contraceptives** (containing ethinylestradiol). Use additional contraceptive precautions. [Moderate] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Study
- ▶ **NSAIDs (etoricoxib)** increase the exposure to **combined hormonal contraceptives**. [Moderate] Study
- ▶ **Olaparib** potentially affects the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Moderate] Theoretical
- ▶ **Combined hormonal contraceptives** potentially oppose the effects of **ospemifene**. Avoid. [Severe] Theoretical
- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **phenothiazines (chlorpromazine)**. [Moderate] Theoretical
- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. [Moderate] Theoretical

- ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **pibrentasvir**. Avoid. [Severe] Study
  - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Pitolisant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [Severe] Theoretical
  - ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. Avoid. [Severe] Theoretical
  - ▶ **Ponatinib** might affect the effects of **combined hormonal contraceptives**. Avoid or use additional contraceptive precautions. [Severe] Theoretical
  - ▶ **Combined hormonal contraceptives** potentially oppose the effects of **raloxifene**. Avoid. [Severe] Theoretical
  - ▶ **Rifamycins** are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Study
  - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
  - ▶ **St John's wort** decreases the efficacy of **combined hormonal contraceptives**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
  - ▶ **Sugammadex** is predicted to decrease the exposure to **combined hormonal contraceptives**. Refer to patient information leaflet for missed pill advice. [Severe] Theoretical
  - ▶ **Combined hormonal contraceptives** might exacerbate skin pigmentation when given with **tetracyclines (minocycline)**. [Moderate] Anecdotal
  - ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **thalidomide**. Avoid. [Severe] Study
  - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Combined hormonal contraceptives** increases the exposure to **tizanidine**. Avoid. [Moderate] Study
  - ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **triptans (zolmitriptan)**. Adjust zolmitriptan dose, p. 515. [Moderate] Theoretical
  - ▶ **Combined hormonal contraceptives** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of **combined hormonal contraceptives**. Avoid or use additional contraceptive precautions. [Severe] Theoretical
  - ▶ **Vemurafenib** might decrease the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
  - ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **voxilaprevir** with sofosbuvir and velpatasvir. Avoid. [Severe] Study
- Corticosteroids** → see TABLE 17 p. 1494 (reduced serum potassium)
- beclomethasone • betamethasone • budesonide • ciclesonide • deflazacort • dexamethasone • fludrocortisone • fluticasone • hydrocortisone • methylprednisolone • mometasone • prednisolone • triamcinolone
- ▶ With intravitreal use of **dexamethasone** in adults: caution with concurrent administration of anticoagulant or antiplatelet drugs—increased risk of haemorrhagic events.
  - ▶ Interactions do not generally apply to corticosteroids (except budesonide and fluticasone) used for topical action (including inhalation) unless specified. However, as systemic absorption might occur with **hydrocortisone eye drops**, the possibility of interactions should be borne in mind.
- ▶ Oral **antacids** are predicted to decrease the absorption of oral **deflazacort**. Separate administration by 2 hours. [Moderate] Theoretical
  - ▶ Oral **antacids** decrease the absorption of oral **dexamethasone**. [Moderate] Study
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **fluticasone**. [Unknown] Theoretical
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to corticosteroids (**budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone**). Monitor and adjust dose. [Moderate] Study
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **fluticasone**. [Unknown] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to corticosteroids (**budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone**). Monitor and adjust dose. [Moderate] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **beclomethasone** (risk with beclomethasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
  - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **methylprednisolone**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to corticosteroids (**betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone**). Avoid or monitor adverse effects. [Severe] Study
  - ▶ **Corticosteroids** are predicted to decrease the concentration of **aspirin** (high-dose) and **aspirin** (high-dose) increases the risk of gastrointestinal bleeding when given with **corticosteroids**. [Moderate] Study
  - ▶ **Dexamethasone** is predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Dexamethasone** is predicted to decrease the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 646. [Moderate] Theoretical
  - ▶ **Cenobamate** is predicted to decrease the exposure to oral **budesonide**. Adjust dose. [Moderate] Theoretical
  - ▶ **Cenobamate** is predicted to decrease the exposure to **fluticasone**. Adjust dose. [Moderate] Theoretical
  - ▶ **Corticosteroids** are predicted to decrease the concentration of **choline salicylate**. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **beclomethasone** (risk with beclomethasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to corticosteroids (**betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone**). Avoid or monitor adverse effects. [Severe] Study
  - ▶ **Corticosteroids** are predicted to increase the effects of **coumarins**. [Moderate] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **corticosteroids**. [Severe] Theoretical
  - ▶ **Corticosteroids** potentially oppose the effects of **glycerol phenylbutyrate**. [Moderate] Theoretical
  - ▶ **Grapefruit** juice moderately increases the exposure to oral **budesonide**. Avoid. [Moderate] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **beclomethasone** (risk with beclomethasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical

## Corticosteroids (continued)

- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to corticosteroids (**betamethasone**, **budesonide**, **ciclesonide**, **deflazacort**, **dexamethasone**, **fludrocortisone**, **fluticasone**, **hydrocortisone**, **methylprednisolone**, **mometasone**, **prednisolone**, **triamcinolone**). Avoid or monitor adverse effects. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **beclomethasone** (risk with **beclomethasone** is likely to be lower than with other corticosteroids). [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to corticosteroids (**betamethasone**, **budesonide**, **ciclesonide**, **deflazacort**, **dexamethasone**, **fludrocortisone**, **fluticasone**, **hydrocortisone**, **methylprednisolone**, **mometasone**, **prednisolone**, **triamcinolone**). Avoid or monitor adverse effects. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Corticosteroids** are predicted to increase the risk of gastrointestinal bleeding when given with **iron chelators (deferasirox)**. [\[Severe\]](#) Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with corticosteroids (high-dose). UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **methylprednisolone**. Adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **beclomethasone** (risk with **beclomethasone** is likely to be lower than with other corticosteroids). [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to corticosteroids (**betamethasone**, **budesonide**, **ciclesonide**, **deflazacort**, **dexamethasone**, **fludrocortisone**, **fluticasone**, **hydrocortisone**, **methylprednisolone**, **mometasone**, **prednisolone**, **triamcinolone**). Avoid or monitor adverse effects. [\[Severe\]](#) Study
- ▶ **Corticosteroids** are predicted to decrease the efficacy of **mifamurtide**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Mifepristone** is predicted to decrease the efficacy of corticosteroids. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to corticosteroids (**budesonide**, **deflazacort**, **dexamethasone**, **fludrocortisone**, **hydrocortisone**, **methylprednisolone**, **prednisolone**, **triamcinolone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **fluticasone**. [\[Unknown\]](#) Theoretical
- ▶ **Corticosteroids (betamethasone, deflazacort, dexamethasone, hydrocortisone, methylprednisolone, prednisolone)** are predicted to decrease the efficacy of **monoclonal antibodies (atezolizumab, ipilimumab, nivolumab, pembrolizumab)**. Use with caution or avoid. [\[Severe\]](#) Theoretical
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to corticosteroids (**dexamethasone, methylprednisolone**). Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Corticosteroids** are predicted to increase the risk of immunosuppression when given with **monoclonal antibodies (dinutuximab)**. Avoid except in life-threatening situations. [\[Severe\]](#) Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant)** moderately increase the exposure to **dexamethasone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to oral **budesonide**. [\[Moderate\]](#) Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **fluticasone**. [\[Moderate\]](#) Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** moderately increase the exposure to **dexamethasone**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Corticosteroids** are predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Severe\]](#) Anecdotal
- ▶ **Corticosteroids** increase the risk of gastrointestinal perforation when given with **nicorandil**. [\[Severe\]](#) Anecdotal
- ▶ **Nilotinib** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **beclomethasone** (risk with **beclomethasone** is likely to be lower than with other corticosteroids). [\[Moderate\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of corticosteroids (**betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone**). Avoid or monitor adverse effects and consider **beclomethasone** as an alternative. [\[Severe\]](#) Theoretical
- ▶ **Dexamethasone** is predicted to decrease the concentration of **NNRTIs (rilpivirine)**. Avoid multiple-dose dexamethasone. [\[Severe\]](#) Theoretical
- ▶ **NSAIDs** increase the risk of gastrointestinal bleeding when given with **corticosteroids**. [\[Severe\]](#) Study
- ▶ **Corticosteroids** are predicted to increase the effects of **phenindione**. [\[Moderate\]](#) Anecdotal
- ▶ **Dexamethasone** decreases the exposure to **praziquantel**. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **fluticasone**. [\[Unknown\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to corticosteroids (**budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Corticosteroids** potentially decrease the effects of **sodium phenylbutyrate**. [\[Moderate\]](#) Anecdotal
- ▶ **Corticosteroids** are predicted to decrease the effects of **somatropin**. [\[Moderate\]](#) Theoretical
- ▶ **Corticosteroids** are predicted to decrease the effects of **suxamethonium**. [\[Severe\]](#) Anecdotal

