- Delamanid** → see TABLE 9 p. 909 (QT-interval prolongation)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** very slightly increase the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Apalutamide** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Cobicistat** very slightly increases the exposure to **delamanid**. [Severe] Study
- ▶ **Enzalutamide** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** very slightly increase the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Idelalisib** very slightly increases the exposure to **delamanid**. [Severe] Study
- ▶ **Macrolides (clarithromycin)** very slightly increase the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Mitotane** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- Demeclocycline** → see tetracyclines
- Desferrioxamine** → see iron chelators
- Desflurane** → see volatile halogenated anaesthetics
- Desloratadine** → see antihistamines, non-sedating
- Desmopressin** → see TABLE 18 p. 911 (hyponatraemia)
- ▶ **Antiepileptics (lamotrigine)** are predicted to increase the risk of hyponatraemia when given with **desmopressin**. [Severe] Theoretical
- ▶ **Loperamide** greatly increases the absorption of oral **desmopressin** (and possibly sublingual). [Moderate] Study
- ▶ **Phenothiazines (chlorpromazine)** are predicted to increase the risk of hyponatraemia when given with **desmopressin**. [Severe] Theoretical
- Desogestrel**
- ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampamil, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical

Desogestrel (continued)

- ▶ **Desogestrel** is predicted to increase the exposure to **antiepileptics (lamotrigine)**. [Moderate] Study
- ▶ **Aprepitant** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
- ▶ **Fosaprepitant** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
- ▶ **Griseofulvin** potentially decreases the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
- ▶ **Modafinil** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
- ▶ **Rifabutin** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the efficacy of **desogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
- ▶ **Sugammadex** is predicted to decrease the exposure to **desogestrel**. Refer to patient information leaflet for missed pill advice. [Severe] Theoretical
- ▶ **Ulipristal** is predicted to decrease the efficacy of **desogestrel**. Avoid. [Severe] Theoretical

Dexamethasone → see corticosteroids

Dexamfetamine → see amfetamines

Dexibuprofen → see NSAIDs

Dexketoprofen → see NSAIDs

Dexmedetomidine → see TABLE 11 p. 909 (CNS depressant effects)

Dextrazoxane → see iron chelators

Diamorphine → see opioids

Diazepam → see TABLE 11 p. 909 (CNS depressant effects)

▶ **Diazepam** potentially affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Study

▶ **Antifungals, azoles (fluconazole, voriconazole)** moderately increase the exposure to **diazepam**. Monitor and adjust dose. [Moderate] Study

▶ **Apalutamide** is predicted to decrease the exposure to **diazepam**. Avoid or monitor. [Mild] Study

▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **diazepam**. Avoid. [Moderate] Theoretical

▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to **diazepam**. Monitor and adjust dose. [Moderate] Theoretical

▶ **Rifampicin** moderately decreases the exposure to **diazepam**. Avoid. [Moderate] Study

▶ **SSRIs (fluvoxamine)** moderately increase the exposure to **diazepam**. [Moderate] Study

Diazoxide → see TABLE 8 p. 908 (hypotension)

▶ **Diazoxide** decreases the concentration of **antiepileptics (fosphenytoin, phenytoin)** and **antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the effects of **diazoxide**. Monitor concentration and adjust dose. [Moderate] Anecdotal

▶ **Diazoxide** increases the risk of severe hypotension when given with **hydralazine**. [Severe] Study → Also see TABLE 8 p. 908

Diclofenac → see NSAIDs

Dicycloverine → see TABLE 10 p. 909 (antimuscarinics)

Dienogest

- ▶ **Antiarrhythmics (dronedarone)** are predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **dienogest**. [Severe] Study
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **dienogest**. [Moderate] Study
 - ▶ **Apalutamide** is predicted to markedly decrease the exposure to **dienogest**. [Severe] Study
 - ▶ **Aprepitant** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
 - ▶ **Cobicistat** is predicted to moderately increase the exposure to **dienogest**. [Moderate] Study
 - ▶ **Crizotinib** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
 - ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **dienogest**. [Severe] Study
 - ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **dienogest**. [Moderate] Study
 - ▶ **Idelalisib** is predicted to moderately increase the exposure to **dienogest**. [Moderate] Study
 - ▶ **Imatinib** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **dienogest**. [Moderate] Study
 - ▶ **Macrolides (erythromycin)** are predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
 - ▶ **Mitotane** is predicted to markedly decrease the exposure to **dienogest**. [Severe] Study
 - ▶ **Netupitant** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
 - ▶ **Nilotinib** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
 - ▶ **Rifampicin** is predicted to markedly decrease the exposure to **dienogest**. [Severe] Study
- Digoxin** → see TABLE 6 p. 908 (bradycardia)
- ▶ **Acarbose** decreases the concentration of **digoxin**. [Moderate] Study
 - ▶ **Aldosterone antagonists (eplerenone)** very slightly increase the exposure to **digoxin**. [Mild] Study
 - ▶ **Aldosterone antagonists (spironolactone)** increase the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Aminoglycosides** potentially increase the concentration of **digoxin**. Monitor and adjust dose. [Mild] Study
 - ▶ **Antacids** decrease the absorption of **digoxin**. Separate administration by 2 hours. [Mild] Study
 - ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to moderately increase the exposure to **digoxin**. Monitor and adjust **digoxin** dose, p. 86. [Severe] Study → Also see TABLE 6 p. 908
 - ▶ **Antiarrhythmics (propafenone)** increase the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study
 - ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the concentration of **digoxin**. [Moderate] Anecdotal
 - ▶ **Antifungals, azoles (isavuconazole)** slightly increase the exposure to **digoxin**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Antifungals, azoles (itraconazole)** are predicted to markedly increase the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study
 - ▶ **Antifungals, azoles (ketoconazole)** are predicted to markedly increase the concentration of **digoxin**. [Severe] Study
 - ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the concentration of **digoxin**. [Severe] Study
 - ▶ **Antimalarials (mefloquine)** are predicted to increase the risk of bradycardia when given with **digoxin**. [Severe] Theoretical
 - ▶ **Antimalarials (quinine)** increase the concentration of **digoxin**. Monitor and adjust **digoxin** dose, p. 86. [Severe] Anecdotal

- ▶ **Apalutamide** is predicted to decrease the exposure to **digoxin**. [Mild] Study
 - ▶ **Balsalazide** is predicted to decrease the concentration of **digoxin**. [Moderate] Theoretical
 - ▶ **Brigatinib** potentially increases the concentration of **digoxin**. [Moderate] Theoretical
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** increase the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study → Also see TABLE 6 p. 908
 - ▶ Intravenous **calcium salts** increase the effects of **digoxin**. Avoid. [Moderate] Anecdotal
 - ▶ **Carbimazole** affects the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Ceritinib** is predicted to increase the risk of bradycardia when given with **digoxin**. Avoid. [Severe] Theoretical
 - ▶ **Ciclosporin** increases the concentration of **digoxin**. Monitor and adjust dose. [Severe] Theoretical
 - ▶ **Drugs that reduce serum potassium** (see TABLE 17 p. 911) are predicted to increase the risk of digoxin toxicity when given with **digoxin**. [Severe] Study
 - ▶ **Eliglustat** increases the exposure to **digoxin**. Adjust dose. [Moderate] Study
 - ▶ **Glecaprevir** (with pibrentasvir) increases the exposure to **digoxin**. [Moderate] Study
 - ▶ **HIV-protease inhibitors (ritonavir)** increase the concentration of **digoxin**. Adjust dose and monitor concentration. [Severe] Study
 - ▶ **Ivacaftor** slightly increases the exposure to **digoxin**. [Moderate] Study
 - ▶ **Lapatinib** is predicted to increase the exposure to **digoxin**. [Moderate] Theoretical
 - ▶ **Ledipasvir** is predicted to increase the exposure to **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Macrolides** increase the concentration of **digoxin**. [Severe] Anecdotal
 - ▶ **Mirabegron** slightly increases the exposure to **digoxin**. Monitor concentration and adjust dose. [Severe] Study
 - ▶ **Neomycin** decreases the absorption of **digoxin**. [Moderate] Study
 - ▶ **Neratinib** is predicted to slightly increase the exposure to **digoxin**. [Moderate] Study
 - ▶ **Neuromuscular blocking drugs, non-depolarising (pancuronium)** are predicted to increase the risk of cardiovascular side-effects when given with **digoxin**. [Severe] Anecdotal
 - ▶ **NSAIDs (indometacin)** increase the concentration of **digoxin**. [Severe] Study
 - ▶ **Paritaprevir** (with ritonavir and ombitasvir) increases the exposure to **digoxin**. Monitor and adjust **digoxin** dose, p. 86. [Moderate] Study
 - ▶ **Penicillamine** potentially decreases the concentration of **digoxin**. Separate administration by 2 hours. [Severe] Anecdotal
 - ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **digoxin**. [Moderate] Study
 - ▶ **Pitolisant** is predicted to decrease the exposure to **digoxin**. [Mild] Theoretical
 - ▶ **Ranolazine** increases the concentration of **digoxin**. [Moderate] Study
 - ▶ **Ribociclib** is predicted to increase the exposure to **digoxin**. [Moderate] Theoretical
 - ▶ **Rifampicin** decreases the concentration of **digoxin**. [Moderate] Study
 - ▶ **Rolapitant** slightly increases the exposure to **digoxin**. [Moderate] Study
 - ▶ **St John's Wort** decreases the concentration of **digoxin**. Avoid. [Severe] Anecdotal
 - ▶ **Sucralfate** decreases the absorption of **digoxin**. Separate administration by 2 hours. [Severe] Anecdotal
 - ▶ **Sulfasalazine** decreases the concentration of **digoxin**. [Moderate] Study
 - ▶ **Suxamethonium** is predicted to increase the risk of cardiovascular side-effects when given with **digoxin**. [Severe] Anecdotal
 - ▶ **Thyroid hormones** are predicted to affect the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Ticagrelor** increases the concentration of **digoxin**. [Moderate] Study
 - ▶ **Tolvaptan** increases the concentration of **digoxin**. [Mild] Study
 - ▶ **Trimethoprim** increases the concentration of **digoxin**. [Moderate] Study
 - ▶ **Vandetanib** slightly increases the exposure to **digoxin**. Monitor ECG and adjust dose. [Moderate] Study
 - ▶ **Velpatasvir** is predicted to increase the exposure to **digoxin**. [Severe] Study
 - ▶ **Venetoclax** increases the exposure to **digoxin**. Avoid or adjust dose. [Severe] Study
 - ▶ **Vitamin D substances** are predicted to increase the risk of toxicity when given with **digoxin**. [Severe] Theoretical
 - ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) is predicted to increase the exposure to **digoxin**. Monitor and adjust dose. [Severe] Theoretical
- Dihydrocodeine** → see opioids
Dihydrotachysterol → see vitamin D substances
Diltiazem → see calcium channel blockers
Dimenhydrinate → see TABLE 10 p. 909 (antimuscarinics)
Dimethyl fumarate
 ▶ **Alcohol (beverage)** (excessive consumption) potentially increases the risk of gastrointestinal side-effects when given with **dimethyl fumarate**. Avoid. [Moderate] Theoretical
 ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dimethyl fumarate**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- Dimutuximab** → see monoclonal antibodies
Diphenoxylate → see opioids
Dipipanone → see opioids
Dipyridamole → see TABLE 8 p. 908 (hypotension), TABLE 4 p. 907 (antiplatelet effects)
 ▶ **Antacids** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [Moderate] Theoretical
 ▶ **Dipyridamole** increases the exposure to **antiarrhythmics (adenosine)**. Avoid or adjust dose. [Severe] Study
 ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [Moderate] Theoretical
 ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [Moderate] Theoretical
- Disopyramide** → see antiarrhythmics
Disulfiram → see TABLE 12 p. 910 (peripheral neuropathy)
 ▶ **Alcohol (beverage)** causes an extremely unpleasant systemic reaction when given with **disulfiram**. Avoid for at least 24 hours before and up to 14 days after stopping treatment. [Severe] Study
 ▶ **Disulfiram** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Study → Also see TABLE 12 p. 910
 ▶ **Disulfiram** increases the anticoagulant effect of **coumarins**. Monitor and adjust dose. [Severe] Study
 ▶ **Disulfiram** increases the risk of acute psychoses when given with **metronidazole**. [Severe] Study → Also see TABLE 12 p. 910
 ▶ **Disulfiram** is predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
- Dobutamine** → see sympathomimetics, inotropic
Docetaxel → see taxanes
Docusate sodium
- ROUTE-SPECIFIC INFORMATION** Interactions do not generally apply to topical use of **docusate** unless specified.
- Dolutegravir**
 ▶ **Antacids** moderately decrease the exposure to **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after antacids. [Moderate] Study
 ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **dolutegravir**. Adjust dose. [Severe] Study
 ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to **dolutegravir**. Adjust dose. [Severe] Theoretical
 ▶ **Apalutamide** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
 ▶ **Bosentan** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study

Dolutegravir (continued)

- ▶ Oral **calcium salts** decrease the absorption of **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after calcium salts. [Moderate] Study
- ▶ **Dolutegravir** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [Moderate] Study
- ▶ **Efavirenz** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **Encorafenib** is predicted to increase the exposure to **dolutegravir**. [Moderate] Theoretical
- ▶ **Enzaltamide** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **Etravirine** moderately decreases the exposure to **dolutegravir**. Avoid unless given with atazanavir, darunavir, or lopinavir (all boosted with ritonavir). [Severe] Study
- ▶ **HIV-protease inhibitors (fosamprenavir)** boosted with ritonavir slightly decrease the exposure to **dolutegravir**. Avoid if resistant to HIV-integrase inhibitors. [Severe] Study
- ▶ **HIV-protease inhibitors (tipranavir)** moderately decrease the exposure to **dolutegravir**. Refer to specialist literature. [Severe] Study
- ▶ **Iron (oral)** decreases the absorption of **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after iron (oral). [Moderate] Study
- ▶ **Dolutegravir** increases the exposure to **metformin**. Use with caution and adjust dose. [Severe] Study
- ▶ **Mitotane** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **Nevirapine** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **Rifampicin** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **St John's Wort** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **Sucralfate** decreases the absorption of **dolutegravir**. [Moderate] Study
- Domperidone** → see TABLE 9 p. 909 (QT-interval prolongation)
- ▶ **Antiarrhythmics (dronedaron)** increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Aprepitant** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Cobicistat** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Crizotinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Domperidone** is predicted to decrease the prolactin-lowering effect of **dopamine receptor agonists (bromocriptine, cabergoline)**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Idelalisib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Imatinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin, erythromycin)** increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Netupitant** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Nilotinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study

Donepezil → see anticholinesterases, centrally acting

Dopamine → see sympathomimetics, inotropic

Dopamine receptor agonists → see TABLE 8 p. 908 (hypotension),

TABLE 9 p. 909 (QT-interval prolongation), TABLE 10 p. 909

(antimuscarinics)

amantadine · apomorphine · bromocriptine · cabergoline · pergolide · pramipexole · quinafolide · ropinirole · rotigotine

FOOD AND LIFESTYLE Dose adjustment might be necessary if smoking started or stopped during treatment with **ropinirole**.

- ▶ **Amisulpride** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the concentration of **cabergoline**. [Severe] Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
- ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** increase the exposure to **bromocriptine**. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
- ▶ **Aripiprazole** is predicted to decrease the effects of **dopamine receptor agonists**. [Moderate] Theoretical → Also see TABLE 8 p. 908
- ▶ **Asenapine** is predicted to decrease the effects of **dopamine receptor agonists**. Adjust dose. [Moderate] Theoretical → Also see TABLE 8 p. 908
- ▶ **Benperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 908
- ▶ **Bupropion** increases the risk of side-effects when given with **amantadine**. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical → Also see TABLE 8 p. 908
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal → Also see TABLE 8 p. 908
- ▶ **Clozapine** is predicted to decrease the effects of **dopamine receptor agonists**. [Moderate] Theoretical → Also see TABLE 8 p. 908 → Also see TABLE 10 p. 909
- ▶ **Cobicistat** increases the exposure to **bromocriptine**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
- ▶ **Dolutegravir** is predicted to increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study
- ▶ **Domperidone** is predicted to decrease the prolactin-lowering effect of **dopamine receptor agonists (bromocriptine, cabergoline)**. [Moderate] Theoretical
- ▶ **Dopamine receptor agonists (cabergoline)** are predicted to increase the risk of ergotism when given with **dopamine receptor agonists (bromocriptine)**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 908
- ▶ **Dopamine receptor agonists (bromocriptine, cabergoline)** are predicted to increase the risk of ergotism when given with **dopamine receptor agonists (pergolide)**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 908
- ▶ **Dopamine receptor agonists (amantadine)** are predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [Moderate] Theoretical → Also see TABLE 8 p. 908
- ▶ **Draperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 908 → Also see TABLE 9 p. 909

- ▶ **Ergometrine** is predicted to increase the risk of ergotism when given with dopamine receptor agonists (**cabergoline**, **pergolide**). Avoid. [Moderate] Theoretical
 - ▶ **Ergotamine** is predicted to increase the risk of ergotism when given with dopamine receptor agonists (**bromocriptine**, **cabergoline**). Avoid. [Moderate] Theoretical
 - ▶ **Ergotamine** is predicted to increase the risk of ergotism when given with **pergolide**. [Moderate] Theoretical
 - ▶ **Flupentixol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 908
 - ▶ **Apomorphine** is predicted to increase the risk of severe hypotension when given with **granisetron**. [Severe] Theoretical
 - ▶ **H₂ receptor antagonists (cimetidine)** are predicted to increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study
 - ▶ **Haloperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 908 → Also see TABLE 9 p. 909 → Also see TABLE 10 p. 909
 - ▶ **HIV-protease inhibitors** increase the exposure to **bromocriptine**. [Severe] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
 - ▶ **Hormone replacement therapy** decreases the clearance of **ropinirole**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Idelalisib** increases the exposure to **bromocriptine**. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
 - ▶ **Imatinib** is predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
 - ▶ **Imatinib** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
 - ▶ **Loxapine** is predicted to decrease the effects of **dopamine receptor agonists**. [Moderate] Theoretical → Also see TABLE 8 p. 908 → Also see TABLE 10 p. 909
 - ▶ **Macrolides (clarithromycin)** increase the exposure to **bromocriptine**. [Severe] Study
 - ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the concentration of **cabergoline**. Avoid. [Severe] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
 - ▶ **Amantadine** increases the risk of CNS toxicity when given with **memantine**. Use with caution or avoid. [Severe] Theoretical
 - ▶ **Memantine** is predicted to increase the effects of dopamine receptor agonists (**apomorphine**, **bromocriptine**, **cabergoline**, **pergolide**, **pramipexole**, **quinagolide**, **ropinirole**, **rotigotine**). [Moderate] Theoretical
 - ▶ **Metoclopramide** is predicted to decrease the effects of dopamine receptor agonists (**apomorphine**, **bromocriptine**, **cabergoline**, **pergolide**, **pramipexole**, **quinagolide**, **ropinirole**, **rotigotine**). Avoid. [Moderate] Study
 - ▶ **Mexiletine** is predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
 - ▶ **Netupitant** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
 - ▶ **Nilotinib** is predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
 - ▶ **Nilotinib** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
 - ▶ **Olanzapine** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 908
 - ▶ **Apomorphine** increases the risk of severe hypotension when given with **ondansetron**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
 - ▶ **Paliperidone** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 908 → Also see TABLE 9 p. 909
 - ▶ **Apomorphine** is predicted to increase the risk of severe hypotension when given with **palonosetron**. [Severe] Theoretical
 - ▶ **Phenothiazines** are predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 908 → Also see TABLE 9 p. 909 → Also see TABLE 10 p. 909
 - ▶ **Pimozide** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 908 → Also see TABLE 9 p. 909 → Also see TABLE 10 p. 909
 - ▶ **Quetiapine** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 908
 - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
 - ▶ **Ranolazine** is predicted to increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study
 - ▶ **Risperidone** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 908 → Also see TABLE 9 p. 909
 - ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
 - ▶ **Sulpiride** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 908 → Also see TABLE 9 p. 909
 - ▶ **Sympathomimetics, vasoconstrictor (isometheptene)** potentially increase the risk of side-effects when given with **bromocriptine**. Avoid. [Severe] Anecdotal
 - ▶ **Trimethoprim** is predicted to increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study
 - ▶ **Zuclopenthixol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 908 → Also see TABLE 9 p. 909
- ### Doravirine
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
 - ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **doravirine**. [Mild] Study
 - ▶ **Apalutamide** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
 - ▶ **Bosentan** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine or lamivudine with tenofovir disoproxil and doravirine dose. [Severe] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **doravirine**. [Mild] Study
 - ▶ **Dabrafenib** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine or lamivudine with tenofovir disoproxil and doravirine dose. [Severe] Theoretical
 - ▶ **Efavirenz** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine or lamivudine with tenofovir disoproxil and doravirine dose. [Severe] Theoretical
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **doravirine**. [Mild] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **doravirine**. [Mild] Study
 - ▶ **Lumacaftor** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **doravirine**. [Mild] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
 - ▶ **Modafinil** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine or lamivudine with tenofovir disoproxil and doravirine dose. [Severe] Theoretical
 - ▶ **Nevirapine** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine or lamivudine with tenofovir disoproxil and doravirine dose. [Severe] Theoretical
 - ▶ **Rifabutin** moderately decreases the exposure to **doravirine**. Adjust doravirine or lamivudine with tenofovir disoproxil and doravirine dose. [Moderate] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
 - ▶ **Doravirine** is predicted to decrease the exposure to **sirolimus**. Monitor sirolimus concentration and adjust dose, p. 561. [Moderate] Theoretical

Doravirine (continued)

- ▶ **St John's Wort** is predicted to decrease the exposure to doravirine. Avoid. [Severe] Theoretical
- ▶ Doravirine is predicted to decrease the exposure to **tacrolimus**. Monitor tacrolimus concentration and adjust dose, p. 562. [Moderate] Theoretical
- ▶ **Telotristat ethyl** is predicted to decrease the exposure to doravirine. Avoid or adjust doravirine or lamivudine with tenofovir disoproxil and doravirine dose. [Severe] Theoretical

Dorzolamide

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

Dosulepin → see tricyclic antidepressants

Doxapram

- ▶ **Aminophylline** increases the risk of agitation when given with doxapram. [Moderate] Study

▶ **MAOIs, irreversible** are predicted to increase the effects of doxapram. [Moderate] Theoretical

- ▶ **Theophylline** increases the risk of agitation when given with doxapram. [Moderate] Study

Doxazosin → see alpha blockers

Doxepin → see tricyclic antidepressants

Doxorubicin → see anthracyclines

Doxycycline → see tetracyclines

Doxylamine → see antihistamines, sedating

Dronabinol → see TABLE 11 p. 909 (CNS depressant effects)

- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to dronabinol. Avoid or adjust dose. [Mild] Study → Also see TABLE 11 p. 909

▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to dronabinol. Adjust dose. [Mild] Study

▶ **Apalutamide** is predicted to decrease the exposure to dronabinol. Avoid or adjust dose. [Mild] Study

▶ **Cobicistat** is predicted to increase the exposure to dronabinol. Adjust dose. [Mild] Study

▶ **Enzalutamide** is predicted to decrease the exposure to dronabinol. Avoid or adjust dose. [Mild] Study

▶ **HIV-protease inhibitors** are predicted to increase the exposure to dronabinol. Adjust dose. [Mild] Study

▶ **Idelalisib** is predicted to increase the exposure to dronabinol. Adjust dose. [Mild] Study

▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to dronabinol. Adjust dose. [Mild] Study

▶ **Mitotane** is predicted to decrease the exposure to dronabinol. Avoid or adjust dose. [Mild] Study

▶ **Rifampicin** is predicted to decrease the exposure to dronabinol. Avoid or adjust dose. [Mild] Study

▶ **St John's Wort** is predicted to decrease the exposure to dronabinol. Avoid or adjust dose. [Mild] Study

Dronedarone → see antiarrhythmics

Droperidol → see TABLE 8 p. 908 (hypotension), TABLE 9 p. 909 (QT-interval prolongation), TABLE 11 p. 909 (CNS depressant effects)

▶ **Droperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 908 → Also see TABLE 9 p. 909

▶ **Droperidol** decreases the effects of **levodopa**. [Severe] Study → Also see TABLE 8 p. 908

Drosiprenone → see TABLE 16 p. 911 (increased serum potassium)

▶ **Antifungals, azoles (ketoconazole)** moderately increase the exposure to drosiprenone. [Severe] Study

Drugs that reduce serum potassium

▶ **Drugs that reduce serum potassium** (see TABLE 17 p. 911) are predicted to increase the risk of digoxin toxicity when given with **digoxin**. [Severe] Study

Drugs with anticoagulant effects

▶ **Bismuth subsalicylate** is predicted to increase the risk of bleeding events when given with **drugs with anticoagulant effects** (see TABLE 3 p. 907). [Moderate] Theoretical

▶ **Caplacizumab** is predicted to increase the risk of bleeding events when given with **drugs with anticoagulant effects** (see TABLE 3 p. 907). [Severe] Theoretical

▶ **Volanesorsen** potentially increases the risk of bleeding events when given with **drugs with anticoagulant effects** (see TABLE 3 p. 907). Avoid depending on platelet count—consult product literature. [Severe] Theoretical

Drugs with antimuscarinic effects

▶ **Drugs with antimuscarinic effects** (see TABLE 10 p. 909) decrease the absorption of **levodopa**. [Moderate] Theoretical

Drugs with antiplatelet effects

▶ **Caplacizumab** is predicted to increase the risk of bleeding events when given with **drugs with antiplatelet effects** (see TABLE 4 p. 907). [Severe] Theoretical

▶ **Volanesorsen** potentially increases the risk of bleeding events when given with **drugs with antiplatelet effects** (see TABLE 4 p. 907). Avoid depending on platelet count—consult product literature. [Severe] Theoretical

Dulaglutide → see TABLE 14 p. 910 (antidiabetic drugs)

Duloxetine → see TABLE 18 p. 911 (hyponatraemia), TABLE 13 p. 910 (serotonin syndrome), TABLE 4 p. 907 (antiplatelet effects)

▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to duloxetine. [Moderate] Theoretical

▶ **Duloxetine** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. [Moderate] Study

▶ **Duloxetine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study

▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to duloxetine. [Moderate] Theoretical

▶ **Leflunomide** is predicted to decrease the exposure to duloxetine. [Moderate] Theoretical

▶ **Duloxetine** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study

▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to duloxetine. Avoid. [Moderate] Theoretical

▶ **Rifampicin** is predicted to decrease the exposure to duloxetine. [Moderate] Theoretical

▶ **SSRIs (fluvoxamine)** markedly increase the exposure to duloxetine. Avoid. [Severe] Study → Also see TABLE 18 p. 911 → Also see TABLE 13 p. 910 → Also see TABLE 4 p. 907

▶ **Teriflunomide** is predicted to decrease the exposure to duloxetine. [Moderate] Theoretical

Dupilumab → see monoclonal antibodies

Durvalumab → see monoclonal antibodies

Dutasteride

▶ **Antiarrhythmics (dronedarone)** are predicted to moderately increase the exposure to dutasteride. [Mild] Study

▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to moderately increase the exposure to dutasteride. [Mild] Study

▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to dutasteride. Monitor side effects and adjust dose. [Moderate] Theoretical

▶ **Aprepitant** is predicted to moderately increase the exposure to dutasteride. [Mild] Study

▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to moderately increase the exposure to dutasteride. [Mild] Study

▶ **Cobicistat** is predicted to increase the exposure to dutasteride. Monitor side effects and adjust dose. [Moderate] Theoretical

▶ **Crizotinib** is predicted to moderately increase the exposure to dutasteride. [Mild] Study

▶ **HIV-protease inhibitors** are predicted to increase the exposure to dutasteride. Monitor side effects and adjust dose. [Moderate] Theoretical

▶ **Idelalisib** is predicted to increase the exposure to dutasteride. Monitor side effects and adjust dose. [Moderate] Theoretical

▶ **Imatinib** is predicted to moderately increase the exposure to dutasteride. [Mild] Study

▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to dutasteride. Monitor side effects and adjust dose. [Moderate] Theoretical

▶ **Macrolides (erythromycin)** are predicted to moderately increase the exposure to dutasteride. [Mild] Study

▶ **Netupitant** is predicted to moderately increase the exposure to dutasteride. [Mild] Study

▶ **Nilotinib** is predicted to moderately increase the exposure to dutasteride. [Mild] Study

Eculizumab → see monoclonal antibodies

Edoxaban → see TABLE 3 p. 907 (anticoagulant effects)

- ▶ **Antiarrhythmics (dronedaron)** slightly increase the exposure to edoxaban. Adjust edoxaban dose. [Severe] Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to edoxaban. [Moderate] Study
- ▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to edoxaban. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole)** are predicted to slightly increase the exposure to edoxaban. [Severe] Theoretical
- ▶ **Antifungals, azoles (ketoconazole)** slightly increase the exposure to edoxaban. Adjust edoxaban dose. [Severe] Study
- ▶ **Ceritinib** is predicted to increase the exposure to edoxaban. [Moderate] Theoretical
- ▶ **Ciclosporin** slightly increases the exposure to edoxaban. Adjust edoxaban dose. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to edoxaban. Avoid. [Severe] Theoretical
- ▶ **Eliglustat** is predicted to increase the exposure to edoxaban. Adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to slightly increase the exposure to edoxaban. [Severe] Theoretical
- ▶ **Lapatinib** is predicted to slightly increase the exposure to edoxaban. [Severe] Theoretical
- ▶ **Macrolides (azithromycin, clarithromycin)** are predicted to slightly increase the exposure to edoxaban. [Severe] Theoretical
- ▶ **Macrolides (erythromycin)** slightly increase the exposure to edoxaban. Adjust edoxaban dose. [Severe] Study
- ▶ **Mirabegron** is predicted to increase the exposure to edoxaban. [Mild] Theoretical
- ▶ **Neratinib** is predicted to increase the exposure to edoxaban. [Moderate] Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to edoxaban. [Severe] Study
- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to edoxaban. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to edoxaban. [Mild] Theoretical
- ▶ **Ranolazine** is predicted to slightly increase the exposure to edoxaban. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to edoxaban. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to edoxaban. [Moderate] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to edoxaban. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to slightly increase the exposure to edoxaban. [Severe] Theoretical
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) is predicted to increase the concentration of edoxaban. Avoid. [Severe] Theoretical

Efavirenz → see TABLE 9 p. 909 (QT-interval prolongation)

- ▶ **Efavirenz** is predicted to decrease the exposure to antiarrhythmics (**dronedaron**). [Severe] Theoretical → Also see TABLE 9 p. 909
- ▶ **Antiepileptics (carbamazepine)** slightly decrease the exposure to efavirenz and efavirenz slightly decreases the exposure to antiepileptics (**carbamazepine**). [Severe] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** slightly decrease the exposure to efavirenz and efavirenz affects the concentration of antiepileptics (**fosphenytoin, phenytoin**). [Severe] Theoretical
- ▶ **Antiepileptics (phenobarbital)** are predicted to decrease the exposure to efavirenz and efavirenz affects the concentration of antiepileptics (**phenobarbital**). [Severe] Theoretical
- ▶ **Efavirenz** is predicted to affect the efficacy of antiepileptics (**primidone**) and antiepileptics (**primidone**) are predicted to slightly decrease the exposure to efavirenz. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to antifungals, azoles (**isavuconazole**). Avoid. [Severe] Theoretical
- ▶ **Efavirenz** slightly decreases the exposure to antifungals, azoles (**itraconazole**). Avoid and for 14 days after stopping efavirenz. [Moderate] Study
- ▶ **Efavirenz** moderately decreases the exposure to antifungals, azoles (**ketoconazole**). [Severe] Study

- ▶ **Efavirenz** slightly decreases the exposure to antifungals, azoles (**posaconazole**). Avoid. [Moderate] Study
- ▶ **Efavirenz** moderately decreases the exposure to antifungals, azoles (**voriconazole**) and antifungals, azoles (**voriconazole**) slightly increase the exposure to efavirenz. Adjust dose. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Efavirenz** decreases the concentration of antimalarials (**artemether**). [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Efavirenz** moderately decreases the exposure to antimalarials (**atovaquone**). Avoid. [Moderate] Study
- ▶ **Efavirenz** affects the exposure to antimalarials (**proguanil**). Avoid. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **aprepitant**. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Efavirenz** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 909
- ▶ **Efavirenz** is predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **bupropion**. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Efavirenz** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the concentration of **caspofungin**. Adjust dose. [Moderate] Study
- ▶ **Efavirenz** decreases the concentration of **ciclosporin**. Monitor concentration and adjust dose. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Study
- ▶ **Efavirenz** is predicted to affect the concentration of **coumarins**. Adjust dose. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 909
- ▶ **Efavirenz** increases the risk of increased ALT concentrations when given with **dasabuvir**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Efavirenz** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
- ▶ **Efavirenz** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine or lamivudine with tenofovir disoproxil and doravirine dose. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **eliglustat**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical

Efavirenz (continued)

- ▶ Efavirenz is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
- ▶ Efavirenz is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ Efavirenz is predicted to decrease the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ Efavirenz is predicted to decrease the exposure to **gefinitib**. Avoid. [Severe] Theoretical
- ▶ Efavirenz is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ Efavirenz is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ Efavirenz is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ Efavirenz decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. [Severe] Study → Also see TABLE 9 p. 909
- ▶ Efavirenz is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ Efavirenz is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ Efavirenz is predicted to decrease the exposure to **imatinitib**. [Moderate] Study
- ▶ Efavirenz is predicted to decrease the exposure to **ivacaftor**. [Moderate] Study
- ▶ Efavirenz is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
- ▶ Efavirenz is predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ Efavirenz is predicted to decrease the concentration of **letemovir**. [Moderate] Theoretical
- ▶ Efavirenz is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
- ▶ Efavirenz is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Theoretical
- ▶ Efavirenz is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Efavirenz decreases the exposure to **macrolides (clarithromycin)**. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ Efavirenz decreases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Theoretical
- ▶ Efavirenz is predicted to alter the effects of **midazolam**. Avoid. [Moderate] Theoretical
- ▶ Efavirenz is predicted to decrease the exposure to **neratinib**. [Severe] Study
- ▶ Efavirenz is predicted to decrease the exposure to **netupitant**. [Moderate] Theoretical
- ▶ **Nevirapine** decreases the concentration of **efavirenz**. Avoid. [Severe] Study
- ▶ Efavirenz is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 909
- ▶ Efavirenz is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ Efavirenz is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ Efavirenz is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ Efavirenz decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study → Also see TABLE 9 p. 909
- ▶ Efavirenz is predicted to decrease the exposure to **osimertinib**. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ Efavirenz is predicted to decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ Efavirenz is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ Efavirenz is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ Efavirenz is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **efavirenz**. [Mild] Theoretical

- ▶ Efavirenz is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ Efavirenz is predicted to decrease the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ Efavirenz slightly decreases the exposure to **rifabutin**. Adjust dose. [Severe] Study
- ▶ **Rifampicin** slightly decreases the exposure to **efavirenz**. Adjust dose. [Severe] Study
- ▶ Efavirenz is predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Theoretical
- ▶ Efavirenz is predicted to decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ Efavirenz is predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Efavirenz is predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
- ▶ Efavirenz is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the concentration of **efavirenz**. Avoid. [Severe] Theoretical
- ▶ Efavirenz slightly decreases the exposure to **statins (atorvastatin)**. [Mild] Study
- ▶ Efavirenz moderately decreases the exposure to **statins (simvastatin)**. [Moderate] Study
- ▶ Efavirenz is predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Efavirenz is predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study
- ▶ Efavirenz is predicted to decrease the concentration of **temsirrolimus**. Avoid. [Severe] Theoretical
- ▶ Efavirenz is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
- ▶ Efavirenz is predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
- ▶ Efavirenz decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ Efavirenz is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
- ▶ Efavirenz is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ Efavirenz is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical

Elbasvir

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Elbasvir** is predicted to increase the concentration of **dabigatran**. [Moderate] Theoretical
- ▶ Efavirenz is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **elbasvir**. Avoid. [Unknown] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Modafinil** is predicted to decrease the exposure to **elbasvir**. Avoid. [Unknown] Theoretical
- ▶ **Nevirapine** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Elbasvir** increases the exposure to **statins (atorvastatin)**. Adjust atorvastatin dose, p. 139. [Moderate] Study
- ▶ **Elbasvir** is predicted to increase the exposure to **statins (fluvastatin)**. Adjust fluvastatin dose, p. 139. [Unknown] Theoretical

- ▶ **Elbasvir** increases the exposure to **statins (rosuvastatin)**. Adjust **rosuvastatin** dose, p. 140. [Moderate] Study
- ▶ **Elbasvir** is predicted to increase the exposure to **statins (simvastatin)**. Adjust **simvastatin** dose, p. 141. [Unknown] Theoretical
- ▶ **Elbasvir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. [Moderate] Theoretical
- Eletriptan** → see TABLE 13 p. 910 (serotonin syndrome)
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **eletriptan**. [Moderate] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Eletriptan** increases the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** moderately increase the exposure to **eletriptan**. Avoid. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **eletriptan**. [Moderate] Study
- Eliglustat**
- ▶ **Abiraterone** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **aliskiren**. Adjust dose. [Moderate] Study
- ▶ **Antiarrhythmics (dronedaron, propafenone)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. Adjust dose. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **atomoxetine**. Adjust dose. [Moderate] Theoretical
- ▶ **Eliglustat** is predicted to increase the exposure to **beta blockers, non-selective (propranolol)**. Adjust dose. [Moderate] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. Adjust dose. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **eliglustat**. [Moderate] Theoretical
- ▶ **Bupropion** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Cinacalcet** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **dabigatran**. Adjust dose. [Moderate] Study
- ▶ **Dacomitinib** is predicted to markedly increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eliglustat** increases the exposure to **digoxin**. Adjust dose. [Moderate] Study
- ▶ **Duloxetine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **edoxaban**. Adjust dose. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **eliglustat**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **everolimus**. Adjust dose. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **eliglustat**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **loperamide**. Adjust dose. [Moderate] Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Moclobemide** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **eliglustat**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **sirolimus**. Adjust dose. [Moderate] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **St John's Wort** is predicted to increase the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **taxanes (paclitaxel)**. Adjust dose. [Moderate] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **tolterodine**. Adjust dose. [Moderate] Theoretical
- ▶ **Eliglustat** is predicted to increase the exposure to **topotecan**. Adjust dose. [Moderate] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **tricyclic antidepressants (nortriptyline)**. Adjust dose. [Moderate] Theoretical
- Elotuzumab** → see monoclonal antibodies
- Eltrombopag**
- ▶ **Antacids** decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after antacids. [Severe] Study
- ▶ Oral **calcium salts** decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **calcium salts**. [Severe] Study
- ▶ **Ciclosporin** decreases the exposure to **eltrombopag**. Monitor and adjust dose. [Moderate] Study

Eltrombopag (continued)

- ▶ **Dairy products** are predicted to decrease the absorption of eltrombopag. Eltrombopag should be taken 2 hours before or 4 hours after dairy products. [Severe] Theoretical
- ▶ **Iron (oral)** is predicted to decrease the absorption of eltrombopag. Eltrombopag should be taken 2 hours before or 4 hours after iron (oral). [Severe] Theoretical
- ▶ **Eltrombopag** is predicted to increase the exposure to **larotrectinib**. [Mild] Study
- ▶ **Eltrombopag** is predicted to increase the concentration of **letemovir**. [Moderate] Study
- ▶ **Eltrombopag** is predicted to increase the concentration of **methotrexate**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to eltrombopag and eltrombopag is predicted to increase the concentration of **rifampicin**. [Moderate] Theoretical
- ▶ Oral **selenium** is predicted to decrease the absorption of eltrombopag. Eltrombopag should be taken 2 hours before or 4 hours after selenium. [Severe] Theoretical
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to eltrombopag. [Moderate] Theoretical
- ▶ **Eltrombopag** is predicted to increase the exposure to **statins**. Monitor and adjust dose. [Moderate] Study
- ▶ **Eltrombopag** potentially increases the exposure to **talazoparib**. Avoid or monitor. [Moderate] Theoretical
- ▶ **Eltrombopag** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
- ▶ **Eltrombopag** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical
- ▶ Oral **zinc** is predicted to decrease the absorption of eltrombopag. Eltrombopag should be taken 2 hours before or 4 hours after zinc. [Severe] Theoretical

Elvitegravir

- ▶ **Antacids** moderately decrease the exposure to elvitegravir. Separate administration by at least 4 hours. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of elvitegravir. Avoid. [Severe] Theoretical
- ▶ **Apalutamide** is predicted to decrease the concentration of elvitegravir. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the concentration of elvitegravir. Avoid. [Severe] Theoretical
- ▶ **Elvitegravir** is predicted to decrease the anticoagulant effect of **coumarins**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the concentration of elvitegravir. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the concentration of elvitegravir. Avoid. [Severe] Theoretical
- ▶ **Elvitegravir** markedly increases the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** boosted with ritonavir increase the concentration of elvitegravir. Refer to specialist literature. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the concentration of elvitegravir. Avoid. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the concentration of elvitegravir. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of elvitegravir. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the concentration of elvitegravir. Avoid. [Severe] Theoretical

Empagliflozin → see TABLE 14 p. 910 (antidiabetic drugs), TABLE 8 p. 908 (hypotension)

Enalapril → see ACE inhibitors

Encorafenib → see TABLE 9 p. 909 (QT-interval prolongation)

- ▶ **Antiarrhythmics (dronedaron)** are predicted to moderately increase the exposure to encorafenib. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to encorafenib. [Severe] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to moderately increase the exposure to encorafenib. [Moderate] Study → Also see TABLE 9 p. 909

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to encorafenib. Avoid or monitor. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Apalutamide** is predicted to decrease the exposure to encorafenib. [Severe] Theoretical → Also see TABLE 9 p. 909
- ▶ **Apreritant** is predicted to moderately increase the exposure to encorafenib. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to moderately increase the exposure to encorafenib. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to encorafenib. Avoid or monitor. [Severe] Study
- ▶ **Encorafenib** is predicted to affect the exposure to **combined hormonal contraceptives**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to moderately increase the exposure to encorafenib. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Encorafenib** is predicted to increase the exposure to **dolutegravir**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to encorafenib. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to encorafenib. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to encorafenib. Avoid or monitor. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Idelalisib** is predicted to increase the exposure to encorafenib. Avoid or monitor. [Severe] Study
- ▶ **Imatinib** is predicted to moderately increase the exposure to encorafenib. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to encorafenib. Avoid or monitor. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Macrolides (erythromycin)** are predicted to moderately increase the exposure to encorafenib. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Mitotane** is predicted to decrease the exposure to encorafenib. [Severe] Theoretical
- ▶ **Netupitant** is predicted to moderately increase the exposure to encorafenib. [Moderate] Study
- ▶ **Nilotinib** is predicted to moderately increase the exposure to encorafenib. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Encorafenib** is predicted to increase the exposure to **raltegravir**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to encorafenib. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to encorafenib. [Severe] Theoretical

Enoxaparin → see low molecular-weight heparins

Entacapone

- ▶ **Iron (oral)** is predicted to decrease the absorption of entacapone. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Entacapone** increases the exposure to **levodopa**. Monitor side effects and adjust dose. [Moderate] Study
- ▶ **Entacapone** is predicted to increase the risk of elevated blood pressure when given with **MAOIs, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Entacapone** is predicted to increase the exposure to **methyldopa**. [Moderate] Theoretical
- ▶ **Entacapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic**. [Moderate] Theoretical
- ▶ **Entacapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Moderate] Study

Enteral feeds

- ▶ **Antacids (aluminium hydroxide)** increase the risk of blocked enteral or nasogastric tubes when given with enteral feeds. [Moderate] Study
- ▶ **Enteral feeds** decrease the absorption of **antiepileptics (phenytoin)**. [Severe] Study
- ▶ **Enteral feeds** (vitamin-K containing) potentially decrease the anticoagulant effect of **coumarins**. [Severe] Anecdotal

- ▶ **Enteral feeds** (vitamin-K containing) potentially decrease the effects of **phenindione**. [Severe] Theoretical
- ▶ **Enteral feeds** decrease the exposure to **quinolones** (**ciprofloxacin**). [Moderate] Study
- ▶ **Sucralfate** increases the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. Separate administration by 1 hour. [Moderate] Study
- ▶ **Enteral feeds** decrease the exposure to **theophylline**. [Moderate] Study

Enzalutamide

GENERAL INFORMATION Caution with concurrent chemotherapy—safety and efficacy not established.

- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **abiraterone**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **aldosterone antagonists** (**eplerenone**). Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **antiarrhythmics** (**disopyramide**, **dronedarone**). Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the efficacy of **antiarrhythmics** (**propafenone**). [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **anticholinesterases**, **centrally acting** (**donepezil**). [Mild] Study
- ▶ **Enzalutamide** is predicted to slightly decrease the exposure to **antiepileptics** (**brivaracetam**). [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **antiepileptics** (**perampanel**). Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **antifungals**, **azoles** (**isavuconazole**). Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **antimalarials** (**artemether**) (with lumefantrine). Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the concentration of **antimalarials** (**piperaquine**). Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
- ▶ **Enzalutamide** moderately decreases the exposure to **apremilast**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 265. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Enzalutamide** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** affects the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. [Severe] Study
- ▶ **Enzalutamide** moderately decreases the exposure to **cabozantinib**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **calcium channel blockers** (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **calcium channel blockers** (**diltiazem**, **verapamil**). [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** decreases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Enzalutamide** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** decreases the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clopidogrel** moderately increases the exposure to **enzalutamide**. Avoid or adjust enzalutamide dose. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **clozapine**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **corticosteroids** (**budesonide**, **deflazacort**, **dexamethasone**, **fludrocortisone**, **hydrocortisone**, **methylprednisolone**, **prednisolone**, **triamcinolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **corticosteroids** (**fluticasone**). [Unknown] Theoretical
- ▶ **Enzalutamide** potentially decreases the exposure to **coumarins**. Avoid or adjust dose and monitor INR. [Severe] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **dienogest**. [Severe] Study
- ▶ **Enzalutamide** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [Mild] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust erlotinib dose. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **esketamine**. Adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Enzalutamide** moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **fosoterodine**. Avoid. [Moderate] Study
- ▶ **Fibrates** (**gemfibrozil**) moderately increase the exposure to **enzalutamide**. Avoid or adjust enzalutamide dose. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **fingolimod**. [Moderate] Study

Enzalutamide (continued)

- ▶ Enzalutamide is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to greatly decrease the concentration of **glecaprevir**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 247. [Moderate] Study
- ▶ Enzalutamide decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **montelukast**. [Mild] Study
- ▶ Enzalutamide is predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ Enzalutamide is predicted to slightly decrease the exposure to **nateglinide**. [Mild] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **nevirapine**. [Severe] Theoretical
- ▶ Enzalutamide is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **ondansetron**. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Enzalutamide decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Enzalutamide is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ Enzalutamide is predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
- ▶ Enzalutamide is predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ Enzalutamide is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ Enzalutamide markedly decreases the exposure to **rilpivirine**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ Enzalutamide is predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ Enzalutamide is predicted to markedly decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ Enzalutamide is predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **siponimod**. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical

Ergotamine (continued)

- ▶ **Apalutamide** is predicted to decrease the effects of ergotamine. [\[Moderate\]](#) Theoretical
- ▶ **Aprepitant** is predicted to increase the risk of ergotism when given with ergotamine. [\[Severe\]](#) Theoretical
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with ergotamine. [\[Severe\]](#) Study
- ▶ **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with ergotamine. [\[Severe\]](#) Study
- ▶ **Bosentan** is predicted to decrease the effects of ergotamine. [\[Moderate\]](#) Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the risk of ergotism when given with ergotamine. [\[Severe\]](#) Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to ergotamine. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the risk of ergotism when given with ergotamine. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the risk of ergotism when given with ergotamine. [\[Severe\]](#) Theoretical
- ▶ **Ergotamine** is predicted to increase the risk of ergotism when given with **dopamine receptor agonists (bromocriptine, cabergoline)**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Ergotamine** is predicted to increase the risk of ergotism when given with **dopamine receptor agonists (pergolide)**. [\[Moderate\]](#) Theoretical
- ▶ **Efavirenz** is predicted to decrease the effects of ergotamine. [\[Moderate\]](#) Theoretical
- ▶ **Eletriptan** increases the risk of vasoconstriction when given with ergotamine. Separate administration by 24 hours. [\[Severe\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the effects of ergotamine. [\[Moderate\]](#) Theoretical
- ▶ **Frovatriptan** is predicted to increase the risk of vasoconstriction when given with ergotamine. Separate administration by 24 hours. [\[Severe\]](#) Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to ergotamine. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with ergotamine. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the risk of ergotism when given with ergotamine. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Imatinib** is predicted to increase the risk of ergotism when given with ergotamine. [\[Severe\]](#) Theoretical
- ▶ **Larotrectinib** is predicted to increase the exposure to ergotamine. Use with caution and adjust dose. [\[Mild\]](#) Theoretical
- ▶ **Letermovir** is predicted to increase the concentration of ergotamine. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Lorlatinib** is predicted to decrease the exposure to ergotamine. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the risk of ergotism when given with ergotamine. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the risk of ergotism when given with ergotamine. [\[Severe\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the effects of ergotamine. [\[Moderate\]](#) Theoretical
- ▶ **Naratriptan** is predicted to increase the risk of vasoconstriction when given with ergotamine. Separate administration by 24 hours. [\[Severe\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the risk of ergotism when given with ergotamine. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the effects of ergotamine. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the risk of ergotism when given with ergotamine. [\[Severe\]](#) Theoretical
- ▶ **Palbociclib** is predicted to increase the exposure to ergotamine. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to ergotamine. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the effects of ergotamine. [\[Moderate\]](#) Theoretical
- ▶ **Rizatriptan** is predicted to increase the risk of vasoconstriction when given with ergotamine. Ergotamine should be taken at

least 24 hours before or 6 hours after rizatriptan. [\[Severe\]](#) Theoretical

- ▶ **Rucaparib** is predicted to increase the exposure to ergotamine. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **St John's Wort** is predicted to decrease the effects of ergotamine. [\[Moderate\]](#) Theoretical
- ▶ **Sumatriptan** increases the risk of vasoconstriction when given with ergotamine. Ergotamine should be taken at least 24 hours before or 6 hours after sumatriptan. [\[Severe\]](#) Study
- ▶ **Ticagrelor** is predicted to increase the exposure to ergotamine. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Zolmitriptan** is predicted to increase the risk of vasoconstriction when given with ergotamine. Ergotamine should be taken at least 24 hours before or 6 hours after zolmitriptan. [\[Severe\]](#) Theoretical

Eribulin → see TABLE 15 p. 910 (myelosuppression), TABLE 12 p. 910 (peripheral neuropathy), TABLE 9 p. 909 (QT-interval prolongation)

Erolotinib

FOOD AND LIFESTYLE Dose adjustment may be necessary if smoking started or stopped during treatment.

- ▶ **Antacids** are predicted to decrease the absorption of erlotinib. Erlotinib should be taken 2 hours before or 4 hours after antacids. [\[Moderate\]](#) Theoretical
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to erlotinib. [\[Moderate\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to erlotinib. Avoid or adjust erlotinib dose. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to erlotinib. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to erlotinib. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Apalutamide** is predicted to decrease the exposure to erlotinib. Avoid or adjust erlotinib dose. [\[Severe\]](#) Study
- ▶ **Aprepitant** is predicted to increase the exposure to erlotinib. [\[Moderate\]](#) Theoretical
- ▶ **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **aspirin** (high-dose). [\[Severe\]](#) Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to erlotinib. [\[Severe\]](#) Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to erlotinib. [\[Moderate\]](#) Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to erlotinib. [\[Moderate\]](#) Theoretical
- ▶ **Cobicistat** is predicted to slightly increase the exposure to erlotinib. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Combined hormonal contraceptives** slightly increase the exposure to erlotinib. Monitor side effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **Corticosteroids** increase the risk of gastrointestinal perforation when given with erlotinib. [\[Severe\]](#) Theoretical
- ▶ **Erlotinib** increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Crizotinib** is predicted to increase the exposure to erlotinib. [\[Moderate\]](#) Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to erlotinib. [\[Severe\]](#) Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to erlotinib. Avoid or adjust erlotinib dose. [\[Severe\]](#) Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to erlotinib. [\[Moderate\]](#) Theoretical
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to erlotinib. Erlotinib should be taken 2 hours before or 10 hours after H₂ receptor antagonists. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to erlotinib. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to slightly increase the exposure to erlotinib. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to erlotinib. [\[Moderate\]](#) Theoretical

- ▶ **Lapatinib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Mexiletine** slightly increases the exposure to **erlotinib**. Monitor side effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose. [\[Severe\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **erlotinib**. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. [\[Severe\]](#) Theoretical
- ▶ **Erlotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Proton pump inhibitors** are predicted to slightly decrease the exposure to **erlotinib**. Avoid. [\[Moderate\]](#) Study
- ▶ **Quinolones (ciprofloxacin)** slightly increase the exposure to **erlotinib**. Monitor side effects and adjust dose. [\[Moderate\]](#) Study
- ▶ **Ranolazine** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose. [\[Severe\]](#) Study
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **erlotinib**. Separate administration by at least 2 hours. [\[Moderate\]](#) Theoretical
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **erlotinib**. Monitor side effects and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **erlotinib**. [\[Severe\]](#) Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- Ertapenem** → see carbapenems
- Ertugliflozin** → see TABLE 14 p. 910 (antidiabetic drugs), TABLE 8 p. 908 (hypotension)
- Erythromycin** → see macrolides
- Escitalopram** → see SSRIs
- Esketamine** → see TABLE 8 p. 908 (hypotension), TABLE 11 p. 909 (CNS depressant effects)
 - ▶ **Esketamine** is predicted to increase the risk of seizures when given with **aminophylline**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 11 p. 909
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Apalutamide** is predicted to decrease the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Esketamine** is predicted to increase the risk of elevated blood pressure when given with **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Idealisib** is predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Rifampicin** is predicted to decrease the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Esketamine** is predicted to increase the risk of seizures when given with **theophylline**. Avoid. [\[Severe\]](#) Theoretical
- Eslicarbazepine** → see antiepileptics
- Esmolol** → see beta blockers, selective
- Esomeprazole** → see proton pump inhibitors
- Estramustine** → see alkylating agents
- Etanercept**
 - ▶ **Anakinra** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etanercept**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etanercept**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- Etelcalcetide**
 - ▶ **Cinacalcet** increases the risk of hypocalcaemia when given with **etelcalcetide**. Avoid. [\[Severe\]](#) Theoretical
- Ethambutol**
 - ▶ **Isoniazid** increases the risk of optic neuropathy when given with **ethambutol**. [\[Severe\]](#) Anecdotal
- Ethosuximide** → see antiepileptics
- Etodolac** → see NSAIDs
- Etomidate** → see TABLE 8 p. 908 (hypotension), TABLE 11 p. 909 (CNS depressant effects)
- Etonogestrel**
 - ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [\[Severe\]](#) Theoretical
 - ▶ **Aprepitant** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [\[Severe\]](#) Theoretical
 - ▶ **Bosentan** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [\[Severe\]](#) Theoretical
 - ▶ **Efavirenz** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [\[Severe\]](#) Theoretical
 - ▶ **Fosaprepitant** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [\[Severe\]](#) Theoretical
 - ▶ **Griseofulvin** decreases the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [\[Severe\]](#) Anecdotal
 - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [\[Severe\]](#) Theoretical
 - ▶ **Modafinil** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [\[Severe\]](#) Theoretical
 - ▶ **Nevirapine** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [\[Severe\]](#) Theoretical
 - ▶ **Rifabutin** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [\[Severe\]](#) Theoretical
 - ▶ **Rifampicin** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [\[Severe\]](#) Theoretical
 - ▶ **St John's Wort** is predicted to decrease the efficacy of **etonogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 536. [\[Severe\]](#) Theoretical
 - ▶ **Sugammadex** is predicted to decrease the efficacy of **etonogestrel**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
 - ▶ **Ulipristal** is predicted to decrease the efficacy of **etonogestrel**. Avoid. [\[Severe\]](#) Theoretical
- Etoposide** → see TABLE 15 p. 910 (myelosuppression)
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the efficacy of **etoposide**. [\[Moderate\]](#) Study
 - ▶ **Ciclosporin** increases the exposure to **etoposide**. Monitor and adjust dose. [\[Severe\]](#) Study

Etoposide (continued)

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etoposide**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Netupitant** slightly increases the exposure to **etoposide**. [Moderate] Study

Etoricoxib → see NSAIDs**Etravirine**

- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
- ▶ **Etravirine** decreases the exposure to **antimalarials (artemether)**. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
- ▶ **Etravirine** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Etravirine** is predicted to decrease the exposure to **brigatinib**. Avoid. [Moderate] Theoretical
- ▶ **Etravirine** increases the anticoagulant effect of **coumarins**. [Moderate] Theoretical
- ▶ **Etravirine** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
- ▶ **Etravirine** moderately decreases the exposure to **dolutegravir**. Avoid unless given with atazanavir, darunavir, or lopinavir (all boosted with ritonavir). [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **elbasvir**. Avoid. [Unknown] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
- ▶ **Etravirine** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Mild] Theoretical
- ▶ **HIV-protease inhibitors (tipranavir)** decrease the exposure to **etravirine**. Avoid. [Severe] Study
- ▶ **Etravirine** increases the exposure to **HIV-protease inhibitors (fosamprenavir)** boosted with ritonavir. Refer to specialist literature. [Moderate] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **letegravir**. [Moderate] Theoretical
- ▶ **Etravirine** decreases the exposure to **macrolides (clarithromycin)** and **macrolides (clarithromycin)** slightly increase the exposure to **etravirine**. [Severe] Study
- ▶ **Etravirine** (with a boosted protease inhibitor) increases the exposure to **maraviroc**. Avoid or adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ **Etravirine** is predicted to decrease the exposure to **paritaprevir**. Avoid. [Severe] Theoretical
- ▶ **Etravirine** moderately decreases the exposure to **phosphodiesterase type-5 inhibitors**. Adjust dose. [Moderate] Study
- ▶ **Rifabutin** decreases the exposure to **etravirine**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
- ▶ **Etravirine** is predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study

Everolimus → see TABLE 15 p.910 (myelosuppression)

- ▶ **Everolimus** potentially increases the risk of angioedema when given with **ACE inhibitors**. [Severe] Anecdotal
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
- ▶ **Apalutamide** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **everolimus**. [Moderate] Theoretical → Also see TABLE 15 p.910
- ▶ **Ciclosporin** moderately increases the exposure to **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p.910
- ▶ **Efavirenz** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **everolimus**. Adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **everolimus**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study → Also see TABLE 15 p.910
- ▶ **Imatinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p.910
- ▶ **Lapatinib** is predicted to increase the exposure to **everolimus**. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the concentration of **everolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **everolimus**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Everolimus** is predicted to increase the exposure to **lomipatide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **everolimus**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **everolimus**. [Mild] Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p.910
- ▶ **Neratinib** is predicted to increase the exposure to **everolimus**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p.910
- ▶ **Palbociclib** is predicted to increase the exposure to **everolimus**. Adjust dose. [Moderate] Theoretical

- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **everolimus**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **everolimus**. Avoid. [Severe] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to **everolimus**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **everolimus**. [Severe] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **everolimus**. Avoid or adjust dose. [Severe] Study

Exemestane

- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) moderately decrease the exposure to **exemestane**. [Moderate] Study
- ▶ **Apalutamide** moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ **Enzalutamide** moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ **Mitotane** moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **exemestane**. [Moderate] Theoretical

Exenatide → see TABLE 14 p.910 (antidiabetic drugs)

SEPARATION OF ADMINISTRATION With standard-release exenatide: some orally administered drugs should be taken at least 1 hour before, or 4 hours after, exenatide injection.

Ezetimibe

- ▶ **Ciclosporin** moderately increases the exposure to **ezetimibe** and **ezetimibe** slightly increases the exposure to **ciclosporin**. [Moderate] Study
- ▶ **Fibrates** are predicted to increase the risk of gallstones when given with **ezetimibe**. [Severe] Theoretical
- ▶ **Ezetimibe** potentially increases the risk of rhabdomyolysis when given with **statins**. [Severe] Anecdotal

Famotidine → see H₂ receptor antagonists

Fampridine

- ▶ H₂ receptor antagonists (**cimetidine**) increase the concentration of **fampridine**. Avoid. [Severe] Theoretical

Febuxostat

- ▶ **Febuxostat** is predicted to increase the exposure to **azathioprine**. Avoid. [Severe] Theoretical
- ▶ **Febuxostat** is predicted to increase the exposure to **mercaptopurine**. Avoid. [Severe] Theoretical

Felbinac → see NSAIDs

Felodipine → see calcium channel blockers

Fenofibrate → see fibrates

Fentanyl → see opioids

Ferric carboxymaltose → see iron (injectable)

Ferric maltol → see iron (oral)

Ferrous fumarate → see iron (oral)

Ferrous gluconate → see iron (oral)

Ferrous sulfate → see iron (oral)

Fesoterodine → see TABLE 10 p.909 (antimuscarinics)

- ▶ Antiarrhythmics (**dronedarone**) are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment. [Mild] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment. [Mild] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment. [Mild] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment. [Mild] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment. [Mild] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment. [Mild] Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment. [Mild] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment. [Mild] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment. [Mild] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Severe] Theoretical

Fexofenadine → see antihistamines, non-sedating

Fibrates

bezafibrate · ciprofibrate · fenofibrate · gemfibrozil

- ▶ **Antacids** slightly to moderately decrease the exposure to **gemfibrozil**. [Moderate] Study
- ▶ **Gemfibrozil** is predicted to increase the exposure to **apalutamide**. [Mild] Study
- ▶ **Bezafibrate** is predicted to increase the risk of nephrotoxicity when given with **ciclosporin**. [Severe] Theoretical
- ▶ **Fenofibrate** increases the risk of nephrotoxicity when given with **ciclosporin**. [Severe] Study
- ▶ **Colchicine** increases the risk of rhabdomyolysis when given with **fibrates**. [Severe] Anecdotal
- ▶ **Fibrates** are predicted to increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Gemfibrozil** is predicted to increase the exposure to **dabrafenib**. [Moderate] Theoretical
- ▶ **Fibrates** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
- ▶ **Gemfibrozil** is predicted to very markedly increase the exposure to **dasabuvir**. Avoid. [Severe] Study
- ▶ **Gemfibrozil** moderately increases the exposure to **enzalutamide**. Avoid or adjust **enzalutamide** dose. [Severe] Study

Fibrates (continued)

- ▶ Fibrates are predicted to increase the risk of gallstones when given with **ezetimibe**. [\[Severe\]](#) Theoretical
 - ▶ Fibrates are predicted to increase the risk of hypoglycaemia when given with **insulins**. [\[Moderate\]](#) Theoretical
 - ▶ **Gemfibrozil** is predicted to increase the exposure to **irinotecan**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Gemfibrozil** is predicted to increase the concentration of **letermovir**. [\[Moderate\]](#) Study
 - ▶ **Gemfibrozil** is predicted to moderately increase the exposure to **montelukast**. [\[Moderate\]](#) Study
 - ▶ Fibrates are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [\[Severe\]](#) Study
 - ▶ **Gemfibrozil** increases the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. [\[Severe\]](#) Study
 - ▶ **Gemfibrozil** increases the exposure to **repaglinide**. Avoid. [\[Severe\]](#) Study
 - ▶ **Gemfibrozil** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust alitretinoin dose. [\[Moderate\]](#) theoretical
 - ▶ **Gemfibrozil** increases the concentration of **retinoids (bexarotene)**. Avoid. [\[Severe\]](#) Study
 - ▶ **Gemfibrozil** increases the exposure to **selexipag**. Avoid. [\[Severe\]](#) Study
 - ▶ **Ciprofibrate** increases the risk of rhabdomyolysis when given with **statins (atorvastatin)**. Avoid or adjust dose. [\[Severe\]](#) Study
 - ▶ **Bezafibrate** increases the risk of rhabdomyolysis when given with **statins (atorvastatin, fluvastatin)**. [\[Severe\]](#) Study
 - ▶ **Fenofibrate** increases the risk of rhabdomyolysis when given with **statins (atorvastatin, simvastatin)**. Adjust fenofibrate dose, p. 138. [\[Severe\]](#) Anecdotal
 - ▶ **Ciprofibrate** increases the risk of rhabdomyolysis when given with **statins (fluvastatin)**. [\[Severe\]](#) Study
 - ▶ **Fenofibrate** is predicted to increase the risk of rhabdomyolysis when given with **statins (fluvastatin)**. Adjust fenofibrate dose, p. 138. [\[Severe\]](#) Theoretical
 - ▶ **Fenofibrate** is predicted to increase the risk of rhabdomyolysis when given with **statins (pravastatin)**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ Fibrates (**bezafibrate, ciprofibrate**) increase the risk of rhabdomyolysis when given with **statins (pravastatin)**. Avoid. [\[Severe\]](#) Study
 - ▶ **Fenofibrate** increases the risk of rhabdomyolysis when given with **statins (rosuvastatin)**. Adjust fenofibrate and rosuvastatin doses, p. 138, p. 140. [\[Severe\]](#) Anecdotal
 - ▶ Fibrates (**bezafibrate, ciprofibrate**) increase the risk of rhabdomyolysis when given with **statins (rosuvastatin)**. Adjust rosuvastatin dose, p. 140. [\[Severe\]](#) Study
 - ▶ Fibrates (**bezafibrate, ciprofibrate**) increase the risk of rhabdomyolysis when given with **statins (simvastatin)**. Adjust simvastatin dose, p. 141. [\[Severe\]](#) Study
 - ▶ **Gemfibrozil** increases the risk of rhabdomyolysis when given with **statins**. Avoid. [\[Severe\]](#) Anecdotal
 - ▶ Fibrates are predicted to increase the risk of hypoglycaemia when given with **sulfonylureas**. [\[Moderate\]](#) Theoretical
 - ▶ **Gemfibrozil** is predicted to increase the concentration of **taxanes (paclitaxel)**. [\[Severe\]](#) Anecdotal
 - ▶ Fibrates are predicted to decrease the efficacy of **ursodeoxycholic acid**. Avoid. [\[Severe\]](#) Theoretical
- ### Fidaxomicin
- ▶ Antiarrhythmic (**amiodarone, dronedarone**) are predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
 - ▶ Antifungals, azoles (**itraconazole, ketoconazole**) are predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
 - ▶ Calcium channel blockers (**verapamil**) are predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
 - ▶ **Ciclosporin** is predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
 - ▶ HIV-protease inhibitors (**lopinavir, ritonavir, saquinavir**) are predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
 - ▶ **Lapatinib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
 - ▶ **Macrolides** are predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
 - ▶ **Ranolazine** is predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study

- ▶ **Vemurafenib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
- ### Fingolimod
- ▶ → see TABLE 6 p. 908 (bradycardia), TABLE 9 p. 909 (QT-interval prolongation)
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **fingolimod**. [\[Moderate\]](#) Study
 - ▶ **Apalutamide** is predicted to decrease the exposure to **fingolimod**. [\[Moderate\]](#) Study
 - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **fingolimod**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 6 p. 908
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **fingolimod**. [\[Moderate\]](#) Study
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fingolimod**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **fingolimod**. [\[Moderate\]](#) Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **fingolimod**. [\[Moderate\]](#) Study
 - ▶ **St John's Wort** is predicted to decrease the exposure to **fingolimod**. Avoid. [\[Moderate\]](#) Theoretical
- ### Flavoxate
- ▶ → see TABLE 10 p. 909 (antimuscarinics)
- ### Flecainide
- ▶ → see antiarrhythmics
- ### Flucloxacillin
- ▶ → see penicillins
- ### Fluconazole
- ▶ → see antifungals, azoles
- ### Flucytosine
- ▶ **Amphotericin** increases the risk of toxicity when given with **flucytosine**. [\[Severe\]](#) Study
 - ▶ **Cytarabine** decreases the concentration of **flucytosine**. Avoid. [\[Severe\]](#) Study
 - ▶ **Zidovudine** increases the risk of haematological toxicity when given with **flucytosine**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ### Fludorabine
- ▶ → see TABLE 15 p. 910 (myelosuppression)
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fludarabine**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Fludarabine** increases the risk of pulmonary toxicity when given with **pentostatin**. Avoid. [\[Severe\]](#) Study → Also see TABLE 15 p. 910
- ### Fludrocortisone
- ▶ → see corticosteroids
- ### Fluocinolone
- ▶ With intravitreal use in adults: caution with concurrent administration of anticoagulant or antiplatelet drugs (higher incidence of conjunctival haemorrhage).
 - ▶ Interactions do not generally apply to corticosteroids used for topical action unless specified.

Fluorouracil → see TABLE 15 p. 910 (myelosuppression), TABLE 5 p. 907 (thromboembolism)

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Fluorouracil** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Fluorouracil** increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Folates (folic acid)** are predicted to increase the risk of toxicity when given with **fluorouracil**. Avoid. [\[Severe\]](#) theoretical
- ▶ **Folates (folic acid)** are predicted to increase the risk of toxicity when given with **fluorouracil**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to **fluorouracil**. [\[Severe\]](#) Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fluorouracil**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical

- ▶ **Methotrexate** potentially increases the risk of severe skin reaction when given with topical **fluorouracil**. [Severe] Anecdotal → Also see TABLE 15 p. 910 → Also see TABLE 5 p. 907
 - ▶ **Metronidazole** increases the risk of toxicity when given with **fluorouracil**. [Severe] Study
 - Fluoxetine** → see SSRIs
 - Flupentixol** → see TABLE 8 p. 908 (hypotension), TABLE 11 p. 909 (CNS depressant effects)
 - ▶ **Flupentixol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 908
 - ▶ **Flupentixol** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Theoretical → Also see TABLE 8 p. 908
 - Fluphenazine** → see phenothiazines
 - Flurazepam** → see TABLE 11 p. 909 (CNS depressant effects)
 - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **flurazepam**. Avoid. [Moderate] Theoretical
 - Flurbiprofen** → see NSAIDs
 - Fluticasone** → see corticosteroids
 - Fluvastatin** → see statins
 - Fluvoxamine** → see SSRIs
 - Folates**
 - folic acid · folinic acid · levofolinic acid
 - ▶ **Folates** are predicted to decrease the concentration of **antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)**. Monitor concentration and adjust dose. [Severe] Study
 - ▶ **Folates** are predicted to increase the risk of toxicity when given with **capecitabine**. [Severe] Anecdotal
 - ▶ **Folic acid** is predicted to increase the risk of toxicity when given with **fluorouracil**. Avoid. [Severe] Theoretical
 - ▶ **Folinic acid** is predicted to increase the risk of toxicity when given with **fluorouracil**. Monitor and adjust dose. [Severe] Theoretical
 - ▶ **Folates** are predicted to alter the effects of **raltitrexed**. Avoid. [Moderate] Study
 - ▶ **Sulfasalazine** is predicted to decrease the absorption of **folates**. [Moderate] Study
 - ▶ **Folates** are predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
 - Folic acid** → see folates
 - Folinic acid** → see folates
 - Fondaparinux** → see TABLE 3 p. 907 (anticoagulant effects)
 - Formoterol** → see beta₂ agonists
 - Fosamprenavir** → see HIV-protease inhibitors
 - Fosaprepitant**
 - ▶ **Fosaprepitant** is predicted to increase the exposure to **alkylating agents (ifosfamide)**. [Severe] Theoretical
 - ▶ **Fosaprepitant** is predicted to increase the exposure to **alprazolam**. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
 - ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **fosaprepitant**. [Moderate] Study
 - ▶ **Apalutamide** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
 - ▶ **Bosentan** is predicted to decrease the exposure to **fosaprepitant**. [Moderate] Theoretical
 - ▶ **Fosaprepitant** is predicted to increase the exposure to **bosutinib**. [Severe] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
 - ▶ **Fosaprepitant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Study
 - ▶ **Fosaprepitant** is predicted to decrease the anticoagulant effect of **coumarins**. [Moderate] Theoretical
 - ▶ **Fosaprepitant** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
 - ▶ **Efavirenz** is predicted to decrease the exposure to **fosaprepitant**. [Moderate] Theoretical
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
 - ▶ **Fosaprepitant** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
 - ▶ **Fosaprepitant** is predicted to increase the concentration of **guanfacine**. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
 - ▶ **Fosaprepitant** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
 - ▶ **Fosaprepitant** is predicted to slightly increase the exposure to **ibrutinib**. [Moderate] Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
 - ▶ **Fosaprepitant** is predicted to increase the exposure to intravenous **irinotecan**. [Severe] Theoretical
 - ▶ **Fosaprepitant** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
 - ▶ **Fosaprepitant** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
 - ▶ **Fosaprepitant** slightly increases the exposure to **midazolam**. [Moderate] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
 - ▶ **Nevirapine** is predicted to decrease the exposure to **fosaprepitant**. [Moderate] Theoretical
 - ▶ **Fosaprepitant** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
 - ▶ **Fosaprepitant** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
 - ▶ **Rifampicin** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
 - ▶ **Fosaprepitant** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
 - ▶ **Fosaprepitant** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
 - Foscarnet** → see TABLE 2 p. 907 (nephrotoxicity)
 - ▶ **Foscarnet** increases the risk of hypocalcaemia when given with **pentamidine**. [Severe] Anecdotal → Also see TABLE 2 p. 907
 - Fosinopril** → see ACE inhibitors
 - Fosphenytoin** → see antiepileptics
 - Frovatriptan** → see TABLE 13 p. 910 (serotonin syndrome)
 - ▶ **Frovatriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Theoretical
 - ▶ **SSRIs (fluvoxamine)** increase the concentration of **frovatriptan**. [Severe] Study → Also see TABLE 13 p. 910
 - Fulvestrant** → see TABLE 5 p. 907 (thromboembolism)
 - Furosemide** → see loop diuretics
 - Fusidate**
 - ▶ **Fusidate** increases the risk of rhabdomyolysis when given with **statins**. Avoid. [Severe] Anecdotal
 - Gabapentin** → see antiepileptics
 - Galantamine** → see anticholinesterases, centrally acting
 - Ganciclovir** → see TABLE 15 p. 910 (myelosuppression), TABLE 2 p. 907 (nephrotoxicity)
- ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- ▶ **Ganciclovir** is predicted to increase the risk of seizures when given with **carbamapenems (imipenem)**. Avoid. [Severe] Anecdotal
 - ▶ **Leflunomide** is predicted to increase the exposure to **ganciclovir**. [Moderate] Theoretical → Also see TABLE 15 p. 910

Ganciclovir (continued)

- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **ganciclovir**. [Moderate] Theoretical → Also see TABLE 15 p. 910
 - ▶ **Nitisinone** is predicted to increase the exposure to **ganciclovir**. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **ganciclovir**. [Moderate] Study
- Gefitinib** → see TABLE 15 p. 910 (myelosuppression)
- ▶ **Antacids** are predicted to slightly decrease the exposure to **gefitinib**. [Moderate] Theoretical
 - ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **gefitinib**. [Moderate] Study
 - ▶ **Apalutamide** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
 - ▶ **Aprepitant** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
 - ▶ **Bosentan** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **gefitinib**. [Moderate] Study
 - ▶ **Gefitinib** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Anecdotal
 - ▶ **Crizotinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 910
 - ▶ **Efavirenz** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
 - ▶ **H₂ receptor antagonists** are predicted to slightly to moderately decrease the exposure to **gefitinib**. [Moderate] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **gefitinib**. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **gefitinib**. [Moderate] Study → Also see TABLE 15 p. 910
 - ▶ **Imatinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 910
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **gefitinib**. [Moderate] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 910
 - ▶ **Netupitant** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
 - ▶ **Nevirapine** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 910
 - ▶ **Gefitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
 - ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **gefitinib**. [Severe] Theoretical
 - ▶ **Rifampicin** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
 - ▶ **St John's Wort** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical

Gemcitabine → see TABLE 15 p. 910 (myelosuppression)

▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **gemcitabine**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

Gemfibrozil → see fibrates**Gentamicin** → see aminoglycosides**Gilteritinib**

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenytoin)** are predicted to decrease the exposure to **gilteritinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **gilteritinib**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **gilteritinib**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **gilteritinib**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **gilteritinib**. [Moderate] Study
- ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **gilteritinib**. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **gilteritinib**. Avoid. [Severe] Study
- ▶ **Gilteritinib** is predicted to decrease the efficacy of **SSRIs (escitalopram, fluoxetine, sertraline)**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **gilteritinib**. Avoid. [Severe] Study

Gilecaprevir

- ▶ **Antiarrhythmics (dronedaron)** potentially increase the exposure to **gilecaprevir**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **gilecaprevir**. Avoid. [Severe] Study
- ▶ **Antiepileptics (eslicarbazepine, oxcarbazepine)** potentially decrease the exposure to **gilecaprevir**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** potentially increase the exposure to **gilecaprevir**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **gilecaprevir**. Avoid. [Severe] Study
- ▶ **Ciclosporin** increases the exposure to **gilecaprevir**. Avoid or monitor. [Severe] Study
- ▶ **Cobicistat** potentially increases the exposure to **gilecaprevir**. [Moderate] Theoretical
- ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **gilecaprevir**. Avoid. [Severe] Study
- ▶ **Crizotinib** potentially decreases the exposure to **gilecaprevir**. Avoid. [Severe] Theoretical
- ▶ **Gilecaprevir** (with pibrentasvir) increases the exposure to **dabigatran**. Avoid. [Moderate] Study
- ▶ **Gilecaprevir** (with pibrentasvir) increases the exposure to **digoxin**. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **gilecaprevir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to greatly decrease the concentration of **gilecaprevir**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** boosted with ritonavir increase the exposure to **gilecaprevir**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** increase the exposure to **gilecaprevir**. Avoid. [Severe] Study
- ▶ **Lumacaftor** potentially decreases the exposure to **gilecaprevir**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to greatly decrease the concentration of **gilecaprevir**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **gilecaprevir**. Avoid. [Severe] Study
- ▶ **Rifampicin** markedly affects the exposure to **gilecaprevir**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **gilecaprevir**. Avoid. [Severe] Study
- ▶ **Gilecaprevir** (with pibrentasvir) markedly increases the exposure to **statins (atorvastatin)**. Avoid. [Severe] Study
- ▶ **Gilecaprevir** (with pibrentasvir) is predicted to increase the exposure to **statins (fluvastatin)**. [Moderate] Theoretical

- ▶ **Glecaprevir** (with pibrentasvir) increases the exposure to **statins (pravastatin)**. Use with caution and adjust **pravastatin** dose. [Moderate] Study
 - ▶ **Glecaprevir** (with pibrentasvir) increases the exposure to **statins (rosuvastatin)**. Use with caution and adjust **rosuvastatin** dose, p. 140. [Moderate] Study
 - ▶ **Glecaprevir** (with pibrentasvir) increases the exposure to **statins (simvastatin)**. Avoid. [Moderate] Study
 - ▶ **Glecaprevir** (with pibrentasvir) slightly increases the exposure to **tacrolimus**. Monitor and adjust dose. [Mild] Study
 - Glibenclamide** → see sulfonylureas
 - Gliclazide** → see sulfonylureas
 - Glimepiride** → see sulfonylureas
 - Glipizide** → see sulfonylureas
 - Glucagon**
 - ▶ **Glucagon** increases the anticoagulant effect of **coumarins (warfarin)**. [Severe] Study
 - Glucosamine**
 - ▶ **Glucosamine** potentially decreases the anticoagulant effect of **coumarins (acenocoumarol)**. [Moderate] Anecdotal
 - ▶ **Glucosamine** potentially increases the anticoagulant effect of **coumarins (warfarin)**. Avoid. [Moderate] Anecdotal
 - Glycerol phenylbutyrate**
 - ▶ **Antiepileptics (valproate)** potentially oppose the effects of **glycerol phenylbutyrate**. [Moderate] Theoretical
 - ▶ **Corticosteroids** potentially oppose the effects of **glycerol phenylbutyrate**. [Moderate] Theoretical
 - ▶ **Haloperidol** potentially opposes the effects of **glycerol phenylbutyrate**. [Moderate] Theoretical
 - Glycerol trinitrate** → see nitrates
 - Glycopyrronium** → see TABLE 10 p. 909 (antimuscarinics)
- ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- Golimimumab** → see monoclonal antibodies
 - Granisetron** → see TABLE 13 p. 910 (serotonin syndrome), TABLE 9 p. 909 (QT-interval prolongation)
 - ▶ **Dopamine receptor agonists (apomorphine)** are predicted to increase the risk of severe hypotension when given with **granisetron**. [Severe] Theoretical
 - Grapefruit juice**
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **abemaciclib**. Avoid. [Moderate] Theoretical
 - ▶ **Grapefruit juice** moderately decreases the exposure to **aliskiren**. Avoid. [Severe] Study
 - ▶ **Grapefruit juice** increases the exposure to **antiarrhythmics (amiodarone)**. Avoid. [Moderate] Study
 - ▶ **Grapefruit juice** moderately increases the exposure to **antiarrhythmics (dronedrone)**. Avoid. [Severe] Study
 - ▶ **Grapefruit juice** increases the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Grapefruit juice** slightly increases the exposure to **antiepileptics (carbamazepine)**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Grapefruit juice** slightly decreases the exposure to **antihistamines, non-sedating (bilastine)**. **Bilastine** should be taken 1 hour before or 2 hours after **grapefruit juice**. [Moderate] Study
 - ▶ **Grapefruit juice** increases the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
 - ▶ **Grapefruit juice** increases the exposure to **antimalarials (artemether)**. [Unknown] Study
 - ▶ **Grapefruit juice** is predicted to increase the concentration of **antimalarials (piperazine)**. Avoid. [Severe] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
 - ▶ **Grapefruit juice** greatly decreases the exposure to **beta blockers, selective (celiprolol)**. [Moderate] Study
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **bosutinib**. Avoid. [Moderate] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the concentration of **brigatinib**. Avoid. [Severe] Study
 - ▶ **Grapefruit juice** increases the exposure to **bupirone**. Avoid. [Mild] Study
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical
 - ▶ **Grapefruit juice** very slightly increases the exposure to **calcium channel blockers (amlodipine)**. Avoid. [Mild] Study
 - ▶ **Grapefruit juice** increases the exposure to **calcium channel blockers (felodipine)**. Avoid. [Moderate] Study
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **calcium channel blockers (ercanidipine)**. Avoid. [Moderate] Theoretical
 - ▶ **Grapefruit juice** increases the exposure to **calcium channel blockers (nicardipine)**. [Mild] Study
 - ▶ **Grapefruit juice** increases the exposure to **calcium channel blockers (nifedipine, verapamil)**. Avoid. [Mild] Study
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **cariprazine**. Avoid. [Moderate] Study
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **ceritinib**. Avoid. [Severe] Theoretical
 - ▶ **Grapefruit juice** increases the concentration of **ciclosporin**. Avoid. [Severe] Study
 - ▶ **Grapefruit juice** markedly decreases the exposure to **clopidogrel**. [Severe] Study
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
 - ▶ **Grapefruit juice** moderately increases the exposure to oral **corticosteroids (budesonide)**. Avoid. [Moderate] Study
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **darifenacin**. [Moderate] Study
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **dasatinib**. Avoid. [Moderate] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **eliglustat**. Avoid. [Severe] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **encorafenib**. Avoid. [Moderate] Study
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **ergometrine**. [Severe] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **ergotamine**. [Severe] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **everolimus**. Avoid. [Severe] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **guanfacine**. Avoid. [Moderate] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **ibrutinib**. Avoid. [Moderate] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **imatnib**. [Moderate] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **ivabradine**. Avoid. [Moderate] Study
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **ivacaftor**. Avoid. [Moderate] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **larotrectinib**. Avoid. [Moderate] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the concentration of **lorlatinib**. Avoid. [Moderate] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **naloxegol**. Avoid. [Moderate] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **neratinib**. Avoid. [Severe] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **olaparib**. Avoid. [Moderate] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **palbociclib**. Avoid. [Severe] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **pazopanib**. Avoid. [Severe] Theoretical

Grapefruit juice (continued)

- ▶ Grapefruit juice is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors**. Use with caution or avoid. [Moderate] Study
- ▶ Grapefruit juice increases the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **ponatinib**. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **praziquantel**. [Moderate] Study
- ▶ Grapefruit juice is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Theoretical
- ▶ Grapefruit juice is predicted to increase the concentration of **ranolazine**. Avoid. [Severe] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **ribociclib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **roxolitinib**. [Severe] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **saxagliptin**. [Mild] Theoretical
- ▶ Grapefruit juice increases the concentration of **sirolimus**. Avoid. [Moderate] Study
- ▶ Grapefruit juice moderately increases the exposure to **SSRIs (sertraline)**. Avoid. [Moderate] Study
- ▶ Grapefruit juice increases the exposure to **statins (atorvastatin)**. [Mild] Study
- ▶ Grapefruit juice increases the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ Grapefruit juice is predicted to increase the exposure to **sunitinib**. Avoid. [Moderate] Theoretical
- ▶ Grapefruit juice greatly increases the concentration of **tacrolimus**. Avoid. [Severe] Study
- ▶ Grapefruit juice is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **tezacaftor**. Avoid. [Severe] Study
- ▶ Grapefruit juice moderately increases the exposure to **ticagrelor**. [Moderate] Study
- ▶ Grapefruit juice increases the exposure to **tolvaptan**. Avoid. [Moderate] Study
- ▶ Grapefruit juice is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Theoretical
- ▶ Grapefruit juice is predicted to increase the exposure to **venetoclax**. Avoid. [Severe] Theoretical

Grass pollen extract

GENERAL INFORMATION Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

Grazoprevir

- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Grazoprevir** is predicted to increase the concentration of **calcium channel blockers**. [Moderate] Theoretical
- ▶ **Ciclosporin** greatly increases the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Elvitegravir** markedly increases the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study

- ▶ **Etravirine** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Mild] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Modafinil** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Grazoprevir** increases the exposure to **statins (atorvastatin)**. Adjust atorvastatin dose, p. 139. [Moderate] Study
- ▶ **Grazoprevir** is predicted to increase the exposure to **statins (fluvastatin)**. Adjust fluvastatin dose, p. 139. [Unknown] Theoretical
- ▶ **Grazoprevir** increases the exposure to **statins (rosuvastatin)**. Adjust rosuvastatin dose, p. 140. [Moderate] Study
- ▶ **Grazoprevir** is predicted to increase the exposure to **statins (simvastatin)**. Adjust simvastatin dose, p. 141. [Unknown] Theoretical
- ▶ **Grazoprevir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Grazoprevir** increases the exposure to **tacrolimus**. [Moderate] Study

Griseofulvin

ROUTE-SPECIFIC INFORMATION Interactions do not generally apply to topical use unless specified.

- ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **griseofulvin**. [Moderate] Anecdotal
- ▶ Antiepileptics (**phenobarbital, primidone**) decrease the effects of **griseofulvin**. [Moderate] Study
- ▶ **Griseofulvin** potentially decreases the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Griseofulvin** potentially decreases the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Griseofulvin** decreases the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of oral **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal

Guanfacine → see TABLE 8 p. 908 (hypotension), TABLE 11 p. 909 (CNS depressant effects)

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 247. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 247. [Moderate] Study → Also see TABLE 11 p. 909
- ▶ Antiepileptics (**oxcarbazepine**) are predicted to decrease the concentration of **guanfacine**. Monitor and adjust **guanfacine** dose, p. 247. [Moderate] Theoretical
- ▶ **Guanfacine** increases the concentration of **antiepileptics (valproate)**. Monitor and adjust dose. [Moderate] Study

- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 247. [\[Moderate\]](#) Theoretical
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 247. [\[Moderate\]](#) Study
 - ▶ **Apalutamide** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 247. [\[Moderate\]](#) Study
 - ▶ **Apreritant** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 247. [\[Moderate\]](#) Theoretical
 - ▶ **Bosentan** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 247. [\[Moderate\]](#) Theoretical → Also see **TABLE 8** p. 908
 - ▶ **Chloramphenicol** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 247. [\[Moderate\]](#) Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 247. [\[Moderate\]](#) Study
 - ▶ **Crizotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 247. [\[Moderate\]](#) Theoretical
 - ▶ **Efavirenz** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Enzalutamide** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 247. [\[Moderate\]](#) Study
 - ▶ **Fosaprepitant** is predicted to increase the concentration of **guanfacine**. [\[Moderate\]](#) Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **guanfacine**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 247. [\[Moderate\]](#) Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 247. [\[Moderate\]](#) Study
 - ▶ **Imatinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 247. [\[Moderate\]](#) Theoretical
 - ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 247. [\[Moderate\]](#) Study
 - ▶ **Macrolides** (**erythromycin**) are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 247. [\[Moderate\]](#) Theoretical
 - ▶ **Guanfacine** is predicted to increase the concentration of **metformin**. [\[Moderate\]](#) Theoretical
 - ▶ **Mitotane** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 247. [\[Moderate\]](#) Study
 - ▶ **Netupitant** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 247. [\[Moderate\]](#) Theoretical
 - ▶ **Nevirapine** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Nilotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 247. [\[Moderate\]](#) Theoretical
 - ▶ **Rifampicin** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 247. [\[Moderate\]](#) Study
 - ▶ **St John's Wort** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Guselkumab** → see monoclonal antibodies
- H₂ receptor antagonists**
- cimetidine · famotidine · nizatidine · ranitidine
- ▶ Cimetidine decreases the clearance of **albendazole**. [\[Moderate\]](#) Study
 - ▶ Cimetidine increases the concentration of **aminophylline**. Adjust dose. [\[Severe\]](#) Study
 - ▶ Cimetidine slightly increases the exposure to **anthracyclines** (**epirubicin**). Avoid. [\[Moderate\]](#) Study
 - ▶ Cimetidine increases the exposure to **antiarrhythmics** (**amiodarone**). [\[Moderate\]](#) Study
 - ▶ Cimetidine slightly increases the exposure to **antiarrhythmics** (**flecainide**). Monitor and adjust dose. [\[Mild\]](#) Study
 - ▶ Cimetidine increases the exposure to **antiarrhythmics** (**lidocaine**). Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ Cimetidine is predicted to increase the exposure to **antiarrhythmics** (**propafenone**). Monitor and adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ Cimetidine transiently increases the concentration of **antiepileptics** (**carbamazepine**). Monitor concentration and adjust dose. [\[Moderate\]](#) Study
 - ▶ Cimetidine increases the concentration of **antiepileptics** (**fosphenytoin**, **phenytoin**). Monitor concentration and adjust dose. [\[Severe\]](#) Study
 - ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **antifungals, azoles** (**itraconazole**). Administer itraconazole capsules with an acidic beverage, p. 409. [\[Moderate\]](#) Study
 - ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **antifungals, azoles** (**ketoconazole**). Administer ketoconazole with an acidic beverage, p. 480. [\[Moderate\]](#) Study
 - ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **antifungals, azoles** (**posaconazole**). Avoid use of posaconazole oral suspension. [\[Moderate\]](#) Study
 - ▶ Cimetidine decreases the clearance of **antimalarials** (**chloroquine**). [\[Moderate\]](#) Study
 - ▶ Cimetidine slightly increases the exposure to **antimalarials** (**quinine**). [\[Moderate\]](#) Study
 - ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **bosutinib**. [\[Moderate\]](#) Theoretical
 - ▶ Cimetidine slightly increases the exposure to **calcium channel blockers** (**diltiazem**, **nimodipine**). Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ Cimetidine (high-dose) is predicted to increase the exposure to **calcium channel blockers** (**lercanidipine**). [\[Moderate\]](#) Theoretical
 - ▶ Cimetidine moderately increases the exposure to **calcium channel blockers** (**nifedipine**). Monitor and adjust dose. [\[Severe\]](#) Study
 - ▶ Cimetidine increases the exposure to **calcium channel blockers** (**verapamil**). [\[Moderate\]](#) Study
 - ▶ Cimetidine is predicted to slightly increase the exposure to **capecitabine**. [\[Severe\]](#) Theoretical
 - ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **ceritinib**. [\[Moderate\]](#) Theoretical
 - ▶ Cimetidine increases the concentration of **ciclosporin**. [\[Mild\]](#) Study
 - ▶ Cimetidine increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Study
 - ▶ **H₂ receptor antagonists** are predicted to decrease the concentration of **dacomitinib**. Dacomitinib should be taken 2 hours before or 10 hours after **H₂ receptor antagonists**. [\[Mild\]](#) Study
 - ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **dasatinib**. Avoid. [\[Moderate\]](#) Study
 - ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [\[Moderate\]](#) Theoretical
 - ▶ Cimetidine is predicted to increase the exposure to **dopamine receptor agonists** (**pramipexole**). Adjust dose. [\[Moderate\]](#) Study
 - ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **erlotinib**. Erlotinib should be taken 2 hours before or 10 hours after **H₂ receptor antagonists**. [\[Moderate\]](#) Study
 - ▶ Cimetidine increases the concentration of **fampridine**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ Cimetidine slightly increases the exposure to **fluorouracil**. [\[Severe\]](#) Study
 - ▶ **H₂ receptor antagonists** are predicted to slightly to moderately decrease the exposure to **gefitinib**. [\[Moderate\]](#) Study
 - ▶ **H₂ receptor antagonists** decrease the exposure to **HIV-protease inhibitors** (**atazanavir**). Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ Cimetidine is predicted to decrease the clearance of **hydroxychloroquine**. [\[Moderate\]](#) Theoretical
 - ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **lapatinib**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 436. [\[Moderate\]](#) Study
 - ▶ **Leflunomide** is predicted to increase the exposure to **H₂ receptor antagonists** (**cimetidine**, **famotidine**). [\[Moderate\]](#) Theoretical
 - ▶ **H₂ receptor antagonists** (**cimetidine**, **ranitidine**) are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical

H₂ receptor antagonists (continued)

- ▶ **Cimetidine** slightly increases the exposure to **macrolides (erythromycin)**. [Moderate] Study
- ▶ **Cimetidine** increases the concentration of **mebendazole**. [Moderate] Study
- ▶ **Cimetidine** increases the exposure to **metformin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cimetidine** slightly increases the exposure to **mirtazapine**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Cimetidine** increases the exposure to **moclobemide**. Adjust moclobemide dose. [Mild] Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Theoretical
- ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **nilotinib**. **H₂ receptor antagonists** should be taken 10 hours before or 2 hours after **nilotinib**. [Mild] Theoretical
- ▶ **Nitisinone** is predicted to increase the exposure to **H₂ receptor antagonists (cimetidine, famotidine)**. [Moderate] Study
- ▶ **Cimetidine** increases the concentration of **opioids (alfentanil)**. Use with caution and adjust dose. [Severe] Study
- ▶ **Cimetidine** increases the exposure to **opioids (fentanyl)**. [Moderate] Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **pazopanib**. **H₂ receptor antagonists** should be taken 10 hours before or 2 hours after **pazopanib**. [Moderate] Theoretical
- ▶ **Cimetidine** increases the exposure to **phenindione**. [Severe] Anecdotal
- ▶ **Cimetidine** moderately increases the exposure to **praziquantel**. [Moderate] Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **rilpivirine**. **H₂ receptor antagonists** should be taken 12 hours before or 4 hours after **rilpivirine**. [Severe] Study
- ▶ **Cimetidine** slightly increases the exposure to **roflumilast**. [Moderate] Study
- ▶ **H₂ receptor antagonists** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see ledipasvir with sofosbuvir p. 436 sofosbuvir with velpatasvir, and sofosbuvir with velpatasvir and voxilaprevir. [Moderate] Study
- ▶ **Cimetidine** slightly increases the exposure to **SSRIs (citalopram, escitalopram)**. Adjust dose. [Moderate] Study
- ▶ **Cimetidine** slightly increases the exposure to **SSRIs (paroxetine, sertraline)**. [Moderate] Study
- ▶ **Cimetidine** is predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
- ▶ **Terflunomide** is predicted to increase the exposure to **H₂ receptor antagonists (cimetidine, famotidine)**. [Moderate] Study
- ▶ **Cimetidine** increases the concentration of **theophylline**. Adjust dose. [Severe] Study
- ▶ **Cimetidine** increases the exposure to **tricyclic antidepressants**. [Moderate] Study
- ▶ **H₂ receptor antagonists** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir. [Moderate] Study
- ▶ **Cimetidine** slightly increases the exposure to **venlafaxine**. [Mild] Study
- ▶ **Cimetidine** slightly increases the exposure to **zolmitriptan**. Adjust zolmitriptan dose, p. 310. [Mild] Study

Haloperidol → see TABLE 8 p. 908 (hypotension), TABLE 9 p. 909 (QT-interval prolongation), TABLE 11 p. 909 (CNS depressant effects), TABLE 10 p. 909 (antimuscarinics)

FOOD AND LIFESTYLE Dose adjustment might be necessary if smoking started or stopped during treatment.

- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the concentration of **haloperidol**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 909
- ▶ **Haloperidol** potentially increases the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [Severe] Theoretical
- ▶ **Antifungals, azoles (itraconazole)** increase the concentration of **haloperidol**. [Moderate] Study
- ▶ **Apalutamide** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 909

- ▶ **Haloperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 908 → Also see TABLE 9 p. 909 → Also see TABLE 10 p. 909
- ▶ **Enzalutamide** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **Haloperidol** potentially opposes the effects of **glycerol phenylbutyrate**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **haloperidol**. [Severe] Theoretical
- ▶ **Haloperidol** decreases the effects of **levodopa**. [Severe] Study → Also see TABLE 8 p. 908
- ▶ **Mitotane** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **Haloperidol** potentially decreases the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
- ▶ **SSRIs (fluoxetine)** increase the concentration of **haloperidol**. Adjust dose. [Moderate] Anecdotal
- ▶ **SSRIs (fluvoxamine)** increase the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **Venlafaxine** slightly increases the exposure to **haloperidol**. [Severe] Study → Also see TABLE 9 p. 909 → Also see TABLE 11 p. 909

Heparin (unfractionated) → see TABLE 16 p. 911 (increased serum potassium), TABLE 3 p. 907 (anticoagulant effects)

▶ **Ranibizumab** increases the risk of bleeding events when given with **heparin (unfractionated)**. [Severe] Theoretical

Hepatitis B immunoglobulin → see immunoglobulins

HIV-protease inhibitors → see TABLE 9 p. 909 (QT-interval prolongation)

atazanavir · darunavir · fosamprenavir · lopinavir · ritonavir · saquinavir · tipranavir

▶ Caution on concurrent use of **atazanavir, lopinavir with ritonavir**, and **ritonavir** with drugs that prolong the PR interval

▶ Concurrent use of **saquinavir** with drugs that prolong the PR interval is contra-indicated.

▶ Caution with concurrent use of **tipranavir** with drugs that increase risk of bleeding.

- ▶ **Tipranavir** slightly decreases the exposure to **abacavir**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose. [Severe] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **Ritonavir** decreases the exposure to **albendazole**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir, saquinavir)** are predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** increase the exposure to **almotriptan**. [Mild] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **alpha blockers (doxazosin)**. [Moderate] Study
- ▶ **HIV-protease inhibitors** moderately increase the exposure to **alprazolam**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir, tipranavir)** are predicted to increase the exposure to **amfetamines**. [Severe] Theoretical
- ▶ **Ritonavir** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
- ▶ **Antacids** are predicted to decrease the absorption of **atazanavir**. **Atazanavir** should be taken 2 hours before or 1 hour after antacids. [Severe] Theoretical

- ▶ **Antacids** are predicted to decrease the absorption of **tipranavir**. Separate administration by 2 hours. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antiarrhythmics (amiodarone)**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 909
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antiarrhythmics (disopyramide)**. [Severe] Theoretical → Also see TABLE 9 p. 909
- ▶ **HIV-protease inhibitors** very markedly increase the exposure to **antiarrhythmics (dronedrone)**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Ritonavir** is predicted to increase the exposure to **antiarrhythmics (flecainide)**. Avoid or monitor side effects. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antiarrhythmics (lidocaine)**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antiepileptics (carbamazepine)** and **antiepileptics (carbamazepine)** are predicted to decrease the exposure to **HIV-protease inhibitors**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to affect the exposure to **antiepileptics (fosphenytoin, phenytoin)** and **antiepileptics (fosphenytoin, phenytoin)** decrease the concentration of **HIV-protease inhibitors**. [Severe] Theoretical
- ▶ **Ritonavir** slightly decreases the exposure to **antiepileptics (lamotrigine)**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to very slightly increase the exposure to **antiepileptics (perampanel)**. [Mild] Study
- ▶ **HIV-protease inhibitors** are predicted to affect the concentration of **antiepileptics (phenobarbital, primidone)** and **antiepileptics (phenobarbital, primidone)** are predicted to decrease the concentration of **HIV-protease inhibitors**. [Severe] Theoretical
- ▶ **Ritonavir** is predicted to decrease the concentration of **antiepileptics (valproate)**. [Severe] Anecdotal
- ▶ **Antifungals, azoles (fluconazole)** slightly increase the exposure to **tipranavir**. Avoid or adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **HIV-protease inhibitors**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **HIV-protease inhibitors**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. Avoid or monitor side effects. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antifungals, azoles (itraconazole)**. Use with caution and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antifungals, azoles (ketoconazole)**. Use with caution and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to affect the exposure to **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** potentially affect the exposure to **HIV-protease inhibitors**. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** decrease the exposure to **antimalarials (atovaquone)**. Avoid if boosted with ritonavir. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to decrease the exposure to **antimalarials (proguanil)**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to affect the exposure to **antimalarials (quinine)**. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **apalutamide**. [Mild] Study → Also see TABLE 9 p. 909
- ▶ **Ritonavir** is predicted to increase the exposure to **apixaban**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 265. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study → Also see TABLE 9 p. 909
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ **Ritonavir** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **beta₂ agonists (salmeterol)**. Avoid. [Severe] Study
- ▶ **Atazanavir** moderately increases the exposure to **bictegravir**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** slightly increase the exposure to **bortezomib**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **bosentan**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **brigatinib**. Adjust brigatinib dose. [Severe] Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **bupropion**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **buprisone**. Adjust buprisone dose. [Severe] Study
- ▶ **HIV-protease inhibitors** slightly increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Ritonavir** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, nifedipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ceritinib**. Avoid or adjust ceritinib dose. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **HIV-protease inhibitors** increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cilostazol**. Adjust cilostazol dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Ritonavir** is predicted to affect the exposure to **clozapine**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust colchicine dose. [Severe] Study

HIV-protease inhibitors (continued)

- ▶ **Atazanavir** (unboosted) increases the exposure to **combined hormonal contraceptives**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Ritonavir** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 536. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **corticosteroids (beclometasone)** (risk with beclometasone is likely to be lower than with other corticosteroids). [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone)**. Avoid or monitor side effects. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to affect the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **crizotinib**. Avoid. [\[Moderate\]](#) Study → Also see TABLE 9 p. 909
- ▶ HIV-protease inhibitors (**lopinavir, ritonavir, saquinavir**) are predicted to increase the exposure to **dabigatran**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [\[Severe\]](#) Study
- ▶ **Dasabuvir** (with ombitasvir, paritaprevir, and ritonavir) decreases the concentration of **darunavir**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study → Also see TABLE 9 p. 909
- ▶ **HIV-protease inhibitors** very slightly increase the exposure to **delamanid**. [\[Severe\]](#) Study → Also see TABLE 9 p. 909
- ▶ **Ritonavir** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [\[Severe\]](#) Theoretical
- ▶ **Ritonavir** is predicted to increase the exposure to **diazepam**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **dienogest**. [\[Moderate\]](#) Study
- ▶ **Ritonavir** increases the concentration of **digoxin**. Adjust dose and monitor concentration. [\[Severe\]](#) Study
- ▶ **Fosamprenavir** boosted with ritonavir slightly decreases the exposure to **dolutegravir**. Avoid if resistant to HIV-integrase inhibitors. [\[Severe\]](#) Study
- ▶ **Tipranavir** moderately decreases the exposure to **dolutegravir**. Refer to specialist literature. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** increase the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** increase the exposure to **dopamine receptor agonists (bromocriptine)**. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of dopamine receptor agonists (**cabergoline**). [\[Moderate\]](#) Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **doravirine**. [\[Mild\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dronabinol**. Adjust dose. [\[Mild\]](#) Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **duloxetine**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ HIV-protease inhibitors (**lopinavir, ritonavir, saquinavir**) are predicted to slightly increase the exposure to **edoxaban**. [\[Severe\]](#) Theoretical
- ▶ **Efavirenz** decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. [\[Severe\]](#) Study → Also see TABLE 9 p. 909
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **eletriptan**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ HIV-protease inhibitors (**atazanavir, lopinavir**) boosted with ritonavir increase the concentration of **elvitegravir**. Refer to specialist literature. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **encorafenib**. Avoid or monitor. [\[Severe\]](#) Study → Also see TABLE 9 p. 909
- ▶ **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Ritonavir** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [\[Severe\]](#) Theoretical
- ▶ **Etravirine** increases the exposure to **fosamprenavir** boosted with ritonavir. Refer to specialist literature. [\[Moderate\]](#) Study
- ▶ **Tipranavir** decreases the exposure to **etravirine**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **everolimus**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **fesoterodine**. Adjust fesoterodine dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment. [\[Severe\]](#) Study
- ▶ HIV-protease inhibitors (**lopinavir, ritonavir, saquinavir**) are predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
- ▶ **Ritonavir** is predicted to increase the exposure to **flurazepam**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **fosaprepitant**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **gilteritinib**. [\[Moderate\]](#) Study
- ▶ HIV-protease inhibitors (**atazanavir, darunavir, lopinavir**) boosted with ritonavir increase the exposure to **glecaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **Ritonavir** increases the exposure to **glecaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **guanfacine**. Adjust guanfacine dose, p. 247. [\[Moderate\]](#) Study
- ▶ **H₂ receptor antagonists** decrease the exposure to **atazanavir**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Ritonavir** is predicted to increase the exposure to **haloperidol**. [\[Severe\]](#) Theoretical
- ▶ **Ritonavir** is predicted to decrease the effects of **hormone replacement therapy**. [\[Moderate\]](#) Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust ibrutinib dose. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **imatinitib**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [\[Moderate\]](#) Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **iron chelators (deferasirox)**. Monitor serum ferritin and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ivabradine**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ivacaftor**. Adjust ivacaftor p. 196 or lumacaftor with ivacaftor p. 197 or tezacaftor with ivacaftor p. 198 dose with potent inhibitors of CYP3A4. [\[Severe\]](#) Study

- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 607. [Moderate] Study
- ▶ **Tipranavir** boosted with ritonavir is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- ▶ HIV-protease inhibitors (**atazanavir**, **lopinavir**) boosted with ritonavir are predicted to increase the concentration of **letermovir**. [Moderate] Study
- ▶ **Ritonavir** is predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **Ritonavir** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** increase the exposure to **saquinavir** and **saquinavir** increases the exposure to **macrolides (clarithromycin)**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **saquinavir**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 909
- ▶ **Atazanavir** is predicted to increase the exposure to **macrolides (clarithromycin)**. Adjust dose in renal impairment. [Severe] Study
- ▶ **Ritonavir** increases the exposure to **macrolides (clarithromycin)**. Adjust dose in renal impairment. [Severe] Study
- ▶ **Tipranavir** boosted with ritonavir increases the exposure to **macrolides (clarithromycin)** and **macrolides (clarithromycin)** increase the exposure to **tipranavir** boosted with ritonavir. Monitor; adjust dose in renal impairment. [Severe] Study
- ▶ HIV-protease inhibitors (**darunavir**, **fosamprenavir**, **lopinavir**) boosted with ritonavir are predicted to increase the exposure to **macrolides (clarithromycin)**. Adjust dose in renal impairment. [Severe] Study
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **tipranavir**) are predicted to increase the exposure to **macrolides (erythromycin)**. [Severe] Theoretical
- ▶ **Darunavir** boosted with ritonavir markedly increases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
- ▶ **Maraviroc** potentially decreases the exposure to **fosamprenavir** and **fosamprenavir** potentially decreases the exposure to **maraviroc**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors (**atazanavir**, **maraviroc**) moderately to markedly increase the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
- ▶ **Lopinavir** boosted with ritonavir moderately increases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
- ▶ **Ritonavir** markedly increases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Ritonavir** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the risk of neutropenia when given with **monoclonal antibodies (brentuximab vedotin)**. Monitor and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **nalmededine**. Avoid or monitor. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **neratinib**. Avoid or adjust **neratinib** dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **netupitant**. [Moderate] Study
- ▶ **Nevirapine** decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
- ▶ HIV-protease inhibitors (**lopinavir**, **ritonavir**, **saquinavir**) are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **nisitsonone**. Adjust dose. [Moderate] Theoretical
- ▶ **Ritonavir** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Ritonavir** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose. [Moderate] Study
- ▶ **Ombitasvir** (in fixed-dose combination with dasabuvir) decreases the concentration of **darunavir**. Avoid or adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** boosted with ritonavir are predicted to decrease the exposure to **opioids (methadone)**. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Ritonavir** is predicted to decrease the concentration of **opioids (morphine)**. [Moderate] Theoretical
- ▶ **Ritonavir** increases the risk of CNS toxicity when given with **opioids (pethidine)**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **oxybutynin**. [Mild] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Atazanavir** boosted with ritonavir markedly increases the exposure to **paritaprevir**. Avoid or give unboosted. [Moderate] Study
- ▶ **Darunavir** boosted with ritonavir slightly decreases the exposure to **paritaprevir**. Avoid or give unboosted. [Moderate] Study
- ▶ HIV-protease inhibitors (**fosamprenavir**, **tipranavir**) boosted with ritonavir are predicted to increase the exposure to **paritaprevir**. Avoid. [Severe] Study
- ▶ **Lopinavir** boosted with ritonavir moderately to markedly increases the exposure to **paritaprevir**. Avoid. [Severe] Study
- ▶ **Saquinavir** is predicted to increase the exposure to **paritaprevir** (in fixed-dose combination). Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose. [Moderate] Study → Also see TABLE 9 p. 909

HIV-protease inhibitors (continued)

- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 125. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [Severe] Study
- ▶ HIV-protease inhibitors (**atazanavir, lopinavir**) boosted with **ritonavir** increase the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ **Ritonavir** potentially increases the exposure to **pibrentasvir**. [Severe] Theoretical
- ▶ **Saquinavir** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Ritonavir** is predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
- ▶ **HIV-protease inhibitors** given with carbimazole are predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical
- ▶ **Proton pump inhibitors** decrease the exposure to **atazanavir**. Avoid or adjust dose. [Severe] Study
- ▶ **Proton pump inhibitors** increase the exposure to **saquinavir**. Avoid. [Severe] Study
- ▶ **Tipranavir** decreases the exposure to **proton pump inhibitors**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
- ▶ **Atazanavir** increases the exposure to **raltegravir** (high-dose). Avoid. [Moderate] Study
- ▶ **Darunavir** increases the risk of rash when given with **raltegravir**. [Moderate] Study
- ▶ **Fosamprenavir** boosted with **ritonavir** decreases the exposure to **raltegravir** and **raltegravir** decreases the exposure to **fosamprenavir** boosted with **ritonavir**. Avoid. [Severe] Study
- ▶ **Tipranavir** boosted with **ritonavir** is predicted to decrease the exposure to **raltegravir** (high-dose). Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust **alitretinoin** dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, saquinavir, tipranavir)** boosted with **ritonavir** increase the exposure to **rifabutin**. Monitor and adjust dose. [Severe] Study
- ▶ **Ritonavir** markedly increases the exposure to **rifabutin**. Avoid or adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately to markedly decrease the exposure to HIV-protease inhibitors (**atazanavir, darunavir, fosamprenavir, lopinavir, saquinavir**). Avoid. [Severe] Study
- ▶ **Rifampicin** slightly decreases the exposure to **ritonavir**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **tipranavir**. Avoid. [Severe] Study
- ▶ **Ritonavir** is predicted to increase the exposure to **riociguat**. Adjust dose and monitor blood pressure. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Ritonavir** moderately increases the exposure to **rivaroxaban**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **roxolitinib**. Adjust dose and monitor side effects. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **saxagliptin**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **HIV-protease inhibitors**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Tipranavir** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** or **tamsulosin** with **solifenacin** dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **SSRIs (dapoxetine)**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **HIV-protease inhibitors**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **HIV-protease inhibitors** slightly to moderately increase the exposure to **statins (rosuvastatin)**. Avoid or adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ HIV-protease inhibitors (**lopinavir, ritonavir, saquinavir**) are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **taxanes (paclitaxel)**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** increase the exposure to **tenofovir alafenamide**. Avoid or adjust dose. [Moderate] Study
- ▶ **Tipranavir** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** are predicted to increase the risk of renal impairment when given with **tenofovir disoproxil**. [Severe] Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor** with **ivacaftor** p. 198 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ **Ritonavir** decreases the concentration of **thyroid hormones (levothyroxine)**. MHRA advises monitor TSH for at least one month after starting or stopping **ritonavir**. [Moderate] Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study

- ▶ **Ritonavir** moderately decreases the exposure to **tizanidine**. [\[Mild\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tolterodine**. Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 909
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **toremifene**. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 909
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors (ritonavir, tipranavir)** are predicted to increase the exposure to **tricyclic antidepressants**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, saquinavir, tipranavir)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [\[Severe\]](#) Study
- ▶ **Ritonavir** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 536. [\[Severe\]](#) Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **Tipranavir** is predicted to increase the exposure to **velpatasvir**. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **venmurfenib**. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 909
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **venlafaxine**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 909
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **vinca alkaloids**. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 909
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [\[Moderate\]](#) Study
- ▶ **Atazanavir** boosted with ritonavir increases the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **Lopinavir** boosted with ritonavir is predicted to increase the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Tipranavir** boosted with ritonavir is predicted to increase the concentration of **voxilaprevir**. [\[Severe\]](#) Theoretical
- ▶ **Tipranavir** slightly decreases the exposure to **zidovudine**. Avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Homatropine** → see TABLE 10 p. 909 (antimuscarinics)
- Hormone replacement therapy**
 - ▶ Antiepileptics (**carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampamil, phenobarbital, phenytoin, primidone, rufinamide, topiramate**) are predicted to decrease the effects of hormone replacement therapy. [\[Moderate\]](#) Anecdotal
 - ▶ **Hormone replacement therapy** is predicted to alter the exposure to antiepileptics (**lamotrigine**). [\[Moderate\]](#) Theoretical
 - ▶ **Aprepitant** is predicted to decrease the effects of hormone replacement therapy. [\[Moderate\]](#) Anecdotal
 - ▶ **Bosentan** is predicted to decrease the effects of hormone replacement therapy. [\[Moderate\]](#) Anecdotal
 - ▶ **Hormone replacement therapy** decreases the clearance of dopamine receptor agonists (**ropinirole**). Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Efavirenz** is predicted to decrease the effects of hormone replacement therapy. [\[Moderate\]](#) Anecdotal
 - ▶ **Fosaprepitant** is predicted to decrease the effects of hormone replacement therapy. [\[Moderate\]](#) Anecdotal
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the effects of hormone replacement therapy. [\[Moderate\]](#) Anecdotal
- ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. [\[Severe\]](#) theoretical
- ▶ **Hormone replacement therapy** is predicted to increase the exposure to MAO-B inhibitors (**selegiline**). Avoid. [\[Moderate\]](#) Study
- ▶ **Modafinil** is predicted to decrease the effects of hormone replacement therapy. [\[Moderate\]](#) Anecdotal
- ▶ **Nevirapine** is predicted to decrease the effects of hormone replacement therapy. [\[Moderate\]](#) Anecdotal
- ▶ **NSAIDs (etoricoxib)** slightly increase the exposure to hormone replacement therapy. [\[Moderate\]](#) Study
- ▶ **Hormone replacement therapy** potentially opposes the effects of **ospemifene**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. [\[Severe\]](#) Theoretical
- ▶ **Hormone replacement therapy** potentially opposes the effects of **raloxifene**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Rifabutin** is predicted to decrease the effects of hormone replacement therapy. [\[Moderate\]](#) Anecdotal
- ▶ **Rifampicin** is predicted to decrease the effects of hormone replacement therapy. [\[Moderate\]](#) Anecdotal
- ▶ **St John's Wort** is predicted to decrease the efficacy of hormone replacement therapy. [\[Moderate\]](#) Theoretical
- ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **thalidomide**. [\[Severe\]](#) theoretical
- ▶ **Oral hormone replacement therapy** is predicted to decrease the effects of **thyroid hormones**. [\[Moderate\]](#) Theoretical
- Hydralazine** → see TABLE 8 p. 908 (hypotension)
- ▶ **Diazoxide** increases the risk of severe hypotension when given with hydralazine. [\[Severe\]](#) Study → Also see TABLE 8 p. 908
- Hydrochlorothiazide** → see thiazide diuretics
- Hydrocortisone** → see corticosteroids
- Hydroflumethiazide** → see thiazide diuretics
- Hydromorphone** → see opioids
- Hydroxycarbamide** → see TABLE 15 p. 910 (myelosuppression)
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with hydroxycarbamide. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Hydroxycarbamide** increases the risk of toxicity when given with **stavudine**. Avoid. [\[Severe\]](#) Study
- Hydroxychloroquine**
 - ▶ **Hydroxychloroquine** is predicted to decrease the effects of **agalsidase alfa**. [\[Moderate\]](#) Theoretical
 - ▶ **Hydroxychloroquine** is predicted to decrease the exposure to **agalsidase beta**. [\[Moderate\]](#) Theoretical
 - ▶ **Antacids** decrease the absorption of **hydroxychloroquine**. Separate administration by at least 4 hours. [\[Moderate\]](#) Study
 - ▶ **Calcium salts (calcium carbonate)** decrease the absorption of **hydroxychloroquine**. Separate administration by at least 4 hours. [\[Moderate\]](#) Study
 - ▶ **Hydroxychloroquine** is predicted to decrease the efficacy of oral **cholera vaccine**. [\[Moderate\]](#) Theoretical
 - ▶ **H₂ receptor antagonists (cimetidine)** are predicted to decrease the clearance of **hydroxychloroquine**. [\[Moderate\]](#) Theoretical
 - ▶ **Lanthanum** is predicted to decrease the absorption of **hydroxychloroquine**. Separate administration by at least 2 hours. [\[Moderate\]](#) Theoretical
 - ▶ **Hydroxychloroquine** is predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. [\[Severe\]](#) Theoretical
 - ▶ **Hydroxychloroquine** is predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Hydroxychloroquine** is predicted to decrease efficacy **rabies vaccine**. [\[Moderate\]](#) Theoretical
- Hydroxyzine** → see antihistamines, sedating
- Hyoscine** → see TABLE 10 p. 909 (antimuscarinics)
- Ibandronate** → see bisphosphonates
- Ibrutinib** → see TABLE 15 p. 910 (myelosuppression), TABLE 4 p. 907 (antiplatelet effects)

Ibrutinib (continued)

FOOD AND LIFESTYLE Avoid food or drink containing bitter (Seville) oranges as they are predicted to increase the exposure to ibrutinib.

- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose. [\[Severe\]](#) Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to ibrutinib. Avoid or adjust ibrutinib dose. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to very markedly increase the exposure to ibrutinib. Avoid potent inhibitors of CYP3A4 or adjust ibrutinib dose. [\[Severe\]](#) Study
- ▶ **Apalutamide** is predicted to decrease the exposure to ibrutinib. Avoid or adjust ibrutinib dose. [\[Severe\]](#) Study
- ▶ **Aprepitant** is predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to very markedly increase the exposure to ibrutinib. Avoid potent inhibitors of CYP3A4 or adjust ibrutinib dose. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study → Also see TABLE 15 p. 910
- ▶ **Enzalutamide** is predicted to decrease the exposure to ibrutinib. Avoid or adjust ibrutinib dose. [\[Severe\]](#) Study
- ▶ **Fosaprepitant** is predicted to slightly increase the exposure to ibrutinib. [\[Moderate\]](#) Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to ibrutinib. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to very markedly increase the exposure to ibrutinib. Avoid potent inhibitors of CYP3A4 or adjust ibrutinib dose. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to very markedly increase the exposure to ibrutinib. Avoid potent inhibitors of CYP3A4 or adjust ibrutinib dose. [\[Severe\]](#) Study → Also see TABLE 15 p. 910
- ▶ **Imatinib** is predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study → Also see TABLE 15 p. 910
- ▶ **Macrolides (clarithromycin)** are predicted to very markedly increase the exposure to ibrutinib. Avoid potent inhibitors of CYP3A4 or adjust ibrutinib dose. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to ibrutinib. Avoid or adjust ibrutinib dose. [\[Severe\]](#) Study → Also see TABLE 15 p. 910
- ▶ **Netupitant** is predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study → Also see TABLE 15 p. 910
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose. [\[Severe\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to ibrutinib. Avoid or adjust ibrutinib dose. [\[Severe\]](#) Study
- ▶ **St John's Wort** is predicted to decrease the exposure to ibrutinib. Avoid. [\[Severe\]](#) Theoretical

Ibuprofen → see NSAIDs

Icatibant

- ▶ **ACE inhibitors** are predicted to decrease the efficacy of icanitab and icanitab is predicted to decrease the efficacy of **ACE inhibitors**. Avoid. [\[Moderate\]](#) Theoretical

Idarubicin → see anthracyclines

Idelalisib → see TABLE 15 p. 910 (myelosuppression)

- ▶ **Idelalisib** is predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** increases the exposure to **almotriptan**. [\[Mild\]](#) Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **alpha blockers (doxazosin)**. [\[Moderate\]](#) Study
- ▶ **Idelalisib** moderately increases the exposure to **alprazolam**. Avoid. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **antiarrhythmics (amiodarone)**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** very markedly increases the exposure to **antiarrhythmics (dronedaron)**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to idelalisib. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to very slightly increase the exposure to **antiepileptics (perampanel)**. [\[Mild\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. Avoid or monitor side effects. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to increase the concentration of **antimalarials (piperaquine)**. [\[Severe\]](#) Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to idelalisib. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **apalutamide**. [\[Mild\]](#) Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **aprepitant**. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 265. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [\[Moderate\]](#) Study → Also see TABLE 15 p. 910
- ▶ **Idelalisib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [\[Mild\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **beta₂ agonists (salmeterol)**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** slightly increases the exposure to **bortezomib**. [\[Moderate\]](#) Study → Also see TABLE 15 p. 910
- ▶ **Bosentan** is predicted to decrease the exposure to idelalisib. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [\[Severe\]](#) Study → Also see TABLE 15 p. 910
- ▶ **Idelalisib** is predicted to increase the exposure to **brigatinib**. Adjust brigatinib dose. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **buspirone**. Adjust buspirone dose. [\[Severe\]](#) Study
- ▶ **Idelalisib** slightly increases the exposure to **cabozantinib**. [\[Moderate\]](#) Study → Also see TABLE 15 p. 910
- ▶ **Idelalisib** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [\[Mild\]](#) Study

- ▶ **Idelalisib** is predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose. [Severe] Study → Also see TABLE 15 p. 910
- ▶ **Idelalisib** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **corticosteroids (beclometasone)** (risk with beclometasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone)**. Avoid or monitor side effects. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 910
- ▶ **Idelalisib** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study → Also see TABLE 15 p. 910
- ▶ **Idelalisib** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study → Also see TABLE 15 p. 910
- ▶ **Idelalisib** very slightly increases the exposure to **delamanid**. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Idelalisib** increases the risk of QT-prolongation when given with **domeperidone**. Avoid. [Severe] Study
- ▶ **Idelalisib** increases the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Idelalisib** is predicted to increase the exposure to **doravirine**. [Mid] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **dronabinol**. Adjust dose. [Mid] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **esketamine**. Adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study → Also see TABLE 15 p. 910
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **gefitinib**. [Moderate] Study → Also see TABLE 15 p. 910
- ▶ **Idelalisib** is predicted to increase the exposure to **gilteritinib**. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 247. [Moderate] Study
- ▶ **Idelalisib** is predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose. [Severe] Study → Also see TABLE 15 p. 910
- ▶ **Idelalisib** is predicted to increase the exposure to **imatinib**. [Moderate] Study → Also see TABLE 15 p. 910
- ▶ **Idelalisib** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study → Also see TABLE 15 p. 910
- ▶ **Idelalisib** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 196 or **lumacaftor** with **ivacaftor** p. 197 or **tezacaftor** with **ivacaftor** p. 198 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 607. [Moderate] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Idelalisib** markedly increases the exposure to **maraviroc**. Adjust dose. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study → Also see TABLE 15 p. 910
- ▶ **Idelalisib** is predicted to increase the exposure to **modafinil**. [Mid] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 910
- ▶ **Idelalisib** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **neratinib**. Avoid or adjust **neratinib** dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **netupitant**. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 910
- ▶ **Idelalisib** is predicted to increase the exposure to **nisitinsone**. Adjust dose. [Moderate] Theoretical

Idelalisib (continued)

- ▶ **Idelalisib** is predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose. [Moderate] Study → Also see TABLE 15 p. 910
 - ▶ **Idelalisib** is predicted to increase the exposure to **opioids** (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**). Monitor and adjust dose. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **opioids** (**methadone**). [Severe] Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **oxycytinin**. [MilI] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid. [Moderate] Study → Also see TABLE 15 p. 910
 - ▶ **Paritaprevir** is predicted to increase the exposure to **idelalisib**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose. [Moderate] Study → Also see TABLE 15 p. 910
 - ▶ **Idelalisib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**avanafil**, **ildenafil**). Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**sildenafil**). Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 125. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**tadalafil**). Use with caution or avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose. [Moderate] Study
 - ▶ **Idelalisib** is predicted to moderately increase the exposure to **praziquantel**. [MilI] Study
 - ▶ **Idelalisib** given with carbimazole is predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 910
 - ▶ **Idelalisib** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **retinoids** (**alitretinoin**). Adjust **alitretinoin** dose. [Moderate] Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose. [Moderate] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor side effects. [Moderate] Study → Also see TABLE 15 p. 910
 - ▶ **Idelalisib** is predicted to increase the exposure to **saxagliptin**. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
 - ▶ **Idelalisib** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **solifenacin**. Adjust solifenacin or tamsulosin with solifenacin dose; avoid in hepatic and renal impairment. [Severe] Study
 - ▶ **Idelalisib** is predicted to moderately increase the exposure to **SSRIs** (**dapoxetine**). Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose. [Severe] Study
 - ▶ **St John's Wort** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **statins** (**atorvastatin**). Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **statins** (**simvastatin**). Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study → Also see TABLE 15 p. 910
 - ▶ **Idelalisib** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **taxanes** (**cabazitaxel**). Avoid. [Severe] Study → Also see TABLE 15 p. 910
 - ▶ **Idelalisib** is predicted to moderately increase the exposure to **taxanes** (**docetaxel**). Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 910
 - ▶ **Idelalisib** is predicted to increase the exposure to **taxanes** (**paclitaxel**). [Severe] Theoretical → Also see TABLE 15 p. 910
 - ▶ **Idelalisib** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 910
 - ▶ **Idelalisib** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with **ivacaftor** p. 198 dose with potent inhibitors of CYP3A4. [Severe] Study
 - ▶ **Idelalisib** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent inhibitors of CYP3A4. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **torsemifene**. [Moderate] Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 15 p. 910
 - ▶ **Idelalisib** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **venlafaxine**. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 910
 - ▶ **Idelalisib** is predicted to increase the exposure to **vitamin D substances** (**paricalcitol**). [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- Ifosfamide** → see alkylating agents
- Iloprost** → see TABLE 8 p. 908 (hypotension), TABLE 4 p. 907 (antiplatelet effects)
- Imatinib** → see TABLE 15 p. 910 (myelosuppression)
- ▶ **Imatinib** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **aldosterone antagonists** (**eplerenone**). Adjust **eplerenone** dose. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **alpha blockers** (**tamsulosin**). [Moderate] Theoretical
 - ▶ **Imatinib** is predicted to increase the exposure to **alprazolam**. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **antiarrhythmics** (**dronedarone**). [Severe] Theoretical
 - ▶ **Imatinib** is predicted to increase the exposure to **antiarrhythmics** (**propafenone**). Monitor and adjust dose. [Moderate] Study

- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**oxcarbazepine**) decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **posaconazole**) are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **antifungals**, azoles (**isavuconazole**). [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **antihistamines**, non-sedating (**mizolastine**). [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **antihistamines**, non-sedating (**rupatadine**). Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the concentration of **antimalarials** (**piperazine**). [Severe] Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Asparaginase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 910
- ▶ **Imatinib** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ **Imatinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 15 p. 910
- ▶ **Imatinib** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **calcium channel blockers** (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicanidipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **corticosteroids** (**methylprednisolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crisantaspase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 910
- ▶ **Imatinib** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 15 p. 910
- ▶ **Imatinib** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Imatinib** increases the risk of QT⁻-prolongation when given with **domeperidone**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dopamine receptor agonists** (**bromocriptine**). [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **dopamine receptor agonists** (**cabergoline**). [Moderate] Anecdotal
- ▶ **Imatinib** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Imatinib** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 910
- ▶ **Imatinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment. [Mild] Study
- ▶ **Imatinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ **Grapefruit juice** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 247. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4. [Severe] Study → Also see TABLE 15 p. 910
- ▶ **Idelalisib** is predicted to increase the exposure to **imatinib**. [Moderate] Study → Also see TABLE 15 p. 910
- ▶ **Imatinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 196 or **tezacaftor** with **ivacaftor** p. 198 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose. [Moderate] Study
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Macrolides** (**erythromycin**) are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 910
- ▶ **Imatinib** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ **Imatinib** is predicted to increase the exposure to **opioids** (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **opioids** (**methadone**). [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical

Imatinib (continued)

- ▶ **Imatinib** increases the risk of hepatotoxicity when given with **paracetamol**. [Severe] Anecdotal
- ▶ **Imatinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ **Pegaspargase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 910
- ▶ **Imatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 125. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **roxolitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ **Imatinib** is predicted to increase the exposure to **saxagliptin**. [Mid] Study
- ▶ **Imatinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Imatinib** moderately increases the exposure to **statins (simvastatin)**. Monitor and adjust dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ **Imatinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ **Tedizolid** is predicted to increase the exposure to **imatinib**. Avoid. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **tensirolimus**. Use with caution or avoid. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ **Imatinib** is predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor** with **ivacaftor** p. 198 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Imatinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **tolterodine**. [Mid] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study

- ▶ **Imatinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 910
- ▶ **Imatinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

Imidapril → see ACE inhibitors

Impenem → see carbapenems

Imipramine → see tricyclic antidepressants

Immunoglobulins

Anti-D (Rh₀) immunoglobulin · antithymocyte immunoglobulin (rabbit) · cytomegalovirus immunoglobulin · hepatitis B immunoglobulin · normal immunoglobulin · rabies immunoglobulin · tetanus immunoglobulin · varicella-zoster immunoglobulin

- ▶ **Cytomegalovirus immunoglobulin** is predicted to decrease the efficacy of **live vaccines**. Avoid. [Severe] Theoretical

- ▶ **Cytomegalovirus immunoglobulin** is predicted to increase the risk of side-effects when given with **loop diuretics**. Avoid. [Moderate] Theoretical

- ▶ **Immunoglobulins** are predicted to alter the effects of **monoclonal antibodies (dinutuximab)**. Avoid. [Severe] Theoretical

Indacaterol → see beta₂ agonists

Indapamide → see thiazide diuretics

Indometacin → see NSAIDs

Indoramin → see alpha blockers

Infliximab → see monoclonal antibodies

Influenza vaccine (live) → see live vaccines

Inotersen → see TABLE 4 p. 907 (antiplatelet effects)

Inotuzumab ozogamicin → see monoclonal antibodies

Insulins → see TABLE 14 p. 910 (antidiabetic drugs)

- ▶ **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **insulins**. [Moderate] Theoretical

Interferon alfa → see interferons

Interferon beta → see interferons

Interferons → see TABLE 15 p. 910 (myelosuppression)

interferon alfa · interferon beta · peginterferon alfa

- ▶ **Interferons** are predicted to slightly increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical

- ▶ **Interferon alfa** is predicted to increase the risk of peripheral neuropathy when given with **telbivudine**. Avoid. [Severe] Theoretical

- ▶ **Peginterferon alfa** increases the risk of peripheral neuropathy when given with **telbivudine**. Avoid. [Severe] Study

- ▶ **Interferons** slightly increase the exposure to **theophylline**.

Adjust dose. [Moderate] Study

Ipilimumab → see monoclonal antibodies

Ipratropium → see TABLE 10 p. 909 (antimuscarinics)

- ▶ **Beta₂ agonists** are predicted to increase the risk of glaucoma when given with **ipratropium**. [Moderate] Anecdotal

Irbesartan → see angiotensin-II receptor antagonists

Irinotecan → see TABLE 15 p. 910 (myelosuppression)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study

- ▶ **Apalutamide** is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study

- ▶ **Apreritant** is predicted to increase the exposure to intravenous **irinotecan**. [Severe] Theoretical

- ▶ **Cobicistat** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study

- ▶ **Enzalutamide** is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study

- ▶ **Fibrates (gemfibrozil)** are predicted to increase the exposure to **irinotecan**. Avoid. [Moderate] Theoretical

- ▶ **Fosaprepitant** is predicted to increase the exposure to intravenous **irinotecan**. [Severe] Theoretical

- ▶ **HIV-protease inhibitors** are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study

- ▶ **Idelalisib** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study → Also see TABLE 15 p. 910

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with

irinotecan. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

- ▶ **Macrolides (clarithromycin)** are predicted to increase the risk of toxicity when given with irinotecan. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to irinotecan. Avoid. [Severe] Study → Also see TABLE 15 p. 910
- ▶ **Netupitant** is predicted to increase the exposure to irinotecan. [Moderate] Study
- ▶ **Irinotecan** is predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to irinotecan. [Mild] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to irinotecan. Avoid. [Severe] Study
- ▶ **Rolapitant** is predicted to increase the exposure to irinotecan. Avoid or monitor. [Moderate] Study
- ▶ **St John's Wort** slightly decreases the exposure to irinotecan. Avoid. [Severe] Study
- ▶ **Irinotecan** is predicted to increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Theoretical

Iron (injectable)

ferric carboxymaltose · iron dextran · iron isomaltoside 1000 · iron sucrose

- ▶ **Chloramphenicol** decreases the efficacy of intravenous iron (injectable). [Moderate] Anecdotal

Iron (oral)

ferric maltol · ferrous fumarate · ferrous gluconate · ferrous sulfate · sodium feredetate

- ▶ **Antacids** decrease the absorption of iron (oral). Iron (oral) should be taken 1 hour before or 2 hours after antacids. [Moderate] Study
- ▶ **Iron (oral)** decreases the exposure to **bictegravir**. Manufacturer advises take 2 hours before iron (oral). [Moderate] Study
- ▶ **Iron (oral)** decreases the absorption of **bisphosphonates (clodronate)**. Avoid iron (oral) for 2 hours before or 1 hour after clodronate. [Moderate] Study
- ▶ **Iron (oral)** is predicted to decrease the absorption of oral **bisphosphonates (ibandronate)**. Avoid iron (oral) for at least 6 hours before or 1 hour after ibandronate. [Moderate] Theoretical
- ▶ **Iron (oral)** decreases the absorption of **bisphosphonates (risedronate)**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Calcium salts (calcium carbonate)** decrease the absorption of iron (oral). Calcium carbonate should be taken 1 hour before or 2 hours after iron (oral). [Moderate] Study
- ▶ **Iron (oral)** is predicted to decrease the exposure to **carbidoopa**. [Moderate] Theoretical
- ▶ **Chloramphenicol** decreases the efficacy of oral iron (oral). [Moderate] Theoretical
- ▶ **Iron (oral)** decreases the absorption of **dolutegravir**. Dolutegravir should be taken 2 hours before or 6 hours after iron (oral). [Moderate] Study
- ▶ **Iron (oral)** is predicted to decrease the absorption of **eltrombopag**. Eltrombopag should be taken 2 hours before or 4 hours after iron (oral). [Severe] Theoretical
- ▶ **Iron (oral)** is predicted to decrease the absorption of **entacapone**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Iron (oral)** are predicted to decrease the absorption of **iron chelators (deferiprone)**. [Moderate] Theoretical
- ▶ **Iron (oral)** decreases the absorption of **levodopa**. [Moderate] Study
- ▶ **Iron (oral)** decreases the effects of **methylodopa**. [Moderate] Study
- ▶ **Iron (oral)** is predicted to decrease the absorption of **penicillamine**. Separate administration by at least 2 hours. [Mild] Study
- ▶ **Iron (oral)** decreases the exposure to **quinolones**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Iron (oral)** decreases the absorption of **tetracyclines**. Tetracyclines should be taken 2 to 3 hours after iron (oral). [Moderate] Study
- ▶ **Iron (oral)** decreases the absorption of **thyroid hormones (levothyroxine)**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ **Trientine** potentially decreases the absorption of iron (oral). [Moderate] Theoretical
- ▶ **Zinc** is predicted to decrease the efficacy of iron (oral) and iron (oral) is predicted to decrease the efficacy of zinc. [Moderate] Study

Iron chelators → see TABLE 15 p. 910 (myelosuppression)

deferasirox · deferiprone · desferrioxamine · dexrazoxane

- ▶ **Deferasirox** is predicted to increase the exposure to **aminophylline**. Avoid. [Moderate] Theoretical
 - ▶ **Antacids (aluminium hydroxide)** are predicted to decrease the exposure to deferasirox. Avoid. [Moderate] Theoretical
 - ▶ **Antacids (aluminium hydroxide)** are predicted to decrease the absorption of **deferiprone**. Avoid. [Moderate] Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to deferasirox. Monitor serum ferritin and adjust dose. [Moderate] Theoretical
 - ▶ **Ascorbic acid** is predicted to increase the risk of cardiovascular side-effects when given with iron chelators (**deferiprone, desferrioxamine**). [Severe] Theoretical
 - ▶ **Aspirin** (high-dose) is predicted to increase the risk of gastrointestinal bleeds when given with deferasirox. [Severe] Theoretical
 - ▶ **Bisphosphonates** are predicted to increase the risk of gastrointestinal bleeding when given with deferasirox. [Severe] Theoretical
 - ▶ **Deferasirox** is predicted to increase the exposure to **clozapine**. Avoid. [Moderate] Theoretical
 - ▶ **Corticosteroids** are predicted to increase the risk of gastrointestinal bleeding when given with deferasirox. [Severe] Theoretical
 - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to deferasirox. Monitor serum ferritin and adjust dose. [Moderate] Theoretical
 - ▶ **Iron (oral)** are predicted to decrease the absorption of **deferiprone**. [Moderate] Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with dexrazoxane. Avoid. [Severe] Theoretical
 - ▶ **Deferasirox** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
 - ▶ **NSAIDs** are predicted to increase the risk of gastrointestinal bleeding when given with deferasirox. [Severe] Theoretical
 - ▶ **NSAIDs (diclofenac)** are predicted to increase the exposure to deferiprone. [Moderate] Theoretical
 - ▶ **Deferasirox** is predicted to increase the exposure to **pioglitazone**. [Moderate] Study
 - ▶ **Deferasirox** moderately increases the exposure to **repaglinide**. Avoid. [Moderate] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to deferasirox. Monitor serum ferritin and adjust dose. [Moderate] Study
 - ▶ **Deferasirox** is predicted to increase the exposure to **selexipag**. Adjust selexipag dose. [Moderate] Study
 - ▶ **Deferasirox** is predicted to increase the concentration of **taxanes (paclitaxel)**. [Severe] Anecdotal
 - ▶ **Deferasirox** increases the exposure to **theophylline**. Avoid. [Moderate] Study
 - ▶ **Deferasirox** is predicted to increase the exposure to **tizanidine**. Avoid. [Moderate] Theoretical
 - ▶ Oral **zinc** is predicted to decrease the absorption of oral **deferiprone**. [Moderate] Theoretical
- Iron dextran** → see iron (injectable)
Iron isomaltoside 1000 → see iron (injectable)
Iron sucrose → see iron (injectable)
Isavuconazole → see antifungals, azoles
Isocarboxazid → see MAOIs, irreversible
Isoflurane → see volatile halogenated anaesthetics
Isometheptene → see sympathomimetics, vasoconstrictor
Isoniazid → see TABLE 1 p. 907 (hepatotoxicity), TABLE 12 p. 910 (peripheral neuropathy)

Isoniazid (continued)

FOOD AND LIFESTYLE Avoid tyramine-rich foods (such as mature cheeses, salami, pickled herring, *Bovril*[®], *Oxo*[®], *Marmite*[®] or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines) or histamine-rich foods (such as very mature cheese or fish from the scromboid family (e.g. tuna, mackerel, salmon)), as tachycardia, palpitation, hypotension, flushing, headache, dizziness, and sweating reported.

- ▶ **Isoniazid** is predicted to affect the clearance of **aminophylline**. [\[Severe\]](#) Theoretical
- ▶ **Isoniazid** markedly increases the concentration of **antiepileptics (carbamazepine)** and **antiepileptics (carbamazepine)** increase the risk of hepatotoxicity when given with **isoniazid**. Monitor concentration and adjust dose. [\[Severe\]](#) Study → Also see **TABLE 1** p. 907
- ▶ **Isoniazid** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [\[Moderate\]](#) Study → Also see **TABLE 12** p. 910
- ▶ **Cycloserine** increases the risk of CNS toxicity when given with **isoniazid**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Isoniazid** increases the risk of optic neuropathy when given with **ethambutol**. [\[Severe\]](#) Anecdotal
- ▶ **Isoniazid** decreases the effects of **levodopa**. [\[Moderate\]](#) Study
- ▶ **Isoniazid** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Unknown\]](#) Theoretical → Also see **TABLE 1** p. 907
- ▶ **Isoniazid** is predicted to increase the risk of peripheral neuropathy when given with **stavudine**. [\[Severe\]](#) Theoretical → Also see **TABLE 12** p. 910
- ▶ **Isoniazid** is predicted to affect the clearance of **theophylline**. [\[Severe\]](#) Anecdotal
- ▶ **Isoniazid** potentially increases the risk of nephrotoxicity when given with **volatile halogenated anaesthetics (methoxyflurane)**. Avoid. [\[Severe\]](#) Theoretical

Isoorbide dinitrate → see nitrates

Isoorbide mononitrate → see nitrates

Isotretinoin → see retinoids

Itraconazole → see antifungals, azoles

Ivabradine → see **TABLE 6** p. 908 (bradycardia)

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose. [\[Severe\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ivabradine**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ivabradine**. Avoid. [\[Severe\]](#) Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose. [\[Severe\]](#) Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ivabradine**. Avoid. [\[Moderate\]](#) Study → Also see **TABLE 6** p. 908
- ▶ **Cobicistat** is predicted to increase the exposure to **ivabradine**. Avoid. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose. [\[Severe\]](#) Theoretical → Also see **TABLE 6** p. 908
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ivabradine**. Avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ivabradine**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ivabradine**. Avoid. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ivabradine**. Avoid. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ivabradine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose. [\[Severe\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **St John's Wort** decreases the exposure to **ivabradine**. Avoid. [\[Moderate\]](#) Study

Ivacaftor

FOOD AND LIFESTYLE Avoid bitter (Seville) oranges as they are predicted to increase the exposure to ivacaftor.

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **ivacaftor**. Adjust ivacaftor p. 196 or tezacaftor with ivacaftor p. 198 dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ivacaftor**. Adjust ivacaftor p. 196 or tezacaftor with ivacaftor p. 198 dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ivacaftor**. Adjust ivacaftor p. 196 or lumacaftor with ivacaftor p. 197 or tezacaftor with ivacaftor p. 198 dose with potent inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Apalutamide** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [\[Severe\]](#) Study
- ▶ **Aprepitant** is predicted to increase the exposure to **ivacaftor**. Adjust ivacaftor p. 196 or tezacaftor with ivacaftor p. 198 dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Bosentan** is predicted to decrease the exposure to **ivacaftor**. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ivacaftor**. Adjust ivacaftor p. 196 or tezacaftor with ivacaftor p. 198 dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **ivacaftor**. Adjust ivacaftor p. 196 or lumacaftor with ivacaftor p. 197 or tezacaftor with ivacaftor p. 198 dose with potent inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Ivacaftor** is predicted to increase the anticoagulant effect of coumarins (**warfarin**). [\[Severe\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **ivacaftor**. Adjust ivacaftor p. 196 or tezacaftor with ivacaftor p. 198 dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Ivacaftor** slightly increases the exposure to **digoxin**. [\[Moderate\]](#) Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **ivacaftor**. [\[Moderate\]](#) Study
- ▶ **Enzalutamide** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [\[Severe\]](#) Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ivacaftor**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ivacaftor**. Adjust ivacaftor p. 196 or lumacaftor with ivacaftor p. 197 or tezacaftor with ivacaftor p. 198 dose with potent inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ivacaftor**. Adjust ivacaftor p. 196 or lumacaftor with ivacaftor p. 197 or tezacaftor with ivacaftor p. 198 dose with potent inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **ivacaftor**. Adjust ivacaftor p. 196 or tezacaftor with ivacaftor p. 198 dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical

- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ivacaftor**. Adjust ivacaftor p. 196 or lumacaftor with ivacaftor p. 197 or tezacaftor with ivacaftor p. 198 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ivacaftor**. Adjust ivacaftor p. 196 or tezacaftor with ivacaftor p. 198 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Mitotane** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **ivacaftor**. Adjust ivacaftor p. 196 or tezacaftor with ivacaftor p. 198 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **ivacaftor**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **ivacaftor**. Adjust ivacaftor p. 196 or tezacaftor with ivacaftor p. 198 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **ivacaftor**. Avoid. [Severe] Study

Ivermectin

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Ivermectin** potentially increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Levamisole** increases the exposure to **ivermectin**. [Moderate] Study
- Ixazomib**
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Theoretical
- ▶ **Ixekizumab** → see monoclonal antibodies

Kaolin

- ▶ **Kaolin** is predicted to decrease the absorption of **tetracyclines**. [Moderate] Theoretical

Ketamine → see TABLE 8 p. 908 (hypotension), TABLE 11 p. 909 (CNS depressant effects)

- ▶ **Ketamine** is predicted to increase the risk of elevated blood pressure when given with **ergometrine**. [Severe] Theoretical
- ▶ **Memantine** is predicted to increase the risk of CNS side-effects when given with **ketamine**. Avoid. [Severe] Theoretical

Ketoconazole → see antifungals, azoles

Ketoprofen → see NSAIDs

Ketorolac → see NSAIDs

Ketifen → see antihistamines, sedating

Labetalol → see beta blockers, non-selective

Lacidipine → see calcium channel blockers

Lacosamide → see antiepileptics

Lamivudine → see TABLE 12 p. 910 (peripheral neuropathy)

▶ **Trimethoprim** slightly increases the exposure to **lamivudine**. [Moderate] Study

▶ **Zidovudine** increases the risk of toxicity when given with **lamivudine**. [Severe] Anecdotal

Lamotrigine → see antiepileptics

Lanreotide

- ▶ **Beta blockers, non-selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. [Moderate] Theoretical
- ▶ **Beta blockers, selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. [Moderate] Theoretical
- ▶ **Lanreotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. [Severe] Theoretical

Lansoprazole → see proton pump inhibitors

Lanthanum

- ▶ **Lanthanum** is predicted to decrease the absorption of **antifungals, azoles (ketoconazole)**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Lanthanum** is predicted to decrease the absorption of **antimalarials (chloroquine)**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Lanthanum** is predicted to decrease the absorption of **hydroxychloroquine**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Lanthanum** moderately decreases the exposure to **quinolones**. Quinolones should be taken 2 hours before or 4 hours after **lanthanum**. [Moderate] Study
- ▶ **Lanthanum** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 hours. [Moderate] Theoretical
- ▶ **Lanthanum** decreases the absorption of **thyroid hormones**. Separate administration by 2 hours. [Moderate] Study
- Lapatinib** → see TABLE 9 p. 909 (QT-interval prolongation)
- ▶ **Lapatinib** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **alsikiren**. [Moderate] Theoretical
- ▶ **Antacids** are predicted to decrease the absorption of **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedrone)** are predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Lapatinib** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Aprepitant** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Cobicistat** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Lapatinib** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **digoxin**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Enzalutamide** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **everolimus**. [Moderate] Theoretical

Lapatinib (continued)

- ▶ **Lapatinib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Idelalisib** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **loperamide**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Mitotane** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Lapatinib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Lapatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **sirolimus**. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Lapatinib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
- ▶ **Lapatinib** slightly increases the exposure to **taxanes (paclitaxel)**. [Severe] Study
- ▶ **Tedizolid** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Lapatinib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical

Laronidase

- ▶ **Antimalarials (chloroquine)** are predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. [Severe] Theoretical
- ▶ **Hydroxychloroquine** is predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. [Severe] Theoretical

Larotrectinib

- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 607. [Moderate] Study
- ▶ **Apalutamide** is predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **larotrectinib**. [Mild] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 607. [Moderate] Study
- ▶ **Larotrectinib** potentially decreases the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Eltrombopag** is predicted to increase the exposure to **larotrectinib**. [Mild] Study
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Larotrectinib** is predicted to increase the exposure to **ergotamine**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **larotrectinib**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 607. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 607. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **larotrectinib**. [Mild] Study
- ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 607. [Moderate] Study
- ▶ **Larotrectinib** slightly increases the exposure to **midazolam**. Use with caution and adjust dose. [Mild] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Larotrectinib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **Larotrectinib** is predicted to increase the exposure to **pimozide**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Larotrectinib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Larotrectinib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **larotrectinib**. [Mild] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical

Ledipasvir

- ▶ **Antacids** are predicted to decrease the exposure to **ledipasvir**. Separate administration by 4 hours. [Moderate] Theoretical
- ▶ **Ledipasvir** increases the risk of severe bradycardia or heart block when given with **antiarrhythmics (amiodarone)**. Refer to specialist literature. [Severe] Anecdotal
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study

- ▶ Antiepileptics (**fosphenytoin**, **oxcarbazepine**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
 - ▶ Calcium salts (**calcium carbonate**) are predicted to decrease the exposure to **ledipasvir**. Separate administration by 4 hours. [Moderate] Theoretical
 - ▶ **Ledipasvir** is predicted to increase the exposure to **dabigatran**. [Moderate] Theoretical
 - ▶ **Ledipasvir** is predicted to increase the exposure to **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 436. [Moderate] Study
 - ▶ HIV-protease inhibitors (**tipranavir**) boosted with ritonavir are predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
 - ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 436. [Moderate] Theoretical
 - ▶ **Rifabutin** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
 - ▶ **Rifampicin** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
 - ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **ledipasvir**. Separate administration by at least 2 hours. [Moderate] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
 - ▶ **Ledipasvir** is predicted to increase the exposure to **statins** (**atorvastatin**, **fluvastatin**, **pravastatin**, **simvastatin**). Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Ledipasvir** is predicted to increase the exposure to **statins** (**rosuvastatin**). Avoid. [Severe] Theoretical
 - ▶ **Ledipasvir** (with sofosbuvir) slightly increases the exposure to **tenofovir disoproxil**. [Moderate] Study
- Leflunomide** → see TABLE 1 p. 907 (hepatotoxicity), TABLE 15 p. 910 (myelosuppression)
- PHARMACOLOGY** Leflunomide has a long half-life; washout procedure recommended before switching to other DMARDs (consult product literature).
- ▶ **Leflunomide** is predicted to increase the exposure to **adefovir**. [Moderate] Theoretical
 - ▶ **Leflunomide** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
 - ▶ **Leflunomide** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
 - ▶ **Leflunomide** is predicted to decrease the exposure to anaesthetics, local (**ropivacaine**). [Moderate] Theoretical
 - ▶ **Leflunomide** is predicted to increase the exposure to anthracyclines (**daunorubicin**, **doxorubicin**, **mitoxantrone**). [Moderate] Theoretical → Also see TABLE 15 p. 910
 - ▶ **Leflunomide** is predicted to increase the exposure to antihistamines, non-sedating (**exofenadine**). [Moderate] Study
 - ▶ **Leflunomide** potentially increases the exposure to **baricitinib**. [Moderate] Theoretical
 - ▶ **Leflunomide** is predicted to increase the exposure to **bosentan**. [Moderate] Study
 - ▶ **Leflunomide** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Leflunomide** is predicted to increase the exposure to cephalosporins (**cefaclor**). [Moderate] Theoretical
 - ▶ **Leflunomide** is predicted to decrease the exposure to **clozapine**. [Moderate] Theoretical → Also see TABLE 15 p. 910
 - ▶ **Leflunomide** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
 - ▶ **Leflunomide** is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
 - ▶ **Leflunomide** is predicted to increase the exposure to **ganciclovir**. [Moderate] Theoretical → Also see TABLE 15 p. 910
 - ▶ **Leflunomide** is predicted to increase the exposure to **H₂ receptor antagonists** (**cimetidine**, **famotidine**). [Moderate] Theoretical
 - ▶ **Leflunomide** is predicted to increase the exposure to **larotrectinib**. [Mid] Study
 - ▶ **Leflunomide** is predicted to increase the concentration of **letermovir**. [Moderate] Study
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **leflunomide**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
 - ▶ **Leflunomide** is predicted to increase the exposure to **loop diuretics** (**furosemide**). [Moderate] Theoretical
 - ▶ **Leflunomide** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
 - ▶ **Leflunomide** is predicted to increase the exposure to **methotrexate**. [Moderate] Theoretical → Also see TABLE 1 p. 907 → Also see TABLE 15 p. 910
 - ▶ **Leflunomide** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Leflunomide** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
 - ▶ **Leflunomide** is predicted to increase the exposure to **nateglinide**. [Moderate] Theoretical
 - ▶ **Leflunomide** is predicted to increase the exposure to NSAIDs (**indometacin**, **ketoprofen**). [Moderate] Theoretical
 - ▶ **Leflunomide** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 15 p. 910
 - ▶ **Leflunomide** is predicted to increase the exposure to **oseltamivir**. [Moderate] Theoretical
 - ▶ **Leflunomide** is predicted to increase the exposure to **penicillins** (**benzylpenicillin**). [Moderate] Theoretical
 - ▶ **Leflunomide** is predicted to increase the exposure to **pioglitazone**. [Moderate] Study
 - ▶ **Leflunomide** is predicted to decrease the exposure to **piperfenidone**. [Moderate] Theoretical
 - ▶ **Leflunomide** is predicted to increase the exposure to **quinolones** (**ciprofloxacin**). [Moderate] Theoretical
 - ▶ **Leflunomide** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
 - ▶ **Leflunomide** is predicted to increase the exposure to **rifampicin**. [Moderate] Theoretical
 - ▶ **Leflunomide** is predicted to increase the exposure to **selexipag**. Adjust selexipag dose. [Moderate] Study
 - ▶ **Leflunomide** is predicted to increase the exposure to **statins** (**atorvastatin**, **fluvastatin**, **pravastatin**, **simvastatin**). [Moderate] Study → Also see TABLE 1 p. 907
 - ▶ **Leflunomide** is predicted to increase the exposure to **statins** (**rosuvastatin**). Adjust dose. [Moderate] Study → Also see TABLE 1 p. 907
 - ▶ **Leflunomide** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 1 p. 907 → Also see TABLE 15 p. 910
 - ▶ **Leflunomide** is predicted to increase the exposure to **sulfonylureas** (**glibenclamide**). [Moderate] Study
 - ▶ **Leflunomide** potentially increases the exposure to **talazoparib**. Avoid or monitor. [Moderate] Theoretical
 - ▶ **Leflunomide** is predicted to increase the concentration of **taxanes** (**paclitaxel**). [Severe] Anecdotal → Also see TABLE 15 p. 910
 - ▶ **Leflunomide** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
 - ▶ **Leflunomide** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical
 - ▶ **Leflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
 - ▶ **Leflunomide** moderately decreases the exposure to **tizanidine**. [Mid] Study
 - ▶ **Leflunomide** is predicted to increase the exposure to **topotecan**. [Moderate] Study → Also see TABLE 15 p. 910
 - ▶ **Leflunomide** is predicted to increase the exposure to **zidovudine**. [Moderate] Theoretical → Also see TABLE 15 p. 910
- Lenalidomide** → see TABLE 1 p. 907 (hepatotoxicity), TABLE 15 p. 910 (myelosuppression), TABLE 5 p. 907 (thromboembolism)
- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. Avoid. [Severe] Theoretical
 - ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. [Severe] Theoretical

