- ▶ TO THE SKIN
- ▶ Adult: Apply to skin or use as a soap substitute

**NUTRAPLUS®****Dry, scaling, and itching skin**

- ▶ TO THE SKIN
- ▶ Child: Apply 2–3 times a day
- ▶ Adult: Apply 2–3 times a day

**IMPORTANT SAFETY INFORMATION**

MHRA/CHM ADVICE (UPDATED DECEMBER 2018): EMOLLIENTS: NEW INFORMATION ABOUT RISK OF SEVERE AND FATAL BURNS WITH PARAFFIN-CONTAINING AND PARAFFIN-FREE EMOLLIENTS See Emollient and barrier preparations p. 1286.

- **DIRECTIONS FOR ADMINISTRATION** Emollients should be applied immediately after washing or bathing to maximise the effect of skin hydration. Emollient preparations contained in tubs should be removed with a clean spoon or spatula to reduce bacterial contamination of the emollient. Emollients should be applied in the direction of hair growth to reduce the risk of folliculitis.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

## 2 Infections of the skin

### Skin infections

22-Mar-2020

#### Antibacterial preparations for the skin

*Cellulitis, erysipelas, and leg ulcer* infections require systemic antibacterial treatment, see Skin infections, antibacterial therapy p. 540.

Impetigo requires topical antiseptic/antibacterial or systemic antibacterial treatment, see Skin infections, antibacterial therapy p. 540.

Although many antibacterial drugs are available in topical preparations, some are potentially hazardous and frequently their use is not necessary if adequate hygienic measures can be taken. Moreover, not all skin conditions that are oozing, crusted, or characterised by pustules are actually infected.

To minimise the development of resistant organisms it is advisable to limit the choice of antibacterials applied topically to those not used systemically. Unfortunately some of these, for example neomycin sulfate p. 1296, may cause sensitisation, and there is cross-sensitivity with other aminoglycoside antibiotics, such as gentamicin p. 545. If *large areas of skin* are being treated, ototoxicity may also be a hazard with aminoglycoside antibiotics, particularly in children, in the elderly, and in those with renal impairment. *Resistant organisms* are more common in hospitals, and whenever possible swabs should be taken for bacteriological examination before beginning treatment.

Mupirocin p. 1297 is not related to any other antibacterial in use; it is effective for skin infections, particularly those due to Gram-positive organisms but it is not indicated for pseudomonal infection. Although *Staphylococcus aureus* strains with low-level resistance to mupirocin are emerging, it is generally useful in infections resistant to other antibacterials. To avoid the development of resistance, mupirocin or fusidic acid p. 604 should not be used for longer than 10 days and local microbiology advice should be sought before using it in hospital. In the presence of mupirocin-resistant MRSA infection, a topical antiseptic such as povidone-iodine p. 1343, chlorhexidine p. 1344, or alcohol can be used; their use should be discussed with the local microbiologist.

Tedizolid p. 606 is licensed for the treatment of acute bacterial skin and skin structure infections.

Silver sulfadiazine p. 1297 is used in the treatment of infected burns.

#### Antibacterial preparations also used systemically

Fusidic acid is a narrow-spectrum antibacterial used for staphylococcal infections.

An ointment containing fusidic acid is used in the fissures of angular cheilitis when associated with staphylococcal infection. See Oropharyngeal fungal infections p. 1283 for further information on angular cheilitis.

Metronidazole p. 1296 is used topically for rosacea and to reduce the odour associated with anaerobic infections; oral metronidazole is used to treat wounds infected with anaerobic bacteria.

#### Antifungal preparations for the skin

Most localised fungal infections are treated with topical preparations. To prevent relapse, local antifungal treatment should be continued for 1–2 weeks after the disappearance of all signs of infection. Systemic therapy is necessary for scalp infection or if the skin infection is widespread, disseminated, or intractable; although topical therapy may be used to treat some nail infections, systemic therapy is more effective. Skin scrapings should be examined if systemic therapy is being considered or where there is doubt about the diagnosis.

#### Dermatophytoses

Ringworm infection can affect the scalp (tinea capitis), body (tinea corporis), groin (tinea cruris), hand (tinea manuum), foot (tinea pedis, athlete's foot), or nail (tinea unguium). Scalp infection requires systemic treatment; additional application of a topical antifungal, during the early stages of treatment, may reduce the risk of transmission. A topical antifungal can also be used to treat asymptomatic carriers of scalp ringworm. Most other local ringworm infections can be treated adequately with topical antifungal preparations (including shampoos). The imidazole antifungals clotrimazole p. 1298, econazole nitrate p. 1298, ketoconazole p. 1298, and miconazole p. 1299 are all effective. Terbinafine cream p. 1300 is also effective but it is more expensive. Other topical antifungals include griseofulvin p. 1300 and the **undecenoates**. **Compound benzoic acid ointment** (Whitfield's ointment) has been used for ringworm infections but it is cosmetically less acceptable than proprietary preparations. Topical preparations for athlete's foot containing **tolnaftate** are on sale to the public.

Antifungal dusting powders are of little therapeutic value in the treatment of fungal skin infections and may cause skin irritation; they may have some role in preventing re-infection.

Antifungal treatment may not be necessary in asymptomatic patients with tinea infection of the nails. If treatment is necessary, a systemic antifungal is more effective than topical therapy. However, topical application of amorolfine p. 1299 or tioconazole p. 1299 may be useful for treating early onychomycosis when involvement is limited to mild distal disease, or for superficial white onychomycosis, or where there are contra-indications to systemic therapy.

#### Pityriasis versicolor

Pityriasis (tinea) versicolor can be treated with ketoconazole shampoo. Alternatively, **selenium sulfide** shampoo [unlicensed indication] can be used as a lotion (diluting with a small amount of water can reduce irritation) and left on the affected area for 10 minutes before rinsing off; it should be applied once daily for 7 days, and the course repeated if necessary.

Topical imidazole antifungals such as clotrimazole, econazole nitrate, ketoconazole, and miconazole, or topical terbinafine are alternatives, but large quantities may be required.

If topical therapy fails, or if the infection is widespread, pityriasis versicolor is treated systemically with a triazole antifungal. Relapse is common, especially in the immunocompromised.

#### Candidiasis

Candidal skin infections can be treated with a topical imidazole antifungal, such as clotrimazole, econazole nitrate, ketoconazole, or miconazole; topical terbinafine is an alternative. Topical application of nystatin p. 1284 is also effective for candidiasis but it is ineffective against dermatophytosis. Refractory candidiasis requires systemic treatment generally with a triazole such as fluconazole p. 630; systemic treatment with terbinafine is **not appropriate** for refractory candidiasis.

#### Angular cheilitis

Miconazole cream is used in the fissures of angular cheilitis when associated with *Candida*.

#### Compound topical preparations

Combination of an imidazole and a mild corticosteroid (such as hydrocortisone 1% p. 1313) may be of value in the treatment of eczematous intertrigo and, in the first few days only, of a severely inflamed patch of ringworm.

Combination of a mild corticosteroid with either an imidazole or nystatin may be of use in the treatment of intertrigo associated with candida.

## Antiviral preparations for the skin

Aciclovir cream p. 1303 is licensed for the treatment of initial and recurrent labial and genital *herpes simplex infections*; treatment should begin as early as possible. Systemic treatment is necessary for buccal or vaginal infections and for *herpes zoster (shingles)*.

### Herpes labialis

Aciclovir cream can be used for the treatment of initial and recurrent labial herpes simplex infections (cold sores). It is best applied at the earliest possible stage, usually when prodromal changes of sensation are felt in the lip and before vesicles appear.

Penciclovir cream is also licensed for the treatment of herpes labialis; it needs to be applied more frequently than aciclovir cream p. 1303.

Systemic treatment is necessary if cold sores recur frequently or for infections in the mouth.

## Parasitocidal preparations for the skin

Suitable quantities of parasitocidal preparations			
Area of body	Skin creams	Lotions	Cream rinses
Scalp (head lice)		50–100 mL	50–100 mL
Body (scabies)	30–60 g	100 mL	
Body (crab lice)	30–60 g	100 mL	
These amounts are usually suitable for an adult for single application.			

### Scabies

Permethrin p. 1303 is used for the treatment of *scabies (Sarcoptes scabiei)*; malathion p. 1302 can be used if permethrin is inappropriate.

Benzyl benzoate p. 1302 is an irritant and should be avoided in children; it is less effective than malathion and permethrin.

Ivermectin p. 640 (available on a named patient basis from 'special-order' manufacturers or specialist importing companies) by mouth has been used, in combination with topical drugs, for the treatment of hyperkeratotic (crusted or 'Norwegian') scabies that does not respond to topical treatment alone; further doses may be required.

### Application

Although acaricides have traditionally been applied after a hot bath, this is **not** necessary and there is even evidence that a hot bath may increase absorption into the blood, removing them from their site of action on the skin.

All members of the affected household should be treated simultaneously. Treatment should be applied to the whole body including the scalp, neck, face, and ears. Particular attention should be paid to the webs of the fingers and toes and lotion brushed under the ends of nails. It is now recommended that malathion and permethrin should be applied twice, one week apart; in the case of benzyl benzoate in adults, up to 3 applications on consecutive days may be needed. It is important to warn users to reapply treatment to the hands if they are washed. Patients with hyperkeratotic scabies may require 2 or 3 applications of acaricide on consecutive days to ensure that enough penetrates the skin crusts to kill all the mites.

### Itching

The *itch* and *eczema* of scabies persists for some weeks after the infestation has been eliminated and treatment for pruritus and eczema may be required. Application of crotamiton p. 1303 can be used to control itching after treatment with more effective acaricides. A topical corticosteroid may help to reduce itch and inflammation after scabies has been treated successfully; however, persistent symptoms suggest that scabies eradication was

not successful. Oral administration of a **sedating antihistamine** at night may also be useful.

### Head lice

Dimeticone p. 1302 is effective against head lice (*Pediculus humanus capitis*). It coats head lice and interferes with water balance in lice by preventing the excretion of water; it is less active against eggs and treatment should be repeated after 7 days. Malathion, an organophosphorus insecticide, is an alternative, but resistance has been reported. Benzyl benzoate is licensed for the treatment of head lice but it is less effective than other drugs and not recommended for use in children. Permethrin is active against head lice but the formulation and licensed methods of application of the current products make them unsuitable for the treatment of head lice.

Head lice infestation (pediculosis) should be treated using lotion or liquid formulations only if live lice are present. Shampoos are diluted too much in use to be effective. A contact time of 8–12 hours or overnight treatment is recommended for lotions and liquids; a 2-hour treatment is not sufficient to kill eggs.

In general, a course of treatment for head lice should be 2 applications of product 7 days apart to kill lice emerging from any eggs that survive the first application. All affected household members should be treated simultaneously.

**MHRA/CHM advice: Head lice eradication products: risk of serious burns if treated hair is exposed to open flames or other sources of ignition (March 2018)**

Some products for the eradication of head lice infestations are combustible/flammable when on the hair and can ignite and cause serious harm in the presence of an open flame or other source of ignition such as when lighting cigarettes.

Patients and carers should be advised on the safe and correct use of head lice eradication treatments and if appropriate, should be advised that they should not smoke around treated hair and that it should be kept away from open flames or other sources of ignition, including in the morning after overnight application until hair is washed.

### Wet combing methods

Head lice can be mechanically removed by combing wet hair meticulously with a plastic detection comb (probably for at least 30 minutes each time) over the whole scalp at 4-day intervals for a minimum of 2 weeks, and continued until no lice are found on 3 consecutive sessions; hair conditioner or vegetable oil can be used to facilitate the process.

Several devices for the removal of head lice such as combs and topical solutions, are available and some are prescribable on the NHS.

The Drug Tariffs can be accessed online at:

- National Health Service Drug Tariff for England and Wales: [www.ppa.org.uk/ppa/edt\\_intro.htm](http://www.ppa.org.uk/ppa/edt_intro.htm)
- Health and Personal Social Services for Northern Ireland Drug Tariff: [www.hscbusiness.hscni.net/services/2034.htm](http://www.hscbusiness.hscni.net/services/2034.htm)
- Scottish Drug Tariff: [www.isds.scotland.org/Health-topics/Prescribing-and-Medicines/Scottish-Drug-Tariff/](http://www.isds.scotland.org/Health-topics/Prescribing-and-Medicines/Scottish-Drug-Tariff/)

### Crab lice

Permethrin and malathion are used to eliminate *crab lice (Pthirus pubis)*. An aqueous preparation should be applied, allowed to dry naturally and washed off after 12 hours; a second treatment is needed after 7 days to kill lice emerging from surviving eggs. All surfaces of the body should be treated, including the scalp, neck, and face (paying particular attention to the eyebrows and other facial hair). A different insecticide should be used if a course of treatment fails.

## 2.1 Bacterial skin infections

### ANTIBACTERIALS > AMINOGLYCOSIDES

#### Neomycin sulfate

##### ● INDICATIONS AND DOSE

##### Bacterial skin infections

- ▶ TO THE SKIN
- ▶ Child: Apply up to 3 times a day, for short-term use only
- ▶ Adult: Apply up to 3 times a day, for short-term use only

##### ● UNLICENSED USE

- ▶ In children *Neomycin Cream BPC*—no information available.

##### ● CONTRA-INDICATIONS Neonates

##### ● CAUTIONS

##### CAUTIONS, FURTHER INFORMATION

- ▶ Large areas
- ▶ In adults If large areas of skin are being treated ototoxicity may be a hazard, particularly in the elderly, and in those with renal impairment.
- ▶ In children If large areas of skin are being treated ototoxicity may be a hazard in children, particularly in those with renal impairment.

##### ● INTERACTIONS → Appendix 1: neomycin

##### ● SIDE-EFFECTS Sensitisation (cross sensitivity with other aminoglycosides may occur)

##### ● RENAL IMPAIRMENT Ototoxicity may be a hazard if large areas of skin are treated.

##### ● LESS SUITABLE FOR PRESCRIBING Neomycin sulfate cream is less suitable for prescribing.

##### ● MEDICINAL FORMS Forms available from special-order manufacturers include: cream

### ANTIBACTERIALS > NITROIMIDAZOLE DERIVATIVES

#### Metronidazole

18-May-2020

##### ● DRUG ACTION Metronidazole is an antimicrobial drug with high activity against anaerobic bacteria and protozoa.

##### ● INDICATIONS AND DOSE

##### ACEA®

##### Acute inflammatory exacerbation of rosacea

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily for 8 weeks, to be applied thinly

##### ANABACT®

##### Malodorous fungating tumours and malodorous gravitational and decubitus ulcers

- ▶ TO THE SKIN
- ▶ Adult: Apply 1–2 times a day, to be applied to clean wound and covered with non-adherent dressing

##### METROGEL®

##### Acute inflammatory exacerbation of rosacea

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily for 8–9 weeks, to be applied thinly

##### Malodorous fungating tumours

- ▶ TO THE SKIN
- ▶ Adult: Apply 1–2 times a day, to be applied to clean wound and covered with non-adherent dressing

##### METROSA®

##### Acute exacerbation of rosacea

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily for up to 8 weeks, to be applied thinly

##### ROSICED®

##### Inflammatory papules and pustules of rosacea

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily for 6 weeks (longer if necessary)

##### ROZEX® CREAM

##### Inflammatory papules, pustules and erythema of rosacea

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily for 3–4 months

##### ROZEX® GEL

##### Inflammatory papules, pustules and erythema of rosacea

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily for 3–4 months

##### ZYOMET®

##### Acute inflammatory exacerbation of rosacea

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily for 8–9 weeks, to be applied thinly

##### ● CAUTIONS Avoid exposure to strong sunlight or UV light

##### ● INTERACTIONS → Appendix 1: metronidazole

##### ● SIDE-EFFECTS

##### ▶ Common or very common Skin reactions

##### ● MEDICINAL FORMS There can be variation in the licensing of different medicines containing the same drug.

##### Gel

EXCIPIENTS: May contain Benzyl alcohol, disodium edetate, hydroxybenzoates (parabens), propylene glycol

##### ▶ Acea (Ferndale Pharmaceuticals Ltd)

**Metronidazole 7.5 mg per 1 gram** Acea 0.75% gel | 40 gram [PoM](#)  
£9.95 DT = £22.63

##### ▶ Anabact (Cambridge Healthcare Supplies Ltd)

**Metronidazole 7.5 mg per 1 gram** Anabact 0.75% gel |  
15 gram [PoM](#) £5.64 DT = £5.64 | 30 gram [PoM](#) £7.89 |  
40 gram [PoM](#) £15.89 DT = £22.63

##### ▶ Metrogel (Galderma (UK) Ltd)

**Metronidazole 7.5 mg per 1 gram** Metrogel 0.75% gel |  
40 gram [PoM](#) £22.63 DT = £22.63

##### ▶ Metrosa (M & A Pharmachem Ltd)

**Metronidazole 7.5 mg per 1 gram** Metrosa 0.75% gel |  
30 gram [PoM](#) £12.00 | 40 gram [PoM](#) £19.90 DT = £22.63

##### ▶ Rozex (Galderma (UK) Ltd)

**Metronidazole 7.5 mg per 1 gram** Rozex 0.75% gel | 30 gram [PoM](#)  
£6.60 | 40 gram [PoM](#) £9.88 DT = £22.63

##### ▶ Zyomet (Advanz Pharma)

**Metronidazole 7.5 mg per 1 gram** Zyomet 0.75% gel |  
30 gram [PoM](#) £12.00

##### Cream

EXCIPIENTS: May contain Benzyl alcohol, isopropyl palmitate, propylene glycol

##### ▶ Rosiced (Pierre Fabre Dermo-Cosmetique)

**Metronidazole 7.5 mg per 1 gram** Rosiced 0.75% cream |  
30 gram [PoM](#) £6.60 DT = £6.60

##### ▶ Rozex (Galderma (UK) Ltd)

**Metronidazole 7.5 mg per 1 gram** Rozex 0.75% cream |  
30 gram [PoM](#) £6.60 DT = £6.60 | 40 gram [PoM](#) £9.88 DT = £9.88

## ANTIBACTERIALS &gt; SULFONAMIDES

## Silver sulfadiazine

20-May-2020

## ● INDICATIONS AND DOSE

**Prophylaxis and treatment of infection in burn wounds**

- ▶ TO THE SKIN
- ▶ Child: Apply daily, may be applied more frequently if very exudative
- ▶ Adult: Apply daily, may be applied more frequently if very exudative

**For conservative management of finger-tip injuries**

- ▶ TO THE SKIN
- ▶ Child: Apply every 2–3 days, consult product literature for details
- ▶ Adult: Apply every 2–3 days, consult product literature for details

**Adjunct to prophylaxis of infection in skin graft donor sites and extensive abrasions**

- ▶ TO THE SKIN
- ▶ Adult: (consult product literature)

**Adjunct to short-term treatment of infection in pressure sores**

- ▶ TO THE SKIN
- ▶ Adult: Apply once daily or on alternate days

**As an adjunct to short-term treatment of infection in leg ulcers**

- ▶ TO THE SKIN
- ▶ Adult: Apply once daily or on alternate days, not recommended if ulcer is very exudative

## ● UNLICENSED USE

- ▶ In children No age range specified by manufacturer.

## ● CONTRA-INDICATIONS Not recommended for neonates

## ● CAUTIONS G6PD deficiency

## CAUTIONS, FURTHER INFORMATION

- ▶ Large areas Plasma-sulfadiazine concentrations may approach therapeutic levels with *side-effects* and *interactions* as for sulfonamides if large areas of skin are treated.

## ● INTERACTIONS → Appendix 1: silver sulfadiazine

## ● SIDE-EFFECTS

- ▶ Common or very common Leucopenia · skin reactions
  - ▶ Rare or very rare Argyria (following treatment of large areas of skin or long term use) · renal failure
- SIDE-EFFECTS, FURTHER INFORMATION** Leucopenia developing 2–3 days after starting treatment of burns patients is reported usually to be self-limiting and silver sulfadiazine need not usually be discontinued provided blood counts are monitored carefully to ensure return to normality within a few days.

## ● ALLERGY AND CROSS-SENSITIVITY Contra-indicated in patients with sensitivity to sulfonamides.

## ● PREGNANCY Risk of neonatal haemolysis and methaemoglobinemia in third trimester.

## ● BREAST FEEDING Small risk of kernicterus in jaundiced infants and of haemolysis in G6PD-deficient infants.

## ● HEPATIC IMPAIRMENT Manufacturer advises caution in significant hepatic impairment.

## ● RENAL IMPAIRMENT Manufacturer advises caution if significant impairment.

## ● MONITORING REQUIREMENTS Monitor for leucopenia.

## ● DIRECTIONS FOR ADMINISTRATION Apply with sterile applicator.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Cream**

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), polysorbates, propylene glycol

▶ **Flamazine** (Smith & Nephew Healthcare Ltd)

**Sulfadiazine silver 10 mg per 1 gram** Flamazine 1% cream | 20 gram [PoM] £2.91 | 50 gram [PoM] £3.85 DT = £3.85 | 250 gram [PoM] £10.32 DT = £10.32 | 500 gram [PoM] £18.27 DT = £18.27

## ANTIBACTERIALS &gt; OTHER

## Mupirocin

18-May-2020

## ● INDICATIONS AND DOSE

**Bacterial skin infections, particularly those caused by Gram-positive organisms (except pseudomonal infection)**

- ▶ TO THE SKIN
- ▶ Child: Apply up to 3 times a day for up to 10 days
- ▶ Adult: Apply up to 3 times a day for up to 10 days

**Non-bullous impetigo [in patients who are not systemically unwell or at high risk of complications]**

- ▶ TO THE SKIN
- ▶ Child: Apply 3 times a day for 5–7 days
- ▶ Adult: Apply 3 times a day for 5–7 days

## ● UNLICENSED USE

- ▶ In children Mupirocin ointment licensed for use in children (age range not specified by manufacturer). *Bactroban*® cream not recommended for use in children under 1 year.

## ● SIDE-EFFECTS

- ▶ Common or very common Skin reactions
- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—no information available.
- **BREAST FEEDING** No information available.
- **RENAL IMPAIRMENT** Manufacturer advises caution when mupirocin ointment used in moderate or severe impairment because it contains macrogols (polyethylene glycol).
- **PRESCRIBING AND DISPENSING INFORMATION** For choice of antibacterial therapy, see Skin infections, antibacterial therapy p. 540.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Ointment**▶ **Mupirocin (Non-proprietary)**

**Mupirocin 20 mg per 1 gram** Mupirocin 2% ointment | 15 gram [PoM] £12.50 DT = £5.26

▶ **Bactroban** (GlaxoSmithKline UK Ltd)

**Mupirocin 20 mg per 1 gram** Bactroban 2% ointment | 15 gram [PoM] £5.26 DT = £5.26

**Cream**

EXCIPIENTS: May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol)

▶ **Bactroban** (GlaxoSmithKline UK Ltd)

**Mupirocin (as Mupirocin calcium) 20 mg per 1 gram** Bactroban 2% cream | 15 gram [PoM] £5.26 DT = £5.26

## 2.2 Fungal skin infections

**Other drugs used for Fungal skin infections**

Hydrocortisone with clotrimazole, p. 1317

## ANTIFUNGALS &gt; IMIDAZOLE ANTIFUNGALS

## Clotrimazole

10-Mar-2020

## ● INDICATIONS AND DOSE

## Fungal skin infections

- ▶ TO THE SKIN
- ▶ Child: Apply 2–3 times a day
- ▶ Adult: Apply 2–3 times a day

- **CAUTIONS** Contact with eyes and mucous membranes should be avoided
- **INTERACTIONS** → Appendix 1: antifungals, azoles
- **SIDE-EFFECTS** Oedema · pain · paraesthesia · skin reactions
- **PREGNANCY** Minimal absorption from skin; not known to be harmful.
- **PRESCRIBING AND DISPENSING INFORMATION** Spray may be useful for application of clotrimazole to large or hairy areas of the skin.
- **PATIENT AND CARER ADVICE**  
Medicines for Children leaflet: Clotrimazole for fungal infections  
[www.medicinesforchildren.org.uk/clotrimazole-fungal-infections](http://www.medicinesforchildren.org.uk/clotrimazole-fungal-infections)

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

## Cream

EXCIPIENTS: May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol), polysorbates

## ▶ Clotrimazole (Non-proprietary)

Clotrimazole 10 mg per 1 gram Clotrimazole 1% cream | 20 gram [P] £2.06 DT = £1.29 | 50 gram [P] £5.45 DT = £3.23

## ▶ Canesten (clotrimazole) (Bayer Plc)

Clotrimazole 10 mg per 1 gram Canesten 1% cream | 20 gram [P] £2.20 DT = £1.29 | 50 gram [P] £3.64 DT = £3.23  
Canesten Antifungal 1% cream | 20 gram [P] £1.85 DT = £1.29

Clotrimazole 20 mg per 1 gram Canesten 2% thrush cream | 20 gram [P] £4.76 DT = £4.76

Clotrimazole 100 mg per 1 gram Canesten 10% VC cream | 5 gram [PoM] £4.50 DT = £6.23

## Liquid

## ▶ Canesten (clotrimazole) (Bayer Plc)

Clotrimazole 10 mg per 1 ml Canesten 1% solution | 20 ml [P] £2.53 DT = £2.53

Combinations available: *Hydrocortisone with clotrimazole*, p. 1317

## Econazole nitrate

08-May-2020

## ● INDICATIONS AND DOSE

## Fungal skin infections

- ▶ TO THE SKIN
- ▶ Child: Apply twice daily
- ▶ Adult: Apply twice daily

## Fungal nail infections

- ▶ BY TRANSUNGUAL APPLICATION
- ▶ Child: Apply once daily, applied under occlusive dressing
- ▶ Adult: Apply once daily, applied under occlusive dressing

- **CAUTIONS** Avoid contact with eyes and mucous membranes
- **SIDE-EFFECTS**
  - ▶ Common or very common Pain · skin reactions
  - ▶ Uncommon Swelling
  - ▶ Frequency not known Angioedema
- **SIDE-EFFECTS, FURTHER INFORMATION** Treatment should be discontinued if side-effects are severe.
- **PREGNANCY** Minimal absorption from skin; not known to be harmful.

- **PRESCRIBING AND DISPENSING INFORMATION** *Pevaryl*® 1% cream should be used.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

## Cream

EXCIPIENTS: May contain Butylated hydroxyanisole, fragrances

## ▶ Gyno-Pevaryl (Janssen-Cilag Ltd)

Econazole nitrate 10 mg per 1 gram Gyno-Pevaryl 1% cream | 15 gram [PoM] £2.11 DT = £2.11 | 30 gram [PoM] £3.78 DT = £3.78

## Ketoconazole

04-Feb-2020

## ● INDICATIONS AND DOSE

## Tinea pedis

- ▶ TO THE SKIN USING CREAM
- ▶ Adult: Apply twice daily

## Fungal skin infection (not Tinea pedis)

- ▶ TO THE SKIN USING CREAM
- ▶ Adult: Apply 1–2 times a day

## Treatment of seborrhoeic dermatitis and dandruff

- ▶ TO THE SKIN USING SHAMPOO
- ▶ Child 12–17 years: Apply twice weekly for 2–4 weeks, leave preparation on for 3–5 minutes before rinsing
- ▶ Adult: Apply twice weekly for 2–4 weeks, leave preparation on for 3–5 minutes before rinsing

## Prophylaxis of seborrhoeic dermatitis and dandruff

- ▶ TO THE SKIN USING SHAMPOO
- ▶ Child 12–17 years: Apply every 1–2 weeks, leave preparation on for 3–5 minutes before rinsing
- ▶ Adult: Apply every 1–2 weeks, leave preparation on for 3–5 minutes before rinsing

## Treatment of pityriasis versicolor

- ▶ TO THE SKIN USING SHAMPOO
- ▶ Child 12–17 years: Apply once daily for maximum 5 days, leave preparation on for 3–5 minutes before rinsing
- ▶ Adult: Apply once daily for maximum 5 days, leave preparation on for 3–5 minutes before rinsing

## Prophylaxis of pityriasis versicolor

- ▶ TO THE SKIN USING SHAMPOO
- ▶ Child 12–17 years: Apply once daily for up to 3 days before sun exposure, leave preparation on for 3–5 minutes before rinsing
- ▶ Adult: Apply once daily for up to 3 days before sun exposure, leave preparation on for 3–5 minutes before rinsing

- **CONTRA-INDICATIONS** Acute porphyrias p. 1120
- **CAUTIONS** Avoid contact with eyes · avoid contact with mucous membranes
- **INTERACTIONS** → Appendix 1: antifungals, azoles
- **SIDE-EFFECTS**
  - ▶ Common or very common Skin reactions
  - ▶ Uncommon Alopecia · angioedema · excessive tearing · folliculitis · hair changes
  - ▶ Rare or very rare Eye irritation · taste altered
- **NATIONAL FUNDING/ACCESS DECISIONS**  
**NHS restrictions** *Nizoral*® cream is not prescribable in NHS primary care except for the treatment of seborrhoeic dermatitis and pityriasis versicolor; endorse prescription 'SLS'.
- **EXCEPTIONS TO LEGAL CATEGORY** A 15-g tube is available for sale to the public for the treatment of tinea pedis, tinea cruris, and candida intertrigo.  
Can be sold to the public for the prevention and treatment of dandruff and seborrhoeic dermatitis of the scalp as a shampoo formulation containing ketoconazole maximum 2%, in a pack containing maximum 120 mL and labelled to show a maximum frequency of application of once every 3 days.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Cream

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), polysorbates, propylene glycol

- ▶ **Nizoral** (Janssen-Cilag Ltd)

**Ketoconazole 20 mg per 1 gram** Nizoral 2% cream | 30 gram [PoM]  
£4.24 DT = £4.24

### Shampoo

EXCIPIENTS: May contain Imidurea

- ▶ **Ketoconazole (Non-proprietary)**

**Ketoconazole 20 mg per 1 gram** Ketoconazole 2% shampoo |  
120 ml [PoM] £4.81 DT = £4.53

- ▶ **Dandrazol** (Transdermal Ltd)

**Ketoconazole 20 mg per 1 gram** Dandrazol 2% shampoo |  
120 ml [PoM] £3.39 DT = £4.53

- ▶ **Nizoral** (Thornton & Ross Ltd)

**Ketoconazole 20 mg per 1 gram** Nizoral 2% shampoo |  
120 ml [PoM] £3.59 DT = £4.53

## Miconazole

20-Jan-2020

### • INDICATIONS AND DOSE

#### Fungal skin infections

- ▶ TO THE SKIN

- ▶ Child: Apply twice daily continuing for 10 days after lesions have healed
- ▶ Adult: Apply twice daily continuing for 10 days after lesions have healed

#### Fungal nail infections

- ▶ TO THE SKIN

- ▶ Child: Apply 1–2 times a day
- ▶ Adult: Apply 1–2 times a day

### • UNLICENSED USE

- ▶ In children Licensed for use in children (age range not specified by manufacturer).

- **CAUTIONS** Avoid in Acute porphyrias p. 1120 • contact with eyes and mucous membranes should be avoided

- **INTERACTIONS** → Appendix 1: antifungals, azoles

### • SIDE-EFFECTS

- ▶ Common or very common Skin reactions
- ▶ Frequency not known Angioedema

- **PREGNANCY** Absorbed from the skin in small amounts; manufacturer advises caution.

- **BREAST FEEDING** Manufacturer advises caution—no information available.

### • PROFESSION SPECIFIC INFORMATION

Dental practitioners' formulary

Miconazole cream may be prescribed.

### • NATIONAL FUNDING/ACCESS DECISIONS

NHS restrictions *Daktarin*® powder and *Daktarin*® cream 15 g is not prescribable in NHS primary care.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Cream

EXCIPIENTS: May contain Butylated hydroxyanisole

- ▶ **Daktarin** (McNeil Products Ltd, Janssen-Cilag Ltd, Johnson & Johnson Ltd)

**Miconazole nitrate 20 mg per 1 gram** Daktarin 2% cream |  
15 gram [P] £2.66 | 30 gram [P] £1.82 DT = £1.82

- ▶ **Gyno-Daktarin** (Janssen-Cilag Ltd)

**Miconazole nitrate 20 mg per 1 gram** Gyno-Daktarin 2% vaginal cream | 78 gram [PoM] £4.33 DT = £4.33

### Powder

- ▶ **Daktarin** (McNeil Products Ltd)

**Miconazole nitrate 20 mg per 1 gram** Daktarin 2% powder |  
20 gram [P] £3.13 DT = £3.13

## Tioconazole

03-Feb-2020

### • INDICATIONS AND DOSE

#### Fungal nail infection

- ▶ BY TRANSUNGUAL APPLICATION

- ▶ Child: Apply twice daily usually for up to 6 months (may be extended to 12 months), apply to nails and surrounding skin
- ▶ Adult: Apply twice daily usually for up to 6 months (may be extended to 12 months), apply to nails and surrounding skin

### • UNLICENSED USE

- ▶ In children Licensed for use in children (age range not specified by manufacturer).

- **CAUTIONS** Contact with eyes and mucous membranes should be avoided • use with caution if child likely to suck affected digits (in children)

### • SIDE-EFFECTS

- ▶ Common or very common Peripheral oedema

- ▶ Uncommon Skin reactions

- ▶ Frequency not known Nail disorder • pain • paraesthesia • periorbital oedema

- **PREGNANCY** Manufacturer advises avoid.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Paint

- ▶ **Tioconazole (Non-proprietary)**

**Tioconazole 283 mg per 1 ml** Tioconazole 283mg/ml medicated nail lacquer | 12 ml [PoM] £28.74 DT = £28.74

- ▶ **Trosyl** (Pfizer Ltd)

**Tioconazole 283 mg per 1 ml** Trosyl 283mg/ml nail solution |  
12 ml [PoM] £27.38 DT = £28.74

## ANTIFUNGALS > OTHER

## Amorolfine

20-Jan-2020

### • INDICATIONS AND DOSE

#### Fungal nail infections

- ▶ BY TRANSUNGUAL APPLICATION

- ▶ Child 12-17 years: Apply 1–2 times a week for 6 months to treat finger nails and for toe nails 9–12 months (review at intervals of 3 months), apply to infected nails after filing and cleansing, allow to dry for approximately 3 minutes
- ▶ Adult: Apply 1–2 times a week for 6 months to treat finger nails and for toe nails 9–12 months (review at intervals of 3 months), apply to infected nails after filing and cleansing, allow to dry for approximately 3 minutes

- **CAUTIONS** Avoid contact with ears • avoid contact with eyes and mucous membranes • use with caution in child likely to suck affected digits

### • SIDE-EFFECTS

- ▶ Rare or very rare Nail discolouration • skin reactions

- **PATIENT AND CARER ADVICE** Avoid nail varnish or artificial nails during treatment.

### • EXCEPTIONS TO LEGAL CATEGORY

- ▶ In adults Amorolfine nail lacquer can be sold to the public if supplied for the treatment of mild cases of distal and lateral subungual onychomycoses caused by dermatophytes, yeasts and moulds; subject to treatment of max. 2 nails, max. strength of nail lacquer amorolfine 5% and a pack size of 3 mL.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Medicated nail lacquer

CAUTIONARY AND ADVISORY LABELS 10

##### ► Amorolfine (Non-proprietary)

**Amorolfine (as Amorolfine hydrochloride) 50 mg per**

**1 ml** Amorolfine 5% medicated nail lacquer | 5 ml [PoM] £16.21 DT = £8.36

##### ► Loceryl (Galderma (UK) Ltd)

**Amorolfine (as Amorolfine hydrochloride) 50 mg per 1 ml** Loceryl 5% medicated nail lacquer | 5 ml [PoM] £9.08 DT = £8.36

##### ► Omicur (Morningside Healthcare Ltd)

**Amorolfine (as Amorolfine hydrochloride) 50 mg per 1 ml** Omicur 5% medicated nail lacquer | 2.5 ml [PoM] £9.09 | 5 ml [PoM] £9.09 DT = £8.36

## Griseofulvin

16-Jan-2020

### • INDICATIONS AND DOSE

#### Tinea pedis

##### ► TO THE SKIN

- Adult: Apply 400 micrograms once daily, apply to an area approximately 13 cm<sup>2</sup>; increased if necessary to 1.2 mg once daily for maximum treatment duration of 4 weeks, allow each spray to dry between application

- **CAUTIONS** Avoid contact with eyes and mucous membranes

- **INTERACTIONS** → Appendix 1: griseofulvin

- **SIDE-EFFECTS** Paraesthesia · skin irritation

- **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk.

- **BREAST FEEDING** Manufacturer advises avoid unless potential benefit outweighs risk.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Spray

CAUTIONARY AND ADVISORY LABELS 15

EXCIPIENTS: May contain Benzyl alcohol

##### ► Grisol (Transdermal Ltd)

**Griseofulvin 10 mg per 1 gram** Grisol 1% spray | 20 ml [GSL] £4.50

## Terbinafine

12-May-2020

### • INDICATIONS AND DOSE

#### Tinea pedis

##### ► TO THE SKIN USING CREAM

- Adult: Apply 1–2 times a day for up to 1 week, to be applied thinly

##### ► BY MOUTH USING TABLETS

- Adult: 250 mg once daily for 2–6 weeks

#### Tinea corporis

##### ► TO THE SKIN USING CREAM

- Adult: Apply 1–2 times a day for up to 1–2 weeks, to be applied thinly, review treatment after 2 weeks

##### ► BY MOUTH USING TABLETS

- Adult: 250 mg once daily for 4 weeks

#### Tinea cruris

##### ► TO THE SKIN USING CREAM

- Adult: Apply 1–2 times a day for up to 1–2 weeks, to be applied thinly, review treatment after 2 weeks

##### ► BY MOUTH USING TABLETS

- Adult: 250 mg once daily for 2–4 weeks

#### Dermatophyte infections of the nails

##### ► BY MOUTH USING TABLETS

- Adult: 250 mg once daily for 6 weeks–3 months (occasionally longer in toenail infections)

### Cutaneous candidiasis | Pityriasis versicolor

#### ► TO THE SKIN USING CREAM

- Adult: Apply 1–2 times a day for 2 weeks, to be applied thinly, review treatment after 2 weeks

### • CAUTIONS

- With oral use Psoriasis (risk of exacerbation) · risk of lupus erythematosus
- With topical use contact with eyes and mucous membranes should be avoided

- **INTERACTIONS** → Appendix 1: terbinafine

### • SIDE-EFFECTS

#### GENERAL SIDE-EFFECTS

- Common or very common Skin reactions

#### SPECIFIC SIDE-EFFECTS

- Common or very common

- With oral use Appetite decreased · arthralgia · diarrhoea · gastrointestinal discomfort · gastrointestinal disorder · headache · myalgia · nausea

#### ► Uncommon

- With oral use Taste altered

- With topical use Pain

#### ► Rare or very rare

- With oral use Agranulocytosis · alopecia · cutaneous lupus erythematosus · dizziness · hepatic disorders · malaise · neutropenia · photosensitivity reaction · sensation abnormal · severe cutaneous adverse reactions (SCARs) · systemic lupus erythematosus (SLE) · thrombocytopenia · vertigo

#### ► Frequency not known

- With oral use Anaemia · anxiety · depressive symptom · fatigue · fever · hearing impairment · influenza like illness · pancreatitis · pancytopenia · rhabdomyolysis · serum sickness-like reaction · smell altered · tinnitus · vasculitis · vision disorders

- With topical use Hypersensitivity

#### SIDE-EFFECTS, FURTHER INFORMATION Liver toxicity

With oral use; discontinue treatment if liver toxicity develops (including jaundice, cholestasis and hepatitis).

**Serious skin reactions** With oral use; discontinue treatment in progressive skin rash (including Stevens-Johnson syndrome and toxic epidermal necrolysis).

### • PREGNANCY

- With topical use Manufacturer advises use only if potential benefit outweighs risk—*animal* studies suggest no adverse effects.

- With oral use Manufacturer advises use only if potential benefit outweighs risk—no information available.

### • BREAST FEEDING

- With topical use Manufacturer advises avoid—present in milk. Less than 5% of the dose is absorbed after topical application of terbinafine; avoid application to mother's chest.

- With oral use Avoid—present in milk.

### • HEPATIC IMPAIRMENT

- With oral use Manufacturer advises avoid (risk of increased exposure).

### • RENAL IMPAIRMENT

- Dose adjustments ► With oral use Use half normal dose if eGFR less than 50 mL/minute/1.73 m<sup>2</sup> and no suitable alternative available.

### • MONITORING REQUIREMENTS

- With oral use Monitor hepatic function before treatment and then periodically after 4–6 weeks of treatment—discontinue if abnormalities in liver function tests.

### • PATIENT AND CARER ADVICE

- With oral use Manufacturer advises that patients should immediately report any signs or symptoms suggestive of liver dysfunction such as pruritus, unexplained persistent nausea, decreased appetite, anorexia, jaundice, vomiting,

fatigue, right upper abdominal pain, dark urine, or pale stools. Patients with these symptoms should discontinue taking terbinafine and the patient's liver function should be immediately evaluated.

#### ● EXCEPTIONS TO LEGAL CATEGORY

- With topical use Preparations of terbinafine hydrochloride (maximum 1%) can be sold to the public for use in those over 16 years for external use for the treatment of tinea pedis as a cream in a pack containing maximum 15 g, or for the treatment of tinea pedis and cruris as a cream in a pack containing maximum 15 g, or for the treatment of tinea pedis, cruris, and corporis as a spray in a pack containing maximum 30 mL spray or as a gel in a pack containing maximum 30 g gel.

- MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Tablet

CAUTIONARY AND ADVISORY LABELS 9

#### ▸ Terbinafine (Non-proprietary)

**Terbinafine (as Terbinafine hydrochloride) 250 mg** Terbinafine 250mg tablets | 14 tablet [PoM] £18.11 DT = £1.80 | 28 tablet [PoM] £3.56-£34.93

#### ▸ Lamisil (Novartis Pharmaceuticals UK Ltd)

**Terbinafine (as Terbinafine hydrochloride) 250 mg** Lamisil 250mg tablets | 14 tablet [PoM] £21.30 DT = £1.80 | 28 tablet [PoM] £41.09

#### Cream

EXCIPIENTS: May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol), polysorbates

#### ▸ Terbinafine (Non-proprietary)

**Terbinafine hydrochloride 10 mg per 1 gram** Terbinafine 1% cream | 15 gram [PoM] £3.17 DT = £1.54 | 30 gram [PoM] £6.33 DT = £3.08

#### ▸ Lamisil (GlaxoSmithKline Consumer Healthcare)

**Terbinafine hydrochloride 10 mg per 1 gram** Lamisil 1% cream | 30 gram [PoM] £8.76 DT = £3.08

## ANTISEPTICS AND DISINFECTANTS > UNDECENOATES

### Undecenoic acid with zinc undecenoate

#### ● INDICATIONS AND DOSE

##### Treatment of athletes foot

##### ▸ TO THE SKIN

- Child: Apply twice daily, continue use for 7 days after lesions have healed
- Adult: Apply twice daily, continue use for 7 days after lesions have healed

##### Prevention of athletes foot

##### ▸ TO THE SKIN

- Child: Apply once daily
- Adult: Apply once daily

#### ● UNLICENSED USE

- In children *Mycota*® licensed for use in children (age range not specified by manufacturer).

- CAUTIONS** Avoid broken skin · contact with eyes should be avoided · contact with mucous membranes should be avoided

#### ● SIDE-EFFECTS

- Rare or very rare Skin irritation

**SIDE-EFFECTS, FURTHER INFORMATION** Treatment should be discontinued if irritation is severe.

- MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Cream

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), fragrances

- *Mycota* (zinc undecenoate / undecenoic acid) (Thornton & Ross Ltd)  
Undecenoic acid 50 mg per 1 gram, Zinc undecenoate 200 mg per 1 gram *Mycota* cream | 25 gram [GSL] £2.01

#### Powder

EXCIPIENTS: May contain Fragrances

- *Mycota* (zinc undecenoate / undecenoic acid) (Thornton & Ross Ltd)

Undecenoic acid 20 mg per 1 gram, Zinc undecenoate 200 mg per 1 gram *Mycota* powder | 70 gram [GSL] £3.04

## ANTISEPTICS AND DISINFECTANTS > OTHER

### Chlorhexidine with nystatin

#### ● INDICATIONS AND DOSE

##### Skin infections due to *Candida* spp.

##### ▸ TO THE SKIN

- Child: Apply 2–3 times a day, continuing for 7 days after lesions have healed
- Adult: Apply 2–3 times a day, continuing for 7 days after lesions have healed

#### ● UNLICENSED USE

- In children Licensed for use in children (age range not specified by manufacturer).

- CAUTIONS** Avoid contact with eyes and mucous membranes

- SIDE-EFFECTS** Hypersensitivity · skin reactions

- MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Cream

EXCIPIENTS: May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol), polysorbates

#### ▸ Chlorhexidine with nystatin (Non-proprietary)

**Chlorhexidine hydrochloride 10 mg per 1 gram, Nystatin 100000 unit per 1 gram** Nystatin 100,000units/g / Chlorhexidine hydrochloride 1% cream | 30 gram [PoM] £4.99 DT = £4.99

## BENZOATES

### Benzoic acid with salicylic acid

#### ● INDICATIONS AND DOSE

##### Ringworm (tinea)

##### ▸ TO THE SKIN

- Child: Apply twice daily
- Adult: Apply twice daily

#### ● UNLICENSED USE

- In children Licensed for use in children (age range not specified by manufacturer).

- CAUTIONS** Avoid broken or inflamed skin · avoid contact with eyes · avoid contact with mucous membranes

#### CAUTIONS, FURTHER INFORMATION

- Salicylate toxicity Salicylate toxicity may occur particularly if applied on large areas of skin.

- SIDE-EFFECTS** Drug toxicity · eye irritation · mucosal irritation · skin reactions

- PRESCRIBING AND DISPENSING INFORMATION** Benzoic Acid Ointment, Compound, BP has also been referred to as Whitfield's ointment.

- MEDICINAL FORMS** Forms available from special-order manufacturers include: cream, ointment

## 2.3 Parasitic skin infections

**Other drugs used for Parasitic skin infections** Ivermectin, p. 640

### PARASITICIDES

#### Benzyl benzoate

19-May-2020

##### • INDICATIONS AND DOSE

###### Scabies

###### ► TO THE SKIN

- Adult: Apply over the whole body; repeat without bathing on the following day and wash off 24 hours later; a third application may be required in some cases

- **CAUTIONS** Avoid contact with eyes and mucous membranes · do not use on broken or secondarily infected skin

- **SIDE-EFFECTS** Eye irritation · mucosal irritation · skin irritation

- **BREAST FEEDING** Suspend feeding until product has been washed off.

- **PRESCRIBING AND DISPENSING INFORMATION** When prepared extemporaneously, the BP states Benzyl Benzoate Application, BP consists of benzyl benzoate 25% in an emulsion basis.

Some manufacturers recommend application to the body but to exclude the head and neck. However, application should be extended to the scalp, neck, face, and ears. Note—dilution to reduce irritant effect also reduces efficacy.

- **LESS SUITABLE FOR PRESCRIBING** Benzyl benzoate is less suitable for prescribing.

- **MEDICINAL FORMS** Forms available from special-order manufacturers include: liquid

#### Dimeticone

04-Feb-2020

##### • INDICATIONS AND DOSE

###### Head lice

###### ► TO THE SKIN

## 3 Inflammatory skin conditions

### 3.1 Eczema and psoriasis

## Eczema

### Types and management

Eczema (dermatitis) has several causes, which may influence treatment. The main types of eczema are irritant, allergic contact, atopic, venous and discoid; different types may co-exist. Lichenification, due to scratching and rubbing, may complicate any chronic eczema. *Atopic eczema* is the most common type and it usually involves dry skin as well as infection and lichenification.

Management of eczema involves the removal or treatment of contributory factors including occupational and domestic irritants. Known or suspected contact allergens should be avoided. Rarely, ingredients in topical medicinal products may sensitise the skin; the BNF lists active ingredients together with excipients that have been associated with skin sensitisation.

Skin dryness and the consequent irritant eczema requires **emollients** applied regularly (at least twice daily) and liberally to the affected area; this can be supplemented with bath or shower emollients. The use of emollients should continue even if the eczema improves or if other treatment is being used.

**Topical corticosteroids** are also required in the management of eczema; the potency of the corticosteroid should be appropriate to the severity and site of the condition. Mild corticosteroids are generally used on the face and on flexures; potent corticosteroids are generally required for use on adults with discoid or lichenified eczema or with eczema on the scalp, limbs, and trunk. Treatment should be reviewed regularly, especially if a potent corticosteroid is required. In patients with frequent flares (2–3 per month), a topical corticosteroid can be applied on 2 consecutive days each week to prevent further flares.

Bandages (including those containing ichthammol with zinc oxide p. 1318) are sometimes applied over topical corticosteroids or emollients to treat eczema of the limbs. Dry-wrap dressings can be used to provide a physical barrier to help prevent scratching and improve retention of emollients. See *Wound management products and elasticated garments* for details of elasticated viscose stockinette tubular bandages and garments, and silk clothing.

See Eczema and psoriasis, drugs affecting the immune response p. 1306 for the role of topical pimecrolimus p. 1321 and tacrolimus p. 1321 in atopic eczema.

### Infection

Bacterial infection (commonly with *Staphylococcus aureus* and occasionally with *Streptococcus pyogenes*) can exacerbate eczema and requires treatment with topical or systemic **antibacterial drugs**. Antibacterial drugs should be used in short courses (typically 1 week) to reduce the risk of drug resistance or skin sensitisation. Associated eczema is treated simultaneously with a topical corticosteroid which can be combined with a topical antimicrobial.

Eczema involving widespread or recurrent infection requires the use of a systemic antibacterial that is active against the infecting organism. Products that combine an antiseptic with an emollient application and with a bath emollient can also be used; antiseptic shampoos can be used on the scalp.

Intertriginous eczema commonly involves candida and bacteria; it is best treated with a mild or moderately potent topical corticosteroid and a suitable antimicrobial drug.

Widespread herpes simplex infection may complicate atopic eczema and treatment with a systemic antiviral drug is indicated.

### Management of other features of eczema

**Lichenification**, which results from repeated scratching is treated initially with a potent corticosteroid. Bandages containing ichthammol **paste** p. 1318 (to reduce pruritus) and other substances such as **zinc oxide** can be applied over the corticosteroid or emollient. **Coal tar** and ichthammol can be useful in some cases of *chronic eczema*.

A **non-sedating antihistamine** may be of some value in relieving severe itching or urticaria associated with eczema. A **sedating antihistamine** can be used if itching causes sleep disturbance.

**Exudative ('weeping') eczema** requires a potent corticosteroid initially; infection may also be present and require specific treatment. Potassium permanganate solution (1 in 10,000) p. 1343 can be used in exuding

eczema for its antiseptic and astringent effects; treatment should be stopped when exudation stops.

### Severe refractory eczema

*Severe refractory eczema* is best managed under specialist supervision; it may require phototherapy or drugs that act on the immune system. Alitretinoin p. 1328 is licensed for the treatment of severe chronic hand eczema refractory to potent topical corticosteroids; patients with hyperkeratotic features are more likely to respond to alitretinoin than those with pompholyx.

### Seborrhoeic dermatitis

*Seborrhoeic dermatitis (seborrhoeic eczema)* is associated with species of the yeast *Malassezia* and affects the scalp, paranasal areas, and eyebrows. Shampoos active against the yeast (including those containing ketoconazole p. 1298 or coal tar p. 1319) and combinations of mild corticosteroids with suitable antimicrobials are used.

## Psoriasis

### Management

Psoriasis is characterised by epidermal thickening and scaling. It commonly affects extensor surfaces and the scalp.

Occasionally, psoriasis is provoked or exacerbated by drugs such as lithium, chloroquine and hydroxychloroquine, beta-blockers, non-steroidal anti-inflammatory drugs, and ACE inhibitors. Psoriasis may not be seen until the drug has been taken for weeks or months.

**Emollients**, in addition to their effects on dryness, scaling and cracking, may have an anti-proliferative effect in psoriasis, and may be the only treatment necessary for mild psoriasis. They are particularly useful in *inflammatory psoriasis* and in *plaque psoriasis of palms and soles*, in which irritant factors can perpetuate the condition. Emollients are useful adjuncts to other more specific treatment.

More specific topical treatment for *chronic stable plaque psoriasis* on extensor surfaces of trunk and limbs involves the use of **vitamin D analogues**, coal tar p. 1319, dithranol p. 1318, and the retinoid tazarotene p. 1330. However, they can irritate the skin and they are not suitable for the more inflammatory forms of psoriasis; their use should be suspended during an inflammatory phase of psoriasis. The efficacy and the irritancy of each substance varies between patients. If a substance irritates significantly, it should be stopped or the concentration reduced; if it is tolerated, its effects should be assessed after 4 to 6 weeks and treatment continued if it is effective.

*Scalp psoriasis* is usually scaly, and the scale may be thick and adherent; this will require softening with an emollient cream, ointment, or oil. A tar-based shampoo is first-line treatment for scalp psoriasis; a keratolytic, such as salicylic acid, should also be used if there is significant scaling, to allow other treatments to work.

Some preparations prescribed for psoriasis affecting the scalp, combine salicylic acid with coal tar or sulfur. The product should be applied generously, and an adequate quantity should be prescribed. It should be left on for at least an hour, often more conveniently overnight, before washing off. The use of scalp preparations containing a potent corticosteroid or a vitamin D analogue, either alone or in combination, can also be helpful.

*Facial, flexural and genital psoriasis* can be managed with short-term use of a mild or moderate potency topical corticosteroid (a mild potency topical corticosteroid is preferred for the initial treatment of facial psoriasis). Calcitriol p. 1331 or tacalcitol p. 1331 can be used for longer-term treatment, or if the response to mild or moderate potency topical corticosteroids is inadequate; calcitriol p. 1330 is more likely to cause irritation. Low strength tar preparations can also be used. Pimecrolimus p. 1321 or

tacrolimus p. 1321 by topical application [unlicensed indication] can be used short-term, under specialist supervision, in patients whose condition has not responded adequately to other treatments, or who are intolerant of them.

Widespread *unstable psoriasis* of erythrodermic or generalised pustular type requires urgent specialist assessment. Initial topical treatment should be limited to using emollients frequently and generously; emollients should be prescribed in quantities of 1 kg or more. More localised acute or subacute *inflammatory psoriasis* with hot, spreading or itchy lesions, should be treated topically with emollients or with a corticosteroid of moderate potency.

Calcipotriol and tacalcitol are analogues of vitamin D that affect cell division and differentiation. Calcitriol is an active form of vitamin D. Vitamin D and its analogues are used first-line for the long-term treatment of plaque psoriasis; they do not smell or stain and they may be more acceptable than tar or dithranol products. Of the vitamin D analogues, tacalcitol and calcitriol are less likely to irritate.

**Coal tar** has anti-inflammatory properties that are useful in chronic plaque psoriasis; it also has antiscaling properties. Crude coal tar (coal tar, BP) is the most effective form, typically in a concentration of 1 to 10% in a soft paraffin base, but few outpatients tolerate the smell and mess. Cleaner extracts of coal tar included in proprietary preparations, are more practicable for home use but they are less effective and improvement takes longer. Contact of coal tar products with normal skin is not normally harmful and they can be used for widespread small lesions; however, irritation, contact allergy, and sterile folliculitis can occur. The milder tar extracts can be used on the face and flexures. Tar baths and tar shampoos are also helpful.

Dithranol is effective for chronic plaque psoriasis. Its major disadvantages are irritation (for which individual susceptibility varies) and staining of skin and of clothing. Dithranol is not generally suitable for widespread small lesions nor should it be used in the flexures or on the face. Proprietary preparations are more suitable for home use; they are usually washed off after 5 to 60 minutes ('short contact'). Specialist nurses may apply intensive treatment with dithranol paste which is covered by stockinette dressings and usually retained overnight. Dithranol should be discontinued if even a low concentration causes acute inflammation; continued use can result in the psoriasis becoming unstable.

Tazarotene, a retinoid, has a similar efficacy to vitamin D and its analogues, but is associated with a greater incidence of irritation. Although irritation is common, it is minimised by applying tazarotene sparingly to the plaques and avoiding normal skin; application to the face and in flexures should also be avoided. Tazarotene does not stain and is odourless.

A topical **corticosteroid** is not generally suitable for long-term use or as the sole treatment of extensive chronic plaque psoriasis; any early improvement is not usually maintained and there is a risk of the condition deteriorating or of precipitating an unstable form of psoriasis (e.g. erythrodermic psoriasis or generalised pustular psoriasis) on withdrawal. Topical use of potent corticosteroids on widespread psoriasis can also lead to systemic as well as local side-effects. However, topical corticosteroids used short-term may be appropriate to treat psoriasis in specific sites such as the face or flexures (with a mild or moderate corticosteroid), and psoriasis of the scalp, palms, and soles (with a potent corticosteroid). Very potent corticosteroids should only be used under specialist supervision.

Combining the use of a corticosteroid with another specific topical treatment may be beneficial in chronic plaque psoriasis; the drugs may be used separately at different times of the day or used together in a single formulation. *Eczema* co-existing with psoriasis may be treated with a corticosteroid, or coal tar, or both.

## Phototherapy

**Phototherapy** is available in specialist centres under the supervision of a dermatologist. **Ultraviolet B (UVB)** radiation is usually effective for *chronic stable psoriasis* and for *guttate psoriasis*. It may be considered for patients with moderately severe psoriasis in whom topical treatment has failed, but it may irritate inflammatory psoriasis.

**Photochemotherapy** combining long-wave ultraviolet A radiation with a psoralen (PUVA) is available in specialist centres under the supervision of a dermatologist. The psoralen, which enhances the effect of irradiation, is administered either by mouth or topically. PUVA is effective in most forms of psoriasis, including *localised palmoplantar pustular psoriasis*. Early adverse effects include phototoxicity and pruritus. Higher cumulative doses exaggerate skin ageing, increase the risk of dysplastic and neoplastic skin lesions, especially squamous cancer, and pose a theoretical risk of cataracts.

Phototherapy combined with coal tar, dithranol, tazarotene, topical vitamin D or vitamin D analogues, or oral acitretin, allows reduction of the cumulative dose of phototherapy required to treat psoriasis.

## Systemic treatment

**Systemic treatment** is required for severe, resistant, unstable or complicated forms of psoriasis, and it should be initiated only under specialist supervision. Systemic drugs for psoriasis include acitretin and drugs that affect the immune response (such as ciclosporin p. 883 and methotrexate p. 963).

Systemic corticosteroids should be used only rarely in psoriasis because rebound deterioration may occur on reducing the dose.

Acitretin p. 1327, a metabolite of etretinate, is a retinoid (vitamin A derivative); it is prescribed by specialists. The main indication for acitretin is *psoriasis*, but it is also used in disorders of keratinisation such as severe *Darier's disease* (keratosis follicularis), and some forms of *ichthyosis*. Although a minority of cases of psoriasis respond well to acitretin alone, it is only moderately effective in many cases and it is combined with other treatments. A therapeutic effect occurs after 2 to 4 weeks and the maximum benefit after 4 months. Consideration should be given to stopping acitretin if the response is inadequate after 4 months at the optimum dose. The manufacturers of acitretin do not recommend continuous treatment for longer than 6 months. However, some patients may benefit from longer treatment, provided that the lowest effective dose is used, patients are monitored carefully for adverse effects, and the need for treatment is reviewed regularly.

Apart from teratogenicity, which remains a risk for 3 years after stopping, acitretin is the least toxic systemic treatment for psoriasis; in women with a potential for child-bearing, the possibility of pregnancy must be excluded before treatment and effective contraception must be used during treatment and for at least 3 years afterwards (oral progestogen-only contraceptives not considered effective).

## Topical treatment

The vitamin D and analogues, calcipotriol p. 1330, calcitriol p. 1331, and tacalcitol p. 1331 are used for the management of plaque psoriasis. They should be avoided by those with calcium metabolism disorders, and used with caution in generalised pustular or erythrodermic exfoliative psoriasis (enhanced risk of hypercalcaemia).

## Eczema and psoriasis, drugs affecting the immune response

### Overview

Drugs affecting the immune response are used for eczema or psoriasis. Systemic drugs acting on the immune system are used under specialist supervision.

Pimecrolimus p. 1321 by topical application is licensed for *mild to moderate atopic eczema*. Tacrolimus p. 1321 is licensed for topical use in *moderate to severe atopic eczema*. Both are drugs whose long-term safety is still being evaluated and they should not usually be considered first-line treatments unless there is a specific reason to avoid or reduce the use of topical corticosteroids. Treatment of atopic eczema with topical pimecrolimus or topical tacrolimus should be initiated only by prescribers experienced in managing the condition. Topical tacrolimus and pimecrolimus have a role in the treatment of psoriasis.

A short course of a systemic corticosteroid can be given for eczema flares that have not improved despite appropriate topical treatment.

Ciclosporin p. 883 by mouth can be used for *severe psoriasis* and for *severe eczema*. Azathioprine p. 881 or mycophenolate mofetil p. 891 are used for severe refractory eczema [unlicensed indication]. Dupilumab p. 1323 is licensed for the treatment of moderate to severe atopic eczema in patients requiring systemic therapy. Dimethyl fumarate p. 898 is licensed for the treatment of moderate to severe plaque psoriasis.

Methotrexate p. 963 can be used for *severe psoriasis*, the dose being adjusted according to severity of the condition and haematological and biochemical measurements. Folic acid p. 1084 should be given to reduce the possibility of side-effects associated with methotrexate. Folic acid can be given once weekly [unlicensed indication], on a different day from the methotrexate; alternative regimens of folic acid may be used in some settings.

Etanercept p. 1175, adalimumab p. 1170, and infliximab p. 1179 inhibit the activity of tumour necrosis factor (TNF $\alpha$ ). They are used for *severe plaque psoriasis* either refractory to at least 2 standard systemic treatments and photochemotherapy, or when standard treatments cannot be used because of intolerance or contra-indications; while either etanercept or adalimumab is considered to be the first choice in stable disease, infliximab or adalimumab may be useful when rapid disease control is required. Secukinumab p. 1161 and ixekizumab p. 1325 inhibit the activity of interleukin-17A, brodalumab p. 1322 inhibits the activity of interleukin-17RA and guselkumab p. 1324 inhibits the activity of interleukin-23. They are used for *moderate to severe plaque psoriasis* in patients who are candidates for systemic therapy. Secukinumab is also licensed for psoriatic arthritis and ankylosing spondylitis. Ustekinumab p. 1164 (a monoclonal antibody that inhibits interleukins 12 and 23) can be used for *severe plaque psoriasis* that has not responded to at least 2 standard systemic treatments and photochemotherapy, or when these treatments cannot be used because of intolerance or contra-indications. Adalimumab is also licensed for the treatment of active moderate to severe hidradenitis suppurativa (acne inversa) in patients who have had inadequate response to conventional systemic therapy. Adalimumab, etanercept, infliximab, ixekizumab and ustekinumab are also licensed for psoriatic arthritis.

**Other drugs used for Eczema and psoriasis** Apremilast, p. 1181 • Certolizumab pegol, p. 1173

## CORTICOSTEROIDS

### Topical corticosteroids

#### Overview

Topical corticosteroids are used for the treatment of inflammatory conditions of the skin (other than those arising from an infection), in particular eczema, contact dermatitis, insect stings, and eczema of scabies. Corticosteroids suppress the inflammatory reaction during use; they are not curative and on discontinuation a rebound exacerbation of the condition may occur. They are generally used to relieve symptoms and suppress signs of the disorder when other measures such as emollients are ineffective.

Topical corticosteroids are not recommended in the routine treatment of urticaria; treatment should only be initiated and supervised by a specialist. They should not be used indiscriminately in pruritus (where they will only benefit if inflammation is causing the itch) and are **not** recommended for acne vulgaris.

Systemic or very potent topical corticosteroids should be avoided or given only under specialist supervision in *psoriasis* because, although they may suppress the psoriasis in the short term, relapse or vigorous rebound occurs on withdrawal (sometimes precipitating severe pustular psoriasis). See the role of topical corticosteroids in the treatment of psoriasis.

In general, the most potent topical corticosteroids should be reserved for recalcitrant dermatoses such as *chronic discoid lupus erythematosus*, *lichen simplex chronicus*, *hypertrophic lichen planus*, and *palmoplantar pustulosis*. Potent corticosteroids should generally be avoided on the face and skin flexures, but specialists occasionally prescribe them for use on these areas in certain circumstances.

When topical treatment has failed, intralesional corticosteroid injections may be used. These are more effective than the very potent topical corticosteroid preparations and should be reserved for severe cases where there are localised lesions such as *keloid scars*, *hypertrophic lichen planus*, or *localised alopecia areata*.

#### Perioral lesions

Hydrocortisone cream 1% p. 1281 can be used for up to 7 days to treat uninfected inflammatory lesions on the lips. Hydrocortisone with miconazole cream or ointment p. 1318 is useful where infection by susceptible organisms and inflammation co-exist, particularly for initial treatment (up to 7 days) e.g. in angular cheilitis. Organisms susceptible to miconazole include *Candida* spp. and many Gram-positive bacteria including streptococci and staphylococci.

#### Choice of formulation

Water-miscible corticosteroid *creams* are suitable for moist or weeping lesions whereas *ointments* are generally chosen for dry, lichenified or scaly lesions or where a more occlusive effect is required. *Lotions* may be useful when minimal application to a large or hair-bearing area is required or for the treatment of exudative lesions. *Occlusive polythene* or *hydrocolloid dressings* increase absorption, but also increase the risk of side effects; they are therefore used only under supervision on a short-term basis for areas of very thick skin (such as the palms and soles). The inclusion of urea or salicylic acid also increases the penetration of the corticosteroid.

In the BNF publications topical corticosteroids for the skin are categorised as 'mild', 'moderately potent', 'potent' or 'very potent'; the **least potent** preparation which is effective should be chosen but dilution should be avoided whenever possible.

### Absorption through the skin

Mild and moderately potent topical corticosteroids are associated with few side-effects but care is required in the use of potent and very potent corticosteroids. Absorption through the skin can rarely cause adrenal suppression and even Cushing's syndrome, depending on the area of the body being treated and the duration of treatment. Absorption is greatest where the skin is thin or raw, and from intertriginous areas; it is increased by occlusion.

#### Suitable quantities of corticosteroid preparations to be prescribed for specific areas of the body

Area of body	Creams and Ointments
Face and neck	15 to 30 g
Both hands	15 to 30 g
Scalp	15 to 30 g
Both arms	30 to 60g
Both legs	100 g
Trunk	100 g
Groins and genitalia	15 to 30 g
These amounts are usually suitable for an adult for a single daily application for 2 weeks	

### Compound preparations

The advantages of including other substances (such as antibacterials or antifungals) with corticosteroids in topical preparations are uncertain, but such combinations may have a place where inflammatory skin conditions are associated with bacterial or fungal infection, such as infected eczema. In these cases the antimicrobial drug should be chosen according to the sensitivity of the infecting organism and used regularly for a short period (typically twice daily for 1 week). Longer use increases the likelihood of resistance and of sensitisation.

The keratolytic effect of salicylic acid p. 1353 facilitates the absorption of topical corticosteroids; however, excessive and prolonged use of topical preparations containing salicylic acid may cause salicylism.

### Topical corticosteroid preparation potencies

Potency of a topical corticosteroid preparation is a result of the formulation as well as the corticosteroid. Therefore, proprietary names are shown.

#### Mild

- Hydrocortisone 0.1–2.5%
- Diiodem
- Mildison
- Synalar 1 in 10 dilution

#### Mild with antimicrobials

- Canesten HC
- Dakta-cort
- Econacort
- Fucidin H
- Hydrocortisone with chlorhexidine hydrochloride and nystatin
- Terra-Cortril
- Timodine

#### Moderate

- Betnovate-RD
- Eumovate
- Haelan
- Modrasone
- Synalar 1 in 4 Dilution
- Ultralanum Plain

### Moderate with antimicrobials

- Trimovate

### Moderate with urea:

- Alphaderm

### Potent

- Beclomethasone dipropionate 0.025%
- Betamethasone valerate 0.1%
- Betacap
- Betesil
- Bettamousse
- Betnovate
- Cutivate
- Diprosone
- Elocon
- Hydrocortisone butyrate
- Locoid
- Locoid Crelo
- Metosyn
- Mometasone furoate 0.1%
- Nerisone
- Synalar

### Potent with antimicrobials

- Aureocort
- Betamethasone and clioquinol
- Betamethasone and neomycin
- Fucibet
- Lotriderm
- Synalar C
- Synalar N

### Potent with salicylic acid

- Diprosalic

### Very potent

- Clarelux
- Dermovate
- Etrivex
- Nerisone Forte

### Very potent with antimicrobials

- Clobetasol with neomycin and nystatin

### Use in children

Children, especially infants, are particularly susceptible to side-effects. However, concern about the safety of topical corticosteroids in children should not result in the child being undertreated. The aim is to control the condition as well as possible; inadequate treatment will perpetuate the condition. A mild corticosteroid such as hydrocortisone 0.5% or 1% is useful for treating nappy rash and hydrocortisone 1% for atopic eczema in childhood. A moderately potent or potent corticosteroid may be appropriate for severe atopic eczema on the limbs, for 1–2 weeks only, switching to a less potent preparation as the condition improves. In an acute flare-up of atopic eczema, it may be appropriate to use more potent formulations of topical corticosteroids for a short period to regain control of the condition. A very potent corticosteroid should be initiated under the supervision of a specialist. Carers of young children should be advised that treatment should **not** necessarily be reserved to 'treat only the worst areas' and they may need to be advised that patient information leaflets may contain inappropriate advice for the patient's condition.

## Corticosteroids (topical)

### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: CORTICOSTEROIDS: RARE RISK OF CENTRAL SEROUS CHORIORETINOPATHY WITH LOCAL AS WELL AS SYSTEMIC ADMINISTRATION (AUGUST 2017)

Central serous chorioretinopathy is a retinal disorder that has been linked to the systemic use of corticosteroids. Recently, it has also been reported after local administration of corticosteroids via inhaled and intranasal, epidural, intra-articular, topical dermal, and periorcular routes. The MHRA recommends that patients should be advised to report any blurred vision or other visual disturbances with corticosteroid treatment given by any route; consider referral to an ophthalmologist for evaluation of possible causes if a patient presents with vision problems.

- **CONTRA-INDICATIONS** Acne · perioral dermatitis · potent corticosteroids in widespread plaque psoriasis · rosacea · untreated bacterial, fungal or viral skin lesions
  - **CAUTIONS** Avoid prolonged use (particularly on the face) · cautions applicable to systemic corticosteroids may also apply if absorption occurs following topical and local use · dermatoses of infancy, including nappy rash (extreme caution required—treatment should be limited to 5–7 days) (in children) · infection · keep away from eyes · use potent or very potent topical corticosteroids under specialist supervision (in children) · use potent or very potent topical corticosteroids under specialist supervision in psoriasis (can result in rebound relapse, development of generalised pustular psoriasis, and local and systemic toxicity) (in adults)
  - **SIDE-EFFECTS**
    - **Common or very common** Skin reactions · telangiectasia
    - **Rare or very rare** Adrenal suppression · hypertrichosis · skin depigmentation (may be reversible)
    - **Frequency not known** Local reaction · vasodilation
- SIDE-EFFECTS, FURTHER INFORMATION** Side-effects applicable to systemic corticosteroids may also apply if absorption occurs following topical and local use. In order to minimise the side-effects of a topical corticosteroid, it is important to apply it thinly to affected areas only, no more frequently than twice daily, and to use the least potent formulation which is fully effective.
- **DIRECTIONS FOR ADMINISTRATION** Topical corticosteroid preparations should be applied no more frequently than twice daily; once daily is often sufficient. Topical corticosteroids should be spread thinly on the skin but in sufficient quantity to cover the affected areas. The length of cream or ointment expelled from a tube may be used to specify the quantity to be applied to a given area of skin. This length can be measured in terms of a *finger tip unit* (the distance from the tip of the adult index finger to the first crease). One finger tip unit (approximately 500 mg from a tube with a standard 5 mm diameter nozzle) is sufficient to cover an area that is twice that of the flat adult handprint (palm and fingers). Mixing topical preparations on the skin should be avoided where possible; several minutes should elapse between application of different preparations.
  - In children 'Wet-wrap bandaging' increases absorption into the skin, but should be initiated only by a dermatologist and application supervised by a healthcare professional trained in the technique.
  - **PRESCRIBING AND DISPENSING INFORMATION** The potency of each topical corticosteroid should be included on the label with the directions for use. The label should be attached to the container (for example, the tube) rather than the outer packaging.

- **PATIENT AND CARER ADVICE** Patients or carers should be given advice on how to administer corticosteroid creams and ointments. If a patient is using topical corticosteroids of different potencies, the patient should be told when to use each corticosteroid. Patients and their carers should be reassured that side effects such as skin thinning and systemic effects rarely occur when topical corticosteroids are used appropriately.

## Alclometasone dipropionate

21-Dec-2017

### ● INDICATIONS AND DOSE

**Inflammatory skin disorders such as eczemas**

► **TO THE SKIN**

- **Child:** Apply 1–2 times a day, to be applied thinly
- **Adult:** Apply 1–2 times a day, to be applied thinly

**POTENCY**

- Alclometasone dipropionate cream 0.05%: moderate

### ● UNLICENSED USE

- In children Licensed for use in children (age range not specified by manufacturer).

- **PATIENT AND CARER ADVICE** Patients or carers should be counselled on the application of alclometasone dipropionate cream.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Cream**

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), chlorocresol, propylene glycol

► **Alclometasone dipropionate (Non-proprietary)**

Alclometasone dipropionate 500 microgram per 1 gram Boots  
Derma Care Eczema & Dermatitis Flare-Up 0.05% cream |  
15 gram [P] [X]

## Beclometasone dipropionate

15-May-2020

(Beclomethasone dipropionate)

### ● INDICATIONS AND DOSE

**Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids | Psoriasis**

► **TO THE SKIN**

- **Child:** Apply 1–2 times a day, to be applied thinly
- **Adult:** Apply 1–2 times a day, to be applied thinly

**POTENCY**

- Beclometasone dipropionate cream and ointment 0.025%: potent.

### ● UNLICENSED USE

- In children Not licensed for use in children under 1 year.

- **INTERACTIONS** → Appendix 1: corticosteroids

- **SIDE-EFFECTS** Vision blurred

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: cream, ointment

#### **Cream**

CAUTIONARY AND ADVISORY LABELS 28

► **Beclometasone dipropionate (Non-proprietary)**

Beclometasone dipropionate 250 microgram per 1 gram Beclometasone 0.025% cream | 30 gram [PoM] £68.00 DT = £68.00

#### **Ointment**

CAUTIONARY AND ADVISORY LABELS 28

► **Beclometasone dipropionate (Non-proprietary)**

Beclometasone dipropionate 250 microgram per 1 gram Beclometasone 0.025% ointment | 30 gram [PoM] £68.00 DT = £68.00

**F 1308**

28-Nov-2019

## Betamethasone

- **DRUG ACTION** Betamethasone has very high glucocorticoid activity and insignificant mineralocorticoid activity.

### ● INDICATIONS AND DOSE

**Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids | Psoriasis**

#### ► TO THE SKIN

- Child: Apply 1–2 times a day, to be applied thinly
- Adult: Apply 1–2 times a day, to be applied thinly

#### POTENCY

- Betamethasone valerate 0.025% cream and ointment: moderate. Betamethasone valerate 0.1% cream, lotion, ointment, and scalp application: potent. Betamethasone valerate 0.12% foam: potent. Betamethasone dipropionate 0.05% cream, lotion, and ointment: potent.

#### BETESIL®

**Inflammatory skin disorders [unresponsive to less potent corticosteroids]**

#### ► TO THE SKIN

- Adult: Apply every 24 hours for up to 30 days, wait at least 30 minutes between applications, up to 6 medicated plasters may be used per day

### ● UNLICENSED USE

- With topical use in children *Betacap*®, *Betnovate*® and *Betnovate-RD*® are not licensed for use in children under 1 year. *Betmousse*® is not licensed for use in children under 6 years.

- **CAUTIONS** Use of more than 100 g per week of 0.1% preparation likely to cause adrenal suppression

- **INTERACTIONS** → Appendix 1: corticosteroids

### ● DIRECTIONS FOR ADMINISTRATION

**BETESIL®** Manufacturer advises cleanse and dry skin prior to plaster application. Plaster may be cut to fit area to be treated.

- **PATIENT AND CARER ADVICE** Patient counselling is advised for betamethasone cream, ointment, scalp application and foam (application).

**BETESIL®** Manufacturer advises avoid contact with water after plaster applied.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: cream, ointment

#### Foam

## Clobetasol propionate

21-Dec-2017

### ● INDICATIONS AND DOSE

**Short-term treatment only of severe resistant inflammatory skin disorders such as recalcitrant eczemas unresponsive to less potent corticosteroids | Psoriasis**

##### ► TO THE SKIN

- Child 1-17 years: Apply 1–2 times a day for up to 4 weeks, to be applied thinly
- Adult: Apply 1–2 times a day for up to 4 weeks, to be applied thinly, maximum 50 g of 0.05% preparation per week

#### POTENCY

- Clobetasol propionate 0.05% cream, foam, ointment, scalp application, and shampoo: very potent.

#### ETRIVEX®

#### Moderate scalp psoriasis

##### ► TO THE SKIN

- Adult: Apply once daily maximum duration of treatment 4 weeks, to be applied thinly then rinsed off after 15 minutes; frequency of application should be reduced after clinical improvement

- **PATIENT AND CARER ADVICE** Patients or carers should be given advice on how to administer clobetasol propionate foam, liquid (scalp application), cream, ointment and shampoo.

Scalp application Patients or carers should be advised to apply foam directly to scalp lesions (foam begins to subside immediately on contact with skin).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: cream, ointment, paste

#### Shampoo

## Clobetasone butyrate

21-Dec-2017

### ● INDICATIONS AND DOSE

**Eczemas and dermatitis of all types | Maintenance between courses of more potent corticosteroids**

- ▶ TO THE SKIN
- ▶ Child: Apply 1–2 times a day, to be applied thinly
- ▶ Adult: Apply 1–2 times a day, to be applied thinly

### POTENCY

- ▶ Clobetasone butyrate 0.05% cream and ointment: moderate.

### ● UNLICENSED USE

- ▶ In children Licensed for use in children (age range not specified by manufacturer).

- ▶ **PATIENT AND CARER ADVICE** Patients or carers should be advised on the application of clobetasone butyrate containing preparations.

- ▶ **EXCEPTIONS TO LEGAL CATEGORY** Cream can be sold to the public for short-term symptomatic treatment and control of patches of eczema and dermatitis (but not seborrhoeic dermatitis) in adults and children over 12 years provided pack does not contain more than 15 g.

- ▶ **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: cream, ointment

### Ointment

CAUTIONARY AND ADVISORY LABELS 28

- ▶ **Clobavate** (Teva UK Ltd)  
Clobetasone butyrate 500 microgram per 1 gram Clobavate 0.05% ointment | 30 gram [PoM] £1.49 DT = £1.86 | 100 gram [PoM] £4.35 DT = £5.44
- ▶ **Eumovate** (GlaxoSmithKline UK Ltd)  
Clobetasone butyrate 500 microgram per 1 gram Eumovate 0.05% ointment | 30 gram [PoM] £1.86 DT = £1.86 | 100 gram [PoM] £5.44 DT = £5.44

### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), chlorocresol

- ▶ **Eumovate** (GlaxoSmithKline Consumer Healthcare, GlaxoSmithKline UK Ltd)  
Clobetasone butyrate 500 microgram per 1 gram Eumovate 0.05% cream | 30 gram [PoM] £1.86 DT = £1.86 | 100 gram [PoM] £5.44 DT = £5.44

Combinations available: *Clobetasone butyrate with nystatin and oxytetracycline*, p. 1316

**F 1308**

## Diffucortolone valerate

21-Dec-2017

### ● INDICATIONS AND DOSE

**Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids (using 0.3% diflucortolone valerate) | Short-term treatment of severe exacerbations (using 0.3% diflucortolone valerate) | Psoriasis (using 0.3% diflucortolone valerate)**

- ▶ TO THE SKIN
- ▶ Child 4–17 years: Apply 1–2 times a day for up to 2 weeks, reducing strength as condition responds, to be applied thinly; maximum 60 g per week
- ▶ Adult: Apply 1–2 times a day for up to 2 weeks, reducing strength as condition responds, to be applied thinly; maximum 60 g per week

**Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids (using 0.1% diflucortolone valerate) | Psoriasis (using 0.1% diflucortolone valerate)**

- ▶ TO THE SKIN
- ▶ Child: Apply 1–2 times a day for up to 4 weeks, to be applied thinly
- ▶ Adult: Apply 1–2 times a day for up to 4 weeks, to be applied thinly

### POTENCY

- ▶ Diflucortolone valerate 0.1% cream and ointment: potent.
- ▶ Diflucortolone valerate 0.3% cream and ointment: very potent.

### ● UNLICENSED USE

- ▶ In children *Nerisone*® licensed for use in children (age range not specified by manufacturer); *Nerisone Forte*® not licensed for use in children under 4 years.

- ▶ **PREScribing AND DISPENSING INFORMATION** Patients or carers should be advised on application of diflucortolone valerate containing preparations.

- ▶ **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Ointment

CAUTIONARY AND ADVISORY LABELS 28

- ▶ **Nerisone** (Meadow Laboratories Ltd)  
Diflucortolone valerate 1 mg per 1 gram Nerisone 0.1% ointment | 30 gram [PoM] £3.98 DT = £3.98  
Diflucortolone valerate 3 mg per 1 gram Nerisone Forte 0.3% ointment | 15 gram [PoM] £4.70 DT = £4.70

### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Beeswax, cetostearyl alcohol (including cetyl and stearyl alcohol), disodium edetate, hydroxybenzoates (parabens)

- ▶ **Nerisone** (Meadow Laboratories Ltd)  
Diflucortolone valerate 1 mg per 1 gram Nerisone 0.1% cream | 30 gram [PoM] £3.98 DT = £3.98  
Nerisone 0.1% oily cream | 30 gram [PoM] £4.95 DT = £4.95  
Diflucortolone valerate 3 mg per 1 gram Nerisone Forte 0.3% oily cream | 15 gram [PoM] £4.70 DT = £4.70

21-Dec-2017

## Fludroxycortide (Flurandrenolone)

**F 1308**

### ● INDICATIONS AND DOSE

**Inflammatory skin disorders such as eczemas**

- ▶ TO THE SKIN
- ▶ Child: Apply 1–2 times a day, to be applied thinly
- ▶ Adult: Apply 1–2 times a day, to be applied thinly

### POTENCY

- ▶ Fludroxycortide 0.0125% cream and ointment: moderate

### HAELAN® TAPE

**Chronic localised recalcitrant dermatoses (but not acute or weeping)**

- ▶ TO THE SKIN
- ▶ Child: Cut tape to fit lesion, apply to clean, dry skin shorn of hair, usually for 12 hours daily
- ▶ Adult: Cut tape to fit lesion, apply to clean, dry skin shorn of hair, usually for 12 hours daily

### ● UNLICENSED USE

- ▶ In children Licensed for use in children (age range not specified by manufacturer).

- ▶ **SIDE-EFFECTS** Cushing's syndrome · increased risk of infection

- ▶ **PATIENT AND CARER ADVICE** Patients or carers should be counselled on application of fludroxycortide cream and ointment.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Ointment

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Beeswax, cetostearyl alcohol (including cetyl and stearyl alcohol), polysorbates

#### ► Fludroxycortide (Non-proprietary)

**Fludroxycortide 125 microgram per 1 gram** Fludroxycortide 0.0125% ointment | 60 gram [PoM] £5.99

### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), propylene glycol

#### ► Fludroxycortide (Non-proprietary)

**Fludroxycortide 125 microgram per 1 gram** Fludroxycortide 0.0125% cream | 60 gram [PoM] £5.99 DT = £5.99

### Impregnated dressing

#### ► Fludroxycortide (Non-proprietary)

**Fludroxycortide 4 microgram per 1 square cm** Fludroxycortide 4micrograms/square cm tape 7.5cm | 20 cm [PoM] £12.49-£13.67 DT = £13.67 | 50 cm [PoM] £18.75

## Fluocinolone acetonide

28-Nov-2019

### • INDICATIONS AND DOSE

**Severe inflammatory skin disorders such as eczemas | Psoriasis**

#### ► TO THE SKIN

- Child 1-17 years: Apply 1-2 times a day, to be applied thinly, reduce strength as condition responds
- Adult: Apply 1-2 times a day, to be applied thinly, reduce strength as condition responds

#### POTENCY

- Fluocinolone acetonide 0.025% cream, gel, and ointment: potent.
- Fluocinolone acetonide 0.00625% cream and ointment: moderate.
- Fluocinolone acetonide 0.0025% cream: mild.

- **INTERACTIONS** → Appendix 1: fluocinolone
- **PRESCRIBING AND DISPENSING INFORMATION** Gel is useful for application to the scalp and other hairy areas.
- **PATIENT AND CARER ADVICE** Patient counselling is advised for fluocinolone acetonide cream, gel and ointment (application).
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Ointment

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Propylene glycol, woolfat and related substances (including lanolin)

#### ► Synalar (Reig Jofre UK Ltd)

**Fluocinolone acetonide 62.5 microgram per 1 gram** Synalar 1 in 4 Dilution 0.00625% ointment | 50 gram [PoM] £4.84 DT = £4.84

**Fluocinolone acetonide 250 microgram per 1 gram** Synalar 0.025% ointment | 30 gram [PoM] £4.14 DT = £4.14 | 100 gram [PoM] £11.75 DT = £11.75

### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol), polysorbates, propylene glycol

#### ► Synalar (Reig Jofre UK Ltd)

**Fluocinolone acetonide 62.5 microgram per 1 gram** Synalar 1 in 4 Dilution 0.00625% cream | 50 gram [PoM] £4.84 DT = £4.84

**Fluocinolone acetonide 250 microgram per 1 gram** Synalar 0.025% cream | 30 gram [PoM] £4.14 DT = £4.14 | 100 gram [PoM] £11.75 DT = £11.75

### Gel

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Hydroxybenzoates (parabens), propylene glycol

#### ► Synalar (Reig Jofre UK Ltd)

**Fluocinolone acetonide 250 microgram per 1 gram** Synalar 0.025% gel | 30 gram [PoM] £5.56 DT = £5.56 | 60 gram [PoM] £10.02 DT = £10.02

**Combinations available: Fluocinolone acetonide with chloquinol, p. 1316 · Fluocinolone acetonide with neomycin, p. 1316**

## Fluocinonide

21-Dec-2017

### • INDICATIONS AND DOSE

**Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids | Psoriasis**

#### ► TO THE SKIN

- Child: Apply 1-2 times a day, to be applied thinly
- Adult: Apply 1-2 times a day, to be applied thinly

#### POTENCY

- Fluocinonide 0.05% cream and ointment: potent.

### • UNLICENSED USE

- In children Not licensed for use in children under 1 year.

- **PATIENT AND CARER ADVICE** Patients or carers should be advised on the application of fluocinonide preparations.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment

### Ointment

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Propylene glycol, woolfat and related substances (including lanolin)

#### ► Metosyn (Reig Jofre UK Ltd)

**Fluocinonide 500 microgram per 1 gram** Metosyn 0.05% ointment | 25 gram [PoM] £3.50 DT = £3.50 | 100 gram [PoM] £13.15 DT = £13.15

### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Propylene glycol

#### ► Metosyn FAGP (Reig Jofre UK Ltd)

**Fluocinonide 500 microgram per 1 gram** Metosyn FAGP 0.05% cream | 25 gram [PoM] £3.96 DT = £3.96 | 100 gram [PoM] £13.34 DT = £13.34

F 1308

## Fluticasone

21-Dec-2017

### • INDICATIONS AND DOSE

**Severe inflammatory skin disorders such as dermatitis and eczemas unresponsive to less potent corticosteroids | Psoriasis**

#### ► TO THE SKIN

- Child 3 months-17 years: Apply 1-2 times a day, to be applied thinly
- Adult: Apply 1-2 times a day, to be applied thinly

#### POTENCY

- Fluticasone cream 0.05%: potent.
- Fluticasone ointment 0.005%: potent.

- **INTERACTIONS** → Appendix 1: corticosteroids

- **PATIENT AND CARER ADVICE** Patients or carers should be given advice on application of fluticasone creams and ointments.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), imidurea, propylene glycol

#### ► Fluticasone (Non-proprietary)

**Fluticasone propionate 500 microgram per 1 gram** Fluticasone 0.05% cream | 30 gram [PoM] £5.08 DT = £4.24

► **Cutivate** (GlaxoSmithKline UK Ltd)

**Fluticasone propionate 500 microgram per 1 gram** Cutivate 0.05% cream | 15 gram [PoM] £2.27 DT = £2.27 | 30 gram [PoM] £4.24 DT = £4.24

**Ointment**

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Propylene glycol

► **Cutivate** (GlaxoSmithKline UK Ltd)

**Fluticasone propionate 50 microgram per 1 gram** Cutivate 0.005% ointment | 15 gram [PoM] £2.27 DT = £2.27 | 30 gram [PoM] £4.24 DT = £4.24

1308

## Hydrocortisone

17-Dec-2019

- **DRUG ACTION** Hydrocortisone has equal glucocorticoid and mineralocorticoid activity.

● **INDICATIONS AND DOSE**

**Mild inflammatory skin disorders such as eczemas**

► TO THE SKIN

- Child: Apply 1–2 times a day, to be applied thinly
- Adult: Apply 1–2 times a day, to be applied thinly

**Nappy rash**

► TO THE SKIN

- Child: Apply 1–2 times a day for no longer than 1 week, discontinued as soon as the inflammation subsides

**POTENCY**

- Hydrocortisone cream and ointment 0.5 to 2.5%: mild

- **INTERACTIONS** → Appendix 1: corticosteroids

- **PRESCRIBING AND DISPENSING INFORMATION** When hydrocortisone cream or ointment is prescribed and no strength is stated, the 1% strength should be supplied. Although *Dioderm*<sup>®</sup> contains only 0.1% hydrocortisone, the formulation is designed to provide a clinical activity comparable to that of Hydrocortisone Cream 1% BP.

- **PATIENT AND CARER ADVICE** Patient counselling is advised for hydrocortisone cream and ointment (application).

● **PROFESSION SPECIFIC INFORMATION**

**Dental practitioners' formulary** Hydrocortisone Cream 1% 15 g may be prescribed.

● **EXCEPTIONS TO LEGAL CATEGORY**

Over-the-counter hydrocortisone preparations Skin creams and ointments containing hydrocortisone (alone or with other ingredients) can be sold to the public for the treatment of allergic contact dermatitis, irritant dermatitis, insect bite reactions and mild to moderate eczema in patients over 10 years, to be applied sparingly over the affected area 1–2 times daily for max. 1 week. Over-the-counter hydrocortisone preparations should not be sold without medical advice for children under 10 years or for pregnant women; they should **not** be sold for application to the face, anogenital region, broken or infected skin (including cold sores, acne, and athlete's foot).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: cream, ointment **Cream**

### Liquid

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Propylene glycol

- **Elocon** (Merck Sharp & Dohme Ltd)

**Mometasone furoate 1 mg per 1 gram** Elocon 0.1% scalp lotion | 30 ml [PoM] £4.36 DT = £4.36

## CORTICOSTEROIDS > CORTICOSTEROID COMBINATIONS WITH ANTI-INFECTIVES

### Betamethasone with clioquinol

20-Mar-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, betamethasone p. 1309.

### ● INDICATIONS AND DOSE

**Severe inflammatory skin disorders such as eczemas associated with infection and unresponsive to less potent corticosteroids | Psoriasis (excluding widespread plaque psoriasis)**

- TO THE SKIN
- Child 1-17 years: (consult product literature)
- Adult: (consult product literature)

### POTENCY

- Betamethasone (as valerate) 0.1% with clioquinol cream and ointment: potent.

- **INTERACTIONS** → Appendix 1: corticosteroids
- **PATIENT AND CARER ADVICE** Stains clothing. Patients or carers should be counselled on application of betamethasone with clioquinol preparations.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Ointment

CAUTIONARY AND ADVISORY LABELS 28

- **Betamethasone with clioquinol (Non-proprietary)**

**Betamethasone (as Betamethasone valerate) 1 mg per 1 gram, Clioquinol 30 mg per 1 gram** Betamethasone valerate 0.1% / Clioquinol 3% ointment | 30 gram [PoM] £38.88 DT = £38.88

### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), chlorocresol

- **Betamethasone with clioquinol (Non-proprietary)**

**Betamethasone (as Betamethasone valerate) 1 mg per 1 gram, Clioquinol 30 mg per 1 gram** Betamethasone valerate 0.1% / Clioquinol 3% cream | 30 gram [PoM] £38.88 DT = £38.88

## Betamethasone with clotrimazole

06-Nov-2019

The properties listed below are those particular to the combination only. For the properties of the components please consider, betamethasone p. 1309, clotrimazole p. 1298.

### ● INDICATIONS AND DOSE

#### Short-term treatment of tinea infections and candidiasis

- TO THE SKIN
- Child 12-17 years: Apply twice daily for 2 weeks for tinea cruris, tinea corporis or candidiasis, or for 4 weeks for tinea pedis
- Adult: Apply twice daily for 2 weeks for tinea cruris, tinea corporis or candidiasis, or for 4 weeks for tinea pedis

### POTENCY

- Betamethasone dipropionate 0.064% (=betamethasone 0.05%) with clotrimazole cream: potent.

- **INTERACTIONS** → Appendix 1: antifungals, azoles · corticosteroids
- **PATIENT AND CARER ADVICE** Patients or carers should be given advice on how to administer betamethasone with clotrimazole cream.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol), propylene glycol

- **Lotiderm** (Merck Sharp & Dohme Ltd)

**Betamethasone dipropionate 640 microgram per 1 gram, Clotrimazole 10 mg per 1 gram** Lotiderm cream | 30 gram [PoM] £6.34 DT = £6.34

## Betamethasone with fusidic acid

20-Mar-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, betamethasone p. 1309, fusidic acid p. 604.

### ● INDICATIONS AND DOSE

**Severe inflammatory skin disorders such as eczemas associated with infection and unresponsive to less potent corticosteroids**

- TO THE SKIN
- Child: (consult product literature)
- Adult: (consult product literature)

### POTENCY

- Betamethasone (as valerate) 0.1% with fusidic acid cream: potent.

### ● UNLICENSED USE

- ▶ In children *Fucibet*<sup>®</sup> *Lipid Cream* is not licensed for use in children under 6 years.

### ● INTERACTIONS → Appendix 1: corticosteroids · fusidate

- **PATIENT AND CARER ADVICE** Patients or carers should be counselled on application of betamethasone with fusidic acid preparations.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Cream

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), chlorocresol, hydroxybenzoates (parabens)

#### ▶ *Fucibet* (LEO Pharma)

Betamethasone (as Betamethasone valerate) 1 mg per 1 gram,

Fusidic acid 20 mg per 1 gram *Fucibet cream* | 30 gram [PoM] £6.38 DT = £6.38 | 60 gram [PoM] £12.76 DT = £12.76

*Fucibet Lipid cream* | 30 gram [PoM] £6.74 DT = £6.38

#### ▶ *Xemacort* (Mylan)

Betamethasone (as Betamethasone valerate) 1 mg per 1 gram,

Fusidic acid 20 mg per 1 gram *Xemacort 20mg/g / 1mg/g cream* | 30 gram [PoM] £6.05 DT = £6.38 | 60 gram [PoM] £12.45 DT = £12.76

## Betamethasone with neomycin

The properties listed below are those particular to the combination only. For the properties of the components please consider, betamethasone p. 1309, neomycin sulfate p. 1296.

### ● INDICATIONS AND DOSE

**Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids | Psoriasis**

- ▶ TO THE SKIN USING OINTMENT, OR TO THE SKIN USING CREAM
- ▶ Child 2–17 years: Apply 1–2 times a day, to be applied thinly
- ▶ Adult: Apply 1–2 times a day, to be applied thinly

#### POTENCY

- ▶ Betamethasone (as valerate) 0.1% with neomycin cream and ointment: potent.

- **INTERACTIONS** → Appendix 1: corticosteroids · neomycin

- **PATIENT AND CARER ADVICE** Patient counselling is advised for betamethasone with neomycin cream and ointment (application).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Ointment

CAUTIONARY AND ADVISORY LABELS 28

#### ▶ *Betamethasone with neomycin (Non-proprietary)*

Betamethasone (as Betamethasone valerate) 1 mg per 1 gram,

100 gram [PoM] £97.00 DT = £104.52

## Betamethasone with salicylic acid

11-Mar-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, betamethasone p. 1309, salicylic acid p. 1353.

### ● INDICATIONS AND DOSE

#### DIPROSALIC<sup>®</sup> OINTMENT

**Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids | Psoriasis**

#### ▶ TO THE SKIN

▶ Child: Apply 1–2 times a day, max. 60 g per week

▶ Adult: Apply 1–2 times a day, max. 60 g per week

#### POTENCY

- ▶ Betamethasone (as dipropionate) 0.05% with salicylic acid 3%: potent.

#### DIPROSALIC<sup>®</sup> SCALP APPLICATION

**Severe inflammatory skin disorders such as eczemas unresponsive to less potent corticosteroids | Psoriasis**

#### ▶ TO THE SKIN

▶ Child: Apply 1–2 times a day, apply a few drops

▶ Adult: Apply 1–2 times a day, apply a few drops

#### POTENCY

- ▶ Betamethasone (as dipropionate) 0.05% with salicylic acid 2%: potent.

- **INTERACTIONS** → Appendix 1: corticosteroids

- **PATIENT AND CARER ADVICE**

**DIPROSALIC<sup>®</sup> OINTMENT** Patients or carers should be counselled on application of betamethasone and salicylic acid preparations.

**DIPROSALIC<sup>®</sup> SCALP APPLICATION** Patients or carers should be counselled on application of betamethasone and salicylic acid scalp application.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Ointment

CAUTIONARY AND ADVISORY LABELS 28

#### ▶ *Diprosalic* (Merck Sharp & Dohme Ltd)

Betamethasone (as Betamethasone dipropionate)

500 microgram per 1 gram, Salicylic acid 30 mg per

1 gram *Diprosalic 0.05%/3% ointment* | 30 gram [PoM] £3.18 DT =

£3.18 | 100 gram [PoM] £9.14 DT = £9.14

#### Liquid

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Disodium edetate

#### ▶ *Diprosalic* (Merck Sharp & Dohme Ltd)

Betamethasone (as Betamethasone dipropionate)

500 microgram per 1 ml, Salicylic acid 20 mg per 1 ml *Diprosalic*

## Clobetasol propionate with neomycin sulfate and nystatin

The properties listed below are those particular to the combination only. For the properties of the components please consider, clobetasol propionate p. 1310, neomycin sulfate p. 1296.

### ● INDICATIONS AND DOSE

**Short-term treatment only of severe resistant inflammatory skin disorders such as recalcitrant eczemas associated with infection and unresponsive to less potent corticosteroids | Psoriasis associated with infection**

#### ▶ TO THE SKIN

- ▶ Adult: (consult product literature)

continued →

**POTENCY**

- ▶ Clobetasol propionate 0.05% with neomycin sulfate and nystatin cream and ointment: very potent.

- **INTERACTIONS** → Appendix 1: neomycin

- **PATIENT AND CARER ADVICE** Patients or carers should be advised on application of clobetasol propionate, neomycin sulfate and nystatin containing preparations.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Ointment**

CAUTIONARY AND ADVISORY LABELS 28

- ▶ **Clobetasol propionate with neomycin sulfate and nystatin (Non-proprietary)**

Clobetasol propionate 500 microgram per 1 gram, Neomycin sulfate 5 mg per 1 gram, Nystatin 100000 unit per 1 gram Clobetasol 500microgram / Neomycin 5mg / Nystatin 100,000units/g ointment | 30 gram [PoM] £87.00 DT = £87.00

**Cream**

CAUTIONARY AND ADVISORY LABELS 28

Clobetasol propionate 500 microgram per 1 gram, Neomycin sulfate 5 mg per 1 gram, Nystatin 100000 unit per 1 gram Clobetasol 500microgram / Neomycin 5mg / Nystatin 100,000units/g cream | 30 gram [PoM] £87.00 DT = £87.00

## Clobetasone butyrate with nystatin and oxytetracycline

06-Mar-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, clobetasone butyrate p. 1311, oxytetracycline p. 600.

● **INDICATIONS AND DOSE**

**Steroid-responsive dermatoses where candidal or bacterial infection is present**

- ▶ TO THE SKIN
- ▶ Adult: (consult product literature)

**POTENCY**

- ▶ Clobetasone butyrate 0.05% with nystatin and oxytetracycline cream: moderate.

- **INTERACTIONS** → Appendix 1: tetracyclines

- **PATIENT AND CARER ADVICE** Stains clothing.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Cream**

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), chlorocresol, sodium metabisulfite

- ▶ **Trimovate** (Ennogen Healthcare Ltd)

Clobetasone butyrate 500 microgram per 1 gram, Oxytetracycline (as Oxytetracycline calcium) 30 mg per 1 gram, Nystatin 100000 unit per 1 gram Trimovate cream | 30 gram [PoM] £12.45 DT = £12.45

## Fluocinolone acetonide with clioquinol

20-Mar-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, fluocinolone acetonide p. 1312.

● **INDICATIONS AND DOSE**

**Mild inflammatory skin disorders such as eczemas associated with infection**

- ▶ TO THE SKIN
- ▶ Adult: Apply 2–3 times a day, to be applied thinly

**POTENCY**

- ▶ Clioquinol 3% with fluocinolone acetonide 0.025% cream and ointment: potent

- **INTERACTIONS** → Appendix 1: fluocinolone

- **PATIENT AND CARER ADVICE** Patient counselling is advised for clioquinol with fluocinolone acetonide cream and ointment (application). Ointment stains clothing.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Ointment**

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Propylene glycol, woolfat and related substances (including lanolin)

- ▶ **Synalar C** (Reig Jofre UK Ltd)

Fluocinolone acetonide 250 microgram per 1 gram, Clioquinol 30 mg per 1 gram Synalar C ointment | 15 gram [PoM] £2.66 DT = £2.66

**Cream**

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), disodium edetate, hydroxybenzoates (parabens), polysorbates, propylene glycol

- ▶ **Synalar C** (Reig Jofre UK Ltd)

Fluocinolone acetonide 250 microgram per 1 gram, Clioquinol 30 mg per 1 gram Synalar C cream | 15 gram [PoM] £2.66 DT = £2.66

## Fluocinolone acetonide with neomycin

The properties listed below are those particular to the combination only. For the properties of the components please consider, fluocinolone acetonide p. 1312, neomycin sulfate p. 1296.

● **INDICATIONS AND DOSE**

**Inflammatory skin disorders such as eczemas associated with infection | Psoriasis associated with infection**

- ▶ TO THE SKIN
- ▶ Child 1–17 years: Apply 1–2 times a day, to be applied thinly, reducing strength as condition responds
- ▶ Adult: Apply 1–2 times a day, to be applied thinly, reducing strength as condition responds

**POTENCY**

- ▶ Fluocinolone acetonide 0.025% with neomycin 0.5% cream and ointment: potent.

- **INTERACTIONS** → Appendix 1: fluocinolone · neomycin

- **PATIENT AND CARER ADVICE** Patients or carers should be counselled on the application of fluocinolone acetonide with neomycin preparations.

- **MEDICINAL FORMS** No licensed medicines listed.

## Hydrocortisone with benzalkonium chloride, dimeticone and nystatin

06-Mar-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, hydrocortisone p. 1313, dimeticone p. 1302.

● **INDICATIONS AND DOSE**

**Mild inflammatory skin disorders such as eczemas associated with infection**

- ▶ TO THE SKIN
- ▶ Child: Apply 3 times a day until lesion has healed, to be applied thinly
- ▶ Adult: Apply 3 times a day until lesion has healed, to be applied thinly

**POTENCY**

- ▶ Benzalkonium with dimeticone, hydrocortisone acetate 0.5%, and nystatin cream: mild.

- **INTERACTIONS** → Appendix 1: corticosteroids
- **PATIENT AND CARER ADVICE** Patients or carers should be advised on application of benzalkonium with dimeticone and hydrocortisone and nystatin preparations.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Cream**

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Butylated hydroxyanisole, cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens), sodium metabisulfite, sorbic acid

- ▶ **Timodine** (Alliance Pharmaceuticals Ltd)

Benzalkonium chloride 1 mg per 1 gram, Hydrocortisone 5 mg per 1 gram, Dimeticone 350 100 mg per 1 gram, Nystatin 100000 unit per 1 gram Timodine cream | 30 gram **[PoM]** £3.37

## Hydrocortisone with chlorhexidine hydrochloride and nystatin

10-Mar-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, hydrocortisone p. 1313, chlorhexidine p. 1344.

**● INDICATIONS AND DOSE**

**Mild inflammatory skin disorders such as eczemas associated with infection**

- ▶ TO THE SKIN

- ▶ Child: (consult product literature)
- ▶ Adult: (consult product literature)

**POTENCY**

- ▶ Hydrocortisone 0.5% with chlorhexidine hydrochloride 1% and nystatin cream: mild
- ▶ Hydrocortisone 1% with chlorhexidine hydrochloride 1% and nystatin ointment: mild

- **INTERACTIONS** → Appendix 1: corticosteroids
- **PATIENT AND CARER ADVICE** Patients or carers should be given advice on application of chlorhexidine hydrochloride with hydrocortisone and nystatin preparations.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Ointment**

CAUTIONARY AND ADVISORY LABELS 28

- ▶ **Hydrocortisone with chlorhexidine hydrochloride and nystatin (Non-proprietary)**

Chlorhexidine acetate 10 mg per 1 gram, Hydrocortisone 10 mg per 1 gram, Nystatin 100000 unit per 1 gram Nystatin 100,000units/g / Chlorhexidine acetate 1% / Hydrocortisone 1% ointment | 30 gram **[PoM]** £5.29 DT = £5.29**Cream**

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol), polysorbates

- ▶ **Hydrocortisone with chlorhexidine hydrochloride and nystatin (Non-proprietary)**

Hydrocortisone 5 mg per 1 gram, Chlorhexidine hydrochloride 10 mg per 1 gram, Nystatin 100000 unit per 1 gram Nystatin 100,000units/g / Chlorhexidine hydrochloride 1% / Hydrocortisone 0.5% cream | 30 gram **[PoM]** £5.29 DT = £5.29

## Hydrocortisone with clotrimazole

17-Mar-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, hydrocortisone p. 1313, clotrimazole p. 1298.

**● INDICATIONS AND DOSE**

**Mild inflammatory skin disorders such as eczemas (associated with fungal infection)**

- ▶ TO THE SKIN

- ▶ Child: (consult product literature)
- ▶ Adult: (consult product literature)

**POTENCY**

- ▶ Clotrimazole with hydrocortisone 1% cream: mild

- **INTERACTIONS** → Appendix 1: antifungals, azoles · corticosteroids
- **PATIENT AND CARER ADVICE** Patients or carers should be given advice on how to administer clotrimazole with hydrocortisone cream.
- **EXCEPTIONS TO LEGAL CATEGORY** A 15-g tube is on sale to the public for the treatment of athlete's foot and fungal infection of skin folds with associated inflammation in patients 10 years and over.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Cream**

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol)

- ▶ **Canesten HC** (Bayer Plc)

Clotrimazole 10 mg per 1 gram, Hydrocortisone 10 mg per 1 gram Canesten HC cream | 30 gram **[PoM]** £2.42 DT = £2.42

## Hydrocortisone with fusidic acid

13-Mar-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, hydrocortisone p. 1313, fusidic acid p. 604.