**Coumarins** → see TABLE 3 p. 1490 (anticoagulant effects)

## acenocoumarol - warfarin

**FOOD AND LIFESTYLE** The effects of coumarins can be reduced or abolished by vitamin K, including that found in health foods, food supplements, enteral feeds, or large amounts of some green vegetables or green tea. Major changes in diet (especially involving salads and vegetables) and in alcohol consumption can affect anticoagulant control. Pomegranate juice is predicted to increase the INR in response to **acenocoumarol and warfarin**.

- ▶ **Alcohol** (in those who drink heavily) potentially decreases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Study
- ▶ **Alpelisib** is predicted to decrease the efficacy of **warfarin**. [\[Moderate\]](#) Theoretical
- ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **coumarins**. Avoid or monitor. [\[Mid\]](#) Study
- ▶ **Anti-androgens (enzalutamide)** potentially decrease the exposure to **coumarins**. Avoid or adjust dose and monitor INR. [\[Severe\]](#) Study
- ▶ **Antiarrhythmics (amiodarone)** increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Study
- ▶ **Antiarrhythmics (propafenone)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Moderate\]](#) Study

- ▶ **Antiepileptics (carbamazepine)** decrease the effects of **coumarins**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to alter the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Anecdotal
- ▶ **Antiepileptics (phenobarbital, primidone)** decrease the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (fluconazole)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (itraconazole)** potentially increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Antifungals, azoles (ketoconazole)** potentially increase the anticoagulant effect of **warfarin**. Monitor INR and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Antifungals, azoles (miconazole)** greatly increase the anticoagulant effect of **coumarins**. MHRA advises avoid unless INR can be monitored closely; monitor for signs of bleeding. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (voriconazole)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Moderate\]](#) Study
- ▶ **Azathioprine** decreases the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Study
- ▶ **Capecitabine** increases the effects of **coumarins**. Monitor INR and adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Cephalosporins (cefazolin, ceftriaxone)** potentially increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Ceritinib** is predicted to increase the exposure to **acenocoumarol**. [\[Severe\]](#) Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **warfarin**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Chloramphenicol** potentially increases the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Anecdotal
- ▶ **Cobicistat** is predicted to affect the exposure to **warfarin**. [\[Moderate\]](#) Theoretical
- ▶ **Corticosteroids** are predicted to increase the effects of **coumarins**. [\[Moderate\]](#) Study
- ▶ **Cranberry** juice potentially increases the anticoagulant effect of **warfarin**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Crizotinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the anticoagulant effect of **coumarins**. [\[Severe\]](#) Theoretical
- ▶ **Disulfiram** increases the anticoagulant effect of **coumarins**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Elvitegravir** is predicted to decrease the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Anecdotal
- ▶ **Endothelin receptor antagonists (bosentan)** decrease the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Study
- ▶ **Enteral feeds** (vitamin-K containing) potentially decrease the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Erlotinib** increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Fibrates** are predicted to increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Severe\]](#) Study
- ▶ **Fluorouracil** increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Fostamatinib** potentially alters the anticoagulant effect of **warfarin**. [\[Moderate\]](#) Theoretical
- ▶ **Gefitinib** is predicted to increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Glucagon** increases the anticoagulant effect of **warfarin**. [\[Severe\]](#) Study
- ▶ **Glucosamine** potentially decreases the anticoagulant effect of **acenocoumarol**. [\[Moderate\]](#) Anecdotal
- ▶ **Glucosamine** potentially increases the anticoagulant effect of **warfarin**. Avoid. [\[Moderate\]](#) Anecdotal
- ▶ **Griseofulvin** potentially decreases the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Anecdotal
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to affect the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Study
- ▶ **Imatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
- ▶ **Ivacaftor** is predicted to increase the exposure to **warfarin**. [\[Moderate\]](#) Theoretical
- ▶ **Ivermectin** potentially increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Lapatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
- ▶ **Leflunomide** increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Letermovir** is predicted to decrease the concentration of **warfarin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Lomitapide** increases the exposure to **warfarin**. Monitor INR and adjust dose. [\[Severe\]](#) Study
- ▶ **Lorlatinib** is predicted to decrease the exposure to **coumarins**. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Mercaptopurine** decreases the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Anecdotal
- ▶ **Metreleptin** might alter the exposure to **warfarin**. Monitor INR and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Metronidazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Severe\]](#) Study
- ▶ **Mexiletine** potentially affects the exposure to **warfarin**. Avoid. [\[Unknown\]](#) Theoretical
- ▶ **Mifepristone** is predicted to increase the exposure to **warfarin**. [\[Moderate\]](#) Theoretical
- ▶ **Monoclonal antibodies (bimekizumab)** might affect the exposure to **warfarin**. [\[Moderate\]](#) Theoretical
- ▶ **Monoclonal antibodies (blinatumomab)** are predicted to transiently increase the exposure to **warfarin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to **warfarin**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to **warfarin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Nandrolone** is predicted to increase the anticoagulant effect of **coumarins**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant)** decrease the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Study
- ▶ **Neurokinin-1 receptor antagonists (fosaprepitant)** are predicted to decrease the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to affect the concentration of **warfarin**. [\[Moderate\]](#) Theoretical
- ▶ **Nitisinone** is predicted to increase the exposure to **warfarin**. [\[Moderate\]](#) Study
- ▶ **NNRTIs (efavirenz)** are predicted to affect the concentration of **coumarins**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **NNRTIs (etravirine)** increase the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Theoretical
- ▶ **NNRTIs (nevirapine)** potentially alter the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Obeticholic acid** decreases the anticoagulant effect of **warfarin**. [\[Severe\]](#) Study
- ▶ **Oxymetholone** increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Paracetamol** increases the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Study
- ▶ **Pazopanib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
- ▶ **Penicillins** potentially alter the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Pitolisant** is predicted to decrease the exposure to **warfarin**. [\[Mild\]](#) Theoretical
- ▶ **Quinolones** increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Ranibizumab** increases the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical

## Coumarins (continued)

- ▶ **Rifamycins (rifabutin)** might decrease the anticoagulant effect of coumarins. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** decrease the anticoagulant effect of coumarins. [Severe] Study
- ▶ **Rifaximin** has been reported to decrease the anticoagulant effect of warfarin. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Rucaparib** slightly increases the exposure to warfarin. Monitor and adjust dose. [Severe] Study
- ▶ **Selumetinib** might increase the risk of bleeding when given with coumarins. [Severe] Theoretical
- ▶ **Sorafenib** increases the anticoagulant effect of coumarins. [Severe] Anecdotal
- ▶ **St John's wort** decreases the anticoagulant effect of coumarins. Avoid. [Fluvestatin, rosuvastatin] Anecdotal
- ▶ **Statins (fluvastatin, rosuvastatin)** increase the anticoagulant effect of coumarins. Monitor INR and adjust dose. [Severe] Study
- ▶ **Sucralfate** potentially decreases the effects of warfarin. Separate administration by 2 hours. [Moderate] Anecdotal
- ▶ **Sulfonamides (sulfadiazine)** are predicted to increase the anticoagulant effect of coumarins. [Severe] Theoretical
- ▶ **Sulfonamides (sulfamethoxazole)** increase the anticoagulant effect of coumarins. [Severe] Study
- ▶ **Tamoxifen** increases the anticoagulant effect of coumarins. [Severe] Study
- ▶ **Tegafur** increases the anticoagulant effect of coumarins. [Moderate] Theoretical
- ▶ **Teriflunomide** affects the anticoagulant effect of coumarins. [Severe] Study
- ▶ **Tetracyclines** increase the anticoagulant effect of coumarins. [Severe] Anecdotal
- ▶ **Tigecycline** is predicted to alter the anticoagulant effect of coumarins. [Moderate] Anecdotal
- ▶ **Tofacitinib** is predicted to increase the risk of bleeding when given with coumarins. [Severe] Theoretical
- ▶ **Toremifene** is predicted to increase the anticoagulant effect of coumarins. [Severe] Theoretical
- ▶ **Trimethoprim** is predicted to increase the anticoagulant effect of coumarins. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to coumarins. [Moderate] Study
- ▶ **Venetoclax** slightly increases the exposure to warfarin. [Moderate] Study

## Cranberry

- ▶ **Cranberry** juice potentially increases the anticoagulant effect of coumarins (warfarin). Avoid. [Severe] Anecdotal

## Crisantaspace → see TABLE 1 p. 1490 (hepatotoxicity), TABLE 15 p. 1493 (myelosuppression)

- ▶ **Crisantaspace** is predicted to increase the risk of hepatotoxicity when given with **imatatinib**. [Severe] Theoretical → Also see TABLE 15 p. 1493
- ▶ **Crisantaspace** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1490 → Also see TABLE 15 p. 1493
- ▶ **Crisantaspace** potentially increases the risk of neurotoxicity when given with **vinca alkaloids (vincristine)**. Vincristine should be taken 3 to 24 hours before **crisantaspace**. [Severe] Anecdotal → Also see TABLE 1 p. 1490 → Also see TABLE 15 p. 1493

**Crizotinib** → see TABLE 6 p. 1491 (bradycardia), TABLE 9 p. 1492 (QT-interval prolongation)

**GENERAL INFORMATION** Caution with concurrent use of drugs that cause gastrointestinal perforation—discontinue treatment if gastrointestinal perforation occurs.

- ▶ **Crizotinib** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust eplerenone dose, p. 210. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **crizotinib**. [Moderate] Study → Also see TABLE 6 p. 1491 → Also see TABLE 9 p. 1492
- ▶ **Crizotinib** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p. 1491
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole)** are predicted to increase the exposure to **crizotinib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Crizotinib** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **antipsychotics, second generation (lurasidone)**. Adjust lurasidone dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **antipsychotics, second generation (quetiapine)**. Avoid. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **avapritinib**. Avoid or adjust **avapritinib** dose, p. 1045. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **axitinib**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Crizotinib** is predicted to increase the exposure to **benzodiazepines (alprazolam)**. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **benzodiazepines (midazolam)**. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Crizotinib** is predicted to increase the exposure to **brigatinib**. [Moderate] Study → Also see TABLE 6 p. 1491
- ▶ **Crizotinib** is predicted to increase the exposure to **buprisone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 6 p. 1491
- ▶ **Crizotinib** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Study → Also see TABLE 6 p. 1491 → Also see TABLE 9 p. 1492
- ▶ **Crizotinib** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors, p. 1212. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Study

- ▶ **Crizotinib** is predicted to increase the exposure to **dabrafenib**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Crizotinib** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [Mild] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Crizotinib** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **elxacaftor**. Adjust tezacaftor with ivacaftor and elxacaftor p. 320 dose with moderate CYP3A4 inhibitors. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Crizotinib** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust entrectinib dose, p. 1056. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Crizotinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **fesoterodine**. Adjust fesoterodine dose with moderate CYP3A4 inhibitors in hepatic and renal impairment, p. 840. [Mild] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Crizotinib** potentially decreases the exposure to **glecaprevir**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit** juice is predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 384. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors, p. 1062. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **crizotinib**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 231. [Severe] Theoretical → Also see TABLE 6 p. 1491
- ▶ **Crizotinib** is predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 317, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elxacaftor p. 320. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Letermovir** is predicted to increase the exposure to **crizotinib**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Crizotinib** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects, p. 67. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust neratinib dose and monitor for gastrointestinal adverse effects, p. 1069. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (netupitant)** are predicted to increase the exposure to **crizotinib**. [Moderate] Study
- ▶ **NRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Crizotinib** is predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p. 1491
- ▶ **Crizotinib** is predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Crizotinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Crizotinib** is predicted to increase the exposure to **pemigatinib**. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 878. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Crizotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Crizotinib** potentially decreases the exposure to **pibrentasvir**. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1492
- ▶ **Pitolisant** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **ponatinib**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Crizotinib** is predicted to increase the exposure to **regorafenib**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Rifamycins (rifampicin)** are predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **selipercatinib**. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Crizotinib** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study → Also see TABLE 6 p. 1491
- ▶ **Crizotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study