Lenvatinib → see TABLE 9 p. 909 (QT-interval prolongation)

Lercanidipine → see calcium channel blockers

Letermovir

- ▶ **Letermovir** is predicted to increase the concentration of antiarrhythmics (**amiodarone**). [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, phenobarbital, primidone)** are predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to decrease the concentration of anti-epileptics (**fosphenytoin, phenytoin**) and anti-epileptics (**fosphenytoin, phenytoin**) are predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **Letermovir** slightly decreases the exposure to **antifungals, azoles (voriconazole)**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the concentration of **antihistamines, non-sedating (fexofenadine)**. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the concentration of **bosentan**. [Moderate] Theoretical
- ▶ **Letermovir** increases the exposure to **ciclosporin** and **ciclosporin** increases the exposure to **letermovir**. Monitor and adjust **letermovir** dose. [Severe] Study
- ▶ **Letermovir** is predicted to decrease the concentration of **coumarins (warfarin)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to decrease the concentration of **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **Eltrombopag** is predicted to increase the concentration of **letermovir**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the concentration of **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Letermovir** is predicted to increase the concentration of **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Etravirine** is predicted to decrease the exposure to **letermovir**. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the concentration of **everolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Fibrates (gemfibrozil)** are predicted to increase the concentration of **letermovir**. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** boosted with ritonavir are predicted to increase the concentration of **letermovir**. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the concentration of **letermovir**. [Moderate] Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the concentration of **letermovir**. [Moderate] Study
- ▶ **Letermovir** slightly to moderately increases the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Modafinil** is predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the concentration of **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Letermovir** is predicted to increase the concentration of **repaglinide**. Avoid. [Moderate] Theoretical
- ▶ **Rifabutin** is predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to affect the concentration of **letermovir**. [Severe] Theoretical
- ▶ **Letermovir** moderately increases the exposure to **sirolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **Letermovir** moderately increases the exposure to **statins (atorvastatin)**. Avoid or adjust **atorvastatin** dose, p. 139. [Severe] Study
- ▶ **Letermovir** is predicted to increase the exposure to **statins (fluvastatin)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **statins (pravastatin)**. Avoid or adjust dose. [Moderate] Theoretical

- ▶ **Letermovir** is predicted to increase the exposure to **statins (rosuvastatin, simvastatin)**. Avoid. [Severe] Study
- ▶ **Letermovir** is predicted to increase the concentration of **sulfonylureas (glibenclamide)**. [Moderate] Theoretical
- ▶ **Letermovir** moderately increases the exposure to **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Teriflunomide** is predicted to increase the concentration of **letermovir**. [Moderate] Study

Levamisole

- ▶ **Albendazole** slightly decreases the exposure to **levamisole** and **levamisole** moderately decreases the exposure to **albendazole**. [Moderate] Study
- ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **levamisole**. [Moderate] Study
- ▶ **Levamisole** increases the exposure to **ivermectin**. [Moderate] Study

Levetiracetam → see anti-epileptics

Levobunolol → see beta blockers, non-selective

Levobupivacaine → see anaesthetics, local

Levocetirizine → see antihistamines, non-sedating

Levodopa → see TABLE 8 p. 908 (hypotension)

- ▶ **Amisulpride** is predicted to decrease the effects of **levodopa**. Avoid. [Severe] Theoretical
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of **levodopa**. [Moderate] Study
- ▶ **Aripiprazole** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 908
- ▶ **Asenapine** is predicted to decrease the effects of **levodopa**. Adjust dose. [Severe] Theoretical → Also see TABLE 8 p. 908
- ▶ **Baclofen** is predicted to increase the risk of side-effects when given with **levodopa**. [Severe] Anecdotal → Also see TABLE 8 p. 908
- ▶ **Benperidol** is predicted to decrease the effects of **levodopa**. [Severe] Study → Also see TABLE 8 p. 908
- ▶ **Bupropion** increases the risk of side-effects when given with **levodopa**. [Moderate] Study
- ▶ **Clozapine** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 908
- ▶ **Droperidol** decreases the effects of **levodopa**. [Severe] Study → Also see TABLE 8 p. 908
- ▶ **Drugs with antimuscarinic effects** (see TABLE 10 p. 909) decrease the absorption of **levodopa**. [Moderate] Theoretical
- ▶ **Entacapone** increases the exposure to **levodopa**. Monitor side effects and adjust dose. [Moderate] Study
- ▶ **Flupentixol** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Theoretical → Also see TABLE 8 p. 908
- ▶ **Haloperidol** decreases the effects of **levodopa**. [Severe] Study → Also see TABLE 8 p. 908
- ▶ **Iron (oral)** decreases the absorption of **levodopa**. [Moderate] Study
- ▶ **Isoniazid** decreases the effects of **levodopa**. [Moderate] Study
- ▶ **Levodopa** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Loxapine** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 908
- ▶ **Lurasidone** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 908
- ▶ **MAO-B inhibitors** are predicted to increase the effects of **levodopa**. Adjust dose. [Mild] Study → Also see TABLE 8 p. 908
- ▶ **Levodopa** increases the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Study → Also see TABLE 8 p. 908
- ▶ **Memantine** is predicted to increase the effects of **levodopa**. [Moderate] Theoretical
- ▶ **Metoclopramide** decreases the effects of **levodopa**. Avoid. [Moderate] Study
- ▶ **Levodopa** increases the risk of side-effects when given with **moclobemide**. [Moderate] Study
- ▶ **Olanzapine** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Anecdotal → Also see TABLE 8 p. 908
- ▶ **Opicapone** increases the exposure to **levodopa**. Adjust dose. [Moderate] Study
- ▶ **Paliperidone** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 908

- ▶ **Phenothiazines** decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Study → Also see TABLE 8 p. 908
 - ▶ **Pimozide** decreases the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 908
 - ▶ **Quetiapine** decreases the effects of **levodopa**. [Severe] Anecdotal → Also see TABLE 8 p. 908
 - ▶ **Risperidone** is predicted to decrease the effects of **levodopa**. Avoid or adjust dose. [Severe] Anecdotal → Also see TABLE 8 p. 908
 - ▶ **Sulpiride** is predicted to decrease the effects of **levodopa**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 908
 - ▶ **Tetrabenazine** is predicted to decrease the effects of **levodopa**. Use with caution or avoid. [Moderate] Theoretical
 - ▶ **Tolcapone** increases the exposure to **levodopa**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Tryptophan** greatly increases the concentration of **levodopa**. [Moderate] Study
 - ▶ **Zuclopenthixol** is predicted to decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Theoretical → Also see TABLE 8 p. 908
- Levofloxacin** → see quinolones
Levofolinic acid → see folates
Levomepromazine → see phenothiazines
- Levonorgestrel**
- ▶ Antiepileptics (**carbamazepine**, **eslicarbazepine**, **fosphenytoin**, **oxcarbazepine**, **perampanel**, **phenobarbital**, **phenytoin**, **primidone**, **rufinamide**, **topiramate**) are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
 - ▶ **Aprepitant** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
 - ▶ **Bosentan** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
 - ▶ **Efavirenz** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
 - ▶ **Fosaprepitant** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
 - ▶ **Griseofulvin** potentially decreases the efficacy of oral **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
 - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
 - ▶ **Lumacaftor** is predicted to decrease the efficacy of **levonorgestrel**. Use additional contraceptive precautions. [Severe] Theoretical
 - ▶ **Modafinil** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
 - ▶ **Nevirapine** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
 - ▶ **Rifabutin** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
 - ▶ **Rifampicin** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the efficacy of **levonorgestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
 - ▶ **Sugammadex** is predicted to decrease the exposure to **levonorgestrel**. Use additional contraceptive precautions. [Severe] Theoretical
 - ▶ **Ulipristal** is predicted to decrease the efficacy of **levonorgestrel**. Avoid. [Severe] Theoretical
- Levothyroxine** → see thyroid hormones
Lidocaine → see antiarrhythmics
Linagliptin → see TABLE 14 p. 910 (antidiabetic drugs)
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **linagliptin**. [Moderate] Study
 - ▶ **Apalutamide** is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
 - ▶ **Linagliptin** is predicted to increase the exposure to **lomipatide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- Linezolid** → see TABLE 15 p. 910 (myelosuppression), TABLE 13 p. 910 (serotonin syndrome)
- FOOD AND LIFESTYLE** Patients taking linezolid should avoid consuming large amounts of tyramine-rich foods (such as mature cheese, salami, pickled herring, Bovril[®], Oxo[®], Marmite[®] or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).
- ▶ **Beta₂ agonists** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
 - ▶ **Bupropion** is predicted to increase the risk of intraoperative hypertension when given with **linezolid**. [Severe] Anecdotal → Also see TABLE 13 p. 910
 - ▶ **Buspirone** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 910
 - ▶ **Levodopa** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
 - ▶ **Macrolides (clarithromycin)** increase the exposure to **linezolid**. [Moderate] Anecdotal
 - ▶ **MAO-B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 910
 - ▶ **MAO-B inhibitors (safinamide)** are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 1 week after stopping **safinamide**. [Severe] Theoretical → Also see TABLE 13 p. 910
 - ▶ **MAOIs, irreversible** are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 910
 - ▶ **Methylphenidate** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
 - ▶ **Moclobemide** is predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping **moclobemide**. [Severe] Theoretical → Also see TABLE 13 p. 910
 - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **linezolid**. Avoid. [Severe] Theoretical
 - ▶ **Rifampicin** slightly decreases the exposure to **linezolid**. [Moderate] Study
 - ▶ **Sympathomimetics, inotropic** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
 - ▶ **Sympathomimetics, vasoconstrictor (adrenaline/epinephrine, ephedrine, isometheptene, noradrenaline/norepinephrine, phenylephrine)** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
 - ▶ **Sympathomimetics, vasoconstrictor (pseudoephedrine)** increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Study
- Liothyronine** → see thyroid hormones
Liraglutide → see TABLE 14 p. 910 (antidiabetic drugs)
Lisdexamfetamine → see amfetamines
Lisinopril → see ACE inhibitors
Lithium → see TABLE 13 p. 910 (serotonin syndrome), TABLE 9 p. 909 (QT-interval prolongation)
- ▶ **ACE inhibitors** are predicted to increase the concentration of **lithium**. Monitor and adjust dose. [Severe] Anecdotal

Lithium (continued)

- ▶ **Acetazolamide** alters the concentration of **lithium**. [\[Severe\]](#) Anecdotal
- ▶ **Aldosterone antagonists (eplerenone)** potentially increase the concentration of **lithium**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Aldosterone antagonists (spironolactone)** potentially increase the concentration of **lithium**. [\[Moderate\]](#) Study
- ▶ **Aminophylline** is predicted to decrease the concentration of **lithium**. [\[Moderate\]](#) Theoretical
- ▶ **Angiotensin-II receptor antagonists** potentially increase the concentration of **lithium**. Monitor concentration and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Antiepileptics (carbamazepine, oxcarbazepine)** are predicted to increase the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal
- ▶ **Calcitonins** decrease the concentration of **lithium**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal
- ▶ **Loop diuretics** increase the concentration of **lithium**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Methyldopa** increases the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal
- ▶ **Metronidazole** is predicted to increase the concentration of **lithium**. Avoid or adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Mexiletine** potentially affects the exposure to **lithium**. Avoid. [\[Unknown\]](#) Theoretical
- ▶ **NSAIDs** increase the concentration of **lithium**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Phenothiazines** potentially increase the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal → Also see **TABLE 9** p. 909
- ▶ **Potassium-sparing diuretics (triamterene)** potentially increase the clearance of **lithium**. [\[Moderate\]](#) Study
- ▶ **Quetiapine** potentially increases the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal
- ▶ **Risperidone** potentially increases the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal → Also see **TABLE 9** p. 909
- ▶ **Sodium bicarbonate** decreases the concentration of **lithium**. [\[Severe\]](#) Anecdotal
- ▶ **Sulpiride** potentially increases the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal → Also see **TABLE 9** p. 909
- ▶ **Tetracyclines** are predicted to increase the risk of lithium toxicity when given with **lithium**. Avoid or adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Theophylline** is predicted to decrease the concentration of **lithium**. Monitor concentration and adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Thiazide diuretics** increase the concentration of **lithium**. Avoid or adjust dose and monitor concentration. [\[Severe\]](#) Study
- ▶ **Tricyclic antidepressants** potentially increase the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal → Also see **TABLE 13** p. 910 → Also see **TABLE 9** p. 909
- ▶ **Zuclophenthixol** potentially increases the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal → Also see **TABLE 9** p. 909

Live vaccines

Bacillus Calmette-Guérin vaccine · influenza vaccine (live) · measles, mumps and rubella vaccine, live · rotavirus vaccine · typhoid vaccine, oral · varicella-zoster vaccine · yellow fever vaccine, live

GENERAL INFORMATION Oral typhoid vaccine is inactivated by concurrent administration of antibacterials or antimalarials: antibacterials should be avoided for 3 days before and after oral typhoid vaccination; *mefloquine* should be avoided for at least 12 hours before or after oral typhoid vaccination; for other antimalarials oral typhoid vaccine vaccination should be completed at least 3 days before the first dose of the antimalarial (except proguanil hydrochloride with atovaquone, which can be given concurrently).

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with

abatacept. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **alkylating agents**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **amsacrine**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **anakinra**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **anthracyclines**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **azathioprine** (high-dose). Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **baricitinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **belatacept**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **bleomycin**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **capcitabine**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **ciclosporin**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **cladribine**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **clofarabine**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **corticosteroids** (high-dose). Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **cytarabine**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dactinomycin**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dimethyl fumarate**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etanercept**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etoposide**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with

- everolimus.** Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fingolimod**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fludarabine**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fluorouracil**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **gemcitabine**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **hydroxycarbamide**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Immunoglobulins (cytomegalovirus immunoglobulin)** are predicted to decrease the efficacy of **live vaccines**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **irinotecan**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **iron chelators (dexrazoxane)**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **leflunomide**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mercaptopurine (high-dose)**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **methotrexate (high-dose)**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mitomycin**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **monoclonal antibodies**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mycophenolate**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **pemetrexed**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **platinum compounds**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **procarbazine**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **raltitrexed**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **siponimod**. Avoid and for 4 weeks after stopping **siponimod**. [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **sirolimus**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **streptozocin**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tacrolimus**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **taxanes (docetaxel, paclitaxel)**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tegafur**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **temsirolimus**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **teriflunomide**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tioguanine**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** potentially increase the risk of generalised infection (possibly life-threatening) when given with **tofacitinib**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **topotecan**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **trabectedin**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **upadacitinib**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Venetoclax** potentially decreases the efficacy of **live vaccines**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **vinca alkaloids**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- Lixisenatide** → see TABLE 14 p. 910 (antidiabetic drugs)
- SEPARATION OF ADMINISTRATION** Some orally administered drugs should be taken at least 1 hour before, or 4 hours after, lixisenatide injection.
- Lofepiramine** → see tricyclic antidepressants
- Lofexidine** → see TABLE 8 p. 908 (hypotension), TABLE 9 p. 909 (QT-interval prolongation), TABLE 11 p. 909 (CNS depressant effects)
- Lomitapide** → see TABLE 1 p. 907 (hepatotoxicity)
- FOOD AND LIFESTYLE** Bitter (Seville) orange is predicted to increase the exposure to lomitapide; separate administration by 12 hours.
- ▶ **Alprazolam** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
 - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **lomitapide**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure

Lomitapide (continued)

- to lomitapide. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 907
- ▶ Antifungals, azoles (**clotrimazole**) are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to lomitapide. Avoid. [Moderate] Theoretical → Also see TABLE 1 p. 907
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to lomitapide. Avoid. [Severe] Study → Also see TABLE 1 p. 907
 - ▶ **Apalutamide** is predicted to decrease the exposure to lomitapide. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Apreritant** is predicted to increase the exposure to lomitapide. Avoid. [Moderate] Theoretical
 - ▶ **Bicalutamide** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ Calcium channel blockers (**amlodipine**, **lacidipine**) are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to lomitapide. Avoid. [Moderate] Theoretical
 - ▶ **Ciclosporin** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Clofazimine** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Cobicistat** is predicted to markedly increase the exposure to lomitapide. Avoid. [Severe] Study
 - ▶ Oral **combined hormonal contraceptives** slightly increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ Lomitapide increases the exposure to **coumarins (warfarin)**. Monitor INR and adjust dose. [Severe] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to lomitapide. Avoid. [Moderate] Theoretical
 - ▶ **Enzalutamide** is predicted to decrease the exposure to lomitapide. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Everolimus** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Fosaprepitant** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ H₂ receptor antagonists (**cimetidine**, **ranitidine**) are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to lomitapide. Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to markedly increase the exposure to lomitapide. Avoid. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the exposure to lomitapide. Avoid. [Moderate] Theoretical
 - ▶ **Isoniazid** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Unknown] Theoretical → Also see TABLE 1 p. 907
 - ▶ **Ivacaftor** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Lapatinib** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Linagliptin** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to lomitapide. Avoid. [Severe] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to lomitapide. Avoid. [Moderate] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to lomitapide. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Netupitant** is predicted to increase the exposure to lomitapide. Avoid. [Moderate] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to lomitapide. Avoid. [Moderate] Theoretical
 - ▶ **Pazopanib** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Peppermint oil** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Propiverine** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Ranolazine** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Rifampicin** is predicted to decrease the exposure to lomitapide. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **SSRIs (fluoxetine)** are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Unknown] Theoretical
 - ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ Lomitapide increases the exposure to **statins (atorvastatin)**. Adjust lomitapide dose or separate administration by 12 hours. [Mild] Study → Also see TABLE 1 p. 907
 - ▶ Lomitapide increases the exposure to **statins (simvastatin)**. Monitor and adjust simvastatin dose, p. 141. [Moderate] Study → Also see TABLE 1 p. 907
 - ▶ **Tacrolimus** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Ticagrelor** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Tolvaptan** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- Lomustine** → see alkylating agents
- Loop diuretics** → see TABLE 18 p. 911 (hyponatraemia), TABLE 8 p. 908 (hypotension), TABLE 19 p. 911 (ototoxicity), TABLE 17 p. 911 (reduced serum potassium)
- bumetanide • furosemide • torasemide
- ▶ **Aliskiren** slightly decreases the exposure to furosemide. [Moderate] Study → Also see TABLE 8 p. 908
 - ▶ **Loop diuretics** increase the risk of nephrotoxicity when given with **aminoglycosides**. Avoid. [Moderate] Study → Also see TABLE 19 p. 911
 - ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of furosemide. [Moderate] Study
 - ▶ Intravenous **furosemide** potentially increases the risk of sweating, variable blood pressure, and tachycardia when given after **chloral hydrate**. [Moderate] Anecdotal
 - ▶ **Dasabuvir** (with ombitasvir, paritaprevir, and ritonavir) increases the concentration of **furosemide**. Adjust dose. [Moderate] Study
 - ▶ **Immunoglobulins (cytomegalovirus immunoglobulin)** are predicted to increase the risk of side-effects when given with **loop diuretics**. Avoid. [Moderate] Theoretical
 - ▶ **Leflunomide** is predicted to increase the exposure to furosemide. [Moderate] Theoretical
 - ▶ **Loop diuretics** increase the concentration of **lithium**. Monitor and adjust dose. [Severe] Study
 - ▶ **Nitisinone** is predicted to increase the exposure to furosemide. [Moderate] Study
 - ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to furosemide. Adjust dose. [Moderate] Theoretical
 - ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **loop diuretics**. [Moderate] Theoretical
 - ▶ **Teriflunomide** is predicted to increase the exposure to furosemide. [Moderate] Study
- Loperamide**
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to loperamide. [Severe] Theoretical
 - ▶ **Ceritinib** is predicted to increase the exposure to loperamide. [Moderate] Theoretical
 - ▶ **Loperamide** greatly increases the absorption of oral **desmopressin** (and possibly sublingual). [Moderate] Study

- ▶ **Eliglustat** is predicted to increase the exposure to **loperamide**. Adjust dose. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **loperamide**. [Moderate] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **loperamide**. [Mild] Theoretical
- ▶ **Opicapone** is predicted to increase the exposure to **loperamide**. Avoid. [Moderate] Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **loperamide**. [Moderate] Study
- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **loperamide**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **loperamide**. [Mild] Theoretical
- ▶ **Velpatasvir** is predicted to increase the exposure to **loperamide**. [Severe] Theoretical
- Lopinavir** → see HIV-protease inhibitors
- Loprazolam** → see TABLE 11 p. 909 (CNS depressant effects)
- Loratadine** → see antihistamines, non-sedating
- Lorazepam** → see TABLE 11 p. 909 (CNS depressant effects)
- ▶ **Rifampicin** increases the clearance of **lorazepam**. [Moderate] Study
- Lorlatinib**
 - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose. [Severe] Study
 - ▶ **Apalutamide** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study
 - ▶ **Bosentan** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Theoretical
 - ▶ **Lorlatinib** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Moderate] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose. [Severe] Study
 - ▶ **Lorlatinib** is predicted to decrease the exposure to **combined hormonal contraceptives**. Avoid. [Moderate] Theoretical
 - ▶ **Efavirenz** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Theoretical
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study
 - ▶ **Lorlatinib** is predicted to decrease the exposure to **ergotamine**. Avoid. [Moderate] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the concentration of **lorlatinib**. Avoid. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose. [Severe] Study
 - ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose. [Severe] Study
 - ▶ **Lorlatinib** moderately decreases the exposure to **midazolam**. Avoid. [Moderate] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study
 - ▶ **Nevirapine** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Theoretical
 - ▶ **Lorlatinib** is predicted to decrease the exposure to **opioids** (**alfentanil**, **fentanyl**). Avoid. [Moderate] Theoretical
 - ▶ **Lorlatinib** is predicted to decrease the exposure to **pimozide**. Avoid. [Moderate] Theoretical
 - ▶ **Rifampicin** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study
 - ▶ **Lorlatinib** is predicted to decrease the exposure to **sirolimus**. Avoid. [Moderate] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Theoretical
 - ▶ **Lorlatinib** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Moderate] Theoretical
- Lormetazepam** → see TABLE 11 p. 909 (CNS depressant effects)
- Losartan** → see angiotensin-II receptor antagonists

Low molecular-weight heparins → see TABLE 16 p. 911 (increased serum potassium), TABLE 3 p. 907 (anticoagulant effects)

dalteparin · enoxaparin · tinzaparin

- ▶ **Ranibizumab** increases the risk of bleeding events when given with **low molecular-weight heparins**. [Severe] Theoretical
- Loxapine** → see TABLE 8 p. 908 (hypotension), TABLE 11 p. 909 (CNS depressant effects), TABLE 10 p. 909 (antimuscarinics)
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
- ▶ **Loxapine** is predicted to decrease the effects of **dopamine receptor agonists**. [Moderate] Theoretical → Also see TABLE 8 p. 908 → Also see TABLE 10 p. 909
- ▶ **Loxapine** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 908
- ▶ **Mexiletine** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
- ▶ **Quinolones** (**ciprofloxacin**) are predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
- ▶ **SSRIs** (**fluvoxamine**) are predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical

Lumacaftor

- ▶ **Lumacaftor** is predicted to decrease the exposure to antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**). Avoid. [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to antifungals, azoles (**fluconazole**). Adjust dose. [Mild] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to antifungals, azoles (**itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**). Avoid or monitor efficacy. [Moderate] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **corticosteroids** (**methylprednisolone**). Adjust dose. [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **everolimus**. Avoid. [Severe] Theoretical
- ▶ **Lumacaftor** potentially decreases the exposure to **glecaprevir**. Avoid. [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the efficacy of **levonorgestrel**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **macrolides** (**clarithromycin**, **erythromycin**). [Moderate] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **midazolam**. Avoid. [Severe] Theoretical
- ▶ **Lumacaftor** potentially decreases the exposure to **pibrentasvir**. Avoid. [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **rifabutin**. Adjust dose. [Moderate] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **sirolimus**. Avoid. [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the efficacy of **ulipristal**. Use additional contraceptive precautions. [Severe] Theoretical
- Lumefantrine** → see antimalarials
- Lurasidone** → see TABLE 8 p. 908 (hypotension), TABLE 11 p. 909 (CNS depressant effects)
- ▶ **Antiarrhythmics** (**dronedarone**) are predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study → Also see TABLE 11 p. 909
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**) are predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose. [Moderate] Study

Lurasidone (continued)

- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **lurasidone**. Avoid. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**posaconazole**) moderately increase the exposure to **lurasidone**. Avoid. [\[Severe\]](#) Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **lurasidone**. Avoid. [\[Moderate\]](#) Study
- ▶ **Aprepitant** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose. [\[Moderate\]](#) Study
- ▶ **Bosentan** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose. [\[Moderate\]](#) Study → Also see TABLE 8 p. 908
- ▶ **Cobicistat** is predicted to increase the exposure to **lurasidone**. Avoid. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose. [\[Moderate\]](#) Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **lurasidone**. Avoid. [\[Moderate\]](#) Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **lurasidone**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **lurasidone**. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **lurasidone**. Avoid. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose. [\[Moderate\]](#) Study
- ▶ **Lurasidone** is predicted to decrease the effects of **levodopa**. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 908
- ▶ Macrolides (**clarithromycin**) are predicted to increase the exposure to **lurasidone**. Avoid. [\[Severe\]](#) Study
- ▶ Macrolides (**erythromycin**) are predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **lurasidone**. Avoid. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose. [\[Moderate\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose. [\[Moderate\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **lurasidone**. Avoid. [\[Moderate\]](#) Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical

Lymecycline → see tetracyclines

Macitentan

- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **macitentan**. Avoid. [\[Severe\]](#) Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **macitentan**. [\[Moderate\]](#) Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **macitentan**. Avoid. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **macitentan**. [\[Moderate\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **macitentan**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **macitentan**. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **macitentan**. [\[Moderate\]](#) Study
- ▶ Macrolides (**clarithromycin**) are predicted to increase the exposure to **macitentan**. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **macitentan**. Avoid. [\[Severe\]](#) Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **macitentan**. Avoid. [\[Severe\]](#) Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **macitentan**. Avoid. [\[Severe\]](#) Theoretical

Macrolides → see TABLE 9 p. 909 (QT-interval prolongation)

azithromycin · clarithromycin · erythromycin

- ▶ Interactions do not generally apply to topical use of **azithromycin** unless specified.
- ▶ Since systemic absorption can follow topical application of **erythromycin**, the possibility of interactions should be borne in mind.
- ▶ **Clarithromycin** is predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose. [\[Severe\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **abemaciclib**. [\[Moderate\]](#) Study
- ▶ **Macrolides** are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to aldosterone antagonists (**eplerenone**). Avoid. [\[Severe\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to aldosterone antagonists (**eplerenone**). Adjust **eplerenone** dose. [\[Severe\]](#) Study
- ▶ **Azithromycin** is predicted to increase the exposure to **aliskiren**. [\[Moderate\]](#) Theoretical
- ▶ Macrolides (**clarithromycin**, **erythromycin**) are predicted to increase the exposure to **aliskiren**. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** increases the exposure to **almotriptan**. [\[Mid\]](#) Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **alpha blockers** (**alfuzosin**, **tamsulosin**). Use with caution or avoid. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **alpha blockers** (**doxazosin**). [\[Moderate\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **alpha blockers** (**tamsulosin**). [\[Moderate\]](#) Theoretical
- ▶ **Clarithromycin** moderately increases the exposure to **alprazolam**. Avoid. [\[Moderate\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **alprazolam**. [\[Severe\]](#) Study
- ▶ **Azithromycin** is predicted to increase the exposure to **aminophylline**. [\[Moderate\]](#) Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **aminophylline**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Aminophylline** is predicted to decrease the exposure to **erythromycin**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Clarithromycin** very markedly increases the exposure to antiarrhythmics (**dronedaron**). Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 909
- ▶ **Erythromycin** is predicted to moderately increase the exposure to antiarrhythmics (**dronedaron**). Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 909
- ▶ Macrolides (**clarithromycin**, **erythromycin**) are predicted to increase the exposure to antiarrhythmics (**lidocaine**). [\[Moderate\]](#) Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to antiarrhythmics (**propafenone**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to antiarrhythmics (**propafenone**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to anticholinesterases, centrally acting (**galantamine**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** slightly increases the concentration of antiepileptics (**carbamazepine**). Monitor concentration and adjust dose. [\[Severe\]](#) Study
- ▶ **Erythromycin** markedly increases the concentration of antiepileptics (**carbamazepine**). Monitor concentration and adjust dose. [\[Severe\]](#) Study
- ▶ **Clarithromycin** is predicted to very slightly increase the exposure to antiepileptics (**perampanel**). [\[Mid\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to antifungals, azoles (**isavuconazole**). Avoid or monitor side effects. [\[Severe\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to antifungals, azoles (**isavuconazole**). [\[Moderate\]](#) Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to antihistamines, non-sedating (**mizolastine**). Avoid. [\[Severe\]](#) Study

- ▶ **Erythromycin** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **apalutamide**. [Mild] Study → Also see TABLE 9 p. 909
- ▶ **Erythromycin** is predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 265. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study → Also see TABLE 9 p. 909
- ▶ **Erythromycin** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 909
- ▶ Macrolides are predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **beta₂ agonists (salmeterol)**. Avoid. [Severe] Study
- ▶ Macrolides are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Clarithromycin** slightly increases the exposure to **bortezomib**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Erythromycin** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 909
- ▶ **Clarithromycin** is predicted to increase the exposure to **brigatinib**. Adjust brigatinib dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **bupirone**. Adjust bupirone dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** slightly increases the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Erythromycin** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Erythromycin** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **calcium channel blockers (diltiazem)**. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **calcium channel blockers (verapamil)**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Azithromycin** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **ceritinib**. Avoid or adjust ceritinib dose. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Clarithromycin** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **cilostazol**. Adjust cilostazol dose. [Moderate] Study
- ▶ **Erythromycin** slightly increases the exposure to **cilostazol**. Adjust cilostazol dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Erythromycin** potentially increases the risk of toxicity when given with **clozapine**. [Severe] Anecdotal
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Azithromycin** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust colchicine dose. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust colchicine dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **colchicine**. Adjust colchicine dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **corticosteroids (beclomethasone)** (risk with beclomethasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone)**. Avoid or monitor side effects. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Macrolides (**clarithromycin, erythromycin**) increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ Macrolides are predicted to increase the exposure to **dabigatran**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Erythromycin** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Clarithromycin** very slightly increases the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Erythromycin** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
- ▶ Macrolides increase the concentration of **digoxin**. [Severe] Anecdotal
- ▶ Macrolides (**clarithromycin, erythromycin**) increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study

Macrolides (continued)

- ▶ **Clarithromycin** increases the exposure to **dopamine receptor agonists (bromocriptine)**. [\[Severe\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [\[Severe\]](#) Theoretical
- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. Avoid. [\[Severe\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **doravirine**. [\[Mild\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **drabinol**. Adjust dose. [\[Mild\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Erythromycin** is predicted to moderately increase the exposure to **dutasteride**. [\[Mild\]](#) Study
- ▶ **Erythromycin** slightly increases the exposure to **edoxaban**. Adjust **edoxaban** dose. [\[Severe\]](#) Study
- ▶ Macrolides (**azithromycin, clarithromycin**) are predicted to slightly increase the exposure to **edoxaban**. [\[Severe\]](#) Theoretical
- ▶ **Efavirenz** decreases the exposure to **clarithromycin**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 909
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [\[Severe\]](#) Study
- ▶ **Erythromycin** moderately increases the exposure to **eletriptan**. Avoid. [\[Moderate\]](#) Study
- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **encorafenib**. Avoid or monitor. [\[Severe\]](#) Study → Also see TABLE 9 p. 909
- ▶ **Erythromycin** is predicted to moderately increase the exposure to **encorafenib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 909
- ▶ **Clarithromycin** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Erythromycin** is predicted to increase the risk of ergotism when given with **ergometrine**. [\[Severe\]](#) Theoretical
- ▶ **Clarithromycin** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Erythromycin** is predicted to increase the risk of ergotism when given with **ergotamine**. [\[Severe\]](#) Theoretical
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ Macrolides (**azithromycin, erythromycin**) are predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Etravirine** decreases the exposure to **clarithromycin** and **clarithromycin** slightly increases the exposure to **etravirine**. [\[Severe\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the concentration of **everolimus**. Avoid. [\[Severe\]](#) Study
- ▶ **Erythromycin** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment. [\[Severe\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment. [\[Mild\]](#) Study
- ▶ Macrolides are predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **fosaprepitant**. [\[Moderate\]](#) Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **gilteritinib**. [\[Moderate\]](#) Study
- ▶ Macrolides (**azithromycin, erythromycin**) are predicted to increase the exposure to **gilteritinib**. [\[Moderate\]](#) Theoretical
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **grazoprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 247. [\[Moderate\]](#) Study
- ▶ **Erythromycin** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 247. [\[Moderate\]](#) Theoretical
- ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to **erythromycin**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors (atazanavir)** are predicted to increase the exposure to **clarithromycin**. Adjust dose in renal impairment. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, tipranavir)** are predicted to increase the exposure to **erythromycin**. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors (darunavir, fosamprenavir, lopinavir)** boosted with ritonavir are predicted to increase the exposure to **clarithromycin**. Adjust dose in renal impairment. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (ritonavir)** increase the exposure to **clarithromycin**. Adjust dose in renal impairment. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (tipranavir)** boosted with ritonavir increase the exposure to **clarithromycin** and **clarithromycin** increases the exposure to **HIV-protease inhibitors (tipranavir)** boosted with ritonavir. Monitor; adjust dose in renal impairment. [\[Severe\]](#) Study
- ▶ **Clarithromycin** increases the exposure to **HIV-protease inhibitors (saquinavir)** and **HIV-protease inhibitors (saquinavir)** increase the exposure to **clarithromycin**. Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 909
- ▶ **Erythromycin** is predicted to increase the exposure to **HIV-protease inhibitors (saquinavir)**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 909
- ▶ **Clarithromycin** is predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose. [\[Severe\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **imatinitib**. [\[Moderate\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **imatinitib**. [\[Moderate\]](#) Theoretical
- ▶ **Clarithromycin** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **ivabradine**. Avoid. [\[Severe\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **ivabradine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **ivacaftor**. Adjust ivacaftor p. 196 or lumacaftor with ivacaftor p. 197 or tezacaftor with ivacaftor p. 198 dose with potent inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Erythromycin** is predicted to increase the exposure to **ivacaftor**. Adjust ivacaftor p. 196 or tezacaftor with ivacaftor p. 198 dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **lapatinib**. Avoid. [\[Moderate\]](#) Study → Also see TABLE 9 p. 909
- ▶ **Erythromycin** is predicted to increase the exposure to **lapatinib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 909
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 607. [\[Moderate\]](#) Study
- ▶ Macrolides (**azithromycin, erythromycin**) are predicted to increase the exposure to **larotrectinib**. [\[Mild\]](#) Theoretical
- ▶ Macrolides (**clarithromycin, erythromycin**) are predicted to increase the concentration of **letermovir**. [\[Moderate\]](#) Study
- ▶ **Clarithromycin** increases the exposure to **linezolid**. [\[Moderate\]](#) Anecdotal
- ▶ **Azithromycin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **lomitapide**. Avoid. [\[Severe\]](#) Study

- ▶ **Erythromycin** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose. [Severe] Study
- ▶ **Lumacaftor** is predicted to decrease the exposure to macrolides (**clarithromycin, erythromycin**). [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **modafinil**. [Mid] Theoretical
- ▶ **Clarithromycin** increases the risk of neutropenia when given with **monoclonal antibodies (brentuximab vedotin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
- ▶ Macrolides (**azithromycin, erythromycin**) are predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **neratinib**. Avoid or adjust **neratinib** dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **netupitant**. [Moderate] Study
- ▶ **Nevirapine** decreases the exposure to **clarithromycin**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Erythromycin** is predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ Macrolides are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the concentration of **opioids (methadone)**. [Severe] Theoretical → Also see TABLE 9 p. 909
- ▶ **Erythromycin** is predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Clarithromycin** is predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **oxybutynin**. [Mid] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **oxybutynin**. [Mid] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ Macrolides (**azithromycin, erythromycin**) are predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Clarithromycin** is predicted to increase the exposure to **paritaprevir**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **paritaprevir**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Erythromycin** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Clarithromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 125. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 125. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Clarithromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 909
- ▶ Macrolides are predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Erythromycin** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 909
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **praziquantel**. [Mid] Study
- ▶ **Clarithromycin** given with carbimazole is predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Erythromycin** is predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 909

Macrolides (continued)

- ▶ **Clarithromycin** is predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust alitretinoin dose. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Erythromycin** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Azithromycin** increases the risk of neutropenia when given with **rifabutin**. [Severe] Study
- ▶ **Clarithromycin** increases the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Theoretical
- ▶ **Rifampicin** decreases the concentration of **clarithromycin**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Clarithromycin** is predicted to increase the exposure to **roxolitinib**. Adjust dose and monitor side effects. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **roxolitinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Erythromycin** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **solifenacin**. Adjust solifenacin or tamsulosin with solifenacin dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **SSRIs (dapoxetine)**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Erythromycin** slightly increases the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Clarithromycin** moderately increases the exposure to **statins (pravastatin)**. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **statins (pravastatin)**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ **Erythromycin** markedly increases the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **sulfonyleureas**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Erythromycin** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Clarithromycin** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Macrolides** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 198 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 198 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Erythromycin** decreases the clearance of **theophylline** and **theophylline** potentially decreases the clearance of **erythromycin**. Adjust dose. [Severe] Study
- ▶ **Macrolides (azithromycin, clarithromycin)** are predicted to increase the exposure to **theophylline**. Adjust dose. [Moderate] Anecdotal
- ▶ **Azithromycin** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose. [Moderate] Study
- ▶ **Erythromycin** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Erythromycin** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 909
- ▶ **Clarithromycin** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4. [Moderate] Study
- ▶ **Macrolides** are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Clarithromycin** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical
- ▶ **Macrolides** are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **venlafaxine**. [Severe] Theoretical → Also see TABLE 9 p. 909
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **venlafaxine**. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 909

- ▶ **Clarithromycin** is predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [Moderate] Study
- ▶ **Clarithromycin** decreases the absorption of **zidovudine**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- ▶ **Erythromycin** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

Magnesium

- ▶ Oral **magnesium** decreases the absorption of **bisphosphonates (alendronate)**. **Alendronate** should be taken at least 30 minutes before **magnesium**. [Moderate] Study
- ▶ Oral **magnesium** decreases the absorption of **bisphosphonates (clodronate)**. Avoid **magnesium** for 2 hours before or 1 hour after **clodronate**. [Moderate] Study
- ▶ Oral **magnesium** is predicted to decrease the absorption of oral **bisphosphonates (ibandronate)**. Avoid for at least 6 hours before or 1 hour after **ibandronate**. [Moderate] Theoretical
- ▶ Oral **magnesium** decreases the absorption of **bisphosphonates (risedronate)**. Separate administration by at least 2 hours. [Moderate] Study

▶ Intravenous **magnesium** potentially increases the risk of hypotension when given with **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine, verapamil)** in pregnant women. [Severe] Anecdotal

▶ Intravenous **magnesium** increases the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Study

▶ Intravenous **magnesium** is predicted to increase the effects of **suxamethonium**. [Moderate] Study

Magnesium carbonate → see antacids

Magnesium trisilicate → see antacids

MAO-B inhibitors → see TABLE 6 p. 908 (bradycardia), TABLE 8 p. 908 (hypotension), TABLE 13 p. 910 (serotonin syndrome)

rasagiline · safinamide · selegiline

FOOD AND LIFESTYLE Hypertension is predicted to occur when high-dose **selegiline** is taken with tyramine-rich foods (such as mature cheese, salami, pickled herring, *Bovril*[®], *Oxo*[®], *Marmite*[®] or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- ▶ MAO-B inhibitors (**rasagiline, selegiline**) are predicted to increase the risk of severe hypertension when given with **amfetamines**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 910
- ▶ **Safinamide** is predicted to increase the risk of severe hypertension when given with **amfetamines**. [Severe] Theoretical → Also see TABLE 13 p. 910
- ▶ MAO-B inhibitors (**rasagiline, selegiline**) are predicted to increase the risk of severe hypertension when given with **beta₂ agonists**. Avoid. [Severe] Theoretical
- ▶ **Safinamide** is predicted to increase the risk of severe hypertension when given with **beta₂ agonists**. [Severe] Theoretical
- ▶ MAO-B inhibitors are predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. [Moderate] Theoretical → Also see TABLE 13 p. 910
- ▶ **Combined hormonal contraceptives** slightly increase the exposure to **rasagiline**. [Moderate] Study
- ▶ **Combined hormonal contraceptives** increase the exposure to **selegiline**. Avoid. [Severe] Study
- ▶ **Hormone replacement therapy** is predicted to increase the exposure to **selegiline**. Avoid. [Moderate] Study
- ▶ MAO-B inhibitors are predicted to increase the effects of **levodopa**. Adjust dose. [Mid] Study → Also see TABLE 8 p. 908
- ▶ MAO-B inhibitors (**rasagiline, selegiline**) are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 910
- ▶ **Safinamide** is predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 1 week after stopping **safranamide**. [Severe] Theoretical → Also see TABLE 13 p. 910
- ▶ MAO-B inhibitors (**rasagiline, selegiline**) are predicted to increase the risk of side-effects when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 8 p. 908 → Also see TABLE 13 p. 910

- ▶ **Safinamide** is predicted to increase the risk of side-effects when given with **MAOIs, irreversible**. Avoid and for 1 week after stopping **safranamide**. [Severe] Theoretical → Also see TABLE 13 p. 910
- ▶ MAO-B inhibitors (**rasagiline, selegiline**) are predicted to increase the risk of a hypertensive crisis when given with **methylphenidate**. Avoid. [Severe] Theoretical
- ▶ **Mexiletine** slightly increases the exposure to **rasagiline**. [Moderate] Study
- ▶ **Moclobemide** is predicted to increase the effects of MAO-B inhibitors (**rasagiline, selegiline**). Avoid. [Severe] Theoretical → Also see TABLE 13 p. 910
- ▶ **Moclobemide** is predicted to increase the risk of side-effects when given with **safranamide**. Avoid and for 1 week after stopping **safranamide**. [Severe] Theoretical → Also see TABLE 13 p. 910
- ▶ **Rasagiline** is predicted to increase the risk of side-effects when given with **opioids (pethidine)**. Avoid and for 14 days after stopping **rasagiline**. [Severe] Theoretical → Also see TABLE 13 p. 910
- ▶ **Safinamide** is predicted to increase the risk of side-effects when given with **opioids (pethidine)**. Avoid and for 1 week after stopping **safranamide**. [Severe] Theoretical → Also see TABLE 13 p. 910
- ▶ **Selegiline** increases the risk of side-effects when given with **opioids (pethidine)**. Avoid. [Severe] Anecdotal → Also see TABLE 13 p. 910
- ▶ **Quinolones (ciprofloxacin)** slightly increase the exposure to **rasagiline**. [Moderate] Study
- ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with MAO-B inhibitors (**rasagiline, selegiline**). Avoid. [Severe] Theoretical
- ▶ MAO-B inhibitors are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, inotropic**. Avoid. [Severe] Anecdotal
- ▶ MAO-B inhibitors are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, vasoconstrictor**. Avoid. [Severe] Anecdotal
- ▶ **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **MAO-B inhibitors**. [Severe] Theoretical

MAOIs, irreversible → see TABLE 8 p. 908 (hypotension), TABLE 13 p. 910 (serotonin syndrome)

isocarboxazid · phenelzine · tranlycypromine

FOOD AND LIFESTYLE Potentially life-threatening hypertensive crisis can develop in those taking MAOIs who eat tyramine-rich food (such as mature cheese, salami, pickled herring, *Bovril*[®], *Oxo*[®], *Marmite*[®] or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines) or foods containing dopa (such as broad bean pods). Avoid tyramine-rich or dopa-rich food or drinks with, or for 2 to 3 weeks after stopping, the MAOI.

- ▶ MAOIs, irreversible are predicted to increase the effects of **alpha blockers (indoramin)**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 908
- ▶ MAOIs, irreversible are predicted to increase the risk of a hypertensive crisis when given with **amfetamines**. Avoid and for 14 days after stopping the MAOI. [Severe] Anecdotal → Also see TABLE 13 p. 910
- ▶ **Antiepileptics (carbamazepine)** are predicted to increase the risk of severe toxic reaction when given with MAOIs, irreversible. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to increase the effects of MAOIs, irreversible. [Severe] Theoretical
- ▶ MAOIs, irreversible are predicted to increase the risk of antimuscarinic side-effects when given with **antihistamines, non-sedating**. Avoid. [Severe] Theoretical
- ▶ MAOIs, irreversible are predicted to increase the risk of antimuscarinic side-effects when given with **antihistamines, sedating**. Avoid. [Severe] Theoretical
- ▶ MAOIs, irreversible are predicted to increase the risk of side-effects when given with **atamoxetina**. Avoid and for 2 weeks after stopping the MAOI. [Severe] Theoretical
- ▶ MAOIs, irreversible are predicted to increase the risk of cardiovascular side-effects when given with **beta₂ agonists**. [Moderate] Anecdotal

MAOIs, irreversible (continued)

- ▶ **MAOIs, irreversible** are predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 910
- ▶ **Buspirone** is predicted to increase the risk of elevated blood pressure when given with **MAOIs, irreversible**. Avoid. [\[Severe\]](#) Anecdotal → Also see TABLE 13 p. 910
- ▶ **MAOIs, irreversible** are predicted to increase the effects of **doxapram**. [\[Moderate\]](#) Theoretical
- ▶ **Entacapone** is predicted to increase the risk of elevated blood pressure when given with **MAOIs, irreversible**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Levodopa** increases the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Study → Also see TABLE 8 p. 908
- ▶ **MAOIs, irreversible** are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 910
- ▶ **MAO-B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of side-effects when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 908 → Also see TABLE 13 p. 910
- ▶ **MAO-B inhibitors (safinamide)** are predicted to increase the risk of side-effects when given with **MAOIs, irreversible**. Avoid and for 1 week after stopping **safinamide**. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 910
- ▶ **MAOIs, irreversible** are predicted to alter the antihypertensive effects of **methyl dopa**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 908
- ▶ **Methylphenidate** is predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical
- ▶ **Mianserin** is predicted to increase the risk of toxicity when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical
- ▶ **Nefopam** is predicted to increase the risk of serious elevations in blood pressure when given with **MAOIs, irreversible**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **MAOIs, irreversible**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Opioids** are predicted to increase the risk of CNS excitation or depression when given with **MAOIs, irreversible**. Avoid. [\[Severe\]](#) Study → Also see TABLE 13 p. 910
- ▶ **MAOIs, irreversible** are predicted to increase the risk of neuroleptic malignant syndrome when given with **phenothiazines**. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 908
- ▶ **Polcodone** is predicted to increase the risk of CNS excitation or depression when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical
- ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **MAOIs, irreversible** are predicted to increase the exposure to **rizatriptan**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 910
- ▶ **MAOIs, irreversible** are predicted to increase the exposure to **sumatriptan**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 910
- ▶ **MAOIs, irreversible** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, inotropic**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical
- ▶ **MAOIs, irreversible** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, vasoconstrictor**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Study
- ▶ **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical
- ▶ **Tolcapone** is predicted to increase the effects of **MAOIs, irreversible**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **MAOIs, irreversible**.

Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#)

Theoretical → Also see TABLE 8 p. 908 → Also see TABLE 13 p. 910

- ▶ **Tryptophan** increases the risk of side-effects when given with **MAOIs, irreversible**. [\[Severe\]](#) Anecdotal → Also see TABLE 13 p. 910
- ▶ **MAOIs, irreversible** are predicted to increase the exposure to **zolmitriptan**. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 910

Maraviroc

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **maraviroc**. Adjust dose. [\[Severe\]](#) Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **maraviroc**. Adjust dose. [\[Severe\]](#) Study
 - ▶ **Apalutamide** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [\[Severe\]](#) Study
 - ▶ **Aprepitant** is predicted to increase the exposure to **maraviroc**. [\[Moderate\]](#) Study
 - ▶ **Bosentan** is predicted to decrease the exposure to **maraviroc**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Cobicistat** markedly increases the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
 - ▶ **Efavirenz** decreases the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Theoretical
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [\[Severe\]](#) Study
 - ▶ **Etravirine** (with a boosted protease inhibitor) increases the exposure to **maraviroc**. Avoid or adjust dose. [\[Moderate\]](#) Study
 - ▶ **HIV-protease inhibitors (atazanavir, saquinavir)** moderately to markedly increase the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
 - ▶ **HIV-protease inhibitors (lopinavir)** boosted with ritonavir moderately increase the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
 - ▶ **HIV-protease inhibitors (darunavir)** boosted with ritonavir markedly increase the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
 - ▶ **HIV-protease inhibitors (lopinavir)** boosted with ritonavir moderately increase the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
 - ▶ **HIV-protease inhibitors (ritonavir)** markedly increase the exposure to **maraviroc**. Refer to specialist literature. [\[Severe\]](#) Study
 - ▶ **Maraviroc** potentially decreases the exposure to **HIV-protease inhibitors (fosamprenavir)** and **HIV-protease inhibitors (fosamprenavir)** potentially decrease the exposure to **maraviroc**. Avoid. [\[Severe\]](#) Study
 - ▶ **Idelalisib** markedly increases the exposure to **maraviroc**. Adjust dose. [\[Severe\]](#) Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **maraviroc**. Adjust dose. [\[Severe\]](#) Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [\[Severe\]](#) Study
 - ▶ **Netupitant** is predicted to increase the exposure to **maraviroc**. [\[Moderate\]](#) Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [\[Severe\]](#) Study
 - ▶ **St John's Wort** is predicted to decrease the exposure to **maraviroc**. Avoid. [\[Severe\]](#) Theoretical
- Measles, mumps and rubella vaccine, live** → see live vaccines
- Mebendazole**
- ▶ **H₂ receptor antagonists (cimetidine)** increase the concentration of **mebendazole**. [\[Moderate\]](#) Study
- Medroxyprogesterone**
- ▶ **Sugammadex** is predicted to decrease the exposure to **medroxyprogesterone**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- Mefenamic acid** → see NSAIDs
- Mefloquine** → see antimalarials
- Melatonin** → see TABLE 11 p. 909 (CNS depressant effects)
- ▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
 - ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
 - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **melatonin**. [\[Moderate\]](#) Theoretical
 - ▶ **Leflunomide** is predicted to decrease the exposure to **melatonin**. [\[Moderate\]](#) Theoretical

- ▶ **Mexiletine** is predicted to increase the exposure to melatonin. [Moderate] Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to melatonin. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to melatonin. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** very markedly increase the exposure to melatonin. Avoid. [Severe] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to melatonin. [Moderate] Theoretical

Meloxicam → see NSAIDs

Melphalan → see alkylating agents

Memantine

- ▶ **Dopamine receptor agonists (amantadine)** increase the risk of CNS toxicity when given with memantine. Use with caution or avoid. [Severe] Theoretical
- ▶ **Memantine** is predicted to increase the effects of dopamine receptor agonists (apomorphine, bromocriptine, cabergoline, pergolide, pramipexole, quinagolide, ropinirole, rotigotine). [Moderate] Theoretical
- ▶ **Memantine** is predicted to increase the risk of CNS side-effects when given with ketamine. Avoid. [Severe] Theoretical
- ▶ **Memantine** is predicted to increase the effects of levodopa. [Moderate] Theoretical

Mepacrine

- ▶ **Mepacrine** is predicted to increase the concentration of antimalarials (primaquine). Avoid. [Moderate] Theoretical

Mepivacaine → see anaesthetics, local

Meprobamate → see TABLE 11 p. 909 (CNS depressant effects)

Meptazinol → see opioids

Mercaptopurine → see TABLE 1 p. 907 (hepatotoxicity), TABLE 15 p. 910 (myelosuppression)

- ▶ **Allopurinol** potentially increases the risk of haematological toxicity when given with mercaptopurine. Adjust mercaptopurine dose, p. 587. [Severe] Study
- ▶ **Mercaptopurine** decreases the anticoagulant effect of coumarins. [Moderate] Anecdotal
- ▶ **Febuxostat** is predicted to increase the exposure to mercaptopurine. Avoid. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with mercaptopurine (high-dose). Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

Meropenem → see carbapenems

Mesalazine

ROUTE-SPECIFIC INFORMATION The manufacturers of some mesalazine gastro-resistant and modified-release medicines (*Asacol MR* tablets, *Ipolcol*, *Salofalk* granules) suggest that preparations that lower stool pH (e.g. lactulose) might prevent the release of mesalazine.

Metaraminol → see sympathomimetics, vasoconstrictor

Metformin → see TABLE 14 p. 910 (antidiabetic drugs)

- ▶ **Alcohol (beverage)** (excessive consumption) potentially increases the risk of lactic acidosis when given with metformin. Avoid excessive alcohol consumption. [Moderate] Theoretical

▶ **Bictegravir** slightly increases the exposure to metformin. [Moderate] Study

▶ **Dolutegravir** increases the exposure to metformin. Use with caution and adjust dose. [Severe] Study

▶ **Guanfacine** is predicted to increase the concentration of metformin. [Moderate] Theoretical

▶ **H₂ receptor antagonists (cimetidine)** increase the exposure to metformin. Monitor and adjust dose. [Moderate] Study

▶ **Mexiletine** is predicted to affect the exposure to metformin. [Unknown] Theoretical

▶ **Pitolisant** is predicted to increase the exposure to metformin. [Mid] Theoretical

▶ **Ribociclib** is predicted to increase the exposure to metformin. [Moderate] Theoretical

▶ **Vandetanib** increases the exposure to metformin. Monitor and adjust dose. [Moderate] Study

Methadone → see opioids

Methenamine

▶ **Acetazolamide** is predicted to decrease the efficacy of methenamine. Avoid. [Moderate] Theoretical

▶ **Potassium citrate** is predicted to decrease the efficacy of methenamine. Avoid. [Moderate] Theoretical

▶ **Sodium bicarbonate** is predicted to decrease the efficacy of methenamine. Avoid. [Moderate] Theoretical

▶ **Sodium citrate** is predicted to decrease the efficacy of methenamine. Avoid. [Moderate] Theoretical

Methocarbamol → see TABLE 11 p. 909 (CNS depressant effects)

Methotrexate → see TABLE 1 p. 907 (hepatotoxicity), TABLE 15 p. 910 (myelosuppression), TABLE 2 p. 907 (nephrotoxicity), TABLE 5 p. 907 (thromboembolism)

▶ **Acetazolamide** increases the urinary excretion of methotrexate. [Moderate] Study

▶ **Methotrexate** is predicted to decrease the clearance of aminophylline. [Moderate] Theoretical

▶ **Antiepileptics (levetiracetam)** decrease the clearance of methotrexate. [Severe] Anecdotal

▶ **Antimalarials (pyrimethamine)** are predicted to increase the risk of side-effects when given with methotrexate. [Severe] Theoretical → Also see TABLE 15 p. 910

▶ **Apalutamide** is predicted to decrease the exposure to methotrexate. [Mid] Study

▶ **Asparaginase** affects the efficacy of methotrexate. [Severe] Anecdotal → Also see TABLE 1 p. 907 → Also see TABLE 15 p. 910

▶ **Aspirin** (high-dose) is predicted to increase the risk of toxicity when given with methotrexate. [Severe] Study

▶ **Brigatinib** potentially increases the concentration of methotrexate. [Moderate] Theoretical

▶ **Crisantaspase** affects the efficacy of methotrexate. [Severe] Anecdotal → Also see TABLE 1 p. 907 → Also see TABLE 15 p. 910

▶ **Eltrombopag** is predicted to increase the concentration of methotrexate. [Moderate] Theoretical

▶ **Methotrexate** potentially increases the risk of severe skin reaction when given with topical fluorouracil. [Severe] Anecdotal → Also see TABLE 15 p. 910 → Also see TABLE 5 p. 907

▶ **Leflunomide** is predicted to increase the exposure to methotrexate. [Moderate] Theoretical → Also see TABLE 1 p. 907 → Also see TABLE 15 p. 910

▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with methotrexate (high-dose). Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

▶ **Nitisinone** is predicted to increase the exposure to methotrexate. [Moderate] Study

▶ **Nitrous oxide** potentially increases the risk of methotrexate toxicity when given with methotrexate. Avoid. [Severe] Study

▶ **NSAIDs** are predicted to increase the risk of toxicity when given with methotrexate. [Severe] Study → Also see TABLE 2 p. 907

▶ **Pegaspargase** affects the efficacy of methotrexate. [Severe] Anecdotal → Also see TABLE 1 p. 907 → Also see TABLE 15 p. 910

▶ **Penicillins** are predicted to increase the risk of toxicity when given with methotrexate. [Severe] Anecdotal → Also see TABLE 1 p. 907

▶ **Potassium aminobenzoate** increases the concentration of methotrexate. [Moderate] Theoretical

▶ **Proton pump inhibitors** decrease the clearance of methotrexate (high-dose). Use with caution or avoid. [Severe] Study

▶ **Quinolones (ciprofloxacin)** potentially increase the risk of toxicity when given with methotrexate. [Severe] Anecdotal

▶ **Regorafenib** is predicted to increase the exposure to methotrexate. [Moderate] Theoretical → Also see TABLE 15 p. 910

▶ **Retinoids (acitretin)** are predicted to increase the concentration of methotrexate. Avoid. [Moderate] Anecdotal

▶ **Rolapitant** is predicted to increase the exposure to methotrexate. Avoid or monitor. [Moderate] Study

▶ **Methotrexate** is predicted to decrease the efficacy of sapropterin. [Moderate] Theoretical

▶ **Sulfonamides** are predicted to increase the exposure to methotrexate. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 15 p. 910

▶ **Tedizolid** is predicted to increase the exposure to methotrexate. Avoid. [Moderate] Theoretical

Methotrexate (continued)

- ▶ **Methotrexate** is predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **methotrexate**. [Moderate] Study → Also see TABLE 1 p. 907
- ▶ **Methotrexate** decreases the clearance of **theophylline**. [Moderate] Study
- ▶ **Trimethoprim** increases the risk of side-effects when given with **methotrexate**. Avoid. [Severe] Anecdotal → Also see TABLE 15 p. 910 → Also see TABLE 2 p. 907

Methoxyflurane → see volatile halogenated anaesthetics

Methylidopa → see TABLE 8 p. 908 (hypotension)

- ▶ **Entacapone** is predicted to increase the exposure to **methylidopa**. [Moderate] Theoretical
- ▶ **Iron (oral)** decreases the effects of **methylidopa**. [Moderate] Study
- ▶ **Methylidopa** increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ **MAOIs, irreversible** are predicted to alter the antihypertensive effects of **methylidopa**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 908

Methylphenidate

- ▶ **Methylphenidate** is predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
- ▶ **Methylphenidate** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **MAO-B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of a hypertensive crisis when given with **methylphenidate**. Avoid. [Severe] theoretical
- ▶ **Methylphenidate** is predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Methylphenidate** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. [Severe] Theoretical
- ▶ **Methylphenidate** increases the risk of dyskinesias when given with **paliperidone**. [Severe] Theoretical
- ▶ **Risperidone** increases the risk of dyskinesias when given with **methylphenidate**. [Severe] Anecdotal

Methylprednisolone → see corticosteroids

Methylthioninium chloride → see TABLE 13 p. 910 (serotonin syndrome)

- ▶ **Methylthioninium chloride** is predicted to increase the risk of severe hypotension when given with **bupropion**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 910

Metoclopramide

- ▶ **Metoclopramide** is predicted to increase the risk of methaemoglobinemia when given with topical **anaesthetics, local (prilocaine)**. Avoid. [Severe] Theoretical
- ▶ **Metoclopramide** potentially decreases the absorption of **antifungals, azoles (posaconazole)** (oral suspension). [Moderate] Study
- ▶ **Metoclopramide** decreases the concentration of **antimalarials (atovaquone)**. Avoid. [Moderate] Study
- ▶ **Metoclopramide** is predicted to decrease the effects of dopamine receptor agonists (**apomorphine, bromocriptine, cabergoline, pergolide, pramipexole, quinagolide, ropinirole, rotigotine**). Avoid. [Moderate] Study
- ▶ **Metoclopramide** decreases the effects of **levodopa**. Avoid. [Moderate] Study
- ▶ **Metoclopramide** is predicted to increase the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Theoretical
- ▶ **Metoclopramide** increases the effects of **suxamethonium**. [Moderate] Study

Metolazone → see thiazide diuretics

Metoprolol → see beta blockers, selective

Metronidazole → see TABLE 12 p. 910 (peripheral neuropathy)

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **metronidazole**. Avoid for at least 48 hours stopping treatment. [Moderate] Study

- ▶ **Metronidazole** increases the risk of toxicity when given with alkylating agents (**busulfan**). [Severe] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **metronidazole**. [Moderate] Study
- ▶ **Metronidazole** is predicted to increase the risk of capecitabine toxicity when given with **capecitabine**. [Severe] Theoretical
- ▶ **Metronidazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Disulfiram** increases the risk of acute psychoses when given with **metronidazole**. [Severe] Study → Also see TABLE 12 p. 910
- ▶ **Metronidazole** increases the risk of toxicity when given with **fluorouracil**. [Severe] Study
- ▶ **Metronidazole** is predicted to increase the concentration of **lithium**. Avoid or adjust dose. [Severe] Anecdotal

Metypapone

- ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the effects of **metypapone**. Avoid. [Moderate] Study
- ▶ **Antihistamines, sedating (cyproheptadine)** decrease the effects of **metypapone**. Avoid. [Moderate] Study
- ▶ **Carbimazole** decreases the effects of **metypapone**. Avoid. [Moderate] Theoretical
- ▶ **Combined hormonal contraceptives** decrease the effects of **metypapone**. Avoid. [Moderate] Theoretical
- ▶ **Phenothiazines (chlorpromazine)** decrease the effects of **metypapone**. Avoid. [Moderate] Theoretical
- ▶ **Propylthiouracil** is predicted to decrease the effects of **metypapone**. Avoid. [Moderate] Theoretical
- ▶ **Tricyclic antidepressants (amitriptyline)** decrease the effects of **metypapone**. Avoid. [Moderate] Theoretical

Mexiletine

FOOD AND LIFESTYLE Dose adjustment might be necessary if smoking started or stopped during treatment.

- ▶ **Mexiletine** is predicted to increase the exposure to **agomelatine**. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical
- ▶ **Mexiletine** increases the risk of torsade de pointes when given with **antiarrhythmics**. Avoid. [Severe] Theoretical
- ▶ **Antiepileptics (phenytoin)** are predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mexiletine** potentially increases the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. Avoid or monitor. [Severe] Theoretical
- ▶ **Mexiletine** potentially increases the risk of cardiovascular side-effects when given with **beta blockers, selective**. Avoid or monitor. [Severe] Theoretical
- ▶ **Bupropion** is predicted to increase the exposure to **mexiletine**. [Moderate] Study
- ▶ **Mexiletine** increases the risk of cardiovascular side-effects when given with **calcium channel blockers (diltiazem)**. Avoid or monitor. [Severe] Theoretical
- ▶ **Mexiletine** potentially increases the risk of cardiovascular side-effects when given with **calcium channel blockers (verapamil)**. Avoid or monitor. [Severe] Theoretical
- ▶ **Cinacalcet** is predicted to increase the exposure to **mexiletine**. [Moderate] Study
- ▶ **Mexiletine** increases the concentration of **clozapine**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Cobicistat** potentially increases the exposure to **mexiletine**. [Severe] Theoretical
- ▶ **Mexiletine** potentially affects the exposure to **coumarins (warfarin)**. Avoid. [Unknown] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [Moderate] Study
- ▶ **Mexiletine** slightly increases the exposure to **erlotinib**. Monitor side effects and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study

- ▶ **Mexiletine** potentially affects the exposure to **lithium**. Avoid. [Unknown] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
- ▶ **Mexiletine** slightly increases the exposure to **MAO-B inhibitors (rasagiline)**. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to affect the exposure to **metformin**. [Unknown] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **olanzapine**. Adjust dose. [Moderate] Anecdotal
- ▶ **Opioids** potentially decrease the absorption of oral mexiletine. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **phenothiazines (chlorpromazine)**. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to increase the clearance of mexiletine. Monitor and adjust dose. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine, fluvoxamine, paroxetine)** are predicted to increase the exposure to **mexiletine**. [Moderate] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **mexiletine**. [Moderate] Study
- ▶ **Terflunomide** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Mexiletine** increases the exposure to **tizanidine**. Avoid. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **zolmitriptan**. Adjust zolmitriptan dose, p. 310. [Moderate] Theoretical
- Mianserin** → see TABLE 11 p. 909 (CNS depressant effects)
- ▶ **Antiepileptics (carbamazepine)** markedly decrease the exposure to **mianserin**. Adjust dose. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **mianserin**. [Moderate] Study → Also see TABLE 11 p. 909
- ▶ **Mianserin** is predicted to increase the risk of toxicity when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Mianserin** is predicted to increase the risk of toxicity when given with **moclobemide**. Avoid and for 1 week after stopping **mianserin**. [Severe] Theoretical
- ▶ **Mianserin** is predicted to decrease the efficacy of **pitolisant**. [Moderate] Theoretical
- ▶ **Mianserin** decreases the effects of **sympathomimetics, vasoconstrictor (ephedrine)**. [Severe] Anecdotal
- Micafungin** → see TABLE 1 p. 907 (hepatotoxicity)
- ▶ **Micafungin** slightly increases the exposure to **amphotericin**. Avoid or monitor toxicity. [Moderate] Study
- Miconazole** → see antifungals, azoles
- Midazolam** → see TABLE 11 p. 909 (CNS depressant effects)
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 909
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to intravenous **midazolam**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to oral **midazolam**. Avoid. [Moderate] Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Apprepitant** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the concentration of **midazolam**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Cobicistat** is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Dabrafenib** decreases the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Efavirenz** is predicted to alter the effects of **midazolam**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Fosaprepitant** slightly increases the exposure to **midazolam**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Larotrectinib** slightly increases the exposure to **midazolam**. Use with caution and adjust dose. [Mid] Study
- ▶ **Letermovir** slightly to moderately increases the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Lorlatinib** moderately decreases the exposure to **midazolam**. Avoid. [Moderate] Study
- ▶ **Lumacaftor** is predicted to decrease the exposure to **midazolam**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Nevirapine** decreases the concentration of **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Palbociclib** increases the exposure to **midazolam**. [Moderate] Study
- ▶ **Ribociclib** moderately increases the exposure to **midazolam**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** slightly increases the exposure to **midazolam**. Monitor and adjust dose. [Severe] Study
- ▶ **St John's Wort** moderately decreases the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Telotristat ethyl** decreases the exposure to **midazolam**. [Moderate] Study
- Midodrine** → see sympathomimetics, vasoconstrictor
- Midostaurin**
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study

Midostaurin (continued)

- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to midostaurin. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to very markedly increase the exposure to midostaurin. Avoid or monitor for toxicity. [\[Severe\]](#) Study
- ▶ **Apalutamide** is predicted to decrease the exposure to midostaurin. Avoid. [\[Severe\]](#) Study
- ▶ **Aprepitant** is predicted to increase the exposure to midostaurin. [\[Moderate\]](#) Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to midostaurin. [\[Moderate\]](#) Theoretical
- ▶ **Cobicistat** is predicted to very markedly increase the exposure to midostaurin. Avoid or monitor for toxicity. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to midostaurin. [\[Moderate\]](#) Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to midostaurin. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to very markedly increase the exposure to midostaurin. Avoid or monitor for toxicity. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to very markedly increase the exposure to midostaurin. Avoid or monitor for toxicity. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to midostaurin. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to very markedly increase the exposure to midostaurin. Avoid or monitor for toxicity. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to midostaurin. [\[Moderate\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to midostaurin. Avoid. [\[Severe\]](#) Study
- ▶ **Netupitant** is predicted to increase the exposure to midostaurin. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to midostaurin. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to midostaurin. Avoid. [\[Severe\]](#) Study
- ▶ **St John's Wort** is predicted to decrease the exposure to midostaurin. Avoid. [\[Severe\]](#) Theoretical

Mifamurtide

- ▶ **Ciclosporin** is predicted to decrease the efficacy of mifamurtide. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Corticosteroids** are predicted to decrease the efficacy of mifamurtide. Avoid. [\[Severe\]](#) Theoretical
- ▶ **NSAIDs (high-dose)** are predicted to decrease the efficacy of mifamurtide. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Pimecrolimus** is predicted to decrease the efficacy of mifamurtide. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Sirolimus** is predicted to decrease the efficacy of mifamurtide. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Tacrolimus** is predicted to affect the efficacy of mifamurtide. Avoid. [\[Severe\]](#) Theoretical

Mifepristone

- ▶ **Mifepristone** is predicted to decrease the efficacy of corticosteroids. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical

Minocycline → see tetracyclines

Minoxidil → see TABLE 8 p. 908 (hypotension)

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

Mirabegron

- ▶ **Mirabegron** is predicted to increase the exposure to **aliskiren**. [\[Mild\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to mirabegron. Adjust mirabegron dose in hepatic and renal impairment. [\[Moderate\]](#) Study
- ▶ **Mirabegron** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [\[Mild\]](#) Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. [\[Moderate\]](#) Study

- ▶ **Cobicistat** is predicted to increase the exposure to mirabegron. Adjust mirabegron dose in hepatic and renal impairment. [\[Moderate\]](#) Study
 - ▶ **Mirabegron** is predicted to increase the exposure to **colchicine**. [\[Mild\]](#) Theoretical
 - ▶ **Mirabegron** is predicted to increase the exposure to **dabigatran**. [\[Severe\]](#) Theoretical
 - ▶ **Mirabegron** slightly increases the exposure to **digoxin**. Monitor concentration and adjust dose. [\[Severe\]](#) Study
 - ▶ **Mirabegron** is predicted to increase the exposure to **edoxaban**. [\[Mild\]](#) Theoretical
 - ▶ **Mirabegron** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
 - ▶ **Mirabegron** is predicted to increase the exposure to **everolimus**. [\[Mild\]](#) Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to mirabegron. Adjust mirabegron dose in hepatic and renal impairment. [\[Moderate\]](#) Study
 - ▶ **Idelalisib** is predicted to increase the exposure to mirabegron. Adjust mirabegron dose in hepatic and renal impairment. [\[Moderate\]](#) Study
 - ▶ **Mirabegron** is predicted to increase the exposure to **loperamide**. [\[Mild\]](#) Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to mirabegron. Adjust mirabegron dose in hepatic and renal impairment. [\[Moderate\]](#) Study
 - ▶ **Mirabegron** is predicted to increase the exposure to **sirolimus**. [\[Mild\]](#) Theoretical
 - ▶ **Mirabegron** is predicted to increase the exposure to **taxanes (paclitaxel)**. [\[Mild\]](#) Theoretical
 - ▶ **Mirabegron** is predicted to increase the exposure to **topotecan**. [\[Mild\]](#) Theoretical
- Mirtazapine** → see TABLE 13 p. 910 (serotonin syndrome), TABLE 11 p. 909 (CNS depressant effects)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to mirtazapine. Adjust dose. [\[Moderate\]](#) Study → Also see TABLE 11 p. 909
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to mirtazapine. [\[Moderate\]](#) Study
 - ▶ **Apalutamide** is predicted to decrease the exposure to mirtazapine. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Cobicistat** is predicted to increase the exposure to mirtazapine. [\[Moderate\]](#) Study
 - ▶ **Enzalutamide** is predicted to decrease the exposure to mirtazapine. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to mirtazapine. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to mirtazapine. [\[Moderate\]](#) Study
 - ▶ **Idelalisib** is predicted to increase the exposure to mirtazapine. [\[Moderate\]](#) Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to mirtazapine. [\[Moderate\]](#) Study
 - ▶ **Mitotane** is predicted to decrease the exposure to mirtazapine. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Mirtazapine** is predicted to decrease the efficacy of **pitolisant**. [\[Moderate\]](#) Theoretical
 - ▶ **Rifampicin** is predicted to decrease the exposure to mirtazapine. Adjust dose. [\[Moderate\]](#) Study
- Mitomycin** → see TABLE 15 p. 910 (myelosuppression), TABLE 5 p. 907 (thromboembolism)
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with mitomycin. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- Mitotane** → see TABLE 15 p. 910 (myelosuppression)
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [\[Severe\]](#) Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **abiraterone**. Avoid. [\[Severe\]](#) Study
 - ▶ **Aldosterone antagonists (spironolactone)** are predicted to decrease the effects of mitotane. Avoid. [\[Severe\]](#) Anecdotal

- ▶ **Mitotane** is predicted to decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the efficacy of **antiarrhythmics (propafenone)**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **anticholinesterases, centrally acting (donepezil)**. [Mild] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **antiepileptics (perampanel)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **antimalarials (artemether) (with lumefantrine)**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the concentration of **antimalarials (piperaquine)**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
- ▶ **Mitotane** moderately decreases the exposure to **apremilast**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 265. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 910
- ▶ **Mitotane** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Study
- ▶ **Mitotane** slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study → Also see TABLE 15 p. 910
- ▶ **Mitotane** affects the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 910
- ▶ **Mitotane** is predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. [Severe] Study
- ▶ **Mitotane** moderately decreases the exposure to **cabozantinib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 910
- ▶ **Mitotane** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **calcium channel blockers (diltiazem)**. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 910
- ▶ **Mitotane** decreases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Mitotane** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** decreases the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **corticosteroids (budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **corticosteroids (fluticasone)**. [Unknown] Theoretical
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 910
- ▶ **Mitotane** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ **Mitotane** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 910
- ▶ **Mitotane** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **dienogest**. [Severe] Study
- ▶ **Mitotane** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [Mild] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust erlotinib dose. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **esketamine**. Adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 910
- ▶ **Mitotane** moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **figoimod**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 910
- ▶ **Mitotane** is predicted to greatly decrease the concentration of **glecaprevir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the concentration of **guanfacine**. Adjust guanfacine dose, p. 247. [Moderate] Study
- ▶ **Mitotane** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ibrutinib**. Avoid or adjust ibrutinib dose. [Severe] Study → Also see TABLE 15 p. 910
- ▶ **Mitotane** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study → Also see TABLE 15 p. 910
- ▶ **Mitotane** is predicted to decrease the exposure to **imatatinib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 910
- ▶ **Mitotane** is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study → Also see TABLE 15 p. 910
- ▶ **Mitotane** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study

Mitotane (continued)

- ▶ Mitotane is predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Mitotane is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- ▶ Mitotane is predicted to decrease the exposure to **montelukast**. [Mild] Study
- ▶ Mitotane is predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ Mitotane is predicted to slightly decrease the exposure to **nateginide**. [Mild] Study
- ▶ Mitotane is predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **nevirapine**. [Severe] Theoretical
- ▶ Mitotane is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 910
- ▶ Mitotane is predicted to decrease the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ Mitotane is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ Mitotane is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ Mitotane is predicted to decrease the exposure to **ondansetron**. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Mitotane decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Mitotane is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ Mitotane is predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ Mitotane is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 910
- ▶ Mitotane is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [Moderate] Theoretical
- ▶ Mitotane is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ Mitotane is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
- ▶ Mitotane is predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 910
- ▶ Mitotane is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ Mitotane is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ Mitotane markedly decreases the exposure to **rilpivirine**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ Mitotane is predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ Mitotane is predicted to markedly decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 15 p. 910
- ▶ Mitotane is predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **siponimod**. [Severe] Study
- ▶ Mitotane is predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ Mitotane is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ Mitotane is predicted to decrease the exposure to **statins (simvastatin)**. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study → Also see TABLE 15 p. 910
- ▶ Mitotane decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **taxanes (cabazitaxel, paclitaxel)**. Avoid. [Severe] Study → Also see TABLE 15 p. 910
- ▶ Mitotane is predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical → Also see TABLE 15 p. 910
- ▶ Mitotane is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study → Also see TABLE 15 p. 910
- ▶ Mitotane decreases the exposure to **tetracyclines (doxycycline)**. Monitor and adjust dose. [Moderate] Study
- ▶ Mitotane is predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
- ▶ Mitotane is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
- ▶ Mitotane is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study

- ▶ **Mitotane** is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 910
- ▶ **Mitotane** is predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical → Also see TABLE 15 p. 910
- ▶ **Mitotane** is predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 910
- ▶ **Mitotane** is predicted to decrease the exposure to **vinca alkaloids (vinorelbine)**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 15 p. 910
- ▶ **Mitotane** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ **Mitotane** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study

Mitoxantrone → see anthracyclines

Mivacurium → see neuromuscular blocking drugs, non-depolarising

Mizolastine → see antihistamines, non-sedating

Moclobemide → see TABLE 13 p. 910 (serotonin syndrome)

FOOD AND LIFESTYLE Moclobemide is claimed to cause less potentiation of the pressor effect of tyramine than the traditional (irreversible) MAOIs, but patients should avoid consuming large amounts of tyramine-rich foods (such as mature cheese, salami, pickled herring, *Bovril*[®], *Oxo*[®], *Marmite*[®] or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- ▶ **Moclobemide** is predicted to increase the risk of a hypertensive crisis when given with **amfetamines**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 910
- ▶ **Apalutamide** is predicted to decrease the exposure to **moclobemide**. Avoid or monitor. [Mid] Study
- ▶ **Moclobemide** is predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 910
- ▶ **Moclobemide** is predicted to increase the exposure to **cannabidiol**. [Moderate] Theoretical
- ▶ **Moclobemide** is predicted to increase the exposure to **cilostazol**. [Moderate] Theoretical
- ▶ **Moclobemide** potentially increases the exposure to **clobazam**. Adjust dose. [Moderate] Theoretical
- ▶ **Moclobemide** is predicted to decrease the efficacy of **clopidogrel**. Avoid. [Moderate] Study
- ▶ **Moclobemide** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
- ▶ **H₂ receptor antagonists (cimetidine)** increase the exposure to **moclobemide**. Adjust **moclobemide** dose. [Mid] Study
- ▶ **Levodopa** increases the risk of side-effects when given with **moclobemide**. [Moderate] Study
- ▶ **Moclobemide** is predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping **moclobemide**. [Severe] Theoretical → Also see TABLE 13 p. 910
- ▶ **Moclobemide** is predicted to increase the effects of **MAO-B inhibitors (rasagiline, selegiline)**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 910
- ▶ **Moclobemide** is predicted to increase the risk of side-effects when given with **MAO-B inhibitors (safinamide)**. Avoid and for

1 week after stopping **safinamide**. [Severe] Theoretical → Also see TABLE 13 p. 910

- ▶ **Methyphenidate** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. [Severe] Theoretical
- ▶ **Mianserin** is predicted to increase the risk of toxicity when given with **moclobemide**. Avoid and for 1 week after stopping **mianserin**. [Severe] Theoretical
- ▶ **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **moclobemide**. Avoid. [Severe] Theoretical
- ▶ **Moclobemide** increases the risk of side-effects when given with **phenothiazines (levomepromazine)**. [Moderate] Study
- ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Theoretical
- ▶ **Moclobemide** moderately increases the exposure to **rizatriptan**. Avoid. [Moderate] Study → Also see TABLE 13 p. 910
- ▶ **Moclobemide** moderately increases the exposure to **sumatriptan**. Avoid. [Moderate] Study → Also see TABLE 13 p. 910
- ▶ **Moclobemide** is predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, vasoconstrictor (ephedrine, isometheptene, phenylephrine, pseudoephedrine)**. Avoid. [Severe] Study
- ▶ **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **moclobemide**. [Severe] Theoretical
- ▶ **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **moclobemide**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 910
- ▶ **Moclobemide** slightly increases the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 310. [Moderate] Study → Also see TABLE 13 p. 910

Modafinil

- ▶ **Antiepileptics (carbamazepine, phenobarbital, primidone)** are predicted to decrease the exposure to **modafinil**. [Mid] Theoretical
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **modafinil** and **modafinil** is predicted to increase the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **modafinil**. [Mid] Theoretical
- ▶ **Modafinil** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **modafinil**. [Mid] Theoretical
- ▶ **Modafinil** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Study
- ▶ **Modafinil** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
- ▶ **Modafinil** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine or lamivudine with tenofovir disoproxil and doravirine dose. [Severe] Theoretical
- ▶ **Modafinil** is predicted to decrease the exposure to **elbasvir**. Avoid. [Unknown] Theoretical
- ▶ **Modafinil** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
- ▶ **Modafinil** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **modafinil**. [Mid] Theoretical
- ▶ **Modafinil** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Idelalisib** is predicted to increase the exposure to **modafinil**. [Mid] Theoretical
- ▶ **Modafinil** is predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **Modafinil** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical

Modafinil (continued)

- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ **Modafinil** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Rifampicin** is predicted to decrease the exposure to **modafinil**. [Moderate] Theoretical
- ▶ **Modafinil** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **Modafinil** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Modafinil** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Severe] Theoretical
- ▶ **Modafinil** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical

Mogamulizumab → see monoclonal antibodies

Mometasone → see corticosteroids

Monoclonal antibodies → see TABLE 15 p. 910 (myelosuppression), TABLE 12 p. 910 (peripheral neuropathy), TABLE 9 p. 909 (QT-interval prolongation), TABLE 4 p. 907 (antiplatelet effects)

adalimumab · alemtuzumab · atezolizumab · avelumab · basiliximab · belimumab · bevacizumab · blinatumomab · brentuximab vedotin · brodalumab · canakinumab · cemiplimab · certolizumab pegol · cetuximab · daratumumab · dinutuximab · dupilumab · durvalumab · eculizumab · elotuzumab · golimumab · guselkumab · infliximab · inotuzumab ozogamicin · ipilimumab · ixekizumab · mogamulizumab · natalizumab · necitumumab · nivolumab · obinutuzumab · ocrelizumab · panitumumab · pembrolizumab · pertuzumab · polatuzumab vedotin · ramucirumab · risankizumab · rituximab · sarilumab · secukinumab · siltuximab · tildrakizumab · tocilizumab · trastuzumab · trastuzumab emtansine · ustekinumab · vedolizumab

- ▶ **Abatacept** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **golimumab**. Avoid. [Severe] Theoretical
- ▶ **Tocilizumab** is predicted to decrease the exposure to **alprazolam**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Blinatumomab** is predicted to transiently increase the exposure to **aminophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Sarilumab** potentially affects the exposure to **aminophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Tocilizumab** is predicted to decrease the exposure to **aminophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Anakinra** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **golimumab**. Avoid. [Severe] Theoretical
- ▶ **Anthracyclines** are predicted to increase the risk of cardiotoxicity when given with monoclonal antibodies (**trastuzumab**, **trastuzumab emtansine**). Avoid. [Severe] Theoretical → Also see TABLE 15 p. 910
- ▶ **Antiarrhythmics (dronedaron)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the effects of **brentuximab vedotin**. [Severe] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **polatuzumab vedotin**. [Moderate] Theoretical
- ▶ **Tocilizumab** is predicted to decrease the exposure to **antiepileptics (fosphenytoin, phenytoin)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **polatuzumab vedotin**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [Severe] Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to **polatuzumab vedotin**. [Moderate] Theoretical
- ▶ **Brentuximab vedotin** increases the risk of pulmonary toxicity when given with **bleomycin**. Avoid. [Severe] Study → Also see TABLE 15 p. 910
- ▶ **Tocilizumab** is predicted to decrease the exposure to **calcium channel blockers**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Blinatumomab** is predicted to transiently increase the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Sarilumab** potentially affects the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Tocilizumab** is predicted to decrease the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **polatuzumab vedotin**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [Severe] Theoretical
- ▶ **Sarilumab** potentially decreases the exposure to **combined hormonal contraceptives**. [Severe] Theoretical
- ▶ **Corticosteroids** are predicted to increase the risk of immunosuppression when given with **dinutuximab**. Avoid except in life-threatening situations. [Severe] Theoretical
- ▶ **Corticosteroids (betamethasone, deflazacort, dexamethasone, hydrocortisone, methylprednisolone, prednisolone)** are predicted to decrease the efficacy of monoclonal antibodies (**atezolizumab**, **ipilimumab**, **nivolumab**, **pembrolizumab**). Use with caution or avoid. [Severe] Theoretical
- ▶ **Tocilizumab** is predicted to decrease the exposure to **corticosteroids (dexamethasone, methylprednisolone)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Blinatumomab** is predicted to transiently increase the exposure to **coumarins (warfarin)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Sarilumab** potentially affects the exposure to **coumarins (warfarin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Tocilizumab** is predicted to decrease the exposure to **coumarins (warfarin)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Tocilizumab** is predicted to decrease the exposure to **diazepam**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **polatuzumab vedotin**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **polatuzumab vedotin**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **polatuzumab vedotin**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 910
- ▶ **Immunoglobulins** are predicted to alter the effects of **dinutuximab**. Avoid. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **monoclonal antibodies**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **polatuzumab vedotin**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [Severe] Theoretical
- ▶ **Tocilizumab** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **polatuzumab vedotin**. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the effects of **brentuximab vedotin**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **polatuzumab vedotin**. [Moderate] Theoretical
- ▶ **Siponimod** potentially increases the risk of immunosuppression when given with **alemtuzumab**. Avoid. [Severe] Theoretical

- ▶ **Sarilumab** potentially affects the exposure to **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Sarilumab** is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Study
- ▶ **Tocilizumab** is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Sarilumab** potentially affects the exposure to **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Blinatumomab** is predicted to transiently increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Sarilumab** potentially affects the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Tocilizumab** is predicted to decrease the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- Montelukast**
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **montelukast**. [Mid] Study
 - ▶ **Apalutamide** is predicted to decrease the exposure to **montelukast**. [Mid] Study
 - ▶ **Clopidogrel** is predicted to moderately increase the exposure to **montelukast**. [Moderate] Study
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **montelukast**. [Mid] Study
 - ▶ **Fibrates (gemfibrozil)** are predicted to moderately increase the exposure to **montelukast**. [Moderate] Study
 - ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
 - ▶ **Leflunomide** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **montelukast**. [Mid] Study
 - ▶ **Opicapone** is predicted to increase the exposure to **montelukast**. Avoid. [Moderate] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **montelukast**. [Mid] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
- Morphine** → see opioids
- Moxifloxacin** → see quinolones
- Moxisylyte** → see TABLE 8 p. 908 (hypotension)
- Moxonidine** → see TABLE 8 p. 908 (hypotension), TABLE 11 p. 909 (CNS depressant effects)
 - ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **moxonidine**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 908 → Also see TABLE 11 p. 909
- Mycophenolate** → see TABLE 15 p. 910 (myelosuppression)
 - ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **aciclovir**. [Moderate] Theoretical
 - ▶ **Antacids** decrease the exposure to **mycophenolate**. [Moderate] Study
 - ▶ **Antifungals, azoles (isavuconazole)** increase the exposure to **mycophenolate**. [Moderate] Study
 - ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **ganciclovir**. [Moderate] Theoretical → Also see TABLE 15 p. 910
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mycophenolate**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
 - ▶ **Rifampicin** decreases the concentration of **mycophenolate**. Monitor and adjust dose. [Severe] Study
 - ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valaciclovir**. [Moderate] Theoretical
 - ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valganciclovir**. [Moderate] Theoretical → Also see TABLE 15 p. 910
- Nabilone** → see TABLE 11 p. 909 (CNS depressant effects)
 - ▶ **Nabilone** is predicted to increase the risk of cardiovascular side-effects when given with **amfetamines**. [Severe] Theoretical
- Nabumetone** → see NSAIDs

Nadolol → see beta blockers, non-selective

Naldemedine

- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
- ▶ **Apalutamide** is predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **naldemedine**. [Moderate] Study

Nalmefene

GENERAL INFORMATION Discontinue treatment 1 week before anticipated use of opioids; if emergency analgesia is required during treatment, an increased dose of opioid analgesic might be necessary (monitor for opioid intoxication).