**● INDICATIONS AND DOSE**

**Mild inflammatory skin disorders such as eczemas associated with infection**

- ▶ TO THE SKIN

- ▶ Child: (consult product literature)
- ▶ Adult: (consult product literature)

**POTENCY**

- ▶ Hydrocortisone with fusidic acid cream: mild

- **INTERACTIONS** → Appendix 1: corticosteroids · fusidate
- **PATIENT AND CARER ADVICE** Patients or carers should be advised on application of hydrocortisone with fusidic acid preparations.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Cream**

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Butylated hydroxyanisole, cetostearyl alcohol (including cetyl and stearyl alcohol), polysorbates, potassium sorbate

- ▶ **Fucidin H (Fusidic acid / Hydrocortisone)** (LEO Pharma)

Hydrocortisone acetate 10 mg per 1 gram, Fusidic acid 20 mg per 1 gram Fucidin H cream | 30 gram **[PoM]** £6.02 DT = £6.02 | 60 gram **[PoM]** £12.05 DT = £12.05

## Hydrocortisone with miconazole

17-Mar-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, hydrocortisone p. 1313, miconazole p. 1299.

### ● INDICATIONS AND DOSE

**Mild inflammatory skin disorders such as eczemas associated with infections**

- ▶ TO THE SKIN
- ▶ Adult: (consult product literature)

### POTENCY

- ▶ Hydrocortisone 1% with miconazole cream and ointment: mild

- **INTERACTIONS** → Appendix 1: antifungals, azoles . corticosteroids
- **PATIENT AND CARER ADVICE** Patients or carers should be advised on application of hydrocortisone with miconazole preparations.
- **PROFESSION SPECIFIC INFORMATION**

**Dental practitioners' formulary**

May be prescribed as Miconazole and Hydrocortisone Cream or Ointment for max. 7 days.

- **EXCEPTIONS TO LEGAL CATEGORY** A 15-g tube of hydrocortisone with miconazole cream is on sale to the public for the treatment of athlete's foot and candidal intertrigo.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.  
**Ointment**  
CAUTIONARY AND ADVISORY LABELS 28  
▶ **Daktacort** (Janssen-Cilag Ltd)  
Hydrocortisone 10 mg per 1 gram, Miconazole nitrate 20 mg per 1 gram Daktacort ointment | 30 gram [PoM] £2.50 DT = £2.50  
**Cream**  
CAUTIONARY AND ADVISORY LABELS 28  
EXCIPIENTS: May contain Butylated hydroxyanisole, disodium edetate  
▶ **Daktacort** (McNeil Products Ltd, Janssen-Cilag Ltd)  
Hydrocortisone 10 mg per 1 gram, Miconazole nitrate 20 mg per 1 gram Daktacort 2%/1% cream | 30 gram [PoM] £2.49 DT = £2.49

## Hydrocortisone with oxytetracycline

The properties listed below are those particular to the combination only. For the properties of the components please consider, hydrocortisone p. 1313, oxytetracycline p. 600.

### ● INDICATIONS AND DOSE

**Mild inflammatory skin disorders such as eczemas**

- ▶ TO THE SKIN
- ▶ Child 12-17 years: (consult product literature)
- ▶ Adult: (consult product literature)

### POTENCY

- ▶ Hydrocortisone 1% with oxytetracycline ointment: mild.

- **CONTRA-INDICATIONS** Children under 12 years
- **INTERACTIONS** → Appendix 1: corticosteroids . tetracyclines
- **PREGNANCY** Tetracyclines should not be given to pregnant women. Effects on skeletal development have been documented when tetracyclines have been used in the first trimester in animal studies. Administration during the second or third trimester may cause discoloration of the child's teeth.
- **BREAST FEEDING** Tetracyclines should not be given to women who are breast-feeding (although absorption and therefore discoloration of teeth in the infant is probably usually prevented by chelation with calcium in milk).

- **PATIENT AND CARER ADVICE** Patients should be given advice on the application of hydrocortisone with oxytetracycline ointment.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Ointment

CAUTIONARY AND ADVISORY LABELS 28

- ▶ **Terra-Cortril** (Intrapharm Laboratories Ltd)

Hydrocortisone 10 mg per 1 gram, Oxytetracycline (as Oxytetracycline hydrochloride) 30 mg per 1 gram Terra-Cortril ointment | 30 gram [PoM] £5.01 DT = £5.01

## DERMATOLOGICAL DRUGS > ANTI-INFECTIVES

### Ichthammol

### ● INDICATIONS AND DOSE

**Chronic lichenified eczema**

- ▶ TO THE SKIN
- ▶ Child 1-17 years: Apply 1-3 times a day
- ▶ Adult: Apply 1-3 times a day

### ● UNLICENSED USE

- ▶ In children No information available.

### ● SIDE-EFFECTS

Skin irritation

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment, paste

### Liquid

- ▶ **Ichthammol (Non-proprietary)**

Ichthammol 1 mg per 1 mg Ichthammol liquid | 100 gram [GSL] £12.99 DT = £12.86 | 500 gram [GSL] £41.88

## Ichthammol with zinc oxide

The properties listed below are those particular to the combination only. For the properties of the components please consider, ichthammol above.

### ● INDICATIONS AND DOSE

**Chronic lichenified eczema**

- ▶ TO THE SKIN
- ▶ Adult: (consult product literature)

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: cream, ointment

### Impregnated dressing

- ▶ **Ichthopaste** (Evolan Pharma AB)  
Ichthopaste bandage 7.5cm × 6m | 1 bandage £3.82

## DERMATOLOGICAL DRUGS > ANTRACEN DERIVATIVES

### Dithranol

(Anthralin)

### ● INDICATIONS AND DOSE

**Subacute and chronic psoriasis**

- ▶ TO THE SKIN
- ▶ Adult: (consult product literature)

### DITHROCREAM®

**Subacute and chronic psoriasis**

- ▶ TO THE SKIN
- ▶ Adult: For application to skin or scalp, 0.1-0.5% cream suitable for overnight treatment, 1-2% cream for maximum 1 hour (consult product literature)

**MICANOL®****Subacute and chronic psoriasis**

## ► TO THE SKIN

- Adult: Apply once daily, for application to skin or scalp, to be applied for up to 30 minutes, apply 1% cream, if necessary 3% cream can be used under medical supervision

- **CONTRA-INDICATIONS** Acute and pustular psoriasis · hypersensitivity
- **CAUTIONS** Avoid sensitive areas of skin · avoid use near eyes
- **SIDE-EFFECTS** Skin reactions
- **PREGNANCY** No adverse effects reported.
- **BREAST FEEDING** No adverse effects reported.
- **DIRECTIONS FOR ADMINISTRATION** When applying dithranol, hands should be protected by gloves or they should be washed thoroughly afterwards. Dithranol should be applied to chronic extensor plaques only, carefully avoiding normal skin.
- **MICANOL®** At the end of contact time, use plenty of lukewarm (not hot) water to rinse off cream; soap may be used after the cream has been rinsed off; use shampoo before applying cream to scalp and if necessary after cream has been rinsed off.
- **PRESCRIBING AND DISPENSING INFORMATION** Treatment should be started with a low concentration such as dithranol 0.1%, and the strength increased gradually every few days up to 3%, according to tolerance.
- **PATIENT AND CARER ADVICE** Dithranol can stain the skin, hair and fabrics.
- **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine if dithranol content more than 1%, otherwise may be sold to the public.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment

**Cream****CAUTIONARY AND ADVISORY LABELS 28**

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), chlorocresol

► **Dithrocream** (Dermal Laboratories Ltd)

**Dithranol 1 mg per 1 gram** Dithrocream 0.1% cream | 50 gram **P**  
£3.77 DT = £3.77

**Dithranol 2.5 mg per 1 gram** Dithrocream 0.25% cream |  
50 gram **P** £4.04 DT = £4.04

**Dithranol 5 mg per 1 gram** Dithrocream 0.5% cream | 50 gram **P**

## Coal tar with calamine

15-Jan-2019

The properties listed below are those particular to the combination only. For the properties of the components please consider, coal tar p. 1319.

### ● INDICATIONS AND DOSE

#### **Psoriasis | Chronic atopic eczema (occasionally)**

- ▶ TO THE SKIN
- ▶ Adult: Apply 1–2 times a day

### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE (UPDATED DECEMBER 2018): EMOLLIENTS: NEW INFORMATION ABOUT RISK OF SEVERE AND FATAL BURNS WITH PARAFFIN-CONTAINING AND PARAFFIN-FREE EMOLLIENTS  
See Emollient and barrier preparations p. 1286.

- **PRESCRIBING AND DISPENSING INFORMATION** When prepared extemporaneously, the BP states Calamine and Coal Tar Ointment BP, consists of calamine 12.5 g, strong coal tar solution 2.5 g, zinc oxide 12.5 g, hydrous wool fat 25 g, white soft paraffin 47.5 g.

- **MEDICINAL FORMS** Forms available from special-order manufacturers include: ointment

## Coal tar with coconut oil and salicylic acid

19-Mar-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, coal tar p. 1319, salicylic acid p. 1353.

### ● INDICATIONS AND DOSE

#### **Scaly scalp disorders | Psoriasis | Seborrhoeic dermatitis | Dandruff | Cradle cap**

- ▶ TO THE SKIN USING SHAMPOO
- ▶ Child: Apply daily as required
- ▶ Adult: Apply daily as required

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Shampoo**

- ▶ **Capasal** (Dermal Laboratories Ltd)  
Salicylic acid 5 mg per 1 gram, Coal tar distilled 10 mg per 1 gram, Coconut oil 10 mg per 1 gram Capasal Therapeutic shampoo | 250 ml [P] £4.69

## Coal tar with dithranol and salicylic acid

The properties listed below are those particular to the combination only. For the properties of the components please consider, coal tar p. 1319, dithranol p. 1318, salicylic acid p. 1353.

### ● INDICATIONS AND DOSE

#### **Subacute and chronic psoriasis**

- ▶ TO THE SKIN
- ▶ Child: Apply up to twice daily
- ▶ Adult: Apply up to twice daily

### ● UNLICENSED USE

- ▶ In children *Psorin*® is licensed for use in children (age range not specified by manufacturer).

- **MEDICINAL FORMS** Forms available from special-order manufacturers include: ointment

## Coal tar with salicylic acid

16-Jan-2019

The properties listed below are those particular to the combination only. For the properties of the components please consider, coal tar p. 1319, salicylic acid p. 1353.

### ● INDICATIONS AND DOSE

#### **Psoriasis | Chronic atopic eczema**

- ▶ TO THE SKIN USING OINTMENT
- ▶ Adult: Apply 1–2 times a day

### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE (UPDATED DECEMBER 2018): EMOLLIENTS: NEW INFORMATION ABOUT RISK OF SEVERE AND FATAL BURNS WITH PARAFFIN-CONTAINING AND PARAFFIN-FREE EMOLLIENTS  
See Emollient and barrier preparations p. 1286.

- **PRESCRIBING AND DISPENSING INFORMATION** When prepared extemporaneously, the BP states Coal Tar and Salicylic Acid Ointment, BP consists of coal tar 2 g, salicylic acid 2 g, emulsifying wax 11.4 g, white soft paraffin 19 g, coconut oil 54 g, polysorbate '80' 4 g, liquid paraffin 7.6 g.

- **MEDICINAL FORMS** Forms available from special-order manufacturers include: ointment

## Coal tar with salicylic acid and precipitated sulfur

20-Mar-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, coal tar p. 1319, salicylic acid p. 1353.

### ● INDICATIONS AND DOSE

#### **COCOIS® OINTMENT**

#### **Scaly scalp disorders including psoriasis, eczema, seborrhoeic dermatitis and dandruff**

- ▶ TO THE SKIN USING SCALP OINTMENT
- ▶ Child 6–11 years: Medical supervision required
- ▶ Child 12–17 years: Apply once weekly as required, alternatively apply daily for the first 3–7 days (if severe), shampoo off after 1 hour
- ▶ Adult: Apply once weekly as required, alternatively apply daily for the first 3–7 days (if severe), shampoo off after 1 hour

#### **SEBCO® OINTMENT**

#### **Scaly scalp disorders including psoriasis, eczema, seborrhoeic dermatitis and dandruff**

- ▶ TO THE SKIN USING SCALP OINTMENT
- ▶ Child 6–11 years: Medical supervision required
- ▶ Child 12–17 years: Apply as required, alternatively apply daily for the first 3–7 days (if severe), shampoo off after 1 hour
- ▶ Adult: Apply as required, alternatively apply daily for the first 3–7 days (if severe), shampoo off after 1 hour

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Ointment**

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol)

- ▶ **Cocois** (RPH Pharmaceuticals AB)  
Salicylic acid 20 mg per 1 gram, Sulfur precipitated 40 mg per 1 gram, Coal tar solution 120 mg per 1 gram Cocois ointment | 40 gram [GSL] £6.22 | 100 gram [GSL] £11.69
- ▶ **Sebco** (Derma UK Ltd)  
Salicylic acid 20 mg per 1 gram, Sulfur precipitated 40 mg per 1 gram, Coal tar solution 120 mg per 1 gram Sebco ointment | 40 gram [GSL] £7.91 | 100 gram [GSL] £13.38

## Coal tar with zinc oxide

16-Jan-2019

The properties listed below are those particular to the combination only. For the properties of the components please consider, coal tar p. 1319.

### ● INDICATIONS AND DOSE

#### Psoriasis | Chronic atopic eczema

- ▶ TO THE SKIN
- ▶ Child: Apply 1–2 times a day
- ▶ Adult: Apply 1–2 times a day

### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE (UPDATED DECEMBER 2018): EMOLLIENTS: NEW INFORMATION ABOUT RISK OF SEVERE AND FATAL BURNS WITH PARAFFIN-CONTAINING AND PARAFFIN-FREE EMOLLIENTS See Emollient and barrier preparations p. 1286.

- **PRESCRIBING AND DISPENSING INFORMATION** No preparations available—when prepared extemporaneously, the BP states Zinc and Coal Tar Paste, BP consists of zinc oxide 6%, coal tar 6%, emulsifying wax 5%, starch 38%, yellow soft paraffin 45%.

- **MEDICINAL FORMS** Forms available from special-order manufacturers include: ointment, paste

## IMMUNOSUPPRESSANTS > CALCINEURIN INHIBITORS AND RELATED DRUGS

## Pimecrolimus

### ● INDICATIONS AND DOSE

**Short-term treatment of mild to moderate atopic eczema (including flares) when topical corticosteroids cannot be used (initiated by a specialist)**

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily until symptoms resolve (stop treatment if eczema worsens or no response after 6 weeks)

**Short-term treatment of facial, flexural, or genital psoriasis in patients unresponsive to, or intolerant of other topical therapy (initiated by a specialist)**

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily until symptoms resolve (maximum duration of treatment 4 weeks)

- **UNLICENSED USE** Pimecrolimus is not licensed for short-term treatment of facial, flexural, or genital psoriasis in patients unresponsive to, or intolerant of other topical therapy.
- **CONTRA-INDICATIONS** Application to malignant or potentially malignant skin lesions · application under occlusion · congenital epidermal barrier defects · contact with eyes · contact with mucous membranes · generalised erythroderma · immunodeficiency · infection at treatment site
- **CAUTIONS** Alcohol consumption (risk of facial flushing and skin irritation) · avoid other topical treatments except emollients at treatment site · UV light (avoid excessive exposure to sunlight and sunlamps)
- **INTERACTIONS** → Appendix 1: pimecrolimus
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Increased risk of infection
  - ▶ **Rare or very rare** Skin discolouration
  - ▶ **Frequency not known** Skin papilloma
- **PREGNANCY** Manufacturer advises avoid; toxicity in animal studies following systemic administration.
- **BREAST FEEDING** Manufacturer advises caution; ensure infant does not come in contact with treated areas.

### ● NATIONAL FUNDING/ACCESS DECISIONS

#### NICE decisions

- ▶ **Tacrolimus and pimecrolimus for atopic eczema (August 2004)** NICE TA82

Topical pimecrolimus is an option for atopic eczema not controlled by maximal topical corticosteroid treatment or if there is a risk of important corticosteroid side-effects (particularly skin atrophy).

Topical pimecrolimus is recommended for moderate atopic eczema on the face and neck of children aged 2–16 years. Pimecrolimus should be used within its licensed indications.

[www.nice.org.uk/TA82](http://www.nice.org.uk/TA82)

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Cream

CAUTIONARY AND ADVISORY LABELS 4, 11, 28

EXCIPIENTS: May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol), propylene glycol

- ▶ **Elidel (Mylan)**

**Pimecrolimus 10 mg per 1 gram** Elidel 1% cream | 30 gram [PoM]  
£19.69 DT = £19.69 | 60 gram [PoM] £37.41 DT = £37.41 |  
100 gram [PoM] £59.07 DT = £59.07

## Tacrolimus

19-Nov-2019

- **DRUG ACTION** Tacrolimus is a calcineurin inhibitor.

### ● INDICATIONS AND DOSE

**Short-term treatment of moderate to severe atopic eczema (including flares) in patients unresponsive to, or intolerant of conventional therapy (initiated by a specialist)**

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily until lesion clears (consider other treatment if eczema worsens or no improvement after 2 weeks), initially 0.1% ointment to be applied thinly, reduce frequency to once daily or strength of ointment to 0.03% if condition allows

**Prevention of flares in patients with moderate to severe atopic eczema and 4 or more flares a year who have responded to initial treatment with topical tacrolimus (initiated by a specialist)**

- ▶ TO THE SKIN
- ▶ Adult: Apply twice weekly, 0.1% ointment to be applied thinly, with an interval of 2–3 days between applications, use short-term treatment regimen during an acute flare; review need for preventative therapy after 1 year

**Short-term treatment of facial, flexural, or genital psoriasis in patients unresponsive to, or intolerant of other topical therapy (initiated under specialist supervision)**

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily until symptoms resolve, 0.1% ointment to be applied thinly, reduce to once daily or switch to 0.03% ointment if condition allows, maximum duration of treatment 4 weeks

- **UNLICENSED USE** Short-term treatment of facial, flexural, or genital psoriasis is unlicensed.
- **CONTRA-INDICATIONS** Application to malignant or potentially malignant skin lesions · application under occlusion · avoid contact with eyes · avoid contact with mucous membranes · congenital epidermal barrier defects · generalised erythroderma · immunodeficiency · infection at treatment site
- **CAUTIONS** UV light (avoid excessive exposure to sunlight and sunlamps)
- **INTERACTIONS** → Appendix 1: tacrolimus

### ● SIDE-EFFECTS

- ▶ **Common or very common** Alcohol intolerance · increased risk of infection · sensation abnormal · skin reactions
- ▶ **Uncommon** Lymphadenopathy
- ▶ **Frequency not known** Malignancy · neoplasms

● **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated if history of hypersensitivity to macrolides.

● **PREGNANCY** Manufacturer advises avoid unless essential; toxicity in *animal* studies following systemic administration.

● **BREAST FEEDING** Avoid—present in breast milk (following systemic administration).

● **HEPATIC IMPAIRMENT** Manufacturer advises caution in hepatic failure.

● **PATIENT AND CARER ADVICE** Avoid excessive exposure to UV light including sunlight.

### ● NATIONAL FUNDING/ACCESS DECISIONS

#### NICE decisions

- ▶ Tacrolimus and pimecrolimus for atopic eczema (August 2004) NICE TA82

Topical tacrolimus is an option for atopic eczema not controlled by maximal topical corticosteroid treatment or if there is a risk of important corticosteroid side-effects (particularly skin atrophy).

Topical tacrolimus is recommended as an option for the second-line treatment for moderate to severe atopic eczema in adults and children over 2 years. Tacrolimus should be used within its licensed indications.

[www.nice.org.uk/guidance/TA82](http://www.nice.org.uk/guidance/TA82)

#### Scottish Medicines Consortium (SMC) decisions

The *Scottish Medicines Consortium* has advised (April 2010) that tacrolimus 0.1% ointment (*Protopic*®) is accepted for restricted use within NHS Scotland for the prevention of flares in patients aged 16 years and over with moderate-to-severe atopic eczema in accordance with the licensed indications; initiation of treatment is restricted to doctors (including general practitioners) with a specialist interest and experience in treating atopic eczema with immunomodulatory therapy.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Ointment

CAUTIONARY AND ADVISORY LABELS 4, 11, 28

EXCIPIENTS: May contain Beeswax

#### ▶ Tacrolimus (Non-proprietary)

Tacrolimus (as Tacrolimus monohydrate) 1 mg per

1 gram Tacrolimus 0.1% ointment | 30 gram [PoM](#) £25.96 DT = £18.88 | 60 gram [PoM](#) £51.91 DT = £37.76

#### ▶ Protopic (LEO Pharma)

Tacrolimus (as Tacrolimus monohydrate) 300 microgram per

1 gram Protopic 0.03% ointment | 30 gram [PoM](#) £23.33 DT = £23.33 | 60 gram [PoM](#) £42.55 DT = £42.55

Tacrolimus (as Tacrolimus monohydrate) 1 mg per

1 gram Protopic 0.1% ointment | 30 gram [PoM](#) £25.92 DT = £18.88 | 60 gram [PoM](#) £47.28 DT = £37.76

## IMMUNOSUPPRESSANTS > INTERLEUKIN INHIBITORS

### Brodalumab

22-Jan-2018

- **DRUG ACTION** Brodalumab is a recombinant human monoclonal antibody that binds with high affinity to interleukin-17RA and blocks the activity of pro-inflammatory cytokines.

#### ● INDICATIONS AND DOSE

**Moderate-to-severe plaque psoriasis (under expert supervision)**

▶ BY SUBCUTANEOUS INJECTION

▶ **Adult:** 210 mg every week for 3 doses, followed by 210 mg every 2 weeks, consider discontinuing treatment if no response after 16 weeks

- **CONTRA-INDICATIONS** Active Crohn's disease · clinically significant active infection

- **CAUTIONS** Chronic infection · history of Crohn's disease (monitor for exacerbations) · history of depressive disorders (discontinue if new or worsening symptoms develop) · history of recurrent infection · history of suicidal ideation or behaviour (discontinue if new or worsening symptoms develop)

#### CAUTIONS, FURTHER INFORMATION

- ▶ **Infection** Manufacturer advises to consider anti-tuberculosis therapy for patients with latent tuberculosis before starting treatment with brodalumab.

Manufacturer advises patients should be brought up-to-date with current immunisation schedule before initiating treatment.

- **INTERACTIONS** → Appendix 1: monoclonal antibodies

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Arthralgia · diarrhoea · fatigue · headache · increased risk of infection · myalgia · nausea · oropharyngeal pain
- ▶ **Uncommon** Conjunctivitis
- ▶ **Frequency not known** Meningitis cryptococcal · suicidal tendencies

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises that women of childbearing potential should use effective contraception during treatment and for at least 12 weeks after stopping treatment.

- **PREGNANCY** Manufacturer advises avoid—limited information available.

- **BREAST FEEDING** Manufacturer advises avoid—no information available.

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises to take the syringe out of the refrigerator at least 30 minutes before administration, and to avoid injecting into areas of the skin that are tender, bruised, or affected by psoriasis. Patients may self-administer *Kyntheum*®, after appropriate training in subcutaneous injection technique.

- **PRESCRIBING AND DISPENSING INFORMATION** Brodalumab is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1; manufacturer advises to record the brand name and batch number after each administration.

- **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator (2–8°C) and protect from light—consult product literature for further information regarding storage outside refrigerator.

- **PATIENT AND CARER ADVICE** Manufacturer advises patients and their carers should be given training in subcutaneous injection technique. Manufacturer advises patients and their carers should seek medical advice if new

or worsening symptoms of depression, suicidal ideation, or behaviour occur; they should also be advised to report signs and symptoms of infection.

#### • NATIONAL FUNDING/ACCESS DECISIONS

##### NICE decisions

#### ► Brodalumab for treating moderate to severe plaque psoriasis (March 2018) NICE TA511

Brodalumab is recommended as an option for treating plaque psoriasis in adults, only if:

- the disease is severe, as defined by a total Psoriasis Area and Severity Index (PASI) of 10 or more and a Dermatology Life Quality Index (DLQI) of more than 10, and
- the disease has not responded to other systemic therapies, including ciclosporin, methotrexate and PUVA (psoralen and long-wave ultraviolet A radiation), or these options are contra-indicated or not tolerated, and
- the manufacturer provides the drug with the discount agreed in the patient access scheme.

Stop brodalumab at 12 weeks if the psoriasis has not responded adequately, defined as:

- a 75% reduction in the PASI score (PASI 75) from when treatment started, or
- a 50% reduction in the PASI score (PASI 50) and a 5-point reduction in DLQI from when treatment started.

Patients whose treatment was started within the NHS before this guidance was published should have the option to continue treatment, without change to their funding arrangements, until they and their NHS clinician consider it appropriate to stop.

[www.nice.org.uk/guidance/ta511](http://www.nice.org.uk/guidance/ta511)

##### Scottish Medicines Consortium (SMC) decisions

SMC No. 1283/17

The *Scottish Medicines Consortium* has advised (updated May 2018) that brodalumab (*Kyntheum*®) is accepted for restricted use within NHS Scotland for the treatment of moderate-to-severe plaque psoriasis in adults who have failed to respond to standard systemic therapies (including ciclosporin, methotrexate and phototherapy), are intolerant to, or have a contra-indication to these treatments. This advice is contingent upon the continuing availability of the patient access scheme in NHS Scotland or a list price that is equivalent or lower.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

##### Solution for injection

#### ► Kyntheum (LEO Pharma) ▼

**Brodalumab 140 mg per 1 ml** Kyntheum 210mg/1.5ml solution for injection pre-filled syringes | 2 pre-filled disposable injection (PoM)  
£1,280.00

## Dupilumab

21-Oct-2019

- **DRUG ACTION** Dupilumab is a recombinant human monoclonal antibody that inhibits interleukin-4 and interleukin-13 signaling.

#### • INDICATIONS AND DOSE

##### Moderate-to-severe atopic eczema (initiated by a specialist)

#### ► BY SUBCUTANEOUS INJECTION

- Adult: Initially 600 mg, followed by 300 mg every 2 weeks, the initial dose should be administered as two consecutive 300 mg injections at different injection sites, review treatment if no response after 16 weeks

##### Severe asthma with type 2 inflammation [add-on maintenance therapy] (initiated by a specialist)

#### ► BY SUBCUTANEOUS INJECTION

- Adult: Initially 400 mg, followed by 200 mg every 2 weeks, the initial dose should be administered as two consecutive 200 mg injections at different injection sites, review need for treatment yearly

##### Severe asthma with type 2 inflammation [add-on maintenance therapy for patients currently treated with oral corticosteroids or patients with co-morbid moderate-to-severe atopic dermatitis] (initiated by a specialist)

#### ► BY SUBCUTANEOUS INJECTION

- Adult: Initially 600 mg, followed by 300 mg every 2 weeks, the initial dose should be administered as two consecutive 300 mg injections at different injection sites, review need for treatment yearly

- **CAUTIONS** Helminth infection

#### CAUTIONS, FURTHER INFORMATION

- Risk of infection Dupilumab may influence the immune response to helminth infections. Resolve pre-existing infection before initiating treatment; suspend treatment if resistant infection develops during therapy.

Manufacturer advises patients should be brought up-to-date with live and live attenuated vaccines before initiating treatment.

- **INTERACTIONS** → Appendix 1: monoclonal antibodies

#### • SIDE-EFFECTS

- Common or very common Eosinophilia · eye inflammation · eye pruritus · headache · oral herpes
- Rare or very rare Hypersensitivity
- Frequency not known Pneumonia eosinophilic · vasculitis

**SIDE-EFFECTS, FURTHER INFORMATION** **Eosinophilic granulomatosis with polyangiitis (Churg-Strauss syndrome)** Churg-Strauss syndrome has occurred in patients given dupilumab; the reaction may be associated with the reduction of oral corticosteroid therapy. Churg-Strauss syndrome can present as vasculitic rash, cardiac complications, worsening pulmonary symptoms, or peripheral neuropathy in patients with eosinophilia.

- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk—limited information available.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises to inject into the thigh or abdomen (except for the 5 cm around the navel), or upper arm (if not self-administered); rotate injection site and avoid skin that is tender, damaged or scarred. Patients may self-administer Dupixent® after appropriate training in preparation and administration.
- **PRESCRIBING AND DISPENSING INFORMATION** Dupilumab is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1; manufacturer advises to record the brand name and batch number after each administration.

- **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator (2–8°C) and protect from light; pre-filled syringes may be kept at room temperature (max. 25°C) for max. 14 days.

#### • NATIONAL FUNDING/ACCESS DECISIONS

##### NICE decisions

#### ► Dupilumab for treating moderate to severe atopic dermatitis (August 2018) NICE TA534

Dupilumab (*Dupixent*®) is recommended as an option for treating moderate to severe atopic dermatitis in adults, only if:

- the disease has not responded to at least 1 other systemic therapy, such as ciclosporin, methotrexate,

azathioprine, and mycophenolate mofetil, or these are contra-indicated or not tolerated, **and**

- the manufacturer provides dupilumab according to the commercial arrangement.

Patients whose treatment was started within the NHS before this guidance was published should have the option to continue treatment, without change to their funding arrangements, until they and their NHS clinician consider it appropriate to stop.

[www.nice.org.uk/guidance/ta534](http://www.nice.org.uk/guidance/ta534)

#### Scottish Medicines Consortium (SMC) decisions

SMC No. SMC2011

The *Scottish Medicines Consortium* has advised (September 2018) that dupilumab (*Dupixent*®) is accepted for restricted use within NHS Scotland for the treatment of moderate-to-severe atopic dermatitis in adults who have had an inadequate response to existing systemic immunosuppressants such as ciclosporin, or in whom such treatment is considered unsuitable. This advice is contingent upon the continuing availability of the patient access scheme in NHS Scotland or a list price that is equivalent or lower.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

EXCIPIENTS: May contain Polysorbates

##### ► **Dupixent** (Sanofi) ▼

**Dupilumab 150 mg per 1 ml** Dupixent 300mg/2ml solution for injection pre-filled syringes | 2 pre-filled disposable injection [PoM] £1,264.89

Dupixent 300mg/2ml solution for injection pre-filled pens | 2 pre-filled disposable injection [PoM] £1,264.89

**Dupilumab 175 mg per 1 ml** Dupixent 200mg/1.14ml solution for injection pre-filled syringes | 2 pre-filled disposable injection [PoM] £1,264.89

Dupixent 200mg/1.14ml solution for injection pre-filled pens | 2 pre-filled disposable injection [PoM] £1,264.89

## Guselkumab

06-Jul-2018

- **DRUG ACTION** Guselkumab is a recombinant human monoclonal antibody that binds selectively to interleukin-23 and blocks the activity of pro-inflammatory cytokines.

#### • **INDICATIONS AND DOSE**

##### Moderate-to-severe plaque psoriasis (specialist use only)

###### ► BY SUBCUTANEOUS INJECTION

- **Adult:** Initially 100 mg, then 100 mg after 4 weeks, then maintenance 100 mg every 8 weeks, consider discontinuation if no response after 16 weeks

- **CONTRA-INDICATIONS** Clinically significant active infection
- **CAUTIONS** Risk of infection
- **CAUTIONS, FURTHER INFORMATION**
  - Risk of infection Manufacturer advises consider anti-tuberculosis therapy before initiation of guselkumab in patients with a past history of latent or active tuberculosis in whom an adequate course of treatment cannot be confirmed.

Manufacturer advises consider completion of appropriate immunisations according to current guidelines before initiating treatment (consult product literature for appropriate interval between vaccination and administration of guselkumab).

- **INTERACTIONS** → Appendix 1: monoclonal antibodies
- **SIDE-EFFECTS**
  - **Common or very common** Arthralgia · diarrhoea · headache · increased risk of infection · skin reactions
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception in women of childbearing potential during treatment and for at least 12 weeks after treatment.

- **PREGNANCY** Manufacturer advises avoid—no information available.
- **BREAST FEEDING** Manufacturer advises avoid during treatment and for up to 12 weeks after discontinuing treatment—no information available.
- **PRE-TREATMENT SCREENING** Manufacturer advises that patients should be evaluated for tuberculosis infection before treatment.
- **MONITORING REQUIREMENTS** Manufacturer advises monitor for signs and symptoms of active tuberculosis during and after treatment.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises to avoid injecting into areas of the skin that show psoriasis. Patients may self-administer *Tremfya*®, after appropriate training in subcutaneous injection technique.
- **PRESCRIBING AND DISPENSING INFORMATION** Manufacturer advises to record the brand name and batch number after each administration.
- **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator (2–8°C) and protect from light.
- **PATIENT AND CARER ADVICE** Manufacturer advises patients and their carers should be advised to seek medical attention if signs or symptoms of infection occur (monitor closely and suspend treatment if infection is clinically significant or unresponsive to treatment). Self-administration Manufacturer advises patients may self-administer following training in subcutaneous injection technique.

#### • **NATIONAL FUNDING/ACCESS DECISIONS**

##### NICE decisions

- **Guselkumab for treating moderate to severe plaque psoriasis (June 2018)** NICE TA521

Guselkumab is recommended as an option for treating plaque psoriasis in adults, only if:

- the disease is severe, as defined by a total Psoriasis Area and Severity Index (PASI) of 10 or more and a Dermatology Life Quality Index (DLQI) of more than 10, **and**
- the disease has not responded to other systemic therapies, including ciclosporin, methotrexate and PUVA (psoralen and long-wave ultraviolet A radiation), or these options are contra-indicated or not tolerated, **and**
- the manufacturer provides the drug according to the commercial arrangement.

Stop guselkumab treatment at 16 weeks if the psoriasis has not responded adequately. An adequate response is defined as:

- a 75% reduction in the PASI score (PASI 75) from when treatment started, **or**
- a 50% reduction in the PASI score (PASI 50) and a 5-point reduction in DLQI from when treatment started. Patients whose treatment was started within the NHS before this guidance was published should have the option to continue treatment, without change to their funding arrangements, until they and their NHS clinician consider it appropriate to stop.

[www.nice.org.uk/guidance/ta521](http://www.nice.org.uk/guidance/ta521)

#### Scottish Medicines Consortium (SMC) decisions

SMC No. 1340/18

The *Scottish Medicines Consortium* has advised (June 2018) that guselkumab (*Tremfya*®) is accepted for restricted use within NHS Scotland for the treatment of moderate to severe plaque psoriasis in adults who have failed to respond to conventional systemic therapies (including ciclosporin, methotrexate and phototherapy), are intolerant to, or have a contra-indication to these treatments. This advice is contingent upon the continuing availability of the patient access scheme in NHS Scotland or a list price that is equivalent or lower.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Tremfya** (Janssen-Cilag Ltd) ▼  
Guselkumab 100 mg per 1 ml Tremfya 100mg/1ml solution for injection pre-filled pens | 1 pre-filled disposable injection (PoM)  
£2,250.00

## Ixekizumab

26-Jun-2017

- **DRUG ACTION** Ixekizumab is a human monoclonal antibody that binds to interleukin-17A and inhibits the release of pro-inflammatory cytokines and chemokines.

#### ● INDICATIONS AND DOSE

**Moderate-to-severe plaque psoriasis (under expert supervision) | Psoriatic arthritis with concomitant moderate-to-severe plaque psoriasis (under expert supervision)**

##### ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: Initially 160 mg for 1 dose, followed by 80 mg after 2 weeks, then 80 mg every 2 weeks for 5 further doses (at weeks 4, 6, 8, 10 and 12), then maintenance 80 mg every 4 weeks, consider discontinuation of treatment if no response after 16–20 weeks

##### **Psoriatic arthritis (under expert supervision)**

##### ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult: Initially 160 mg for 1 dose, then maintenance 80 mg every 4 weeks, consider discontinuation of treatment if no response after 16–20 weeks

- **CONTRA-INDICATIONS** Active infections (including active tuberculosis)

- **CAUTIONS** Chronic infection—monitor carefully and discontinue if serious, unresponsive infection develops · Crohn's disease · ulcerative colitis

#### CAUTIONS, FURTHER INFORMATION

- ▶ Severe hypersensitivity reactions Severe hypersensitivity reactions have been reported—discontinue treatment immediately if symptoms occur.
- ▶ Latent tuberculosis Manufacturer advises that patients with latent tuberculosis should complete anti-tuberculosis therapy before starting ixekizumab.
- ▶ Inflammatory bowel disease Manufacturer advises to monitor closely for exacerbation.

- **INTERACTIONS** → Appendix 1: monoclonal antibodies

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Increased risk of infection · nausea · oropharyngeal pain
- ▶ **Uncommon** Conjunctivitis · neutropenia · skin reactions · thrombocytopenia
- ▶ **Frequency not known** Angioedema · dyspnoea · hypersensitivity (occasionally late-onset) · inflammatory bowel disease

- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception during treatment and for at least 10 weeks after treatment in women of childbearing potential.

- **PREGNANCY** Manufacturer advises avoid—limited information available.

- **BREAST FEEDING** Manufacturer advises avoid—present in milk in animal studies.

- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises to avoid injecting into areas of the skin that show psoriasis; injection sites may be alternated. Patients may self-administer Taltz<sup>®</sup>, after appropriate training in subcutaneous injection technique.

- **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator (2–8°C).

#### ● PATIENT AND CARER ADVICE

Self-administration If appropriate, patients and their carers should be given training in subcutaneous injection technique.

#### ● NATIONAL FUNDING/ACCESS DECISIONS

##### NICE decisions

- ▶ Ixekizumab for treating moderate to severe plaque psoriasis (April 2017) NICE TA442

Ixekizumab (Taltz<sup>®</sup>) is recommended as an option for treating plaque psoriasis only if:

- the disease is severe, defined by a total Psoriasis Area and Severity Index (PASI) of 10 or more and a Dermatology Life Quality Index (DLQI) of 10 or more;
  - the disease has not responded to standard systemic therapies (e.g. ciclosporin, methotrexate and PUVA) or these treatments are contra-indicated or not tolerated, and
  - the manufacturer provides ixekizumab with the discount agreed in the patient access scheme
- Ixekizumab should be discontinued if there is an inadequate response at 12 weeks.

Patients currently receiving ixekizumab, whose disease does not meet the above criteria, should have the option to continue treatment until they and their clinician consider it appropriate to stop.

[www.nice.org.uk/guidance/ta442](http://www.nice.org.uk/guidance/ta442)

- ▶ Ixekizumab for treating active psoriatic arthritis after inadequate response to DMARDs (August 2018) NICE TA537
- Ixekizumab (Taltz<sup>®</sup>) alone, or with methotrexate, is recommended as an option for treating active psoriatic arthritis in adults only if:

- it is used as described in the NICE technology appraisal guidance on etanercept, infliximab and adalimumab for the treatment of psoriatic arthritis (TA199 recommendations 1.1 and 1.2), or
- the person has had a tumour necrosis factor (TNF)-alpha inhibitor but their disease has not responded within the first 12 weeks or has stopped responding after the first 12 weeks, or
- TNF-alpha inhibitors are contra-indicated but would otherwise be considered (as described in the NICE technology appraisal guidance on etanercept, infliximab and adalimumab for the treatment of psoriatic arthritis). Ixekizumab is only recommended if the manufacturer provides it according to the commercial arrangement.

Patients whose treatment was started within the NHS before this guidance was published should have the option to continue treatment, without change to their funding arrangements, until they and their NHS clinician consider it appropriate to stop.

[www.nice.org.uk/guidance/ta537](http://www.nice.org.uk/guidance/ta537)

##### Scottish Medicines Consortium (SMC) decisions

SMC No. 1223/17

The *Scottish Medicines Consortium* has advised (April 2017) that ixekizumab (Taltz<sup>®</sup>) is accepted for restricted use within NHS Scotland for the treatment of moderate-to-severe plaque psoriasis only in patients who have failed to respond to standard systemic therapies (including ciclosporin, methotrexate and phototherapy), are intolerant to, or have a contra-indication to these treatments. This advice is contingent upon the continuing availability of the patient access scheme in NHS Scotland, or a list price that is equivalent or lower.

SMC No. SMC2097

The *Scottish Medicines Consortium* has advised (October 2018) that ixekizumab (Taltz<sup>®</sup>) is accepted for restricted use within NHS Scotland, alone or in combination with methotrexate, for the treatment of active psoriatic arthritis in adults whose disease has not responded adequately to at least two conventional disease-modifying anti-rheumatic drugs given either alone or in combination, and who have

had an inadequate response to a tumour necrosis factor inhibitor.

This advice is contingent upon the continuing availability of the patient access scheme in NHS Scotland or a list price that is equivalent or lower.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

EXCIPIENTS: May contain Polysorbates

- **Taltz** (Eli Lilly and Company Ltd) ▼

Ixekizumab 80 mg per 1 ml Taltz 80mg/1ml solution for injection pre-filled pens | 1 pre-filled disposable injection [PoM] £1,125.00 (Hospital only)

Taltz 80mg/1ml solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £1,125.00 (Hospital only)

## Risankizumab

12-Sep-2019

- **DRUG ACTION** Risankizumab is a humanised monoclonal antibody that binds selectively to interleukin-23 and blocks the activity of pro-inflammatory cytokines.

#### ● INDICATIONS AND DOSE

##### Moderate-to-severe plaque psoriasis (specialist use only)

- **BY SUBCUTANEOUS INJECTION**

- **Adult:** Initially 150 mg, then 150 mg after 4 weeks, then maintenance 150 mg every 12 weeks, consider discontinuation if no response after 16 weeks

- **CONTRA-INDICATIONS** Clinically significant active infection
- **CAUTIONS** Chronic infection · history of recurrent infection · risk of infection
- **CAUTIONS, FURTHER INFORMATION**
  - Risk of infection Manufacturer advises consider anti-tuberculosis therapy before initiation of risankizumab in patients with a history of latent or active tuberculosis in whom an adequate course of treatment cannot be confirmed.
  - Manufacturer advises consider completion of immunisations according to current guidelines before initiating treatment (consult product literature for appropriate interval between vaccination and administration of risankizumab).
- **INTERACTIONS** → Appendix 1: monoclonal antibodies
- **SIDE-EFFECTS**
  - **Common or very common** Asthenia · headaches · increased risk of infection · pruritus
- **CONCEPTION AND CONTRACEPTION** Manufacturer advises effective contraception in women of childbearing potential during treatment and for at least 21 weeks after treatment.
- **PREGNANCY** Manufacturer advises avoid (limited information available).
- **BREAST FEEDING** Manufacturer advises avoid (no information available).
- **PRE-TREATMENT SCREENING** Manufacturer advises patients should be evaluated for tuberculosis infection before treatment.
- **MONITORING REQUIREMENTS** Manufacturer advises monitor for signs and symptoms of active tuberculosis during treatment.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises to take carton out of the refrigerator at least 15 minutes before administration, and to avoid injecting into areas of the skin that are show psoriasis. Patients may self-administer *Skyrizi*® after appropriate training in subcutaneous injection technique.
- **PRESCRIBING AND DISPENSING INFORMATION** Risankizumab is a biological medicine. Biological medicines must be prescribed and dispensed by brand

name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1; manufacturer advises to record the brand name and batch number after each administration.

- **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator (2–8°C) and protect from light.
- **PATIENT AND CARER ADVICE** Manufacturer advises patients and their carers should be advised to seek medical attention if signs or symptoms of infection occur.

#### ● NATIONAL FUNDING/ACCESS DECISIONS

##### NICE decisions

- **Risankizumab for treating moderate to severe plaque psoriasis (August 2019)** NICE TA596

Risankizumab (*Skyrizi*®) is recommended as an option for treating plaque psoriasis in adults, only if:

- the disease is severe, as defined by a total Psoriasis Area and Severity Index (PASI) of 10 or more and a Dermatology Life Quality Index (DLQI) of more than 10, **and**
- the disease has not responded to other systemic treatments, including ciclosporin, methotrexate, and phototherapy, or these options are contra-indicated or not tolerated, **and**
- the manufacturer provides the drug according to the commercial arrangement.

Patients whose treatment was started within the NHS before this guidance was published should have the option to continue treatment, without change to their funding arrangements, until they and their NHS clinician consider it appropriate to stop.

[www.nice.org.uk/guidance/ta596](http://www.nice.org.uk/guidance/ta596)

##### Scottish Medicines Consortium (SMC) decisions

SMC No. SMC2196

The *Scottish Medicines Consortium* has advised (October 2019) that risankizumab (*Skyrizi*®) is accepted for restricted use within NHS Scotland for moderate to severe plaque psoriasis in patients who have failed to respond to conventional systemic therapies (including ciclosporin, methotrexate, and phototherapy), are intolerant to, or have a contra-indication to these treatments. The advice is contingent upon the continuing availability of the patient access scheme in NHS Scotland or a list price that is equivalent or lower.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

EXCIPIENTS: May contain Polysorbates, sorbitol

- **Skyrizi** (AbbVie Ltd) ▼

Risankizumab 90.36 mg per 1 ml Skyrizi 75mg/0.83ml solution for injection pre-filled syringes | 2 pre-filled disposable injection [PoM] £3,326.09

## Tildrakizumab

14-May-2019

- **DRUG ACTION** Tildrakizumab is a recombinant human monoclonal antibody that specifically binds to interleukin-23 and inhibits the release of pro-inflammatory cytokines and chemokines.

#### ● INDICATIONS AND DOSE

##### Moderate-to-severe plaque psoriasis (under expert supervision)

- **BY SUBCUTANEOUS INJECTION**

- **Adult:** Initially 100 mg, then 100 mg after 4 weeks, then maintenance 100 mg every 12 weeks, consider discontinuation if no response after 28 weeks, in patients with a high disease burden, or with a body weight ≥ 90kg, a dose of 200 mg may provide greater efficacy

- **CONTRA-INDICATIONS** Clinically significant active infection
  - **CAUTIONS** Chronic infection · history of recurrent infection · recent serious infection
  - CAUTIONS, FURTHER INFORMATION**
    - Risk of infection Manufacturer advises consider anti-tuberculosis therapy before initiation of tildrakizumab in patients with a history of tuberculosis, in whom an adequate course of treatment cannot be confirmed. Manufacturer advises consider completion of immunisations according to current guidelines before initiating treatment (consult product literature for appropriate interval between vaccination and administration of tildrakizumab).
  - **INTERACTIONS** → Appendix 1: monoclonal antibodies
  - **SIDE-EFFECTS**
    - Common or very common Back pain · diarrhoea · headache · increased risk of infection · nausea
  - **CONCEPTION AND CONTRACEPTION** Manufacturer advises that women of childbearing potential should use effective contraception during treatment and for at least 17 weeks after stopping treatment.
  - **PREGNANCY** Manufacturer advises avoid—limited information available.
  - **BREAST FEEDING** Manufacturer advises avoid—limited information available.
  - **PRE-TREATMENT SCREENING** Manufacturer advises patients should be evaluated for tuberculosis infection before treatment.
  - **MONITORING REQUIREMENTS** Manufacturer advises monitor for signs and symptoms of active tuberculosis during and after treatment
  - **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises to take the syringe out of the refrigerator at least 30 minutes before administration, and to avoid injecting into areas of the skin that are affected by psoriasis or are tender, bruised, red, hard, thick, or scaly. Patients may self-administer *Ilumetri*®, after appropriate training in subcutaneous injection technique.
  - **PRESCRIBING AND DISPENSING INFORMATION** Tildrakizumab is a biological medicine. Biological medicines must be prescribed and dispensed by brand name, see *Biological medicines* and *Biosimilar medicines*, under Guidance on prescribing p. 1; manufacturer advises to record the brand name and batch number after each administration.
  - **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator (2–8°C) and protect from light—consult product literature for further information regarding storage outside refrigerator.
  - **PATIENT AND CARER ADVICE** Manufacturer advises patients and their carers should be advised to seek medical advice if signs or symptoms of infection occur.
  - **NATIONAL FUNDING/ACCESS DECISIONS**
- NICE decisions**
- Tildrakizumab for treating moderate to severe plaque psoriasis (April 2019) NICE TA575
- Tildrakizumab (*Ilumetri*®) is recommended as an option for treating plaque psoriasis in adults, only if:
- the disease is severe, as defined by a total Psoriasis Area and Severity Index (PASI) of 10 or more and a Dermatology Life Quality Index (DLQI) of more than 10, and
  - the disease has not responded to other systemic treatments, including ciclosporin, methotrexate and phototherapy, or these options are contra-indicated or not tolerated, and
  - the manufacturer provides the drug according to the commercial arrangement.

Consider stopping tildrakizumab between 12 weeks and 28 weeks if there has not been at least a 50% reduction in the PASI score from when treatment started.

Stop tildrakizumab at 28 weeks if the psoriasis has not responded adequately. An adequate response is defined as:

- a 75% reduction in the PASI score (PASI 75) from when treatment started, or
  - a 50% reduction in the PASI score (PASI 50) and a 5-point reduction in DLQI from when treatment started.
- Patients whose treatment was started within the NHS before this guidance was published should have the option to continue treatment, without change to their funding arrangements, until they and their NHS clinician consider it appropriate to stop.

Tildrakizumab 100 mg per 1 ml *Ilumetri* 100mg/1ml solution for injection pre-filled syringes | 1 pre-filled disposable injection (PoM) £3,241.00 | 2 pre-filled disposable injection (PoM) £3,241.00

## RETINOID AND RELATED DRUGS

### Acitretin

28-Jan-2020

- **DRUG ACTION** Acitretin is a metabolite of etretinate.

#### INDICATIONS AND DOSE

**Severe extensive psoriasis resistant to other forms of therapy (under expert supervision) | Palmoplantar pustular psoriasis (under expert supervision) | Severe congenital ichthyosis (under expert supervision)**

- BY MOUTH

➤ Adult: Initially 25–30 mg daily for 2–4 weeks, then adjusted according to response to 25–50 mg daily, increased to up to 75 mg daily, dose only increased to 75 mg daily for short periods in psoriasis

**Severe Darier's disease (keratosis follicularis) (under expert supervision)**

- BY MOUTH

➤ Adult: Initially 10 mg daily for 2–4 weeks, then adjusted according to response to 25–50 mg daily

#### IMPORTANT SAFETY INFORMATION

**MHRA/CHM ADVICE: ORAL RETINOID MEDICINES: REVISED AND SIMPLIFIED PREGNANCY PREVENTION EDUCATIONAL MATERIALS FOR HEALTHCARE PROFESSIONALS AND WOMEN (JUNE 2019)**

New prescriber checklists, patient reminder cards, and pharmacy checklists are available to support the Pregnancy Prevention Programme in women and girls of childbearing potential taking oral acitretin, alitretinoin, or isotretinoin. Healthcare professionals are reminded that the use of oral retinoids is contra-indicated in pregnancy due to a high risk of serious congenital malformations, and any use in females must be within the conditions of the Pregnancy Prevention Programme

(see *Conception and contraception* and *Prescribing and dispensing information*).

Neuropsychiatric reactions have been reported in patients taking oral retinoids. Healthcare professionals are advised to monitor patients for signs of depression or suicidal ideation and refer for appropriate treatment, if necessary; particular care is needed in those with a history of depression. Patients should be advised to speak to their doctor if they experience any changes in mood or behaviour, and encouraged to ask family and friends to look out for any change in mood.

- **CONTRA-INDICATIONS** Hyperlipidaemia
- **CAUTIONS** Avoid excessive exposure to sunlight and unsupervised use of sunlamps · diabetes (can alter glucose tolerance—initial frequent blood glucose checks) · do not donate blood during and for 3 years after stopping therapy (teratogenic risk) · history of depression (risk of neuropsychiatric reactions) · in children use only in exceptional circumstances and monitor growth parameters and bone development (premature epiphyseal closure reported) · investigate atypical musculoskeletal symptoms
- **INTERACTIONS** → Appendix 1: retinoids
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Abdominal pain · arthralgia · brittle nails · conjunctivitis · diarrhoea · dry mouth · gastrointestinal disorder · haemorrhage · hair texture abnormal · headache · increased risk of infection · mucosal abnormalities · myalgia · nausea · oral disorders · peripheral oedema · skin reactions · thirst · vomiting · xerophthalmia
  - ▶ **Uncommon** Dizziness · hepatic disorders · photosensitivity reaction · vision disorders
  - ▶ **Rare or very rare** Bone pain · exostosis · idiopathic intracranial hypertension · peripheral neuropathy
  - ▶ **Frequency not known** Angioedema · capillary leak syndrome · drowsiness · dysphonia · flushing · glucose tolerance impaired · granuloma · hearing impairment · hyperhidrosis · malaise · pyogenic granuloma · retinoic acid syndrome · taste altered · tinnitus
- SIDE-EFFECTS, FURTHER INFORMATION** Exostosis Skeletal hyperostosis and extra-osseous calcification reported following long-term treatment with etretinate (of which acitretin is a metabolite) and premature epiphyseal closure in children.

**Benign intracranial hypertension** Discontinue if severe headache, nausea, vomiting, or visual disturbances occur.

- **CONCEPTION AND CONTRACEPTION** The MHRA advises that women and girls of childbearing potential being treated with the oral retinoids acitretin, alitretinoin, or isotretinoin must be supported on a Pregnancy Prevention Programme with regular follow-up and pregnancy testing. Pregnancy prevention Effective contraception must be used.
 

In females of childbearing potential (including those with a history of infertility), exclude pregnancy up to 3 days before treatment, every month during treatment, and every 1–3 months for 3 years after stopping treatment. Treatment should be started on day 2 or 3 of menstrual cycle. Females of childbearing age must practise effective contraception for at least 1 month before starting treatment, during treatment, and for at least 3 years after stopping treatment. Females should be advised to use at least 1 method of contraception, but ideally they should use 2 methods of contraception. Oral progestogen-only contraceptives are not considered effective. Barrier methods should not be used alone but can be used in conjunction with other contraceptive methods. Females should be advised to seek medical attention immediately if they become pregnant during treatment or within 3 years of stopping treatment. They should also be advised to

avoid alcohol during treatment and for 2 months after stopping treatment.

- **PREGNANCY** Manufacturer advises avoid—teratogenic.
- **BREAST FEEDING** Avoid.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid in severe impairment.
- **RENAL IMPAIRMENT** Avoid in severe impairment; increased risk of toxicity.
- **MONITORING REQUIREMENTS**
  - ▶ Monitor serum-triglyceride and serum-cholesterol concentrations before treatment, 1 month after starting, then every 3 months.
  - ▶ Check liver function at start, then every 2–4 weeks for first 2 months and then every 3 months.
- **PRESCRIBING AND DISPENSING INFORMATION**

Prescribing for females of childbearing potential The Pregnancy Prevention Programme is supported by the following materials provided by the manufacturer: *Checklists for prescribers and pharmacists*, and *Patient reminder cards*.

Each prescription for oral acitretin should be limited to a supply of up to 30 days' treatment. Pregnancy testing should ideally be carried out on the same day as prescription issuing and dispensing.
- **PATIENT AND CARER ADVICE**

Risk of neuropsychiatric reactions The MHRA advises patients and carers to seek medical attention if changes in mood or behaviour occur.

Pregnancy Prevention Programme Pharmacists must ensure that female patients have a patient card—see also *Important safety information*.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution
- Capsule**

**CAUTIONARY AND ADVISORY LABELS** 10, 11, 21

  - ▶ **Acitretin (Non-proprietary)**

**Acitretin 10 mg** Acitretin 10mg capsules | 60 capsule [PoM](#) £26.98  
DT = £26.98

**Acitretin 25 mg** Acitretin 25mg capsules | 60 capsule [PoM](#) £55.24  
DT = £43.75
  - ▶ **Neotigason** (Teva UK Ltd)
 

**Acitretin 10 mg** Neotigason 10mg capsules | 60 capsule [PoM](#)  
£17.30 DT = £26.98

**Acitretin 25 mg** Neotigason 25mg capsules | 60 capsule [PoM](#)  
£43.00 DT = £43.75

## Alitretinoin

15-Jan-2020

### ● INDICATIONS AND DOSE

#### Severe chronic hand eczema refractory to potent topical corticosteroids

- ▶ **BY MOUTH**
- ▶ **Adult** (prescribed by or under supervision of a consultant dermatologist): 30 mg once daily; reduced if not tolerated to 10 mg once daily for 12–24 weeks total duration of treatment, discontinue if no response after 12 weeks, course may be repeated in those who relapse

#### DOSE ADJUSTMENTS DUE TO INTERACTIONS

- ▶ Manufacturer advises reduce dose to 10 mg once daily with concurrent use of potent inhibitors of CYP3A4, CYP2C8 and moderate inhibitors of CYP2C9.

### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: ORAL RETINOID MEDICINES: REVISED AND SIMPLIFIED PREGNANCY PREVENTION EDUCATIONAL MATERIALS FOR HEALTHCARE PROFESSIONALS AND WOMEN (JUNE 2019)

New prescriber checklists, patient reminder cards, and pharmacy checklists are available to support the Pregnancy Prevention Programme in women and girls of

childbearing potential taking oral acitretin, alitretinoin, or isotretinoin. Healthcare professionals are reminded that the use of oral retinoids is contra-indicated in pregnancy due to a high risk of serious congenital malformations, and any use in females must be within the conditions of the Pregnancy Prevention Programme (see *Conception and contraception and Prescribing and dispensing information*).

Neuropsychiatric reactions have been reported in patients taking oral retinoids. Healthcare professionals are advised to monitor patients for signs of depression or suicidal ideation and refer for appropriate treatment, if necessary; particular care is needed in those with a history of depression. Patients should be advised to speak to their doctor if they experience any changes in mood or behaviour, and encouraged to ask family and friends to look out for any change in mood.

- **CONTRA-INDICATIONS** Hypervitaminosis A · uncontrolled hyperlipidaemia · uncontrolled hypothyroidism
- **CAUTIONS** Avoid blood donation during treatment and for at least 1 month after stopping treatment · dry eye syndrome · history of depression (risk of neuropsychiatric reactions)
- **INTERACTIONS** → Appendix 1: retinoids
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Alopecia · anaemia · conjunctivitis · dizziness · dry eye · dry mouth · eye irritation · fatigue · flushing · headache · hypercholesterolaemia · hypertension · hypertriglyceridaemia (risk of pancreatitis if triglycerides above 9 mmol/litre) · joint disorders · myalgia · nausea · oral disorders · skin reactions · tinnitus · vomiting
  - ▶ **Uncommon** Bone disorders · cataract · dyspepsia · epistaxis · vision disorders
  - ▶ **Rare or very rare** Anxiety · behaviour abnormal · depression · hair texture abnormal · idiopathic intracranial hypertension · mood altered · nail disorder · photosensitivity reaction · psychotic disorder · suicidal tendencies · vasculitis
  - ▶ **Frequency not known** Inflammatory bowel disease · peripheral oedema

**SIDE-EFFECTS, FURTHER INFORMATION** Dry eyes may respond to lubricating eye ointment or tear replacement therapy.

Discontinue treatment if signs or symptoms of idiopathic intracranial hypertension such as headache, nausea, vomiting, papilloedema, or visual disturbances occur.

Risk of pancreatitis if triglycerides above 9 mmol/litre—discontinue if uncontrolled hypertriglyceridaemia or pancreatitis.

- **CONCEPTION AND CONTRACEPTION** The MHRA advises that women and girls of childbearing potential being treated with the oral retinoids acitretin, alitretinoin, or isotretinoin must be supported on a Pregnancy Prevention Programme with regular follow-up and pregnancy testing. Pregnancy prevention Effective contraception must be used.

In females of childbearing potential, exclude pregnancy a few days before treatment, every month during treatment (unless there are compelling reasons to indicate that there is no risk of pregnancy), and 4 weeks after stopping treatment. Females must practise effective contraception for at least 1 month before starting treatment, during treatment, and for at least 1 month after stopping treatment. They should be advised to use at least 1 method of contraception but ideally they should use 2 methods of contraception. Oral progestogen-only contraceptives are not considered effective. Barrier methods should not be used alone but can be used in conjunction with other contraceptive methods. Females

should be advised to discontinue treatment and to seek prompt medical attention if they become pregnant during treatment or within 1 month of stopping treatment.

- **PREGNANCY** Manufacturer advises avoid—teratogenic.
- **BREAST FEEDING** Manufacturer advises avoid.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid—limited information available.
- **RENAL IMPAIRMENT** Manufacturer advises avoid in severe impairment—no information available.
- **MONITORING REQUIREMENTS** Monitor serum lipids (more frequently in those with diabetes, history of hyperlipidaemia, or risk factors for cardiovascular disease)—discontinue if uncontrolled hyperlipidaemia.

#### ● **PRESCRIBING AND DISPENSING INFORMATION**

Prescribing for females of childbearing potential The Pregnancy Prevention Programme is supported by the following materials provided by the manufacturer: *Checklists for prescribers and pharmacists*, and *Patient reminder cards*.

Each prescription for oral alitretinoin should be limited to a supply of up to 30 days' treatment. Pregnancy testing should ideally be carried out on the same day as prescription issuing and dispensing.

#### ● **PATIENT AND CARER ADVICE**

Risk of neuropsychiatric reactions The MHRA advises patients and carers to seek medical attention if changes in mood or behaviour occur.

UV light Manufacturer advises patients to avoid excessive exposure to UV light (including sunlight, solariums)—sunscreens with a high protection factor should be applied. Pregnancy Prevention Programme Pharmacists must ensure that female patients have a patient card—see also *Important safety information*.

#### ● **NATIONAL FUNDING/ACCESS DECISIONS**

##### **NICE decisions**

- ▶ **Alitretinoin for the treatment of severe chronic hand eczema (August 2009)** NICE TA177  
Alitretinoin (*Toctino*®) is recommended for the treatment of severe chronic hand eczema in adults that has not responded to potent topical corticosteroids.

Treatment should be stopped as soon as an adequate response has been achieved (hands clear or almost clear), or if the eczema remains severe after 12 weeks, or if an adequate response has not been achieved by 24 weeks.

[www.nice.org.uk/guidance/ta177](http://www.nice.org.uk/guidance/ta177)

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

##### **Capsule**

CAUTIONARY AND ADVISORY LABELS 10, 11, 21

EXCIPIENTS: May contain Sorbitol

##### ▶ **Alitretinoin (Non-proprietary)**

**Alitretinoin 10 mg** Alitretinoin 10mg capsules | 30 capsule PoM

## Tazarotene

14-Feb-2020

### ● INDICATIONS AND DOSE

**Mild to moderate plaque psoriasis affecting up to 10% of skin area**

- ▶ TO THE SKIN
- ▶ Adult: Apply once daily usually for up to 12 weeks, apply in the evening

- **CAUTIONS** Avoid contact with eczematous skin · avoid contact with eyes · avoid contact with face · avoid contact with hair-covered scalp · avoid contact with inflamed skin · avoid contact with intertriginous areas

- **INTERACTIONS** → Appendix 1: retinoids

### ● SIDE-EFFECTS

- ▶ **Common or very common** Paraesthesia · skin reactions
- SIDE-EFFECTS, FURTHER INFORMATION** Local irritation is more common with higher concentration and may require treatment interruption.

- **CONCEPTION AND CONTRACEPTION** Effective contraception required (oral progestogen-only contraceptives not considered effective).

- **PREGNANCY** Avoid.

- **BREAST FEEDING** Manufacturer advises avoid—present in milk in *animal* studies.

- **PATIENT AND CARER ADVICE** Avoid excessive exposure to UV light (including sunlight, solariums, PUVA or UVB treatment). Do not apply emollients or cosmetics within 1 hour of application. Wash hands immediately after use.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Gel

EXCIPIENTS: May contain Benzyl alcohol, butylated hydroxyanisole, butylated hydroxytoluene, disodium edetate, polysorbates

- ▶ **Zorac** (Allergan Ltd)

**Tazarotene 500 microgram per 1 gram** Zorac 0.05% gel |

30 gram [PoM] £14.09 DT = £14.09

**Tazarotene 1 mg per 1 gram** Zorac 0.1% gel | 30 gram [PoM]

£14.80 DT = £14.80

## SALICYLIC ACID AND DERIVATIVES

### Salicylic acid with zinc oxide

### ● INDICATIONS AND DOSE

**Hyperkeratotic skin disorders**

- ▶ TO THE SKIN
- ▶ Adult: Apply twice daily

- **CAUTIONS** Avoid broken skin · avoid inflamed skin

### CAUTIONS, FURTHER INFORMATION

- ▶ Salicylate toxicity Salicylate toxicity may occur particularly if applied on large areas of skin or neonatal skin.

- **SIDE-EFFECTS** Skin irritation

- **PRESCRIBING AND DISPENSING INFORMATION** Zinc and Salicylic Acid Paste BP is also referred to as Lassar's Paste. When prepared extemporaneously, the BP states Zinc and Salicylic Acid Paste, BP (Lassar's Paste) consists of zinc oxide 24%, salicylic acid 2%, starch 24%, white soft paraffin 50%.

- **MEDICINAL FORMS** Forms available from special-order manufacturers include: paste

## VITAMINS AND TRACE ELEMENTS > VITAMIN D AND ANALOGUES

### Calcipotriol

### ● INDICATIONS AND DOSE

**Plaque psoriasis**

- ▶ TO THE SKIN USING OINTMENT

- ▶ Adult: Apply 1–2 times a day, when preparations are used together maximum total calcipotriol 5 mg in any one week (e.g. scalp solution 60 mL with ointment 30 g or scalp solution 30 mL with ointment 60 g); maximum 100 g per week

**Scalp psoriasis**

- ▶ TO THE SKIN USING SCALP LOTION

- ▶ Adult: Apply twice daily, when preparations are used together maximum total calcipotriol 5 mg in any one week (e.g. scalp solution 60 mL with ointment 30 g or scalp solution 30 mL with ointment 60 g); maximum 60 mL per week

- **CONTRA-INDICATIONS** Calcium metabolism disorders

- **CAUTIONS** Avoid excessive exposure to sunlight and sunlamps · avoid use on face · erythrodermic exfoliative psoriasis (enhanced risk of hypercalcaemia) · generalised pustular psoriasis (enhanced risk of hypercalcaemia)

- **INTERACTIONS** → Appendix 1: vitamin D substances

### ● SIDE-EFFECTS

- ▶ **Common or very common** Skin reactions
- ▶ **Uncommon** Increased risk of infection
- ▶ **Rare or very rare** Hypercalcaemia · hypercalciuria · photosensitivity reaction

- **PREGNANCY** Manufacturers advise avoid unless essential.

- **BREAST FEEDING** No information available.

- **HEPATIC IMPAIRMENT** Manufacturers advise avoid in severe impairment (no information available).

### ● PATIENT AND CARER ADVICE

Advice on application Patient information leaflet for *Dovonex*® ointment advises liberal application. However, patients should be advised of maximum recommended weekly dose.

Hands should be washed thoroughly after application to avoid inadvertent transfer to other body areas.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: ointment

### Ointment

EXCIPIENTS: May contain Disodium edetate, propylene glycol

- ▶ **Calcipotriol (Non-proprietary)**

**Calcipotriol 50 microgram per 1 gram** Calcipotriol 50micrograms/g ointment | 30 gram [PoM] £7.43 DT = £7.42 | 60 gram [PoM] £11.56-£14.86 | 120 gram [PoM] £23.10-£29.72

- ▶ **Dovonex** (LEO Pharma)

**Calcipotriol 50 microgram per 1 gram** Dovonex 50micrograms/g ointment | 30 gram [PoM] £5.78 DT = £7.42 | 60 gram [PoM] £11.56

### Liquid

- ▶ **Calcipotriol (Non-proprietary)**

**Calcipotriol (as Calcipotriol hydrate) 50 microgram per 1 ml** Calcipotriol 50micrograms/ml scalp solution | 60 ml [PoM] £56.94 DT = £56.94 | 120 ml [PoM] £113.88 DT = £113.88

Combinations available: *Calcipotriol with betamethasone*, p. 1309

F 1143

04-Mar-2020

## Calcitriol

### (1,25-Dihydroxycholecalciferol)

#### ● INDICATIONS AND DOSE

##### Mild to moderate plaque psoriasis

###### ► TO THE SKIN

- Adult: Apply twice daily, not more than 35% of body surface to be treated daily; maximum 30 g per day

- **CONTRA-INDICATIONS** Do not apply under occlusion - patients with calcium metabolism disorders
- **CAUTIONS** Erythrodermic exfoliative psoriasis (enhanced risk of hypercalcaemia) · generalised pustular psoriasis (enhanced risk of hypercalcaemia)
- **INTERACTIONS** → Appendix 1: vitamin D substances
- **PREGNANCY** Manufacturer advises use in restricted amounts only if clearly necessary.  
**Monitoring** Monitor urine- and serum-calcium concentration in pregnancy.
- **BREAST FEEDING** Manufacturer advises avoid.
- **HEPATIC IMPAIRMENT** Manufacturer advises avoid.
- **RENAL IMPAIRMENT** Manufacturer advises avoid—no information available.
- **HANDLING AND STORAGE** Hands should be washed thoroughly after application to avoid inadvertent transfer to other body areas.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.  
**Ointment**
  - Silkis (Galderma (UK) Ltd)

## Tacalcitol

18-Feb-2020

#### ● INDICATIONS AND DOSE

##### Plaque psoriasis

###### ► TO THE SKIN

- Adult: Apply once daily, preferably at bedtime, maximum 10 g ointment or 10 mL lotion daily, when lotion and ointment used together, maximum total tacalcitol 280 micrograms in any one week (e.g. lotion 30 mL with ointment 40 g)

- **CONTRA-INDICATIONS** Calcium metabolism disorders
- **CAUTIONS** Avoid eyes · erythrodermic exfoliative psoriasis (enhanced risk of hypercalcaemia) · generalised pustular psoriasis (enhanced risk of hypercalcaemia) · if used in conjunction with UV treatment  
**CAUTIONS, FURTHER INFORMATION**
  - UV treatment If tacalcitol is used in conjunction with UV treatment, UV radiation should be given in the morning and tacalcitol applied at bedtime.
- **INTERACTIONS** → Appendix 1: vitamin D substances
- **SIDE-EFFECTS**
  - Uncommon Skin reactions
  - Frequency not known Hypercalcaemia
- **PREGNANCY** Manufacturer advises avoid unless no safer alternative—no information available.
- **BREAST FEEDING** Manufacturer advises avoid application to breast area; no information available on presence in milk.
- **MONITORING REQUIREMENTS** Monitor serum calcium if risk of hypercalcaemia.

- **PATIENT AND CARER ADVICE** Hands should be washed thoroughly after application to avoid inadvertent transfer to other body areas.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Ointment

## 4 Perspiration

### 4.1 Hyperhidrosis

## Hyperhidrosis

16-May-2017

### Overview

Aluminium chloride hexahydrate p. 1332 is a potent antiperspirant used in the treatment of hyperhidrosis. Aluminium salts are also incorporated in preparations used for minor fungal skin infections associated with hyperhidrosis.

Limited evidence suggests that oxybutynin hydrochloride p. 821 [unlicensed indication] can be used to treat hyperhidrosis in patients whose symptoms are not adequately managed through lifestyle modifications and antiperspirants.

In more severe cases specialists use glycopyrronium bromide p. 1331 as a 0.05% solution in the iontophoretic treatment of hyperhidrosis of plantar and palmar areas. Botox® contains botulinum toxin type A complex p. 425 and is licensed for use intradermally for severe hyperhidrosis of the axillae unresponsive to topical antiperspirant or other antihidrotic treatment.

## 5 Pruritus

### Topical local antipruritics

#### Overview

Pruritus may be caused by systemic disease (such as obstructive jaundice, endocrine disease, chronic renal disease, iron deficiency, and certain malignant diseases), skin disease (e.g. psoriasis, eczema, urticaria, and scabies), drug hypersensitivity, or as a side-effect of opioid analgesics. Where possible, the underlying causes should be treated. An **emollient** may be of value where the pruritus is associated with dry skin. Pruritus that occurs in otherwise healthy elderly people can also be treated with an emollient. Levomenthol **cream** p. 1333 can be used to relieve pruritus; it exerts a cooling effect on the skin. Local antipruritics have a role in the treatment of pruritus in palliative care.

Preparations containing crometamol p. 1333 are sometimes used but are of uncertain value. Preparations containing calamine are often ineffective.

A topical preparation containing doxepin 5% p. 1333 is licensed for the relief of pruritus in eczema; it can cause drowsiness and there may be a risk of sensitisation.

Pruritus is common in biliary obstruction, especially in primary biliary cirrhosis and drug-induced cholestasis. Oral administration of colestyramine p. 210 is the treatment of choice.

Topical antihistamines and local anaesthetics are only marginally effective and occasionally cause hypersensitivity. For *insect stings* and *insect bites*, a short course of a topical corticosteroid is appropriate. Short-term treatment with a **sedating antihistamine** may help in insect stings and in intractable pruritus where sedation is desirable. Calamine preparations are of little value for the treatment of insect stings or bites.

Topical local anaesthetics are indicated for the relief of local pain. Preparations may be absorbed, especially through mucosal surfaces, therefore excessive application should be avoided and they should preferably not be used for more than 3 days; not generally suitable for young children and are less suitable for prescribing.

Topical antihistamines should be avoided in eczema and are not recommended for longer than 3 days. They are less suitable for prescribing.

**Other drugs used for Pruritus** Alimemazine tartrate, p. 297 • Cetirizine hydrochloride, p. 294 • Chlorphenamine maleate, p. 297 • Coal tar with calamine, p. 1320 • Hydroxyzine hydrochloride, p. 299 • Levocetirizine hydrochloride, p. 295

## ANTI-PRURITICS

### Calamine with zinc oxide

11-Mar-2020

• **INDICATIONS AND DOSE**

**Minor skin conditions**

- ▶ TO THE SKIN

▶ **Child:** (consult product literature)

▶ **Adult:** (consult product literature)

**IMPORTANT SAFETY INFORMATION**

MHRA/CHM ADVICE (UPDATED DECEMBER 2018): EMOLLIENTS: NEW INFORMATION ABOUT RISK OF SEVERE AND FATAL BURNS WITH PARAFFIN-CONTAINING AND PARAFFIN-FREE EMOLLIENTS See Emollient and barrier preparations p. 1286.

- **CONTRA-INDICATIONS** Avoid application of preparations containing zinc oxide prior to x-ray (zinc oxide may affect outcome of x-ray)
- **LESS SUITABLE FOR PRESCRIBING** Less suitable for prescribing.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Cream**

CAUTIONARY AND ADVISORY LABELS 15

- ▶ **Calamine with zinc oxide (Non-proprietary)**

Phenoxyethanol 5 mg per 1 gram, Zinc oxide 30 mg per 1 gram, Calamine 40 mg per 1 gram, Cetomacrogol emulsifying wax 50 mg per 1 gram, Self-emulsifying glyceryl monostearate 50 mg per 1 gram, Liquid paraffin 200 mg per 1 gram Aqueous calamine cream | 100 gram [GSL] £1.43 DT = £1.43

**Liquid**

## 6 Rosacea and acne

### Rosacea and Acne

#### Acne

Treatment of acne should be commenced early to prevent scarring. Patients should be counselled that an improvement may not be seen for at least a couple of months. The choice of treatment depends on whether the acne is predominantly inflammatory or comedonal and its severity.

*Mild to moderate acne* is generally treated with topical preparations. Systemic treatment with oral antibacterials is generally used for *moderate to severe acne* or where topical preparations are not tolerated or are ineffective or where application to the site is difficult. Another oral preparation used for acne is the hormone treatment co-cyprindiol p. 1335 (cyproterone acetate with ethinylestradiol); it is for women only.

*Severe acne*, acne unresponsive to prolonged courses of oral antibacterials, scarring, or acne associated with psychological problems calls for early referral to a consultant dermatologist who may prescribe isotretinoin p. 1337 for administration by mouth.

#### Acne: topical preparations

In mild to moderate acne, comedones and inflamed lesions respond well to benzoyl peroxide p. 1336 or to a topical retinoid. Alternatively, topical application of an antibacterial such as erythromycin p. 569 or clindamycin p. 1335 may be

effective for inflammatory acne. If topical preparations prove inadequate, oral preparations may be needed.

#### Benzoyl peroxide and azelaic acid

Benzoyl peroxide is effective in mild to moderate acne. Both comedones and inflamed lesions respond well to benzoyl peroxide. The lower concentrations seem to be as effective as higher concentrations in reducing inflammation. It is usual to start with a lower strength and to increase the concentration of benzoyl peroxide gradually. Adverse effects include local skin irritation, particularly when therapy is initiated, but the scaling and redness often subside with treatment continued at a reduced frequency of application. If the acne does not respond after 2 months then use of a topical antibacterial should be considered.

Azelaic acid p. 1336 has antimicrobial and anticomedonal properties. It may be an alternative to benzoyl peroxide or to a topical retinoid for treating mild to moderate comedonal acne, particularly of the face. Some patients prefer azelaic acid because it is less likely to cause local irritation than benzoyl peroxide.

#### Topical antibacterials for acne

For many patients with mild to moderate inflammatory acne, topical antibacterials may be no more effective than topical benzoyl peroxide or tretinoin. Topical antibacterials are probably best reserved for patients who wish to avoid oral antibacterials or who cannot tolerate them. Topical preparations of erythromycin and clindamycin are effective for inflammatory acne. Topical antibacterials can produce mild irritation of the skin, and on rare occasions cause sensitisation; gastro-intestinal disturbances have been reported with topical clindamycin.

Antibacterial resistance of *Propionibacterium acnes* is increasing; there is cross-resistance between erythromycin and clindamycin. To avoid development of resistance:

- when possible use non-antibiotic antimicrobials (such as benzoyl peroxide or azelaic acid);
- avoid concomitant treatment with different oral and topical antibacterials;
- if a particular antibacterial is effective, use it for repeat courses if needed (short intervening courses of benzoyl peroxide or azelaic acid may eliminate any resistant *propionibacteria*);
- do not continue treatment for longer than necessary (however, treatment with a topical preparation should be continued for at least 6 months).

Some manufacturers of topical antibacterial preparations for acne advise that preparations containing alcohol are not suitable for use with benzoyl peroxide.

#### Topical retinoids and related preparations for acne

Topical tretinoin (available from 'special-order' manufacturers), its isomer isotretinoin, and adapalene p. 1337 (a retinoid-like drug), are useful for treating comedones and inflammatory lesions in mild to moderate acne. Several months of treatment may be needed to achieve an optimal response and the treatment should be continued until no new lesions develop. Isotretinoin is given by mouth in severe acne.

#### Other topical preparations for acne

Preparations containing aluminium oxide are not considered beneficial in acne.

A topical preparation of nicotinamide p. 1339 is available for inflammatory acne.

#### Acne: oral preparations

Systemic antibacterial treatment is useful for inflammatory acne if topical treatment is not adequately effective or if it is inappropriate. Anticomedonal treatment (e.g. with topical benzoyl peroxide) may also be required.

Either oxytetracycline p. 600 or tetracycline p. 600 is usually given for acne. If there is no improvement after the

first 3 months another oral antibacterial should be used. Maximum improvement usually occurs after 4 to 6 months but in more severe cases treatment may need to be continued for 2 years or longer.

Doxycycline p. 597 and lymecycline p. 599 are alternatives to tetracycline.

Although minocycline p. 599 is as effective as other tetracyclines for acne, it is associated with a greater risk of lupus erythematosus-like syndrome. Minocycline sometimes causes irreversible pigmentation; it is given in a once or twice daily dose.

Erythromycin in a twice daily dose is an alternative for the management of acne but *propionibacteria* strains resistant to erythromycin are becoming widespread and this may explain poor response.

Trimethoprim p. 607 may be used for acne resistant to other antibacterials [unlicensed indication]. Prolonged treatment with trimethoprim may depress haematopoiesis; it should generally be initiated by specialists.

Concomitant use of different topical and systemic antibacterials is undesirable owing to the increased likelihood of the development of bacterial resistance.

#### Hormone treatment for acne

Co-cyprindiol (cyproterone acetate with ethinylestradiol) contains an anti-androgen. It is licensed for use in women with moderate to severe acne that has not responded to topical therapy or oral antibacterials, and for moderately severe hirsutism. Although it is an effective hormonal contraceptive, it should not be used solely for contraception.

Improvement of acne with co-cyprindiol probably occurs because of decreased sebum secretion which is under androgen control. Some women with moderately severe hirsutism may also benefit because hair growth is also androgen-dependent.

#### Oral retinoid for acne

The retinoid isotretinoin reduces sebum secretion. It is used for the systemic treatment of nodulo-cystic and conglobate acne, severe acne, scarring, acne which has not responded to an adequate course of a systemic antibacterial, or acne which is associated with psychological problems. It is also useful in women who develop acne in the third or fourth decades of life, since late onset acne is frequently unresponsive to antibacterials.

Isotretinoin is a toxic drug that should be prescribed **only** by, or under the supervision of, a consultant dermatologist. It is given for at least 16 weeks; repeat courses are not normally required.

Side-effects of isotretinoin include severe dryness of the skin and mucous membranes, nose bleeds, and joint pains. The drug is **teratogenic** and must **not** be given to women of child-bearing age unless they practise effective contraception (oral progestogen-only contraceptives not considered effective) and then only after detailed assessment and explanation by the physician. Women must also be registered with a pregnancy prevention programme.

Although a causal link between isotretinoin p. 1337 use and psychiatric changes (including suicidal ideation) has not been established, the possibility should be considered before initiating treatment; if psychiatric changes occur during treatment, isotretinoin should be stopped, the prescriber informed, and specialist psychiatric advice should be sought.

#### Rosacea

Rosacea is not comedonal (but may exist with acne which may be comedonal). Brimonidine tartrate p. 1340 is licensed for the treatment of facial erythema in rosacea. The pustules and papules of rosacea respond to topical azelaic acid p. 1336, topical ivermectin p. 1339 or to topical metronidazole p. 1296. Alternatively oral administration of oxytetracycline p. 600 or tetracycline p. 600, or erythromycin p. 569, can be used; courses usually last 6–12 weeks and are repeated intermittently. Doxycycline p. 597 can be used

[unlicensed indication] if oxytetracycline or tetracycline is inappropriate (e.g. in renal impairment). A modified-release preparation of doxycycline is licensed in low daily doses for the treatment of facial rosacea. Isotretinoin is occasionally given in refractory cases [unlicensed indication]. Camouflagers may be required for the redness.

## 6.1 Acne

### ANTI-ANDROGENS

#### Co-cyprindiol

02-Mar-2017

##### ● INDICATIONS AND DOSE

**Moderate to severe acne in females of child-bearing age refractory to topical therapy or oral antibacterials**  
**Moderately severe hirsutism**

##### ► BY MOUTH

- Females of childbearing potential: 1 tablet daily for 21 days, to be started on day 1 of menstrual cycle; subsequent courses repeated after a 7-day interval (during which withdrawal bleeding occurs), time to symptom remission, at least 3 months; review need for treatment regularly

- **CONTRA-INDICATIONS** Acute porphyrias p. 1120 · gallstones · heart disease associated with pulmonary hypertension or risk of embolus · history during pregnancy of cholestatic jaundice · history during pregnancy of chorea · history during pregnancy of pemphigoid gestationis · history during pregnancy of pruritus · history of breast cancer but can be used after 5 years if no evidence of disease and non-hormonal methods unacceptable · history of haemolytic uraemic syndrome · migraine with aura · personal history of venous or arterial thrombosis · presence or history of liver tumours · sclerosing treatment for varicose veins · severe or multiple risk factors for arterial disease or for venous thromboembolism · systemic lupus erythematosus with (or unknown) antiphospholipid antibodies · transient cerebral ischaemic attacks without headaches · undiagnosed vaginal bleeding

- **CAUTIONS** Active trophoblastic disease (until return to normal of urine- and plasma-gonadotrophin concentration)—seek specialist advice · arterial disease · gene mutations associated with breast cancer (e.g. BRCA 1) · history of severe depression especially if induced by hormonal contraceptive · hyperprolactinaemia—seek specialist advice · inflammatory bowel disease including Crohn's disease · migraine · personal or family history of hypertriglyceridaemia (increased risk of pancreatitis) · risk factors for venous thromboembolism · sickle-cell disease · undiagnosed breast mass

##### CAUTIONS, FURTHER INFORMATION

- Venous thromboembolism There is an increased risk of venous thromboembolism in women taking co-cyprindiol, particularly during the first year of use. The incidence of venous thromboembolism is 1.5–2 times higher in women using co-cyprindiol than in women using combined oral contraceptives containing levonorgestrel, but the risk may be similar to that associated with use of combined oral contraceptives containing third generation progestogens (desogestrel and gestodene) or drospirenone. Women requiring co-cyprindiol may have an inherently increased risk of cardiovascular disease.

- **INTERACTIONS** → Appendix 1: combined hormonal contraceptives

##### ● SIDE-EFFECTS

- **Common or very common** Abdominal pain · breast abnormalities · depression · headaches · mood altered · nausea · weight changes

- **Uncommon** Diarrhoea · fluid retention · sexual dysfunction · skin reactions · vomiting
- **Rare or very rare** Contact lens intolerance · erythema nodosum · thromboembolism · vaginal discharge
- **Frequency not known** Amenorrhoea (on discontinuation) · angioedema aggravated · chorea exacerbated · hepatic function abnormal · hepatic neoplasm · hypertension · hypertriglyceridaemia · inflammatory bowel disease · menstrual cycle irregularities · suicidal tendencies
- **PREGNANCY** Avoid—risk of feminisation of male fetus with cyproterone.
- **BREAST FEEDING** Manufacturer advises avoid; possibility of anti-androgen effects in neonate with cyproterone.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution; avoid in severe or active disease
- **PRESCRIBING AND DISPENSING INFORMATION** A mixture of cyproterone acetate and ethinylestradiol in the mass proportions 2000 parts to 35 parts, respectively.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

## RETINOID AND RELATED DRUGS

### Adapalene

16-Jan-2020

● **INDICATIONS AND DOSE**

**Mild to moderate acne vulgaris**

► **TO THE SKIN**

- Child 12–17 years: Apply once daily, apply thinly in the evening
- Adult: Apply once daily, apply thinly in the evening

- **CAUTIONS** Avoid accumulation in angles of the nose - avoid contact with eyes, nostrils, mouth and mucous membranes, eczematous, broken or sunburned skin - avoid exposure to UV light (including sunlight, solariums) - avoid in severe acne involving large areas - caution in sensitive areas such as the neck

- **INTERACTIONS** → Appendix 1: retinoids

- **CONCEPTION AND CONTRACEPTION** Females of child-bearing age must use effective contraception (oral progestogen-only contraceptives not considered effective).

- **PREGNANCY** Avoid.

- **BREAST FEEDING** Amount of drug in milk probably too small to be harmful; ensure infant does not come in contact with treated areas.

- **PATIENT AND CARER ADVICE** If sun exposure is unavoidable, an appropriate sunscreen or protective clothing should be used.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Cream**

CAUTIONARY AND ADVISORY LABELS 11

EXCIPIENTS: May contain Disodium edetate, hydroxybenzoates (parabens)

► **Differin** (Galderma (UK) Ltd)

**Adapalene 1 mg per 1 gram** Differin 0.1% cream | 45 gram [PoM]  
£16.43 DT = £16.43

**Gel**

EXCIPIENTS: May contain Disodium edetate, hydroxybenzoates (parabens), propylene glycol

► **Differin** (Galderma (UK) Ltd)

**Adapalene 1 mg per 1 gram** Differin 0.1% gel | 45 gram [PoM]  
£16.43 DT = £16.43

### Adapalene with benzoyl peroxide

09-Mar-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, adapalene above, benzoyl peroxide p. 1336.

● **INDICATIONS AND DOSE**

**Acne vulgaris**

► **TO THE SKIN**

- Child 9–17 years: Apply once daily, to be applied thinly in the evening
- Adult: Apply once daily, to be applied thinly in the evening

- **INTERACTIONS** → Appendix 1: retinoids

- **CONCEPTION AND CONTRACEPTION** Females of child-bearing age must use effective contraception (oral

progestogen-only contraceptives not considered effective).

- **PATIENT AND CARER ADVICE** Gel may bleach clothing and hair.

- **NATIONAL FUNDING/ACCESS DECISIONS**

**Scottish Medicines Consortium (SMC) decisions**

The *Scottish Medicines Consortium* has advised (April 2014) that *Epiduo*® should be restricted for use in mild to moderate facial acne when monotherapy with benzoyl peroxide or adapalene is inappropriate.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Gel**

CAUTIONARY AND ADVISORY LABELS 11

EXCIPIENTS: May contain Disodium edetate, polysorbates, propylene glycol

► **Epiduo** (Galderma (UK) Ltd)

**Adapalene 1 mg per 1 gram, Benzoyl peroxide 25 mg per 1 gram** Epiduo 0.1%/2.5% gel | 45 gram [PoM] £19.53 DT = £19.53  
**Adapalene 3 mg per 1 gram, Benzoyl peroxide 25 mg per 1 gram** Epiduo 0.3%/2.5% gel | 45 gram [PoM] £19.53

### Isotretinoin

12-May-2020

● **INDICATIONS AND DOSE**

**Severe acne (under expert supervision) | Acne which is associated with psychological problems (under expert supervision) | Acne which has not responded to an adequate course of a systemic antibacterial (under expert supervision) | Acne with scarring (under expert supervision) | Systemic treatment of nodulo-cystic and conglobate acne (under expert supervision)**

► **BY MOUTH**

- Adult: Initially 500 micrograms/kg daily in 1–2 divided doses, increased if necessary to 1 mg/kg daily for 16–24 weeks, repeat treatment course after a period of at least 8 weeks if relapse after first course; maximum 150 mg/kg per course

### IMPORTANT SAFETY INFORMATION

**MHRA/CHM ADVICE: ISOTRETINOIN (ROACCUTANE®): RARE REPORTS OF ERECTILE DYSFUNCTION AND DECREASED LIBIDO (OCTOBER 2017)**

An EU-wide review has concluded that on rare occasions, oral isotretinoin, indicated for severe acne, may cause sexual side-effects, including erectile dysfunction and decreased libido.

**MHRA/CHM ADVICE: ORAL RETINOID MEDICINES: REVISED AND SIMPLIFIED PREGNANCY PREVENTION EDUCATIONAL MATERIALS FOR HEALTHCARE PROFESSIONALS AND WOMEN (JUNE 2019)**

New reminder checklists, patient reminder cards, and pharmacy checklists are available to support the Pregnancy Prevention Programme in women and girls of childbearing potential taking oral acitretin, alitretinoin, or isotretinoin. Healthcare professionals are reminded that the use of oral retinoids is contra-indicated in pregnancy due to a high risk of serious congenital malformations, and any use in females must be within the conditions of the Pregnancy Prevention Programme (see *Conception and contraception* and *Prescribing and dispensing information*).

Neuropsychiatric reactions have been reported in patients taking oral retinoids. Healthcare professionals are advised to monitor patients for signs of depression or suicidal ideation and refer for appropriate treatment, if necessary; particular care is needed in those with a history of depression. Patients should be advised to speak to their doctor if they experience any changes in mood or behaviour, and encouraged to ask family and friends to look out for any change in mood.

- **CONTRA-INDICATIONS** Hyperlipidaemia · hypervitaminosis A
- **CAUTIONS** Avoid blood donation during treatment and for at least 1 month after treatment · diabetes · dry eye syndrome (associated with risk of keratitis) · history of depression (risk of neuropsychiatric reactions)

● **INTERACTIONS** → Appendix 1: retinoids

● **SIDE-EFFECTS**

- ▶ **Common or very common** Alopecia · anaemia · arthralgia · back pain · cheilitis · dry eye · eye discomfort · eye inflammation · haemorrhage · headache · increased risk of infection · myalgia · nasal dryness · neutropenia · proteinuria · skin fragility (trauma may cause blistering) · skin reactions · thrombocytopenia · thrombocytosis
- ▶ **Rare or very rare** Anxiety · arthritis · behaviour abnormal · bone disorders · bronchospasm · cataract · corneal opacity · depression · diabetes mellitus · dizziness · drowsiness · dry throat · gastrointestinal disorders · glomerulonephritis · hair changes · hearing impairment · hepatitis · hoarseness · hyperhidrosis · hyperuricaemia · idiopathic intracranial hypertension · inflammatory bowel disease · lymphadenopathy · malaise · mood altered · nail dystrophy · nausea · pancreatitis · photosensitivity reaction · psychotic disorder · pyogenic granuloma · seizure · suicidal tendencies · tendinitis · vasculitis · vision disorders
- ▶ **Frequency not known** Rhabdomyolysis · severe cutaneous adverse reactions (SCARs)

**SIDE-EFFECTS, FURTHER INFORMATION** Risk of pancreatitis if triglycerides above 9 mmol/litre—discontinue if uncontrolled hypertriglyceridaemia or pancreatitis.

Discontinue treatment if skin peeling severe or haemorrhagic diarrhoea develops.

Visual disturbances require expert referral and possible withdrawal.

Psychiatric side-effects could require expert referral.

- **CONCEPTION AND CONTRACEPTION** The MHRA advises that women and girls of childbearing potential being treated with the oral retinoids acitretin, alitretinoin, or isotretinoin must be supported on a Pregnancy Prevention Programme with regular follow-up and pregnancy testing. Pregnancy prevention Effective contraception must be used.

In females of childbearing potential, exclude pregnancy a few days before treatment, every month during treatment (unless there are compelling reasons to indicate that there is no risk of pregnancy), and 4 weeks after stopping treatment. Females must practise effective contraception for at least 1 month before starting treatment, during treatment, and for at least 1 month after stopping treatment. They should be advised to use at least 1 method of contraception, but ideally they should use 2 methods of contraception. Oral progestogen-only contraceptives are not considered effective. Barrier methods should not be used alone, but can be used in conjunction with other contraceptive methods. Females should be advised to discontinue treatment and to seek prompt medical attention if they become pregnant during treatment or within 1 month of stopping treatment.

- **PREGNANCY** Manufacturer advises avoid—teratogenic.

- **BREAST FEEDING** Avoid.

- **HEPATIC IMPAIRMENT** Manufacturer advises avoid—limited information available.

- **RENAL IMPAIRMENT**

**Dose adjustments** In severe impairment, reduce initial dose (e.g. 10 mg daily) and increase gradually up to 1 mg/kg daily as tolerated.

- **MONITORING REQUIREMENTS** Measure hepatic function and serum lipids before treatment, 1 month after starting and then every 3 months (reduce dose or discontinue if transaminase or serum lipids persistently raised).

- **PRESCRIBING AND DISPENSING INFORMATION** Isotretinoin is an isomer of tretinoin.

Prescribing for females of childbearing potential The Pregnancy Prevention Programme is supported by the following materials provided by the manufacturer: *Checklists for prescribers and pharmacists*, and *Patient reminder cards*.

Each prescription for oral isotretinoin should be limited to a supply of up to 30 days' treatment. Pregnancy testing should ideally be carried out on the same day as prescription issuing and dispensing.

- **PATIENT AND CARER ADVICE** Warn patient to avoid wax epilation (risk of epidermal stripping), dermabrasion, and laser skin treatments (risk of scarring) during treatment and for at least 6 months after stopping; patient should avoid exposure to UV light (including sunlight) and use sunscreen and emollient (including lip balm) preparations from the start of treatment.

Risk of neuropsychiatric reactions The MHRA advises patients and carers to seek medical attention if changes in mood or behaviour occur.

Pregnancy Prevention Programme Pharmacists must ensure that female patients have a patient card—see also *Important safety information*.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Capsule**

CAUTIONARY AND ADVISORY LABELS 10, 11, 21

▶ **Isotretinoin (Non-proprietary)**

**Isotretinoin 5 mg** Isotretinoin 5mg capsules | 30 capsule [PoM]

£10.10-£10.15 | 56 capsule [PoM] £14.78-£14.79 DT = £14.79

## Tretinoin with clindamycin

10-Mar-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, tretinoin p. 990, clindamycin p. 1335.

● **INDICATIONS AND DOSE**

**Facial acne**

▶ **TO THE SKIN**

- ▶ Child 12-17 years: Apply daily, (to be applied thinly at bedtime)
- ▶ Adult: Apply daily, (to be applied thinly at bedtime)

- **CONTRA-INDICATIONS** Perioral dermatitis · personal or familial history of skin cancer · rosacea

- **CAUTIONS** Allow peeling (resulting from other irritant treatments) to subside before using a topical retinoid · avoid accumulation in angles of the nose · avoid contact with eyes, nostrils, mouth and mucous membranes, eczematous, broken or sunburned skin · avoid exposure to UV light (including sunlight, solariums) · avoid use of topical retinoids with keratolytic agents, abrasive cleaners, comedogenic or astringent cosmetics · caution in sensitive areas such as the neck · severe acne

- **INTERACTIONS** → Appendix 1: clindamycin · retinoids

- **SIDE-EFFECTS** Dry skin (discontinue if severe) · eye irritation · oedema · photosensitivity reaction · skin pigmentation change (transient) · skin reactions

- **CONCEPTION AND CONTRACEPTION** Females of childbearing age must use effective contraception (oral

progestogen-only contraceptives not considered effective).

- **PREGNANCY** Contra-indicated in pregnancy.
- **BREAST FEEDING** Amount of drug in milk after topical application probably too small to be harmful; ensure infant does not come in contact with treated areas.
- **PATIENT AND CARER ADVICE** If sun exposure is unavoidable, an appropriate sunscreen or protective clothing should be used.  
Patients and carers should be warned that some redness and skin peeling can occur initially but settles with time. If undue irritation occurs, the frequency of application should be reduced or treatment suspended until the reaction subsides; if irritation persists, discontinue treatment. Several months of treatment may be needed to achieve an optimal response and the treatment should be continued until no new lesions develop.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Gel

CAUTIONARY AND ADVISORY LABELS 11

EXCIPIENTS: May contain Butylated hydroxytoluene, hydroxybenzoates (parabens), polysorbates

► **Tretinoin** (Mylan)

Tretinoin 250 microgram per 1 gram, Clindamycin (as Clindamycin phosphate) 10 mg per 1 gram Tretinoin 1%/0.025% gel | 30 gram [PoM] £11.94 DT = £11.94

## Tretinoin with erythromycin

03-Apr-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, tretinoin p. 990, erythromycin p. 569.

### INDICATIONS AND DOSE

#### Acne

► TO THE SKIN

- Child: Apply 1–2 times a day, apply thinly
- Adult: Apply 1–2 times a day, apply thinly

- **CONTRA-INDICATIONS** Perioral dermatitis · personal or familial history of skin cancer · rosacea
- **CAUTIONS** Allow peeling (resulting from other irritant treatments) to subside before using a topical retinoid · avoid accumulation in angles of the nose · avoid contact with eyes, nostrils, mouth and mucous membranes, eczematous, broken or sunburned skin · avoid exposure to UV light (including sunlight, solariums) · avoid use of topical retinoids with keratolytic agents, abrasive cleaners, comedogenic or astringent cosmetics · caution in sensitive areas such as the neck · severe acne
- **INTERACTIONS** → Appendix 1: macrolides · retinoids
- **SIDE-EFFECTS** Dry skin (discontinue if severe) · eye irritation · oedema · photosensitivity reaction · skin eruption · skin pigmentation change (transient)
- **CONCEPTION AND CONTRACEPTION** Females of child-bearing age must use effective contraception (oral progestogen-only contraceptives not considered effective).
- **PREGNANCY** Contra-indicated in pregnancy.
- **BREAST FEEDING** Amount of drug in milk after topical application probably too small to be harmful; ensure infant does not come in contact with treated areas.
- **PATIENT AND CARER ADVICE** Patients and carers should be warned that some redness and skin peeling can occur initially but settles with time. If undue irritation occurs, the frequency of application should be reduced or treatment suspended until the reaction subsides; if irritation persists, discontinue treatment. Several months of treatment may be needed to achieve an optimal

response and the treatment should be continued until no new lesions develop. If sun exposure is unavoidable, an appropriate sunscreen or protective clothing should be used.

CAUTIONARY AND ADVISORY LABELS 11

► **Aknemycin Plus** (Almirall Ltd)

Tretinoin 250 microgram per 1 gram, Erythromycin 40 mg per 1 gram Aknemycin Plus solution | 25 ml [PoM] £7.05 DT = £7.05

## VITAMINS AND TRACE ELEMENTS > VITAMIN B GROUP

### Nicotinamide

06-May-2020

#### INDICATIONS AND DOSE

##### Inflammatory acne vulgaris

► TO THE SKIN

- Adult: Apply twice daily, reduced to once daily or on alternate days, dose reduced if irritation occurs

- **CAUTIONS** Avoid contact with eyes · avoid contact with mucous membranes (including nose and mouth) · reduce frequency of application if excessive dryness, irritation or peeling
- **SIDE-EFFECTS** Paraesthesia · skin reactions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Gel

► **Frederm** (Dendron Ltd)

Nicotinamide 40 mg per 1 gram Frederm Treatment 4% gel | 25 gram [P] £5.56 DT = £5.56

► **Nicam** (Dermal Laboratories Ltd)

Nicotinamide 40 mg per 1 gram Nicam 4% gel | 60 gram [P] £7.10 DT = £7.10

## 6.2 Rosacea

**Other drugs used for Rosacea** Azelaic acid, p. 1336

### ANTHELMINTICS

#### Ivermectin

17-May-2017

#### INDICATIONS AND DOSE

##### Papulopustular rosacea

► TO THE SKIN

- Adult: Apply daily for up to 4 months, the treatment course may be repeated; discontinue if no improvement after 3 months

- **INTERACTIONS** → Appendix 1: ivermectin
- **SIDE-EFFECTS**
  - Common or very common Skin reactions
- **PREGNANCY** Manufacturer advises avoid—limited information but toxicity following oral use in animal studies.
- **BREAST FEEDING** Manufacturer advises avoid—limited information but present in milk following oral use.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment (no information available).
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises apply thinly to the face only, avoiding contact with eyes, lips and mucosa.
- **PATIENT AND CARER ADVICE** Wash hands immediately after use.

### • NATIONAL FUNDING/ACCESS DECISIONS

#### Scottish Medicines Consortium (SMC) decisions

The *Scottish Medicines Consortium* has advised (December 2015) that ivermectin (*Soolantra*®) is accepted for restricted use within NHS Scotland for the treatment of moderate-to-severe inflammatory lesions of rosacea (papulopustular) where a topical treatment is considered appropriate.

#### All Wales Medicines Strategy Group (AWMSG) decisions

The All Wales Medicines Strategy Group has advised (April 2016) that ivermectin (*Soolantra*®) is recommended as an option for use within NHS Wales for the topical treatment of inflammatory lesions of rosacea (papulopustular) in adult patients.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Cautionary and advisory labels

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), disodium edetate, isopropyl palmitate, propylene glycol

► **Soolantra** (Galderma (UK) Ltd)

Ivermectin 10 mg per 1 gram Soolantra 10mg/g cream | 30 gram [PoM] £18.29 DT = £18.29

### SYMPATHOMIMETICS > ALPHA<sub>2</sub>-ADRENOCEPTOR AGONISTS

## Brimonidine tartrate

03-Apr-2020

- **DRUG ACTION** Brimonidine, an alpha<sub>2</sub>-adrenoceptor agonist, is used to reduce erythema in rosacea by cutaneous vasoconstriction.

### • INDICATIONS AND DOSE

#### Facial erythema in rosacea

► TO THE SKIN

► **Adult:** Apply once daily until erythema subsides, apply thinly, divide dose over forehead, chin, nose, and cheeks, max. 1 g of gel per day

#### DOSE EQUIVALENCE AND CONVERSION

► 1 g of gel contains 5 mg of brimonidine tartrate (equivalent to 3.3 mg of brimonidine).

### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: BRIMONIDINE GEL (*MIRVASO*®): RISK OF SYSTEMIC CARDIOVASCULAR EFFECTS (JUNE 2017)

Systemic cardiovascular effects including bradycardia, hypotension, and dizziness have been reported after application of brimonidine gel. To minimise the possibility of systemic absorption, it is important to avoid application to irritated or damaged skin, including after laser therapy.

MHRA/CHM ADVICE: BRIMONIDINE GEL (*MIRVASO*®): RISK OF EXACERBATION OF ROSACEA (NOVEMBER 2016)

Symptom exacerbation has been reported very commonly in patients treated with brimonidine gel. Treatment should be initiated with a small amount of gel (less than the maximum dose) for at least 1 week, then increased gradually, based on tolerability and response. Patients should be counselled on the importance of not exceeding the maximum daily dose, and advised to stop treatment and seek medical advice if symptoms worsen during treatment.

- **CAUTIONS** Cerebral insufficiency · coronary insufficiency · depression · postural hypotension · Raynaud's syndrome · severe cardiovascular disease · thromboangiitis obliterans
- **INTERACTIONS** → Appendix 1: brimonidine
- **SIDE-EFFECTS**
  - **Common or very common** Dizziness · dry mouth · flushing · headache · skin reactions

- **Uncommon** Angioedema · eyelid oedema · feeling hot · nasal congestion · paraesthesia · peripheral coldness
- **Rare or very rare** Bradycardia · hypotension

- **PREGNANCY** Manufacturer advises avoid—limited information available.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (no information available).
- **RENAL IMPAIRMENT** Manufacturer advises use with caution.
- **DIRECTIONS FOR ADMINISTRATION** Avoid contact with eyes, mouth, and mucous membranes; avoid use on irritated or damaged skin or open wounds; apply other topical preparations (including cosmetics) only after brimonidine gel has dried on skin.

- **PATIENT AND CARER ADVICE** Patients should be advised on administration of gel.

**Driving and skilled tasks** Drowsiness may affect performance of skilled tasks (e.g. driving).

### • NATIONAL FUNDING/ACCESS DECISIONS

#### Scottish Medicines Consortium (SMC) decisions

The *Scottish Medicines Consortium* has advised (January 2015) that brimonidine (*Mirvaso*®) is accepted for restricted use within NHS Scotland for the symptomatic treatment of moderate to severe persistent facial erythema associated with rosacea.

#### All Wales Medicines Strategy Group (AWMSG) decisions

The All Wales Medicines Strategy Group has advised (September 2015) that brimonidine (*Mirvaso*®) is accepted for restricted use within NHS Wales for the symptomatic treatment of moderate to severe persistent facial erythema associated with rosacea.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Gel

CAUTIONARY AND ADVISORY LABELS 28

EXCIPIENTS: May contain Hydroxybenzoates (parabens), propylene glycol

► **Mirvaso** (Galderma (UK) Ltd)

Brimonidine (as Brimonidine tartrate) 3 mg per 1 gram Mirvaso 3mg/g gel | 30 gram [PoM] £33.69 DT = £33.69

## 7 Scalp and hair conditions

### Scalp and hair conditions

#### Overview

*Dandruff* is considered to be a mild form of seborrhoeic dermatitis. Shampoos containing antimicrobial agents such as **pyrithione zinc** (which are widely available) and selenium p. 1341 may have beneficial effects. Shampoos containing **tar** extracts may be useful and they are also used in *psoriasis*. Ketoconazole shampoo p. 1298 should be considered for more persistent or severe dandruff or for seborrhoeic dermatitis of the scalp.

**Corticosteroid** gels and lotions can also be used.

Shampoos containing coal tar with salicylic acid p. 1320 may also be useful. A cream or an ointment containing coal tar with salicylic acid is very helpful in *Psoriasis* p. 1304 that affects the scalp. Patients who do not respond to these treatments may need to be referred to exclude the possibility of other skin conditions.