## Crizotinib (continued)

- ▶ **Crizotinib** is predicted to increase the exposure to **SSRIs** (**dapoxetine**). Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. [\[Moderate\]](#) Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **crizotinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **statins** (**atorvastatin**). Monitor and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Crizotinib** is predicted to increase the exposure to **statins** (**pravastatin**). [\[Moderate\]](#) Theoretical
  - ▶ **Crizotinib** is predicted to increase the exposure to **statins** (**simvastatin**). Monitor and adjust dose. [\[Severe\]](#) Theoretical
  - ▶ **Crizotinib** is predicted to increase the exposure to **sunitinib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1492
  - ▶ **Crizotinib** is predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **taxanes** (**cabazitaxel**). [\[Moderate\]](#) Theoretical
  - ▶ **Crizotinib** is predicted to increase the exposure to **taxanes** (**docetaxel**). [\[Severe\]](#) Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **taxanes** (**paclitaxel**). [\[Moderate\]](#) Anecdotal
  - ▶ **Crizotinib** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Crizotinib** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elxacaftor p. 320. [\[Severe\]](#) Study
  - ▶ **Crizotinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. [\[Moderate\]](#) Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. [\[Moderate\]](#) Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
  - ▶ **Crizotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Moderate\]](#) Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **vemurafenib**. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Crizotinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **vinca alkaloids**. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1492
  - ▶ **Crizotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Study
- Cyclizine** → see antihistamines, sedating
- Cyclopentolate** → see TABLE 10 p. 1492 (antimuscarinics)
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **cyclopentolate**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see TABLE 10 p. 1492
- Cyclophosphamide** → see alkylating agents
- Cycloserine**
- ▶ **Cycloserine** increases the risk of CNS toxicity when given with **isoniazid**. Monitor and adjust dose. [\[Moderate\]](#) Study
- Cyproheptadine** → see antihistamines, sedating
- Cyproterone** → see anti-androgens
- Cytarabine** → see TABLE 15 p. 1493 (myelosuppression)
- ▶ **Cytarabine** decreases the concentration of **flucytosine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **cytarabine**. UKHSA advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- Cytomegalovirus immunoglobulin** → see immunoglobulins
- Dabigatran** → see thrombin inhibitors
- Dabrafenib**
- ▶ **Dabrafenib** is predicted to decrease the exposure to **acalabrutinib**. [\[Severe\]](#) Study
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **dabrafenib**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **anti-androgens (darolutamide)**. Avoid. [\[Moderate\]](#) Theoretical

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **dabrafenib**. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **dabrafenib**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **dabrafenib**. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [\[Moderate\]](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **antipsychotics, second generation (lurasidone)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **antipsychotics, second generation (quetiapine)**. [\[Moderate\]](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **avapritinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **axitinib**. [\[Moderate\]](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **bedaquiline**. Avoid. [\[Severe\]](#) Study
- ▶ **Dabrafenib** decreases the exposure to **benzodiazepines (midazolam)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **bosutinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **brigatinib**. Avoid. [\[Moderate\]](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **cabozantinib**. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **dabrafenib**. [\[Moderate\]](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [\[Moderate\]](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **ceritinib**. [\[Severe\]](#) Study
- ▶ **Clopidogrel** is predicted to increase the exposure to **dabrafenib**. [\[Moderate\]](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **cobicistat**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [\[Moderate\]](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **cobimetinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the anticoagulant effect of **coumarins**. [\[Severe\]](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **crizotinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **dabrafenib**. [\[Moderate\]](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **dasatinib**. [\[Severe\]](#) Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **digoxin**. [\[Moderate\]](#) Theoretical
- ▶ **Dabrafenib** is predicted to decrease the exposure to **dolutegravir**. [\[Severe\]](#) Study
- ▶ **Dabrafenib** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Dabrafenib** is predicted to decrease the concentration of **elvitegravir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **dabrafenib**. [\[Moderate\]](#) Study

- ▶ **Dabrafenib** is predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Theoretical
  - ▶ **Dabrafenib** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **erlotinib**. [Severe] Study
  - ▶ **Dabrafenib** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **fedratinib**. Avoid. [Moderate] Study
  - ▶ **Fibrates (gemfibrozil)** are predicted to increase the exposure to **dabrafenib**. [Moderate] Theoretical
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **glasdegib**. Avoid or adjust **glasdegib** dose, p. 1087. [Moderate] Theoretical
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
  - ▶ **Dabrafenib** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
  - ▶ **Dabrafenib** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **ibrutinib**. Avoid or monitor. [Severe] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
  - ▶ **Idelalisib** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **dabrafenib**. [Moderate] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **ivacaftor**. [Moderate] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **dabrafenib**. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **dabrafenib**. [Moderate] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **midostaurin**. [Severe] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **mifepristone**. [Severe] Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **dabrafenib**. [Moderate] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **neurokinin-1 receptor antagonists (netupitant)**. [Moderate] Theoretical
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to **dabrafenib**. [Moderate] Study
  - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **dabrafenib**. [Moderate] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **NNRTIs (doravirine)**. Avoid or adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. [Severe] Theoretical
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **NNRTIs (etravirine)**. Avoid. [Severe] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **NNRTIs (rilpivirine)**. Avoid. [Severe] Theoretical
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
  - ▶ **Dabrafenib** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. [Severe] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **ospemifene**. [Moderate] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **pazopanib**. [Severe] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **pemigatinib**. Avoid or monitor. [Severe] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **phenindione**. [Moderate] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **ponatinib**. [Severe] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **regorafenib**. [Severe] Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **selipercatinib**. [Moderate] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **selumetinib**. Avoid. [Severe] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **sorafenib**. [Moderate] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **sunitinib**. [Moderate] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **taxanes (paclitaxel)**. Avoid. [Severe] Study
  - ▶ **Dabrafenib** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
  - ▶ **Dabrafenib** is predicted to decrease the efficacy of **ulipristal**. Avoid and for 4 weeks after stopping **ulipristal**. [Severe] Theoretical
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **vandetanib**. [Moderate] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **vemurafenib**. [Severe] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
  - ▶ **Dabrafenib** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- Dacarbazine** → see alkylating agents
- Dacomitinib**
- ▶ **Dacomitinib** is predicted to markedly increase the exposure to **atomoxetine**. Avoid or adjust dose. [Severe] Study
  - ▶ **Dacomitinib** is predicted to markedly increase the exposure to **beta blockers, non-selective (propranolol)**. Avoid. [Severe] Study
  - ▶ **Dacomitinib** is predicted to markedly increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. Avoid. [Severe] Study
  - ▶ **Dacomitinib** is predicted to markedly increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study