- ▶ **Nalmefene** is predicted to decrease the efficacy of **opioids**. Avoid. [Severe] Theoretical

Naloxegol

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ **Apalutamide** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study

Naloxegol (continued)

- ▶ **Aprepitant** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects. [Moderate] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects. [Moderate] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **naloxegol**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects. [Moderate] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects. [Moderate] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **naloxegol**. Avoid. [Moderate] Theoretical

Naltrexone

GENERAL INFORMATION Avoid concurrent use of opioids.

Mandrolone

- ▶ **Mandrolone** is predicted to increase the anticoagulant effect of **coumarins**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Mandrolone** is predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [Severe] Theoretical

Naproxen → see NSAIDs

Naratriptan → see TABLE 13 p. 910 (serotonin syndrome)

- ▶ **Naratriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Theoretical

Natalizumab → see monoclonal antibodies

Nateglinide → see TABLE 14 p. 910 (antidiabetic drugs)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to slightly decrease the exposure to **nateglinide**. [Mild] Study
- ▶ **Apalutamide** is predicted to slightly decrease the exposure to **nateglinide**. [Mild] Study
- ▶ **Enzalutamide** is predicted to slightly decrease the exposure to **nateglinide**. [Mild] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **nateglinide**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to slightly decrease the exposure to **nateglinide**. [Mild] Study
- ▶ **Rifampicin** is predicted to slightly decrease the exposure to **nateglinide**. [Mild] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **nateglinide**. [Moderate] Theoretical

Nebivolol → see beta blockers, selective

Necitumumab → see monoclonal antibodies

Nefopam → see TABLE 10 p. 909 (antimuscarinics)

- ▶ **Nefopam** is predicted to increase the risk of serious elevations in blood pressure when given with **MAOIs, irreversible**. Avoid. [Severe] Theoretical

Nelarabine → see TABLE 15 p. 910 (myelosuppression)

Neomycin → see TABLE 2 p. 907 (nephrotoxicity), TABLE 19 p. 911 (ototoxicity), TABLE 20 p. 911 (neuromuscular blocking effects)

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Neomycin** decreases the absorption of **digoxin**. [Moderate] Study
- ▶ **Neomycin** moderately decreases the exposure to **sorafenib**. [Moderate] Study
- ▶ **Neostigmine** → see TABLE 6 p. 908 (bradycardia)
- ▶ **Aminoglycosides** are predicted to decrease the effects of **neostigmine**. [Moderate] Theoretical
- ▶ **Nepafenac** → see NSAIDs
- ▶ **Neratinib** → see TABLE 1 p. 907 (hepatotoxicity)
- ▶ Oral **antacids** are predicted to decrease the exposure to oral **neratinib**. Separate administration by at least 3 hours. [Mild] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study → Also see TABLE 1 p. 907
- ▶ **Antifungals, azoles (itraconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **neratinib**. Avoid. [Severe] Study → Also see TABLE 1 p. 907
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **neratinib**. Avoid or adjust **neratinib** dose. [Severe] Study → Also see TABLE 1 p. 907
- ▶ **Neratinib** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **neratinib**. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ Oral **calcium salts (calcium carbonate)** are predicted to decrease the exposure to oral **neratinib**. Separate administration by at least 3 hours. [Mild] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **neratinib**. Avoid or adjust **neratinib** dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Neratinib** is predicted to increase the exposure to **dabigatran**. [Moderate] Study
- ▶ **Neratinib** is predicted to slightly increase the exposure to **digoxin**. [Moderate] Study
- ▶ **Neratinib** is predicted to increase the exposure to **edoxaban**. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **neratinib**. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Neratinib** is predicted to increase the exposure to **everolimus**. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **neratinib**. Avoid. [Severe] Theoretical
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **neratinib**. Avoid or adjust **neratinib** dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **neratinib**. Avoid or adjust **neratinib** dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **neratinib**. Avoid or adjust **neratinib** dose. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **neratinib**. [Severe] Study

- ▶ **Nilotinib** is predicted to increase the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Neratinib** is predicted to increase the exposure to **sirolimus**. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Theoretical
- Netupitant**
 - ▶ **Netupitant** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **aldosterone** antagonists (**epplerenone**). Adjust **epplerenone** dose. [Severe] Study
 - ▶ **Netupitant** very slightly increases the exposure to **alkylating agents (cyclophosphamide)**. [Moderate] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **alkylating agents (ifosfamide)**. [Moderate] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
 - ▶ **Netupitant** is predicted to increase the exposure to **alprazolam**. [Severe] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **netupitant**. [Moderate] Study
 - ▶ **Netupitant** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
 - ▶ **Netupitant** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
 - ▶ **Netupitant** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
 - ▶ **Netupitant** is predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
 - ▶ **Apalutamide** is predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
 - ▶ **Netupitant** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Theoretical
 - ▶ **Netupitant** is predicted to increase the exposure to **beta₂ agonists (salmeterol)**. [Moderate] Study
 - ▶ **Bosentan** is predicted to decrease the exposure to **netupitant**. [Moderate] Theoretical
 - ▶ **Netupitant** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical
 - ▶ **Netupitant** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical
 - ▶ **Netupitant** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
 - ▶ **Netupitant** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **netupitant**. [Moderate] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
 - ▶ **Netupitant** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4. [Severe] Study
 - ▶ **Netupitant** is predicted to increase the exposure to oral **corticosteroids (budesonide)**. [Moderate] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **corticosteroids (dexamethasone)**. Adjust dose. [Moderate] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **corticosteroids (fluticasone)**. [Moderate] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Netupitant** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **dasatinib**. [Severe] Study
 - ▶ **Netupitant** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
 - ▶ **Netupitant** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
 - ▶ **Netupitant** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
 - ▶ **Netupitant** is predicted to moderately increase the exposure to **dutasteride**. [Mid] Study
 - ▶ **Efavirenz** is predicted to decrease the exposure to **netupitant**. [Moderate] Theoretical
 - ▶ **Netupitant** is predicted to increase the exposure to **eletriptan**. [Moderate] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Netupitant** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
 - ▶ **Netupitant** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
 - ▶ **Netupitant** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
 - ▶ **Netupitant** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
 - ▶ **Netupitant** slightly increases the exposure to **etoposide**. [Moderate] Study
 - ▶ **Netupitant** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment. [Mid] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
 - ▶ **Netupitant** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 247. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **netupitant**. [Moderate] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **netupitant**. [Moderate] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
 - ▶ **Netupitant** is predicted to increase the exposure to **irinotecan**. [Moderate] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose. [Severe] Theoretical
 - ▶ **Netupitant** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 196 or **tezacaftor** with **ivacaftor** p. 198. [Severe] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **lomipatide**. Avoid. [Moderate] Theoretical
 - ▶ **Netupitant** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose. [Moderate] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **netupitant**. [Moderate] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **maraviroc**. [Moderate] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study

Netupitant (continued)

- ▶ Netupitant is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to netupitant. Avoid. [Severe] Study
- ▶ Netupitant is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ Netupitant is predicted to increase the exposure to **naloxegol**. Adjust naloxegol dose and monitor side effects. [Moderate] Study
- ▶ Netupitant is predicted to increase the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to netupitant. [Moderate] Theoretical
- ▶ Netupitant is predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical
- ▶ Netupitant is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose. [Moderate] Theoretical
- ▶ Netupitant is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Netupitant is predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical
- ▶ Netupitant is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- ▶ Netupitant is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
- ▶ Netupitant is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose. [Moderate] Theoretical
- ▶ Netupitant is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 125. [Moderate] Study
- ▶ Netupitant is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ Netupitant is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical
- ▶ Netupitant is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ Netupitant is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ Netupitant is predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ Netupitant is predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to netupitant. Avoid. [Severe] Study
- ▶ Netupitant is predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical
- ▶ Netupitant is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ Netupitant increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ Netupitant is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to netupitant. [Moderate] Theoretical
- ▶ Netupitant is predicted to increase the exposure to **statins (atorvastatin, simvastatin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ Netupitant is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
- ▶ Netupitant is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ Netupitant is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
- ▶ Netupitant slightly increases the exposure to **taxanes (docetaxel)**. [Moderate] Study
- ▶ Netupitant is predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Study
- ▶ Netupitant is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical

- ▶ Netupitant is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 198 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ Netupitant given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose. [Moderate] Study
- ▶ Netupitant is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical
- ▶ Netupitant is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4. [Moderate] Study
- ▶ Netupitant is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ Netupitant is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ Netupitant is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ Netupitant is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ Netupitant is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

Neuromuscular blocking drugs, non-depolarising → see TABLE 6 p. 908 (bradycardia), TABLE 20 p. 911 (neuromuscular blocking effects)

atracurium · cisatracurium · mivacurium · pancuronium · rocuronium · vecuronium

- ▶ **Anticholinesterases, centrally acting** are predicted to decrease the effects of neuromuscular blocking drugs, non-depolarising. [Moderate] Theoretical → Also see TABLE 6 p. 908
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the effects of (but acute use increases the effects of) neuromuscular blocking drugs, non-depolarising (**atracurium, cisatracurium, pancuronium, rocuronium, vecuronium**). Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of (but acute use increases the effects of) neuromuscular blocking drugs, non-depolarising (**atracurium, cisatracurium, pancuronium, rocuronium, vecuronium**). [Moderate] Study
- ▶ **Clindamycin** increases the effects of neuromuscular blocking drugs, non-depolarising. [Severe] Anecdotal
- ▶ **Corticosteroids** are predicted to decrease the effects of neuromuscular blocking drugs, non-depolarising. [Severe] Anecdotal
- ▶ **Pancuronium** is predicted to increase the risk of cardiovascular side-effects when given with **digoxin**. [Severe] Anecdotal
- ▶ **Irinotecan** is predicted to decrease the effects of neuromuscular blocking drugs, non-depolarising. [Moderate] Theoretical
- ▶ Intravenous **magnesium** increases the effects of neuromuscular blocking drugs, non-depolarising. [Moderate] Study
- ▶ **Metoclopramide** is predicted to increase the effects of neuromuscular blocking drugs, non-depolarising. [Moderate] Theoretical
- ▶ **Penicillins (piperacillin)** increase the effects of neuromuscular blocking drugs, non-depolarising. [Moderate] Study
- ▶ **SSRIs** potentially increase the risk of prolonged neuromuscular blockade when given with **mivacurium**. [Unknown] Theoretical

Nevirapine

- ▶ Nevirapine is predicted to decrease the exposure to **antiarrhythmics (dronedarone)**. [Severe] Theoretical
- ▶ Nevirapine is predicted to decrease the concentration of antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) and antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of nevirapine. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole)** slightly to moderately increase the exposure to nevirapine. [Moderate] Study
- ▶ Nevirapine is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Theoretical
- ▶ Nevirapine moderately decreases the exposure to **antifungals, azoles (itraconazole)**. Avoid and for 14 days after stopping nevirapine. [Moderate] Study
- ▶ Nevirapine moderately decreases the exposure to **antifungals, azoles (ketoconazole)**. Avoid. [Severe] Study

- ▶ **Nevirapine** is predicted to decrease the exposure to **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** increase the exposure to **nevirapine**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **aprepitant**. [\[Moderate\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **axitinib**. [\[Moderate\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **bedaquiline**. Avoid. [\[Severe\]](#) Study
- ▶ **Bosentan** is predicted to decrease the exposure to **nevirapine**. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **bosutinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **brigatinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **cabozantinib**. [\[Moderate\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [\[Moderate\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the concentration of **caspofungin**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the concentration of **ciclosporin**. [\[Moderate\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **cobicistat**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **cobimetinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 536. [\[Severe\]](#) Study
- ▶ **Nevirapine** potentially alters the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Nevirapine** is predicted to decrease the exposure to **crizotinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **dasabuvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **dasatinib**. [\[Severe\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** decreases the exposure to **dolutegravir**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine or lamivudine with tenofovir disoproxil and doravirine dose. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** decreases the concentration of **efavirenz**. Avoid. [\[Severe\]](#) Study
- ▶ **Nevirapine** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **eliglustat**. [\[Moderate\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the concentration of **elvitegravir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **nevirapine**. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the effects of **ergotamine**. [\[Moderate\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **erlotinib**. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **etravirine**. Avoid. [\[Severe\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **fosaprepitant**. [\[Moderate\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **gefitinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **glecaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **Nevirapine** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Nevirapine** decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. [\[Moderate\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the effects of **hormone replacement therapy**. [\[Moderate\]](#) Anecdotal
- ▶ **Nevirapine** is predicted to decrease the exposure to **idelalisib**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **imatinib**. [\[Moderate\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **ivacaftor**. [\[Moderate\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **lapatinib**. Avoid. [\[Severe\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **larotrectinib**. Avoid. [\[Moderate\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **lorlatinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Nevirapine** decreases the exposure to **macrolides (clarithromycin)**. [\[Moderate\]](#) Study
- ▶ **Nevirapine** decreases the concentration of **midazolam**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **nevirapine**. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **neratinib**. [\[Severe\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **netupitant**. [\[Moderate\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **nilotinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 536. [\[Severe\]](#) Anecdotal
- ▶ **Nevirapine** is predicted to decrease the exposure to **olaparib**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **ombitasvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **osimertinib**. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **ospemifene**. [\[Moderate\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [\[Severe\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [\[Moderate\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **quetiapine**. [\[Moderate\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **ribociclib**. [\[Moderate\]](#) Study
- ▶ **Rifampicin** decreases the concentration of **nevirapine**. Avoid. [\[Severe\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **rilpivirine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **rolapitant**. Avoid. [\[Severe\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical

Nevirapine (continued)

- ▶ Nevirapine is predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. [\[Severe\]](#) Theoretical
 - ▶ Nevirapine is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **St John's Wort** is predicted to decrease the concentration of nevirapine. Avoid. [\[Severe\]](#) Theoretical
 - ▶ Nevirapine slightly decreases the exposure to **statins (atorvastatin)**. [\[Mild\]](#) Study
 - ▶ Nevirapine moderately decreases the exposure to **statins (simvastatin)**. [\[Moderate\]](#) Study
 - ▶ Nevirapine is predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ Nevirapine is predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [\[Severe\]](#) Study
 - ▶ Nevirapine is predicted to decrease the concentration of **temsirolimus**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ Nevirapine is predicted to decrease the exposure to **ticagrelor**. [\[Moderate\]](#) Theoretical
 - ▶ Nevirapine is predicted to decrease the exposure to **tofacinib**. [\[Moderate\]](#) Study
 - ▶ Nevirapine decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 536. [\[Severe\]](#) Anecdotal
 - ▶ Nevirapine is predicted to decrease the exposure to **velpatasvir**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ Nevirapine is predicted to decrease the exposure to **venetoclax**. Avoid. [\[Severe\]](#) Study
 - ▶ Nevirapine is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ Nevirapine is predicted to decrease the concentration of **zidovudine**. Refer to specialist literature. [\[Severe\]](#) Theoretical
- Nicardipine** → see calcium channel blockers
- Nicorandil** → see TABLE 8 p. 908 (hypotension)
- ▶ **Aspirin** is predicted to increase the risk of gastrointestinal perforation when given with **nicorandil**. [\[Severe\]](#) Theoretical
 - ▶ **Corticosteroids** increase the risk of gastrointestinal perforation when given with **nicorandil**. [\[Severe\]](#) Anecdotal
 - ▶ **Nicorandil** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. [\[Severe\]](#) Theoretical
 - ▶ **Nicorandil** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 908
- Nicotinic acid** → see TABLE 3 p. 907 (anticoagulant effects)
- ▶ **Nicotinic acid** is predicted to increase the risk of rhabdomyolysis when given with **statins**. [\[Severe\]](#) Theoretical
- Nifedipine** → see calcium channel blockers
- Nilotinib** → see TABLE 15 p. 910 (myelosuppression), TABLE 9 p. 909 (QT-interval prolongation)
- ▶ **Nilotinib** is predicted to increase the exposure to **abemaciclib**. [\[Moderate\]](#) Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust eplerenone dose. [\[Severe\]](#) Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [\[Moderate\]](#) Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **alprazolam**. [\[Severe\]](#) Study
 - ▶ **Antacids** are predicted to decrease the absorption of nilotinib. Separate administration by at least 2 hours. [\[Moderate\]](#) Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [\[Moderate\]](#) Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to nilotinib. Avoid. [\[Severe\]](#) Study
 - ▶ **Antifungals, azoles (fluconazole, posaconazole)** are predicted to increase the exposure to nilotinib. [\[Moderate\]](#) Theoretical → Also see TABLE 9 p. 909
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to nilotinib. Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 909
 - ▶ **Nilotinib** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [\[Severe\]](#) Theoretical

- ▶ **Nilotinib** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the concentration of **antimalarials (piperazine)**. [\[Severe\]](#) Theoretical
- ▶ **Apalutamide** is predicted to moderately decrease the exposure to **sirolimus**. Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 909
- ▶ **Apreritant** is predicted to increase the exposure to nilotinib. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **axitinib**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 910
- ▶ **Nilotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [\[Mild\]](#) Theoretical → Also see TABLE 9 p. 909
- ▶ **Bosentan** is predicted to decrease the exposure to nilotinib. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [\[Severe\]](#) Theoretical → Also see TABLE 15 p. 910 → Also see TABLE 9 p. 909
- ▶ **Nilotinib** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **cabozantinib**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 910 → Also see TABLE 9 p. 909
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to nilotinib. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nifedipine, nimodipine)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the concentration of **ciclosporin**. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to nilotinib. Avoid. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **cobimetinib**. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **colchicine**. Adjust colchicine dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to slightly increase the exposure to **darifenacin**. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **dasatinib**. [\[Severe\]](#) Study → Also see TABLE 15 p. 910 → Also see TABLE 9 p. 909
- ▶ **Nilotinib** is predicted to slightly increase the exposure to **dienogest**. [\[Moderate\]](#) Study
- ▶ **Nilotinib** increases the risk of QT-prolongation when given with **domeperidone**. Avoid. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [\[Moderate\]](#) Anecdotal
- ▶ **Nilotinib** is predicted to moderately increase the exposure to **dutasteride**. [\[Mild\]](#) Study
- ▶ **Efavirenz** is predicted to decrease the exposure to nilotinib. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 909
- ▶ **Nilotinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to moderately increase the exposure to **encorafenib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 909
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to nilotinib. Avoid. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [\[Moderate\]](#) Study → Also see TABLE 15 p. 910

- ▶ **Nilotinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment. [Mid] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 910
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Theoretical
 - ▶ **Nilotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 247. [Moderate] Theoretical
 - ▶ **H₂ receptor antagonists** are predicted to decrease the absorption of **nilotinib**. **H₂ receptor antagonists** should be taken 10 hours before or 2 hours after **nilotinib**. [Mid] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
 - ▶ **Nilotinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4. [Severe] Study → Also see TABLE 15 p. 910
 - ▶ **Idealisib** is predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 910
 - ▶ **Nilotinib** is predicted to increase the exposure to **ivabradine**. Avoid **ivabradine** dose. [Severe] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 196 or **tezacaftor** with **ivacaftor** p. 198 dose with moderate inhibitors of CYP3A4. [Severe] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 909
 - ▶ **Nilotinib** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose. [Moderate] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Nilotinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
 - ▶ **Mitotane** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 910
 - ▶ **Nilotinib** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects. [Moderate] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **neratinib**. Avoid. [Severe] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical
 - ▶ **Nevirapine** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose. [Moderate] Theoretical → Also see TABLE 15 p. 910
 - ▶ **Nilotinib** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Nilotinib** is predicted to increase the exposure to **oxybutynin**. [Mid] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 15 p. 910 → Also see TABLE 9 p. 909
 - ▶ **Nilotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose. [Moderate] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 125. [Moderate] Study → Also see TABLE 9 p. 909
 - ▶ **Nilotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Nilotinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Pitolisant** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 909
 - ▶ **Nilotinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 909
 - ▶ **Rifampicin** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **roxolitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 910
 - ▶ **Nilotinib** is predicted to increase the exposure to **saxagliptin**. [Mid] Study
 - ▶ **Nilotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **nilotinib**. Separate administration by at least 2 hours. [Moderate] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4. [Moderate] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
 - ▶ **Nilotinib** is predicted to slightly increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **statins (simvastatin)**. Monitor and adjust dose. [Severe] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 910 → Also see TABLE 9 p. 909
 - ▶ **Nilotinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical → Also see TABLE 15 p. 910
 - ▶ **Nilotinib** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical → Also see TABLE 15 p. 910
 - ▶ **Nilotinib** is predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor** with **ivacaftor** p. 198 dose with moderate inhibitors of CYP3A4. [Severe] Study
 - ▶ **Nilotinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose. [Moderate] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **tolterodine**. [Mid] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Nilotinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4. [Moderate] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 910 → Also see TABLE 9 p. 909
 - ▶ **Nilotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- Nimodipine** → see calcium channel blockers
- Nintedanib**
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **nintedanib**. [Moderate] Study

Nintedanib (continued)

- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Macrolides** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **nintedanib**. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **nintedanib**. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study

Nitisinone

- ▶ **Nitisinone** is predicted to increase the exposure to **adefovir**. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **Nitisinone** is predicted to increase the exposure to **cephalosporins (cefactor)**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **Nitisinone** is predicted to increase the exposure to **coumarins (warfarin)**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **Nitisinone** is predicted to increase the exposure to **gancliclovir**. [Moderate] Study
- ▶ **Nitisinone** is predicted to increase the exposure to **H₂ receptor antagonists (cimetidine, famotidine)**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **Nitisinone** is predicted to increase the exposure to **loop diuretics (furosemide)**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **Nitisinone** is predicted to increase the exposure to **methotrexate**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **Nitisinone** is predicted to increase the exposure to **NSAIDs (celecoxib)**. [Moderate] Study
- ▶ **Nitisinone** is predicted to increase the exposure to **oseltamivir**. [Moderate] Study
- ▶ **Nitisinone** is predicted to increase the exposure to **penicillins (benzylpenicillin)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **Nitisinone** is predicted to increase the exposure to **sulfonylureas (glibenclamide, tolbutamide)**. [Moderate] Study

Nitrates → see TABLE 7 p. 908 (first-dose hypotension), TABLE 8 p. 908 (hypotension)

glyceryl trinitrate · isosorbide dinitrate · isosorbide mononitrate

PHARMACOLOGY Drugs with antimuscarinic effects can cause dry mouth, which can reduce the effectiveness of sublingual glyceryl trinitrate tablets.

- ▶ **Nitrates** are predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Avoid. [Severe] Theoretical
- ▶ **Nitrates** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ **Nitrates** potentially increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [Severe] Study → Also see TABLE 8 p. 908

Nitrazepam → see TABLE 11 p. 909 (CNS depressant effects)

- ▶ **Rifampicin** increases the clearance of **nitrazepam**. [Moderate] Study

Nitrofurantoin → see TABLE 12 p. 910 (peripheral neuropathy)

- ▶ **Nitrofurantoin** is predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Antacids (magnesium trisilicate)** decrease the absorption of **nitrofurantoin**. [Moderate] Study
- ▶ **Nitrofurantoin** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical

Nitroprusside → see TABLE 8 p. 908 (hypotension)

- ▶ **Nitroprusside** is predicted to increase the risk of methaemoglobinaemia when given with **anaesthetics, local (prilocaine)**. [Severe] Theoretical
- ▶ **Nitroprusside** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical

Nitrous oxide → see TABLE 8 p. 908 (hypotension), TABLE 11 p. 909 (CNS depressant effects)

- ▶ **Nitrous oxide** potentially increases the risk of methotrexate toxicity when given with **methotrexate**. Avoid. [Severe] Study

Nivolumab → see monoclonal antibodies

Nizatidine → see H₂ receptor antagonists

Noradrenaline/norepinephrine → see sympathomimetics, vasoconstrictor

Norethisterone

- ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Aprepitant** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Besotane** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Efavirenz** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Fosaprepitant** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Modafinil** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Nevirapine** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Rifabutin** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Rifampicin** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **St John's Wort** is predicted to decrease the efficacy of **norethisterone**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal

► **Sugammadex** is predicted to decrease the exposure to **norethisterone**. Use additional contraceptive precautions. [Severe] Theoretical

► **Ulipristal** is predicted to decrease the efficacy of **norethisterone**. Avoid. [Severe] Theoretical

Normal immunoglobulin → see immunoglobulins

Nortriptyline → see tricyclic antidepressants

NSAIDs → see TABLE 18 p. 911 (hyponatraemia), TABLE 2 p. 907 (nephrotoxicity), TABLE 16 p. 911 (increased serum potassium), TABLE 4 p. 907 (antiplatelet effects)

aceclofenac · benzydamine · bromfenac · celecoxib · dexibuprofen · dexketoprofen · diclofenac · etodolac · etoricoxib · felbinac · flurbiprofen · ibuprofen · indometacin · ketoprofen · ketorolac · mefenamic acid · meloxicam · nabumetone · naproxen · nepafenac · parecoxib · piroxicam · sulindac · tenoxicam · tiaprofenic acid · tolfenamic acid

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

► **Celecoxib** is predicted to increase the exposure to **antiarrhythmics (flecainide, propafenone)**. Monitor and adjust dose. [Moderate] Theoretical

► **Antifungals, azoles (fluconazole)** moderately increase the exposure to **celecoxib**. Adjust **celecoxib** dose. [Moderate] Study

► **Antifungals, azoles (fluconazole)** increase the exposure to **parecoxib**. Monitor and adjust dose. [Moderate] Study

► **Antifungals, azoles (voriconazole)** slightly increase the exposure to **diclofenac**. Monitor and adjust dose. [Moderate] Study

► **Antifungals, azoles (voriconazole)** moderately increase the exposure to **ibuprofen**. Adjust dose. [Moderate] Study

► **NSAIDs** are predicted to increase the risk of gastrointestinal irritation when given with **bisphosphonates (alendronate, ibandronate)**. [Moderate] Study

► **NSAIDs** are predicted to increase the risk of renal impairment when given with **bisphosphonates (clodronate)**. [Moderate] Study

► **Ceritinib** is predicted to increase the exposure to NSAIDs (celecoxib, diclofenac). Adjust dose. [Moderate] Theoretical

► **Ciclosporin** increases the concentration of **diclofenac**. [Severe] Study → Also see TABLE 2 p. 907 → Also see TABLE 16 p. 911

► **Etoricoxib** slightly increases the exposure to **combined hormonal contraceptives**. [Moderate] Study

► **NSAIDs** increase the risk of gastrointestinal bleeding when given with **corticosteroids**. [Severe] Study

► **NSAIDs** increase the risk of renal impairment when given with **daptomycin**. [Moderate] Theoretical

► **Indometacin** increases the concentration of **digoxin**. [Severe] Study

► **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with NSAIDs. [Severe] Theoretical

► **Etoricoxib** slightly increases the exposure to **hormone replacement therapy**. [Moderate] Study

► **NSAIDs** are predicted to increase the risk of gastrointestinal bleeding when given with **iron chelators (deferasirox)**. [Severe] Theoretical

► **Diclofenac** is predicted to increase the exposure to **iron chelators (deferiprone)**. [Moderate] Theoretical

► **Leflunomide** is predicted to increase the exposure to NSAIDs (indometacin, ketoprofen). [Moderate] Theoretical

► **NSAIDs** increase the concentration of **lithium**. Monitor and adjust dose. [Severe] Study

► **NSAIDs** are predicted to increase the risk of toxicity when given with **methotrexate**. [Severe] Study → Also see TABLE 2 p. 907

► **NSAIDs** (high-dose) are predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical

► **Nicorandil** is predicted to increase the risk of gastrointestinal perforation when given with NSAIDs. [Severe] Theoretical

► **Nitisinone** is predicted to increase the exposure to **celecoxib**. [Moderate] Study

► **NSAIDs** are predicted to increase the exposure to **pemetrexed**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 2 p. 907

► **NSAIDs** potentially increase the risk of seizures when given with **quinolones**. [Severe] Theoretical

► **Regorafenib** is predicted to increase the exposure to **mefenamic acid**. Avoid. [Moderate] Theoretical → Also see TABLE 4 p. 907

► **Rifampicin** moderately decreases the exposure to NSAIDs (celecoxib, diclofenac, etoricoxib). [Moderate] Study

► **Teriflunomide** is predicted to increase the exposure to NSAIDs (indometacin, ketoprofen). [Moderate] Theoretical

► **NSAIDs** increase the risk of acute renal failure when given with **thiazide diuretics**. [Severe] Theoretical → Also see TABLE 18 p. 911

► **Zidovudine** increases the risk of haematological toxicity when given with NSAIDs. [Severe] Study → Also see TABLE 2 p. 907

Obeticholic acid

► **Obeticholic acid** decreases the anticoagulant effect of **coumarins (warfarin)**. [Severe] Study

► **Obeticholic acid** is predicted to increase the exposure to **theophylline**. [Severe] Theoretical

► **Obeticholic acid** is predicted to increase the exposure to **tizanidine**. [Severe] Theoretical

Obinutuzumab → see monoclonal antibodies

Ocrelizumab → see monoclonal antibodies

Octreotide

► **Octreotide** decreases the absorption of oral **ciclosporin**. Adjust **ciclosporin** dose, p. 559. [Severe] Anecdotal

► **Octreotide** (short-acting) decreases the exposure to **telotristat ethyl**. **Telotristat ethyl** should be taken at least 30 minutes before **octreotide**. [Moderate] Study

Ofloxacin → see quinolones

Olanzapine → see TABLE 8 p. 908 (hypotension), TABLE 15 p. 910 (myelosuppression), TABLE 11 p. 909 (CNS depressant effects)

FOOD AND LIFESTYLE Dose adjustment might be necessary if smoking started or stopped during treatment.

► **Antiepileptics (carbamazepine)** potentially decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study

► **Antiepileptics (phenytoin)** are predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study

► **Olanzapine** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 908

► **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study

► **Leflunomide** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 15 p. 910

► **Olanzapine** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Anecdotal → Also see TABLE 8 p. 908

► **Mexiletine** is predicted to increase the exposure to **olanzapine**. Adjust dose. [Moderate] Anecdotal

► **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **olanzapine**. Adjust dose. [Moderate] Anecdotal

► **Rifampicin** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study

► **SSRIs (fluvoxamine)** moderately increase the exposure to **olanzapine**. Adjust dose. [Severe] Anecdotal

► **Teriflunomide** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study

Olaparib → see TABLE 15 p. 910 (myelosuppression)

FOOD AND LIFESTYLE Bitter (Seville) orange is predicted to increase the exposure to olaparib.

► **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose. [Moderate] Theoretical

► **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical

► **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose. [Moderate] Theoretical

Olaparib (continued)

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose. [Moderate] Study
- ▶ **Olaparib** potentially affects the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ **Efavirenz** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose. [Moderate] Study → Also see TABLE 15 p. 910
- ▶ **Imatinib** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ **Netupitant** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ **Rifampicin** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical

Olmесartan → see angiotensin-II receptor antagonists

Olodaterol → see beta₂ agonists

Olsalazine → see TABLE 15 p. 910 (myelosuppression)

Ombitasvir

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin)** are predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ **Etravirine** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ **Ombitasvir** (in fixed-dose combination with dasabuvir) decreases the concentration of **HIV-protease inhibitors (darunavir)**. Avoid or adjust dose. [Moderate] Study

- ▶ **Mitotane** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical

Omega-3-acid ethyl esters → see TABLE 3 p. 907 (anticoagulant effects)

Omeprazole → see proton pump inhibitors

Ondansetron → see TABLE 13 p. 910 (serotonin syndrome), TABLE 9 p. 909 (QT-interval prolongation)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ondansetron**. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **ondansetron**. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Dopamine receptor agonists (apomorphine)** increase the risk of severe hypotension when given with **ondansetron**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ondansetron**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ondansetron**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ondansetron**. [Moderate] Study

Opicapone

▶ **Opicapone** increases the exposure to **levodopa**. Adjust dose. [Moderate] Study

▶ **Opicapone** is predicted to increase the exposure to **loperamide**. Avoid. [Moderate] Study

▶ **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **MAOIs, irreversible**. Avoid. [Severe] Theoretical

▶ **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **moclobemide**. Avoid. [Severe] Theoretical

▶ **Opicapone** is predicted to increase the exposure to **montelukast**. Avoid. [Moderate] Study

▶ **Opicapone** is predicted to increase the exposure to **pioglitazone**. Avoid. [Moderate] Study

▶ **Opicapone** is predicted to increase the exposure to **repaglinide**. Avoid. [Moderate] Study

▶ **Opicapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic**. [Severe] Theoretical

▶ **Opicapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Severe] Theoretical

Opioids → see TABLE 6 p. 908 (bradycardia), TABLE 13 p. 910 (serotonin syndrome), TABLE 9 p. 909 (QT-interval prolongation), TABLE 11 p. 909 (CNS depressant effects)

alfentanil · buprenorphine · codeine · diamorphine · dihydrocodeine · diphenoxylate · dipipanone · fentanyl · hydromorphone · meptazinol · methadone · morphine · oxycodone · pentazocine · pethidine · remifentanyl · tapentadol · tramadol

▶ **Alcohol (beverage)** causes rapid release of opioids (**hydromorphone, morphine**) (from extended-release preparations). Avoid. [Severe] Study → Also see TABLE 11 p. 909

▶ **Antiarrhythmics (amiodarone)** are predicted to increase the concentration of fentanyl. [Moderate] Theoretical → Also see TABLE 6 p. 908

▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **methadone**. [Moderate] Theoretical → Also see TABLE 9 p. 909

▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [Moderate] Study

▶ **Antiepileptics (carbamazepine)** decrease the concentration of **tramadol**. Adjust dose. [Severe] Study

▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure

- to **buprenorphine**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 909
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) decrease the exposure to **methadone**. Monitor and adjust dose. [Severe] Study → Also see TABLE 11 p. 909
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 909
 - ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to opioids (**alfentanil, fentanyl**). [Moderate] Study → Also see TABLE 11 p. 909
 - ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **methadone**. [Moderate] Theoretical → Also see TABLE 9 p. 909
 - ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **methadone**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 909
 - ▶ Antifungals, azoles (**miconazole**) are predicted to increase the exposure to **alfentanil**. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [Moderate] Study
 - ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [Severe] Study
 - ▶ **Apalutamide** is predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Apalutamide** decreases the exposure to **methadone**. Monitor and adjust dose. [Severe] Study → Also see TABLE 9 p. 909
 - ▶ **Apalutamide** is predicted to decrease the exposure to opioids (**alfentanil, fentanyl**). [Moderate] Study
 - ▶ **Apalutamide** is predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Apreritant** is predicted to increase the exposure to **methadone**. [Moderate] Theoretical
 - ▶ **Apreritant** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [Moderate] Study
 - ▶ **Bictegravir** is predicted to increase the exposure to **methadone**. [Moderate] Theoretical
 - ▶ **Bosentan** decreases the exposure to **methadone**. Monitor and adjust dose. [Severe] Study
 - ▶ **Brigatinib** potentially decreases the concentration of opioids (**alfentanil, fentanyl**). Avoid. [Moderate] Theoretical
 - ▶ **Bupropion** is predicted to decrease the efficacy of **codeine**. [Moderate] Theoretical
 - ▶ **Bupropion** is predicted to decrease the efficacy of **tramadol**. [Severe] Study → Also see TABLE 13 p. 910
 - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **methadone**. [Moderate] Theoretical → Also see TABLE 6 p. 908
 - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p. 908
 - ▶ **Ceritinib** is predicted to increase the exposure to opioids (**alfentanil, fentanyl**). Avoid. [Severe] Theoretical
 - ▶ **Cinacalcet** is predicted to decrease the efficacy of **codeine**. [Moderate] Theoretical
 - ▶ **Cinacalcet** is predicted to decrease the efficacy of **tramadol**. [Severe] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [Severe] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **methadone**. [Moderate] Theoretical → Also see TABLE 6 p. 908 → Also see TABLE 9 p. 909
 - ▶ **Crizotinib** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p. 908
 - ▶ **Efavirenz** decreases the exposure to **methadone**. Monitor and adjust dose. [Severe] Study → Also see TABLE 9 p. 909
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Enzalutamide** decreases the exposure to **methadone**. Monitor and adjust dose. [Severe] Study
 - ▶ **Enzalutamide** is predicted to decrease the exposure to opioids (**alfentanil, fentanyl**). [Moderate] Study
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. [Moderate] Study
 - ▶ **H₂ receptor antagonists (cimetidine)** increase the concentration of **alfentanil**. Use with caution and adjust dose. [Severe] Study
 - ▶ **H₂ receptor antagonists (cimetidine)** increase the exposure to **fentanyl**. [Moderate] Study
 - ▶ **HIV-protease inhibitors** boosted with **ritonavir** are predicted to decrease the exposure to **methadone**. [Moderate] Study → Also see TABLE 9 p. 909
 - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the concentration of **morphine**. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors (ritonavir)** increase the risk of CNS toxicity when given with **pethidine**. Avoid. [Severe] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **methadone**. [Severe] Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **methadone**. [Moderate] Theoretical
 - ▶ **Imatinib** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [Moderate] Study
 - ▶ **Larotrectinib** is predicted to increase the exposure to opioids (**alfentanil, fentanyl**). Use with caution and adjust dose. [Mild] Theoretical
 - ▶ **Letermovir** is predicted to increase the exposure to opioids (**alfentanil, fentanyl**). Monitor and adjust dose. [Moderate] Study
 - ▶ **Lorlatinib** is predicted to decrease the exposure to opioids (**alfentanil, fentanyl**). Avoid. [Moderate] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of **methadone**. [Severe] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **methadone**. [Moderate] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [Severe] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [Moderate] Study
 - ▶ **MAO-B inhibitors (rasagiline)** are predicted to increase the risk of side-effects when given with **pethidine**. Avoid and for 14 days after stopping **rasagiline**. [Severe] Theoretical → Also see TABLE 13 p. 910
 - ▶ **MAO-B inhibitors (safinamide)** are predicted to increase the risk of side-effects when given with **pethidine**. Avoid and for 1 week after stopping **safinamide**. [Severe] Theoretical → Also see TABLE 13 p. 910
 - ▶ **MAO-B inhibitors (selegiline)** increase the risk of side-effects when given with **pethidine**. Avoid. [Severe] Anecdotal → Also see TABLE 13 p. 910
 - ▶ **Opioids** are predicted to increase the risk of CNS excitation or depression when given with **MAOIs, irreversible**. Avoid. [Severe] Study → Also see TABLE 13 p. 910
 - ▶ **Opioids** potentially decrease the absorption of oral **mexiletine**. [Moderate] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Mitotane** decreases the exposure to **methadone**. Monitor and adjust dose. [Severe] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to opioids (**alfentanil, fentanyl**). [Moderate] Study

Opioids (continued)

- ▶ **Mitotane** is predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nalmefene** is predicted to decrease the efficacy of opioids. Avoid. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **methadone**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Nevirapine** decreases the exposure to **methadone**. Monitor and adjust dose. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **methadone**. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Nilotinib** is predicted to increase the exposure to opioids (**alfentanil, buprenorphine, fentanyl, oxycodone**). Monitor and adjust dose. [Moderate] Study
- ▶ Opioids (**buprenorphine**) are predicted to increase the risk of opiate withdrawal when given with opioids (**alfentanil**). [Severe] Theoretical → Also see TABLE 11 p. 909
- ▶ Opioids (**pentazocine**) are predicted to increase the risk of opiate withdrawal when given with opioids (**alfentanil, codeine, diamorphine, dihydrocodeine, dipipanone, fentanyl, hydromorphone, meptazinol, methadone, morphine, oxycodone**). [Severe] Theoretical → Also see TABLE 13 p. 910 → Also see TABLE 11 p. 909
- ▶ Opioids (**buprenorphine**) are predicted to increase the risk of opiate withdrawal when given with opioids (**codeine, diamorphine, dihydrocodeine, dipipanone, fentanyl, hydromorphone, meptazinol, methadone, morphine, oxycodone, pentazocine, pethidine, remifentanyl, tapentadol, tramadol**). [Severe] Theoretical → Also see TABLE 11 p. 909
- ▶ Opioids (**pentazocine**) are predicted to increase the risk of opiate withdrawal when given with opioids (**pethidine, remifentanyl, tapentadol, tramadol**). [Severe] Theoretical → Also see TABLE 13 p. 910 → Also see TABLE 11 p. 909
- ▶ **Palbociclib** is predicted to increase the exposure to opioids (**alfentanil, fentanyl**). Adjust dose. [Moderate] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **morphine**. [Mild] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to opioids (**alfentanil, fentanyl**). Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **methadone**. Monitor and adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to opioids (**alfentanil, fentanyl**). [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to opioids (**codeine, morphine**). [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to opioids (**alfentanil, fentanyl**). Monitor and adjust dose. [Moderate] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to decrease the efficacy of **codeine**. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to decrease the efficacy of **tramadol**. [Severe] Study → Also see TABLE 13 p. 910
- ▶ **St John's Wort** decreases the exposure to **methadone**. Monitor and adjust dose. [Severe] Study → Also see TABLE 13 p. 910
- ▶ **St John's Wort** moderately decreases the exposure to **oxycodone**. Adjust dose. [Moderate] Study
- ▶ **Terbinafine** is predicted to decrease the efficacy of **codeine**. [Moderate] Theoretical
- ▶ **Terbinafine** is predicted to decrease the efficacy of **tramadol**. [Severe] Study

Orlistat

SEPARATION OF ADMINISTRATION Orlistat might affect the absorption of concurrently administered drugs—consider separating administration. Particular care should be taken with antiepileptics, antiretrovirals, and drugs that have a narrow therapeutic index.

Orphenadrine → see TABLE 10 p. 909 (antimuscarinics)

Oseltamivir

- ▶ **Leflunomide** is predicted to increase the exposure to **oseltamivir**. [Moderate] Theoretical
- ▶ **Nitisinone** is predicted to increase the exposure to **oseltamivir**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **oseltamivir**. [Moderate] Study
- ▶ **Osimertinib** → see TABLE 9 p. 909 (QT-interval prolongation)
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ **Apalutamide** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Bosentan** is predicted to decrease the exposure to **osimertinib**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **osimertinib**. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **osimertinib**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **osimertinib**. Avoid. [Moderate] Theoretical
- ▶ **Osimertinib** slightly increases the exposure to **statins (rosuvastatin)**. [Moderate] Study

Ospemifene

- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) increase the exposure to **ospemifene**. Use with caution or avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- ▶ **Apalutamide** is predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- ▶ **Combined hormonal contraceptives** potentially oppose the effects of **ospemifene**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- ▶ **Hormone replacement therapy** potentially opposes the effects of **ospemifene**. Avoid. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ **Oxaliplatin** → see platinum compounds
- ▶ **Oxazepam** → see TABLE 11 p. 909 (CNS depressant effects)
- ▶ **Oxcarbazepine** → see antiepileptics
- ▶ **Oxybuprocaine** → see anaesthetics, local
- ▶ **Oxybutynin** → see TABLE 10 p. 909 (antimuscarinics)
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical

- ▶ **Oxybutynin** potentially increases the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **oxybutynin**. [\[Mild\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **oxybutynin**. [\[Mild\]](#) Study
- ▶ **Aprepitant** is predicted to increase the exposure to **oxybutynin**. [\[Mild\]](#) Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **oxybutynin**. [\[Mild\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **oxybutynin**. [\[Mild\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **oxybutynin**. [\[Mild\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **oxybutynin**. [\[Mild\]](#) Study
- ▶ **Idealisib** is predicted to increase the exposure to **oxybutynin**. [\[Mild\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **oxybutynin**. [\[Mild\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **oxybutynin**. [\[Mild\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **oxybutynin**. [\[Mild\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **oxybutynin**. [\[Mild\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **oxybutynin**. [\[Mild\]](#) Theoretical
- ▶ **Oxycodone** → see opioids
- ▶ **Oxymetholone**
 - ▶ **Oxymetholone** increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
 - ▶ **Oxymetholone** increases the anticoagulant effect of **phenindione**. [\[Severe\]](#) Anecdotal
- ▶ **Oxytetracycline** → see tetracyclines
- ▶ **Paclitaxel** → see taxanes
- ▶ **Palbociclib**
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **palbociclib**. Avoid. [\[Severe\]](#) Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose. [\[Severe\]](#) Study
 - ▶ **Apalutamide** is predicted to decrease the exposure to **palbociclib**. Avoid. [\[Severe\]](#) Study
 - ▶ **Palbociclib** is predicted to increase the exposure to **ciclosporin**. Adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose. [\[Severe\]](#) Study
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **palbociclib**. Avoid. [\[Severe\]](#) Study
 - ▶ **Palbociclib** is predicted to increase the exposure to **ergotamine**. Adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Palbociclib** is predicted to increase the exposure to **everolimus**. Adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **palbociclib**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose. [\[Severe\]](#) Study
 - ▶ **Idealisib** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose. [\[Severe\]](#) Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose. [\[Severe\]](#) Study
 - ▶ **Palbociclib** increases the exposure to **midazolam**. [\[Moderate\]](#) Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **palbociclib**. Avoid. [\[Severe\]](#) Study
 - ▶ **Palbociclib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Palbociclib** is predicted to increase the exposure to **pimozide**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **palbociclib**. Avoid. [\[Severe\]](#) Study
- ▶ **Palbociclib** is predicted to increase the exposure to **sirinolimus**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **palbociclib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Palbociclib** is predicted to increase the exposure to **tacrolimus**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Paliperidone** → see [TABLE 8](#) p. 908 (hypotension), [TABLE 9](#) p. 909 (QT-interval prolongation), [TABLE 11](#) p. 909 (CNS depressant effects)
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [\[Severe\]](#) Study → Also see [TABLE 11](#) p. 909
 - ▶ **Antiepileptics (valproate)** slightly increase the exposure to **paliperidone**. Adjust dose. [\[Moderate\]](#) Study
 - ▶ **Apalutamide** is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [\[Severe\]](#) Study → Also see [TABLE 9](#) p. 909
 - ▶ **Paliperidone** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [\[Moderate\]](#) Theoretical → Also see [TABLE 8](#) p. 908 → Also see [TABLE 9](#) p. 909
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [\[Severe\]](#) Study
 - ▶ **Paliperidone** is predicted to decrease the effects of **levodopa**. [\[Severe\]](#) Theoretical → Also see [TABLE 8](#) p. 908
 - ▶ **Methylphenidate** increases the risk of dyskinesias when given with **paliperidone**. [\[Severe\]](#) Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [\[Severe\]](#) Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [\[Severe\]](#) Study
 - ▶ **St John's Wort** is predicted to decrease the exposure to **paliperidone**. [\[Severe\]](#) Theoretical
- ▶ **Palonosetron** → see [TABLE 9](#) p. 909 (QT-interval prolongation), [TABLE 13](#) p. 910 (serotonin syndrome)
 - ▶ **Dopamine receptor agonists (apomorphine)** are predicted to increase the risk of severe hypotension when given with **palonosetron**. [\[Severe\]](#) Theoretical
- ▶ **Pamidronate** → see bisphosphonates
- ▶ **Pancreatin**
 - ▶ **Pancreatin** is predicted to decrease the effects of **acarbose**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Pancuronium** → see neuromuscular blocking drugs, non-depolarising
- ▶ **Panitumumab** → see monoclonal antibodies
- ▶ **Panobinostat** → see [TABLE 15](#) p. 910 (myelosuppression), [TABLE 9](#) p. 909 (QT-interval prolongation)

FOOD AND LIFESTYLE Avoid pomegranate, pomegranate juice, and star fruit as they are predicted to increase panobinostat exposure.

 - ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **panobinostat**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see [TABLE 9](#) p. 909
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **panobinostat**. Avoid. [\[Moderate\]](#) Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid. [\[Moderate\]](#) Study → Also see [TABLE 9](#) p. 909
 - ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **panobinostat**. Adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Apalutamide** is predicted to decrease the exposure to **panobinostat**. Avoid. [\[Moderate\]](#) Theoretical → Also see [TABLE 9](#) p. 909
 - ▶ **Panobinostat** is predicted to increase the exposure to **atomoxetine**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
 - ▶ **Panobinostat** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
 - ▶ **Panobinostat** is predicted to increase the exposure to **beta blockers, selective (nebivolol)**. Monitor and adjust dose. [\[Mild\]](#) Theoretical
 - ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **panobinostat**. Adjust dose. [\[Moderate\]](#) Theoretical

Panobinostat (continued)

- ▶ **Ciclosporin** is predicted to increase the exposure to panobinostat. Adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to panobinostat. Adjust panobinostat dose; in hepatic impairment avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to panobinostat. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to panobinostat. Adjust panobinostat dose; in hepatic impairment avoid. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Idelalisib** is predicted to increase the exposure to panobinostat. Adjust panobinostat dose; in hepatic impairment avoid. [Moderate] Study → Also see TABLE 15 p. 910
- ▶ **Lapatinib** is predicted to increase the exposure to panobinostat. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to panobinostat. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to panobinostat. Adjust panobinostat dose; in hepatic impairment avoid. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Mitotane** is predicted to decrease the exposure to panobinostat. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ **Panobinostat** is predicted to increase the exposure to **pinozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 909
- ▶ **Ranolazine** is predicted to increase the exposure to panobinostat. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Rifampicin** is predicted to decrease the exposure to panobinostat. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to panobinostat. Avoid. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to panobinostat. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 909

Pantoprazole → see proton pump inhibitors

Paracetamol → see TABLE 1 p. 907 (hepatotoxicity)

- ▶ **Alcohol (beverage)** (in those who drink heavily) causes severe liver damage when given with paracetamol. [Severe] Study → Also see TABLE 1 p. 907
 - ▶ **Paracetamol** is predicted to decrease the clearance of **alkylating agents (busulfan)**. [Moderate] Theoretical
 - ▶ **Paracetamol** is predicted to increase the risk of methaemoglobinemia when given with **topical anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to paracetamol. [Moderate] Study → Also see TABLE 1 p. 907
 - ▶ **Paracetamol** increases the anticoagulant effect of **coumarins**. [Moderate] Study
 - ▶ **Paracetamol** is predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [Severe] Theoretical
 - ▶ **Imatinib** increases the risk of hepatotoxicity when given with paracetamol. [Severe] Anecdotal
 - ▶ **Paracetamol** potentially increases the risk of high anion gap metabolic acidosis when given with **penicillins (flucloxacillin)**. [Severe] Theoretical → Also see TABLE 1 p. 907
 - ▶ **Paracetamol** is predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
 - ▶ **Pitolisant** is predicted to decrease the exposure to paracetamol. [Mild] Theoretical
 - ▶ **Rifampicin** decreases the exposure to paracetamol. [Moderate] Study
- Paraldehyde** → see antiepileptics
- Parathyroid hormone**
- ▶ **Bisphosphonates** are predicted to decrease the effects of parathyroid hormone. Avoid. [Moderate] Study
- Parecoxib** → see NSAIDs
- Paricalcitol** → see vitamin D substances

Paritaprevir

- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **aliskiren**. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to paritaprevir (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to paritaprevir. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to paritaprevir (with ritonavir and ombitasvir) and paritaprevir (with ritonavir and ombitasvir) is predicted to increase the exposure to **antifungals, azoles (posaconazole)**. Avoid. [Severe] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to paritaprevir (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to paritaprevir (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to paritaprevir. Avoid. [Severe] Study
- ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with paritaprevir (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Paritaprevir** (in fixed-dose combination with dasabuvir) decreases the anticoagulant effect of **coumarins (acenocoumarol)**. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Paritaprevir** (in fixed-dose combination) decreases the anticoagulant effect of **coumarins (warfarin)**. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **dabigatran**. [Severe] Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) increases the exposure to **digoxin**. Monitor and adjust digoxin dose, p. 86. [Moderate] Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **edoxaban**. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to paritaprevir (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to paritaprevir (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to paritaprevir. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir)** boosted with ritonavir markedly increase the exposure to paritaprevir. Avoid or give unboosted. [Moderate] Study
- ▶ **HIV-protease inhibitors (darunavir)** boosted with ritonavir slightly decrease the exposure to paritaprevir. Avoid or give unboosted. [Moderate] Study
- ▶ **HIV-protease inhibitors (fosamprenavir, tipranavir)** boosted with ritonavir are predicted to increase the exposure to paritaprevir. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (lopinavir)** boosted with ritonavir moderately to markedly increase the exposure to paritaprevir. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (saquinavir)** are predicted to increase the exposure to paritaprevir (in fixed-dose combination). Avoid. [Severe] Study
- ▶ **Paritaprevir** is predicted to increase the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **loop diuretics (furosemide)**. Adjust dose. [Moderate] Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **loperamide**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to paritaprevir. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to paritaprevir. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to paritaprevir (with ritonavir and ombitasvir). Avoid. [Severe] Study

- ▶ **Nevirapine** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Paritaprevir** (in fixed-dose combination) is predicted to increase the risk of rhabdomyolysis when given with **statins (atorvastatin)**. Avoid. [Severe] Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **statins (fluvastatin)**. Avoid. [Moderate] Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) increases the exposure to **statins (pravastatin)**. Adjust **pravastatin** dose. [Moderate] Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) slightly to moderately increases the exposure to **statins (rosuvastatin)**. Adjust **rosuvastatin** dose, p. 140. [Moderate] Study
- ▶ **Paritaprevir** (in fixed-dose combination) is predicted to increase the risk of rhabdomyolysis when given with **statins (simvastatin)**. Avoid. [Severe] Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **thyroid hormones (levothyroxine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **topotecan**. [Moderate] Study
- Paroxetine** → see SSRIs
- Pasireotide** → see TABLE 6 p. 908 (bradycardia), TABLE 9 p. 909 (QT-interval prolongation)
- ▶ **Pasireotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. [Severe] Theoretical
- Patimor**

SEPARATION OF ADMINISTRATION Manufacturer advises take 3 hours before, or after, other drugs.
- Pazopanib** → see TABLE 15 p. 910 (myelosuppression), TABLE 9 p. 909 (QT-interval prolongation)
- ▶ **Antacids** are predicted to decrease the absorption of **pazopanib**. **Pazopanib** should be taken 1 hour before or 2 hours after antacids. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Apalutamide** is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 909
- ▶ **Aprepitant** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose. [Moderate] Study
- ▶ **Pazopanib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 15 p. 910 → Also see TABLE 9 p. 909
- ▶ **Enzalutamide** is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to **pazopanib**. **H₂ receptor antagonists** should be taken 10 hours before or 2 hours after **pazopanib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Idelalisib** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose. [Moderate] Study → Also see TABLE 15 p. 910
- ▶ **Imatinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ **Pazopanib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Mitotane** is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 910
- ▶ **Netupitant** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 15 p. 910 → Also see TABLE 9 p. 909
- ▶ **Pazopanib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **pazopanib**. Avoid or administer concurrently without food. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **Pazopanib** is predicted to affect the exposure to **statins (atorvastatin)**. [Moderate] Anecdotal
- ▶ **Pazopanib** is predicted to affect the exposure to **statins (pravastatin, rosuvastatin, simvastatin)**. [Moderate] Theoretical
- Pegaspargase** → see TABLE 1 p. 907 (hepatotoxicity), TABLE 15 p. 910 (myelosuppression)
- ▶ **Pegaspargase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 910
- ▶ **Pegaspargase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 907 → Also see TABLE 15 p. 910
- ▶ **Pegaspargase** potentially increases the risk of neurotoxicity when given with **vinca alkaloids (vincristine)**. **Vincristine** should be taken 3 to 24 hours before **pegaspargase**. [Severe] Anecdotal → Also see TABLE 1 p. 907 → Also see TABLE 15 p. 910
- Peginterferon alfa** → see interferons
- Peginterferon beta** → see TABLE 15 p. 910 (myelosuppression)
- Pembrolizumab** → see monoclonal antibodies
- Pemetrexed** → see TABLE 15 p. 910 (myelosuppression), TABLE 2 p. 907 (nephrotoxicity)
- ▶ **Antimalarials (pyrimethamine)** are predicted to increase the risk of side-effects when given with **pemetrexed**. [Severe] Theoretical → Also see TABLE 15 p. 910
- ▶ **Aspirin** (high-dose) potentially increases the exposure to **pemetrexed**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **pemetrexed**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **NSAIDs** are predicted to increase the exposure to **pemetrexed**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 2 p. 907
- Penicillamine** → see TABLE 2 p. 907 (nephrotoxicity)
- ▶ **Antacids** decrease the absorption of **penicillamine**. Separate administration by 2 hours. [Mild] Study
- ▶ **Antimalarials (chloroquine)** are predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [Severe] Theoretical
- ▶ **Penicillamine** potentially decreases the concentration of **digoxin**. Separate administration by 2 hours. [Severe] Anecdotal

Penicillamine (continued)

- ▶ **Hydroxychloroquine** is predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Iron (oral)** is predicted to decrease the absorption of **penicillamine**. Separate administration by at least 2 hours. [\[Mild\]](#) Study
- ▶ **Sodium aurothiomalate** potentially increases the risk of side-effects when given with **penicillamine** (in those who have had previous adverse reactions to gold). Avoid. [\[Severe\]](#) Study
- ▶ **Zinc** is predicted to decrease the absorption of **penicillamine**. [\[Mild\]](#) Theoretical

Penicillins → see TABLE 1 p. 907 (hepatotoxicity)

amoxicillin · ampicillin · benzathine benzylpenicillin · benzylpenicillin · flucloxacillin · phenoxymethylpenicillin · piperacillin · pivmecillinam · temocillin · ticarcillin

- ▶ **Allopurinol** increases the risk of skin rash when given with **penicillins** (**amoxicillin**, **ampicillin**). [\[Moderate\]](#) Study
- ▶ **Antiepileptics (valproate)** increase the risk of side-effects when given with **pivmecillinam**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Penicillins** potentially alter the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Leflunomide** is predicted to increase the exposure to **benzylpenicillin**. [\[Moderate\]](#) Theoretical
- ▶ **Penicillins** are predicted to increase the risk of toxicity when given with **methotrexate**. [\[Severe\]](#) Anecdotal → Also see TABLE 1 p. 907
- ▶ **Piperacillin** increases the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Moderate\]](#) Study
- ▶ **Nitisinone** is predicted to increase the exposure to **benzylpenicillin**. [\[Moderate\]](#) Study
- ▶ **Paracetamol** potentially increases the risk of high anion gap metabolic acidosis when given with **flucloxacillin**. [\[Severe\]](#) Theoretical → Also see TABLE 1 p. 907
- ▶ **Penicillins** are predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Piperacillin** increases the effects of **suxamethonium**. [\[Moderate\]](#) Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **benzylpenicillin**. [\[Moderate\]](#) Study

Pentamidine → see TABLE 9 p. 909 (QT-interval prolongation), TABLE 15 p. 910 (myelosuppression), TABLE 2 p. 907 (nephrotoxicity)

- ▶ **Foscarnet** increases the risk of hypocalcaemia when given with **pentamidine**. [\[Severe\]](#) Anecdotal → Also see TABLE 2 p. 907

Pentazocine → see opioids**Pentostatin** → see TABLE 15 p. 910 (myelosuppression), TABLE 5 p. 907 (thromboembolism)

- ▶ **Alkylating agents (cyclophosphamide)** (high-dose) increase the risk of toxicity when given with **pentostatin**. Avoid. [\[Severe\]](#) Anecdotal → Also see TABLE 15 p. 910 → Also see TABLE 5 p. 907
- ▶ **Fludarabine** increases the risk of pulmonary toxicity when given with **pentostatin**. Avoid. [\[Severe\]](#) Study → Also see TABLE 15 p. 910

Pentoxifylline

- ▶ **Pentoxifylline** is predicted to increase the concentration of **aminophylline**. Use with caution or avoid. [\[Severe\]](#) Theoretical
- ▶ **Quinolones (ciprofloxacin)** very slightly increase the exposure to **pentoxifylline**. [\[Moderate\]](#) Study
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **pentoxifylline**. [\[Moderate\]](#) Theoretical
- ▶ **Pentoxifylline** increases the concentration of **theophylline**. Monitor and adjust dose. [\[Severe\]](#) Study

Peppermint

- ▶ **Peppermint oil** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical

Perampanel → see antiepileptics**Pergolide** → see dopamine receptor agonists**Pericyazine** → see phenothiazines**Perindopril** → see ACE inhibitors**Pertuzumab** → see monoclonal antibodies**Pethidine** → see opioids**Phenelzine** → see MAOIs, irreversible**Phenindione** → see TABLE 3 p. 907 (anticoagulant effects)

FOOD AND LIFESTYLE The effects of phenindione can be reduced or abolished by vitamin K, including that found in health foods, food supplements, enteral feeds, or large amounts of some green vegetables or green tea. Major changes in diet (especially involving salads and vegetables) and in alcohol consumption can affect anticoagulant control.

- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (miconazole)** greatly increase the anticoagulant effect of **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Axitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Bosutinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Cabozantinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Cephalosporins (ceftriaxone)** potentially increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Anecdotal
- ▶ **Corticosteroids** are predicted to increase the effects of **phenindione**. [\[Moderate\]](#) Anecdotal
- ▶ **Crizotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Dasatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Disulfiram** is predicted to increase the anticoagulant effect of **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Enteral feeds** (vitamin-K containing) potentially decrease the effects of **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Erlotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Fibrates** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [\[Severe\]](#) Study
- ▶ **Gefitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **H₂ receptor antagonists (cimetidine)** increase the exposure to **phenindione**. [\[Severe\]](#) Anecdotal
- ▶ **Imatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Lapatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Nandrolone** is predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Oxymetholone** increases the anticoagulant effect of **phenindione**. [\[Severe\]](#) Anecdotal
- ▶ **Paracetamol** is predicted to increase the anticoagulant effect of **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Pazopanib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Penicillins** are predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Ponatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Regorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Ruxolitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Sorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Statins (rosuvastatin)** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Sunitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Vandetanib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical

Phenobarbital → see antiepileptics**Phenothiazines** → see TABLE 8 p. 908 (hypotension), TABLE 9 p. 909 (QT-interval prolongation), TABLE 11 p. 909 (CNS depressant effects), TABLE 10 p. 909 (antimuscarinics)

chlorpromazine · fluphenazine · levomepromazine · pericyazine · prochlorperazine · promazine · trifluoperazine

FOOD AND LIFESTYLE Chlorpromazine and fluphenazine dose adjustment might be necessary if smoking started or stopped during treatment.