*Cradle cap* in infants may be treated with **coconut oil** or **olive oil** applications followed by shampooing.

## Hirsutism

Hirsutism may result from hormonal disorders or as a side-effect of drugs such as minoxidil below, corticosteroids, anabolic steroids, androgens, danazol p. 783, and progestogens.

Weight loss can reduce hirsutism in obese women.

Women should be advised about local methods of hair removal, and in the mildest cases this may be all that is required.

Eflornithine p. 1342 an antiprotozoal drug, inhibits the enzyme ornithine decarboxylase in hair follicles. Topical eflornithine can be used as an adjunct to laser therapy for facial hirsutism in women.

Co-cyprindiol p. 1335 may be effective for moderately severe hirsutism. Metformin hydrochloride p. 730 is an alternative in women with polycystic ovary syndrome [unlicensed indication]. Systemic treatment is required for 6–12 months before benefit is seen.

## Androgenetic alopecia

Finasteride p. 831 is licensed for the treatment of androgenetic alopecia in men. Continuous use for 3–6 months is required before benefit is seen, and effects are reversed 6–12 months after treatment is discontinued.

Topical application of minoxidil may stimulate limited hair growth in a small proportion of adults but only for as long as it is used.

**Other drugs used for Scalp and hair conditions** Coal tar, p. 1319 • Coal tar with salicylic acid and precipitated sulfur, p. 1320

## ANTISEPTICS AND DISINFECTANTS > UNDECENOATES

### Cetrimide with undecenoic acid

#### ● INDICATIONS AND DOSE

**Scalp psoriasis | Seborrhoeic dermatitis | Dandruff**

▶ TO THE SKIN

- ▶ Child: Apply 3 times a week for 1 week, then apply twice weekly
- ▶ Adult: Apply 3 times a week for 1 week, then apply twice weekly

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Shampoo

▶ **Ceanel** (Alliance Pharmaceuticals Ltd)

Undecenoic acid 10 mg per 1 ml, Phenylethyl alcohol 75 mg per 1 ml, Cetrimide 100 mg per 1 ml Ceanel Concentrate shampoo | 150 ml [P] £3.40 | 500 ml [P] £9.80

## ANTISEPTICS AND DISINFECTANTS > OTHER

### Benzalkonium chloride

26-Mar-2020

#### ● INDICATIONS AND DOSE

**Seborrhoeic scalp conditions associated with dandruff and scaling**

▶ TO THE SKIN

- ▶ Child: Apply as required
- ▶ Adult: Apply as required

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Shampoo

▶ **Dermamax** (Dermal Laboratories Ltd)

Benzalkonium chloride 5 mg per 1 ml Dermamax Therapeutic 0.5% shampoo | 250 ml [P] £5.69 DT = £5.69

## VITAMINS AND TRACE ELEMENTS

### Selenium

#### ● INDICATIONS AND DOSE

**Seborrhoeic dermatitis | Dandruff**

▶ TO THE SKIN USING SHAMPOO

- ▶ Child 5–17 years: Apply twice weekly for 2 weeks, then apply once weekly for 2 weeks, then apply as required
- ▶ Adult: Apply twice weekly for 2 weeks, then apply once weekly for 2 weeks, then apply as required

**Pityriasis versicolor**

▶ TO THE SKIN USING SHAMPOO

- ▶ Adult: Apply once daily for 7 days, apply to the affected area and leave on for 10 minutes before rinsing off. The course may be repeated if necessary. Diluting with a small amount of water prior to application can reduce irritation

- **UNLICENSED USE** The use of selenium sulfide shampoo as a lotion for the treatment of pityriasis (tinea) versicolor is an unlicensed indication.

- **INTERACTIONS** → Appendix 1: selenium

- **PATIENT AND CARER ADVICE** Avoid using 48 hours before or after applying hair colouring, straightening or waving preparations.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Shampoo

EXCIPIENTS: May contain Fragrances

▶ **Selsun** (Chatterm (U.K.) Ltd)

Selenium sulfide 25 mg per 1 ml Selsun 2.5% shampoo | 50 ml [P] £1.61 DT = £1.61 | 100 ml [P] £2.15 DT = £2.15 | 150 ml [P] £3.06 DT = £3.06

## 7.1 Alopecia

**Other drugs used for Alopecia** Finasteride, p. 831

## VASODILATORS > VASODILATOR ANTIHYPERTENSIVES

### Minoxidil

01-May-2020

#### ● INDICATIONS AND DOSE

**REGAINE® FOR MEN EXTRA STRENGTH FOAM**

**Androgenetic alopecia**

▶ TO THE SKIN

- ▶ Adult: Apply 0.5 capful twice daily, to be applied to the affected areas of scalp; discontinue if no improvement after 16 weeks

**REGAINE® FOR MEN EXTRA STRENGTH SOLUTION**

**Androgenetic alopecia**

▶ TO THE SKIN

- ▶ Adult: Apply 1 mL twice daily, to be applied to the affected areas of scalp; discontinue if no improvement after 1 year

**REGAINE® FOR WOMEN REGULAR STRENGTH**

**Androgenetic alopecia**

▶ TO THE SKIN

- ▶ Adult: Apply 1 mL twice daily, to be applied to the affected areas of scalp; discontinue if no improvement after 1 year

- **CONTRA-INDICATIONS** Pheochromocytoma

- **CAUTIONS** Avoid contact with broken, infected, shaved, or inflamed skin • avoid contact with eyes • avoid contact with

mouth · avoid contact with mucous membranes · avoid inhalation of spray mist · avoid occlusive dressings

- **INTERACTIONS** → Appendix 1: minoxidil

- **SIDE-EFFECTS**

- ▶ **Common or very common** Hair changes

- ▶ **Uncommon** Hypotension

**SIDE-EFFECTS, FURTHER INFORMATION** When used topically systemic effects unlikely; only about 1–2% absorbed (greater absorption may occur with use on inflamed skin).

- **PREGNANCY** Avoid—possible toxicity including reduced placental perfusion. Neonatal hirsutism reported.

- **BREAST FEEDING** Present in milk but not known to be harmful.

- **PATIENT AND CARER ADVICE** Ensure hair and scalp dry before application. Patients and their carers should be advised to wash hands after application of liquid or foam.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Liquid

CAUTIONARY AND ADVISORY LABELS 15

EXCIPIENTS: May contain Propylene glycol

- ▶ **Regaine** (McNeil Products Ltd, Johnson & Johnson Ltd)

**Minoxidil 20 mg per 1 ml** Regaine for Women Regular Strength 2% solution | 60 ml [GSL] £15.43

**Minoxidil 50 mg per 1 ml** Regaine for Men Extra Strength 5% scalp solution | 60 ml [GSL] £21.63 | 180 ml [GSL] £43.28

#### Foam

CAUTIONARY AND ADVISORY LABELS 15

EXCIPIENTS: May contain Butylated hydroxytoluene, cetostearyl alcohol (including cetyl and stearyl alcohol), polysorbates

- ▶ **Regaine** (McNeil Products Ltd)

**Minoxidil 50 mg per 1 gram** Regaine for Men Extra Strength 5% scalp foam | 60 gram [GSL] £23.33 DT = £23.33 | 180 gram [GSL] £50.01 DT = £50.01

## 7.2 Hirsutism

**Other drugs used for Hirsutism** Co-cyprindiol, p. 1335

## ANTIPROTOZOALS

### Efloornithine

18-May-2020

- **DRUG ACTION** An antiprotozoal drug that inhibits the enzyme ornithine decarboxylase in hair follicles.

- **INDICATIONS AND DOSE**

**Adjunct in the treatment of facial hirsutism in women**

- ▶ **TO THE SKIN**

- ▶ **Adult:** Apply twice daily, to be applied thinly, discontinue use if no improvement after 4 months of treatment

- **SIDE-EFFECTS**

- ▶ **Common or very common** Alopecia · increased risk of infection · paraesthesia · skin reactions
- ▶ **Uncommon** Face oedema · flushing · hair changes · oral disorders · skin haemorrhage
- ▶ **Rare or very rare** Skin neoplasm

- **PREGNANCY** Toxicity in *animal* studies—manufacturer advises avoid.

- **BREAST FEEDING** Manufacturer advises avoid—no information available.

- **PATIENT AND CARER ADVICE** Medicines must be rubbed in thoroughly. Cosmetics may be applied over treated area 5 minutes after efloornithine, do not wash treated area for 4 hours after application.

- **NATIONAL FUNDING/ACCESS DECISIONS**

#### Scottish Medicines Consortium (SMC) decisions

SMC No. 159/05

The *Scottish Medicines Consortium* has advised (September 2005) that efloornithine 11.5% cream (*Vaniqua*®) for facial hirsutism be restricted for use in women in whom alternative drug treatment cannot be used.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Cream

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens)

- ▶ **Vaniqua** (Almirall Ltd)

**Eflornithine (as Eflornithine hydrochloride monohydrate) 115 mg per 1 gram** Vaniqua 11.5% cream | 60 gram [PoM] £56.87 DT = £56.87

## 8 Skin cleansers, antiseptics and desloughing agents

### Skin cleansers, antiseptics and desloughing agents

#### Skin cleansers and antiseptics

Soap or detergent is used with water to cleanse intact skin; emollient preparations such as aqueous cream or emulsifying ointment can be used in place of soap or detergent for cleansing dry skin.

An antiseptic is used for skin that is infected or that is susceptible to recurrent infection. Detergent preparations containing chlorhexidine p. 1344 or povidone-iodine p. 1343, which should be thoroughly rinsed off, are used. Emollients may also contain antiseptics.

Antiseptics such as chlorhexidine or povidone-iodine are used on intact skin before surgical procedures; their antiseptic effect is enhanced by an alcoholic solvent. Antiseptic solutions containing cetrimide can be used if a detergent effect is also required.

Hydrogen peroxide p. 1345, an oxidising agent, can be used in solutions of up to 6% for skin disinfection, such as cleansing and deodorising wounds and ulcers. Hydrogen peroxide is also available as a cream for superficial bacterial skin infections.

For irrigating ulcers or wounds, lukewarm sterile sodium chloride 0.9% solution is used, but tap water is often appropriate.

Potassium permanganate solution 1 in 10 000 p. 1343, a mild antiseptic with astringent properties, can be used for exudative eczematous areas; treatment should be stopped when the skin becomes dry.

#### Desloughing agents

Alginate, hydrogel and hydrocolloid dressings are effective at wound debridement. Sterile larvae (maggots) (available from BioMonde) are also used for managing sloughing wounds and are prescribable on the NHS.

Desloughing solutions and creams are of little clinical value. Substances applied to an open area are easily absorbed and perilesional skin is easily sensitised. Gravitational dermatitis may be complicated by superimposed contact sensitivity to substances such as neomycin sulfate p. 1296 or lanolin.

**ANTISEPTICS AND DISINFECTANTS****Potassium permanganate**

26-Jun-2019

**● INDICATIONS AND DOSE****Cleansing and deodorising suppurating eczematous reactions and wounds****► TO THE SKIN**

- Adult: For wet dressings or baths, use approximately 0.01% (1 in 10 000) solution

**IMPORTANT SAFETY INFORMATION**

**NHS IMPROVEMENT PATIENT SAFETY ALERT: RISK OF DEATH OR SERIOUS HARM FROM ACCIDENTAL INGESTION OF POTASSIUM PERMANGANATE PREPARATIONS (DECEMBER 2014)**

Potassium permanganate is for external use only. Oral ingestion can cause fatality due to local inflammatory reactions that block the airways or cause perforations of the gastrointestinal tract, or through toxicity and organ failure. Following a number of reports of ingestion, NHS England advises that healthcare professionals should consider whether action needs to be taken locally to reduce the risk of accidental ingestion occurring. Potassium permanganate is subject to the requirements of Control of Substances Hazardous to Health including: separate storage, additional hazard labelling, and issue only to staff and patients who have been educated to understand its safe use. Accidental ingestion should be treated as a medical emergency.

- **CAUTIONS** Irritant to mucous membranes

- **DIRECTIONS FOR ADMINISTRATION** Potassium permanganate 0.1% solution to be diluted 1 in 10 to provide a 0.01% (1 in 10 000) solution. With potassium permanganate tablets for solution, 1 tablet dissolved in 4 litres of water provides a 0.01% (1 in 10 000) solution.

- **PATIENT AND CARER ADVICE** Can stain clothing, skin and nails (especially with prolonged use).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: liquid

**Tablet for cutaneous solution****► Permitabs (Alliance Pharmaceuticals Ltd)**

Potassium permanganate 400 mg Permitabs 400mg tablets for cutaneous solution | 30 tablet £19.92 DT = £19.92

**ANTISEPTICS AND DISINFECTANTS > ALCOHOL DISINFECTANTS****Alcohol****(Industrial methylated spirit)****● INDICATIONS AND DOSE****Skin preparation before injection****► TO THE SKIN**

- Child: Apply as required
- Adult: Apply as required

- **CONTRA-INDICATIONS** Neonates

- **CAUTIONS** Avoid broken skin · flammable · patients have suffered severe burns when diathermy has been preceded by application of alcoholic skin disinfectants

**● SIDE-EFFECTS**

**Overdose** Features of acute alcohol intoxication include ataxia, dysarthria, nystagmus, and drowsiness, which may progress to coma, with hypotension and acidosis.

For details on the management of poisoning, see Alcohol, under Emergency treatment of poisoning p. 1430.

- **PRESCRIBING AND DISPENSING INFORMATION** Industrial methylated spirits defined by the BP as a mixture of 19 volumes of ethyl alcohol of an appropriate strength with 1 volume of approved wood naphtha.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Liquid****► Alcohol (Non-proprietary)**

Industrial methylated spirit 70% | 600 ml £6.56-£7.01

**ANTISEPTICS AND DISINFECTANTS > IODINE PRODUCTS****Povidone-iodine****● INDICATIONS AND DOSE****Skin disinfection****► TO THE SKIN**

- Child: (consult product literature)
- Adult: (consult product literature)

**BETADINE® DRY POWDER SPRAY****Skin disinfection, particularly minor wounds and infections****► TO THE SKIN**

- Adult: Not for use in serous cavities (consult product literature)

**VIDENE® SOLUTION****Skin disinfection****► TO THE SKIN**

- Child: Apply undiluted in pre-operative skin disinfection and general antiseptics
- Adult: Apply undiluted in pre-operative skin disinfection and general antiseptics

**VIDENE® SURGICAL SCRUB®****Skin disinfection****► TO THE SKIN**

- Child: Use as a pre-operative scrub for hand and skin disinfection
- Adult: Use as a pre-operative scrub for hand and skin disinfection

**VIDENE® TINCTURE****Skin disinfection****► TO THE SKIN**

- Adult: Apply undiluted in pre-operative skin disinfection

- **CONTRA-INDICATIONS** Avoid regular use in patients with thyroid disorders (in adults) · concomitant use of lithium · corrected gestational age under 32 weeks · infants body-weight under 1.5 kg · regular use in neonates

- **CAUTIONS** Broken skin · large open wounds

**CAUTIONS, FURTHER INFORMATION**

- Large open wounds The application of povidone-iodine to large wounds or severe burns may produce systemic adverse effects such as metabolic acidosis, hypernatraemia and impairment of renal function.

**VIDENE® TINCTURE** Procedures involving hot wire cautery and diathermy

- **SIDE-EFFECTS** Acute kidney injury · goitre · hyperthyroidism · hypothyroidism · metabolic acidosis · skin burning sensation

- **PREGNANCY** Sufficient iodine may be absorbed to affect the fetal thyroid in the second and third trimester.

- **BREAST FEEDING** Avoid regular or excessive use.

- **RENAL IMPAIRMENT** Avoid regular application to inflamed or broken skin or mucosa.

- **EFFECT ON LABORATORY TESTS** May interfere with thyroid function tests.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: liquid

#### Spray

- **Betadine** (Aspire Pharma Ltd)  
Povidone-iodine 25 mg per 1 gram Betadine 2.5% dry powder spray | 100 ml [GSL] £9.95 DT = £9.95

#### Liquid

CAUTIONARY AND ADVISORY LABELS 15 (Only for use with alcoholic solutions)

- **Videne** (Ecolab Healthcare Division)  
Povidone-iodine 75 mg per 1 ml Videne 7.5% surgical scrub solution | 500 ml [P] £7.97 DT = £7.97  
Povidone-iodine 100 mg per 1 ml Videne 10% antiseptic solution | 500 ml [P] £7.97 DT = £7.97

## ANTISEPTICS AND DISINFECTANTS > OTHER

### Chlorhexidine

21-Nov-2019

#### ● INDICATIONS AND DOSE

##### CEPTON® LOTION

##### For skin disinfection in acne

- TO THE SKIN
- Child: (consult product literature)
- Adult: (consult product literature)

##### CEPTON® SKIN WASH

##### For use as skin wash in acne

- TO THE SKIN
- Child: (consult product literature)
- Adult: (consult product literature)

##### HIBITANE® PLUS 5% CONCENTRATE SOLUTION

##### General and pre-operative skin disinfection

- TO THE SKIN
- Child: (consult product literature)

##### HIBISC scrub®

##### Pre-operative hand and skin disinfection | General hand and skin disinfection

- TO THE SKIN
- Child: Use as alternative to soap (consult product literature)
- Adult: Use as alternative to soap (consult product literature)

##### HIBITANE OBSTETRIC®

##### For use in obstetrics and gynaecology as an antiseptic and lubricant

- TO THE SKIN
- Adult: To be applied to skin around vulva and perineum and to hands of midwife or doctor

##### HIBI® LIQUID HAND RUB+

##### Hand and skin disinfection

- TO THE SKIN
- Child: To be used undiluted (consult product literature)
- Adult: To be used undiluted (consult product literature)

##### HYDREX® SOLUTION

##### For pre-operative skin disinfection

- TO THE SKIN
- Child: (consult product literature)
- Adult: (consult product literature)

##### HYDREX® SURGICAL SCRUB

##### For pre-operative hand and skin disinfection | General hand disinfection

- TO THE SKIN
- Child: (consult product literature)
- Adult: (consult product literature)

#### UNISEPT®

##### For cleansing and disinfecting wounds and burns and swabbing in obstetrics

- TO THE SKIN
- Child: (consult product literature)
- Adult: (consult product literature)

#### IMPORTANT SAFETY INFORMATION

##### MHRA/CHM ADVICE: CHLORHEXIDINE SOLUTIONS: REMINDER OF THE RISK OF CHEMICAL BURNS IN PREMATURE INFANTS (NOVEMBER 2014)

In premature infants, use sparingly, monitor for skin reactions, and do not allow solution to pool—risk of severe chemical burns.

- **CONTRA-INDICATIONS** Not for use in body cavities
- **CAUTIONS** Avoid contact with brain · avoid contact with eyes · avoid contact with meninges · avoid contact with middle ear · use prior to diathermy (alcohol containing skin disinfectants)
- **SIDE-EFFECTS** Skin reactions
- **DIRECTIONS FOR ADMINISTRATION**  
**HIBITANE® PLUS 5% CONCENTRATE SOLUTION** For pre-operative skin preparation, dilute 1 in 10 (0.5%) with alcohol 70%. For general skin disinfection, dilute 1 in 100 (0.05%) with water. Alcoholic solutions not suitable for use before diathermy or on neonatal skin.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Cream

- **Hibitane Obstetric** (Derma UK Ltd)  
Chlorhexidine gluconate 10 mg per 1 gram Hibitane Obstetric 1% cream | 250 ml [GSL] £19.23 DT = £19.23

#### Liquid

CAUTIONARY AND ADVISORY LABELS 15 (For ethanolic solutions (e.g. Chloraprep® and Hydrex® only))

EXCIPIENTS: May contain Fragrances

- **Cepton** (Boston Healthcare Ltd)

 Sterets Tisept solution 100ml sachets | 10 sachet [P] £6.85 DT = £6.85

## Diethyl phthalate with methyl salicylate

### ● INDICATIONS AND DOSE

#### Skin preparation before injection

- ▶ TO THE SKIN
- ▶ Adult: Apply to the area to be disinfected

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Liquid

CAUTIONARY AND ADVISORY LABELS 15

- ▶ **Diethyl phthalate with methyl salicylate (Non-proprietary)**

**Methyl salicylate 5 ml per 1 litre, Diethyl phthalate 20 ml per 1 litre, Castor oil 25 ml per 1 litre, Industrial methylated spirit 950 ml per 1 litre** Surgical spirit | 200 ml [GSL] £1.17 DT = £1.17 | 1000 ml [GSL] £4.03

## Hydrogen peroxide

29-Apr-2020

- **DRUG ACTION** Hydrogen peroxide is an oxidising agent.

### ● INDICATIONS AND DOSE

#### For skin disinfection, particularly cleansing and deodorising wounds and ulcers

- ▶ TO THE SKIN
- ▶ Adult: Use 3% and 6% solutions (consult product literature)

#### CRYSTACIDE®

#### Superficial bacterial skin infection

- ▶ TO THE SKIN
- ▶ Child: Apply 2–3 times a day for up to 3 weeks
- ▶ Adult: Apply 2–3 times a day for up to 3 weeks

#### Localised non-bullous impetigo [in patients who are not systemically unwell or at high risk of complications]

- ▶ TO THE SKIN
- ▶ Child: Apply 2–3 times a day for 5–7 days
- ▶ Adult: Apply 2–3 times a day for 5–7 days

- **UNLICENSED USE**

- ▶ In children Licensed for use in children (age range not specified by manufacturer).

- **CONTRA-INDICATIONS** Closed body cavities (in adults) • deep wounds • large wounds • use as disinfection agent for surgical instruments (in adults) • use as enema (in adults) • use during surgery (in adults)

- **CAUTIONS** Avoid on eyes • avoid on healthy skin • incompatible with products containing iodine or potassium permanganate

- **PRESCRIBING AND DISPENSING INFORMATION** The BP directs that when hydrogen peroxide is prescribed, hydrogen peroxide solution 6% (20 vols) should be dispensed.

Strong solutions of hydrogen peroxide which contain 27% (90 vols) and 30% (100 vols) are only for the preparation of weaker solutions.

**CRYSTACIDE®** For choice of therapy, see Skin infections, antibacterial therapy p. 540.

- **HANDLING AND STORAGE** Hydrogen peroxide bleaches fabric.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: liquid

#### Cream

EXCIPIENTS: May contain Edetic acid (edta), propylene glycol

**8.1 Minor cuts and abrasions****Minor cuts and abrasions****Management**

Many preparations traditionally used to manage minor burns, and abrasions have fallen out of favour. Preparations containing camphor and sulfonamides should be avoided. Preparations such as magnesium sulfate paste are now rarely used to treat carbuncles and boils as these are best treated with antibiotics.

Cetrimide is used to treat minor cuts and abrasions and proflavine above may be used to treat infected wounds or burns, but its use has now been largely superseded by other antiseptics or suitable antibacterials. The effervescent effect of hydrogen peroxide p. 1345 is used to clean minor cuts and abrasions.

Flexible collodion (see castor oil with collodion and colophony below) may be used to seal minor cuts and wounds that have partially healed; skin tissue adhesives are used similarly, and also for additional suture support.

**ANTISEPTICS AND DISINFECTANTS > OTHER****Glycerol with magnesium sulfate and phenol**● **INDICATIONS AND DOSE****Treat carbuncles and boils**

- TO THE SKIN
- Adult: To be applied under dressing

## 9 Skin disfigurement

### Camouflagers

#### Overview

Disfigurement of the skin can be very distressing to patients and may have a marked psychological effect. In skilled hands, or with experience, camouflage cosmetics can be very effective in concealing scars and birthmarks. The depigmented patches in vitiligo are also very disfiguring and camouflage creams are of great cosmetic value.

Opaque cover foundation or cream is used to mask skin pigment abnormalities; careful application using a combination of dark- and light-coloured cover creams set with powder helps to minimise the appearance of skin deformities.

#### Borderline substances

The preparations marked 'ACBS' can be prescribed on the NHS for postoperative scars and other deformities and as adjunctive therapy in the relief of emotional disturbances due to disfiguring skin disease, such as vitiligo.

## 10 Sun protection and photodamage

### Sunscreen

05-Feb-2020

#### Sunscreen preparations

Solar ultraviolet irradiation can be harmful to the skin. It is responsible for disorders such as *polymorphic light eruption*, *solar urticaria*, and it provokes the various *cutaneous porphyrias*. It also provokes (or at least aggravates) skin lesions of *lupus erythematosus* and may aggravate *rosacea* and some other *dermatoses*. Certain drugs, such as demeclocycline, phenothiazines, or amiodarone, can cause photosensitivity. All these conditions (as well as *sunburn*) may occur after relatively short periods of exposure to the sun. Solar ultraviolet irradiation may provoke attacks of recurrent herpes labialis (but it is not known whether the effect of sunlight exposure is local or systemic).

The effects of exposure over longer periods include *ageing changes* and more importantly the initiation of *skin cancer*.

Solar ultraviolet radiation is approximately 200–400 nm in wavelength. The medium wavelengths (290–320 nm, known as UVB) cause *sunburn*. The long wavelengths (320–400 nm, known as UVA) are responsible for many *photosensitivity reactions* and *photodermatoses*. Both UVA and UVB contribute to long-term *photodamage* and to the changes responsible for *skin cancer* and ageing.

Sunscreen preparations contain substances that protect the skin against UVA and UVB radiation, but they are no substitute for covering the skin and avoiding sunlight. The sun protection factor (SPF, usually indicated in the preparation title) provides guidance on the degree of protection offered against UVB; it indicates the multiples of protection provided against burning, compared with unprotected skin; for example, an SPF of 8 should enable a person to remain 8 times longer in the sun without burning. However, in practice, users do not apply sufficient sunscreen product and the protection is lower than that found in experimental studies.

Some manufacturers use a star rating system to indicate the protection against UVA relative to protection against UVB for sunscreen products. However, the usefulness of the star rating system remains controversial. The EU Commission (September 2006) has recommended that the UVA protection factor for a sunscreen should be at least one-third of the sun protection factor (SPF); products that achieve this requirement will be labelled with a UVA logo alongside the SPF classification. Preparations that also

contain reflective substances, such as titanium dioxide, provide the most effective protection against UVA. Sunscreen preparations may rarely cause allergic reactions.

For optimum photoprotection, sunscreen preparations should be applied **thickly** and **frequently** (approximately 2 hourly). In photodermatoses, they should be used from spring to autumn. As maximum protection from sunlight is desirable, preparations with the highest SPF should be prescribed.

Ingredient nomenclature in sunscreen preparations	
rINN	INCI
amiloxate	isoamyl <i>p</i> -methoxycinnamate
avobenzene	butyl methoxydibenzoylmethane
bemotrizinol	bis-ethylhexyloxyphenol methoxyphenyl triazine
bisoctrizole	methylene bis-benzotriazolyl tetramethylbutylphenol
ecamsule	terephthalylidene dicamphor sulfonic acid
ensulizole	phenylbenzimidazole sulfonic acid
enzacamene	4-methylbenzylidene camphor
octinoxate	octyl (or ethylhexyl) methoxycinnamate
octocrilene	octocrylene
oxybenzone	benzophenone-3
The European Commission Cosmetic Products Regulation (EC) 1223/2009 requires the use of INCI (International Nomenclature of Cosmetic Ingredients) for cosmetics and sunscreens. This table includes the rINN and the INCI synonym for the active ingredients of sunscreen preparations in the BNF	

Borderline substances

LA Roche-Posay Anthelios® XL SPF 50+ Cream; Sunsense® Ultra (Ego) SPF 50+; Uvistat® Lipscreen SPF 50; and Uvistat® Suncream SPF 30 and 50 (see About Borderline Substances) are regarded as drugs when prescribed for skin protection against ultraviolet radiation and/or visible light in abnormal cutaneous photosensitivity causing severe cutaneous reactions in genetic disorders (including xeroderma pigmentosum and porphyrias), severe photodermatoses (both idiopathic and acquired) and in those with increased risk of ultraviolet radiation causing adverse effects due to chronic disease (such as haematological malignancies), medical therapies and/or procedures.

Photodamage

Overview

Patients should be advised to use a high-SPF sunscreen and to minimise exposure of the skin to direct sunlight or sun lamps.

Topical treatments can be used for actinic (solar) keratoses. An emollient may be sufficient for mild lesions. Diclofenac sodium gel below is suitable for the treatment of superficial lesions in mild disease. Fluorouracil cream p. 1349 is effective against most types of non-hypertrophic actinic keratosis; a solution containing fluorouracil with salicylic acid p. 1349 is available for the treatment of low or moderately thick hyperkeratotic actinic keratosis. Imiquimod p. 1352 is used for lesions on the face and scalp when cryotherapy or other topical treatments cannot be

used. Fluorouracil and imiquimod produce a more marked inflammatory reaction than diclofenac sodium but lesions resolve faster. A short course of ingenol mebutate p. 1349 is licensed for the treatment of non-hypertrophic actinic keratosis; response to treatment can usually be assessed 8 weeks after the course. Photodynamic therapy in combination with methyl-5-aminolevulinate cream (Metvix®, available from Galderma) or 5-aminolaevulinic acid gel (Ameluz®, available from Spirit Healthcare) is used in specialist centres for treating superficial and confluent, non-hypertrophic actinic keratosis when other treatments are inadequate or unsuitable; it is particularly suitable for multiple lesions, for periorbital lesions, or for lesions located at sites of poor healing.

Imiquimod or topical fluorouracil is used for treating superficial basal cell carcinomas. Photodynamic therapy in combination with methyl-5-aminolevulinate cream is used in specialist centres for treating superficial, nodular basal cell carcinomas when other treatments are unsuitable.

ANALGESICS > NON-STEROIDAL ANTI-INFLAMMATORY DRUGS

Diclofenac sodium

28-Apr-2020

● **INDICATIONS AND DOSE**  
**SOLARAZE®**  
**Actinic keratosis**  
▶ TO THE SKIN  
▶ **Adult:** Apply twice daily for 60–90 days, to be applied thinly; maximum 8 g per day

● **CAUTIONS** Avoid contact with eyes · avoid contact with inflamed or broken skin · avoid contact with mucous membranes · not for use with occlusive dressings · topical application of large amounts can result in systemic effects, including hypersensitivity and asthma (renal disease has also been reported)

● **INTERACTIONS** → Appendix 1: NSAIDs

● **SIDE-EFFECTS**  
▶ **Common or very common** Conjunctivitis · muscle tone increased · oedema · rash (discontinue) · sensation abnormal · skin reactions · skin ulcer  
▶ **Uncommon** Abdominal pain · alopecia · diarrhoea · eye pain · haemorrhage · lacrimation disorder · nausea · seborrhoea  
▶ **Rare or very rare** Acute kidney injury · angioedema · asthma · hypersensitivity · photosensitivity reaction · rash pustular  
▶ **Frequency not known** Hair colour changes

**SIDE-EFFECTS, FURTHER INFORMATION** Topical application of large amounts of diclofenac can result in systemic effects.

● **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.

● **PREGNANCY** Patient packs for topical preparations carry a warning to avoid during pregnancy.

● **BREAST FEEDING** Patient packs for topical preparations carry a warning to avoid during breast-feeding.

● **DIRECTIONS FOR ADMINISTRATION** For topical preparations, apply with gentle massage only.

● **PRESCRIBING AND DISPENSING INFORMATION** Caution—topical preparations not generally suitable for children.

● **PATIENT AND CARER ADVICE** For topical preparations, patients and their carers should be advised to wash hands immediately after use.

**Photosensitivity** Patients should be advised against excessive exposure to sunlight of area treated in order to avoid possibility of photosensitivity.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Gel

EXCIPIENTS: May contain Benzyl alcohol, fragrances, propylene glycol  
 ▶ **Solaraze** (Almirall Ltd)

**Diclofenac sodium 30 mg per 1 gram** Solaraze 3% gel | 50 gram [PoM] £38.30 DT = £38.30 | 100 gram [PoM] £76.60

## ANTINEOPLASTIC DRUGS > ANTIMETABOLITES

### Fluorouracil

03-Mar-2020

#### ● INDICATIONS AND DOSE

##### Superficial malignant and pre-malignant skin lesions

###### ▶ TO THE SKIN USING CREAM

- ▶ Adult: Apply 1–2 times a day for 3–4 weeks (usual duration of initial therapy), apply thinly to the affected area, maximum area of skin 500 cm<sup>2</sup> (e.g. 23 cm × 23 cm) treated at one time, alternative regimens may be used in some settings

- **CAUTIONS** Avoid contact with eyes and mucous membranes · dihydropyrimidine dehydrogenase deficiency · do not apply to bleeding lesions

- **INTERACTIONS** → Appendix 1: fluorouracil

#### ● SIDE-EFFECTS

##### GENERAL SIDE-EFFECTS

- ▶ **Common or very common** Alopecia · diarrhoea · mucositis · nausea · neutropenia · skin reactions · stomatitis · thrombocytopenia · vomiting
- ▶ **Uncommon** Dizziness · headache
- ▶ **Rare or very rare** Abdominal pain · chills · diarrhoea haemorrhagic · fever · leucocytosis · pancytopenia · skin irritation (use a topical corticosteroid for severe discomfort associated with inflammatory reactions) · skin ulcer
- ▶ **Frequency not known** Conjunctival irritation · excessive tearing · keratitis · taste altered

- **CONCEPTION AND CONTRACEPTION** Contraceptive advice required, see *Pregnancy and reproductive function* in Cytotoxic drugs p. 938.

- **PREGNANCY** Manufacturers advise avoid (teratogenic).

- **BREAST FEEDING** Manufacturers advise avoid.

- **HANDLING AND STORAGE** Caution in handling—irritant to tissues.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Cream

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens), polysorbates, propylene glycol

##### ▶ Efudix (Mylan)

**Fluorouracil 50 mg per 1 gram** Efudix 5% cream | 40 gram [PoM] £32.90 DT = £32.90

### Fluorouracil with salicylic acid

The properties listed below are those particular to the combination only. For the properties of the components please consider, fluorouracil above, salicylic acid p. 1353.

#### ● INDICATIONS AND DOSE

##### Low or moderately thick hyperkeratotic actinic keratosis

###### ▶ TO THE SKIN

- ▶ Adult: Apply once daily for up to 12 weeks, reduced to 3 times a week if severe side effects occur and until

side-effects improve, to be applied to the affected area, if treating area with thin epidermis, reduce frequency of application and monitor response more often; maximum area of skin treated at one time, 25 cm<sup>2</sup> (e.g. 5 cm × 5 cm)

- **INTERACTIONS** → Appendix 1: fluorouracil

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Cutaneous solution

CAUTIONARY AND ADVISORY LABELS 15

##### ▶ Actikerall (Almirall Ltd)

**Fluorouracil 5 mg/g, Salicylic acid 100 mg/g** Actikerall 5mg/g / 100mg/g cutaneous solution | 25 ml [PoM] £38.30 DT = £38.30

## PROTEIN KINASE C ACTIVATORS

### Ingenol mebutate

09-Mar-2020

#### ● INDICATIONS AND DOSE

##### Actinic keratosis on face and scalp

###### ▶ TO THE SKIN

- ▶ Adult: Apply once daily for 3 days, use the 150 microgram/g gel

##### Actinic keratosis on trunk and extremities

###### ▶ TO THE SKIN

- ▶ Adult: Apply once daily for 2 days, use the 500 microgram/g gel

#### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE (UPDATED FEBRUARY 2020): INGENOL MEBUGATE GEL (PICATO<sup>®</sup>): SUSPENSION OF THE LICENCE DUE TO RISK OF SKIN MALIGNANCY

Clinical studies have shown an increased incidence of benign and malignant skin tumours (such as basal and squamous cell carcinoma, Bowen's disease, and keratoacanthoma) in patients using ingenol mebutate gel; cases of neuroendocrine carcinoma of the skin, and atypical fibroxanthoma have also been reported. Healthcare professionals are advised to stop prescribing ingenol mebutate gel and consider alternative treatment options for actinic keratosis. The licence of ingenol mebutate has been suspended as a precautionary measure while investigations are carried out. Healthcare professionals should advise patients to be vigilant for the development of any new skin lesions within the treatment area and to seek immediate medical advice if any occur.

- **CAUTIONS** Avoid contact with broken skin · avoid contact with eyes · avoid contact with inside of ears · avoid contact with inside of nostrils · avoid contact with lips · avoid occlusive dressings on treated area

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Headache
- ▶ **Frequency not known** Neoplasms · skin eruption localised
- **PREGNANCY** Not absorbed from skin, but manufacturer advises avoid.

- **BREAST FEEDING** Not absorbed from skin; ensure infant does not come in contact with treated area for 6 hours after application.

- **DIRECTIONS FOR ADMINISTRATION** One tube covers skin area of 25 cm<sup>2</sup>. Allow gel to dry on treatment area for 15 minutes. Avoid washing or touching the treated area for 6 hours after application; after this time, area may be washed with mild soap and water. Avoid use immediately after shower or less than 2 hours before bedtime.

- **MEDICINAL FORMS** No licensed medicines listed.

## 11 Superficial soft-tissue injuries and superficial thrombophlebitis

### Topical circulatory preparations

#### Overview

These preparations are used to improve circulation in conditions such as bruising, superficial thrombophlebitis, chilblains and varicose veins but are of little value. Chilblains are best managed by avoidance of exposure to cold; neither systemic nor topical vasodilator therapy is established as being effective.

#### HEPARINOIDS

##### Heparinoid

###### ● INDICATIONS AND DOSE

**Superficial thrombophlebitis | Bruising | Haematoma**

► TO THE SKIN

► Adult: Apply up to 4 times a day

● **CONTRA-INDICATIONS** Should not be used on large areas of skin, broken or sensitive skin, or mucous membranes

● **LESS SUITABLE FOR PRESCRIBING** Hirudoid® is less suitable for prescribing.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

###### Cream

EXCIPIENTS: May contain Cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens)

► **Hirudoid** (Genus Pharmaceuticals Ltd)

**Heparinoid 3 mg per 1 gram** Hirudoid 0.3% cream | 50 gram [P] £3.99 DT = £3.99

###### Gel

EXCIPIENTS: May contain Fragrances, propylene glycol

► **Hirudoid** (Genus Pharmaceuticals Ltd)

**Heparinoid 3 mg per 1 gram** Hirudoid 0.3% gel | 50 gram [P] £3.99 DT = £3.99

## 12 Warts and calluses

### Warts and calluses

#### Overview

Warts (verrucae) are caused by a human papillomavirus, which most frequently affects the hands, feet (plantar warts), and the anogenital region; treatment usually relies on local tissue destruction. Warts may regress on their own and treatment is required only if the warts are painful, unsightly, persistent, or cause distress.

Preparations of salicylic acid p. 1353, formaldehyde p. 1351, glutaraldehyde p. 1351 or silver nitrate p. 1352 are available for purchase by the public; they are suitable for the removal of warts on hands and feet. Salicylic acid is a useful keratolytic which may be considered first-line; it is also suitable for the removal of *corns* and *calluses*. Preparations of salicylic acid in a collodion basis are available but some patients may develop an allergy to colophony in the formulation; collodion should be avoided in children allergic to elastic adhesive plaster. Cryotherapy causes pain, swelling, and blistering, and may be no more effective than topical salicylic acid in the treatment of warts.

#### Anogenital warts

The treatment of anogenital warts (condylomata acuminata) should be accompanied by screening for other sexually transmitted infections. Podophyllotoxin p. 1351 (the major active ingredient of podophyllum) may be used for *soft, non-keratinised* external anogenital warts. Patients with a limited number of external warts or *keratinised* lesions may be better treated with cryotherapy or other forms of physical ablation.

Imiquimod cream p. 1352 is licensed for the treatment of external anogenital warts; it may be used for both *keratinised* and *non-keratinised* lesions. It is also licensed for the treatment of superficial basal cell carcinoma and actinic keratosis. Camellia sinensis ointment below is licensed for the treatment of external anogenital warts.

Inosine pranobex p. 670 is licensed for adjunctive treatment of genital warts but it has been superseded by more effective drugs.

#### ANTINEOPLASTIC DRUGS > PLANT ALKALOIDS

##### Camellia sinensis

03-May-2017

● **DRUG ACTION** Camellia sinensis is an extract from green tea leaves. The exact mechanism of action is not known; non-clinical studies have shown inhibition of the growth of activated keratinocytes, and anti-oxidative effects at the site of application.

###### ● INDICATIONS AND DOSE

**Warts (external genital and perianal) in immunocompetent patients**

► TO THE LESION

► Adult: Apply up to 250 mg 3 times a day until complete clearance of warts (maximum 16 weeks), do not exceed treatment period even if new warts develop; maximum 750 mg per day

###### DOSE EQUIVALENCE AND CONVERSION

► 250 mg is equivalent to 0.5 cm of ointment.

● **CAUTIONS** Avoid broken skin • avoid contact with eyes • avoid contact with lips • avoid contact with mouth • avoid contact with nostrils • avoid inflamed skin • uncircumcised males (risk of phimosis) • vulvar region

###### ● SIDE-EFFECTS

► **Uncommon** Balanoposthitis • increased risk of infection • lymphatic abnormalities • necrosis • painful sexual intercourse • phimosis • skin reactions • urinary disorders  
► **Frequency not known** Urinary tract stenosis • vaginal discharge

● **CONCEPTION AND CONTRACEPTION** Manufacturer advises *Catephen*® may weaken condoms and vaginal diaphragms—alternative methods of contraception should be considered.

● **PREGNANCY** Manufacturer advises avoid—toxicity in animal studies.

● **BREAST FEEDING** Manufacturer advises risk to infant cannot be excluded—no information available.

● **HEPATIC IMPAIRMENT** Manufacturer advises avoid in severe impairment (limited information available).

● **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises apply to each wart, ensuring a thin layer is left on the wart. It is not necessary to wash off the ointment from the area before next application.

● **PATIENT AND CARER ADVICE** Manufacturer advises the ointment should be washed off before sexual activity. Manufacturer advises female patients using tampons should insert tampon before applying the ointment.

###### ● NATIONAL FUNDING/ACCESS DECISIONS

###### Scottish Medicines Consortium (SMC) decisions

The Scottish Medicines Consortium has advised (April 2016) that camellia sinensis (green tea) leaf extract (*Catephen*®)

is accepted for restricted use within NHS Scotland for the treatment of external genital and perianal warts in patients not suitable for podophyllotoxin or who have not responded to treatment with podophyllotoxin.

#### All Wales Medicines Strategy Group (AWMSG) decisions

The *All Wales Medicines Strategy Group* has advised (October 2016) that green tea leaf extract (camellia sinensis), (*Catephen*<sup>®</sup>), is recommended for restricted use within NHS Wales for the treatment of external genital and perianal warts in patients not suitable for podophyllotoxin or who have not responded to treatment with podophyllotoxin.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Ointment

- ▶ **Catephen** (KoRa Healthcare)

Camellia sinensis extract **100 mg per 1 gram** Catephen 10% ointment | 15 gram [PoM] £39.00 DT = £39.00

## Podophyllotoxin

### ● INDICATIONS AND DOSE

#### CONDYLINE<sup>®</sup>

#### Condylomata acuminata affecting the penis or the female external genitalia

- ▶ TO THE LESION

- ▶ Adult: Apply twice daily for 3 consecutive days, treatment may be repeated at weekly intervals if necessary for a total of five 3-day treatment courses, direct medical supervision for lesions in the female and for lesions greater than 4 cm<sup>2</sup> in the male, maximum 50 single applications ('loops') per session (consult product literature)

#### WARTICON<sup>®</sup> CREAM

#### Condylomata acuminata affecting the penis or the female external genitalia

- ▶ TO THE LESION

- ▶ Adult: Apply twice daily for 3 consecutive days, treatment may be repeated at weekly intervals if necessary for a total of four 3-day treatment courses, direct medical supervision for lesions greater than 4 cm<sup>2</sup>

#### WARTICON<sup>®</sup> LIQUID

#### Condylomata acuminata affecting the penis or the female external genitalia

- ▶ TO THE LESION

- ▶ Adult: Apply twice daily for 3 consecutive days, treatment may be repeated at weekly intervals if necessary for a total of four 3-day treatment courses, direct medical supervision for lesions greater than 4 cm<sup>2</sup>, maximum 50 single applications ('loops') per session (consult product literature)

- **CAUTIONS** Avoid normal skin · avoid open wounds · keep away from face · very irritant to eyes
- **SIDE-EFFECTS** Balanoposthitis · skin irritation
- **PREGNANCY** Avoid.
- **BREAST FEEDING** Avoid.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Cream

EXCIPIENTS: May contain Butylated hydroxyanisole, cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens), sorbic acid

- ▶ **Warticon** (Phoenix Labs Ltd)

Podophyllotoxin **1.5 mg per 1 gram** Warticon 0.15% cream | 5 gram [PoM] £17.83 DT = £17.83

### Liquid

CAUTIONARY AND ADVISORY LABELS 15

- ▶ **Condyline** (Takeda UK Ltd)

Podophyllotoxin **5 mg per 1 ml** Condyline 0.5% solution | 3.5 ml [PoM] £14.49 DT = £14.49

- ▶ **Warticon** (Phoenix Labs Ltd)

Podophyllotoxin **5 mg per 1 ml** Warticon 0.5% solution | 3 ml [PoM] £14.86 DT = £14.86

## ANTISEPTICS AND DISINFECTANTS > ALDEHYDES AND DERIVATIVES

## Formaldehyde

### ● INDICATIONS AND DOSE

#### Warts, particularly plantar warts

- ▶ TO THE LESION

- ▶ Child: Apply twice daily
- ▶ Adult: Apply twice daily

### ● UNLICENSED USE

- ▶ In children Licensed for use in children (age range not specified by manufacturer).

- **CAUTIONS** Impaired peripheral circulation · not suitable for application to anogenital region · not suitable for application to face · not suitable for application to large areas · patients with diabetes at risk of neuropathic ulcers · protect surrounding skin and avoid broken skin · significant peripheral neuropathy

- **SIDE-EFFECTS** Asthma · cough · dysphagia · eye irritation · increased risk of infection · laryngospasm · skin reactions

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: liquid

#### Liquid

- ▶ **Formaldehyde (Non-proprietary)**

Formaldehyde **40 mg per 1 ml** Formaldehyde (Buffered) 4% solution | 1000 ml £3.90 DT = £3.90

Formaldehyde **350 mg per 1 gram** Formaldehyde solution | 500 ml £7.31 DT = £7.24 | 2000 ml £18.72

## Glutaraldehyde

### ● INDICATIONS AND DOSE

#### Warts, particularly plantar warts

- ▶ TO THE LESION

- ▶ Child: Apply twice daily
- ▶ Adult: Apply twice daily

### ● UNLICENSED USE

- ▶ In children Licensed for use in children (age range not specified by manufacturer).

- **CAUTIONS** Not for application to anogenital areas · not for application to face · not for application to mucosa · protect surrounding skin

### ● SIDE-EFFECTS

- ▶ **Rare or very rare** Severe cutaneous adverse reactions (SCARs)
- ▶ **Frequency not known** Rash · skin irritation (discontinue if severe)

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Paint

- ▶ **Glutarol** (Dermal Laboratories Ltd)

Glutaraldehyde **100 mg per 1 ml** Glutarol 10% cutaneous solution | 10 ml [P] £2.07 DT = £2.07

## ANTISEPTICS AND DISINFECTANTS &gt; OTHER

## Silver nitrate

## ● INDICATIONS AND DOSE

**Common warts**

## ▶ TO THE LESION

- ▶ Child: Apply every 24 hours for up to 3 applications, apply moistened caustic pencil tip for 1–2 minutes. Instructions in proprietary packs generally incorporate advice to remove dead skin before use by gentle filing and to cover with adhesive dressing after application
- ▶ Adult: Apply every 24 hours for up to 3 applications, apply moistened caustic pencil tip for 1–2 minutes. Instructions in proprietary packs generally incorporate advice to remove dead skin before use by gentle filing and to cover with adhesive dressing after application

**Verrucas**

## ▶ TO THE LESION

- ▶ Child: Apply every 24 hours for up to 6 applications, apply moistened caustic pencil tip for 1–2 minutes. Instructions in proprietary packs generally incorporate advice to remove dead skin before use by gentle filing and to cover with adhesive dressing after application
- ▶ Adult: Apply every 24 hours for up to 6 applications, apply moistened caustic pencil tip for 1–2 minutes. Instructions in proprietary packs generally incorporate advice to remove dead skin before use by gentle filing and to cover with adhesive dressing after application

**Umbilical granulomas**

## ▶ TO THE SKIN

- ▶ Child: Apply moistened caustic pencil tip (usually containing silver nitrate 40%) for 1–2 minutes, protect surrounding skin with soft paraffin
- ▶ Adult: Apply moistened caustic pencil tip (usually containing silver nitrate 40%) for 1–2 minutes, protect surrounding skin with soft paraffin

## ● UNLICENSED USE

- ▶ In children No age range specified by manufacturer.

- ▶ **CAUTIONS** Avoid broken skin · not suitable for application to ano-genital region · not suitable for application to face · not suitable for application to large areas · protect surrounding skin

## ● SIDE-EFFECTS

- ▶ **Rare or very rare** Argyria · methaemoglobinaemia
- ▶ **PATIENT AND CARER ADVICE** Patients should be advised that silver nitrate may stain fabric.

- ▶ **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Stick**▶ **Avoca** (Bray Group Ltd)

**Silver nitrate 400 mg per 1 gram** Avoca 40% silver nitrate pencils | 1 applicator [P] £1.16 DT = £1.16

**Silver nitrate 750 mg per 1 gram** Avoca 75% silver nitrate applicators | 100 applicator [P] £49.16 DT = £49.16  
Avoca 75% silver nitrate applicators with thick handles | 50 applicator [P] £48.51

**Silver nitrate 950 mg per 1 gram** Avoca 95% silver nitrate applicators | 100 applicator [P] £52.60 DT = £52.60  
Avoca 95% silver nitrate pencils | 1 applicator [P] £2.63 DT = £3.08  
Avoca wart and verruca treatment set | 1 applicator [P] £3.08 DT = £3.08

## ANTIVIRALS &gt; IMMUNE RESPONSE MODIFIERS

## Imiquimod

20-May-2020

## ● INDICATIONS AND DOSE

**ALDARA®****Warts (external genital and perianal)**

## ▶ TO THE LESION

- ▶ Adult: Apply 3 times a week until lesions resolve (maximum 16 weeks), to be applied thinly at night

**Superficial basal cell carcinoma**

## ▶ TO THE LESION

- ▶ Adult: Apply daily for 5 nights of each week for 6 weeks, to be applied to lesion and 1 cm beyond it, assess response 12 weeks after completing treatment

**Actinic keratosis**

## ▶ TO THE LESION

- ▶ Adult: Apply 3 times a week for 4 weeks, to be applied to lesion at night, assess response after a 4 week treatment-free interval; repeat 4-week course if lesions persist, maximum 2 courses

**ZYCLARA®****Actinic keratosis**

## ▶ TO THE SKIN

- ▶ Adult: Apply once daily for 2 weeks, to be applied at bedtime to lesion on face or balding scalp, repeat course after a 2-week treatment-free interval, assess response 8 weeks after second course; maximum 2 sachets per day

- ▶ **CAUTIONS** Autoimmune disease · avoid broken skin · avoid contact with eyes · avoid contact with lips · avoid contact with nostrils · avoid open wounds · immunosuppressed patients · not suitable for internal genital warts · uncircumcised males (risk of phimosis or stricture of foreskin)

## ● SIDE-EFFECTS

- ▶ **Common or very common** Appetite decreased · arthralgia · asthenia · headaches · increased risk of infection · lymphadenopathy · myalgia · nausea · pain
- ▶ **Uncommon** Anorectal disorder · chills · conjunctival irritation · depression · diarrhoea · dizziness · drowsiness · dry mouth · dysuria · erectile dysfunction · eyelid oedema · face oedema · fever · flushing · gastrointestinal discomfort · genital pain · hyperhidrosis · inflammation · influenza like illness · insomnia · irritability · laryngeal pain · malaise · nasal congestion · painful sexual intercourse · paraesthesia · penis disorder · skin reactions · skin ulcer · tinnitus · uterovaginal prolapse · vomiting · vulvovaginal disorders
- ▶ **Rare or very rare** Autoimmune disorder exacerbated
- ▶ **Frequency not known** Alopecia · cutaneous lupus erythematosus · severe cutaneous adverse reactions (SCARs)

- ▶ **CONCEPTION AND CONTRACEPTION** May damage latex condoms and diaphragms.

- ▶ **PREGNANCY** No evidence of teratogenicity or toxicity in animal studies; manufacturer advises caution.

- ▶ **BREAST FEEDING** No information available.

## ● DIRECTIONS FOR ADMINISTRATION

**ZYCLARA®** ▶ **Important** Should be rubbed in and allowed to stay on the treated area for 8 hours, then washed off with mild soap and water.

**ALDARA®** ▶ **Important** Should be rubbed in and allowed to stay on the treated area for 6–10 hours for warts or for 8 hours for basal cell carcinoma and actinic keratosis, then washed off with mild soap and water (uncircumcised males treating warts under foreskin should wash the area daily). The cream should be washed off before sexual contact.

- **PATIENT AND CARER ADVICE** A patient information leaflet should be provided.

- **NATIONAL FUNDING/ACCESS DECISIONS**

**Scottish Medicines Consortium (SMC) decisions**

SMC No. SMC2211

The *Scottish Medicines Consortium* has advised (November 2019) that imiquimod (*Zyclara*®) is accepted for restricted use within NHS Scotland for the topical treatment of large field actinic keratosis (>25cm<sup>2</sup>) of the full face or balding scalp in immunocompetent adults when other topical treatment options are contra-indicated or less appropriate.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Cream**

CAUTIONARY AND ADVISORY LABELS 10

EXCIPIENTS: May contain Benzyl alcohol, cetostearyl alcohol (including cetyl and stearyl alcohol), hydroxybenzoates (parabens), polysorbates

 ▶ **Aldara** (Mylan)

Imiquimod 50 mg per 1 gram Aldara 5% cream 250mg sachets | 12 sachet [PoM] £48.60 DT = £48.60

 ▶ **Zyclara** (Mylan)

Imiquimod 37.5 mg per 1 gram Zyclara 3.75% cream 250mg sachets | 28 sachet [PoM] £54.75 DT = £54.75

## SALICYLIC ACID AND DERIVATIVES

### Salicylic acid

- **INDICATIONS AND DOSE**

**OCCUSAL**®

**Common and plantar warts**

## ▶ TO THE LESION

- ▶ Child: Apply daily, treatment may need to be continued for up to 3 months
- ▶ Adult: Apply daily, treatment may need to be continued for up to 3 months

**VERRUGON**®

**For plantar warts**

## ▶ TO THE LESION

- ▶ Child: Apply daily, treatment may need to be continued for up to 3 months
- ▶ Adult: Apply daily, treatment may need to be continued for up to 3 months

- **UNLICENSED USE**

- ▶ In children Not licensed for use in children under 2 years.

- **CAUTIONS** Avoid broken skin · impaired peripheral circulation · not suitable for application to anogenital region · not suitable for application to face · not suitable for application to large areas · patients with diabetes at risk of neuropathic ulcers · significant peripheral neuropathy

- **SIDE-EFFECTS** Skin irritation

- **PATIENT AND CARER ADVICE** Advise patient to apply carefully to wart and to protect surrounding skin (e.g. with soft paraffin or specially designed plaster); rub wart surface gently with file or pumice stone once weekly.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Ointment**

 ▶ **Verrugon** (Optima Consumer Health Ltd)

Salicylic acid 500 mg per 1 gram Verrugon complete 50% ointment | 6 gram [P] £4.44 DT = £4.44

**Liquid**

CAUTIONARY AND ADVISORY LABELS 15

 ▶ **Occlusal** (Alliance Pharmaceuticals Ltd)

Salicylic acid 260 mg per 1 ml Occlusal 26% solution | 10 ml [P] £3.56 DT = £3.56

### Salicylic acid with lactic acid

The properties listed below are those particular to the combination only. For the properties of the components please consider, salicylic acid above.

### 1 Immunoglobulin therapy

#### IMMUNE SERA AND IMMUNOGLOBULINS > IMMUNOGLOBULINS

#### Immunoglobulins

04-Oct-2017

##### Passive immunity

Immunity with immediate protection against certain infective organisms can be obtained by injecting preparations made from the plasma of immune individuals with adequate levels of antibody to the disease for which protection is sought. The duration of this passive immunity varies according to the dose and the type of immunoglobulin. Passive immunity may last only a few weeks; when necessary, passive immunisation can be repeated. Antibodies of human origin are usually termed immunoglobulins. The term antiserum is applied to material prepared in animals. Because of serum sickness and other allergic-type reactions that may follow injections of antisera, this therapy has been replaced wherever possible by the use of immunoglobulins. Reactions are theoretically possible after injection of human immunoglobulins but reports of such reactions are very rare.

Two types of human immunoglobulin preparation are available, normal immunoglobulin p. 1358 and **disease-specific immunoglobulins**.

Human immunoglobulin is a sterile preparation of concentrated antibodies (immune globulins) recovered from pooled human plasma or serum obtained from outside the UK, tested and found non-reactive for hepatitis B surface antigen and for antibodies against hepatitis C virus and human immunodeficiency virus (types 1 and 2). A global shortage of human immunoglobulin and the rapidly increasing range of clinical indications for treatment with immunoglobulins has resulted in the need for a Demand Management programme in the UK, for further information consult [www.ivig.nhs.uk](http://www.ivig.nhs.uk) and *Clinical Guidelines for Immunoglobulin Use*, [www.gov.uk/dh](http://www.gov.uk/dh).

Further information on the use of immunoglobulins is included in Public Health England's *Immunoglobulin Handbook*, [www.gov.uk/phe](http://www.gov.uk/phe), and in the Department of Health's publication, *Immunisation against Infectious Disease*, [www.gov.uk/dh](http://www.gov.uk/dh).

##### Availability

Normal immunoglobulin for intramuscular administration is available from some regional Public Health laboratories for protection of contacts and the control of outbreaks of hepatitis A, measles, and rubella only. For other indications, subcutaneous or intravenous normal immunoglobulin should be purchased from the manufacturer.

**Disease-specific immunoglobulins** are available from some regional Public Health laboratories, with the exception of tetanus immunoglobulin p. 1360 which is available from

BPL, hospital pharmacies, or blood transfusion departments. Rabies immunoglobulin p. 1359 is available from the Specialist and Reference Microbiology Division, Public Health England, Colindale. Hepatitis B immunoglobulin p. 1357 required by transplant centres should be obtained commercially.

In Scotland all immunoglobulins are available from the *Scottish National Blood Transfusion Service* (SNBTS).

In Wales all immunoglobulins are available from the *Welsh Blood Service* (WBS).

In Northern Ireland all immunoglobulins are available from the *Northern Ireland Blood Transfusion Service* (NIBTS).

##### Normal immunoglobulin

Human normal immunoglobulin ('HNIG') is prepared from pools of at least 1000 donations of human plasma; it contains immunoglobulin G (IgG) and antibodies to hepatitis A, measles, mumps, rubella, varicella, and other viruses that are currently prevalent in the general population.

##### Uses

Normal immunoglobulin (containing 10%–18% protein) is administered by *intramuscular injection* for the protection of susceptible contacts against **hepatitis A virus** (infectious hepatitis), **measles** and, to a lesser extent, **rubella**. Injection of immunoglobulin produces immediate protection lasting several weeks.

Normal immunoglobulin (containing 3%–12% protein) for *intravenous administration* is used as *replacement therapy* for patients with congenital agammaglobulinaemia and hypogammaglobulinaemia, and for the short-term treatment of idiopathic thrombocytopenic purpura and Kawasaki disease; it is also used for the prophylaxis of infection following bone-marrow transplantation and in children with symptomatic HIV infection who have recurrent bacterial infections. Normal immunoglobulin for replacement therapy may also be given intramuscularly or subcutaneously, but intravenous formulations are normally preferred. Intravenous immunoglobulin is also used in the treatment of Guillain-Barré syndrome as an alternative to plasma exchange.

For guidance on the use of intravenous normal immunoglobulin and alternative therapies for certain conditions, consult *Clinical Guidelines for Immunoglobulin Use* ([www.gov.uk/dh](http://www.gov.uk/dh)).

##### Hepatitis A

Hepatitis A vaccine p. 1388 is recommended for individuals at risk of infection including those visiting areas where the disease is highly endemic (all countries excluding Northern and Western Europe, North America, Japan, Australia, and New Zealand). In unimmunised individuals, transmission of hepatitis A is reduced by good hygiene. Intramuscular normal immunoglobulin is no longer recommended for prophylaxis in travellers.

Public Health England recommends the use of normal immunoglobulin in addition to hepatitis A vaccine for prevention of infection in close contacts (of confirmed cases

of hepatitis A) who are 60 years of age or over, have chronic liver disease (including chronic hepatitis B or C infection), or HIV infection (with a CD4 count < 200 cells per microlitre), or who are immunosuppressed; normal immunoglobulin should be given as soon as possible, preferably within 14 days of exposure to the primary case. However, normal immunoglobulin can still be given to contacts with chronic liver disease up to 28 days after exposure to the primary case. Hepatitis A vaccine can be given at the same time, but it should be given at a separate injection site.

### Measles

Intravenous or subcutaneous normal immunoglobulin may be given to prevent or attenuate an attack of measles in individuals who do not have adequate immunity. Patients with compromised immunity who have come into contact with measles should receive intravenous or subcutaneous normal immunoglobulin as soon as possible after exposure. It is most effective if given within 72 hours but can be effective if given within 6 days.

Subcutaneous or intramuscular normal immunoglobulin should also be considered for the following individuals if they have been in contact with a confirmed case of measles or with a person associated with a local outbreak:

- non-immune pregnant women
- infants under 9 months

Further advice should be sought from the Centre for Infections, Public Health England (tel. (020) 8200 6868).

Individuals with normal immunity who are not in the above categories and who have not been fully immunised against measles, can be given measles, mumps and rubella vaccine, live p. 1393 for prophylaxis following exposure to measles.

### Rubella

Intramuscular immunoglobulin after exposure to rubella does **not** prevent infection in non-immune contacts and is **not** recommended for protection of pregnant women exposed to rubella. It may, however, reduce the likelihood of a clinical attack which may possibly reduce the risk to the fetus. Risk of intra-uterine transmission is greatest in the first 11 weeks of pregnancy, between 16 and 20 weeks there is minimal risk of deafness only, after 20 weeks there is no increased risk. Intramuscular normal immunoglobulin should be used only if termination of pregnancy would be unacceptable to the pregnant woman—it should be given as soon as possible after exposure. Serological follow-up of recipients is essential to determine if the woman has become infected despite receiving immunoglobulin.

For routine prophylaxis against Rubella, see measles, mumps and rubella vaccine, live p. 1393.

### Disease-specific immunoglobulins

Specific immunoglobulins are prepared by pooling the plasma of selected human donors with high levels of the specific antibody required. For further information, see *Immunoglobulin Handbook* ([www.gov.uk/phe](http://www.gov.uk/phe)).

There are no specific immunoglobulins for hepatitis A, measles, or rubella—normal immunoglobulin p. 1358 is used in certain circumstances. There is no specific immunoglobulin for mumps; neither normal immunoglobulin nor measles, mumps and rubella vaccine, live is effective as post-exposure prophylaxis.

### Hepatitis B immunoglobulin

Disease-specific hepatitis B immunoglobulin p. 1357 ('HBIG') is available for use in association with hepatitis B vaccine p. 1389 for the prevention of infection in laboratory and other personnel who have been accidentally inoculated with hepatitis B virus, and in infants born to mothers who have become infected with this virus in pregnancy or who are high-risk carriers. Hepatitis B immunoglobulin will not inhibit the antibody response when given at the same time as hepatitis B vaccine but should be given at different sites.

An intravenous and subcutaneous preparation of hepatitis B immunoglobulin is licensed for the prevention of hepatitis B recurrence in HBV-DNA negative patients who have undergone liver transplantation for liver failure caused by the virus.

### Rabies immunoglobulin

Following exposure of an unimmunised individual to an animal in or from a country where the risk of rabies is high the site of the bite should be washed with soapy water and specific rabies immunoglobulin p. 1359 of human origin administered. All of the dose should be injected around the site of the wound; if this is difficult or the wound has completely healed it can be given in the anterolateral thigh (remote from the site used for vaccination).

Rabies vaccine p. 1394 should also be given intramuscularly at a different site (for details see rabies vaccine). If there is delay in giving the rabies immunoglobulin, it should be given within 7 days of starting the course of rabies vaccine.

### Tetanus immunoglobulin

For the management of tetanus-prone wounds, tetanus immunoglobulin p. 1360 should be used in addition to wound cleansing and, where appropriate, antibacterial prophylaxis and a tetanus-containing vaccine. Tetanus immunoglobulin, together with metronidazole p. 572 and wound cleansing, should also be used for the treatment of established cases of tetanus.

### Varicella-zoster immunoglobulin

Varicella-zoster immunoglobulin p. 1360 (VZIG) is recommended for individuals who are at increased risk of severe varicella (neonates, pregnant women and immunosuppressed individuals with varicella-zoster virus immunoglobulin G antibody less than 150 mIU/mL) and who have no antibodies to varicella-zoster virus and who have significant exposure to chickenpox (varicella) or shingles (herpes zoster) during the infectious period.

Immunosuppressed patients receiving regular intravenous immunoglobulin replacement therapy only require varicella-zoster immunoglobulin if the most recent dose was administered more than 3 weeks before exposure.

Immunosuppressed patients on long term aciclovir p. 670 or valaciclovir p. 673 prophylaxis will require a temporary increase in their dose following exposure; for patients within 12 months of a stem cell transplant, varicella-zoster immunoglobulin should also be considered.

**Important:** for full details consult *Guidance for issuing varicella-zoster immunoglobulin (VZIG) and Immunisation against infectious disease* from Public Health England ([www.gov.uk](http://www.gov.uk)).

### Anti-D (Rh<sub>0</sub>) immunoglobulin

Anti-D (Rh<sub>0</sub>) immunoglobulin p. 1356 is prepared from plasma taken from rhesus-negative donors who have been immunised against the anti-D-antigen. Anti-D (Rh<sub>0</sub>) immunoglobulin is used to prevent a rhesus-negative mother from forming antibodies to fetal rhesus-positive cells which may pass into the maternal circulation. The objective is to protect any subsequent child from the hazard of haemolytic disease of the newborn.

Anti-D (Rh<sub>0</sub>) immunoglobulin should be administered to the mother following any sensitising episode (e.g. abortion, miscarriage and birth); it should be injected within 72 hours of the episode but even if a longer period has elapsed it may still give protection and should be administered. Anti-D (Rh<sub>0</sub>) immunoglobulin is also given when significant foeto-maternal haemorrhage occurs in rhesus-negative women during delivery. The dose of anti-D (Rh<sub>0</sub>) immunoglobulin is determined according to the level of exposure to rhesus-positive blood.

Use of routine *antenatal* anti-D prophylaxis should be given irrespective of previous anti-D prophylaxis for a

sensitising event early in the same pregnancy. Similarly, *postpartum* anti-D prophylaxis should be given irrespective of previous routine antenatal anti-D prophylaxis or antenatal anti-D prophylaxis for a sensitising event in the same pregnancy.

Anti-D ( $Rh_D$ ) immunoglobulin is also given to women of child-bearing potential after the inadvertent transfusion of rhesus-incompatible blood components and is used for the treatment of idiopathic thrombocytopenia purpura.

#### MMR vaccine

Measles, mumps and rubella vaccine, live may be given in the postpartum period with anti-D ( $Rh_D$ ) immunoglobulin injection provided that separate syringes are used and the products are administered into different limbs. If blood is transfused, the antibody response to the vaccine may be inhibited—measure rubella antibodies after 6–8 weeks and revaccinate if necessary.

## Anti-D ( $Rh_D$ ) immunoglobulin

03-Mar-2020

### • INDICATIONS AND DOSE

#### To rhesus-negative woman for prevention of $Rh_D$ (D) sensitisation, following birth of rhesus-positive infant

##### ► BY DEEP INTRAMUSCULAR INJECTION

- Females of childbearing potential: 500 units, dose to be administered immediately or within 72 hours; for transplacental bleed of over 4 mL fetal red cells, extra 100–125 units per mL fetal red cells, subcutaneous route used for patients with bleeding disorders

#### To rhesus-negative woman for prevention of $Rh_D$ (D) sensitisation, following any potentially sensitising episode (e.g. stillbirth, abortion, amniocentesis) up to 20 weeks' gestation

##### ► BY DEEP INTRAMUSCULAR INJECTION

- Females of childbearing potential: 250 units per episode, dose to be administered immediately or within 72 hours, subcutaneous route used for patients with bleeding disorders

#### To rhesus-negative woman for prevention of $Rh_D$ (D) sensitisation, following any potentially sensitising episode (e.g. stillbirth, abortion, amniocentesis) after 20 weeks' gestation

##### ► BY DEEP INTRAMUSCULAR INJECTION

- Females of childbearing potential: 500 units per episode, dose to be administered immediately or within 72 hours, subcutaneous route used for patients with bleeding disorders

#### To rhesus-negative woman for prevention of $Rh_D$ (D) sensitisation, antenatal prophylaxis

##### ► BY DEEP INTRAMUSCULAR INJECTION

- Females of childbearing potential: 500 units, dose to be given at weeks 28 and 34 of pregnancy, if infant rhesus-positive, a further dose is still needed immediately or within 72 hours of delivery, subcutaneous route used for patients with bleeding disorders

#### To rhesus-negative woman for prevention of $Rh_D$ (D) sensitisation, antenatal prophylaxis (alternative NICE recommendation)

##### ► BY DEEP INTRAMUSCULAR INJECTION

- Females of childbearing potential: 1000–1650 units, dose to be given at weeks 28 and 34 of pregnancy, alternatively 1500 units for 1 dose, dose to be given between 28 and 30 weeks gestation

#### To rhesus-negative woman for prevention of $Rh_D$ (D) sensitisation, following $Rh_D$ (D) incompatible blood transfusion

##### ► BY DEEP INTRAMUSCULAR INJECTION

- Females of childbearing potential: 100–125 units per mL of transfused rhesus-positive red cells, subcutaneous route used for patients with bleeding disorders

#### RHOPHYLAC®

#### To rhesus-negative woman for prevention of $Rh_D$ (D) sensitisation, following birth of rhesus-positive infant

##### ► BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION

- Females of childbearing potential: 1000–1500 units, dose to be administered immediately or within 72 hours; for large transplacental bleed, extra 100 units per mL fetal red cells (preferably by intravenous injection), intravenous route recommended for patients with bleeding disorders

#### To rhesus-negative woman for prevention of $Rh_D$ (D) sensitisation, following any potentially sensitising episode (e.g. abortion, amniocentesis, chorionic villous sampling) up to 12 weeks' gestation

##### ► BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION

- Females of childbearing potential: 1000 units per episode, dose to be administered immediately or within 72 hours, intravenous route recommended for patients with bleeding disorders, higher doses may be required after 12 weeks gestation

#### To rhesus-negative woman for prevention of $Rh_D$ (D) sensitisation, antenatal prophylaxis

##### ► BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION

- Females of childbearing potential: 1500 units, dose to be given between weeks 28–30 of pregnancy; if infant rhesus-positive, a further dose is still needed immediately or within 72 hours of delivery, intravenous route recommended for patients with bleeding disorders

#### To rhesus-negative woman for prevention of $Rh_D$ (D) sensitisation, following $Rh_D$ (D) incompatible blood transfusion

##### ► BY INTRAVENOUS INJECTION

- Females of childbearing potential: 50 units per mL of transfused rhesus-positive blood, alternatively 100 units per mL of erythrocyte concentrate, intravenous route recommended for patients with bleeding disorders

- **CAUTIONS** Immunoglobulin A deficiency · possible interference with live virus vaccines

#### CAUTIONS, FURTHER INFORMATION

- **MMR vaccine** MMR vaccine may be given in the postpartum period with anti-D ( $Rh_D$ ) immunoglobulin injection provided that separate syringes are used and the products are administered into different limbs. If blood is transfused, the antibody response to the vaccine may be inhibited—measure rubella antibodies after 6–8 weeks and revaccinate if necessary.

- **INTERACTIONS** → Appendix 1: immunoglobulins

#### ● SIDE-EFFECTS

- **Uncommon** Chills · fever · headache · malaise · skin reactions
- **Rare or very rare** Arthralgia · dyspnoea · hypersensitivity · hypotension · nausea · tachycardia · vomiting
- **Frequency not known** Intravascular haemolysis
- **HANDLING AND STORAGE** Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the

preparation may become ineffective. **Refrigerated storage** is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

#### ● NATIONAL FUNDING/ACCESS DECISIONS

##### NICE decisions

- ▶ **Routine antenatal anti-D prophylaxis for rhesus-negative women (August 2008)** NICE TA156  
Routine antenatal anti-D prophylaxis should be offered to all non-sensitised pregnant women who are rhesus negative.  
[www.nice.org.uk/guidance/ta156](http://www.nice.org.uk/guidance/ta156)

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

##### Solution for injection

- ▶ **D-Gam** (Bio Products Laboratory Ltd)  
**Anti-D (RHO) immunoglobulin 500 unit** D-Gam Anti-D immunoglobulin 500unit solution for injection vials | 1 vial [PoM] £38.25  
**Anti-D (RHO) immunoglobulin 1500 unit** D-Gam Anti-D immunoglobulin 1,500unit solution for injection vials | 1 vial [PoM] £58.00
- ▶ **Rhophylac** (CSL Behring UK Ltd)  
**Anti-D (RHO) immunoglobulin 750 unit per 1 ml** Rhophylac 1,500units/2ml solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £46.50

## Cytomegalovirus immunoglobulin

16-Apr-2020

#### ● INDICATIONS AND DOSE

**Prophylaxis of cytomegalovirus infection in patients taking immunosuppressants, particularly transplant recipients (specialist use only)**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Adult: (consult product literature)

- **CONTRA-INDICATIONS** Selective IgA deficiency with IgA antibodies
- **CAUTIONS** Interference with live virus vaccines
- **CAUTIONS, FURTHER INFORMATION**
- ▶ Interference with live virus vaccines Cytomegalovirus immunoglobulin may impair the immune response to live virus vaccines; such vaccines should only be given 3 months after CMV immunoglobulin treatment. Patients receiving measles vaccines should have their antibody status checked as impairment of immune response may persist for up to 1 year.
- **INTERACTIONS** → Appendix 1: immunoglobulins
- **SIDE-EFFECTS** Arthralgia · back pain · chills · cutaneous lupus erythematosus · dizziness · embolism and thrombosis · fatigue · fever · haemolysis · haemolytic anaemia · headache · hypotension · infusion related reaction · meningitis aseptic · myocardial infarction · nausea · neutropenia · renal impairment · skin reactions · stroke · transfusion-related acute lung injury · vomiting

#### ● MONITORING REQUIREMENTS

- ▶ Manufacturer advises monitor for signs of infusion-related reactions during and for at least one hour after each infusion in patients receiving cytomegalovirus immunoglobulin for the first time, or following a prolonged period between treatments, or when a different human immunoglobulin has been used previously; monitor all other patients for at least 20 minutes after each infusion—in case of reaction, reduce rate or stop infusion as clinically appropriate.
- ▶ Manufacturer advises monitor urine output and serum creatinine.

- **HANDLING AND STORAGE** Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

##### Solution for infusion

##### ▶ Cytomegalovirus immunoglobulin (Non-proprietary)

- Cytomegalovirus immunoglobulin human 100 unit per 1 ml** Cytotec CP Biotech 5,000units/50ml solution for infusion vials | 1 vial [PoM] £917.70
- Cytotec CP Biotech 1,000units/10ml solution for infusion vials** | 1 vial [PoM] £183.54

## Hepatitis B immunoglobulin

06-Mar-2020

#### ● INDICATIONS AND DOSE

**Prophylaxis against hepatitis B infection**

##### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Adult: 500 units, dose to be administered as soon as possible after exposure; ideally within 12–48 hours, but no later than 7 days after exposure

**Prophylaxis against hepatitis B infection, after exposure to hepatitis B virus-contaminated material**

##### ▶ BY INTRAVENOUS INFUSION

- ▶ Adult: Dose to be administered as soon as possible after exposure, but no later than 72 hours (consult product literature)

**Prevention of hepatitis B in haemodialysed patients**

##### ▶ BY INTRAVENOUS INFUSION

- ▶ Adult: (consult product literature)

**Prophylaxis against re-infection of transplanted liver**

##### ▶ BY INTRAVENOUS INFUSION

- ▶ Adult: (consult product literature)

**Prevention of hepatitis B re-infection more than 6 months after liver transplantation in stable HBV-DNA negative patients**

##### ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult (body-weight up to 75 kg): 500 units once weekly, increased if necessary up to 1000 units once weekly, dose to be started 2–3 weeks after last dose of intravenous hepatitis B immunoglobulin
- ▶ Adult (body-weight 75 kg and above): 1000 units once weekly, dose to be started 2–3 weeks after last dose of intravenous hepatitis B immunoglobulin

- **CAUTIONS** IgA deficiency · interference with live virus vaccines

- **INTERACTIONS** → Appendix 1: immunoglobulins

#### ● SIDE-EFFECTS

- ▶ **Uncommon** Abdominal pain upper · headache
- ▶ **Rare or very rare** Cardiac discomfort · fatigue · hypersensitivity · hypertension · hypotension · muscle spasms · nasopharyngitis · oropharyngeal pain · palpitations · skin reactions

- **PRESCRIBING AND DISPENSING INFORMATION** Vials containing 200 units or 500 units (for intramuscular injection), available from selected Public Health England and NHS laboratories (except for Transplant Centres), also available from BPL.

- **HANDLING AND STORAGE** Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many immunoglobulins need

to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ▶ Hepatitis B immunoglobulin (Non-proprietary)

**Hepatitis B immunoglobulin human 200 unit** Hepatitis B immunoglobulin human 200unit solution for injection vials | 1 vial [PoM] £200.00

**Hepatitis B immunoglobulin human 500 unit** Hepatitis B immunoglobulin human 500unit solution for injection vials | 1 vial [PoM] £400.00

- ▶ **Zutectra** (Biotest (UK) Ltd)  
Zutectra 500units/1ml solution for injection pre-filled syringes | 5 syringe [PoM] £1,500.00

#### Solution for infusion

##### ▶ Hepatect CP (Biotest (UK) Ltd)

**Hepatitis B immunoglobulin human 50 unit per 1 ml** Hepatect CP 100units/2ml solution for infusion vials | 1 vial [PoM] £55.00

Hepatect CP 2000units/40ml solution for infusion vials | 1 vial [PoM] £1,100.00

Hepatect CP 500units/10ml solution for infusion vials | 1 vial [PoM] £275.00

Hepatect CP 5000units/100ml solution for infusion vials | 1 vial [PoM] £2,750.00

##### ▶ Omri-Hep-B (Imported (Israel))

**Hepatitis B immunoglobulin human 50 unit per 1 ml** Omri-Hep-B 5000units/100ml solution for infusion vials | 1 vial [PoM] 

## Normal immunoglobulin

17-Mar-2020

### • INDICATIONS AND DOSE

#### To control outbreaks of hepatitis A

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Adult: 500 mg

#### Rubella in pregnancy, prevention of clinical attack

- ▶ BY DEEP INTRAMUSCULAR INJECTION
- ▶ Females of childbearing potential: 750 mg

#### Antibody deficiency syndromes

- ▶ BY SUBCUTANEOUS INFUSION
- ▶ Adult: (consult product literature)

#### SUBGAM<sup>®</sup>

#### Hepatitis A prophylaxis in outbreaks

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult: 750 mg

### • UNLICENSED USE

- ▶ **SUBGAM<sup>®</sup>** *Subgam<sup>®</sup>* is not licensed for prophylactic use, but due to difficulty in obtaining suitable immunoglobulin products, Public Health England recommends intramuscular use for prophylaxis against Hepatitis A or rubella.

- **CONTRA-INDICATIONS** Patients with selective IgA deficiency who have known antibody against IgA
- ▶ **PRIVIGEN<sup>®</sup>** Hyperprolinaemia (contains L-proline)
- ▶ **FLEBOGAMMA<sup>®</sup> DIF** Hereditary fructose intolerance (contains sorbitol)

- ▶ **HIZENTRA<sup>®</sup>** Hyperprolinaemia (contains L-proline)

- ▶ **GAMMAPLEX<sup>®</sup>** Hereditary fructose intolerance (contains sorbitol)

- **CAUTIONS** Agammaglobulinaemia with or without IgA deficiency · hypogammaglobulinaemia with or without IgA deficiency · interference with live virus vaccines

#### CAUTIONS, FURTHER INFORMATION

- ▶ Interference with live virus vaccines Normal immunoglobulin may interfere with the immune response to live virus vaccines which should therefore only be given at least **3 weeks before or 3 months after** an injection of normal immunoglobulin (this does not apply to yellow fever

vaccine since normal immunoglobulin does not contain antibody to this virus).

**OCTAGAM<sup>®</sup>** Falsely elevated results with blood glucose testing systems (contains maltose)

- **INTERACTIONS** → Appendix 1: immunoglobulins

### • SIDE-EFFECTS

- ▶ Common or very common
  - ▶ With intramuscular use Chills
  - ▶ With subcutaneous use Diarrhoea · dizziness · drowsiness · fatigue · gastrointestinal discomfort · headaches · hypotension · local reaction · myalgia · nausea · pain · skin reactions
- ▶ Uncommon
  - ▶ With intramuscular use Dizziness · fatigue · feeling hot · headache · nausea · pain · skin reactions
  - ▶ With subcutaneous use Paraesthesia
- ▶ Rare or very rare
  - ▶ With intramuscular use Abdominal pain · arthralgia · musculoskeletal stiffness · myalgia · peripheral coldness · tremor
- ▶ Frequency not known
  - ▶ With intramuscular use Chest discomfort · dyspnoea · facial swelling · fever · flushing · hyperhidrosis · hypertension · hypotension · malaise · oral paraesthesia · pallor · paraesthesia · tachycardia · vomiting

**SIDE-EFFECTS, FURTHER INFORMATION** Adverse reactions are more likely to occur in patients receiving normal immunoglobulin for the first time, or following a prolonged period between treatments, or when a different brand of normal immunoglobulin is administered.

- **MONITORING REQUIREMENTS** Monitor for acute renal failure; consider discontinuation if renal function deteriorates. Intravenous preparations with added sucrose have been associated with cases of renal dysfunction and acute renal failure.

### • DIRECTIONS FOR ADMINISTRATION

Preparations for subcutaneous use May be administered by intramuscular injection if subcutaneous route not possible; intramuscular route **not** for patients with thrombocytopenia or other bleeding disorders.

**GAMUNEX<sup>®</sup>** Use Glucose 5% intravenous infusion if dilution prior to infusion is required.

**KIOVIG<sup>®</sup>** Use Glucose 5% intravenous infusion if dilution prior to infusion is required.

- **PRESCRIBING AND DISPENSING INFORMATION** Antibody titres can vary widely between normal immunoglobulin preparations from different manufacturers—formulations are **not interchangeable**; patients should be maintained on the same formulation throughout long-term treatment to avoid adverse effects.

- ▶ With intramuscular use Available from the Centre for Infections and other regional Public Health England offices (for contacts and control of outbreaks only).

- **HANDLING AND STORAGE** Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

ELECTROLYTES: May contain Sodium

- ▶ **Hizentra** (CSL Behring UK Ltd)

**Normal immunoglobulin human 200 mg per 1 ml** Hizentra 2g/10ml solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £108.00

► **Subgam** (Bio Products Laboratory Ltd)

**Normal immunoglobulin human 160 mg per 1 ml** Subgam  
1.5g/9.375ml solution for injection vials | 1 vial [PoM](#) £75.00  
Subgam 4g/25ml solution for injection vials | 1 vial [PoM](#) £200.00  
Subgam 2g/12.5ml solution for injection vials | 1 vial [PoM](#) £100.00  
Subgam 1g/6.25ml solution for injection vials | 1 vial [PoM](#) £50.00  
Subgam 750mg/4.6875ml solution for injection vials | 1 vial [PoM](#) £37.50

**Solution for infusion**

EXCIPIENTS: May contain Glucose, maltose, sorbitol, sucrose

► **Normal immunoglobulin (Non-proprietary)**

**Normal immunoglobulin human 100 mg per 1 ml** Normal immunoglobulin human 5g/50ml solution for infusion vials | 1 vial [PoM](#) [S](#)  
Normal immunoglobulin human 2.5g/25ml solution for infusion vials | 1 vial [PoM](#) [S](#)

## Rabies immunoglobulin

16-Mar-2020

### ● INDICATIONS AND DOSE

► **Post-exposure prophylaxis against rabies infection**

- BY LOCAL INFILTRATION, OR BY INTRAMUSCULAR INJECTION
- Child: 20 units/kg, dose administered by infiltration in and around the cleansed wound; if the wound not visible or healed or if infiltration of whole volume not possible, give remainder by intramuscular injection into anterolateral thigh (remote from vaccination site)
- Adult: 20 units/kg, dose administered by infiltration in and around the cleansed wound; if the wound not visible or healed or if infiltration of whole volume not possible, give remainder by intramuscular injection into anterolateral thigh (remote from vaccination site)

● **CAUTIONS** IgA deficiency · interference with live virus vaccines

● **INTERACTIONS** → Appendix 1: immunoglobulins

● **SIDE-EFFECTS**

- Rare or very rare Arthralgia · chills · fatigue · fever · headache · hypersensitivity · hypotension · influenza like illness · malaise · nausea · skin reactions · tachycardia · vomiting

● **PRESCRIBING AND DISPENSING INFORMATION** The potency of individual batches of rabies immunoglobulin from the manufacturer may vary; potency may also be described differently by different manufacturers. It is therefore critical to know the potency of the batch to be used and the weight of the patient in order to calculate the specific volume required to provide the necessary dose.

Available from Specialist and Reference Microbiology Division, Public Health England (also from BPL).

● **HANDLING AND STORAGE** Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

► **Rabies immunoglobulin (Non-proprietary)**

**Rabies immunoglobulin human 500 unit** Rabies immunoglobulin human 500unit solution for injection vials | 1 vial [PoM](#) £800.00

## Tetanus immunoglobulin

16-Mar-2020

### • INDICATIONS AND DOSE

#### Post-exposure prophylaxis

- BY INTRAMUSCULAR INJECTION
- Child: Initially 250 units, then increased to 500 units, dose is only increased if more than 24 hours have elapsed or there is risk of heavy contamination or following burns
- Adult: Initially 250 units, then increased to 500 units, dose is only increased if more than 24 hours have elapsed or there is risk of heavy contamination or following burns

#### Treatment of tetanus infection

- BY INTRAMUSCULAR INJECTION
- Child: 150 units/kg, dose may be given over multiple sites
- Adult: 150 units/kg, dose may be given over multiple sites

- **CAUTIONS** IgA deficiency · interference with live virus vaccines
- **INTERACTIONS** → Appendix 1: immunoglobulins
- **SIDE-EFFECTS**
  - Rare or very rare Anaphylactic reaction · hypotension
  - Frequency not known Arthralgia · chest pain · dizziness · dyspnoea · face oedema · oral disorders · tremor
- **HANDLING AND STORAGE** Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.  
**Solution for injection**
  - **Tetanus immunoglobulin (Non-proprietary)**  
Tetanus immunoglobulin human 250 unit Tetanus immunoglobulin human 250unit solution for injection vials | 1 vial [Pom] £170.00 DT = £170.00

## Varicella-zoster immunoglobulin

16-Mar-2020

### (Antivaricella-zoster Immunoglobulin)

### • INDICATIONS AND DOSE

#### Prophylaxis against varicella infection

- BY DEEP INTRAMUSCULAR INJECTION
- Adult: 1 g, to be administered as soon as possible—not later than 10 days after exposure, second dose to be given if further exposure occurs more than 3 weeks after first dose, no evidence that effective in severe disease

- **CAUTIONS** IgA deficiency · interference with live virus vaccines
- **INTERACTIONS** → Appendix 1: immunoglobulins
- **SIDE-EFFECTS** Arthralgia · chills · fever · headache · hypersensitivity · hypotension · malaise · nausea · skin reactions · tachycardia · vomiting
- **DIRECTIONS FOR ADMINISTRATION** Normal immunoglobulin for intravenous use may be used in those unable to receive intramuscular injections.

- **PRESCRIBING AND DISPENSING INFORMATION** Available from selected Public Health England and NHS laboratories (also from BPL).
- **HANDLING AND STORAGE** Care must be taken to store all immunological products under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many immunoglobulins need to be stored at 2–8°C and not allowed to freeze. Immunoglobulins should be protected from light. Opened multidose vials must be used within the period recommended in the product literature.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- **Varicella-Zoster** (Bio Products Laboratory Ltd)  
Varicella-Zoster immunoglobulin human 250 mg Varicella-Zoster immunoglobulin human 250mg solution for injection vials | 1 vial [Pom] £600.00 DT = £600.00

## 2 Post-exposure prophylaxis

### IMMUNE SERA AND IMMUNOGLOBULINS › ANTITOXINS

## Bezlotoxumab

18-Aug-2017

- **DRUG ACTION** Bezlotoxumab is a human monoclonal antitoxin antibody; it binds to *Clostridioides difficile* toxin B and neutralises its activity, preventing recurrence of *Clostridioides difficile* infection.

### • INDICATIONS AND DOSE

#### Prevention of recurrence of *Clostridioides difficile* infection in patients at high risk of reinfection

- BY INTRAVENOUS INFUSION
- Adult: 10 mg/kg for 1 dose, to be administered during the course of antibacterial therapy for *Clostridioides difficile* infection

- **SIDE-EFFECTS**
  - Common or very common Dizziness · dyspnoea · fatigue · fever · headache · hypertension · infusion related reaction · nausea
- **PREGNANCY** Manufacturer advises avoid unless essential—limited information available.
- **BREAST FEEDING** Manufacturer advises avoid—no information available.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises for intravenous infusion (Zinplava<sup>®</sup>), give intermittently in Glucose 5% or Sodium Chloride 0.9%; dilute requisite dose to a concentration of 1–10 mg/mL with infusion fluid; give over 60 minutes via a central venous catheter or peripheral catheter using a low-protein binding filter (0.2–5 micron).
- **HANDLING AND STORAGE** Manufacturer advises store in a refrigerator (2–8 °C)—consult product literature for further information regarding storage conditions outside refrigerator and after preparation of the infusion.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for infusion

EXCIPIENTS: May contain Polysorbates

ELECTROLYTES: May contain Sodium

- **Zinplava** (Merck Sharp & Dohme Ltd) ▼

Bezlotoxumab 25 mg per 1 ml Zinplava 1g/40ml concentrate for solution for infusion vials | 1 vial [Pom] £2,470.00 (Hospital only)

## Botulism antitoxin

- **DRUG ACTION** A preparation containing the specific antitoxic globulins that have the power of neutralising the toxins formed by types A, B, and E of *Clostridium botulinum*.

### ● INDICATIONS AND DOSE

#### Post exposure prophylaxis of botulism

- BY INTRAMUSCULAR INJECTION
- Adult: (consult product literature)

- **SIDE-EFFECTS** Hypersensitivity

**SIDE-EFFECTS, FURTHER INFORMATION** It is essential to read the contra-indications, warnings, and details of sensitivity tests on the package insert. Prior to treatment checks should be made regarding previous administration of any antitoxin and history of any allergic condition, e.g. asthma, hay fever, etc.

- **PRE-TREATMENT SCREENING** All patients should be tested for sensitivity (diluting the antitoxin if history of allergy).
- **PRESCRIBING AND DISPENSING INFORMATION** Available from local designated centres, for details see TOXBASE (requires registration) [www.toxbase.org](http://www.toxbase.org). For supplies outside working hours apply to other designated centres or to the Public Health England Colindale duty doctor (Tel (020) 8200 6868). For major incidents, obtain supplies from the local blood bank.

The BP title Botulinum Antitoxin is not used because the preparation currently in use may have a different specification.

- **MEDICINAL FORMS** No licensed medicines listed.

## Diphtheria antitoxin

(Dip/Ser)

### ● INDICATIONS AND DOSE

#### Passive immunisation in suspected cases of diphtheria

- BY INTRAVENOUS INFUSION
- Adult: Dose should be given without waiting for bacteriological confirmation (consult product literature)

- **CAUTIONS**

#### CAUTIONS, FURTHER INFORMATION

- Hypersensitivity Hypersensitivity is common after administration; resuscitation facilities should be available.

Diphtheria antitoxin is no longer used for prophylaxis because of the risk of hypersensitivity; unimmunised contacts should be promptly investigated and given antibacterial prophylaxis and vaccine.

- **SIDE-EFFECTS**

- Common or very common Hypersensitivity

- **PRE-TREATMENT SCREENING** Diphtheria antitoxin is derived from horse serum and reactions are common; tests for hypersensitivity should be carried out before use.

- **PRESCRIBING AND DISPENSING INFORMATION** Available from Centre for Infections (Tel (020) 8200 6868) or in Northern Ireland from Public Health Laboratory, Belfast City Hospital (Tel (028) 9032 9241).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- **Diphtheria antitoxin (Non-proprietary)**

Diphtheria antitoxin 1000 unit per 1 ml Antidiphtheria serum 10,000units/10ml solution for injection ampoules | 1 ampoule [PoM](#) [S](#)

## 3 Tuberculosis diagnostic test

### DIAGNOSTIC AGENTS

## Tuberculin purified protein derivative (Tuberculin PPD)

### ● INDICATIONS AND DOSE

#### Mantoux test

- BY INTRADERMAL INJECTION
- Child: 2 units for one dose
- Adult: 2 units for one dose

#### Mantoux test (if first test is negative and a further test is considered appropriate)

- BY INTRADERMAL INJECTION
- Child: 10 units for 1 dose
- Adult: 10 units for 1 dose

#### DOSE EQUIVALENCE AND CONVERSION

- 2 units is equivalent to 0.1 mL of 20 units/mL strength.
- 10 units is equivalent to 0.1 mL of 100 units/mL strength.

- **CAUTIONS**

#### CAUTIONS, FURTHER INFORMATION

- Mantoux test Response to tuberculin may be suppressed by viral infection, sarcoidosis, corticosteroid therapy, or immunosuppression due to disease or treatment and the MMR vaccine. If a tuberculin skin test has already been initiated, then the MMR should be delayed until the skin test has been read unless protection against measles is required urgently. If a child has had a recent MMR, and requires a tuberculin test, then a 4 week interval should be observed. Apart from tuberculin and MMR, all other live vaccines can be administered at any time before or after tuberculin.

- **PRESCRIBING AND DISPENSING INFORMATION** Available from ImmForm (SSI brand).

The strength of tuberculin PPD in currently available products may be different to the strengths of products used previously for the Mantoux test; care is required to select the correct strength.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

#### Solution for injection

- **Tuberculin purified protein derivative (Non-proprietary)**

Tuberculin purified protein derivative 20 tuberculin unit per 1 ml Tuberculin PPD RT 23 SSI 20 tuberculin units/ml solution for injection 1.5ml vials | 1 vial [S](#)

Tuberculin purified protein derivative 100 tuberculin unit per 1 ml Tuberculin PPD RT 23 SSI 100 tuberculin units/ml solution for injection 1.5ml vials | 1 vial [S](#)

## 4 Vaccination

### Vaccination, general principles

06-Feb-2020

#### Active immunity

Active immunity can be acquired by natural disease or by vaccination. **Vaccines** stimulate production of antibodies and other components of the immune mechanism; they consist of either:

- a *live attenuated* form of a virus (e.g. measles, mumps and rubella vaccine) or bacteria (e.g. BCG vaccine), or
- *inactivated* preparations of the virus (e.g. influenza vaccine) or bacteria, or
- *detoxified exotoxins* produced by a micro-organism (e.g. tetanus vaccine), or
- *extracts* of a micro-organism, which may be derived from the organism (e.g. pneumococcal vaccine) or produced by recombinant DNA technology (e.g. hepatitis B vaccine).

**Live attenuated vaccines** usually produce a durable immunity, but not always as long-lasting as that resulting from natural infection.

**Inactivated vaccines** may require a primary series of injections of vaccine to produce an adequate antibody response, and in most cases booster (reinforcing) injections are required; the duration of immunity varies from months to many years. Some inactivated vaccines are adsorbed onto an adjuvant (such as aluminium hydroxide) to enhance the antibody response.

## Vaccines and HIV infection

HIV-positive individuals with or without symptoms can receive the following live vaccines:

- MMR (but avoid if immunity significantly impaired; use of normal immunoglobulin should be considered after exposure to measles), varicella-zoster vaccine against chickenpox (but avoid if immunity significantly impaired—consult product literature; varicella-zoster immunoglobulin should be considered after exposure to chickenpox or herpes zoster), rotavirus;

and the following inactivated vaccines:

- anthrax, cholera (oral), diphtheria, haemophilus influenzae type b, hepatitis A, hepatitis B, human papillomavirus, influenza (injection), meningococcal, pertussis, pneumococcal, poliomyelitis, rabies, tetanus, tick-borne encephalitis, typhoid (injection).

HIV-positive individuals should **not** receive:

- BCG, influenza nasal spray (unless stable HIV infection and receiving antiretroviral therapy), typhoid (oral), yellow fever (if yellow fever risk is unavoidable, specialist advice should be sought).

The above advice differs from that for other immunocompromised patients; *Immunisation Guidelines for HIV-infected Adults* issued by *British HIV Association* (BHIVA) are available at [www.bhiva.org](http://www.bhiva.org) and, *Immunisation of HIV-infected Children* issued by *Children's HIV Association* (CHIVA) are available at [www.chiva.org.uk](http://www.chiva.org.uk)

## Vaccines and asplenia, splenic dysfunction, or complement disorders

The following vaccines are recommended for individuals with asplenia, splenic dysfunction, or complement disorders (including those taking complement inhibitors) depending on the age at which their condition is diagnosed:

- Influenza vaccine p. 1392;
- Meningococcal groups A with C and W135 and Y vaccine p. 1385 and meningococcal group B vaccine (rDNA, component, adsorbed) p. 1384;
- 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) p. 1385 and/or 23-valent pneumococcal polysaccharide vaccine p. 1386. Patients on complement inhibitor therapy with eculizumab p. 1077 are not at increased risk of pneumococcal disease and do not require 23-valent pneumococcal polysaccharide vaccine or additional doses of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

Additional booster doses of other vaccines should be considered depending on the individual's underlying condition—specialist advice may be required. For information on specific indications for immunisation of

vulnerable groups, see Chapter 7, Immunisation of individuals with underlying medical conditions, in *Immunisation against infectious disease*—'The Green Book'.

**Children first diagnosed or presenting aged under 1 year** should be immunised according to the Immunisation schedule p. 1364. During their first year they should also be given 2 doses of meningococcal groups A with C and W135 and Y vaccine at least 4 weeks apart, and a dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) p. 1385 (in order to have received a total of 2 doses of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) with an 8 week interval). 8 weeks following their routine 1 year booster vaccines, they should receive a booster dose of meningococcal groups A with C and W135 and Y vaccine. An additional dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) should be given at least 8 weeks after the routine 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) booster p. 1385 scheduled at 1 year. After their second birthday, a dose of 23-valent pneumococcal polysaccharide vaccine p. 1386 should be given at least 8 weeks after the last dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed). The influenza vaccine should be given annually in children aged 6 months or older.

**Children first diagnosed or presenting aged 1 year to under 2 years** should be immunised according to the Immunisation schedule p. 1364, including any routine vaccines due at 1 year of age if not yet administered. 8 weeks following the routine 1 year booster vaccines a dose of meningococcal groups A with C and W135 and Y vaccine should be given. An additional dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) p. 1385 should be given at least 8 weeks after the 1 year 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) booster dose p. 1385. After their second birthday, a dose of 23-valent pneumococcal polysaccharide vaccine p. 1386 should be given at least 8 weeks after the last dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed). The influenza vaccine should be given annually.

**Children first diagnosed or presenting aged 2 years to under 10 years** should be immunised according to the Immunisation schedule p. 1364. Additionally, they should be given a dose of meningococcal groups A with C and W135 and Y vaccine and 23-valent pneumococcal polysaccharide vaccine p. 1386. For children who have not received the full routine immunisation for meningococcal group B vaccine (rDNA, component, adsorbed), ensure that 2 doses, 8 weeks apart have been given since their first birthday. For children who have not received any 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) p. 1385 previously, a single dose should be given, followed by a dose of 23-valent pneumococcal polysaccharide vaccine at least 8 weeks later. The influenza vaccine should be given annually.

**Individuals first diagnosed aged 10 years and over** regardless of previous immunisations, should be given a dose of 23-valent pneumococcal polysaccharide vaccine p. 1386, meningococcal group B vaccine (rDNA, component, adsorbed) and meningococcal groups A with C and W135 and Y vaccine. After 4 weeks, an additional dose of meningococcal group B vaccine (rDNA, component, adsorbed) should be given. The influenza vaccine should be given annually.

## Vaccines and antisera availability

Anthrax vaccine p. 1382 and yellow fever vaccine, live p. 1397, botulism antitoxin p. 1361, diphtheria antitoxin p. 1361, and snake and spider venom antitoxins are available from local designated holding centres.

For antivenom, see Poisoning, emergency treatment p. 1430.

**Routine immunisation schedule**

When to immunise	Vaccine given and dose schedule (for details of dose, see under individual vaccines)
Neonates at risk only	<ul style="list-style-type: none"> <li>▶ Bacillus Calmette-Guérin vaccine p. 1382 (at birth, see <i>Bacillus Calmette-Guérin vaccine</i> p. 1365).</li> <li>▶ Hepatitis B vaccine p. 1389 (at birth, 4 weeks, and 1 year, see <i>Hepatitis B vaccine</i> p. 1368).</li> </ul>
8 weeks	<ul style="list-style-type: none"> <li>▶ Diphtheria with tetanus, pertussis, hepatitis B, poliomyelitis and haemophilus influenzae type b vaccine p. 1381 (<i>Infanrix hexa</i>®). First dose.</li> <li>▶ Meningococcal group B vaccine (rDNA, component, adsorbed) p. 1384 (<i>Bexsero</i>®). First dose.</li> <li>▶ Changes have been made to the immunisation schedule for children born on or after 1st January 2020, see <i>12 weeks</i>. For children born on or before 31st December 2019, give pneumococcal polysaccharide conjugate vaccine (adsorbed) p. 1385 (<i>Prevenar 13</i>®). First dose.</li> <li>▶ Rotavirus vaccine p. 1395 (<i>Rotarix</i>®). First dose.</li> </ul>
12 weeks	<ul style="list-style-type: none"> <li>▶ Diphtheria with tetanus, pertussis, hepatitis B, poliomyelitis and haemophilus influenzae type b vaccine (<i>Infanrix hexa</i>®). Second dose.</li> <li>▶ For children born on or after 1st January 2020, give pneumococcal polysaccharide conjugate vaccine (adsorbed) (<i>Prevenar 13</i>®). Single dose.</li> <li>▶ Rotavirus vaccine (<i>Rotarix</i>®). Second dose.</li> </ul>
16 weeks	<ul style="list-style-type: none"> <li>▶ Diphtheria with tetanus, pertussis, hepatitis B, poliomyelitis and haemophilus influenzae type b vaccine (<i>Infanrix hexa</i>®). Third dose.</li> <li>▶ Meningococcal group B vaccine (rDNA, component, adsorbed) (<i>Bexsero</i>®). Second dose.</li> <li>▶ For children born on or before 31st December 2019, give pneumococcal polysaccharide conjugate vaccine (adsorbed) (<i>Prevenar 13</i>®). Second dose.</li> </ul>
1 year (on or after first birthday)	<ul style="list-style-type: none"> <li>▶ Measles, mumps and rubella vaccine, live p. 1393 (<i>MMR VaxPRO</i>® or <i>Priorix</i>®). First dose.</li> <li>▶ Meningococcal group B vaccine (rDNA, component, adsorbed) (<i>Bexsero</i>®). Single booster dose.</li> <li>▶ Pneumococcal polysaccharide conjugate vaccine (adsorbed) (<i>Prevenar 13</i>®). Single booster dose regardless of birth date.</li> <li>▶ Haemophilus influenzae type b with meningococcal group C vaccine p. 1383 (<i>Menitorix</i>®). Single booster dose.</li> </ul>
2-10 years on 31st August 2019 (including children in reception class and school years 1, 2, 3, 4, 5, and 6).	<ul style="list-style-type: none"> <li>▶ Influenza vaccine p. 1392. Each year from September. Note: live attenuated influenza nasal spray is recommended (<i>Fluenz Tetra</i>®). If contra-indicated and child is in a clinical risk group, use inactivated influenza vaccine (see <i>Influenza vaccine</i> p. 1369).</li> </ul>
3 years and 4 months, or soon after	<ul style="list-style-type: none"> <li>▶ Diphtheria with tetanus, pertussis and poliomyelitis vaccine p. 1381 (<i>Boostrix-IPV</i>® or <i>Repevax</i>®). Single booster dose.</li> <li>▶ Measles, mumps and rubella vaccine, live (<i>MMR VaxPRO</i>® or <i>Priorix</i>®). Second dose.</li> </ul>
11-14 years. First dose of HPV vaccine will be offered to individuals aged 12-13 years in England, Wales, and Northern Ireland, and those aged 11-13 years in Scotland. For individuals aged 15 years and over, see <i>Human papillomavirus vaccine</i> p. 1368.	<ul style="list-style-type: none"> <li>▶ Human papillomavirus vaccines p. 1391 (<i>Gardasil</i>®). 2 dose schedule; second dose 6-24 months after first dose. Only <i>Gardasil</i>® is offered as part of the national immunisation programme. For individuals who started the schedule with <i>Cervarix</i>®, but did not complete the vaccination course, the course can be completed with <i>Gardasil</i>®. Ideally one vaccine should be used for the entire course.</li> </ul>
13-15 years	<ul style="list-style-type: none"> <li>▶ Meningococcal groups A with C and W135 and Y vaccine p. 1385 (<i>Nimenrix</i>® or <i>Menveo</i>®). Single booster dose.</li> </ul>
13-18 years	<ul style="list-style-type: none"> <li>▶ Diphtheria with tetanus and poliomyelitis vaccine p. 1380 (<i>Revaxis</i>®). Single booster dose. Note: Can be given at the same time as the dose of meningococcal groups A with C and W135 and Y vaccine at 13-15 years of age.</li> </ul>
Females of child-bearing age susceptible to rubella	<ul style="list-style-type: none"> <li>▶ Measles, mumps and rubella vaccine, live. Females of child-bearing age who have not received 2 doses of a rubella-containing vaccine or who do not have a positive antibody test for rubella should be offered rubella immunisation (using the MMR vaccine)—exclude pregnancy before immunisation, and avoid pregnancy for one month after vaccination.</li> </ul>
Pregnant females	<ul style="list-style-type: none"> <li>▶ Acellular pertussis-containing vaccine administered as diphtheria with tetanus, pertussis and poliomyelitis vaccine (<i>Boostrix-IPV</i>® or <i>Repevax</i>®). 1 dose from the 16th week of pregnancy, preferably after the fetal anomaly scan (weeks 18-20).</li> <li>▶ Influenza vaccine (inactivated). Single dose administered from September, regardless of the stage of pregnancy (see <i>Influenza vaccine</i> p. 1369).</li> </ul>

Enquiries for vaccines not available commercially can also be made to:

Vaccines and Countermeasures Response Department  
Public Health England  
Wellington House  
133-155 Waterloo Road  
London

(029) 2074 2979

Routine immunisations during adult life	
When to immunise	Vaccine given and dose schedule (for details of dose, see under individual vaccines)
Under 25 years, those entering university who are at risk of meningococcal disease	► Meningococcal groups A with C and W135 and Y vaccine ( <i>Nimenrix</i> ® or <i>Menveo</i> ®). Single dose. <b>Note:</b> Should be offered to those aged under 25 years entering university who have not received the meningococcal groups A with C and W135 and Y vaccine over the age of 10 years.
During adult life, if not previously immunised or 5 dose course is incomplete	► Diphtheria with tetanus and poliomyelitis vaccine.
65 years	► Pneumococcal polysaccharide vaccine p. 1386.
From 65 years	► Influenza vaccine (inactivated). Each year from September (see Influenza vaccine p. 1369).
70 years	► Varicella-zoster vaccine p. 1396. Single dose.