**Dacomitinib** (continued)

- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the concentration of **dacomitinib**. **Dacomitinib** should be taken 2 hours before or 10 hours after **H<sub>2</sub> receptor antagonists**. [Mild] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **dacomitinib**. Avoid. [Moderate] Study
- ▶ **Dacomitinib** is predicted to markedly increase the exposure to **tolterodine**. Avoid. [Severe] Study
- ▶ **Dacomitinib** is predicted to markedly increase the exposure to **tricyclic antidepressants (imipramine, nortriptyline)**. Avoid. [Severe] Study

**Dactinomycin** → see TABLE 1 p. 1490 (hepatotoxicity), TABLE 15 p. 1493 (myelosuppression)

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dactinomycin**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical

**Dalteparin** → see low molecular-weight heparins

**Danaparoid** → see TABLE 3 p. 1490 (anticoagulant effects)

- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **danaparoid**. [Severe] Theoretical

**Dantrolene** → see TABLE 1 p. 1490 (hepatotoxicity)

- ▶ Intravenous **dantrolene** potentially increases the risk of acute hyperkalaemia and cardiovascular collapse when given with **calcium channel blockers (diltiazem, verapamil)**. Avoid. [Severe] Anecdotal

**Dapagliflozin** → see sodium glucose co-transporter 2 inhibitors

**Dapoxetine** → see SSRIs

**Dapsone**

- ▶ **Aminosalicylic acid** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ **Dapsone** is predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ **Antimalarials (chloroquine, primaquine)** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ **Nitrates** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ **Nitrofurantoin** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ **Nitroprusside** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ **Paracetamol** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ **Rifamycins** decrease the exposure to **dapsone**. [Moderate] Study
- ▶ **Sulfonamides** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ **Dapsone** increases the exposure to **trimethoprim** and **trimethoprim** increases the exposure to **dapsone**. [Severe] Study

**Daptomycin**

- ▶ **Aspirin** (high-dose) increases the risk of renal impairment when given with **daptomycin**. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
- ▶ **Fibrates** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
- ▶ **NSAIDs** increase the risk of renal impairment when given with **daptomycin**. [Moderate] Theoretical
- ▶ **Statins** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical

**Daratumumab** → see monoclonal antibodies

**Darbepeotin alfa** → see TABLE 5 p. 1491 (thromboembolism), TABLE 16 p. 1494 (increased serum potassium)

**Darifenacin** → see TABLE 10 p. 1492 (antimuscarinics)

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Darifenacin** is predicted to increase the concentration of **antiarrhythmics (flecainide)**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole)** slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Antifungals, azoles (isavuconazole, posaconazole)** are predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **darifenacin**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
- ▶ **Bupropion** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **Calcium channel blockers (diltiazem)** are predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **darifenacin**. Avoid. [Moderate] Study
- ▶ **Cenobamate** is predicted to decrease the exposure to **darifenacin**. Adjust dose. [Moderate] theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **darifenacin**. Avoid. [Moderate] Theoretical
- ▶ **Cinacalcet** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **Cobicistat** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Grapefruit** juice is predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **darifenacin**. [Mild] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Terbinafine** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **Darifenacin** (high-dose) is predicted to increase the exposure to **tricyclic antidepressants**. [Moderate] Study → Also see TABLE 10 p. 1492
- ▶ **Tucatinib** is predicted to increase the exposure to **darifenacin**. Avoid or adjust dose. [Moderate] Theoretical

**Darolutamide** → see anti-androgens

**Darunavir** → see HIV-protease inhibitors

**Dasatinib** → see TABLE 15 p. 1493 (myelosuppression), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 4 p. 1490 (antiplatelet effects)

- ▶ Oral **antacids** decrease the absorption of oral **dasatinib**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ Oral **calcium salts (calcium carbonate)**-containing antacids are predicted to decrease the exposure to oral **dasatinib**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Cenobamate** is predicted to decrease the exposure to **dasatinib**. Adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Dabrafenib** is predicted to decrease the exposure to **dasatinib**. [Severe] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **dasatinib**. [Severe] Study
- ▶ **Grapefruit** juice is predicted to increase the exposure to **dasatinib**. Avoid. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **dasatinib**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 15 p. 1493 → Also see TABLE 4 p. 1490
- ▶ **Letermovir** is predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1493
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 15 p. 1493 → Also see TABLE 9 p. 1492
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **dasatinib**. Avoid. [Severe] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Pitolisant** is predicted to decrease the exposure to **dasatinib**. Avoid. [Severe] Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ **Rifamycins (rifampicin)** are predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ Oral **sodium bicarbonate**-containing antacids are predicted to decrease the exposure to oral **dasatinib**. Separate administration by at least 2 hours. [Moderate] Study

- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **dasatinib**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **dasatinib**. [Severe] Study
- ▶ **Dasatinib** is predicted to increase the exposure to **statins (simvastatin)**. [Moderate] Theoretical
- Daunorubicin** → see anthracyclines
- Decitabine** → see TABLE 15 p. 1493 (myelosuppression)
- Deferasirox** → see iron chelators
- Deferiprone** → see iron chelators
- Deflazacort** → see corticosteroids
- Delafloxacin** → see quinolones
- Delamanid** → see TABLE 9 p. 1492 (QT-interval prolongation)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1492
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** very slightly increase the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Cobicistat** very slightly increases the exposure to **delamanid**. [Severe] Study
- ▶ **HIV-protease inhibitors** very slightly increase the exposure to **delamanid**. [Severe] Study
- ▶ **Idelalisib** very slightly increases the exposure to **delamanid**. [Severe] Study
- ▶ **Macrolides (clarithromycin)** very slightly increase the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Mitotane** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **delamanid**. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- Demeclocycline** → see tetracyclines
- Denosumab**
- ▶ **Cinacalcet** might increase the risk of hypocalcaemia when given with **denosumab**. [Severe] Theoretical
- ▶ **Etelcalcetide** might increase the risk of hypocalcaemia when given with **denosumab**. [Severe] Theoretical
- Desferrioxamine** → see iron chelators
- Desflurane** → see volatile halogenated anaesthetics
- Desloratadine** → see antihistamines, non-sedating
- Desmopressin** → see TABLE 18 p. 1494 (hyponatraemia)
- ▶ **Antiepileptics (lamotrigine)** are predicted to increase the risk of hyponatraemia when given with **desmopressin**. [Severe] Theoretical
- ▶ **Loperamide** greatly increases the absorption of oral **desmopressin** (and possibly sublingual). [Moderate] Study
- ▶ **Phenothiazines (chlorpromazine)** are predicted to increase the risk of hyponatraemia when given with **desmopressin**. [Severe] Theoretical
- Desogestrel**
- ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampamel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ▶ **Desogestrel** is predicted to increase the exposure to **antiepileptics (lamotrigine)**. [Moderate] Study
- ▶ **Berotralstat** might decrease the efficacy of **desogestrel**-containing contraceptives. Use alternatives to **desogestrel**-only contraceptives. [Severe] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical
- ▶ **Griseofulvin** potentially decreases the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Anecdotal
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [Severe] Theoretical