- ▶ **Phenothiazines** are predicted to decrease the effects of **amfetamines** and **amfetamines** are predicted to decrease the effects of **phenothiazines**. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **phenothiazines**. [Moderate] Anecdotal
- ▶ **Chlorpromazine** decreases the concentration of **antiepileptics (phenobarbital, primidone)** and **antiepileptics (phenobarbital, primidone)** decrease the concentration of **chlorpromazine**. [Moderate] Study → Also see TABLE 11 p. 909
- ▶ **Chlorpromazine** is predicted to increase the risk of hypotatraemia when given with **desmopressin**. [Severe] Theoretical
- ▶ **Phenothiazines** are predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 908 → Also see TABLE 9 p. 909 → Also see TABLE 10 p. 909
- ▶ **Phenothiazines** decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Study → Also see TABLE 8 p. 908
- ▶ **Phenothiazines** potentially increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 909
- ▶ **MAOIs, irreversible** are predicted to increase the risk of neuroleptic malignant syndrome when given with **phenothiazines**. [Severe] Theoretical → Also see TABLE 8 p. 908
- ▶ **Chlorpromazine** decreases the effects of **metyparone**. Avoid. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **chlorpromazine**. [Moderate] Theoretical
- ▶ **Moclobemide** increases the risk of side-effects when given with **levomepromazine**. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **chlorpromazine**. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **chlorpromazine**. [Moderate] Theoretical
- Phenoxymethylpenicillin** → see penicillins
- Phenylephrine** → see sympathomimetics, vasoconstrictor
- Phenytoin** → see antiepileptics
- Pholcodine**
 - ▶ **Pholcodine** is predicted to increase the risk of CNS excitation or depression when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- Phosphodiesterase type-5 inhibitors** → see TABLE 8 p. 908 (hypotension), TABLE 9 p. 909 (QT-interval prolongation)

avanafil · sildenafil · tadalafil · vardenafil

- ▶ **Alpha blockers** cause significant hypotensive effects when given with **phosphodiesterase type-5 inhibitors**. Patient should be stabilised on first drug then second drug should be added at the lowest recommended dose. [Severe] Study → Also see TABLE 8 p. 908
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 125. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **varidenafil**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 909
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil, tadalafil**). Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil, vardenafil**). [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 125. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **sildenafil**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafil**). Avoid. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Apalutamide** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil, tadalafil**). Avoid. [Severe] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil, vardenafil**). [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Aprepitant** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 125. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **varidenafil**. Adjust dose. [Severe] Theoretical
- ▶ **Bosentan** decreases the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose. [Moderate] Theoretical → Also see TABLE 8 p. 908
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 125. [Moderate] Study → Also see TABLE 8 p. 908
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tadalafil**. [Severe] Theoretical → Also see TABLE 8 p. 908
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **varidenafil**. Adjust dose. [Severe] Theoretical → Also see TABLE 8 p. 908
- ▶ **Cobicistat** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil, vardenafil**). Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **sildenafil**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 125. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 125. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Crizotinib** is predicted to increase the exposure to **tadalafil**. [Severe] Theoretical

Phosphodiesterase type-5 inhibitors (continued)

- ▶ **Crizotinib** is predicted to increase the exposure to **varденаfil**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Efavirenz** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Enzalutamide** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil**, **tadalafil**). Avoid. [Severe] Study
 - ▶ **Enzalutamide** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil**, **varденаfil**). [Moderate] Theoretical
 - ▶ **Etravirine** moderately decreases the exposure to **phosphodiesterase type-5 inhibitors**. Adjust dose. [Moderate] Study
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors**. Use with caution or avoid. [Moderate] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil**, **varденаfil**). Avoid. [Severe] Study → Also see TABLE 9 p. 909
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **sildenafil**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 125. [Severe] Study → Also see TABLE 9 p. 909
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil**, **varденаfil**). Avoid. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **sildenafil**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 125. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose. [Moderate] Theoretical
 - ▶ **Imatinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 125. [Moderate] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
 - ▶ **Imatinib** is predicted to increase the exposure to **varденаfil**. Adjust dose. [Severe] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **sildenafil**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 125. [Severe] Study → Also see TABLE 9 p. 909
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [Severe] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose. [Moderate] Theoretical
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 125. [Moderate] Study → Also see TABLE 9 p. 909
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **varденаfil**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil**, **varденаfil**). Avoid. [Severe] Study → Also see TABLE 9 p. 909
 - ▶ **Mitotane** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil**, **tadalafil**). Avoid. [Severe] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil**, **varденаfil**). [Moderate] Theoretical
 - ▶ **Netupitant** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose. [Moderate] Theoretical
 - ▶ **Netupitant** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 125. [Moderate] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
 - ▶ **Netupitant** is predicted to increase the exposure to **varденаfil**. Adjust dose. [Severe] Theoretical
 - ▶ **Nevirapine** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Theoretical
 - ▶ **Nicorandil** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 908
 - ▶ **Nilotinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose. [Moderate] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 125. [Moderate] Study → Also see TABLE 9 p. 909
 - ▶ **Nilotinib** is predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **varденаfil**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Nitrates** potentially increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [Severe] Study → Also see TABLE 8 p. 908
 - ▶ **Ribociclib** is predicted to increase the exposure to **sildenafil**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Rifampicin** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil**, **tadalafil**). Avoid. [Severe] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil**, **varденаfil**). [Moderate] Theoretical
 - ▶ **Riociguat** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 908
 - ▶ **Phosphodiesterase type-5 inhibitors** are predicted to increase the risk of hypotension when given with **sapropterin**. [Moderate] Theoretical → Also see TABLE 8 p. 908
 - ▶ **St John's Wort** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Theoretical
- Pibrentasvir**
- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **aliskiren**. [Moderate] Study
 - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
 - ▶ **Antiarrhythmics (dronedarone)** potentially increase the exposure to **pibrentasvir**. [Moderate] Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **Antiepileptics (eslicarbazepine, oxcarbazepine)** potentially decrease the exposure to **pibrentasvir**. Avoid. [Severe] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
 - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Study
 - ▶ **Apalutamide** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **Bosentan** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
 - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **colchicine**. [Moderate] Study
 - ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **Crizotinib** potentially decreases the exposure to **pibrentasvir**. Avoid. [Severe] Theoretical
 - ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **dabigatran**. Avoid. [Moderate] Study
 - ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **digoxin**. [Moderate] Study
 - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **edoxaban**. [Moderate] Study

- ▶ **Efavirenz** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **everolimus**. [Moderate] Study
 - ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** boosted with ritonavir increase the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **HIV-protease inhibitors (ritonavir)** potentially increase the exposure to **pibrentasvir**. [Severe] Theoretical
 - ▶ **HIV-protease inhibitors (saquinavir)** are predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
 - ▶ **Lapatinib** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
 - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **loperamide**. [Moderate] Study
 - ▶ **Lumacaftor** potentially decreases the exposure to **pibrentasvir**. Avoid. [Severe] Theoretical
 - ▶ **Macrolides** are predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
 - ▶ **Mitotane** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **Nevirapine** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **Ranolazine** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
 - ▶ **Rifampicin** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **sirolimus**. [Moderate] Study
 - ▶ **St John's Wort** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **Pibrentasvir** (with glecaprevir) markedly increases the exposure to **statins (atorvastatin)**. Avoid. [Severe] Study
 - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **statins (fluvastatin)**. [Moderate] Theoretical
 - ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **statins (pravastatin)**. Use with caution and adjust **pravastatin** dose. [Moderate] Study
 - ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **statins (rosuvastatin)**. Use with caution and adjust **rosuvastatin** dose, p. 140. [Moderate] Study
 - ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **statins (simvastatin)**. Avoid. [Moderate] Study
 - ▶ **Pibrentasvir** (with glecaprevir) slightly increases the exposure to **tacrolimus**. Monitor and adjust dose. [Mild] Study
 - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Study
 - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **topotecan**. [Moderate] Study
 - ▶ **Vemurafenib** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- Pilocarpine**
- ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- Pimecrolimus**
- ▶ **Alcohol (beverage)** increases the risk of facial flushing and skin irritation when given with topical **pimecrolimus**. [Moderate] Study
 - ▶ **Pimecrolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- Pimozide** → see TABLE 8 p. 908 (hypotension), TABLE 9 p. 909 (QT-interval prolongation), TABLE 11 p. 909 (CNS depressant effects), TABLE 10 p. 909 (antimuscarinics)
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
 - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **pimozide**. Avoid. [Moderate] Theoretical
 - ▶ **Antiprepitant** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 908
 - ▶ **Ceritinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Cobicistat** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Pimozide** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 908 → Also see TABLE 9 p. 909 → Also see TABLE 10 p. 909
 - ▶ **Fosaprepitant** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
 - ▶ **Grapefruit juice** increases the exposure to **pimozide**. Avoid. [Severe] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
 - ▶ **Idelalisib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
 - ▶ **Larotrectinib** is predicted to increase the exposure to **pimozide**. Use with caution and adjust dose. [Mild] Theoretical
 - ▶ **Letermovir** is predicted to increase the concentration of **pimozide**. Avoid. [Severe] Theoretical
 - ▶ **Pimozide** decreases the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 908
 - ▶ **Lortitanib** is predicted to decrease the exposure to **pimozide**. Avoid. [Moderate] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Netupitant** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Palbociclib** is predicted to increase the exposure to **pimozide**. Adjust dose. [Moderate] Theoretical
 - ▶ **Panobinostat** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Pitolisant** is predicted to decrease the exposure to **pimozide**. Avoid. [Severe] Theoretical
 - ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **pimozide**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Rolapitant** is predicted to increase the exposure to **pimozide**. [Severe] Study
 - ▶ **Rucaparib** is predicted to increase the exposure to **pimozide**. Monitor and adjust dose. [Moderate] Study
- Pindolol** → see beta blockers, non-selective
- Pioglitazone** → see TABLE 14 p. 910 (antidiabetic drugs)
- Pioglitazone** potentially decreases the exposure to **antifungals, azoles (isavuconazole)**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Clopidogrel** increases the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. [Severe] Study
 - ▶ **Fibrates (gemfibrozil)** increase the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. [Severe] Study
 - ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **pioglitazone**. [Moderate] Study
 - ▶ **Leflunomide** is predicted to increase the exposure to **pioglitazone**. [Moderate] Study
 - ▶ **Opicapone** is predicted to increase the exposure to **pioglitazone**. Avoid. [Moderate] Study
 - ▶ **Rifampicin** moderately decreases the exposure to **pioglitazone**. Monitor and adjust dose. [Moderate] Study
 - ▶ **St John's Wort** slightly decreases the exposure to **pioglitazone**. [Mild] Study

Pioglitazone (continued)

- ▶ **Teriflunomide** is predicted to increase the exposure to pioglitazone. [Moderate] Study

Piperacillin → see penicillins

Piperaquine → see antimalarials

Pirfenidone

FOOD AND LIFESTYLE Smoking increases pirfenidone clearance; patients should be encouraged to stop smoking before and during treatment with pirfenidone.

- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to pirfenidone. [Moderate] Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to pirfenidone. Use with caution and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to pirfenidone. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to decrease the exposure to pirfenidone. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to pirfenidone. Use with caution and adjust dose. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to pirfenidone. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to pirfenidone. Avoid. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** are predicted to moderately increase the exposure to pirfenidone. Avoid. [Moderate] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to pirfenidone. [Moderate] Theoretical

Piroxicam → see NSAIDs

Pitolisant

- ▶ **Pitolisant** is predicted to decrease the exposure to **aliskiren**. [Mid] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to pitolisant. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to antihistamines, non-sedating (**exfenadine**). [Mid] Theoretical
- ▶ **Antihistamines, sedating** are predicted to decrease the efficacy of pitolisant. [Moderate] Theoretical
- ▶ **Apalutamide** is predicted to moderately decrease the exposure to pitolisant. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Bupropion** is predicted to moderately increase the exposure to pitolisant. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Severe] Theoretical
- ▶ **Cinacalcet** is predicted to moderately increase the exposure to pitolisant. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **colchicine**. [Mid] Theoretical
- ▶ **Pitolisant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **coumarins (warfarin)**. [Mid] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **dabigatran**. [Mid] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **dasatinib**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **digoxin**. [Mid] Theoretical
- ▶ **Duloxetine** is predicted to increase the exposure to pitolisant. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **edoxaban**. [Mid] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **efavirenz**. [Mid] Theoretical
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to pitolisant. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **everolimus**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **irinotecan**. [Mid] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **loperamide**. [Mid] Theoretical
- ▶ **Pitolisant** is predicted to increase the exposure to **metformin**. [Mid] Theoretical
- ▶ **Mianserin** is predicted to decrease the efficacy of pitolisant. [Moderate] Theoretical
- ▶ **Mirtazapine** is predicted to decrease the efficacy of pitolisant. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to moderately decrease the exposure to pitolisant. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **opioids (morphine)**. [Mid] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **paracetamol**. [Mid] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **repaglinide**. [Mid] Theoretical
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to pitolisant. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **sirolimus**. Avoid. [Severe] Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to moderately increase the exposure to pitolisant. Use with caution and adjust dose. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to pitolisant. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **taxanes (docetaxel)**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **taxanes (paclitaxel)**. [Mid] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Terbinafine** is predicted to moderately increase the exposure to pitolisant. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **topotecan**. [Mid] Theoretical
- ▶ **Tricyclic antidepressants** are predicted to decrease the efficacy of pitolisant. [Mid] Theoretical
- ▶ **Venlafaxine** is predicted to increase the exposure to pitolisant. Use with caution and adjust dose. [Mid] Theoretical

Pivmecillinam → see penicillins

Pixantrone → see anthracyclines

Pizotifen → see antihistamines, sedating

Platinum compounds → see TABLE 15 p. 910 (myelosuppression),

TABLE 2 p. 907 (nephrotoxicity), TABLE 19 p. 911 (ototoxicity), TABLE 12 p. 910 (peripheral neuropathy)

carboplatin · cisplatin · oxaliplatin

- ▶ **Cisplatin** increases the risk of pulmonary toxicity when given with **bleomycin**. [Severe] Study → Also see TABLE 15 p. 910
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **platinum compounds**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

Polatuzumab vedotin → see monoclonal antibodies

Polymyxin b → see TABLE 2 p. 907 (nephrotoxicity), TABLE 20 p. 911 (neuromuscular blocking effects)

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

Polystyrene sulfonate

SEPARATION OF ADMINISTRATION Manufacturers advise take other drugs at least 3 hours before or after calcium- or sodium-polystyrene sulfonate; a 6-hour separation should be considered in gastroparesis.

- ▶ **Antacids** increase the risk of metabolic alkalosis when given with polystyrene sulfonate. [Severe] Anecdotal
- Pomalidomide** → see TABLE 15 p. 910 (myelosuppression), TABLE 5 p. 907 (thromboembolism)
- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with pomalidomide. Avoid. [Severe] Theoretical
- ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with pomalidomide. [Severe] Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to pomalidomide. Adjust pomalidomide dose. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** moderately increase the exposure to pomalidomide. Adjust pomalidomide dose. [Moderate] Study
- Ponatinib**
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to ponatinib. Avoid. [Moderate] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to ponatinib. Monitor and adjust ponatinib dose. [Moderate] Study
 - ▶ **Apalutamide** is predicted to decrease the exposure to ponatinib. Avoid. [Moderate] Theoretical
 - ▶ **Cobicistat** is predicted to slightly increase the exposure to ponatinib. Monitor and adjust ponatinib dose. [Moderate] Study
 - ▶ **Ponatinib** is predicted to increase the risk of bleeding events when given with coumarins. [Severe] Theoretical
 - ▶ **Enzalutamide** is predicted to decrease the exposure to ponatinib. Avoid. [Moderate] Theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to ponatinib. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to ponatinib. Monitor and adjust ponatinib dose. [Moderate] Study
 - ▶ **Idelalisib** is predicted to slightly increase the exposure to ponatinib. Monitor and adjust ponatinib dose. [Moderate] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to ponatinib. Monitor and adjust ponatinib dose. [Moderate] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to ponatinib. Avoid. [Moderate] Theoretical
 - ▶ **Ponatinib** is predicted to increase the risk of bleeding events when given with phenindione. [Severe] Theoretical
 - ▶ **Rifampicin** is predicted to decrease the exposure to ponatinib. Avoid. [Moderate] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to ponatinib. Avoid. [Severe] Theoretical
- Posaconazole** → see antifungals, azoles
- Potassium aminobenzoate** → see TABLE 16 p. 911 (increased serum potassium)
- ▶ **Potassium aminobenzoate** increases the concentration of methotrexate. [Moderate] Theoretical
- ▶ **Potassium aminobenzoate** is predicted to affect the efficacy of sulfonamides. Avoid. [Severe] Theoretical
- Potassium canrenoate** → see TABLE 16 p. 911 (increased serum potassium)
- Potassium chloride** → see TABLE 16 p. 911 (increased serum potassium)
- Potassium citrate**
 - ▶ **Potassium citrate** is predicted to decrease the efficacy of methenamine. Avoid. [Moderate] Theoretical
 - ▶ **Potassium citrate** increases the risk of side-effects when given with sucralfate. Avoid. [Moderate] Theoretical
- Potassium-sparing diuretics** → see TABLE 18 p. 911 (hyponatraemia), TABLE 16 p. 911 (increased serum potassium)
 - amiloride + triamterene
- ▶ **Triamterene** potentially increases the clearance of lithium. [Moderate] Study
- Pramipexole** → see dopamine receptor agonists
- Prasugrel** → see TABLE 4 p. 907 (antiplatelet effects)
- Pravastatin** → see statins
- Praziquantel**
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to praziquantel. Avoid. [Moderate] Study

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to praziquantel. [Mild] Study
- ▶ **Antimalarials (chloroquine)** moderately decrease the exposure to praziquantel. Use with caution and adjust dose. [Moderate] Study
- ▶ **Apalutamide** is predicted to markedly decrease the exposure to praziquantel. Avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to praziquantel. [Mild] Study
- ▶ **Corticosteroids (dexamethasone)** decrease the exposure to praziquantel. [Moderate] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to praziquantel. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to praziquantel. [Moderate] Study
- ▶ **H₂ receptor antagonists (cimetidine)** moderately increase the exposure to praziquantel. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to praziquantel. [Mild] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to praziquantel. [Mild] Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to praziquantel. [Mild] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to praziquantel. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to praziquantel. Avoid. [Moderate] Study
- Prazosin** → see alpha blockers
- Prednisolone** → see corticosteroids
- Pregabalin** → see antiepileptics
- Prilocaline** → see anaesthetics, local
- Primaquine** → see antimalarials
- Primidone** → see antiepileptics
- Procarbazine** → see TABLE 15 p. 910 (myelosuppression), TABLE 13 p. 910 (serotonin syndrome)

FOOD AND LIFESTYLE Procarbazine is a mild monoamine-oxidase inhibitor and might rarely interact with tyramine-rich foods (such as mature cheese, salami, pickled herring, Bovril[®], Oxo[®], Marmite[®] or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with procarbazine. [Moderate] Anecdotal
- ▶ **Antiepileptics (carbamazepine, phenobarbital, phenytoin, primidone)** are predicted to increase the risk of hypersensitivity reactions when given with procarbazine. [Severe] Anecdotal
- ▶ **Antiepileptics (fosphenytoin)** are predicted to increase the risk of hypersensitivity when given with procarbazine. [Severe] Anecdotal
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with procarbazine. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- Prochlorperazine** → see phenothiazines
- Procyclidine** → see TABLE 10 p. 909 (antimuscarinics)
- ▶ **SSRIs (paroxetine)** slightly increase the exposure to procyclidine. Monitor and adjust dose. [Moderate] Study
- Proguanil** → see antimalarials
- Promazine** → see phenothiazines
- Promethazine** → see antihistamines, sedating
- Propafenone** → see antiarrhythmics
- Propanteline** → see TABLE 10 p. 909 (antimuscarinics)
- Propiverine** → see TABLE 10 p. 909 (antimuscarinics)
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** given with carbimazole are predicted to increase the exposure to propiverine. Adjust starting dose. [Moderate] Theoretical
 - ▶ **Carbimazole** given with a potent CYP3A4 inhibitor is predicted to increase the exposure to propiverine. Adjust starting dose. [Moderate] Theoretical
 - ▶ **Cobicistat** given with carbimazole is predicted to increase the exposure to propiverine. Adjust starting dose. [Moderate] Theoretical

Propiverine (Continued)

- ▶ **HIV-protease inhibitors** given with carbimazole are predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical
- ▶ **Idelalisib** given with carbimazole is predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical
- ▶ **Propiverine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** given with carbimazole are predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical

Propofol → see TABLE 8 p. 908 (hypotension), TABLE 11 p. 909 (CNS depressant effects)

- ▶ **Antiepileptics (valproate)** potentially increase the concentration of **propofol**. Adjust dose. [Severe] Theoretical

Propranolol → see beta blockers, non-selective

Propylthiouracil → see TABLE 15 p. 910 (myelosuppression)

- ▶ **Propylthiouracil** is predicted to decrease the effects of **metyrapone**. Avoid. [Moderate] Theoretical

Proton pump inhibitors

esomeprazole · lansoprazole · omeprazole · pantoprazole · rabeprazole

- ▶ **Antifungals, azoles (voriconazole)** increase the exposure to proton pump inhibitors (**esomeprazole, omeprazole**). Adjust dose. [Moderate] Study
- ▶ **Proton pump inhibitors** decrease the absorption of **antifungals, azoles (itraconazole)**. Administer itraconazole capsules with an acidic beverage. [Moderate] Study
- ▶ **Proton pump inhibitors** decrease the absorption of **antifungals, azoles (ketoconazole)**. Administer ketoconazole with an acidic beverage. [Moderate] Study
- ▶ **Proton pump inhibitors** decrease the absorption of **antifungals, azoles (posaconazole)** (oral suspension). Avoid. [Moderate] Study
- ▶ **Apalutamide** markedly decreases the exposure to **omeprazole**. Avoid or monitor. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to proton pump inhibitors (**lansoprazole, rabeprazole**). Avoid or monitor. [Mild] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **bosutinib**. [Moderate] Study
- ▶ **Esomeprazole** is predicted to increase the exposure to **cannabidiol**. [Moderate] Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **ceritinib**. [Moderate] Theoretical
- ▶ **Esomeprazole** is predicted to increase the exposure to **cilostazol**. [Moderate] Theoretical
- ▶ **Omeprazole** is predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose. [Moderate] Study
- ▶ Proton pump inhibitors (**esomeprazole, omeprazole**) potentially increase the exposure to **clobazam**. Adjust dose. [Moderate] Theoretical
- ▶ Proton pump inhibitors (**esomeprazole, omeprazole**) are predicted to decrease the efficacy of **clopidogrel**. Avoid. [Moderate] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **dacomitinib**. Avoid. [Moderate] Study
- ▶ **Proton pump inhibitors** are predicted to slightly to moderately decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [Moderate] Theoretical
- ▶ **Proton pump inhibitors** are predicted to slightly decrease the exposure to **erlotinib**. Avoid. [Moderate] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **gefitinib**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (tipranavir)** decrease the exposure to **proton pump inhibitors**. Avoid. [Severe] Study
- ▶ **Proton pump inhibitors** decrease the exposure to **HIV-protease inhibitors (atazanavir)**. Avoid or adjust dose. [Severe] Study
- ▶ **Proton pump inhibitors** increase the exposure to **HIV-protease inhibitors (saquinavir)**. Avoid. [Severe] Study

- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 436. [Moderate] Theoretical
- ▶ **Proton pump inhibitors** decrease the clearance of **methotrexate** (high-dose). Use with caution or avoid. [Severe] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **pazopanib**. Avoid or administer concurrently without food. [Moderate] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Study
- ▶ **Proton pump inhibitors** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see ledipasvir with sofosbuvir, sofosbuvir with velpatasvir, and sofosbuvir with velpatasvir and voxilaprevir. [Moderate] Study
- ▶ **Esomeprazole** is predicted to slightly to moderately increase the exposure to **SSRIs (citalopram, escitalopram)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Omeprazole** slightly to moderately increases the exposure to **SSRIs (citalopram, escitalopram)**. Monitor and adjust dose. [Severe] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir. [Moderate] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **voxilaprevir**. Adjust dose, see sofosbuvir with velpatasvir and voxilaprevir. [Moderate] Study

Proxymetacaine → see anaesthetics, local

Pseudoephedrine → see sympathomimetics, vasoconstrictor

Pyrazinamide

- ▶ **Allopurinol** is predicted to increase the risk of hyperuricaemia when given with **pyrazinamide**. [Moderate] Theoretical

Pyridostigmine → see TABLE 6 p. 908 (bradycardia)

- ▶ **Aminoglycosides** are predicted to decrease the effects of **pyridostigmine**. [Moderate] Theoretical

Pyrimethamine → see antimalarials

Quetiapine → see TABLE 8 p. 908 (hypotension), TABLE 11 p. 909 (CNS depressant effects)

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **quetiapine**. [Moderate] Study → Also see TABLE 11 p. 909
- ▶ **Antiepileptics (valproate)** potentially increase the risk of neutropenia when given with **quetiapine**. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study → Also see TABLE 8 p. 908
- ▶ **Cobicistat** is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Quetiapine** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 908
- ▶ **Efavirenz** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study

- ▶ **Idelalisib** is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Quetiapine** decreases the effects of **levodopa**. [Severe] Anecdotal → Also see TABLE 8 p. 908
- ▶ **Quetiapine** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- Quinagolide** → see dopamine receptor agonists
- Quinapril** → see ACE inhibitors
- Quinine** → see antimalarials
- Quinolones** → see TABLE 9 p. 909 (QT-interval prolongation)

ciprofloxacin · levofloxacin · moxifloxacin · ofloxacin

 - ▶ Avoid concurrent administration of dairy products and mineral-fortified drinks with **oral ciprofloxacin** due to reduced exposure.
 - ▶ Since systemic absorption can follow topical application of **ciprofloxacin, levofloxacin, and ofloxacin**, the possibility of interactions should be borne in mind.
 - ▶ Interactions do not generally apply to topical use of **moxifloxacin** unless specified.
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **agomelatine**. [Moderate] Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical
- ▶ **Antacids** decrease the absorption of **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after antacids. [Moderate] Study
- ▶ **Ciprofloxacin** slightly increases the exposure to **antiarrhythmics (lidocaine)**. [Mid] Study
- ▶ **Ciprofloxacin** affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Calcium salts (calcium carbonate)** decrease the absorption of **ciprofloxacin**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Ciprofloxacin** increases the concentration of **clozapine**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Quinolones** increase the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [Moderate] Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **duloxetine**. Avoid. [Moderate] Theoretical
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
- ▶ **Enteral feeds** decrease the exposure to **ciprofloxacin**. [Moderate] Study
- ▶ **Ciprofloxacin** slightly increases the exposure to **erlotinib**. Monitor side effects and adjust dose. [Moderate] Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose. [Severe] Theoretical
- ▶ **Iron (oral)** decreases the exposure to **quinolones**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Lanthanum** moderately decreases the exposure to **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after **lanthanum**. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **ciprofloxacin**. [Moderate] Theoretical
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
- ▶ **Ciprofloxacin** slightly increases the exposure to **MAO-B inhibitors (rasagiline)**. [Moderate] Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Ciprofloxacin** potentially increases the risk of toxicity when given with **methotrexate**. [Severe] Anecdotal
- ▶ **NSAIDs** potentially increase the risk of seizures when given with **quinolones**. [Severe] Theoretical
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **olanzapine**. Adjust dose. [Moderate] Anecdotal
- ▶ **Ciprofloxacin** very slightly increases the exposure to **pentoxifylline**. [Moderate] Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **phenothiazines (chlorpromazine)**. [Moderate] Theoretical
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **pomalidomide**. Adjust **pomalidomide** dose. [Moderate] Theoretical
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
- ▶ **Strontium** is predicted to decrease the absorption of **quinolones**. Avoid. [Moderate] Theoretical
- ▶ **Sucralfate** decreases the exposure to **quinolones**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Terflunomide** is predicted to increase the exposure to **ciprofloxacin**. [Moderate] Theoretical
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Ciprofloxacin** increases the exposure to **tizanidine**. Avoid. [Moderate] Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **tolvaptan**. Use with caution and adjust **tolvaptan** dose. [Moderate] Theoretical
- ▶ **Zinc** is predicted to decrease the exposure to **quinolones**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Ciprofloxacin** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 310. [Moderate] Theoretical
- Rabeprazole** → see proton pump inhibitors
- Rabies immunoglobulin** → see immunoglobulins
- Rabies vaccine**
 - ▶ **Antimalarials (chloroquine)** decrease the efficacy of **rabies vaccine** (intradermal). Avoid. [Moderate] Study
 - ▶ **Hydroxychloroquine** is predicted to decrease efficacy **rabies vaccine**. [Moderate] Theoretical
- Raloxifene** → see TABLE 5 p. 907 (thromboembolism)
 - ▶ **Combined hormonal contraceptives** potentially oppose the effects of **raloxifene**. Avoid. [Severe] Theoretical
 - ▶ **Hormone replacement therapy** potentially opposes the effects of **raloxifene**. Avoid. [Severe] Theoretical
- Raltegravir**
 - ▶ **Antacids** slightly decrease the exposure to **raltegravir**. Avoid. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine)** are predicted to affect the exposure to **raltegravir**. [Moderate] Theoretical
 - ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to affect the exposure to **raltegravir**. Use with caution or avoid. [Moderate] Theoretical
 - ▶ **Calcium salts (calcium carbonate)** greatly decrease the exposure to **raltegravir** (high-dose). Avoid. [Severe] Study
 - ▶ **Encorafenib** is predicted to increase the exposure to **raltegravir**. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors (atazanavir)** increase the exposure to **raltegravir** (high-dose). Avoid. [Moderate] Study

Raltegravir (continued)

- ▶ **HIV-protease inhibitors (darunavir)** increase the risk of rash when given with **raltegravir**. [Moderate] Study
- ▶ **HIV-protease inhibitors (fosamprenavir)** boosted with ritonavir decrease the exposure to **raltegravir** and **raltegravir** decreases the exposure to **HIV-protease inhibitors (fosamprenavir)** boosted with ritonavir. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (tipranavir)** boosted with ritonavir are predicted to decrease the exposure to **raltegravir** (high-dose). Avoid. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **raltegravir**. Avoid or adjust dose—consult product literature. [Moderate] Study
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **raltegravir**. Separate administration by at least 2 hours. [Moderate] Theoretical

Raltitrexed → see TABLE 15 p. 910 (myelosuppression)

- ▶ **Folates** are predicted to alter the effects of **raltitrexed**. Avoid. [Moderate] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **raltitrexed**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

Ramipril → see ACE inhibitors**Ramucicrumab** → see monoclonal antibodies**Ranibizumab**

- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **argatroban**. [Severe] Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **bivalirudin**. [Moderate] Theoretical
- ▶ **Ranibizumab** increases the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **danaparoid**. [Severe] Theoretical
- ▶ **Ranibizumab** increases the risk of bleeding events when given with **heparin (unfractionated)**. [Severe] Theoretical
- ▶ **Ranibizumab** increases the risk of bleeding events when given with **low molecular-weight heparins**. [Severe] Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical

Ranitidine → see H₂ receptor antagonists**Ranolazine** → see TABLE 9 p. 909 (QT-interval prolongation)

- ▶ **Ranolazine** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Apalutamide** is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Aprepitant** is predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Ciclosporin** is predicted to increase the concentration of **ranolazine** and **ranolazine** is predicted to increase the concentration of **ciclosporin**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Ranolazine** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Ranolazine** increases the concentration of **digoxin**. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [Moderate] Study
- ▶ **Ranolazine** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the concentration of **ranolazine**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Idelalisib** is predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Mitotane** is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Ranolazine** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Ranolazine** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **statins (atorvastatin)**. [Moderate] Theoretical
- ▶ **Ranolazine** slightly increases the exposure to **statins (simvastatin)**. Adjust simvastatin dose, p. 141. [Moderate] Study
- ▶ **Ranolazine** increases the concentration of **tacrolimus**. Adjust dose. [Severe] Anecdotal
- ▶ **Ranolazine** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical

Rasagiline → see MAO-B inhibitors

Reboxetine

- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
 - ▶ Antifungals, azoles (**miconazole**) are predicted to increase the concentration of **reboxetine**. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **Apalutamide** is predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
 - ▶ **Cobicistat** is predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
 - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **linezolid**. Avoid. [Severe] Theoretical
 - ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **loop diuretics**. [Moderate] Theoretical
 - ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
 - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors** (**rasagiline**, **selegiline**). Avoid. [Severe] Theoretical
 - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **MAOIs**, **irreversible**. Avoid. [Severe] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
 - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Theoretical
 - ▶ **Rifampicin** is predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
 - ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **thiazide diuretics**. [Moderate] Anecdotal
- Regorafenib** → see TABLE 15 p. 910 (myelosuppression), TABLE 4 p. 907 (antiplatelet effects)
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
 - ▶ **Apalutamide** is predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
 - ▶ **Regorafenib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Study
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 910
 - ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
 - ▶ **Regorafenib** is predicted to increase the exposure to **methotrexate**. [Moderate] Theoretical → Also see TABLE 15 p. 910
 - ▶ **Mitotane** is predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 910
 - ▶ **Regorafenib** is predicted to increase the exposure to **NSAIDs** (**mefenamic acid**). Avoid. [Moderate] Theoretical → Also see TABLE 4 p. 907
 - ▶ **Regorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
 - ▶ **Rifampicin** is predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study

- ▶ **Regorafenib** is predicted to increase the exposure to **statins** (**atorvastatin**, **fluvastatin**, **rosuvastatin**). [Moderate] Study
 - ▶ **Regorafenib** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 15 p. 910
 - ▶ **Regorafenib** is predicted to increase the exposure to **topotecan**. [Moderate] Study → Also see TABLE 15 p. 910
- Remifentanyl** → see opioids
- Repaglinide** → see TABLE 14 p. 910 (antidiabetic drugs)
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
 - ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **repaglinide**. [Moderate] Study
 - ▶ **Apalutamide** is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
 - ▶ **Ciclosporin** moderately increases the exposure to **repaglinide**. [Moderate] Study
 - ▶ **Clopidogrel** increases the exposure to **repaglinide**. Avoid. [Severe] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
 - ▶ **Fibrates** (**gemfibrozil**) increase the exposure to **repaglinide**. Avoid. [Severe] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **repaglinide**. [Moderate] Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
 - ▶ **Iron chelators** (**deferasirox**) moderately increase the exposure to **repaglinide**. Avoid. [Moderate] Study
 - ▶ **Leflunomide** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
 - ▶ **Letermovir** is predicted to increase the concentration of **repaglinide**. Avoid. [Moderate] Theoretical
 - ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **repaglinide**. [Moderate] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
 - ▶ **Opicapone** is predicted to increase the exposure to **repaglinide**. Avoid. [Moderate] Study
 - ▶ **Pitolisant** is predicted to decrease the exposure to **repaglinide**. [Mil] Theoretical
 - ▶ **Rifampicin** is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
 - ▶ **Teriflunomide** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
 - ▶ **Trimethoprim** slightly increases the exposure to **repaglinide**. Avoid or monitor blood glucose. [Moderate] Study
 - ▶ **Venetoclax** is predicted to increase the exposure to **repaglinide**. [Moderate] Theoretical
- Retigabine** → see antiepileptics
- Retinoids** → see TABLE 5 p. 907 (thromboembolism)

acitretin · adapalene · alitretinoin · bexarotene · isotretinoin · tazarotene · tretinoin

- ▶ Avoid concomitant use of keratolytics in patients taking **acitretin** and **isotretinoin**.
- ▶ Since systemic absorption can follow topical application of **isotretinoin** and **tretinoin**, the possibility of interactions should be borne in mind.

- ▶ **Alcohol** (beverage) potentially increases the concentration of **acitretin**. Avoid and for 2 months after stopping **acitretin**. [Moderate] Study
- ▶ **Antiarrhythmics** (**amiodarone**) are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **itraconazole**, **ketoconazole**, **miconazole**, **voriconazole**) are predicted to increase the

Retinoids (continued)

- exposure to **alitretinoin**. Adjust **alitretinoin** dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, ketoconazole, voriconazole)** are predicted to increase the risk of tretinoin toxicity when given with **tretinoin**. [Moderate] Study
 - ▶ **Clopidogrel** is predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose. [Moderate] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose. [Moderate] Theoretical
 - ▶ **Fibrates (gemfibrozil)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose. [Moderate] Theoretical
 - ▶ **Fibrates (gemfibrozil)** increase the concentration of **boxarotene**. Avoid. [Severe] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose. [Moderate] Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose. [Moderate] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose. [Moderate] Theoretical
 - ▶ **Acitretin** is predicted to increase the concentration of **methotrexate**. Avoid. [Moderate] Anecdotal
 - ▶ Retinoids (**acitretin, alitretinoin, isotretinoin, tretinoin**) increase the risk of benign intracranial hypertension when given with **tetracyclines**. Avoid. [Severe] Anecdotal
 - ▶ Retinoids (**acitretin, alitretinoin, isotretinoin, tretinoin**) increase the risk of benign intracranial hypertension when given with **tigecycline**. Avoid. [Severe] Anecdotal
 - ▶ **Boxarotene** is predicted to increase the risk of toxicity when given with **vitamin A**. Adjust dose. [Moderate] Theoretical
 - ▶ Retinoids (**acitretin, alitretinoin, isotretinoin**) are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Theoretical
 - ▶ **Tretinoin** is predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Study

Ribavirin

- ▶ **Ribavirin** increases the risk of toxicity when given with **stavudine**. Avoid. [Severe] Study
- ▶ **Ribavirin** increases the risk of anaemia and/or leucopenia when given with **zidovudine**. Avoid. [Severe] Study

Ribociclib → see TABLE 9 p. 909 (QT-interval prolongation)

FOOD AND LIFESTYLE Avoid concomitant use of pomegranate or pomegranate juice as it is predicted to increase ribociclib exposure.

- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **alpha blockers (alfuzosin)**. Avoid. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **antiarrhythmics (amiodarone)**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Apalutamide** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Aprepitant** is predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **ribociclib**. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Ribociclib** is predicted to increase the exposure to **ciclosporin**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 909

- ▶ **Ribociclib** is predicted to increase the exposure to **digoxin**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **ergotamine**. Avoid. [Moderate] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to **everolimus**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ribociclib**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Idelalisib** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Ribociclib** is predicted to increase the exposure to **metformin**. [Moderate] Theoretical
- ▶ **Ribociclib** moderately increases the exposure to **midazolam**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **ribociclib**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Ribociclib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **pimozide**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Theoretical
- ▶ **Rifampin** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **Ribociclib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **Ribociclib** is predicted to increase the exposure to **statins (pravastatin, rosuvastatin)**. [Moderate] Theoretical
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Moderate] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. [Moderate] Theoretical

Rifabutin

GENERAL INFORMATION Although some manufacturers class rifabutin as a potent inducer of CYP3A4, clinical data suggests it is potentially a weak inducer, and therefore the BNF does not extrapolate the interactions of potent CYP3A4 inducers to rifabutin. For those who wish to err on the side of caution, see the interactions of rifampicin but bear in mind other mechanisms might be involved.

- ▶ **Antifungals, azoles (fluconazole)** increase the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, posaconazole)** increase the concentration of **rifabutin** and **rifabutin** decreases the concentration of **antifungals, azoles (itraconazole, posaconazole)**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (ketoconazole)** are predicted to increase the concentration of **rifabutin** and **rifabutin** is predicted to

- decrease the concentration of **antifungals, azoles (ketoconazole)**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **rifabutin**. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **Rifabutin** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Theoretical
 - ▶ **Rifabutin** decreases the concentration of **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** increase the concentration of **rifabutin**. Avoid or adjust **voriconazole** dose, p. 410. [Severe] Study
 - ▶ **Rifabutin** slightly decreases the exposure to **antimalarials (atovaquone)**. Avoid. [Moderate] Study
 - ▶ **Rifabutin** slightly decreases the exposure to **bictegravir**. Avoid. [Moderate] Study
 - ▶ **Rifabutin** is predicted to decrease the exposure to **brigatinib**. Avoid. [Moderate] Theoretical
 - ▶ **Rifabutin** decreases the concentration of **cobicistat** and **cobicistat** increases the exposure to **rifabutin**. Avoid or adjust dose. [Severe] Study
 - ▶ **Rifabutin** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Study
 - ▶ **Rifabutin** decreases the exposure to **dapsone**. [Moderate] Study
 - ▶ **Rifabutin** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
 - ▶ **Rifabutin** moderately decreases the exposure to **doravirine**. Adjust doravirine or lamivudine with tenofovir disoproxil and doravirine dose. [Moderate] Study
 - ▶ **Efavirenz** slightly decreases the exposure to **rifabutin**. Adjust dose. [Severe] Study
 - ▶ **Rifabutin** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
 - ▶ **Rifabutin** decreases the exposure to **etravirine**. [Moderate] Study
 - ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, saquinavir, tipranavir)** boosted with ritonavir increase the exposure to **rifabutin**. Monitor and adjust dose. [Severe] Study
 - ▶ **HIV-protease inhibitors (ritonavir)** markedly increase the exposure to **rifabutin**. Avoid or adjust dose. [Severe] Study
 - ▶ **Rifabutin** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
 - ▶ **Rifabutin** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
 - ▶ **Rifabutin** is predicted to decrease the concentration of **letemovir**. [Moderate] Theoretical
 - ▶ **Rifabutin** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
 - ▶ **Lumacaftor** is predicted to decrease the exposure to **rifabutin**. Adjust dose. [Moderate] Theoretical
 - ▶ **Macrolides (azithromycin)** increase the risk of neutropenia when given with **rifabutin**. [Severe] Study
 - ▶ **Macrolides (clarithromycin)** increase the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Theoretical
 - ▶ **Rifabutin** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
 - ▶ **Rifabutin** slightly decreases the exposure to **rilpivirine**. Adjust dose. [Severe] Study
 - ▶ **Rifabutin** is predicted to decrease the exposure to **rolapitant**. Avoid. [Moderate] Theoretical
 - ▶ **Rifabutin** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
 - ▶ **Rifabutin** is predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
 - ▶ **Rifabutin** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
 - ▶ **Rifabutin** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ### Rifampicin
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **abiraterone**. Avoid. [Severe] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **afatinib**. [Moderate] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
 - ▶ **Rifampicin** is predicted to decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Theoretical
 - ▶ **Rifampicin** decreases the exposure to **aliskiren**. [Moderate] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical
 - ▶ **Rifampicin** transiently increases the exposure to **ambrirentan**. [Moderate] Study
 - ▶ **Rifampicin** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
 - ▶ **Antacids** decrease the absorption of **rifampicin**. **Rifampicin** should be taken 1 hour before antacids. [Moderate] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [Severe] Study
 - ▶ **Rifampicin** is predicted to decrease the efficacy of **antiarrhythmics (propafenone)**. [Moderate] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **anticholinesterases, centrally acting (donepezil)**. [Mid] Study
 - ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **rifampicin** and **rifampicin** is predicted to decrease the exposure to **antiepileptics (phenobarbital, primidone)**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Rifampicin** slightly decreases the exposure to **antiepileptics (brivaracetam)**. Adjust dose. [Moderate] Study
 - ▶ **Rifampicin** decreases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Rifampicin** markedly increases the clearance of **antiepileptics (lamotrigine)**. Adjust lamotrigine dose, p. 216. [Moderate] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **antiepileptics (perampnel)**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Rifampicin** slightly decreases the exposure to **antifungals, azoles (fluconazole)**. Adjust dose. [Moderate] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Study
 - ▶ **Rifampicin** markedly decreases the exposure to **antifungals, azoles (itraconazole)**. Avoid and for 14 days after stopping **rifampicin**. [Moderate] Study
 - ▶ **Rifampicin** markedly decreases the exposure to **antifungals, azoles (ketoconazole)** and **antifungals, azoles (ketoconazole)** potentially decrease the exposure to **rifampicin**. Avoid. [Moderate] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **antifungals, azoles (posaconazole)**. Avoid. [Moderate] Anecdotal
 - ▶ **Rifampicin** very markedly decreases the exposure to **antifungals, azoles (voriconazole)**. Avoid. [Moderate] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **antihistamines, non-sedating (bilastine)**. [Moderate] Theoretical
 - ▶ **Rifampicin** increases the clearance of **antihistamines, non-sedating (fexofenadine)**. [Moderate] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **antimalarials (artemether)** (with lumefantrine). Avoid. [Severe] Study
 - ▶ **Rifampicin** moderately decreases the exposure to **antimalarials (atovaquone)** and **antimalarials (atovaquone)** slightly increase the exposure to **rifampicin**. Avoid. [Moderate] Study
 - ▶ **Rifampicin** moderately decreases the exposure to **antimalarials (mefloquine)**. [Severe] Study
 - ▶ **Rifampicin** is predicted to decrease the concentration of **antimalarials (piperaquine)**. Avoid. [Moderate] Theoretical

Rifampicin (continued)

- ▶ Rifampicin decreases the exposure to **antimalarials (quinine)**. [\[Severe\]](#) Study
- ▶ Rifampicin is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ Rifampicin moderately decreases the exposure to **apremilast**. Avoid. [\[Severe\]](#) Study
- ▶ Rifampicin is predicted to markedly decrease the exposure to **aprepitant**. Avoid. [\[Moderate\]](#) Study
- ▶ Rifampicin is predicted to moderately decrease the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 265. [\[Moderate\]](#) Study
- ▶ Rifampicin decreases the exposure to **ataluren**. [\[Moderate\]](#) Study
- ▶ Rifampicin is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ Rifampicin is predicted to decrease the exposure to **bazedoxifene**. [\[Moderate\]](#) Theoretical
- ▶ Rifampicin decreases the exposure to **bedaquiline**. Avoid. [\[Severe\]](#) Study
- ▶ Rifampicin moderately decreases the exposure to **beta blockers, non-selective (carvedilol)**. [\[Moderate\]](#) Study
- ▶ Rifampicin decreases the exposure to **beta blockers, non-selective (propranolol)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Rifampicin slightly decreases the exposure to **beta blockers, selective (bisoprolol, metoprolol)**. [\[Mild\]](#) Study
- ▶ Rifampicin moderately decreases the exposure to **beta blockers, selective (celiprolol)**. [\[Moderate\]](#) Study
- ▶ Rifampicin is predicted to decrease the exposure to **bictegravir**. Avoid. [\[Moderate\]](#) Study
- ▶ Rifampicin slightly decreases the exposure to **bortezomib**. Avoid. [\[Severe\]](#) Study
- ▶ Rifampicin affects the exposure to **bosentan**. Avoid. [\[Severe\]](#) Study
- ▶ Rifampicin is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [\[Severe\]](#) Study
- ▶ Rifampicin is predicted to decrease the exposure to **brigatinib**. Avoid. [\[Severe\]](#) Study
- ▶ Rifampicin is predicted to decrease the exposure to **bupropion**. [\[Moderate\]](#) Study
- ▶ Rifampicin is predicted to decrease the exposure to **bupirone**. Use with caution and adjust dose. [\[Severe\]](#) Study
- ▶ Rifampicin moderately decreases the exposure to **cabozantinib**. Avoid. [\[Moderate\]](#) Study
- ▶ Rifampicin is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Rifampicin is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Rifampicin greatly decreases the exposure to **calcium channel blockers (diltiazem, verapamil)**. [\[Severe\]](#) Study
- ▶ Rifampicin moderately decreases the exposure to **calcium channel blockers (nifedipine)**. Avoid. [\[Severe\]](#) Study
- ▶ Rifampicin moderately decreases the exposure to **canagliflozin**. Adjust canagliflozin dose. [\[Moderate\]](#) Study
- ▶ Rifampicin is predicted to decrease the exposure to **cannabidiol**. Adjust dose. [\[Moderate\]](#) Study
- ▶ Rifampicin is predicted to decrease the exposure to **cariprazine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Rifampicin decreases the concentration of **caspofungin**. Adjust caspofungin dose, p. 405. [\[Moderate\]](#) Study
- ▶ Rifampicin is predicted to decrease the exposure to **ceritinib**. Avoid. [\[Severe\]](#) Study
- ▶ Rifampicin decreases the concentration of **chloramphenicol**. [\[Moderate\]](#) Study
- ▶ Rifampicin is predicted to decrease the exposure to **chlordiazepoxide**. [\[Moderate\]](#) Theoretical
- ▶ Rifampicin decreases the concentration of **ciclosporin**. [\[Severe\]](#) Study
- ▶ Rifampicin is predicted to alter the effects of **cilostazol**. [\[Moderate\]](#) Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Rifampicin decreases the exposure to **clomethiazole**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Rifampicin decreases the exposure to **clozapine**. [\[Severe\]](#) Anecdotal
- ▶ Rifampicin is predicted to decrease the exposure to **cobicistat**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **cobimetinib**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Rifampicin is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 536. [\[Severe\]](#) Study
- ▶ Rifampicin is predicted to decrease the exposure to **corticosteroids (budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Rifampicin is predicted to decrease the exposure to **corticosteroids (fluticasone)**. [\[Unknown\]](#) Theoretical
- ▶ Rifampicin decreases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Study
- ▶ Rifampicin is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [\[Severe\]](#) Study
- ▶ Rifampicin is predicted to decrease the exposure to **dabigatran**. Avoid. [\[Severe\]](#) Study
- ▶ Rifampicin is predicted to decrease the exposure to **dabrafenib**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ Rifampicin decreases the exposure to **dapsone**. [\[Moderate\]](#) Study
- ▶ Rifampicin is predicted to decrease the exposure to **darifenacin**. [\[Moderate\]](#) Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **dasabuvir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Rifampicin is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [\[Severe\]](#) Study
- ▶ Rifampicin is predicted to slightly decrease the exposure to **delamanid**. Avoid. [\[Moderate\]](#) Study
- ▶ Rifampicin is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [\[Severe\]](#) Theoretical
- ▶ Rifampicin moderately decreases the exposure to **diazepam**. Avoid. [\[Moderate\]](#) Study
- ▶ Rifampicin is predicted to markedly decrease the exposure to **dienogest**. [\[Severe\]](#) Study
- ▶ Rifampicin decreases the concentration of **digoxin**. [\[Moderate\]](#) Study
- ▶ Rifampicin decreases the exposure to **dolutegravir**. Adjust dose. [\[Severe\]](#) Study
- ▶ Rifampicin is predicted to decrease the exposure to **doravirine**. Avoid. [\[Severe\]](#) Study
- ▶ Rifampicin is predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [\[Mild\]](#) Study
- ▶ Rifampicin is predicted to decrease the exposure to **duloxetine**. [\[Moderate\]](#) Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **edoxaban**. [\[Moderate\]](#) Study
- ▶ Rifampicin slightly decreases the exposure to **efavirenz**. Adjust dose. [\[Severe\]](#) Study
- ▶ Rifampicin is predicted to decrease the exposure to **elbasvir**. Avoid. [\[Severe\]](#) Study
- ▶ Rifampicin is predicted to decrease the exposure to **eliglustat**. Avoid. [\[Severe\]](#) Study
- ▶ Rifampicin is predicted to decrease the exposure to **eltrombopag** and **eltrombopag** is predicted to increase the concentration of rifampicin. [\[Moderate\]](#) Theoretical
- ▶ Rifampicin is predicted to decrease the concentration of **elvitegravir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **encorafenib**. [\[Severe\]](#) Theoretical
- ▶ Rifampicin is predicted to decrease the effects of **ergotamine**. [\[Moderate\]](#) Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **erlotinib**. Avoid or adjust erlotinib dose. [\[Severe\]](#) Study
- ▶ Rifampicin is predicted to decrease the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ Rifampicin is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [\[Severe\]](#) Theoretical

- ▶ **Rifampicin** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **fingolimod**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **gilteritinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** markedly affects the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 247. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately to markedly decrease the exposure to **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, saquinavir)**. Avoid. [Severe] Study
- ▶ **Rifampicin** slightly decreases the exposure to **HIV-protease inhibitors (ritonavir)**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **HIV-protease inhibitors (tipranavir)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Rifampicin** is predicted to decrease the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **iron chelators (deferasirox)**. Monitor serum ferritin and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **rifampicin**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to affect the concentration of **letermovir**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **linezolid**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** increases the clearance of **lorazepam**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
- ▶ **Rifampicin** decreases the concentration of **macrolides (clarithromycin)**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **modafinil**. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the effects of **monoclonal antibodies (brentuximab vedotin)**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **montelukast**. [Mild] Study
- ▶ **Rifampicin** decreases the concentration of **mycophenolate**. Monitor and adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to slightly decrease the exposure to **nateline**. [Mild] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
- ▶ **Rifampicin** decreases the concentration of **nevirapine**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **nintedanib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **nitisone**. Adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** increases the clearance of **nitrazepam**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Rifampicin** moderately decreases the exposure to **NSAIDs (celecoxib, diclofenac, etoricoxib)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ondansetron**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **opioids (codeine, morphine)**. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study

Rifampicin (continued)

- ▶ Rifampicin is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ Rifampicin decreases the exposure to **paracetamol**. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [Moderate] Theoretical
- ▶ Rifampicin is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ Rifampicin moderately decreases the exposure to **pioglitazone**. Monitor and adjust dose. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **prifenidone**. Avoid. [Moderate] Theoretical
- ▶ Rifampicin is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ Rifampicin is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ Rifampicin slightly decreases the exposure to **raltegravir**. Avoid or adjust dose—consult product literature. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
- ▶ Rifampicin is predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ Rifampicin is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ Rifampicin markedly decreases the exposure to **rilpivirine**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ Rifampicin is predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ Rifampicin is predicted to markedly decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ Rifampicin is predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study
- ▶ Rifampicin moderately decreases the exposure to the active metabolite of **selexipag**. Adjust dose. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **siponimod**. [Severe] Study
- ▶ Rifampicin is predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **solfifenacin**. [Moderate] Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical
- ▶ Rifampicin markedly decreases the exposure to **statins (atorvastatin)**. Manufacturer advises take both drugs at the same time. [Moderate] Study
- ▶ Rifampicin moderately decreases the exposure to **statins (fluvastatin)**. Monitor and adjust dose. [Moderate] Study
- ▶ Rifampicin very markedly decreases the exposure to **statins (simvastatin)**. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **sulfonylureas**. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study
- ▶ Rifampicin decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ Rifampicin markedly decreases the exposure to **tamoxifen**. [Unknown] Study
- ▶ Rifampicin is predicted to decrease the exposure to **taxanes (cabazitaxel, paclitaxel)**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] theoretical
- ▶ Rifampicin is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
- ▶ Rifampicin decreases the exposure to **terbinafine**. Adjust dose. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to rifampicin. [Moderate] Theoretical
- ▶ Rifampicin decreases the exposure to **tetracyclines (doxycycline)**. Monitor and adjust dose. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ Rifampicin is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ Rifampicin moderately decreases the exposure to **tizanidine**. [Mild] Study
- ▶ Rifampicin is predicted to decrease the exposure to **tofacinib**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical
- ▶ Rifampicin decreases the exposure to **trimethoprim**. [Moderate] Study
- ▶ Rifampicin decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ Rifampicin is predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
- ▶ Rifampicin is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [Severe] Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **vinca alkaloids (vinorelbine)**. Use with caution or avoid. [Severe] Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ Rifampicin potentially increases the risk of nephrotoxicity when given with **volatile halogenated anaesthetics (methoxyflurane)**. Avoid. [Severe] Theoretical

- ▶ **Rifampicin** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **zolidem**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study

Rifaximin

- ▶ **Ciclosporin** very markedly increases the exposure to rifaximin. [Severe] Study

Rilpivirine

- ▶ **Antacids** are predicted to decrease the exposure to rilpivirine. Rilpivirine should be taken 4 hours before or 2 hours after antacids. [Severe] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** markedly decrease the exposure to rilpivirine. Avoid. [Severe] Study
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the concentration of rilpivirine. Avoid. [Severe] Theoretical
- ▶ **Apalutamide** markedly decreases the exposure to rilpivirine. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to rilpivirine. Avoid. [Severe] Theoretical
- ▶ **Calcium salts (calcium carbonate)** are predicted to slightly decrease the exposure to rilpivirine. Calcium carbonate should be taken 2 hours before or 4 hours after rilpivirine. [Severe] Theoretical
- ▶ **Corticosteroids (dexamethasone)** are predicted to decrease the concentration of rilpivirine. Avoid multiple-dose dexamethasone. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to rilpivirine. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** markedly decreases the exposure to rilpivirine. Avoid. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to rilpivirine. Avoid. [Severe] Theoretical
- ▶ **H₂ receptor antagonists** are predicted to decrease the exposure to rilpivirine. H₂ receptor antagonists should be taken 12 hours before or 4 hours after rilpivirine. [Severe] Study
- ▶ **Mitotane** markedly decreases the exposure to rilpivirine. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to rilpivirine. Avoid. [Severe] Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to rilpivirine. Avoid. [Severe] Study
- ▶ **Rifabutin** slightly decreases the exposure to rilpivirine. Adjust dose. [Severe] Study
- ▶ **Rifampicin** markedly decreases the exposure to rilpivirine. Avoid. [Severe] Study
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to rilpivirine. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to rilpivirine. Avoid. [Severe] Theoretical

Riluzole

FOOD AND LIFESTYLE Charcoal-grilled foods are predicted to decrease the exposure to riluzole.

- ▶ **Mexiletine** is predicted to increase the exposure to riluzole. [Moderate] Theoretical
 - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to riluzole. [Moderate] Theoretical
 - ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to riluzole. [Moderate] Theoretical
- Riociguat** → see TABLE 8 p. 908 (hypotension)

FOOD AND LIFESTYLE Dose adjustment might be necessary if smoking is started or stopped during treatment.

- ▶ **Antacids** slightly decrease the exposure to **riociguat**. **Riociguat** should be taken 1 hour before or 2 hours after antacids. [Mild] Study
- ▶ **Antifungals, azoles (itraconazole, posaconazole)** are predicted to increase the exposure to **riociguat**. Adjust **riociguat** dose and monitor blood pressure. [Moderate] Theoretical

- ▶ **Antifungals, azoles (ketoconazole)** moderately increase the exposure to **riociguat**. Adjust **riociguat** dose and monitor blood pressure. [Moderate] Study
 - ▶ **Ciclosporin** is predicted to increase the exposure to **riociguat**. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **riociguat**. Adjust dose and monitor blood pressure. [Moderate] Theoretical
 - ▶ **Riociguat** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 908
- Risankizumab** → see monoclonal antibodies
- Risedronate** → see bisphosphonates
- Risperidone** → see TABLE 8 p. 908 (hypotension), TABLE 9 p. 909 (QT-interval prolongation), TABLE 11 p. 909 (CNS depressant effects)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 909
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 909
 - ▶ **Apalutamide** is predicted to decrease the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 909
 - ▶ **Bupropion** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
 - ▶ **Cinacalcet** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
 - ▶ **Risperidone** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 908 → Also see TABLE 9 p. 909
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **risperidone**. Adjust dose. [Moderate] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 909
 - ▶ **Idelalisib** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
 - ▶ **Risperidone** is predicted to decrease the effects of **levodopa**. Avoid or adjust dose. [Severe] Anecdotal → Also see TABLE 8 p. 908
 - ▶ **Risperidone** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 909
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 909
 - ▶ **Risperidone** increases the risk of dyskinesias when given with **methylphenidate**. [Severe] Anecdotal
 - ▶ **Mitotane** is predicted to decrease the exposure to **risperidone**. Adjust dose. [Moderate] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **risperidone**. Adjust dose. [Moderate] Study
 - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
 - ▶ **Terbinafine** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
- Ritonavir** → see HIV-protease inhibitors
- Rituximab** → see monoclonal antibodies
- Rivaroxaban** → see TABLE 3 p. 907 (anticoagulant effects)
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **rivaroxaban**. Avoid. [Moderate] Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to moderately increase the exposure to **rivaroxaban**. Avoid. [Severe] Study
 - ▶ **Apalutamide** is predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study

Rivaroxaban (continued)

- ▶ **Cobicistat** is predicted to increase the exposure to **rivaroxaban**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** moderately increase the exposure to **rivaroxaban**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study

Rivastigmine → see anticholinesterases, centrally acting

Rizatriptan → see TABLE 13 p. 910 (serotonin syndrome)

- ▶ **Beta blockers, non-selective (propranolol)** slightly to moderately increase the exposure to **rizatriptan**. Adjust **rizatriptan** dose and separate administration by at least 2 hours. [Moderate] Study
- ▶ **Rizatriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **rizatriptan**. [Severe] Theoretical
- ▶ **MAOIs, irreversible** are predicted to increase the exposure to **rizatriptan**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 910
- ▶ **Moclobemide** moderately increases the exposure to **rizatriptan**. Avoid. [Moderate] Study → Also see TABLE 13 p. 910

Rocuronium → see neuromuscular blocking drugs, non-depolarising

Roflumilast

- ▶ **Aminophylline** is predicted to slightly increase the exposure to **roflumilast**. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to **roflumilast**. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **roflumilast**. [Moderate] Study
- ▶ **Theophylline** is predicted to slightly increase the exposure to **roflumilast**. Avoid. [Moderate] Theoretical

Rolapitant

- ▶ **Rolapitant** is predicted to increase the exposure to **alkylating agents (bendamustine)**. Avoid or monitor. [Moderate] Study
- ▶ **Rolapitant** is predicted to increase the exposure to **anthracyclines (doxorubicin, mitoxantrone)**. Avoid or monitor. [Moderate] Study
- ▶ **Rolapitant** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ **Apalutamide** is predicted to markedly decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ **Rolapitant** is predicted to moderately increase the exposure to **beta blockers, selective (metoprolol)**. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ **Rolapitant** is predicted to increase the exposure to **colchicine**. [Moderate] Study
- ▶ **Rolapitant** is predicted to increase the exposure to **digabigatran**. [Moderate] Study
- ▶ **Rolapitant** slightly increases the exposure to **digoxin**. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ **Rolapitant** is predicted to increase the exposure to **irinotecan**. Avoid or monitor. [Moderate] Study
- ▶ **Rolapitant** is predicted to increase the exposure to **methotrexate**. Avoid or monitor. [Moderate] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ **Rolapitant** is predicted to increase the exposure to **pimozide**. [Severe] Study
- ▶ **Rifabutin** is predicted to decrease the exposure to **rolapitant**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ **Rolapitant** is predicted to increase the exposure to **statins (rosuvastatin)**. Monitor and adjust dose. [Severe] Study
- ▶ **Rolapitant** increases the exposure to **sulfasalazine**. [Severe] Study
- ▶ **Rolapitant** is predicted to increase the exposure to **tamoxifen**. [Severe] Study
- ▶ **Rolapitant** is predicted to increase the exposure to **topotecan**. Avoid or monitor. [Moderate] Study

Ropinirole → see dopamine receptor agonists

Ropivacaine → see anaesthetics, local

Rosuvastatin → see statins

Rotavirus vaccine → see live vaccines

Rotigotine → see dopamine receptor agonists

Rucaparib

- ▶ **Rucaparib** is predicted to increase the exposure to **aminophylline**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **antiepileptics (phenytoin)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** slightly increases the exposure to **coumarins (warfarin)**. Monitor and adjust dose. [Severe] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **ergotamine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** slightly increases the exposure to **midazolam**. Monitor and adjust dose. [Severe] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **pimozide**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **tacrolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **tizanidine**. Monitor and adjust dose. [Moderate] Study

Rufinamide → see antiepileptics

Rupatadine → see antihistamines, non-sedating

Ruxolitinib → see TABLE 15 p. 910 (myelosuppression)

▶ **Antiarrhythmics (dronedronarone)** are predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical

▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study

▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical

▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor side effects. [Moderate] Study

- ▶ **Apalutamide** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor side effects. [Moderate] Study
- ▶ **Ruxolitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ **Efavirenz** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ruxolitinib**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor side effects. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor side effects. [Moderate] Study → Also see TABLE 15 p. 910
- ▶ **Imatinib** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor side effects. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 15 p. 910
- ▶ **Netupitant** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ **Ruxolitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Theoretical
- Sacubitril** → see TABLE 8 p. 908 (hypotension)
- ▶ **Sacubitril** is predicted to increase the exposure to **statins**. [Severe] Study
- Safinamide** → see MAO-B inhibitors
- Salbutamol** → see beta₂ agonists
- Salmeterol** → see beta₂ agonists
- Sapropterin** → see TABLE 8 p. 908 (hypotension)
- ▶ **Methotrexate** is predicted to decrease the efficacy of **sapropterin**. [Moderate] Theoretical
- ▶ **Phosphodiesterase type-5 inhibitors** are predicted to increase the risk of hypotension when given with **sapropterin**. [Moderate] Theoretical → Also see TABLE 8 p. 908
- ▶ **Trimethoprim** is predicted to decrease the efficacy of **sapropterin**. [Moderate] Theoretical
- Saquinavir** → see HIV-protease inhibitors
- Sarilumab** → see monoclonal antibodies
- Saxagliptin** → see TABLE 14 p. 910 (antidiabetic drugs)
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Apalutamide** is predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **saxagliptin**. [Mild] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study
- Secukinumab** → see monoclonal antibodies
- Selegiline** → see MAO-B inhibitors
- Selenium**
- ROUTE-SPECIFIC INFORMATION Interactions do not generally apply to topical use unless specified.
- ▶ Oral **selenium** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **selenium**. [Severe] Theoretical
- Selexipag**
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenytoin)** are predicted to decrease the exposure to the active metabolite of **selexipag**. Adjust dose. [Moderate] Study
- ▶ **Antiepileptics (valproate)** are predicted to increase the exposure to **selexipag**. [Unknown] Theoretical
- ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to **selexipag**. [Unknown] Theoretical
- ▶ **Clopidogrel** is predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose. [Moderate] Study
- ▶ **Fibrates (gemfibrozil)** increase the exposure to **selexipag**. Avoid. [Severe] Study
- ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to the active metabolite of **selexipag**. Adjust dose. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose. [Moderate] Study
- Semaglutide** → see TABLE 14 p. 910 (antidiabetic drugs)
- Sertraline** → see SSRIs
- Sevoflurane** → see volatile halogenated anaesthetics
- Sildenafil** → see phosphodiesterase type-5 inhibitors
- Siltuximab** → see monoclonal antibodies
- Silver sulfadiazine**
- PHARMACOLOGY Silver might inactivate enzymatic debriding agents—concurrent use might not be appropriate.
- Simvastatin** → see statins
- Siponimod** → see TABLE 6 p. 908 (bradycardia), TABLE 9 p. 909 (QT-interval prolongation)

Siponimod (continued)

- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. [\[Severe\]](#) Study → Also see TABLE 6 p. 908
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to siponimod. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. [\[Severe\]](#) Study
- ▶ **Apalutamide** is predicted to decrease the exposure to siponimod. [\[Severe\]](#) Study
- ▶ **Bosentan** is predicted to decrease the exposure to siponimod. Manufacturer advises caution depending on genotype—consult product literature. [\[Severe\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. [\[Severe\]](#) Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to siponimod. Manufacturer advises caution depending on genotype—consult product literature. [\[Severe\]](#) Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to siponimod. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. [\[Severe\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with siponimod. Avoid and for 4 weeks after stopping siponimod. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. [\[Severe\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to siponimod. [\[Severe\]](#) Study
- ▶ Siponimod potentially increases the risk of immunosuppression when given with **monoclonal antibodies (alemtuzumab)**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to siponimod. Manufacturer advises caution depending on genotype—consult product literature. [\[Severe\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to siponimod. [\[Severe\]](#) Study
- ▶ **St John's Wort** is predicted to decrease the exposure to siponimod. Manufacturer advises caution depending on genotype—consult product literature. [\[Severe\]](#) Theoretical

Sirolimus

- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the concentration of sirolimus. [\[Severe\]](#) Anecdotal
- ▶ **Antiarrhythmics (dronedarone)** increase the concentration of sirolimus. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of sirolimus. Avoid. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** increase the concentration of sirolimus. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of sirolimus. Avoid. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of sirolimus. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Apalutamide** is predicted to decrease the concentration of sirolimus. Avoid. [\[Severe\]](#) Study
- ▶ **Aprepitant** increases the concentration of sirolimus. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Bosentan** is predicted to decrease the concentration of sirolimus and sirolimus potentially increases the concentration of bosentan. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Brigatinib** potentially decreases the concentration of sirolimus. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** increase the concentration of sirolimus. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Ceritinib** is predicted to increase the exposure to sirolimus. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Sirolimus** is predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Ciclosporin** moderately increases the exposure to sirolimus. Separate administration by 4 hours. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the concentration of sirolimus. Avoid. [\[Severe\]](#) Study
- ▶ **Crizotinib** increases the concentration of sirolimus. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Doravirine** is predicted to decrease the exposure to sirolimus. Monitor sirolimus concentration and adjust dose, p. 561. [\[Moderate\]](#) Theoretical
- ▶ **Efavirenz** is predicted to decrease the concentration of sirolimus. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Eliglustat** is predicted to increase the exposure to sirolimus. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the concentration of sirolimus. Avoid. [\[Severe\]](#) Study
- ▶ **Grapefruit juice** increases the concentration of sirolimus. Avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of sirolimus. Avoid. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the concentration of sirolimus. Avoid. [\[Severe\]](#) Study
- ▶ **Imatinib** increases the concentration of sirolimus. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Lapatinib** is predicted to increase the exposure to sirolimus. [\[Moderate\]](#) Theoretical
- ▶ **Larotrectinib** is predicted to increase the exposure to sirolimus. Use with caution and adjust dose. [\[Mid\]](#) Theoretical
- ▶ **Letermovir** moderately increases the exposure to sirolimus. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with sirolimus. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Lorlatinib** is predicted to decrease the exposure to sirolimus. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to sirolimus. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of sirolimus. Avoid. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** increase the concentration of sirolimus. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Sirolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to sirolimus. [\[Mid\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of sirolimus. Avoid. [\[Severe\]](#) Study
- ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to sirolimus. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Neratinib** is predicted to increase the exposure to sirolimus. [\[Moderate\]](#) Study
- ▶ **Netupitant** increases the concentration of sirolimus. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the concentration of sirolimus. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** increases the concentration of sirolimus. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Palbociclib** is predicted to increase the exposure to sirolimus. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to sirolimus. [\[Moderate\]](#) Study

- ▶ **Pitolisant** is predicted to decrease the exposure to **sirolimus**. Avoid. [Severe] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Sirolimus** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** increases the exposure to **sirolimus**. [Severe] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **sirolimus**. [Severe] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **sirolimus**. Avoid or adjust dose. [Severe] Study

Sitagliptin → see TABLE 14 p. 910 (antidiabetic drugs)

Sodium aurothiomalate

- ▶ **ACE inhibitors** are predicted to increase the risk of hypersensitivity when given with **sodium aurothiomalate**. [Severe] Anecdotal
- ▶ **Sodium aurothiomalate** potentially increases the risk of side-effects when given with **penicillamine** (in those who have had previous adverse reactions to gold). Avoid. [Severe] Study

Sodium bicarbonate

ROUTE-SPECIFIC INFORMATION Interactions do not generally apply to topical use unless specified.

- ▶ Oral **sodium bicarbonate** decreases the absorption of **antifungals, azoles (ketoconazole)**. [Moderate] Study
- ▶ **Sodium bicarbonate** decreases the concentration of **lithium**. [Severe] Anecdotal
- ▶ **Sodium bicarbonate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical

Sodium citrate

- ▶ **Sodium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
- ▶ **Sodium citrate** is predicted to increase the risk of side-effects when given with **sucralfate**. Avoid. [Moderate] Theoretical

Sodium ferredate → see iron (oral)

Sodium oxybate → see TABLE 8 p. 908 (hypotension), TABLE 11 p. 909 (CNS depressant effects)

- ▶ **Antiepileptics (valproate)** increase the exposure to **sodium oxybate**. Adjust **sodium oxybate** dose. [Moderate] Study

Sodium phenylbutyrate

- ▶ **Antiepileptics (valproate)** potentially decrease the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
- ▶ **Corticosteroids** potentially decrease the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
- ▶ **Haloperidol** potentially decreases the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal

Sodium picosulfate → see TABLE 18 p. 911 (hyponatraemia)

Sodium stibogluconate

- ▶ **Sodium stibogluconate** increases the risk of cardiovascular side-effects when given with **amphotericin**. Separate administration by 14 days. [Severe] Study

Sodium zirconium cyclosilicate

- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **antifungals, azoles**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **dasatinib**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **erlotinib**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **HIV-protease inhibitors**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **ledipasvir**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **nilotinib**. Separate administration by at least 2 hours. [Moderate] Theoretical

- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **raltegravir**. Separate administration by at least 2 hours. [Moderate] Theoretical

- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **rilpivirine**. Separate administration by at least 2 hours. [Moderate] Theoretical

Sofosbuvir

- ▶ **Sofosbuvir** is predicted to increase the risk of severe bradycardia or heart block when given with **antiarrhythmics (amiodarone)**. Refer to specialist literature. [Severe] Anecdotal
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
- ▶ **Antiepileptics (fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **H₂ receptor antagonists** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see ledipasvir with sofosbuvir sofosbuvir with velpatasvir, and sofosbuvir with velpatasvir and voxilaprevir. [Moderate] Study
- ▶ **HIV-protease inhibitors (tipranavir)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **Modafinil** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **Proton pump inhibitors** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see ledipasvir with sofosbuvir sofosbuvir with velpatasvir, and sofosbuvir with velpatasvir and voxilaprevir. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study

Solifenacin → see TABLE 10 p. 909 (antimuscarinics)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **solifenacin**. Adjust solifenacin or tamsulosin with solifenacin dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **solifenacin**. Adjust solifenacin or tamsulosin with solifenacin dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **solifenacin**. Adjust solifenacin or tamsulosin with solifenacin dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **solifenacin**. Adjust solifenacin or tamsulosin with solifenacin dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **solifenacin**. Adjust solifenacin or tamsulosin with solifenacin dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical

Somatropin

- ▶ **Corticosteroids** are predicted to decrease the effects of **somatropin**. [Moderate] Theoretical

Sorafenib → see TABLE 15 p. 910 (myelosuppression), TABLE 9 p. 909 (QT-interval prolongation)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Sorafenib** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Enzalutamide** is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical

Sorafenib (continued)

- ▶ **Mitotane** is predicted to decrease the exposure to **sorafenib**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 910
- ▶ **Neomycin** moderately decreases the exposure to **sorafenib**. [\[Moderate\]](#) Study
- ▶ **Sorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **sorafenib**. [\[Moderate\]](#) Theoretical

Sotalol → see beta blockers, non-selective

Spirolonactone → see aldosterone antagonists

SSRIs → see TABLE 18 p. 911 (hyponatraemia), TABLE 13 p. 910 (serotonin syndrome), TABLE 9 p. 909 (QT-interval prolongation), TABLE 4 p. 907 (antiplatelet effects)

citalopram · dapoxetine · escitalopram · fluoxetine · fluvoxamine · paroxetine · sertraline

- ▶ **Fluvoxamine** very markedly increases the exposure to **agomelatine**. Avoid. [\[Severe\]](#) Study
- ▶ **Fluvoxamine** moderately increases the exposure to **alprazolam**. Adjust dose. [\[Moderate\]](#) Study
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to **amfetamines**. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 910
- ▶ **Fluvoxamine** moderately to markedly increases the exposure to **aminophylline**. Avoid. [\[Severe\]](#) Study
- ▶ **Fluvoxamine** decreases the clearance of **anaesthetics, local (ropivacaine)**. Avoid prolonged use. [\[Moderate\]](#) Study
- ▶ **Fluvoxamine** is predicted to increase the exposure to **anagrelide**. [\[Moderate\]](#) Theoretical → Also see TABLE 4 p. 907
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4. [\[Moderate\]](#) Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to SSRIs (**citalopram, escitalopram, fluoxetine, fluvoxamine, paroxetine, sertraline**). [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 909
- ▶ **Fluvoxamine** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the concentration of **paroxetine**. [\[Moderate\]](#) Study
- ▶ **Sertraline** potentially increases the risk of toxicity when given with **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ SSRIs (**fluoxetine, fluvoxamine**) are predicted to increase the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (voriconazole)** are predicted to increase the exposure to **citalopram**. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 909
- ▶ **Antihistamines, sedating (cyproheptadine)** potentially decrease the effects of SSRIs. [\[Moderate\]](#) Anecdotal
- ▶ **Apalutamide** is predicted to decrease the exposure to **citalopram**. Avoid or monitor. [\[Mid\]](#) Study → Also see TABLE 9 p. 909
- ▶ **Aprepitant** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4. [\[Moderate\]](#) Theoretical
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 265. [\[Moderate\]](#) Study
- ▶ **Fluvoxamine** increases the exposure to **asenapine**. [\[Moderate\]](#) Study

- ▶ **Paroxetine** moderately increases the exposure to **asenapine**. [\[Moderate\]](#) Study
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [\[Severe\]](#) Study
- ▶ **Fluvoxamine** moderately increases the concentration of **beta blockers, non-selective (propranolol)**. [\[Moderate\]](#) Study
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [\[Moderate\]](#) Study
- ▶ **Bupropion** is predicted to increase the exposure to **dapoxetine**. [\[Moderate\]](#) Theoretical → Also see TABLE 13 p. 910
- ▶ **Fluvoxamine** markedly decreases the clearance of **caffeine citrate**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4. [\[Moderate\]](#) Theoretical
- ▶ SSRIs (**fluoxetine, fluvoxamine**) are predicted to increase the exposure to **cannabidiol**. [\[Moderate\]](#) Theoretical
- ▶ SSRIs (**fluoxetine, fluvoxamine**) are predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose. [\[Moderate\]](#) Theoretical → Also see TABLE 4 p. 907
- ▶ **Cinacalcet** is predicted to increase the exposure to **dapoxetine**. [\[Moderate\]](#) Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **cinacalcet**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ SSRIs (**fluoxetine, fluvoxamine**) potentially increase the exposure to **clobazam**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ SSRIs (**fluoxetine, fluvoxamine**) are predicted to decrease the efficacy of **clopidogrel**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 4 p. 907
- ▶ **Fluvoxamine** increases the concentration of **clozapine**. Monitor side effects and adjust dose. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **dapoxetine**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4. [\[Moderate\]](#) Theoretical
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to slightly increase the exposure to **darifenacin**. [\[Mid\]](#) Study
- ▶ **Fluvoxamine** moderately increases the exposure to **diazepam**. [\[Moderate\]](#) Study
- ▶ **Fluvoxamine** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Fluvoxamine** markedly increases the exposure to **duloxetine**. Avoid. [\[Severe\]](#) Study → Also see TABLE 18 p. 911 → Also see TABLE 13 p. 910 → Also see TABLE 4 p. 907
- ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Fluvoxamine** is predicted to increase the exposure to **eltrombopag**. [\[Moderate\]](#) Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **erlotinib**. Monitor side effects and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Fluvoxamine** increases the concentration of **frovatriptan**. [\[Severe\]](#) Study → Also see TABLE 13 p. 910
- ▶ **Gilteritinib** is predicted to decrease the efficacy of SSRIs (**escitalopram, fluoxetine, sertraline**). Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Grapefruit juice** moderately increases the exposure to **sertraline**. Avoid. [\[Moderate\]](#) Study
- ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to SSRIs (**citalopram, escitalopram**). Adjust dose. [\[Moderate\]](#) Study
- ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to SSRIs (**paroxetine, sertraline**). [\[Moderate\]](#) Study
- ▶ **Fluoxetine** increases the concentration of **haloperidol**. Adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Fluvoxamine** increases the concentration of **haloperidol**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose. [\[Severe\]](#) Study

- ▶ **Idelalisib** is predicted to moderately increase the exposure to **dapoxetine**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4. [Moderate] Theoretical
 - ▶ **Fluoxetine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Unknown] Theoretical
 - ▶ **Fluvoxamine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Fluvoxamine** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose. [Severe] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4. [Moderate] Theoretical
 - ▶ **Fluvoxamine** very markedly increases the exposure to **melatonin**. Avoid. [Severe] Study
 - ▶ SSRIs (**fluoxetine, fluvoxamine, paroxetine**) are predicted to increase the exposure to **mexiletine**. [Moderate] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4. [Moderate] Theoretical
 - ▶ SSRIs potentially increase the risk of prolonged neuromuscular blockade when given with **neuromuscular blocking drugs, non-depolarising (mivacurium)**. [Unknown] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4. [Moderate] Theoretical
 - ▶ **Fluvoxamine** moderately increases the exposure to **olanzapine**. Adjust dose. [Severe] Anecdotal
 - ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to decrease the efficacy of **opioids (codeine)**. [Moderate] Theoretical
 - ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to decrease the efficacy of **opioids (tramadol)**. [Severe] Study → Also see TABLE 13 p. 910
 - ▶ **Fluvoxamine** is predicted to increase the exposure to **pentoxifylline**. [Moderate] Theoretical
 - ▶ **Fluvoxamine** is predicted to increase the exposure to **phenothiazines (chlorpromazine)**. [Moderate] Theoretical
 - ▶ **Fluvoxamine** is predicted to moderately increase the exposure to **pirfenidone**. Avoid. [Moderate] Study
 - ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
 - ▶ **Fluvoxamine** moderately increases the exposure to **pomalidomide**. Adjust **pomalidomide** dose. [Moderate] Study
 - ▶ **Paroxetine** slightly increases the exposure to **procyclidine**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Proton pump inhibitors (esomeprazole)** are predicted to slightly to moderately increase the exposure to SSRIs (**citalopram, escitalopram**). Monitor and adjust dose. [Severe] Theoretical
 - ▶ **Proton pump inhibitors (omeprazole)** slightly to moderately increase the exposure to SSRIs (**citalopram, escitalopram**). Monitor and adjust dose. [Severe] Study
 - ▶ **Fluvoxamine** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
 - ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
 - ▶ **Fluvoxamine** is predicted to increase the exposure to **roflumilast**. [Moderate] Study
 - ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to SSRIs (**dapoxetine**). [Moderate] Theoretical → Also see TABLE 18 p. 911 → Also see TABLE 13 p. 910 → Also see TABLE 4 p. 907
 - ▶ SSRIs potentially increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Unknown] Theoretical
 - ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
 - ▶ **Terbinafine** is predicted to increase the exposure to **fluoxetine**. Adjust dose. [Moderate] Theoretical
 - ▶ **Terbinafine** moderately increases the exposure to **paroxetine**. [Moderate] Study
 - ▶ **Terbinafine** is predicted to increase the exposure to SSRIs (**citalopram, dapoxetine, escitalopram, fluvoxamine, sertraline**). [Moderate] Theoretical
 - ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
 - ▶ **Fluvoxamine** moderately to markedly increases the exposure to **theophylline**. Avoid. [Severe] Study
 - ▶ **Fluvoxamine** very markedly increases the exposure to **tizanidine**. Avoid. [Severe] Study
 - ▶ SSRIs (**fluoxetine, fluvoxamine**) given with a moderate CYP3A4 inhibitor are predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose. [Moderate] Study
 - ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study → Also see TABLE 18 p. 911 → Also see TABLE 13 p. 910
 - ▶ **Fluvoxamine** increases the exposure to **tricyclic antidepressants (amitriptyline, imipramine)**. Adjust dose. [Severe] Study → Also see TABLE 18 p. 911 → Also see TABLE 13 p. 910
 - ▶ **Fluvoxamine** markedly increases the exposure to **tricyclic antidepressants (clomipramine)**. Adjust dose. [Severe] Study → Also see TABLE 18 p. 911 → Also see TABLE 13 p. 910
 - ▶ SSRIs (**fluoxetine, paroxetine**) are predicted to increase the exposure to **voroxetine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 13 p. 910 → Also see TABLE 4 p. 907
 - ▶ **Fluvoxamine** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 310. [Severe] Theoretical → Also see TABLE 13 p. 910
- St John's Wort** → see TABLE 13 p. 910 (serotonin syndrome)
- ▶ **St John's Wort** is predicted to decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
 - ▶ **St John's Wort** is predicted to decrease the exposure to **afatinib**. [Moderate] Study
 - ▶ **St John's Wort** is predicted to slightly decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Study
 - ▶ **St John's Wort** decreases the exposure to **aliskiren**. [Moderate] Study
 - ▶ **St John's Wort** moderately decreases the exposure to **alprazolam**. [Moderate] Study
 - ▶ **St John's Wort** is predicted to decrease the concentration of **aminophylline**. [Severe] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **antiarrhythmics (dronedaron)**. Avoid. [Severe] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **antiepileptics (brivaracetam)**. [Moderate] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the concentration of **antiepileptics (carbamazepine)**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the concentration of **antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)**. Avoid. [Severe] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **antiepileptics (perampanel)**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **antiepileptics (tiagabine)**. Avoid. [Mild] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Theoretical
 - ▶ **St John's Wort** moderately decreases the exposure to **antifungals, azoles (voriconazole)**. Avoid. [Moderate] Study
 - ▶ **St John's Wort** is predicted to decrease the concentration of **antimalarials (piperaquine)**. Avoid. [Moderate] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **apixaban**. Use with caution or avoid. [Moderate] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **apremilast**. Avoid. [Severe] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **aprepitant**. Avoid. [Moderate] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study