Useful Resources

Recommendations reflect advice from *Immunisation against Infectious Disease*– ‘The Green Book’. Public Health England, (2013). Chapters from the handbook (including updates since 2013) are available at:  
[www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

respiratory complications for 48–72 hours after immunisation. If a baby develops apnoea, bradycardia, or desaturation after the first immunisation, the second immunisation should also be given in hospital with similar monitoring.

Individuals with unknown or incomplete immunisation history

For children born in the UK who present with an inadequate or unknown immunisation history, investigation into immunisations received should be carried out. Outstanding doses should be administered where the routine childhood immunisation schedule has not been completed.

For advice on dosing schedules for missed vaccinations, and the immunisation of individuals coming to the UK, consult Chapter 11, The UK immunisation schedule, in *Immunisation against infectious disease*– ‘The Green Book’. Public Health England, available at: [www.gov.uk/government/publications/immunisation-schedule-the-green-book-chapter-11](http://www.gov.uk/government/publications/immunisation-schedule-the-green-book-chapter-11)

Immunisations for healthcare and laboratory staff

Vaccine-preventable diseases that can be transmitted from person to person are a risk for staff and patients in healthcare environments, and staff in laboratory environments. Therefore, all staff must be up-to-date with their routine immunisations. In addition, specific immunisations are recommended for certain staff groups due to the risk of acquiring or passing on infection. For detailed recommendations, consult Chapter 12, Immunisation of healthcare and laboratory staff in *Immunisation against infectious disease*– ‘The Green Book’. Public Health England, available at: [www.gov.uk/government/publications/immunisation-of-healthcare-and-laboratory-staff-the-green-book-chapter-12](http://www.gov.uk/government/publications/immunisation-of-healthcare-and-laboratory-staff-the-green-book-chapter-12)

Immunisation schedule

21-Apr-2020

Routine immunisations, sources of information

The Joint Committee on Vaccination and Immunisation have issued a statement on immunisation prioritisation during the COVID-19 pandemic, available at: [www.gov.uk/government/publications/jcvi-statement-on-immunisation-prioritisation/statement-from-jcvi-on-immunisation-prioritisation](http://www.gov.uk/government/publications/jcvi-statement-on-immunisation-prioritisation/statement-from-jcvi-on-immunisation-prioritisation)

The following recommendations reflect advice produced by Public Health England. Recommendations specific to each vaccine can be found in *Immunisation against infectious disease*– ‘The Green Book’. Public Health England at: [www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

The immunisation schedule reflects advice from ‘The complete routine immunisation schedule’ produced by Public Health England (2019). For the most up to date immunisation schedule, see: [www.gov.uk/government/publications/the-complete-routine-immunisation-schedule](http://www.gov.uk/government/publications/the-complete-routine-immunisation-schedule)

The Influenza immunisation recommendations reflect advice from the ‘National flu immunisation programme plan 2019/2020’ produced by Public Health England, Department of Health and Social Care, and NHS England. For the most up-to-date letter, see: [www.gov.uk/government/publications/national-flu-immunisation-programme-plan](http://www.gov.uk/government/publications/national-flu-immunisation-programme-plan)

Vaccines for the immunisation schedule should be obtained from ImmForm at: [www.immform.dh.gov.uk](http://www.immform.dh.gov.uk)

Preterm birth

Babies born preterm should receive all routine immunisations based on their actual date of birth. The risk of apnoea following vaccination is increased in preterm babies, particularly in those born at or before 28 weeks gestational age. If babies at risk of apnoea are in hospital at the time of their first immunisation, they should be monitored for

Anthrax vaccine

31-Oct-2018

Overview

Anthrax vaccine p. 1382 is made from antigens from inactivated *Bacillus anthracis* adsorbed onto an adjuvant. Anthrax immunisation is indicated for individuals who handle infected animals or process infected animal products where there is a potential risk of occupational exposure to *B. anthracis*. It is also recommended for occupations where workers are at risk of one-off high level exposures to anthrax (e.g. following a deliberate or accidental release of spores).

A 4-dose regimen is used for primary immunisation; a single booster dose should be given at 10-year intervals on up to 3 occasions to workers at potential continuous low level risk of exposure to anthrax. In those with potential intermittent high level exposure, a single booster dose should be offered just before entering situations with a specific high exposure risk. If such opportunities do not arise, a single booster dose should be given at 10-year intervals on up to 3 occasions to sustain protection.

In the event of proven or high probability of exposure to anthrax spores, a single booster dose should be given, in addition to antibacterial prophylaxis, except when a dose has been given in the preceding 12 months.

Advice on the treatment of previously unvaccinated individuals with a proven or high probability of exposure to anthrax spores can be found at: [www.gov.uk/government/publications/chemical-biological-radiological-and-nuclear-incidents-recognise-and-respond](http://www.gov.uk/government/publications/chemical-biological-radiological-and-nuclear-incidents-recognise-and-respond).

All suspected cases of anthrax must be notified to the local health protection unit. Where there is a community level outbreak, specialist advice should be sought from Public Health England (tel. 020 8200 4400) or, in Scotland, Health Protection Scotland (tel. 0140 300 1191).

## Useful Resources

Recommendations reflect Chapter 13, Anthrax, in *Immunisation against infectious disease*—‘The Green Book’. Public Health England, February 2017.  
[www.gov.uk/government/publications/anthrax-the-green-book-chapter-13](http://www.gov.uk/government/publications/anthrax-the-green-book-chapter-13)

## Bacillus Calmette-Guérin vaccine

24-Oct-2019

### Overview

The Bacillus Calmette-Guérin vaccine p. 1382 (BCG vaccine) contains a live attenuated strain derived from *Mycobacterium bovis* which is indicated for the prevention of Tuberculosis p. 612.

BCG vaccine is recommended for the following individuals if immunisation has not previously been carried out and they are tuberculin-negative:

- all neonates and infants (aged 0–12 months) living in areas of the UK where the annual incidence of tuberculosis is 40 cases per 100 000 or greater;
- all neonates and infants (aged 0–12 months) with a parent or grandparent born in a country where the annual incidence of tuberculosis is 40 cases per 100 000 or greater;
- previously unvaccinated children (aged 1–5 years) with a parent or grandparent born in a country where the annual incidence of tuberculosis is 40 cases per 100 000 or greater (tuberculin testing is not usually required);
- previously unvaccinated children (aged 6–15 years) with a parent or grandparent born in a country where the annual incidence of tuberculosis is 40 cases per 100 000 or greater;
- previously unvaccinated children (aged under 16 years) with close contact to cases of sputum smear-positive pulmonary or laryngeal tuberculosis;
- previously unvaccinated children (aged under 16 years) who were born in, or lived for at least 3 months in a country where the annual incidence of tuberculosis is 40 cases per 100 000 or greater;
- previously unvaccinated individuals at occupational risk (irrespective of age). This includes healthcare workers or laboratory staff who have direct contact with patients with tuberculosis or potentially infectious clinical materials, and veterinary and abattoir staff handling animals or animal materials that could be infected with tuberculosis. BCG vaccination can also be considered for staff working with prisoners, homeless people, people with drug and alcohol misuse, and those who work with refugees and asylum seekers.

Although protection provided by BCG vaccine may decrease with time, there is no evidence that repeat vaccination offers significant additional protection and therefore repeat BCG vaccination is not recommended.

The Bacillus Calmette-Guérin vaccine is contra-indicated in all HIV-infected individuals. For advice on BCG vaccination in immunosuppressed individuals, consult

Chapter 32: Tuberculosis – ‘The Green Book’, Public Health England (see *Useful resources*).

For advice on drug treatment, see Tuberculosis p. 612; for the treatment of infection following vaccination, seek expert advice.

### Travel

The risk of a traveller acquiring tuberculosis infection depends on several factors including the incidence of tuberculosis in that country, the duration of travel, the degree of contact with the local population, the work setting of the traveller (if any), the reason for travel, and the susceptibility and age of the traveller.

BCG vaccine is recommended for previously unvaccinated, tuberculin-negative individuals aged under 16 years, or for healthcare workers at high risk of exposure to patients with tuberculosis, who intend to travel for 3 months or more in a country where the annual incidence of tuberculosis is 40 cases per 100 000 or greater, or where the risk of multi-drug resistant tuberculosis is high. The risk of tourists acquiring tuberculosis infection is low and BCG vaccine is not required if no other factors are present.

A list of countries where the annual incidence of tuberculosis is 40 cases per 100 000 or greater, is available at [www.gov.uk/government/publications/tuberculosis-tb-by-country-rates-per-100000-people](http://www.gov.uk/government/publications/tuberculosis-tb-by-country-rates-per-100000-people).

### Tuberculin skin testing

The tuberculin skin test (*Mantoux test*) is used to assess an individual's sensitivity to tuberculin protein when BCG vaccination is being considered or as an aid to diagnosis of tuberculosis. A tuberculin skin test involves administration of tuberculin purified protein derivative p. 1361 by intradermal injection. It is necessary before BCG vaccination for:

- individuals aged 6 years and over;
- children aged under 6 years living in a country for more than 3 months with an annual tuberculosis incidence of 40 cases per 100 000 or greater;
- those who have had close contact with a person with known tuberculosis;
- those who have a family history of tuberculosis within the last 5 years.

BCG vaccination can be given up to three months following a negative tuberculin test.

The BCG vaccine should not be administered to an individual with a positive tuberculin test—it is unnecessary and may cause a more severe local reaction. Those with a *Mantoux test* induration of 5 mm and greater should be referred to a tuberculosis clinic for assessment of the need for further investigation and treatment.

All suspected cases of tuberculosis must be notified to the local health protection unit. Where there is a community level outbreak, specialist advice should be sought from Public Health England (tel. 020 8200 4400) or, in Scotland, Health Protection Scotland (tel. 0140 300 1191).

## Useful Resources

Recommendations reflect Chapter 32, Tuberculosis, in *Immunisation against infectious disease*—‘The Green Book’. Public Health England, August 2018.  
[www.gov.uk/government/publications/tuberculosis-the-green-book-chapter-32](http://www.gov.uk/government/publications/tuberculosis-the-green-book-chapter-32)

## Botulism antitoxin

### Overview

A polyvalent botulism antitoxin p. 1361 is available for the post-exposure prophylaxis of botulism and for the treatment of persons thought to be suffering from botulism. It specifically neutralises the toxins produced by *Clostridium*

*botulinum* types A, B, and E. It is not effective against infantile botulism as the toxin (type A) is seldom, if ever, found in the blood in this type of infection.

### Useful Resources

Advice reflects that in the handbook *Immunisation against Infectious Disease* (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at: [www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Cholera vaccine

07-Nov-2018

### Overview

Oral cholera vaccine p. 1383 contains inactivated Inaba (including El-Tor biotype) and Ogawa strains of *Vibrio cholerae*, serotype O1 together with recombinant B-subunit of the cholera toxin produced in Inaba strains of *V. cholerae*, serotype O1.

Oral cholera vaccine is licensed for adults and children from 2 years of age who are travelling to endemic or epidemic areas on the basis of current recommendations. Immunisation should be completed at least one week before potential exposure. However, there is no requirement for cholera vaccination for international travel. After a full risk assessment, immunisation can be considered for the following individuals:

- relief or disaster aid workers;
- persons with remote itineraries in areas where cholera epidemics are occurring and there is limited access to medical care;
- travellers to potential cholera risk areas, for whom vaccination is considered potentially beneficial;
- individuals at occupational risk, such as laboratory workers who may be regularly exposed to cholera.

For dosing schedule, see cholera vaccine.

Immunisation with cholera vaccine does not provide complete protection and all travellers to a country where cholera exists should be warned that scrupulous attention to food, water, and personal hygiene is essential.

All suspected cases of cholera must be notified to the local health protection unit. Where there is a community level outbreak, specialist advice should be sought from Public Health England (tel. 020 8200 4400) or, in Scotland, Health Protection Scotland (tel. 0140 300 1191).

### Contacts

Contacts of patients with cholera should maintain high standards of personal hygiene to avoid becoming infected. Cholera vaccine should not be used in the management of contacts of cases or in controlling the spread of infection.

### Useful Resources

Recommendations reflect Chapter 14, Cholera, in *Immunisation against infectious disease* – 'The Green Book'. Public Health England, December 2013. [www.gov.uk/government/publications/cholera-the-green-book-chapter-14](http://www.gov.uk/government/publications/cholera-the-green-book-chapter-14)

## Diphtheria vaccine

### Overview

Diphtheria-containing vaccines are prepared from the toxin of *Corynebacterium diphtheriae* and adsorption on aluminium hydroxide or aluminium phosphate improves antigenicity.

The vaccine stimulates the production of the protective antibody. The quantity of diphtheria toxoid in a preparation determines whether the vaccine is defined as 'high dose' or 'low dose'. Vaccines containing the higher dose of diphtheria toxoid are used for primary immunisation of children under 10 years of age. Vaccines containing the lower dose of diphtheria toxoid are used for primary immunisation in adults and children over 10 years. Single-antigen diphtheria vaccine is not available and adsorbed diphtheria vaccine is given as a combination product containing other vaccines.

For primary immunisation of children aged between 2 months and 10 years, vaccination is recommended usually in the form of 3 doses (separated by 1-month intervals) of diphtheria with tetanus, pertussis, hepatitis B, poliomyelitis and haemophilus influenzae type b vaccine p. 1381 (*Infanrix hexa*®) (see Immunisation schedule). In unimmunised individuals aged over 10 years the primary course comprises of 3 doses of **adsorbed diphtheria** [low dose], **tetanus** and **poliomyelitis (inactivated)** vaccine.

A booster dose should be given 3 years after the primary course (this interval can be reduced to a minimum of 1 year if the primary course was delayed). Children under 10 years should receive either **adsorbed diphtheria, tetanus, pertussis (acellular, component) and poliomyelitis (inactivated) vaccine** or **adsorbed diphtheria** [low dose], **tetanus, pertussis (acellular, component) and poliomyelitis (inactivated) vaccine**. Individuals aged over 10 years should receive **adsorbed diphtheria** [low dose], **tetanus, and poliomyelitis (inactivated) vaccine**.

A second booster dose, of adsorbed diphtheria [low dose], tetanus and poliomyelitis (inactivated) vaccine, should be given 10 years after the previous booster dose (this interval can be reduced to a minimum of 5 years if previous doses were delayed).

### Diphtheria-containing vaccines for children over 10 years and adults

A **low dose** of diphtheria toxoid is sufficient to recall immunity in individuals previously immunised against diphtheria but whose immunity may have diminished with time; it is insufficient to cause serious reactions in an individual who is already immune. Preparations containing low dose diphtheria should be used for adults and children over 10 years, for both primary immunisation and booster doses.

### Travel

Those intending to travel to areas with a risk of diphtheria infection should be fully immunised according to the UK schedule. If more than 10 years have lapsed since completion of the UK schedule, a dose of **adsorbed diphtheria** [low dose], **tetanus** and **poliomyelitis (inactivated) vaccine** should be administered.

### Contacts

Staff in contact with diphtheria patients or with potentially pathogenic clinical specimens or working directly with *C. diphtheriae* or *C. ulcerans* should receive a booster dose if fully immunised (with 5 doses of diphtheria-containing vaccine given at appropriate intervals); further doses should be given at 10-year intervals if risk persists. Individuals at risk who are not fully immunised should complete the primary course; a booster dose should be given after 5 years and then at 10-year intervals. **Adsorbed diphtheria** [low dose], **tetanus** and **poliomyelitis (inactivated) vaccine** is used for this purpose; immunity should be checked by antibody testing at least 3 months after completion of immunisation.

Advice on the management of cases, carriers, contacts and outbreaks must be sought from health protection units. The immunisation history of infected individuals and their contacts should be determined; those who have been incompletely immunised should complete their immunisation and fully immunised individuals should

receive a reinforcing dose. See advice on antibacterial treatment to prevent a secondary case of diphtheria in a non-immune individual.

### Useful Resources

Advice reflects that in the handbook Immunisation against Infectious Disease (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at:

[www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Haemophilus influenzae type B conjugate vaccine

### Overview

**Haemophilus influenzae type b (Hib) vaccine** is made from capsular polysaccharide; it is conjugated with a protein such as tetanus toxoid to increase immunogenicity, especially in young children. *Haemophilus influenzae type b* vaccine immunisation is given in combination with diphtheria, tetanus, pertussis, hepatitis B and poliomyelitis vaccine (*Infanrix hexa*®), as a component of the primary course of childhood immunisation (see Immunisation schedule). For infants under 1 year, the course consists of 3 doses of a vaccine containing *Haemophilus influenzae type b* component with an interval of 1 month between doses. A booster dose of *Haemophilus influenzae type b* vaccine (combined with meningococcal group C conjugate vaccine) should be given at 1 year of age, on or after the child's first birthday.

Children 1–10 years who have not been immunised against *Haemophilus influenzae type b* need to receive only 1 dose of *Haemophilus influenzae type b* vaccine (combined with meningococcal group C conjugate vaccine). However, if a primary course of immunisation has not been completed, children born before August 2017 should be given 3 doses of the combined vaccine they were started on. The risk of infection falls sharply in older children and the vaccine is not normally required for children over 10 years.

*Haemophilus influenzae type b* vaccine may be given to those over 10 years who are considered to be at increased risk of invasive *H. influenzae type b* disease (such as those with sickle-cell disease or complement deficiency, or those receiving treatment for malignancy).

### Invasive *Haemophilus influenzae type b* disease

After recovery from infection, unimmunised and partially immunised index cases under 10 years of age should complete their age-specific course of immunisation. Previously vaccinated cases under 10 years of age should be given an additional dose of *haemophilus influenzae type b* vaccine (combined with meningococcal group C conjugate vaccine) if Hib antibody concentrations are low or if it is not possible to measure antibody concentrations. Index cases of any age with asplenia or splenic dysfunction should complete their immunisation according to the recommendations below; fully vaccinated cases with asplenia or splenic dysfunction should be given an additional dose of *haemophilus influenzae type b* vaccine (combined with meningococcal group C conjugate vaccine) if they received their previous dose over 1 year ago.

See also use of rifampicin p. 615 in the prevention of secondary cases of *Haemophilus influenzae type b* disease.

### Useful Resources

Advice reflects that in the handbook Immunisation against Infectious Disease (2013), which in turn reflects the guidance

of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at:

[www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Hepatitis A vaccine

### Overview

Hepatitis A vaccine p. 1388 is prepared from formaldehyde-inactivated hepatitis A virus grown in human diploid cells.

Immunisation is recommended for:

- laboratory staff who work directly with the virus;
- staff and residents of homes for those with severe learning difficulties;
- workers at risk of exposure to untreated sewage;
- individuals who work with primates;
- patients with haemophilia or other conditions treated with plasma-derived clotting factors;
- patients with severe liver disease;
- travellers to high-risk areas;
- individuals who are at risk due to their sexual behaviour;
- parenteral drug abusers.

Immunisation should be considered for:

- patients with chronic liver disease including chronic hepatitis B or chronic hepatitis C;
- prevention of secondary cases in close contacts of confirmed cases of hepatitis A, within 14 days of exposure to the primary case (within 8 weeks of exposure to the primary case where there is more than 1 contact in the household).

A booster dose is usually given 6–12 months after the initial dose. A second booster dose can be given 20 years after the previous booster dose to those who continue to be at risk. Specialist advice should be sought on re-immunisation of immunocompromised individuals.

For rapid protection against hepatitis A after exposure or during an outbreak, in adults a single dose of a monovalent vaccine is recommended; for children under 16 years, a single dose of the combined vaccine *Ambirix*® can also be used.

Public Health England recommends the use of intramuscular normal immunoglobulin p. 1358 in addition to hepatitis A vaccine for prevention of infection in close contacts (of confirmed cases of hepatitis A) who are 60 years of age or over, have chronic liver disease, or HIV infection, or who are immunosuppressed. For further guidance, see Immunoglobulins p. 1354.

Post-exposure prophylaxis is not required for healthy children under 1 year of age, so long as all those involved in nappy changing are vaccinated against hepatitis A. However, children 2–12 months of age can be given a dose of hepatitis A vaccine if it is not possible to vaccinate their carers, or if the child becomes a source of infection to others [unlicensed use]; in these cases, if the child goes on to require long-term protection against hepatitis A after the first birthday, the full course of 2 doses should be given.

### Useful Resources

Advice reflects that in the handbook Immunisation against Infectious Disease (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at:

[www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Hepatitis B vaccine

### Overview

Hepatitis B vaccine p. 1389 contains inactivated hepatitis B virus surface antigen (HBsAg) adsorbed onto an adjuvant. It is made biosynthetically using recombinant DNA technology.

From August 2017, vaccination against hepatitis B is recommended as part of the **routine immunisation schedule**. Primary immunisation (see *Routine immunisation schedule*) requires 3 doses, administered at intervals of 1 month from the age of 2 months, to be given as part of the combined diphtheria with tetanus, pertussis, hepatitis B, poliomyelitis and haemophilus influenzae type b vaccine p. 1381 (*Infanrix hexa*®).

As part of the **selective neonatal immunisation programme**, vaccination is recommended for neonates whose mothers have had acute hepatitis B during pregnancy or are positive for hepatitis B surface antigen (regardless of e-antigen markers). Hepatitis B vaccination is started immediately after birth with a dose of the monovalent hepatitis B vaccine (no later than 24 hours after delivery), followed by a second dose at 4 weeks; the routine immunisation combination vaccine (*Infanrix hexa*®) at weeks 8, 12 and 16; and a further dose of the monovalent hepatitis B vaccine at one year of age.

Neonates born to highly infectious mothers should also receive hepatitis B immunoglobulin p. 1357 at the same time as the first dose of monovalent hepatitis B vaccine, but administered at a different site—more detailed guidance is given in the handbook *Immunisation against Infectious Disease* ([www.gov.uk/government/publications/hepatitis-b-the-green-book-chapter-18](http://www.gov.uk/government/publications/hepatitis-b-the-green-book-chapter-18)).

Following **significant exposure to hepatitis B** (e.g. through needle-stick injury or unprotected sex) and for **pre-exposure prophylaxis in high-risk groups**, an 'accelerated schedule' using the single, monovalent hepatitis B vaccine is recommended immediately, with the second dose given 1 month after the initial dose, and the third dose given 2 months after the initial dose. For those at continued high risk following exposure, a fourth dose should be given 12 months after the first dose. More detailed guidance is given in the handbook *Immunisation against Infectious Disease*.

Specific hepatitis B immunoglobulin can also be indicated for use with the vaccine in those accidentally inoculated and in neonates at special risk of infection. If hepatitis B immunoglobulin is indicated, it should be given as soon as possible, ideally at the same time or within 24 hours of the first dose of vaccine, but not after seven days have elapsed since exposure. See also *Hepatitis B immunoglobulin in Immunoglobulins p. 1354*.

In the UK, groups at high-risk of hepatitis B include:

- parenteral drug misusers, their sexual partners, and household contacts; other drug misusers who are likely to 'progress' to injecting;
- individuals who change sexual partners frequently;
- close family contacts of a case or individual with chronic hepatitis B infection;
- individuals with haemophilia, those receiving regular blood transfusions or blood products, and carers responsible for the administration of such products;
- patients with chronic renal failure including those on haemodialysis. Haemodialysis patients should be monitored for antibodies annually and re-immunised if necessary. Home carers (of dialysis patients) should be vaccinated;
- individuals with chronic liver disease;
- healthcare personnel (including trainees) who have direct contact with blood or blood-stained body fluids or with patients' tissues;

- laboratory staff who handle material that may contain the virus;
- other occupational risk groups such as morticians and embalmers;
- staff and patients of day-care or residential accommodation for those with severe learning difficulties;
- staff and inmates of custodial institutions;
- those travelling to areas of high or intermediate prevalence who are at increased risk or who plan to remain there for lengthy periods;
- families adopting children from countries with a high or intermediate prevalence of hepatitis B;
- foster carers and their families.

Following a primary course of immunisation, most people do not require a reinforcing dose of a hepatitis B-containing vaccine. A single booster dose should be offered to healthcare workers approximately five years after primary immunisation, to patients on renal dialysis with anti-HBs levels below 10mIU/mL, and at the time of a subsequent significant exposure.

Immunisation does not eliminate the need for common sense precautions for avoiding the risk of infection from known carriers by the routes of infection which have been clearly established, consult *Guidance for Clinical Health Care Workers: Protection against Infection with Blood-borne Viruses* (available at [www.dh.gov.uk/](http://www.dh.gov.uk/)).

Accidental inoculation of hepatitis B virus-infected blood into a wound, incision, needle-prick, or abrasion may lead to infection, whereas it is unlikely that indirect exposure to a carrier will do so.

A combined hepatitis A and B vaccine p. 1387 is also available.

### Useful Resources

Advice reflects that in the handbook *Immunisation against Infectious Disease* (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at:

[www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Human papillomavirus vaccine

15-Jan-2019

### Overview

The human papillomavirus vaccines p. 1391 consist of virus-like particles prepared from the major protein of the viral coat or capsid and mimic the structure of the native virus, but do not contain any viral DNA. The vaccines are available as a bivalent vaccine (*Cervarix*®), containing human papillomavirus (HPV) types 16 and 18), a quadrivalent vaccine (*Gardasil*®), containing HPV types 6, 11, 16 and 18), and a nine-valent vaccine (*Gardasil 9*®), containing HPV types 6, 11, 16, 18, 31, 33, 45, 52 and 58). All are adjuvanted and used for the prevention of cervical and anal cancers, and pre-cancerous genital (cervical, vulvar, and vaginal) and anal lesions associated with HPV types 16 and 18. *Gardasil*® and *Gardasil 9*® are also effective at preventing genital warts. The vaccines may also provide some cross-protection against infection caused by other high-risk HPV types.

Although there is emerging evidence on interchangeability of the HPV vaccines, the same vaccine product should be used for an entire course. Only *Gardasil*® is offered as part of the national HPV programme and is recommended for eligible individuals aged 11 to 25 years, and for men who have sex with men aged up to and including 45 years of age.

As the vaccines do not protect against all strains of HPV, safe sex precautions should always be practiced; and for all females, routine cervical screening should continue at the scheduled age.

#### Children aged 9 to 14 years

The human papillomavirus vaccines are licensed for individuals from 9 years of age, however, vaccination in children aged 9 to 10 years is not offered as part of the national programme. A 2 dose schedule is recommended for children who receive the first dose before the age of 15 years. The first dose is usually given to children from 11 years, with the second dose given 6–24 months after the first dose. See Immunisation schedule p. 1364 for guidance on immunisation in different countries within the UK.

2 doses given less than 6 months apart should not be considered adequate to provide long term protection. A third dose should be given according to human papillomavirus vaccines dosing schedule.

#### Children and adults aged 15 to 25 years

Under the national programme in England, individuals remain eligible to receive the HPV vaccine up to the age of 25 years if they did not receive the vaccine when scheduled. A 3 dose schedule is recommended, with the second and third dose given 1 month and 4–6 months after the first dose respectively. All 3 doses should be given within a 12-month period (see human papillomavirus vaccines).

In cases where the second dose is given late and there is a high likelihood that the individual will not return, or it is not practical for the third dose to be given after three months, then the third dose can be given at least one month after the second dose.

Where appropriate, immunisation with the HPV vaccine should be offered to individuals aged under 25 years coming into the UK, as they may not have been offered protection in their country of origin. If they are aged 25 years and over, and commenced, but did not complete their vaccination, it is reasonable to complete their vaccination in the UK.

#### Vaccination of men who have sex with men and other at risk individuals

Men aged 15–45 years, who have sex with other men and attend Specialist Sexual Health Services or HIV clinics are eligible for vaccination if they have not previously been vaccinated. Immunisation should still be offered to eligible men who have sex with men, regardless of CD4 cell count, antiretroviral therapy use, viral load, or if known to be immunocompromised at the time of immunisation. A 3 dose schedule of *Gardasil*® should be given, with administration of doses aligned with clinic appointments. All 3 doses should be given within a 24 month period, but if the course has not been completed before the age of 46, it can still be completed provided the first dose was given as part of the pilot or national programme.

There may be considerable benefit in offering the HPV vaccination to individuals who attend Sexual Health Services or HIV clinics, who are not eligible under the national programme and are deemed to have a similar risk profile to that seen in men who have sex with men. This includes some transgender individuals, sex workers, and men and women living with HIV infection. For these individuals a 3 dose schedule of *Gardasil*® is recommended.

Refer to the British HIV Association for further information on the use of human papillomavirus vaccines in individuals with HIV infection. See [www.bhiva.org/guidelines](http://www.bhiva.org/guidelines) for further information.

#### Booster doses

Protection from human papillomavirus vaccines is maintained for at least 10 years, although protection is expected to last longer. There is no recommendation for the need for booster doses.

#### Useful Resources

Recommendations reflect Chapter 18a, Human papillomavirus, in *Immunisation against infectious disease* - 'The Green Book'. Public Health England, July 2019. [www.gov.uk/government/publications/human-papillomavirus-hpv-the-green-book-chapter-18a](http://www.gov.uk/government/publications/human-papillomavirus-hpv-the-green-book-chapter-18a)

[www.gov.uk/government/collections/hpv-vaccination-for-men-who-have-sex-with-men-msm-programme](http://www.gov.uk/government/collections/hpv-vaccination-for-men-who-have-sex-with-men-msm-programme)

## Influenza vaccine

23-Apr-2019

### Overview

While most viruses are antigenically stable, the influenza viruses A and B (especially A) are constantly altering their antigenic structure as indicated by changes in the haemagglutinins (H) and neuraminidases (N) on the surface of the viruses. It is essential that influenza vaccine p. 1392 in use contain the H and N components of the prevalent strain or strains as recommended each year by the World Health Organization.

The influenza vaccines recommended for immunisation are the adjuvanted trivalent influenza vaccine (inactivated), high dose trivalent influenza vaccine (inactivated), cell-grown quadrivalent influenza vaccine (inactivated), standard egg-grown quadrivalent influenza vaccine (inactivated), and live attenuated influenza vaccine. The choice of vaccine is dependent on the person's age and contra-indications.

The ideal time for immunisation is between September and early November.

Immunisation is recommended for people at high risk from influenza, and to reduce transmission of infection. Annual immunisation is strongly recommended for individuals aged 6 months and over with the following conditions:

- chronic respiratory disease;
- chronic heart disease;
- chronic liver disease;
- chronic renal disease at stage 3, 4 or 5;
- chronic neurological disease;
- complement disorders;
- diabetes mellitus;
- immunosuppression because of disease (including asplenia or splenic dysfunction) or treatment (including prolonged systemic corticosteroid treatment [for over 1 month at dose equivalents of prednisolone p. 716: *adult and child over 20 kg*, 20 mg or more daily; *child under 20 kg*, 1 mg/kg or more daily], and chemotherapy);
- HIV infection (regardless of immune status);
- morbid obesity (BMI of 40 kg/m<sup>2</sup> and above).

Annual influenza vaccine is also recommended for:

- children of specific ages, see Immunisation schedule p. 1364;
- all pregnant women (including those who become pregnant during the flu season);
- all adults aged 65 years and over (including those becoming 65 by 31 March 2020);
- residents of nursing or residential homes for the elderly and other long-stay facilities;
- carers of individuals whose welfare may be at risk if the carer falls ill;
- household contacts of immunocompromised individuals;
- frontline health and social care workers.

Children aged 6 months to less than 2 years of age in clinical risk groups should be offered the standard egg-grown quadrivalent inactivated influenza vaccine.

Children aged 2–17 years of age (including those in clinical risk groups) should be offered the live attenuated influenza

vaccine, administered as a nasal spray (*Fluenz tetra*®). The live attenuated vaccine is thought to provide broader protection than inactivated vaccines. If the child is in a clinical risk group and the live attenuated vaccine is contra-indicated or otherwise unsuitable, offer standard egg-grown quadrivalent inactivated influenza vaccine.

Children aged 6 months to less than 9 years of age in clinical risk groups who have not had the influenza vaccine previously should be offered two doses of the appropriate influenza vaccine, four weeks apart.

Adults aged 18 to 64 years of age in clinical risk groups, pregnant females, and other eligible groups should be offered either the standard egg-grown quadrivalent inactivated influenza vaccine or the cell-grown quadrivalent inactivated influenza vaccine.

Adults aged 65 years and over should be offered either the adjuvanted trivalent inactivated influenza vaccine or the cell-grown quadrivalent inactivated influenza vaccine. The high dose trivalent inactivated influenza vaccine is equally suitable but is **not eligible for reimbursement under the NHS flu vaccination 2019/2020 programme**.

In the 2019/2020 national influenza immunisation programme, annual influenza vaccine will be offered to all children aged 2–10 years on 31st August 2019 (including those in reception class and school years 1, 2, 3, 4, 5, and 6).

For the management of influenza, see Influenza p. 698.

Information on pandemic influenza, avian influenza, swine influenza, and annual flu programme may be found at [www.gov.uk/government/collections/pandemic-flu-public-health-response](http://www.gov.uk/government/collections/pandemic-flu-public-health-response) and at [www.gov.uk/government/collections/annual-flu-programme](http://www.gov.uk/government/collections/annual-flu-programme).

## Japanese encephalitis vaccine

14-Nov-2018

### Overview

Japanese encephalitis is a mosquito-borne viral encephalitis caused by a *Flavivirus*.

Japanese encephalitis vaccine p. 1393 (*IXIARO*)® is an inactivated vaccine adsorbed onto an adjuvant. It is recommended for individuals who are going to reside in an area where Japanese encephalitis is endemic or epidemic. Travellers to South and South-East Asia and the Far East should be immunised if staying for a month or longer in endemic areas during the transmission season. Other travellers with shorter exposure periods should also be immunised if the risk is considered sufficient. Immunisation is also recommended for laboratory staff at risk of exposure to the virus.

The primary immunisation course of 2 doses should be completed at least one week before potential exposure to Japanese encephalitis virus.

In adults (aged under 65 years) and children (aged 2 months and over) at ongoing risk (including laboratory staff and long-term travellers), a single booster dose should be given 12 months after the primary immunisation course. A booster dose can be considered in adults aged 65 years and over, but the immune response is lower than in younger adults. For other travellers, a single booster dose should be given within 12–24 months after primary immunisation,

before potential re-exposure to the Japanese encephalitis virus. Travellers aged 18–64 years should be offered a second booster dose at 10 years if they remain at risk.

Cases of Japanese encephalitis should be managed with supportive treatment.

Up-to-date information on the risk of Japanese encephalitis in specific countries can be obtained from the National Travel Health Network and Centre.

### Useful Resources

Recommendations reflect Chapter 20, Japanese encephalitis, in *Immunisation against infectious disease*– ‘The Green Book’. Public Health England, June 2018.

## Measles, Mumps and Rubella vaccine

### Overview

**Measles vaccine** has been replaced by a combined measles, mumps and rubella vaccine, live p. 1393 (MMR vaccine).

Measles, mumps and rubella vaccine, live aims to eliminate measles, mumps, and rubella (German measles) and congenital rubella syndrome. Every child should receive two doses of measles, mumps and rubella vaccine, live by entry to primary school, unless there is a valid contra-indication. Measles, mumps and rubella vaccine, live should be given irrespective of previous measles, mumps, or rubella infection or vaccination.

The first dose of measles, mumps and rubella vaccine, live is given to children at 1 year of age, on or after their first birthday. A second dose is given before starting school at 3 years and 4 months of age, or soon after (see Immunisation Schedule).

Children presenting for pre-school booster who have not received the first dose of measles, mumps and rubella vaccine, live should be given a dose of measles, mumps and rubella vaccine, live followed 3 months later by a second dose.

At school-leaving age or at entry into further education, measles, mumps and rubella vaccine, live immunisation should be offered to individuals of both sexes who have not received 2 doses during childhood. In those who have received only a single dose of measles, mumps and rubella vaccine, live in childhood, a second dose is recommended to achieve full protection. If 2 doses of measles, mumps and rubella vaccine, live are required, the second dose should be given one month after the initial dose. The decision on whether to vaccinate adults should take into consideration their vaccination history, the likelihood of the individual remaining susceptible, and the future risk of exposure and disease.

Measles, mumps and rubella vaccine, live should be used to protect against rubella in *seronegative women of child-bearing age* (see Immunisation Schedule); unimmunised healthcare workers who might put pregnant women and other vulnerable groups at risk of rubella or measles should be vaccinated. Measles, mumps and rubella vaccine, live may also be offered to previously unimmunised and *seronegative post-partum women* (see measles, mumps and rubella vaccine, live)—vaccination a few days after delivery is important because about 60% of congenital abnormalities from rubella infection occur in babies of women who have borne more than one child. Immigrants arriving after the age of school immunisation are particularly likely to require immunisation.

## Contacts

Measles, mumps and rubella vaccine, live may also be used in the control of outbreaks of measles and should be offered to susceptible children aged over 6 months who are contacts of a case, within 3 days of exposure to infection. Children immunised before 12 months of age should still receive two doses of measles, mumps and rubella vaccine, live at the recommended ages. If one dose of measles, mumps and rubella vaccine, live has already been given to a child, then the second dose may be brought forward to at least one month after the first, to ensure complete protection. If the child is under 18 months of age and the second dose is given within 3 months of the first, then the routine dose before starting school at 3 years and 4 months of age (or soon after) should still be given. Children aged under 9 months for whom avoidance of measles infection is particularly important (such as those with history of recent severe illness) can be given normal immunoglobulin after exposure to measles; routine measles, mumps and rubella vaccine, live immunisation should then be given after at least 3 months at the appropriate age.

Measles, mumps and rubella vaccine, live is **not suitable** for prophylaxis following exposure to mumps or rubella since the antibody response to the mumps and rubella components is too slow for effective prophylaxis.

Children and adults with impaired immune response should not receive live vaccines (see advice on HIV). If they have been exposed to measles infection they should be given normal immunoglobulin.

## Travel

Unimmunised travellers, including children over 6 months, to areas where measles is endemic or epidemic should receive measles, mumps and rubella vaccine, live. Children immunised before 12 months of age should still receive two doses of measles, mumps and rubella vaccine, live at the recommended ages. If one dose of measles, mumps and rubella vaccine, live has already been given to a child, then the second dose should be brought forward to at least one month after the first, to ensure complete protection. If the child is under 18 months of age and the second dose is given within 3 months of the first, then the routine dose before starting school at 3 years and 4 months of age (or soon after) should still be given.

## Useful Resources

Advice reflects that in the handbook *Immunisation against Infectious Disease* (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at:

[www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

# Meningococcal vaccine

## Overview

Almost all childhood meningococcal disease in the UK is caused by *Neisseria meningitidis* serogroups B and C.

**Meningococcal group C conjugate vaccine** protects only against infection by serogroup C and **Meningococcal group B vaccine** protects only against infection by serogroup B. The risk of meningococcal disease declines with age—immunisation is not generally recommended after the age of 25 years.

Tetravalent meningococcal vaccines that cover serogroups A, C, W135, and Y are available. Although the duration of protection has not been established, the **meningococcal groups A, C, W135, and Y conjugate vaccine** is likely to

provide longer-lasting protection than the unconjugated meningococcal polysaccharide vaccine. The antibody response to serogroup C in unconjugated meningococcal polysaccharide vaccines in young children may be suboptimal [not currently available in the UK].

**Meningococcal group B vaccines**, *Bexsero*<sup>®</sup>, and *Trumenba*<sup>®</sup> are licensed in the UK against infection caused by *Neisseria meningitidis* serogroup B. The use of *Bexsero*<sup>®</sup> is recommended in the Immunisation Schedule. *Bexsero*<sup>®</sup> contains 3 recombinant *Neisseria meningitidis* serogroup B proteins and the outer membrane vesicles from the NZ 98/254 strain, in order to achieve broad protection against *Neisseria meningitidis* serogroup B. *Trumenba*<sup>®</sup> contains 2 recombinant *Neisseria meningitidis* serogroup B proteins. The proteins are adsorbed onto an aluminium compound to stimulate an enhanced immune response.

## Childhood immunisation

**Meningococcal group C conjugate vaccine** provides long-term protection against infection by serogroup C of *Neisseria meningitidis*. Immunisation consists of 1 dose given at 12 months of age (as the haemophilus influenzae type b with meningococcal group C vaccine p. 1383) and a second dose given at 13–15 years of age (as the meningococcal groups A with C and W135 and Y vaccine p. 1385) (see Immunisation Schedule).

**Meningococcal group B vaccine** provides protection against infection by serogroup B of *Neisseria meningitidis*. Immunisation consists of 1 dose given at 2 months of age, a second dose at 4 months of age, and a booster dose at 12 months of age (see *Immunisation Schedule* above).

Unimmunised children aged under 12 months should be given 1 dose of meningococcal group B vaccine (rDNA, component, adsorbed) p. 1384 followed by a second dose of meningococcal group B vaccine (rDNA, component, adsorbed) two months later. They should then be vaccinated according to the Immunisation Schedule (ensuring at least a two month interval between doses of meningococcal group B vaccines). Unimmunised children aged 12–23 months should be given 2 doses of meningococcal group B vaccine (rDNA, component, adsorbed) separated by an interval of two months if they have received less than 2 doses in the first year of life. Unimmunised children aged 2–9 years should be given a single dose of meningococcal group C vaccine (as the haemophilus influenzae type b with meningococcal group C vaccine) followed by a booster dose of meningococcal groups A with C and W135 and Y vaccine at 13–15 years of age.

From 2015, unimmunised individuals aged 10–25 years, including those aged under 25 years who are attending university for the first time, should be given a single dose of meningococcal groups A with C and W135 and Y vaccine; a booster dose is not required.

Patients under 25 years of age with confirmed serogroup C disease, who have previously been immunised with meningococcal group C vaccine, should be offered meningococcal group C conjugate vaccine before discharge from hospital.

## Travel

Individuals travelling to countries of risk should be immunised with meningococcal groups A, C, W135, and Y conjugate vaccine, even if they have previously received meningococcal group C conjugate vaccine. If an individual has recently received meningococcal group C conjugate vaccine, an interval of at least 4 weeks should be allowed before administration of the tetravalent (meningococcal groups A, C, W135, and Y) vaccine.

Vaccination is particularly important for those living or working with local people or visiting an area of risk during outbreaks.

Immunisation recommendations and requirements for visa entry for individual countries should be checked before travelling, particularly to countries in Sub-Saharan Africa, Asia, and the Indian sub-continent where epidemics of

meningococcal outbreaks and infection are reported. Country-by-country information is available from the National Travel Health Network and Centre ([www.nathnac.org/](http://www.nathnac.org/)).

Proof of vaccination with the tetravalent meningococcal groups A with C and W135 and Y vaccine is required for those travelling to Saudi Arabia during the Hajj and Umrah pilgrimages (where outbreaks of the W135 strain have occurred).

### Contacts

For advice on the immunisation of *laboratory workers and close contacts* of cases of meningococcal disease in the UK and on the role of the vaccine in the control of *local outbreaks*, consult Guidance for Public Health Management of Meningococcal Disease in the UK at [www.gov.uk/phe](http://www.gov.uk/phe). Also see for antibacterial prophylaxis for prevention of secondary cases of meningococcal meningitis.

The need for immunisation of laboratory staff who work directly with *Neisseria meningitidis* should be considered.

### Useful Resources

Advice reflects that in the handbook Immunisation against Infectious Disease (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at: [www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Pertussis vaccine

### Overview

**Pertussis vaccine** is given as a combination preparation containing other vaccines. Acellular vaccines are derived from highly purified components of *Bordetella pertussis*. Primary immunisation against pertussis (whooping cough) requires 3 doses of an acellular pertussis-containing vaccine (see Immunisation schedule), given at intervals of 1 month from the age of 2 months.

All children up to the age of 10 years should receive primary immunisation with a combination vaccine of diphtheria with tetanus, pertussis, hepatitis B, poliomyelitis and haemophilus influenzae type b vaccine p. 1381 (*Infanrix hexa*<sup>®</sup>).

A booster dose of an acellular pertussis-containing vaccine should ideally be given 3 years after the primary course, although, the interval can be reduced to 1 year if the primary course was delayed. Children aged 1–10 years who have not received a *pertussis-containing vaccine* as part of their primary immunisation should be offered 1 dose of a suitable pertussis-containing vaccine; after an interval of at least 1 year, a booster dose of a suitable pertussis-containing vaccine should be given. Immunisation against pertussis is not routinely recommended in individuals over 10 years of age.

### Vaccination of pregnant women against pertussis

In response to the pertussis outbreak, the UK health departments introduced a temporary programme (October 2012) to vaccinate pregnant women against pertussis, and this programme will continue until further notice. The aim of the programme is to boost the levels of pertussis-specific antibodies that are transferred through the placenta, from the mother to the fetus, so that the newborn is protected before routine immunisation begins at 2 months of age.

Pregnant women should be offered a single dose of acellular pertussis-containing vaccine (as adsorbed diphtheria [low dose], tetanus, pertussis [acellular, component] and poliomyelitis [inactivated] vaccine;

*Boostrix-IPV*<sup>®</sup>) between 16 and 32 weeks of pregnancy. Public Health England has advised (2016) that the vaccine is probably best offered after the fetal anomaly scan at around 18–20 weeks. Pregnant women should be offered a single dose of acellular pertussis-containing vaccine up to the onset of labour if they missed the opportunity for vaccination at 16–32 weeks of pregnancy. A single dose of acellular pertussis-containing vaccine may also be offered to new mothers, who have never previously been vaccinated against pertussis, until the child receives the first vaccination.

While this programme is in place, women who become pregnant again should be offered vaccination during each pregnancy to maximise transplacental transfer of antibody.

### Contacts

Vaccination against pertussis should be considered for close contacts of cases with pertussis who have been offered antibacterial prophylaxis. Unimmunised or partially immunised contacts under 10 years of age should complete their vaccination against pertussis. A booster dose of an acellular pertussis-containing vaccine is recommended for contacts aged over 10 years who have not received a pertussis-containing vaccine in the last 5 years and who have not received adsorbed diphtheria [low dose], tetanus, and poliomyelitis (inactivated) vaccine in the last month.

### Side-effects

Local reactions do not contra-indicate further doses.

The vaccine should not be withheld from children with a history to a preceding dose of:

- fever, irrespective of severity;
- persistent crying or screaming for more than 3 hours;
- severe local reaction, irrespective of extent.

### Useful Resources

Advice reflects that in the handbook Immunisation against Infectious Disease (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at:

[www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Pneumococcal vaccine

07-Jan-2020

### Overview

The pneumococcal polysaccharide conjugate vaccine (adsorbed) p. 1385 and the pneumococcal polysaccharide vaccine p. 1386 protect against infection with *Streptococcus pneumoniae* (pneumococcus). Both vaccines contain polysaccharide from capsular pneumococci. The pneumococcal polysaccharide vaccine contains purified polysaccharide from **23 capsular types** of pneumococcus, whereas the pneumococcal polysaccharide conjugate vaccine (adsorbed) contains polysaccharide from either **10 capsular types** (*Synflorix*<sup>®</sup>) or **13 capsular types** (*Prevenar 13*<sup>®</sup>). Both vaccines are inactivated.

*Prevenar 13*<sup>®</sup> is the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) used in childhood immunisation. For children born on or before December 31st 2019, the schedule consists of 3 doses given at separate intervals. For children born on or after January 1st 2020, the schedule consists of 2 doses given at separate intervals. For more information, see Immunisation schedule p. 1364. Children who present late for vaccination should be immunised according to *Children with unknown or incomplete vaccination histories*.

The 23-valent pneumococcal polysaccharide vaccine is recommended for all adults aged 65 years and over, and for

adults and children aged 2 years and over in the following at-risk groups:

- asplenia or splenic dysfunction (including homozygous sickle cell disease and coeliac syndrome which could lead to splenic dysfunction);
- chronic respiratory disease (including severe asthma treated with continuous or frequent use of a systemic corticosteroid);
- chronic heart disease;
- chronic renal disease;
- chronic liver disease;
- diabetes mellitus requiring insulin or anti-diabetic medication;
- immunosuppression because of disease (e.g. HIV infection, and genetic disorders affecting the immune system) or treatment (including prolonged systemic corticosteroid treatment for over 1 month at dose equivalents of prednisolone: *adult and child 20 kg and over*, 20 mg or more daily; *child under 20 kg*, 1 mg/kg or more daily, and chemotherapy);
- presence of cochlear implant;
- conditions where leakage of cerebrospinal fluid may occur.

The 23-valent pneumococcal polysaccharide vaccine should also be considered for those at risk of occupational exposure to metal fume (e.g. welders).

Where possible, the vaccine should be given at least 2 weeks (ideally 4–6 weeks) before splenectomy, chemotherapy or radiotherapy; patients should be given advice about the increased risk of pneumococcal infection. If it is not possible to vaccinate at least 2 weeks before splenectomy, chemotherapy or radiotherapy, the vaccine should be given at least 2 weeks after the splenectomy, and at least 3 months after completion of chemotherapy or radiotherapy. Vaccination advice for patients with leukaemia or those who have had a bone marrow transplant, and information on patient cards and leaflets for individuals with asplenia, are available in Chapter 25, *Pneumococcal, in Immunisation against infectious disease* - 'The Green Book'.

Vaccination regimens may differ depending on the individual's age, risk of pneumococcal disease, vaccination history, and immune status. Individuals in at-risk groups may require additional protection.

For information on revaccination with 23-valent pneumococcal polysaccharide vaccine for individuals in whom the antibody concentration is likely to decline rapidly, see *Revaccination*.

## Children with unknown or incomplete vaccination histories

### Individuals born on or before December 31st 2019

Unimmunised or partially immunised children who present late for vaccination and before the age of 1 year should receive 2 doses of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) 2 months apart, and a booster dose on or after their first birthday, at least 2 months after the previous dose (intervals can be reduced to 1 month to allow the immunisation schedule to be completed promptly).

Children aged 1 year to under 2 years who are unimmunised or partially immunised should receive a single dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

### Individuals born on or after January 1st 2020

Unimmunised or partially immunised children who present late for vaccination and before the age of 1 year should receive a single dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed), and a booster dose on or after their first birthday, at least 4 weeks after the previous dose.

Children aged 1 year to under 2 years who are unimmunised or partially immunised should receive a single

dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

For the management of children who received one or more doses of 10-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) in another country, refer to Chapter 25 (for infants born on or after 1 January 2020), *Pneumococcal, in Immunisation against infectious disease* - 'The Green Book'.

## Individuals with an at-risk condition born on or before December 31st 2019

### Children diagnosed with at-risk conditions aged under 2 years

Children diagnosed with an at-risk condition aged under 1 year should receive the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) according to the Immunisation schedule p. 1364. Those who present late for vaccination should be immunised according to *Children with unknown or incomplete vaccination histories*. A single dose of the 23-valent pneumococcal polysaccharide vaccine should then be given at 2 years of age, at least 2 months after the last dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

Children aged under 2 years who are severely immunocompromised, or those with asplenia, splenic dysfunction or complement disorders, should have an additional dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed), given at least 2 months after the booster dose due on or after their first birthday (the interval can be reduced to 1 month to allow the immunisation schedule to be completed promptly). A single dose of the 23-valent pneumococcal polysaccharide vaccine should then be given at 2 years of age, at least 2 months after the last dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

For further information on vaccination in individuals with asplenia, splenic dysfunction, or complement disorders, see *Vaccination, general principles* p. 1361.

### Children diagnosed with at-risk conditions aged 2 years to under 10 years

Children diagnosed or first presenting with an at-risk condition who have completed their routine immunisation schedule should receive a single dose of 23-valent pneumococcal polysaccharide vaccine, at least 2 months after the last dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

Children previously unvaccinated or partially vaccinated with the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) should receive a single dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed), followed by a single dose of the 23-valent pneumococcal polysaccharide vaccine at least 2 months later.

For further information on vaccination in individuals with asplenia, splenic dysfunction, or complement disorders, see *Vaccination, general principles* p. 1361.

Severely immunocompromised children may have a sub-optimal immunological response to the vaccine and should be given an additional dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed), even if they are fully vaccinated. This should be followed by a single dose of the 23-valent pneumococcal polysaccharide vaccine, at least 2 months after the last dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed). If the 23-valent pneumococcal polysaccharide vaccine has already been given, the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) should be given at least 6 months after.

### Individuals diagnosed with at-risk conditions aged 10 years and over

Individuals diagnosed or first presenting with an at-risk condition should be given a single dose of the 23-valent pneumococcal polysaccharide vaccine p. 1386; no additional

23-valent pneumococcal polysaccharide vaccine is required at 65 years of age.

For further information on vaccination in individuals with asplenia, splenic dysfunction, or complement disorders, see Vaccination, general principles p. 1361.

Severely immunocompromised individuals should be given a single dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) p. 1385 followed by the 23-valent pneumococcal polysaccharide vaccine at least 2 months after, irrespective of their previous pneumococcal vaccinations. If the 23-valent pneumococcal polysaccharide vaccine has already been given, the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) should be given at least 6 months after.

### Individuals with an at-risk condition born on or after January 1st 2020

#### Children diagnosed with at-risk conditions aged under 1 year

Children in an at-risk group (excluding those with asplenia, splenic dysfunction or complement disorder, or who are severely immunocompromised) should receive the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) according to the Immunisation schedule p. 1364. Those who present late for vaccination should be immunised according to *Children with unknown or incomplete vaccination histories*. A single dose of the 23-valent pneumococcal polysaccharide vaccine should then be given at 2 years of age, at least 8 weeks after the last dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

Children who are severely immunocompromised, or those with asplenia, splenic dysfunction or complement disorders, should receive 2 doses of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) at least 8 weeks apart (commencing no earlier than 6 weeks of age), followed by a single booster dose given on or after their first birthday. An additional dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) should be given at least 8 weeks after the booster dose. A single dose of the 23-valent pneumococcal polysaccharide vaccine should then be given at 2 years of age, at least 8 weeks after the last dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

For further information on vaccination in individuals with asplenia, splenic dysfunction, or complement disorders, see Vaccination, general principles p. 1361.

#### Children diagnosed with at-risk conditions aged 1 year to under 2 years

Children in an at-risk group (excluding those with asplenia, splenic dysfunction or complement disorder, or who are severely immunocompromised) should receive their 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) booster dose according to the Immunisation schedule p. 1364. Those who present late for vaccination should be immunised according to *Children with unknown or incomplete vaccination histories*. A single dose of the 23-valent pneumococcal polysaccharide vaccine should then be given at 2 years of age, at least 8 weeks after the last dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

Children who are severely immunocompromised, or those with asplenia, splenic dysfunction or complement disorders, should receive their 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) booster dose according to the Immunisation schedule p. 1364. Those who present late for vaccination should be immunised according to *Children with unknown or incomplete vaccination histories*. An additional dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) should be given at least 8 weeks after the booster dose. A single dose of the 23-valent pneumococcal polysaccharide vaccine should then be given at 2 years of age, at least 8 weeks after the last dose of

13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

For further information on vaccination in individuals with asplenia, splenic dysfunction, or complement disorders, see Vaccination, general principles p. 1361.

#### Children diagnosed with at-risk conditions aged 2 years to under 10 years

Children diagnosed or first presenting with an at-risk condition (excluding those severely immunocompromised) who have completed their routine immunisation schedule should receive a single dose of 23-valent pneumococcal polysaccharide vaccine, at least 8 weeks after the last dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

Children diagnosed or first presenting with an at-risk condition (excluding those severely immunocompromised) who are previously unimmunised or partially immunised with the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed), should receive a single dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed), followed by a single dose of the 23-valent pneumococcal polysaccharide vaccine at least 8 weeks later.

For further information on vaccination in individuals with asplenia, splenic dysfunction, or complement disorders, see Vaccination, general principles p. 1361.

Severely immunocompromised children should be given a single dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed), regardless of immunisation status. This should be followed by a single dose of the 23-valent pneumococcal polysaccharide vaccine, at least 8 weeks after the last dose of 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed).

#### Individuals diagnosed with at-risk conditions aged 10 years and over

Individuals diagnosed or first presenting with an at-risk condition (excluding those who are severely immunocompromised) should be given a single dose of the 23-valent pneumococcal polysaccharide vaccine. The 23-valent pneumococcal polysaccharide vaccine is not required for individuals with asplenia, splenic dysfunction or complement disorders if they have already received a dose within the previous 2 years (due to a theoretical risk of pneumococcal serotype-specific hypo-responsiveness with revaccination).

For further information on vaccination in individuals with asplenia, splenic dysfunction, or complement disorders, see Vaccination, general principles p. 1361.

Severely immunocompromised individuals should be given a single dose of the 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed), followed by a single dose of the 23-valent pneumococcal polysaccharide vaccine at least 8 weeks after. The 13-valent pneumococcal polysaccharide conjugate vaccine (adsorbed) or additional 23-valent pneumococcal polysaccharide vaccine are not required if a 23-valent pneumococcal polysaccharide vaccine has already been received within the previous 2 years, due to a theoretical risk of pneumococcal serotype-specific hypo-responsiveness with re-vaccination.

### Revaccination

Revaccination is not recommended for any clinical risk groups or age groups, except for individuals in whom the antibody concentration is likely to decline rapidly (e.g. asplenia, splenic dysfunction, or chronic renal disease), where revaccination is recommended every 5 years.

### Management of cases

For the management of cases, contacts and outbreaks, refer to Chapter 25, Pneumococcal, in *Immunisation against infectious disease* - 'The Green Book' (see *Useful resources*).

## Useful Resources

Recommendations reflect Chapter 25 (for infants born up to and including 31 December 2019), Pneumococcal, in *Immunisation against infectious disease* - 'The Green Book'. Public Health England, January 2018.

[www.gov.uk/government/publications/pneumococcal-the-green-book-chapter-25](http://www.gov.uk/government/publications/pneumococcal-the-green-book-chapter-25)

Recommendations reflect Chapter 25 (for infants born on or after 1 January 2020), Pneumococcal, in *Immunisation against infectious disease* - 'The Green Book'. Public Health England, January 2020.

[www.gov.uk/government/publications/pneumococcal-the-green-book-chapter-25](http://www.gov.uk/government/publications/pneumococcal-the-green-book-chapter-25)

## Poliomyelitis vaccine

### Overview

Two types of poliomyelitis vaccines (containing strains of poliovirus types 1, 2, and 3) are available, inactivated poliomyelitis vaccine (for injection) and live (oral) poliomyelitis vaccine. **Inactivated** poliomyelitis vaccines, only available in combined preparation, is recommended for routine immunisation.

A course of primary immunisation consists of 3 doses of a combined preparation containing inactivated poliomyelitis vaccines, starting at 2 months of age with intervals of 1 month between doses (see Immunisation schedule). A course of 3 doses should also be given to all unimmunised adults; no adult should remain unimmunised against poliomyelitis.

Two booster doses of a preparation containing inactivated poliomyelitis vaccines are recommended, the first before school entry and the second before leaving school (see Immunisation schedule). Further booster doses are only necessary for adults at special risk, such as travellers to endemic areas, or laboratory staff likely to be exposed to the viruses, or healthcare workers in possible contact with cases; booster doses should be given to such individuals every 10 years.

**Live (oral) poliomyelitis vaccine** is no longer available for routine use; its use may be considered during large outbreaks, but advice should be sought from Public Health England. The live (oral) vaccine poses a very rare risk of vaccine-associated paralytic polio because the attenuated strain of the virus can revert to a virulent form. For this reason the live (oral) vaccine must **not** be used for immunosuppressed individuals or their household contacts. The use of inactivated poliomyelitis vaccines removes the risk of vaccine-associated paralytic polio altogether.

### Travel

Unimmunised travellers to areas with a high incidence of poliomyelitis should receive a full 3-dose course of a preparation containing inactivated poliomyelitis vaccines. Those who have not been vaccinated in the last 10 years should receive a booster dose of **adsorbed diphtheria [low dose], tetanus and poliomyelitis (inactivated) vaccine**. Information about countries with a high incidence of poliomyelitis can be obtained from [www.travax.nhs.uk/](http://www.travax.nhs.uk/) or from the National Travel Health Network and Centre ([www.nathnac.org/](http://www.nathnac.org/)).

## Useful Resources

Advice reflects that in the handbook *Immunisation against Infectious Disease* (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates.

Chapters from the handbook (including updates since 2013) are available at:

[www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Rabies vaccine

### Overview

Rabies vaccine p. 1394 contains inactivated rabies virus cultivated in either human diploid cells or purified chick embryo cells; vaccines are used for pre- and post-exposure prophylaxis.

### Pre-exposure prophylaxis

Immunisation should be offered to those at high risk of exposure to rabies— laboratory staff who handle the rabies virus, those working in quarantine stations, animal handlers, veterinary surgeons and field workers who are likely to be bitten by infected wild animals, certain port officials, and bat handlers. Transmission of rabies by humans has not been recorded but it is advised that those caring for patients with the disease should be vaccinated.

Immunisation against rabies is also recommended where there is limited access to prompt medical care for those living in areas where rabies is enzootic, for those travelling to such areas for longer than 1 month, and for those on shorter visits who may be exposed to unusual risk.

Immunisation against rabies is indicated during pregnancy if there is substantial risk of exposure to rabies and rapid access to post-exposure prophylaxis is likely to be limited.

Up-to-date country-by-country information on the incidence of rabies can be obtained from the National Travel Health Network and Centre ([www.nathnac.org/](http://www.nathnac.org/)) and, in Scotland, from Health Protection Scotland ([www.hps.scot.nhs.uk/](http://www.hps.scot.nhs.uk/)).

Immunisation against rabies requires 3 doses of rabies vaccine, with further booster doses for those who remain at frequent risk. To ensure continued protection in persons at high risk (e.g. laboratory workers), the concentration of antirabies antibodies in plasma is used to determine the intervals between doses.

### Post-exposure management

Following potential exposure to rabies, the wound or site of exposure (e.g. mucous membrane) should be cleansed under running water and washed for several minutes with soapy water as soon as possible after exposure. Disinfectant and a simple dressing can be applied, but suturing should be delayed because it may increase the risk of introducing rabies virus into the nerves.

Post-exposure prophylaxis against rabies depends on the level of risk in the country, the nature of exposure, and the individual's immunity. In each case, expert risk assessment and advice on appropriate management should be obtained from the local Public Health England Centre or Public Health England's Virus Reference Department, Colindale (tel. (020) 8200 4400) or the PHE Colindale Duty Doctor (tel. (020) 8200 6868), in Wales from the Public Health Wales local Health Protection Team or Public Health Wales Virus Reference Laboratory (tel. (029) 2074 7747), in Scotland from the local on-call infectious diseases consultant, and in Northern Ireland from the Public Health Agency Duty Room (tel (028) 9055 3997/(028) 9063 2662) or the Regional Virology Service (tel. (028) 9024 0503).

There are no specific contra-indications to the use of rabies vaccine for post-exposure prophylaxis and its use should be considered whenever a patient has been attacked by an animal in a country where rabies is enzootic, even if there is no direct evidence of rabies in the attacking animal. Because of the potential consequences of untreated rabies exposure and because rabies vaccination has not been associated with fetal abnormalities, pregnancy is not

considered a contra-indication to post-exposure prophylaxis.

For post-exposure prophylaxis of *fully immunised* individuals (who have previously received pre-exposure or post-exposure prophylaxis with cell-derived rabies vaccine), 2 doses of cell-derived vaccine are likely to be sufficient; the first dose is given on day 0 and the second dose is given between day 3–7. Rabies immunoglobulin p. 1359 is not necessary in such cases.

Post-exposure treatment for *unimmunised individuals* (or those whose prophylaxis is possibly incomplete) comprises 5 doses of rabies vaccine given over 1 month (on days 0, 3, 7, 14, and the fifth dose is given between day 28–30); also, depending on the level of risk (determined by factors such as the nature of the bite and the country where it was sustained), rabies immunoglobulin is given to unimmunised individuals on day 0 or within 7 days of starting the course of rabies vaccine. The immunisation course can be discontinued if it is proved that the individual was not at risk.

### Useful Resources

Advice reflects that in the handbook *Immunisation against Infectious Disease* (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at:

[www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Rotavirus vaccine

02-Aug-2019

### Overview

Rotavirus vaccine p. 1395 is a live, oral vaccine that protects young children against gastro-enteritis caused by rotavirus infection. The recommended schedule consists of 2 doses, the first at 8 weeks of age, and the second at 12 weeks of age (see *Immunisation schedule* p. 1364). The first dose of rotavirus vaccine must be given between 6 weeks and under 15 weeks of age and the second dose should be given after an interval of at least 4 weeks; the vaccine should not be started in children 15 weeks of age or older. Ideally, the full course should be completed before 16 weeks of age to provide protection before the main burden of disease, and to avoid a temporal association between vaccination and intussusception; the course must be completed before 24 weeks of age.

Children who inadvertently receive the first dose of rotavirus vaccine at 15 weeks of age or older should still receive a second dose after at least 4 weeks, providing that they will still be under 24 weeks of age at the time.

The rotavirus vaccine virus is excreted in the stool and may be transmitted to close contacts; however, vaccination of children with *immunosuppressed* close contacts may protect the contacts from wild-type rotavirus disease and outweigh any risk from transmission of vaccine virus. Carers of a recently vaccinated child should be advised of the need to wash their hands after changing the child's nappies.

### Useful Resources

Recommendations reflect Chapter 27b, *Rotavirus*, in *Immunisation against infectious disease*—‘The Green Book’. Public Health England, August 2015.

[www.gov.uk/government/publications/rotavirus-the-green-book-chapter-27b](http://www.gov.uk/government/publications/rotavirus-the-green-book-chapter-27b)

## Smallpox vaccine

### Overview

Limited supplies of **smallpox vaccine** are held at the Specialist and Reference Microbiology Division, Public Health England Colindale (Tel. (020) 8200 4400) for the exclusive use of workers in laboratories where pox viruses (such as vaccinia) are handled.

If a wider use of the vaccine is being considered, *Guidelines for smallpox response and management in the post-eradication era* should be consulted at [www.gov.uk/phe](http://www.gov.uk/phe).

### Useful Resources

Advice reflects that in the handbook *Immunisation against Infectious Disease* (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at:

[www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Tetanus vaccine

### Overview

**Tetanus vaccine** contains a cell-free purified toxin of *Clostridium tetani* adsorbed on aluminium hydroxide or aluminium phosphate to improve antigenicity.

Primary immunisation for children under 10 years consists of 3 doses of a combined preparation containing adsorbed tetanus vaccine, with an interval of 1 month between doses (see *Routine immunisation schedule*). Following routine childhood vaccination, 2 booster doses of a preparation containing adsorbed tetanus vaccine are recommended, the first before school entry and the second before leaving school.

The recommended schedule of tetanus vaccination not only gives protection against tetanus in childhood but also gives the basic immunity for subsequent booster doses. In most circumstances, a total of 5 doses of tetanus vaccine is considered sufficient for long term protection.

For primary immunisation of adults and children over 10 years previously unimmunised against tetanus, 3 doses of **adsorbed diphtheria [low dose], tetanus and poliomyelitis (inactivated) vaccine** are given with an interval of 1 month between doses (see *Diphtheria-containing vaccines for children over 10 years and adults*).

When an individual presents for a booster dose but has been vaccinated following a tetanus-prone wound, the vaccine preparation administered at the time of injury should be determined. If this is not possible, the booster should still be given to ensure adequate protection against all antigens in the booster vaccine.

Very rarely, tetanus has developed after abdominal surgery; patients awaiting elective surgery should be asked about tetanus immunisation and immunised if necessary.

Parenteral drug abuse is also associated with tetanus; those abusing drugs by injection should be vaccinated if unimmunised—booster doses should be given if there is any doubt about their immunisation status.

All laboratory staff should be offered a primary course if unimmunised.

### Wounds

Wounds are considered to be tetanus-prone if they are sustained more than 6 hours before surgical treatment or at any interval after injury and are puncture-type (particularly if contaminated with soil or manure) or show much devitalised tissue or are septic or are compound fractures or

contain foreign bodies. All wounds should receive thorough cleansing.

- For *clean wounds*: fully immunised individuals (those who have received a total of 5 doses of a tetanus-containing vaccine at appropriate intervals) and those whose primary immunisation is complete (with boosters up to date), do not require tetanus vaccine; individuals whose primary immunisation is incomplete or whose boosters are not up to date require a reinforcing dose of a tetanus-containing vaccine (followed by further doses as required to complete the schedule); non-immunised individuals (or those whose immunisation status is not known or who have been fully immunised but are now immunocompromised) should be given a dose of the appropriate tetanus-containing vaccine immediately (followed by completion of the full course of the vaccine if records confirm the need)
- For *tetanus-prone wounds*: management is as for clean wounds with the addition of a dose of tetanus immunoglobulin given at a different site; in fully immunised individuals and those whose primary immunisation is complete (with boosters up to date) the immunoglobulin is needed only if the risk of infection is especially high (e.g. contamination with manure). Antibacterial prophylaxis (with benzylpenicillin, co-amoxiclav, or metronidazole) may also be required for tetanus-prone wounds.

### Useful Resources

Advice reflects that in the handbook Immunisation against Infectious Disease (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at:

[www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Tick-borne encephalitis vaccine

### Overview

Tick-borne encephalitis vaccine, inactivated p. 1396 contains inactivated tick-borne encephalitis virus cultivated in chick embryo cells. It is recommended for immunisation of those working in, or visiting, high-risk areas (see International Travel). Those working, walking or camping in warm forested areas of Central and Eastern Europe, Scandinavia, Northern and Eastern China, and some parts of Japan, particularly from April to November when ticks are most prevalent, are at greatest risk of tick-borne encephalitis. For full protection, 3 doses of the vaccine are required; booster doses are required every 3–5 years for those still at risk. Ideally, immunisation should be completed at least one month before travel.

### Useful Resources

Advice reflects that in the handbook Immunisation against Infectious Disease (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at:

[www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Typhoid vaccine

29-Jul-2019

### Overview

Typhoid vaccine p. 1387 is available as a Vi capsular polysaccharide (from *Salmonella typhi*) vaccine for injection and a live, attenuated *Salmonella typhi* vaccine for oral use.

Typhoid immunisation is advised for:

- travellers to areas where typhoid is endemic and whose planned activities put them at higher risk (country-by-country information is available from the National Travel Health Network and Centre);
- travellers to endemic areas where frequent or prolonged exposure to poor sanitation and poor food hygiene is likely;
- laboratory personnel who, in the course of their work, may be exposed to *Salmonella typhi*.

Capsular polysaccharide typhoid vaccine is given as a single dose, usually by intramuscular injection. Children under 2 years [unlicensed] may respond suboptimally to the vaccine, but children aged between 1–2 years should be immunised if the risk of typhoid fever is considered high (immunisation is not recommended for infants under 12 months). A single booster dose should be given at 3-year intervals in adults and children over 2 years of age who remain at risk from typhoid fever.

Oral typhoid vaccine is a live, attenuated vaccine contained in an enteric-coated capsule recommended in individuals aged 5 years and over. One capsule taken on alternate days for a total of 3 doses, provides protection 7–10 days after the last dose. If travelling from a non-endemic area to an area where typhoid is endemic, a booster consisting of 3 doses is recommended every 3 years. The oral typhoid vaccine should be avoided in immunosuppressed and HIV-infected individuals.

Prevention of typhoid primarily depends on improving sanitation and water supplies in endemic areas and on scrupulous personal, food and water hygiene.

All suspected cases of typhoid fever must be notified to the local health protection unit. Where there is a community level outbreak, specialist advice should be sought from Public Health England (tel. 020 8200 4400) or, in Scotland, Health Protection Scotland (tel. 0140 300 1191).

### Useful Resources

Recommendations reflect Chapter 33, Typhoid, in *Immunisation against infectious disease* – ‘The Green Book’. Public Health England, May 2019.

## Varicella-zoster vaccine

### Overview

The live varicella-zoster vaccine p. 1396, *Varilrix*® and *Varivax*®, are licensed for immunisation against varicella (chickenpox) in seronegative individuals. They are not recommended for routine use in children, but can be given to seronegative healthy children over 1 year who come into close contact with individuals at high risk of severe varicella infections. The Department of Health recommends these vaccines for seronegative healthcare workers who come into direct contact with patients. Those with a history of chickenpox or shingles can be considered immune, but healthcare workers with a negative or uncertain history should be tested.

Rarely, the varicella-zoster vaccine virus has been transmitted from the vaccinated individual to close contacts.

Therefore, contact with the following should be avoided if a vaccine-related cutaneous rash develops within 4–6 weeks of the first or second dose:

- varicella-susceptible pregnant women;
- individuals at high risk of severe varicella, including those with immunodeficiency or those receiving immunosuppressive therapy;

Healthcare workers who develop a generalised papular or vesicular rash on vaccination should avoid contact with patients until the lesions have crusted. Those who develop a localised rash after vaccination should cover the lesions and be allowed to continue working unless in contact with patients at high risk of severe varicella.

#### National shingles immunisation programme

The aim of the national shingles immunisation programme is to lower the incidence and severity of shingles in older people using the high potency, live varicella-zoster vaccine, *Zostavax*®. It is recommended that vaccination is routinely offered to people aged 70 years. A catch-up programme has also been rolled out (since 2013) in those aged 70–79 years, as this age group is likely to have the greatest benefit from vaccination.

In the 2016–2017 immunisation programme, varicella-zoster vaccine is recommended in adults who were 70 or 78 years of age on 1st September 2016. Patients who were eligible for vaccination in the first 3 years of the programme but have not been vaccinated against *herpes zoster* remain eligible until their 80th birthday; this includes patients who were aged 71–73 or 79 on 1st September 2016. Patients who have reached 80 years are no longer eligible for vaccination. A single dose of *Zostavax*® is likely to give protection for at least 7 years, but the need for, or timing of, a booster dose has not been established. Although *Zostavax*® is not recommended for the treatment of shingles or post-herpetic neuralgia, it can be given to those with a previous history of shingles; ideally the vaccine should be delayed until systemic antiviral therapy has been completed.

Varicella-zoster immunoglobulin p. 1360 is used to protect susceptible individuals at increased risk of severe varicella infection (see Immunoglobulins p. 1354).

#### Useful Resources

Advice reflects that in the handbook *Immunisation against Infectious Disease* (2013), which in turn reflects the guidance of the Joint Committee on Vaccination and Immunisation (JCVI). The advice also incorporates changes announced by the Chief Medical Officer and Health Department Updates. Chapters from the handbook (including updates since 2013) are available at:

[www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book](http://www.gov.uk/government/collections/immunisation-against-infectious-disease-the-green-book)

## Yellow fever vaccine

23-Jan-2020

### MHRA/CHM advice: stronger precautions in people with weakened immunity and in those aged 60 years or older

The MHRA and CHM have released important safety information regarding the use of the live yellow fever vaccine in those with weakened immunity, and in those aged 60 years or older. For further information, see *Important safety information* for yellow fever vaccine, live p. 1397.

#### Overview

Yellow fever vaccine, live is an attenuated preparation of yellow fever virus grown in chick eggs. Yellow fever vaccine, live is recommended for:

- laboratory workers handling infected material;

- individuals aged 9 months or older who are travelling to, or living in areas or countries with a risk of yellow fever transmission;
- individuals aged 9 months or older who are travelling to, or living in countries that require an International Certificate of Vaccination or Prophylaxis (ICVP) for entry (information about countries at risk of yellow fever is available from the National Travel Health Network and Centre).

Children aged under 9 months are at higher risk of vaccine-associated encephalitis, with the risk being inversely proportional to age. Children aged under 6 months should **not** be vaccinated. Children aged 6–9 months should only be vaccinated following a detailed risk assessment, and vaccination is generally only recommended if the risk of yellow fever transmission is high (such as during epidemics/outbreaks). If travel is unavoidable, seek expert advice on whether to vaccinate.

Yellow fever vaccine, live should be avoided in individuals with primary or acquired immunodeficiency due to a congenital condition or disease process, and in individuals who are immunosuppressed as a result of treatment.

If the yellow fever risk is unavoidable in HIV-infected individuals, consult the British HIV Association ([bhiva.org/vaccination-guidelines](http://bhiva.org/vaccination-guidelines)) or other specialist advice.

For additional guidance on the suitability of immunisation against yellow fever, standardised checklists are available from: National Travel Health Network and Centre (see *Useful resources*) or Health Protection Scotland ([www.Travax.nhs.uk](http://www.Travax.nhs.uk)).

A single-dose of yellow fever vaccine, live confers life-long immunity against yellow fever disease. Immunisation should be performed at least 10 days before travelling to an endemic area to allow protective immunity to develop and for the ICVP (if required) to become valid.

Reinforcing immunisation is not needed, except for a small subset of individuals at continued risk who may not have developed long-term protection from their initial yellow fever vaccine, live vaccination—seek expert advice.

All suspected cases of yellow fever must be notified to the local health protection unit. Where there is a community level outbreak, specialist advice should be sought from Public Health England (tel. 020 8200 4400) or, in Scotland, Health Protection Scotland (tel. 0140 300 1191).

#### Useful Resources

Recommendations reflect Chapter 35, Yellow fever, in *Immunisation against infectious disease*—‘The Green Book’. Public Health England, January 2020.

National Travel Health Network and Centre [travelhealthpro.org.uk](http://travelhealthpro.org.uk)

## Vaccines for travel

### Immunisation for travel

See advice on Malaria, treatment p. 649.

No special immunisation is required for travellers to the United States, Europe, Australia, or New Zealand, although all travellers should have immunity to tetanus and poliomyelitis (and childhood immunisations should be up to date); Tick-borne encephalitis vaccine is recommended for immunisation of those working in, or visiting, high-risk areas. Certain special precautions are required in non-European areas surrounding the Mediterranean, in Africa, the Middle East, Asia, and South America.

Travellers to areas that have a high incidence of **poliomyelitis** or **tuberculosis** should be immunised with the appropriate vaccine; in the case of poliomyelitis previously immunised travellers may be given a booster dose

of a preparation containing inactivated poliomyelitis vaccine. For guidance on immunisation against tuberculosis, see *Travel* in *Bacillus Calmette-Guérin* vaccine p. 1365.

For guidance on immunisation against **yellow fever**, see *Yellow fever* vaccine p. 1378.

Immunisation against **meningococcal meningitis** is recommended for a number of areas of the world.

Protection against **hepatitis A** is recommended for travellers to high-risk areas outside Northern and Western Europe, North America, Japan, Australia and New Zealand. Hepatitis A vaccine is recommended and it is likely to be effective even if given shortly before departure; Public Health England recommends travellers can be vaccinated with hepatitis A vaccine up to the day of travel, and no longer recommends the use of normal immunoglobulin for travel prophylaxis. Special care must also be taken with food hygiene.

**Hepatitis B** vaccine is recommended for those travelling to areas of high or intermediate prevalence who intend to seek employment as healthcare workers or who plan to remain there for lengthy periods and who may therefore be at increased risk of acquiring infection as the result of medical or dental procedures carried out in those countries. Short-term tourists or business travellers are not generally at increased risk of infection but may put themselves at risk by their sexual behaviour when abroad.

Prophylactic immunisation against **rabies** is recommended for travellers to enzootic areas on long journeys or to areas out of reach of immediate medical attention.

Travellers who have not had a **tetanus** booster in the last 10 years and are visiting areas where medical attention may not be accessible should receive a booster dose of adsorbed diphtheria [low dose], tetanus and poliomyelitis (inactivated) vaccine, even if they have received 5 doses of a tetanus-containing vaccine previously.

**Typhoid vaccine** is indicated for travellers to countries where typhoid is endemic, but the vaccine is no substitute for personal precautions.

There is no requirement for cholera vaccination as a condition for entry into any country, but **oral cholera vaccine** should be considered for backpackers and those travelling to situations where the risk is greatest (e.g. refugee camps). Regardless of vaccination, travellers to areas where cholera is endemic should take special care with food hygiene.

Advice on **diphtheria**, on **Japanese encephalitis**, and on **tick-borne encephalitis** is included in *Health Information for Overseas Travel*.

### Food hygiene

In areas where sanitation is poor, good food hygiene is important to help prevent hepatitis A, typhoid, cholera, and other diarrhoeal diseases (including travellers' diarrhoea). Food should be freshly prepared and hot, and uncooked vegetables (including green salads) should be avoided; only fruits which can be peeled should be eaten. Only suitable bottled water, or tap water that has been boiled or treated with sterilising tablets, should be used for drinking.

### Information on health advice for travellers

Health professionals and travellers can find the latest information on immunisation requirements and precautions for avoiding disease while travelling from: [nathnac.net](http://nathnac.net).

The handbook, *Health Information for Overseas Travel* (2010), which draws together essential information for *healthcare professionals* regarding health advice for travellers, can also be obtained from this website.

Immunisation requirements change from time to time, and information on the current requirements for any particular country may be obtained from the embassy or legation of the appropriate country or from:

## VACCINES

## Vaccines

### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE (UPDATED NOVEMBER 2017)

Following reports of death in neonates who received a live attenuated vaccine after exposure to a tumor necrosis factor alpha (TNF- $\alpha$ ) inhibitor in utero, the MHRA has issued the following advice:

- any infant who has been exposed to immunosuppressive treatment from the mother either in utero during pregnancy or via breastfeeding should have any live attenuated vaccination deferred for as long as a postnatal influence on the immune status of the infant remains possible;
- in the case of infants who have been exposed to TNF- $\alpha$  inhibitors and other immunosuppressive biological medicines in utero, PHE advise that any live attenuated vaccination (e.g. BCG vaccine) should be deferred until the infant is age 6 months;
- PHE advise if there is any doubt as to whether an infant due to receive a live attenuated vaccine may be immunosuppressed due to the mother's therapy, including exposure through breast-feeding, specialist advice should be sought.

### • CONTRA-INDICATIONS

#### CONTRA-INDICATIONS, FURTHER INFORMATION

- ▶ Impaired immune response Public Health England advises severely immunosuppressed patients should not be given live vaccines (including those with severe primary immunodeficiency).

- **CAUTIONS** Acute illness · minor illnesses

**CAUTIONS, FURTHER INFORMATION** Vaccination may be postponed if the individual is suffering from an acute illness; however, it is not necessary to postpone immunisation in patients with minor illnesses without fever or systemic upset.

- ▶ Impaired immune response and drugs affecting immune response Immune response to vaccines may be reduced in immunosuppressed patients and there is also a risk of generalised infection with live vaccines.

Specialist advice should be sought for those being treated with high doses of corticosteroids (dose equivalents of prednisolone: **adults**, at least 40 mg daily for more than 1 week; **children**, 2 mg/kg (or more than 40 mg) daily for at least 1 week or 1 mg/kg daily for 1 month), or other immunosuppressive drugs, and those being treated for malignant conditions with chemotherapy or generalised radiotherapy. Live vaccines should be postponed until at least 3 months after stopping high-dose systemic corticosteroids and at least 6 months after stopping other immunosuppressive drugs or generalised radiotherapy (at least 12 months after discontinuing immunosuppressants following bone-marrow transplantation).

The Royal College of Paediatrics and Child Health has produced a statement, *Immunisation of the Immunocompromised Child* (2002)(available at [www.rcpch.ac.uk](http://www.rcpch.ac.uk)).

- ▶ Predisposition to neurological problems When there is a personal or family history of febrile convulsions, there is an increased risk of these occurring during fever from any cause including immunisation, but this is not a contra-indication to immunisation. In children who have had a seizure associated with fever without neurological deterioration, immunisation is *recommended*; advice on the *management of fever* (see Post-immunisation Pyrexia in Infants) should be given before immunisation. When a child has had a convulsion not associated with fever, and the neurological condition is not deteriorating, immunisation is *recommended*.

Children with stable neurological disorders (e.g. spina bifida, congenital brain abnormality, and peri-natal hypoxic-ischaemic encephalopathy) should be immunised according to the recommended schedule.

When there is a *still evolving neurological problem*, including poorly controlled epilepsy, immunisation should be deferred and the child referred to a specialist. Immunisation is recommended if a cause for the neurological disorder is identified. If a cause is not identified, immunisation should be deferred until the condition is stable.

- **SIDE-EFFECTS**

- ▶ **Common or very common** Appetite decreased · arthralgia (frequency not known in elderly) · diarrhoea (uncommon in elderly) · dizziness (uncommon in elderly) · fatigue · fever · headache · irritability · lymphadenopathy (uncommon in elderly) · malaise · myalgia · nausea (uncommon in elderly) · skin reactions (rare in elderly) · vomiting (uncommon in elderly)
- ▶ **Uncommon** Hypersensitivity (frequency not known in elderly)

- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a confirmed anaphylactic reaction to a preceding dose of a vaccine containing the same antigens or vaccine component (such as antibacterials in viral vaccines).

- **PREGNANCY** Live vaccines should not be administered routinely to pregnant women because of the theoretical risk of fetal infection but where there is a significant risk of exposure to disease, the need for vaccination usually outweighs any possible risk to the fetus. Termination of pregnancy following inadvertent immunisation is not

recommended. There is no evidence of risk from vaccinating pregnant women with inactivated viral or bacterial vaccines or toxoids.

- **BREAST FEEDING** Although there is a theoretical risk of live vaccine being present in breast milk, vaccination is not contra-indicated for women who are breast-feeding when there is significant risk of exposure to disease. There is no evidence of risk from vaccinating women who are breast-feeding, with inactivated viral or bacterial vaccines or toxoids.

- **DIRECTIONS FOR ADMINISTRATION** If alcohol or disinfectant is used for cleansing the skin it should be allowed to evaporate before vaccination to prevent possible inactivation of live vaccines.

When 2 or more live vaccines are required (and are not available as a combined preparation), they can be administered at any time before or after each other at different sites, preferably in a different limb; if more than one injection is to be given in the same limb, they should be administered at least 2.5 cm apart. See also *Bacillus Calmette-Guérin vaccine p. 1382*, and *Cautions*, further information in *measles, mumps and rubella vaccine*, live p. 1393.

Vaccines should not be given intravenously. Most vaccines are given by the intramuscular route, although some are given by either the intradermal, deep subcutaneous, or oral route. The intramuscular route should not be used in patients with **bleeding disorders** such as haemophilia or thrombocytopenia, vaccines usually given by the intramuscular route should be given by deep subcutaneous injection instead.

The Department of Health has advised *against the use of jet guns* for vaccination owing to the risk of transmitting blood borne infections, such as HIV.

Particular attention must be paid to instructions on the use of diluents. Vaccines which are liquid suspensions or are reconstituted before use should be adequately mixed to ensure uniformity of the material to be injected.

- **HANDLING AND STORAGE** Care must be taken to store all vaccines under the conditions recommended in the product literature, otherwise the preparation may become ineffective. **Refrigerated storage** is usually necessary; many vaccines need to be stored at 2–8°C and not allowed to freeze. Vaccines should be protected from light. Reconstituted vaccines and opened multidose vials must be used within the period recommended in the product literature. Unused vaccines should be disposed of by incineration at a registered disposal contractor.

## VACCINES > BACTERIAL AND VIRAL VACCINES, COMBINED

F 1379

### Diphtheria with tetanus and poliomyelitis vaccine

- **INDICATIONS AND DOSE**

#### Primary immunisation

- ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 10–17 years: 0.5 mL every month for 3 doses
- ▶ Adult: 0.5 mL every month for 3 doses

#### Booster doses

- ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 10–17 years: 0.5 mL for 1 dose, first booster dose—should be given 3 years after primary course (this interval can be reduced to a minimum of 1 year if the primary course was delayed), then 0.5 mL for 1 dose, second booster dose—should be given 10 years after first booster dose (this interval can be reduced to a minimum of 5 years if previous doses were delayed),

second booster dose may also be used as first booster dose in those over 10 years who have received only 3 previous doses of a diphtheria-containing vaccine

- ▶ **Adult:** 0.5 mL for 1 dose, first booster dose—should be given 3 years after primary course (this interval can be reduced to a minimum of 1 year if the primary course was delayed), then 0.5 mL for 1 dose, second booster dose—should be given 10 years after first booster dose (this interval can be reduced to a minimum of 5 years if previous doses were delayed), second booster dose may also be used as first booster dose in those over 10 years who have received only 3 previous doses of a diphtheria-containing vaccine

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Vertigo
- ▶ **Frequency not known** Abdominal pain · asthenia · chills · face oedema · influenza like illness · nerve disorders · pallor · seizure · shock · syncope · vaccination reactions

● **PRESCRIBING AND DISPENSING INFORMATION** Available as part of childhood schedule from health organisations or ImmForm.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Suspension for injection

EXCIPIENTS: May contain Neomycin, polymyxin b, streptomycin

- ▶ **Revaxis** (Sanofi Pasteur)  
Revaxis vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [Pom] £7.80 DT = £7.80

1379

## Diphtheria with tetanus, pertussis and poliomyelitis vaccine

#### ● INDICATIONS AND DOSE

##### First booster dose

- ▶ **BY INTRAMUSCULAR INJECTION**
- ▶ Child 3–9 years: 0.5 mL, to be given 3 years after primary immunisation

##### Vaccination of pregnant women against pertussis (using low dose vaccines)

- ▶ **BY INTRAMUSCULAR INJECTION**
- ▶ Females of childbearing potential: 0.5 mL for 1 dose

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Abdominal pain
- ▶ **Uncommon** Apathy (in children) · asthma · chills · drowsiness (very common in children) · dry throat (in children) · extensive swelling of vaccinated limb (very common in children) · oral herpes · pain · paraesthesia · sleep disorder (in children)
- ▶ **Frequency not known** Angioedema · asthenia · hypotonic-hyporesponsiveness episode · seizure

**SIDE-EFFECTS, FURTHER INFORMATION** The incidence of local and systemic reactions is lower with acellular pertussis vaccines than with whole-cell pertussis vaccines used previously.

Compared with primary vaccination, injection site reactions are more common with booster doses of vaccines containing acellular pertussis.

Public Health England has advised (2016) that the vaccine should not be withheld from children with a history to a preceding dose of: fever, irrespective of severity; hypotonic-hyporesponsive episodes; persistent crying or screaming for more than 3 hours; severe local reaction, irrespective of extent.

● **PREGNANCY** Contra-indicated in pregnant women with a history of encephalopathy of unknown origin within 7 days of previous immunisation with a pertussis-containing vaccine. Contra-indicated in pregnant women with a history of transient thrombocytopenia or neurological

complications following previous immunisation against diphtheria or tetanus.

● **PRESCRIBING AND DISPENSING INFORMATION** Pregnant women should be vaccinated using low dose vaccines (brands may include *Boostrix-IPV*® or *Repevax*®).

Available as part of childhood immunisation schedule from health organisations or ImmForm.

Available for vaccination of pregnant women from ImmForm.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Suspension for injection

EXCIPIENTS: May contain Neomycin, polymyxin b, streptomycin

- ▶ **Boostrix-IPV** (GlaxoSmithKline UK Ltd)  
Boostrix-IPV suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [Pom] £22.74 DT = £20.00
- ▶ **Repevax** (Sanofi Pasteur)  
Repevax vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [Pom] £20.00 DT = £20.00

12-Oct-2017

## Diphtheria with tetanus, pertussis, hepatitis B, poliomyelitis and haemophilus influenzae type b vaccine

#### ● INDICATIONS AND DOSE

##### Primary immunisation (first dose)

- ▶ **BY DEEP INTRAMUSCULAR INJECTION**
- ▶ Child 2 months: 0.5 mL for 1 dose

##### Primary immunisation (second dose)

- ▶ **BY DEEP INTRAMUSCULAR INJECTION**
- ▶ Child 3 months: 0.5 mL for 1 dose, preferably administer at a different injection site to that of first dose

##### Primary immunisation (third dose)

- ▶ **BY DEEP INTRAMUSCULAR INJECTION**
- ▶ Child 4 months: 0.5 mL for 1 dose, preferably administer at a different injection site to that of second dose

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Anxiety · crying abnormal
- ▶ **Uncommon** Cough · drowsiness · extensive swelling of vaccinated limb · increased risk of infection
- ▶ **Rare or very rare** Angioedema · apnoea · hypotonic-hyporesponsiveness episode · seizure · swelling · thrombocytopenia

● **PRESCRIBING AND DISPENSING INFORMATION** Available as part of childhood schedule from health organisations or ImmForm.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder and suspension for suspension for injection

EXCIPIENTS: May contain Neomycin, polymyxin b

- ▶ **Infanrix Hexa** (GlaxoSmithKline UK Ltd)  
Infanrix Hexa vaccine powder and suspension for suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [Pom] S

1379

## Diphtheria with tetanus, pertussis, poliomyelitis and haemophilus influenzae type b vaccine

#### ● INDICATIONS AND DOSE

##### Primary immunisation

- ▶ **BY INTRAMUSCULAR INJECTION**
- ▶ Child 2 months–9 years: 0.5 mL every month for 3 doses

- **UNLICENSED USE** *Infanrix-IPV+ Hib*® not licensed for use in children over 36 months; *Pediacel*® not licensed in children over 4 years. However, the Department of Health recommends that these be used for children up to 10 years.

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Crying abnormal · drowsiness · restlessness
- ▶ **Uncommon** Cough · extensive swelling of vaccinated limb · increased risk of infection · rhinorrhoea
- ▶ **Frequency not known** Angioedema · apnoea · hypotonic-hyporesponsiveness episode · seizure

**SIDE-EFFECTS, FURTHER INFORMATION** The incidence of local and systemic reactions is lower with acellular pertussis vaccines than with whole-cell pertussis vaccines used previously.

Compared with primary vaccination, injection site reactions are more common with booster doses of vaccines containing acellular pertussis.

Public Health England has advised (2016) that the vaccine should not be withheld from children with a history to a preceding dose of: fever, irrespective of severity; hypotonic-hyporesponsive episodes; persistent crying or screaming for more than 3 hours; severe local reaction, irrespective of extent.

- **PRESCRIBING AND DISPENSING INFORMATION** Available as part of childhood schedule from health organisations or ImmForm.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Powder and suspension for suspension for injection**

- ▶ **Infanrix-IPV + Hib** (GlaxoSmithKline UK Ltd)

Infanrix-IPV + Hib vaccine powder and suspension for suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £27.86

##### **Immunisation against tuberculosis**

- ▶ **BY INTRADERMAL INJECTION**
- ▶ **Child 1-11 months:** 0.05 mL, to be injected at insertion of deltoid muscle onto humerus (keloid formation more likely with sites higher on arm); tip of shoulder should be **avoided**
- ▶ **Child 1-17 years:** 0.1 mL, to be injected at insertion of deltoid muscle onto humerus (keloid formation more likely with sites higher on arm); tip of shoulder should be **avoided**
- ▶ **Adult:** 0.1 mL, to be injected at insertion of deltoid muscle onto humerus (keloid formation more likely with sites higher on arm); tip of shoulder should be **avoided**

- **CONTRA-INDICATIONS** Children less than 2 years of age in household contact with known or suspected case of active tuberculosis (in children) · generalised septic skin conditions

#### **CONTRA-INDICATIONS, FURTHER INFORMATION**

Manufacturer advises using a lesion-free site to administer BCG vaccine to patients with eczema.

- **CAUTIONS** When BCG is given to infants, there is no need to delay routine primary immunisations. No further vaccination should be given in the arm used for BCG vaccination for at least 3 months because of the risk of regional lymphadenitis.

- **INTERACTIONS** → Appendix 1: live vaccines

#### ● SIDE-EFFECTS

- ▶ **Uncommon** Lymphadenitis suppurative
- ▶ **Rare or very rare** Osteitis · osteomyelitis
- ▶ **Frequency not known** Seizure · syncope

- **PRE-TREATMENT SCREENING** Apart from children under 6 years, any person being considered for BCG immunisation must first be given a skin test for hypersensitivity to tuberculinoprotein (see tuberculin purified protein derivative p. 1361). A skin test is not necessary for a child under 6 years provided that the child has not stayed for longer than 3 months in a country with an incidence of tuberculosis greater than 40 per 100 000, the child has not had contact with a person with tuberculosis, and there is no family history of tuberculosis within the last 5 years.

#### ● DIRECTIONS FOR ADMINISTRATION

Intradermal injection technique Skin is stretched between thumb and forefinger and needle (size 25G or 26G) inserted (bevel upwards) for about 3 mm into superficial layers of dermis (almost parallel with surface). Needle should be short with short bevel (can usually be seen through epidermis during insertion). Tense raised blanched bleb showing tips of hair follicles is sign of correct injection; 7 mm bleb = 0.1 mL injection, 3 mm bleb = 0.05 mL injection; if considerable resistance not felt, needle too deep and should be removed and reinserted before giving more vaccine.

- **PRESCRIBING AND DISPENSING INFORMATION** Available from health organisations or direct from ImmForm [www.immform.dh.gov.uk](http://www.immform.dh.gov.uk) (SSI brand, multidose vial with diluent).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for injection

- ▶ **Bacillus calmette-guérin vaccine (Non-proprietary)**  
BCG Vaccine AJV powder for suspension for injection 1ml vials | 10 vial [PoM] [S]

#### Powder and solvent for suspension for injection

- ▶ **InterVax BCG** (InterVax Ltd)  
InterVax BCG vaccine powder and solvent for suspension for injection ampoules | 20 ampoule [PoM] [S]

F 1379

## Cholera vaccine

### • INDICATIONS AND DOSE

#### Immunisation against cholera (for travellers to endemic or epidemic areas on the basis of current recommendations)

- ▶ **BY MOUTH**
- ▶ Child 2-5 years: 1 dose every 1-6 weeks for 3 doses, if more than 6 weeks have elapsed between doses, the primary course should be restarted, immunisation should be completed at least one week before potential exposure
- ▶ Child 6-17 years: 1 dose every 1-6 weeks for 2 doses, if more than 6 weeks have elapsed between doses, the primary course should be restarted, immunisation should be completed at least one week before potential exposure
- ▶ Adult: 1 dose every 1-6 weeks for 2 doses, if more than 6 weeks have elapsed between doses, the primary course should be restarted, immunisation should be completed at least one week before potential exposure

#### Booster

- ▶ **BY MOUTH**
- ▶ Child 2-5 years: A single booster dose can be given within 6 months after primary course, if more than 6 months have elapsed since the last vaccination, the primary course should be repeated
- ▶ Child 6-17 years: A single booster dose can be given within 2 years after primary course, if more than 2 years have elapsed since the last vaccination, the primary course should be repeated
- ▶ Adult: A single booster dose can be given within 2 years after primary course, if more than 2 years have elapsed since the last vaccination, the primary course should be repeated

- **CONTRA-INDICATIONS** Acute gastro-intestinal illness

- **INTERACTIONS** → Appendix 1: cholera vaccine

### • SIDE-EFFECTS

- ▶ **Uncommon** Gastrointestinal discomfort · gastrointestinal disorders
- ▶ **Rare or very rare** Chills · cough · dehydration · drowsiness · hyperhidrosis · increased risk of infection · insomnia · pulmonary reaction · syncope · taste altered · throat pain
- ▶ **Frequency not known** Angioedema · asthenia · dyspnoea · hypertension · influenza like illness · lymphadenitis · pain · paraesthesia · sputum increased

### • DIRECTIONS FOR ADMINISTRATION

- ▶ In children Dissolve effervescent sodium bicarbonate granules in a glassful of water or chlorinated water (approximately 150 mL). For children over 6 years, add vaccine suspension to make one dose. For child 2-5 years, discard half (approximately 75 mL) of the solution, then add vaccine suspension to make one dose. Drink within 2 hours. Food, drink, and other oral medicines should be avoided for 1 hour before and after vaccination.
- ▶ In adults Dissolve effervescent sodium bicarbonate granules in a glassful of water or chlorinated water (approximately 150 mL). Add vaccine suspension to make one dose. Drink within 2 hours. Food, drink, and other oral

medicines should be avoided for 1 hour before and after vaccination.

- **PATIENT AND CARER ADVICE** Counselling on administration advised. Immunisation with cholera vaccine does not provide complete protection and all travellers to a country where cholera exists should be warned that scrupulous attention to food, water, and personal hygiene is **essential**.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Oral suspension

- ▶ **Dukoral** (Valneva UK Ltd)  
Dukoral cholera vaccine oral suspension | 2 dose [PoM] £26.35 DT = £26.35

F 1379

## Haemophilus influenzae type b with meningococcal group C vaccine

### • INDICATIONS AND DOSE

#### Booster dose (for infants who have received primary immunisation with a vaccine containing *Haemophilus influenzae* type b component) and primary immunisation against *Neisseria meningitidis*

- ▶ **BY INTRAMUSCULAR INJECTION**
- ▶ Child 12-13 months: 0.5 mL for 1 dose

#### Immunisation against *Neisseria meningitidis* in an unimmunised patient

- ▶ **BY INTRAMUSCULAR INJECTION**
- ▶ Child 1-9 years: 0.5 mL for 1 dose

#### Booster dose (for children who have not been immunised against *Haemophilus influenzae* type b) | Booster dose after recovery from *Haemophilus influenzae* type b disease (for index cases previously vaccinated, with low Hib antibody concentration or if it is not possible to measure antibody concentration)

- ▶ **BY INTRAMUSCULAR INJECTION**
- ▶ Child 1-9 years: 0.5 mL for 1 dose

#### Booster dose after recovery from *Haemophilus influenzae* type b disease (for fully vaccinated index cases with asplenia or splenic dysfunction, if previous dose received over 1 year ago)

- ▶ **BY INTRAMUSCULAR INJECTION**
- ▶ Child 1-17 years: 0.5 mL for 1 dose
- ▶ Adult: 0.5 mL for 1 dose

#### Booster dose (for patients diagnosed with asplenia, splenic dysfunction or complement deficiency at under 2 years of age)

- ▶ **BY INTRAMUSCULAR INJECTION**
- ▶ Child 2-17 years: 0.5 mL for 1 dose, this booster dose should be given after the second birthday, this is the second dose of haemophilus influenzae type B vaccine combined with meningococcal group C conjugate vaccine (the first dose is given during the routine immunisation schedule)

#### Booster dose (for patients diagnosed with asplenia, splenic dysfunction or complement deficiency at over 2 years of age)

- ▶ **BY INTRAMUSCULAR INJECTION**
- ▶ Child 2-17 years: 0.5 mL for 1 dose, this booster dose should be followed 2 months later by one dose of meningococcal A, C, W135, and Y conjugate vaccine (in patients from 11 years of age, this interval can be reduced to one month)
- ▶ Adult: 0.5 mL for 1 dose, this booster dose should be followed 1 month later by one dose of meningococcal A, C, W135, and Y conjugate vaccine

- **UNLICENSED USE** Not licensed for use in patients over 2 years.

### ● SIDE-EFFECTS

- ▶ **Common or very common** Drowsiness
- ▶ **Uncommon** Crying
- ▶ **Rare or very rare** Abdominal pain · insomnia
- ▶ **Frequency not known** Febrile seizure · meningism (but no evidence that vaccine causes meningococcal C meningitis) · muscle tone decreased

- **PRESCRIBING AND DISPENSING INFORMATION** Available as part of the childhood immunisation schedule from ImmForm.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Powder and solvent for solution for injection**

- ▶ **Menitorix** (GlaxoSmithKline UK Ltd)

Menitorix vaccine powder and solvent for solution for injection 0.5ml vials | 1 vial (PoM) £37.76 DT = £37.76

F 1379

## Meningococcal group B vaccine (rDNA, component, adsorbed)

19-Oct-2017

### ● INDICATIONS AND DOSE

#### **BEXSERO®**

#### **Immunisation against *Neisseria meningitidis*, primary immunisation**

- ▶ **BY DEEP INTRAMUSCULAR INJECTION**
- ▶ **Child 2 months:** 0.5 mL for 1 dose, injected preferably into deltoid region (or anterolateral thigh in infants), for information about the use of paracetamol for prophylaxis of post-immunisation pyrexia, see paracetamol p. 465.
- ▶ **Child 4 months:** 0.5 mL for 1 dose, injected preferably into deltoid region (or anterolateral thigh in infants), for information about the use of paracetamol for prophylaxis of post-immunisation pyrexia, see paracetamol p. 465.

#### **Immunisation against *Neisseria meningitidis*, primary immunisation booster dose**

- ▶ **BY DEEP INTRAMUSCULAR INJECTION**
- ▶ **Child 12–23 months:** 0.5 mL for 1 dose, injected preferably into deltoid region (or anterolateral thigh in infants)

#### **Immunisation against *Neisseria meningitidis*, primary immunisation (in unimmunised patients)**

- ▶ **BY DEEP INTRAMUSCULAR INJECTION**
- ▶ **Child 6–11 months:** 0.5 mL for 2 doses, separated by an interval of at least 2 months; booster dose of 0.5 mL given between 1–2 years of age and at least 2 months after completion of primary immunisation, injected preferably into deltoid region (or anterolateral thigh in infants)
- ▶ **Child 12–23 months:** 0.5 mL for 2 doses, separated by an interval of at least 2 months; booster dose of 0.5 mL given 12–24 months after completion of primary immunisation, injected preferably into deltoid region (or anterolateral thigh in infants)
- ▶ **Child 2–10 years:** 0.5 mL for 2 doses, separated by an interval of at least 2 months. Injected preferably into deltoid region (or anterolateral thigh in infants)
- ▶ **Child 11–17 years:** 0.5 mL for 2 doses, separated by an interval of at least 1 month. Injected preferably into deltoid region
- ▶ **Adult:** 0.5 mL for 2 doses, separated by an interval of at least 1 month. Injected preferably into deltoid region

### TRUMENBA®

#### **Immunisation against *Neisseria meningitidis*, primary immunisation**

- ▶ **BY INTRAMUSCULAR INJECTION**
- ▶ **Child 10–17 years:** 0.5 mL for 2 doses, separated by an interval of 6 months, alternatively 0.5 mL for 2 doses, separated by an interval of at least 1 month, followed by 0.5 mL as a third dose, given at least 4 months after the second dose, injected preferably into deltoid region, a booster dose should be considered for individuals at continued risk—consult product literature
- ▶ **Adult:** 0.5 mL for 2 doses, separated by an interval of 6 months, alternatively 0.5 mL for 2 doses, separated by an interval of at least 1 month, followed by 0.5 mL as a third dose, given at least 4 months after the second dose, injected preferably into deltoid region, a booster dose should be considered for individuals at continued risk—consult product literature

### ● SIDE-EFFECTS

- ▶ **Common or very common** Crying abnormal (in children) · drowsiness (in children) · eating disorder (in children)
- ▶ **Uncommon** Seizures (in children) · vascular disorders (in children)
- ▶ **Frequency not known** Extensive swelling of vaccinated limb · hypotonic-hyporesponsiveness episode (in children)

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Suspension for injection**

EXCIPIENTS: May contain Kanamycin

- ▶ **Bexsero** (GlaxoSmithKline UK Ltd)

Bexsero vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection (PoM) £75.00

- ▶ **Trumenba** (Pfizer Ltd) ▼

Trumenba vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection (PoM) £75.00

F 1379

## Meningococcal group C vaccine

### ● INDICATIONS AND DOSE

#### **Patients with confirmed serogroup C disease (who have previously been immunised)**

- ▶ **BY INTRAMUSCULAR INJECTION**
- ▶ **Child 1–17 years:** 0.5 mL for 1 dose, dose to be given before discharge from hospital
- ▶ **Adult 18–24 years:** 0.5 mL for 1 dose, dose to be given before discharge from hospital

### ● SIDE-EFFECTS

- ▶ **Common or very common** Anxiety (in children) · cough (in children) · crying (in children) · drowsiness (in children) · gastrointestinal discomfort (in children) · hyperhidrosis (in children) · increased risk of infection (in children)
- ▶ **Uncommon** Chills · eyelid oedema (in children) · flushing (in children) · influenza like illness (rare in children) · joint stiffness (in children)
- ▶ **Rare or very rare** Circulatory collapse (in children)
- ▶ **Frequency not known** Angioedema · apnoea · asthenia (uncommon in children) · dyspnoea · hypotonic-hyporesponsiveness episode · immune thrombocytopenic purpura · meningism (but no evidence that vaccine causes meningococcal C meningitis) · musculoskeletal stiffness (uncommon in children) · nasal congestion (uncommon in children) · oedema (uncommon in children) · pain (very common in children) · respiratory disorders (uncommon in children) · seizures (uncommon in children) · sensation abnormal (uncommon in children) · sleep disorders (very common in children) · Stevens-Johnson syndrome · syncope (uncommon in children)

● **PRESCRIBING AND DISPENSING INFORMATION** Available as part of childhood immunisation schedule from [www.immform.dh.gov.uk](http://www.immform.dh.gov.uk).