## Desogestrel (continued)

- ▶ **Modafinil** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [\[Severe\]](#) Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant)** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [\[Severe\]](#) Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [\[Severe\]](#) Theoretical
- ▶ **Rifamycins** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. [\[Severe\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the efficacy of **desogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 859. [\[Severe\]](#) Theoretical
- ▶ **Sugammadex** is predicted to decrease the exposure to **desogestrel**. Refer to patient information leaflet for missed pill advice. [\[Severe\]](#) Theoretical
- ▶ **Desogestrel** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of **desogestrel**. Avoid or use additional contraceptive precautions. [\[Severe\]](#) Theoretical

**Dexamethasone** → see corticosteroids

**Dexamfetamine** → see amfetamines

**Dexketoprofen** → see NSAIDs

**Dexmedetomidine** → see TABLE 11 p. 1492 (CNS depressant effects)

**Dextrazoxane** → see iron chelators

**Diamorphine** → see opioids

**Diazepam** → see benzodiazepines

**Diazoxide** → see TABLE 8 p. 1491 (hypotension)

▶ **Diazoxide** decreases the concentration of **antiepileptics (fosphenytoin, phenytoin)** and **antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the effects of **diazoxide**. Monitor concentration and adjust dose. [\[Moderate\]](#) Anecdotal

▶ **Diazoxide** increases the risk of severe hypotension when given with **hydralazine**. [\[Severe\]](#) Study → Also see TABLE 8 p. 1491

**Diclofenac** → see NSAIDs

**Dicycloverine** → see TABLE 10 p. 1492 (antimuscarinics)

▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **dicycloverine**; concurrent use might increase the risk of developing intestinal obstruction. [\[Severe\]](#) Theoretical → Also see TABLE 10 p. 1492

**Dienogest**

▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **dienogest**. [\[Severe\]](#) Study

▶ **Antiarrhythmics (dronedarone)** are predicted to slightly increase the exposure to **dienogest**. [\[Moderate\]](#) Study

▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **dienogest**. [\[Severe\]](#) Study

▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to slightly increase the exposure to **dienogest**. [\[Moderate\]](#) Study

▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **dienogest**. [\[Moderate\]](#) Study

▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to slightly increase the exposure to **dienogest**. [\[Moderate\]](#) Study

▶ **Cobicistat** is predicted to moderately increase the exposure to **dienogest**. [\[Moderate\]](#) Study

▶ **Crizotinib** is predicted to slightly increase the exposure to **dienogest**. [\[Moderate\]](#) Study

▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **dienogest**. [\[Moderate\]](#) Study

▶ **Idelalisib** is predicted to moderately increase the exposure to **dienogest**. [\[Moderate\]](#) Study

▶ **Imatinib** is predicted to slightly increase the exposure to **dienogest**. [\[Moderate\]](#) Study

▶ **Letermovir** is predicted to slightly increase the exposure to **dienogest**. [\[Moderate\]](#) Study

▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **dienogest**. [\[Moderate\]](#) Study

▶ **Macrolides (erythromycin)** are predicted to slightly increase the exposure to **dienogest**. [\[Moderate\]](#) Study

▶ **Mitotane** is predicted to markedly decrease the exposure to **dienogest**. [\[Severe\]](#) Study

▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to slightly increase the exposure to **dienogest**. [\[Moderate\]](#) Study

▶ **Nilotinib** is predicted to slightly increase the exposure to **dienogest**. [\[Moderate\]](#) Study

▶ **Rifamycins (rifampicin)** are predicted to markedly decrease the exposure to **dienogest**. [\[Severe\]](#) Study

**Digoxin** → see TABLE 6 p. 1491 (bradycardia)

▶ **Abrocitinib** might increase the exposure to **digoxin**. [\[Moderate\]](#) Theoretical

▶ **Acarbose** decreases the concentration of **digoxin**. [\[Moderate\]](#) Study

▶ **Aldosterone antagonists (eplerenone)** very slightly increase the exposure to **digoxin**. [\[Mild\]](#) Study

▶ **Aldosterone antagonists (spironolactone)** increase the concentration of **digoxin**. Monitor and adjust dose. [\[Moderate\]](#) Study

▶ **Aminoglycosides** potentially increase the concentration of **digoxin**. Monitor and adjust dose. [\[Mild\]](#) Study

▶ **Oral antacids** decrease the absorption of oral **digoxin**. Separate administration by 2 hours. [\[Mild\]](#) Study

▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **digoxin**. [\[Mild\]](#) Study

▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to moderately increase the exposure to **digoxin**. Monitor and adjust **digoxin** dose, p. 117. [\[Severe\]](#) Study → Also see TABLE 6 p. 1491

▶ **Antiarrhythmics (propafenone)** increase the concentration of **digoxin**. Monitor and adjust dose. [\[Severe\]](#) Study → Also see TABLE 6 p. 1491

▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the concentration of **digoxin**. [\[Moderate\]](#) Anecdotal

▶ **Antifungals, azoles (isavuconazole)** slightly increase the exposure to **digoxin**. Monitor and adjust dose. [\[Moderate\]](#) Study

▶ **Antifungals, azoles (itraconazole)** are predicted to markedly increase the concentration of **digoxin**. Monitor and adjust dose. [\[Severe\]](#) Study

▶ **Antifungals, azoles (ketoconazole)** are predicted to markedly increase the concentration of **digoxin**. [\[Severe\]](#) Study

▶ **Antifungals, azoles (posaconazole)** are predicted to increase the concentration of **digoxin**. [\[Severe\]](#) Study

▶ **Antimalarials (mefloquine)** are predicted to increase the risk of bradycardia when given with **digoxin**. [\[Severe\]](#) Theoretical

▶ **Antimalarials (quinine)** increase the concentration of **digoxin**. Monitor and adjust **digoxin** dose, p. 117. [\[Severe\]](#) Anecdotal

▶ **Balsalazide** is predicted to decrease the concentration of **digoxin**. [\[Moderate\]](#) Theoretical

▶ **Berotrastat** is predicted to increase the concentration of **digoxin**. Monitor and adjust dose. [\[Moderate\]](#) Study

▶ **Calcium channel blockers (diltiazem, verapamil)** increase the concentration of **digoxin**. Monitor and adjust dose. [\[Severe\]](#) Study → Also see TABLE 6 p. 1491

▶ **Intravenous calcium salts** increase the effects of **digoxin**. Avoid. [\[Moderate\]](#) Anecdotal

▶ **Carbamazole** affects the concentration of **digoxin**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical

▶ **Ceritinib** is predicted to increase the risk of bradycardia when given with **digoxin**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 6 p. 1491

▶ **Ciclosporin** increases the concentration of **digoxin**. Monitor and adjust dose. [\[Severe\]](#) Theoretical

▶ **Dabrafenib** is predicted to decrease the exposure to **digoxin**. [\[Moderate\]](#) Theoretical

▶ **Drugs that reduce serum potassium** (see TABLE 17 p. 1494) are predicted to increase the risk of **digoxin** toxicity when given with **digoxin**. [\[Severe\]](#) Study