St John's Wort (continued)

- ▶ St John's Wort is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **bosentan**. Avoid. [Moderate] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
- ▶ St John's Wort is predicted to decrease the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Mild] Study
- ▶ St John's Wort is predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **certinib**. Avoid. [Severe] Theoretical
- ▶ St John's Wort decreases the concentration of **ciclosporin**. Avoid. [Moderate] Study
- ▶ St John's Wort is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ St John's Wort decreases the efficacy of **combined hormonal contraceptives**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ St John's Wort decreases the anticoagulant effect of **coumarins**. Avoid. [Severe] Anecdotal
- ▶ St John's Wort is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ St John's Wort is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **dasatinib**. [Severe] Study
- ▶ St John's Wort is predicted to decrease the efficacy of **desogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
- ▶ St John's Wort decreases the concentration of **digoxin**. Avoid. [Severe] Anecdotal
- ▶ St John's Wort decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ St John's Wort is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [Mild] Study
- ▶ St John's Wort is predicted to decrease the exposure to **edoxaban**. [Moderate] Study
- ▶ St John's Wort is predicted to decrease the concentration of **efavirenz**. Avoid. [Severe] Theoretical
- ▶ St John's Wort is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ St John's Wort is predicted to increase the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ St John's Wort is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
- ▶ St John's Wort is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical
- ▶ St John's Wort is predicted to decrease the efficacy of **etonogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
- ▶ St John's Wort is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ St John's Wort is predicted to decrease the exposure to **exemestane**. [Moderate] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **fesoterodine**. Avoid. [Severe] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **fingolimod**. Avoid. [Moderate] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **gilteritinib**. Avoid. [Severe] Study
- ▶ St John's Wort is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ St John's Wort is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ St John's Wort is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **HIV-protease inhibitors**. Avoid. [Severe] Study
- ▶ St John's Wort is predicted to decrease the efficacy of **hormone replacement therapy**. [Moderate] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **ibrutinib**. Avoid. [Severe] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ St John's Wort slightly decreases the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ St John's Wort decreases the exposure to **ivabradine**. Avoid. [Moderate] Study
- ▶ St John's Wort is predicted to decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ St John's Wort is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ St John's Wort is predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ St John's Wort is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
- ▶ St John's Wort is predicted to decrease the concentration of **letemovir**. [Moderate] Theoretical
- ▶ St John's Wort is predicted to decrease the efficacy of **levonorgestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **maraviroc**. Avoid. [Severe] Theoretical
- ▶ St John's Wort moderately decreases the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ St John's Wort is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- ▶ St John's Wort is predicted to decrease the exposure to **naloxegol**. Avoid. [Moderate] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Theoretical
- ▶ St John's Wort is predicted to decrease the exposure to **netupitant**. [Moderate] Theoretical

- ▶ **St John's Wort** is predicted to decrease the concentration of **nevirapine**. Avoid. [Severe] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **nintedanib**. [Moderate] Study
 - ▶ **St John's Wort** is predicted to decrease the efficacy of **norethisterone**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
 - ▶ **St John's Wort** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
 - ▶ **St John's Wort** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study → Also see TABLE 13 p. 910
 - ▶ **St John's Wort** moderately decreases the exposure to **opioids (oxycodone)**. Adjust dose. [Moderate] Study
 - ▶ **St John's Wort** is predicted to decrease the exposure to **osimertinib**. Avoid. [Moderate] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **ospemifene**. [Moderate] Study
 - ▶ **St John's Wort** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **paliperidone**. [Severe] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
 - ▶ **St John's Wort** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
 - ▶ **St John's Wort** slightly decreases the exposure to **pioglitazone**. [Mild] Study
 - ▶ **St John's Wort** is predicted to decrease the exposure to **pitolisant**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **ponatinib**. Avoid. [Severe] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
 - ▶ **St John's Wort** is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
 - ▶ **St John's Wort** is predicted to decrease the exposure to **ribociclib**. Avoid. [Severe] Study
 - ▶ **St John's Wort** is predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **rolapitant**. Avoid. [Severe] Study
 - ▶ **St John's Wort** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Severe] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
 - ▶ **St John's Wort** slightly decreases the exposure to **statins (atorvastatin)**. [Mild] Study
 - ▶ **St John's Wort** moderately decreases the exposure to **statins (simvastatin)**. [Moderate] Study
 - ▶ **St John's Wort** decreases the concentration of **tacrolimus**. Avoid. [Severe] Study
 - ▶ **St John's Wort** is predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study
 - ▶ **St John's Wort** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
 - ▶ **St John's Wort** potentially decreases the exposure to **theophylline**. [Severe] Anecdotal
 - ▶ **St John's Wort** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **tivozanib**. Avoid. [Severe] Study
 - ▶ **St John's Wort** is predicted to decrease the exposure to **tofacinib**. [Moderate] Study
 - ▶ **St John's Wort** is predicted to decrease the exposure to **tolvaptan**. Avoid. [Moderate] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **topotecan**. [Severe] Theoretical
 - ▶ **St John's Wort** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
 - ▶ **St John's Wort** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **St John's Wort** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- Statins** → see TABLE 1 p. 907 (hepatotoxicity)
- atorvastatin · fluvastatin · pravastatin · rosuvastatin · simvastatin
- ▶ **Atorvastatin** slightly to moderately increases the exposure to **aliskiren**. [Moderate] Study
 - ▶ **Antacids** moderately decrease the absorption of **rosuvastatin**. Separate administration by 2 hours. [Moderate] Study
 - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the risk of rhabdomyolysis when given with **atorvastatin**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **fluvastatin**. [Severe] Theoretical
 - ▶ **Antiarrhythmics (amiodarone)** increase the risk of rhabdomyolysis when given with **simvastatin**. Adjust **simvastatin** dose, p. 141. [Severe] Study
 - ▶ **Antiarrhythmics (dronedarone)** slightly increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Study
 - ▶ **Antiarrhythmics (dronedarone)** slightly increase the exposure to **rosuvastatin**. Adjust dose. [Severe] Study
 - ▶ **Antiarrhythmics (dronedarone)** moderately increase the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Study → Also see TABLE 1 p. 907
 - ▶ **Antiepileptics (carbamazepine)** moderately decrease the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Study → Also see TABLE 1 p. 907
 - ▶ **Antiepileptics (carbamazepine, eslicarbazepine)** are predicted to decrease the exposure to **atorvastatin**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 907
 - ▶ **Antiepileptics (eslicarbazepine)** moderately decrease the exposure to **simvastatin**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Antiepileptics (fosphenytoin, phenytoin)** potentially decrease the exposure to statins (**atorvastatin, simvastatin**). [Moderate] Anecdotal
 - ▶ **Antifungals, azoles (fluconazole)** potentially increase the risk of rhabdomyolysis when given with **atorvastatin**. Monitor and adjust dose. [Severe] Anecdotal → Also see TABLE 1 p. 907
 - ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Anecdotal → Also see TABLE 1 p. 907
 - ▶ **Antifungals, azoles (fluconazole, miconazole)** are predicted to increase the exposure to **fluvastatin**. [Severe] Theoretical → Also see TABLE 1 p. 907
 - ▶ **Antifungals, azoles (isavuconazole)** slightly increase the exposure to **atorvastatin**. [Moderate] Study
 - ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study → Also see TABLE 1 p. 907
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study → Also see TABLE 1 p. 907

Statins (continued)

- ▶ Antifungals, azoles (**miconazole**) potentially increase the exposure to **atorvastatin**. [Severe] Anecdotal
- ▶ Antifungals, azoles (**miconazole**) are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Theoretical
- ▶ Antifungals, azoles (**posaconazole**) are predicted to increase the exposure to **atorvastatin**. Avoid. [Severe] Anecdotal
- ▶ Antifungals, azoles (**posaconazole**) markedly to very markedly increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**isavuconazole**) are predicted to increase the exposure to statins (**fluvastatin, rosuvastatin**). [Moderate] Theoretical
- ▶ **Apalutamide** slightly decreases the exposure to **rosuvastatin**. [Mild] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **simvastatin**. Avoid or monitor. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to statins (**atorvastatin, simvastatin**). Monitor and adjust dose. [Severe] Theoretical
- ▶ **Bosentan** slightly decreases the exposure to **atorvastatin**. [Mild] Study
- ▶ **Bosentan** moderately decreases the exposure to **simvastatin**. [Moderate] Study
- ▶ **Calcium channel blockers (amlodipine)** slightly increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 141. [Mild] Study
- ▶ **Calcium channel blockers (diltiazem)** slightly to moderately increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Calcium channel blockers (diltiazem, verapamil)** moderately increase the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Study
- ▶ **Calcium channel blockers (verapamil)** are predicted to slightly to moderately increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Cephalosporins (ceftibiprole)** are predicted to increase the concentration of **statins**. [Moderate] Theoretical
- ▶ **Ciclosporin** very markedly increases the exposure to **atorvastatin**. Avoid or adjust **atorvastatin** dose, p. 139. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **fluvastatin**. [Severe] Study
- ▶ **Ciclosporin** markedly to very markedly increases the exposure to **pravastatin**. Adjust dose. [Severe] Study
- ▶ **Ciclosporin** markedly increases the exposure to statins (**rosuvastatin, simvastatin**). Avoid. [Severe] Study
- ▶ **Clopidogrel** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 140. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Colchicine** increases the risk of rhabdomyolysis when given with **statins**. [Severe] Anecdotal
- ▶ Statins (**fluvastatin, rosuvastatin**) increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to statins (**atorvastatin, simvastatin**). Monitor and adjust dose. [Severe] Theoretical
- ▶ **Danazol** is predicted to increase the risk of rhabdomyolysis when given with **atorvastatin**. [Severe] Theoretical
- ▶ **Danazol** increases the risk of rhabdomyolysis when given with **simvastatin**. Avoid. [Severe] Anecdotal
- ▶ **Statins** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
- ▶ **Dasabuvir** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 140. [Moderate] Study
- ▶ **Dasatinib** is predicted to increase the exposure to **simvastatin**. [Moderate] Theoretical
- ▶ **Efavirenz** slightly decreases the exposure to **atorvastatin**. [Mild] Study
- ▶ **Efavirenz** moderately decreases the exposure to **simvastatin**. [Moderate] Study
- ▶ **Elbasvir** increases the exposure to **atorvastatin**. Adjust **atorvastatin** dose, p. 139. [Moderate] Study
- ▶ **Elbasvir** is predicted to increase the exposure to **fluvastatin**. Adjust **fluvastatin** dose, p. 139. [Unknown] Theoretical
- ▶ **Elbasvir** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 140. [Moderate] Study
- ▶ **Elbasvir** is predicted to increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 141. [Unknown] Theoretical
- ▶ **Eltrombopag** is predicted to increase the exposure to **statins**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **simvastatin**. [Severe] Study
- ▶ **Ezetimibe** potentially increases the risk of rhabdomyolysis when given with **statins**. [Severe] Anecdotal
- ▶ **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **pravastatin**. Avoid. [Severe] Study
- ▶ **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **rosuvastatin**. Adjust **rosuvastatin** dose, p. 140. [Severe] Study
- ▶ **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **simvastatin**. Adjust **simvastatin** dose, p. 141. [Severe] Study
- ▶ **Fibrates (ciprofibrate)** increase the risk of rhabdomyolysis when given with **atorvastatin**. Avoid or adjust dose. [Severe] Study
- ▶ **Fibrates (ciprofibrate)** increase the risk of rhabdomyolysis when given with **fluvastatin**. [Severe] Study
- ▶ **Fibrates (fenofibrate)** are predicted to increase the risk of rhabdomyolysis when given with **fluvastatin**. Adjust **fenofibrate** dose, p. 138. [Severe] Theoretical
- ▶ **Fibrates (fenofibrate)** are predicted to increase the risk of rhabdomyolysis when given with **pravastatin**. Avoid. [Severe] Theoretical
- ▶ **Fibrates (fenofibrate)** increase the risk of rhabdomyolysis when given with **rosuvastatin**. Adjust **fenofibrate** and **rosuvastatin** doses, p. 138, p. 140. [Severe] Anecdotal
- ▶ **Fibrates (gemfibrozil)** increase the risk of rhabdomyolysis when given with **statins**. Avoid. [Severe] Anecdotal
- ▶ **Fibrates (bezafibrate)** increase the risk of rhabdomyolysis when given with **statins (atorvastatin, fluvastatin)**. [Severe] Study
- ▶ **Fibrates (fenofibrate)** increase the risk of rhabdomyolysis when given with **statins (atorvastatin, simvastatin)**. Adjust **fenofibrate** dose, p. 138. [Severe] Anecdotal
- ▶ **Fusidate** increases the risk of rhabdomyolysis when given with **statins**. Avoid. [Severe] Anecdotal
- ▶ **Glecaprevir** (with pibrentasvir) markedly increases the exposure to **atorvastatin**. Avoid. [Severe] Study
- ▶ **Glecaprevir** (with pibrentasvir) is predicted to increase the exposure to **fluvastatin**. [Moderate] Theoretical
- ▶ **Glecaprevir** (with pibrentasvir) increases the exposure to **pravastatin**. Use with caution and adjust **pravastatin** dose, p. 140. [Moderate] Study
- ▶ **Glecaprevir** (with pibrentasvir) increases the exposure to **rosuvastatin**. Use with caution and adjust **rosuvastatin** dose, p. 140. [Moderate] Study
- ▶ **Glecaprevir** (with pibrentasvir) increases the exposure to **simvastatin**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** increases the exposure to **atorvastatin**. [Mild] Study
- ▶ **Grapefruit juice** increases the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Grazoprevir** increases the exposure to **atorvastatin**. Adjust **atorvastatin** dose, p. 139. [Moderate] Study
- ▶ **Grazoprevir** is predicted to increase the exposure to **fluvastatin**. Adjust **fluvastatin** dose, p. 139. [Unknown] Theoretical
- ▶ **Grazoprevir** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 140. [Moderate] Study
- ▶ **Grazoprevir** is predicted to increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 141. [Unknown] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **HIV-protease inhibitors** slightly to moderately increase the exposure to **rosuvastatin**. Avoid or adjust dose. [Severe] Study

- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Imatinib** moderately increases the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Study
- ▶ **Ledipasvir** is predicted to increase the exposure to **rosuvastatin**. Avoid. [Severe] Theoretical
- ▶ **Ledipasvir** is predicted to increase the exposure to statins (**atorvastatin, fluvastatin, pravastatin, simvastatin**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **rosuvastatin**. Adjust dose. [Moderate] Study → Also see TABLE 1 p. 907
- ▶ **Leflunomide** is predicted to increase the exposure to statins (**atorvastatin, fluvastatin, pravastatin, simvastatin**). [Moderate] Study → Also see TABLE 1 p. 907
- ▶ **Letermovir** moderately increases the exposure to **atorvastatin**. Avoid or adjust **atorvastatin** dose, p. 139. [Severe] Study
- ▶ **Letermovir** is predicted to increase the exposure to **fluvastatin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **pravastatin**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to statins (**rosuvastatin, simvastatin**). Avoid. [Severe] Study
- ▶ **Lomitapide** increases the exposure to **atorvastatin**. Adjust lomitapide dose or separate administration by 12 hours. [Mid] Study → Also see TABLE 1 p. 907
- ▶ **Lomitapide** increases the exposure to **simvastatin**. Monitor and adjust **simvastatin** dose, p. 141. [Moderate] Study → Also see TABLE 1 p. 907
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Macrolides (clarithromycin)** moderately increase the exposure to **pravastatin**. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** slightly increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **pravastatin**. [Severe] Study
- ▶ **Macrolides (erythromycin)** markedly increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **simvastatin**. [Severe] Study
- ▶ **Monoclonal antibodies (sarilumab)** are predicted to decrease the exposure to statins (**atorvastatin, simvastatin**). [Moderate] Study
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to statins (**atorvastatin, simvastatin**). Monitor and adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to statins (**atorvastatin, simvastatin**). Monitor and adjust dose. [Severe] Theoretical
- ▶ **Nevirapine** slightly decreases the exposure to **atorvastatin**. [Mid] Study
- ▶ **Nevirapine** moderately decreases the exposure to **simvastatin**. [Moderate] Study
- ▶ **Nicotinic acid** is predicted to increase the risk of rhabdomyolysis when given with statins. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to slightly increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Osimertinib** slightly increases the exposure to **rosuvastatin**. [Moderate] Study
- ▶ **Paritaprevir** (in fixed-dose combination) is predicted to increase the risk of rhabdomyolysis when given with **atorvastatin**. Avoid. [Severe] Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **fluvastatin**. Avoid. [Moderate] Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) increases the exposure to **pravastatin**. Adjust **pravastatin** dose, p. 140. [Moderate] Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) slightly to moderately increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 140. [Moderate] Study
- ▶ **Paritaprevir** (in fixed-dose combination) is predicted to increase the risk of rhabdomyolysis when given with **simvastatin**. Avoid. [Severe] Theoretical
- ▶ **Pazopanib** is predicted to affect the exposure to **atorvastatin**. [Moderate] Anecdotal
- ▶ **Pazopanib** is predicted to affect the exposure to statins (**pravastatin, rosuvastatin, simvastatin**). [Moderate] Theoretical
- ▶ **Rosuvastatin** is predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [Severe] Theoretical
- ▶ **Pibrentasvir** (with glecaprevir) markedly increases the exposure to **atorvastatin**. Avoid. [Severe] Study
- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **fluvastatin**. [Moderate] Theoretical
- ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **pravastatin**. Use with caution and adjust **pravastatin** dose, p. 140. [Moderate] Study
- ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **rosuvastatin**. Use with caution and adjust **rosuvastatin** dose, p. 140. [Moderate] Study
- ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **simvastatin**. Avoid. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **atorvastatin**. [Moderate] Theoretical
- ▶ **Ranolazine** slightly increases the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 141. [Moderate] Study
- ▶ **Regorafenib** is predicted to increase the exposure to statins (**atorvastatin, fluvastatin, rosuvastatin**). [Moderate] Study
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **simvastatin**. Avoid. [Moderate] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to statins (**pravastatin, rosuvastatin**). [Moderate] Theoretical
- ▶ **Rifampicin** markedly decreases the exposure to **atorvastatin**. Manufacturer advises take both drugs at the same time. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **fluvastatin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** very markedly decreases the exposure to **simvastatin**. [Moderate] Study
- ▶ **Rolapitant** is predicted to increase the exposure to **rosuvastatin**. Monitor and adjust dose. [Severe] Study
- ▶ **Sacubitril** is predicted to increase the exposure to statins. [Severe] Study
- ▶ **St John's Wort** slightly decreases the exposure to **atorvastatin**. [Mid] Study
- ▶ **St John's Wort** moderately decreases the exposure to **simvastatin**. [Moderate] Study
- ▶ **Fluvastatin** slightly increases the exposure to **sulfonylureas (glibenclamide)**. [Mid] Study
- ▶ **Tedizolid** is predicted to increase the exposure to statins (**atorvastatin, fluvastatin, rosuvastatin**). Avoid. [Moderate] Study
- ▶ **Teriflunomide** moderately increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 140. [Moderate] Study → Also see TABLE 1 p. 907
- ▶ **Teriflunomide** is predicted to increase the exposure to statins (**atorvastatin, fluvastatin, pravastatin, simvastatin**). [Moderate] Study → Also see TABLE 1 p. 907
- ▶ **Ticagrelor** slightly increases the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 141. [Moderate] Study
- ▶ **Tivozanib** is predicted to decrease the exposure to **rosuvastatin**. [Moderate] Theoretical
- ▶ **Velpatasvir** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose and monitor side effects, p. 140. [Severe] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **simvastatin**. Monitor side effects and adjust dose. [Severe] Theoretical

Statins (continued)

- ▶ **Venetoclax** is predicted to increase the exposure to **atorvastatin**. [Moderate] Study
- ▶ **Venetoclax** is predicted to increase the exposure to statins (**fluvastatin**, **pravastatin**, **rosuvastatin**, **simvastatin**). [Moderate] Theoretical
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) is predicted to increase the exposure to **atorvastatin**. Adjust **atorvastatin** dose, p. 139. [Moderate] Theoretical
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) moderately increases the exposure to **pravastatin**. Monitor and adjust **pravastatin** dose, p. 140. [Moderate] Study
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) markedly increases the exposure to **rosuvastatin**. Avoid. [Severe] Study
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) is predicted to increase the exposure to statins (**fluvastatin**, **simvastatin**). Avoid. [Moderate] Theoretical

Stavudine → see TABLE 12 p. 910 (peripheral neuropathy)

- ▶ **Hydroxycarbamide** increases the risk of toxicity when given with **stavudine**. Avoid. [Severe] Study
- ▶ **Isoniazid** is predicted to increase the risk of peripheral neuropathy when given with **stavudine**. [Severe] Theoretical → Also see TABLE 12 p. 910
- ▶ **Ribavirin** increases the risk of toxicity when given with **stavudine**. Avoid. [Severe] Study
- ▶ **Zidovudine** is predicted to decrease the efficacy of **stavudine**. Avoid. [Severe] Theoretical

Stiripentol → see antiepileptics

Streptokinase → see TABLE 3 p. 907 (anticoagulant effects)

Streptomycin → see aminoglycosides

Streptozocin → see TABLE 1 p. 907 (hepatotoxicity), TABLE 2 p. 907 (nephrotoxicity)

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **streptozocin**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

Strontium → see TABLE 5 p. 907 (thromboembolism)

- ▶ **Antacids** decrease the absorption of **strontium**. Separate administration by 2 hours. [Moderate] Study
- ▶ Oral **calcium salts** decrease the exposure to **strontium**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Strontium** is predicted to decrease the absorption of **quinolones**. Avoid. [Moderate] Theoretical
- ▶ **Strontium** is predicted to decrease the absorption of **tetracyclines**. Avoid. [Moderate] Theoretical

Sulfalate

Sulfalate is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Theoretical

- ▶ **Sulfalate** potentially decreases the effects of **coumarins** (**warfarin**). Separate administration by 2 hours. [Moderate] Anecdotal
- ▶ **Sulfalate** decreases the absorption of **digoxin**. Separate administration by 2 hours. [Severe] Anecdotal
- ▶ **Sulfalate** decreases the absorption of **dolutegravir**. [Moderate] Study
- ▶ **Sulfalate** increases the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. Separate administration by 1 hour. [Moderate] Study
- ▶ **Potassium citrate** increases the risk of side-effects when given with **sulfalate**. Avoid. [Moderate] Theoretical
- ▶ **Sulfalate** decreases the exposure to **quinolones**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Sodium citrate** is predicted to increase the risk of side-effects when given with **sulfalate**. Avoid. [Moderate] Theoretical
- ▶ **Sulfalate** decreases the absorption of **sulpiride**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Sulfalate** potentially decreases the absorption of **theophylline**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Sulfalate** decreases the absorption of **thyroid hormones** (**levothyroxine**). Separate administration by at least 4 hours. [Moderate] Study
- ▶ **Sulfalate** is predicted to decrease the absorption of **tricyclic antidepressants**. [Moderate] Study

Sugammadex

- ▶ **Sugammadex** is predicted to decrease the exposure to oral **combined hormonal contraceptives**. Refer to patient information leaflet for missed pill advice. [Severe] Theoretical
- ▶ **Sugammadex** is predicted to decrease the exposure to **desogestrel**. Refer to patient information leaflet for missed pill advice. [Severe] Theoretical
- ▶ **Sugammadex** is predicted to decrease the efficacy of **etonogestrel**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Sugammadex** is predicted to decrease the exposure to **levonorgestrel**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Sugammadex** is predicted to decrease the exposure to **medroxyprogesterone**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Sugammadex** is predicted to decrease the exposure to **norethisterone**. Use additional contraceptive precautions. [Severe] Theoretical

Sulfadiazine → see sulfonamides

Sulfadoxine → see sulfonamides

Sulfamethoxazole → see sulfonamides

Sulfasalazine → see TABLE 1 p. 907 (hepatotoxicity), TABLE 15 p. 910 (myelosuppression)

- ▶ **Antifungals**, azoles (**isavuconazole**) are predicted to increase the exposure to **sulfasalazine**. [Moderate] Theoretical
- ▶ **Sulfasalazine** decreases the concentration of **digoxin**. [Moderate] Study
- ▶ **Sulfasalazine** is predicted to decrease the absorption of **folates**. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 1 p. 907 → Also see TABLE 15 p. 910
- ▶ **Regorafenib** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 15 p. 910
- ▶ **Rolapitant** increases the exposure to **sulfasalazine**. [Severe] Study
- ▶ **Tedizolid** is predicted to increase the exposure to **sulfasalazine**. Avoid. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 1 p. 907
- ▶ **Velpatasvir** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Theoretical
- ▶ **Voxilaprevir** is predicted to increase the concentration of **sulfasalazine**. Avoid. [Severe] Theoretical

Sulfonamides → see TABLE 15 p. 910 (myelosuppression)

sulfadiazine · sulfadoxine · sulfamethoxazole

- ▶ **Sulfonamides** potentially increase the risk of methaemoglobinemia when given with topical **anaesthetics**, **local** (**prilocaine**). Use with caution or avoid. [Severe] Anecdotal
- ▶ **Sulfadiazine** is predicted to increase the concentration of **antiepileptics** (**fosphenytoin**). Monitor and adjust dose. [Moderate] Study
- ▶ **Sulfadiazine** increases the concentration of **antiepileptics** (**phenytoin**). Monitor and adjust dose. [Moderate] Study
- ▶ **Antimalarials** (**pyrimethamine**) increase the risk of side-effects when given with **sulfonamides**. [Severe] Study → Also see TABLE 15 p. 910
- ▶ **Chlorprocaine** is predicted to decrease the effects of **sulfonamides**. Avoid. [Severe] Theoretical
- ▶ **Sulfadiazine** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Theoretical
- ▶ **Sulfamethoxazole** increases the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Sulfonamides** are predicted to increase the risk of methaemoglobinemia when given with **dapsone**. [Severe] Theoretical
- ▶ **Sulfonamides** are predicted to increase the exposure to **methotrexate**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 15 p. 910
- ▶ **Potassium aminobenzoate** is predicted to affect the efficacy of **sulfonamides**. Avoid. [Severe] Theoretical
- ▶ **Sulfonamides** are predicted to increase the exposure to **sulfonylureas**. [Moderate] Study

- ▶ **Sulfonamides** are predicted to increase the effects of **thiopental**. [Moderate] Theoretical
- Sulfonylureas** → see TABLE 14 p. 910 (antidiabetic drugs)
 - glibenclamide · gliclazide · glimepiride · glipizide · tolbutamide
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, miconazole)** are predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (voriconazole)** are predicted to increase the concentration of **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Bosentan** increases the risk of hepatotoxicity when given with **glibenclamide**. Avoid. [Severe] Study
- ▶ **Cephalosporins (ceftobiprole)** are predicted to increase the concentration of **glibenclamide**. [Moderate] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **glimepiride**. Adjust dose. [Moderate] Theoretical
- ▶ **Chloramphenicol** is predicted to increase the exposure to **sulfonylureas**. [Severe] Study
- ▶ **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **sulfonylureas**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **glibenclamide**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the concentration of **glibenclamide**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to **sulfonylureas**. [Moderate] Theoretical
- ▶ **Nitisinone** is predicted to increase the exposure to **sulfonylureas (glimepiride, tolbutamide)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **sulfonylureas**. [Moderate] Study
- ▶ **Statins (fluvastatin)** slightly increase the exposure to **glibenclamide**. [Mild] Study
- ▶ **Sulfonamides** are predicted to increase the exposure to **sulfonylureas**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **glibenclamide**. [Moderate] Study
- ▶ **Venetoclax** is predicted to increase the exposure to **glibenclamide**. [Moderate] Theoretical
- Sulindac** → see NSAIDs
- Sulpiride** → see TABLE 8 p. 908 (hypotension), TABLE 9 p. 909 (QT-interval prolongation), TABLE 11 p. 909 (CNS depressant effects)
- ▶ **Antacids** decrease the absorption of **sulpiride**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Sulpiride** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 908 → Also see TABLE 9 p. 909
- ▶ **Sulpiride** is predicted to decrease the effects of **levodopa**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 908
- ▶ **Sulpiride** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 909
- ▶ **Sucralfate** decreases the absorption of **sulpiride**. Separate administration by 2 hours. [Moderate] Study
- Sumatriptan** → see TABLE 13 p. 910 (serotonin syndrome)
- ▶ **Sumatriptan** increases the risk of vasoconstriction when given with **ergotamine**. Ergotamine should be taken at least 24 hours before or 6 hours after **sumatriptan**. [Severe] Study
- ▶ **MAOIs, irreversible** are predicted to increase the exposure to **sumatriptan**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 910
- ▶ **Moclobemide** moderately increases the exposure to **sumatriptan**. Avoid. [Moderate] Study → Also see TABLE 13 p. 910
- Sunitinib** → see TABLE 15 p. 910 (myelosuppression), TABLE 9 p. 909 (QT-interval prolongation)
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study → Also see TABLE 9 p. 909
 - ▶ **Apalutamide** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study → Also see TABLE 9 p. 909
 - ▶ **Aprepitant** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
 - ▶ **Cobicistat** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study
 - ▶ **Sunitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
 - ▶ **Crizotinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 910 → Also see TABLE 9 p. 909
 - ▶ **Elbasvir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **sunitinib**. Avoid. [Moderate] Theoretical
 - ▶ **Grazoprevir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study → Also see TABLE 9 p. 909
 - ▶ **Idelalisib** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study → Also see TABLE 15 p. 910
 - ▶ **Imatinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 910
 - ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study → Also see TABLE 9 p. 909
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Mitotane** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study → Also see TABLE 15 p. 910
 - ▶ **Netupitant** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
 - ▶ **Nilotinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 910 → Also see TABLE 9 p. 909
 - ▶ **Sunitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
 - ▶ **Rifampicin** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose. [Moderate] Study
- Suxamethonium** → see TABLE 20 p. 911 (neuromuscular blocking effects)
 - ▶ **Alkylating agents (cyclophosphamide)** increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Study
 - ▶ **Antiarrhythmics (lidocaine)** are predicted to increase the effects of **suxamethonium**. [Moderate] Study
 - ▶ **Anticholinesterases, centrally acting** increase the effects of **suxamethonium**. [Moderate] Theoretical
 - ▶ **Antiepileptics (carbamazepine)** increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Study
 - ▶ **Antiepileptics (fosphenytoin, phenytoin)** increase the effects of **suxamethonium**. [Moderate] Study
 - ▶ **Clindamycin** increases the effects of **suxamethonium**. [Severe] Anecdotal
 - ▶ **Corticosteroids** are predicted to decrease the effects of **suxamethonium**. [Severe] Anecdotal
 - ▶ **Suxamethonium** is predicted to increase the risk of cardiovascular side-effects when given with **digoxin**. [Severe] Anecdotal

Suxamethonium (continued)

- ▶ **Irinotecan** is predicted to increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Theoretical
- ▶ Intravenous **magnesium** is predicted to increase the effects of **suxamethonium**. [Moderate] Study
- ▶ **Metoclopramide** increases the effects of **suxamethonium**. [Moderate] Study
- ▶ **Penicillins (piperacillin)** increase the effects of **suxamethonium**. [Moderate] Study
- ▶ **SSRIs** potentially increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Unknown] Theoretical

Sympathomimetics, inotropic

dobutamine · dopamine

- ▶ **Sympathomimetics, inotropic** are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
- ▶ **Beta blockers, non-selective** increase the risk of hypertension and bradycardia when given with **dobutamine**. [Severe] Theoretical
- ▶ **Beta blockers, selective** increase the risk of hypertension and bradycardia when given with **dobutamine**. [Moderate] Theoretical
- ▶ **Entacapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic**. [Moderate] Theoretical
- ▶ **Ergometrine** potentially increases the risk of peripheral vasoconstriction when given with **dopamine**. Avoid. [Severe] Anecdotal
- ▶ **Sympathomimetics, inotropic** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **MAO-B inhibitors** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, inotropic**. Avoid. [Severe] Anecdotal
- ▶ **MAOIs, irreversible** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, inotropic**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Opicapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic**. [Severe] Theoretical
- ▶ **Tolcapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic**. [Moderate] Theoretical

Sympathomimetics, vasoconstrictor

adrenaline/epinephrine · ephedrine · isometheptene · metaraminol · midodrine · noradrenaline/norepinephrine · phenylephrine · pseudoephedrine · xylometazoline

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Ephedrine** increases the risk of side-effects when given with **aminophylline**. Avoid in children. [Moderate] Study
- ▶ **Sympathomimetics, vasoconstrictor** are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
- ▶ **Atropine** increases the risk of severe hypertension when given with **phenylephrine**. [Severe] Study
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of hypertension and bradycardia when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Severe] Study
- ▶ **Beta blockers, selective** are predicted to increase the risk of hypertension and bradycardia when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Severe] Study
- ▶ **Isometheptene** potentially increases the risk of side-effects when given with **dopamine receptor agonists (bromocriptine)**. Avoid. [Severe] Anecdotal
- ▶ **Entacapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Moderate] Study

- ▶ **Ergometrine** is predicted to increase the risk of peripheral vasoconstriction when given with **noradrenaline/norepinephrine**. [Severe] Anecdotal
- ▶ **Pseudoephedrine** increases the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Study
- ▶ **Sympathomimetics, vasoconstrictor (adrenaline/epinephrine, ephedrine, isometheptene, noradrenaline/norepinephrine, phenylephrine)** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **MAO-B inhibitors** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, vasoconstrictor**. Avoid. [Severe] Anecdotal
- ▶ **MAOIs, irreversible** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, vasoconstrictor**. Avoid and for 14 days after stopping the MAOI. [Severe] Study
- ▶ **Mianserin** decreases the effects of **ephedrine**. [Severe] Anecdotal
- ▶ **Moclobemide** is predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, vasoconstrictor (ephedrine, isometheptene, phenylephrine, pseudoephedrine)**. Avoid. [Severe] Study
- ▶ **Opicapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Severe] Theoretical
- ▶ **Ephedrine** increases the risk of side-effects when given with **theophylline**. Avoid in children. [Moderate] Study
- ▶ **Tolcapone** is predicted to increase the effects of **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Moderate] Theoretical
- ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **ephedrine**. Avoid. [Severe] Study
- ▶ **Tricyclic antidepressants** increase the effects of **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine, phenylephrine)**. Avoid. [Severe] Study

Tacalcitol → see vitamin D substances

Tacrolimus → see TABLE 2, p. 907 (nephrotoxicity), TABLE 16 p. 911 (increased serum potassium)

- ▶ Pomelo and pomegranate juices might greatly increase the concentration of tacrolimus.

- ▶ Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Alcohol (beverage)** increases the risk of facial flushing and skin irritation when given with topical **tacrolimus**. [Moderate] Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the concentration of **tacrolimus**. [Severe] Anecdotal
- ▶ **Antiarrhythmics (dronedrone)** are predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Apalutamide** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** potentially increases the concentration of **bosentan**. Avoid. [Severe] Theoretical
- ▶ **Brigatinib** potentially decreases the concentration of **tacrolimus**. Avoid. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **tacrolimus**. [Severe] Study

- ▶ **Calcium channel blockers (nifedipine)** potentially increase the concentration of **tacrolimus**. Monitor concentration and adjust dose. [Severe] Anecdotal
 - ▶ **Ceritinib** is predicted to increase the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
 - ▶ **Chloramphenicol** increases the concentration of **tacrolimus**. [Severe] Study
 - ▶ **Ciclosporin** increases the concentration of **tacrolimus**. Avoid. [Severe] Study → Also see TABLE 2 p. 907 → Also see TABLE 16 p. 911
 - ▶ **Cobicistat** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
 - ▶ **Crizotinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
 - ▶ **Tacrolimus** is predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Theoretical
 - ▶ **Danazol** potentially increases the concentration of **tacrolimus**. [Severe] Anecdotal
 - ▶ **Doravirine** is predicted to decrease the exposure to **tacrolimus**. Monitor **tacrolimus** concentration and adjust dose, p. 562. [Moderate] Theoretical
 - ▶ **Efavirenz** is predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Enzalutamide** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
 - ▶ **Glecaprevir** (with pibrentasvir) slightly increases the exposure to **tacrolimus**. Monitor and adjust dose. [Mild] Study
 - ▶ **Grapefruit juice** greatly increases the concentration of **tacrolimus**. Avoid. [Severe] Study
 - ▶ **Grazoprevir** increases the exposure to **tacrolimus**. [Moderate] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
 - ▶ **Idelalisib** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
 - ▶ **Imatinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
 - ▶ **Larotrectinib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. [Mild] Theoretical
 - ▶ **Letermovir** moderately increases the exposure to **tacrolimus**. Monitor and adjust dose. [Severe] Study
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tacrolimus**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
 - ▶ **Tacrolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
 - ▶ **Lorlatinib** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Moderate] Theoretical
 - ▶ **Lumacaftor** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of **tacrolimus**. [Severe] Study
 - ▶ **Tacrolimus** is predicted to affect the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
 - ▶ **Mitotane** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
 - ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Netupitant** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
 - ▶ **Nevirapine** is predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
 - ▶ **Nilotinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
 - ▶ **Palbociclib** is predicted to increase the exposure to **tacrolimus**. Adjust dose. [Moderate] Theoretical
 - ▶ **Pibrentasvir** (with glecaprevir) slightly increases the exposure to **tacrolimus**. Monitor and adjust dose. [Mild] Study
 - ▶ **Pitolisant** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
 - ▶ **Ranolazine** increases the concentration of **tacrolimus**. Adjust dose. [Severe] Anecdotal
 - ▶ **Ribociclib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **Rifampicin** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
 - ▶ **Rucaparib** is predicted to increase the exposure to **tacrolimus**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Siroliimus** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** increases the exposure to **siroliimus**. [Severe] Study
 - ▶ **St John's Wort** decreases the concentration of **tacrolimus**. Avoid. [Severe] Study
 - ▶ **Tacrolimus** increases the exposure to **tofacitinib**. Avoid. [Severe] Study
 - ▶ **Tacrolimus** potentially increases the risk of serotonin syndrome when given with **venlafaxine**. [Severe] Anecdotal
- Tadalafil** → see phosphodiesterase type-5 inhibitors
- Talazoparib**
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
 - ▶ **Calcium channel blockers (verapamil)** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
 - ▶ **Ciclosporin** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
 - ▶ **Eltrombopag** potentially increases the exposure to **talazoparib**. Avoid or monitor. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
 - ▶ **Lapatinib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
 - ▶ **Leflunomide** potentially increases the exposure to **talazoparib**. Avoid or monitor. [Moderate] Theoretical
 - ▶ **Macrolides** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
 - ▶ **Ranolazine** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
 - ▶ **Teriflunomide** potentially increases the exposure to **talazoparib**. Avoid or monitor. [Moderate] Theoretical
 - ▶ **Vemurafenib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
- Tamoxifen** → see TABLE 5 p. 907 (thromboembolism)
- ▶ **Bupropion** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
 - ▶ **Cinacalcet** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
 - ▶ **Tamoxifen** increases the anticoagulant effect of **coumarins**. [Severe] Study
 - ▶ **Rifampicin** markedly decreases the exposure to **tamoxifen**. [Unknown] Study
 - ▶ **Rolapitant** is predicted to increase the exposure to **tamoxifen**. [Severe] Study
 - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
 - ▶ **Terbinafine** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
- Tamsulosin** → see alpha blockers
- Tapentadol** → see opioids
- Taxanes** → see TABLE 15 p. 910 (myelosuppression), TABLE 12 p. 910 (peripheral neuropathy)
- cabazitaxel · docetaxel · paclitaxel
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
 - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical → Also see TABLE 12 p. 910

Taxanes (continued)

- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to taxanes (**cabazitaxel**, **paclitaxel**). Avoid. [Severe] Study → Also see TABLE 12 p. 910
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
- ▶ Antifungals, azoles (**miconazole**) are predicted to increase the concentration of **docetaxel**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to **docetaxel**. Avoid. [Severe] Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to taxanes (**cabazitaxel**, **paclitaxel**). Avoid. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **paclitaxel**. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ **Clopidogrel** is predicted to increase the concentration of **paclitaxel**. [Severe] Anecdotal
- ▶ **Cobicistat** is predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ **Efavirenz** is predicted to decrease the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **paclitaxel**. Adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to taxanes (**cabazitaxel**, **paclitaxel**). Avoid. [Severe] Study
- ▶ Fibrates (**gemfibrozil**) are predicted to increase the concentration of **paclitaxel**. [Severe] Anecdotal
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study → Also see TABLE 15 p. 910
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 910
- ▶ **Idelalisib** is predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical → Also see TABLE 15 p. 910
- ▶ **Imatinib** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ Iron chelators (**deferasirox**) are predicted to increase the concentration of **paclitaxel**. [Severe] Anecdotal
- ▶ **Lapatinib** slightly increases the exposure to **paclitaxel**. [Severe] Study
- ▶ **Leflunomide** is predicted to increase the concentration of **paclitaxel**. [Severe] Anecdotal → Also see TABLE 15 p. 910
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with taxanes

- (**docetaxel**, **paclitaxel**). Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
 - ▶ Macrolides (**clarithromycin**) are predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study
 - ▶ Macrolides (**clarithromycin**) are predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study
 - ▶ Macrolides (**clarithromycin**) are predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
 - ▶ Macrolides (**erythromycin**) are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
 - ▶ **Mirabegron** is predicted to increase the exposure to **paclitaxel**. [Mild] Theoretical
 - ▶ **Mitotane** is predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical → Also see TABLE 15 p. 910
 - ▶ **Mitotane** is predicted to decrease the exposure to taxanes (**cabazitaxel**, **paclitaxel**). Avoid. [Severe] Study → Also see TABLE 15 p. 910
 - ▶ **Netupitant** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
 - ▶ **Netupitant** slightly increases the exposure to **docetaxel**. [Moderate] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **paclitaxel**. [Moderate] Study
 - ▶ **Nevirapine** is predicted to decrease the exposure to **cabazitaxel**. Avoid. [Severe] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical → Also see TABLE 15 p. 910
 - ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **paclitaxel**. [Moderate] Study
 - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **paclitaxel**. [Moderate] Study
 - ▶ **Pitolisant** is predicted to decrease the exposure to **docetaxel**. Avoid. [Severe] Theoretical
 - ▶ **Pitolisant** is predicted to decrease the exposure to **paclitaxel**. [Mild] Theoretical
 - ▶ **Rifampicin** is predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical
 - ▶ **Rifampicin** is predicted to decrease the exposure to taxanes (**cabazitaxel**, **paclitaxel**). Avoid. [Severe] Study
 - ▶ **St John's Wort** is predicted to decrease the exposure to **cabazitaxel**. Avoid. [Severe] Study
 - ▶ **Teriflunomide** is predicted to increase the concentration of **paclitaxel**. [Severe] Anecdotal
 - ▶ **Velpatasvir** is predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
- Tazarotene** → see retinoids
- Tedizolid**
- ▶ **Tedizolid** is predicted to increase the exposure to **imatinib**. Avoid. [Moderate] Theoretical
 - ▶ **Tedizolid** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
 - ▶ **Tedizolid** is predicted to increase the exposure to **methotrexate**. Avoid. [Moderate] Theoretical
 - ▶ **Tedizolid** is predicted to increase the exposure to **statins** (**atorvastatin**, **fluvastatin**, **rosuvastatin**). Avoid. [Moderate] Study
 - ▶ **Tedizolid** is predicted to increase the exposure to **sulfasalazine**. Avoid. [Moderate] Study
 - ▶ **Tedizolid** is predicted to increase the exposure to **topotecan**. Avoid. [Moderate] Study
- Tegafur**
- ▶ **Tegafur** potentially increases the concentration of antiepileptics (**fosphenytoin**, **phenytoin**). Monitor concentration and adjust dose. [Severe] Anecdotal
 - ▶ **Tegafur** increases the anticoagulant effect of **coumarins**. [Moderate] Theoretical
 - ▶ **Folates** are predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
 - ▶ **H₂ receptor antagonists** (**cimetidine**) are predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
 - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tegafur**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

- ▶ **Methotrexate** is predicted to increase the risk of toxicity when given with tegafur. [Severe] Theoretical

Tecoloplanin

GENERAL INFORMATION If other nephrotoxic or neurotoxic drugs are given, monitor renal and auditory function on prolonged administration.

- ▶ **Telavancin** → see TABLE 2 p. 907 (nephrotoxicity), TABLE 19 p. 911 (ototoxicity), TABLE 9 p. 909 (QT-interval prolongation)

Telbivudine

- ▶ **Interferons (interferon alfa)** are predicted to increase the risk of peripheral neuropathy when given with telbivudine. Avoid. [Severe] Theoretical
- ▶ **Interferons (peginterferon alfa)** increase the risk of peripheral neuropathy when given with telbivudine. Avoid. [Severe] Study
- ▶ **Temisartan** → see angiotensin-II receptor antagonists

Telotristat ethyl

- ▶ **Telotristat ethyl** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine or lamivudine with tenofovir disoproxil and doravirine dose. [Severe] Theoretical
- ▶ **Telotristat ethyl** decreases the exposure to **midazolam**. [Moderate] Study
- ▶ **Octreotide** (short-acting) decreases the exposure to telotristat ethyl. Telotristat ethyl should be taken at least 30 minutes before octreotide, p. 504. [Moderate] Study

- ▶ **Temazepam** → see TABLE 11 p. 909 (CNS depressant effects)

- ▶ **Temocillin** → see penicillins

- ▶ **Temozolomide** → see alkylating agents

- ▶ **Temsirolimus** → see TABLE 15 p. 910 (myelosuppression)

- ▶ **ACE inhibitors** are predicted to increase the risk of angioedema when given with temsirolimus. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the concentration of temsirolimus. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of temsirolimus. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of temsirolimus. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of temsirolimus. Avoid. [Severe] Theoretical
- ▶ **Apalutamide** is predicted to decrease the concentration of temsirolimus. Avoid. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the concentration of temsirolimus. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the concentration of temsirolimus. Avoid. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of and the risk of angioedema when given with temsirolimus. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Temsirolimus** is predicted to increase the risk of angioedema when given with calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine**). [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the concentration of temsirolimus. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of temsirolimus. Use with caution or avoid. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ **Efavirenz** is predicted to decrease the concentration of temsirolimus. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the concentration of temsirolimus. Avoid. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the concentration of temsirolimus. Use with caution or avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of temsirolimus. Avoid. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the concentration of temsirolimus. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 910
- ▶ **Imatinib** is predicted to increase the concentration of temsirolimus. Use with caution or avoid. [Moderate] Theoretical → Also see TABLE 15 p. 910

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with temsirolimus. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Lumacafor** is predicted to decrease the exposure to temsirolimus. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of temsirolimus. Avoid. [Severe] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of temsirolimus. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of temsirolimus. Avoid. [Severe] Study → Also see TABLE 15 p. 910
- ▶ **Netupitant** is predicted to increase the concentration of temsirolimus. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the concentration of temsirolimus. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of temsirolimus. Use with caution or avoid. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ **Pitolisant** is predicted to decrease the exposure to temsirolimus. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of temsirolimus. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of temsirolimus. Avoid. [Severe] Theoretical
- ▶ **Tenecteplase** → see TABLE 3 p. 907 (anticoagulant effects)

Tenofovir alafenamide

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to tenofovir alafenamide. Avoid. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to tenofovir alafenamide. [Moderate] Theoretical
- ▶ **Eltrombopag** is predicted to increase the exposure to tenofovir alafenamide. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** increase the exposure to tenofovir alafenamide. Avoid or adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (tipranavir)** are predicted to decrease the exposure to tenofovir alafenamide. Avoid. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to tenofovir alafenamide. [Moderate] Theoretical
- ▶ **Rifabutin** is predicted to decrease the exposure to tenofovir alafenamide. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to tenofovir alafenamide. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to tenofovir alafenamide. Avoid. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to tenofovir alafenamide. [Moderate] Theoretical
- ▶ **Tenofovir disoproxil** → see TABLE 2 p. 907 (nephrotoxicity)
- ▶ **Ciclosporin** is predicted to increase the exposure to tenofovir disoproxil. [Moderate] Theoretical → Also see TABLE 2 p. 907
- ▶ **Eltrombopag** is predicted to increase the exposure to tenofovir disoproxil. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** are predicted to increase the risk of renal impairment when given with tenofovir disoproxil. [Severe] Anecdotal
- ▶ **Ledipasvir** (with sofosbuvir) slightly increases the exposure to tenofovir disoproxil. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to tenofovir disoproxil. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to tenofovir disoproxil. [Moderate] Theoretical
- ▶ **Velpatasvir** is predicted to increase the exposure to tenofovir disoproxil. [Severe] Study
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) potentially increases the concentration of tenofovir disoproxil. [Severe] Study

- ▶ **Tenoxicam** → see NSAIDs

- ▶ **Terazosin** → see alpha blockers

Terbinafine

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Terbinafine** is predicted to increase the exposure to anticholinesterases, centrally acting (**galantamine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Terbinafine** is predicted to moderately increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 265. [Moderate] Study
- ▶ **Terbinafine** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
- ▶ **Terbinafine** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **mexiletine**. [Moderate] Study
- ▶ **Terbinafine** is predicted to decrease the efficacy of **opioids (codeine)**. [Moderate] Theoretical
- ▶ **Terbinafine** is predicted to decrease the efficacy of **opioids (tramadol)**. [Severe] Study
- ▶ **Terbinafine** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **terbinafine**. Adjust dose. [Moderate] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **SSRIs (citalopram, dapoxetine, escitalopram, fluvoxamine, sertraline)**. [Moderate] Theoretical
- ▶ **Terbinafine** is predicted to increase the exposure to **SSRIs (fluoxetine)**. Adjust dose. [Moderate] Theoretical
- ▶ **Terbinafine** moderately increases the exposure to **SSRIs (paroxetine)**. [Moderate] Study
- ▶ **Terbinafine** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
- ▶ **Terbinafine** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study

Terbutaline → see beta₂ agonists

Teriflunomide → see TABLE 1 p. 907 (hepatotoxicity)

- ▶ **Teriflunomide** is predicted to increase the exposure to **adefovir**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **Teriflunomide** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **anthracyclines (daunorubicin, doxorubicin, mitoxantrone)**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Study
- ▶ **Teriflunomide** potentially increases the exposure to **baricitinib**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **bosentan**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **cephalosporins (cefaclor)**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **clozapine**. [Moderate] Theoretical
- ▶ **Teriflunomide** affects the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **ganciclovir**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **H₂ receptor antagonists (cimetidine, famotidine)**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **larotrectinib**. [Mild] Study
- ▶ **Teriflunomide** is predicted to increase the concentration of **letermovir**. [Moderate] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **teriflunomide**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **loop diuretics (furosemide)**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **methotrexate**. [Moderate] Study → Also see TABLE 1 p. 907
- ▶ **Teriflunomide** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **nateglinide**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **NSAIDs (indometacin, ketoprofen)**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **oseltamivir**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **penicillins (benzylpenicillin)**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **pioglitazone**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **quinolones (ciprofloxacin)**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **rifampicin**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **selexipag**. Adjust selexipag dose. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin, pravastatin, simvastatin)**. [Moderate] Study → Also see TABLE 1 p. 907
- ▶ **Teriflunomide** moderately increases the exposure to **statins (rosuvastatin)**. Adjust rosuvastatin dose, p. 140. [Moderate] Study → Also see TABLE 1 p. 907
- ▶ **Teriflunomide** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 1 p. 907
- ▶ **Teriflunomide** is predicted to increase the exposure to **sulfonylureas (glibenclamide)**. [Moderate] Study
- ▶ **Teriflunomide** potentially increases the exposure to **talazoparib**. Avoid or monitor. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the concentration of **taxanes (paclitaxel)**. [Severe] Anecdotal
- ▶ **Teriflunomide** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ **Teriflunomide** moderately decreases the exposure to **tizanidine**. [Mild] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **topotecan**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **zidovudine**. [Moderate] Theoretical

Tetanus immunoglobulin → see immunoglobulins

Tetrabenazine → see TABLE 9 p. 909 (QT-interval prolongation), TABLE 11 p. 909 (CNS depressant effects)

- ▶ **Bupropion** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study

- ▶ **Cinacalcet** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. [\[Moderate\]](#) Study
- ▶ **Tetrabenazine** is predicted to decrease the effects of **levodopa**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **MAO-B inhibitors**. [\[Severe\]](#) Theoretical
- ▶ **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical
- ▶ **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **moclobemide**. [\[Severe\]](#) Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to the active metabolite of **tetrabenazine**. [\[Moderate\]](#) Study
- ▶ **Terbinafine** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. [\[Moderate\]](#) Study

Tetracaine → see anaesthetics, local

Tetracycline → see tetracyclines

Tetracyclines → see TABLE 1 p. 907 (hepatotoxicity)

demeclocycline · doxycycline · lymecycline · minocycline · oxytetracycline · tetracycline

ROUTE-SPECIFIC INFORMATION Interactions do not generally apply to topical use of **oxytetracycline** unless specified.

- ▶ **ACE inhibitors (quinapril)** (tablet) decrease the absorption of oral **tetracycline**. Avoid. [\[Moderate\]](#) Study
- ▶ **Antacids** decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **doxycycline**. Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 1 p. 907
- ▶ **Tetracycline** decreases the concentration of **antimalarials (atovaquone)**. [\[Moderate\]](#) Study
- ▶ **Apalutamide** decreases the exposure to **doxycycline**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Bismuth** greatly decreases the efficacy of **tetracyclines**. Separate administration by 2 hours. [\[Moderate\]](#) Study
- ▶ **Calcium salts (calcium carbonate)** are predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [\[Moderate\]](#) Theoretical
- ▶ **Tetracyclines** increase the risk of bleeding events when given with **coumarins**. [\[Moderate\]](#) Anecdotal
- ▶ **Dairy products** decrease the exposure to tetracyclines (demeclocycline, oxytetracycline, tetracycline). Avoid. [\[Moderate\]](#) Study
- ▶ **Enzalutamide** decreases the exposure to **doxycycline**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Iron (oral)** decreases the absorption of **tetracyclines**. **Tetracyclines** should be taken 2 to 3 hours after **iron (oral)**. [\[Moderate\]](#) Study
- ▶ **Kaolin** is predicted to decrease the absorption of **tetracyclines**. [\[Moderate\]](#) Theoretical
- ▶ **Lanthanum** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 hours. [\[Moderate\]](#) Theoretical
- ▶ **Tetracyclines** are predicted to increase the risk of lithium (lithium carbonate p. 250, lithium citrate p. 250) toxicity when given with **lithium**. Avoid or adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Mitotane** decreases the exposure to **doxycycline**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Retinoids (acitretin, alitretinoin, isotretinoin, tretinoin)** increase the risk of benign intracranial hypertension when given with **tetracyclines**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Rifampicin** decreases the exposure to **doxycycline**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Strontium** is predicted to decrease the absorption of **tetracyclines**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ Oral **zinc** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [\[Moderate\]](#) Theoretical

Tezacaftor

FOOD AND LIFESTYLE Avoid bitter (Seville) oranges as they are predicted to increase the exposure to tezacaftor.

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 198 dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 198 dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 198 dose with potent inhibitors of CYP3A4. [\[Severe\]](#) Study
 - ▶ **Apalutamide** is predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) theoretical
 - ▶ **Aprepitant** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 198 dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 198 dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 198 dose with potent inhibitors of CYP3A4. [\[Severe\]](#) Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 198 dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) theoretical
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 198 dose with potent inhibitors of CYP3A4. [\[Severe\]](#) Study
 - ▶ **Idelalisib** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 198 dose with potent inhibitors of CYP3A4. [\[Severe\]](#) Study
 - ▶ **Imatinib** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 198 dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 198 dose with potent inhibitors of CYP3A4. [\[Severe\]](#) Study
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 198 dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Netupitant** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 198 dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 198 dose with moderate inhibitors of CYP3A4. [\[Severe\]](#) Study
 - ▶ **Rifabutin** is predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **Rifampicin** is predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Theoretical
- Thalidomide** → see TABLE 6 p. 908 (bradycardia), TABLE 15 p. 910 (myelosuppression), TABLE 12 p. 910 (peripheral neuropathy), TABLE 5 p. 907 (thromboembolism), TABLE 11 p. 909 (CNS depressant effects)
- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **thalidomide**. Avoid. [\[Severe\]](#) Study
 - ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **thalidomide**. [\[Severe\]](#) Theoretical

Theophylline → see TABLE 17 p. 911 (reduced serum potassium)

FOOD AND LIFESTYLE Smoking can increase theophylline clearance and increased doses of theophylline are therefore required; dose adjustments are likely to be necessary if smoking started or stopped during treatment.

- ▶ **Aciclovir** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Theophylline** decreases the efficacy of **antiarrhythmics (adenosine)**. Separate administration by 24 hours. [Mild] Study
- ▶ **Antiepileptics (carbamazepine)** potentially increase the clearance of **theophylline** and **theophylline** decreases the exposure to **antiepileptics (carbamazepine)**. Adjust dose. [Moderate] Anecdotal
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to increase the clearance of **theophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Antiepileptics (stiripentol)** are predicted to increase the exposure to **theophylline**. Avoid. [Moderate] Theoretical
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [Severe] Theoretical
- ▶ **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [Severe] Theoretical
- ▶ **Caffeine citrate** decreases the clearance of **theophylline**. [Moderate] Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Theophylline** increases the risk of agitation when given with **doxapram**. [Moderate] Study
- ▶ **Enteral feeds** decrease the exposure to **theophylline**. [Moderate] Study
- ▶ **Esketamine** is predicted to increase the risk of seizures when given with **theophylline**. Avoid. [Severe] Theoretical
- ▶ **H₂ receptor antagonists (cimetidine)** increase the concentration of **theophylline**. Adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ **Interferons** slightly increase the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ **Iron chelators (deferasirox)** increase the exposure to **theophylline**. Avoid. [Moderate] Study
- ▶ **Isoniazid** is predicted to affect the clearance of **theophylline**. [Severe] Anecdotal
- ▶ **Leflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ **Theophylline** is predicted to decrease the concentration of **lithium**. Monitor concentration and adjust dose. [Moderate] Anecdotal
- ▶ **Macrolides (azithromycin, clarithromycin)** are predicted to increase the exposure to **theophylline**. Adjust dose. [Moderate] Anecdotal
- ▶ **Macrolides (erythromycin)** decrease the clearance of **theophylline** and **theophylline** potentially decreases the clearance of **macrolides (erythromycin)**. Adjust dose. [Severe] Study
- ▶ **Methotrexate** decreases the clearance of **theophylline**. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Monoclonal antibodies (binatumomab)** are predicted to transiently increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Obeticholic acid** is predicted to increase the exposure to **theophylline**. [Severe] Theoretical

- ▶ **Pentoxifylline** increases the concentration of **theophylline**. Monitor and adjust dose. [Severe] Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ **Theophylline** is predicted to slightly increase the exposure to **roflumilast**. Avoid. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** moderately to markedly increase the exposure to **theophylline**. Avoid. [Severe] Study
- ▶ **St John's Wort** potentially decreases the exposure to **theophylline**. [Severe] Anecdotal
- ▶ **Sucralfate** potentially decreases the absorption of **theophylline**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Sympathomimetics, vasoconstrictor (ephedrine)** increase the risk of side-effects when given with **theophylline**. Avoid in children. [Moderate] Study
- ▶ **Teriflumidomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ **Valaciclovir** is predicted to increase the exposure to **theophylline**. [Severe] Theoretical

Thiazide diuretics → see TABLE 18 p. 911 (hyponatraemia), TABLE 8 p. 908 (hypotension), TABLE 17 p. 911 (reduced serum potassium)

benfroflumethiazide · chlorothiazide · chlortalidone · hydrochlorothiazide · hydroflumethiazide · indapamide · metolazone · xipamide

- ▶ **Thiazide diuretics** are predicted to increase the risk of hypersensitivity reactions when given with **allopurinol**. [Severe] Theoretical
 - ▶ **Aspirin** (high-dose) increases the risk of acute renal failure when given with **thiazide diuretics**. [Severe] Theoretical
 - ▶ **Thiazide diuretics** increase the risk of hypercalcaemia when given with **calcium salts**. [Severe] Anecdotal
 - ▶ **Thiazide diuretics** increase the concentration of **lithium**. Avoid or adjust dose and monitor concentration. [Severe] Study
 - ▶ **NSAIDs** increase the risk of acute renal failure when given with **thiazide diuretics**. [Severe] Theoretical → Also see TABLE 18 p. 911
 - ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **thiazide diuretics**. [Moderate] Anecdotal
 - ▶ **Thiazide diuretics** are predicted to increase the risk of hypercalcaemia when given with **toramifene**. [Severe] Theoretical
 - ▶ **Thiazide diuretics** increase the risk of hypercalcaemia when given with **vitamin D substances**. [Moderate] Theoretical
- Thiopental** → see TABLE 8 p. 908 (hypotension), TABLE 11 p. 909 (CNS depressant effects)
- ▶ **Sulfonamides** are predicted to increase the effects of **thiopental**. [Moderate] Theoretical
 - ▶ **Tricyclic antidepressants** increase the risk of cardiac arrhythmias and hypotension when given with **thiopental**. [Moderate] Study → Also see TABLE 8 p. 908 → Also see TABLE 11 p. 909
- Thiopepa** → see alkylating agents

Thyroid hormones

levothyroxine · liothyronine

- ▶ **Antacids** are predicted to decrease the absorption of **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Anecdotal
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the risk of thyroid dysfunction when given with **thyroid hormones**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenytoin)** are predicted to increase the risk of hypothyroidism when given with **thyroid hormones**. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the effects of **thyroid hormones**. [Moderate] Theoretical
- ▶ **Apalutamide** potentially decreases the exposure to **levothyroxine**. [Mild] Theoretical
- ▶ **Oral calcium salts** are predicted to decrease the absorption of **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Anecdotal

- ▶ **Thyroid hormones** are predicted to affect the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** decrease the concentration of **levothyroxine**. MHRA advises monitor TSH for at least one month after starting or stopping ritonavir. [Moderate] Anecdotal
- ▶ **Oral hormone replacement therapy** is predicted to decrease the effects of **thyroid hormones**. [Moderate] Theoretical
- ▶ **Iron (oral)** decreases the absorption of **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ **Lanthanum** decreases the absorption of **thyroid hormones**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **levothyroxine**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Sucralfate** decreases the absorption of **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Study
- Tiagabine** → see antiepileptics
- Tiaprofenic acid** → see NSAIDs
- Tibolone** → see TABLE 5 p. 907 (thromboembolism)
- Ticagrelor** → see TABLE 4 p. 907 (antiplatelet effects)
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Apalutamide** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Ticagrelor** increases the concentration of **digoxin**. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Ticagrelor** is predicted to increase the exposure to **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** moderately increases the exposure to **ticagrelor**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Ticagrelor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
- ▶ **Ticagrelor** slightly increases the exposure to **statins (simvastatin)**. Adjust **simvastatin** dose, p. 141. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- Ticarcillin** → see penicillins
- Tigecycline** → see TABLE 1 p. 907 (hepatotoxicity)
- ▶ **Tigecycline** increases the risk of bleeding events when given with **coumarins**. [Moderate] Anecdotal
- ▶ **Retinoids (acitretin, alitretinoin, isotretinoin, tretinoin)** increase the risk of benign intracranial hypertension when given with **tigecycline**. Avoid. [Severe] Anecdotal
- Tildrakizumab** → see monoclonal antibodies
- Timolol** → see beta blockers, non-selective
- Tinidazole**
- ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **tinidazole**. Avoid for 72 hours stopping treatment. [Moderate] Theoretical
- ▶ **Tinidazole** is predicted to increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Theoretical
- Tinzaparin** → see low molecular-weight heparins
- Tioguanine** → see TABLE 15 p. 910 (myelosuppression)
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tioguanine**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- Tiotropium** → see TABLE 10 p. 909 (antimuscarinics)
- Tipranavir** → see HIV-protease inhibitors
- Tirofiban** → see TABLE 4 p. 907 (antiplatelet effects)
- Tivozanib**
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **tivozanib**. Avoid. [Severe] Study
- ▶ **Tivozanib** is predicted to decrease the exposure to **statins (rosuvastatin)**. [Moderate] Theoretical
- Tizanidine** → see TABLE 6 p. 908 (bradycardia), TABLE 8 p. 908 (hypotension), TABLE 9 p. 909 (QT-interval prolongation), TABLE 11 p. 909 (CNS depressant effects)
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** moderately decrease the exposure to **tizanidine**. [Mild] Study
- ▶ **Combined hormonal contraceptives** increase the exposure to **tizanidine**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** moderately decrease the exposure to **tizanidine**. [Mild] Study
- ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **tizanidine**. Avoid. [Moderate] Theoretical
- ▶ **Lefunomide** moderately decreases the exposure to **tizanidine**. [Mild] Study
- ▶ **Mexiletine** increases the exposure to **tizanidine**. Avoid. [Moderate] Study
- ▶ **Obeticholic acid** is predicted to increase the exposure to **tizanidine**. [Severe] Theoretical
- ▶ **Quinolones (ciprofloxacin)** increase the exposure to **tizanidine**. Avoid. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **tizanidine**. [Mild] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **tizanidine**. Monitor and adjust dose. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** very markedly increase the exposure to **tizanidine**. Avoid. [Severe] Study
- ▶ **Terifunomide** moderately decreases the exposure to **tizanidine**. [Mild] Study
- Tobramycin** → see aminoglycosides
- Tocilizumab** → see monoclonal antibodies
- Tofacitinib**
- ▶ **Antiarrhythmics (dronedarone)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole)** increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose. [Moderate] Study

Tofacitinib (continued)

- ▶ **Antifungals, azoles (isavuconazole)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose. [Moderate] Study
- ▶ **Antifungals, azoles (posaconazole)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose. [Moderate] Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to tofacitinib. Avoid. [Severe] Study
- ▶ **Aprepitant** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to tofacitinib. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose. [Moderate] Study
- ▶ **Ciclosporin** increases the exposure to tofacitinib. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose. [Moderate] Study
- ▶ **Crizotinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to tofacitinib. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to tofacitinib. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose. [Moderate] Study
- ▶ **Imatinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose. [Moderate] Study
- ▶ **Live vaccines** potentially increase the risk of generalised infection (possibly life-threatening) when given with tofacitinib. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose. [Moderate] Study
- ▶ **Macrolides (erythromycin)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to tofacitinib. Avoid. [Severe] Study
- ▶ **Netupitant** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to tofacitinib. [Moderate] Study
- ▶ **Nilotinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to tofacitinib. Avoid. [Severe] Study
- ▶ **SSRIs (fluoxetine, fluvoxamine)** given with a moderate CYP3A4 inhibitor are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to tofacitinib. [Moderate] Study
- ▶ **Tacrolimus** increases the exposure to tofacitinib. Avoid. [Severe] Study

Tolbutamide → see sulfonylureas

Tolcapone

- ▶ **Tolcapone** increases the exposure to **levodopa**. Monitor and adjust dose. [Moderate] Study
- ▶ **Tolcapone** is predicted to increase the effects of **MAOIs, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Tolcapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic**. [Moderate] Theoretical

- ▶ **Tolcapone** is predicted to increase the effects of **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Moderate] Theoretical

Tolfenamic acid → see NSAIDs

Tolterodine → see TABLE 9 p. 909 (QT-interval prolongation), TABLE 10 p. 909 (antimuscarinics)

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **tolterodine**. [Mid] Theoretical → Also see TABLE 9 p. 909
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tolterodine**. [Mid] Theoretical → Also see TABLE 9 p. 909
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Aprepitant** is predicted to increase the exposure to **tolterodine**. [Mid] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tolterodine**. [Mid] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **tolterodine**. [Mid] Theoretical → Also see TABLE 9 p. 909
- ▶ **Dacomitinib** is predicted to markedly increase the exposure to **tolterodine**. Avoid. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **tolterodine**. Adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Idelalisib** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **tolterodine**. [Mid] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 909
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **tolterodine**. [Mid] Theoretical → Also see TABLE 9 p. 909
- ▶ **Netupitant** is predicted to increase the exposure to **tolterodine**. [Mid] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **tolterodine**. [Mid] Theoretical → Also see TABLE 9 p. 909

Tolvaptan → see TABLE 16 p. 911 (increased serum potassium)

GENERAL INFORMATION Avoid concurrent use of drugs that increase serum-sodium concentrations.

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent inhibitors of CYP3A4. [Severe] Study

- ▶ **Crizotinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4. [Moderate] Study
- ▶ **Tolvaptan** increases the concentration of **digoxin**. [Mild] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **Grapefruit juice** increases the exposure to **tolvaptan**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4. [Moderate] Study
- ▶ **Tolvaptan** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **tolvaptan**. Use with caution and adjust **tolvaptan** dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **tolvaptan**. Avoid. [Moderate] Theoretical
- Topiramate** → see antiepileptics
- Topotecan** → see TABLE 15 p. 910 (myelosuppression)
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** increase the clearance of **topotecan**. [Moderate] Study
- ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **topotecan**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **topotecan**. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ **Ciclosporin** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **topotecan**. Adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **topotecan**. [Moderate] Study → Also see TABLE 15 p. 910
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **topotecan**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Macrolides** are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **topotecan**. [Mild] Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **topotecan**. [Moderate] Study
- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **topotecan**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **topotecan**. [Mild] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Regorafenib** is predicted to increase the exposure to **topotecan**. [Moderate] Study → Also see TABLE 15 p. 910
- ▶ **Rolapitant** is predicted to increase the exposure to **topotecan**. Avoid or monitor. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **topotecan**. [Severe] Theoretical
- ▶ **Tedizolid** is predicted to increase the exposure to **topotecan**. Avoid. [Moderate] Study
- ▶ **Terflunomide** is predicted to increase the exposure to **topotecan**. [Moderate] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **topotecan**. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Venetoclax** is predicted to increase the exposure to **topotecan**. [Moderate] Theoretical
- ▶ **Voxilaprevir** is predicted to increase the concentration of **topotecan**. Avoid. [Severe] Theoretical
- Torasemide** → see loop diuretics
- Toremifene** → see TABLE 5 p. 907 (thromboembolism), TABLE 9 p. 909 (QT-interval prolongation)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Apalutamide** is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 909
- ▶ **Cobicistat** is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical
- ▶ **Toremifene** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Idelalisib** is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 909
- ▶ **Mitotane** is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
- ▶ **Thiazide diuretics** are predicted to increase the risk of hypercalcaemia when given with **toremifene**. [Severe] Theoretical
- Trabectedin** → see TABLE 1 p. 907 (hepatotoxicity), TABLE 15 p. 910 (myelosuppression)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical → Also see TABLE 1 p. 907
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 1 p. 907
- ▶ **Apalutamide** is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical

Trabectedin (continued)

- ▶ **Idelalisib** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 15 p. 910
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **trabectedin**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 910
- ▶ **Rifampicin** is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical

Tramadol → see opioids

Trametinib

- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
 - ▶ **Calcium channel blockers (verapamil)** are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
 - ▶ **Ciclosporin** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
 - ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
 - ▶ **Lapatinib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
 - ▶ **Macrolides** are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
 - ▶ **Ranolazine** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
 - ▶ **Vemurafenib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- Trandolapril** → see ACE inhibitors
- Tranexamic acid** → see TABLE 5 p. 907 (thromboembolism)
- Tranylcypromine** → see MAOIs, irreversible
- Trastuzumab** → see monoclonal antibodies
- Trastuzumab emtansine** → see monoclonal antibodies

Trazodone → see TABLE 13 p. 910 (serotonin syndrome), TABLE 11 p. 909 (CNS depressant effects)

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine)** decrease the concentration of **trazodone**. Adjust dose. [Moderate] Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical

▶ **Nilotinib** is predicted to increase the exposure to **trazodone**.

[Moderate] Theoretical

Tree pollen extract

GENERAL INFORMATION Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

Treosulfan → see alkylating agents

Tretinoin → see retinoids

Triamcinolone → see corticosteroids

Triamterene → see potassium-sparing diuretics

Tricyclic antidepressants → see TABLE 18 p. 911 (hyponatraemia), TABLE 8 p. 908 (hypotension), TABLE 13 p. 910 (serotonin syndrome), TABLE 9 p. 909 (QT-interval prolongation), TABLE 11 p. 909 (CNS depressant effects), TABLE 10 p. 909 (antimuscarinics)

amitriptyline • clomipramine • dosulepin • doxepin • imipramine • lofepramine • nortriptyline • trimipramine

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions of topical **doxepin** should be borne in mind.