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Suspension for injection

- ▶ **NeisVac-C** (Pfizer Ltd)  
NeisVac-C vaccine suspension for injection 0.5ml pre-filled syringes | 10 pre-filled disposable injection [PoM] £187.50

F 1379

## Meningococcal groups A with C and W135 and Y vaccine

### ● INDICATIONS AND DOSE

#### MENVEO®

##### Primary immunisation against *Neisseria meningitidis*

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 13-15 years: 0.5 mL for 1 dose, dose preferably injected into deltoid region

##### Immunisation against *Neisseria meningitidis* in an unimmunised patient

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 10-17 years: 0.5 mL for 1 dose, booster dose is not required
- ▶ Adult 18-24 years: 0.5 mL for 1 dose, booster dose is not required

##### Immunisation against *Neisseria meningitidis* in those at risk of exposure to prevent invasive disease

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 3-11 months: 0.5 mL every month for 2 doses, dose preferably injected into deltoid region
- ▶ Child 1-17 years: 0.5 mL for 1 dose, dose preferably injected into deltoid region
- ▶ Adult: 0.5 mL for 1 dose, dose preferably injected into deltoid region

##### Patients attending university for the first time (who have not received the routine meningococcal groups A with C and W135 and Y conjugate vaccine over the age of 10 years)

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult 18-24 years: 0.5 mL for 1 dose

#### NIMENRIX®

##### Primary immunisation against *Neisseria meningitidis*

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 13-15 years: 0.5 mL for 1 dose, to be injected preferably into deltoid region

##### Immunisation against *Neisseria meningitidis* in an unimmunised patient

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 10-17 years: 0.5 mL for 1 dose, booster dose is not required
- ▶ Adult 18-24 years: 0.5 mL for 1 dose, booster dose is not required

##### Immunisation against *Neisseria meningitidis* in those at risk of exposure

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 1-17 years: 0.5 mL for 1 dose, to be injected preferably into deltoid region (or anterolateral thigh in child 12-23 months), then 0.5 mL after 1 year if required for 1 dose, second dose should be considered in those who continue to be at risk of *Neisseria meningitidis* serogroup A infection
- ▶ Adult: 0.5 mL for 1 dose, to be injected preferably into deltoid region, then 0.5 mL after 1 year if required for 1 dose, second dose should be considered in those who continue to be at risk of *Neisseria meningitidis* serogroup A infection

**Patients attending university for the first time (who have not received the routine meningococcal groups A with C and W135 and Y conjugate vaccine over the age of 10 years)**

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult 18-24 years: 0.5 mL for 1 dose

### ● UNLICENSED USE

#### MENVEO®

- ▶ In children *Menveo*® is not licensed for use in children under 2 years.

### ● SIDE-EFFECTS

- ▶ **Common or very common** Drowsiness
- ▶ **Uncommon** Crying · insomnia · numbness · pain in extremity
- ▶ **Frequency not known** Extensive swelling of vaccinated limb

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder and solvent for solution for injection

- ▶ **Menveo** (GlaxoSmithKline UK Ltd)  
Menveo vaccine powder and solvent for solution for injection 0.5ml vials | 1 vial [PoM] £30.00 DT = £30.00
- ▶ **Nimenrix** (Pfizer Ltd)  
Nimenrix vaccine powder and solvent for solution for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £30.00 DT = £30.00

F 1379

## Pneumococcal polysaccharide conjugate vaccine (adsorbed)

12-Nov-2019

### ● INDICATIONS AND DOSE

#### PREVENAR 13®

##### Primary immunisation against pneumococcal infection—first dose [infants born on or after 1 January 2020]

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 12 weeks: 0.5 mL for 1 dose, anterolateral thigh is preferred site of injection in infants under 1 year

##### Primary immunisation against pneumococcal infection—booster dose [infants born on or after 1 January 2020]

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 1 year: 0.5 mL for 1 dose, anterolateral thigh is preferred site of injection in infants under 1 year; deltoid muscle is preferred in older children

##### Primary immunisation against pneumococcal infection—in those with asplenia, splenic dysfunction, complement disorder or severe immunocompromise [infants born on or after 1 January 2020]

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 6 weeks-11 months: 0.5 mL for 4 doses, the first two doses to be given at least 8 weeks apart, the third dose to be given on or after their first birthday, and the fourth dose to be given at least 8 weeks later. Anterolateral thigh is preferred site of injection in infants under 1 year; deltoid muscle is preferred in children

##### Immunisation against pneumococcal infection—unimmunised or partially immunised patients [infants born on or after 1 January 2020]

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 3-11 months: 0.5 mL for 1 dose, followed by 0.5 mL for 1 dose on or after their first birthday, given at least 4 weeks after the first dose. Anterolateral thigh is preferred site of injection in infants under 1 year
- ▶ Child 12-23 months: 0.5 mL for 1 dose, deltoid muscle is preferred site of injection in children

continued →

**Immunisation against pneumococcal infection—unimmunised or partially immunised patients at increased risk [born on or after 1 January 2020]**

- BY INTRAMUSCULAR INJECTION
- Child 2–9 years: 0.5 mL for 1 dose, deltoid muscle is preferred site of injection in children

**Immunisation against pneumococcal infection—immunised patients with severe immunocompromise [born on or after 1 January 2020]**

- BY INTRAMUSCULAR INJECTION
- Child 2–17 years: 0.5 mL for 1 dose, deltoid muscle is preferred site of injection in children
- Adult: 0.5 mL for 1 dose, deltoid muscle is preferred site of injection in adults

**Primary immunisation against pneumococcal infection—first dose [infants born on or before 31 December 2019]**

- BY INTRAMUSCULAR INJECTION
- Child 8 weeks: 0.5 mL for 1 dose, anterolateral thigh is preferred site of injection in infants under 1 year

**Primary immunisation against pneumococcal infection—second dose [infants born on or before 31 December 2019]**

- BY INTRAMUSCULAR INJECTION
- Child 16 weeks: 0.5 mL for 1 dose, anterolateral thigh is preferred site of injection in infants under 1 year

**Primary immunisation against pneumococcal infection—booster dose [infants born on or before 31 December 2019]**

- BY INTRAMUSCULAR INJECTION
- Child 1 year: 0.5 mL for 1 dose, anterolateral thigh is preferred site of injection in infants under 1 year; deltoid muscle is preferred in older children

**Immunisation against pneumococcal infection—unimmunised or partially immunised patients [infants born on or before 31 December 2019]**

- BY INTRAMUSCULAR INJECTION
- Child 3–11 months: 0.5 mL for 2 doses, given 2 months apart (interval may be reduced to 1 month to ensure immunisation schedule is completed), followed by 0.5 mL for 1 dose on their first birthday, given at least 2 months after the last dose. Anterolateral thigh is preferred site of injection in infants under 1 year
- Child 12–23 months: 0.5 mL for 1 dose, deltoid muscle is preferred site of injection in children

**Immunisation against pneumococcal infection—immunised patients at increased risk [born on or before 31 December 2019]**

- BY INTRAMUSCULAR INJECTION
- Child 14 months–17 years: 0.5 mL for 1 dose, given at least 2 months after primary immunisation booster dose, deltoid muscle is preferred site of injection in children
- Adult: 0.5 mL for 1 dose, deltoid muscle is preferred site of injection in adults

## Typhoid vaccine

17-Mar-2020

- **DRUG ACTION** Typhoid vaccine protects against typhoid fever caused by *Salmonella typhi* infection; it is available as an oral live attenuated vaccine and an injectable polysaccharide vaccine.

### INDICATIONS AND DOSE

#### Immunisation against typhoid fever [in children at high risk of typhoid fever]

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 12-23 months: 0.5 mL for 1 dose, dose should be given at least 2 weeks before potential exposure to typhoid infection, response may be suboptimal

#### Immunisation against typhoid fever

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 2-17 years: 0.5 mL for 1 dose, dose should be given at least 2 weeks before potential exposure to typhoid infection
- ▶ Adult: 0.5 mL for 1 dose, dose should be given at least 2 weeks before potential exposure to typhoid infection
- ▶ BY MOUTH
- ▶ Child 5-17 years: 1 capsule every 2 days for 3 doses (on days 1, 3, and 5), course should be completed at least 1 week before potential exposure to typhoid infection
- ▶ Adult: 1 capsule every 2 days for 3 doses (on days 1, 3, and 5), course should be completed at least 1 week before potential exposure to typhoid infection

#### Booster

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 2-17 years: 0.5 mL for 1 dose every 3 years
- ▶ Adult: 0.5 mL for 1 dose every 3 years
- ▶ BY MOUTH
- ▶ Child 5-17 years: 1 capsule every 2 days for 3 doses (on days 1, 3, and 5) every 3 years
- ▶ Adult: 1 capsule every 2 days for 3 doses (on days 1, 3, and 5) every 3 years

### UNLICENSED USE

- ▶ With intramuscular use in children Not licensed for use in children under 2 years.

### CONTRA-INDICATIONS

- ▶ With oral use Acute gastro-intestinal illness

- **INTERACTIONS** → Appendix 1: live vaccines

### SIDE-EFFECTS

#### GENERAL SIDE-EFFECTS

Shock

#### SPECIFIC SIDE-EFFECTS

- ▶ **Common or very common**
- ▶ With oral use Gastrointestinal discomfort
- ▶ **Frequency not known**
- ▶ With oral use Asthenia • back pain • chills • flatulence • influenza like illness • paraesthesia
- ▶ With parental use Abdominal pain • asthma • syncope
- **DIRECTIONS FOR ADMINISTRATION** Capsule should be taken one hour before a meal. Swallow as soon as possible after placing in mouth with a cold or lukewarm drink.

### HANDLING AND STORAGE

- ▶ With oral use It is important to store capsules in a refrigerator.

### PATIENT AND CARER ADVICE

- ▶ With oral use Patients or carers should be given advice on how to administer and store typhoid vaccine capsules.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Typhim Vi** (Sanofi Pasteur)  
**Salmonella typhi Vi capsular polysaccharide 50 microgram per 1 ml** Typhim Vi 25micrograms/0.5ml vaccine solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £11.16 DT = £11.16 | 10 pre-filled disposable injection [PoM] £111.60 DT = £111.60

#### Gastro-resistant capsule

CAUTIONARY AND ADVISORY LABELS 25

Vivotif vaccine gastro-resistant capsules | 3 capsule [PoM] £14.77 DT = £14.77

Combinations available: **Hepatitis A with typhoid vaccine**, p. 1389

## VACCINES > VIRAL VACCINES

### Hepatitis A and B vaccine

03-Dec-2019

The properties listed below are those particular to the combination only. For the properties of the components please consider, hepatitis A vaccine p. 1388, hepatitis B vaccine p. 1389.

### INDICATIONS AND DOSE

#### AMBRIX®

#### Immunisation against hepatitis A and hepatitis B infection (primary course)

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 1-15 years: Initially 1 mL for 1 dose, then 1 mL after 6-12 months for 1 dose, the deltoid region is the preferred site of injection in older children; anterolateral thigh is the preferred site in infants; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)

#### TWINRIX® ADULT

#### Immunisation against hepatitis A and hepatitis B infection (primary course)

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 16-17 years: Initially 1 mL every month for 2 doses, then 1 mL after 5 months for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)
- ▶ Adult: Initially 1 mL every month for 2 doses, then 1 mL after 5 months for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)

#### Immunisation against hepatitis A and hepatitis B infection—accelerated schedule for travellers departing within 1 month

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 16-17 years: Initially 1 mL for 1 dose, then 1 mL after 7 days for 1 dose, then 1 mL after 14 days for 1 dose, then 1 mL for 1 dose given 12 months after the first dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)
- ▶ Adult: Initially 1 mL for 1 dose, then 1 mL after 7 days for 1 dose, then 1 mL after 14 days for 1 dose, then 1 mL for 1 dose given 12 months after the first dose, the deltoid region is the preferred site of

continued →

injection; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)

#### TWINRIX® PAEDIATRIC

##### Immunisation against hepatitis A and hepatitis B infection (primary course)

###### ► BY INTRAMUSCULAR INJECTION

- Child 1–15 years: Initially 0.5 mL every month for 2 doses, then 0.5 mL after 5 months for 1 dose, the deltoid region is the preferred site of injection in older children; anterolateral thigh is the preferred site in infants; not to be injected into the buttock (vaccine efficacy reduced), subcutaneous route used for patients with bleeding disorders (but immune response may be reduced)

#### IMPORTANT SAFETY INFORMATION

*Ambirix*® and *Twinrix*® are not recommended for post-exposure prophylaxis following percutaneous (needle-stick), ocular, or mucous membrane exposure to hepatitis B virus.

#### ● PRESCRIBING AND DISPENSING INFORMATION

**TWINRIX® PAEDIATRIC** Primary course should be completed with *Twinrix*® (single component vaccines given at appropriate intervals may be used for booster dose).

**TWINRIX® ADULT** Primary course should be completed with *Twinrix*® (single component vaccines given at appropriate intervals may be used for booster dose).

**AMBRISX®** Primary course should be completed with *Ambirix*® (single component vaccines given at appropriate intervals may be used for booster dose).

- MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

##### Suspension for injection

EXCIPIENTS: May contain Neomycin

###### ► *Ambirix* (GlaxoSmithKline UK Ltd)

*Ambirix* vaccine suspension for injection 1ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £31.18 DT = £31.18

###### ► *Twinrix* (GlaxoSmithKline UK Ltd)

*Twinrix* Paediatric vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £20.79 DT = £20.79  
*Twinrix* Adult vaccine suspension for injection 1ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £33.31 DT = £31.18 | 10 pre-filled disposable injection [PoM] £333.13

■ 1379

## Hepatitis A vaccine

#### ● INDICATIONS AND DOSE

##### AVAXIM®

##### Immunisation against hepatitis A infection

###### ► BY INTRAMUSCULAR INJECTION

- Child 16–17 years: Initially 0.5 mL for 1 dose, then 0.5 mL after 6–12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders; not to be injected into the buttock (vaccine efficacy reduced)
- Adult: Initially 0.5 mL for 1 dose, then 0.5 mL after 6–12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders; not to be injected into the buttock (vaccine efficacy reduced)

#### HAVRIX MONODOSE®

##### Immunisation against hepatitis A infection

###### ► BY INTRAMUSCULAR INJECTION

- Child 1–15 years: Initially 0.5 mL for 1 dose, then 0.5 mL after 6–12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders
- Child 16–17 years: Initially 1 mL for 1 dose, then 1 mL after 6–12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders
- Adult: Initially 1 mL for 1 dose, then 1 mL after 6–12 months, dose given as booster; booster dose may be delayed by up to 3 years if not given after recommended interval following primary dose, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders

#### VAQTA® ADULT

##### Immunisation against hepatitis A infection

###### ► BY INTRAMUSCULAR INJECTION

- Adult: Initially 1 mL for 1 dose, then 1 mL after 6–18 months, dose given as booster, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders (but immune response may be delayed)

#### VAQTA® PAEDIATRIC

##### Immunisation against hepatitis A infection

###### ► BY INTRAMUSCULAR INJECTION

- Child 1–17 years: Initially 0.5 mL for 1 dose, then 0.5 mL after 6–18 months, dose given as booster, the deltoid region is the preferred site of injection. The subcutaneous route may be used for patients with bleeding disorders (but immune response may be reduced)

#### ● SIDE-EFFECTS

- Common or very common** Asthenia (uncommon in children) · pain (uncommon in children)
- Uncommon** Anxiety (in children) · chills · cough · crying (in children) · ear pain (rare in children) · gastrointestinal discomfort · gastrointestinal disorders (rare in children) · increased risk of infection · influenza like illness (rare in children) · muscle weakness · musculoskeletal stiffness (rare in children) · nasal complaints · paraesthesia (rare in children) · respiratory disorders (rare in children) · sensation of tightness (rare in children) · temperature sensation altered (rare in children) · vasodilation (rare in children)
- Rare or very rare** Allergic rhinitis (in children) · apathy · asthma (in children) · ataxia (in children) · burping (in children) · chest pain · constipation (in children) · dehydration (in children) · drowsiness (uncommon in children) · dry mouth · eye discomfort · gait abnormal (in children) · infantile spitting up (in children) · menstrual disorder · migraine · muscle complaints · oral ulceration · oropharyngeal pain (in children) · photophobia · screaming (in children) · sleep disorders (uncommon in children) · sweat changes · synovitis (in children) · throat oedema · tremor · vertigo · watering eye
- Frequency not known** Guillain-Barre syndrome · thrombocytopenia

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Suspension for injection

EXCIPIENTS: May contain Neomycin

- ▶ **Avaxim** (Sanofi Pasteur)  
Avaxim vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £21.72 | 10 pre-filled disposable injection [PoM] £217.20
- ▶ **Havrix** (GlaxoSmithKline UK Ltd)  
Havrix Monodose vaccine suspension for injection 1ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £22.14 DT = £22.14 | 10 pre-filled disposable injection [PoM] £221.43  
Havrix Junior Monodose vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £16.77 | 10 pre-filled disposable injection [PoM] £167.68
- ▶ **VAQTA** (Merck Sharp & Dohme Ltd)  
VAQTA Adult vaccine suspension for injection 1ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £18.10 DT = £22.14  
VAQTA Paediatric vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £14.74

## Hepatitis A with typhoid vaccine

The properties listed below are those particular to the combination only. For the properties of the components please consider, hepatitis A vaccine p. 1388, typhoid vaccine p. 1387.

#### • INDICATIONS AND DOSE

##### HEPATYRIX®

#### Immunisation against hepatitis A and typhoid infection (primary course)

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 15-17 years: 1 mL for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced). The subcutaneous route may be used for patients with bleeding disorders, booster dose given using single component vaccines
- ▶ Adult: 1 mL for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced). The subcutaneous route may be used for patients with bleeding disorders, booster dose given using single component vaccines

##### VIATIM®

#### Immunisation against hepatitis A and typhoid infection (primary course)

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 16-17 years: 1 mL for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced). The subcutaneous route may be used for patients with bleeding disorders, booster dose given using single component vaccines
- ▶ Adult: 1 mL for 1 dose, the deltoid region is the preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced). The subcutaneous route may be used for patients with bleeding disorders, booster dose given using single component vaccines

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Suspension for injection

EXCIPIENTS: May contain Neomycin

- ▶ **VIATIM** (Sanofi Pasteur)  
VIATIM vaccine suspension for injection 1ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £35.76 DT = £35.76

## Hepatitis B vaccine

#### • INDICATIONS AND DOSE

##### ENGERIX B®

#### Immunisation against hepatitis B infection

##### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 1 month-15 years: 10 micrograms for 1 dose, then 10 micrograms after 1 month for 1 dose, followed by 10 micrograms after 5 months for 1 dose, deltoid muscle is preferred site of injection in older children; anterolateral thigh is preferred site in infants and young children; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Child 16-17 years: 20 micrograms for 1 dose, then 20 micrograms after 1 month for 1 dose, followed by 20 micrograms after 5 months for 1 dose, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Adult: 20 micrograms for 1 dose, then 20 micrograms after 1 month for 1 dose, followed by 20 micrograms after 5 months for 1 dose, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

#### Immunisation against hepatitis B infection (accelerated schedule)

##### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Neonate: 10 micrograms every month for 3 doses, followed by 10 micrograms after 10 months for 1 dose, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced), this dose should not be given to neonates born to hepatitis B surface antigen positive mother.
- ▶ Child 1 month-15 years: 10 micrograms every month for 3 doses, followed by 10 micrograms after 10 months for 1 dose, deltoid muscle is preferred site of injection in older children; anterolateral thigh is preferred site in infants and young children; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Child 16-17 years: 20 micrograms every month for 3 doses, followed by 20 micrograms after 10 months for 1 dose, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)
- ▶ Adult: 20 micrograms every month for 3 doses, followed by 20 micrograms after 10 months for 1 dose, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

#### Immunisation against hepatitis B infection, alternative accelerated schedule

##### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 11-15 years: 20 micrograms for 1 dose, followed by 20 micrograms after 6 months, this schedule is not suitable if high risk of infection between doses or if compliance with second dose uncertain, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

#### Immunisation against hepatitis B infection (accelerated schedule in exceptional cases, e.g. for travellers departing within 1 month)

##### ▶ BY INTRAMUSCULAR INJECTION

- ▶ Adult: 20 micrograms for 1 dose, then 20 micrograms after 7 days for 1 dose, followed by 20 micrograms after 14 days for 1 dose, followed by 20 micrograms for 1 dose, to be given 12 months after the first dose, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

continued →

**Immunisation against hepatitis B infection (in renal insufficiency, including haemodialysis patients)**

## ► BY INTRAMUSCULAR INJECTION

- Child 1 month-15 years: 10 micrograms every month for 3 doses, followed by 10 micrograms after 5 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection in older children; anterolateral thigh is preferred site in infants and young children; not to be injected into the buttock (vaccine efficacy reduced)
- Child 16-17 years: 40 micrograms every month for 3 doses, followed by 40 micrograms after 4 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)
- Adult: 40 micrograms every month for 3 doses, followed by 40 micrograms after 4 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

**Immunisation against hepatitis B infection (in renal insufficiency, including haemodialysis patients (accelerated schedule))**

## ► BY INTRAMUSCULAR INJECTION

- Child 1 month-15 years: 10 micrograms every month for 3 doses, followed by 10 micrograms after 10 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection in older children; anterolateral thigh is preferred site in infants and young children; not to be injected into the buttock (vaccine efficacy reduced)

## FENDRIX®

**Immunisation against hepatitis B infection in renal insufficiency (including pre-haemodialysis and haemodialysis patients)**

## ► BY INTRAMUSCULAR INJECTION

- Child 15-17 years: 20 micrograms every month for 3 doses, followed by 20 micrograms after 4 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)
- Adult: 20 micrograms every month for 3 doses, followed by 20 micrograms after 4 months for 1 dose, immunisation schedule and booster doses may need to be adjusted in those with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

## HBVAXPRO®

**Immunisation against hepatitis B infection**

## ► BY INTRAMUSCULAR INJECTION

- Neonate: 5 micrograms for 1 dose, followed by 5 micrograms after 1 month for 1 dose, then 5 micrograms after 5 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced), dose not to be used for neonate born to hepatitis B surface antigen positive mother.
- Child 1 month-15 years: 5 micrograms for 1 dose, followed by 5 micrograms after 1 month for 1 dose, then 5 micrograms after 5 months for 1 dose, booster

doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in adults and older children; anterolateral thigh is preferred site in infants; not to be injected into the buttock (vaccine efficacy reduced)

- Child 16-17 years: 10 micrograms for 1 dose, followed by 10 micrograms after 1 month for 1 dose, followed by 10 micrograms after 5 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in adults and older children; not to be injected into the buttock (vaccine efficacy reduced)
- Adult: 10 micrograms for 1 dose, followed by 10 micrograms after 1 month for 1 dose, followed by 10 micrograms after 5 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in adults and older children; not to be injected into the buttock (vaccine efficacy reduced)

**Immunisation against hepatitis B infection (accelerated schedule)**

## ► BY INTRAMUSCULAR INJECTION

- Neonate: 5 micrograms every month for 3 doses, followed by 5 micrograms after 10 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced), dose not to be used for neonate born to hepatitis B surface antigen positive mother.
- Child 1 month-15 years: 5 micrograms every month for 3 doses, followed by 5 micrograms after 10 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in older children; anterolateral thigh is preferred site in infants; not to be injected into the buttock (vaccine efficacy reduced)
- Child 16-17 years: 10 micrograms every month for 3 doses, followed by 10 micrograms after 10 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection in older children; not to be injected into the buttock (vaccine efficacy reduced)
- Adult: 10 micrograms every month for 3 doses, followed by 10 micrograms after 10 months for 1 dose, booster doses may be required in immunocompromised patients with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

**Neonate born to hepatitis B surface antigen-positive mother**

## ► BY INTRAMUSCULAR INJECTION

- Neonate: 5 micrograms every month for 3 doses, first dose given at birth with hepatitis B immunoglobulin injection (separate site), followed by 5 micrograms after 10 months for 1 dose, anterolateral thigh is preferred site in neonates; not to be injected into the buttock (vaccine efficacy reduced).

**Chronic haemodialysis patients**

## ► BY INTRAMUSCULAR INJECTION

- Child 16-17 years: 40 micrograms every month for 2 doses, followed by 40 micrograms after 5 months for 1 dose, booster doses may be required in those with low antibody concentration, deltoid muscle is preferred site of injection in older children; not to be injected into the buttock (vaccine efficacy reduced)

- Adult: 40 micrograms every month for 2 doses, followed by 40 micrograms after 5 months for 1 dose, booster doses may be required in those with low antibody concentration, deltoid muscle is preferred site of injection; not to be injected into the buttock (vaccine efficacy reduced)

#### ● SIDE-EFFECTS

- Common or very common Drowsiness · gastrointestinal disorder
- Uncommon Influenza like illness
- Rare or very rare Sensation abnormal
- Frequency not known Angioedema · apnoea · arthritis · encephalitis · encephalopathy · hypotension · meningitis · multiple sclerosis · muscle weakness · nerve disorders · paralysis · seizure · thrombocytopenia · vasculitis

- MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Suspension for injection

EXCIPIENTS: May contain Thiomersal

- Engerix B** (GlaxoSmithKline UK Ltd)

**Hepatitis B virus surface antigen 20 microgram per 1 ml** Engerix B 10micrograms/0.5ml vaccine suspension for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £9.67 DT = £9.67

## Human papillomavirus vaccines

29-Oct-2019

#### ● INDICATIONS AND DOSE

##### CERVARIX®

**Immunisation against HPV-related premalignant lesions and cancer (cervical, vulvar, vaginal, and anal) [2 dose schedule]**

- BY INTRAMUSCULAR INJECTION

- Child 9–14 years: 0.5 mL for 1 dose, followed by 0.5 mL after 5–24 months for 1 dose, if second dose administered earlier than 5 months after the first, a third dose should be administered, to be administered into deltoid region, if the 2 dose schedule is interrupted, it should be resumed (using the same vaccine) but not repeated, even if more than 24 months have elapsed since the first dose or if the patient is now older than 14 years

**Immunisation against HPV-related premalignant lesions and cancer (cervical, vulvar, vaginal, and anal) [3 dose schedule]**

- BY INTRAMUSCULAR INJECTION

- Child 15–17 years: 0.5 mL for 1 dose, followed by 0.5 mL after 1–2.5 months for 1 dose, then 0.5 mL after 5–12 months from the first dose for 1 dose, to be administered into deltoid region, if the 3 dose schedule is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses

- Adult: 0.5 mL for 1 dose, followed by 0.5 mL after 1–2.5 months for 1 dose, then 0.5 mL after 5–12 months from the first dose for 1 dose, to be administered into deltoid region, if the 3 dose schedule is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses

##### GARDASIL 9®

**Immunisation against HPV-related premalignant lesions and cancer (cervical, vulvar, vaginal, and anal) and genital warts [2 dose schedule]**

- BY INTRAMUSCULAR INJECTION

- Child 9–14 years: 0.5 mL for 1 dose, followed by 0.5 mL after 5–24 months for 1 dose, to be administered preferably into deltoid region or higher anterolateral thigh, if the 2 dose schedule is interrupted, it should be resumed (using the same vaccine) but not repeated, even if more than 24 months have elapsed since the first dose or if the patient is now older than 14 years

**Immunisation against HPV-related premalignant lesions and cancer (cervical, vulvar, vaginal, and anal) and genital warts [3 dose schedule]**

- BY INTRAMUSCULAR INJECTION

- Child 9–17 years: 0.5 mL for 1 dose, followed by 0.5 mL for 1 dose, second dose to be given at least 1 month after the first dose, then 0.5 mL for 1 dose, third dose to be given at least 3 months after the second dose, to be administered preferably into deltoid region or higher anterolateral thigh, the 3 dose schedule should be completed within 12 months of the first dose. If the schedule is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses
- Adult: 0.5 mL for 1 dose, followed by 0.5 mL for 1 dose, second dose to be given at least 1 month after the first dose, then 0.5 mL for 1 dose, third dose to be given at least 3 months after the second dose, to be administered preferably into deltoid region or higher anterolateral thigh, the 3 dose schedule should be completed within 12 months of the first dose. If the schedule is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses

##### GARDASIL®

**Immunisation against HPV-related premalignant lesions and cancer (cervical, vulvar, vaginal, and anal) and genital warts [2 dose schedule]**

- BY INTRAMUSCULAR INJECTION

- Child 9–14 years: 0.5 mL for 1 dose, followed by 0.5 mL after 6–24 months for 1 dose, to be administered preferably into deltoid region or higher anterolateral thigh, if the 2 dose schedule is interrupted, it should be resumed (using the same vaccine) but not repeated, even if more than 24 months have elapsed since the first dose or if the patient is now older than 14 years

**Immunisation against HPV-related premalignant lesions and cancer (cervical, vulvar, vaginal, and anal) and genital warts [3 dose schedule]**

- BY INTRAMUSCULAR INJECTION

- Child 9–17 years: 0.5 mL for 1 dose, followed by 0.5 mL for 1 dose, second dose to be given at least 1 month after the first dose, then 0.5 mL for 1 dose, third dose to be given at least 3 months after the second dose, to be administered preferably into deltoid region or higher anterolateral thigh, the 3 dose schedule should be completed within 12 months of the first dose, if the schedule is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses

continued →

- ▶ **Adult:** 0.5 mL for 1 dose, followed by 0.5 mL for 1 dose, second dose to be given at least 1 month after the first dose, then 0.5 mL for 1 dose, third dose to be given at least 3 months after the second dose, to be administered preferably into deltoid region or higher anterolateral thigh, the 3 dose schedule should be completed within 12 months of the first dose, if the schedule is interrupted, it should be resumed (using the same vaccine) but not repeated, allowing the appropriate interval between the remaining doses
- **UNLICENSED USE** [\[EvGr\]](#) Human papillomavirus vaccines are used in a 2 dose immunisation schedule, [A](#) but the interval between doses may differ from licensing.
- **GARDASIL**® [\[EvGr\]](#) The 2 dose schedule is not licensed for use in children aged 14 years. [A](#)
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Abdominal pain · gastrointestinal disorder · pain in extremity
  - ▶ **Uncommon** Upper respiratory tract infection
  - ▶ **Frequency not known** Acute disseminated encephalomyelitis · angioedema · asthenia · bronchospasm · chills · Guillain-Barre syndrome · immune thrombocytopenic purpura · syncope
- **PREGNANCY** Not known to be harmful, but vaccination should be postponed until completion of pregnancy.
- **PRESCRIBING AND DISPENSING INFORMATION** To avoid confusion, prescribers should specify the brand to be dispensed.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Supension for injection

- ▶ **Cervarix** (GlaxoSmithKline UK Ltd)  
Cervarix vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [\[PoM\]](#) £80.50

## Influenza vaccine

12-Nov-2019

- **DRUG ACTION** Influenza vaccines protect people at high risk from influenza and reduce transmission of infection; the nasal spray contains live attenuated strains, all other vaccines are inactivated.

#### ● INDICATIONS AND DOSE

##### Annual immunisation against seasonal influenza

- ▶ **BY INTRAMUSCULAR INJECTION**
  - ▶ Child 6 months–17 years: 0.5 mL for 1 dose
  - ▶ Adult: 0.5 mL for 1 dose
- ▶ **BY INTRADERMAL INJECTION**
  - ▶ Adult 18–59 years: 9 micrograms for 1 dose, dose to be injected into deltoid region
  - ▶ Adult 60 years and over: 15 micrograms for 1 dose, dose to be injected into deltoid region
- ▶ **BY INTRANASAL ADMINISTRATION**
  - ▶ Child 2–17 years: 0.1 mL for 1 dose, dose to be administered into each nostril

##### Annual immunisation against seasonal influenza (for children in clinical risk groups who have not received seasonal influenza vaccine previously)

- ▶ **BY INTRAMUSCULAR INJECTION**
  - ▶ Child 6 months–8 years: 0.5 mL for 1 dose, followed by 0.5 mL for 1 dose, after at least 4 weeks

#### ▶ BY INTRANASAL ADMINISTRATION

- ▶ Child 2–8 years: 0.1 mL for 1 dose, followed by 0.1 mL for 1 dose, after at least 4 weeks. 0.1 mL dose to be administered to each nostril

- **UNLICENSED USE** The Joint Committee on Vaccination and Immunisation advises offering a second dose of vaccine for annual immunisation against seasonal influenza to children in clinical risk groups only.
- **CONTRA-INDICATIONS** Preparations marketed by Pfizer, or CSL Biotherapies in child under 5 years—increased risk of febrile convulsions
- **FLUENZA TETRA**® Active wheezing · concomitant use with antiviral therapy for influenza · severe asthma
- **CONTRA-INDICATIONS, FURTHER INFORMATION**
  - ▶ Concomitant use with antiviral therapy for influenza Public Health England advises avoid immunisation for at least 48 hours after stopping the influenza antiviral agent. Administration of influenza antiviral agents within two weeks of Fluenza Tetra® administration may reduce the effectiveness of the vaccine.
- **CAUTIONS** Increased risk of fever in child 5–9 years with preparations marketed by Pfizer or CSL Biotherapies—use alternative influenza vaccine if available
- **INTERACTIONS** → Appendix 1: live vaccines
- **SIDE-EFFECTS**
  - ▶ **Common or very common**
    - ▶ With intradermal use Chills · local reactions · pain
    - ▶ With intramuscular use Chills (uncommon in elderly) · hyperhidrosis · induration · local reactions · pain (uncommon in elderly)
    - ▶ With intranasal use Nasal complaints
  - ▶ **Uncommon**
    - ▶ With intradermal use Hyperhidrosis
    - ▶ With intramuscular use Cough
    - ▶ With intranasal use Epistaxis · face oedema
  - ▶ **Rare or very rare**
    - ▶ With intradermal use Nerve disorders · paraesthesia
    - ▶ With intramuscular use Vasodilation
  - ▶ **Frequency not known**
    - ▶ With intradermal use Angioedema · encephalomyelitis · febrile seizure · nervous system disorder · shock · thrombocytopenia · vasculitis
  - ▶ With intramuscular use Angioedema · asthenia · chest pain · dyspnoea · extensive swelling of vaccinated limb · eye erythema · increased risk of infection · nerve disorders · nervous system disorders · paraesthesia · seizures · shock · syncope · throat tightness · thrombocytopenia · vasculitis · wheezing
  - ▶ With intranasal use Guillain-Barre syndrome
- **ALLERGY AND CROSS-SENSITIVITY** Individuals with a history of egg allergy can be immunised with either an egg free influenza vaccine, if available, or an influenza vaccine with an ovalbumin content less than 120 nanograms/mL (facilities should be available to treat anaphylaxis). Vaccines with an ovalbumin content more than 120 nanograms/mL or where content is not stated should not be used in individuals with egg allergy. If an influenza vaccine containing ovalbumin is being considered in those with a history of anaphylaxis to egg or egg allergy with uncontrolled asthma, these individuals should be referred to a specialist in hospital.
- **PREGNANCY** Inactivated vaccines not known to be harmful.
- **FLUENZA TETRA**® Avoid in pregnancy.
- **BREAST FEEDING** Inactivated vaccines not known to be harmful.
- **FLUENZA TETRA**® Avoid in breast-feeding.
- **PRESCRIBING AND DISPENSING INFORMATION** The available preparations are not licensed for use in all age-

groups—further information can be found in the product literature for the individual vaccines.

**FLUARIX TETRA**® Ovalbumin content less than 100 nanograms/mL.

#### ● PATIENT AND CARER ADVICE

**FLUENZ TETRA**® Avoid close contact with severely immunocompromised patients for 1–2 weeks after vaccination.

#### ● MEDICINAL FORMS There can be variation in the licensing of different medicines containing the same drug.

## Japanese encephalitis vaccine

22-Feb-2019

#### ● INDICATIONS AND DOSE

##### Immunisation against Japanese encephalitis

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child 2–35 months: 0.25 mL every 28 days for 2 doses, alternatively 0.25 mL every 7 days for 2 doses, anterolateral thigh may be used as the injection site in infants; deltoid muscle is preferred site in older children, immunisation should be completed at least 1 week before potential exposure
- ▶ Child 3–17 years: 0.5 mL every 28 days for 2 doses, alternatively 0.5 mL every 7 days for 2 doses, deltoid muscle is preferred site in older children, immunisation should be completed at least 1 week before potential exposure
- ▶ Adult: 0.5 mL every 28 days for 2 doses, alternatively 0.5 mL every 7 days for 2 doses, deltoid muscle is preferred site of injection, immunisation should be completed at least 1 week before potential exposure

#### First booster

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult: 0.5 mL after 1–2 years, deltoid muscle is preferred site of injection, for those at continued risk, the booster dose should be given 1 year after completing the primary course
- ▶ Elderly: 0.5 mL after 1 year, for those at continued risk, deltoid muscle is preferred site of injection

#### Second booster

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Adult: 0.5 mL after 10 years, for those at continued risk, deltoid muscle is preferred site of injection

#### ● UNLICENSED USE

- ▶ When used for Immunisation against Japanese encephalitis The rapid schedule administered at days 0 and 7 is not licensed in children or the elderly.

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Influenza like illness (frequency not known in children)
- ▶ **Uncommon** Abdominal pain (frequency not known in children) · asthenia · chills · hyperhidrosis · migraine · musculoskeletal stiffness · vertigo
- ▶ **Rare or very rare** Dyspnoea · eyelid oedema · neuritis · pain in extremity · palpitations · paraesthesia · peripheral oedema · tachycardia · taste altered · thrombocytopenia
- ▶ **Frequency not known** Cough (in children)
- ▶ **PREGNANCY** Although manufacturer advises avoid because of limited information, miscarriage has been associated with Japanese encephalitis virus infection acquired during the first 2 trimesters of pregnancy.

#### ● MEDICINAL FORMS There can be variation in the licensing of different medicines containing the same drug.

##### Solution for injection

- ▶ **Japanese encephalitis vaccine (Non-proprietary)**  
Japanese encephalitis GCVC vaccine solution for injection 1ml vials | 1 vial [S]  
Japanese encephalitis GCVC vaccine solution for injection 20ml vials | 1 vial [S]  
Japanese encephalitis GCVC vaccine solution for injection 10ml vials | 1 vial [S]

##### Suspension for injection

- ▶ **Ixiaro** (Valneva UK Ltd)  
Ixiaro vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £59.50 DT = £59.50

1379

## Measles, mumps and rubella vaccine, live

#### ● INDICATIONS AND DOSE

##### Primary immunisation against measles, mumps, and rubella (first dose)

- ▶ BY INTRAMUSCULAR INJECTION, OR BY DEEP SUBCUTANEOUS INJECTION
- ▶ Child 12–13 months: 0.5 mL for 1 dose

##### Primary immunisation against measles, mumps, and rubella (second dose)

- ▶ BY INTRAMUSCULAR INJECTION, OR BY DEEP SUBCUTANEOUS INJECTION
- ▶ Child 40 months–5 years: 0.5 mL for 1 dose

##### Rubella immunisation (in seronegative women, susceptible to rubella and in unimmunised, seronegative women, post-partum)

- ▶ BY INTRAMUSCULAR INJECTION, OR BY DEEP SUBCUTANEOUS INJECTION
- ▶ Females of childbearing potential: (consult product literature or local protocols) continued →

**Children presenting for pre-school booster, who have not received the primary immunisation (first dose) | Immunisation for patients at school-leaving age or at entry into further education, who have not completed the primary immunisation course | Control of measles outbreak | Immunisation for patients travelling to areas where measles is endemic or epidemic, who have not completed the primary immunisation**

- ▶ BY INTRAMUSCULAR INJECTION, OR BY DEEP SUBCUTANEOUS INJECTION
- ▶ Child 6 months–17 years: (consult product literature or local protocols)
- ▶ Adult: (consult product literature or local protocols)

#### ● UNLICENSED USE

- ▶ In children Not licensed for use in children under 9 months.

#### IMPORTANT SAFETY INFORMATION

##### MMR VACCINATION AND BOWEL DISEASE OR AUTISM

Reviews undertaken on behalf of the CSM, the Medical Research Council, and the Cochrane Collaboration, have not found any evidence of a link between MMR vaccination and bowel disease or autism. The Chief Medical Officers have advised that the MMR vaccine is the safest and best way to protect children against measles, mumps, and rubella. Information (including fact sheets and a list of references) may be obtained from [www.dh.gov.uk/immunisation](http://www.dh.gov.uk/immunisation).

- **CAUTIONS** Antibody response to measles component may be reduced after immunoglobulin administration or blood transfusion—leave an interval of at least 3 months before MMR immunisation

#### CAUTIONS, FURTHER INFORMATION

- ▶ Administration with other vaccines MMR vaccine should not be administered on the same day as yellow fever vaccine; there should be a 4-week minimum interval between the vaccines. When protection is rapidly required, the vaccines can be given at any interval and an additional dose of MMR may be considered.

MMR and varicella-zoster vaccine can be given on the same day or separated by a 4-week minimum interval. When protection is rapidly required, the vaccines can be given at any interval and an additional dose of the vaccine given second may be considered.

- **INTERACTIONS** → Appendix 1: live vaccines

#### ● SIDE-EFFECTS

- ▶ **Uncommon** Increased risk of infection · rhinorrhoea
- ▶ **Frequency not known** Angioedema · arthritis · ataxia · cough · encephalopathy · eye inflammation · meningitis · aseptic · nerve deafness · nerve disorders · oculomotor nerve paralysis · oedema · panniculitis · papillitis · paraesthesia · regional lymphadenopathy · respiratory disorders · seizures · Stevens-Johnson syndrome · subacute sclerosing panencephalitis · syncope · throat pain · thrombocytopenia · vasculitis

**SIDE-EFFECTS, FURTHER INFORMATION** Malaise, fever, or a rash can occur after the first dose of MMR vaccine—most commonly about a week after vaccination and lasting about 2 to 3 days.

Febrile seizures occur rarely 6 to 11 days after MMR vaccination (the incidence is lower than that following measles infection).

**Idiopathic thrombocytopenic purpura** Idiopathic thrombocytopenic purpura has occurred rarely following MMR vaccination, usually within 6 weeks of the first dose. The risk of idiopathic thrombocytopenic purpura after MMR vaccine is much less than the risk after infection with wild measles or rubella virus. Children who develop idiopathic thrombocytopenic purpura within 6 weeks of the first dose of MMR should undergo serological testing

before the second dose is due; if the results suggest incomplete immunity against measles, mumps or rubella then a second dose of MMR is recommended. Samples should be sent to the Virus Reference Laboratory of the Health Protection Agency.

**Frequency of side effects** Adverse reactions are considerably less frequent after the second dose of MMR vaccine than after the first.

- **ALLERGY AND CROSS-SENSITIVITY** MMR vaccine can be given safely even when the child has had an anaphylactic reaction to food containing egg. Dislike of eggs, refusal to eat egg, or confirmed anaphylactic reactions to egg-containing food is not a contra-indication to MMR vaccination. Children with a confirmed anaphylactic reaction to the MMR vaccine should be assessed by a specialist.
- **CONCEPTION AND CONTRACEPTION** Exclude pregnancy before immunisation. Avoid pregnancy for at least 1 month after vaccination.
- **PRESCRIBING AND DISPENSING INFORMATION** Available as part of childhood immunisation schedule from health organisations or ImmForm [www.immform.dh.gov.uk](http://www.immform.dh.gov.uk).
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.  
**Powder and solvent for suspension for injection**  
EXCIPIENTS: May contain Gelatin, neomycin  
▶ **M-M-RVAXPRO** (Merck Sharp & Dohme Ltd)  
M-M-RVAXPRO vaccine powder and solvent for suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM]  
£11.00 DT = £11.00  
**Powder and solvent for solution for injection**  
EXCIPIENTS: May contain Neomycin  
▶ **Priorix** (GlaxoSmithKline UK Ltd)  
Priorix vaccine powder and solvent for solution for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £7.64 DT = £7.64

F 1379

## Rabies vaccine

### ● INDICATIONS AND DOSE

#### Pre-exposure prophylaxis

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child: 1 mL for 2 doses (on days 0 and 7), followed by 1 mL for 1 dose (on day 28), to be administered in deltoid region or anterolateral thigh in infants, for those at continuous risk, measure plasma-concentration of antirabies antibodies every 6 months and give a booster dose if the titre is less than 0.5 units/mL, final dose may be given from day 21, if insufficient time before travel
- ▶ Adult: 1 mL for 2 doses (on days 0 and 7), followed by 1 mL for 1 dose (on day 28), to be administered in deltoid region, for those at continuous risk, measure plasma-concentration of antirabies antibodies every 6 months and give a booster dose if the titre is less than 0.5 units/mL, final dose may be given from day 21, if insufficient time before travel

#### Pre-exposure prophylaxis booster dose (for patients at frequent risk of exposure)

- ▶ BY INTRAMUSCULAR INJECTION
- ▶ Child: 1 mL after 1 year for 1 dose, to be given 1 year after primary course is completed, then 1 mL every 3–5 years, to be administered in deltoid region or anterolateral thigh in infants, the frequency of booster doses may alternatively be determined according to plasma-concentration of antirabies antibodies
- ▶ Adult: 1 mL for 1 dose, to be given 1 year after primary course is completed, then 1 mL every 3–5 years, to be administered in deltoid region, the frequency of booster doses may alternatively be determined

according to plasma-concentration of antirabies antibodies

#### Pre-exposure prophylaxis booster dose (for patients at infrequent risk of exposure)

##### ► BY INTRAMUSCULAR INJECTION

- **Child:** 1 mL for 1 dose, to be given 10 years after primary course is completed, administered in deltoid region or anterolateral thigh in infants
- **Adult:** 1 mL for 1 dose, to be given 10 years after primary course is completed, administered in deltoid region

#### Post-exposure prophylaxis of fully immunised individuals (who have previously received pre-exposure or post-exposure prophylaxis with cell-derived rabies vaccine)

##### ► BY INTRAMUSCULAR INJECTION

- **Child** (administered on expert advice): 1 mL for 1 dose, followed by 1 mL after 3–7 days for 1 dose, to be administered in deltoid region or anterolateral thigh in infants, rabies immunoglobulin is not necessary
- **Adult** (administered on expert advice): 1 mL for 1 dose, followed by 1 mL after 3–7 days for 1 dose, to be administered in deltoid region, rabies immunoglobulin is not necessary

#### Post-exposure treatment for unimmunised individuals (or those whose prophylaxis is possibly incomplete)

##### ► BY INTRAMUSCULAR INJECTION

- **Child** (administered on expert advice): 1 mL 5 times a month for 1 month, doses should be given on days 0, 3, 7, 14, and the fifth dose is given between day 28–30, to be administered in deltoid region or anterolateral thigh in infants, depending on the level of risk (determined by factors such as the nature of the bite and the country where it was sustained), rabies immunoglobulin is given to unimmunised individuals on day 0 or within 7 days of starting the course of rabies vaccine, the immunisation course can be discontinued if it is proved that the individual was not at risk
- **Adult** (administered on expert advice): 1 mL 5 times a month for 1 month, doses should be given on days 0, 3, 7, 14, and the fifth dose is given between day 28–30, to be administered in deltoid region, depending on the level of risk (determined by factors such as the nature of the bite and the country where it was sustained), rabies immunoglobulin is given to unimmunised individuals on day 0 or within 7 days of starting the course of rabies vaccine, the immunisation course can be discontinued if it is proved that the individual was not at risk

#### • **INTERACTIONS** → Appendix 1: rabies vaccine

#### • **SIDE-EFFECTS**

- **Common or very common** Asthenia · gastrointestinal discomfort
- **Rare or very rare** Angioedema · chills · encephalitis · Guillain-Barre syndrome · hyperhidrosis · paraesthesia · syncope · vertigo

#### • **PREGNANCY** Because of the potential consequences of untreated rabies exposure and because rabies vaccination has not been associated with fetal abnormalities, pregnancy is not considered a contra-indication to post-exposure prophylaxis. Immunisation against rabies is indicated during pregnancy if there is substantial risk of exposure to rabies and rapid access to post-exposure prophylaxis is likely to be limited.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Powder and solvent for suspension for injection**

EXCIPIENTS: May contain Neomycin

##### ► **Rabies vaccine (Non-proprietary)**

Verorab powder and solvent for suspension for injection 0.5ml vials | 1 vial [PoM] £5  
Rabies vaccine powder and solvent for suspension for injection 1ml vials | 1 vial [PoM] £40.84

#### **Powder and solvent for solution for injection**

EXCIPIENTS: May contain Neomycin

##### ► **Rabipur** (GlaxoSmithKline UK Ltd)

Rabipur vaccine powder and solvent for solution for injection 1ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £34.56

F 1379

## Rotavirus vaccine

12-Nov-2019

- **DRUG ACTION** Rotavirus vaccine is a live, oral vaccine that protects young children against gastro-enteritis caused by rotavirus infection.

#### • **INDICATIONS AND DOSE**

##### **Immunisation against gastro-enteritis caused by rotavirus**

##### ► **BY MOUTH**

- **Child** 6–23 weeks: 1.5 mL for 2 doses separated by an interval of at least 4 weeks, first dose must be given between 6–14 weeks of age; course should be completed before 24 weeks of age (preferably before 16 weeks)

#### **IMPORTANT SAFETY INFORMATION**

##### **PUBLIC HEALTH ENGLAND: UPDATE TO GREEN BOOK (OCTOBER 2017)**

Public Health England advises that immunisation with live vaccines should be delayed until 6 months of age in children born to mothers who received immunosuppressive biological therapy during pregnancy. In practice, this means that children born to mothers who were on immunosuppressive biological therapy during pregnancy will not be eligible to receive rotavirus vaccine.

- **CONTRA-INDICATIONS** History of intussusception · predisposition to intussusception · severe combined immunodeficiency disorder
- **CONTRA-INDICATIONS, FURTHER INFORMATION**
  - **Immunosuppression** With the exception of severe combined immunodeficiency disorder (and children born to mothers who received immunosuppressive biological therapy during pregnancy, see *Important safety information*), rotavirus vaccine is not contra-indicated in immunosuppressed patients—benefit from vaccination is likely to outweigh the risk, if there is any doubt, Public Health England recommends seek specialist advice.
- **CAUTIONS** Diarrhoea (postpone vaccination) · immunosuppressed close contacts · vomiting (postpone vaccination)
- **CAUTIONS, FURTHER INFORMATION** The rotavirus vaccine virus is excreted in the stool and may be transmitted to close contacts; however, vaccination of those with immunosuppressed close contacts may protect the contacts from wild-type rotavirus disease and outweigh any risk from transmission of vaccine virus.
- **INTERACTIONS** → Appendix 1: live vaccines
- **SIDE-EFFECTS**
  - **Uncommon** Abdominal pain · gastrointestinal disorders
  - **Frequency not known** Apnoea · haematochezia
- **PATIENT AND CARER ADVICE** The rotavirus vaccine virus is excreted in the stool and may be transmitted to close contacts; carers of a recently vaccinated baby should be advised of the need to wash their hands after changing the baby's nappies.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Oral suspension

- ▶ **Rotarix** (GlaxoSmithKline UK Ltd)

Rotarix vaccine live oral suspension 1.5ml tube | 1 tube [PoM] £34.76  
DT = £34.76

F 1379

## Tick-borne encephalitis vaccine, inactivated

### • INDICATIONS AND DOSE

#### Initial immunisation against tick-borne encephalitis

- ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 1–15 years: 0.25 mL for 1 dose, followed by 0.25 mL after 1–3 months for 1 dose, then 0.25 mL after further 5–12 months for 1 dose, to achieve more rapid protection, second dose may be given 14 days after first dose, dose to be administered in deltoid region or anterolateral thigh in infants, in immunocompromised patients (including those receiving immunosuppressants), antibody concentration may be measured 4 weeks after second dose and dose repeated if protective levels not achieved

- ▶ Child 16–17 years: 0.5 mL for 1 dose, followed by 0.5 mL after 1–3 months for 1 dose, then 0.5 mL after further 5–12 months for 1 dose, to achieve more rapid protection, second dose may be given 14 days after first dose, dose to be administered in deltoid region, in immunocompromised patients (including those receiving immunosuppressants), antibody concentration may be measured 4 weeks after second dose and dose repeated if protective levels not achieved

- ▶ Adult: 0.5 mL for 1 dose, followed by 0.5 mL after 1–3 months for 1 dose, then 0.5 mL after further 5–12 months for 1 dose, to achieve more rapid protection, second dose may be given 14 days after first dose, dose to be administered in deltoid region, in immunocompromised patients (including those receiving immunosuppressants), antibody concentration may be measured 4 weeks after second dose and dose repeated if protective levels not achieved

- ▶ Elderly: 0.5 mL for 1 dose, followed by 0.5 mL after 1–3 months for 1 dose, then 0.5 mL after further 5–12 months for 1 dose, to achieve more rapid protection, second dose may be given 14 days after first dose, dose to be administered in deltoid region, antibody concentration may be measured 4 weeks after second dose and dose repeated if protective levels not achieved

#### Immunisation against tick-borne encephalitis, booster doses

- ▶ BY INTRAMUSCULAR INJECTION

- ▶ Child 1–17 years: First dose to be given within 3 years after initial course completed and then every 3–5 years, dose to be administered in deltoid region or anterolateral thigh in infants (consult product literature)
- ▶ Adult: First dose to be given within 3 years after initial course completed and then every 3–5 years, dose to be administered in deltoid region (consult product literature)

### • SIDE-EFFECTS

- ▶ **Common or very common** Restlessness (in children) · sleep disorder (in children)
- ▶ **Rare or very rare** Asthenia · autoimmune disorder · chills (uncommon in children) · demyelination · drowsiness · dyspnoea · eye pain · gait abnormal · gastrointestinal discomfort (uncommon in children) · hyperhidrosis ·

increased risk of infection · influenza like illness · joint swelling · meningism · meningitis aseptic · motor dysfunction · musculoskeletal stiffness · nerve disorders · oedema · pain · seizures · sensory disorder · tachycardia · tinnitus · vertigo · vision disorders

- **ALLERGY AND CROSS-SENSITIVITY** Individuals with evidence of previous anaphylactic reaction to egg should not be given tick-borne encephalitis vaccine.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Suspension for injection

EXCIPENTS: May contain Gentamicin, neomycin

- ▶ **TicoVac** (Pfizer Ltd)

TicoVac Junior vaccine suspension for injection 0.25ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £28.00

TicoVac vaccine suspension for injection 0.5ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £32.00

F 1379

## Varicella-zoster vaccine

21-Oct-2019

- **DRUG ACTION** *Varilrix*® and *Varivax*® are live attenuated vaccines that protect against varicella (chickenpox) caused by varicella-zoster virus infection. *Zostavax*® is a live attenuated vaccine that protects against herpes zoster (shingles) caused by varicella-zoster virus infection.

### • INDICATIONS AND DOSE

#### VARILRIX®

##### Prevention of varicella infection (chickenpox)

- ▶ BY SUBCUTANEOUS INJECTION

- ▶ Child 1–17 years: 0.5 mL every 4–6 weeks for 2 doses, to be administered into the deltoid region or anterolateral thigh
- ▶ Adult: 0.5 mL every 4–6 weeks for 2 doses, to be administered into the deltoid region or anterolateral thigh

#### VARIVAX®

##### Prevention of varicella infection (chickenpox)

- ▶ BY SUBCUTANEOUS INJECTION, OR BY INTRAMUSCULAR INJECTION

- ▶ Child 1–12 years: 0.5 mL for 2 doses, interval of at least 4 weeks between each dose, to be administered into the deltoid region (or higher anterolateral thigh in young children)
- ▶ Child 13–17 years: 0.5 mL for 2 doses, interval of 4–8 weeks between each dose, to be administered preferably into the deltoid region
- ▶ Adult: 0.5 mL for 2 doses, interval of 4–8 weeks between each dose, to be administered preferably into the deltoid region

##### Prevention of varicella infection (chickenpox) in children with asymptomatic HIV infection

- ▶ BY SUBCUTANEOUS INJECTION, OR BY INTRAMUSCULAR INJECTION

- ▶ Child 1–12 years: 0.5 mL for 2 doses, interval of 12 weeks between each dose, to be administered into the deltoid region (or higher anterolateral thigh in young children)

#### ZOSTAVAX®

##### Prevention of herpes zoster (shingles)

- ▶ BY SUBCUTANEOUS INJECTION

- ▶ Adult 70–79 years: 0.65 mL for 1 dose, to be administered preferably into the deltoid region

- **CAUTIONS** Post-vaccination close contact with susceptible individuals

**CAUTIONS, FURTHER INFORMATION** Rarely, the varicella-zoster vaccine virus has been transmitted from the vaccinated individual to close contacts. Therefore, contact with the following should be avoided if a vaccine-related

cutaneous rash develops within 4–6 weeks of the first or second dose:

- varicella-susceptible pregnant women;
- individuals at high risk of severe varicella, including those with immunodeficiency or those receiving immunosuppressive therapy.

Healthcare workers who develop a generalised papular or vesicular rash on vaccination should avoid contact with patients until the lesions have crusted. Those who develop a localised rash after vaccination should cover the lesions and be allowed to continue working unless in contact with patients at high risk of severe varicella.

- ▶ Administration with MMR vaccine Varicella–zoster and MMR vaccines can be given on the same day or separated by a 4-week minimum interval. When protection is rapidly required, the vaccines can be given at any interval and an additional dose of the vaccine given second may be considered.

#### • INTERACTIONS → Appendix 1: live vaccines

#### • SIDE-EFFECTS

- ▶ **Uncommon** Cough · drowsiness · increased risk of infection
- ▶ **Rare or very rare** Abdominal pain · conjunctivitis · Kawasaki disease · seizure · stroke · thrombocytopenia · vasculitis

#### • CONCEPTION AND CONTRACEPTION Avoid pregnancy for 3 months after vaccination.

#### • PRESCRIBING AND DISPENSING INFORMATION

**ZOSTAVAX®** Advice in the BNF may differ from that in product literature.

#### • MEDICINAL FORMS There can be variation in the licensing of different medicines containing the same drug.

##### **Powder and solvent for suspension for injection**

EXCIPIENTS: May contain Gelatin, neomycin

- ▶ **Varivax** (Merck Sharp & Dohme Ltd)  
Varivax vaccine powder and solvent for suspension for injection 0.5ml vials | 1 vial [PoM] £30.28 DT = £30.28
- ▶ **Zostavax** (Merck Sharp & Dohme Ltd)  
Zostavax vaccine powder and solvent for suspension for injection 0.65ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £99.96 DT = £99.96

##### **Powder and solvent for solution for injection**

EXCIPIENTS: May contain Neomycin

- ▶ **Varilrix** (GlaxoSmithKline UK Ltd)  
Varilrix vaccine powder and solvent for solution for injection 0.5ml vials | 1 vial [PoM] £27.31 DT = £27.31

In patients aged 60 years and older, the vaccine should only be administered when there is a significant and unavoidable risk of acquiring yellow fever infection. It must only be administered by healthcare professionals specifically trained in the benefit-risk evaluation of yellow fever vaccine. Healthcare professionals must inform patients and carers about the early signs and symptoms of YEL-AVD and YEL-AND, and advise them to seek urgent medical attention if they occur; the manufacturer's patient information leaflet should also be provided. Healthcare professionals administering vaccines should consult information in the YF Vaccine Centre code of practice and strengthen protocols and checklists to avoid inappropriate administration.

#### • CONTRA-INDICATIONS Children under 6 months · history of thymus dysfunction

#### • CAUTIONS Individuals over 60 years—greater risk of vaccine-associated adverse effects

##### **CAUTIONS, FURTHER INFORMATION**

- ▶ Administration with MMR vaccine Yellow fever and MMR vaccines should not be administered on the same day; there should be a 4-week minimum interval between the vaccines. When protection is rapidly required, the vaccines can be given at any interval and an additional dose of MMR may be considered.

#### • INTERACTIONS → Appendix 1: live vaccines

#### • SIDE-EFFECTS

- ▶ **Common or very common** Asthenia · crying (in children) · drowsiness (in children)
- ▶ **Uncommon** Abdominal pain
- ▶ **Rare or very rare** Rhinitis · yellow fever vaccine-associated neurotropic disease · yellow fever vaccine-associated viscerotropic disease
- ▶ **Frequency not known** Angioedema · influenza like illness · paraesthesia

**SIDE-EFFECTS, FURTHER INFORMATION** Very rare vaccine-associated adverse effects may occur, such as viscerotropic disease (yellow-fever vaccine-associated viscerotropic disease, YEL-AVD), a syndrome which may include metabolic acidosis, muscle and liver cirrhosis, and multi-organ failure. Neurological disorders (yellow fever vaccine-associated neurotropic disease, YEL-AND) such as encephalitis have also been reported. These very rare adverse effects usually occur after the first dose of yellow fever vaccine in those with no previous immunity. Increased risk of fatal reactions reported in patients aged 60 years and older and those who are immunosuppressed.

- **ALLERGY AND CROSS-SENSITIVITY** Yellow fever vaccine should only be considered under the guidance of a specialist in individuals with evidence of previous anaphylactic reaction to egg.
- **PREGNANCY** Live yellow fever vaccine should not be given during pregnancy because there is a theoretical risk of fetal infection. Pregnant women should be advised not to travel to areas at high risk of yellow fever. If exposure cannot be avoided during pregnancy, then the vaccine should be given if the risk from disease in the mother outweighs the risk to the fetus from vaccination.
- **BREAST FEEDING** Avoid; seek specialist advice if exposure to virus cannot be avoided.

#### • MEDICINAL FORMS There can be variation in the licensing of different medicines containing the same drug.

##### **Powder and solvent for suspension for injection**

- ▶ **Stamaril** (Sanofi Pasteur)  
Stamaril vaccine powder and solvent for suspension for injection 0.5ml vials | 1 vial [PoM] £39.72 DT = £39.72

## Yellow fever vaccine, live

22-May-2019

#### • INDICATIONS AND DOSE

##### **Immunisation against yellow fever**

- ▶ **BY DEEP SUBCUTANEOUS INJECTION**
- ▶ **Child 6–8 months** (administered on expert advice): Infants under 9 months should be vaccinated only if the risk of yellow fever is high and unavoidable (consult product literature or local protocols)
- ▶ **Child 9 months–17 years:** 0.5 mL for 1 dose
- ▶ **Adult:** 0.5 mL for 1 dose

#### IMPORTANT SAFETY INFORMATION

**MHRA/CHM ADVICE (UPDATED NOVEMBER 2019): YELLOW FEVER VACCINE: STRONGER PRECAUTIONS IN PEOPLE WITH WEAKENED IMMUNITY AND IN THOSE AGED 60 YEARS OR OLDER**

The yellow fever vaccine (*Stamaril*®) has been associated with the very rare, life-threatening reactions viscerotropic disease (YEL-AVD) and neurotropic disease (YEL-AND), which both resemble yellow fever infection. It must not be given to patients who have had a thymectomy, who are taking immunosuppressive or immunomodulating biological drugs, or who have a first-degree family history of YEL-AVD or YEL-AND following vaccination that was unrelated to a known medical risk

## General anaesthesia

### Anaesthesia (general)

Overview

Several different types of drug are given together during general anaesthesia. Anaesthesia is induced with either a volatile drug given by inhalation or with an intravenously administered drug; anaesthesia is maintained with an intravenous or inhalational anaesthetic. Analgesics, usually short-acting opioids, are also used. The use of neuromuscular blocking drugs necessitates intermittent positive-pressure ventilation. Following surgery, anticholinesterases can be given to reverse the effects of neuromuscular blocking drugs; specific antagonists can be used to reverse central and respiratory depression caused by some drugs used in surgery. A local topical anaesthetic can be used to reduce pain at the injection site.

Individual requirements vary considerably and the recommended doses are only a guide. Smaller doses are indicated in ill, shocked, or debilitated patients and in significant hepatic impairment, while robust individuals may require larger doses. The required dose of induction agent may be less if the patient has been premedicated with a sedative agent or if an opioid analgesic has been used.

Intravenous anaesthetics

Intravenous anaesthetics may be used either to induce anaesthesia or for maintenance of anaesthesia throughout surgery. Intravenous anaesthetics nearly all produce their effect in one arm-brain circulation time. Extreme care is required in surgery of the mouth, pharynx, or larynx where the airway may be difficult to maintain (e.g. in the presence of a tumour in the pharynx or larynx).

To facilitate tracheal intubation, induction is usually followed by a neuromuscular blocking drug or a short-acting opioid.

The doses of all intravenous anaesthetic drugs should be titrated to effect (except when using 'rapid sequence induction'); lower doses may be required in premedicated patients.

**Total intravenous anaesthesia**

This is a technique in which major surgery is carried out with all drugs given intravenously. Respiration can be spontaneous, or controlled with oxygen-enriched air. Neuromuscular blocking drugs can be used to provide relaxation and prevent reflex muscle movements. The main problem to be overcome is the assessment of depth of anaesthesia. Target Controlled Infusion (TCI) systems can be used to titrate intravenous anaesthetic infusions to

predicted plasma-drug concentrations in ventilated adult patients.

**Drugs used for intravenous anaesthesia**

Propofol p. 1400, the most widely used intravenous anaesthetic, can be used for induction or maintenance of anaesthesia in adults and children, but it is not commonly used in neonates. Propofol is associated with rapid recovery and less hangover effect than other intravenous anaesthetics. Propofol can also be used for sedation during diagnostic procedures and sedation in adults in intensive care.

Thiopental sodium p. 354 is a barbiturate that is used for induction of anaesthesia, but has no analgesic properties. Induction is generally smooth and rapid, but dose-related cardiovascular and respiratory depression can occur. Awakening from a moderate dose of thiopental sodium is rapid because the drug redistributes into other tissues, particularly fat. However, metabolism is slow and sedative effects can persist for 24 hours. Repeated doses have a cumulative effect and recovery is much slower.

Etomidate p. 1400 is an intravenous agent associated with rapid recovery without a hangover effect. Etomidate causes less hypotension than thiopental sodium and propofol during induction. It produces a high incidence of extraneous muscle movements, which can be minimised by an opioid analgesic or a short-acting benzodiazepine given just before induction.

Ketamine p. 1415 is used rarely. Ketamine causes less hypotension than thiopental sodium and propofol during induction. It is used mainly for paediatric anaesthesia, particularly when repeated administration is required (such as for serial burns dressings); recovery is relatively slow and there is a high incidence of extraneous muscle movements. The main disadvantage of ketamine is the high incidence of hallucinations, nightmares, and other transient psychotic effects; these can be reduced by a benzodiazepine such as diazepam p. 360 or midazolam p. 356.

Inhalational anaesthetics

Inhalational anaesthetics include gases and volatile liquids. *Gaseous anaesthetics* require suitable equipment for storage and administration. *Volatile liquid anaesthetics* are administered using calibrated vaporisers, using air, oxygen, or nitrous oxide-oxygen mixtures as the carrier gas. To prevent hypoxia, the inspired gas mixture should contain a minimum of 25% oxygen at all times. Higher concentrations of oxygen (greater than 30%) are usually required during inhalational anaesthesia when nitrous oxide p. 1402 is being administered.

### Volatile liquid anaesthetics

Volatile liquid anaesthetics can be used for induction and maintenance of anaesthesia, and following induction with an intravenous anaesthetic.

Isflurane p. 1402 is a volatile liquid anaesthetic. Heart rhythm is generally stable during isoflurane anaesthesia, but heart-rate can rise, particularly in younger patients. Systemic arterial pressure and cardiac output can fall, owing to a decrease in systemic vascular resistance. Muscle relaxation occurs and the effects of muscle relaxant drugs are potentiated. Isoflurane is the preferred inhalational anaesthetic for use in obstetrics.

Desflurane p. 1402 is a rapid acting volatile liquid anaesthetic; it is reported to have about one-fifth the potency of isoflurane. Emergence and recovery from anaesthesia are particularly rapid because of its low solubility. Desflurane is not recommended for induction of anaesthesia as it is irritant to the upper respiratory tract.

Sevoflurane p. 1403 is a rapid acting volatile liquid anaesthetic and is more potent than desflurane. Emergence and recovery are particularly rapid, but slower than desflurane. Sevoflurane is non-irritant and is therefore often used for inhalational induction of anaesthesia; it has little effect on heart rhythm compared with other volatile liquid anaesthetics.

### Nitrous oxide

Nitrous oxide is used for maintenance of anaesthesia and, in sub-anaesthetic concentrations, for analgesia. For anaesthesia, nitrous oxide is commonly used in a concentration of 50 to 66% in oxygen as part of a balanced technique in association with other inhalational or intravenous agents. Nitrous oxide is unsatisfactory as a sole anaesthetic owing to lack of potency, but is useful as part of a combination of drugs since it allows a significant reduction in dosage.

For analgesia (without loss of consciousness), a mixture of nitrous oxide and oxygen containing 50% of each gas (Entonox<sup>®</sup>, Equanox<sup>®</sup>) is used. Self-administration using a demand valve is popular in obstetric practice, for changing painful dressings, as an aid to postoperative physiotherapy, and in emergency ambulances.

Nitrous oxide may have a deleterious effect if used in patients with an air-containing closed space since nitrous oxide diffuses into such a space with a resulting increase in pressure. This effect may be dangerous in conditions such as pneumothorax, which may enlarge to compromise respiration, or in the presence of intracranial air after head injury, entrapped air following recent underwater dive, or recent intra-ocular gas injection.

### Malignant hyperthermia

Malignant hyperthermia is a rare but potentially lethal complication of anaesthesia. It is characterised by a rapid rise in temperature, increased muscle rigidity, tachycardia, and acidosis. The most common triggers of malignant hyperthermia are the volatile anaesthetics. Suxamethonium chloride p. 1407 has also been implicated, but malignant hyperthermia is more likely if it is given following a volatile anaesthetic. Volatile anaesthetics and suxamethonium chloride should be avoided during anaesthesia in patients at high risk of malignant hyperthermia.

Dantrolene sodium p. 1417 is used in the treatment of malignant hyperthermia.

## Sedation, anaesthesia, and resuscitation in dental practice

### Overview

Sedation for dental procedures should be limited to conscious sedation. Diazepam p. 360 and temazepam p. 509 are effective anxiolytics for dental treatment in adults.

For details of sedation, anaesthesia, and resuscitation in dental practice see *A Conscious Decision: A review of the use of general anaesthesia and conscious sedation in primary dental care*; report by a group chaired by the Chief Medical Officer and Chief Dental Officer, July 2000 and associated documents. Further details can also be found in *Standards for Conscious Sedation in the Provision of Dental Care*; report of an Intercollegiate Advisory Committee for Sedation in Dentistry, 2015 [www.rcseng.ac.uk/-/media/files/rcs/library-and-publications/non-journal-publications/dental-sedation-report.pdf](http://www.rcseng.ac.uk/-/media/files/rcs/library-and-publications/non-journal-publications/dental-sedation-report.pdf).

## Surgery and long-term medication

### Overview

The risk of losing disease control on stopping long-term medication before surgery is often greater than the risk posed by continuing it during surgery. It is vital that the anaesthetist knows about **all** drugs that a patient is (or has been) taking.

Patients with adrenal atrophy resulting from long-term corticosteroid use may suffer a precipitous fall in blood pressure unless corticosteroid cover is provided during anaesthesia and in the immediate postoperative period. Anaesthetists must therefore know whether a patient is, or has been, receiving corticosteroids (including high-dose inhaled corticosteroids).

Other drugs that should normally not be stopped before surgery include antiepileptics, antiparkinsonian drugs, antipsychotics, anxiolytics, bronchodilators, cardiovascular drugs (but see potassium-sparing diuretics, angiotensin-converting enzyme inhibitors, and angiotensin-II receptor antagonists), glaucoma drugs, immunosuppressants, drugs of dependence, and thyroid or antithyroid drugs. Expert advice is required for patients receiving antivirals for HIV infection. See general advice on surgery in diabetic patients in Diabetes, surgery and medical illness p. 727.

Patients taking antiplatelet medication or an oral anticoagulant present an increased risk for surgery. In these circumstances, the anaesthetist and surgeon should assess the relative risks and decide jointly whether the antiplatelet or the anticoagulant drug should be stopped or replaced with heparin (unfractionated) p. 143 or low molecular weight heparin therapy. [EvGr](#) In patients with stable angina, perioperative aspirin p. 130 should be only continued where there is a high thrombotic risk (e.g. patients with a recent acute coronary syndrome, coronary artery stents, or an ischaemic stroke). [A](#)

Drugs that should be stopped before surgery include combined oral contraceptives, see Contraceptives, hormonal p. 835; for advice on hormone replacement therapy, see Sex hormones p. 790. MAOIs can have important interactions with some drugs used during surgery, such as pethidine hydrochloride p. 490. Tricyclic antidepressants need not be stopped, but there may be an increased risk of arrhythmias and hypotension (and dangerous interactions with vasopressor drugs); therefore, the anaesthetist should be informed if they are not stopped. Lithium should be stopped 24 hours before major surgery but the normal dose can be continued for minor surgery (with careful monitoring of fluids and electrolytes). Potassium-sparing diuretics may need to be withheld on the morning of surgery because hyperkalaemia may develop if renal perfusion is impaired or

if there is tissue damage. Angiotensin-converting enzyme (ACE) inhibitors and angiotensin-II receptor antagonists can be associated with severe hypotension after induction of anaesthesia; these drugs may need to be discontinued 24 hours before surgery. Herbal medicines may be associated with adverse effects when given with anaesthetic drugs and consideration should be given to stopping them before surgery.

## ANAESTHETICS, GENERAL > INTRAVENOUS ANAESTHETICS

### Etomidate

04-Dec-2019

#### ● INDICATIONS AND DOSE

##### Induction of anaesthesia

###### ► BY SLOW INTRAVENOUS INJECTION

- Adult: 150–300 micrograms/kg (max. per dose 60 mg), to be administered over 30–60 seconds (60 seconds in patients in whom hypotension might be hazardous)
- Elderly: 150–200 micrograms/kg (max. per dose 60 mg), to be administered over 30–60 seconds (60 seconds in patients in whom hypotension might be hazardous)

#### IMPORTANT SAFETY INFORMATION

Etomidate should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CAUTIONS** Acute circulatory failure (shock) • adrenal insufficiency • Avoid in Acute porphyrias p. 1120 • cardiovascular disease • elderly • fixed cardiac output • hypovolaemia

#### CAUTIONS, FURTHER INFORMATION

- Adrenal insufficiency Etomidate suppresses adrenocortical function, particularly during continuous administration, and it should not be used for maintenance of anaesthesia. It should be used with caution in patients with underlying adrenal insufficiency, for example, those with sepsis.

- **INTERACTIONS** → Appendix 1: etomidate

#### ● SIDE-EFFECTS

- **Common or very common** Apnoea • hypotension • movement disorders • nausea • respiratory disorders • skin reactions • vascular pain • vomiting
- **Uncommon** Arrhythmias • cough • hiccups • hypersalivation • hypertension • muscle rigidity • neuromuscular dysfunction • nystagmus • procedural complications
- **Frequency not known** Adrenal insufficiency • atrioventricular block • cardiac arrest • embolism and thrombosis • seizures • shock • Stevens-Johnson syndrome • trismus

**SIDE-EFFECTS, FURTHER INFORMATION** Pain on injection Can be reduced by injecting into a larger vein or by giving an opioid analgesic just before induction.

**Extraneous muscle movements** Extraneous muscle movements can be minimised by an opioid analgesic or a short-acting benzodiazepine given just before induction.

- **PREGNANCY** May depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.
- **HEPATIC IMPAIRMENT**  
**Dose adjustments** Manufacturer advises reduce dose in liver cirrhosis.
- **DIRECTIONS FOR ADMINISTRATION** To be administered over 30–60 seconds (60 seconds in patients in whom hypotension might be hazardous).

#### ● PATIENT AND CARER ADVICE

**Driving and skilled tasks** Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks afterwards. For a short general anaesthetic the risk extends to **at least 24 hours** after administration. Responsible persons should be available to take patients home. The dangers of taking **alcohol** should also be emphasised.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Solution for injection**

EXCIPIENTS: May contain Propylene glycol

##### ► **Hypnomidate** (Piramal Critical Care Ltd)

**Etomidate 2 mg per 1 ml** Hypnomidate 20mg/10ml solution for injection ampoules | 5 ampoule [POM] £6.90

#### **Emulsion for injection**

##### ► **Etomidate-Lipuro** (B.Braun Medical Ltd)

**Etomidate 2 mg per 1 ml** Etomidate-Lipuro 20mg/10ml emulsion for injection ampoules | 10 ampoule [POM] £16.09

### Propofol

04-Dec-2019

#### ● INDICATIONS AND DOSE

##### Induction of anaesthesia using 0.5% or 1% injection

###### ► BY SLOW INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION

- Adult 18–54 years: Usual dose 1.5–2.5 mg/kg, to be administered at a rate of 20–40 mg every 10 seconds until response, for debilitated patients use dose for 55 years and over
- Adult 55 years and over: Usual dose 1–1.5 mg/kg, to be administered at a rate of 20 mg every 10 seconds until response

##### Induction of anaesthesia using 2% injection

###### ► BY INTRAVENOUS INFUSION

- Adult 18–54 years: Usual dose 1.5–2.5 mg/kg, to be administered at a rate of 20–40 mg every 10 seconds until response. For debilitated patients use dose for 55 years and over
- Adult 55 years and over: Usual dose 1–1.5 mg/kg, to be administered at a rate of 20 mg every 10 seconds until response

##### Maintenance of anaesthesia using 1% injection

###### ► INITIALLY BY INTRAVENOUS INFUSION

- Adult: Usual dose 4–12 mg/kg/hour, alternatively (by slow intravenous injection) 25–50 mg, dose may be repeated according to response, for debilitated patients use dose for elderly
- Elderly: Usual dose 3–6 mg/kg/hour, alternatively (by slow intravenous injection) 25–50 mg, dose may be repeated according to response

##### Maintenance of anaesthesia using 2% injection

###### ► BY INTRAVENOUS INFUSION

- Adult: Usual dose 4–12 mg/kg/hour, for debilitated patients use dose for elderly
- Elderly: Usual dose 3–6 mg/kg/hour

##### Sedation of ventilated patients in intensive care using 1% or 2% injection

###### ► BY CONTINUOUS INTRAVENOUS INFUSION

- Adult: Usual dose 0.3–4 mg/kg/hour, adjusted according to response

##### Induction of sedation for surgical and diagnostic procedures using 0.5% or 1% injection

###### ► BY SLOW INTRAVENOUS INJECTION

- Adult: Initially 0.5–1 mg/kg, to be administered over 1–5 minutes, dose and rate of administration adjusted according to desired level of sedation and response

### Maintenance of sedation for surgical and diagnostic procedures using 0.5% injection

#### ► INITIALLY BY INTRAVENOUS INFUSION

- Adult: Initially 1.5–4.5 mg/kg/hour, dose and rate of administration adjusted according to desired level of sedation and response, followed by (by slow intravenous injection) 10–20 mg, (if rapid increase in sedation required), patients over 55 years or debilitated may require lower initial dose and rate of administration

### Maintenance of sedation for surgical and diagnostic procedures using 1% injection

#### ► INITIALLY BY INTRAVENOUS INFUSION

- Adult: Initially 1.5–4.5 mg/kg/hour, dose and rate of administration adjusted according to desired level of sedation and response, followed by (by slow intravenous injection) 10–20 mg, (if rapid increase in sedation required), patients over 55 years or debilitated may require lower initial dose and rate of administration

### Maintenance of sedation for surgical and diagnostic procedures using 2% injection

#### ► INITIALLY BY INTRAVENOUS INFUSION

- Adult: Initially 1.5–4.5 mg/kg/hour, dose and rate of administration adjusted according to desired level of sedation and response, followed by (by slow intravenous injection) 10–20 mg, using 0.5% or 1% injection (if rapid increase in sedation required), patients over 55 years or debilitated may require lower initial dose and rate of administration

### IMPORTANT SAFETY INFORMATION

Propofol should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CAUTIONS** Acute circulatory failure (shock) · cardiac impairment · cardiovascular disease · elderly · epilepsy · fixed cardiac output · hypotension · hypovolaemia · raised intracranial pressure · respiratory impairment
  - **INTERACTIONS** → Appendix 1: propofol
  - **SIDE-EFFECTS**
    - **Common or very common** Apnoea · arrhythmias · headache · hypotension · localised pain · nausea · vomiting
    - **Uncommon** Thrombosis
    - **Rare or very rare** Epileptiform seizure (may be delayed) · pancreatitis · post procedural complications · pulmonary oedema · sexual disinhibition · soft tissue necrosis · urine discoloration
    - **Frequency not known** Drug use disorders · dyskinesia · euphoric mood · heart failure · hepatomegaly · hyperkalaemia · hyperlipidaemia · metabolic acidosis · renal failure · respiratory depression · rhabdomyolysis
  - SIDE-EFFECTS, FURTHER INFORMATION** Bradycardia
- Bradycardia may be profound and may be treated with intravenous administration of an antimuscarinic drug.
- Pain on injection** Pain on injection can be reduced by intravenous lidocaine.
- Propofol infusion syndrome** Prolonged infusion of propofol doses exceeding 4mg/kg/hour may result in potentially fatal effects, including metabolic acidosis, arrhythmias, cardiac failure, rhabdomyolysis, hyperlipidaemia, hyperkalaemia, hepatomegaly, and renal failure.
- **PREGNANCY** May depress neonatal respiration if used during delivery.
- Dose adjustments** Max. dose for maintenance of anaesthesia 6 mg/kg/hour.

- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution.
- **RENAL IMPAIRMENT** Use with caution.
- **MONITORING REQUIREMENTS** Monitor blood-lipid concentration if risk of fat overload or if sedation longer than 3 days.
- **DIRECTIONS FOR ADMINISTRATION** Shake before use; microbiological filter not recommended; may be administered via a Y-piece close to injection site co-administered with Glucose 5% or Sodium chloride 0.9%. 0.5% **emulsion** for injection or intermittent infusion; may be administered undiluted, or diluted with Glucose 5% or Sodium chloride 0.9%; dilute to a concentration not less than 1 mg/mL. 1% **emulsion** for injection or infusion; may be administered undiluted, or diluted with Glucose 5% (*Diprivan*®) or (*Propofol-Lipuro*®) or Sodium chloride 0.9% (*Propofol-Lipuro*® only); dilute to a concentration not less than 2 mg/mL; use within 6 hours of preparation. 2% **emulsion** for infusion; do not dilute.
- **PATIENT AND CARER ADVICE**
  - Driving and skilled tasks** Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks afterwards. For a short general anaesthetic the risk extends to **at least 24 hours** after administration. Responsible persons should be available to take patients home. The dangers of taking **alcohol** should also be emphasised.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Emulsion for infusion

#### ► **Propofol (Non-proprietary)**

- Propofol 10 mg per 1 ml** Propofol 500mg/50ml emulsion for infusion vials | 1 vial [PoM] £15.00 (Hospital only)
- Propofol-Lipuro 1% emulsion for infusion 50ml vials** | 10 vial [PoM] £97.56 (Hospital only)
- Propofol 1g/100ml emulsion for infusion vials** | 1 vial [PoM] £15.00 (Hospital only)
- Propofol-Lipuro 1% emulsion for infusion 100ml vials** | 10 vial [PoM] £186.66 (Hospital only)
- Propofol 20 mg per 1 ml** Propofol 1g/50ml emulsion for infusion vials | 1 vial [PoM] £15.00 (Hospital only)
- Propofol-Lipuro 2% emulsion for infusion 50ml vials** | 10 vial [PoM] £186.64 (Hospital only)

#### ► **Diprivan** (Aspen Pharma Trading Ltd)

- Propofol 10 mg per 1 ml** Diprivan 1% emulsion for infusion 50ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £10.68
- Propofol 20 mg per 1 ml** Diprivan 2% emulsion for infusion 50ml pre-filled syringes | 1 pre-filled disposable injection [PoM] £15.16

#### ► **Propoven** (Fresenius Kabi Ltd)

- Propofol 10 mg per 1 ml** Propoven 1% emulsion for infusion 50ml vials | 10 vial [PoM] £120.60 (Hospital only)
- Propoven 1% emulsion for infusion 100ml vials** | 10 vial [PoM] £241.50 (Hospital only)
- Propofol 20 mg per 1 ml** Propoven 2% emulsion for infusion 50ml vials | 10 vial [PoM] £241.50 (Hospital only)

### Emulsion for injection

#### ► **Propofol (Non-proprietary)**

- Propofol 10 mg per 1 ml** Propofol 200mg/20ml emulsion for injection vials | 5 vial [PoM] £20.00 (Hospital only)
- Propofol-Lipuro 1% emulsion for injection 20ml ampoules** | 5 ampoule [PoM] £20.16 (Hospital only)

#### ► **Diprivan** (Aspen Pharma Trading Ltd)

- Propofol 10 mg per 1 ml** Diprivan 1% emulsion for injection 20ml ampoules | 5 ampoule [PoM] £15.36 (Hospital only)

#### ► **Propofol-Lipuro** (B.Braun Melsungen AG)

- Propofol 5 mg per 1 ml** Propofol-Lipuro 0.5% emulsion for injection 20ml ampoules | 5 ampoule [PoM] £15.15

#### ► **Propoven** (Fresenius Kabi Ltd)

- Propofol 10 mg per 1 ml** Propoven 1% emulsion for injection 20ml ampoules | 5 ampoule [PoM] £23.90 (Hospital only)

## ANAESTHETICS, GENERAL > VOLATILE LIQUID ANAESTHETICS

### Volatile halogenated anaesthetics

#### IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CONTRA-INDICATIONS** Susceptibility to malignant hyperthermia
- **CAUTIONS** Can trigger malignant hyperthermia • raised intracranial pressure (can increase cerebrospinal pressure)
- **SIDE-EFFECTS**
  - ▶ Common or very common Agitation • apnoea • arrhythmias • chills • cough • dizziness • headache • hypersalivation • hypertension • hypotension • nausea • respiratory disorders • vomiting
  - ▶ Uncommon Hypoxia
  - ▶ Frequency not known Breath holding • cardiac arrest • haemorrhage • hepatic disorders • hyperkalaemia • malignant hyperthermia • QT interval prolongation • rhabdomyolysis • seizure
- **ALLERGY AND CROSS-SENSITIVITY** Can cause hepatotoxicity in those sensitised to halogenated anaesthetics.
- **DIRECTIONS FOR ADMINISTRATION** Volatile liquid anaesthetics are administered using calibrated vaporisers, using air, oxygen, or nitrous oxide-oxygen mixtures as the carrier gas. To prevent hypoxia, the inspired gas mixture should contain a minimum of 25% oxygen at all times.
- **PATIENT AND CARER ADVICE**

**Driving and skilled tasks** Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risks of driving or undertaking skilled tasks afterwards. For a short general anaesthetic, the risk extends to **at least 24 hours** after administration. Responsible persons should be available to take patients home. The dangers of taking **alcohol** should also be emphasised.

### Desflurane

#### ● INDICATIONS AND DOSE

##### Induction of anaesthesia (but not recommended)

- ▶ BY INHALATION
  - ▶ Adult: 4–11 %, to be inhaled through specifically calibrated vaporiser

##### Maintenance of anaesthesia (in nitrous oxide-oxygen)

- ▶ BY INHALATION
  - ▶ Adult: 2–6 %, to be inhaled through a specifically calibrated vaporiser

##### Maintenance of anaesthesia (in oxygen or oxygen-enriched air)

- ▶ BY INHALATION
  - ▶ Adult: 2.5–8.5 %, to be inhaled through a specifically calibrated vaporiser

- **INTERACTIONS** → Appendix 1: volatile halogenated anaesthetics
- **SIDE-EFFECTS**
  - ▶ Common or very common Coagulation disorder • conjunctivitis

- ▶ **Uncommon** Myalgia • myocardial infarction • myocardial ischaemia • vasodilation
- ▶ **Frequency not known** Abdominal pain • asthenia • heart failure • hypokalaemia • malaise • metabolic acidosis • pancreatitis acute • shock • skin reactions • ventricular dysfunction • visual acuity decreased
- **PREGNANCY** May depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Inhalation vapour

##### ▶ Desflurane (Non-proprietary)

Desflurane 1 ml per 1 ml Desflurane volatile liquid | 240 ml [PoM]  (Hospital only)

 above

12-Dec-2019

### Isoflurane

#### ● INDICATIONS AND DOSE

##### Induction of anaesthesia (in oxygen or nitrous oxide-oxygen)

- ▶ BY INHALATION
  - ▶ Adult: Initially 0.5 %, increased to 3 %, adjusted according to response, administered using specifically calibrated vaporiser

##### Maintenance of anaesthesia (in nitrous oxide-oxygen)

- ▶ BY INHALATION
  - ▶ Adult: 1–2.5 %, to be administered using specifically calibrated vaporiser; an additional 0.5–1 % may be required when given with oxygen alone

##### Maintenance of anaesthesia in caesarean section (in nitrous oxide-oxygen)

- ▶ BY INHALATION
  - ▶ Adult: 0.5–0.6 %, to be administered using specifically calibrated vaporiser

- **INTERACTIONS** → Appendix 1: volatile halogenated anaesthetics
- **SIDE-EFFECTS** Carboxyhaemoglobinaemia • chest discomfort • cognitive impairment • delirium • dyspnoea • ileus • mood altered (that can last several days) • myoglobinuria • skin reactions
- **PREGNANCY** May depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Inhalation vapour

##### ▶ Isoflurane (Non-proprietary)

Isoflurane 1 ml per 1 ml Isoflurane inhalation vapour | 250 ml [PoM] £35.29 (Hospital only)

##### ▶ AErrane (Baxter Healthcare Ltd)

Isoflurane 1 ml per 1 ml AErrane volatile liquid | 250 ml [PoM]  (Hospital only)

### Nitrous oxide

10-Mar-2020

#### ● INDICATIONS AND DOSE

##### Maintenance of anaesthesia in conjunction with other anaesthetic agents

- ▶ BY INHALATION
  - ▶ Adult: 50–66 %, to be administered using suitable anaesthetic apparatus in oxygen

**Analgesia**

## ► BY INHALATION

- **Adult:** Up to 50 %, to be administered using suitable anaesthetic apparatus in oxygen, adjusted according to the patient's needs

**IMPORTANT SAFETY INFORMATION**

Nitrous oxide should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CAUTIONS** Entrapped air following recent underwater dive · pneumothorax · presence of intracranial air after head injury · recent intra-ocular gas injection
- **CAUTIONS, FURTHER INFORMATION** Nitrous oxide may have a deleterious effect if used in patients with an air-containing closed space since nitrous oxide diffuses into such a space with a resulting increase in pressure. This effect may be dangerous in conditions such as pneumothorax, which may enlarge to compromise respiration, or in the presence of intracranial air after head injury, entrapped air following recent underwater dive, or recent intra-ocular gas injection.
- **INTERACTIONS** → Appendix 1: nitrous oxide
- **SIDE-EFFECTS** Abdominal distension · addiction · agranulocytosis · disorientation · dizziness · euphoric mood · megaloblastic anaemia · middle ear damage · myeloneuropathy · nausea · paraesthesia · sedation · subacute combined cord degeneration · tympanic membrane perforation · vomiting
- **SIDE-EFFECTS, FURTHER INFORMATION** Exposure of patients to nitrous oxide for prolonged periods, either by continuous or by intermittent administration, may result in megaloblastic anaemia owing to interference with the action of vitamin B<sub>12</sub>; neurological toxic effects can occur without preceding overt haematological changes. Depression of white cell formation may also occur.
- **PREGNANCY** May depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Breast-feeding can be resumed as soon as mother has recovered sufficiently from anaesthesia.
- **MONITORING REQUIREMENTS**
  - Assessment of plasma-vitamin B<sub>12</sub> concentration should be considered in those at risk of deficiency, including the elderly, those who have a poor, vegetarian, or vegan diet, and those with a history of anaemia.
  - Nitrous oxide should **not** be given continuously for longer than 24 hours or more frequently than every 4 days without close supervision and haematological monitoring.
- **DIRECTIONS FOR ADMINISTRATION** For analgesia (without loss of consciousness), a mixture of nitrous oxide and oxygen containing 50% of each gas (*Entonox*®, *Equanox*®) is used.
- **HANDLING AND STORAGE** Exposure of theatre staff to nitrous oxide should be minimised (risk of serious side-effects).
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.
 

**Inhalation gas**

  - **Nitrous oxide (Non-proprietary)**
  - **Nitrous oxide 1 ml per 1 ml** Nitrous oxide cylinders size E | 1800 litre [P] [N]
  - **Medical Nitrous Oxide cylinders size D** | 900 litre [P] [N]
  - **Medical Nitrous Oxide cylinders size G** | 9000 litre [P] [N]
  - **Nitrous oxide cylinders size F** | 3600 litre [P] [N]
  - **Nitrous oxide cylinders size J** | 18000 litre [P] [N]
  - **Nitrous oxide cylinders size G** | 9000 litre [P] [N]

Anaesthesia

**1 Anaesthesia adjuvants****Pre-medication and peri-operative drugs****Drugs that affect gastric pH**

Regurgitation and aspiration of gastric contents (Mendelson's syndrome) can be an important complication of general anaesthesia, particularly in obstetrics and during emergency surgery, and requires prophylaxis against acid aspiration. Prophylaxis is also needed in those with gastro-oesophageal reflux disease and in circumstances where gastric emptying may be delayed.

A **H<sub>2</sub>-receptor antagonist** can be used before surgery to increase the pH and reduce the volume of gastric fluid. It does not affect the pH of fluid already in the stomach and this limits its value in emergency procedures; an oral H<sub>2</sub>-receptor antagonist can be given 1–2 hours before the procedure. Antacids are frequently used to neutralise the acidity of the fluid already in the stomach; 'clear' (non-particulate) antacids such as sodium citrate p. 832 are preferred.

**Antimuscarinic drugs**

Antimuscarinic drugs are used (less commonly nowadays) as premedicants to dry bronchial and salivary secretions which are increased by intubation, upper airway surgery, or some

inhalational anaesthetics. They are also used before or with neostigmine p. 1188 to prevent bradycardia, excessive salivation, and other muscarinic actions of neostigmine. They also prevent bradycardia and hypotension associated with drugs such as propofol p. 1400 and suxamethonium chloride p. 1407.

Atropine sulfate p. 1404 is now rarely used for premedication but still has an emergency role in the treatment of vagotonic side-effects. Atropine sulfate may have a role in acute arrhythmias after myocardial infarction.

Hyoscine hydrobromide p. 458 reduces secretions and also provides a degree of amnesia, sedation, and anti-emesis. Unlike atropine sulfate it may produce bradycardia rather than tachycardia.

Glycopyrronium bromide p. 1405 reduces salivary secretions. When given intravenously it produces less tachycardia than atropine sulfate. It is widely used with neostigmine for reversal of non-depolarising neuromuscular blocking drugs.

**Phenothiazines** do not effectively reduce secretions when used alone.

### Sedative drugs

Fear and anxiety before a procedure (including the night before) can be minimised by using a sedative drug, usually a **benzodiazepine**. Premedication may also augment the action of anaesthetics and provide some degree of pre-operative amnesia. The choice of drug depends on the individual, the nature of the procedure, the anaesthetic to be used, and other prevailing circumstances such as outpatients, obstetrics, and availability of recovery facilities. The choice also varies between elective and emergency procedures.

Premedicants can be given the night before major surgery; a further, smaller dose may be required before surgery. Alternatively, the first dose may be given on the day of the procedure.

#### Benzodiazepines

Benzodiazepines possess useful properties for premedication including relief of anxiety, sedation, and amnesia; short-acting benzodiazepines taken by mouth are the most common premedicants. Benzodiazepines are also used in intensive care units for sedation, particularly in those receiving assisted ventilation. Flumazenil p. 1439 is used to antagonise the effects of benzodiazepines.

Diazepam p. 360 is used to produce mild sedation with amnesia. It is a long-acting drug with active metabolites and a second period of drowsiness can occur several hours after its administration. Peri-operative use of diazepam in children is not recommended; its effect and timing of response are unreliable and paradoxical effects may occur.

Diazepam is relatively insoluble in water and preparations formulated in organic solvents are painful on intravenous injection and give rise to a high incidence of venous thrombosis (which may not be noticed for several days after the injection). Intramuscular injection of diazepam is painful and absorption is erratic. An emulsion formulated for intravenous injection is less irritant and reduces the risk of venous thrombosis; it is not suitable for intramuscular injection.

Temazepam p. 509 is given by mouth for premedication and has a shorter duration of action and a more rapid onset than oral diazepam; anxiolytic and sedative effects last about 90 minutes although there may be residual drowsiness.

Lorazepam p. 355 produces more prolonged sedation than temazepam and it has marked amnesic effects.

Midazolam p. 356 is a water-soluble benzodiazepine that is often used in preference to intravenous diazepam; recovery is faster than from diazepam, but may be significantly longer in the elderly, in patients with a low cardiac output, or after repeated dosing. Midazolam is associated with profound

sedation when high doses are given intravenously or when it is used with certain other drugs.

#### Other drugs for sedation

Dexmedetomidine p. 1416 and clonidine hydrochloride p. 156 are alpha<sub>2</sub>-adrenergic agonists with sedative properties. Dexmedetomidine is licensed for the sedation of patients receiving intensive care who need to remain responsive to verbal stimulation. Clonidine hydrochloride [unlicensed indication] can be used by mouth or by intravenous injection as a sedative agent when adequate sedation cannot be achieved with standard treatment.

### Antagonists for central and respiratory depression

Respiratory depression is a major concern with opioid analgesics and it may be treated by artificial ventilation or be reversed by naloxone hydrochloride p. 1440. Naloxone hydrochloride will immediately reverse opioid-induced respiratory depression but the dose may have to be repeated because of the short duration of action of naloxone hydrochloride; however, naloxone hydrochloride will also antagonise the analgesic effect.

Flumazenil is a benzodiazepine antagonist for the reversal of the central sedative effects of benzodiazepines after anaesthetic and similar procedures. Flumazenil has a shorter half-life and duration of action than diazepam or midazolam so patients may become resedated.

Doxapram hydrochloride p. 314 is a central and respiratory stimulant but is of limited value in anaesthesia.

### ANTIMUSCARINICS

#### Atropine sulfate

05-Dec-2019

##### • INDICATIONS AND DOSE

##### **Bradycardia due to acute massive overdosage of beta-blockers**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child: 40 micrograms/kg (max. per dose 3 mg)
- ▶ Adult: 3 mg

##### **Treatment of poisoning by organophosphorus insecticide or nerve agent (in combination with pralidoxime chloride)**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child: 20 micrograms/kg every 5–10 minutes (max. per dose 2 mg) until the skin becomes flushed and dry, the pupils dilate, and bradycardia is abolished, frequency of administration dependent on the severity of poisoning
- ▶ Adult: 2 mg every 5–10 minutes until the skin becomes flushed and dry, the pupils dilate, and bradycardia is abolished, frequency of administration dependent on the severity of poisoning

##### **Symptomatic relief of gastro-intestinal disorders characterised by smooth muscle spasm**

- ▶ BY MOUTH
- ▶ Adult: 0.6–1.2 mg daily, dose to be taken at night

##### **Premedication**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child 12–17 years: 300–600 micrograms, to be administered immediately before induction of anaesthesia
- ▶ Adult: 300–600 micrograms, to be administered immediately before induction of anaesthesia
- ▶ BY SUBCUTANEOUS INJECTION, OR BY INTRAMUSCULAR INJECTION
- ▶ Child 12–17 years: 300–600 micrograms, to be administered 30–60 minutes before induction of anaesthesia
- ▶ Adult: 300–600 micrograms, to be administered 30–60 minutes before induction of anaesthesia

**Intra-operative bradycardia**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child 12–17 years: 300–600 micrograms, larger doses may be used in emergencies
- ▶ Adult: 300–600 micrograms, larger doses may be used in emergencies

**Control of muscarinic side-effects of neostigmine in reversal of competitive neuromuscular block**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child 12–17 years: 0.6–1.2 mg
- ▶ Adult: 0.6–1.2 mg

**Excessive bradycardia associated with beta-blocker use**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: 0.6–2.4 mg in divided doses (max. per dose 600 micrograms)

**Bradycardia following myocardial infarction (particularly if complicated by hypotension)**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: 500 micrograms every 3–5 minutes; maximum 3 mg per course

**IMPORTANT SAFETY INFORMATION**

Antimuscarinic drugs used for premedication to general anaesthesia should only be administered by, or under the direct supervision of, personnel experienced in their use.

● **INTERACTIONS** → Appendix 1: atropine● **SIDE-EFFECTS**

- ▶ **Common or very common**
- ▶ With intravenous use Abdominal distension · anhidrosis · anxiety · arrhythmias · bronchial secretion decreased · dysphagia · gastrointestinal disorders · hallucination · hyperthermia · movement disorders · mydriasis · speech disorder · taste loss · thirst
- ▶ **Uncommon**
- ▶ With intravenous use Psychotic disorder
- ▶ **Rare or very rare**
- ▶ With intravenous use Angina pectoris · hypertensive crisis · seizure
- ▶ **Frequency not known**
- ▶ With intravenous use Insomnia
- ▶ With oral use Angle closure glaucoma · arrhythmias · bronchial secretion altered · chest pain · dysphagia · fever · gastrointestinal disorders · mydriasis · staggering · thirst

● **PREGNANCY** Not known to be harmful; manufacturer advises caution.● **BREAST FEEDING** May suppress lactation; small amount present in milk—manufacturer advises caution.● **MONITORING REQUIREMENTS**

- ▶ Control of muscarinic side-effects of neostigmine in reversal of competitive neuromuscular block
- ▶ With intravenous use Since atropine has a shorter duration of action than neostigmine, late unopposed bradycardia may result; close monitoring of the patient is necessary.

● **LESS SUITABLE FOR PRESCRIBING** Atropine tablets less suitable for prescribing. Any clinical benefit as a gastrointestinal antispasmodic is outweighed by atropinic side-effects.● **EXCEPTIONS TO LEGAL CATEGORY**

- ▶ With intramuscular use or intravenous use or subcutaneous use Prescription only medicine restriction does not apply where administration is for saving life in emergency.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution, solution for injection, solution for infusion

## 1.1 Neuromuscular blockade

### Neuromuscular blockade

#### Neuromuscular blocking drugs

Neuromuscular blocking drugs used in anaesthesia are also known as **muscle relaxants**. By specific blockade of the neuromuscular junction they enable light anaesthesia to be used with adequate relaxation of the muscles of the abdomen and diaphragm. They also relax the vocal cords and allow the passage of a tracheal tube. Their action differs from the muscle relaxants used in musculoskeletal disorders that act on the spinal cord or brain.

Patients who have received a neuromuscular blocking drug should **always** have their respiration assisted or controlled until the drug has been inactivated or antagonised. They should also receive sufficient concomitant inhalational or intravenous anaesthetic or sedative drugs to prevent awareness.

#### Non-depolarising neuromuscular blocking drugs

Non-depolarising neuromuscular blocking drugs (also known as competitive muscle relaxants) compete with acetylcholine for receptor sites at the neuromuscular junction and their action can be reversed with anticholinesterases such as neostigmine p. 1188. Non-depolarising neuromuscular blocking drugs can be divided into the **aminosteroid** group, comprising pancuronium bromide p. 1409, rocuronium bromide p. 1409, and vecuronium bromide p. 1409, and the **benzylisoquinolinium** group, comprising atracurium besilate p. 1407, cisatracurium p. 1408, and mivacurium p. 1408.

Non-depolarising neuromuscular blocking drugs have a slower onset of action than suxamethonium chloride p. 1407. These drugs can be classified by their duration of action as short-acting (15–30 minutes), intermediate-acting (30–40 minutes), and long-acting (60–120 minutes), although duration of action is dose-dependent. Drugs with a shorter or intermediate duration of action, such as atracurium besilate and vecuronium bromide p. 1409, are more widely used than those with a longer duration of action, such as pancuronium bromide.

Non-depolarising neuromuscular blocking drugs have no sedative or analgesic effects and are not considered to trigger malignant hyperthermia.

For patients receiving intensive care and who require tracheal intubation and mechanical ventilation, a non-depolarising neuromuscular blocking drug is chosen according to its onset of effect, duration of action, and side-effects. Rocuronium bromide, with a rapid onset of effect, may facilitate intubation. Atracurium besilate or cisatracurium may be suitable for long-term neuromuscular blockade since their duration of action is not dependent on elimination by the liver or the kidneys.

Atracurium besilate, a mixture of 10 isomers, is a benzylisoquinolinium neuromuscular blocking drug with an intermediate duration of action. It undergoes non-enzymatic metabolism which is independent of liver and kidney

function, thus allowing its use in patients with hepatic or renal impairment. Cardiovascular effects are associated with significant histamine release; histamine release can be minimised by administering slowly or in divided doses over at least 1 minute.

Cisatracurium is a single isomer of atracurium besilate. It is more potent and has a slightly longer duration of action than atracurium besilate and provides greater cardiovascular stability because cisatracurium lacks histamine-releasing effects.

Mivacurium, a benzylisoquinolinium neuromuscular blocking drug, has a short duration of action. It is metabolised by plasma cholinesterase and muscle paralysis is prolonged in individuals deficient in this enzyme. It is not associated with vagolytic activity or ganglionic blockade although histamine release can occur, particularly with rapid injection.

Pancuronium bromide, an aminosteroid neuromuscular blocking drug, has a long duration of action and is often used in patients receiving long-term mechanical ventilation in intensive care units. It lacks a histamine-releasing effect, but vagolytic and sympathomimetic effects can cause tachycardia and hypertension.

Rocuronium bromide exerts an effect within 2 minutes and has the most rapid onset of any of the non-depolarising neuromuscular blocking drugs. It is an aminosteroid neuromuscular blocking drug with an intermediate duration of action. It is reported to have minimal cardiovascular effects; high doses produce mild vagolytic activity.