▶ **Eliglustat** increases the exposure to **digoxin**. Adjust dose. [\[Moderate\]](#) Study

▶ **Fostamatinib** slightly increases the exposure to **digoxin**. Monitor **digoxin** concentration and adjust dose, p. 117. [\[Moderate\]](#) Study

- ▶ **Glecaprevir** with pibrentasvir increases the exposure to **digoxin**. [Moderate] Study
  - ▶ **HIV-protease inhibitors (ritonavir)** increase the concentration of **digoxin**. Adjust dose and monitor concentration. [Severe] Study
  - ▶ **Ibrutinib** is predicted to increase the exposure to **digoxin**. Separate administration by at least 6 hours. [Moderate] Theoretical
  - ▶ **Ivacaftor** slightly increases the exposure to **digoxin**. [Moderate] Study
  - ▶ **Lapatinib** is predicted to increase the exposure to **digoxin**. [Moderate] Theoretical
  - ▶ **Ledipasvir** is predicted to increase the exposure to **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **digoxin**. [Moderate] Study
  - ▶ **Macrolides** increase the concentration of **digoxin**. [Severe] Anecdotal
  - ▶ **Mirabegron** slightly increases the exposure to **digoxin**. Monitor concentration and adjust dose. [Severe] Study
  - ▶ **Neomycin** decreases the absorption of **digoxin**. [Moderate] Study
  - ▶ **Neratinib** slightly increases the exposure to **digoxin**. [Moderate] Study
  - ▶ **Neuromuscular blocking drugs, non-depolarising (pancuronium)** are predicted to increase the risk of cardiovascular adverse effects when given with **digoxin**. [Severe] Anecdotal
  - ▶ **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **digoxin**. [Severe] Theoretical
  - ▶ **NSAIDs (indometacin)** increase the concentration of **digoxin**. [Severe] Study
  - ▶ **Olaparib** might increase the exposure to **digoxin**. [Moderate] Theoretical
  - ▶ **Osimertinib** is predicted to increase the exposure to **digoxin**. [Moderate] Study
  - ▶ **Pemigatinib** might increase the exposure to **digoxin**. Separate administration by at least 6 hours. [Moderate] Theoretical
  - ▶ **Penicillamine** potentially decreases the concentration of **digoxin**. Separate administration by 2 hours. [Severe] Anecdotal
  - ▶ **Pibrentasvir** with glecaprevir increases the exposure to **digoxin**. [Moderate] Study
  - ▶ **Pitolisant** is predicted to decrease the exposure to **digoxin**. [Mild] Theoretical
  - ▶ **Ranolazine** increases the concentration of **digoxin**. [Moderate] Study
  - ▶ **Ribociclib** is predicted to increase the exposure to **digoxin**. [Moderate] Theoretical
  - ▶ **Rifamycins (rifampicin)** decrease the concentration of **digoxin**. [Moderate] Study
  - ▶ **Sotorasib** is predicted to increase the exposure to **digoxin**. Avoid or adjust dose. [Moderate] Study
  - ▶ **St John's wort** decreases the concentration of **digoxin**. Avoid. [Severe] Anecdotal
  - ▶ **Sucralfate** decreases the absorption of **digoxin**. Separate administration by 2 hours. [Severe] Anecdotal
  - ▶ **Sulfasalazine** decreases the concentration of **digoxin**. [Moderate] Study
  - ▶ **Suxamethonium** is predicted to increase the risk of cardiovascular adverse effects when given with **digoxin**. [Severe] Anecdotal → Also see TABLE 6 p. 1491
  - ▶ **Teptinib** is predicted to increase the concentration of **digoxin**. [Severe] Study
  - ▶ **Thyroid hormones** are predicted to affect the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Ticagrelor** increases the concentration of **digoxin**. [Moderate] Study → Also see TABLE 6 p. 1491
  - ▶ **Tolvaptan** increases the concentration of **digoxin**. [Mild] Study
  - ▶ **Trimethoprim** increases the concentration of **digoxin**. [Moderate] Study
  - ▶ **Tucatinib** slightly increases the exposure to **digoxin**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Vandetanib** slightly increases the exposure to **digoxin**. [Moderate] Study
  - ▶ **Velpatasvir** is predicted to increase the exposure to **digoxin**. [Severe] Study
  - ▶ **Vemurafenib** slightly increases the exposure to **digoxin**. Use with caution and adjust dose. [Severe] Study
  - ▶ **Venetoclax** increases the exposure to **digoxin**. Avoid or adjust dose. [Severe] Study
  - ▶ **Vitamin D substances** are predicted to increase the risk of toxicity when given with **digoxin**. [Severe] Theoretical
  - ▶ **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the exposure to **digoxin**. Monitor and adjust dose. [Severe] Theoretical
- Dihydrocodeine** → see opioids
- Diltiazem** → see calcium channel blockers
- Dimenhydrinate** → see TABLE 10 p. 1492 (antimuscarinics)
- ▶ **Antipsychotics, second generation (clozapine)** can cause constipation, as can **dimenhydrinate**; concurrent use might increase the risk of developing intestinal obstruction. [Severe] Theoretical → Also see TABLE 10 p. 1492
- Dimethyl fumarate**
- ▶ **Alcohol** (excessive consumption) potentially increases the risk of gastrointestinal adverse effects when given with **dimethyl fumarate**. Avoid. [Moderate] Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dimethyl fumarate**. UKHSA advises avoid (refer to Green Book). [Severe] Theoretical
- Dinutuximab** → see monoclonal antibodies
- Dipeptidylpeptidase-4 inhibitors** → see TABLE 14 p. 1493 (antidiabetic drugs)
- alogliptin · linagliptin · saxagliptin · sitagliptin · vildagliptin
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **linagliptin**. [Moderate] Study
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **saxagliptin**. [Mild] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **linagliptin**. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **saxagliptin**. [Mild] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **saxagliptin**. [Moderate] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **saxagliptin**. [Mild] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **saxagliptin**. [Moderate] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
  - ▶ **Fenfluramine** might decrease blood glucose concentrations when given with **dipeptidylpeptidase-4 inhibitors**. [Moderate] Theoretical
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **saxagliptin**. [Mild] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **saxagliptin**. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **saxagliptin**. [Moderate] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
  - ▶ **Linagliptin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **saxagliptin**. [Moderate] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **saxagliptin**. [Mild] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
  - ▶ **Mitotane** is predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study