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **tricyclic antidepressants**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 909
- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the concentration of **tricyclic antidepressants**. [Moderate] Theoretical → Also see TABLE 10 p. 909
- ▶ **Antiepileptics (carbamazepine)** decrease the exposure to **tricyclic antidepressants**. Adjust dose. [Moderate] Study → Also see TABLE 18 p. 911
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **tricyclic antidepressants**. [Moderate] Study → Also see TABLE 11 p. 909
- ▶ **Tricyclic antidepressants (clomipramine, imipramine)** potentially increase the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [Severe] Theoretical
- ▶ **Bupropion** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study → Also see TABLE 13 p. 910
- ▶ **Cinacalcet** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study
- ▶ **Tricyclic antidepressants** decrease the antihypertensive effects of **clonidine**. Monitor and adjust dose. [Moderate] Anecdotal → Also see TABLE 8 p. 908 → Also see TABLE 11 p. 909
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **tricyclic antidepressants**. [Mild] Study
- ▶ **Dacomitinib** is predicted to markedly increase the exposure to **tricyclic antidepressants (imipramine, nortriptyline)**. Avoid. [Severe] Study
- ▶ **Darifenacin** is predicted to increase the exposure to **tricyclic antidepressants**. [Moderate] Theoretical → Also see TABLE 10 p. 909
- ▶ **Eliglustat** is predicted to increase the exposure to **nortriptyline**. Adjust dose. [Moderate] Theoretical
- ▶ **H₂ receptor antagonists (cimetidine)** increase the exposure to **tricyclic antidepressants**. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir, tipranavir)** are predicted to increase the exposure to **tricyclic antidepressants**. [Moderate] Theoretical
- ▶ **Tricyclic antidepressants** potentially increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 13 p. 910 → Also see TABLE 9 p. 909
- ▶ **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 8 p. 908 → Also see TABLE 13 p. 910
- ▶ **Amitriptyline** decreases the effects of **metyrampone**. Avoid. [Moderate] Theoretical
- ▶ **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **moclobemide**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 910

- ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **moxonidine**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 908 → Also see TABLE 11 p. 909
- ▶ **Tricyclic antidepressants** are predicted to decrease the efficacy of **pitolisant**. [Mild] Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study → Also see TABLE 18 p. 911 → Also see TABLE 13 p. 910
- ▶ **SSRIs (fluvoxamine)** markedly increase the exposure to **clomipramine**. Adjust dose. [Severe] Study → Also see TABLE 18 p. 911 → Also see TABLE 13 p. 910
- ▶ **SSRIs (fluvoxamine)** increase the exposure to tricyclic antidepressants (**amitriptyline, imipramine**). Adjust dose. [Severe] Study → Also see TABLE 18 p. 911 → Also see TABLE 13 p. 910
- ▶ **Sucralfate** is predicted to decrease the absorption of **tricyclic antidepressants**. [Moderate] Study
- ▶ **Tricyclic antidepressants** increase the effects of sympathomimetics, vasoconstrictor (**adrenaline/epinephrine, noradrenaline/norepinephrine, phenylephrine**). Avoid. [Severe] Study
- ▶ **Tricyclic antidepressants** are predicted to decrease the effects of sympathomimetics, vasoconstrictor (**ephedrine**). Avoid. [Severe] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study
- ▶ **Tricyclic antidepressants** increase the risk of cardiac arrhythmias and hypotension when given with **thiopental**. [Moderate] Study → Also see TABLE 8 p. 908 → Also see TABLE 11 p. 909
- Trientine**
 - ▶ **Trientine** potentially decreases the absorption of **iron (oral)**. [Moderate] Theoretical
 - ▶ **Trientine** potentially decreases the absorption of **zinc**. [Moderate] Theoretical
- Trifluoperazine** → see phenothiazines
- Trihexyphenidyl** → see TABLE 10 p. 909 (antimuscarinics)
- Trimethoprim** → see TABLE 18 p. 911 (hyponatraemia), TABLE 15 p. 910 (myelosuppression), TABLE 2 p. 907 (nephrotoxicity), TABLE 16 p. 911 (increased serum potassium)
 - ▶ **Trimethoprim** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Moderate] Study
 - ▶ **Antimalarials (pyrimethamine)** increase the risk of side-effects when given with **trimethoprim**. [Severe] Study → Also see TABLE 15 p. 910
 - ▶ **Trimethoprim** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Study
 - ▶ **Dapsone** increases the exposure to **trimethoprim** and **trimethoprim** increases the exposure to **dapsone**. [Severe] Study
 - ▶ **Trimethoprim** increases the concentration of **digoxin**. [Moderate] Study
 - ▶ **Trimethoprim** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [Moderate] Study
 - ▶ **Trimethoprim** slightly increases the exposure to **lamivudine**. [Moderate] Study
 - ▶ **Trimethoprim** increases the risk of side-effects when given with **methotrexate**. Avoid. [Severe] Anecdotal → Also see TABLE 15 p. 910 → Also see TABLE 2 p. 907
 - ▶ **Trimethoprim** slightly increases the exposure to **repaglinide**. Avoid or monitor blood glucose. [Moderate] Study
 - ▶ **Rifampicin** decreases the exposure to **trimethoprim**. [Moderate] Study
 - ▶ **Trimethoprim** is predicted to decrease the efficacy of **sapropterin**. [Moderate] Theoretical
- Trimipramine** → see tricyclic antidepressants
- Tropicamide** → see TABLE 10 p. 909 (antimuscarinics)
- Trospium** → see TABLE 10 p. 909 (antimuscarinics)
- Tryptophan** → see TABLE 13 p. 910 (serotonin syndrome)
 - ▶ **Tryptophan** greatly decreases the concentration of **levodopa**. [Moderate] Study
 - ▶ **Tryptophan** increases the risk of side-effects when given with **MAOIs, irreversible**. [Severe] Anecdotal → Also see TABLE 13 p. 910
- Typhoid vaccine, oral** → see live vaccines

Ulipristal

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ **Aprepitant** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Bosentan** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ **Ulipristal** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Ulipristal** is predicted to decrease the efficacy of **desogestrel**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **ulipristal**. Avoid and for 4 weeks after stopping **ulipristal**. [Severe] Theoretical
- ▶ **Ulipristal** is predicted to decrease the efficacy of **etonogestrel**. Avoid. [Severe] Theoretical
- ▶ **Fosaprepitant** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Theoretical
- ▶ **Griseofulvin** potentially decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, saquinavir, tipranavir)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Idelalisib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Ulipristal** is predicted to decrease the efficacy of **levonorgestrel**. Avoid. [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the efficacy of **ulipristal**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Modafinil** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Netupitant** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study

Ulipristal (continued)

- ▶ **Nevirapine** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Nilotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Ulipristal** is predicted to decrease the efficacy of **norethisterone**. Avoid. [Severe] Theoretical
- ▶ **Rifabutin** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **Rifampicin** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal
- ▶ **St John's Wort** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 536. [Severe] Anecdotal

Umeclidinium → see TABLE 10 p. 909 (antimuscarinics)

Upadacitinib

- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
- ▶ Antifungals, azoles (**posaconazole**) are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **upadacitinib**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **upadacitinib**. [Moderate] Study

Urokinase → see TABLE 3 p. 907 (anticoagulant effects)

Ursodeoxycholic acid

- ▶ **Antacids** are predicted to decrease the absorption of **ursodeoxycholic acid**. Separate administration by 2 hours. [Moderate] Theoretical
- ▶ **Ursodeoxycholic acid** affects the concentration of **ciclosporin**. Use with caution and adjust dose. [Severe] Anecdotal
- ▶ **Fibrates** are predicted to decrease the efficacy of **ursodeoxycholic acid**. Avoid. [Severe] Theoretical

Ustekinumab → see monoclonal antibodies

Vaborbactam

- ▶ **Vaborbactam** is predicted to increase the concentration of **beta blockers**, **selective (metoprolol)**. [Unknown] Theoretical
- ▶ **Vaborbactam** is predicted to increase the concentration of **venlafaxine**. [Unknown] Theoretical

Valaciclovir → see TABLE 2 p. 907 (nephrotoxicity)

- ▶ **Valaciclovir** is predicted to increase the exposure to **aminophylline**. [Severe] Anecdotal
- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valaciclovir**. [Moderate] Theoretical
- ▶ **Valaciclovir** is predicted to increase the exposure to **theophylline**. [Severe] Theoretical

Valganciclovir → see TABLE 15 p. 910 (myelosuppression), TABLE 2 p. 907 (nephrotoxicity)

- ▶ **Valganciclovir** is predicted to increase the risk of seizures when given with **carbapenems (imipenem)**. Avoid. [Severe] Anecdotal

- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valganciclovir**. [Moderate] Theoretical → Also see TABLE 15 p. 910

Valproate → see antiepileptics

Valsartan → see angiotensin-II receptor antagonists

Vancomycin → see TABLE 2 p. 907 (nephrotoxicity), TABLE 19 p. 911 (ototoxicity)

Vandetanib → see TABLE 9 p. 909 (QT-interval prolongation)

- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
 - ▶ **Apalutamide** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 909
 - ▶ **Vandetanib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
 - ▶ **Vandetanib** slightly increases the exposure to **digoxin**. Monitor ECG and adjust dose. [Moderate] Study
 - ▶ **Vandetanib** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [Moderate] Study
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
 - ▶ **Vandetanib** increases the exposure to **metformin**. Monitor and adjust dose. [Moderate] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
 - ▶ **Vandetanib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
 - ▶ **Rifampicin** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
- Vardenafil** → see phosphodiesterase type-5 inhibitors
- Varicella-zoster immunoglobulin** → see immunoglobulins
- Varicella-zoster vaccine** → see live vaccines
- Vecuronium** → see neuromuscular blocking drugs, non-depolarising
- Vedolizumab** → see monoclonal antibodies

Velpatasvir

- ▶ **Velpatasvir** is predicted to increase the exposure to **aliskiren**. [Severe] Theoretical
- ▶ **Antacids** are predicted to decrease the concentration of **velpatasvir**. Separate administration by 4 hours. [Moderate] Theoretical
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the concentration of **velpatasvir**. Avoid or monitor. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
- ▶ Antiepileptics (**oxcarbazepine**) are predicted to decrease the exposure to **velpatasvir**. Avoid. [Severe] Theoretical
- ▶ **Velpatasvir** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Severe] Theoretical
- ▶ **Apalutamide** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
- ▶ **Calcium salts (calcium carbonate)** are predicted to decrease the concentration of **velpatasvir**. Separate administration by 4 hours. [Moderate] Anecdotal
- ▶ **Velpatasvir** is predicted to increase the exposure to **colchicine**. [Severe] Theoretical
- ▶ **Velpatasvir** increases the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **digoxin**. [Severe] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **everolimus**. [Severe] Theoretical
- ▶ **H₂ receptor antagonists** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with **velpatasvir**. [Moderate] Study

- ▶ **HIV-protease inhibitors (tipranavir)** are predicted to increase the exposure to **velpatasvir**. [Severe] Theoretical
 - ▶ **Velpatasvir** is predicted to increase the exposure to **loperamide**. [Severe] Theoretical
 - ▶ **Mitotane** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
 - ▶ **Modafinil** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Severe] Theoretical
 - ▶ **Nevirapine** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
 - ▶ **Proton pump inhibitors** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with **velpatasvir**. [Moderate] Study
 - ▶ **Rifampicin** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
 - ▶ **Velpatasvir** is predicted to increase the exposure to **sirolimus**. [Severe] Theoretical
 - ▶ **St John's Wort** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
 - ▶ **Velpatasvir** increases the exposure to **statins (rosuvastatin)**. Adjust **rosuvastatin** dose and monitor side effects, p. 140. [Severe] Study
 - ▶ **Velpatasvir** is predicted to increase the exposure to **statins (simvastatin)**. Monitor side effects and adjust dose. [Severe] Theoretical
 - ▶ **Velpatasvir** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Theoretical
 - ▶ **Velpatasvir** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Severe] Theoretical
 - ▶ **Velpatasvir** is predicted to increase the exposure to **tenofovir disoproxil**. [Severe] Study
 - ▶ **Velpatasvir** is predicted to increase the exposure to **topotecan**. [Severe] Theoretical
 - Vemurafenib** → see TABLE 9 p. 909 (QT-interval prolongation)
 - ▶ **Vemurafenib** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
 - ▶ **Vemurafenib** is predicted to increase the exposure to **aliskiren**. Use with caution and adjust dose. [Moderate] Theoretical
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Apalutamide** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Vemurafenib** is predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
 - ▶ **Vemurafenib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose. [Severe] Theoretical
 - ▶ **Vemurafenib** increases the exposure to **dabigatran**. Use with caution and adjust dose. [Severe] Theoretical
 - ▶ **Vemurafenib** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Idelalisib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **larotrectinib**. [Mid] Theoretical
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Mitotane** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
 - ▶ **Vemurafenib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
 - ▶ **Vemurafenib** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 909
 - ▶ **Vemurafenib** is predicted to increase the exposure to **pi Breitbartasvir**. [Moderate] Theoretical
 - ▶ **Rifampicin** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
 - ▶ **Vemurafenib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose. [Severe] Study
 - ▶ **Vemurafenib** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
 - ▶ **Vemurafenib** is predicted to increase the exposure to **topotecan**. [Severe] Study
 - ▶ **Vemurafenib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
 - ▶ **Vemurafenib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- Venetoclax**
- FOOD AND LIFESTYLE** Avoid Seville (bitter orange) and star fruit as they might increase the exposure to **venetoclax**.
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
 - ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Venetoclax** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Theoretical
 - ▶ **Apalutamide** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **Aprepitant** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Bosentan** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **Venetoclax** is predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Ciclosporin** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
 - ▶ **Cobicistat** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Venetoclax** slightly increases the exposure to **coumarins (warfarin)**. [Moderate] Study
 - ▶ **Crizotinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
 - ▶ **Venetoclax** is predicted to increase the exposure to **dabigatran**. Avoid or adjust dose. [Severe] Study
 - ▶ **Venetoclax** increases the exposure to **digoxin**. Avoid or adjust dose. [Severe] Study
 - ▶ **Efavirenz** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
 - ▶ **Venetoclax** is predicted to increase the exposure to **everolimus**. Avoid or adjust dose. [Severe] Study
 - ▶ **Grapefruit juice** is predicted to increase the exposure to **venetoclax**. Avoid. [Severe] Theoretical
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study

Venetoclax (continued)

- ▶ **Idelalisib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Venetoclax** potentially decreases the efficacy of **live vaccines**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **repaglinide**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Venetoclax** is predicted to increase the exposure to **sirolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Venetoclax** is predicted to increase the exposure to **statins (atorvastatin)**. [Moderate] Study
- ▶ **Venetoclax** is predicted to increase the exposure to **statins (fluvastatin, pravastatin, rosuvastatin, simvastatin)**. [Moderate] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **sulfonylureas (glibenclamide)**. [Moderate] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **topotecan**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical

- Venlafaxine** → see TABLE 13 p. 910 (serotonin syndrome), TABLE 9 p. 909 (QT-interval prolongation), TABLE 11 p. 909 (CNS depressant effects), TABLE 4 p. 907 (antiplatelet effects)
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **venlafaxine**. [Moderate] Study → Also see TABLE 9 p. 909
 - ▶ **Cobicistat** is predicted to increase the exposure to **venlafaxine**. [Moderate] Study
 - ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to **venlafaxine**. [Mild] Study
 - ▶ **Venlafaxine** slightly increases the exposure to **haloperidol**. [Severe] Study → Also see TABLE 9 p. 909 → Also see TABLE 11 p. 909
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **venlafaxine**. [Moderate] Study → Also see TABLE 9 p. 909
 - ▶ **Idelalisib** is predicted to increase the exposure to **venlafaxine**. [Moderate] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **venlafaxine**. [Moderate] Study → Also see TABLE 9 p. 909
 - ▶ **Venlafaxine** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Mild] Theoretical
 - ▶ **Tacrolimus** potentially increases the risk of serotonin syndrome when given with **venlafaxine**. [Severe] Anecdotal
 - ▶ **Vaborbactam** is predicted to increase the concentration of **venlafaxine**. [Unknown] Theoretical

Verapamil → see calcium channel blockers

Vernakalant → see antiarrhythmics

Verteporfin

GENERAL INFORMATION Caution on concurrent use with other photosensitising drugs.

Vigabatrin → see antiepileptics

Vilanterol → see beta₂ agonists

Vildagliptin → see TABLE 14 p. 910 (antidiabetic drugs)

Vinblastine → see vinca alkaloids

Vinca alkaloids → see TABLE 1 p. 907 (hepatotoxicity), TABLE 15 p. 910 (myelosuppression), TABLE 19 p. 911 (ototoxicity), TABLE 12 p. 910 (peripheral neuropathy), TABLE 5 p. 907 (thromboembolism), TABLE 9 p. 909 (QT-interval prolongation)

vinblastine · vincristine · vindesine · vinflunine · vinorelbine

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 909
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical → Also see TABLE 12 p. 910
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 12 p. 910
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical → Also see TABLE 1 p. 907 → Also see TABLE 12 p. 910
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 1 p. 907 → Also see TABLE 9 p. 909
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **vinca alkaloids**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 909
- ▶ **Apalutamide** is predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Asparaginase** potentially increases the risk of neurotoxicity when given with **vincristine**. **Vincristine** should be taken 3 to 24 hours before **asparaginase**. [Severe] Anecdotal → Also see TABLE 1 p. 907 → Also see TABLE 15 p. 910
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Crisantaspase** potentially increases the risk of neurotoxicity when given with **vincristine**. **Vincristine** should be taken 3 to 24 hours before **crisantaspase**. [Severe] Anecdotal → Also see TABLE 1 p. 907 → Also see TABLE 15 p. 910
- ▶ **Crizotinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 910 → Also see TABLE 9 p. 909
- ▶ **Enzalutamide** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Fosaprepitant** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 909
- ▶ **Idelalisib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 910
- ▶ **Imatinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 910
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **vinca alkaloids**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 909
- ▶ **Mitotane** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical → Also see TABLE 15 p. 910

- ▶ **Mitotane** is predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 910
- ▶ **Mitotane** is predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 15 p. 910
- ▶ **Netupitant** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 910 → Also see TABLE 9 p. 909
- ▶ **Pegaspargase** potentially increases the risk of neurotoxicity when given with **vincristine**. Vincristine should be taken 3 to 24 hours before **pegaspargase**, p. 594, p. 597. [Severe] Anecdotal → Also see TABLE 1 p. 907 → Also see TABLE 15 p. 910
- ▶ **Rifampicin** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical
- Vincristine** → see vinca alkaloids
- Vindesine** → see vinca alkaloids
- Vinflunine** → see vinca alkaloids
- Vinorelbine** → see vinca alkaloids
- Vismodegib** → see TABLE 15 p. 910 (myelosuppression)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 910
- ▶ **Rifampicin** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical

Vitamin A

- ▶ **Retinoids (acitretin, alitretinoin, isotretinoin)** are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Theoretical
- ▶ **Retinoids (bexarotene)** are predicted to increase the risk of toxicity when given with **vitamin A**. Adjust dose. [Moderate] Theoretical
- ▶ **Retinoids (tretinoin)** are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Study

Vitamin D substances

alfacalcidol · calcipotriol · calcitriol · colecalciferol · dihydrotychsterol · ergocalciferol · paricalcitol · tacalcitol

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions with topical **calcitriol** should be borne in mind.

- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the effects of **vitamin D substances**. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of **vitamin D substances**. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the effects of **vitamin D substances**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (clotrimazole, ketoconazole)** are predicted to decrease the exposure to **colecalciferol**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Vitamin D substances** are predicted to increase the risk of toxicity when given with **digoxin**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **paricalcitol**. [Moderate] Study

- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Thiazide diuretics** increase the risk of hypercalcaemia when given with **vitamin D substances**. [Moderate] Theoretical

Vitamin E substances

alpha tocopherol · alpha tocopheryl acetate

- ▶ **Vitamin E substances** affect the exposure to **ciclosporin**. [Moderate] Study

Volanesorsen

- ▶ **Volanesorsen** potentially increases the risk of bleeding events when given with **drugs with anticoagulant effects** (see TABLE 3 p. 907). Avoid depending on platelet count—consult product literature. [Severe] Theoretical
- ▶ **Volanesorsen** potentially increases the risk of bleeding events when given with **drugs with antiplatelet effects** (see TABLE 4 p. 907). Avoid depending on platelet count—consult product literature. [Severe] Theoretical

- ▶ **Volatile halogenated anaesthetics** → see TABLE 8 p. 908 (hypotension), TABLE 11 p. 909 (CNS depressant effects)

desflurane · isoflurane · methoxyflurane · sevoflurane

- ▶ **Antiepileptics (phenobarbital, primidone)** potentially increase the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. [Severe] Theoretical → Also see TABLE 11 p. 909
- ▶ **Isoniazid** potentially increases the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** potentially increases the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. [Severe] Theoretical
- Voriconazole** → see antifungals, azoles
- ▶ **Vortioxetine** → see TABLE 13 p. 910 (serotonin syndrome), TABLE 4 p. 907 (antiplatelet effects)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 13 p. 910
- ▶ **Cinacalcet** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 13 p. 910 → Also see TABLE 4 p. 907
- ▶ **Terbinafine** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study

Voxilaprevir

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Apalutamide** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Ciclosporin** increases the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **voxilaprevir** (with sofosbuvir and velpatasvir). Avoid. [Severe] Study
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) increases the concentration of **dabigatran**. Avoid. [Severe] Study
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) is predicted to increase the exposure to **digoxin**. Monitor and adjust dose. [Severe] Theoretical

Voxilaprevir (continued)

- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) is predicted to increase the concentration of **edoxaban**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Efavirenz** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Enzalutamide** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (atazanavir)** boosted with ritonavir increase the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors (lopinavir)** boosted with ritonavir are predicted to increase the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors (tipranavir)** boosted with ritonavir are predicted to increase the concentration of **voxilaprevir**. [\[Severe\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **Modafinil** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Nevirapine** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **voxilaprevir**. Adjust dose, see sofosbuvir with velpatasvir and voxilaprevir. [\[Moderate\]](#) Study
- ▶ **Rifabutin** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) is predicted to increase the exposure to **statins (atorvastatin)**. Adjust atorvastatin dose, p. 139. [\[Moderate\]](#) Theoretical
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) is predicted to increase the exposure to **statins (fluvastatin, simvastatin)**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) moderately increases the exposure to **statins (pravastatin)**. Monitor and adjust pravastatin dose. [\[Moderate\]](#) Study
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) markedly increases the exposure to **statins (rosuvastatin)**. Avoid. [\[Severe\]](#) Study
- ▶ **Voxilaprevir** is predicted to increase the concentration of **sulfasalazine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) potentially increases the concentration of **tenofovir disoproxil**. [\[Severe\]](#) Study
- ▶ **Voxilaprevir** is predicted to increase the concentration of **topotecan**. Avoid. [\[Severe\]](#) Theoretical

Warfarin → see coumarins

Wasp venom extract

GENERAL INFORMATION Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

Xipamide → see thiazide diuretics

Xylometazoline → see sympathomimetics, vasoconstrictor

Yellow fever vaccine, live → see live vaccines

Zidovudine → see TABLE 15 p. 910 (myelosuppression), TABLE 2 p. 907 (nephrotoxicity)

- ▶ **Antiepileptics (valproate)** slightly increase the exposure to **zidovudine**. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (fluconazole)** slightly increase the exposure to **zidovudine**. [\[Moderate\]](#) Study
- ▶ **Antimalarials (pyrimethamine)** are predicted to increase the risk of side-effects when given with **zidovudine**. [\[Severe\]](#) Theoretical → Also see TABLE 15 p. 910
- ▶ **Zidovudine** increases the risk of haematological toxicity when given with **aspirin** (high-dose). [\[Severe\]](#) Study
- ▶ **Zidovudine** increases the risk of haematological toxicity when given with **flucytosine**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors (tipranavir)** slightly decrease the exposure to **zidovudine**. Avoid. [\[Moderate\]](#) Study

- ▶ **Zidovudine** increases the risk of toxicity when given with **lamivudine**. [\[Severe\]](#) Anecdotal
- ▶ **Leflunomide** is predicted to increase the exposure to **zidovudine**. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 910
- ▶ **Macrolides (clarithromycin)** decrease the absorption of **zidovudine**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the concentration of **zidovudine**. Refer to specialist literature. [\[Severe\]](#) Theoretical
- ▶ **Zidovudine** increases the risk of haematological toxicity when given with **NSAIDs**. [\[Severe\]](#) Study → Also see TABLE 2 p. 907
- ▶ **Ribavirin** increases the risk of anaemia and/or leucopenia when given with **zidovudine**. Avoid. [\[Severe\]](#) Study
- ▶ **Zidovudine** is predicted to decrease the efficacy of **stavudine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **zidovudine**. [\[Moderate\]](#) Theoretical

Zinc

ROUTE-SPECIFIC INFORMATION Interactions do not generally apply to topical use unless specified.

- ▶ Oral **zinc** decreases the absorption of oral **bisphosphonates (alendronate)**. **Alendronate** should be taken at least 30 minutes before **zinc**. [\[Moderate\]](#) Study
- ▶ Oral **zinc** decreases the absorption of oral **bisphosphonates (clodronate)**. Avoid **zinc** for 2 hours before or 1 hour after **clodronate**. [\[Moderate\]](#) Study
- ▶ Oral **zinc** is predicted to decrease the absorption of oral **bisphosphonates (ibandronate)**. Avoid **zinc** for at least 6 hours before or 1 hour after **ibandronate**. [\[Moderate\]](#) Theoretical
- ▶ Oral **zinc** decreases the absorption of oral **bisphosphonates (risedronate)**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ Oral **calcium salts** decrease the absorption of **zinc**. [\[Moderate\]](#) Study
- ▶ Oral **zinc** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **zinc**. [\[Severe\]](#) Theoretical
- ▶ **Zinc** is predicted to decrease the efficacy of **iron (oral)** and **iron (oral)** is predicted to decrease the efficacy of **zinc**. [\[Moderate\]](#) Study
- ▶ Oral **zinc** is predicted to decrease the absorption of oral **iron chelators (deferiprone)**. [\[Moderate\]](#) Theoretical
- ▶ **Zinc** is predicted to decrease the absorption of **penicillamine**. [\[Mild\]](#) Theoretical
- ▶ **Zinc** is predicted to decrease the exposure to **quinolones**. Separate administration by 2 hours. [\[Moderate\]](#) Study
- ▶ Oral **zinc** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [\[Moderate\]](#) Theoretical
- ▶ **Trientine** potentially decreases the absorption of **zinc**. [\[Moderate\]](#) Theoretical

Zoledronate → see bisphosphonates

Zolmitriptan → see TABLE 13 p. 910 (serotonin syndrome)

- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 310. [\[Moderate\]](#) Theoretical
- ▶ **Zolmitriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **zolmitriptan**, p. 310. [\[Severe\]](#) Theoretical
- ▶ **H₂ receptor antagonists (cimetidine)** slightly increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 310. [\[Mild\]](#) Study
- ▶ **MAOIs, irreversible** are predicted to increase the exposure to **zolmitriptan**. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 910
- ▶ **Mexiletine** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 310. [\[Moderate\]](#) Theoretical
- ▶ **Moclobemide** slightly increases the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 310. [\[Moderate\]](#) Study → Also see TABLE 13 p. 910
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 310. [\[Moderate\]](#) Theoretical

- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 310. [Severe]

Theoretical → Also see TABLE 13 p. 910

Zolpidem → see TABLE 11 p. 909 (CNS depressant effects)

- ▶ **Antiepileptics (carbamazepine)** moderately decrease the exposure to **zolpidem**. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **zolpidem**. [Moderate] Study

Zonisamide → see antiepileptics

Zopiclone → see TABLE 11 p. 909 (CNS depressant effects)

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
 - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 909
 - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
 - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
 - ▶ **Apalutamide** is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study
 - ▶ **Aprepitant** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
 - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
 - ▶ **Cobicistat** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
 - ▶ **Crizotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
 - ▶ **Enzalutamide** is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study
 - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
 - ▶ **Idelalisib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
 - ▶ **Imatinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
 - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
 - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
 - ▶ **Mitotane** is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study
 - ▶ **Netupitant** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
 - ▶ **Nilotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
 - ▶ **Rifampicin** is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- Zuclopenthixol** → see TABLE 8 p. 908 (hypotension), TABLE 9 p. 909 (QT-interval prolongation), TABLE 11 p. 909 (CNS depressant effects)
- ▶ **Zuclopenthixol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 908 → Also see TABLE 9 p. 909
 - ▶ **Zuclopenthixol** is predicted to decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Theoretical → Also see TABLE 8 p. 908
 - ▶ **Zuclopenthixol** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 909

Appendix 2

Borderline substances

CONTENTS

Enteral feeds (non-disease specific)	page	1100	Feed thickeners and pre-thickened drinks	page	1126
Enteral feeds (non-disease specific): less than 5 g protein/100 mL		1100	Flavouring preparations		1126
Enteral feeds (non-disease specific): 5 g (or more) protein/100 mL		1102	Foods for special diets		1127
Enteral feeds (non-disease specific): Child under 12 years		1104	Gluten-free foods		1127
Nutritional supplements (non-disease specific)		1108	Low-protein foods		1129
Nutritional supplements: less than 5 g protein/100 mL		1108	Nutritional supplements for metabolic diseases		1131
Nutritional supplements: 5 g (or more) protein/100 mL		1109	Glutaric aciduria (type 1)		1131
Specialised formulas		1114	Glycogen storage disease		1132
Specialised formulas: Infant and child		1114	Homocystinuria or hypermethioninaemia		1132
Feed supplements		1120	Hyperlysinemia		1132
High-energy supplements		1120	Isovaleric acidemia		1132
Fibre, vitamin, and mineral supplements		1125	Maple syrup urine disease		1133
Feed additives		1126	Methylmalonic or propionic acidemia		1133
Special additives for conditions of intolerance		1126	Other inborn errors of metabolism		1134
			Phenylketonuria		1134
			Tyrosinemia		1137

In certain conditions some foods (and toilet preparations) have characteristics of drugs and the Advisory Committee on Borderline Substances (ACBS) advises as to the circumstances in which such substances may be regarded as drugs. Prescriptions issued in accordance with the Committee's advice and endorsed 'ACBS' will normally not be investigated.

Information

General Practitioners are reminded that the ACBS recommends products on the basis that they may be regarded as drugs for the management of specified conditions. Doctors should satisfy themselves that the products can safely be prescribed, that patients are adequately monitored and that, where necessary, expert hospital supervision is available.

Foods which may be prescribed on FP10, GP10 (Scotland), or WP10 (Wales)

All the food products listed in this appendix have ACBS approval. Some products may not be approved in all three countries. The clinical condition for which the product has been approved is included with each entry.

Note Foods included in this appendix may contain cariogenic sugars and patients should be advised to take appropriate oral hygiene measures.

Enteral feeds and supplements

For most enteral feeds and nutritional supplements, the main source of **carbohydrate** is either maltodextrin or glucose syrup; other carbohydrate sources are listed in the relevant table, below. Feeds containing residual lactose (less than 1 g lactose/100 mL formula) are described as 'clinically lactose-free' or 'lactose-free' by some manufacturers. The presence of lactose (including residual lactose) in feeds is indicated in the relevant table, below. The primary sources of **protein** or **amino acids** are included with each product entry. The **fat** or **oil** content is derived from a variety of sources such as vegetables, soya bean, corn, palm nuts, and seeds; where the fat content is derived from animal or fish sources, this information is included in the relevant table,

below. The presence of medium chain triglycerides (MCT) is also noted where the quantity exceeds 30% of the fat content.

Enteral feeds and nutritional supplements can contain varying amounts of **vitamins**, **minerals**, and **trace elements**—the manufacturer's product literature should be consulted for more detailed information. Feeds containing vitamin K may affect the INR in patients receiving warfarin. The suitability of food products for patients requiring a vegan, kosher, halal, or other compliant diet should be confirmed with individual manufacturers.

Note Feeds containing more than 6 g/100 mL protein or 2 g/100 mL fibre should be avoided in children unless recommended by an appropriate specialist or dietician.

Nutritional values

Nutritional values of products vary with flavour and pack size—consult product literature.

Paediatric ACBS indications: Disease-related malnutrition, intractable malabsorption, growth failure, pre-operative preparation of malnourished patients, dysphagia, short-bowel syndrome, bowel fistula.

Standard ACBS indications: Disease-related malnutrition, intractable malabsorption, pre-operative preparation of malnourished patients, dysphagia, proven inflammatory bowel disease, following total gastrectomy, short-bowel syndrome, bowel fistula.

Other conditions for which ACBS products can be prescribed

This is a list of clinical conditions for which the ACBS has approved toilet preparations.

Dermatitis, Eczema and Pruritus

Aveeno® Cream; *Aveeno*® Lotion; *E45*® Emollient Bath Oil; *E45*® Emollient Wash Cream

Disfiguring skin lesions (birthmarks, mutilating lesions, scars, vitiligo)

Covermark® classic foundation and finishing powder; *DermaColor*® Camouflage cream and fixing powder; *Keromask*® finishing powder and masking cream; *Veil*® Cover cream and Finishing Powder. (Cleansing Creams, Cleansing Milks, and Cleansing Lotions are excluded).

Disinfectants (antiseptics)

May be prescribed on an FP10 only when ordered in such quantities and with such directions as are appropriate for the treatment of patients, but not if ordered for general hygienic purposes.

Dry mouth (xerostomia)

For patients suffering from dry mouth as a result of having (or having undergone) radiotherapy, or sicca syndrome.

AS Saliva Orthana®; *Biotène Oralbalance*®; *Glandosane*®; *Saliveze*®

Photodermatoses (skin protection in)

LA Roche-Posay Anthelios® XL SPF 50+ cream; *Sunsense*®

Ultra (Ego) SPF 50+; *Uvistat*® Lipscreen SPF 50, *Uvistat*®

Suncream SPF 30 and 50

Table 1 Enteral feeds (non-disease specific)

Less than 5 g protein/100 mL

Enteral feeds: 1 kcal/mL and less than 5 g protein/100 mL

Not suitable for use in child under 1 year unless otherwise stated; not recommended for child 1-6 years

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 1500 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g cows' milk soya	13 g (sugars 0.9 g)	3.4 g	1.5 g	Gluten-free Residual lactose Contains fish oil	Borderline substances standard ACBS indications p. 1098 except bowel fistula and pre-operative preparation of malnourished patients. Not suitable for child under 2 years	Fresubin 1500 Complete liquid: 1.5 litre = £15.00
Fresubin® Original (Fresenius Kabi Ltd)	Liquid (sip or tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g cows' milk soya	13.8 g (sugars 3.5 g)	3.4 g	Nil	Gluten-free Residual lactose Contains fish gelatin Feed in flexible pack contains fish oil and fish gelatin	Borderline substances standard ACBS indications p. 1098	Fresubin Original drink: blackcurrant, chocolate, nut, peach, vanilla 200 ml = £2.43; Fresubin Original tube feed liquid: 500 ml = £4.70; 1000 ml = £9.33; 1500 ml = £13.99
Fresubin® Original Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g cows' milk soya	13 g (sugars 0.9 g)	3.4 g	1.5 g	Gluten-free Residual lactose Contains fish oil	Borderline substances standard ACBS indications p. 1098 except bowel fistula and pre-operative preparation of malnourished patients. Not suitable for child under 2 years	Fresubin Original Fibre liquid: 500 ml = £5.33; 1000 ml = £10.64
Jevity® (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	449 kJ (107 kcal)	4 g caseinates	14.1 g (sugars 470 mg)	3.47 g	1.76 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1098 except bowel fistula. Not suitable for child under 2 years	Jevity liquid: 500 ml = £5.98; 1000 ml = £11.28; 1500 ml = £16.89
Nutrison® (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g cows' milk	12.3 g (sugars 1 g)	3.9 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1098	Nutrison liquid: 500 ml = £5.55; 1000 ml = £9.75; 1500 ml = £14.63
Nutrison® Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g cows' milk	12.3 g (sugars 1 g)	3.9 g	1.5 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1098 except bowel fistula	Nutrison Multi Fibre liquid: 500 ml = £6.00; 1000 ml = £11.30; 1500 ml = £16.92
Osmolite® (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	424 kJ (100 kcal)	4 g caseinates soy isolate	13.6 g (sugars 630 mg)	3.4 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1098	Osmolite liquid: 500 ml = £5.54; 1000 ml = £9.73; 1500 ml = £14.60

SOYA PROTEIN FORMULA									
Not suitable for use in child under 1 year; not recommended for child 1–6 years									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® Soya Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g soya protein	13.3 g (sugars 4.1 g)	3.6 g	2 g	Gluten-free Lactose-free Contains fish oil	Borderline substances standard ACBS indications p. 1098; also cows' milk protein intolerance, lactose intolerance	Fresubin Soya Fibre liquid: 500 ml = £5.51
Nutrison® Soya (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g soy isolate	12.3 g (sugars 1 g)	3.9 g	Nil	Gluten-free Residual lactose Milk protein-free	Borderline substances standard ACBS indications p. 1098; also cows' milk protein and lactose intolerance	Nutrison Soya liquid: 500 ml = £5.99; 1000 ml = £12.01
Nutrison® Soya Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g soy isolate	12.3 g (sugars 700 mg)	3.9 g	1.5 g	Gluten-free Residual lactose Milk protein-free	Borderline substances standard ACBS indications p. 1098 except bowel fistula; also cows' milk protein and lactose intolerance	Nutrison Soya Multi Fibre liquid: 1.5 litre = £19.97
PEPTIDE-BASED FORMULA									
Not suitable for use in child under 1 year; not recommended for child 1–6 years									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Nutrison Peptisorb® (Nutricia Ltd)	Liquid (tube feed) per 100 mL	425 kJ (100 kcal)	4 g whey protein hydrolysate	17.6 g (sugars 1.7 g)	1.7 g (MCT 47%)	Nil	Gluten-free Residual lactose	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula	Nutrison Peptisorb liquid: 500 ml = £8.74; 1000 ml = £15.76
Peptamen® (Nestle Health Science)	Liquid (sip or tube feed) per 100 mL	420 kJ (100 kcal)	4 g whey peptides	12.7 g (sugars 480 mg)	3.7 g (MCT 70%)	Nil	Gluten-free Residual lactose	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula	Peptamen liquid: vanilla 800 ml = £13.38; unflavoured 500 ml = £7.52; 1000 ml = £14.12
Survimed® OPD (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4.5 g whey protein hydrolysate	14.3 g (sugars 1.1 g)	2.8 g (MCT 51%)	0.1 g	Gluten-free Residual lactose Contains fish oil	Borderline substances standard ACBS indications p. 1098; also growth failure	Survimed OPD: liquid 500 ml = £7.86; 800 ml = £13.56; 1000 ml = £15.72; HN liquid 500 ml = £7.57
Enteral feeds: Less than 1 kcal/mL and less than 5 g protein/100 mL									
AMINO ACID FORMULA (ESSENTIAL AND NON-ESSENTIAL AMINO ACIDS)									
Not suitable for use in child under 1 year; not recommended for child 1–6 years									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Elemental O28® Extra (Nutricia Ltd)	Liquid (sip feed) per 100 mL	360 kJ (86 kcal)	2.5 g (protein equivalent)	11 g (sugars 4.7 g)	3.5 g (MCT 35%)	Nil		Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula	Elemental O28 Extra liquid: grapefruit, orange & pineapple, summer fruits 250 ml = £4.11
	Standard dilution (20%) of powder (sip or tube feed) per 100 mL	374 kJ (89 kcal)	2.5 g (protein equivalent)	11.8 g (sugars 1.8 g)	3.5 g (MCT 35%)	Nil		Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula.	Elemental O28 Extra powder: banana, orange, plain 100 gram = £7.99
Powder provides protein equivalent 12.5 g, carbohydrate 59 g, fat 17.45 g, energy 1871 kJ (443 kcal)/100 g. To flavour unflavoured products, see Modjul® Flavour System p. 1126.									

Enteral feeds (non-disease specific): 5 g (or more) protein/100 mL

Enteral feeds: 1.5 kcal/mL and 5 g (or more) protein/100 mL

Not suitable for use in child under 1 year unless otherwise stated; not recommended for child 1-6 years unless otherwise stated

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 2250 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	5.6 g cows' milk	18.8 g (sugars 1.5 g)	5.8 g	2 g	Gluten-free Residual lactose Contains fish oil and fish gelatin	Borderline substances standard ACBS indications p. 1098	Fresubin 2250 Complete liquid: 1.5 litre = £16.75
Fresubin® Energy (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	5.6 g cows' milk	18.8 g (sugars)	5.8 g	Nil	Gluten-free Residual lactose Contains fish gelatin	Borderline substances standard ACBS indications p. 1098 Strawberry flavour may contain traces of wheat starch and egg.	Fresubin Energy liquid: banana, blackcurrant, cappuccino, chocolate, lemon, strawberry, tropical fruits, vanilla 200 ml = £1.40; unflavoured 200 ml = £1.40; 500 ml = £6.27; 1000 ml = £11.80; 1500 ml = £16.99
	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	5.6 g cows' milk	18.8 g (sugars 1.4 g)	5.8 g	Nil	Gluten-free Residual lactose Contains fish oil and fish gelatin	Borderline substances standard ACBS indications p. 1098	
Fresubin® Energy Fibre (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	5.6 g cows' milk	18.8 g (sugars)	5.8 g	2 g	Gluten-free Residual lactose Contains fish gelatin	Borderline substances standard ACBS indications p. 1098	Fresubin Energy Fibre liquid: banana, caramel, cherry, chocolate, strawberry 200 ml = £2.23; unflavoured 500 ml = £6.97; 1000 ml = £13.14; 1500 ml = £15.68
	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	5.6 g cows' milk	18.8 g (sugars 1.5 g)	5.8 g	2 g	Gluten-free Residual lactose Contains fish oil and fish gelatin	Borderline substances standard ACBS indications p. 1098	Fresubin Energy Fibre liquid unflavoured: 500 ml = £6.97; 1000 ml = £13.14; 1500 ml = £15.68
Fresubin® HP Energy (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	7.5 g cows' milk	17 g (sugars 1 g)	5.8 g (MCT 57%)	Nil	Gluten-free Residual lactose Contains fish oil and fish gelatin	Borderline substances standard ACBS indications p. 1098; also CAPD and haemodialysis	Fresubin HP Energy liquid: 500 ml = £6.45; 1000 ml = £12.16
Jevity® 1.5 kcal (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	649 kJ (154 kcal)	6.38 g caseinates and soy isolate	20.1 g (sugars 1.47 g)	4.9 g	2.2 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1098 Not suitable for child under 2 years; not recommended for child 2-10 years	Jevity 1.5kcal liquid: 500 ml = £7.16; 1000 ml = £13.50; 1500 ml = £20.83
Nutrison® Energy (Nutricia Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	6 g cows' milk	18.5 g (sugars 1.5 g)	5.8 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1098	Nutrison Energy liquid: 500 ml = £6.47; 1000 ml = £12.17; 1500 ml = £18.21
Nutrison® Energy Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	6 g cows' milk	18.5 g (sugars 1.5 g)	5.8 g	1.5 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1098	Nutrison Energy Multi Fibre liquid: 500 ml = £7.18; 1000 ml = £13.51; 1500 ml = £20.86

Osmolite® 1.5 kcal (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	632 kJ (150 kcal)	6.25 g cows' milk soya protein isolate	20 g (sugars 4.9 g)	5 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1098	Osmolite 1.5kcal tube feed liquid: 500 ml = £6.44; 1000 ml = £12.15; 1500 ml = £18.18;
Resource® Energy (Nestle Health Science)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	5.6 g cows' milk	21 g (sugars 5.2 g)	5 g	less than 0.5 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1098 Not suitable for use in child under 3 years	Resource Energy liquid: apricot, chocolate, coffee, strawberry and raspberry, vanilla 800 ml = £8.45

Enteral feeds: Less than 1.5 kcal/mL and 5g (or more) protein/100 mL

Not suitable for use in child under 1 year unless otherwise stated; not recommended for child 1–6 years unless otherwise stated

Resource Fibre 2.0 liquid: apricot, coffee, neutral, strawberry, summer fruit, vanilla 200 ml = £2.08

Table 3 Specialised formulas

Specialised formulas: Infant and child

Specialised formulas: Infant and child: Amino acid-based formula

Not suitable for child under 1 year of age unless otherwise stated.

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Neocate [®] Junior (Nutricia Ltd)	Standard dilution (21.1%) of powder per 100ml serving	420 kJ (100 kcal)	2.8 g protein equivalent (essential and non- essential amino acids)	12 g (sugars 1.1 g)	4.6 g	Nil	Milk protein-free	For the dietary management of proven whole protein allergy, short bowel syndrome, intractable malabsorption and other gastrointestinal disorders where an amino acid diet is recommended, for children from 1 year onwards.	Neocate Junior powder: strawberry, unflavoured, vanilla 400 gram = £30.62
Powder provides protein equivalent 13.3 g, carbohydrate 56 g, fat 22 g, energy 1992 kJ (475 kcal)/100 g.									
Neocate [®] LCP (Nutricia Ltd)	Standard dilution (13.8%) of powder per 100 mL	279 kJ (67 kcal)	1.8 g protein equivalent (essential and non- essential amino acids)	7.2 g (sugars 0.65 g)	3.4 g	Nil	Milk protein and lactose free	For the dietary management of cow's milk allergy, multiple food protein allergies and other conditions where an elemental diet is recommended.	Neocate LCP powder: 400 gram = £22.98
Powder provides: protein equivalent 13 g, carbohydrate 52.5 g, fat 24.5 g, energy 2020 kJ (483 kcal)/100 g.									
Neocate [®] Spoon (Nutricia Ltd)	Standard dilution of powder per 97 g serving (37-g sachet diluted with 60 mL water)	733 kJ (175 kcal)	3 g protein equivalent (essential and non- essential amino acids)	24.9 g (sugars 4.6 g)	7 g	Nil	Milk protein-free	For the dietary management of cow's milk allergy, multiple food protein allergy and other conditions requiring an amino acid-based food.	Neocate Spoon powder 37g sachets: 15 sachet = £43.95
Powder provides protein equivalent 8.2 g, carbohydrate 67.4 g, fat 18.8 g, energy 1981 kJ (472 kcal)/100 g.									
Neocate [®] Syneo (Nutricia Ltd)	Standard dilution (14.7%) of powder per 100ml serving	285 kJ (68.2 kcal)	1.9 g protein equivalent (essential and non- essential amino acids)	7.2 g (sugars 0.68 g)	3.4 g	0.66 g	Milk Protein Free	For the dietary management of cow's milk allergy, multiple food protein allergies and other conditions requiring an amino acid-based diet.	Neocate Syneo powder: 400 gram = £29.56
Powder provides protein equivalent 13 g, carbohydrate 49 g, fat 23 g, energy 1941 kJ (464 kcal)/100 g.									
Nutramigen [®] Puramino (Reckitt Benckiser Healthcare (UK) Ltd)	Standard dilution (13.6%) of powder per 100 mL	290 kJ (68 kcal)	1.89 g essential and non-essential amino acids	7.2 g	3.6 g	Nil	Gluten-free Lactose-free	For use in the management of severe protein intolerance, multiple food intolerance and other gastro-intestinal disorders where an amino acid based diet is specifically indicated for infants and young children.	Nutramigen PurAmino powder: 400 gram = £23.00
Powder provides: protein 13.9 g, carbohydrate 53 g, fat 26 g, energy 2100 kJ (500 kcal)/100 g.									

SMA Alfamino® (Nestle Health Science)	Standard dilution (13.8%) of powder per 100 mL	291 kJ (69 kcal)	1.8 g protein equivalent (essential and non- essential amino acids)	7.9 g (sugars 2.2 g)	3.4 g	Nil		Severe cows' milk allergy and or multiple food allergies	SMA Alfamino powder: 400 gram = £22.98
Powder provides protein equivalent 13.3 g, carbohydrate 57 g, fat 24.6 g, energy 2105 kJ (503 kcal)/100 g.									
Specialised formulas: Infant and child: Hydrolysate formula									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Aptamil Pepti-Junior® (Nutricia Early Life Nutrition Ltd)	Standard dilution (12.8%) of powder per 100 mL	275 kJ (66 kcal)	1.8 g whey hydrolysed	6.8 g (sugars 1.1 g)	3.5 g	Nil	Residual lactose Contains fish oil	Disaccharide and/or whole protein intolerance, or where amino acids and peptides are indicated in conjunction with medium chain triglycerides.	Aptamil Pepti-Junior powder: 450 gram = £14.03
Powder provides: protein 14 g, carbohydrate 53.4 g, fat 27.3 g, energy 2155 kJ (515 kcal)/100 g.									
Aptamil Pepti® 1 (Nutricia Early Life Nutrition Ltd)	Standard dilution (13.64%) of powder per 100 mL	276 kJ (66 kcal)	1.6 g whey hydrolysate	7.1 g (sugars 3.5 g)	3.4 g	0.5 g	Contains fish oil, lactose	Established cows' milk allergy with/without proven secondary lactose intolerance.	Aptamil Pepti 1 powder: 400 gram = £9.87; 800 gram = £19.73
Powder provides: protein 11.6 g, carbohydrate 51.8 g, fat 24.7 g, energy 2024 kJ (484 kcal)/100 g.									
Aptamil Pepti® 2 (Nutricia Early Life Nutrition Ltd)	Standard dilution (14.43%) of powder per 100 mL	285 kJ (68 kcal)	1.6 g whey protein hydrolysate	7.8 g (sugars 3.6 g)	3.2 g	0.6 g	Contains fish oil, lactose	Established cows' milk allergy.	Aptamil Pepti 2 powder: 400 gram = £9.41; 800 gram = £18.82
Powder provides: protein 11.4 g, carbohydrate 54.3 g, fat 22.3 g, energy 1974 kJ (471 kcal)/100 g.									
Infatrini® Peptisorb (Nutricia Ltd)	Liquid (sip or tube feed) per 100 mL	420 kJ (100 kcal)	2.6 g whey protein hydrolysate	10.3 g (sugars 2.7 g)	5.4 g (MCT 50%)	Nil	Gluten-free Residual lactose Contains fish oil	Disease-related malnutrition, intractable malabsorption, proven inflammatory bowel disease, short bowel syndrome, bowel fistula, and intolerance to whole protein feeds in child from birth to 18 months or body-weight up to 9 kg	Infatrini Peptisorb liquid: 200 ml = £3.92
Nutramigen 1 with LGG® (Reckitt Benckiser Healthcare (UK) Ltd)	Standard dilution (13.5%) of powder per 100 mL	280 kJ (68 kcal)	1.9 g casein hydrolysed	7.5 g	3.4 g	Nil	Residual lactose	For the dietary management of cow's milk allergy with / or without lactose intolerance.	Nutramigen 1 with LGG powder: 400 gram = £11.21
Powder provides: protein 14 g, carbohydrate 55 g, fat 25 g, energy 2100 kJ (500 kcal)/100 g.									
Nutramigen 2 with LGG® (Reckitt Benckiser Healthcare (UK) Ltd)	Standard dilution (14.2%) of powder per 100 mL	280 kJ (68 kcal)	1.7 g casein hydrolysed	8.8 g	2.8 g	Nil	Gluten-free Residual lactose	For the dietary management of cow's milk allergy with / or without lactose intolerance.	Nutramigen 2 with LGG powder: 400 gram = £11.21
Powder provides: protein 12 g, carbohydrate 62 g, fat 20 g, energy 2000 kJ (480 kcal)/100 g.									

Specialised formulas: Infant and child: Hydrolysate formula (product list continued)									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Pregestimil® Lipil (Reckitt Benckiser Healthcare (UK) Ltd)	Standard dilution (13.5%) of powder per 100 mL	280 kJ (68 kcal)	1.89 g casein hydrolysed	6.9 g	3.8 g (MCT 54%)	Nil	Gluten-free Lactose-free	Disaccharide and/or whole protein intolerance, or where amino acids or peptides are indicated in conjunction with medium chain triglycerides.	Pregestimil LIPIL powder: 400 gram = £12.43
Powder provides: protein 14 g, carbohydrate 51 g, fat 28 g, energy 2100 kJ (500 kcal)/100 g.									
Similac® Alimentum (Abbott Laboratories Ltd)	Standard dilution (14%) of powder per 100 mL	283 kJ (67.6 kcal)	1.86 g casein hydrolysed	6.62 g (sugars 1.5 g)	3.75 g (MCT 33%)	Nil	Gluten-free Lactose-free Contains meat derivatives	Cows' milk protein allergy and other conditions where an extensively hydrolysed formula is indicated.	Alimentum powder: 400 gram = £9.69
Powder provides: protein 14.4 g, carbohydrate 51.4 g, fat 29.1 g, energy 2196 kJ (525 kcal)/100 g.									
SMA Althéra® (Nestle Health Science)	Standard dilution (13.2%) of powder per 100 mL	280 kJ (67 kcal)	1.7 g whey hydrolysed	7.3 g (sugars 4 g)	3.4 g	Nil	Contains lactose	Complete nutritional support from birth to 3 years or supplementary feeding from 6 months to 3 years, in cow's milk protein allergy or multiple food protein allergies	SMA Althera powder: 400 gram = £9.86
Powder provides: protein 12.5 g, carbohydrate 55.5 g, fat 26 g, energy 2119 kJ (506 kcal)/100 g.									
Specialised formulas: Infant and child: Residual lactose formula									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Enfamil® O-Lac (Reckitt Benckiser Healthcare (UK) Ltd)	Standard dilution (13%) of powder per 100 mL	280 kJ (68 kcal)	1.42 g cows' milk	7.2 g	3.7 g	Nil	Gluten-free Residual lactose	Proven lactose intolerance	Enfamil O-Lac powder: 400 gram = £5.08
Powder provides: protein 10.9 g, carbohydrate 55 g, fat 28 g, energy 2200 kJ (524 kcal)/100 g.									
Galactomin 17® (Nutricia Ltd)	Standard dilution (13.6%) of powder per 100 mL	295 kJ (70 kcal)	1.7 g protein equivalent (cows' milk)	7.5 g (sugars 1.4 g)	3.7 g	Nil	Residual lactose	Proven lactose intolerance in pre-school children, galactosaemia, and galactokinase deficiency.	Galactomin 17 powder: 400 gram = £18.79
Powder provides: protein equivalent 12.3 g, carbohydrate 55.3 g, fat 27.2 g, energy 2155 kJ (515 kcal)/100 g. To flavour unflavoured products, see Modjul® Flavour System p. 1126.									
SMA® LF (SMA Nutrition)	Standard dilution (13%) of powder per 100 mL	281 kJ (67 kcal)	1.5 g casein, whey	7.2 g (sugars 2.6 g)	3.6 g	Nil	Residual lactose	Proven lactose intolerance	SMA LF powder: 400 gram = £5.32
Powder provides: protein 12 g, carbohydrate 55.6 g, fat 28 g, energy 2185 kJ (522 kcal)/100 g.									

Specialised formulas: Infant and child: MCT-enhanced formula

Suitable for infants from birth; Child under 12 years.

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Lipistart® (Vitafo International Ltd)	Standard dilution (15%) of powder per 100 mL	282 kJ (68 kcal)	2.1 g protein equivalent (whey, soya)	8.3 g (sugars 0.7 g)	3.1 g (MCT 81%)	Nil	Residual lactose	Dietary management of fat malabsorption, long-chain fatty acid oxidation disorders, and other disorders requiring a high MCT, low LCT formula.	Lipistart powder: 400 gram = £21.90
Powder provides: protein equivalent 13.7 g, carbohydrate 55.3 g, fat 20.6 g, energy 1883 kJ (450 kcal)/100 g.									
Monogen® (Nutricia Ltd)	Standard dilution (17.5%) of powder per 100 mL	310 kJ (74 kcal)	2.2 g protein equivalent (whey)	12 g (sugars 1.2 g)	1.9 g (MCT 80%)	Nil	Residual lactose Supplementation with essential fatty acids may be needed	Long-chain acyl-CoA dehydrogenase deficiency (LCAD), carnitine palmitoyl transferase deficiency (CPTD), primary and secondary lipoprotein lipase deficiency, chylothorax, and lymphangiectasia	Monogen powder: 400 gram = £22.71
Powder provides: protein equivalent 12.5 g, carbohydrate 68 g, fat 11 g, energy 1769 kJ (420 kcal)/100 g.									

Specialised formulas: Infant and child: Soya-based formula

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Wysoy® (SMA Nutrition)	Standard dilution (13.2%) of powder per 100 mL	280 kJ (67 kcal)	1.8 g soya protein isolate	6.9 g (sugars 2.5 g)	3.6 g	Nil	Lactose-free	Proven lactose and associated sucrose intolerance in pre-school children, galactokinase deficiency, galactosaemia, and proven whole cows' milk sensitivity.	SMA Wysoy powder: 800 gram = £10.45; 860 gram = £10.93
Powder provides: protein 14 g, carbohydrate 54 g, fat 27 g, energy 2155 kJ (515 kcal)/100 g.									

Specialised formulas: Infant and child: Low calcium formula

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Locasol® (Nutricia Ltd)	Standard dilution (13.1%) of powder per 100 mL	278 kJ (66 kcal)	1.9 g cows' milk	7 g (sugars 6.9 g)	3.4 g	Nil	Contains lactose Calcium less than 7 mg/100 mL No added vitamin D	Conditions of calcium intolerance requiring restriction of calcium and vitamin D intake	Locasol powder: 400 gram = £26.14
Powder provides: protein 14.6 g, carbohydrate 53.7 g, fat 26.1 g, energy 2125 kJ (508 kcal)/100 g.									

Specialised formulas: Infant and child: Fructose-based formula

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Galactomin 19® (Nutricia Ltd)	Standard dilution (12.9%) of powder per 100 mL	288 kJ (69 kcal)	1.9 g protein equivalent (cows' milk)	6.4 g (fructose 6.3 g)	4 g	Nil	Residual lactose, galactose and glucose	Conditions of glucose plus galactose intolerance	Galactomin 19 powder: 400 gram = £49.48
Powder provides: protein equivalent 14.6 g, carbohydrate 49.7 g, fat 30.8 g, energy 2233 kJ (534 kcal)/100 g.									

Specialised formulas: Infant and child: Pre-thickened infant feeds									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Enfamil [®] AR (Reckitt Benckiser Healthcare (UK) Ltd)	Standard dilution (13.5%) of powder per 100 mL	285 kJ (68 kcal)	1.7 g cows' milk	7.6 g (lactose 4.6 g)	3.5 g	Nil	Contains lactose, pregelatinised rice starch	Significant gastro-oesophageal reflux	Enfamil AR powder: 400 gram = £3.80
Powder provides: protein 12.5 g, carbohydrate 56 g, fat 26 g, energy 2093 kJ (500 kcal)/100 g.									
Specialised formulas for specific clinical conditions									
Not suitable for child under 1 year unless otherwise stated; use with caution in child 1-4 years unless otherwise stated.									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Alicalm [®] (Nutricia Ltd)	Standard dilution (30%) of powder per 100 mL	567 kJ (135 kcal)	4.5 g caseinate whey	17.4 g (sugars 3.2 g)	5.3 g	Nil	Residual lactose	Crohn's disease Not suitable for child under 1 year; use as nutritional supplement only in children 1-6 years.	Alicalm oral powder: 400 gram = £24.04
Powder provides: protein 15 g, carbohydrate 58 g, fat 17.5 g, energy 1889 kJ (450 kcal)/100 g.									
Forticare [®] (Nutricia Ltd)	Liquid (sip feed) per 100 mL.	675 kJ (160 kcal)	9 g cows' milk	19.1 g (sugars 13.6 g)	5.3 g	2.1 g	Gluten-free Residual lactose Contains fish oil	Nutritional supplement in patients with lung cancer undergoing chemotherapy, or with pancreatic cancer Not suitable in child under 3 years	Forticare liquid: cappuccino, orange & lemon, peach & ginger 500 ml = £10.04
Heparon [®] Junior (Nutricia Ltd)	Standard dilution (18%) of powder per 100 mL	363 kJ (86 kcal)	2 g cows' milk	11.6 g (sugars 2.9 g)	3.6 g	Nil	Contains lactose Electrolytes/100 mL: Na ⁺ 0.56 mmol K ⁺ 1.9 mmol Ca ²⁺ 2.3 mmol P ⁻ 1.6 mmol	Enteral feed or nutritional supplement for children with acute or chronic liver failure	Heparon Junior powder: 400 gram = £24.22
Powder provides: protein 11.1 g, carbohydrate 64.2 g, fat 19.9 g, energy 2016 kJ (480 kcal)/100 g.									
KetoCal [®] (Nutricia Ltd)	Standard dilution (20%) of powder per 100 mL	602 kJ (146 kcal)	3.1 g cows' milk with additional amino acids	0.6 g (sugars 0.12 g)	14.6 g (LCT 100%)	Nil	Electrolytes/100 mL: Na ⁺ 4.3 mmol K ⁺ 4.1 mmol Ca ²⁺ 2.15 mmol P ⁻ 2.77 mmol	Enteral feed or nutritional supplement as part of ketogenic diet in management of epilepsy resistant to drug therapy, in children over 1 year, only on the advice of secondary care physician with experience of ketogenic diet.	KetoCal 4:1 powder: unflavoured, vanilla 300 gram = £34.10
Powder provides: protein 15.25 g, carbohydrate 3 g, fat 73 g, energy 3011 kJ (730 kcal)/100 g.									
KetoCal [®] 3:1 (Nutricia Ltd)	Standard dilution (9.5%) of powder per 100 mL	276 kJ (66 kcal)	1.5 g	0.68 g (sugars 0.57 g)	6.4 g	Nil	Electrolytes/100 mL: Na ⁺ 1.3 mmol K ⁺ 2.4 mmol Ca ²⁺ 2 mmol P ⁻ 1.7 mmol	Enteral feed or nutritional supplement as part of ketogenic diet in management of drug resistant epilepsy or other conditions for which a ketogenic diet is indicated in children from birth to 6 years; as a nutritional supplement in children over 6 years.	KetoCal 3:1 powder: 300 gram = £33.01
Powder provides: protein 15.3 g, carbohydrate 7.2 g, fat 67.7 g, energy 2927 kJ (699 kcal)/100 g.									

KetoCal® 4:1 LQ (Nutricia Ltd)	Liquid (sip or tube feed) per 100 mL	620 kJ (150 kcal)	3.09 g casein and whey with additional amino acids	0.61 g (sugars 0.23 g)	14.8 g (LCT 100 %)	1.12 g	Residual lactose Electrolytes/100 mL: Na ⁺ 4.9 mmol K ⁺ 4.7 mmol Ca ²⁺ 2.4 mmol P ⁺ 3.1 mmol	Enteral feed or nutritional supplement as part of ketogenic diet in management of drug resistant epilepsy or other conditions for which a ketogenic diet is indicated in children 1–10 years; as a nutritional supplement in children over 10 years.	KetoCal 4:1LQ liquid: unflavoured, vanilla 200 ml = £4.86
Kindergen® (Nutricia Ltd)	Standard dilution (20%) of powder per 100 mL	421 kJ (101 kcal)	1.5 g whey protein	11.8 g (sugars 1.2 g)	5.3 g (LCT 93 %)	Nil	Electrolytes/100 mL: Na ⁺ 2 mmol K ⁺ 0.6 mmol Ca ²⁺ 2.8 mmol P ⁺ 3 mmol Low Vitamin A	Enteral feed or nutritional supplement for children with chronic renal failure receiving peritoneal rapid overnight dialysis.	Kindergen powder: 400 gram = £32.51
Powder provides: protein 7.5 g, carbohydrate 59 g, fat 26.3 g, energy 2104 kJ (504 kcal)/100 g.									
Modulen IBD® (Nestle Health Science)	Standard dilution (20%) of powder (sip or tube feed) per 100 mL	420 kJ (100 kcal)	3.6 g casein	11 g (sugars 3.98 g)	4.7 g	Nil	Gluten-free Residual lactose	Crohn's disease active phase, and in remission if malnourished	Modulen IBD powder: 400 gram = £16.19
Powder provides: protein 18 g, carbohydrate 54 g, fat 23 g, energy 2070 kJ (500 kcal)/100 g.									
Nepro® (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	838 kJ (200 kcal)	7 g cows' milk	20.6 g (sugars 3.26 g)	9.6 g	1.56 g	Gluten-free Residual lactose Electrolytes/100 mL: Na ⁺ 3.67 mmol K ⁺ 2.72 mmol Ca ²⁺ 3.43 mmol P ⁺ 2.23 mmol	Enteral feed or nutritional supplement in patients with chronic renal failure who are on haemodialysis or CAPD, or with cirrhosis, or other conditions requiring a high energy, low fluid, low electrolyte diet. Not suitable for child under 1 year; use with caution in child 1-5 years.	Nepro HP liquid: strawberry 220 ml = £3.60; vanilla 220 ml = £3.60; 500 ml = £8.24
ProSure® (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	536 kJ (127 kcal)	6.65 g	18.3 g (sugars 6.5 g)	2.56 g	2.07 g	Gluten-free Residual lactose Contains fish oil	For pancreatic cancer, oesophageal cancer and patients with lung cancer who are undergoing chemotherapy.	ProSure liquid: 220 ml = £3.69
Renamil® (Stanningley Pharma Ltd)	Powder (sip or tube feed when reconstituted) per 100 g	2003 kJ (477 kcal)	4.6 g cows' milk	70.8 g	19.3 g	Nil	Contains lactose Gluten-free Electrolytes/100 g: Na ⁺ 1.04 mmol K ⁺ 0.13 mmol Ca ²⁺ 10.22 mmol P ⁺ 1.06 mmol Contains no vitamin A or vitamin D	Enteral feed or nutritional supplement for adults and children over 1 year with chronic renal failure.	Renapro powder 100g sachets: 10 sachet = £25.40

Specialised formulas for specific clinical conditions (product list continued)

Not suitable for child under 1 year unless otherwise stated; use with caution in child 1-4 years unless otherwise stated.

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Renapro® (Stanningley Pharma Ltd)	Powder per 100 g	1558 kJ (372 kcal)	90 g whey protein	3.4 g	1 g	Nil	Gluten-free Do not use in cow's milk allergy, or where absorption and digestive problems are present Electrolytes/100 g: Na ⁺ 15.65 mmol K ⁺ 4.60 mmol Ca ²⁺ 4.74 mmol Mg ⁺ 0.82 mmol P ⁺ 3.55 mmol	Nutritional supplement for biochemically proven hypoproteinaemia and patients undergoing dialysis. Not suitable for child under 1 year.	Renapro powder 20g sachets: 30 sachet = £69.60
Powder provides: protein 18 g, energy 312 kJ (74 kcal)/20-g sachet.									
Renastart® (Vitafo International Ltd)	Standard dilution (20%) of powder per 100 mL	414 kJ (99 kcal)	1.5 g cows' milk soya	12.5 g (sugars 1.3 g)	4.8 g	Nil	Contains lactose Electrolytes/100 mL: Na ⁺ 2.1 mmol K ⁺ 0.6 mmol Ca ²⁺ 0.6 mmol P ⁺ 0.6 mmol	Dietary management of renal failure in child from birth to 10 years.	Renastart powder: 400 gram = £29.81
Powder provides: protein 7.5 g, carbohydrate 62.5 g, fat 23.8 g, energy 2071 kJ (494 kcal)/100 g.									
Supportan® (Fresenius Kabi Ltd)	Liquid (sip feed) per 100 mL	630 kJ (150 kcal)	10 g cows' milk	12.4 g (sugars 7.5 g)	6.7 g	1.5 g	Gluten-free Residual lactose Contains fish oil	Nutritional supplement in patients with pancreatic cancer or with lung cancer undergoing chemotherapy Not suitable for child under 1 year; use with caution in child 1-4 years	Supportan drink: cappuccino 800 ml = £11.60; tropical fruits 200 ml = £2.90; 800 ml = £11.60

Table 4 Feed supplements

High-energy supplements

High-energy supplements: carbohydrate

Flavoured carbohydrate supplements are not suitable for child under 1 year; liquid supplements should be diluted before use in child under 5 years.

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Maxijul® Super Soluble (Nutricia Ltd)	Powder per 100 g	1615 kJ (380 kcal)	Nil	95 g Glucose polymer (sugars 8.6 g)	Nil	Nil	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high or readily available carbohydrate supplement.	Maxijul Super Soluble powder: 4x132g sachets = £7.25; 1x200 gram = £2.91; 1x25000 gram = £174.08
Polycal® (Nutricia Ltd)	Powder per 100 g	1630 kJ (384 kcal)	Nil	96 g Maltodextrin (sugars 6 g)	Nil	Nil	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high or readily available carbohydrate supplement.	Polycal powder: 400 gram = £4.84

	Liquid per 100 mL	1050 kJ (247 kcal)	Nil	61.9 g Maltodextrin (sugars 12.2 g)	Nil	Nil		Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high or readily available carbohydrate supplement.	Polycal liquid: neutral, orange 200 ml = £1.92
S.O.S. [®] (Vitafo International Ltd)	Powder per 100 g	1590 kJ (380 kcal)	Nil	95 g (sugars 9 g)	Nil	Nil		For use as an emergency regimen in the dietary management of inborn errors of metabolism in adults and children from birth.	S.O.S10 oral powder 30x21g sachets = £8.26; S.O.S15 oral powder 30x31g sachets = £12.19; S.O.S20 oral powder 30x42g sachets = £16.53; S.O.S25 oral powder 30x52g sachets = £20.44
Contents of each sachet should be reconstituted with water to a total volume of 200mL									
Vitajoule [®] (Vitafo International Ltd)	Powder per 100 g	1590 kJ (380 kcal)	Nil	95 g Dried glucose syrup (sugars 9 g)	Nil	Nil	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high or readily available carbohydrate supplement. Flavoured carbohydrate supplements are not suitable for child under 1 year; liquid supplements should be diluted before use in child under 5 years.	Vitajoule powder: 500 gram = £4.94
High-energy supplements: fat									
Liquid supplements should be diluted before use in child under 5 years									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Calogen [®] (Nutricia Ltd)	Liquid (sip or tube feed) per 100 mL	1850 kJ (450 kcal)	Nil	0.1 g (sugar nil)	50.0 g	Nil	Banana and strawberry flavours not suitable for child under 3 years. Gluten-free. Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat supplement, with or without fluid and electrolyte restrictions.	Calogen emulsion: banana 500 ml = £12.11; neutral, strawberry 200 ml = £4.92; 500 ml = £12.11
Fresubin [®] 5 kcal Shot (Fresenius Kabi Ltd)	Liquid (emulsion) per 100 mL	2100 kJ (500 kcal)	Nil	4.0 g (sucrose)	53.8 g	0.4 g	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat (or fat and carbohydrate) supplement. Liquid supplements should be diluted before use in child under 5 years. Not suitable for child under 3 years.	Fresubin 5kcal shot drink: lemon, neutral 480 ml = £11.96
Liquigen [®] (Nutricia Ltd)	Liquid (emulsion) per 100 mL	1850 kJ (450 kcal)	Nil	Nil	50 g (MCT 97 %) Fractionated coconut oil	Nil	Gluten-free Lactose-free	Steatorrhoea associated with cystic fibrosis of the pancreas, intestinal lymphangiectasia, intestinal surgery, chronic liver disease, liver cirrhosis, other proven malabsorption syndromes, ketogenic diet in epilepsy, and in type 1 lipoproteinaemia Not suitable for child under 1 year	Liquigen emulsion: 250 ml = £10.36

High-energy supplements: fat (product list continued)									
Liquid supplements should be diluted before use in child under 5 years									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Medium-chain Triglyceride (MCT) Oil (Nutricia Ltd)	Liquid per 100 mL	3515 kJ (855 kcal)	Nil	Nil	MCT 100 %	Nil		Nutritional supplement for steatorrhea associated with cystic fibrosis of the pancreas, intestinal lymphangiectasia, intestinal surgery, chronic liver disease and liver cirrhosis, other proven malabsorption syndromes, ketogenic diet in management of epilepsy, type 1 hyperlipoproteinaemia	MCT oil: 500 ml = £16.43
FAT AND CARBOHYDRATE									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Duocal [®] Super Soluble (Nutricia Ltd)	Powder per 100 g	2061 kJ (492 kcal)	Nil	72.7 g (sugars 6.5 g)	22.3 g (MCT 35%)	Nil		Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat (or fat and carbohydrate) supplement.	Duocal Super Soluble powder: 400 gram = £20.23
Energivit [®] (Nutricia Ltd)	Standard dilution (15%) of powder per 100 mL	309 kJ (74 kcal)	Nil	10 g (sugars 900 mg)	3.75 g	Nil	Lactose-free With vitamins, minerals, and trace elements	For children requiring additional energy, vitamins, minerals, and trace elements following a protein-restricted diet	Energivit powder: 400 gram = £24.60
Powder provides: carbohydrate 66.7 g, fat 25 g, energy 2059 kJ (492 kcal)/100 g.									
High-energy supplements: protein									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
ProSource [®] Jelly (Nutrino Ltd)	Semi-solid per 100 mL	315 kJ (75 kcal)	16.9 g collagen protein hydrolysate whey protein isolate	Less than 1 g	Nil	Less than 1 g	Gluten-free Lactose-free Contains porcine derivatives	Hypoproteinaemia Not recommended for child under 3 years	ProSource jelly: fruit punch, orange 118 ml = £1.99
Protifar [®] (Nutricia Ltd)	Powder per 100 g	1580 kJ (373 kcal)	88.5 g cows' milk	less than 1.5 g	1.6 g	Nil	Gluten-free Residual lactose Electrolytes/100 mL: Na ⁺ 1.3 mmol K ⁺ 1.28 mmol Ca ²⁺ 33.75 mmol P ⁺ 22.58 mmol	Nutritional supplement for use in biochemically proven hypoproteinaemia.	Protifar powder: 225 gram = £9.84
Powder provides: protein 2.2 g per 2.5 g.									

PROTEIN AND CARBOHYDRATE									
Not recommended for child under 3 years									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Dialamine [®] (Nutricia Ltd)	Standard dilution (20%) of powder per 100 mL	264 kJ (62 kcal)	4.3 g protein equivalent (essential and non- essential amino acids)	11.2 g (sugars 10.2 g)	Nil	Nil	Contains vitamin C	Hypoproteinaemia, chronic renal failure, wound fistula leakage with excessive protein loss, conditions requiring a controlled nitrogen intake, and haemodialysis. Not suitable for child under 6 months.	Dialamine powder: 400 gram = £82.20
Powder provides: protein equivalent 25 g, carbohydrate 65 g, vitamin C 125 mg, energy 1530 kJ (360 kcal)/100 g.									
ProSource [®] Liquid (Nutrinovo Ltd)	Liquid per 30 mL	420 kJ (100 kcal)	10 g collagen protein whey protein isolate	15 g (sugars 8 g)	Nil	Nil	Gluten-free Lactose-free May contain porcine derivatives	Biochemically proven hypoproteinaemia Not recommended for child under 3 years.	ProSource liquid 30ml sachets: citrus berry, lemon, neutral, orange creme 100 sachet = £107.32
ProSource [®] Plus (Nutrinovo Ltd)	Liquid per 30 mL	420 kJ (100 kcal)	15 g collagen protein whey protein isolate	11 g (sugars 10 g)	Nil	Nil	Gluten-free Residual lactose Contains porcine derivatives	Hypoproteinaemia	ProSource Plus liquid 30ml sachets: citrus berry, neutral, orange creme 50 sachet = £76.33; 100 sachet = £152.66
PROTEIN, FAT, AND CARBOHYDRATE									
Not suitable for use in child under 3 years unless otherwise stated; not recommended for child 3-6 years unless otherwise stated									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Calogen [®] Extra (Nutricia Ltd)	Liquid (sip or tube feed) per 100 mL	1650 kJ (400 kcal)	5.0 g caseinates, whey protein hydrolysate	4.5 g (sugars 3.5 g)	40.3 g	Nil	Contains residual lactose. Gluten-free	Disease related malnutrition, malabsorption states or other conditions requiring fortification with a high fat supplement with or without fluid restriction. Feed additives

Special additives for conditions of intolerance

Colief®

- ▶ Transient Lactase Deficiency. For dosage and administration details, consult product literature.

LIQUID, lactase 50 000 units/g

Colief 50,000units/g infant drops (Crosscare Ltd)

7 ml (ACBS) · NHS indicative price = £8.40

Fructose

- ▶ (Laevulose) For proven glucose/galactose intolerance

Dietade dietary foods fruit sugar (Margetts)

250 gram · No NHS indicative price available

Glucose

- ▶ (Dextrose monohydrate) For use as an energy supplement in sucrose-isomaltase deficiency

Glucose powder for oral use BP 1980 (Ennogen Healthcare Ltd)

500 gram (ACBS) · No NHS indicative price available · Drug Tariff (Part VIIIA Category C) price = £1.75

Glucose powder for oral use BP 1980 (Thornton & Ross Ltd)

500 gram (ACBS) · NHS indicative price = £1.75 · Drug Tariff (Part VIIIA Category C) price = £1.75

Feed thickeners and pre-thickened drinks

Carobel, Instant®

- ▶ For thickening feeds in the treatment of vomiting.

POWDER, carob seed flour.

Instant Carobel powder (Cow & Gate Ltd)

135 gram (ACBS) · NHS indicative price = £2.98

Multi-thick®

- ▶ For thickening of liquids and foods in dysphagia. Not suitable for child under 3 years.

POWDER, modified maize starch, gluten and lactose-free.

Multi-thick powder (Abbott Laboratories Ltd)

250 gram (ACBS) · NHS indicative price = £4.83

Nutilis® Clear

- ▶ For thickening of liquids or foods in dysphagia. Not suitable for children under 3 years.

POWDER, dried glucose syrup, xanthan gum, guar gum, gluten- and lactose-free.

Nutilis Clear powder (Nutricia Ltd)

175 gram (ACBS) · NHS indicative price = £8.46

Nutilis® Powder

- ▶ For thickening of food and fluidin dysphagia. Not suitable for child under 3 years.

POWDER, carbohydrate 87.5 g, energy 1545 kJ (363 kcal)/100 g, contains modified starch. Gluten-free and lactose-free.

Nutilis powder (Nutricia Ltd)

300 gram (ACBS) · NHS indicative price = £5.66

Resource® Thickened Drink

- ▶ For dysphagia. Not suitable for children under 3 years.

LIQUID, carbohydrate: orange 21 g; apple 23 g, energy: orange 376 kJ (89 kcal); apple 396 kJ (95 kcal)/100 mL.

Resource Thickened Drink custard apple (Nestle Health Science)

114 ml (ACBS) · NHS indicative price = £0.78

Resource Thickened Drink custard orange (Nestle Health Science)

114 ml (ACBS) · NHS indicative price = £0.78

Resource Thickened Drink syrup orange (Nestle Health Science)

114 ml (ACBS) · NHS indicative price = £0.78

Resource® ThickenUp Clear

- ▶ For thickening of liquids or foods in dysphagia. Not suitable for children under 3 years.

POWDER, maltodextrin (corn, potato), xanthan gum, potassium chloride. Gluten-free. May contain milk (tin only).

Resource ThickenUp Clear powder (Nestle Health Science)

127 gram (ACBS) · NHS indicative price = £8.46

Resource® ThickenUp®

- ▶ For thickening of foods in dysphagia. Suitable for children above 3 years of age.

POWDER, modified maize starch. Gluten-free.

Resource ThickenUp powder (Nestle Health Science)

227 gram (ACBS) · NHS indicative price = £4.66

SLO Drinks®

- ▶ Nutritional supplement for patient hydration in the dietary management of dysphagia. Not suitable for children under 3 years.

POWDER, carbohydrate content varies with flavour and chosen consistency (3 consistencies available), see product literature.

SLO Drink Stage 1: IDDSI 2 Mildly Thick oral powder blackcurrant (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

SLO Drink Stage 1: IDDSI 2 Mildly Thick oral powder orange (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

SLO Drink Stage 2: IDDSI 3 Moderately Thick oral powder blackcurrant (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

SLO Drink Stage 2: IDDSI 3 Moderately Thick oral powder orange (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

Thick and Easy®

- ▶ For thickening of foods in dysphagia. Not suitable for children under 1 year except in cases of failure to thrive.

POWDER Modified maize starch

Thick & Easy Original powder (Fresenius Kabi Ltd)

225 gram (ACBS) · NHS indicative price = £5.57 | 4540 gram (ACBS) · NHS indicative price = £96.75

Thicken Aid®

- ▶ For thickening of foods in dysphagia. Not suitable for children under 1 year.

POWDER, modified maize starch, maltodextrin, gluten- and lactose-free.

Thicken Aid powder (Aymes International Ltd)

225 gram (ACBS) · NHS indicative price = £3.71

MMA/PA Maxamum powder (Nutricia Ltd)

500 gram (ACBS) · NHS indicative price = £176.20

Other inborn errors of metabolism

Cystine500®

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from 3 years.

POWDER, cystine 500 mg, carbohydrate 3.3 g, fat nil, energy 64 kJ (15 kcal)/4 g

Cystine500 oral powder sachets (Vitaflo International Ltd)

30 sachet (ACBS) · NHS indicative price = £61.02

DocOmega®

- ▶ Nutritional supplement for the dietary management of inborn errors of metabolism for adults and children from birth. POWDER, protein (cows' milk, soya) 100 mg, carbohydrate 3.2 g, fat 500 mg (of which docosahexaenoic acid 200 mg), fibre nil, energy 74 kJ (18 kcal)/4 g, with minerals

DocOmega oral powder 4g sachets (Vitaflo International Ltd)

30 sachet (ACBS) · NHS indicative price = £44.16

EAA® Supplement

- ▶ Nutritional supplement for the dietary management of disorders of protein metabolism including urea cycle disorders in children over 3 years.