Vecuronium bromide p. 1409, an aminosteroid neuromuscular blocking drug, has an intermediate duration of action. It does not generally produce histamine release and lacks cardiovascular effects.

#### Depolarising neuromuscular blocking drugs

Suxamethonium chloride has the most rapid onset of action of any of the neuromuscular blocking drugs and is ideal if fast onset and brief duration of action are required, e.g. with tracheal intubation. Unlike the non-depolarising neuromuscular blocking drugs, its action cannot be reversed and recovery is spontaneous; anticholinesterases such as neostigmine potentiate the neuromuscular block.

Suxamethonium chloride should be given after anaesthetic induction because paralysis is usually preceded by painful muscle fasciculations. While tachycardia occurs with single use, bradycardia may occur with repeated doses in adults and with the first dose in children. Premedication with atropine reduces bradycardia as well as the excessive salivation associated with suxamethonium chloride use.

Prolonged paralysis may occur in **dual block**, which occurs with high or repeated doses of suxamethonium chloride and is caused by the development of a non-depolarising block following the initial depolarising block. Individuals with myasthenia gravis are resistant to suxamethonium chloride but can develop dual block resulting in delayed recovery. Prolonged paralysis may also occur in those with low or atypical plasma cholinesterase. Assisted ventilation should be continued until muscle function is restored.

## NEUROMUSCULAR BLOCKING DRUGS > DEPOLARISING

### Suxamethonium chloride

26-Nov-2019

#### (Succinylcholine chloride)

- **DRUG ACTION** Suxamethonium acts by mimicking acetylcholine at the neuromuscular junction but hydrolysis is much slower than for acetylcholine; depolarisation is therefore prolonged, resulting in neuromuscular blockade.

#### ● INDICATIONS AND DOSE

##### Neuromuscular blockade (short duration) during surgery and intubation

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: 1–1.5 mg/kg

- **UNLICENSED USE** Doses of suxamethonium in BNF may differ from those in product literature.

#### IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in its use.

- **CONTRA-INDICATIONS** Hyperkalaemia · low plasma-cholinesterase activity (including severe liver disease) · major trauma · neurological disease involving acute wasting of major muscle · personal or family history of congenital myotonic disease · personal or family history of malignant hyperthermia · prolonged immobilisation (risk of hyperkalaemia) · severe burns · skeletal muscle myopathies (e.g. Duchenne muscular dystrophy)

- **CAUTIONS** Cardiac disease · neuromuscular disease · raised intra-ocular pressure (avoid in penetrating eye injury) · respiratory disease · severe sepsis (risk of hyperkalaemia)

- **INTERACTIONS** → Appendix 1: suxamethonium

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Arrhythmias · bradycardia (may occur with repeated doses) · flushing · muscle contractions involuntary · myoglobinaemia · myoglobinuria · post procedural muscle pain · rash
  - ▶ **Rare or very rare** Apnoea · cardiac arrest · hypersensitivity · malignant hyperthermia · respiratory disorders · trismus
- SIDE-EFFECTS, FURTHER INFORMATION** Premedication with atropine reduces bradycardia associated with suxamethonium use.

- **ALLERGY AND CROSS-SENSITIVITY** Allergic cross-reactivity between neuromuscular blocking drugs has been reported; caution is advised in cases of hypersensitivity to these drugs.

- **PREGNANCY** Mildly prolonged maternal neuromuscular blockade may occur.

- **BREAST FEEDING** Unlikely to be present in breast milk in significant amounts (ionised at physiological pH). Breast-feeding may be resumed once the mother recovered from neuromuscular block.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution, particularly in end stage hepatic failure (increased risk of prolonged apnoea due to reduced hepatic synthesis of plasma cholinesterase).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

#### Solution for injection

- ▶ **Suxamethonium chloride (Non-proprietary)**

Suxamethonium chloride 50 mg per 1 ml Suxamethonium chloride 100mg/2ml solution for injection ampoules | 10 ampoule **[PoM]** £28.80–£50.00

- ▶ **Anectine** (Aspen Pharma Trading Ltd)

Suxamethonium chloride 50 mg per 1 ml Anectine 100mg/2ml solution for injection ampoules | 5 ampoule **[PoM]** £3.57 (Hospital only)

## NEUROMUSCULAR BLOCKING DRUGS > NON-DEPOLARISING

### Non-depolarising neuromuscular blocking drugs

#### IMPORTANT SAFETY INFORMATION

Non-depolarising neuromuscular blocking drugs should only be administered by, or under direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management.

- **CAUTIONS** Burns (resistance can develop, increased doses may be required) · cardiovascular disease (reduce rate of administration) · electrolyte disturbances (response unpredictable) · fluid disturbances (response unpredictable) · hypothermia (activity prolonged, lower doses required) · myasthenia gravis (activity prolonged, lower doses required) · neuromuscular disorders (response unpredictable)

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Flushing · hypotension
- ▶ **Uncommon** Bronchospasm · hypersensitivity · skin reactions · tachycardia
- ▶ **Rare or very rare** Circulatory collapse · muscle weakness (after prolonged use in intensive care) · myopathy (after prolonged use in intensive care) · shock
- **ALLERGY AND CROSS-SENSITIVITY** Allergic cross-reactivity between neuromuscular blocking drugs has been reported; caution is advised in cases of hypersensitivity to these drugs.
- **PREGNANCY** Non-depolarising neuromuscular blocking drugs are highly ionised at physiological pH and are therefore unlikely to cross the placenta in significant amounts.
- **BREAST FEEDING** Non-depolarising neuromuscular blocking drugs are ionised at physiological pH and are unlikely to be present in milk in significant amounts. Breast-feeding may be resumed once the mother has recovered from neuromuscular block.

**above**

### Atracurium besilate

#### (Atracurium besylate)

#### ● INDICATIONS AND DOSE

##### Neuromuscular blockade (short to intermediate duration) for surgery and intubation

- ▶ INITIALLY BY INTRAVENOUS INJECTION

Adult: Initially 300–600 micrograms/kg, then (by intravenous injection) 100–200 micrograms/kg as required, alternatively (by intravenous injection) initially 300–600 micrograms/kg, followed by (by intravenous infusion) 300–600 micrograms/kg/hour

##### Neuromuscular blockade during intensive care

- ▶ INITIALLY BY INTRAVENOUS INJECTION

Adult: Initially 300–600 micrograms/kg, initial dose is optional, then (by intravenous infusion) 270–1770 micrograms/kg/hour; (by intravenous infusion) usual dose 650–780 micrograms/kg/hour

#### DOSES AT EXTREMES OF BODY-WEIGHT

- ▶ To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **INTERACTIONS** → Appendix 1: neuromuscular blocking drugs, non-depolarising
- **SIDE-EFFECTS**
  - ▶ Rare or very rare Cardiac arrest
  - ▶ Frequency not known Seizure

**SIDE-EFFECTS, FURTHER INFORMATION** Hypotension, skin flushing, and bronchospasm is associated with histamine release. Manufacturer advises minimising effects of histamine release by administering over 1 minute in patients with cardiovascular disease or sensitivity to hypotension.

- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion* (*Tracrium*®; Atracurium besilate injection, Hospira; Atracurium injection/infusion, Genus), give continuously in Glucose 5% or Sodium Chloride 0.9%; stability varies with diluent; dilute requisite dose with infusion fluid to a concentration of 0.5–5 mg/mL.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

#### Solution for injection

##### ▶ Atracurium besilate (Non-proprietary)

Atracurium besilate 10 mg per 1 ml Atracurium besilate 250mg/25ml solution for injection vials | 1 vial [PoM] £16.50 (Hospital only)

Atracurium besilate 25mg/2.5ml solution for injection ampoules | 5 ampoule [PoM] £9.25 (Hospital only) | 5 ampoule [PoM] £11.50 | 10 ampoule [PoM] £18.50 | 10 ampoule [PoM] £16.56 (Hospital only) Atracurium besilate 50mg/5ml solution for injection ampoules | 5 ampoule [PoM] £17.50 (Hospital only) | 5 ampoule [PoM] £17.50 | 10 ampoule [PoM] £35.00 | 10 ampoule [PoM] £30.04 (Hospital only)

##### ▶ Tracrium (Aspen Pharma Trading Ltd)

Atracurium besilate 10 mg per 1 ml Tracrium 250mg/25ml solution for injection vials | 2 vial [PoM] £25.81 (Hospital only) Tracrium 25mg/2.5ml solution for injection ampoules | 5 ampoule [PoM] £8.28 (Hospital only) Tracrium 50mg/5ml solution for injection ampoules | 5 ampoule [PoM] £15.02 (Hospital only)

F 1407

## Cisatracurium

### • INDICATIONS AND DOSE

#### Neuromuscular blockade (intermediate duration) during surgery and intubation

##### ▶ INITIALLY BY INTRAVENOUS INJECTION

- ▶ Adult: Initially 150 micrograms/kg, then (by intravenous injection) maintenance 30 micrograms/kg every 20 minutes, alternatively (by intravenous infusion) initially 180 micrograms/kg/hour, then (by intravenous infusion) maintenance 60–120 micrograms/kg/hour, maintenance dose administered after stabilisation

#### Neuromuscular blockade (intermediate duration) during intensive care

##### ▶ INITIALLY BY INTRAVENOUS INJECTION

- ▶ Adult: Initially 150 micrograms/kg, initial dose is optional, then (by intravenous infusion) 180 micrograms/kg/hour, adjusted according to response; (by intravenous infusion) usual dose 30–600 micrograms/kg/hour

#### DOSES AT EXTREMES OF BODY-WEIGHT

- ▶ To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **INTERACTIONS** → Appendix 1: neuromuscular blocking drugs, non-depolarising
- **SIDE-EFFECTS**
  - ▶ Common or very common Bradycardia
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion* (*Nimbex*®, *Nimbex Forte*®), give continuously in Glucose 5% or Sodium Chloride 0.9%; solutions of 2 mg/mL and

5 mg/mL may be infused undiluted; alternatively dilute with infusion fluid to a concentration of 0.1–2 mg/mL.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ▶ Cisatracurium (Non-proprietary)

Cisatracurium (as Cisatracurium besilate) 2 mg per

1 ml Cisatracurium besilate 10mg/5ml solution for injection ampoules | 5 ampoule [PoM] £5 (Hospital only)

Cisatracurium besilate 20mg/10ml solution for injection ampoules | 5 ampoule [PoM] £37.75 (Hospital only) | 5 ampoule [PoM] £32.09–£37.75 | 10 ampoule [PoM] £75.50

Cisatracurium besilate 20mg/10ml solution for injection vials | 5 vial [PoM] £37.75 (Hospital only)

Cisatracurium (as Cisatracurium besilate) 5 mg per

1 ml Cisatracurium besilate 150mg/30ml solution for injection vials | 1 vial [PoM] £45.00 (Hospital only) | 1 vial [PoM] £26.43

##### ▶ Nimbex (Aspen Pharma Trading Ltd)

Cisatracurium (as Cisatracurium besilate) 2 mg per 1 ml Nimbex 20mg/10ml solution for injection ampoules | 5 ampoule [PoM] £37.75

Cisatracurium (as Cisatracurium besilate) 5 mg per 1 ml Nimbex Forte 150mg/30ml solution for injection vials | 1 vial [PoM] £31.09

F 1407

## Mivacurium

### • INDICATIONS AND DOSE

#### Neuromuscular blockade (short duration) during surgery and intubation

##### ▶ INITIALLY BY INTRAVENOUS INJECTION

- ▶ Adult: 70–250 micrograms/kg; (by intravenous injection) maintenance 100 micrograms/kg every 15 minutes, alternatively (by intravenous infusion) maintenance 8–10 micrograms/kg/minute, (by intravenous infusion) adjusted in steps of 1 microgram/kg/minute every 3 minutes if required; (by intravenous infusion) usual dose 6–7 micrograms/kg/minute

#### DOSES AT EXTREMES OF BODY-WEIGHT

- ▶ To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **CAUTIONS** Burns (low plasma cholinesterase activity; dose titration required) • elderly
- **INTERACTIONS** → Appendix 1: neuromuscular blocking drugs, non-depolarising
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in hepatic failure (increased duration of action).  
**Dose adjustments** Manufacturer advises dose reduction in hepatic failure.
- **RENAL IMPAIRMENT**  
**Dose adjustments** Clinical effect prolonged in renal failure—reduce dose according to response.
- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion*, give continuously in Glucose 5% or Sodium chloride 0.9%. Dilute to a concentration of 500 micrograms/mL; may also be given undiluted. Doses up to 150 micrograms/kg may be given over 5–15 seconds, higher doses should be given over 30 seconds. In asthma, cardiovascular disease or in those sensitive to reduced arterial blood pressure, give over 60 seconds.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ▶ Mivacron (Aspen Pharma Trading Ltd)

Mivacurium (as Mivacurium chloride) 2 mg per 1 ml Mivacron 10mg/5ml solution for injection ampoules | 5 ampoule [PoM] £13.95 (Hospital only)

Mivacron 20mg/10ml solution for injection ampoules | 5 ampoule [PoM] £22.57 (Hospital only)

F 1407

## Pancuronium bromide

### ● INDICATIONS AND DOSE

#### Neuromuscular blockade (long duration) during surgery and intubation

##### ► BY INTRAVENOUS INJECTION

- Adult: Initially 100 micrograms/kg, then 20 micrograms/kg as required

#### Neuromuscular blockade (long duration) during intensive care

##### ► BY INTRAVENOUS INJECTION

- Adult: Initially 100 micrograms/kg, initial dose is optional, then 60 micrograms/kg every 60–90 minutes

#### DOSES AT EXTREMES OF BODY-WEIGHT

- To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **INTERACTIONS** → Appendix 1: neuromuscular blocking drugs, non-depolarising

- **SIDE-EFFECTS** Apnoea · arrhythmia · hypersalivation · increased cardiac output · miosis

**SIDE-EFFECTS, FURTHER INFORMATION** Pancuronium lacks histamine-releasing effect, but vagolytic and sympathomimetic effects can cause tachycardia.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution (possibly slower onset and higher dose requirements due to resistance to neuromuscular blocking action which may lead to a prolonged recovery time).

- **RENAL IMPAIRMENT** Use with caution; prolonged duration of block.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ► Pancuronium bromide (Non-proprietary)

Pancuronium bromide 2 mg per 1 mL Pancuronium bromide 4mg/2mL solution for injection ampoules | 10 ampoule **[PoM]** £50.00 (Hospital only)

F 1407

## Rocuronium bromide

### ● INDICATIONS AND DOSE

#### Neuromuscular blockade (intermediate duration) during surgery and intubation

##### ► INITIALLY BY INTRAVENOUS INJECTION

- Adult: Initially 600 micrograms/kg; (by intravenous injection) maintenance 150 micrograms/kg, alternatively (by intravenous infusion) maintenance 300–600 micrograms/kg/hour, adjusted according to response
- Elderly: Initially 600 micrograms/kg; (by intravenous injection) maintenance 75–100 micrograms/kg, alternatively (by intravenous infusion) maintenance up to 400 micrograms/kg/hour, adjusted according to response

#### Neuromuscular blockade (intermediate duration) during intensive care

##### ► INITIALLY BY INTRAVENOUS INJECTION

- Adult: Initially 600 micrograms/kg, initial dose is optional; (by intravenous infusion) maintenance 300–600 micrograms/kg/hour for first hour, then (by intravenous infusion), adjusted according to response

#### DOSES AT EXTREMES OF BODY-WEIGHT

- To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **INTERACTIONS** → Appendix 1: neuromuscular blocking drugs, non-depolarising

### ● SIDE-EFFECTS

- **Uncommon** Procedural complications
- **Rare or very rare** Angioedema · face oedema · malignant hyperthermia · paralysis

- **HEPATIC IMPAIRMENT** Manufacturer advises caution (may prolong duration of action).

**Dose adjustments** Manufacturer advises consider dose reduction—consult product literature.

### ● RENAL IMPAIRMENT

**Dose adjustments** Reduce maintenance dose; prolonged paralysis.

- **DIRECTIONS FOR ADMINISTRATION** For *continuous intravenous infusion* or via drip tubing, may be diluted with Glucose 5% or Sodium Chloride 0.9%.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ► Rocuronium bromide (Non-proprietary)

Rocuronium bromide 10 mg per 1 mL Rocuronium bromide 50mg/5mL solution for injection ampoules | 10 ampoule **[PoM]** £24.00–£28.00

Rocuronium bromide 50mg/5mL solution for injection vials | 10 vial **[PoM]** £28.00–£38.30 | 10 vial **[PoM]** £28.00 (Hospital only)  
Rocuronium bromide 100mg/10mL solution for injection vials | 10 vial **[PoM]** £57.00–£76.70 | 10 vial **[PoM]** £57.00 (Hospital only)  
Rocuronium bromide 100mg/10mL solution for injection ampoules | 10 ampoule **[PoM]** £57.00

##### ► Esmeron (Merck Sharp & Dohme Ltd)

Rocuronium bromide 10 mg per 1 mL Esmeron 50mg/5mL solution for injection vials | 10 vial **[PoM]** £28.92 (Hospital only)

F 1407

22-May-2019

## Vecuronium bromide

### ● INDICATIONS AND DOSE

#### Neuromuscular blockade (intermediate duration) during surgery and intubation

##### ► INITIALLY BY INTRAVENOUS INJECTION

- Adult: 80–100 micrograms/kg; (by intravenous injection) maintenance 20–30 micrograms/kg, adjusted according to response, max. 100 micrograms/kg in caesarean section, alternatively (by intravenous infusion) maintenance 0.8–1.4 micrograms/kg/minute, adjusted according to response

#### DOSES AT EXTREMES OF BODY-WEIGHT

- To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **INTERACTIONS** → Appendix 1: neuromuscular blocking drugs, non-depolarising

### ● SIDE-EFFECTS

- **Uncommon** Procedural complications
- **Rare or very rare** Angioedema · face oedema · paralysis

- **HEPATIC IMPAIRMENT** Manufacturer advises caution in significant impairment.

- **RENAL IMPAIRMENT** Use with caution.

- **DIRECTIONS FOR ADMINISTRATION** Reconstitute each vial with 5 mL Water for Injections to give 2 mg/mL solution; alternatively reconstitute with up to 10 mL Glucose 5% or Sodium Chloride 0.9% or Water for Injections—unsuitable for further dilution if not reconstituted with Water for Injections. For *continuous intravenous infusion*, dilute reconstituted solution to a concentration up to 40 micrograms/mL with Glucose 5% or Sodium Chloride 0.9%; reconstituted solution can also be given via drip tubing.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for solution for injection

##### ► Vecuronium bromide (Non-proprietary)

**Vecuronium bromide 10 mg** Vecuronium bromide 10mg powder for solution for injection vials | 10 vial [PoM] £57.85 (Hospital only)

## 1.2 Neuromuscular blockade reversal

### Neuromuscular blockade reversal

#### Neuromuscular blockade reversal

##### Anticholinesterases

Anticholinesterases reverse the effects of the non-depolarising (competitive) neuromuscular blocking drugs such as pancuronium bromide p. 1409 but they prolong the action of the depolarising neuromuscular blocking drug suxamethonium chloride p. 1407.

Neostigmine p. 1188 is used specifically for reversal of non-depolarising (competitive) blockade. It acts within one minute of intravenous injection and its effects last for 20 to 30 minutes; a second dose may then be necessary.

Glycopyrronium bromide p. 1405 or alternatively atropine sulfate p. 1404, given before or with neostigmine, prevent bradycardia, excessive salivation, and other muscarinic effects of neostigmine.

##### Other drugs for reversal of neuromuscular blockade

Sugammadex below is a modified gamma cyclodextrin that can be used for rapid reversal of neuromuscular blockade induced by rocuronium bromide p. 1409 or vecuronium bromide p. 1409. In practice, sugammadex is used mainly for rapid reversal of neuromuscular blockade in an emergency.

### ANTICHOLINESTERASES

#### Neostigmine with glycopyrronium bromide

The properties listed below are those particular to the combination only. For the properties of the components please consider, neostigmine p. 1188, glycopyrronium bromide p. 1405.

##### • INDICATIONS AND DOSE

##### Reversal of non-depolarising neuromuscular blockade

###### ► BY INTRAVENOUS INJECTION

- Adult: 1–2 mL, repeated if necessary, alternatively 0.02 mL/kg, repeated if necessary; maximum 2 mL per course

- **INTERACTIONS** → Appendix 1: glycopyrronium · neostigmine

- **DIRECTIONS FOR ADMINISTRATION** For intravenous injection, give over 10–30 seconds.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- **Neostigmine with glycopyrronium bromide (Non-proprietary)**  
Glycopyrronium bromide 500 microgram per 1 mL, Neostigmine metilsulfate 2.5 mg per 1 mL Neostigmine 2.5mg/1mL / Glycopyrronium bromide 500micrograms/1mL solution for injection ampoules | 10 ampoule [PoM] £11.50

### ANTIDOTES AND CHELATORS

#### Sugammadex

18-Nov-2019

##### • INDICATIONS AND DOSE

##### Routine reversal of neuromuscular blockade induced by rocuronium or vecuronium

###### ► BY INTRAVENOUS INJECTION

- Adult: Initially 2–4 mg/kg, then 4 mg/kg if required, administered if recurrence of neuromuscular blockade occurs; consult product literature for further details

##### Immediate reversal of neuromuscular blockade induced by rocuronium

###### ► BY INTRAVENOUS INJECTION

- Adult: 16 mg/kg (consult product literature)

##### IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in its use.

- **CAUTIONS** Cardiovascular disease (recovery may be delayed) · elderly (recovery may be delayed) · pre-existing coagulation disorders · recurrence of neuromuscular blockade—monitor respiratory function until fully recovered · use of anticoagulants (unrelated to surgery) · wait 24 hours before re-administering rocuronium · wait 24 hours before re-administering vecuronium

- **INTERACTIONS** → Appendix 1: sugammadex

##### • SIDE-EFFECTS

- Common or very common Abdominal pain · arrhythmias · cough · dizziness · headache · nausea · procedural complications · skin reactions · taste altered · vomiting

##### ► Uncommon Hypersensitivity

- Frequency not known Bronchospasm

- **PREGNANCY** Use with caution—no information available.

- **RENAL IMPAIRMENT** Avoid if eGFR less than 30 mL/minute/1.73 m<sup>2</sup>.

##### • NATIONAL FUNDING/ACCESS DECISIONS

##### Scottish Medicines Consortium (SMC) decisions

The *Scottish Medicines Consortium*, has advised (February 2013) that sugammadex (*Bridion*®) is accepted for restricted use within NHS Scotland for the routine reversal of neuromuscular blockade in high-risk patients only, or where prompt reversal of neuromuscular block is required.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

ELECTROLYTES: May contain Sodium

- **Bridion** (Merck Sharp & Dohme Ltd)

**Sugammadex (as Sugammadex sodium) 100 mg per 1 mL** Bridion 500mg/5mL solution for injection vials | 10 vial [PoM] £1,491.00 (Hospital only)

Bridion 200mg/2mL solution for injection vials | 10 vial [PoM] £596.40 (Hospital only)

## 1.3 Peri-operative analgesia

### Peri-operative analgesia

#### Non-opioid analgesics

Since non-steroidal anti-inflammatory drugs (NSAIDs) do not depress respiration, do not impair gastro-intestinal motility, and do not cause dependence, they may be useful alternatives or adjuncts to opioids for the relief of postoperative pain. NSAIDs may be inadequate for the relief of severe pain. Diclofenac sodium p. 1198, diclofenac potassium p. 1197, flurbiprofen p. 1203, ibuprofen p. 1203, ketoprofen p. 1207, paracetamol p. 465, parecoxib p. 1413,

and ketorolac trometamol p. 1412 are licensed for postoperative use. Diclofenac and paracetamol can be given by injection as well as by mouth. Diclofenac sodium can be given by intravenous infusion for the treatment or prevention of postoperative pain. Intramuscular injections of diclofenac sodium and ketoprofen are rarely used; they are given deep into the gluteal muscle to minimise pain and tissue damage. Ketorolac trometamol is less irritant on intramuscular injection but pain has been reported; it can also be given by intravenous injection.

Suppositories of diclofenac sodium and ketoprofen may be effective alternatives to the parenteral use of these drugs.

### Opioid analgesics

Opioid analgesics are now rarely used as premedicants; they are more likely to be administered at induction. Pre-operative use of opioid analgesics is generally limited to those patients who require control of existing pain. See general notes on opioid analgesics and their use in postoperative pain.

See the management of opioid-induced respiratory depression in Pre-medication and peri-operative drugs p. 1403.

### Intra-operative analgesia

Opioid analgesics given in small doses before or with induction reduce the dose requirement of some drugs used during anaesthesia.

Alfentanil p. 1413, fentanyl p. 479, and remifentanyl p. 1414 are particularly useful because they act within 1–2 minutes and have short durations of action. The initial doses of alfentanil or fentanyl are followed either by successive intravenous injections or by an intravenous infusion; prolonged infusions increase the duration of effect. Repeated intra-operative doses of alfentanil or fentanyl should be given with care since the resulting respiratory depression can persist postoperatively and occasionally it may become apparent for the first time postoperatively when monitoring of the patient might be less intensive. Alfentanil, fentanyl, and remifentanyl can cause muscle rigidity, particularly of the chest wall or jaw; this can be managed by the use of neuromuscular blocking drugs.

In contrast to other opioids which are metabolised in the liver, remifentanyl undergoes rapid metabolism by nonspecific blood and tissue esterases; its short duration of action allows prolonged administration at high dosage, without accumulation, and with little risk of residual postoperative respiratory depression. Remifentanyl should not be given by intravenous injection intraoperatively, but it is well suited to continuous infusion; a supplementary analgesic is given before stopping the infusion of remifentanyl.

## ANAESTHETICS, GENERAL > NMDA RECEPTOR ANTAGONISTS

### Esketamine

06-Nov-2018

- **DRUG ACTION** Esketamine is an isomer of ketamine that blocks N-methyl-D-aspartate (NMDA) receptors and interrupts the association pathways of the brain, resulting in dissociative anaesthesia and analgesia.

#### ● INDICATIONS AND DOSE

##### Induction and maintenance of anaesthesia (specialist use only)

- ▶ **BY SLOW INTRAVENOUS INJECTION**
  - Adult: 0.5–1 mg/kg, then maintenance 0.25–0.5 mg/kg every 10–15 minutes, adjusted according to response
- ▶ **BY INTRAMUSCULAR INJECTION**
  - Adult: 2–4 mg/kg, then maintenance 1–2 mg/kg every 10–15 minutes, adjusted according to response

#### ▶ BY CONTINUOUS INTRAVENOUS INFUSION

- Adult: 0.5–3 mg/kg/hour, adjusted according to response

#### Analgescic supplementation of regional and local anaesthesia (specialist use only)

#### ▶ BY CONTINUOUS INTRAVENOUS INFUSION

- Adult: 0.125–0.25 mg/kg/hour, adjusted according to response

#### Analgescia in emergency medicine (specialist use only)

#### ▶ BY INTRAMUSCULAR INJECTION

- Adult: 0.25–0.5 mg/kg, adjusted according to response
- ▶ **BY SLOW INTRAVENOUS INJECTION**
  - Adult: 0.125–0.25 mg/kg, adjusted according to response

### IMPORTANT SAFETY INFORMATION

Esketamine should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CONTRA-INDICATIONS** Acute porphyrias p. 1120 · eclampsia · ischaemic cardiac disorders (when used as sole anaesthetic agent) · patients in whom hypertension or raised intracranial pressure forms a serious risk · pre-eclampsia
- **CAUTIONS** Chronic or acute alcohol consumption · decompensated cardiac failure · hypertension · increased cerebrospinal fluid pressure · patients with multiple injuries or in poor condition—consult product literature · prolapsed umbilical cord · raised intra-ocular pressure · raised intracranial pressure · severe psychotic disorders · thyroid dysfunction · unstable angina pectoris · uterine rupture
- **INTERACTIONS** → Appendix 1: esketamine
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Arrhythmias · dizziness · hypersalivation · movement disorders · nausea · respiratory disorders · respiratory secretion increased · sleep disorders · vision disorders · vomiting
  - ▶ **Uncommon** Muscle tone increased · nystagmus · skin reactions
  - ▶ **Rare or very rare** Hypotension
  - ▶ **Frequency not known** Anxiety · disorientation · drug-induced liver injury · dysphoria · hallucination
- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk—may depress neonatal respiration if used during delivery.
- **BREAST FEEDING** Manufacturer advises present in milk—not thought to be harmful at therapeutic doses.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (risk of prolonged action).
  - Dose adjustments** Manufacturer advises consider dose reduction.
- **DIRECTIONS FOR ADMINISTRATION** Manufacturer advises solution can be diluted with Glucose 5% or Sodium Chloride 0.9%.
- **PATIENT AND CARER ADVICE**
  - Driving and skilled tasks** Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks afterwards. For a short general anaesthetic the risk extends to **at least 24 hours** after administration. Responsible persons should be available to take patients home. The dangers of taking **alcohol** should also be emphasised.
  - For information on 2015 legislation regarding driving whilst taking certain controlled drugs, including ketamine which has similar pharmacokinetic properties to

esketamine, see *Drugs and driving* under Guidance on prescribing p. 1.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ► Vesierra (Pfizer Ltd)

**Esketamine (as Esketamine hydrochloride) 5 mg per 1 ml** Vesierra 25mg/5ml solution for injection ampoules | 10 ampoule [PoM] £18.98 (Hospital only) [CD2]  
**Esketamine (as Esketamine hydrochloride) 25 mg per 1 ml** Vesierra 50mg/2ml solution for injection ampoules | 10 ampoule [PoM] £26.31 (Hospital only) [CD2]

## ANAESTHETICS, LOCAL

### Bupivacaine with fentanyl

The properties listed below are those particular to the combination only. For the properties of the components please consider, bupivacaine hydrochloride p. 1419, fentanyl p. 479.

#### • INDICATIONS AND DOSE

##### During labour (once epidural block established)

###### ► BY CONTINUOUS LUMBAR EPIDURAL INFUSION

- Adult: 10–18.75 mg/hour, dose of bupivacaine to be administered, maximum 400 mg bupivacaine in 24 hours and 16–30 micrograms/hour, dose of fentanyl to be administered, maximum 720 micrograms fentanyl in 24 hours

##### Postoperative pain (once epidural block established)

###### ► BY CONTINUOUS EPIDURAL INFUSION

- Adult: 4–18.75 mg/hour, dose of bupivacaine to be administered, maximum 400 mg bupivacaine in 24 hours and 8–30 micrograms/hour, dose of fentanyl to be administered, maximum 720 micrograms fentanyl in 24 hours, to be administered by thoracic, upper abdominal or lower abdominal epidural infusion

- **INTERACTIONS** → Appendix 1: anaesthetics, local · opioids

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: infusion, solution for infusion

#### Solution for infusion

##### ► Buflay (Advanz Pharma)

**Fentanyl 2 microgram per 1 ml, Bupivacaine hydrochloride 1 mg per 1 ml** Buflay 1mg/ml and 2micrograms/ml 500ml infusion bags | 5 bag [PoM] £46.00 (Hospital only) [CD2]  
**Buflay 1mg/ml and 2micrograms/ml 250ml infusion bags** | 5 bag [PoM] £42.50 (Hospital only) [CD2]  
**Fentanyl (as Fentanyl citrate) 2 microgram per 1 ml, Bupivacaine hydrochloride 1.25 mg per 1 ml** Buflay 1.25mg/ml and 2micrograms/ml 250ml infusion bags | 5 bag [PoM] £45.25 (Hospital only) [CD2]  
**Buflay 1.25mg/ml and 2micrograms/ml 500ml infusion bags** | 10 bag [PoM] £92.00 (Hospital only) [CD2]

## ANALGESICS > NON-STEROIDAL ANTI-INFLAMMATORY DRUGS

### Ketorolac trometamol

17-Apr-2020

#### • INDICATIONS AND DOSE

##### Short-term management of moderate to severe acute postoperative pain only

###### ► BY INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION

- Adult (body-weight up to 50 kg): Initially 10 mg, then 10–30 mg every 4–6 hours as required for maximum duration of treatment 2 days, frequency may be increased to up to every 2 hours during initial postoperative period; maximum 60 mg per day

- Adult (body-weight 50 kg and above): Initially 10 mg, then 10–30 mg every 4–6 hours as required for maximum duration of treatment 2 days, frequency may be increased to up to every 2 hours during initial postoperative period; maximum 90 mg per day
- Elderly: Initially 10 mg, then 10–30 mg every 4–6 hours as required for maximum duration of treatment 2 days, frequency may be increased to up to every 2 hours during initial postoperative period; maximum 60 mg per day

- **CONTRA-INDICATIONS** Active or history of gastro-intestinal bleeding · active or history of gastro-intestinal ulceration · coagulation disorders · complete or partial syndrome of nasal polyps · confirmed or suspected cerebrovascular bleeding · dehydration · following operations with high risk of haemorrhage or incomplete haemostasis · haemorrhagic diatheses · history of gastro-intestinal bleeding related to previous NSAID therapy · history of gastro-intestinal perforation related to previous NSAID therapy · hypovolaemia · severe heart failure

- **CAUTIONS** Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · cerebrovascular disease · connective-tissue disorders · elderly (risk of serious side-effects and fatalities) · heart failure · history of gastro-intestinal disorders (e.g. ulcerative colitis, Crohn's disease) · ischaemic heart disease · peripheral arterial disease · risk factors for cardiovascular events · uncontrolled hypertension

- **INTERACTIONS** → Appendix 1: NSAIDs

- **SIDE-EFFECTS** Agranulocytosis · angioedema · anxiety · aplastic anaemia · appetite decreased · asthenia · asthma · azotaemia · bradycardia · burping · chest pain · concentration impaired · confusion · constipation · Crohn's disease aggravated · depression · diarrhoea · dizziness · drowsiness · dry mouth · dyspnoea · electrolyte imbalance · embolism and thrombosis · euphoric mood · fever · flank pain · fluid retention · flushing · gastrointestinal discomfort · gastrointestinal disorders · haemolytic anaemia · haemorrhage · hallucination · headache · hearing loss · heart failure · hepatic disorders · hyperhidrosis · hyperkinesia · hypersensitivity · hypertension · hypotension · infertility female · malaise · meningitis aseptic (patients with connective-tissue disorders such as systemic lupus erythematosus may be especially susceptible) · musculoskeletal disorder · myalgia · myocardial infarction · nausea · nephritis tubulointerstitial · nephropathy · neutropenia · oedema · optic neuritis · oral disorders · pallor · palpitations · pancreatitis · paraesthesia · perforation · photosensitivity reaction · platelet aggregation inhibition · psychotic disorder · pulmonary oedema · renal impairment · respiratory disorders · seizure · severe cutaneous adverse reactions (SCARs) · skin reactions · sleep disorders · stroke · taste altered · thinking abnormal · thirst · thrombocytopenia · tinnitus · ulcer · urinary disorders · vertigo · visual impairment · vomiting · weight increased · wound haemorrhage

**SIDE-EFFECTS, FURTHER INFORMATION** For information about cardiovascular and gastrointestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs. p. 1193

- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID.
- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.

- **PREGNANCY** Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.
- **BREAST FEEDING** Amount too small to be harmful.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution—may increase risk of renal impairment; avoid in hepatic failure.
- **RENAL IMPAIRMENT** Avoid if possible or use with caution. Avoid if serum creatinine greater than 160 micromol/litre. **Dose adjustments** The lowest effective dose should be used for the shortest possible duration. Max. 60 mg daily by intramuscular injection or intravenous injection. **Monitoring** In renal impairment monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.
- **DIRECTIONS FOR ADMINISTRATION** For intravenous injection, give over at least 15 seconds.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ▶ Ketorolac trometamol (Non-proprietary)

**Ketorolac trometamol 30 mg per 1 ml** Ketorolac 30mg/1ml solution for injection ampoules | 5 ampoule [PoM] £20.00–£30.00 DT = £5.36 (Hospital only)

##### ▶ Toradol (Atnabs Pharma UK Ltd)

**Ketorolac trometamol 30 mg per 1 ml** Toradol 30mg/1ml solution for injection ampoules | 5 ampoule [PoM] £5.36 DT = £5.36 (Hospital only)

## Parecoxib

27-Apr-2020

- **DRUG ACTION** Parecoxib is a selective inhibitor of cyclo-oxygenase-2.

#### ● INDICATIONS AND DOSE

##### Short-term management of acute postoperative pain

- ▶ BY DEEP INTRAMUSCULAR INJECTION, OR BY INTRAVENOUS INJECTION
- ▶ **Adult:** Initially 40 mg, then 20–40 mg every 6–12 hours as required for up to 3 days; maximum 80 mg per day
- ▶ **Elderly (body-weight up to 50 kg):** Initially 20 mg; maximum 40 mg per day

- **CONTRA-INDICATIONS** Active gastro-intestinal bleeding · active gastro-intestinal ulceration · cerebrovascular disease · following coronary artery bypass graft surgery · inflammatory bowel disease · ischaemic heart disease · mild to severe heart failure · peripheral arterial disease
- **CAUTIONS** Allergic disorders · cardiac impairment (NSAIDs may impair renal function) · coagulation defects · connective-tissue disorders · dehydration (risk of renal impairment) · elderly (risk of serious side-effects and fatalities) · history of cardiac failure · history of gastro-intestinal disorders · hypertension · oedema · risk factors for cardiovascular events

- **INTERACTIONS** → Appendix 1: NSAIDs

#### ● SIDE-EFFECTS

- ▶ **Common or very common** Agitation · back pain · constipation · dizziness · gastrointestinal discomfort · gastrointestinal disorders · hyperhidrosis · hypertension · hypokalaemia · hypotension · increased risk of infection · insomnia · nausea · numbness · peripheral oedema · post procedural complications · renal impairment · respiratory disorders · skin reactions · vomiting
- ▶ **Uncommon** Appetite decreased · arrhythmias · arthralgia · asthenia · cerebrovascular insufficiency · dry mouth · ear pain · embolism and thrombosis · hyperglycaemia · myocardial infarction · thrombocytopenia
- ▶ **Rare or very rare** Hypersensitivity · pancreatitis · perioral swelling

- ▶ **Frequency not known** Angioedema · cardiovascular event · circulatory collapse · congestive heart failure · dyspnoea · fluid retention · hepatitis · renal failure (more common in patients with pre-existing renal impairment) · severe cutaneous adverse reactions (SCARs)

**SIDE-EFFECTS, FURTHER INFORMATION** For information about cardiovascular and gastrointestinal side-effects, and a possible exacerbation of symptoms in asthma, see Non-steroidal anti-inflammatory drugs. p. 1193

- **ALLERGY AND CROSS-SENSITIVITY** Contra-indicated in patients with a history of hypersensitivity to aspirin or any other NSAID—which includes those in whom attacks of asthma, angioedema, urticaria or rhinitis have been precipitated by aspirin or any other NSAID. Contra-indicated in patients with a history of allergic drug reactions including sulfonamide hypersensitivity.
- **CONCEPTION AND CONTRACEPTION** Caution—long-term use of some NSAIDs is associated with reduced female fertility, which is reversible on stopping treatment.
- **PREGNANCY** Avoid unless the potential benefit outweighs the risk. Avoid during the third trimester (risk of closure of fetal ductus arteriosus *in utero* and possibly persistent pulmonary hypertension of the newborn); onset of labour may be delayed and duration may be increased.

- **BREAST FEEDING** Avoid—present in milk.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in moderate impairment (risk of increased exposure); avoid in severe impairment (no information available). **Dose adjustments** Manufacturer advises dose reduction to half the usual recommended dose in moderate impairment; maximum 40 mg daily.
- **RENAL IMPAIRMENT** Avoid if possible or use with caution. **Dose adjustments** The lowest effective dose should be used for the shortest possible duration. **Monitoring** In renal impairment monitor renal function; sodium and water retention may occur and renal function may deteriorate, possibly leading to renal failure.

#### ● NATIONAL FUNDING/ACCESS DECISIONS

##### Scottish Medicines Consortium (SMC) decisions

The Scottish Medicines Consortium has advised (January 2003) that parecoxib is **not** recommended for use within NHS Scotland.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder and solvent for solution for injection

##### ▶ Dynastat (Pfizer Ltd)

**Parecoxib (as Parecoxib sodium) 40 mg** Dynastat 40mg powder and solvent for solution for injection vials | 5 vial [PoM] £28.34 DT = £28.34

#### Powder for solution for injection

##### ▶ Dynastat (Pfizer Ltd)

**Parecoxib (as Parecoxib sodium) 40 mg** Dynastat 40mg powder for solution for injection vials | 10 vial [PoM] £49.60 DT = £49.60

## ANALGESICS > OPIOIDS

F 467

## Alfentanil

#### ● INDICATIONS AND DOSE

##### Spontaneous respiration: analgesia and enhancement of anaesthesia for short procedures

##### ▶ BY INTRAVENOUS INJECTION

- ▶ **Adult:** Initially up to 500 micrograms, dose to be administered over 30 seconds; supplemental doses 250 micrograms

continued →

**Assisted ventilation: analgesia and enhancement of anaesthesia for short procedures**

- BY INTRAVENOUS INJECTION
- Adult: Initially 30–50 micrograms/kg, supplemental doses 15 micrograms/kg

**Assisted ventilation: analgesia and enhancement of anaesthesia during maintenance of anaesthesia for longer procedures**

- BY INTRAVENOUS INFUSION
- Adult: Initially 50–100 micrograms/kg, dose to be administered over 10 minutes or as a bolus, followed by maintenance 30–60 micrograms/kg/hour

**Assisted ventilation: analgesia and suppression of respiratory activity during intensive care for up to 4 days**

- BY INTRAVENOUS INFUSION
- Adult: Initially 2 mg/hour, adjusted according to response; usual dose 0.5–10 mg/hour, alternatively initially 5 mg in divided doses, to be administered over 10 minutes; dose used for more rapid initial control, reduce rate of administration if hypotension or bradycardia occur; additional doses of 0.5–1 mg may be given by intravenous injection during short painful procedures

**DOSES AT EXTREMES OF BODY-WEIGHT**

- To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **CAUTIONS** Repeated intra-operative doses of alfentanil should be given with care since the resulting respiratory depression can persist postoperatively and occasionally it may become apparent for the first time postoperatively when monitoring of the patient might be less intensive.

- **INTERACTIONS** → Appendix 1: opioids

**● SIDE-EFFECTS**

- **Common or very common** Apnoea · chills · fatigue · hypertension · movement disorders · muscle rigidity · procedural complications
- **Uncommon** Coma · hiccups · hypercapnia · pain · post procedural complications · respiratory disorders
- **Rare or very rare** Agitation · crying · epistaxis · vascular pain
- **Frequency not known** Cardiac arrest · cough · fever · loss of consciousness · seizure

**SIDE-EFFECTS, FURTHER INFORMATION** Alfentanil can cause muscle rigidity, particularly of the chest wall or jaw; this can be managed by the use of neuromuscular blocking drugs.

- **BREAST FEEDING** Present in milk—withhold breast-feeding for 24 hours.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution. **Dose adjustments** Manufacturer advises dose reduction and cautious titration.
- **RENAL IMPAIRMENT** Avoid use or reduce dose; opioid effects increased and prolonged and increased cerebral sensitivity occurs.
- **DIRECTIONS FOR ADMINISTRATION** 5 mg/mL injection to be diluted before use. For *continuous or intermittent intravenous infusion* dilute in Glucose 5% or Sodium Chloride 0.9%.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

**Solution for injection**► **Alfentanil (Non-proprietary)**

**Alfentanil (as Alfentanil hydrochloride) 500 microgram per 1 mL** Alfentanil 1mg/2mL solution for injection ampoules | 10 ampoule [PoM] £5.95 DT = £6.34 [CD2]  
**Alfentanil 25mg/50mL solution for injection vials** | 1 vial [PoM] £14.90 [CD2]

**Alfentanil 5mg/10mL solution for injection ampoules** | 10 ampoule [PoM] £27.80 DT = £27.80 [CD2]

**Alfentanil (as Alfentanil hydrochloride) 5 mg per 1 mL** Alfentanil 5mg/1mL solution for injection ampoules | 10 ampoule [PoM] £21.95 DT = £23.19 [CD2]

► **Rapifen** (Piramal Critical Care Ltd)

**Alfentanil (as Alfentanil hydrochloride) 500 microgram per 1 mL** Rapifen 5mg/10mL solution for injection ampoules | 5 ampoule [PoM] £16.00 DT = £14.50 [CD2]

**Rapifen 1mg/2mL solution for injection ampoules** | 10 ampoule [PoM] £6.34 DT = £6.34 [CD2]

**Alfentanil (as Alfentanil hydrochloride) 5 mg per 1 mL** Rapifen Intensive Care 5mg/1mL solution for injection ampoules | 10 ampoule [PoM] £23.19 DT = £23.19 (Hospital only) [CD2]

F 467

**Remifentanil****● INDICATIONS AND DOSE****Analgesia and enhancement of anaesthesia at induction (initial bolus injection)**

- BY INTRAVENOUS INJECTION
- Adult: Initially 0.25–1 microgram/kg, dose to be administered over at least 30 seconds, if patient is to be intubated more than 8 minutes after start of intravenous infusion, initial bolus intravenous injection dose is not necessary

**Analgesia and enhancement of anaesthesia at induction with or without initial bolus dose**

- BY INTRAVENOUS INFUSION
- Adult: 30–60 micrograms/kg/hour, if patient is to be intubated more than 8 minutes after start of intravenous infusion, initial bolus intravenous injection dose is not necessary

**Assisted ventilation: analgesia and enhancement of anaesthesia during maintenance of anaesthesia (initial bolus injection)**

- BY INTRAVENOUS INJECTION
- Adult: Initially 0.25–1 microgram/kg, dose to be administered over at least 30 seconds

**Assisted ventilation: analgesia and enhancement of anaesthesia during maintenance of anaesthesia with or without initial bolus dose**

- BY INTRAVENOUS INFUSION
- Adult: 3–120 micrograms/kg/hour, dose to be administered according to anaesthetic technique and adjusted according to response, in light anaesthesia additional doses can be given by *intravenous injection* every 2–5 minutes during the intravenous infusion

**Spontaneous respiration: analgesia and enhancement of anaesthesia during maintenance of anaesthesia**

- BY INTRAVENOUS INFUSION
- Adult: Initially 2.4 micrograms/kg/hour, adjusted according to response; usual dose 1.5–6 micrograms/kg/hour

**Assisted ventilation: analgesia and sedation in intensive-care patients (for max 3 days)**

- BY INTRAVENOUS INFUSION
- Adult: Initially 6–9 micrograms/kg/hour, then adjusted in steps of 1.5 micrograms/kg/hour, allow at least 5 minutes between dose adjustments; usual dose 0.36–44.4 micrograms/kg/hour, if an infusion rate of

12 micrograms/kg/hour does not produce adequate sedation add another sedative (consult product literature for details)

#### Assisted ventilation: additional analgesia during stimulating or painful procedures in intensive-care patients

##### ► BY INTRAVENOUS INFUSION

- Adult: Usual dose 15–45 micrograms/kg/hour, maintain infusion rate of at least 6 micrograms/kg/hour for at least 5 minutes before procedure and adjust every 2–5 minutes according to requirements

#### Cardiac surgery

- Adult: (consult product literature)

#### DOSES AT EXTREMES OF BODY-WEIGHT

- To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

- **UNLICENSED USE** Remifentanyl doses in BNF may differ from those in product literature.

- **CONTRA-INDICATIONS** Analgesia in conscious patients

- **INTERACTIONS** → Appendix 1: opioids

#### ● SIDE-EFFECTS

- **Common or very common** Apnoea · muscle rigidity · post procedural complications

- **Uncommon** Hypoxia

- **Rare or very rare** Cardiac arrest

- **Frequency not known** Agitation · atrioventricular block · hypertension · seizure

**SIDE-EFFECTS, FURTHER INFORMATION** In contrast to other opioids which are metabolised in the liver, remifentanyl undergoes rapid metabolism by plasma esterases; it has short duration of action which is independent of dose and duration of infusion.

**Muscle rigidity** Remifentanyl can cause muscle rigidity that can be managed by the use of neuromuscular blocking drugs.

- **PREGNANCY** No information available.

- **BREAST FEEDING** Avoid breast-feeding for 24 hours after administration—present in milk in *animal* studies.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment (limited information available).

#### ● RENAL IMPAIRMENT

**Dose adjustments** No dose adjustment necessary in renal impairment.

- **DIRECTIONS FOR ADMINISTRATION** For *intravenous infusion* (*Ultiva*®), give continuously in Glucose 5% or Sodium Chloride 0.9% or Water for Injections; reconstitute with infusion fluid to a concentration of 1 mg/mL then dilute further to a concentration of 20–250 micrograms/mL (50 micrograms/mL recommended for general anaesthesia, 20–50 micrograms/mL recommended when used with target controlled infusion (TCI) device).

#### ● PRESCRIBING AND DISPENSING INFORMATION

Remifentanyl should not be given by intravenous injection intra-operatively, but it is well suited to continuous infusion; a supplementary analgesic is given before stopping the infusion of remifentanyl.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for solution for injection

##### ► Remifentanyl (Non-proprietary)

**Remifentanyl (as Remifentanyl hydrochloride) 1 mg** Remifentanyl 1mg powder for concentrate for solution for injection vials | 5 vial [PoM] £25.60 (Hospital only) [CD2]

**Remifentanyl (as Remifentanyl hydrochloride) 2 mg** Remifentanyl 2mg powder for concentrate for solution for injection vials | 5 vial [PoM] £51.13 (Hospital only) [CD2]

**Remifentanyl (as Remifentanyl hydrochloride) 5 mg** Remifentanyl 5mg powder for concentrate for solution for injection vials | 5 vial [PoM] £127.90–£131.74 (Hospital only) [CD2]

##### ► **Ultiva** (Aspen Pharma Trading Ltd)

**Remifentanyl (as Remifentanyl hydrochloride) 1 mg** Ultiva 1mg powder for solution for injection vials | 5 vial [PoM] £25.58 (Hospital only) [CD2]

**Remifentanyl (as Remifentanyl hydrochloride) 2 mg** Ultiva 2mg powder for solution for injection vials | 5 vial [PoM] £51.15 (Hospital only) [CD2]

**Remifentanyl (as Remifentanyl hydrochloride) 5 mg** Ultiva 5mg powder for solution for injection vials | 5 vial [PoM] £127.88 (Hospital only) [CD2]

## 1.4 Peri-operative sedation

### Conscious sedation for clinical procedures

#### Overview

Sedation of patients during diagnostic and therapeutic procedures is used to reduce fear and anxiety, to control pain, and to minimise excessive movement. The choice of sedative drug will depend upon the intended procedure; some procedures are safer and more successful under anaesthesia. The patient should be *monitored carefully*; monitoring should begin as soon as the sedative is given or when the patient becomes drowsy, and should be continued until the patient wakes up.

#### ANAESTHETICS, GENERAL > NMDA RECEPTOR ANTAGONISTS

### Ketamine

04-Dec-2019

#### ● INDICATIONS AND DOSE

##### Induction and maintenance of anaesthesia for short procedures

###### ► BY INTRAMUSCULAR INJECTION

- Adult: Initially 6.5–13 mg/kg, adjusted according to response, a dose of 10 mg/kg usually produces 12–25 minutes of surgical anaesthesia

###### ► BY INTRAVENOUS INJECTION

- Adult: Initially 1–4.5 mg/kg, adjusted according to response, to be administered over at least 60 seconds, a dose of 2 mg/kg usually produces 5–10 minutes of surgical anaesthesia

##### Diagnostic manoeuvres and procedures not involving intense pain

###### ► BY INTRAMUSCULAR INJECTION

- Adult: Initially 4 mg/kg

##### Induction and maintenance of anaesthesia for long procedures

###### ► BY INTRAVENOUS INFUSION

- Adult: Initially 0.5–2 mg/kg, using an infusion solution containing 1 mg/mL; maintenance 10–45 micrograms/kg/minute, adjusted according to response

#### IMPORTANT SAFETY INFORMATION

Ketamine should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management, and when resuscitation equipment is available.

- **CONTRA-INDICATIONS** Acute porphyrias p. 1120 · eclampsia · head trauma · hypertension · pre-eclampsia · raised intracranial pressure · severe cardiac disease · stroke

- **CAUTIONS** Acute circulatory failure (shock) · cardiovascular disease · dehydration · elderly · fixed cardiac output · hallucinations · head injury · hypertension ·

hypovolaemia • increased cerebrospinal fluid pressure • intracranial mass lesions • nightmares • predisposition to seizures • psychotic disorders • raised intra-ocular pressure • respiratory tract infection • thyroid dysfunction

● **INTERACTIONS** → Appendix 1: ketamine

● **SIDE-EFFECTS**

- ▶ **Common or very common** Anxiety • behaviour abnormal • confusion • diplopia • hallucination • muscle tone increased • nausea • nystagmus • skin reactions • sleep disorders • tonic clonic movements • vomiting
  - ▶ **Uncommon** Appetite decreased • arrhythmias • hypotension • respiratory disorders
  - ▶ **Rare or very rare** Apnoea • cystitis • cystitis haemorrhagic • delirium • dysphoria • flashback • hypersalivation
  - ▶ **Frequency not known** Drug-induced liver injury
- SIDE-EFFECTS, FURTHER INFORMATION** Incidence of hallucinations can be reduced by premedication with a benzodiazepine (such as midazolam).

● **PREGNANCY** May depress neonatal respiration if used during delivery.

● **BREAST FEEDING** Avoid for at least 12 hours after last dose.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution (risk of prolonged duration of action).  
**Dose adjustments** Manufacturer advises consider dose reduction.

● **DIRECTIONS FOR ADMINISTRATION** For *continuous intravenous infusion*, dilute to a concentration of 1 mg/mL with Glucose 5% or Sodium Chloride 0.9%; use microdrip infusion for maintenance of anaesthesia. For *intravenous injection*, dilute 100 mg/mL strength to a concentration of not more than 50 mg/mL with Glucose 5% or Sodium Chloride 0.9% or Water for Injections.

● **PATIENT AND CARER ADVICE**

**Driving and skilled tasks** Patients given sedatives and analgesics during minor outpatient procedures should be very carefully warned about the risk of driving or undertaking skilled tasks afterwards. For a short general anaesthetic the risk extends to **at least 24 hours** after administration. Responsible persons should be available to take patients home. The dangers of taking **alcohol** should also be emphasised.

For information on 2015 legislation regarding driving whilst taking certain controlled drugs, including ketamine, see *Drugs and driving* under Guidance on prescribing p. 1.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

**Solution for injection**

▶ **Ketamine (Non-proprietary)**

**Ketamine (as Ketamine hydrochloride) 10 mg per 1 mL** Ketamin 10 Curamed 50mg/5mL solution for injection ampoules | 10 ampoule [PoM] [S] [CD2]

**Ketamine (as Ketamine hydrochloride) 50 mg per 1 mL** Ketamine 500mg/10mL solution for injection vials | 10 vial [PoM] £70.00 [CD2] | 10 vial [PoM] £70.00 (Hospital only) [CD2]

**Ketamine 100mg/2mL solution for injection ampoules** | 10 ampoule [PoM] [S] [CD2]

**Ketamine 500mg/10mL solution for injection ampoules** | 10 ampoule [PoM] £70.00 [CD2]

▶ **Ketalar** (Pfizer Ltd)

**Ketamine (as Ketamine hydrochloride) 10 mg per 1 mL** Ketalar 200mg/20mL solution for injection vials | 1 vial [PoM] £5.06 DT = £5.06 [CD2]

**Ketamine (as Ketamine hydrochloride) 50 mg per 1 mL** Ketalar 500mg/10mL solution for injection vials | 1 vial [PoM] £8.77 DT = £8.77 [CD2]

## HYPNOTICS, SEDATIVES AND ANXIOLYTICS > NON-BENZODIAZEPINE HYPNOTICS AND SEDATIVES

### Dexmedetomidine

20-May-2020

● **INDICATIONS AND DOSE**

**Maintenance of sedation during intensive care**

▶ **BY INTRAVENOUS INFUSION**

▶ **Adult:** 0.7 microgram/kg/hour, adjusted according to response; usual dose 0.2–1.4 micrograms/kg/hour

**IMPORTANT SAFETY INFORMATION**

Dexmedetomidine should only be administered by, or under the direct supervision of, personnel experienced in its use, with adequate training in anaesthesia and airway management.

● **CONTRA-INDICATIONS** Acute cerebrovascular disorders • second- or third-degree AV block (unless pacemaker fitted) • uncontrolled hypotension

● **CAUTIONS** Abrupt withdrawal after prolonged use • bradycardia • elderly (risk of hypotension) • ischaemic heart disease (especially at higher doses) • malignant hyperthermia • severe cerebrovascular disease (especially at higher doses) • severe neurological disorders • spinal cord injury

● **INTERACTIONS** → Appendix 1: dexmedetomidine

● **SIDE-EFFECTS**

▶ **Common or very common** Agitation • arrhythmias • dry mouth • hyperglycaemia • hypertension • hyperthermia • hypoglycaemia • hypotension • myocardial infarction • myocardial ischaemia • nausea • respiratory depression • vomiting

▶ **Uncommon** Abdominal distension • apnoea • atrioventricular block • dyspnoea • hallucination • hyaloalbuminaemia • metabolic acidosis • thirst

● **PREGNANCY** Manufacturer advises avoid unless potential benefit outweighs risk—toxicity in *animal* studies.

● **BREAST FEEDING** Manufacturer advises avoid unless potential benefit outweighs risk—present in milk in *animal* studies.

● **HEPATIC IMPAIRMENT** Manufacturer advises caution (increased risk of toxicity due to decreased clearance).  
**Dose adjustments** Manufacturer advises consider dose reduction.

● **MONITORING REQUIREMENTS**

▶ Monitor cardiac function.

▶ Monitor respiratory function in non-intubated patients.

● **DIRECTIONS FOR ADMINISTRATION** To be diluted before use. For *intravenous infusion* given continuously in Glucose 5% or Sodium chloride 0.9%, dilute to a concentration of 4 micrograms/mL.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for infusion**

▶ **Dexmedetomidine (Non-proprietary)**

**Dexmedetomidine (as Dexmedetomidine hydrochloride)**

**100 microgram per 1 mL** Dexmedetomidine 1mg/10mL concentrate for solution for infusion vials | 4 vial [PoM] £313.10 (Hospital only) | Dexmedetomidine 400micrograms/4mL concentrate for solution for infusion vials | 4 vial [PoM] £125.30 (Hospital only)

Dexmedetomidine 200micrograms/2mL concentrate for solution for infusion ampoules | 5 ampoule [PoM] £78.30 (Hospital only)

▶ **Dexdor** (Orion Pharma (UK) Ltd)

**Dexmedetomidine (as Dexmedetomidine hydrochloride)**

**100 microgram per 1 mL** Dexdor 1mg/10mL concentrate for solution for infusion vials | 4 vial [PoM] £313.20 (Hospital only) | Dexdor 400micrograms/4mL concentrate for solution for infusion vials | 4 vial [PoM] £125.28 (Hospital only)

Dexdor 200micrograms/2ml concentrate for solution for infusion ampoules | 5 ampoule [PoM] £78.30 (Hospital only) | 25 ampoule [PoM] £391.50 (Hospital only)

## 2 Malignant hyperthermia

### MUSCLE RELAXANTS > DIRECTLY ACTING

#### Dantrolene sodium

29-Nov-2019

- **DRUG ACTION** Acts on skeletal muscle cells by interfering with calcium efflux, thereby stopping the contractile process.

- **INDICATIONS AND DOSE**

##### Malignant hyperthermia

- ▶ **BY RAPID INTRAVENOUS INJECTION**

- ▶ Adult: Initially 2–3 mg/kg, then 1 mg/kg, repeated if necessary; maximum 10 mg/kg per course

##### Chronic severe spasticity of voluntary muscle

- ▶ **BY MOUTH**

- ▶ Adult: Initially 25 mg daily, then increased to up to 100 mg 4 times a day, dose increased at weekly intervals; usual dose 75 mg 3 times a day

##### Muscle cramps in motor neurone disease (specialist use only)

- ▶ **BY MOUTH**

- ▶ Adult: Initially 25 mg daily, then increased to up to 100 mg 4 times a day, dose increased at weekly intervals

- **UNLICENSED USE**

- ▶ With oral use [EvGr] Dantrolene sodium is used for the treatment of muscle cramps in motor neurone disease, but is not licensed for this indication.

#### IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in the use of dantrolene when used for malignant hyperthermia.

- **CONTRA-INDICATIONS**

- ▶ With oral use Acute muscle spasm • avoid when spasticity is useful, for example, locomotion

- **CAUTIONS**

- ▶ With intravenous use Avoid extravasation (risk of tissue necrosis)
- ▶ With oral use Females (hepatotoxicity) • history of liver disorders (hepatotoxicity) • if doses greater than 400 mg daily (hepatotoxicity) • impaired cardiac function • impaired pulmonary function • patients over 30 years (hepatotoxicity) • therapeutic effect may take a few weeks to develop—discontinue if no response within 6–8 weeks

- **INTERACTIONS** → Appendix 1: dantrolene

- **SIDE-EFFECTS**

##### GENERAL SIDE-EFFECTS

- ▶ **Common or very common** Abdominal pain • hepatic disorders • nausea • respiratory disorders • skin reactions • speech disorder • vomiting
- ▶ **Uncommon** Crystalluria • hyperhidrosis
- ▶ **Frequency not known** Arrhythmias • dizziness • drowsiness

##### SPECIFIC SIDE-EFFECTS

- ▶ **Common or very common**
- ▶ With oral use Appetite decreased • chills • confusion • depression • eosinophilia • fever • headache • insomnia • nervousness • pericarditis • visual impairment
- ▶ **Uncommon**
- ▶ With oral use Constipation • dysphagia • haemorrhage • heart failure aggravated • urinary disorders

- ▶ **Frequency not known**

- ▶ With intravenous use Gastrointestinal haemorrhage • heart failure • localised pain • pulmonary oedema • seizure • thrombophlebitis
- ▶ With oral use Asthenia • diarrhoea • dyspnoea • hypertension • malaise

- **PREGNANCY**

- ▶ With intravenous use Use only if potential benefit outweighs risk.
- ▶ With oral use Although teratological studies in *animals* have proved satisfactory, dantrolene sodium does cross the placenta, therefore manufacturer advises avoid.

- **BREAST FEEDING**

- ▶ With intravenous use Present in milk—use only if potential benefit outweighs risk.
- ▶ With oral use Present in milk—manufacturer advises avoid.

- **HEPATIC IMPAIRMENT**

- ▶ With oral use Manufacturer advises avoid in hepatic impairment.

- **MONITORING REQUIREMENTS**

- ▶ With oral use Test liver function before and at intervals during therapy.

- **PATIENT AND CARER ADVICE**

Hepatotoxicity ▶ With oral use Patients should be told how to recognise signs of liver disorder and advised to seek prompt medical attention if symptoms such as anorexia, nausea, vomiting, fatigue, abdominal pain, dark urine, or pruritus develop.

**Driving and skilled tasks** ▶ With oral use Drowsiness may affect performance of skilled tasks (e.g. driving); effects of alcohol enhanced.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: oral suspension, oral solution

##### Powder for solution for injection

- ▶ **Dantrium** (Forum Health Products Ltd)

**Dantrolene sodium 20 mg** Dantrium Intravenous 20mg powder for solution for injection vials | 12 vial [PoM] £612.00 (Hospital only) | 36 vial [PoM] £1,836.00 (Hospital only)

##### Capsule

##### CAUTIONARY AND ADVISORY LABELS 2

- ▶ **Dantrium** (Forum Health Products Ltd)

**Dantrolene sodium 25 mg** Dantrium 25mg capsules | 100 capsule [PoM] £16.87 DT = £16.87

**Dantrolene sodium 100 mg** Dantrium 100mg capsules | 100 capsule [PoM] £43.07 DT = £43.07

## Local anaesthesia

### Anaesthesia (local)

#### Local anaesthetic drugs

The use of local anaesthetics by injection or by application to mucous membranes to produce local analgesia is discussed in this section.

Local anaesthetic drugs act by causing a reversible block to conduction along nerve fibres. They vary widely in their potency, toxicity, duration of action, stability, solubility in water, and ability to penetrate mucous membranes. These factors determine their application, e.g. topical (surface), infiltration, peripheral nerve block, intravenous regional anaesthesia (Bier's block), plexus, epidural (extradural), or spinal (intrathecal or subarachnoid) block. Local anaesthetics may also be used for postoperative pain relief, thereby reducing the need for analgesics such as opioids.

Bupivacaine hydrochloride p. 1419 has a longer duration of action than other local anaesthetics. It has a slow onset of action, taking up to 30 minutes for full effect. It is often used

in lumbar epidural blockade and is particularly suitable for continuous epidural analgesia in labour, or for postoperative pain relief. It is the principal drug used for spinal anaesthesia. Hyperbaric solutions containing glucose may be used for spinal block.

Levobupivacaine p. 1421, an isomer of bupivacaine, has anaesthetic and analgesic properties similar to bupivacaine hydrochloride, but is thought to have fewer adverse effects.

Lidocaine hydrochloride p. 1422 is effectively absorbed from mucous membranes and is a useful surface anaesthetic in concentrations up to 10%. Except for surface anaesthesia and dental anaesthesia, solutions should **not** usually exceed 1% in strength. The duration of the block (with adrenaline/epinephrine p. 236) is about 90 minutes.

Prilocaine hydrochloride p. 1426 is a local anaesthetic of low toxicity which is similar to lidocaine hydrochloride. A hyperbaric solution of prilocaine hydrochloride (containing glucose) may be used for spinal anaesthesia.

Ropivacaine hydrochloride p. 1427 is an amide-type local anaesthetic agent similar to bupivacaine hydrochloride. It is less cardiotoxic than bupivacaine hydrochloride, but also less potent.

Tetracaine p. 1429, a para-aminobenzoic acid ester, is an effective local anaesthetic for topical application; a 4% gel is indicated for anaesthesia before venepuncture or venous cannulation. It is rapidly absorbed from mucous membranes and should **never** be applied to inflamed, traumatised, or highly vascular surfaces. It should never be used to provide anaesthesia for bronchoscopy or cystoscopy because lidocaine hydrochloride is a safer alternative.

#### Administration by injection

The dose of local anaesthetic depends on the injection site and the procedure used. In determining the safe dosage, it is important to take account of the rate of absorption and excretion, and of the potency. The patient's age, weight, physique, and clinical condition, and the vascularity of the administration site and the duration of administration, must also be considered.

Uptake of local anaesthetics into the systemic circulation determines their duration of action and produces toxicity.

NHS Improvement has advised (September 2016) that, prior to administration, all injectable medicines must be drawn directly from their original ampoule or container into a syringe and should **never** be decanted into gallipots or open containers. This is to avoid the risk of medicines being confused with other substances, e.g. skin disinfectants, and to reduce the risk of contamination.

Great care must be taken to avoid accidental intravascular injection; local anaesthetic injections should be given slowly in order to detect inadvertent intravascular administration. When prolonged analgesia is required, a long-acting local anaesthetic is preferred to minimise the likelihood of cumulative systemic toxicity. Local anaesthesia around the oral cavity may impair swallowing and therefore increases the risk of aspiration.

Epidural anaesthesia is commonly used during surgery, often combined with general anaesthesia, because of its protective effect against the stress response of surgery. It is often used when good postoperative pain relief is essential.

#### Vasoconstrictors in combination with local anaesthetics

Local anaesthetics cause dilatation of blood vessels. The addition of a vasoconstrictor such as adrenaline/epinephrine to the local anaesthetic preparation diminishes local blood flow, slowing the rate of absorption and thereby prolonging the anaesthetic effect. Great care should be taken to avoid inadvertent intravenous administration of a preparation containing adrenaline/epinephrine, and it is **not** advisable to give adrenaline/epinephrine with a local anaesthetic injection in digits or appendages because of the risk of ischaemic necrosis.

Adrenaline/epinephrine must be used in a low concentration when administered with a local anaesthetic. Care must also be taken to calculate a safe maximum dose of local anaesthetic when using combination products.

In patients with severe hypertension or unstable cardiac rhythm, the use of adrenaline/epinephrine with a local anaesthetic may be hazardous. For these patients an anaesthetic without adrenaline/epinephrine should be used.

#### Dental anaesthesia

Lidocaine hydrochloride is widely used in dental procedures; it is most often used in combination with adrenaline/epinephrine. Lidocaine hydrochloride 2% combined with adrenaline/epinephrine 1 in 80 000 (12.5 micrograms/mL) is a safe and effective preparation; there is no justification for using higher concentrations of adrenaline/epinephrine.

The amide-type local anaesthetics **articaine** and mepivacaine hydrochloride p. 1426 are also used in dentistry; they are available in cartridges suitable for dental use. Mepivacaine hydrochloride is available with or without adrenaline/epinephrine and articaine is available with adrenaline.

In patients with severe hypertension or unstable cardiac rhythm, mepivacaine hydrochloride without adrenaline/epinephrine may be used. Alternatively, prilocaine hydrochloride with or without felypressin can be used but there is no evidence that it is any safer. Felypressin can cause coronary vasoconstriction when used at high doses; limit dose in patients with coronary artery disease.

#### Toxicity induced by local anaesthesia

For management of toxicity see Severe local anaesthetic-induced cardiovascular toxicity below.

## Severe local anaesthetic-induced cardiovascular toxicity

### Overview

After injection of a bolus of local anaesthetic, toxicity may develop at any time in the following hour. In the event of signs of toxicity during injection, the administration of the local anaesthetic must be stopped immediately.

Cardiovascular status must be assessed and cardiopulmonary resuscitation procedures must be followed.

In the event of local anaesthetic-induced cardiac arrest, standard cardiopulmonary resuscitation should be initiated immediately. Lidocaine must not be used as anti-arrhythmic therapy.

If the patient does not respond rapidly to standard procedures, 20% lipid emulsion such as *Intralipid*® [unlicensed indication] should be given intravenously at an initial bolus dose of 1.5 mL/kg over 1 minute, followed by an infusion of 15 mL/kg/hour. After 5 minutes, if cardiovascular stability has not been restored or circulation deteriorates, give a maximum of two further bolus doses of 1.5 mL/kg over 1 minute, 5 minutes apart, and increase the infusion rate to 30 mL/kg/hour. Continue infusion until cardiovascular stability and adequate circulation are restored or maximum cumulative dose of 12 mL/kg is given.

Standard cardiopulmonary resuscitation must be maintained throughout lipid emulsion treatment.

Propofol is not a suitable alternative to lipid emulsion.

Further advice on ongoing treatment should be obtained from the National Poisons Information Service.

Detailed treatment algorithms and accompanying notes are available at [www.toxbase.org](http://www.toxbase.org) or can be found in the Association of Anaesthetists of Great Britain and Ireland safety guideline, Management of Severe Local Anaesthetic

Toxicity and Management of Severe Local Anaesthetic Toxicity – Accompanying notes.

## ANAESTHETICS, LOCAL

### Adrenaline with articaine hydrochloride

19-Dec-2019

(Carticaine hydrochloride with epinephrine)

#### ● INDICATIONS AND DOSE

##### **Infiltration anaesthesia in dentistry**

###### ► BY REGIONAL ADMINISTRATION

- Adult: Consult expert dental sources

##### **DOSES AT EXTREMES OF BODY-WEIGHT**

- To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

#### IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Injection into infected tissues • injection into inflamed tissues • preparations containing preservatives should not be used for caudal, epidural, or spinal block

##### **CONTRA-INDICATIONS, FURTHER INFORMATION**

- Injection site Manufacturer advises the local anaesthetic effect may be reduced when injected into an inflamed or infected area, due to altered local pH. Increased absorption into the blood also increases the possibility of systemic side-effects.

- **CAUTIONS** Arrhythmias • arteriosclerosis • cardiovascular disease • cerebrovascular disease • cor pulmonale • debilitated patients (consider dose reduction) • diabetes mellitus • elderly (consider dose reduction) • epilepsy • hypercalcaemia • hyperreflexia • hypertension • hyperthyroidism • hypokalaemia • hypovolaemia • impaired cardiac conduction • impaired respiratory function • ischaemic heart disease • myasthenia gravis • obstructive cardiomyopathy • occlusive vascular disease • organic brain damage • pheochromocytoma • prostate disorders • psychoneurosis • severe angina • shock • susceptibility to angle-closure glaucoma

##### **CAUTIONS, FURTHER INFORMATION**

- Use of vasoconstrictors In patients with severe hypertension or unstable cardiac rhythm, the use of adrenaline with a local anaesthetic may be hazardous. For these patients an anaesthetic without adrenaline should be used.

- **INTERACTIONS** → Appendix 1: articaine • sympathomimetics, vasoconstrictor

- **SIDE-EFFECTS** Face oedema • gingivitis • headache • nausea • sensation abnormal

**SIDE-EFFECTS, FURTHER INFORMATION** Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection. The toxicity mainly involves the central nervous and cardiovascular systems. The onset of toxicity can be unpredictable and delayed. Monitor as per local protocol for at least 30 minutes after administration.

- **ALLERGY AND CROSS-SENSITIVITY**

- Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine; reactions are less frequent with the amide types, such as articaine,

bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- **PREGNANCY** Use only if potential benefit outweighs risk – no information available.
- **BREAST FEEDING** Avoid breast-feeding for 48 hours after administration.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution (increased risk of toxicity in severe impairment).
- **RENAL IMPAIRMENT** Manufacturers advise use with caution in severe impairment.
- **MONITORING REQUIREMENTS** Consider monitoring blood pressure and ECG (advised with systemic adrenaline/epinephrine).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Solution for injection**

EXCIPIENTS: May contain Sulfites

- **Septanest** (Septodont Ltd)

**Adrenaline (as Adrenaline acid tartrate) 10 microgram per 1 ml, Articaine hydrochloride 40 mg per 1 ml** Septanest 1 in 100,000 solution for injection cartridges | 50 cartridge [PoM] £24.95

**Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 ml, Articaine hydrochloride 40 mg per 1 ml** Septanest 1 in 200,000 solution for injection cartridges | 50 cartridge [PoM] £24.95

## Bupivacaine hydrochloride

09-Dec-2019

#### ● INDICATIONS AND DOSE

##### **Surgical anaesthesia, lumbar epidural block**

###### ► BY REGIONAL ADMINISTRATION

- Adult: 75–150 mg, dose administered using a 5 mg/mL (0.5%) solution

##### **Surgical anaesthesia, field block**

###### ► BY REGIONAL ADMINISTRATION

- Adult: Up to 150 mg, dose administered using a 2.5 mg/mL (0.25%) or 5 mg/mL (0.5%) solution

##### **Surgical anaesthesia, thoracic epidural block**

###### ► BY THORACIC EPIDURAL

- Adult: 12.5–50 mg, dose administered using a 2.5 mg/mL (0.25%) or 5 mg/mL (0.5%) solution

##### **Surgical anaesthesia, caudal epidural block**

###### ► BY REGIONAL ADMINISTRATION

- Adult: 50–150 mg, dose administered using a 2.5 mg/mL (0.25%) or 5 mg/mL (0.5%) solution

##### **Surgical anaesthesia, major nerve block**

###### ► BY REGIONAL ADMINISTRATION

- Adult: 50–175 mg, dose administered using 5 mg/mL (0.5%) solution

##### **Acute pain, intra-articular block**

###### ► BY INTRA-ARTICULAR INJECTION

- Adult: Up to 100 mg, dose administered using a 2.5 mg/mL (0.25%) solution; when co-administered with bupivacaine by another route, total max. 150 mg

##### **Acute pain, thoracic epidural block**

###### ► BY CONTINUOUS EPIDURAL INFUSION

- Adult: 6.3–18.8 mg/hour, dose administered using a 1.25 mg/mL (0.125%) or 2.5 mg/mL (0.25%) solution; maximum 400 mg per day

##### **Acute pain, labour**

###### ► BY CONTINUOUS EPIDURAL INFUSION

- Adult: 6.25–12.5 mg/hour, dose administered using a 1.25 mg/mL (0.125%) solution; maximum 400 mg per day

##### **Acute pain, lumbar epidural block**

###### ► INITIALLY BY LUMBAR EPIDURAL

- Adult: 15–37.5 mg, then (by lumbar epidural) 15–37.5 mg, repeated when required at

continued →

intervals of at least 30 minutes, dose administered by intermittent injection using a 2.5 mg/mL (0.25%) solution, alternatively (by continuous epidural infusion) 12.5–18.8 mg/hour, dose administered using a 1.25 mg/mL (0.125%) or 2.5 mg/mL (0.25%) solution; maximum 400 mg per day

#### Acute pain, field block

- BY REGIONAL ADMINISTRATION
- Adult: Up to 150 mg, dose administered using a 2.5 mg/mL (0.25%) solution

#### DOSES AT EXTREMES OF BODY-WEIGHT

- To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

#### MARCAIN HEAVY®

#### Intrathecal anaesthesia for surgery

- BY INTRATHECAL INJECTION
- Adult: 10–20 mg

#### IMPORTANT SAFETY INFORMATION

The licensed doses stated may not be appropriate in some settings and expert advice should be sought.

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Avoid injection into infected tissues • avoid injection into inflamed tissues • intravenous regional anaesthesia (Bier's block) • preparations containing preservatives should not be used for caudal, epidural, or spinal block

#### CONTRA-INDICATIONS, FURTHER INFORMATION

- Injection site Manufacturer advises local anaesthetics should not be injected into inflamed or infected tissues. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.
- **CAUTIONS** Cardiovascular disease • cerebral atheroma • complete heart block • debilitated patients (consider dose reduction) • elderly (consider dose reduction) • epilepsy • hypertension • hypotension • hypovolaemia • impaired cardiac conduction • impaired respiratory function • myasthenia gravis • myocardial depression may be more severe and more resistant to treatment • shock

- **INTERACTIONS** → Appendix 1: anaesthetics, local

#### SIDE-EFFECTS

- **Common or very common** Arrhythmias • dizziness • hypertension • hypotension • nausea • paraesthesia • urinary retention • vomiting
- **Uncommon** Neurotoxicity
- **Rare or very rare** Arachnoiditis • cardiac arrest • diplopia • nerve disorders • paraplegia • paresis • respiratory depression

**SIDE-EFFECTS, FURTHER INFORMATION** Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection. The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems. The onset of toxicity can be unpredictable and delayed. Monitor as per local protocol for at least 30 minutes after administration.

#### ALLERGY AND CROSS-SENSITIVITY

- Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine,

prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- **PREGNANCY** Large doses during delivery can cause neonatal respiratory depression, hypotonia, and bradycardia after epidural block.
- Dose adjustments** Use lower doses for intrathecal use during late pregnancy.
- **BREAST FEEDING** Amount too small to be harmful.
- **HEPATIC IMPAIRMENT** Manufacturer advises use with caution in advanced liver dysfunction.
- **RENAL IMPAIRMENT** Use with caution in severe impairment.
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection, infusion, solution for infusion

#### Solution for injection

##### ► Bupivacaine hydrochloride (Non-proprietary)

**Bupivacaine hydrochloride 2.5 mg per 1 ml** Bupivacaine 25mg/10ml (0.25%) solution for injection vials | 10 vial [PoM] £ Bupivacaine 0.25% solution for injection 10ml Sure-Amp ampoules | 20 ampoule [PoM] £17.50 DT = £17.50

**Bupivacaine hydrochloride 5 mg per 1 ml** Bupivacaine 0.5% solution for injection 10ml Sure-Amp ampoules | 20 ampoule [PoM] £18.30 DT = £18.30

**Bupivacaine 100mg/20ml (0.5%) solution for injection vials** | 10 vial [PoM] £ Bupivacaine 50mg/10ml (0.5%) solution for injection ampoules | 10 ampoule [PoM] £7.56 DT = £7.56 | 10 ampoule [PoM] £17.58 DT = £7.56 (Hospital only)

**Bupivacaine hydrochloride anhydrous 40 mg per 1 ml** Bupivacaine Sintetica 40mg/ml (4%) solution for injection ampoules | 10 ampoule [PoM] £

##### ► Marcaïn (Aspen Pharma Trading Ltd)

**Bupivacaine hydrochloride 2.5 mg per 1 ml** Marcaïn 0.25% solution for injection 10ml Polypamp Steripack ampoules | 5 ampoule [PoM] £7.92 DT = £7.92 (Hospital only)

**Bupivacaine hydrochloride 5 mg per 1 ml** Marcaïn 0.5% solution for injection 10ml Polypamp Steripack ampoules | 5 ampoule [PoM] £9.25 DT = £9.25 (Hospital only)

#### Infusion

##### ► Bupivacaine hydrochloride (Non-proprietary)

**Bupivacaine hydrochloride 1 mg per 1 ml** Bupivacaine 100mg/100ml (0.1%) infusion bags | 20 bag [PoM] £ Bupivacaine 250mg/250ml (0.1%) infusion bags | 5 bag [PoM] £60.87 | 20 bag [PoM] £243.48

**Bupivacaine hydrochloride 1.25 mg per 1 ml** Bupivacaine 312.5mg/250ml (0.125%) infusion bags | 5 bag [PoM] £62.12 | 20 bag [PoM] £248.47

## Bupivacaine with adrenaline

19-Dec-2019

The properties listed below are those particular to the combination only. For the properties of the components please consider, bupivacaine hydrochloride p. 1419, adrenaline/epinephrine p. 236.

#### ● INDICATIONS AND DOSE

##### Surgical anaesthesia

- BY LUMBAR EPIDURAL, OR BY LOCAL INFILTRATION, OR BY CAUDAL EPIDURAL
- Adult: (consult product literature)

##### Acute pain management

- BY LUMBAR EPIDURAL, OR BY LOCAL INFILTRATION
- Adult: (consult product literature)

#### ● CAUTIONS

**CAUTIONS, FURTHER INFORMATION** In patients with severe hypertension or unstable cardiac rhythm, the use of adrenaline with a local anaesthetic may be hazardous. For these patients an anaesthetic without adrenaline should be used.

- **INTERACTIONS** → Appendix 1: anaesthetics, local • sympathomimetics, vasoconstrictor

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ► Bupivacaine with adrenaline (Non-proprietary)

Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 ml, Bupivacaine hydrochloride 2.5 mg per 1 ml Bupivacaine 25mg/10ml (0.25%) / Adrenaline (base) 50micrograms/10ml (1 in 200,000) solution for injection ampoules | 10 ampoule [PoM] £46.00 DT = £46.00

Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 ml, Bupivacaine hydrochloride anhydrous 2.5 mg per

1 ml Carbostesin-adrenaline 0.25% / 100micrograms/20ml (1 in 200,000) solution for injection ampoules | 1 ampoule [PoM] £5 Carbostesin-adrenaline 0.25% / 25micrograms/5ml (1 in 200,000) solution for injection ampoules | 1 ampoule [PoM] £5

Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 ml, Bupivacaine hydrochloride 5 mg per 1 ml Bupivacaine 50mg/10ml (0.5%) / Adrenaline (base) 50micrograms/10ml (1 in 200,000) solution for injection ampoules | 10 ampoule [PoM] £51.75 DT = £51.75

Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 ml, Bupivacaine hydrochloride anhydrous 5 mg per 1 ml Carbostesin-adrenaline 0.5% / 25micrograms/5ml (1 in 200,000) solution for injection ampoules | 1 ampoule [PoM] £5 Carbostesin-adrenaline 0.5% / 100micrograms/20ml (1 in 200,000) solution for injection ampoules | 1 ampoule [PoM] £5

## Chloroprocaine hydrochloride

21-May-2020

- **DRUG ACTION** Chloroprocaine is an ester-type local anaesthetic that blocks the generation and conduction of nerve impulses.

#### • INDICATIONS AND DOSE

**Spinal anaesthesia for surgical procedures lasting 40 minutes or less (using 10 mg/ml solution) (specialist use only)**

- BY SLOW INTRATHECAL INJECTION
- Adult: 40–50 mg (max. per dose 50 mg), dose depends on desired length of block

**Surgical anaesthesia for procedures lasting 60 minutes or less, peripheral nerve block (using 20 mg/ml solution) (specialist use only)**

- BY REGIONAL ADMINISTRATION
- Adult: (consult product literature)

#### IMPORTANT SAFETY INFORMATION

The licensed doses stated above may not be appropriate in some settings and expert advice should be sought.

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Avoid injection into infected tissues · avoid injection into inflamed tissues · hypovolaemia · impaired cardiac conduction · intravenous regional anaesthesia (Bier's block) · severe anaemia

#### CONTRA-INDICATIONS, FURTHER INFORMATION

- Injection site Local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.
- **CAUTIONS** Acute porphyrias p. 1120 · cardiovascular disease · complete heart block · debilitated patients (consider dose reduction) · elderly (consider dose reduction) · low plasma-cholinesterase activity (including severe liver disease) · neurological disorders · neuromuscular disorders · partial heart block
- **INTERACTIONS** → Appendix 1: chloroprocaine

#### • SIDE-EFFECTS

##### GENERAL SIDE-EFFECTS

- **Common or very common** Anxiety · dizziness · hypotension · nausea · vomiting
- **Uncommon** Arrhythmias · hearing impairment · hypertension · loss of consciousness · neurotoxicity · oral disorders · seizure · speech disorder · tinnitus · tremor · vision disorders
- **Rare or very rare** Cardiac arrest · drowsiness · faecal incontinence · myocardial contractility decreased · nerve disorders · neurological injury · perineal numbness · sexual dysfunction · urinary incontinence

##### SPECIFIC SIDE-EFFECTS

- **Common or very common**
- With intrathecal use Sensation abnormal
- When used by regional administration Anaesthetic complication · paraesthesia
- **Uncommon**
- With intrathecal use Headache · pain
- **Rare or very rare**
- With intrathecal use Motor dysfunction · respiratory disorders · spinal block
- When used by regional administration Dyspnoea · respiratory arrest

#### • ALLERGY AND CROSS-SENSITIVITY

- Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine and chloroprocaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.
- **PREGNANCY** Manufacturer advises use only if potential benefit outweighs risk (limited information available); this does not preclude use at term for obstetrical anaesthesia.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment.
- **RENAL IMPAIRMENT** Manufacturer advises use with caution.
- **HANDLING AND STORAGE** Manufacturer advises protect from light.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ► Chloroprocaine hydrochloride (Non-proprietary)

Chloroprocaine hydrochloride 20 mg per 1 ml Ampres 400mg/20ml solution for injection vials | 1 vial [PoM] £14.72

##### ► Ampres (Sintetica Ltd)

Chloroprocaine hydrochloride 10 mg per 1 ml Ampres 50mg/5ml solution for injection ampoules | 10 ampoule [PoM] £87.50

## Levobupivacaine

09-Dec-2019

#### • INDICATIONS AND DOSE

##### Acute postoperative pain

- BY CONTINUOUS EPIDURAL INFUSION
- Adult: 12.5–18.75 mg/hour, dose administered using a 1.25 mg/mL (0.125%) or 2.5 mg/mL (0.25%) solution; maximum 400 mg per day

##### Acute labour pain

- BY LUMBAR EPIDURAL
- Adult: 15–25 mg, repeated at intervals of at least 15 minutes, dose administered using a 2.5 mg/mL (0.25%) solution; maximum 400 mg per day
- BY CONTINUOUS EPIDURAL INFUSION
- Adult: 5–12.5 mg/hour, dose administered using a 1.25 mg/mL (0.125%) solution; maximum 400 mg per day

continued →

**Surgical anaesthesia, peripheral nerve block**

- ▶ BY REGIONAL ADMINISTRATION
- ▶ Adult: 2.5–150 mg, dose administered using a 2.5 mg/mL (0.25%) or 5 mg/mL (0.5%) solution

**Surgical anaesthesia, peribulbar nerve block**

- ▶ BY REGIONAL ADMINISTRATION
- ▶ Adult: 37.5–112.5 mg, dose administered using a 7.5 mg/mL (0.75%) solution

**Surgical anaesthesia for caesarean section**

- ▶ BY LUMBAR EPIDURAL
- ▶ Adult: 75–150 mg, to be given over 15–20 minutes, dose administered using a 5 mg/mL (0.5%) solution

**Surgical anaesthesia**

- ▶ BY LUMBAR EPIDURAL
- ▶ Adult: 50–150 mg, to be given over 5 minutes, dose administered using a 5 mg/mL (0.5%) or 7.5 mg/mL (0.75%) solution
- ▶ BY INTRATHECAL INJECTION
- ▶ Adult: 15 mg, dose administered using a 5 mg/mL (0.5%) solution
- ▶ BY LOCAL INFILTRATION
- ▶ Adult: 2.5–150 mg, dose administered using a 2.5 mg/mL (0.25%) solution

**DOSES AT EXTREMES OF BODY-WEIGHT**

- ▶ To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

**IMPORTANT SAFETY INFORMATION**

The licensed doses stated may not be appropriate in some settings and expert advice should be sought.

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Avoid injection into infected tissues • avoid injection into inflamed tissues • intravenous regional anaesthesia (Bier's block) • preparations containing preservatives should not be used for caudal, epidural, or spinal block

**CONTRA-INDICATIONS, FURTHER INFORMATION**

- ▶ Injection site Manufacturer advises local anaesthetics should not be injected into inflamed or infected tissues. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.
- **CAUTIONS** Cardiovascular disease • complete heart block • debilitated patients (consider dose reduction) • elderly (consider dose reduction) • epilepsy • hypovolaemia • impaired cardiac conduction • impaired respiratory function • myasthenia gravis • shock

- **INTERACTIONS** → Appendix 1: anaesthetics, local

**SIDE-EFFECTS**

- ▶ **Common or very common** Anaemia • back pain • dizziness • fever • headache • hypotension • nausea • procedural pain • vomiting
- ▶ **Frequency not known** Angioedema • apnoea • arrhythmias • asthma • atrioventricular block • bladder disorder • cardiac arrest • drowsiness • eye disorders • faecal incontinence • flushing • loss of consciousness • muscle twitching • muscle weakness • nerve disorders • neurological injury • oral hypoaesthesia • paralysis • priapism • respiratory disorders • seizure • sensation abnormal • skin reactions • sneezing • sweat changes • syncope • vision blurred

**SIDE-EFFECTS, FURTHER INFORMATION** The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems. Systemic toxicity can occur due to inadvertent intravascular injection. The onset

of toxicity can be unpredictable and delayed. Monitor as per local protocol for at least 30 minutes after administration.

**● ALLERGY AND CROSS-SENSITIVITY**

- ▶ **Hypersensitivity and cross-sensitivity** Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.
- **PREGNANCY** Large doses during delivery can cause neonatal respiratory depression, hypotonia, and bradycardia after epidural block. Avoid if possible in the first trimester—toxicity in *animal* studies. May cause fetal distress syndrome. Do not use for paracervical block in obstetrics. Do not use 7.5 mg/mL strength in obstetrics.
- **BREAST FEEDING** Amount too small to be harmful.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in impairment or patients with reduced hepatic blood flow (no information available).
- **DIRECTIONS FOR ADMINISTRATION** For 1.25 mg/mL concentration dilute standard solutions with sodium chloride 0.9%.
- **PRESCRIBING AND DISPENSING INFORMATION** Levobupivacaine is an isomer of bupivacaine.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection****▶ Levobupivacaine (Non-proprietary)**

**Levobupivacaine (as Levobupivacaine hydrochloride) 2.5 mg per 1 ml** Levobupivacaine 25mg/10ml solution for injection ampoules | 5 ampoule [PoM] £9.45 (Hospital only)

**Levobupivacaine (as Levobupivacaine hydrochloride) 5 mg per 1 ml** Levobupivacaine 50mg/10ml solution for injection ampoules | 5 ampoule [PoM] £10.85 (Hospital only)

**Levobupivacaine (as Levobupivacaine hydrochloride) 7.5 mg per 1 ml** Levobupivacaine 75mg/10ml solution for injection ampoules | 5 ampoule [PoM] £16.20 (Hospital only)

**▶ Chirocaine (AbbVie Ltd)**

**Levobupivacaine (as Levobupivacaine hydrochloride) 2.5 mg per 1 ml** Chirocaine 25mg/10ml solution for injection ampoules | 10 ampoule [PoM] £14.11 (Hospital only)

**Levobupivacaine (as Levobupivacaine hydrochloride) 5 mg per 1 ml** Chirocaine 50mg/10ml solution for injection ampoules | 10 ampoule [PoM] £16.15 (Hospital only)

**Levobupivacaine (as Levobupivacaine hydrochloride) 7.5 mg per 1 ml** Chirocaine 75mg/10ml solution for injection ampoules | 10 ampoule [PoM] £24.23 (Hospital only)

**Infusion****▶ Levobupivacaine (Non-proprietary)**

**Levobupivacaine (as Levobupivacaine hydrochloride) 625 mg per 1 ml** Levobupivacaine 62.5mg/100ml infusion bags | 5 bag [PoM] £8

**Levobupivacaine 125mg/200ml infusion bags | 5 bag [PoM] £8**

**Levobupivacaine (as Levobupivacaine hydrochloride) 1.25 mg per 1 ml** Levobupivacaine 125mg/100ml infusion bags | 5 bag [PoM] £8

**▶ Chirocaine (AbbVie Ltd)**

**Levobupivacaine (as Levobupivacaine hydrochloride) 1.25 mg per 1 ml** Chirocaine 125mg/100ml infusion bags | 24 bag [PoM] £174.22

**Lidocaine hydrochloride****(Lignocaine hydrochloride)**

11-Dec-2019

**● INDICATIONS AND DOSE****Infiltration anaesthesia****▶ BY LOCAL INFILTRATION**

- ▶ Adult: Dose to be given according to patient's weight and nature of procedure; max. 200 mg, maximum dose 500 mg if given in solutions containing adrenaline

**DOSES AT EXTREMES OF BODY-WEIGHT**

- ▶ When used by local infiltration To avoid excessive dosage in obese patients, weight-based doses for non-emergency indications may need to be calculated on the basis of ideal body-weight.

**Intravenous regional anaesthesia and nerve block**

- ▶ BY REGIONAL ADMINISTRATION
- ▶ Adult: Seek expert advice

**Pain relief (in anal fissures, haemorrhoids, pruritus ani, pruritus vulvae, herpes zoster, or herpes labialis) | Lubricant in cystoscopy | Lubricant in proctoscopy**

- ▶ TO THE SKIN USING OINTMENT
- ▶ Adult: Apply 1–2 mL as required, avoid long-term use

**Sore nipples from breast-feeding**

- ▶ TO THE SKIN USING OINTMENT
- ▶ Adult: Apply using gauze and wash off immediately before next feed

**LMX 4®****Anaesthesia before venous cannulation or venepuncture**

- ▶ TO THE SKIN
- ▶ Child 1–2 months: Apply up to 1 g, apply thick layer to small area (2.5 cm × 2.5 cm) of non-irritated skin at least 30 minutes before procedure; may be applied under an occlusive dressing; max. application time 60 minutes, remove cream with gauze and perform procedure after approximately 5 minutes
- ▶ Child 3–11 months: Apply up to 1 g, apply thick layer to small area (2.5 cm × 2.5 cm) of non-irritated skin at least 30 minutes before procedure; may be applied under an occlusive dressing; max. application time 4 hours, remove cream with gauze and perform procedure after approximately 5 minutes
- ▶ Child 1–17 years: Apply 1–2.5 g, apply thick layer to small area (2.5 cm × 2.5 cm) of non-irritated skin at least 30 minutes before procedure; may be applied under an occlusive dressing; max. application time 5 hours, remove cream with gauze and perform procedure after approximately 5 minutes
- ▶ Adult: Apply 1–2.5 g, apply thick layer to small area (2.5 cm × 2.5 cm) of non-irritated skin at least 30 minutes before procedure; may be applied under an occlusive dressing; max. application time 5 hours, remove cream with gauze and perform procedure after approximately 5 minutes

**VERSATIS®****Postherpetic neuralgia**

- ▶ TO THE SKIN
- ▶ Adult: Apply once daily for up to 12 hours, followed by a 12-hour plaster-free period; discontinue if no response after 4 weeks, to be applied to intact, dry, non-hairy, non-irritated skin, up to 3 plasters may be used to cover large areas; plasters may be cut

**XYLOCAINE®****During delivery in obstetrics**

- ▶ TO THE SKIN
- ▶ Adult: Up to 20 doses

**IMPORTANT SAFETY INFORMATION**

- ▶ When used by local infiltration The licensed doses stated may not be appropriate in some settings and expert advice should be sought. Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

**• CONTRA-INDICATIONS**

- ▶ When used by regional administration Avoid injection into infected tissues · avoid injection into inflamed tissues · complete heart block · preparations containing preservatives should not be used for caudal, epidural, or spinal block, or for intravenous regional anaesthesia (Bier's block)
- ▶ With topical use Application to the middle ear (can cause ototoxicity) · should not be applied to damaged skin

**• CONTRA-INDICATIONS, FURTHER INFORMATION**

- ▶ With topical use or when used by regional administration Manufacturer advises local anaesthetics should not be injected into inflamed or infected tissues nor should they be applied to damaged skin. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.

**• CAUTIONS**

- ▶ When used by regional administration Acute porphyrias

p. 1120 (consider infusion with glucose for its anti-porphyrinogenic effects) · congestive cardiac failure (consider lower dose) · debilitated patients (consider dose reduction) · elderly (consider dose reduction) · epilepsy · hypovolaemia · impaired cardiac conduction · impaired respiratory function · myasthenia gravis · post cardiac surgery (consider lower dose) · shock

**• INTERACTIONS** → Appendix 1: antiarrhythmics**• SIDE-EFFECTS**

- ▶ With parenteral use Anxiety · arrhythmias · atrioventricular block · cardiac arrest · circulatory collapse · confusion · dizziness · drowsiness · euphoric mood · headache · hypotension (may lead to cardiac arrest) · loss of consciousness · methaemoglobinaemia · muscle twitching · myocardial contractility decreased · nausea · neurological effects · nystagmus · pain · psychosis · respiratory disorders · seizure · sensation abnormal · temperature sensation altered · tinnitus · tremor · vision blurred · vomiting

**SIDE-EFFECTS, FURTHER INFORMATION Toxic effects** The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems.

**Methaemoglobinaemia** Methylthioninium chloride is licensed for the acute symptomatic treatment of drug-induced methaemoglobinaemia.

**• ALLERGY AND CROSS-SENSITIVITY**

- ▶ Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.
- ▶ **PREGNANCY** Crosses the placenta but not known to be harmful in animal studies—use if benefit outweighs risk. When used as a local anaesthetic, large doses can cause fetal bradycardia; if given during delivery can also cause neonatal respiratory depression, hypotonia, or bradycardia after paracervical or epidural block.

- ▶ **BREAST FEEDING** Present in milk but amount too small to be harmful.

- ▶ **HEPATIC IMPAIRMENT** Manufacturer advises caution (risk of increased exposure).

- ▶ **RENAL IMPAIRMENT** Possible accumulation of lidocaine and active metabolite; caution in severe impairment.

**• MONITORING REQUIREMENTS**

- ▶ With systemic use Monitor ECG and have resuscitation facilities available.

## NATIONAL FUNDING/ACCESS DECISIONS

### VERSATIS®

#### Scottish Medicines Consortium (SMC) decisions

- With transdermal use The *Scottish Medicines Consortium* has advised (August 2008) that *Versatis*® is accepted for restricted use within NHS Scotland for the treatment of postherpetic neuralgia in patients who are intolerant of first-line systemic therapies or when they have been ineffective.

- MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection, liquid, ointment

#### Solution for injection

##### Lidocaine hydrochloride (Non-proprietary)

- Lidocaine hydrochloride 5 mg per 1 ml** Lidocaine 50mg/10ml (0.5%) solution for injection ampoules | 10 ampoule [PoM] £7.00
- Lidocaine hydrochloride 10 mg per 1 ml** Lidocaine 100mg/10ml (1%) solution for injection Mini-Plasco ampoules | 20 ampoule [PoM] £1.15-£11.21
- Lidocaine 100mg/10ml (1%) solution for injection ampoules | 10 ampoule [PoM] £5.00 DT = £5.00
- Lidocaine 200mg/20ml (1%) solution for injection vials | 10 vial [PoM] £22.00 DT = £22.00
- Lidocaine 200mg/20ml (1%) solution for injection ampoules | 10 ampoule [PoM] £10.00-£11.00 DT = £11.00
- Lidocaine 50mg/5ml (1%) solution for injection ampoules | 10 ampoule [PoM] £3.00-£12.00 DT = £3.00
- Lidocaine 200mg/20ml (1%) solution for injection Mini-Plasco ampoules | 20 ampoule [PoM] [N]
- Lidocaine 20mg/2ml (1%) solution for injection ampoules | 10 ampoule [PoM] £12.00 DT = £2.50
- Lidocaine 50mg/5ml (1%) solution for injection Mini-Plasco ampoules | 20 ampoule [PoM] £6.50
- Lidocaine 50mg/5ml (1%) solution for injection Sure-Amp ampoules | 20 ampoule [PoM] £6.00
- Lidocaine hydrochloride 20 mg per 1 ml** Lidocaine 100mg/5ml (2%) solution for injection ampoules | 10 ampoule [PoM] £3.20-£12.00 DT = £3.20
- Lidocaine 400mg/20ml (2%) solution for injection vials | 10 vial [PoM] £23.00 DT = £23.00
- Lidocaine 200mg/10ml (2%) solution for injection Mini-Plasco ampoules | 20 ampoule [PoM] £14.95 DT = £14.95
- Lidocaine 400mg/20ml (2%) solution for injection Mini-Plasco ampoules | 20 ampoule [PoM] [N]
- Lidocaine 40mg/2ml (2%) solution for injection ampoules | 10 ampoule [PoM] £12.00 DT = £2.70
- Lidocaine 100mg/5ml (2%) solution for injection Mini-Plasco ampoules | 20 ampoule [PoM] £7.50
- Lidocaine 400mg/20ml (2%) solution for injection ampoules | 10 ampoule [PoM] £11.00-£11.40 DT = £11.40

#### Medicated plaster

EXCIPIENTS: May contain Hydroxybenzoates (parabens), propylene glycol

- ▶ *Relvo* (Grunenthal Ltd)**
- Lidocaine 50 mg per 1 gram** Relvo 700mg medicated plasters | 30 plaster [PoM] £61.54 DT = £72.40
- ▶ *Versatis* (Grunenthal Ltd)**
- Lidocaine 50 mg per 1 gram** Versatis 700mg medicated plasters | 30 plaster [PoM] £72.40 DT = £72.40

#### Cream

EXCIPIENTS: May contain Benzyl alcohol, propylene glycol

- ▶ *LMX 4* (Ferndale Pharmaceuticals Ltd)**
- Lidocaine 40 mg per 1 gram** LMX 4 cream | 5 gram [P] £2.98 DT = £2.98 | 30 gram [P] £14.90 DT = £14.90
- ▶ *Vagisil medicated* (Combe International Ltd)**
- Lidocaine 20 mg per 1 gram** Vagisil 2% medicated cream | 30 gram [GSL] £2.99 DT = £2.99

#### Ointment

##### ▶ *Lidocaine hydrochloride (Non-proprietary)*

- Lidocaine hydrochloride 50 mg per 1 gram** Lidocaine 5% ointment | 15 gram [P] £9.00 DT = £8.28

#### Spray

##### ▶ *Xylocaine* (Aspen Pharma Trading Ltd)

- Lidocaine 10 mg per 1 actuation** Xylocaine 10mg/dose spray sugar-free | 50 ml [P] £6.29 DT = £6.29

## Lidocaine with adrenaline

19-Dec-2019

The properties listed below are those particular to the combination only. For the properties of the components please consider, lidocaine hydrochloride p. 1422, adrenaline/epinephrine p. 236.

### INDICATIONS AND DOSE

#### Local anaesthesia

##### ▶ BY LOCAL INFILTRATION

- Adult: Dosed according to the type of nerve block required (consult product literature)

- INTERACTIONS** → Appendix 1: antiarrhythmics • sympathomimetics, vasoconstrictor

### PROFESSION SPECIFIC INFORMATION

#### Dental information

A variety of lidocaine injections with adrenaline is available in dental cartridges.

Consult expert dental sources for specific advice in relation to dose of lidocaine for dental anaesthesia.

- MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

#### Solution for injection

EXCIPIENTS: May contain Sulfites

##### ▶ *Lignospan Special* (Septodont Ltd)

- Adrenaline (as Adrenaline acid tartrate) 12.5 microgram per 1 ml, Lidocaine hydrochloride 20 mg per 1 ml** Lignospan Special 20mg/ml / 12.5micrograms/ml solution for injection 2.2ml cartridges | 50 cartridge [PoM] £21.95 DT = £21.95
- Lignospan Special 20mg/ml / 12.5micrograms/ml solution for injection 1.8ml cartridges | 50 cartridge [PoM] £21.95

##### ▶ *Rexocaine* (Henry Schein Ltd)

- Adrenaline (as Adrenaline acid tartrate) 12.5 microgram per 1 ml, Lidocaine hydrochloride 20 mg per 1 ml** Rexocaine 2% injection 2.2ml cartridges | 50 cartridge [PoM] £23.29 DT = £21.95

##### ▶ *Xylocaine with Adrenaline* (Aspen Pharma Trading Ltd)

- Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 ml, Lidocaine hydrochloride 10 mg per 1 ml** Xylocaine 1% with Adrenaline 100micrograms/20ml (1 in 200,000) solution for injection vials | 5 vial [PoM] £9.66 DT = £9.66 (Hospital only)
- Adrenaline (as Adrenaline acid tartrate) 5 microgram per 1 ml, Lidocaine hydrochloride 20 mg per 1 ml** Xylocaine 2% with Adrenaline 100micrograms/20ml (1 in 200,000) solution for injection vials | 5 vial [PoM] £8.85 DT = £8.85 (Hospital only)

## Lidocaine with cetrimide

27-Apr-2018

The properties listed below are those particular to the combination only. For the properties of the components please consider, lidocaine hydrochloride p. 1422.

### INDICATIONS AND DOSE

#### Anaesthesia and disinfection in dental practice

##### ▶ TO MUCOUS MEMBRANES USING OROMUCOSAL SPRAY

- Adult: 10–20 mg, no more than 30 mg should be applied to the same quadrant of the buccal cavity—consult product literature, dose expressed as lidocaine

#### Anaesthesia in dental practice

##### ▶ TO MUCOUS MEMBRANES USING DENTAL GEL

- Adult: Apply 100–500 mg, use cotton pellet for application to dried mucosa, dose expressed as weight of gel

### DOSE EQUIVALENCE AND CONVERSION

- 1 metered dose of *Xylonor*® spray is equivalent to 10 mg of lidocaine.
- 2 millimetres of *Xylonor*® gel is approximately equivalent to 100 mg of gel (approximately equivalent to 5 mg of lidocaine).

- **CAUTIONS** Sepsis (risk of rapid systemic absorption) · traumatised mucosa (risk of rapid systemic absorption)
- **INTERACTIONS** → Appendix 1: antiarrhythmics
- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Oromucosal gel

##### ▶ Xylonor (Septodont Ltd)

Cetrimide 1.5 mg per 1 gram, Lidocaine 50 mg per 1 gram Xylonor 50mg/g / 1.5mg/g gel sugar-free | 15 gram [PoM] £4.00

#### Spray

##### ▶ Xylonor (Septodont Ltd)

Cetrimide 100 microgram per 1 gram, Lidocaine 10 mg per 1 gram Xylonor 150mg/g / 1.5mg/g oromucosal spray sugar-free | 36 gram [PoM] £20.15

## Lidocaine with phenylephrine

The properties listed below are those particular to the combination only. For the properties of the components please consider, lidocaine hydrochloride p. 1422, phenylephrine hydrochloride p. 201.