**Dipeptidylpeptidase-4 inhibitors** (continued)

- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **saxagliptin**. [Mild] Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **linagliptin**. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** are predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study
  - ▶ **Vemurafenib** is predicted to increase the exposure to **sitagliptin**. Use with caution or avoid. [Moderate] Theoretical
- Diphenoxylate** → see opioids
- Dipipanone** → see opioids
- Dipyridamole** → see TABLE 8 p. 1491 (hypotension), TABLE 4 p. 1490 (antiplatelet effects)
- ▶ Oral **antacids** are predicted to decrease the absorption of oral **dipyridamole** (immediate release tablets). [Moderate] Theoretical
  - ▶ **Dipyridamole** increases the exposure to **antiarrhythmics (adenosine)**. Avoid or adjust dose. [Severe] Study
  - ▶ **Dipyridamole** might increase the exposure to **cladribine**. [Moderate] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [Moderate] Theoretical
  - ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [Moderate] Theoretical
  - ▶ **Selumetinib** might increase the risk of bleeding when given with **dipyridamole**. [Moderate] Theoretical
- Diroximel fumarate**
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **diroximel fumarate**. Use with caution or avoid. [Severe] Theoretical
- Disopyramide** → see antiarrhythmics
- Disulfiram** → see TABLE 12 p. 1493 (peripheral neuropathy)
- ▶ **Alcohol** causes an extremely unpleasant systemic reaction when given with **disulfiram**. Avoid for at least 24 hours before and up to 14 days after stopping treatment. [Severe] Study
  - ▶ **Disulfiram** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Study → Also see TABLE 12 p. 1493
  - ▶ **Disulfiram** increases the anticoagulant effect of **coumarins**. Monitor and adjust dose. [Severe] Study
  - ▶ **Methylphenidate** has been reported to cause psychotic symptoms when given with **disulfiram**. [Severe] Anecdotal
  - ▶ **Disulfiram** increases the risk of acute psychoses when given with **metronidazole**. [Severe] Study → Also see TABLE 12 p. 1493
  - ▶ **Disulfiram** is predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
- Dobutamine** → see sympathomimetics, inotropic
- Docetaxel** → see taxanes

**Docusates**

**ROUTE-SPECIFIC INFORMATION** Interactions do not generally apply to topical use of **docusates** unless specified.

- ▶ Oral **docusates** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. [Severe] Theoretical

**Dolutegravir**

- ▶ Oral **antacids** decrease the exposure to oral **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after antacids. [Moderate] Study
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **dolutegravir**. [Severe] Study
  - ▶ **Antiepileptics (carbamazepine)** decrease the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 696. [Severe] Study
  - ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 696. [Severe] Study
  - ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 696. [Severe] Theoretical
  - ▶ Oral **calcium salts** decrease the absorption of **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after calcium salts. [Moderate] Study
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **dolutegravir**. [Severe] Study
  - ▶ **Dolutegravir** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [Moderate] Study
  - ▶ **Encorafenib** is predicted to increase the exposure to **dolutegravir**. [Moderate] Theoretical
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **dolutegravir**. [Severe] Study
  - ▶ **Dolutegravir** might increase the concentration of **fampridine**. Avoid. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors (atazanavir)** (alone or boosted with ritonavir) slightly increase the exposure to **dolutegravir**. Adjust dose—consult product literature. [Moderate] Study
  - ▶ **HIV-protease inhibitors (fosamprenavir)** boosted with ritonavir slightly decrease the exposure to **dolutegravir**. Avoid if resistant to HIV-integrase inhibitors. [Severe] Study
  - ▶ **HIV-protease inhibitors (tipranavir)** moderately decrease the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 696. [Severe] Study
  - ▶ Oral **iron** decreases the absorption of oral **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after iron. [Moderate] Study
  - ▶ **Dolutegravir** increases the exposure to **metformin**. Adjust dose. [Moderate] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **dolutegravir**. [Severe] Study
  - ▶ **NNRTIs (efavirenz)** moderately decrease the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 696. [Severe] Study
  - ▶ **NNRTIs (etravirine)** moderately decrease the exposure to **dolutegravir**. Adjust **dolutegravir** dose unless given with atazanavir, darunavir, or lopinavir (all boosted with ritonavir), p. 696. [Severe] Study
  - ▶ **NNRTIs (nevirapine)** are predicted to decrease the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 696. [Severe] Study
  - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 696. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 696. [Severe] Study
  - ▶ **Sucralfate** decreases the absorption of **dolutegravir**. [Moderate] Study
- Domperidone** → see TABLE 9 p. 1492 (QT-interval prolongation)
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
  - ▶ **Domperidone** is predicted to decrease the prolactin-lowering effect of **dopamine receptor agonists (bromocriptine, cabergoline)**. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
  - ▶ **Letermovir** is predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
  - ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **domperidone**. Avoid. [Severe] Study
- Donepezil** → see anticholinesterases, centrally acting
- Dopamine** → see sympathomimetics, inotropic
- Dopamine receptor agonists** → see TABLE 8 p. 1491 (hypotension), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 10 p. 1492 (antimuscarinics)

amantadine · apomorphine · bromocriptine · cabergoline · pramipexole · quinagolide · ropinirole · rotigotine

**FOOD AND LIFESTYLE** Dose adjustment might be necessary if smoking started or stopped during treatment with **ropinirole**.

- ▶ **Apomorphine** is predicted to increase the risk of severe hypotension when given with **5-HT<sub>3</sub>-receptor antagonists (granisetron, palonosetron)**. [Severe] Theoretical
- ▶ **Apomorphine** increases the risk of severe hypotension when given with **5-HT<sub>3</sub>-receptor antagonists (ondansetron)**. Avoid. [Severe] Study → Also see TABLE 9 p. 1492
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the concentration of **cabergoline**. [Severe] Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
- ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** increase the exposure to **bromocriptine**. [Severe] Study
- ▶ **Antipsychotics, second generation (amisulpride, olanzapine, paliperidone, quetiapine, risperidone)** are predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 9 p. 1492
- ▶ **Antipsychotics, second generation (aripiprazole, clozapine)** are predicted to decrease the effects of **dopamine receptor agonists**. [Moderate] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 10 p. 1492
- ▶ **Antipsychotics, second generation (asenapine)** are predicted to decrease the effects of **dopamine receptor agonists**. Adjust dose. [Moderate] Theoretical → Also see TABLE 8 p. 1491
- ▶ **Axitinib** is predicted to increase the exposure to **ropinirole**. [Moderate] Theoretical
- ▶ **Benperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1491
- ▶ **Bupropion** increases the risk of adverse effects when given with **amantadine**. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical → Also see TABLE 8 p. 1491
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal → Also see TABLE 8 p. 1491
- ▶ **Cobicistat** increases the exposure to **bromocriptine**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
- ▶ **Combined hormonal contraceptives** is predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
- ▶ **Dolutegravir** is predicted to increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study
- ▶ **Domperidone** is predicted to decrease the prolactin-lowering effect of **dopamine receptor agonists (bromocriptine, cabergoline)**. [Moderate] Theoretical
- ▶ **Dopamine receptor agonists (cabergoline)** are predicted to increase the risk of ergotism when given with **dopamine receptor agonists (bromocriptine)**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1491
- ▶ **Dopamine receptor agonists (amantadine)** are predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [Moderate] Theoretical → Also see TABLE 8 p. 1491
- ▶ **Droperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1491 → Also see TABLE 9 p. 1492
- ▶ **Ergometrine** is predicted to increase the risk of ergotism when given with **cabergoline**. Avoid. [Moderate] Theoretical