POWDER, protein equivalent (essential amino acids) 5 g, carbohydrate 4 g, fat nil, energy 151 kJ (36 kcal)/12.5 g, with vitamins, minerals, and trace elements.

EAA Supplement oral powder 12.5g sachets (Vitaflo International Ltd)

50 sachet (ACBS) · NHS indicative price = £230.27

Isoleucine50®

- ▶ Nutritional supplement for use in the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, isoleucine 50 mg, carbohydrate 3.8 g, fat nil, energy 63 kJ (15 kcal)/4 g

Isoleucine50 oral powder 4g sachets (Vitaflo International Ltd)

30 sachet (ACBS) · NHS indicative price = £61.02

KeyOmega®

- ▶ Nutritional supplement for the dietary management of inborn errors of metabolism. POWDER, protein (cows' milk, soya) 170 mg, carbohydrate 2.8 g, fat 800 mg (of which arachidonic acid 200 mg, docosahexaenoic acid 100 mg), energy 80 kJ (19 kcal)/4 g.

KeyOmega oral powder 4g sachets (Vitaflo International Ltd)

30 sachet (ACBS) · NHS indicative price = £45.16

Leucine100®

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, leucine 100 mg, carbohydrate 3.7 g, fat nil, energy 63 kJ (15 kcal)/4 g

Leucine100 oral powder sachets (Vitaflo International Ltd)

30 sachet (ACBS) · NHS indicative price = £61.02

Low protein drink

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children over 1 year.

POWDER, protein (cows' milk) 4.5 g (phenylalanine 100 mg), carbohydrate 59.5 g, fat 29.9 g, fibre nil, energy 2194 kJ (528 kcal)/100 g, with vitamins, minerals, and trace elements. Contains lactose. Termed *Milupa*® *lp-drink* by manufacturer.**Milupa LP drink** (Nutricia Ltd)

400 gram (ACBS) · NHS indicative price = £10.00

Phenylalanine50®

- ▶ Nutritional supplement for use in the dietary management of inborn errors of metabolism in adults and children from birth. POWDER, phenylalanine 50 mg, carbohydrate 3.8 g, fat nil, energy 63 kJ (15 kcal)/4 g

Phenylalanine50 oral powder sachets (Vitaflo International Ltd)

30 sachet (ACBS) · NHS indicative price = £59.25

ProZero®

- ▶ A protein-free nutritional supplement for the dietary management of inborn errors of metabolism in children over 6 months and adults. LIQUID, carbohydrate 8.1 g (of which sugars 3.5 g), fat 3.8 g, energy 278 kJ (66 kcal)/100 mL. Contains lactose.

ProZero liquid (Vitaflo International Ltd)

250 ml (ACBS) · NHS indicative price = £1.62 | 1000 ml (ACBS) · NHS indicative price = £6.50

Tyrosine1000®

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, tyrosine 1 g, carbohydrate 2.9 g, fat nil, energy 63 kJ (15 kcal)/4-g sachet.

Tyrosine1000 oral powder 4g sachets (Vitaflo International Ltd)

30 sachet (ACBS) · NHS indicative price = £5.57

Valine50®

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, valine 50 mg, carbohydrate 3.8 g, fat nil, energy 63 kJ (15 kcal)/4 g

Valine50 oral powder 4g sachets (Vitaflo International Ltd)

30 sachet (ACBS) · NHS indicative price = £61.02

Phenylketonuria

Easiphen®

- ▶ Nutritional supplement for the dietary management of proven phenylketonuria in children over 8 years. LIQUID, protein equivalent (containing essential and non-essential amino acids except phenylalanine) 6.7 g, carbohydrate 5.1 g, fat 2 g, energy 275 kJ (65 kcal)/100 mL with vitamins, minerals, and trace elements.

Easiphen liquid (Nutricia Ltd)

250 ml (ACBS) · NHS indicative price = £10.46

L-Tyrosine

- ▶ Nutritional supplement for the dietary management of phenylketonuria in pregnant women with low plasma tyrosine concentrations.

POWDER, L-tyrosine 20 g, carbohydrate 76.8 g, fat nil, energy 1612 kJ (379 kcal)/100 g.

L-Tyrosine powder (Nutricia Ltd)

100 gram (ACBS) · NHS indicative price = £24.52

Lophlex®

- ▶ Nutritional supplement for the dietary management of proven phenylketonuria in children over 8 years and adults including pregnant women. POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine) 20 g, carbohydrate 2.5 g, fat 60 mg, fibre 220 mg, energy 385 kJ (91 kcal)/27.8-g sachet, with vitamins, minerals, and trace elements.

Lophlex powder 27.8g sachets berry (Nutricia Ltd)

30 sachet (ACBS) · NHS indicative price = £314.10

Lophlex powder 27.8g sachets orange (Nutricia Ltd)

30 sachet (ACBS) · NHS indicative price = £314.10

Lophlex powder 27.8g sachets unflavoured (Nutricia Ltd)

30 sachet (ACBS) · NHS indicative price = £314.10

Loprofin® PKU Drink

- ▶ Nutritional supplement for the dietary management of phenylketonuria in children over 1 year and adults. LIQUID, protein (cows' milk) 400 mg (phenylalanine 10 mg), lactose 9.4 g, fat 2 g, energy 165 kJ (40 kcal)/100 mL.

Loprofin PKU drink (Nutricia Ltd)

200 ml (ACBS) · NHS indicative price = £0.81

Loprofin® Sno-Pro

- ▶ Nutritional supplement for the dietary management of phenylketonuria, chronic renal failure and other inborn errors of amino acid metabolism.

LIQUID, protein (cows' milk) 220 mg (phenylalanine 12.5 mg), carbohydrate 8 g, fat 3.8 g, energy 273 kJ (65 kcal)/100 mL. Contains lactose.

Loprofin SNO-PRO drink (Nutricia Ltd)

200 ml (ACBS) · NHS indicative price = £1.35

Phlexy-10® Exchange System

- ▶ Nutritional supplement for the dietary management of phenylketonuria.

CAPSULES, protein equivalent (essential and non-essential amino acids except phenylalanine) 416.5 mg/capsule.

Phlexy-10 600mg capsules (Nutricia Ltd)

200 capsule (ACBS) · NHS indicative price = £47.03

TABLETS, protein equivalent (essential and non-essential amino acids except phenylalanine) 833 mg tablet.

TYR Anamix® Junior

- ▶ Nutritional supplement for the dietary management of proven tyrosinaemia in children 1–10 years. POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 8.4 g, carbohydrate 11 g, fat 3.9 g, energy 475 kJ (113 kcal)/29-g sachet, with vitamins, minerals, and trace elements.

TYR Anamix Junior oral powder 29g sachets (Nutricia Ltd)

30 sachet (ACBS) · NHS indicative price = £206.40

TYR Anamix® Junior LQ

- ▶ Nutritional supplement for the dietary management of tyrosinaemia type 1 (when nitisinone (NTBC) is used, see nitisinone p. 662), type II, and type III, in children over 1 year. LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 10 g, carbohydrate 8.8 g, fat 4.8 g, fibre 310 mg, energy 500 kJ (119 kcal)/125 mL, with vitamins, minerals and trace elements.

TYR Anamix Junior LQ liquid (Nutricia Ltd)

125 ml (ACBS) · NHS indicative price = £10.09

TYR cooler® 45

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children over 3 years and adults. LIQUID, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 15 g, carbohydrate 7 g, fat 500 mg, energy 393 kJ (92 kcal)/130 mL, with vitamins, minerals, and trace elements.

TYR orange cooler15 liquid (Vitaflor International Ltd)

130 ml (ACBS) · NHS indicative price = £12.68

TYR red cooler10 liquid (Vitaflor International Ltd)

87 ml (ACBS) · NHS indicative price = £7.89

TYR red cooler15 liquid (Vitaflor International Ltd)

130 ml (ACBS) · NHS indicative price = £12.68

TYR red cooler20 liquid (Vitaflor International Ltd)

174 ml (ACBS) · NHS indicative price = £16.48

TYR express15®

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children over 8 years and adults. POWDER, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 15 g, carbohydrate 3.4 g, fat less than 100 mg, energy 310 kJ (74 kcal)/25 g, with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1126.

TYR express15 oral powder 25g sachets (Vitaflor International Ltd)

30 sachet (ACBS) · NHS indicative price = £373.05

TYR express20®

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children over 8 years. POWDER, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 20 g, carbohydrate 4.7 g, fat less than 100 mg, energy 416 kJ (99 kcal)/34 g, with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1126.

TYR express20 oral powder 34g sachets (Vitaflor International Ltd)

30 sachet (ACBS) · NHS indicative price = £481.98

TYR Gel®

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children 1–10 years. GEL, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 10 g, carbohydrate 10.3 g, fat less than 100 mg, energy 339 kJ (81 kcal)/24 g, with vitamins, minerals and trace elements. To flavour unflavoured products, see FlavourPac p. 1126.

TYR gel oral powder 24g sachets (Vitaflor International Ltd)

30 sachet (ACBS) · NHS indicative price = £240.17

TYR Lophlex® LQ 20

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children over 4 years and adults, including pregnant women (in conjunction with standard folic acid supplementation). LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 20 g, carbohydrate 8.8 g, fat less than 500 mg, fibre 500 mg, energy 509 kJ (120 kcal)/125 mL, with vitamins, minerals, and trace elements.

TYR Lophlex LQ 20 liquid (Nutricia Ltd)

125 ml (ACBS) · NHS indicative price = £17.94

XPHEN TYR Tyrosidon®

- ▶ Nutritional supplement for the management of tyrosinaemia in children and adults where plasma-methionine concentrations are normal. POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g. To flavour unflavoured products, see Modjul Flavour System p. 1126.

XPHEN TYR Tyrosidon Free AA Mix powder (Nutricia Ltd)

500 gram (ACBS) · NHS indicative price = £208.24

XPTM Tyrosidon®

- ▶ Nutritional supplement for the dietary management of tyrosinaemia type I in children and adults where plasma-methionine concentrations are above normal. POWDER, protein equivalent (essential and non-essential amino acids except methionine, phenylalanine, and tyrosine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g. To flavour unflavoured products, see Modjul Flavour System p. 1126.

XPTM Tyrosidon powder (Nutricia Ltd)

500 gram · NHS indicative price = £91.31

Appendix 3

Cautionary and advisory labels for dispensed medicines

Guidance for cautionary and advisory labels

Medicinal forms within BNF publications include code numbers of the cautionary labels that pharmacists are recommended to add when dispensing. It is also expected that pharmacists will counsel patients and carers when necessary.

Counselling needs to be related to the age, experience, background, and understanding of the individual patient or carer. The pharmacist should ensure understanding of how to take or use the medicine and how to follow the correct dosage schedule. Any effects of the medicine on co-ordination, performance of skilled tasks (e.g. driving or work), any foods or medicines to be avoided, and what to do if a dose is missed should also be explained. Other matters, such as the possibility of staining of the clothes or skin, or discolouration of urine or stools by a medicine should also be mentioned.

For some medicines there is a special need for counselling, such as an unusual method or time of administration or a potential interaction with a common food or domestic remedy, and this should be mentioned where necessary.

Original packs

Most preparations are dispensed in unbroken original packs that include further advice for the patient in the form of patient information leaflets. The advice in patient information leaflets may be less appropriate when the medicine is for a child, particularly for unlicensed medicines or indications. Pharmacists should explain discrepancies to carers, if necessary. The patient information leaflet should only be withheld in exceptional circumstances because it contains other information that should be provided. Label 10 may be of value where appropriate. More general leaflets advising on the administration of preparations such as eye drops, eye ointments, inhalers, and suppositories are also available.

Scope of labels

In general no label recommendations have been made for injections on the assumption that they will be administered by a healthcare professional or a well-instructed patient. The labelling is not exhaustive and pharmacists are recommended to use their professional discretion in labelling new preparations and those for which no labels are shown.

Individual labelling advice is not given on the administration of the large variety of antacids. In the absence of instructions from the prescriber, and if on enquiry the patient has had no verbal instructions, the directions given under 'Dose' should be used on the label.

It is recognised that there may be occasions when pharmacists will use their knowledge and professional discretion and decide to omit one or more of the recommended labels for a particular patient. In this case counselling is of the utmost importance. There may also be an occasion when a prescriber does not wish additional cautionary labels to be used, in which case the prescription should be endorsed 'NCL' (no cautionary labels). The exact wording that is required instead should then be specified on the prescription.

Pharmacists label medicines with various wordings in addition to those directions specified on the prescription. Such labels include 'Shake the bottle', 'For external use only', and 'Store in a cool place', as well as 'Discard.... days after opening' and 'Do not use after....', which apply particularly to antibiotic mixtures, diluted liquid and topical preparations, and to eye-drops. Although not listed in the *BNF for Children* these labels should continue to be used when appropriate; indeed, 'For external use only' is a legal requirement on external liquid

preparations, while 'Keep out of the reach of children' is a legal requirement on all dispensed medicines. Care should be taken not to obscure other relevant information with adhesive labelling.

It is the usual practice for patients to take standard tablets with water or other liquid and for this reason no separate label has been recommended.

The label wordings recommended by the *BNF for Children* apply to medicines dispensed against a prescription. Children and carers should be aware that a dispensed medicine should never be taken by, or shared with, anyone other than for whom the prescriber intended it. Therefore, the *BNF for Children* does not include warnings against the use of a dispensed medicine by persons other than for whom it was specifically prescribed.

The label or labels for each preparation are recommended after careful consideration of the information available. However, it is recognised that in some cases this information may be either incomplete or open to a different interpretation. The *BNF for Children* will therefore be grateful to receive any constructive comments on the labelling suggested for any preparation.

Recommended label wordings

For *BNF for Children* 2011–2012, a revised set of cautionary and advisory labels were introduced. All of the existing labels were user-tested, and the revised wording selected reflects terminology that is better understood by patients.

Wordings which can be given as separate warnings are labels 1–19, 29–50, and 32. Wordings which can be incorporated in an appropriate position in the directions for dosage or administration are labels 21–28. A label has been omitted for number 20; labels 31 and 33 no longer apply to any medicines in the *BNF for Children* and have therefore been deleted.

If separate labels are used it is recommended that the wordings be used without modification. If changes are made to suit computer requirements, care should be taken to retain the sense of the original.

Welsh labels

Comprehensive Welsh translations are available for each cautionary and advisory label.

Labels

1 Warning: This medicine may make you sleepy

Rhybudd: Gall y feddyginiath hon eich gwneud yn gysglyd

To be used on *preparations for children* containing antihistamines, or other preparations given to children where the warnings of label 2 on driving or alcohol would not be appropriate.

2 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol

Rhybudd: Gall y feddyginiath hon eich gwneud yn gysglyd. Peidiwch â grru, defnyddio offer llaw neu beiriannau os yw hyn yn digwydd. Peidiwch ag yfed alcohol

To be used on *preparations for adults that can cause drowsiness*, thereby affecting coordination and the ability to drive and operate hazardous machinery; label 1 is more appropriate for children. It is an offence to drive while under the influence of drink or drugs.

Some of these preparations only cause drowsiness in the first few days of treatment and some only cause drowsiness in higher doses.

In such cases the patient should be told that the advice applies until the effects have worn off. However many of these preparations can produce a slowing of reaction time and a loss of mental concentration that can have the same effects as drowsiness.

Avoidance of alcoholic drink is recommended because the effects of CNS depressants are enhanced by alcohol. Strict prohibition however could lead to some patients not taking the medicine. Pharmacists should therefore explain the risk and encourage compliance, particularly in patients who may think they already tolerate the effects of alcohol (see also label 5). Queries from patients with epilepsy regarding fitness to drive should be referred back to the patient's doctor.

Side-effects unrelated to drowsiness that may affect a patient's ability to drive or operate machinery safely include *blurred vision, dizziness, or nausea*. In general, no label has been recommended to cover these cases, but the patient should be suitably counselled.

- 3 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines**

Rhybudd: Gall y feddyginiaeth hon eich gwneud yn gysglyd. Peidiwch â gyrnu, defnyddio offer llaw neu beiriannau os wy hyn yn digwydd

To be used on *preparations containing monoamine-oxidase inhibitors*; the warning to avoid alcohol and dealcoholised (low alcohol) drink is covered by the patient information leaflet.

Also to be used as for label 2 but where alcohol is not an issue.

- 4 Warning: Do not drink alcohol**

Rhybudd: Peidiwch ag yfed alcohol

To be used on *preparations where a reaction such as flushing may occur if alcohol is taken* (e.g. metronidazole). Alcohol may also enhance the hypoglycaemia produced by some oral antidiabetic drugs but routine application of a warning label is not considered necessary.

Patients should be advised not to drink alcohol for as long as they are receiving/using a course of medication, and in some cases for a period of time after the course is finished.

- 5 Do not take indigestion remedies 2 hours before or after you take this medicine**

Peidiwch â chymryd meddyginiaethau camdreuliad 2 awr cyn neu ar ôl y feddyginiaeth hon

To be used with label 25 on *preparations coated to resist gastric acid* (e.g. enteric-coated tablets). This is to avoid the possibility of premature dissolution of the coating in the presence of an alkaline pH.

Label 5 also applies to drugs such as gabapentin where the *absorption is significantly affected by antacids*. Pharmacists will be aware (from a knowledge of physiology) that the usual time during which indigestion remedies should be avoided is at least 2 hours before and after the majority of medicines have been taken; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.

- 6 Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine**

Peidiwch â chymryd meddyginiaethau camdreuliad neu feddyginiaethau sy'n cynnwys haearn neu sinc, 2 awr cyn neu ar ôl y feddyginiaeth hon

To be used on *preparations containing ofloxacin and some other quinolones, doxycycline, lymecycline, minocycline, and penicillamine*. These drugs chelate calcium, iron, and zinc and are less well absorbed when taken with calcium-containing antacids or preparations containing iron or zinc. Pharmacists will be aware (from a knowledge of physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.

- 7 Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine**

Peidiwch â chymryd llaeth, meddyginiaethau camdreuliad, neu feddyginiaeth sy'n cynnwys haearn neu sinc, 2 awr cyn neu ar ôl cymryd y feddyginiaeth hon

To be used on *preparations containing ciprofloxacin, norfloxacin, or tetracyclines that chelate calcium, iron, magnesium, and zinc*, and are thus less available for absorption. Pharmacists will be aware (from a knowledge of physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient. Doxycycline, lymecycline, and minocycline are less liable to form chelates and therefore only require label 6 (see above).

- 8 Warning: Do not stop taking this medicine unless your doctor tells you to stop**

Rhybudd: Peidiwch â stopio cymryd y feddyginiaeth hon, oni bai fod eich meddyg yn dweud wrthyhych am stopio

To be used on *preparations that contain a drug which is required to be taken over long periods without the patient necessarily perceiving any benefit* (e.g. antituberculous drugs).

Also to be used on *preparations that contain a drug whose withdrawal is likely to be a particular hazard* (e.g. clonidine for hypertension). Label 10 (see below) is more appropriate for corticosteroids.

- 9 Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop**

Gadewch yr un faint o amser rhwng pob dôs yn ystod y dydd.

Parhewch i gymryd y feddyginiaeth nes bod y cyfan wedi'i orffen, oni bai eich bod yn cael cynghor i stopio

To be used on *preparations where a course of treatment should be completed* to reduce the incidence of relapse or failure of treatment.

The preparations are antimicrobial drugs given by mouth. Very occasionally, some may have severe side-effects (e.g. diarrhoea in patients receiving clindamycin) and in such cases the patient may need to be advised of reasons for stopping treatment quickly and returning to the doctor.

- 10 Warning: Read the additional information given with this medicine**

Rhybudd: Darllenwch y wybodaeth ychwanegol gyda'r feddyginiaeth hon

To be used particularly on *preparations containing anticoagulants, lithium, and oral corticosteroids*. The appropriate treatment card should be given to the patient and any necessary explanations given.

This label may also be used on other preparations to remind the patient of the instructions that have been given.

- 11 Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds**

Diogelwch eich croen rhag golau'r haul, hyd yn oed ar ddiwrnod braf ond cymylog. Peidiwch â defnyddio gwely haul

To be used on *preparations that may cause phototoxic or photoallergic reactions* if the patient is exposed to ultraviolet radiation. Exposure to high intensity ultraviolet radiation from sunray lamps and sunbeds is particularly likely to cause reactions.

- 12 Do not take anything containing aspirin while taking this medicine**

Peidiwch â chymryd unrhyw beth sy'n cynnwys aspirin gyda'r feddyginiaeth hon

To be used on *preparations containing sulfapyrazone* whose activity is reduced by aspirin.

Label 12 should not be used for anticoagulants since label 10 is more appropriate.

- 13 Dissolve or mix with water before taking**

Gadewch i ddatodi mewn dŵr cyn ei gymryd

To be used on *preparations that are intended to be dissolved in water* (e.g. soluble tablets) or *mixed with water* (e.g. powders,

granules) before use. In a few cases other liquids such as fruit juice or milk may be used.

- 14 This medicine may colour your urine. This is harmless**
Gall y feddyginiaeth hon liwio eich dŵr. Nid yw hyn yn arwydd o ddrwg
 To be used on *preparations that may cause the patient's urine to turn an unusual colour*. These include triamterene (blue under some lights), levodopa (dark reddish), and rifampicin (red).
- 15 Caution: flammable. Keep your body away from fire or flames after you have put on the medicine**
Rhybudd: Fflamadwy. Ar ôl rhoi'r feddyginiaeth ymlaen, cadwch yn glir o dân neu fflamau
 To be used on *preparations containing sufficient flammable solvent to render them flammable if exposed to a naked flame*.
- 16 Dissolve the tablet under your tongue—do not swallow. Store the tablets in this bottle with the cap tightly closed. Get a new supply 8 weeks after opening**
Rhowch y dabled i doddî dan eich tafod - peidiwch â'i lyncu. Cadwch y tabledi yn y botel yma gyda'r caead wedi'i gau yn dynn. Gofynnwch am dabledi newydd 8 wythnos ar ôl ei hagar
 To be used on *glyceryl trinitrate tablets* to remind the patient not to transfer the tablets to plastic or less suitable containers.
- 17 Do not take more than... in 24 hours**
Peidiwch â chymryd mwy na... mewn 24 awr
 To be used on *preparations for the treatment of acute migraine* except those containing ergotamine, for which label 18 is used. The dose form should be specified, e.g. tablets or capsules.
 It may also be used on preparations for which no dose has been specified by the prescriber.
- 18 Do not take more than... in 24 hours. Also, do not take more than... in any one week**
Peidiwch â chymryd mwy na... mewn 24 awr. Hefyd, peidiwch â chymryd mwy na... mewn wythnos
 To be used on preparations containing ergotamine. The dose form should be specified, e.g. tablets or suppositories.
- 19 Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink alcohol**
Rhybudd: Bydd y feddyginiaeth hon yn eich gwneud yn gysglyd. Os ydych yn dal i deimlo'n gysglyd drannoeth, peidiwch â gyrru, defnyddio offer llaw neu beiriannau. Peidiwch ag yfed alcohol
 To be used on *preparations containing hypnotics (or some other drugs with sedative effects) prescribed to be taken at night*. On the rare occasions when hypnotics are prescribed for daytime administration (e.g. nitrazepam in epilepsy), this label would clearly not be appropriate. Also to be used as an *alternative to the label 2 wording* (the choice being at the discretion of the pharmacist) for *anxiolytics prescribed to be taken at night*.
 It is hoped that this wording will convey adequately the problem of residual morning sedation after taking 'sleeping tablets'.
- 21 Take with or just after food, or a meal**
Cymerwch gyda neu ar ôl bwyd
 To be used on *preparations that are liable to cause gastric irritation, or those that are better absorbed with food*. Patients should be advised that a *small amount of food is sufficient*.
- 22 Take 30 to 60 minutes before food**
Cymerwch 30 i 60 munud cyn bwyd
 To be used on some preparations whose *absorption is thereby improved*.
 Most oral antibacterials require label 23 instead (see below).

- 23 Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food**
Cymerwch y feddyginiaeth hon ar stomog wag. Mae hyn yn golygu awr cyn, neu 2 awr ar ôl bwyd
 To be used on *oral antibacterials whose absorption may be reduced by the presence of food and acid in the stomach*.
- 24 Suck or chew this medicine**
Bydd angen cnoi neu sugno'r feddyginiaeth hon
 To be used on *preparations that should be sucked or chewed*. The pharmacist should use discretion as to which of these words is appropriate.
- 25 Swallow this medicine whole. Do not chew or crush**
Llyncwch yn gyfan. Peidiwch â chnoi neu falu'n fân
 To be used on *preparations that are enteric-coated or designed for modified-release*.
 Also to be used on *preparations that taste very unpleasant or may damage the mouth if not swallowed whole*. Patients should be advised (where relevant) that some modified-release preparations can be broken in half, but that the halved tablet should still be swallowed whole, and not chewed or crushed.
- 26 Dissolve this medicine under your tongue**
Gadewch i'r feddyginiaeth hon doddî o dan y tafod
 To be used on *preparations designed for sublingual use*. Patients should be advised to hold under the tongue and avoid swallowing until dissolved. The buccal mucosa between the gum and cheek is occasionally specified by the prescriber.
- 27 Take with a full glass of water**
Cymerwch gyda llond gwydr o ddŵr
 To be used on *preparations that should be well diluted (e.g. chloral hydrate), where a high fluid intake is required (e.g. sulfonamides), or where water is required to aid the action (e.g. methylcellulose)*. The patient should be advised that 'a full glass' means at least 150 mL. In most cases fruit juice, tea, or coffee may be used.
- 28 Spread thinly on the affected skin only**
Taenwch yn denau ar y croen sydd wedi'i effeithio yn unig
 To be used on *external preparations* that should be applied sparingly (e.g. corticosteroids, dithranol).
- 29 Do not take more than 2 at any one time. Do not take more than 8 in 24 hours**
Peidiwch â chymryd mwy na 2 ar unrhyw un adeg. Peidiwch â chymryd mwy nag 8 mewn 24 awr
 To be used on containers of dispensed *solid dose preparations containing paracetamol for adults when the instruction on the label indicates that the dose can be taken on an 'as required' basis*. The dose form should be specified, e.g. tablets or capsules.
 This label has been introduced because of the serious consequences of overdose with paracetamol.
- 30 Contains paracetamol. Do not take anything else containing paracetamol while taking this medicine. Talk to a doctor at once if you take too much of this medicine, even if you feel well**
Yn cynnwys paracetamol. Peidiwch â chymryd unrhyw beth arall sy'n cynnwys paracetamol tra'n cymryd y feddyginiaeth hon. Siaradwch gyda'ch meddyg ar unwaith os ydych yn cymryd gormod, hyd yn oed os ydych yn teimlo'n iawn
 To be used on all containers of dispensed *preparations containing paracetamol*.
- 32 Contains aspirin. Do not take anything else containing aspirin while taking this medicine**
Yn cynnwys aspirin. Peidiwch â chymryd unrhyw beth arall sy'n cynnwys aspirin tra'n cymryd y feddyginiaeth hon
 To be used on containers of dispensed *preparations containing aspirin when the name on the label does not include the word 'aspirin'*.

Dental Practitioners' Formulary

List of Dental Preparations

The following list has been approved by the appropriate Secretaries of State, and the preparations therein may be prescribed by dental practitioners on form FP10D (GP14 in Scotland, WP10D in Wales).

Licensed **sugar-free** versions, where available, are preferred. Licensed **alcohol-free** mouthwashes, where available, are preferred.

Aciclovir Cream, BP
 Aciclovir Oral Suspension, BP, 200 mg/5 mL
 Aciclovir Tablets, BP, 200 mg
 Aciclovir Tablets, BP, 800 mg
 Amoxicillin Capsules, BP
 Amoxicillin Oral Powder, DPF
 Amoxicillin Oral Suspension, BP
 Artificial Saliva Gel, DPF
 Artificial Saliva Oral Spray, DPF
 Artificial Saliva Pastilles, DPF
 Artificial Saliva Protective Spray, DPF
 Artificial Saliva Substitutes as listed below (to be prescribed only for indications approved by ACBS (patients suffering from dry mouth as a result of having or, having undergone, radiotherapy or sicca syndrome):
BioXtra[®] Gel Mouthspray
BioXtra[®] Moisturising Gel
Glandosane[®]
Saliveze[®]
 Artificial Saliva Substitute Spray, DPF
 Aspirin Tablets, Dispersible, BP
 Azithromycin Capsules, 250 mg, DPF
 Azithromycin Oral Suspension, 200 mg/5 mL, DPF
 Azithromycin Tablets, 250 mg, DPF
 Azithromycin Tablets, 500 mg, DPF
 Beclometasone Pressurised Inhalation, BP,
 50 micrograms/metered inhalation, CFC-free, as:
Clenil Modulite[®]
 Benzylamine Mouthwash, BP 0.15%
 Benzylamine Oromucosal Spray, BP 0.15%
 Betamethasone Soluble Tablets, 500 micrograms, DPF
 Carbamazepine Tablets, BP
 Cefalexin Capsules, BP
 Cefalexin Oral Suspension, BP
 Cefalexin Tablets, BP
 Cefradine Capsules, BP
 Cetirizine Oral Solution, BP, 5 mg/5 mL
 Cetirizine Tablets, BP, 10 mg
 Chlorhexidine Gluconate Gel, BP
 Chlorhexidine Mouthwash, BP
 Chlorhexidine Oral Spray, DPF
 Chlorphenamine Oral Solution, BP
 Chlorphenamine Tablets, BP
 Choline Salicylate Dental Gel, BP
 Clarithromycin Oral Suspension, 125 mg/5 mL, DPF
 Clarithromycin Oral Suspension, 250 mg/5 mL, DPF
 Clarithromycin Tablets, BP
 Clindamycin Capsules, BP
 Co-amoxiclav Tablets, BP, 250/125 (amoxicillin 250 mg as trihydrate, clavulanic acid 125 mg as potassium salt)
 Co-amoxiclav Oral Suspension, BP, 125/31 (amoxicillin 125 mg as trihydrate, clavulanic acid 31.25 mg as potassium salt)/5 mL
 Co-amoxiclav Oral Suspension, BP, 250/62 (amoxicillin 250 mg as trihydrate, clavulanic acid 62.5 mg as potassium salt)/5 mL
 Diazepam Oral Solution, BP, 2 mg/5 mL
 Diazepam Tablets, BP

Diclofenac Sodium Tablets, Gastro-resistant, BP
 Dihydrocodeine Tablets, BP, 30 mg
 Doxycycline Tablets, Dispersible, BP
 Doxycycline Capsules, BP, 100 mg
 Doxycycline Tablets, 20 mg, DPF
 Ephedrine Nasal Drops, BP
 Erythromycin Ethyl Succinate Oral Suspension, BP
 Erythromycin Ethyl Succinate Tablets, BP
 Erythromycin Stearate Tablets, BP
 Erythromycin Tablets, Gastro-resistant, BP
 Fluconazole Capsules, 50 mg, DPF
 Fluconazole Oral Suspension, 50 mg/5 mL, DPF
 Hydrocortisone Cream, BP, 1%
 Hydrocortisone Oromucosal Tablets, BP
 Hydrogen Peroxide Mouthwash, BP, 6%
 Ibuprofen Oral Suspension, BP, sugar-free
 Ibuprofen Tablets, BP
 Lansoprazole Capsules, Gastro-resistant, BP
 Lidocaine Ointment, BP, 5%
 Lidocaine Spray 10%, DPF
 Loratadine Syrup, 5 mg/5 mL, DPF
 Loratadine Tablets, BP, 10 mg
 Menthol and Eucalyptus Inhalation, BP 1980
 Metronidazole Oral Suspension, BP
 Metronidazole Tablets, BP
 Miconazole Cream, BP
 Miconazole Oromucosal Gel, BP
 Miconazole and Hydrocortisone Cream, BP
 Miconazole and Hydrocortisone Ointment, BP
 Nystatin Oral Suspension, BP
 Omeprazole Capsules, Gastro-resistant, BP
 Oxytetracycline Tablets, BP
 Paracetamol Oral Suspension, BP
 Paracetamol Tablets, BP
 Paracetamol Tablets, Soluble, BP
 Phenoxymethylpenicillin Oral Solution, BP
 Phenoxymethylpenicillin Tablets, BP
 Promethazine Hydrochloride Tablets, BP
 Promethazine Oral Solution, BP
 Saliva Stimulating Tablets, DPF
 Sodium Chloride Mouthwash, Compound, BP
 Sodium Fluoride Mouthwash, BP
 Sodium Fluoride Oral Drops, BP
 Sodium Fluoride Tablets, BP
 Sodium Fluoride Toothpaste 0.619%, DPF
 Sodium Fluoride Toothpaste 1.1%, DPF
 Sodium Fusidate Ointment, BP
 Temazepam Oral Solution, BP
 Temazepam Tablets, BP
 Tetracycline Tablets, BP
 Preparations in this list which are not included in the BP or BPC are described under Details of DPF preparations. For details of preparations that can be prescribed, see individual entries under the relevant drug monographs throughout the BNF publications.

Details of DPF preparations

Preparations on the List of Dental Preparations which are specified as DPF are described as follows in the DPF. Although brand names have sometimes been included for identification purposes preparations on the list should be prescribed by non-proprietary name.

Amoxicillin Oral Powder
 amoxicillin (as trihydrate) 3 g sachet

Artificial Saliva Gel

consists of lactoperoxidase, lactoferrin, lysozyme, glucose oxidase, xylitol in a gel basis

Artificial Saliva Oral Spray

(proprietary product: *Xerotin*) consists of water, sorbitol, carmellose (carboxymethylcellulose), potassium chloride, sodium chloride, potassium phosphate, magnesium chloride, calcium chloride and other ingredients, pH neutral

Artificial Saliva Pastilles

(proprietary product: *Salivix*), consists of acacia, malic acid, and other ingredients

Artificial Saliva Protective Spray

(proprietary product: *Aequasyl*) consists of oxidised glycerol triesters, silicon dioxide, flavouring agents, aspartame

Artificial Saliva Substitute Spray

(proprietary product: *AS Saliva Orthana Spray*) consists of mucin, methylparaben, benzalkonium chloride, EDTA, xylitol, peppermint oil, spearmint oil, mineral salts

Azithromycin Capsules

azithromycin 250 mg

Azithromycin Oral Suspension 200 mg/5 mL

azithromycin 200 mg/5 mL when reconstituted with water

Azithromycin Tablets

azithromycin 250 mg and 500 mg

Betamethasone Soluble Tablets 500 micrograms

betamethasone (as sodium phosphate) 500 micrograms

Chlorhexidine Oral Spray

(proprietary product: *Corsodyl Oral Spray*), chlorhexidine gluconate 0.2%

Clarithromycin Oral Suspension 125 mg/5 mL

clarithromycin 125 mg/5 mL when reconstituted with water

Clarithromycin Oral Suspension 250 mg/5 mL

clarithromycin 250 mg/5 mL when reconstituted with water

Doxycycline Tablets 20 mg

(proprietary product: *Periostat*), doxycycline (as hyclate) 20 mg

Fluconazole Capsules 50 mg

fluconazole 50 mg

Fluconazole Oral Suspension 50 mg/5 mL

(proprietary product: *Diflucan*), fluconazole 50 mg/5 mL when reconstituted with water

Lidocaine Spray 10%

(proprietary product: *Xylocaine Spray*), lidocaine 10% supplying 10 mg lidocaine/spray

Loratadine Syrup 5 mg/5 mL

loratadine 5 mg/5 mL

Saliva Stimulating Tablets

(proprietary product: *SST*), citric acid, malic acid and other ingredients in a sorbitol base

Sodium Fluoride Toothpaste 0.619%

(proprietary product: *Duraphat '2800 ppm' Toothpaste*), sodium fluoride 0.619%

Sodium Fluoride Toothpaste 1.1%

(proprietary product: *Duraphat '5000 ppm' Toothpaste*), sodium fluoride 1.1%

Nurse Prescribers' Formulary (NPF)

Nurse Prescribers' Formulary for Community Practitioners

List of preparations approved by the Secretary of State which may be prescribed on form FP10P (form HS21(N) in Northern Ireland, form GP10(N) in Scotland, forms WP10CN and WP10PN in Wales) by Nurses for National Health Service patients.

Community practitioners who have completed the necessary training may only prescribe items appearing in the nurse prescribers' list set out below. Community Practitioner Nurse Prescribers are recommended to prescribe generically, except where this would not be clinically appropriate or where there is no approved generic name.

This list is for reference only; see the BNF for full prescribing information.

Medicinal Preparations

Preparations on this list which are not included in the BP or BPC are described under Details of NPF preparations.

Almond Oil Ear Drops, BP
 Arachis Oil Enema, NPF
 Aspirin Tablets, Dispersible, 300 mg, BP (max. 96 tablets; max. pack size 32 tablets)
 Bisacodyl Suppositories, BP (includes 5-mg and 10-mg strengths)
 Bisacodyl Tablets, BP
 Catheter Maintenance Solution, Sodium Chloride, NPF
 Catheter Maintenance Solution, 'Solution G', NPF
 Catheter Maintenance Solution, 'Solution R', NPF
 Chlorhexidine Gluconate Alcoholic Solutions containing at least 0.05%
 Chlorhexidine Gluconate Aqueous Solutions containing at least 0.05%
 Choline Salicylate Dental Gel, BP
 Clotrimazole Cream 1%, BP
 Co-danthramer Capsules, NPF
 Co-danthramer Capsules, Strong, NPF
 Co-danthramer Oral Suspension, NPF
 Co-danthramer Oral Suspension, Strong, NPF
 Co-danthrusate Capsules, BP
 Co-danthrusate Oral Suspension, NPF
 Crothamiton Cream, BP
 Crothamiton Lotion, BP
 Dimeticone barrier creams containing at least 10%
 Dimeticone Lotion, NPF
 Docusate Capsules, BP
 Docusate Enema, NPF
 Docusate Oral Solution, BP
 Docusate Oral Solution, Paediatric, BP
 Econazole Cream 1%, BP
 Emollients as listed below:
 Aquadrate[®] 10% w/w Cream
 Arachis Oil, BP
 Balneum[®] Plus Cream
 Cetraben[®] Emollient Cream
 Dermamist[®]
 Diprobase[®] Cream
 Diprobase[®] Ointment
 Doublebase[®]
 Doublebase[®] Dayleve Gel
 E45[®] Cream
 E45[®] Itch Relief Cream
 Emulsifying Ointment, BP
 Eucerin[®] Intensive 10% w/w Urea Treatment Cream
 Eucerin[®] Intensive 10% w/w Urea Treatment Lotion

Hydromol[®] Cream
 Hydromol[®] Intensive
 Hydrous Ointment, BP
 Hypobase[®]
 Liquid and White Soft Paraffin Ointment, NPF
 Neutrogena[®] Norwegian Formula Dermatological Cream
 Nutraplus[®] Cream
 Oilatum[®] Cream
 Oilatum[®] Junior Cream
 Paraffin, White Soft, BP
 Paraffin, Yellow Soft, BP
 Ultrabase[®]
 Unguentum M[®]
 Emollient bath and shower preparations as listed below:
 Aqueous Cream, BP
 Balneum[®] (except pack sizes that are not to be prescribed under the NHS (see Part XVIII of the Drug Tariff, Part XI of the Northern Ireland Drug Tariff))
 Balneum Plus[®] Bath Oil (except pack sizes that are not to be prescribed under the NHS (see Part XVIII of the Drug Tariff, Part XI of the Northern Ireland Drug Tariff))
 Cetraben[®] Emollient Bath Additive
 Dermalmo[®] Bath Emollient
 Doublebase[®] Emollient Bath Additive
 Doublebase[®] Emollient Shower Gel
 Doublebase[®] Emollient Wash Gel
 Hydromol[®] Bath and Shower Emollient
 Oilatum[®] Emollient
 Oilatum[®] Gel
 Oilatum[®] Junior Bath Additive
 Zerolatum[®] Emollient Medicinal Bath Oil
 Folic Acid Tablets 400 micrograms, BP
 Glycerol Suppositories, BP
 Ibuprofen Oral Suspension, BP (except for indications and doses that are prescription-only)
 Ibuprofen Tablets, BP (except for indications and doses that are prescription-only)
 Ispaghula Husk Granules, BP
 Ispaghula Husk Granules, Effervescent, BP
 Ispaghula Husk Oral Powder, BP
 Lactulose Solution, BP
 Lidocaine Ointment, BP
 Lidocaine and Chlorhexidine Gel, BP
 Macrogol Oral Liquid, Compound, NPF
 Macrogol Oral Powder, Compound, NPF
 Macrogol Oral Powder, Compound, Half-strength, NPF
 Magnesium Hydroxide Mixture, BP
 Magnesium Sulfate Paste, BP
 Malathion aqueous lotions containing at least 0.5%
 Mebendazole Oral Suspension, NPF
 Mebendazole Tablets, NPF
 Methylcellulose Tablets, BP
 Miconazole Cream 2%, BP
 Miconazole Oromucosal Gel, BP
 Mouthwash Solution-tablets, NPF
 Nicotine Inhalation Cartridge for Oromucosal Use, NPF
 Nicotine Lozenge, NPF
 Nicotine Medicated Chewing Gum, NPF
 Nicotine Nasal Spray, NPF
 Nicotine Oral Spray, NPF
 Nicotine Sublingual Tablets, NPF
 Nicotine Transdermal Patches, NPF
 Nystatin Oral Suspension, BP
 Olive Oil Ear Drops, BP

Paracetamol Oral Suspension, BP (includes 120 mg/5 mL and 250 mg/5 mL strengths—both of which are available as sugar-free formulations)

Paracetamol Tablets, BP (max. 96 tablets; max. pack size 32 tablets)

Paracetamol Tablets, Soluble, BP (max. 96 tablets; max. pack size 32 tablets)

Permethrin Cream, NPF

Phosphates Enema, BP

Povidone–Iodine Solution, BP

Senna Oral Solution, NPF

Senna Tablets, BP

Senna and Ispaghula Granules, NPF

Sodium Chloride Solution, Sterile, BP

Sodium Citrate Compound Enema, NPF

Sodium Picosulfate Capsules, NPF

Sodium Picosulfate Elixir, NPF

Spermicidal contraceptives as listed below:

 Gygel[®] Contraceptive Jelly

 Sterculia Granules, NPF

 Sterculia and Frangula Granules, NPF

 Titanium Ointment, BP

 Water for Injections, BP

 Zinc and Castor Oil Ointment, BP

 Zinc Oxide and Dimeticone Spray, NPF

 Zinc Oxide Impregnated Medicated Bandage, NPF

 Zinc Oxide Impregnated Medicated Stocking, NPF

 Zinc Paste Bandage, BP 1993

 Zinc Paste and Ichthammol Bandage, BP 1993

Appliances and Reagents (including Wound Management Products)

Community Practitioner Nurse Prescribers in England, Wales and Northern Ireland can prescribe any appliance or reagent in the relevant Drug Tariff. In the Scottish Drug Tariff, Appliances and Reagents which may **not** be prescribed by Nurses are annotated **Nx**.

Appliances (including Contraceptive Devices) as listed in Part IXA of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 3 (Appliances) and Part 2 (Dressings) of the Scottish Drug Tariff). (Where it is not appropriate for nurse prescribers in family planning clinics to prescribe contraceptive devices using form FP10(P) (forms WP10CN and WP10PN in Wales), they may prescribe using the same system as doctors in the clinic.)

Incontinence Appliances as listed in Part IXB of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 5 of the Scottish Drug Tariff).

Stoma Appliances and Associated Products as listed in Part IXC of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 6 of the Scottish Drug Tariff).

Chemical Reagents as listed in Part IXR of the Drug Tariff (Part II of the Northern Ireland Drug Tariff, Part 9 of the Scottish Drug Tariff).

The Drug Tariffs can be accessed online at:
National Health Service Drug Tariff for England and Wales:
www.ppa.org.uk/ppa/edt_intro.htm

Health and Personal Social Services for Northern Ireland Drug Tariff: www.hscbusiness.hscni.net/services/2034.htm
Scottish Drug Tariff: www.isdscotland.org/Health-topics/Prescribing-and-Medicines/Scottish-Drug-Tariff/

Details of NPF preparations

Preparations on the Nurse Prescribers' Formulary which are not included in the BP or BPC are described as follows in the Nurse Prescribers' Formulary. Although brand names have sometimes been included for identification purposes, it is recommended that non-proprietary names should be used for prescribing medicinal preparations in the NPF except where a non-proprietary name is not available.

Arachis Oil Enema

arachis oil 100%

Catheter Maintenance Solution, Sodium Chloride

(proprietary products: *OptiFlo S*; *Uro-Tainer Sodium Chloride*; *Uriflex-S*), sodium chloride 0.9%

Catheter Maintenance Solution, 'Solution G'

(proprietary products: *OptiFlo G*; *Uro-Tainer Suby G*; *Uriflex G*), citric acid 3.23%, magnesium oxide 0.38%, sodium bicarbonate 0.7%, disodium edetate 0.01%

Catheter Maintenance Solution, 'Solution R'

(proprietary products: *OptiFlo R*; *Uro-Tainer Solutio R*; *Uriflex R*), citric acid 6%, gluconolactone 0.6%, magnesium carbonate 2.8%, disodium edetate 0.01%

Chlorhexidine gluconate alcoholic solutions

(proprietary products: *ChloraPrep*; *Hydrex Solution*; *Hydrex spray*), chlorhexidine gluconate in alcoholic solution

Chlorhexidine gluconate aqueous solutions

(proprietary product: *Unisept*), chlorhexidine gluconate in aqueous solution

Co-danthramer Capsules PoM

co-danthramer 25/200 (dantron 25 mg, poloxamer '188' 200 mg)

Co-danthramer Capsules, Strong PoM

co-danthramer 37.5/500 (dantron 37.5 mg, poloxamer '188' 500 mg)

Co-danthramer Oral Suspension PoM

co-danthramer 25/200 in 5 mL (dantron 25 mg, poloxamer '188' 200 mg/5 mL)

Co-danthramer Oral Suspension, Strong PoM

co-danthramer 75/1000 in 5 mL (dantron 75 mg, poloxamer '188' 1 g/5 mL)

Co-danthrusate Oral Suspension PoM

(proprietary product: *Normax*), co-danthrusate 50/60 (dantron 50 mg, docusate sodium 60 mg/5 mL)

Dimeticone barrier creams

(proprietary products *Conotrane Cream*, dimeticone '350' 22%; *Siopel Barrier Cream*, dimeticone '1000' 10%), dimeticone 10–22%

Dimeticone Lotion

(proprietary product: *Hedrin*), dimeticone 4%

Docusate Enema

(proprietary product: *Norgalax Micro-enema*), docusate sodium 120 mg in 10 g

Liquid and White Soft Paraffin Ointment

liquid paraffin 50%, white soft paraffin 50%

Macrogol Oral Liquid, Compound

(proprietary product: *Movicol Liquid*), macrogol '3350' (polyethylene glycol '3350') 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/25 mL

Macrogol Oral Powder, Compound

(proprietary products: *Laxido Orange*, *Molaxole*, *Movicol*), macrogol '3350' (polyethylene glycol '3350') 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/sachet; (amount of potassium chloride varies according to flavour of *Movicol*[®] as follows: plain-flavour (sugar-free) = 50.2 mg/sachet; lime and lemon flavour = 46.6 mg/sachet; chocolate flavour = 31.7 mg/sachet. 1 sachet when reconstituted with 125 mL water provides K⁺ 5.4 mmol/litre)

Macrogol Oral Powder, Compound, Half-strength

(proprietary product: *Movicol-Half*), macrogol '3350' (polyethylene glycol '3350') 6.563 g, sodium bicarbonate 89.3 g, sodium chloride 175.4 mg, potassium chloride 23.3 mg/sachet

Malathion aqueous lotions

(proprietary products: *Derbac-M Liquid*), malathion 0.5% in an aqueous basis

Mebendazole Oral Suspension PoM

(proprietary product: *Vermox*), mebendazole 100 mg/5 mL

Mebendazole Tablets [POM]

(proprietary products: *Ovex*, *Vermox*), mebendazole 100 mg (can be supplied for oral use in the treatment of enterobiasis in adults and children over 2 years provided its container or package is labelled to show a max. single dose of 100 mg and it is supplied in a container or package containing not more than 800 mg)

Mouthwash Solution-tablets

consist of tablets which may contain antimicrobial, colouring and flavouring agents in a suitable soluble effervescent basis to make a mouthwash

Nicotine Inhalation Cartridge for Oromucosal Use

(proprietary products: *NicAssist Inhalator*, *Nicorette Inhalator*), nicotine 15 mg (for use with inhalation mouthpiece; to be prescribed as either a starter pack (6 cartridges with inhalator device and holder) or refill pack (42 cartridges with inhalator device))

Nicotine Lozenge

nicotine (as bitartrate) 1 mg or 2 mg (proprietary product: *Nicorette Mint Lozenge*, *Nicotinell Mint Lozenge*), or nicotine (as resinate) 1.5 mg, 2 mg, or 4 mg (proprietary product: *NiQuitin Lozenges*, *NiQuitin Minis*, *NiQuitin Pre-quit*)

Nicotine Medicated Chewing Gum

(proprietary products: *NicAssist Gum*, *Nicorette Gum*, *Nicotinell Gum*, *NiQuitin Gum*), nicotine 2 mg or 4 mg

Nicotine Nasal Spray

(proprietary product: *NicAssist Nasal Spray*, *Nicorette Nasal Spray*), nicotine 500 micrograms/metered spray

Nicotine Oral Spray

(proprietary product: *Nicorette Quickmist*), nicotine 1 mg/metered spray

Nicotine Sublingual Tablets

(proprietary product: *NicAssist Microtab*, *Nicorette Microtab*), nicotine (as a cyclodextrin complex) 2 mg (to be prescribed as either a starter pack (2 × 15-tablet discs with dispenser) or refill pack (7 × 15-tablet discs))

Nicotine Transdermal Patches

releasing in each 16 hours, nicotine approx. 5 mg, 10 mg, or 15 mg (proprietary products: *Boots NicAssist Patch*, *Nicorette Patch*), or releasing in each 16 hours approx. 10 mg, 15 mg, or 25 mg (proprietary products: *NicAssist Translucent Patch*, *Nicorette Invisi Patch*), or releasing in each 24 hours nicotine approx. 7 mg, 14 mg, or 21 mg (proprietary products: *Nicopatch*, *Nicotinell TTS*, *NiQuitin*, *NiQuitin Clear*) (prescriber should specify the brand to be dispensed)

Permethrin Cream

(proprietary product: *Lyclear Dermal Cream*), permethrin 5%

Senna Oral Solution

(proprietary product: *Senokot Syrup*), sennosides 7.5 mg/5 mL

Senna and Ispaghula Granules

(proprietary product: *Manevac Granules*), senna fruit 12.4%, ispaghula 54.2%

Sodium Citrate Compound Enema

(proprietary products: *Micolette Micro-enema*; *Micalax Micro-enema*; *Relaxit Micro-enema*), sodium citrate 450 mg with glycerol, sorbitol and an anionic surfactant

Sodium Picosulfate Capsules

(proprietary products: *Dulcolax Perles*), sodium picosulfate 2.5 mg

Sodium Picosulfate Elixir

(proprietary product: *Dulcolax Liquid*), sodium picosulfate 5 mg/5 mL

Sterculia Granules

(proprietary product: *Normacol Granules*), sterculia 62%

Sterculia and Frangula Granules

(proprietary product: *Normacol Plus Granules*), sterculia 62%, frangula (standardised) 8%

Zinc Oxide and Dimeticone Spray

(proprietary product: *Sprilon*), dimeticone 1.04%, zinc oxide 12.5% in a pressurised aerosol unit

Zinc Oxide Impregnated Medicated Bandage

(proprietary product: *Steripaste*), sterile cotton bandage impregnated with paste containing zinc oxide 15%

Zinc Oxide Impregnated Medicated Stocking

(proprietary product: *Zipzoc*), sterile rayon stocking impregnated with ointment containing zinc oxide 20%

Non-medical prescribing

Overview

A range of non-medical healthcare professionals can prescribe medicines for patients as either Independent or Supplementary Prescribers.

Independent prescribers are practitioners responsible and accountable for the assessment of patients with previously undiagnosed or diagnosed conditions and for decisions about the clinical management required, including prescribing. They are recommended to prescribe generically, except where this would not be clinically appropriate or where there is no approved non-proprietary name.

Supplementary prescribing is a partnership between an independent prescriber (a doctor or a dentist) and a supplementary prescriber to implement an agreed Clinical Management Plan for an individual patient with that patient's agreement.

Independent and Supplementary Prescribers are identified by an annotation next to their name in the relevant professional register.

Information and guidance on non-medical prescribing is available on the Department of Health website at www.dh.gov.uk/health/2012/04/prescribing-change.

For information on the mixing of medicines by Independent and Supplementary Prescribers, see *Mixing of medicines prior to administration in clinical practice: medical and non-medical prescribing*, National Prescribing Centre, May 2010 (available at www.gov.uk/government/uploads/system/uploads/attachment_data/file/213885/dh_116360.pdf).

For information on the supply and administration of medicines to groups of patients using Patient Group Directions see Guidance on prescribing p. 1.

In order to protect patient safety, the initial prescribing and supply of medicines prescribed should normally remain separate functions performed by separate healthcare professionals.

Nurses

Nurse Independent Prescribers (formerly known as Extended Formulary Nurse Prescribers) are able to prescribe any medicine for any medical condition. Unlicensed medicines are excluded from the Nurse Prescribing Formulary in Scotland.

Nurse Independent Prescribers are able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine hydrochloride p. 294, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction.

Nurse Independent Prescribers must work within their own level of professional competence and expertise.

The Nurse Prescribers' Formulary (NPF) p. 1143 for Community Practitioners provides information on prescribing.

Pharmacists

Pharmacist Independent Prescribers can prescribe any medicine for any medical condition. This includes unlicensed medicines, subject to accepted clinical good practice.

They are also able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine hydrochloride p. 294, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction.

Pharmacist Independent Prescribers must work within their own level of professional competence and expertise.

Physiotherapists

Physiotherapist Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. They are also allowed to prescribe the following Controlled Drugs: oral or injectable morphine p. 299, transdermal fentanyl p. 296 and oral diazepam p. 236, dihydrocodeine tartrate p. 295, lorazepam p. 238, oxycodone hydrochloride p. 302 or temazepam p. 879.

Physiotherapist Independent Prescribers must work within their own level of professional competence and expertise.

Therapeutic radiographers

Therapeutic Radiographer Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. Therapeutic Radiographer Independent Prescribers must work within their own level of professional competence and expertise.

Optometrists

Optometrist Independent Prescribers can prescribe any licensed medicine for ocular conditions affecting the eye and the tissues surrounding the eye, except Controlled Drugs or medicines for parenteral administration. Optometrist Independent Prescribers must work within their own level of professional competence and expertise.

Podiatrists

Podiatrist Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. They are also allowed to prescribe the following Controlled Drugs for oral administration: diazepam p. 236, dihydrocodeine tartrate p. 295, lorazepam p. 238 and temazepam p. 879.

Podiatrist Independent Prescribers must work within their own level of professional competence and expertise.

Further Information

For further details about the different types of prescribers, see *Medicines, Ethics and Practice*, London, Pharmaceutical Press (always consult latest edition).

Index of manufacturers

The following is an alphabetical list of manufacturers and other companies referenced in the BNF, with their medicines information or general contact details. For information on 'special-order' manufacturers and specialist importing companies see 'Special-order manufacturers'.

Special-order manufacturers

Unlicensed medicines are available from 'special-order' manufacturers and specialist-importing companies; the MHRA maintains a register of these companies at tinyurl.com/cdsllke.

Licensed **hospital manufacturing units** also manufacture 'special-order' products as unlicensed medicines, the principal NHS units are listed below. A database (*Pro-File*; www.pro-file.nhs.uk) provides information on medicines manufactured in the NHS; access is restricted to NHS pharmacy staff.

The Association of Pharmaceutical Specials Manufacturers may also be able to provide further information about commercial companies (www.apsm-uk.com).

The MHRA recommends that an unlicensed medicine should only be used when a patient has special requirements that cannot be met by use of a licensed medicine.

As well as being available direct from the hospital manufacturer(s) concerned, many NHS-manufactured Specials may be bought from the Oxford Pharmacy Store, owned and operated by Oxford Health NHS Foundation Trust.

YellowCard

COMMISSION ON HUMAN MEDICINES (CHM)

It's easy to report online at:
www.mhra.gov.uk/yellowcard**REPORT OF SUSPECTED ADVERSE DRUG REACTIONS**

If you suspect an adverse reaction may be related to one or more drugs/vaccines/complementary remedies, please complete this Yellow Card. See 'Adverse reactions to drugs' section in BNFC or www.mhra.gov.uk/yellowcard for guidance. Do not be put off reporting because some details are not known.

PATIENT DETAILS Patient Initials: _____ Sex: M / F Is the patient pregnant? Y / N Ethnicity: _____
Age (at time of reaction): _____ Weight (kg): _____ Identification number (e.g. Practice or Hospital Ref): _____

SUSPECTED DRUG(S)/VACCINE(S)

Drug/Vaccine (Brand if known)	Batch	Route	Dosage	Date started	Date stopped	Prescribed for
_____	_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____	_____

SUSPECTED REACTION(S) Please describe the reaction(s) and any treatment given. (Please attach additional pages if necessary):**Outcome**

Recovered
Recovering
Continuing
Other

Date reaction(s) started: _____ Date reaction(s) stopped: _____

Do you consider the reactions to be serious? Yes / No

If yes, please indicate why the reaction is considered to be serious (please tick all that apply):

Patient died due to reaction Involved or prolonged inpatient hospitalisation
 Life threatening Involved persistent or significant disability or incapacity
 Congenital abnormality Medically significant; please give details: _____

If the reactions were not serious according to the categories above, how bad was the suspected reaction?

Mild Unpleasant, but did not affect everyday activities Bad enough to affect everyday activities

It's easy to report online: www.mhra.gov.uk/yellowcard

OTHER DRUG(S) (including self-medication and complementary remedies)

Did the patient take any other medicines/vaccines/complementary remedies in the last 3 months prior to the reaction? Yes / No

If yes, please give the following information if known:

Drug/Vaccine (Brand if known)	Batch	Route	Dosage	Date started	Date stopped	Prescribed for
_____	_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____	_____

Additional relevant information e.g. medical history, test results, known allergies, rechallenge (if performed). For reactions relating to use of a medicine during pregnancy please state all other drugs taken during pregnancy, the last menstrual period, information on previous pregnancies, ultrasound scans, any delivery complications, birth defects or developmental concerns.

Please list any medicines obtained from the internet:

Newborn Life Support

Resuscitation Council (UK)

Newborn Life Support

Paediatric Basic Life Support

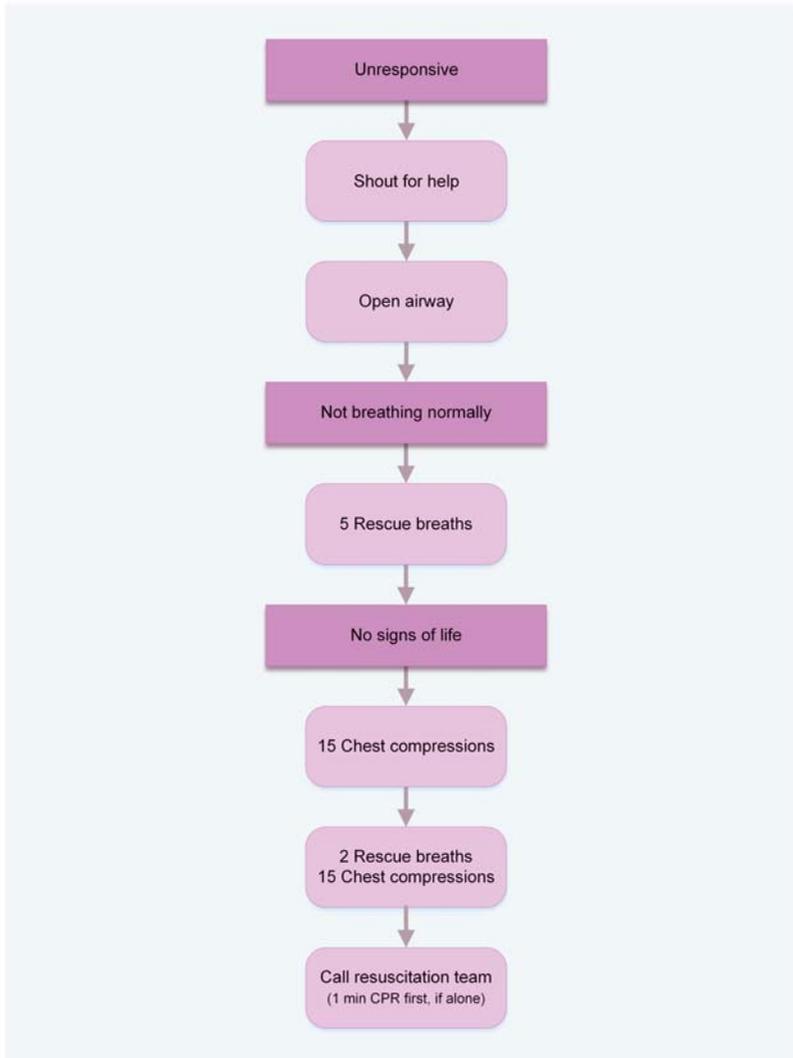

(Healthcare professionals with a duty to respond)

Resuscitation Council (UK)

Paediatric Basic Life Support
(Healthcare professionals with a duty to respond)

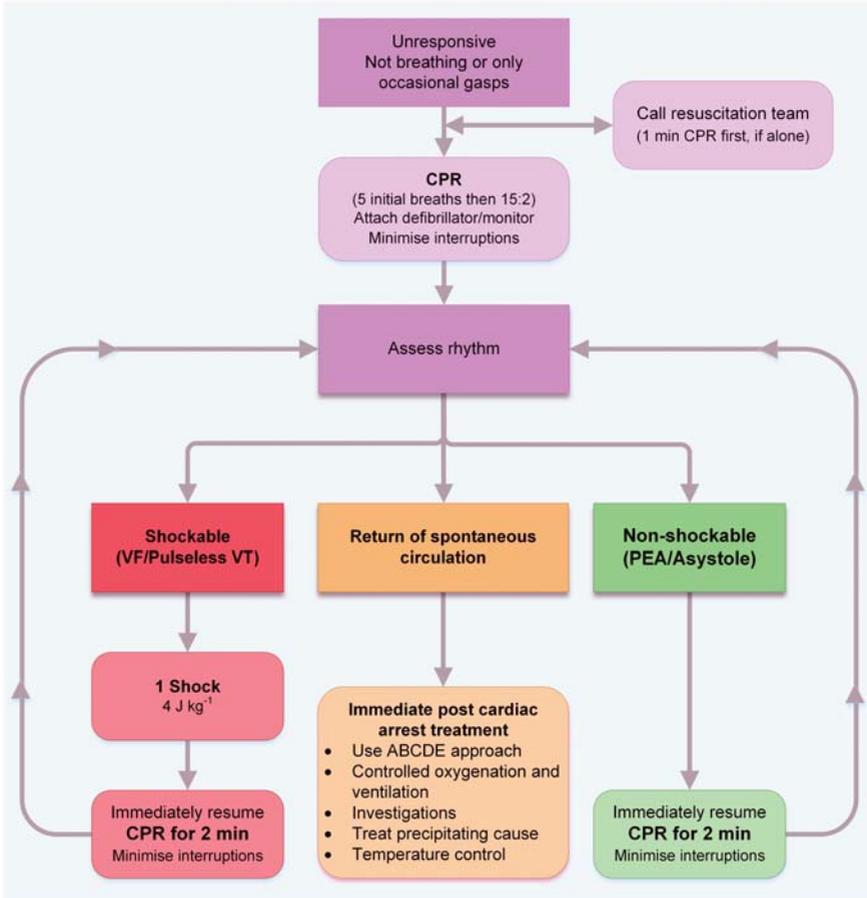

Paediatric Advanced Life Support

Resuscitation Council (UK)

Paediatric Advanced Life Support

During CPR

- Ensure high-quality CPR: rate, depth, recoil
- Plan actions before interrupting CPR
- Give oxygen
- Vascular access (intravenous, intraosseous)
- Give adrenaline every 3-5 min
- Consider advanced airway and capnography
- Continuous chest compressions when advanced airway in place
- Correct reversible causes
- Consider amiodarone after 3 and 5 shocks

Reversible Causes

- Hypoxia
- Hypovolaemia
- Hyper/hypokalaemia, metabolic
- Hypothermia
- Thrombosis (coronary or pulmonary)
- Tension pneumothorax
- Tamponade (cardiac)
- Toxic/therapeutic disturbances

Medical emergencies in the community

Overview

Drug treatment outlined below is intended for use by appropriately qualified healthcare professionals. Only drugs that are used for immediate relief are shown; advice on supporting care is not given. Where the child's condition requires investigation and further treatment, the child should be transferred to hospital promptly.

Airways disease, obstructive

▶ **ASTHMA: ACUTE**

Regard each emergency consultation as being for **severe acute asthma** until shown otherwise; failure to respond adequately at **any time** requires immediate transfer to hospital

▶ **EITHER Salbutamol aerosol inhaler p. 164**

(100 micrograms/metered inhalation)

BY AEROSOL INHALATION VIA LARGE-VOLUME SPACER (AND A CLOSE-FITTING FACE MASK IF CHILD UNDER 3 YEARS)

▶ Child: 2–10 puffs each inhaled separately, repeated every 10–20 minutes or as necessary

▶ **OR Salbutamol nebuliser solution (1 mg/mL, 2 mg/mL)**

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

▶ Child 4 years and below: 2.5 mg every 20–30 minutes or as necessary

▶ Child 5–11 years: 2.5–5 mg every 20–30 minutes or as necessary

▶ Child 12–17 years: 5 mg every 20–30 minutes or as necessary

▶ **OR Terbutaline sulfate nebuliser solution p. 166 (2.5 mg/mL)**

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

▶ Child 4 years and below: 5 mg every 20–30 minutes or as necessary

▶ Child 5–11 years: 5–10 mg every 20–30 minutes or as necessary

▶ Child 12–17 years: 10 mg every 20–30 minutes or as necessary

▶ **PLUS (in all cases)**

▶ **EITHER Prednisolone tablets p. 478 (or prednisolone soluble tablets) (5 mg)**

BY MOUTH

▶ Child 11 years and below: 1–2 mg/kg (max. 40 mg) once daily for up to 3 days or longer if necessary; if child has been taking an oral corticosteroid for more than a few days, give prednisolone 2 mg/kg (max. 60 mg) once daily

▶ Child 12–17 years: 40–50 mg once daily for at least 5 days

▶ **OR Hydrocortisone p. 476 (preferably as sodium succinate)**

BY INTRAVENOUS INJECTION

▶ Child 17 years and below: 4 mg/kg (max. 100 mg) every 6 hours until conversion to oral prednisolone is possible; alternative dose if weight unavailable:

▶ Child 1 year and below: 25 mg

▶ Child 2–4 years: 50 mg

▶ Child 5–17 years: 100 mg

High-flow oxygen should be given if available (via face mask in children)

Monitor response 15 to 30 minutes after nebulisation; if any signs of acute asthma persist, arrange hospital admission.

While awaiting ambulance, repeat **nebulised beta₂ agonist** (as above) and give with

Ipratropium bromide nebuliser solution p. 161

(250 micrograms/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

▶ Child 11 years and below: 250 micrograms, repeated every 20–30 minutes for the first 2 hours, then every

4–6 hours as necessary

▶ Child 12–17 years: 500 micrograms every 4–6 hours as necessary

▶ **CROUP**

Dexamethasone oral solution p. 475 (2 mg/5 mL)

BY MOUTH

▶ Child 1 month–2 years: 150 micrograms/kg as a single dose

Anaphylaxis

▶ **ANAPHYLAXIS**

Adrenaline/epinephrine injection p. 143 (1 mg/mL (1 in 1000))

BY INTRAMUSCULAR INJECTION

▶ Child 5 years and below: 150 micrograms (0.15 mL), repeated every 5 minutes if necessary

▶ Child 6–11 years: 300 micrograms (0.3 mL), repeated every 5 minutes if necessary

▶ Child 12–17 years: 500 micrograms (0.5 mL), repeated every 5 minutes if necessary; 300 micrograms (0.3 mL) should be given if child is small or prepubertal

High-flow oxygen and intravenous fluids should be given as soon as available.

Chlorphenamine maleate injection p. 186

BY INTRAMUSCULAR OR INTRAVENOUS INJECTION

May help counter histamine-mediated vasodilation and bronchoconstriction.

Hydrocortisone (preferably as sodium succinate)

BY INTRAVENOUS INJECTION

Has delayed action but should be given to severely affected patients to prevent further deterioration.

Bacterial disease

▶ **MENINGOCOCCAL DISEASE**

Benzylpenicillin sodium injection p. 364 (600 mg, 1.2 g)

BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)

▶ Neonate: 300 mg

▶ Child 1 month–11 months: 300 mg

▶ Child 1–9 years: 600 mg

▶ Child 10–17 years: 1.2 g

NOTE A single dose should be given before urgent transfer to hospital, so long as this does not delay the transfer.

▶ **OR if history of allergy to penicillin**

Cefotaxime injection p. 342 (1 g)

BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)

▶ Neonate: 50 mg/kg

▶ Child 1 month–11 years: 50 mg/kg (max. 1 g)

▶ Child 12–17 years: 1 g

NOTE A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

- ▶ **OR if history of immediate hypersensitivity reaction (including anaphylaxis, angioedema, urticaria, or rash immediately after administration) to penicillin or to cephalosporins**

Chloramphenicol injection p. 385 (1 g)

BY INTRAVENOUS INJECTION

- ▶ Child 1 month-17 years: 12.5–25 mg/kg

NOTE A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

See also Central nervous system infections, antibacterial therapy p. 323.

Hypoglycaemia

- ▶ **DIABETIC HYPOGLYCAEMIA**

Glucose or sucrose

BY MOUTH

- ▶ Child over 2 years: approx. 10–20 g (110–220 mL *Lucozade[®] Energy Original* or 100–200 mL *Coca-Cola[®]*—both non-diet versions or 2–4 teaspoonfuls of sugar or 3–6 sugar lumps) repeated after 10–15 minutes if necessary

- ▶ **OR if hypoglycaemia unresponsive or if oral route cannot be used**

Glucagon injection p. 502 (1 mg/mL)

BY SUBCUTANEOUS OR INTRAMUSCULAR INJECTION

- ▶ Child body-weight up to 25 kg: 500 micrograms (0.5 mL)
- ▶ Child body-weight 25 kg and over: 1 mg (1 mL)

- ▶ **OR if hypoglycaemia prolonged or unresponsive to glucagon after 10 minutes**

Glucose intravenous infusion p. 638 (10%)

BY INTRAVENOUS INJECTION INTO LARGE VEIN

- ▶ Child 1 month-17 years: 5 mL/kg (glucose 500 mg/kg)

Seizures

- ▶ **CONVULSIVE (INCLUDING FEBRILE) SEIZURES LASTING LONGER THAN 5 MINUTES**

- ▶ **EITHER Diazepam rectal solution p. 236** (2 mg/mL, 4 mg/mL)

BY RECTUM

- ▶ Neonate: 1.25–2.5 mg, repeated once after 10–15 minutes if necessary
- ▶ Child 1 month-1 year: 5 mg, repeated once after 10–15 minutes if necessary
- ▶ Child 2-11 years: 5–10 mg, repeated once after 10–15 minutes if necessary
- ▶ Child 12-17 years: 10–20 mg, repeated once after 10–15 minutes if necessary

- ▶ **OR Midazolam oromucosal solution p. 239**

BY BUCCAL ADMINISTRATION, REPEATED ONCE AFTER 10 MINUTES IF NECESSARY

- ▶ Neonate: 300 micrograms/kg [unlicensed]
- ▶ Child 1-2 months: 300 micrograms/kg (max. 2.5 mg) [unlicensed]
- ▶ Child 3 months-11 months: 2.5 mg
- ▶ Child 1-4 years: 5 mg
- ▶ Child 5-9 years: 7.5 mg
- ▶ Child 10-17 years: 10 mg

Approximate Conversions and Units

Conversion of pounds to kilograms

lb	kg
1	0.45
2	0.91
3	1.36
4	1.81
5	2.27
6	2.72
7	3.18
8	3.63
9	4.08
10	4.54
11	4.99
12	5.44
13	5.90
14	6.35

Conversion of stones to kilograms

stones	kg
1	6.35
2	12.70
3	19.05
4	25.40
5	31.75
6	38.10
7	44.45
8	50.80
9	57.15
10	63.50
11	69.85
12	76.20
13	82.55
14	88.90
15	95.25

Conversion from millilitres to fluid ounces

mL	fl oz
50	1.8
100	3.5
150	5.3
200	7.0
500	17.6
1000	35.2

Length

1 metre (m) = 1000 millimetres (mm)
1 centimetre (cm) = 10 mm
1 inch (in) = 25.4 mm
1 foot (ft) = 12 inches
12 inches = 304.8 mm

Mass

1 kilogram (kg) = 1000 grams (g)
1 gram (g) = 1000 milligrams (mg)
1 milligram (mg) = 1000 micrograms
1 microgram = 1000 nanograms
1 nanogram = 1000 picograms

Volume

1 litre = 1000 millilitres (mL)
1 millilitre (1 mL) = 1000 microlitres
1 pint ≈ 568 mL

Other units

1 kilocalorie (kcal) = 4186.8 joules (J)
1000 kilocalories (kcal) = 4.1868 megajoules (MJ)
1 megajoule (MJ) = 238.8 kilocalories (kcal)
1 millimetre of mercury (mmHg) = 133.3 pascals (Pa)
1 kilopascal (kPa) = 7.5 mmHg (pressure)

Plasma-drug concentrations

Plasma-drug concentrations in BNF publications are expressed in mass units per litre (e.g. mg/litre). The approximate equivalent in terms of amount of substance units (e.g. micromol/litre) is given in brackets.

Prescribing for children: weight, height, and gender

The table below shows the **mean values** for weight, height and gender by age; these values have been derived from the UK-WHO growth charts 2009 and UK1990 standard centile charts, by extrapolating the 50th centile, and may be used to calculate doses in the absence of actual measurements. However, the child's actual weight and height might vary considerably from the values in the table and it is important to see the child to ensure that the value chosen is appropriate. In most cases the child's actual measurement should be obtained as soon as possible and the dose re-calculated.

Age	Weight (kg)	Height (cm)
Full-term neonate	3.5	51
1 month	4.3	55
2 months	5.4	58
3 months	6.1	61
4 months	6.7	63
6 months	7.6	67
1 year	9	75
3 years	14	96
5 years	18	109
7 years	23	122
10 years	32	138
12 years	39	149
14 year old boy	49	163
14 year old girl	50	159
Adult male	68	176
Adult female	58	164

Recommended wording of cautionary and advisory labels

For details including Welsh language translation, please see Appendix 3

- 1** Warning: This medicine may make you sleepy
- 2** Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol
- 3** Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines
- 4** Warning: Do not drink alcohol
- 5** Do not take indigestion remedies 2 hours before or after you take this medicine
- 6** Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine
- 7** Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine
- 8** Warning: Do not stop taking this medicine unless your doctor tells you to stop
- 9** Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop
- 10** Warning: Read the additional information given with this medicine
- 11** Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds
- 12** Do not take anything containing aspirin while taking this medicine
- 13** Dissolve or mix with water before taking
- 14** This medicine may colour your urine. This is harmless
- 15** Caution: flammable. Keep your body away from fire or flames after you have put on the medicine
- 16** Dissolve the tablet under your tongue—do not swallow. Store the tablets in this bottle with the cap tightly closed. Get a new supply 8 weeks after opening
- 17** Do not take more than... in 24 hours
- 18** Do not take more than... in 24 hours. Also, do not take more than... in any one week
- 19** Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink alcohol
- 21** Take with or just after food, or a meal
- 22** Take 30 to 60 minutes before food
- 23** Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food
- 24** Suck or chew this medicine
- 25** Swallow this medicine whole. Do not chew or crush
- 26** Dissolve this medicine under your tongue
- 27** Take with a full glass of water
- 28** Spread thinly on the affected skin only
- 29** Do not take more than 2 at any one time. Do not take more than 8 in 24 hours
- 30** Contains paracetamol. Do not take anything else containing paracetamol while taking this medicine. Talk to a doctor at once if you take too much of this medicine, even if you feel well
- 32** Contains aspirin. Do not take anything else containing aspirin while taking this medicine

Abbreviations and Symbols

Internationally recognised units and symbols are used in the BNF publications where possible.

ACBS	Advisory Committee on Borderline Substances, <i>see</i> Borderline Substances
ACE	Angiotensin-converting enzyme

Latin abbreviations

Directions should be in English without abbreviation. However, Latin abbreviations have been used when prescribing.

The following is a list of appropriate abbreviations. It should be noted that the English version is not always an exact translation.

a. c.	= ante cibum (before food)
b. d.	= bis die (twice daily)
o. d.	= omni die (every day)
o. m.	= omni mane (every morning)
o. n.	= omni nocte (every night)
p. c.	= post cibum (after food)
p. r. n.	= pro re nata (when required)
q. d. s.	= quater die sumendum (to be taken four times daily)
q. q. h.	= quarta quaque hora (every four hours)
stat	= immediately
t. d. s.	= ter die sumendum (to be taken three times daily)
t. i. d.	= ter in die (three times daily)

E numbers

The following is a list of common E numbers and the inactive ingredients to which they correspond.

E102	Tartrazine
E104	Quinoline Yellow
E110	Sunset Yellow FCF
E123	Amaranth
E124	Ponceau 4R
E127	Erythrosine BS
E132	Indigo Carmine
E142	Green S
E171	Titanium Dioxide
E172	Iron oxides, iron hydroxides
E200	Sorbic Acid
E211	Sodium Benzoate
E223	Sodium Metabisulfite
E320	Butylated Hydroxyanisole
E321	Butylated Hydroxytoluene
E322	Lecithins
E420	Sorbitol
E421	Mannitol
E422	Glycerol
E901	Beeswax (white and yellow)
E1520	Propylene Glycol