#### ● INDICATIONS AND DOSE

##### Anaesthesia before nasal surgery, endoscopy, laryngoscopy, or removal of foreign bodies from the nose

- ▶ BY INTRANASAL ADMINISTRATION
- ▶ Adult: Up to 8 sprays

- **INTERACTIONS** → Appendix 1: antiarrhythmics · sympathomimetics, vasoconstrictor

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Spray

##### ▶ Lidocaine with phenylephrine (Non-proprietary)

Phenylephrine hydrochloride 5 mg per 1 ml, Lidocaine hydrochloride 50 mg per 1 ml Lidocaine 5% / Phenylephrine 0.5% nasal spray | 2.5 ml [PoM] £14.19 DT = £14.19

## Lidocaine with prilocaine

10-Mar-2020

The properties listed below are those particular to the combination only. For the properties of the components please consider, lidocaine hydrochloride p. 1422, prilocaine hydrochloride p. 1426.

#### ● INDICATIONS AND DOSE

##### Anaesthesia before minor skin procedures including venepuncture

- ▶ TO THE SKIN
- ▶ Child 1-2 months: Apply up to 1 g for maximum 1 hour before procedure, to be applied under occlusive dressing, shorter application time of 15–30 minutes is recommended for children with atopic dermatitis (30 minutes before removal of mollusca); maximum 1 dose per day
- ▶ Child 3-11 months: Apply up to 2 g for maximum 1 hour before procedure, to be applied under occlusive dressing, shorter application time of 15–30 minutes is recommended for children with atopic dermatitis (30 minutes before removal of mollusca); maximum 2 doses per day
- ▶ Child 1-11 years: Apply 1–5 hours before procedure, a thick layer should be applied under occlusive dressing, shorter application time of 15–30 minutes is recommended for children with atopic dermatitis (30 minutes before removal of mollusca); maximum 2 doses per day
- ▶ Child 12-17 years: Apply 1–5 hours before procedure (2–5 hours before procedures on large areas e.g. split skin grafting), a thick layer should be applied under

occlusive dressing, shorter application time of 15–30 minutes is recommended for children with atopic dermatitis (30 minutes before removal of mollusca)

- ▶ Adult: Apply 1–5 hours before procedure (2–5 hours before procedures on large areas e.g. split skin grafting), a thick layer should be applied under occlusive dressing

##### Anaesthesia on genital skin before injection of local anaesthetics

- ▶ TO THE SKIN
- ▶ Adult: Apply under occlusive dressing for 15 minutes (males) or 60 minutes (females) before procedure

##### Anaesthesia before surgical treatment of lesions on genital mucosa

- ▶ TO THE SKIN
- ▶ Adult: Apply up to 10 g, to be applied 5–10 minutes before procedure

##### Anaesthesia before cervical curettage

- ▶ TO THE SKIN
- ▶ Adult: Apply 10 g in lateral vaginal fornices for 10 minutes

##### Anaesthesia before mechanical cleansing or debridement of leg ulcer

- ▶ TO THE SKIN
- ▶ Adult: Apply up to 10 g for 30–60 minutes, to be applied under occlusive dressing

#### FORTACIN®

##### Primary premature ejaculation

- ▶ TO THE SKIN
- ▶ Adult: 3 sprays every 4 hours as required, to be applied to cover the glans penis (excess spray should be removed after 5 minutes and before intercourse); maximum 9 sprays per day

#### DOSE EQUIVALENCE AND CONVERSION

- ▶ For Fortacin®: each dose of 3 sprays is equivalent to lidocaine 22.5 mg and prilocaine 7.5 mg.

- **CONTRA-INDICATIONS** Use in child less than 37 weeks corrected gestational age
- **CAUTIONS**
  - FORTACIN® Acquired methaemoglobinaemia · anaemia · congenital methaemoglobinaemia
- **INTERACTIONS** → Appendix 1: anaesthetics, local · antiarrhythmics
- **SIDE-EFFECTS**
  - ▶ Common or very common Sexual dysfunction (in adults)
  - ▶ Uncommon Fever (in adults) · headache (in adults) · penis disorder (in adults)
  - ▶ Rare or very rare Methaemoglobinaemia · skin reactions
- **SIDE-EFFECTS, FURTHER INFORMATION** When applied to the glans penis, side-effects for sexual partners should be considered. Side-effects reported in female partners include vaginal candidiasis and dysuria.
- **CONCEPTION AND CONTRACEPTION**
  - FORTACIN® Deterioration of polyurethane-based female and male condoms has been observed. Manufacturer advises avoid in patients planning to conceive, or if it is essential to achieve penetration, then the glans penis should be washed thoroughly 5 minutes after application but before intercourse.
- **PREGNANCY**
  - FORTACIN® Manufacturer advises preferably avoid unless an effective male barrier contraceptive is used—limited information available.
- **HEPATIC IMPAIRMENT**
  - FORTACIN® Manufacturer advises caution in severe impairment (no information available).

## ● DIRECTIONS FOR ADMINISTRATION

**FORTACIN**® Manufacturer advises when using the spray for the first time, shake and prime the unit with 3 sprays, and before each subsequent use, shake and prime the unit with 1 spray.

## ● PATIENT AND CARER ADVICE

Medicines for Children leaflet: EMLA cream for local anaesthesia [www.medicinesforchildren.org.uk/emla-cream-local-anaesthesia](http://www.medicinesforchildren.org.uk/emla-cream-local-anaesthesia)

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

### Cream

- ▶ **Denela** (Teva UK Ltd)  
Lidocaine 25 mg per 1 gram, Prilocaine 25 mg per 1 gram Denela 5% cream | 5 gram [P] £3.29 | 25 gram [P] £12.99 | 30 gram [P] £14.75 DT = £12.30
- ▶ **Emla** (Aspen Pharma Trading Ltd)  
Lidocaine 25 mg per 1 gram, Prilocaine 25 mg per 1 gram Emla 5% cream | 5 gram [P] £2.25-£2.99 | 25 gram [P] £11.70 | 30 gram [P] £12.30 DT = £12.30
- ▶ **Nulbia** (Glenmark Pharmaceuticals Europe Ltd)  
Lidocaine 25 mg per 1 gram, Prilocaine 25 mg per 1 gram Nulbia 5% cream | 5 gram [P] £1.58 | 25 gram [P] £7.88 | 30 gram [P] £8.61 DT = £12.30

### Cutaneous spray solution

- ▶ **Fortacin** (Recordati Pharmaceuticals Ltd)  
Prilocaine 50 mg per 1 ml, Lidocaine 150 mg per 1 ml Fortacin 150mg/ml / 50mg/ml cutaneous spray | 5 ml [PoM] £59.99 DT = £59.99

## Mepivacaine hydrochloride

04-Dec-2019

### ● INDICATIONS AND DOSE

#### Infiltration anaesthesia and nerve block in dentistry

- ▶ Child 3-17 years: Consult expert dental sources
- ▶ Adult: Consult expert dental sources

#### DOSES AT EXTREMES OF BODY-WEIGHT

- ▶ To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

### IMPORTANT SAFETY INFORMATION

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Avoid injection into infected tissues · avoid injection into inflamed tissues · intravenous regional anaesthesia (Bier's block) · preparations containing preservatives should not be used for caudal, epidural, or spinal block · severe atrio-ventricular conduction disorders not controlled by a pacemaker

#### CONTRA-INDICATIONS, FURTHER INFORMATION

- ▶ Injection site Manufacturer advises the local anaesthetic effect may be reduced when injected into an inflamed or infected area, due to altered local pH. Increased absorption into the blood also increases the possibility of systemic side-effects.
- **CAUTIONS** Cardiovascular disease · children (consider dose reduction) · debilitated patients (consider dose reduction) · elderly (consider dose reduction) · epilepsy · hypovolaemia · impaired cardiac conduction · impaired respiratory function · myasthenia gravis · shock
- **INTERACTIONS** → Appendix 1: anaesthetics, local
- **SIDE-EFFECTS**
  - ▶ **Common or very common** Arrhythmias · dizziness · hypertension · hypotension · nausea · paraesthesia · vomiting

- ▶ **Uncommon** Neurotoxicity
- ▶ **Rare or very rare** Arachnoiditis · cardiac arrest · diplopia · nerve disorders · respiratory depression

**SIDE-EFFECTS, FURTHER INFORMATION** Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection or too rapid injection. The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems. The onset of toxicity can be unpredictable and delayed. Monitor as per local protocol for at least 30 minutes after administration.

### ● ALLERGY AND CROSS-SENSITIVITY

- ▶ Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- **PREGNANCY** Use with caution in early pregnancy.

- **BREAST FEEDING** Use with caution.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution; increased risk of toxic plasma concentrations in severe impairment.

- **RENAL IMPAIRMENT** Use with caution; increased risk of side-effects.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Scandonest plain** (Septodont Ltd)  
Mepivacaine hydrochloride 30 mg per 1 ml Scandonest plain 3% solution for injection 2.2ml cartridges | 50 cartridge [PoM] £21.95

## Mepivacaine with adrenaline

19-Dec-2019

The properties listed below are those particular to the combination only. For the properties of the components please consider, mepivacaine hydrochloride above, adrenaline/epinephrine p. 236.

### ● INDICATIONS AND DOSE

#### Infiltration anaesthesia and nerve block in dentistry

- ▶ BY LOCAL INFILTRATION
- ▶ Adult: (consult product literature)

- **INTERACTIONS** → Appendix 1: anaesthetics, local · sympathomimetics, vasoconstrictor

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- EXCIPIENTS: May contain Sulfites
- ▶ **Scandonest special** (Septodont Ltd)  
Adrenaline 10 microgram per 1 ml, Mepivacaine hydrochloride 20 mg per 1 ml Scandonest special 2% solution for injection 2.2ml cartridges | 50 cartridge [PoM] £21.95

## Prilocaine hydrochloride

09-Dec-2019

### ● INDICATIONS AND DOSE

#### CITANEST 1%®

#### Infiltration anaesthesia | Nerve block

- ▶ BY REGIONAL ADMINISTRATION
- ▶ Adult: 100–200 mg/minute, alternatively may be given in incremental doses; dose adjusted according to site of administration and response, and in elderly and debilitated patients (smaller doses may be required); maximum 400 mg per course

**PRILOTEKAL®****Spinal anaesthesia**

## ► BY INTRATHECAL INJECTION

- Adult: Usual dose 40–60 mg (max. per dose 80 mg), dose may need to be reduced in elderly or debilitated patients, or in late pregnancy

**DOSES AT EXTREMES OF BODY-WEIGHT**

- To avoid excessive dosage in obese patients, dose should be calculated on the basis of ideal body-weight.

**IMPORTANT SAFETY INFORMATION**

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

**CONTRA-INDICATIONS****GENERAL CONTRA-INDICATIONS**

Acquired methaemoglobinaemia · anaemia · avoid injection into infected tissues · avoid injection into inflamed tissues · congenital methaemoglobinaemia · preparations containing preservatives should not be used for caudal, epidural, or spinal block

**SPECIFIC CONTRA-INDICATIONS**

- With intrathecal use Serious cardiac conduction disorders

**CONTRA-INDICATIONS, FURTHER INFORMATION**

- Injection site Manufacturer advises local anaesthetics should not be injected into inflamed or infected tissues. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.

- CAUTIONS** Cardiovascular disease · debilitated patients (consider dose reduction) · elderly (consider dose reduction) · epilepsy · hypovolaemia · impaired cardiac conduction · impaired respiratory function · myasthenia gravis · severe or untreated hypertension · shock

- INTERACTIONS** → Appendix 1: anaesthetics, local

**SIDE-EFFECTS**

- Common or very common** Arrhythmias · dizziness · hypertension · hypotension · nausea · paraesthesia · vomiting
- Uncommon** Neurotoxicity
- Rare or very rare** Cardiac arrest · methaemoglobinaemia · nerve disorders
- Frequency not known** Diplopia · respiratory depression

**SIDE-EFFECTS, FURTHER INFORMATION Toxic effects**

Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection or too rapid injection. The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems. The onset of toxicity can be unpredictable and delayed. Monitor as per local protocol for at least 30 minutes after administration.

**Methaemoglobinaemia** Methaemoglobinaemia can be treated with an intravenous injection of methylthioninium chloride.

**ALLERGY AND CROSS-SENSITIVITY**

- Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- PREGNANCY** Large doses during delivery can cause neonatal respiratory depression, hypotonia, and bradycardia after epidural block. Avoid paracervical or

pudendal block in obstetrics (neonatal methaemoglobinaemia reported).

**Dose adjustments** Use lower doses for intrathecal use during late pregnancy.

- BREAST FEEDING** Present in milk but not known to be harmful.
- HEPATIC IMPAIRMENT** Manufacturer advises caution. **Dose adjustments** ► With intrathecal use Manufacturer advises consider dose reduction.
- RENAL IMPAIRMENT** Use with caution. **Dose adjustments** Lower doses may be required for intrathecal anaesthesia.

**NATIONAL FUNDING/ACCESS DECISIONS****PRILOTEKAL®****Scottish Medicines Consortium (SMC) decisions**

- With intrathecal use The *Scottish Medicines Consortium* has advised (January 2011) that prilocaine 2% hyperbaric solution for injection (*Prilotekal*®) is accepted for restricted use within NHS Scotland for use in spinal anaesthesia in ambulatory surgery settings.

- MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

- Citanest** (Aspen Pharma Trading Ltd)  
Prilocaine hydrochloride 10 mg per 1 mL Citanest 1% solution for injection 50 mL vials | 1 vial [PoM] £5.06
- Prilotekal** (Sintetica Ltd)  
Prilocaine hydrochloride 20 mg per 1 mL Prilotekal 100mg/5mL solution for injection ampoules | 10 ampoule [PoM] £78.80 (Hospital only)

**Prilocaine with felypressin**

The properties listed below are those particular to the combination only. For the properties of the components please consider, prilocaine hydrochloride p. 1426.

**INDICATIONS AND DOSE****Dental anaesthesia**

## ► BY REGIONAL ADMINISTRATION

- Adult: Consult expert dental sources for specific advice

- INTERACTIONS** → Appendix 1: anaesthetics, local

- SIDE-EFFECTS** Bradycardia · cardiac arrest · dizziness · drowsiness · hypotension · loss of consciousness · methaemoglobinaemia · myocardial contractility decreased · nervousness · respiratory arrest · seizure · tremor · vision blurred

- MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

- Citanest with Octapressin** (Dentsply Ltd)  
Prilocaine hydrochloride 30 mg per 1 mL, Felypressin 0.3 unit per 1 mL Citanest 3% with Octapressin Dental 0.066units/2.2mL solution for injection self aspirating cartridges | 50 cartridge [PoM] £

**Ropivacaine hydrochloride**

09-Dec-2019

**INDICATIONS AND DOSE****Acute pain, peripheral nerve block**

## ► BY REGIONAL ADMINISTRATION

- Adult: 10–20 mg/hour, dose administered as a continuous infusion or by intermittent injection using a 2 mg/mL (0.2%) solution

**Acute pain, field block**

## ► BY REGIONAL ADMINISTRATION

- Adult: 2–200 mg, dose administered using a 2 mg/mL (0.2%) solution

continued →

**Acute pain, lumbar epidural block**

- ▶ BY LUMBAR EPIDURAL
- ▶ Adult: 20–40 mg, followed by 20–30 mg at least every 30 minutes, dose administered using a 2 mg/mL (0.2%) solution

**Acute labour pain**

- ▶ BY CONTINUOUS EPIDURAL INFUSION
- ▶ Adult: 12–20 mg/hour, dose administered using a 2 mg/mL (0.2%) solution

**Acute postoperative pain**

- ▶ BY CONTINUOUS EPIDURAL INFUSION
- ▶ Adult: Up to 28 mg/hour, dose administered using a 2 mg/mL (0.2%) solution

**Postoperative pain, thoracic epidural block**

- ▶ BY CONTINUOUS EPIDURAL INFUSION
- ▶ Adult: 12–28 mg/hour, dose administered using a 2 mg/mL (0.2%) solution

**Surgical anaesthesia, field block**

- ▶ BY REGIONAL ADMINISTRATION
- ▶ Adult: 7.5–225 mg, dose administered using a 7.5 mg/mL (0.75%) solution

**Surgical anaesthesia, major nerve block (brachial plexus block)**

- ▶ BY REGIONAL ADMINISTRATION
- ▶ Adult: 225–300 mg, dose administered using a 7.5 mg/mL (0.75%) solution

**Surgical anaesthesia, thoracic epidural block (to establish block for postoperative pain)**

- ▶ BY THORACIC EPIDURAL
- ▶ Adult: 38–113 mg, dose administered using a 7.5 mg/mL (0.75%) solution

**Surgical anaesthesia for caesarean section**

- ▶ BY LUMBAR EPIDURAL
- ▶ Adult: 113–150 mg, to be administered in incremental doses using a 7.5 mg/mL (0.75%) solution

**Surgical anaesthesia, lumbar epidural block**

- ▶ BY LUMBAR EPIDURAL
- ▶ Adult: 113–200 mg, dose administered using a 7.5 mg/mL (0.75%) or 10 mg/mL (1%) solution

**DOSES AT EXTREMES OF BODY-WEIGHT**

- ▶ To avoid excessive dosage in obese patients, dose may need to be calculated on the basis of ideal bodyweight.

**IMPORTANT SAFETY INFORMATION**

Should only be administered by, or under the direct supervision of, personnel experienced in their use, with adequate training in anaesthesia and airway management, and should not be administered parenterally unless adequate resuscitation equipment is available.

- **CONTRA-INDICATIONS** Avoid injection into infected tissues • avoid injection into inflamed tissues • intravenous regional anaesthesia (Bier's block) • preparations containing preservatives should not be used for caudal, epidural, or spinal block

**CONTRA-INDICATIONS, FURTHER INFORMATION**

- ▶ Injection site Manufacturer advises local anaesthetics should not be injected into inflamed or infected tissues. Increased absorption into the blood increases the possibility of systemic side-effects, and the local anaesthetic effect may also be reduced by altered local pH.
- **CAUTIONS** Acute porphyrias p. 1120 • cardiovascular disease • complete heart block • debilitated patients (consider dose reduction) • elderly (consider dose reduction) • epilepsy • hypovolaemia • impaired cardiac conduction • impaired respiratory function • myasthenia gravis • shock
- **INTERACTIONS** → Appendix 1: anaesthetics, local

**● SIDE-EFFECTS**

- ▶ **Common or very common** Arrhythmias • back pain • chills • dizziness • headache • hypertension • hypotension • nausea • sensation abnormal • urinary retention • vomiting
- ▶ **Uncommon** Anxiety • dyspnoea • hypothermia • neurotoxicity • syncope
- ▶ **Rare or very rare** Cardiac arrest
- ▶ **Frequency not known** Dyskinesia

**SIDE-EFFECTS, FURTHER INFORMATION** Toxic effects after administration of local anaesthetics are a result of excessively high plasma concentrations; severe toxicity usually results from inadvertent intravascular injection. The systemic toxicity of local anaesthetics mainly involves the central nervous and cardiovascular systems. The onset of toxicity can be unpredictable and delayed. Monitor as per local protocol for at least 30 minutes after administration.

**● ALLERGY AND CROSS-SENSITIVITY**

- ▶ Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- **PREGNANCY** Not known to be harmful. Do not use for paracervical block in obstetrics.
- **BREAST FEEDING** Not known to be harmful.
- **HEPATIC IMPAIRMENT** Manufacturer advises caution in severe impairment.  
**Dose adjustments** Manufacturer advises consider dose reduction for repeat doses in severe impairment.
- **RENAL IMPAIRMENT** Caution in severe impairment.  
Increased risk of systemic toxicity in chronic renal failure.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

**Solution for injection**

ELECTROLYTES: May contain Sodium

▶ **Ropivacaine hydrochloride (Non-proprietary)**

**Ropivacaine hydrochloride 2 mg per 1 ml** Ropivacaine 20mg/10ml solution for injection ampoules | 10 ampoule [PoM] £16.50–£27.84 (Hospital only)

**Ropivacaine hydrochloride 7.5 mg per 1 ml** Ropivacaine 75mg/10ml solution for injection ampoules | 10 ampoule [PoM] £25.00–£28.40 (Hospital only)

**Ropivacaine hydrochloride 10 mg per 1 ml** Ropivacaine 100mg/10ml solution for injection ampoules | 10 ampoule [PoM] £30.00–£31.74 (Hospital only)

▶ **Naropin** (Aspen Pharma Trading Ltd)

**Ropivacaine hydrochloride 2 mg per 1 ml** Naropin 20mg/10ml solution for injection ampoules | 5 ampoule [PoM] £12.79

**Ropivacaine hydrochloride 7.5 mg per 1 ml** Naropin 75mg/10ml solution for injection ampoules | 5 ampoule [PoM] £15.90 (Hospital only)

**Ropivacaine hydrochloride 10 mg per 1 ml** Naropin 100mg/10ml solution for injection ampoules | 5 ampoule [PoM] £19.22 (Hospital only)

**Infusion**

ELECTROLYTES: May contain Sodium

▶ **Ropivacaine hydrochloride (Non-proprietary)**

**Ropivacaine hydrochloride 2 mg per 1 ml** Ropivacaine 400mg/200ml infusion bags | 5 bag [PoM] £79.35–£82.05 (Hospital only) | 10 bag [PoM] £137.00 (Hospital only)

▶ **Naropin** (Aspen Pharma Trading Ltd)

**Ropivacaine hydrochloride 2 mg per 1 ml** Naropin 400mg/200ml infusion Polybags | 5 bag [PoM] £86.70 (Hospital only)

## Tetracaine

10-Mar-2020

### (Amethocaine)

#### ● INDICATIONS AND DOSE

##### **Anaesthesia before venepuncture or venous cannulation**

###### ► TO THE SKIN

- Child 1 month-4 years: Apply contents of up to 1 tube (applied at separate sites at a single time or appropriate proportion) to site of venepuncture or venous cannulation and cover with occlusive dressing; remove gel and dressing after 30 minutes for venepuncture and after 45 minutes for venous cannulation
- Child 5-17 years: Apply contents of up to 5 tubes (applied at separate sites at a single time or appropriate proportion) to site of venepuncture or venous cannulation and cover with occlusive dressing; remove gel and dressing after 30 minutes for venepuncture and after 45 minutes for venous cannulation
- Adult: Apply contents of up to 5 tubes (applied at separate sites at a single time or appropriate proportion) to site of venepuncture or venous cannulation and cover with occlusive dressing; remove gel and dressing after 30 minutes for venepuncture and after 45 minutes for venous cannulation

- **CONTRA-INDICATIONS** Should not be applied to damaged skin

- **INTERACTIONS** → Appendix 1: anaesthetics, local

- **SIDE-EFFECTS** Oedema · skin reactions

**SIDE-EFFECTS, FURTHER INFORMATION** The systemic toxicity of local anaesthetics mainly involves the central nervous system; systemic side effects unlikely as minimal absorption following topical application.

- **ALLERGY AND CROSS-SENSITIVITY**

- Hypersensitivity and cross-sensitivity Hypersensitivity reactions occur mainly with the ester-type local anaesthetics, such as tetracaine; reactions are less frequent with the amide types, such as articaine, bupivacaine, levobupivacaine, lidocaine, mepivacaine, prilocaine, and ropivacaine. Cross-sensitivity reactions may be avoided by using the alternative chemical type.

- **BREAST FEEDING** Not known to be harmful.

### Poisoning, emergency treatment

28-Apr-2020

Overview

These notes provide only an overview of the treatment of poisoning, and it is strongly recommended that either TOXBASE or the UK National Poisons Information Service be consulted when there is doubt about the degree of risk or about management.

Hospital admission

Patients who have features of poisoning should generally be admitted to hospital. Patients who have taken poisons with delayed action should also be admitted, even if they appear well. Delayed-action poisons include aspirin p. 130, iron, paracetamol p. 465, tricyclic antidepressants, and co-phenotrope p. 71 (diphenoxylate with atropine, *Lomotil*®); the effects of modified-release preparations are also delayed. A note of all relevant information, including what treatment has been given, should accompany the patient to hospital.

Further information

TOXBASE, the primary clinical toxicology database of the National Poisons Information Service, is available on the internet to registered users at [www.toxbase.org](http://www.toxbase.org) (a backup site is available at [www.toxbasebackup.org](http://www.toxbasebackup.org) if the main site cannot be accessed). It provides information about routine diagnosis, treatment, and management of patients exposed to drugs, household products, and industrial and agricultural chemicals.

Specialist information and advice on the treatment of poisoning is available day and night from the UK National Poisons Information Service on the following number: Tel: 0344 892 0111.

Advice on laboratory analytical services can be obtained from TOXBASE or from the National Poisons Information Service. Help with identifying capsules or tablets may be available from a regional medicines information centre or from the National Poisons Information Service (out of hours).

General care

It is often impossible to establish with certainty the identity of the poison and the size of the dose. This is not usually important because only a few poisons (such as opioids, paracetamol, and iron) have specific antidotes; few patients require active removal of the poison. In most patients, treatment is directed at managing symptoms as they arise. Nevertheless, knowledge of the type and timing of poisoning can help in anticipating the course of events. All relevant information should be sought from the poisoned individual

and from carers or parents. However, such information should be interpreted with care because it may not be complete or entirely reliable. Sometimes symptoms arise from other illnesses and patients should be assessed carefully. Accidents may involve domestic and industrial products (the contents of which are not generally known). The National Poisons Information Service should be consulted when there is doubt about any aspect of suspected poisoning.

Respiration

Respiration is often impaired in unconscious patients. An obstructed airway requires immediate attention. In the absence of trauma, the airway should be opened with simple measures such as chin lift or jaw thrust. An oropharyngeal or nasopharyngeal airway may be useful in patients with reduced consciousness to prevent obstruction, provided ventilation is adequate. Intubation and ventilation should be considered in patients whose airway cannot be protected or who have respiratory acidosis because of inadequate ventilation; such patients should be monitored in a critical care area.

Most poisons that impair consciousness also depress respiration. Assisted ventilation (either mouth-to-mouth or using a bag-valve-mask device) may be needed. Oxygen is not a substitute for adequate ventilation, although it should be given in the highest concentration possible in poisoning with carbon monoxide and irritant gases.

Blood pressure

Hypotension is common in severe poisoning with central nervous system depressants. A systolic blood pressure of less than 70 mmHg may lead to irreversible brain damage or renal tubular necrosis. Hypotension should be corrected initially by raising the foot of the bed and administration of an infusion of either sodium chloride p. 1101 or a colloid. Vasoconstrictor sympathomimetics are rarely required and their use may be discussed with the National Poisons Information Service.

Fluid depletion without hypotension is common after prolonged coma and after aspirin poisoning due to vomiting, sweating, and hyperpnoea.

Hypertension, often transient, occurs less frequently than hypotension in poisoning; it may be associated with sympathomimetic drugs such as amfetamines, phencyclidine, and cocaine.

Heart

Cardiac conduction defects and arrhythmias can occur in acute poisoning, notably with tricyclic antidepressants, some antipsychotics, and some antihistamines. Arrhythmias

often respond to correction of underlying hypoxia, acidosis, or other biochemical abnormalities, but ventricular arrhythmias that cause serious hypotension require treatment. If the QT interval is prolonged, specialist advice should be sought because the use of some anti-arrhythmic drugs may be inappropriate. Supraventricular arrhythmias are seldom life-threatening and drug treatment is best withheld until the patient reaches hospital.

### Body temperature

Hypothermia may develop in patients of any age who have been deeply unconscious for some hours, particularly following overdose with barbiturates or phenothiazines. It may be missed unless core temperature is measured using a low-reading rectal thermometer or by some other means. Hypothermia should be managed by prevention of further heat loss and appropriate re-warming as clinically indicated.

Hyperthermia can develop in patients taking CNS stimulants; children and the elderly are also at risk when taking therapeutic doses of drugs with antimuscarinic properties. Hyperthermia is initially managed by removing all unnecessary clothing and using a fan. Sponging with tepid water will promote evaporation. Advice should be sought from the National Poisons Information Service on the management of severe hyperthermia resulting from conditions such as the serotonin syndrome.

Both hypothermia and hyperthermia require **urgent** hospitalisation for assessment and supportive treatment.

### Convulsions during poisoning

Single short-lived convulsions (lasting less than 5 minutes) do not require treatment. If convulsions are protracted or recur frequently, lorazepam p. 355 or diazepam p. 360 (preferably as emulsion) should be given by slow intravenous injection into a large vein. Benzodiazepines should not be given by the intramuscular route for convulsions. If the intravenous route is not readily available, midazolam oromucosal solution p. 356 [unlicensed use in adults and children under 3 months] can be given by the buccal route or diazepam can be administered as a rectal solution.

### Methaemoglobinaemia

Drug- or chemical-induced methaemoglobinaemia should be treated with methylthioninium chloride p. 1442 if the methaemoglobin concentration is 30% or higher, or if symptoms of tissue hypoxia are present despite oxygen therapy. Methylthioninium chloride reduces the ferric iron of methaemoglobin back to the ferrous iron of haemoglobin; in high doses, methylthioninium chloride can itself cause methaemoglobinaemia.

### Poison removal and elimination

#### Prevention of absorption

Given by mouth, charcoal, activated p. 1438 can bind many poisons in the gastro-intestinal system, thereby reducing their absorption. The **sooner** it is given the **more effective** it is, but it may still be effective up to 1 hour after ingestion of the poison—longer in the case of modified-release preparations or of drugs with antimuscarinic (anticholinergic) properties. It is particularly useful for the prevention of absorption of poisons that are toxic in small amounts, such as antidepressants.

#### Active elimination techniques

Repeated doses of charcoal, activated by mouth *enhance the elimination* of some drugs after they have been absorbed; repeated doses are given after overdosage with:

- Carbamazepine
- Dapsone
- Phenobarbital
- Quinine
- Theophylline

If vomiting occurs after dosing it should be treated (e.g. with an antiemetic drug) since it may reduce the efficacy of charcoal treatment. In cases of intolerance, the dose may be reduced and the frequency increased but this may compromise efficacy.

Charcoal, activated should **not** be used for poisoning with petroleum distillates, corrosive substances, alcohols, malathion, cyanides and metal salts including iron and lithium salts.

Other techniques intended to enhance the elimination of poisons after absorption are only practicable in hospital and are only suitable for a small number of severely poisoned patients. Moreover, they only apply to a limited number of poisons. Examples include:

- haemodialysis for ethylene glycol, lithium, methanol, phenobarbital, salicylates, and sodium valproate;
- alkalinisation of the urine for salicylates.

#### Removal from the gastro-intestinal tract

Gastric lavage is rarely required; for substances that cannot be removed effectively by other means (e.g. iron), it should be considered only if a life-threatening amount has been ingested within the previous hour. It should be carried out only if the airway can be protected adequately. Gastric lavage is contra-indicated if a corrosive substance or a petroleum distillate has been ingested, but it may occasionally be considered in patients who have ingested drugs that are not adsorbed by charcoal, such as iron or lithium. Induction of *emesis* (e.g. with ipecacuanha) is **not** recommended because there is no evidence that it affects absorption and it may increase the risk of aspiration.

*Whole bowel irrigation* (by means of a bowel cleansing preparation) has been used in poisoning with certain modified-release or enteric-coated formulations, in severe poisoning with iron and lithium salts, and if illicit drugs are carried in the gastro-intestinal tract ('body-packing'). However, it is not clear that the procedure improves outcome and advice should be sought from the National Poisons Information Service.

### Alcohol, acute intoxication

Acute intoxication with alcohol (ethanol) is common in adults but also occurs in children. The features include ataxia, dysarthria, nystagmus, and drowsiness, which may progress to coma, with hypotension and acidosis. Aspiration of vomit is a special hazard and hypoglycaemia may occur in children and some adults. Patients are managed supportively, with particular attention to maintaining a clear airway and measures to reduce the risk of aspiration of gastric contents. The blood glucose is measured and glucose given if indicated.

### Aspirin poisoning

The main features of salicylate poisoning are hyperventilation, tinnitus, deafness, vasodilatation, and sweating. Coma is uncommon but indicates very severe poisoning. The associated acid-base disturbances are complex.

Treatment must be in hospital, where plasma salicylate, pH, and electrolytes can be measured; absorption of aspirin may be slow and the plasma-salicylate concentration may continue to rise for several hours, requiring repeated measurement. Plasma-salicylate concentration may not correlate with clinical severity in the young and the elderly, and clinical and biochemical assessment is necessary. Generally, the clinical severity of poisoning is less below a plasma-salicylate concentration of 500 mg/litre (3.6 mmol/litre), unless there is evidence of metabolic acidosis. Activated charcoal can be given within 1 hour of ingesting more than 125 mg/kg of aspirin. Fluid losses should be replaced and intravenous sodium bicarbonate may be given (ensuring plasma-potassium concentration is within

Paracetamol overdose treatment graph

Patients whose plasma-paracetamol concentrations are on or above the **treatment line** should be treated with acetylcysteine by intravenous infusion.

The prognostic accuracy after 15 hours is uncertain, but a plasma-paracetamol concentration on or above the treatment line should be regarded as carrying a serious risk of liver damage.

Graph reproduced courtesy of Medicines and Healthcare products Regulatory Agency

the reference range) to enhance urinary salicylate excretion (optimum urinary pH 7.5–8.5).

Plasma-potassium concentration should be corrected before giving sodium bicarbonate as hypokalaemia may complicate alkalinisation of the urine.

Haemodialysis is the treatment of choice for severe salicylate poisoning and should be considered when the plasma-salicylate concentration exceeds 700 mg/litre (5.1 mmol/litre) or in the presence of severe metabolic acidosis.

### Opioid poisoning

Opioids (narcotic analgesics) cause coma, respiratory depression, and pinpoint pupils. The specific antidote naloxone hydrochloride p. 1440 is indicated if there is coma or bradypnoea. Since naloxone has a shorter duration of action than many opioids, close monitoring and repeated injections are necessary according to the respiratory rate and depth of coma. When repeated administration of naloxone is required, it can be given by continuous intravenous infusion instead and the rate of infusion adjusted according to vital signs. The effects of some opioids, such as buprenorphine, are only partially reversed by naloxone. Dextropropoxyphene and methadone have very long durations of action; patients may need to be monitored for long periods following large overdoses.

Naloxone reverses the opioid effects of dextropropoxyphene. The long duration of action of dextropropoxyphene calls for prolonged monitoring and further doses of naloxone may be required. Norpropoxyphene, a metabolite of dextropropoxyphene,

also has cardiotoxic effects which may require treatment with sodium bicarbonate p. 1099 or magnesium sulfate p. 1112, or both. Arrhythmias may occur for up to 12 hours.

### Paracetamol poisoning

In all cases of **intravenous paracetamol poisoning** clinicians are encouraged to contact the National Poisons Information Service for advice on risk assessment and management.

Toxic doses of paracetamol p. 465 may cause severe hepatocellular necrosis and, much less frequently, renal tubular necrosis. Nausea and vomiting, the only early features of poisoning, usually settle within 24 hours. Persistence beyond this time, often associated with the onset of right subcostal pain and tenderness, usually indicates development of hepatic necrosis. Liver damage is maximal 3–4 days after paracetamol overdose and may lead to hepatic failure, encephalopathy, coma, and death.

The following guidance provides only an overview of the management of paracetamol overdosage from the *National Poisons Information Service TOXBASE* database.

To avoid underestimating the potentially toxic paracetamol dose ingested by obese patients who weigh more than 110 kg, use a body-weight of 110 kg (rather than their actual body-weight) when calculating the total dose of paracetamol ingested (in mg/kg).

Acetylcysteine p. 1442 prevents or reduces the severity of liver damage if given up to, and possibly beyond (in patients at risk of severe liver disease) 24 hours of ingesting paracetamol p. 465. It is most effective if given within 8 hours of paracetamol ingestion, after which effectiveness

declines. Very rarely, giving acetylcysteine p. 1442 by mouth [unlicensed route] is an alternative if intravenous access is not possible.

Neonates less than 45 weeks corrected gestational age may be more susceptible to paracetamol-induced liver toxicity, therefore, treatment with acetylcysteine should be considered in all paracetamol overdoses, and if uncertain advice should be sought from the National Poisons Information Service.

Acute overdose

Acute overdose involves ingestion of a potentially toxic dose of paracetamol in 1 hour or less. Serious toxicity is unlikely to occur from a single ingestion of less than 75 mg/kg of paracetamol taken in less than 1 hour. Patients should be referred to hospital for medical assessment if they have ingested paracetamol in the context of self-harm, are symptomatic, have ingested 75 mg/kg or more of paracetamol in 1 hour or less, or where the time of ingestion is uncertain but the dose ingested is 75 mg/kg or more. Although the benefit of gastric decontamination is uncertain, charcoal, activated p. 1438 should be considered if the patient presents within 1 hour of ingesting paracetamol in excess of 150 mg/kg.

Patients at risk of liver damage and therefore requiring acetylcysteine, can be identified from a single measurement of the plasma-paracetamol concentration related to the time from ingestion, provided this time interval is not less than 4 hours; earlier samples cannot be interpreted. The concentration is plotted on a paracetamol treatment graph, with a reference line ('treatment line') joining plots of 100 mg/litre (0.66 mmol/litre) at 4 hours and 3.13 mg/litre (0.02 mmol/litre) at 24 hours, see *Paracetamol overdose treatment graph*.

Acetylcysteine treatment should commence in patients:

- whose plasma-paracetamol concentration falls on or above the *treatment line* on the paracetamol treatment graph;
- who present within 8 hours of ingestion of more than 150 mg/kg of paracetamol, if there is going to be a delay of 8 hours or more in obtaining the paracetamol concentration after the overdose;
- who present 8–24 hours after ingestion of an acute overdose of more than 150 mg/kg of paracetamol, even if the plasma-paracetamol concentration is not yet available;
- who present more than 24 hours after ingestion of an overdose, if they are clearly jaundiced or have hepatic tenderness, their ALT is above the upper limit of normal (patients with chronically elevated ALT should be discussed with the National Poisons Information Service), their INR is greater than 1.3 (in the absence of another cause), or the paracetamol concentration is detectable.

Consider acetylcysteine treatment in patients who present within 24 hours of an overdose if biochemical tests suggest acute liver injury, even if the plasma paracetamol concentration is below the treatment line on the paracetamol treatment graph.

If the patient is not at risk of liver toxicity (i.e. the paracetamol concentration is below the treatment line or undetectable; the INR and ALT are normal; and the patient is asymptomatic) no treatment with an antidote is indicated; acetylcysteine may be discontinued if it has been started.

Where the time of ingestion is unknown, patients should be managed as a *staggered overdose*.

Staggered overdose or therapeutic excess

Patients who have ingested more than 150 mg/kg of paracetamol in any 24-hour period are at risk of serious toxicity. Toxicity rarely occurs with paracetamol doses between 75–150 mg/kg in any 24-hour period. Doses consistently less than 75 mg/kg in any 24-hour period are very unlikely to be toxic; however risk may be increased if this dose is repeatedly ingested over 2 or more days.

Ingestion of a licensed dose of paracetamol is not considered an overdose.

A **staggered overdose** involves ingestion of a potentially toxic dose of paracetamol over more than 1 hour, with the possible intention of causing self-harm. All patients who have taken a staggered overdose should be referred to hospital for medical assessment. The MHRA advises that all patients who have ingested a staggered overdose should be treated with acetylcysteine without delay.

**Therapeutic excess** is the ingestion of a potentially toxic dose of paracetamol with intent to treat pain or fever and without self-harm intent during its clinical use. All patients should be referred to hospital for medical assessment if they are symptomatic, have ingested more than a licensed dose and more than or equal to 75 mg/kg in any 24-hour period, or have ingested more than the licensed dose but less than 75 mg/kg/24 hours on each of the preceding 2 or more days. Patients with clinical features of hepatic injury such as jaundice or hepatic tenderness should be treated urgently with acetylcysteine. For other patients, management is determined by the maximum dose of paracetamol ingested in any 24-hour period.

When there is uncertainty about whether the presentation was due to therapeutic excess, the patient should be managed as a *staggered overdose*.

Clinically significant toxicity is unlikely and the patient is not considered to be at risk if, there has been at least 4 hours or more since the last paracetamol ingestion, the patient has no symptoms suggesting liver damage, the paracetamol concentration is less than 10 mg/L, their ALT is within the normal range, and INR is 1.3 or less. Acetylcysteine can be discontinued in patients not considered to be at risk of clinically significant liver damage. If there is uncertainty about a patient's risk of toxicity after paracetamol overdose, advice should be sought from the National Poisons Information Service.

Acetylcysteine dose and administration

For paracetamol overdosage, acetylcysteine is given in a total dose that is divided into 3 consecutive intravenous infusions over a total of 21 hours. The tables below include the dose of acetylcysteine for adults and children of body-weight 40 kg and over, in terms of the volume of acetylcysteine Concentrate for Intravenous Infusion required for each of the 3 infusions. The requisite dose of acetylcysteine is added to glucose 5% p. 1102 or sodium chloride 0.9% Intravenous Infusion p. 1101. For information on dosing/administration for adults and children who weigh less than 40 kg, see **Acetylcysteine Doses—Children**, available from TOXBASE.

First infusion	
Body-weight	Volume of Acetylcysteine Concentrate for Intravenous Infusion 200 mg/mL required to prepare first infusion
40–49 kg	34 mL
50–59 kg	42 mL
60–69 kg	49 mL
70–79 kg	57 mL
80–89 kg	64 mL
90–99 kg	72 mL
100–109 kg	79 mL
≥110 kg	83 mL (max. dose)

*First infusion* (based on an acetylcysteine dose of approx. 150 mg/kg)—add requisite volume of Acetylcysteine Concentrate for Intravenous Infusion to 200 mL Glucose 5% or sodium chloride 0.9% Intravenous Infusion p. 1101; infuse over 1 hour.

**Second infusion**

Body-weight	Volume of Acetylcysteine Concentrate for Intravenous Infusion 200 mg/mL required to prepare second infusion
40–49 kg	12 mL
50–59 kg	14 mL
60–69 kg	17 mL
70–79 kg	19 mL
80–89 kg	22 mL
90–99 kg	24 mL
100–109 kg	27 mL
≥110 kg	28 mL (max. dose)

*Second infusion* (based on an acetylcysteine dose of approx. 50 mg/kg; start immediately after completion of first infusion)—add requisite volume of Acetylcysteine Concentrate for Intravenous Infusion to 500 mL Glucose 5% or sodium chloride 0.9% Intravenous Infusion; infuse over 4 hours.

**Third infusion**

Body-weight	Volume of Acetylcysteine Concentrate for Intravenous Infusion 200 mg/mL required to prepare third infusion
40–49 kg	23 mL
50–59 kg	28 mL
60–69 kg	33 mL
70–79 kg	38 mL
80–89 kg	43 mL
90–99 kg	48 mL
100–109 kg	53 mL
≥110 kg	55 mL (max. dose)

*Third infusion* (based on an acetylcysteine dose of approx. 100 mg/kg; start immediately after completion of second infusion)—add requisite volume of Acetylcysteine Concentrate for Intravenous Infusion to 1 litre Glucose 5% or sodium chloride 0.9% Intravenous Infusion; infuse over 16 hours.

**Antidepressant poisoning****Tricyclic and related antidepressants**

Tricyclic and related antidepressants cause dry mouth, coma of varying degree, hypotension, hypothermia, hyperreflexia, extensor plantar responses, convulsions, respiratory failure, cardiac conduction defects, and arrhythmias. Dilated pupils and urinary retention also occur. Metabolic acidosis may complicate severe poisoning; delirium with confusion, agitation, and visual and auditory hallucinations are common during recovery.

Assessment in hospital is strongly advised in case of poisoning by tricyclic and related antidepressants but symptomatic treatment can be given before transfer. Supportive measures to ensure a clear airway and adequate ventilation during transfer are mandatory. Intravenous lorazepam or intravenous diazepam (preferably in emulsion form) may be required to treat convulsions. Activated charcoal given within 1 hour of the overdose reduces absorption of the drug. Although arrhythmias are worrying, some will respond to correction of hypoxia and acidosis. The use of anti-arrhythmic drugs is best avoided, but intravenous infusion of sodium bicarbonate can arrest arrhythmias or prevent them in those with an extended QRS duration. Diazepam given by mouth is usually adequate to sedate delirious patients but large doses may be required.

**Selective serotonin re-uptake inhibitors (SSRIs)**

Symptoms of poisoning by selective serotonin re-uptake inhibitors include nausea, vomiting, agitation, tremor, nystagmus, drowsiness, and sinus tachycardia; convulsions may occur. Rarely, severe poisoning results in the serotonin syndrome, with marked neuropsychiatric effects, neuromuscular hyperactivity, and autonomic instability; hyperthermia, rhabdomyolysis, renal failure, and coagulopathies may develop.

Management of SSRI poisoning is supportive. Activated charcoal given within 1 hour of the overdose reduces absorption of the drug. Convulsions can be treated with lorazepam, diazepam, or midazolam oromucosal solution [unlicensed use in adults and children under 3 months] (see *Convulsions*). Contact the National Poisons Information Service for the management of hyperthermia or the serotonin syndrome.

**Antimalarial poisoning**

Overdose with quinine, chloroquine, or hydroxychloroquine is extremely hazardous and difficult to treat. Urgent advice from the National Poisons Information Service is essential. Life-threatening features include arrhythmias (which can have a very rapid onset) and convulsions (which can be intractable).

**Antipsychotic poisoning****Phenothiazines and related drugs**

Phenothiazines cause less depression of consciousness and respiration than other sedatives. Hypotension, hyperthermia, sinus tachycardia, and arrhythmias may complicate poisoning. Dystonic reactions can occur with therapeutic doses (particularly with prochlorperazine and trifluoperazine), and convulsions may occur in severe cases. Arrhythmias may respond to correction of hypoxia, acidosis, and other biochemical abnormalities, but specialist advice should be sought if arrhythmias result from a prolonged QT interval; the use of some anti-arrhythmic drugs can worsen such arrhythmias. Dystonic reactions are rapidly abolished by injection of drugs such as procyclidine hydrochloride p. 431 or diazepam p. 360 (emulsion preferred).

**Second-generation antipsychotic drugs**

Features of poisoning by second-generation antipsychotic drugs include drowsiness, convulsions, extrapyramidal symptoms, hypotension, and ECG abnormalities (including prolongation of the QT interval). Management is supportive. Charcoal, activated p. 1438 can be given within 1 hour of ingesting a significant quantity of a second-generation antipsychotic drug.

**Benzodiazepine poisoning**

Benzodiazepines taken alone cause drowsiness, ataxia, dysarthria, nystagmus, and occasionally respiratory depression, and coma. Charcoal, activated can be given within 1 hour of ingesting a significant quantity of benzodiazepine, provided the patient is awake and the airway is protected. Benzodiazepines potentiate the effects of other central nervous system depressants taken concomitantly. Use of the benzodiazepine antagonist flumazenil p. 1439 [unlicensed indication] can be hazardous, particularly in mixed overdoses involving tricyclic antidepressants or in benzodiazepine-dependent patients. Flumazenil may prevent the need for ventilation, particularly in patients with severe respiratory disorders; it should be used on expert advice only and not as a diagnostic test in patients with a reduced level of consciousness.

**Beta-blockers poisoning**

Overdoses with beta-blockers may cause cardiac effects such as bradycardia, hypotension, syncope, conduction abnormalities, and heart failure. Bradycardia is the most common arrhythmia, but some beta-blockers may induce

ventricular tachyarrhythmias secondary to prolongation of QT interval (e.g. sotalol) or QRS duration (e.g. propranolol). Although the predominant effects of beta-blocker overdose are on the heart, other features may also occur, such as central nervous system effects (including drowsiness, confusion, convulsions, hallucinations, and in severe cases coma), respiratory depression, and bronchospasm. The effects of overdosage can vary from one beta-blocker to another; propranolol overdosage in particular may cause coma and convulsions.

The following guidance provides only an overview of the management of beta-blocker overdosage from the *National Poisons Information Service TOXBASE database*.

All patients who have been exposed to beta-blockers as a result of self-harm should be referred for assessment. Medical assessment is recommended for all patients who are symptomatic or have ingested more than a toxic dose; and in those who are treatment naïve or have taken more than their therapeutic dose, and have a significant cardiac history, asthma, chronic obstructive pulmonary disease, or are elderly. All patients who have exceeded their prescribed daily dose of 2 or more cardiotoxic agents should also be referred for medical assessment irrespective of the dose ingested. Hospital clinicians are encouraged to discuss all serious cases with the UK National Poisons Information Service.

For patients presenting with overdose, maintain a clear airway and adequate ventilation. Although the benefit of gastric decontamination is uncertain, charcoal, activated can be considered if the patient presents within 1 hour of ingestion of more than a potentially toxic dose.

For the management of hypotension, ensure adequate fluid resuscitation; in an emergency, vasopressors and inotropes can be initiated under the advice of an experienced physician. Intravenous glucagon p. 763 [unlicensed] is a treatment option for severe hypotension, heart failure, or cardiogenic shock. In severe cases, an insulin and glucose infusion can improve myocardial contractility and systemic perfusion, especially in the presence of acidosis. Consider intravenous sodium bicarbonate p. 1099 for correction of metabolic acidosis that persists despite correction of hypoxia and adequate fluid resuscitation—rapid correction is particularly important if QRS duration is prolonged. For symptomatic bradycardia, give intravenous atropine sulfate p. 1404; dobutamine p. 235 [unlicensed] or isoprenaline [unlicensed] (available from 'special-order' manufacturers or specialist importing companies) may be considered if bradycardia is associated with hypotension. A temporary cardiac pacemaker can be used to increase the heart rate.

Treat bronchospasm with nebulised bronchodilators and corticosteroids.

If convulsions occur give oxygen, and correct acid-base and metabolic disturbances as required. Prolonged or frequent convulsions should be controlled with intravenous diazepam p. 360, lorazepam p. 355, or midazolam p. 356. If convulsions are unresponsive to treatment, the patient should be referred urgently to critical care.

### Calcium-channel blockers poisoning

Features of calcium-channel blocker poisoning include nausea, vomiting, dizziness, agitation, confusion, and coma in severe poisoning. Metabolic acidosis and hyperglycaemia may occur. Verapamil and diltiazem have a profound cardiac depressant effect causing hypotension and arrhythmias, including complete heart block and asystole. The dihydropyridine calcium-channel blockers cause severe hypotension secondary to profound peripheral vasodilatation.

Charcoal, activated p. 1438 should be considered if the patient presents within 1 hour of overdosage with a calcium-channel blocker; repeated doses of activated charcoal are considered if a modified-release preparation is involved. In

patients with significant features of poisoning, calcium chloride p. 1107 or calcium gluconate p. 1108 is given by injection; atropine sulfate is given to correct symptomatic bradycardia. In severe cases, an insulin and glucose infusion may be required in the management of hypotension and myocardial failure. For the management of hypotension, the choice of inotropic sympathomimetic depends on whether hypotension is secondary to vasodilatation or to myocardial depression—advice should be sought from the National Poisons Information Service.

### Iron salts poisoning

Iron poisoning in childhood is usually accidental. The symptoms are nausea, vomiting, abdominal pain, diarrhoea, haematemesis, and rectal bleeding. Hypotension and hepatocellular necrosis can occur later. Coma, shock, and metabolic acidosis indicate severe poisoning.

Advice should be sought from the National Poisons Information Service if a significant quantity of iron has been ingested within the previous hour.

Mortality is reduced by intensive and specific therapy with desferrioxamine mesilate p. 1088, which chelates iron. The serum-iron concentration is measured as an emergency and intravenous desferrioxamine mesilate given to chelate absorbed iron in excess of the expected iron binding capacity. In severe toxicity intravenous desferrioxamine mesilate should be given immediately without waiting for the result of the serum-iron measurement.

### Lithium poisoning

Most cases of lithium intoxication occur as a complication of long-term therapy and are caused by reduced excretion of the drug because of a variety of factors including dehydration, deterioration of renal function, infections, and co-administration of diuretics or NSAIDs (or other drugs that interact). Acute deliberate overdoses may also occur with delayed onset of symptoms (12 hours or more) owing to slow entry of lithium into the tissues and continuing absorption from modified-release formulations.

The early clinical features are non-specific and may include apathy and restlessness which could be confused with mental changes arising from the patient's depressive illness. Vomiting, diarrhoea, ataxia, weakness, dysarthria, muscle twitching, and tremor may follow. Severe poisoning is associated with convulsions, coma, renal failure, electrolyte imbalance, dehydration, and hypotension.

Therapeutic serum-lithium concentrations are within the range of 0.4–1 mmol/litre; concentrations in excess of 2 mmol/litre are usually associated with serious toxicity and such cases may need treatment with haemodialysis if neurological symptoms or renal failure are present. In acute overdosage much higher serum-lithium concentrations may be present without features of toxicity and all that is usually necessary is to take measures to increase urine output (e.g. by increasing fluid intake but avoiding diuretics). Otherwise, treatment is supportive with special regard to electrolyte balance, renal function, and control of convulsions. Gastric lavage may be considered if it can be performed within 1 hour of ingesting significant quantities of lithium. Whole-bowel irrigation should be considered for significant ingestion, but advice should be sought from the National Poisons Information Service.

### Stimulant-drug poisoning

Amfetamines cause wakefulness, excessive activity, paranoia, hallucinations, and hypertension followed by exhaustion, convulsions, hyperthermia, and coma. The early stages can be controlled by diazepam or lorazepam; advice should be sought from the National Poisons Information Service on the management of hypertension. Later, tepid sponging, anticonvulsants, and artificial respiration may be needed.

## Cocaine

Cocaine stimulates the central nervous system, causing agitation, dilated pupils, tachycardia, hypertension, hallucinations, hyperthermia, hypertonia, and hyperreflexia; cardiac effects include chest pain, myocardial infarction, and arrhythmias.

Initial treatment of cocaine poisoning involves intravenous administration of diazepam to control agitation and cooling measures for hyperthermia (see Body temperature); hypertension and cardiac effects require specific treatment and expert advice should be sought.

## Ecstasy

Ecstasy (methylenedioxymethamphetamine, MDMA) may cause severe reactions, even at doses that were previously tolerated. The most serious effects are delirium, coma, convulsions, ventricular arrhythmias, hyperthermia, rhabdomyolysis, acute renal failure, acute hepatitis, disseminated intravascular coagulation, adult respiratory distress syndrome, hyperreflexia, hypotension and intracerebral haemorrhage; hyponatraemia has also been associated with ecstasy use.

Treatment of methylenedioxymethamphetamine poisoning is supportive, with diazepam to control severe agitation or persistent convulsions and close monitoring including ECG. Self-induced water intoxication should be considered in patients with ecstasy poisoning.

'Liquid ecstasy' is a term used for sodium oxybate (gamma-hydroxybutyrate, GHB), which is a sedative.

## Theophylline poisoning

Theophylline and related drugs are often prescribed as modified-release formulations and toxicity can therefore be delayed. They cause vomiting (which may be severe and intractable), agitation, restlessness, dilated pupils, sinus tachycardia, and hyperglycaemia. More serious effects are haematemesis, convulsions, and supraventricular and ventricular arrhythmias. Severe hypokalaemia may develop rapidly.

Repeated doses of activated charcoal can be used to eliminate theophylline even if more than 1 hour has elapsed after ingestion and especially if a modified-release preparation has been taken (see also under Active Elimination Techniques). Ondansetron p. 455 may be effective for severe vomiting that is resistant to other antiemetics [unlicensed indication]. Hypokalaemia is corrected by intravenous infusion of potassium chloride p. 1119 and may be so severe as to require 60 mmol/hour (high doses require ECG monitoring). Convulsions should be controlled by intravenous administration of lorazepam p. 355 or diazepam p. 360 (see Convulsions). Sedation with diazepam may be necessary in agitated patients.

Provided the patient does not suffer from asthma, a short-acting beta-blocker can be administered intravenously to reverse severe tachycardia, hypokalaemia, and hyperglycaemia.

## Cyanide poisoning

**Oxygen** should be administered to patients with cyanide poisoning. The choice of antidote depends on the severity of poisoning, certainty of diagnosis, and the cause. Dicobalt edetate p. 1438 is the antidote of choice when there is a strong clinical suspicion of severe cyanide poisoning, but it should **not** be used as a precautionary measure. Dicobalt edetate itself is toxic, associated with anaphylactoid reactions, and is potentially fatal if administered in the absence of cyanide poisoning. A regimen of sodium nitrite p. 1438 followed by sodium thiosulfate p. 1438 is an alternative if dicobalt edetate is not available.

Hydroxocobalamin p. 1085 (*Cyanokit*®—no other preparation of hydroxocobalamin is suitable) can be considered for use in victims of smoke inhalation who show signs of significant cyanide poisoning.

## Ethylene glycol and methanol poisoning

**Fomepizole** (available from 'special-order' manufacturers or specialist importing companies) is the treatment of choice for ethylene glycol and methanol (methyl alcohol) poisoning. If necessary, **ethanol** (by mouth or by intravenous infusion) can be used, but with caution. Advice on the treatment of ethylene glycol and methanol poisoning should be obtained from the National Poisons Information Service. It is important to start antidote treatment promptly in cases of suspected poisoning with these agents.

## Heavy metal poisoning

Heavy metal antidotes include succimer (DMSA) [unlicensed], unithiol (DMPS) [unlicensed], sodium calcium edetate [unlicensed], and dimercaprol. Dimercaprol in the management of heavy metal poisoning has been superseded by other chelating agents. In all cases of heavy metal poisoning, the advice of the National Poisons Information Service should be sought.

## Noxious gases poisoning

### Carbon monoxide

Carbon monoxide poisoning is usually due to inhalation of smoke, car exhaust, or fumes caused by blocked flues or incomplete combustion of fuel gases in confined spaces.

Immediate treatment of carbon monoxide poisoning is essential. The person should be moved to fresh air, the airway cleared, and high-flow **oxygen** 100% administered through a tight-fitting mask with an inflated face seal. Artificial respiration should be given as necessary and continued until adequate spontaneous breathing starts, or stopped only after persistent and efficient treatment of cardiac arrest has failed. The patient should be admitted to hospital because complications may arise after a delay of hours or days. Cerebral oedema may occur in severe poisoning and is treated with an intravenous infusion of mannitol p. 243. Referral for hyperbaric oxygen treatment should be discussed with the National Poisons Information Service if the patient is pregnant or in cases of severe poisoning, such as if the patient is or has been unconscious, or has psychiatric or neurological features other than a headache, or has myocardial ischaemia or an arrhythmia, or has a blood carboxyhaemoglobin concentration of more than 20%.

### Sulfur dioxide, chlorine, phosgene, and ammonia

All of these gases can cause upper respiratory tract and conjunctival irritation. Pulmonary oedema, with severe breathlessness and cyanosis may develop suddenly up to 36 hours after exposure. Death may occur. Patients are kept under observation and those who develop pulmonary oedema are given oxygen. Assisted ventilation may be necessary in the most serious cases.

## CS Spray poisoning

CS spray, which is used for riot control, irritates the eyes (hence 'tear gas') and the respiratory tract; symptoms normally settle spontaneously within 15 minutes. If symptoms persist, the patient should be removed to a well-ventilated area, and the exposed skin washed with soap and water after removal of contaminated clothing. Contact lenses should be removed and rigid ones washed (soft ones should be discarded). Eye symptoms should be treated by irrigating the eyes with physiological saline (or water if saline is not available) and advice sought from an ophthalmologist. Patients with features of severe poisoning, particularly respiratory complications, should be admitted to hospital for symptomatic treatment.

## Nerve agent poisoning

Treatment of nerve agent poisoning is similar to organophosphorus insecticide poisoning, but advice must be

sought from the National Poisons Information Service. The risk of cross-contamination is significant; adequate decontamination and protective clothing for healthcare personnel are essential. In emergencies involving the release of nerve agents, kits ('NAAS pods') containing pralidoxime chloride p. 1439 can be obtained through the Ambulance Service from the National Blood Service (or the Welsh Blood Service in South Wales or designated hospital pharmacies in Northern Ireland and Scotland—see TOXBASE for list of designated centres).

## Pesticide poisoning

### Organophosphorus insecticides

Organophosphorus insecticides are usually supplied as powders or dissolved in organic solvents. All are absorbed through the bronchi and intact skin as well as through the gut and inhibit cholinesterase activity, thereby prolonging and intensifying the effects of acetylcholine. Toxicity between different compounds varies considerably, and onset may be delayed after skin exposure.

Anxiety, restlessness, dizziness, headache, miosis, nausea, hypersalivation, vomiting, abdominal colic, diarrhoea, bradycardia, and sweating are common features of organophosphorus poisoning. Muscle weakness and fasciculation may develop and progress to generalised flaccid paralysis, including the ocular and respiratory muscles. Convulsions, coma, pulmonary oedema with copious bronchial secretions, hypoxia, and arrhythmias occur in severe cases. Hyperglycaemia and glycosuria without ketonuria may also be present.

Further absorption of the organophosphorus insecticide should be prevented by moving the patient to fresh air, removing soiled clothing, and washing contaminated skin. In severe poisoning it is vital to ensure a clear airway, frequent removal of bronchial secretions, and adequate ventilation and oxygenation; gastric lavage may be considered provided that the airway is protected. Atropine sulfate p. 1404 will reverse the muscarinic effects of acetylcholine and is given by intravenous injection until the skin becomes flushed and dry, the pupils dilate, and bradycardia is abolished.

Pralidoxime chloride, a cholinesterase reactivator, is used as an adjunct to atropine sulfate in moderate or severe poisoning. It improves muscle tone within 30 minutes of administration. Pralidoxime chloride is continued until the patient has not required atropine sulfate for 12 hours. Pralidoxime chloride can be obtained from designated centres, the names of which are held by the National Poisons Information Service.

## Snake bites and animal stings

### Snake bites

Envenoming from snake bite is uncommon in the UK. Many exotic snakes are kept, some illegally, but the only indigenous venomous snake is the adder (*Vipera berus*). The bite may cause local and systemic effects. Local effects include pain, swelling, bruising, and tender enlargement of regional lymph nodes. Systemic effects include early anaphylactic symptoms (transient hypotension with syncope, angioedema, urticaria, abdominal colic, diarrhoea, and vomiting), with later persistent or recurrent hypotension, ECG abnormalities, spontaneous systemic bleeding, coagulopathy, adult respiratory distress syndrome, and acute renal failure. Fatal envenoming is rare but the potential for severe envenoming must not be underestimated.

Early anaphylactic symptoms should be treated with **adrenaline/epinephrine p. 236**. Indications for european viper snake venom antiserum p. 1443 treatment include *systemic envenoming*, especially hypotension, ECG abnormalities, vomiting, haemostatic abnormalities, and marked local envenoming such that after bites on the hand or foot, swelling extends beyond the wrist or ankle within

4 hours of the bite. For those patients who present with clinical features of *severe envenoming* (e.g. shock, ECG abnormalities, or local swelling that has advanced from the foot to above the knee or from the hand to above the elbow within 2 hours of the bite), a higher initial dose of the european viper snake venom antiserum is recommended; if symptoms of *systemic envenoming* persist contact the National Poisons Information Service.

Adrenaline/epinephrine injection must be immediately to hand for treatment of anaphylactic reactions to the european viper snake venom antiserum.

Antivenom is available for bites by certain foreign snakes and spiders, stings by scorpions and fish. For information on identification, management, and for supply in an emergency, telephone the National Poisons Information Service. Whenever possible the TOXBASE entry should be read, and relevant information collected, before telephoning the National Poisons Information Service.

### Insect stings

Stings from ants, wasps, hornets, and bees cause local pain and swelling but seldom cause severe direct toxicity unless many stings are inflicted at the same time. If the sting is in the mouth or on the tongue local swelling may threaten the upper airway. The stings from these insects are usually treated by cleaning the area with a topical antiseptic. Bee stings should be removed as quickly as possible.

Anaphylactic reactions require immediate treatment with intramuscular **adrenaline/epinephrine**; self-administered intramuscular adrenaline/epinephrine (e.g. *EpiPen*®) is the best first-aid treatment for patients with severe hypersensitivity. An inhaled bronchodilator should be used for asthmatic reactions, see also the management of anaphylaxis. A short course of an **oral antihistamine** or a **topical corticosteroid** may help to reduce inflammation and relieve itching. A vaccine containing extracts of bee and wasp venom can be used to reduce the risk of anaphylaxis and systemic reactions in patients with systemic hypersensitivity to bee or wasp stings.

### Marine stings

The severe pain of weeverfish (*Trachinus vipera*) and Portuguese man-o'-war stings can be relieved by immersing the stung area immediately in uncomfortably hot, but not scalding, water (not more than 45°C). People stung by jellyfish and Portuguese man-o'-war around the UK coast should be removed from the sea as soon as possible. Adherent tentacles should be lifted off carefully (wearing gloves or using tweezers) or washed off with seawater. Alcoholic solutions, including suntan lotions, should **not** be applied because they can cause further discharge of stinging hairs. Ice packs can be used to reduce pain.

## Other poisons

Consult either the National Poisons Information Service day and night or TOXBASE.

The **National Poisons Information Service** (Tel: 0344 892 0111) will provide specialist advice on all aspects of poisoning day and night.

# 1 Active elimination from the gastro-intestinal tract

## ANTIDOTES AND CHELATORS > INTESTINAL ADSORBENTS

### Charcoal, activated

#### ● INDICATIONS AND DOSE

**Reduction of absorption of poisons in the gastro-intestinal system**

► BY MOUTH

► Neonate: 1 g/kg.

- Child 1 month–11 years: 1 g/kg (max. per dose 50 g)
- Child 12–17 years: 50 g
- Adult: 50 g

#### **Active elimination of poisons**

► BY MOUTH

► Neonate: 1 g/kg every 4 hours, dose may be reduced and the frequency increased if not tolerated, reduced dose may compromise efficacy.

- Child 1 month–11 years: 1 g/kg every 4 hours (max. per dose 50 g), dose may be reduced and the frequency increased if not tolerated, reduced dose may compromise efficacy
- Child 12–17 years: Initially 50 g, then 50 g every 4 hours, reduced if not tolerated to 25 g every 2 hours, alternatively 12.5 g every 1 hour, reduced dose may compromise efficacy
- Adult: Initially 50 g, then 50 g every 4 hours, reduced if not tolerated to 25 g every 2 hours, alternatively 12.5 g every 1 hour, reduced dose may compromise efficacy

#### **Accelerated elimination of teriflunomide**

► BY MOUTH USING GRANULES

► Adult: 50 g every 12 hours for 11 days

#### **Accelerated elimination of leflunomide (washout procedure)**

► BY MOUTH USING GRANULES

► Adult: 50 g 4 times a day for 11 days

#### ● UNLICENSED USE

► In adults Activated charcoal doses in BNF may differ from those in product literature.

● **CAUTIONS** Comatose patient (risk of aspiration—ensure airway is protected) · drowsy patient (risk of aspiration—ensure airway protected) · reduced gastrointestinal motility (risk of obstruction)

● **SIDE-EFFECTS** Bazoar · constipation · diarrhoea · gastrointestinal disorders

● **DIRECTIONS FOR ADMINISTRATION** Suspension or reconstituted powder may be mixed with soft drinks (e.g. caffeine-free diet cola) or fruit juices to mask the taste.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Oral suspension**

► **Charcodote** (Teva UK Ltd)

Activated charcoal 200 mg per 1 ml Charcodote 200mg/ml oral suspension sugar-free | 250 ml **P** £11.88

#### **Granules**

► **Carbomix** (Kent Pharmaceuticals Ltd)

Activated charcoal 813 mg per 1 gram Carbomix 81.3% granules sugar-free | 50 gram **P** £11.90

# 2 Chemical toxicity

## 2.1 Cyanide toxicity

## ANTIDOTES AND CHELATORS

### Dicobalt edetate

#### ● INDICATIONS AND DOSE

**Severe poisoning with cyanides**

► BY INTRAVENOUS INJECTION

► Child: Consult the National Poisons Information Service

► Adult: 300 mg, to be given over 1 minute (or 5 minutes if condition less serious), dose to be followed immediately by 50 mL of glucose intravenous infusion 50%; if response inadequate a second dose of both may be given, but risk of cobalt toxicity

● **CAUTIONS** Owing to toxicity to be used only for definite cyanide poisoning when patient tending to lose, or has lost, consciousness

● **SIDE-EFFECTS** Reflex tachycardia · vomiting

● **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine restriction does not apply where administration is for saving life in emergency.

● **MEDICINAL FORMS** No licensed medicines listed.

### Sodium nitrite

16-Mar-2018

#### ● INDICATIONS AND DOSE

**Poisoning with cyanides (used in conjunction with sodium thiosulfate)**

► BY INTRAVENOUS INJECTION

► Child: Consult the National Poisons Information Service

► Adult: 300 mg

● **SIDE-EFFECTS** Arrhythmias · dizziness · headache · hypotension · palpitations

● **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine restriction does not apply where administration is for saving life in emergency.

● **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### **Solution for injection**

► **Sodium nitrite (Non-proprietary)**

Sodium nitrite 30 mg per 1 ml Sodium nitrite 300mg/10ml solution for injection vials | 1 vial **PoM** **S** (Hospital only)

### Sodium thiosulfate

16-Mar-2018

#### ● INDICATIONS AND DOSE

**Poisoning with cyanides**

► BY INTRAVENOUS INJECTION

► Child: Consult the National Poisons Information Service

► Adult: 12.5 g, to be given over 10 minutes, dose may be repeated in severe cyanide poisoning

#### **DOSE EQUIVALENCE AND CONVERSION**

► 12.5 g equates to 50 mL of a 25% solution or 25 mL of a 50% solution.

● **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine restriction does not apply where administration is for saving life in emergency.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

#### Solution for injection

- ▶ **Sodium thiosulfate (Non-proprietary)**

Sodium thiosulfate 250 mg per 1 mL Sodium thiosulfate 12.5g/50mL solution for injection vials | 1 vial **[PoM]** **[S]** (Hospital only)

## 2.2 Organophosphorus toxicity

**Other drugs used for Organophosphorus toxicity** Atropine sulfate, p. 1404

### ANTIDOTES AND CHELATORS

#### Pralidoxime chloride

##### • INDICATIONS AND DOSE

**Adjunct to atropine in the treatment of poisoning by organophosphorus insecticide or nerve agent**

- ▶ **BY INTRAVENOUS INFUSION**

- ▶ **Child:** Initially 30 mg/kg, to be given over 20 minutes, followed by 8 mg/kg/hour; maximum 12 g per day
- ▶ **Adult:** Initially 30 mg/kg, to be given over 20 minutes, followed by 8 mg/kg/hour; maximum 12 g per day

- **UNLICENSED USE** Pralidoxime chloride doses may differ from those in product literature.

- ▶ **In children** Licensed for use in children (age range not specified by manufacturer).

- **CONTRA-INDICATIONS** Poisoning with carbamates · poisoning with organophosphorus compounds without anticholinesterase activity

- **CAUTIONS** Myasthenia gravis

- **SIDE-EFFECTS** Dizziness · drowsiness · headache · hyperventilation · muscle weakness · nausea · tachycardia · vision disorders

- **RENAL IMPAIRMENT** Use with caution.

- **DIRECTIONS FOR ADMINISTRATION** The loading dose may be administered by intravenous injection (diluted to a concentration of 50 mg/mL with water for injections) over at least 5 minutes if pulmonary oedema is present or if it is not practical to administer an intravenous infusion.

- ▶ **In children** For *intravenous infusion*, reconstitute each vial with 20 mL Water for Injections, then dilute to a concentration of 10–20 mg/mL with Sodium Chloride 0.9%.

- **PRESCRIBING AND DISPENSING INFORMATION** Available from designated centres for organophosphorus insecticide poisoning or from the National Blood Service (or Welsh Ambulance Services for Mid West and South East Wales)—see TOXBASE for list of designated centres).

- **EXCEPTIONS TO LEGAL CATEGORY** Prescription only medicine restriction does not apply where administration is for saving life in emergency.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for solution for injection

- ▶ **Protopam (Imported (United States))**

Pralidoxime chloride 1 gram Protopam Chloride 1g powder for solution for injection vials | 6 vial **[PoM]** **[S]**

## 3 Drug toxicity

### 3.1 Benzodiazepine toxicity

#### ANTIDOTES AND CHELATORS > BENZODIAZEPINE ANTAGONISTS

##### Flumazenil

19-Nov-2019

##### • INDICATIONS AND DOSE

**Reversal of sedative effects of benzodiazepines in anaesthesia and clinical procedures**

- ▶ **BY INTRAVENOUS INJECTION**

- ▶ **Adult:** 200 micrograms, dose to be administered over 15 seconds, then 100 micrograms every 1 minute if required; usual dose 300–600 micrograms; maximum 1 mg per course

**Reversal of sedative effects of benzodiazepines in intensive care**

- ▶ **BY INTRAVENOUS INJECTION**

- ▶ **Adult:** 300 micrograms, dose to be administered over 15 seconds, then 100 micrograms every 1 minute if required; maximum 2 mg per course

**Reversal of sedative effects of benzodiazepines in intensive care (if drowsiness recurs after injection)**

- ▶ **INITIALLY BY INTRAVENOUS INFUSION**

- ▶ **Adult:** 100–400 micrograms/hour, adjusted according to response, alternatively (by intravenous injection) 300 micrograms, adjusted according to response

##### IMPORTANT SAFETY INFORMATION

Flumazenil should only be administered by, or under the direct supervision of, personnel experienced in its use.

- **CONTRA-INDICATIONS** Life-threatening condition (e.g. raised intracranial pressure, status epilepticus) controlled by benzodiazepines

- **CAUTIONS** Avoid rapid injection following major surgery · avoid rapid injection in high-risk or anxious patients · benzodiazepine dependence (may precipitate withdrawal symptoms) · elderly · ensure neuromuscular blockade cleared before giving · head injury (rapid reversal of benzodiazepine sedation may cause convulsions) · history of panic disorders (risk of recurrence) · prolonged benzodiazepine therapy for epilepsy (risk of convulsions) · short-acting (repeat doses may be necessary—benzodiazepine effects may persist for at least 24 hours)

##### • SIDE-EFFECTS

- ▶ **Common or very common** Anxiety · diplopia · dry mouth · eye disorders · flushing · headache · hiccups · hyperhidrosis · hyperventilation · hypotension · insomnia · nausea · palpitations · paraesthesia · speech disorder · tremor · vertigo · vomiting
- ▶ **Uncommon** Abnormal hearing · arrhythmias · chest pain · chills · cough · dyspnoea · nasal congestion · seizure (more common in patients with epilepsy)
- ▶ **Frequency not known** Withdrawal syndrome

- **PREGNANCY** Not known to be harmful.

- **BREAST FEEDING** Avoid breast-feeding for 24 hours.

- **HEPATIC IMPAIRMENT** Manufacturer advises caution (risk of increased half-life).

**Dose adjustments** Manufacturer advises cautious dose titration.

- **DIRECTIONS FOR ADMINISTRATION** For *continuous intravenous infusion*, dilute with Glucose 5% or Sodium Chloride 0.9%.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Flumazenil (Non-proprietary)**

Flumazenil 100 microgram per 1 ml Flumazenil 500micrograms/5ml solution for injection ampoules | 5 ampoule [PoM] £72.46 (Hospital only) | 5 ampoule [PoM] £65.50-£70.00 | 10 ampoule [PoM] £140.00

## 3.2 Digoxin toxicity

### ANTIDOTES AND CHELATORS > ANTIBODIES

#### Digoxin-specific antibody

- **INDICATIONS AND DOSE**

**Treatment of known or strongly suspected life-threatening digoxin toxicity associated with ventricular arrhythmias or bradyarrhythmias unresponsive to atropine and when measures beyond the withdrawal of digoxin and correction of any electrolyte abnormalities are considered necessary**

- ▶ BY INTRAVENOUS INFUSION
- ▶ Child: Serious cases of digoxin toxicity should be discussed with the National Poisons Information Service (consult product literature)
- ▶ Adult: Serious cases of digoxin toxicity should be discussed with the National Poisons Information Service (consult product literature)

- **DIRECTIONS FOR ADMINISTRATION**

- ▶ In adults For *intravenous infusion (DigiFab®)*, given intermittently in Sodium chloride 0.9%. Reconstitute with water for injections (4 mL/vial), then dilute with infusion fluid and give over 30 minutes.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Powder for solution for infusion

- ▶ **DigiFab** (BTG International Ltd)

Digoxin-specific antibody fragments 40 mg DigiFab 40mg powder for solution for infusion vials | 1 vial [PoM] £750.00 (Hospital only)

## 3.3 Heparin toxicity

### ANTIDOTES AND CHELATORS

#### Protamine sulfate

- **INDICATIONS AND DOSE**

**Overdosage with intravenous injection of unfractionated heparin**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: Dose to be administered at a rate not exceeding 5 mg/minute, 1 mg neutralises 80–100 units heparin when given within 15 minutes; if longer than 15 minutes since heparin, less protamine required (consult product literature for details) as heparin rapidly excreted; maximum 50 mg

**Overdosage with intravenous infusion of unfractionated heparin**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Adult: 25–50 mg, to be administered once heparin infusion stopped at a rate not exceeding 5 mg/minute

**Overdosage with subcutaneous injection of unfractionated heparin**

- ▶ INITIALLY BY INTRAVENOUS INJECTION
- ▶ Adult: Initially 25–50 mg, to be administered at a rate not exceeding 5 mg/minute, 1 mg neutralises 100 units

heparin, then (by intravenous infusion), any remaining dose to be administered over 8–16 hours; maximum 50 mg per course

**Overdosage with subcutaneous injection of low molecular weight heparin**

- ▶ BY INTRAVENOUS INJECTION, OR BY CONTINUOUS INTRAVENOUS INFUSION
- ▶ Adult: Dose to be administered by intermittent intravenous injection at a rate not exceeding 5 mg/minute, 1 mg neutralises approx. 100 units low molecular weight heparin (consult product literature of low molecular weight heparin for details); maximum 50 mg

- **CAUTIONS** Excessive doses can have an anticoagulant effect
- **SIDE-EFFECTS**
- ▶ Rare or very rare Hypertension · pulmonary oedema non-cardiogenic
- ▶ Frequency not known Acute pulmonary vasoconstriction · back pain · bradycardia · circulatory collapse · dyspnoea · fatigue · feeling hot · flushing · nausea · pulmonary hypertension · vomiting
- **ALLERGY AND CROSS-SENSITIVITY** Caution if increased risk of allergic reaction to protamine (includes previous treatment with protamine or protamine insulin, allergy to fish, men who are infertile or who have had a vasectomy and who may have antibodies to protamine).
- **MONITORING REQUIREMENTS** Monitor activated partial thromboplastin time or other appropriate blood clotting parameters.
- **PRESCRIBING AND DISPENSING INFORMATION** The long half-life of low molecular weight heparins should be taken into consideration when determining the dose of protamine sulfate; the effects of low molecular weight heparins can persist for up to 24 hours after administration.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- ▶ **Protamine sulfate (Non-proprietary)**

Protamine sulfate 10 mg per 1 ml Protamine sulfate 100mg/10ml solution for injection ampoules | 5 ampoule [PoM] £ Protamine sulfate 50mg/5ml solution for injection ampoules | 10 ampoule [PoM] £49.55

## 3.4 Opioid toxicity

### OPIOID RECEPTOR ANTAGONISTS

#### Naloxone hydrochloride

08-Jan-2020

- **INDICATIONS AND DOSE**

**Overdosage with opioids**

- ▶ BY INTRAVENOUS INJECTION
- ▶ Child 1 month–11 years: Initially 100 micrograms/kg (max. per dose 2 mg), if no response, repeat at intervals of 1 minute to a max. of 2 mg, then review diagnosis; further doses may be required if respiratory function deteriorates, doses can be given by subcutaneous or intramuscular routes but only if intravenous route is not feasible; intravenous administration has more rapid onset of action
- ▶ Child 12–17 years: Initially 400 micrograms, then 800 micrograms for up to 2 doses at 1 minute intervals if no response to preceding dose, then increased to 2 mg for 1 dose if still no response (4 mg dose may be required in seriously poisoned patients), then review diagnosis; further doses may be required if respiratory

function deteriorates, doses can be given by subcutaneous or intramuscular routes but only if intravenous route is not feasible; intravenous administration has more rapid onset of action

- ▶ **Adult:** Initially 400 micrograms, then 800 micrograms for up to 2 doses at 1 minute intervals if no response to preceding dose, then increased to 2 mg for 1 dose if still no response (4 mg dose may be required in seriously poisoned patients), then review diagnosis; further doses may be required if respiratory function deteriorates, doses can be given by subcutaneous or intramuscular routes but only if intravenous route is not feasible; intravenous administration has more rapid onset of action

▶ **BY CONTINUOUS INTRAVENOUS INFUSION**

- ▶ **Child:** Using an infusion pump, adjust rate according to response (initially, rate may be set at 60% of the initial resuscitative intravenous injection dose per hour). The initial resuscitative *intravenous injection* dose is that which maintained satisfactory ventilation for at least 15 minutes

- ▶ **Adult:** Using an infusion pump, adjust rate according to response (initially, rate may be set at 60% of the initial resuscitative intravenous injection dose per hour). The initial resuscitative *intravenous injection* dose is that which maintained satisfactory ventilation for at least 15 minutes

▶ **BY INTRANASAL ADMINISTRATION**

- ▶ **Child 14–17 years:** 1.8 mg, administered into one nostril, if no response, give a second dose after 2–3 minutes. If the patient responds to the first dose then relapses into respiratory depression, give the second dose immediately. Further doses should be administered into alternate nostrils

- ▶ **Adult:** 1.8 mg, administered into one nostril, if no response, give a second dose after 2–3 minutes. If the patient responds to the first dose then relapses into respiratory depression, give the second dose immediately. Further doses should be administered into alternate nostrils

**Overdosage with opioids in a non-medical setting**

▶ **BY INTRAMUSCULAR INJECTION**

- ▶ **Adult:** 400 micrograms every 2–3 minutes, each dose given in subsequent resuscitation cycles if patient not breathing normally, continue until consciousness regained, breathing normally, medical assistance available, or contents of syringe used up; to be injected into deltoid region or anterolateral thigh

▶ **BY INTRANASAL ADMINISTRATION**

- ▶ **Child 14–17 years:** 1.8 mg, administered into one nostril, if no response, give a second dose after 2–3 minutes. If the patient responds to the first dose then relapses into respiratory depression, give the second dose immediately. Further doses should be administered into alternate nostrils

- ▶ **Adult:** 1.8 mg, administered into one nostril, if no response, give a second dose after 2–3 minutes. If the patient responds to the first dose then relapses into respiratory depression, give the second dose immediately. Further doses should be administered into alternate nostrils

**Reversal of postoperative respiratory depression**

▶ **INITIALLY BY INTRAVENOUS INJECTION**

- ▶ **Child 1 month–11 years:** 1 microgram/kg, repeated every 2–3 minutes if required
- ▶ **Child 12–17 years:** Initially 100–200 micrograms, alternatively (by intravenous injection) initially 1.5–3 micrograms/kg, if response inadequate, give subsequent doses, (by intravenous injection) 100 micrograms every 2 minutes, alternatively (by

intramuscular injection) 100 micrograms every 1–2 hours

- ▶ **Adult:** Initially 100–200 micrograms, alternatively (by intravenous injection) initially 1.5–3 micrograms/kg, if response inadequate, give subsequent doses, (by intravenous injection) 100 micrograms every 2 minutes, alternatively (by intramuscular injection) 100 micrograms every 1–2 hours

**DOSE EQUIVALENCE AND CONVERSION**

- ▶ With intranasal use
- ▶ 1 spray equivalent to 1.8 mg.

**PHARMACOKINETICS**

- ▶ Naloxone has a short duration of action; repeated doses or infusion may be necessary to reverse effects of opioids with longer duration of action.

- **UNLICENSED USE** Naloxone doses in BNF may differ from those in product literature.

**IMPORTANT SAFETY INFORMATION**

**SAFE PRACTICE**

Doses used in acute opioid overdosage may not be appropriate for the management of opioid-induced respiratory depression and sedation in those receiving palliative care and in chronic opioid use.

- **CAUTIONS** Cardiovascular disease or those receiving cardiotoxic drugs (serious adverse cardiovascular effects reported) · maternal physical dependence on opioids (may precipitate withdrawal in newborn) · pain · physical dependence on opioids (precipitates withdrawal)

**CAUTIONS, FURTHER INFORMATION**

- ▶ Titration of dose In postoperative use, the dose should be titrated for each patient in order to obtain sufficient respiratory response; however, naloxone antagonises analgesia.

● **SIDE-EFFECTS**

**GENERAL SIDE-EFFECTS**

- ▶ **Common or very common** Arrhythmias · dizziness · headache · hypertension · hypotension · nausea · vomiting
- ▶ **Uncommon** Diarrhoea · dry mouth · hyperhidrosis · hyperventilation · tremor
- ▶ **Rare or very rare** Cardiac arrest · erythema multiforme · pulmonary oedema

**SPECIFIC SIDE-EFFECTS**

- ▶ **Uncommon**
- ▶ With parenteral use Inflammation localised · pain · vascular irritation
- ▶ **Rare or very rare**
- ▶ With parenteral use Anxiety · seizure
- ▶ **Frequency not known**
- ▶ With parenteral use Analgesia reversed · asthenia · chills · death · dyspnoea · fever · irritability · nasal complaints · piloerection · yawning

- **PREGNANCY** Use only if potential benefit outweighs risk.

- **BREAST FEEDING** Not orally bioavailable.

● **DIRECTIONS FOR ADMINISTRATION**

- ▶ With intravenous use in children For *continuous intravenous infusion*, dilute to a concentration of up to 200 micrograms/mL with Glucose 5% or Sodium Chloride 0.9%.
- ▶ With intravenous use in adults For *intravenous infusion* (Minijet<sup>®</sup> Naloxone Hydrochloride), give continuously in Glucose 5% or Sodium Chloride 0.9%. Dilute to a concentration of up to 200 micrograms/mL and administer via an infusion pump.

● **PRESCRIBING AND DISPENSING INFORMATION**

- ▶ With intranasal use The manufacturer has provided a *Healthcare Professional Guidance Document*.

- **PATIENT AND CARER ADVICE** Patients and carers should be given advice on how to administer naloxone nasal spray.
- ▶ With intranasal use Patient training and information cards should be provided.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

##### ▶ Naloxone hydrochloride (Non-proprietary)

**Naloxone hydrochloride 20 microgram per 1 ml** Naloxone 40micrograms/2ml solution for injection ampoules | 10 ampoule [PoM] £55.00

**Naloxone hydrochloride (as Naloxone hydrochloride dihydrate) 400 microgram per 1 ml** Naloxone 400micrograms/1ml solution for injection ampoules | 10 ampoule [PoM] £36.00-£53.70 DT = £40.51

**Naloxone hydrochloride 1 mg per 1 ml** Naloxone 2mg/2ml solution for injection pre-filled syringes | 1 pre-filled disposable injection [PoM] £16.80

#### Spray

##### ▶ Nyxoid (Napp Pharmaceuticals Ltd)

**Naloxone (as Naloxone hydrochloride dihydrate) 18 mg per 1 ml** Nyxoid 1.8mg/0.1ml nasal spray 0.1ml unit dose | 2 unit dose [PoM] £27.50

#### IMPORTANT SAFETY INFORMATION

MHRA/CHM ADVICE: INTRAVENOUS ACETYL CYSTEINE FOR PARACETAMOL OVERDOSE; REMINDER OF AUTHORISED DOSE REGIMEN; POSSIBLE NEED FOR CONTINUED TREATMENT (JANUARY 2017)

The authorised dose regimen for acetylcysteine in paracetamol overdose is 3 consecutive intravenous infusions given over a total of 21 hours.

Continued treatment (given at the dose and rate as used in the third infusion) may be necessary depending on the clinical evaluation of the individual patient.

- **CAUTIONS** Asthma (see Side-effects for management of asthma but do not delay acetylcysteine treatment) · atopy · may slightly increase INR · may slightly increase prothrombin time

#### ● SIDE-EFFECTS

- ▶ **Frequency not known** Acidosis · anaphylactoid reaction · angioedema · anxiety · arrhythmias · cardiac arrest · chest discomfort · cough · cyanosis · eye pain · eye swelling · generalised seizure · hyperhidrosis · hypertension · hypotension · joint disorders · malaise · nausea · pain facial · respiratory disorders · skin reactions · syncope · thrombocytopenia · vasodilation · vision blurred · vomiting

**SIDE-EFFECTS, FURTHER INFORMATION** Anaphylactoid reactions can be managed by suspending treatment and initiating appropriate management. Treatment may then be restarted at lower rate.

#### ● DIRECTIONS FOR ADMINISTRATION

- ▶ In children Glucose 5% is preferred fluid; Sodium Chloride 0.9% is an alternative if Glucose 5% unsuitable.
- ▶ In adults For intravenous infusion (Parvolex®), give continuously in Glucose 5% or Sodium chloride 0.9%. Glucose Intravenous Infusion 5% is the preferred fluid; Sodium Chloride Intravenous Infusion 0.9% is an alternative if Glucose Intravenous Infusion 5% is unsuitable.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for infusion

#### Solution for infusion

ELECTROLYTES: May contain Sodium

##### ▶ Acetylcysteine (Non-proprietary)

**Acetylcysteine 200 mg per 1 ml** Acetylcysteine 2g/10ml solution for infusion ampoules | 10 ampoule [PoM] £21.26 DT = £21.26

##### ▶ Parvolex (Phoenix Labs Ltd)

**Acetylcysteine 200 mg per 1 ml** Parvolex 2g/10ml concentrate for solution for infusion ampoules | 10 ampoule [PoM] £22.50 DT = £21.26

## 3.5 Paracetamol toxicity

### ANTIDOTES AND CHELATORS

#### Acetylcysteine

03-Apr-2018

#### ● INDICATIONS AND DOSE

##### Paracetamol overdosage

##### ▶ BY INTRAVENOUS INFUSION

- ▶ Child (body-weight up to 20 kg): Initially 150 mg/kg over 1 hour, dose to be administered in 3 mL/kg glucose 5%, followed by 50 mg/kg over 4 hours, dose to be administered in 7 mL/kg glucose 5%, then 100 mg/kg over 16 hours, dose to be administered in 14 mL/kg glucose 5%
- ▶ Child (body-weight 20–39 kg): Initially 150 mg/kg over 1 hour, dose to be administered in 100 mL Glucose 5%, followed by 50 mg/kg over 4 hours, dose to be administered in 250 mL glucose 5%, then 100 mg/kg over 16 hours, dose to be administered in 500 mL glucose 5%
- ▶ Child (body-weight 40 kg and above): 150 mg/kg over 1 hour, dose to be administered in 200 mL Glucose Intravenous Infusion 5%, then 50 mg/kg over 4 hours, to be started immediately after completion of first infusion, dose to be administered in 500 mL Glucose Intravenous Infusion 5%, then 100 mg/kg over 16 hours, to be started immediately after completion of second infusion, dose to be administered in 1 litre Glucose Intravenous Infusion 5%
- ▶ Adult (body-weight 40 kg and above): 150 mg/kg over 1 hour, dose to be administered in 200 mL Glucose Intravenous Infusion 5%, then 50 mg/kg over 4 hours, to be started immediately after completion of first infusion, dose to be administered in 500 mL Glucose Intravenous Infusion 5%, then 100 mg/kg over 16 hours, to be started immediately after completion of second infusion, dose to be administered in 1 litre Glucose Intravenous Infusion 5%

#### DOSES AT EXTREMES OF BODY-WEIGHT

- ▶ To avoid excessive dosage in obese patients, a ceiling weight of 110 kg should be used when calculating the dose for paracetamol overdosage.

## 4 Methaemoglobinaemia

### ANTIDOTES AND CHELATORS

#### Methyithioninium chloride

(Methylene blue)

#### ● INDICATIONS AND DOSE

##### Drug- or chemical-induced methaemoglobinaemia

##### ▶ BY SLOW INTRAVENOUS INJECTION

- ▶ Child 3 months–17 years: Initially 1–2 mg/kg, then 1–2 mg/kg after 30–60 minutes if required, to be given over 5 minutes, seek advice from National Poisons Information Service if further repeat doses are required; maximum 7 mg/kg per course
- ▶ Adult: Initially 1–2 mg/kg, then 1–2 mg/kg after 30–60 minutes if required, to be given over 5 minutes, seek advice from National Poisons Information Service

if further repeat doses are required; maximum 7 mg/kg per course

#### Aniline- or dapsone-induced methaemoglobinaemia

##### ► BY SLOW INTRAVENOUS INJECTION

- Child 3 months–17 years: Initially 1–2 mg/kg, then 1–2 mg/kg after 30–60 minutes if required, to be given over 5 minutes, seek advice from National Poisons Information Service if further repeat doses are required; maximum 4 mg/kg per course

- Adult: Initially 1–2 mg/kg, then 1–2 mg/kg after 30–60 minutes if required, to be given over 5 minutes, seek advice from National Poisons Information Service if further repeat doses are required; maximum 4 mg/kg per course

- **CAUTIONS** Chlorate poisoning (reduces efficacy of methylthioninium) · G6PD deficiency (seek advice from National Poisons Information Service) · methaemoglobinaemia due to treatment of cyanide poisoning with sodium nitrite (seek advice from National Poisons Information Service) · pulse oximetry may give false estimation of oxygen saturation

- **INTERACTIONS** → Appendix 1: methylthioninium chloride

#### ● SIDE-EFFECTS

- **Common or very common** Abdominal pain · anxiety · chest pain · dizziness · headache · hyperhidrosis · nausea · pain in extremity · paraesthesia · skin reactions · taste altered · urine discolouration · vomiting

- **Frequency not known** Aphasia · arrhythmias · confusion · faeces discoloured · fever · haemolytic anaemia · hyperbilirubinaemia (in infants) · hypertension · hypotension · injection site necrosis · mydriasis · tremor

- **PREGNANCY** No information available, but risk to fetus of untreated methaemoglobinaemia likely to be significantly higher than risk of treatment.

- **BREAST FEEDING** Manufacturer advises avoid breastfeeding for up to 6 days after administration—no information available.

#### ● RENAL IMPAIRMENT

**Dose adjustments** Use with caution in severe impairment; dose reduction may be required.

#### ● DIRECTIONS FOR ADMINISTRATION

- In children For *intravenous injection*, may be diluted with Glucose 5% to minimise injection-site pain; not compatible with Sodium Chloride 0.9%.

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug. Forms available from special-order manufacturers include: solution for injection

#### Solution for injection

##### ► Methylthioninium chloride (Non-proprietary)

**Methylthioninium chloride 5 mg per 1 ml** Methylthioninium chloride Proveblue 50mg/10ml solution for injection ampoules | 5 ampoule [PoM] £196.89

**Methylthioninium chloride 10 mg per 1 ml** Methylthioninium chloride 50mg/5ml concentrate for solution for injection vials | 5 vial [PoM] £150.00 (Hospital only)

## 5 Snake bites

### IMMUNE SERA AND IMMUNOGLOBULINS > ANTITOXINS

#### European viper snake venom antiserum

##### ● INDICATIONS AND DOSE

##### Systemic envenoming from snake bites | Marked local envenoming

##### ► BY INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION

- Child: Initially 10 mL for 1 dose, then 10 mL after 1–2 hours if required, the second dose should only be given if symptoms of systemic envenoming persist after the first dose, if symptoms of systemic envenoming persist contact the National Poisons Information Service

- Adult: Initially 10 mL for 1 dose, then 10 mL after 1–2 hours if required, the second dose should only be given if symptoms of systemic envenoming persist after the first dose, if symptoms of systemic envenoming persist contact the National Poisons Information Service

##### Severe systemic envenoming from snake bites in patients presenting with clinical features

##### ► BY INTRAVENOUS INJECTION, OR BY INTRAVENOUS INFUSION

- Child: Initially 20 mL for 1 dose, if symptoms of systemic envenoming persist contact the National Poisons Information Service

- Adult: Initially 20 mL for 1 dose, if symptoms of systemic envenoming persist contact the National Poisons Information Service

- **DIRECTIONS FOR ADMINISTRATION** By *intravenous injection* given over 10–15 minutes or by *intravenous infusion* over 30 minutes after diluting in sodium chloride 0.9% (use 5 mL diluent/kg body-weight).

- **PRESCRIBING AND DISPENSING INFORMATION** To order, email [immform@dh.gsi.gov.uk](mailto:immform@dh.gsi.gov.uk).

- **MEDICINAL FORMS** There can be variation in the licensing of different medicines containing the same drug.

#### Solution for injection

- Viper venom antiserum, European (equine) 1g/10ml solution for injection vials (Imported (Croatia))

**European viper snake venom antiserum 100 mg per 1 ml** Viper venom antiserum, European (equine) 1g/10ml solution for injection vials | 1 vial [PoM] 

# Appendix 1

## Interactions

Changes have been made to the interactions content in BNF publications. For more information, see [www.bnf.org/new-bnf-interactions/](http://www.bnf.org/new-bnf-interactions/).

Two or more drugs given at the same time can exert their effects independently or they can interact. Interactions may be beneficial and exploited therapeutically; this type of interaction is not within the scope of this appendix. Many interactions are harmless, and even those that are potentially harmful can often be managed, allowing the drugs to be used safely together. Nevertheless, adverse drug interactions should be reported to the Medicines and Healthcare products Regulatory Agency (MHRA), through the Yellow Card Scheme (see Adverse reactions to drugs p. 12), as for other adverse drug reactions.

Potentially harmful drug interactions may occur in only a small number of patients, but the true incidence is often hard to establish. Furthermore the severity of a harmful interaction is likely to vary from one patient to another. Patients at increased risk from drug interactions include the elderly and those with impaired renal or hepatic function.

Interactions can result in the potentiation or antagonism of one drug by another, or result in another effect, such as renal impairment. Drug interactions may develop either through pharmacokinetic or pharmacodynamic mechanisms.

### Pharmacodynamic interactions

These are interactions between drugs which have similar or antagonistic pharmacological effects or side-effects. They might be due to competition at receptor sites, or occur between drugs acting on the same physiological system. They are usually predictable from a knowledge of the pharmacology of the interacting drugs; in general, those demonstrated with one drug are likely to occur with related drugs.

### Pharmacokinetic interactions

These occur when one drug alters the absorption, distribution, metabolism, or excretion of another, thus increasing or decreasing the amount of drug available to produce its pharmacological effects. Pharmacokinetic interactions occurring with one drug do not necessarily occur uniformly across a group of related drugs.

**Affecting absorption** The rate of absorption and the total amount absorbed can both be altered by drug interactions. Delayed absorption is rarely of clinical importance unless a rapid effect is required (e.g. when giving an analgesic). Reduction in the total amount absorbed, however, can result in ineffective therapy.

**Affecting distribution** *Due to changes in protein binding:* To a variable extent most drugs are loosely bound to plasma proteins. Protein-binding sites are non-specific and one drug can displace another thereby increasing the proportion free to diffuse from plasma to its site of action. This only produces a detectable increase in effect if it is an extensively bound drug (more than 90%) that is not widely distributed throughout the body. Even so displacement rarely produces

more than transient potentiation because this increased concentration of free drug will usually be eliminated.

Displacement from protein binding plays a part in the potentiation of warfarin by sulfonamides but these interactions become clinically relevant mainly because warfarin metabolism is also inhibited.

**Induction or inhibition of drug transporter proteins:** Drug transporter proteins, such as P-glycoprotein, actively transport drugs across biological membranes. Transporters can be induced or inhibited, resulting in changes in the concentrations of drugs that are substrates for the transporter. For example, rifampicin induces P-glycoprotein, particularly in the gut wall, resulting in decreased plasma concentrations of digoxin, a P-glycoprotein substrate.

**Affecting metabolism** Many drugs are metabolised in the liver. Drugs are either metabolised by phase I reactions (oxidation, reduction, or hydrolysis) or by phase II reactions (e.g. glucuronidation).

Phase I reactions are mainly carried out by the cytochrome P450 family of isoenzymes, of which CYP3A4 is the most important isoenzyme involved in the metabolism of drugs. Induction of cytochrome P450 isoenzymes by one drug can increase the rate of metabolism of another, resulting in lower plasma concentrations and a reduced effect. On withdrawal of the inducing drug, plasma concentrations increase and toxicity can occur.

Conversely when one drug inhibits cytochrome P450 isoenzymes, it can decrease the metabolism of another, leading to higher plasma concentrations, resulting in an increased effect with a risk of toxicity.

Isoenzymes of the hepatic cytochrome P450 system interact with a wide range of drugs. With knowledge of which isoenzymes are involved in a drug's metabolism, it is possible to predict whether certain pharmacokinetic interactions will occur. For example, carbamazepine is a potent inducer of CYP3A4, ketoconazole is potent inhibitor of CYP3A4, and midazolam is a substrate of CYP3A4. Carbamazepine reduces midazolam concentrations, and it is therefore likely that other drugs that are potent inducers of CYP3A4 will interact similarly with midazolam. Ketoconazole, however, increases midazolam concentrations, and it can be predicted that other drugs that are potent inhibitors of CYP3A4 will interact similarly.

Less is known about the enzymes involved in phase II reactions. These include UDP-glucuronyltransferases which, for example, might be induced by rifampicin, resulting in decreased metabolism of mycophenolate (a substrate for this enzyme) to its active form, mycophenolic acid.

**Affecting renal excretion** Drugs are eliminated through the kidney both by glomerular filtration and by active tubular secretion. Competition occurs between those which share active transport mechanisms in the proximal tubule. For example, salicylates and some other NSAIDs delay the excretion of methotrexate; serious methotrexate toxicity is possible. Changes in urinary pH can also affect the reabsorption of a small number of drugs, including methenamine.

**Relative importance of interactions**

**Levels of severity:** Most interactions have been assigned a severity; this describes the likely effect of an unmanaged interaction on the patient.

**Severe**—the result may be a life-threatening event or have a permanent detrimental effect.

**Moderate**—the result could cause considerable distress or partially incapacitate a patient; they are unlikely to be life-threatening or result in long-term effects.

**Mild**—the result is unlikely to cause concern or incapacitate the majority of patients.

**Unknown**—used for those interactions that are predicted, but there is insufficient evidence to hazard a guess at the outcome.

**Levels of evidence:** Most interactions have been assigned a rating to indicate the weight of evidence behind the interaction.

**Study**—for interactions where the information is based on formal study including those for other drugs with same mechanism (e.g. known inducers, inhibitors, or substrates of cytochrome P450 isoenzymes or P-glycoprotein).

**Anecdotal**—interactions based on either a single case report or a limited number of case reports.

**Theoretical**—interactions that are predicted based on sound theoretical considerations. The information may have been derived from *in vitro* studies or based on the way other members in the same class act.

**Action messages:** Each interaction describes the effect that occurs, and the action to be taken, either based on manufacturer's advice from the relevant Summary of Product Characteristics or advice from a relevant authority (e.g. MHRA). An action message is only included where the combination is to be avoided, where a dose adjustment is required, or where specific administration requirements (e.g. timing of doses) are recommended. **Pharmacodynamic interactions**, with the exception of interactions with drugs that may prolong the QT interval, do not have an action message included as these will depend on individual patient circumstances.

Appendix 1 structure

**1 Drugs**

Drugs are listed alphabetically. If a drug is a member of a drug class, all interactions for that drug will be listed under the drug class entry; in this case the drug entry provides direction to the relevant drug class where its interactions can be found.

Within a drug or drug class entry, interactions are listed alphabetically by the interacting drug or drug class. The interactions describe the effect that occurs, and the action to be taken, either based on manufacturer's advice from the relevant Summary of Product Characteristics or advice from a relevant authority (e.g. MHRA). An action message is only included where the combination is to be avoided, where a dose adjustment is required, or where specific administration requirements (e.g. timing of doses) are recommended. If two drugs have a pharmacodynamic effect in addition to a pharmacokinetic interaction, a cross-reference to the relevant pharmacodynamic effect table is included at the end of the pharmacokinetic message.

**2 Drug classes**

The drugs that are members of a drug class are listed underneath the drug class entry in a blue box. Interactions for the class are then listed alphabetically by the interacting drug or drug class. If the interaction only applies to certain drugs in the class, these drugs will be shown in brackets after the drug class name.

**3 Supplementary information**

If a drug has additional important information to be considered, this is shown in a blue box underneath the drug or drug class entry. This information might be food and lifestyle advice (including smoking and alcohol consumption), relate to the pharmacology of the drug or applicability of interactions to certain routes of administration, or it might be advice about separating administration times.

**4 Pharmacodynamic effects**

Tables at the beginning of Appendix 1 cover pharmacodynamic effects. If a drug is included in one or more of these tables, this will be indicated at the top of the

**1 Drug entry**

- Details of interaction between **drug entry** and another **drug** or **drug class**. Action statement. [\[Severity\]](#) Evidence
  - Details of interaction between **drug entry** and another **drug** or **drug class**. Action statement. [\[Severity\]](#) Evidence

**TABLE 1**  
**Name of pharmacodynamic effect**  
Explanation of the effect

Drug	Drug	Drug
Drug	Drug	Drug

list of interactions for the drug or drug class. In addition to the list of interactions for a drug or drug class, these tables should always be consulted.

Each table describes the relevant pharmacodynamic effect and lists those drugs that are commonly associated with the effect. Concurrent use of two or more drugs from the same table is expected to increase the risk of the pharmacodynamic effect occurring. Please note these tables are not exhaustive.

**TABLE 1****Drugs that cause hepatotoxicity**

The following is a list of some drugs that cause hepatotoxicity (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

alcohol (beverage)	dactinomycin	itraconazole	minocycline	streptozocin
alectinib	dantrolene	leflunomide	neratinib	sulfasalazine
asparaginase	demeclocycline	lenalidomide	oxytetracycline	teriflunomide
atorvastatin	doxycycline	lomitapide	paracetamol	tetracycline
bedaquiline	flucloxacillin	lymecycline	pegaspargase	tigecycline
carbamazepine	fluconazole	mercaptopurine	pravastatin	trabectedin
clavulanate	fluvastatin	methotrexate	rosuvastatin	valproate
crisantaspase	isoniazid	micafungin	simvastatin	vincristine

**TABLE 2****Drugs that cause nephrotoxicity**

The following is a list of some drugs that cause nephrotoxicity (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

aceclofenac	cefradine	diclofenac	gabumetone	tenofovir disoproxil
aciclovir	ceftaroline	etodolac	naproxen	tenoxicam
adefovir	ceftazidime	etoricoxib	neomycin	tiaprofenic acid
amikacin	ceftobiprole	flurbiprofen	oxaliplatin	toframycin
amphotericin	ceftolozane	foscarnet	parecoxib	tolfenamic acid
bacitracin	ceftriaxone	ganciclovir	pemetrexed	trimethoprim
capreomycin	cefuroxime	gentamicin	penicillamine	valaciclovir
carboplatin	celecoxib	ibuprofen	pentamidine	valganciclovir
cefaclor	ciclosporin	ifosfamide	piroxicam	vancomycin
cefadroxil	cidofovir	indometacin	polymyxin b	zidovudine
cefalexin	cisplatin	ketoprofen	streptomycin	zoledronate
cefepime	colistimethate (particularly intravenous)	ketorolac	streptozocin	
cefixime	dexibuprofen	mefenamic acid	sulindac	
cefotaxime	dexketoprofen	meloxicam	tacrolimus	
cefoxitin		methotrexate	telavancin	

**TABLE 3****Drugs with anticoagulant effects**

The following is a list of drugs that have anticoagulant effects. Concurrent use of two or more drugs from this list might increase the risk of bleeding; concurrent use of drugs with antiplatelet effects (see table of drugs with antiplatelet effects) might also increase this risk.

acenocoumarol	dabigatran	fondaparinux	rivaroxaban	warfarin
alteplase	dalteparin	heparin (unfractionated)	streptokinase	
apixaban	danaparoid	nicotinic acid	tenecteplase	
argatroban	edoxaban	omega-3-acid ethyl esters	tinzaparin	
bivalirudin	enoxaparin	phenindione	urokinase	

**TABLE 4****Drugs with antiplatelet effects**

The following is a list of drugs that have antiplatelet effects (note that this list is not exhaustive). Concurrent use of two or more drugs from this list might increase the risk of bleeding; concurrent use of drugs with anticoagulant effects (see table of drugs with anticoagulant effects) might also increase this risk.

aceclofenac	dasatinib	etoricoxib	ketorolac	sertraline
anagrelide	dexibuprofen	fluoxetine	mefenamic acid	sulindac
aspirin	dexketoprofen	flurbiprofen	meloxicam	tenoxicam
bevacizumab	diclofenac	fluvoxamine	nabumetone	tiaprofenic acid
cangrelor	dipyridamole	ibritinib	naproxen	ticagrelor
celecoxib	duloxetine	ibuprofen	parecoxib	tirofiban
cilostazol	epoprostenol	iloprost	paroxetine	tolfenamic acid
citalopram	efitibatide	indometacin	piroxicam	trastuzumab emtansine
clopidogrel	escitalopram	inotersen	prasugrel	venlafaxine
dapoxetine	etodolac	ketoprofen	regorafenib	vortioxetine

**TABLE 5**  
**Drugs that cause thromboembolism**

The following is a list of some drugs that cause thromboembolism (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

bleomycin	epoetin zeta	pentostatin	tibolone	vindesine
cyclophosphamide	flourouracil	pomalidomide	toremifene	vinflunine
darbepoetin alfa	fulvestrant	raloxifene	tranexamic acid	vinorelbine
doxorubicin	lenalidomide	strontium	trastuzumab	
epoetin alfa	methotrexate	tamoxifen	vinblastine	
epoetin beta	mitomycin	thalidomide	vincristine	

**TABLE 6**  
**Drugs that cause bradycardia**

The following is a list of drugs that cause bradycardia (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

acebutolol	carvedilol	fentanyl	nadolol	selegiline
alectinib	celiprolol	fingolimod	nebivolol	siponimod
alfentanil	cisatracurium	flecainide	neostigmine	sotalol
amiodarone	clonidine	galantamine	pasireotide	thalidomide
apraclonidine	crizotinib	ivabradine	pindolol	timolol
atenolol	digoxin	labetalol	propranolol	tizanidine
betaxolol	diltiazem	levobunolol	pyridostigmine	verapamil
bisoprolol	donepezil	methadone	remifentanyl	
brimonidine	esmolol	metoprolol	rivastigmine	

**TABLE 7**  
**Drugs that cause first dose hypotension**

The following is a list of some drugs that can cause first-dose hypotension (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

alfuzosin	eprosartan	isosorbide dinitrate	prazosin	trandolapril
azilsartan	fosinopril	isosorbide mononitrate	quinapril	valsartan
candesartan	glyceryl trinitrate	lisinopril	ramipril	
captopril	imidapril	losartan	tamsulosin	
doxazosin	indoramin	olmesartan	telmisartan	
enalapril	irbesartan	perindopril	terazosin	

**TABLE 8**  
**Drugs that cause hypotension**

The following is a list of some drugs that cause hypotension (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

acebutolol	chlorothiazide	haloperidol	minoxidil	riociguat
alcohol (beverage)	chlorpromazine	hydralazine	moxisylyte	risperidone
alfuzosin	chlorthalidone	hydrochlorothiazide	moxonidine	ropinirole
aliskiren	clomipramine	hydroflumethiazide	nadolol	rotigotine
alprostadil	clonidine	iloprost	nebivolol	sacubitril
amantadine	clozapine	imidapril	nicardipine	sapropterin
amitriptyline	dapagliflozin	imipramine	nicorandil	selegiline
amlodipine	desflurane	indapamide	nifedipine	sevoflurane
apomorphine	diazoxide	indoramin	nimodipine	sildenafil
apraclonidine	diltiazem	irbesartan	nitroprusside	sodium oxybate
aripiprazole	dipyridamole	isocarboxazid	nitrous oxide	sotalol
asenapine	dosulepin	isoflurane	nortriptyline	spironolactone
atenolol	doxazosin	isosorbide dinitrate	olanzapine	sulpiride
avanafil	doxepin	isosorbide mononitrate	olmesartan	tadalafil
azilsartan	droperidol	ketamine	paliperidone	tamsulosin
baclofen	empagliflozin	labetalol	pergolide	telmisartan
bendroflumethiazide	enalapril	lacidipine	pericyazine	terazosin
benperidol	eplerenone	lercandipine	perindopril	thiopental
betaxolol	epoprostenol	levobunolol	phenelzine	timolol
bisoprolol	eprosartan	levodopa	pimozide	tizanidine
bortezomib	ertugliflozin	levomepromazine	pindolol	torasemide
brimonidine	esketamine	lisinopril	pramipexole	trandolapril
bromocriptine	esmolol	lofepamine	prazosin	tranylcypromine
bumetanide	etomidate	lofedidine	prochlorperazine	trifluoperazine
cabergoline	felodipine	losartan	promazine	trimipramine
canagliflozin	flupentixol	loxapine	propofol	valsartan
candesartan	fluphenazine	lurasidone	propranolol	vardenafil
captopril	fosinopril	methoxyflurane	quetiapine	verapamil
cariprazine	furosemide	methyl dopa	quinagolide	vernakalant
carvedilol	glyceryl trinitrate	metolazone	quinapril	xipamide
celiprolol	guanfacine	metoprolol	ramipril	zuclopenthixol

**TABLE 9****Drugs that prolong the QT interval**

The following is a list of some drugs that prolong the QT-interval (note that this list is not exhaustive). In general, manufacturers advise that the use of two or more drugs that are associated with QT prolongation should be avoided. Increasing age, female sex, cardiac disease, and some metabolic disturbances (notably hypokalaemia) predispose to QT prolongation—concurrent use of drugs that reduce serum potassium might further increase this risk (see table of drugs that reduce serum potassium).

Drugs that are not known to prolong the QT interval but are predicted (by the manufacturer) to increase the risk of QT prolongation include: domperidone, fingolimod, granisetron, ivabradine, mefloquine, mizolastine, palonosetron, intravenous pentamidine, and siponimod. Most manufacturers advise avoiding concurrent use with drugs that prolong the QT interval.

amifampridine	clarithromycin	haloperidol	pasireotide	tizanidine
amiodarone	clomipramine	hydroxyzine	pazopanib	tolterodine
amisulpride	crizotinib	inotuzumab ozogamicin	pimozide	toremifene
anagrelide	dasatinib	lapatinib	quinine	vandetanib
apalutamide	delamanid	lenvatinib	ranolazine	varafenil
apomorphine	disopyramide	levomepromazine	ribociclib	vemurafenib
arsenic trioxide	dronedarone	lithium	risperidone	venlafaxine
artemether	droperidol	lofedidine	saquinavir	vernakalant
artenimol	efavirenz	methadone	sildenafil	vinflunine
bedaquiline	encorafenib	moxifloxacin	sorafenib	voriconazole
bosutinib	eribulin	nilotinib	sotalol	zuclopenthixol
cabozantinib	erythromycin	ondansetron	sulpiride	
ceritinib	escitalopram	osimertinib	sunitinib	
chlorpromazine	flecainide	paliperidone	telavancin	
citalopram	fluconazole	panobinostat	tetrabenazine	

**TABLE 10****Drugs with antimuscarinic effects**

The following is a list of some drugs that have antimuscarinic effects (note that this list is not exhaustive). Concurrent use of two or more drugs from this list might increase the risk of these effects occurring.

aclidinium	cyclopentolate	haloperidol	orphenadrine	tolterodine
amantadine	cyproheptadine	homatropine	oxybutynin	trifluoperazine
amitriptyline	darifenacin	hydroxyzine	pimozide	trihexphenidyl
atropine	dicycloverine	hyoscine	prochlorperazine	trimipramine
baclofen	dimenhydrinate	imipramine	procyclidine	tropicamide
chlorphenamine	disopyramide	ipratropium	promethazine	trospium
chlorpromazine	dosulepin	levomepromazine	propafenone	umecidinium
clemastine	doxepin	lofepramine	propantheline	
clomipramine	fesoterodine	loxapine	propiverine	
clozapine	flavoxate	nefopam	solifenacin	
cyclizine	glycopyrronium	nortriptyline	tiotropium	

**TABLE 11****Drugs with CNS depressant effects**

The following is a list of some drugs with CNS depressant effects (note that this list is not exhaustive). Concurrent use of two or more drugs from this list might increase the risk of CNS depressant effects, such as drowsiness, which might affect the ability to perform skilled tasks (see 'Drugs and Driving' in Guidance on Prescribing p. 1).

agomelatine	clobazam	guanfacine	mianserin	propofol
alcohol (beverage)	clometiazole	haloperidol	midazolam	quetiapine
alfentanil	clomipramine	hydromorphone	mirtazapine	remifentanyl
alimemazine	clonazepam	hydroxyzine	morphine	risperidone
alprazolam	clonidine	imipramine	moxonidine	ropivacaine
amisulpride	clozapine	isoflurane	nabilone	sevoflurane
amitriptyline	codeine	ketamine	nitrazepam	sodium oxybate
apraclonidine	cyclizine	ketotifen	nitrous oxide	sulpiride
aripiprazole	cyproheptadine	lamotrigine	nortriptyline	tapentadol
articaïne	desflurane	levetiracetam	olanzapine	temazepam
asenapine	dexmedetomidine	levomepromazine	oxazepam	tetrabenazine
baclofen	diamorphine	lidocaine	oxycodone	tetracaine
benperidol	diazepam	lofepramine	paliperidone	thalidomide
brimonidine	dihydrocodeine	lofedidine	pentazocine	thiopental
bucizine	dipipanone	loprazolam	perampanel	tizanidine
bupivacaine	dosulepin	lorazepam	pericyazine	tramadol
buprenorphine	doxepin	lormetazepam	pethidine	trazodone
cannabidiol	dronabinol	loxapine	phenobarbital	trifluoperazine
cariprazine	droperidol	lurasidone	pimozide	trimipramine
chloral hydrate	esketamine	melatonin	pizotifen	venlafaxine
chlordiazepoxide	etomidate	mepivacaine	pregabalin	zolpidem
chlorprocaine	fentanyl	meprobamate	prilocaine	zopiclone
chlorphenamine	flupentixol	meptazinol	primidone	zuclopenthixol
chlorpromazine	fluphenazine	methadone	prochlorperazine	
cinnarizine	flurazepam	methocarbamol	promazine	
clemastine	gabapentin	methoxyflurane	promethazine	

**TABLE 12**  
**Drugs that cause peripheral neuropathy**

The following is a list of some drugs that cause peripheral neuropathy (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

amiodarone	disulfiram	lamivudine	stavudine	vinflunine
bortezomib	docetaxel	metronidazole	thalidomide	vinorelbine
brentuximab vedotin	eribulin	nitrofurantoin	vinblastine	
cabazitaxel	fosphenytoin	paclitaxel	vincristine	
cisplatin	isoniazid	phenytoin	vindesine	

**TABLE 13**  
**Drugs that cause serotonin syndrome**

The following is a list of some drugs that cause serotonin syndrome (note that this list is not exhaustive). See 'Serotonin Syndrome' and 'Monoamine-Oxidase Inhibitors' under Antidepressant drugs, p. 376 for more information and for specific advice on avoiding monoamine-oxidase inhibitors during and after administration of other serotonergic drugs.

almotriptan	fentanyl	methadone	phenelzine	tranylcypromine
bupropion	fluoxetine	methylthionium chloride	procarbazine	trazodone
bupirone	fluvoxamine	mirtazapine	rasagiline	tryptophan
citalopram	frovatriptan	moclobemide	rizatriptan	venlafaxine
clomipramine	granisetron	naratriptan	safinamide	vortioxetine
dapoxetine	imipramine	ondansetron	selegiline	zolmitriptan
dexamfetamine	isocarboxazid	palonosetron	sertraline	
duloxetine	linezolid	paroxetine	St John's Wort	
eletriptan	lisdexamfetamine	pentazocine	sumatriptan	
escitalopram	lithium	pethidine	tramadol	

**TABLE 14**  
**Antidiabetic drugs**

The following is a list of antidiabetic drugs (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase the risk of hypoglycaemia.

acarbose	empagliflozin	glimepiride	lixisenatide	saxagliptin
alogliptin	ertugliflozin	glipizide	metformin	semaglutide
canagliflozin	exenatide	insulins	nateglinide	sitagliptin
dapagliflozin	glibenclamide	linagliptin	pioglitazone	tolbutamide
dulaglutide	gliclazide	liraglutide	repaglinide	vildagliptin

**TABLE 15**  
**Drugs that cause myelosuppression**

The following is a list of some drugs that cause myelosuppression (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

afatinib	carmustine	everolimus	nilotinib	ruxolitinib
afibercept	ceritinib	fludarabine	nivolumab	siltuximab
alemtuzumab	cetuximab	flucytosine	obinutuzumab	sorafenib
amsacrine	chlorambucil	ganciclovir	olanzapine	sulfadiazine
anakinra	chlormethine	gefitinib	olaparib	sulfamethoxazole
arsenic trioxide	cisplatin	gemcitabine	olsalazine	sulfasalazine
asparaginase	cladribine	hydroxycarbamide	oxaliplatin	sunitinib
axitinib	clofarabine	ibrutinib	paclitaxel	temozolomide
azacitidine	clozapine	idarubicin	panitumumab	temsirolimus
azathioprine	crisantaspase	idelalisib	panobinostat	thalidomide
balsalazide	crizotinib	ifosfamide	pazopanib	thiotepa
belinumab	cyclophosphamide	imatinib	pegaspargase	tioguanine
bendamustine	cytarabine	interferon alfa	peginterferon alfa	topotecan
bevacizumab	dabrafenib	interferon beta	peginterferon beta	trabectedin
bleomycin	dacarbazine	irinotecan	pemetrexed	trastuzumab emtansine
blinatumomab	dactinomycin	leflunomide	pentamidine	treosulfan
bortezomib	dasatinib	lenalidomide	pentostatin	trimethoprim
bosutinib	daunorubicin	linezolid	pexidone	valganciclovir
brentuximab vedotin	decitabine	lomustine	pomalidomide	vinblastine
busulfan	deferiprone	melphalan	primaquine	vincristine
cabazitaxel	docetaxel	mercaptopurine	procarbazine	vindesine
cabozantinib	doxorubicin	methotrexate	propylthiouracil	vinflunine
canakinumab	epirubicin	mitomycin	pyrimethamine	vinorelbine
capecitabine	eribulin	mitotane	raltitrexed	vismodegib
carbimazole	estramustine	mitoxantrone	ramucirumab	zidovudine
carboplatin	ethosuximide	mycophenolate	regorafenib	
carfilzomib	etoposide	nelarabine	rituximab	

**TABLE 16****Drugs that increase serum potassium**

The following is a list of some drugs that increase serum potassium concentrations (note that this list is not exhaustive). Concurrent use of two or more drugs from this list might increase the risk of hyperkalaemia (hyperkalaemia is particularly notable when ACE inhibitors or angiotensin-II receptor antagonists are given with spironolactone or eplerenone).

aceclofenac	diclofenac	heparin (unfractionated)	naproxen	tacrolimus
aliskiren	drospirenone	ibuprofen	olmesartan	telmisartan
amiloride	enalapril	imidapril	parecoxib	tenoxicam
azilsartan	enoxaparin	indometacin	perindopril	tiaprofenic acid
candesartan	eplerenone	irbesartan	piroxicam	tinzaparin
captopril	epoetin alfa	ketoprofen	potassium aminobenzoate	tolfenamic acid
celecoxib	epoetin beta	ketorolac	potassium canrenoate	tolvaptan
ciclosporin	epoetin zeta	lisinopril	potassium chloride	trandolapril
dalteparin	eprosartan	losartan	quinapril	triarterene
darbapoetin alfa	etodolac	mefenamic acid	ramipril	trimethoprim
dexibuprofen	etoricoxib	meloxicam	spironolactone	valsartan
dexketoprofen	flurbiprofen	nabumetone	sulindac	

**TABLE 17****Drugs that reduce serum potassium**

The following is a list of some drugs that reduce serum potassium concentrations (note that this list is not exhaustive and that other drugs can cause hypokalaemia in overdose). Concurrent use of two or more drugs from this list might increase the risk of hypokalaemia. Hypokalaemia can increase the risk of torsade de pointes, which might be additive with the effects of drugs that prolong the QT interval (see table of drugs that prolong the QT interval).

aminophylline	bumetanide	furosemide	metolazone	torasemide
amphotericin	chlorothiazide	hydrochlorothiazide	olodaterol	triamcinolone
bambuterol	chlortalidone	hydrocortisone	prednisolone	vilanterol
beclometasone	deflazacort	hydroflumethiazide	salbutamol	xipamide
bendroflumethiazide	dexamethasone	indacaterol	salmeterol	
betamethasone	fludrocortisone	indapamide	terbutaline	
budesonide	formoterol	methylprednisolone	theophylline	

**TABLE 18****Drugs that cause hyponatraemia**

The following is a list of some drugs that reduce sodium concentrations (note that this list is not exhaustive). Concurrent use of two or more drugs from this list might increase the risk of hyponatraemia.

aceclofenac	desmopressin	flurbiprofen	mefenamic acid	sulindac
amiloride	dexibuprofen	flvoxamine	meloxicam	tenoxicam
amitriptyline	dexketoprofen	furosemide	metolazone	tiaprofenic acid
bendroflumethiazide	diclofenac	gabapentin	nabumetone	tolfenamic acid
bumetanide	dosulepin	hydrochlorothiazide	naproxen	torasemide
carbamazepine	doxepin	hydroflumethiazide	nortriptyline	triarterene
celecoxib	duloxetine	ibuprofen	parecoxib	trimethoprim
chlorothiazide	eplerenone	imipramine	paroxetine	trimipramine
chlortalidone	escitalopram	indapamide	piroxicam	xipamide
citalopram	etodolac	indometacin	sertraline	
clomipramine	etoricoxib	ketoprofen	sodium picosulfate	
dapoxetine	fluoxetine	ketorolac	spironolactone	

**TABLE 19****Drugs that cause ototoxicity**

The following is a list of some drugs that cause ototoxicity (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

amikacin	cisplatin	oxaliplatin	torasemide	vindesine
bumetanide	furosemide	streptomycin	vancomycin	vinflunine
capreomycin	gentamicin	telavancin	vinblastine	vinorelbine
carboplatin	neomycin	tobramycin	vincristine	

**TABLE 20****Drugs with neuromuscular blocking effects**

The following is a list of some drugs with neuromuscular blocking effects (note that this list is not exhaustive). Concurrent use of two or more drugs from the list might increase this risk.

amikacin	botulinum toxin type B	gentamicin	pancuronium	streptomycin
atracurium	cisatracurium	mivacurium	polymyxin b	suxamethonium
botulinum toxin type A	colistimethate	neomycin	rocuronium	tobramycin

## List of drug interactions

The following is an alphabetical list of drugs and their interactions; to avoid excessive cross-referencing each drug or group is listed twice: in the alphabetical list and also against the drug or group with which it interacts.

### Abacavir

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **abacavir**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (tipranavir)** slightly decrease the exposure to **abacavir**. Avoid. [Severe] Study

### Abatacept

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **abatacept**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Abatacept** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **monoclonal antibodies (golimumab)**. Avoid. [Severe] Theoretical

### Abemaciclib

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 1019. [Severe] Study
- ▶ **Apalutamide** is predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 1019. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **abemaciclib**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 1019. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 1019. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 1019. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **abemaciclib**. Avoid. [Severe] Study

### Abiraterone

**GENERAL INFORMATION** Caution with concurrent chemotherapy—safety and efficacy not established.

- ▶ **Aldosterone antagonists (spironolactone)** are predicted to oppose the effects of **abiraterone**. Avoid. [Severe] Theoretical

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **abiraterone**. Avoid. [Severe] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **abiraterone**. Avoid. [Severe] Study
- ▶ **Abiraterone** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. [Moderate] Study
- ▶ **Abiraterone** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **abiraterone**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **abiraterone**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **abiraterone**. Avoid. [Severe] Study

**Acarbose** → see TABLE 14 p. 1449 (antidiabetic drugs)

- ▶ **Acarbose** decreases the concentration of **digoxin**. [Moderate] Study

- ▶ **Pancreatin** is predicted to decrease the effects of **acarbose**. Avoid. [Moderate] Theoretical

**ACE inhibitors** → see TABLE 7 p. 1447 (first-dose hypotension), TABLE 8 p. 1447 (hypotension), TABLE 16 p. 1450 (increased serum potassium)

captopril • enalapril • fosinopril • imidapril • lisinopril • perindopril • quinapril • ramipril • trandolapril

- ▶ **ACE inhibitors** increase the risk of renal impairment when given with **aliskiren**. Use with caution or avoid **aliskiren** in selected patients, p. 191. [Severe] Study → Also see TABLE 8 p. 1447 → Also see TABLE 16 p. 1450
- ▶ **ACE inhibitors** are predicted to increase the risk of hypersensitivity and haematological reactions when given with **allopurinol**. [Severe] Anecdotal
- ▶ **ACE inhibitors** are predicted to increase the risk of anaemia and/or leucopenia when given with **azathioprine**. [Severe] Anecdotal
- ▶ **Everolimus** potentially increases the risk of angioedema when given with **ACE inhibitors**. [Severe] Anecdotal
- ▶ **ACE inhibitors** are predicted to decrease the efficacy of **icatibant** and **icatibant** is predicted to decrease the efficacy of **ACE inhibitors**. Avoid. [Moderate] Theoretical
- ▶ **ACE inhibitors** are predicted to increase the concentration of **lithium**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **ACE inhibitors** are predicted to increase the risk of hypersensitivity when given with **sodium aurothiomalate**. [Severe] Anecdotal
- ▶ **ACE inhibitors** are predicted to increase the risk of angioedema when given with **temsirolimus**. [Moderate] Theoretical
- ▶ **Quinapril** (tablet) decreases the absorption of oral **tetracyclines (tetracycline)**. Avoid. [Moderate] Study

**Acetabuto** → see beta blockers, selective

**Acetofenac** → see NSAIDs

**Acenocoumarol** → see coumarins

### Acetazolamide

- ▶ **Acetazolamide** potentially increases the risk of toxicity when given with **antiepileptics (valproate)**. [Severe] Study
- ▶ **Acetazolamide** potentially increases the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [Severe] Theoretical
- ▶ **Acetazolamide** increases the risk of severe toxic reaction when given with **aspirin** (high-dose). [Severe] Study
- ▶ **Acetazolamide** alters the concentration of **lithium**. [Severe] Anecdotal
- ▶ **Acetazolamide** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
- ▶ **Acetazolamide** increases the urinary excretion of **methotrexate**. [Moderate] Study

**Aciclovir** → see TABLE 2 p. 1446 (nephrotoxicity)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Aciclovir** increases the exposure to **aminophylline**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **aciclovir**. [Moderate] Theoretical

Aciclovir (continued)

- ▶ **Aciclovir** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Severe] Theoretical

**Acitretin** → see retinoids

**Acidinium** → see TABLE 10 p. 1448 (antimuscarinics)

**Acrivastine** → see antihistamines, non-sedating

**Adalimumab** → see monoclonal antibodies

**Adapalene** → see retinoids

**Adefovir** → see TABLE 2 p. 1446 (nephrotoxicity)

- ▶ **Leflunomide** is predicted to increase the exposure to **adefovir**. [Moderate] Theoretical

- ▶ **Nitisinone** is predicted to increase the exposure to **adefovir**. [Moderate] Study

- ▶ **Teriflunomide** is predicted to increase the exposure to **adefovir**. [Moderate] Study

**Adenosine** → see antiarrhythmics

**Adrenaline/epinephrine** → see sympathomimetics, vasoconstrictor

**Afatinib** → see TABLE 15 p. 1449 (myelosuppression)

- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study

- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **afatinib**. [Moderate] Study

- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study

- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study

- ▶ **Ciclosporin** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study

- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study

- ▶ **Lapatinib** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study

- ▶ **Macrolides** are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study

- ▶ **Ranolazine** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study

- ▶ **Rifampicin** is predicted to decrease the exposure to **afatinib**. [Moderate] Study

- ▶ **St John's Wort** is predicted to decrease the exposure to **afatinib**. [Moderate] Study

- ▶ **Vemurafenib** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study

**Aflibercept** → see TABLE 15 p. 1449 (myelosuppression)

**ROUTE-SPECIFIC INFORMATION** Interactions do not generally apply to topical use unless specified.

#### Agalsidase alfa

- ▶ **Aminoglycosides** are predicted to decrease the effects of **agalsidase alfa**. Avoid. [Moderate] Theoretical
- ▶ **Antiarrhythmics (amiodarone)** are predicted to decrease the effects of **agalsidase alfa**. Avoid. [Moderate] Theoretical
- ▶ **Antimalarials (chloroquine)** are predicted to decrease the effects of **agalsidase alfa**. Avoid. [Moderate] Theoretical
- ▶ **Hydroxychloroquine** is predicted to decrease the effects of **agalsidase alfa**. [Moderate] Theoretical

#### Agalsidase beta

- ▶ **Aminoglycosides** are predicted to decrease the effects of **agalsidase beta**. Avoid. [Moderate] Theoretical
- ▶ **Antiarrhythmics (amiodarone)** are predicted to decrease the effects of **agalsidase beta**. Avoid. [Moderate] Theoretical
- ▶ **Antimalarials (chloroquine)** are predicted to decrease the effects of **agalsidase beta**. Avoid. [Moderate] Theoretical
- ▶ **Hydroxychloroquine** is predicted to decrease the exposure to **agalsidase beta**. [Moderate] Theoretical

**Agomelatine** → see TABLE 11 p. 1448 (CNS depressant effects)

- ▶ Dose adjustment might be necessary if smoking started or stopped during treatment.
- ▶ Caution with concomitant use of drugs associated with hepatic injury.
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical

- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **agomelatine**. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **agomelatine**. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **agomelatine**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** very markedly increase the exposure to **agomelatine**. Avoid. [Severe] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical

#### Albendazole

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the concentration of **albendazole**. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** decrease the clearance of **albendazole**. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** decrease the exposure to **albendazole**. Avoid. [Severe] Study
- ▶ **Albendazole** slightly decreases the exposure to **levamisole** and **levamisole** moderately decreases the exposure to **albendazole**. [Moderate] Study

**Alcohol (beverage)** → see TABLE 1 p. 1446 (hepatotoxicity), TABLE 8

p. 1447 (hypotension), TABLE 11 p. 1448 (CNS depressant effects)

- ▶ **Alcohol (beverage)** potentially increases the risk of visual disturbances when given with **antiepileptics (retigabine)**. [Moderate] Study

- ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **antifungals, azoles (ketoconazole)**. Avoid. [Moderate] Anecdotal

- ▶ **Alcohol (beverage)** causes serious, potentially fatal, CNS depression when given with **clomethiazole**. Avoid. [Severe] Study → Also see TABLE 11 p. 1448

- ▶ **Alcohol (beverage)** (in those who drink heavily) potentially decreases the anticoagulant effect of **coumarins**. [Severe] Study

- ▶ **Alcohol (beverage)** (excessive consumption) potentially increases the risk of gastrointestinal side-effects when given with **dimethyl fumarate**. Avoid. [Moderate] Theoretical

- ▶ **Alcohol (beverage)** causes an extremely unpleasant systemic reaction when given with **disulfiram**. Avoid for at least 24 hours before and up to 14 days after stopping treatment. [Severe] Study

- ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **griseofulvin**. [Moderate] Anecdotal

- ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **levamisole**. [Moderate] Study

- ▶ **Alcohol (beverage)** (excessive consumption) potentially increases the risk of lactic acidosis when given with **metformin**. Avoid excessive alcohol consumption. [Moderate] Theoretical

- ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **metronidazole**. Avoid for at least 48 hours stopping treatment. [Moderate] Study

- ▶ **Alcohol (beverage)** causes rapid release of **opioids (hydromorphone, morphine)** (from extended-release preparations). Avoid. [Severe] Study → Also see TABLE 11 p. 1448

- ▶ **Alcohol (beverage)** (in those who drink heavily) causes severe liver damage when given with **paracetamol**. [Severe] Study → Also see TABLE 1 p. 1446

- ▶ **Alcohol (beverage)** increases the risk of facial flushing and skin irritation when given with topical **pimecrolimus**. [Moderate] Study

- ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **procarbazine**. [Moderate] Anecdotal

- ▶ **Alcohol (beverage)** potentially increases the concentration of **retinoids (acitretin)**. Avoid and for 2 months after stopping **acitretin**. [Moderate] Study

- ▶ **Alcohol (beverage)** increases the risk of facial flushing and skin irritation when given with topical **tacrolimus**. [Moderate] Study

- ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **tinidazole**. Avoid for 72 hours stopping treatment. [Moderate] Theoretical

**Alдостерон antagonists** → see TABLE 18 p. 1450 (hyponatraemia), TABLE 8 p. 1447 (hypotension), TABLE 16 p. 1450 (increased serum potassium)

eplerenone · spironolactone

- ▶ **Spironolactone** is predicted to oppose the effects of **abiraterone**. Avoid. [Severe] Theoretical
  - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 205. [Severe] Theoretical
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 205. [Severe] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **eplerenone**. Avoid. [Moderate] Theoretical → Also see TABLE 18 p. 1450
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 205. [Severe] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **eplerenone**. Avoid. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **eplerenone**. Avoid. [Moderate] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 205. [Severe] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 205. [Severe] Study → Also see TABLE 8 p. 1447
  - ▶ **Cobicistat** is predicted to markedly increase the exposure to **eplerenone**. Avoid. [Severe] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 205. [Severe] Study
  - ▶ **Eplerenone** very slightly increases the exposure to **digoxin**. [Mild] Study
  - ▶ **Spironolactone** increases the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **eplerenone**. Avoid. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **eplerenone**. Avoid. [Severe] Study
  - ▶ **Idelalisib** is predicted to markedly increase the exposure to **eplerenone**. Avoid. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 205. [Severe] Study
  - ▶ **Eplerenone** potentially increases the concentration of **lithium**. Avoid. [Moderate] Theoretical
  - ▶ **Spironolactone** potentially increases the concentration of **lithium**. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **eplerenone**. Avoid. [Severe] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 205. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **eplerenone**. Avoid. [Moderate] Theoretical
  - ▶ **Spironolactone** is predicted to decrease the effects of **mitotane**. Avoid. [Severe] Anecdotal
  - ▶ **Netupitant** is predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 205. [Severe] Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **eplerenone**. Adjust **eplerenone** dose, p. 205. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **eplerenone**. Avoid. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to slightly decrease the exposure to **eplerenone**. Avoid. [Moderate] Study
- Alectinib** → see TABLE 6 p. 1447 (bradycardia), TABLE 1 p. 1446 (hepatotoxicity)
- Alemtuzumab** → see monoclonal antibodies
- Alendronate** → see bisphosphonates
- Alfacalcidol** → see vitamin D substances
- Alfentanil** → see opioids

**Alfuzosin** → see alpha blockers

**Alimemazine** → see antihistamines, sedating

**Aliskiren** → see TABLE 8 p. 1447 (hypotension), TABLE 16 p. 1450 (increased serum potassium)

**FOOD AND LIFESTYLE** Avoid apple juice and orange juice as they greatly decrease aliskiren concentrations and plasma renin activity.

- ▶ **ACE inhibitors** increase the risk of renal impairment when given with **aliskiren**. Use with caution or avoid **aliskiren** in selected patients, p. 191. [Severe] Study → Also see TABLE 8 p. 1447 → Also see TABLE 16 p. 1450
  - ▶ **Angiotensin-II receptor antagonists** increase the risk of renal impairment when given with **aliskiren**. Use with caution or avoid **aliskiren** in selected patients, p. 191. [Severe] Study → Also see TABLE 8 p. 1447 → Also see TABLE 16 p. 1450
  - ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **aliskiren**. [Severe] Study
  - ▶ **Antiepileptics (carbamazepine)** decrease the exposure to **aliskiren**. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole)** markedly increase the exposure to **aliskiren**. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (ketoconazole)** moderately increase the exposure to **aliskiren**. [Moderate] Study
  - ▶ **Calcium channel blockers (verapamil)** moderately increase the exposure to **aliskiren**. [Moderate] Study → Also see TABLE 8 p. 1447
  - ▶ **Ceritinib** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
  - ▶ **Closporin** markedly increases the exposure to **aliskiren**. Avoid. [Severe] Study → Also see TABLE 16 p. 1450
  - ▶ **Eliglustat** is predicted to increase the exposure to **aliskiren**. Adjust dose. [Moderate] Study
  - ▶ **Grapefruit juice** moderately decreases the exposure to **aliskiren**. Avoid. [Severe] Study
  - ▶ **HIV-protease inhibitors (ritonavir, saquinavir)** are predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
  - ▶ **Lapatinib** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
  - ▶ **Aliskiren** slightly decreases the exposure to **loop diuretics (furosemide)**. [Moderate] Study → Also see TABLE 8 p. 1447
  - ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
  - ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **aliskiren**. [Moderate] Study
  - ▶ **Mirabegron** is predicted to increase the exposure to **aliskiren**. [Mild] Theoretical
  - ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **aliskiren**. [Moderate] Study
  - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **aliskiren**. [Moderate] Study
  - ▶ **Pitolisant** is predicted to decrease the exposure to **aliskiren**. [Mild] Theoretical
  - ▶ **Ranolazine** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
  - ▶ **Rifampicin** decreases the exposure to **aliskiren**. [Moderate] Study
  - ▶ **St John's Wort** decreases the exposure to **aliskiren**. [Moderate] Study
  - ▶ **Statins (atorvastatin)** slightly to moderately increase the exposure to **aliskiren**. [Moderate] Study
  - ▶ **Velpatasvir** is predicted to increase the exposure to **aliskiren**. [Severe] Theoretical
  - ▶ **Vemurafenib** is predicted to increase the exposure to **aliskiren**. Use with caution and adjust dose. [Moderate] Theoretical
- Altretinoin** → see retinoids
- Alkylating agents** → see TABLE 15 p. 1449 (myelosuppression), TABLE 2 p. 1446 (nephrotoxicity), TABLE 5 p. 1447 (thromboembolism)
- bendamustine · busulfan · carmustine · chlorambucil · cyclophosphamide · dacarbazine · estramustine · ifosfamide · lomustine · melphalan · temozolomide · thiopeta · treosulfan
- ▶ **Antacids** are predicted to decrease the absorption of **estramustine**. Avoid. [Moderate] Study
  - ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **cyclophosphamide**. [Moderate] Study

## Alkylating agents (continued)

- ▶ **Antifungals, azoles (itraconazole)** increase the risk of busulfan toxicity when given with **busulfan**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **busulfan**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to **ifosfamide**. [\[Severe\]](#) Theoretical
  - ▶ Oral **calcium salts** decrease the absorption of **estramustine**. [\[Severe\]](#) Study
  - ▶ **Fosaprepitant** is predicted to increase the exposure to **ifosfamide**. [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with alkylating agents. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Metronidazole** increases the risk of toxicity when given with **busulfan**. [\[Severe\]](#) Study
  - ▶ **Netupitant** very slightly increases the exposure to **cyclophosphamide**. [\[Moderate\]](#) Study
  - ▶ **Netupitant** is predicted to increase the exposure to **ifosfamide**. [\[Moderate\]](#) Study
  - ▶ **Paracetamol** is predicted to decrease the clearance of **busulfan**. [\[Moderate\]](#) Theoretical
  - ▶ **Cyclophosphamide** (high-dose) increases the risk of toxicity when given with **pentostatin**. Avoid. [\[Severe\]](#) Anecdotal → Also see TABLE 15 p. 1449 → Also see TABLE 5 p. 1447
  - ▶ **Rolapitant** is predicted to increase the exposure to **bendamustine**. Avoid or monitor. [\[Moderate\]](#) Study
  - ▶ **Cyclophosphamide** increases the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [\[Moderate\]](#) Study
- Allopurinol**
- ▶ **ACE inhibitors** are predicted to increase the risk of hypersensitivity and haematological reactions when given with **allopurinol**. [\[Severe\]](#) Anecdotal
  - ▶ **Allopurinol** potentially increases the risk of haematological toxicity when given with **azathioprine**. Adjust **azathioprine** dose, p. 881. [\[Severe\]](#) Study
  - ▶ **Allopurinol** is predicted to decrease the effects of **capecitabine**. Avoid. [\[Severe\]](#) Study
  - ▶ **Allopurinol** potentially increases the risk of haematological toxicity when given with **mercaptopurine**. Adjust **mercaptopurine** dose, p. 963. [\[Severe\]](#) Study
  - ▶ **Allopurinol** increases the risk of skin rash when given with **penicillins** (**amoxicillin**, **ampicillin**). [\[Moderate\]](#) Study
  - ▶ **Allopurinol** is predicted to increase the risk of hyperuricaemia when given with **pyrazinamide**. [\[Moderate\]](#) Theoretical
  - ▶ **Thiazide diuretics** are predicted to increase the risk of hypersensitivity reactions when given with **allopurinol**. [\[Severe\]](#) Theoretical

**Almotriptan** → see TABLE 13 p. 1449 (serotonin syndrome)

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** increase the exposure to **almotriptan**. [\[Mild\]](#) Study
- ▶ **Cobicistat** increases the exposure to **almotriptan**. [\[Mild\]](#) Study
- ▶ **Almotriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **almotriptan**. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** increase the exposure to **almotriptan**. [\[Mild\]](#) Study
- ▶ **Idelalisib** increases the exposure to **almotriptan**. [\[Mild\]](#) Study
- ▶ **Macrolides (clarithromycin)** increase the exposure to **almotriptan**. [\[Mild\]](#) Study

**Allogliptin** → see TABLE 14 p. 1449 (antidiabetic drugs)

**Alpha blockers** → see TABLE 7 p. 1447 (first-dose hypotension), TABLE 8 p. 1447 (hypotension)

alfuzosin • doxazosin • indoramin • prazosin • tamsulosin • terazosin

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **tamsulosin**. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tamsulosin**. [\[Moderate\]](#) Theoretical

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **doxazosin**. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [\[Moderate\]](#) Study
- ▶ **Aprepitant** is predicted to increase the exposure to **tamsulosin**. [\[Moderate\]](#) Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tamsulosin**. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1447
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [\[Moderate\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **doxazosin**. [\[Moderate\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **tamsulosin**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **doxazosin**. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **doxazosin**. [\[Moderate\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **tamsulosin**. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **doxazosin**. [\[Moderate\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **tamsulosin**. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [\[Moderate\]](#) Study
- ▶ **MAOIs, irreversible** are predicted to increase the effects of **indoramin**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1447
- ▶ **Netupitant** is predicted to increase the exposure to **tamsulosin**. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **tamsulosin**. [\[Moderate\]](#) Theoretical
- ▶ **Alpha blockers** cause significant hypotensive effects when given with **phosphodiesterase type-5 inhibitors**. Patient should be stabilised on first drug then second drug should be added at the lowest recommended dose. [\[Severe\]](#) Study → Also see TABLE 8 p. 1447
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **alfuzosin**. Avoid. [\[Moderate\]](#) Theoretical

**Alpha tocopherol** → see vitamin E substances

**Alpha tocopheryl acetate** → see vitamin E substances

**Alprazolam** → see TABLE 11 p. 1448 (CNS depressant effects)

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **alprazolam**. [\[Severe\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **alprazolam**. Adjust dose. [\[Moderate\]](#) Theoretical → Also see TABLE 11 p. 1448
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **alprazolam**. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** moderately increase the exposure to **alprazolam**. Avoid. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **alprazolam**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to **alprazolam**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **alprazolam**. [\[Severe\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **alprazolam**. [\[Severe\]](#) Study

- ▶ **Cobicistat** moderately increases the exposure to **alprazolam**. Avoid. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical
- ▶ **Fosaprepitant** is predicted to increase the exposure to **alprazolam**. [Moderate] Study
- ▶ **HIV-protease inhibitors** moderately increase the exposure to **alprazolam**. Avoid. [Moderate] Study
- ▶ **Idelalisib** moderately increases the exposure to **alprazolam**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Alprazolam** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** moderately increase the exposure to **alprazolam**. Avoid. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to **alprazolam**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** moderately increase the exposure to **alprazolam**. Adjust dose. [Moderate] Study
- ▶ **St John's Wort** moderately decreases the exposure to **alprazolam**. [Moderate] Study

**Alprostadil** → see TABLE 8 p. 1447 (hypotension)

**Alteplase** → see TABLE 3 p. 1446 (anticoagulant effects)

**Aluminium hydroxide** → see antacids

**Amantadine** → see dopamine receptor agonists

#### Ambrisentan

- ▶ **Ciclosporin** moderately increases the exposure to **ambrisentan**. Adjust ambrisentan dose, p. 195. [Moderate] Study
- ▶ **Rifampicin** transiently increases the exposure to **ambrisentan**. [Moderate] Study

**Amfetamines** → see TABLE 13 p. 1449 (serotonin syndrome)

dexamfetamine · lisdexamfetamine

- ▶ **Amfetamines** are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
- ▶ **Amfetamines** are predicted to increase the risk of side-effects when given with **atomoxetine**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir, tipranavir)** are predicted to increase the exposure to **amfetamines**. [Severe] Theoretical
- ▶ **MAO-B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of severe hypertension when given with **amfetamines**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1449
- ▶ **MAO-B inhibitors (safinamide)** are predicted to increase the risk of severe hypertension when given with **amfetamines**. [Severe] Theoretical → Also see TABLE 13 p. 1449
- ▶ **MAOIs, irreversible** are predicted to increase the risk of a hypertensive crisis when given with **amfetamines**. Avoid and for 14 days after stopping the MAOI. [Severe] Anecdotal → Also see TABLE 13 p. 1449
- ▶ **Moclobemide** is predicted to increase the risk of a hypertensive crisis when given with **amfetamines**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1449
- ▶ **Nabilone** is predicted to increase the risk of cardiovascular side-effects when given with **amfetamines**. [Severe] Theoretical
- ▶ **Phenothiazines** are predicted to decrease the effects of **amfetamines** and **amfetamines** are predicted to decrease the effects of **phenothiazines**. [Moderate] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **amfetamines**. [Severe] Theoretical → Also see TABLE 13 p. 1449

**Amifampridine** → see TABLE 9 p. 1448 (QT-interval prolongation)

**Amikacin** → see aminoglycosides

**Amiloride** → see potassium-sparing diuretics

**Aminoglycosides** → see TABLE 2 p. 1446 (nephrotoxicity), TABLE 19 p. 1450 (ototoxicity), TABLE 20 p. 1450 (neuromuscular blocking effects)

amikacin · gentamicin · streptomycin · tobramycin

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions with topical **gentamicin** and topical **tobramycin** should be borne in mind.

- ▶ **Aminoglycosides** are predicted to decrease the effects of **agalsidase alfa**. Avoid. [Moderate] Theoretical
- ▶ **Aminoglycosides** are predicted to decrease the effects of **agalsidase beta**. Avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (miconazole)** potentially decrease the exposure to **tobramycin**. [Moderate] Anecdotal
- ▶ **Ataluren** is predicted to increase the risk of nephrotoxicity when given with intravenous **aminoglycosides**. Avoid. [Severe] Study
- ▶ **Aminoglycosides** increase the risk of hypocalcaemia when given with **bisphosphonates**. [Moderate] Anecdotal → Also see TABLE 2 p. 1446
- ▶ **Aminoglycosides** potentially increase the concentration of **digoxin**. Monitor and adjust dose. [Mild] Study
- ▶ **Loop diuretics** increase the risk of nephrotoxicity when given with **aminoglycosides**. Avoid. [Moderate] Study → Also see TABLE 19 p. 1450
- ▶ **Aminoglycosides** are predicted to decrease the effects of **neostigmine**. [Moderate] Theoretical
- ▶ **Aminoglycosides** are predicted to decrease the effects of **pyridostigmine**. [Moderate] Theoretical

**Aminophylline** → see TABLE 17 p. 1450 (reduced serum potassium)

**FOOD AND LIFESTYLE** Smoking can increase aminophylline clearance and increased doses of aminophylline are therefore required; dose adjustments are likely to be necessary if smoking started or stopped during treatment.

- ▶ **Aciclovir** increases the exposure to **aminophylline**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Aminophylline** is predicted to decrease the efficacy of **antiarrhythmics (adenosine)**. Separate administration by 24 hours. [Mild] Theoretical
- ▶ **Antiepileptics (fosphenytoin)** are predicted to decrease the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital)** are predicted to decrease the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Antiepileptics (phenytoin)** decrease the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Antiepileptics (primidone)** are predicted to increase the clearance of **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Antiepileptics (stiripentol)** are predicted to increase the exposure to **aminophylline**. Avoid. [Moderate] Theoretical
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with **aminophylline**. Avoid. [Severe] Theoretical
- ▶ **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with **aminophylline**. Avoid. [Severe] Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Aminophylline** increases the risk of agitation when given with **doxapram**. [Moderate] Study
- ▶ **Esketamine** is predicted to increase the risk of seizures when given with **aminophylline**. Avoid. [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the concentration of **aminophylline**. Adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** decrease the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Interferons** are predicted to slightly increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **aminophylline**. Avoid. [Moderate] Theoretical
- ▶ **Isoniazid** is predicted to affect the clearance of **aminophylline**. [Severe] Theoretical

**Aminophylline** (continued)

- ▶ **Leflunomide** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Aminophylline** is predicted to decrease the concentration of **lithium**. [Moderate] Theoretical
- ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to **aminophylline**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Aminophylline** is predicted to decrease the exposure to **macrolides (erythromycin)**. Adjust dose. [Severe] Study
- ▶ **Methotrexate** is predicted to decrease the clearance of **aminophylline**. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Monoclonal antibodies (blinatumomab)** are predicted to transiently increase the exposure to **aminophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to **aminophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to **aminophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Pentoxifylline** is predicted to increase the concentration of **aminophylline**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Aminophylline** is predicted to slightly increase the exposure to **roflumilast**. Avoid. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **aminophylline**. Monitor and adjust dose. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** moderately to markedly increase the exposure to **aminophylline**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **aminophylline**. [Severe] Theoretical
- ▶ **Sympathomimetics, vasoconstrictor (ephedrine)** increase the risk of side-effects when given with **aminophylline**. Avoid in children. [Moderate] Study
- ▶ **Teriflunomide** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Valaciclovir** is predicted to increase the exposure to **aminophylline**. [Severe] Anecdotal

**Aminosalicilic acid**

- ▶ **Aminosalicilic acid** is predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Aminosalicilic acid** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical

**Amiodarone** → see antiarrhythmics

**Amisulpride** → see TABLE 9 p. 1448 (QT-interval prolongation), TABLE 11 p. 1448 (CNS depressant effects)

- ▶ **Amisulpride** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1448

- ▶ **Amisulpride** is predicted to decrease the effects of **levodopa**. Avoid. [Severe] Theoretical

**Amitriptyline** → see tricyclic antidepressants

**Amiodipine** → see calcium channel blockers

**Amoxicillin** → see penicillins

**Amphotericin** → see TABLE 2 p. 1446 (nephrotoxicity), TABLE 17 p. 1450 (reduced serum potassium)

- ▶ **Amphotericin** increases the risk of toxicity when given with **flucytosine**. [Severe] Study

- ▶ **Micafungin** slightly increases the exposure to **amphotericin**. Avoid or monitor toxicity. [Moderate] Study

- ▶ **Sodium stibogluconate** increases the risk of cardiovascular side-effects when given with **amphotericin**. Separate administration by 14 days. [Severe] Study

**Ampicillin** → see penicillins

**Amsacrine** → see TABLE 15 p. 1449 (myelosuppression)

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **amsacrine**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

**Anaesthetics, local** → see TABLE 11 p. 1448 (CNS depressant effects)

bupivacaine • levobupivacaine • mepivacaine • oxybuprocaine • prilocaine • proxymetacaine • ropivacaine • tetracaine

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Aminosalicilic acid** is predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Anaesthetics, local** are predicted to increase the risk of cardiodepression when given with **antiarrhythmics**. [Severe] Theoretical → Also see TABLE 11 p. 1448
  - ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 11 p. 1448
  - ▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to **ropivacaine**. [Moderate] Theoretical
  - ▶ **Antimalarials (chloroquine, primaquine)** are predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Dapsone** is predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **ropivacaine**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to decrease the exposure to **ropivacaine**. [Moderate] Theoretical
  - ▶ **Metoclopramide** is predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Avoid. [Severe] Theoretical
  - ▶ **Nitrates** are predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Avoid. [Severe] Theoretical
  - ▶ **Nitrofurantoin** is predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Nitroprusside** is predicted to increase the risk of methaemoglobinaemia when given with **prilocaine**. [Severe] Theoretical
  - ▶ **Paracetamol** is predicted to increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **ropivacaine**. [Moderate] Theoretical
  - ▶ **SSRIs (fluvoxamine)** decrease the clearance of **ropivacaine**. Avoid prolonged use. [Moderate] Study
  - ▶ **Sulfonamides** potentially increase the risk of methaemoglobinaemia when given with topical **prilocaine**. Use with caution or avoid. [Severe] Anecdotal
  - ▶ **Teriflunomide** is predicted to decrease the exposure to **ropivacaine**. [Moderate] Theoretical
- Anagrelide** → see TABLE 9 p. 1448 (QT-interval prolongation), TABLE 4 p. 1446 (antiplatelet effects)
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical
  - ▶ **Mexiletine** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical
  - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical
  - ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical → Also see TABLE 4 p. 1446
- Anakinra** → see TABLE 15 p. 1449 (myelosuppression)
- ▶ **Anakinra** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etanercept**. Avoid. [Severe] Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with

anakinra. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

- ▶ **Anakinra** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **monoclonal antibodies (golimumab)**. Avoid. [Severe] Theoretical
- Angiotensin-II receptor antagonists** → see TABLE 7 p. 1447 (first-dose hypotension), TABLE 8 p. 1447 (hypotension), TABLE 16 p. 1450 (increased serum potassium)

azilsartan • candesartan • eprosartan • irbesartan • losartan • olmesartan • telmisartan • valsartan

- ▶ **Angiotensin-II receptor antagonists** increase the risk of renal impairment when given with **aliskiren**. Use with caution or avoid **aliskiren** in selected patients, p. 191. [Severe] Study → Also see TABLE 8 p. 1447 → Also see TABLE 16 p. 1450
- ▶ **Angiotensin-II receptor antagonists** potentially increase the concentration of **lithium**. Monitor concentration and adjust dose. [Severe] Anecdotal

## Antacids

aluminium hydroxide • magnesium carbonate • magnesium trisilicate

**SEPARATION OF ADMINISTRATION** Antacids should preferably not be taken at the same time as other drugs since they might impair absorption. Antacids might damage enteric coatings designed to prevent dissolution in the stomach.

- ▶ **Antacids** are predicted to decrease the absorption of **alkylating agents (estramustine)**. Avoid. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **antiepileptics (gabapentin)**. Gabapentin should be taken 2 hours after antacids. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **antifungals, azoles (itraconazole)** (capsule). Itraconazole should be taken 2 hours before or 1 hour after antacids. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **antifungals, azoles (ketoconazole)**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **antihistamines, non-sedating (fexofenadine)**. Separate administration by 2 hours. [Mild] Study
- ▶ **Antacids** decrease the absorption of **antimalarials (chloroquine)**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ **Antacids** are predicted to decrease the absorption of **antimalarials (proguanil)**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **aspirin** (high-dose). [Moderate] Study
- ▶ **Antacids** decrease the exposure to **bictegravir**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **bisphosphonates (alendronate)**. Alendronate should be taken at least 30 minutes before antacids. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **bisphosphonates (clodronate)**. Avoid antacids for 2 hours before or 1 hour after clodronate. [Moderate] Study
- ▶ **Antacids** are predicted to decrease the absorption of **bisphosphonates (ibandronate)**. Avoid antacids for at least 6 hours before or 1 hour after ibandronate. [Moderate] Theoretical
- ▶ **Antacids** decrease the absorption of **bisphosphonates (risedronate)**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Antacids** are predicted to decrease the absorption of **bosutinib**. Bosutinib should be taken at least 12 hours before antacids. [Moderate] Theoretical
- ▶ **Antacids** are predicted to decrease the absorption of **ceritinib**. Separate administration by 2 hours. [Moderate] Theoretical
- ▶ Oral **aluminium hydroxide** decreases the absorption of **chenodeoxycholic acid**. [Moderate] Study
- ▶ **Antacids** are predicted to decrease the absorption of **cholic acid**. Separate administration by 5 hours. [Mild] Theoretical
- ▶ **Antacids** are predicted to decrease the absorption of **corticosteroids (deflazacort)**. Separate administration by 2 hours. [Moderate] Theoretical
- ▶ **Antacids** decrease the absorption of **corticosteroids (dexamethasone)**. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **dasatinib**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **digoxin**. Separate administration by 2 hours. [Mild] Study
- ▶ **Antacids** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [Moderate] Theoretical
- ▶ **Antacids** moderately decrease the exposure to **dolutegravir**. Dolutegravir should be taken 2 hours before or 6 hours after antacids. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **eltrombopag**. Eltrombopag should be taken 2 hours before or 4 hours after antacids. [Severe] Study
- ▶ **Antacids** moderately decrease the exposure to **elvitegravir**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ **Aluminium hydroxide** increases the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. [Moderate] Study
- ▶ **Antacids** are predicted to decrease the absorption of **erlotinib**. Erlotinib should be taken 2 hours before or 4 hours after antacids. [Moderate] Theoretical
- ▶ **Antacids** slightly to moderately decrease the exposure to **fibrates (gemfibrozil)**. [Moderate] Study
- ▶ **Antacids** are predicted to slightly decrease the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Antacids** are predicted to decrease the absorption of **HIV-protease inhibitors (atazanavir)**. Atazanavir should be taken 2 hours before or 1 hour after antacids. [Severe] Theoretical
- ▶ **Antacids** are predicted to decrease the absorption of **HIV-protease inhibitors (tipranavir)**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **hydroxychloroquine**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **iron (oral)**. Iron (oral) should be taken 1 hour before or 2 hours after antacids. [Moderate] Study
- ▶ **Aluminium hydroxide** is predicted to decrease the exposure to **iron chelators (deferasirox)**. Avoid. [Moderate] Theoretical
- ▶ **Aluminium hydroxide** is predicted to decrease the absorption of **iron chelators (deferiprone)**. Avoid. [Moderate] Theoretical
- ▶ **Antacids** are predicted to decrease the absorption of **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **Antacids** are predicted to decrease the exposure to **ledipasvir**. Separate administration by 4 hours. [Moderate] Theoretical
- ▶ **Antacids** decrease the exposure to **mycophenolate**. [Moderate] Study
- ▶ Oral **antacids** are predicted to decrease the exposure to oral **neratinib**. Separate administration by at least 3 hours. [Mild] Theoretical
- ▶ **Antacids** are predicted to decrease the absorption of **nilotinib**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Magnesium trisilicate** decreases the absorption of **nitrofurantoin**. [Moderate] Study
- ▶ **Antacids** are predicted to decrease the absorption of **pazopanib**. Pazopanib should be taken 1 hour before or 2 hours after antacids. [Moderate] Theoretical
- ▶ **Antacids** decrease the absorption of **penicillamine**. Separate administration by 2 hours. [Mild] Study
- ▶ **Antacids** decrease the absorption of **phenothiazines**. [Moderate] Anecdotal
- ▶ **Antacids** increase the risk of metabolic alkalosis when given with **polystyrene sulfonate**. [Severe] Anecdotal
- ▶ **Antacids** decrease the absorption of **quinolones**. Quinolones should be taken 2 hours before or 4 hours after antacids. [Moderate] Study
- ▶ **Antacids** slightly decrease the exposure to **raltegravir**. Avoid. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **rifampicin**. Rifampicin should be taken 1 hour before antacids. [Moderate] Study
- ▶ **Antacids** are predicted to decrease the exposure to **rilpivirine**. Rilpivirine should be taken 4 hours before or 2 hours after antacids. [Severe] Theoretical
- ▶ **Antacids** slightly decrease the exposure to **riociguat**. Riociguat should be taken 1 hour before or 2 hours after antacids. [Mild] Study

## Antacids (continued)

- ▶ **Antacids** moderately decrease the absorption of **statins** (**rosuvastatin**). Separate administration by 2 hours. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **strontium**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **sulpiride**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Study
- ▶ **Antacids** are predicted to decrease the absorption of **thyroid hormones** (**levothyroxine**). Separate administration by at least 4 hours. [Moderate] Anecdotal
- ▶ **Antacids** are predicted to decrease the absorption of **ursodeoxycholic acid**. Separate administration by 2 hours. [Moderate] Theoretical
- ▶ **Antacids** are predicted to decrease the concentration of **velpatasvir**. Separate administration by 4 hours. [Moderate] Theoretical

**Antazoline** → see antihistamines, sedating

**Anthracyclines** → see TABLE 15 p. 1449 (myelosuppression), TABLE 5 p. 1447 (thromboembolism)

daunorubicin • doxorubicin • epirubicin • idarubicin • mitoxantrone • ptxantrone •

**GENERAL INFORMATION** Caution is necessary with concurrent use of cardiotoxic drugs, or drugs that reduce cardiac contractility.

- ▶ **Calcium channel blockers** (**verapamil**) moderately increase the exposure to **doxorubicin**. [Moderate] Study
- ▶ **Ciclosporin** increases the concentration of anthracyclines (daunorubicin, doxorubicin, epirubicin, idarubicin, mitoxantrone). [Severe] Study
- ▶ **H<sub>2</sub> receptor antagonists** (**cimetidine**) slightly increase the exposure to **epirubicin**. Avoid. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to anthracyclines (daunorubicin, doxorubicin, mitoxantrone). [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **anthracyclines**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Anthracyclines** are predicted to increase the risk of cardiotoxicity when given with **monoclonal antibodies** (**trastuzumab**, **trastuzumab emtansine**). Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Rolapitant** is predicted to increase the exposure to anthracyclines (daunorubicin, mitoxantrone). Avoid or monitor. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to anthracyclines (daunorubicin, doxorubicin, mitoxantrone). [Moderate] Theoretical

**Anti-D (Rh<sub>0</sub>) immunoglobulin** → see immunoglobulins

**Antiarrhythmics** → see TABLE 6 p. 1447 (bradycardia), TABLE 8 p. 1447 (hypotension), TABLE 12 p. 1449 (peripheral neuropathy), TABLE 9 p. 1448 (QT-interval prolongation), TABLE 11 p. 1448 (CNS depressant effects), TABLE 10 p. 1448 (antimutagens)

adenosine • amiodarone • disopyramide • dronedarone • flecainide • lidocaine • propafenone • vernakalant

- ▶ **Amiodarone** has a long half-life; there is potential for drug interactions to occur for several weeks (or even months) after treatment with it has been stopped.
- ▶ Since systemic absorption can follow topical application of **lidocaine**, the possibility of interactions should be borne in mind.
- ▶ Avoid intravenous class I and class III antiarrhythmics for 4 hours before and after **vernakalant**.
- ▶ **Dronedarone** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ Antiarrhythmics (**amiodarone**, **dronedarone**) are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study

- ▶ **Amiodarone** is predicted to decrease the effects of **agalsidase alfa**. Avoid. [Moderate] Theoretical
- ▶ **Amiodarone** is predicted to decrease the effects of **agalsidase beta**. Avoid. [Moderate] Theoretical
- ▶ **Amiodarone** is predicted to increase the exposure to **aldosterone antagonists** (**eplerenone**). Adjust **eplerenone** dose, p. 205. [Severe] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **aldosterone antagonists** (**eplerenone**). Adjust **eplerenone** dose, p. 205. [Severe] Study
- ▶ Antiarrhythmics (**amiodarone**, **dronedarone**) are predicted to increase the exposure to **aliskiren**. [Severe] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **alpha blockers** (**tamsulosin**). [Moderate] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Aminophylline** is predicted to decrease the efficacy of **adenosine**. Separate administration by 24 hours. [Mild] Theoretical
- ▶ **Anaesthetics, local** are predicted to increase the risk of cardiodepression when given with antiarrhythmics. [Severe] Theoretical → Also see TABLE 11 p. 1448
- ▶ Antiarrhythmics (**propafenone**) are predicted to increase the risk of cardiodepression when given with antiarrhythmics (**amiodarone**). Monitor and adjust dose. [Severe] Theoretical
- ▶ Antiarrhythmics (**amiodarone**) increase the concentration of antiarrhythmics (**flecainide**). Adjust **flecainide** dose and monitor side effects. [Severe] Study → Also see TABLE 6 p. 1447 → Also see TABLE 9 p. 1448
- ▶ Antiarrhythmics (**propafenone**) are predicted to increase the risk of cardiodepression when given with antiarrhythmics (**lidocaine**). [Moderate] Study
- ▶ Antiarrhythmics (**dronedarone**) are predicted to increase the exposure to antiarrhythmics (**propafenone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the efficacy of **propafenone**. [Moderate] Study
- ▶ **Antiepileptics** (**fosphenytoin**, **phenytoin**) are predicted to decrease the exposure to **lidocaine**. [Severe] Anecdotal
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to antiarrhythmics (**disopyramide**, **dronedarone**). Avoid. [Severe] Study
- ▶ **Amiodarone** is predicted to slightly increase the concentration of **antiepileptics** (**fosphenytoin**, **phenytoin**). Monitor and adjust dose. [Severe] Study → Also see TABLE 12 p. 1449
- ▶ **Antifungals, azoles** (**fluconazole**) are predicted to increase the exposure to **dronedarone**. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Antifungals, azoles** (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles** (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **disopyramide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Antifungals, azoles** (**itraconazole**, **ketoconazole**, **voriconazole**) very markedly increase the exposure to **dronedarone**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Antifungals, azoles** (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Severe] Study
- ▶ **Antifungals, azoles** (**miconazole**) are predicted to increase the exposure to **disopyramide**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Antifungals, azoles** (**posaconazole**) are predicted to increase the exposure to antiarrhythmics (**disopyramide**, **dronedarone**). Avoid. [Severe] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to antihistamines, non-sedating (**fexofenadine**, **mizolastine**). [Severe] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to antihistamines, non-sedating (**rupatadine**). Avoid. [Moderate] Study
- ▶ **Dronedarone** is predicted to increase the concentration of antimalarials (**piperaquine**). [Severe] Theoretical

- ▶ **Apalutamide** is predicted to decrease the exposure to antiarrhythmics (**disopyramide**, **dronedaron**). Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Apalutamide** is predicted to decrease the efficacy of **propafenone**. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
- ▶ **Aprepitant** increases the exposure to **dronedaron**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 1448
- ▶ Antiarrhythmics (**amiodarone**, **disopyramide**, **dronedaron**, **flecainide**, **lidocaine**) are predicted to increase the risk of cardiovascular side-effects when given with **beta blockers**, **non-selective**. Use with caution or avoid. [Severe] Study → Also see TABLE 6 p. 1447 → Also see TABLE 9 p. 1448
- ▶ **Propafenone** is predicted to increase the risk of cardiovascular side-effects when given with **beta blockers**, **non-selective** (**labetalol**, **levobunolol**, **nadolol**, **pindolol**, **sotalol**). Use with caution or avoid. [Severe] Study
- ▶ **Propafenone** increases the risk of cardiovascular side-effects when given with **beta blockers**, **non-selective** (**propranolol**). Use with caution or avoid. [Severe] Study
- ▶ **Propafenone** is predicted to increase the exposure to **beta blockers**, **non-selective** (**timolol**) and **beta blockers**, **non-selective** (**timolol**) are predicted to increase the risk of cardiodepression when given with **propafenone**. [Severe] Anecdotal
- ▶ Antiarrhythmics (**amiodarone**, **disopyramide**, **dronedaron**, **flecainide**, **lidocaine**) are predicted to increase the risk of cardiovascular side-effects when given with **beta blockers**, **selective**. Use with caution or avoid. [Severe] Study → Also see TABLE 6 p. 1447
- ▶ **Propafenone** is predicted to increase the risk of cardiovascular side-effects when given with **beta blockers**, **selective** (**acebutolol**, **atenolol**, **betaxolol**, **bisoprolol**, **celiprolol**, **esmolol**). Use with caution or avoid. [Severe] Study
- ▶ **Propafenone** is predicted to increase the exposure to **beta blockers**, **selective** (**metoprolol**). [Moderate] Study
- ▶ **Propafenone** is predicted to increase the exposure to **beta blockers**, **selective** (**nebivolol**) and **beta blockers**, **selective** (**nebivolol**) are predicted to increase the risk of cardiodepression when given with **propafenone**. Avoid. [Severe] Theoretical
- ▶ Antiarrhythmics (**amiodarone**, **dronedaron**) are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **dronedaron**. [Severe] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Dronedaron** is predicted to increase the exposure to **bupropion**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Caffeine citrate** decreases the efficacy of **adenosine**. Separate administration by 24 hours. [Mild] Study
- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) increase the exposure to **dronedaron** and **dronedaron** increases the exposure to **calcium channel blockers** (**diltiazem**, **verapamil**). [Moderate] Study
- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Calcium channel blockers** (**verapamil**) increase the risk of cardiodepression when given with **flecainide**. [Severe] Anecdotal → Also see TABLE 6 p. 1447
- ▶ **Dronedaron** is predicted to increase the exposure to **calcium channel blockers** (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Amiodarone** is predicted to increase the risk of cardiodepression when given with **calcium channel blockers** (**diltiazem**, **verapamil**). Avoid. [Severe] Theoretical → Also see TABLE 6 p. 1447
- ▶ **Disopyramide** is predicted to increase the risk of cardiodepression when given with **calcium channel blockers** (**verapamil**). [Severe] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Amiodarone** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Chloroprocaine** is predicted to increase the risk of cardiovascular side-effects when given with antiarrhythmics (**amiodarone**, **dronedaron**, **vernalakant**). [Severe] Theoretical
- ▶ **Amiodarone** increases the concentration of **ciclosporin**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Dronedaron** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** potentially increases the concentration of antiarrhythmics (**amiodarone**, **disopyramide**, **flecainide**, **lidocaine**). [Severe] Theoretical
- ▶ **Cobicistat** very markedly increases the exposure to **dronedaron**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Severe] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Amiodarone** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose, p. 1183. [Severe] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1183. [Severe] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **corticosteroids** (**methylprednisolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Amiodarone** increases the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Propafenone** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Amiodarone** increases the exposure to **dabigatran**. Adjust **dabigatran** dose, p. 146. [Moderate] Study
- ▶ **Dronedaron** slightly increases the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Dronedaron** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Darifenacin** is predicted to increase the concentration of **flecainide**. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Dronedaron** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
- ▶ Antiarrhythmics (**amiodarone**, **dronedaron**) are predicted to moderately increase the exposure to **digoxin**. Monitor and adjust **digoxin** dose, p. 116. [Severe] Study → Also see TABLE 6 p. 1447
- ▶ **Propafenone** increases the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study
- ▶ **Dipyridamol** increases the exposure to **adenosine**. Avoid or adjust dose. [Severe] Study
- ▶ **Dronedaron** increases the risk of QT-prolongation when given with **domeperidone**. Avoid. [Severe] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **dopamine receptor agonists** (**bromocriptine**). [Severe] Theoretical
- ▶ **Dronedaron** is predicted to increase the concentration of **dopamine receptor agonists** (**cabergoline**). [Severe] Anecdotal
- ▶ **Dronedaron** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Dronedaron** slightly increases the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 135. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **dronedaron**. [Severe] Theoretical → Also see TABLE 9 p. 1448

## Antiarrhythmics (continued)

- ▶ Antiarrhythmics (**dronedaron**, **propafenone**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Dronedaron** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Enzalutamide** is predicted to decrease the exposure to antiarrhythmics (**disopyramide**, **dronedaron**). Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the efficacy of **propafenone**. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Dronedaron** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ Antiarrhythmics (**amiodaron**, **dronedaron**) are predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **fosoterodine**. Adjust **fosoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 821. [Mid] Study
- ▶ Antiarrhythmics (**amiodaron**, **dronedaron**) are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Dronedaron** potentially increases the exposure to **glecaprevir**. [Moderate] Theoretical
- ▶ **Grapefruit juice** increases the exposure to **amiodaron**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** moderately increases the exposure to **dronedaron**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** increases the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **amiodaron**. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **flecainide**. Monitor and adjust dose. [Mid] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **lidocaine**. Monitor and adjust dose. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **amiodaron**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **disopyramide**. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **HIV-protease inhibitors** very markedly increase the exposure to **dronedaron**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **flecainide**. Avoid or monitor side effects. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **lidocaine**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Severe] Study
- ▶ **Amiodaron** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose, p. 1037. [Severe] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 1037. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **amiodaron**. Avoid. [Moderate] Theoretical
- ▶ **Idelalisib** very markedly increases the exposure to **dronedaron**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dronedaron**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 225. [Severe] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 308 or **tezacaftor** with **ivacaftor** p. 310 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ Antiarrhythmics (**amiodaron**, **dronedaron**) are predicted to increase the exposure to **larotrectinib**. [Mid] Theoretical
- ▶ **Ledipasvir** increases the risk of severe bradycardia or heart block when given with **amiodaron**. Refer to specialist literature. [Severe] Anecdotal
- ▶ **Letermovir** is predicted to increase the concentration of **amiodaron**. [Moderate] Theoretical
- ▶ **Amiodaron** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **loperamide**. [Severe] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 416. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** very markedly increase the exposure to **dronedaron**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Severe] Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **lidocaine**. [Moderate] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to moderately increase the exposure to **dronedaron**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mexiletine** increases the risk of torsade de pointes when given with antiarrhythmics. Avoid. [Severe] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to antiarrhythmics (**disopyramide**, **dronedaron**). Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the efficacy of **propafenone**. [Moderate] Study
- ▶ **Dronedaron** increases the risk of neutropenia when given with **monoclonal antibodies (brentuximab vedotin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ Antiarrhythmics (**amiodaron**, **dronedaron**) are predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 69. [Moderate] Study
- ▶ **Dronedaron** is predicted to increase the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **dronedaron**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiarrhythmics (**amiodaron**, **dronedaron**) are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **NSAIDs (celecoxib)** are predicted to increase the exposure to antiarrhythmics (**flecainide**, **propafenone**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1063. [Moderate] Theoretical
- ▶ **Dronedaron** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study

- ▶ **Amiodarone** is predicted to increase the concentration of **opioids (fentanyl)**. [Moderate] Theoretical → Also see TABLE 6 p. 1447
- ▶ **Dronedarone** is predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Dronedarone** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- ▶ Antiarrhythmics (**amiodarone, dronedarone**) are predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Dronedarone** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Propafenone** is predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 858. [Moderate] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 859. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Dronedarone** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Amiodarone** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- ▶ **Dronedarone** potentially increases the exposure to **pibrentasvir**. [Moderate] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Dronedarone** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin)** slightly increase the exposure to **lidocaine**. [Mild] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Amiodarone** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust **alitretinoin** dose, p. 1328. [Moderate] Theoretical
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **amiodarone**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Dronedarone** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Rifampicin** is predicted to decrease the exposure to antiarrhythmics (**disopyramide, dronedarone**). Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the efficacy of **propafenone**. [Moderate] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **rivaroxaban**. Avoid. [Moderate] Theoretical
- ▶ **Rolapitant** is predicted to increase the exposure to **propafenone**. [Severe] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **ruixitinib**. [Moderate] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Amiodarone** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study → Also see TABLE 6 p. 1447
- ▶ **Amiodarone** is predicted to increase the concentration of **sirolimus**. [Severe] Anecdotal
- ▶ **Dronedarone** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Sofosbuvir** is predicted to increase the risk of severe bradycardia or heart block when given with **amiodarone**. Refer to specialist literature. [Severe] Anecdotal
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **SSRIs (citalopram, escitalopram, fluoxetine, fluvoxamine, paroxetine, sertraline)**. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Dronedarone** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 866. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **dronedarone**. Avoid. [Severe] Theoretical
- ▶ **Amiodarone** is predicted to increase the risk of rhabdomyolysis when given with **statins (atorvastatin)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Dronedarone** slightly increases the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Study
- ▶ **Amiodarone** is predicted to increase the exposure to **statins (fluvastatin)**. [Severe] Theoretical
- ▶ **Dronedarone** slightly increases the exposure to **statins (rosuvastatin)**. Adjust dose. [Severe] Study
- ▶ **Amiodarone** increases the risk of rhabdomyolysis when given with **statins (simvastatin)**. Adjust **simvastatin** dose, p. 217. [Severe] Study
- ▶ **Dronedarone** moderately increases the exposure to **statins (simvastatin)**. Monitor and adjust dose. [Severe] Study
- ▶ **Amiodarone** is predicted to increase the exposure to **sulfonyleureas**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Lidocaine** is predicted to increase the effects of **suxamethonium**. [Moderate] Study
- ▶ **Amiodarone** is predicted to increase the concentration of **tacrolimus**. [Severe] Anecdotal
- ▶ **Dronedarone** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ Antiarrhythmics (**amiodarone, dronedarone**) are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1065. [Severe] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Severe] Theoretical
- ▶ **Dronedarone** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor** with **ivacaftor** p. 310 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Theophylline** decreases the efficacy of **adenosine**. Separate administration by 24 hours. [Mild] Study
- ▶ **Amiodarone** is predicted to increase the risk of thyroid dysfunction when given with **thyroid hormones**. Avoid. [Moderate] Study
- ▶ **Amiodarone** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Dronedarone** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1167. [Moderate] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Dronedarone** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4, p. 706. [Moderate] Study
- ▶ Antiarrhythmics (**amiodarone, dronedarone**) are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ Antiarrhythmics (**amiodarone, dronedarone**) are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **tricyclic antidepressants**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Propafenone** is predicted to increase the concentration of **tricyclic antidepressants**. [Moderate] Theoretical → Also see TABLE 10 p. 1448
- ▶ **Dronedarone** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Amiodarone** is predicted to increase the concentration of **velpatasvir**. Avoid or monitor. [Moderate] Theoretical

## Antiarrhythmics (continued)

- ▶ **Amiodarone** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Dronedarone** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Dronedarone** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Dronedarone** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

**Anticholinesterases, centrally acting** → see TABLE 6 p. 1447 (bradycardia)

donepezil • galantamine • rivastigmine

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **donepezil**. [Mild] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **donepezil**. [Mild] Study
  - ▶ **Bupropion** is predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Cinacalcet** is predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **donepezil**. [Mild] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **donepezil**. [Mild] Study
  - ▶ **Anticholinesterases, centrally acting** are predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Theoretical → Also see TABLE 6 p. 1447
  - ▶ **Rifampicin** is predicted to decrease the exposure to **donepezil**. [Mild] Study
  - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Anticholinesterases, centrally acting** increase the effects of **suxamethonium**. [Moderate] Theoretical
  - ▶ **Terbinafine** is predicted to increase the exposure to **galantamine**. Monitor and adjust dose. [Moderate] Study
- Antiepileptics** → see TABLE 1 p. 1446 (hepatotoxicity), TABLE 18 p. 1450 (hyponatraemia), TABLE 15 p. 1449 (myelosuppression), TABLE 12 p. 1449 (peripheral neuropathy), TABLE 11 p. 1448 (CNS depressant effects)
- brivacetam • carbamazepine • eslicarbazepine • ethosuximide • fosphenytoin • gabapentin • lacosamide • lamotrigine • levetiracetam • oxcarbazepine • paraldehyde • perampanel • phenobarbital • phenytoin • pregabalin • primidone • retigabine • rufinamide • stiripentol • tiagabine • topiramate • valproate • vigabatrin • zonisamide

**FOOD AND LIFESTYLE** Avoid taking milk, dairy products, carbonated drinks, fruit juices, or caffeine-containing food and drinks at the same time as **stiripentol**.

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **abacavir**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **abiraterone**. Avoid. [Severe] Study
- ▶ **Acetazolamide** potentially increases the risk of toxicity when given with **valproate**. [Severe] Study

- ▶ **Acetazolamide** potentially increases the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [Severe] Theoretical
- ▶ **Carbamazepine** is predicted to decrease the exposure to **afatinib**. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the concentration of **albendazole**. [Moderate] Study
- ▶ **Alcohol (beverage)** potentially increases the risk of visual disturbances when given with **retigabine**. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Theoretical → Also see TABLE 18 p. 1450
- ▶ **Carbamazepine** decreases the exposure to **aliskiren**. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 1448
- ▶ **Fosphenytoin** is predicted to decrease the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Phenobarbital** is predicted to decrease the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Phenytoin** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Primidone** is predicted to increase the clearance of **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Stiripentol** is predicted to increase the exposure to **aminophylline**. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 11 p. 1448
- ▶ **Phenytoin** is predicted to decrease the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
- ▶ **Antacids** decrease the absorption of **gabapentin**. Gabapentin should be taken 2 hours after antacids. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [Severe] Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to slightly increase the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor and adjust dose. [Severe] Study → Also see TABLE 12 p. 1449
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **antiarrhythmics (lidocaine)**. [Severe] Anecdotal
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the efficacy of **antiarrhythmics (propafenone)**. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **anticholinesterases, centrally acting (donepezil)**. [Mild] Study
- ▶ **Antiepileptics (carbamazepine)** decrease the concentration of antiepileptics (**brivacetam**). [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the concentration of antiepileptics (**brivacetam**). [Moderate] Study
- ▶ **Antiepileptics (lamotrigine)** potentially increase the concentration of antiepileptics (**carbamazepine**) and antiepileptics (**carbamazepine**) decrease the concentration of antiepileptics (**lamotrigine**). Adjust lamotrigine dose and monitor carbamazepine concentration, p. 334, p. 327. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital)** affect the concentration of antiepileptics (**carbamazepine**) and antiepileptics (**carbamazepine**) increase the concentration of antiepileptics (**phenobarbital**). Adjust dose. [Moderate] Study
- ▶ **Antiepileptics (topiramate)** increase the risk of carbamazepine toxicity when given with antiepileptics (**carbamazepine**). [Moderate] Study

- ▶ Antiepileptics (**stiripentol**) increase the concentration of antiepileptics (**carbamazepine**, **phenobarbital**). Avoid in Dravet syndrome. [\[Severe\]](#) Study
- ▶ Antiepileptics (**carbamazepine**) slightly decrease the exposure to antiepileptics (**eslicarbazepine**, **oxcarbazepine**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**oxcarbazepine**) are predicted to increase the concentration of antiepileptics (**fosphenytoin**). Monitor concentration and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**stiripentol**) are predicted to increase the concentration of antiepileptics (**fosphenytoin**). [\[Severe\]](#) Study
- ▶ Antiepileptics (**carbamazepine**) affect the concentration of antiepileptics (**fosphenytoin**, **phenytoin**) and antiepileptics (**fosphenytoin**, **phenytoin**) decrease the concentration of antiepileptics (**carbamazepine**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ Antiepileptics (**eslicarbazepine**) increase the exposure to antiepileptics (**fosphenytoin**, **phenytoin**) and antiepileptics (**fosphenytoin**, **phenytoin**) decrease the exposure to antiepileptics (**eslicarbazepine**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**valproate**) affect the concentration of antiepileptics (**fosphenytoin**, **phenytoin**) and antiepileptics (**fosphenytoin**, **phenytoin**) decrease the concentration of antiepileptics (**valproate**). [\[Severe\]](#) Study
- ▶ Antiepileptics (**vigabatrin**) decrease the concentration of antiepileptics (**fosphenytoin**, **phenytoin**). [\[Mild\]](#) Study
- ▶ Antiepileptics (**fosphenytoin**) decrease the concentration of antiepileptics (**lamotrigine**). Monitor and adjust **lamotrigine** dose, p. 334. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**phenobarbital**, **phenytoin**, **primidone**) decrease the concentration of antiepileptics (**lamotrigine**). Monitor and adjust **lamotrigine** dose, p. 334. [\[Moderate\]](#) Study → Also see TABLE 11 p. 1448
- ▶ Antiepileptics (**valproate**) increase the exposure to antiepileptics (**lamotrigine**). Adjust **lamotrigine** dose and monitor rash, p. 334. [\[Severe\]](#) Study
- ▶ Antiepileptics (**lamotrigine**) are predicted to increase the concentration of antiepileptics (**oxcarbazepine**) and antiepileptics (**oxcarbazepine**) are predicted to decrease the concentration of antiepileptics (**lamotrigine**). Monitor side effects and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**) are predicted to decrease the exposure to antiepileptics (**perampanel**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**oxcarbazepine**) decrease the concentration of antiepileptics (**perampanel**) and antiepileptics (**perampanel**) increase the concentration of antiepileptics (**oxcarbazepine**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to antiepileptics (**perampanel**). Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 11 p. 1448
- ▶ Antiepileptics (**phenytoin**) increase the concentration of antiepileptics (**phenobarbital**) and antiepileptics (**phenobarbital**) affect the concentration of antiepileptics (**phenytoin**). [\[Moderate\]](#) Study
- ▶ Antiepileptics (**fosphenytoin**) increase the concentration of antiepileptics (**phenobarbital**, **primidone**) and antiepileptics (**phenobarbital**, **primidone**) affect the concentration of antiepileptics (**fosphenytoin**). [\[Moderate\]](#) Study
- ▶ Antiepileptics (**oxcarbazepine**) are predicted to increase the concentration of antiepileptics (**phenytoin**). Monitor concentration and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**stiripentol**) are predicted to increase the concentration of antiepileptics (**phenytoin**). Avoid in Dravet syndrome. [\[Severe\]](#) Study
- ▶ Antiepileptics (**carbamazepine**) potentially decrease the concentration of antiepileptics (**primidone**) and antiepileptics (**primidone**) potentially decrease the concentration of antiepileptics (**carbamazepine**). Adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ Antiepileptics (**phenytoin**) increase the concentration of antiepileptics (**primidone**) and antiepileptics (**primidone**) affect the concentration of antiepileptics (**phenytoin**). [\[Moderate\]](#) Study
- ▶ Antiepileptics (**stiripentol**) are predicted to increase the concentration of antiepileptics (**primidone**). [\[Severe\]](#) Theoretical
- ▶ Antiepileptics (**valproate**) affect the concentration of antiepileptics (**primidone**). Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ Antiepileptics (**carbamazepine**) slightly increase the clearance of antiepileptics (**retigabine**). [\[Moderate\]](#) Study
- ▶ Antiepileptics (**fosphenytoin**, **phenytoin**) are predicted to slightly increase the clearance of antiepileptics (**retigabine**). [\[Moderate\]](#) Study
- ▶ Antiepileptics (**valproate**) increase the exposure to antiepileptics (**rufinamide**). Adjust **rufinamide** dose, p. 342. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) decrease the exposure to antiepileptics (**tiagabine**). Monitor and adjust **tiagabine** dose, p. 347. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**fosphenytoin**, **phenytoin**) decrease the concentration of antiepileptics (**topiramate**) and antiepileptics (**topiramate**) increase the concentration of antiepileptics (**fosphenytoin**, **phenytoin**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**phenobarbital**, **primidone**) are predicted to decrease the concentration of antiepileptics (**topiramate**). [\[Mild\]](#) Study
- ▶ Antiepileptics (**phenobarbital**) decrease the concentration of antiepileptics (**valproate**) and antiepileptics (**valproate**) increase the concentration of antiepileptics (**phenobarbital**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**topiramate**) increase the risk of toxicity when given with antiepileptics (**valproate**). [\[Severe\]](#) Study
- ▶ Antiepileptics (**carbamazepine**) slightly to moderately decrease the concentration of antiepileptics (**zonisamide**) and antiepileptics (**zonisamide**) affect the concentration of antiepileptics (**carbamazepine**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**fosphenytoin**, **phenytoin**) slightly to moderately decrease the concentration of antiepileptics (**zonisamide**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**phenobarbital**, **primidone**) are predicted to decrease the concentration of antiepileptics (**zonisamide**). Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**topiramate**) potentially increase the risk of overheating and dehydration when given with antiepileptics (**zonisamide**). Avoid in children. [\[Severe\]](#) Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to very slightly increase the exposure to **perampanel**. [\[Mild\]](#) Study
- ▶ Antifungals, azoles (**miconazole**) increase the risk of carbamazepine toxicity when given with carbamazepine. Monitor and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ Antifungals, azoles (**miconazole**) increase the risk of phenytoin toxicity when given with fosphenytoin. Monitor and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ Antifungals, azoles (**miconazole**) increase the risk of phenytoin toxicity when given with phenytoin. Monitor and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ Carbamazepine is predicted to decrease the efficacy of antifungals, azoles (**fluconazole**) and antifungals, azoles (**fluconazole**) increase the concentration of carbamazepine. Avoid or monitor carbamazepine concentration and adjust dose accordingly, p. 327. [\[Severe\]](#) Theoretical → Also see TABLE 1 p. 1446
- ▶ Antifungals, azoles (**fluconazole**) increase the concentration of antiepileptics (**fosphenytoin**, **phenytoin**). Monitor concentration and adjust dose. [\[Moderate\]](#) Study
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to antifungals, azoles (**isavuconazole**). Avoid. [\[Severe\]](#) Study
- ▶ Fosphenytoin very markedly decreases the exposure to antifungals, azoles (**itraconazole**). Avoid and for 14 days after stopping fosphenytoin. [\[Moderate\]](#) Study
- ▶ Phenobarbital decreases the concentration of antifungals, azoles (**itraconazole**). Avoid and for 14 days after stopping phenobarbital. [\[Moderate\]](#) Study

## Antiepileptics (continued)

- ▶ Phenytoin very markedly decreases the exposure to antifungals, azoles (itraconazole). Avoid and for 14 days after stopping phenytoin. [Moderate] Study
- ▶ Primidone is predicted to decrease the concentration of antifungals, azoles (itraconazole). [Moderate] Theoretical
- ▶ Carbamazepine is predicted to decrease the efficacy of antifungals, azoles (itraconazole, voriconazole) and antifungals, azoles (itraconazole, voriconazole) increase the concentration of carbamazepine. Avoid or adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 1446
- ▶ Carbamazepine is predicted to decrease the efficacy of antifungals, azoles (ketoconazole) and antifungals, azoles (ketoconazole) slightly increase the concentration of carbamazepine. Avoid or monitor carbamazepine concentration and adjust dose accordingly, p. 327. [Moderate] Study
- ▶ Phenobarbital is predicted to decrease the concentration of antifungals, azoles (ketoconazole). Avoid. [Moderate] Study
- ▶ Antiepileptics (fosphenytoin, phenytoin) decrease the exposure to antifungals, azoles (ketoconazole). Avoid. [Moderate] Study
- ▶ Primidone is predicted to decrease the concentration of antifungals, azoles (ketoconazole, posaconazole). Avoid. [Moderate] Study
- ▶ Carbamazepine is predicted to decrease the efficacy of antifungals, azoles (posaconazole) and antifungals, azoles (posaconazole) increase the concentration of carbamazepine. Avoid. [Moderate] Theoretical
- ▶ Phenobarbital is predicted to decrease the concentration of antifungals, azoles (posaconazole). Avoid. [Moderate] Study
- ▶ Antiepileptics (fosphenytoin, phenytoin) are predicted to decrease the exposure to antifungals, azoles (posaconazole). Avoid. [Moderate] Study
- ▶ Fosphenytoin decreases the exposure to antifungals, azoles (voriconazole) and antifungals, azoles (voriconazole) increase the exposure to fosphenytoin. Avoid or adjust voriconazole dose and monitor phenytoin concentration, p. 635. [Moderate] Study
- ▶ Phenytoin decreases the exposure to antifungals, azoles (voriconazole) and antifungals, azoles (voriconazole) increase the exposure to phenytoin. Avoid or adjust voriconazole dose and monitor phenytoin concentration, p. 635, p. 339. [Moderate] Study
- ▶ Antiepileptics (phenobarbital, primidone) are predicted to decrease the concentration of antifungals, azoles (voriconazole). Avoid. [Moderate] Theoretical
- ▶ Antihistamines, sedating (hydroxyzine) potentially increase the risk of overheating and dehydration when given with zonisamide. Avoid in children. [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to antimalarials (artemether) (with lumefantrine). Avoid. [Severe] Study
- ▶ Antimalarials (pyrimethamine) increase the risk of haematological toxicity when given with antiepileptics (fosphenytoin, phenytoin). [Severe] Study
- ▶ Antimalarials (pyrimethamine) are predicted to increase the risk of haematological toxicity when given with antiepileptics (phenobarbital, primidone). [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the concentration of antimalarials (piperazine). Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, phenobarbital, primidone) potentially increase the risk of toxicity when given with antimalarials (quinine). [Unknown] Study
- ▶ Apalutamide is predicted to decrease the exposure to perampamil. Monitor and adjust dose. [Moderate] Study
- ▶ Apalutamide potentially decreases the exposure to valproate. [Mild] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately decrease the exposure to apixaban. Use with caution or avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) moderately decrease the exposure to apremilast. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to aprepitant. Avoid. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately decrease the exposure to aripiprazole. Adjust aripiprazole dose, p. 413. [Moderate] Study → Also see TABLE 11 p. 1448
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to axitinib. Avoid or adjust dose. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to bazedoxifene. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) decrease the exposure to bedaquinolone. Avoid. [Severe] Study → Also see TABLE 1 p. 1446
- ▶ Antiepileptics (phenobarbital, primidone) are predicted to decrease the exposure to beta blockers, non-selective (carvedilol, labetalol). [Moderate] Theoretical
- ▶ Antiepileptics (phenobarbital, primidone) are predicted to decrease the exposure to beta blockers, non-selective (propranolol). [Moderate] Study
- ▶ Antiepileptics (phenobarbital, primidone) are predicted to decrease the exposure to beta blockers, selective (acebutolol, bisoprolol, metoprolol, nebivolol). [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to bictegavir. Avoid. [Moderate] Study
- ▶ Oxcarbazepine is predicted to decrease the exposure to bictegavir. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) slightly decrease the exposure to bortezomib. Avoid. [Severe] Study → Also see TABLE 12 p. 1449
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) affect the exposure to bosentan. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to very markedly decrease the exposure to bosutinib. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to brigatinib. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to bupropion. [Severe] Study
- ▶ Valproate increases the exposure to bupropion. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to buspirone. Use with caution and adjust dose. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) moderately decrease the exposure to cabozantinib. Avoid. [Moderate] Study
- ▶ Antiepileptics (fosphenytoin, phenytoin) are predicted to moderately increase the clearance of caffeine citrate. Monitor and adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (diltiazem) increase the concentration of carbamazepine and carbamazepine is predicted to decrease the exposure to calcium channel blockers (diltiazem). Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ Calcium channel blockers (verapamil) increase the concentration of carbamazepine and carbamazepine is predicted to decrease the exposure to calcium channel blockers (verapamil). [Severe] Anecdotal
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nifedipine, nimodipine). Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (phenobarbital, primidone) are predicted to decrease the exposure to calcium channel blockers (diltiazem, verapamil). [Severe] Study

- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) potentially increase the concentration of antiepileptics (**fosphenytoin**, **phenytoin**) and antiepileptics (**fosphenytoin**, **phenytoin**) are predicted to decrease the exposure to **calcium channel blockers** (**diltiazem**, **verapamil**). [Severe] Study
- ▶ **Valproate** increases the exposure to **calcium channel blockers** (**nimodipine**). Adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1448
- ▶ **Cannabidiol** increases the risk of increased ALT concentrations when given with **valproate**. Avoid or adjust dose. [Severe] Study
- ▶ **Capecitabine** increases the concentration of antiepileptics (**fosphenytoin**, **phenytoin**). [Severe] Anecdotal
- ▶ **Carbapenems** decrease the concentration of **valproate**. Avoid. [Severe] Anecdotal
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical → Also see TABLE 11 p. 1448
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **casopfungin** dose, p. 628. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**phenobarbital**, **primidone**) are predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Antiepileptics (**phenobarbital**, **primidone**) decrease the concentration of **chloramphenicol**. [Moderate] Study
- ▶ Intravenous **chloramphenicol** increases the concentration of antiepileptics (**fosphenytoin**, **phenytoin**) and antiepileptics (**fosphenytoin**, **phenytoin**) affect the concentration of intravenous **chloramphenicol**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Chlordiazepoxide** affects the concentration of antiepileptics (**fosphenytoin**, **phenytoin**). [Severe] Study
- ▶ **Phenobarbital** decreases the effects of **cholic acid**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) decrease the concentration of **ciclosporin**. [Severe] Study
- ▶ **Oxcarbazepine** decreases the concentration of **ciclosporin**. [Severe] Anecdotal
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- ▶ **Carbamazepine** is predicted to increase the risk of haematological toxicity when given with oral **cladribine**. [Moderate] Theoretical
- ▶ **Clobazam** potentially affects the concentration of antiepileptics (**fosphenytoin**, **phenytoin**). [Severe] Anecdotal
- ▶ **Stiripentol** increases the concentration of **clobazam**. [Severe] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) decrease the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 1448
- ▶ **Clonazepam** potentially affects the concentration of antiepileptics (**fosphenytoin**, **phenytoin**). [Severe] Anecdotal
- ▶ Antiepileptics (**fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **clozapine**. [Moderate] Anecdotal → Also see TABLE 11 p. 1448
- ▶ **Carbamazepine** is predicted to increase the risk of myelosuppression when given with **clozapine**. Avoid. [Severe] Anecdotal
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Oxcarbazepine** is predicted to decrease the concentration of **cobicistat**. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to very slightly increase the exposure to **perampanel**. [Mild] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine**, **eslicarbazepine**, **fosphenytoin**, **oxcarbazepine**, **perampanel**, **phenobarbital**, **phenytoin**, **primidone**, **rufinamide**, **topiramate**) are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see **Contraceptives**, interactions p. 839. [Severe] Study
- ▶ **Combined hormonal contraceptives** alter the exposure to **lamotrigine**. Adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **corticosteroids** (**budesonide**, **deflazacort**, **dexamethasone**, **fludrocortisone**, **hydrocortisone**, **methylprednisolone**, **prednisolone**, **triamcinolone**). Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **corticosteroids** (**fluticasone**). [Unknown] Theoretical
- ▶ Antiepileptics (**fosphenytoin**, **phenytoin**) are predicted to alter the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
- ▶ Antiepileptics (**phenobarbital**, **primidone**) decrease the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Moderate] Study
- ▶ **Carbamazepine** decreases the effects of **coumarins**. Monitor and adjust dose. [Severe] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Carbamazepine** is predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Phenytoin** is predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
- ▶ **Danazol** moderately increases the concentration of **carbamazepine**. Monitor and adjust dose. [Severe] Study
- ▶ Antiepileptics (**fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **Lamotrigine** is predicted to increase the risk of hyponatraemia when given with **desmopressin**. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine**, **eslicarbazepine**, **fosphenytoin**, **oxcarbazepine**, **perampanel**, **phenobarbital**, **phenytoin**, **primidone**, **rufinamide**, **topiramate**) are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see **Contraceptives**, interactions p. 839. [Severe] Theoretical
- ▶ **Desogestrel** is predicted to increase the exposure to **lamotrigine**. [Moderate] Study
- ▶ **Diazepam** potentially affects the concentration of antiepileptics (**fosphenytoin**, **phenytoin**). Monitor concentration and adjust dose. [Severe] Study
- ▶ **Diazoxide** decreases the concentration of antiepileptics (**fosphenytoin**, **phenytoin**) and antiepileptics (**fosphenytoin**, **phenytoin**) are predicted to decrease the effects of **diazoxide**. Monitor concentration and adjust dose. [Moderate] Anecdotal

## Antiepileptics (continued)

- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to **dienogest**. [Severe] Study
- Antiepileptics (fosphenytoin, phenytoin) are predicted to decrease the concentration of **digoxin**. [Moderate] Anecdotal
- Disulfiram** increases the concentration of antiepileptics (fosphenytoin, phenytoin). Monitor concentration and adjust dose. [Severe] Study → Also see TABLE 12 p. 1449
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) decrease the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- Oxcarbazepine is predicted to decrease the exposure to **dolutegravir**. Adjust dose. [Severe] Theoretical
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
- Oxcarbazepine is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Theoretical
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [Mild] Study → Also see TABLE 11 p. 1448
- Phenytoin is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- Carbamazepine is predicted to decrease the exposure to **edoxaban**. [Moderate] Study
- Phenytoin is predicted to decrease the exposure to **edoxaban**. [Moderate] Theoretical
- Antiepileptics (fosphenytoin, phenytoin) slightly decrease the exposure to **efavirenz** and **efavirenz** affects the concentration of antiepileptics (fosphenytoin, phenytoin). [Severe] Theoretical
- Carbamazepine slightly decreases the exposure to **efavirenz** and **efavirenz** slightly decreases the exposure to carbamazepine. [Severe] Study
- Phenobarbital is predicted to decrease the exposure to **efavirenz** and **efavirenz** affects the concentration of phenobarbital. [Severe] Theoretical
- Efavirenz** is predicted to affect the efficacy of primidone and primidone is predicted to slightly decrease the exposure to **efavirenz**. [Severe] Theoretical
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
- Enteral feeds** decrease the absorption of phenytoin. [Severe] Study
- Enzalutamide** is predicted to slightly decrease the exposure to **brivaracetam**. [Moderate] Theoretical
- Enzalutamide** is predicted to decrease the exposure to **perampanel**. Monitor and adjust dose. [Moderate] Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **erlotinib**. Avoid or adjust erlotinib dose, p. 1033. [Severe] Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **esketamine**. Adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 1448
- Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate) are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical

- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the efficacy of **etoposide**. [Moderate] Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) moderately decrease the exposure to **exemestane**. [Moderate] Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **fosfoterodine**. Avoid. [Moderate] Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to  **fingolimod**. [Moderate] Study
- Fluorouracil** increases the concentration of antiepileptics (fosphenytoin, phenytoin). Monitor concentration and adjust dose. [Severe] Anecdotal
- Folates** are predicted to decrease the concentration of antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone). Monitor concentration and adjust dose. [Severe] Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **gefinitib**. Avoid. [Severe] Study
- Antiepileptics (carbamazepine, fosphenytoin, phenytoin) are predicted to decrease the exposure to **gilteritinib**. Avoid. [Severe] Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- Antiepileptics (eslicarbazepine, oxcarbazepine) potentially decrease the exposure to **glecaprevir**. Avoid. [Severe] Theoretical
- Valproate** potentially opposes the effects of **glycerol phenylbutyrate**. [Moderate] Theoretical
- Grapefruit juice** slightly increases the exposure to carbamazepine. Monitor and adjust dose. [Moderate] Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- Antiepileptics (phenobarbital, primidone) decrease the effects of **griseofulvin**. [Moderate] Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the concentration of **guanfacine**. Adjust guanfacine dose, p. 370. [Moderate] Study → Also see TABLE 11 p. 1448
- Oxcarbazepine is predicted to decrease the concentration of **guanfacine**. Monitor and adjust guanfacine dose, p. 370. [Moderate] Theoretical
- Guanfacine** increases the concentration of **valproate**. Monitor and adjust dose. [Moderate] Study
- H<sub>2</sub> receptor antagonists (cimetidine)** transiently increase the concentration of carbamazepine. Monitor concentration and adjust dose. [Moderate] Study
- H<sub>2</sub> receptor antagonists (cimetidine)** increase the concentration of antiepileptics (fosphenytoin, phenytoin). Monitor concentration and adjust dose. [Severe] Study
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) decrease the concentration of **haloperidol**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1448
- Haloperidol** potentially increases the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [Severe] Theoretical
- HIV-protease inhibitors** are predicted to affect the exposure to antiepileptics (fosphenytoin, phenytoin) and antiepileptics (fosphenytoin, phenytoin) decrease the concentration of **HIV-protease inhibitors**. [Severe] Theoretical

- ▶ **HIV-protease inhibitors** are predicted to affect the concentration of antiepileptics (**phenobarbital**, **primidone**) and antiepileptics (**phenobarbital**, **primidone**) are predicted to decrease the concentration of **HIV-protease inhibitors**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **carbamazepine** and **carbamazepine** is predicted to decrease the exposure to **HIV-protease inhibitors**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** slightly decrease the exposure to **lamotrigine**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to very slightly increase the exposure to **perampanel**. [Mild] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the concentration of **valproate**. [Severe] Anecdotal
- ▶ Antiepileptics (**carbamazepine**, **eslicarbazepine**, **fosphenytoin**, **oxcarbazepine**, **perampanel**, **phenobarbital**, **phenytoin**, **primidone**, **rufinamide**, **topiramate**) are predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Hormone replacement therapy** is predicted to alter the exposure to **lamotrigine**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 1037. [Severe] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to very slightly increase the exposure to **perampanel**. [Mild] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Oxcarbazepine** decreases the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **iron chelators (deferasirox)**. Monitor serum ferritin and adjust dose. [Moderate] Theoretical
- ▶ **Isoniazid** increases the concentration of antiepileptics (**fosphenytoin**, **phenytoin**). [Moderate] Study → Also see TABLE 12 p. 1449
- ▶ **Isoniazid** markedly increases the concentration of **carbamazepine** and **carbamazepine** increases the risk of hepatotoxicity when given with **isoniazid**. Monitor concentration and adjust dose. [Severe] Study → Also see TABLE 1 p. 1446
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**fosphenytoin**, **oxcarbazepine**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- ▶ **Carbamazepine** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine**, **phenobarbital**, **primidone**) are predicted to decrease the concentration of **letemovir**. [Moderate] Theoretical
- ▶ **Letemovir** is predicted to decrease the concentration of antiepileptics (**fosphenytoin**, **phenytoin**) and antiepileptics (**fosphenytoin**, **phenytoin**) are predicted to decrease the concentration of **letemovir**. [Moderate] Theoretical
- ▶ Antiepileptics (**fosphenytoin**, **phenytoin**) decrease the effects of **levodopa**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine**, **eslicarbazepine**, **fosphenytoin**, **oxcarbazepine**, **perampanel**, **phenobarbital**, **phenytoin**, **primidone**, **rufinamide**, **topiramate**) are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine**, **oxcarbazepine**) are predicted to increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **lomipamide**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 1446
- ▶ Antiepileptics (**fosphenytoin**, **phenytoin**) decrease the effects of **loop diuretics (furosemide)**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study
- ▶ **Lumacaftor** is predicted to decrease the exposure to antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**). Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study → Also see TABLE 11 p. 1448
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin)** slightly increase the concentration of **carbamazepine**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to very slightly increase the exposure to **perampanel**. [Mild] Study
- ▶ **Macrolides (erythromycin)** markedly increase the concentration of **carbamazepine**. Monitor concentration and adjust dose. [Severe] Study
- ▶ Antiepileptics (**phenobarbital**, **primidone**) are predicted to increase the effects of **MAOIs, irreversible**. [Severe] Theoretical
- ▶ **Carbamazepine** is predicted to increase the risk of severe toxic reaction when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Phenytoin** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Levetiracetam** decreases the clearance of **methotrexate**. [Severe] Anecdotal
- ▶ Antiepileptics (**phenobarbital**, **primidone**) are predicted to decrease the exposure to **metronidazole**. [Moderate] Study
- ▶ Antiepileptics (**fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the effects of **metypapone**. Avoid. [Moderate] Study
- ▶ **Phenytoin** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**phenobarbital**, **primidone**) are predicted to decrease the exposure to **mianserin**. [Moderate] Study → Also see TABLE 11 p. 1448
- ▶ **Carbamazepine** markedly decreases the exposure to **mianserin**. Adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 1448
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure

## Antiepileptics (continued)

- to **mirtazapine**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1448
- ▶ **Mitotane** is predicted to decrease the exposure to **perampanel**. Monitor and adjust dose. [Moderate] Study
  - ▶ Antiepileptics (**carbamazepine**, **phenobarbital**, **primidone**) are predicted to decrease the exposure to **modafinil**. [Mild] Theoretical
  - ▶ Antiepileptics (**fosphenytoin**, **phenytoin**) are predicted to decrease the exposure to **modafinil** and **modafinil** is predicted to increase the concentration of antiepileptics (**fosphenytoin**, **phenytoin**). Monitor concentration and adjust dose. [Moderate] Theoretical
  - ▶ **Carbamazepine** is predicted to decrease the effects of **monoclonal antibodies (brentuximab vedotin)**. [Severe] Theoretical
  - ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to antiepileptics (**fosphenytoin**, **phenytoin**). Monitor and adjust dose. [Moderate] Theoretical
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **montelukast**. [Mild] Study
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to slightly decrease the exposure to **nateline**. [Mild] Study
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study → Also see TABLE 1 p. 1446
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
  - ▶ **Carbamazepine** is predicted to decrease the effects of (but acute use increases the effects of) **neuromuscular blocking drugs, non-depolarising (atracurium, cisatracurium, pancuronium, rocuronium, vecuronium)**. Monitor and adjust dose. [Moderate] Study
  - ▶ Antiepileptics (**fosphenytoin**, **phenytoin**) decrease the effects of (but acute use increases the effects of) **neuromuscular blocking drugs, non-depolarising (atracurium, cisatracurium, pancuronium, rocuronium, vecuronium)**. [Moderate] Study
  - ▶ **Nevirapine** is predicted to decrease the concentration of antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) and antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the concentration of **nevirapine**. [Severe] Study
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
  - ▶ **Carbamazepine** is predicted to decrease the exposure to **nintedanib**. [Moderate] Study
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **nitisone**. Adjust dose. [Moderate] Theoretical
  - ▶ Antiepileptics (**carbamazepine**, **eslicarbazepine**, **fosphenytoin**, **oxcarbazepine**, **perampanel**, **phenobarbital**, **phenytoin**, **primidone**, **rufinamide**, **topiramate**) are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Anecdotal
  - ▶ **Carbamazepine** potentially decreases the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Phenytoin** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**) are predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **ondansetron**. [Moderate] Study
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [Moderate] Study → Also see TABLE 11 p. 1448
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 1448
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) decrease the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study → Also see TABLE 11 p. 1448
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 1448
  - ▶ **Carbamazepine** decreases the concentration of **opioids (tramadol)**. Adjust dose. [Severe] Study
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
  - ▶ **Oxybutynin** potentially increases the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [Severe] Theoretical
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [Severe] Study → Also see TABLE 11 p. 1448
  - ▶ **Valproate** slightly increases the exposure to **paliperidone**. Adjust dose. [Moderate] Study
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) decrease the exposure to **paracetamol**. [Moderate] Study → Also see TABLE 1 p. 1446
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **paritaprevir** (with **ritonavir** and **ombitasvir**). Avoid. [Severe] Study
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
  - ▶ **Valproate** increases the risk of side-effects when given with **penicillins (pivmecillinam)**. Avoid. [Severe] Anecdotal
  - ▶ **Phenothiazines (chlorpromazine)** decrease the concentration of antiepileptics (**phenobarbital**, **primidone**) and antiepileptics (**phenobarbital**, **primidone**) decrease the concentration of **phenothiazines (chlorpromazine)**. [Moderate] Study → Also see TABLE 11 p. 1448
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [Severe] Study
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [Moderate] Theoretical
  - ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to moderately decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
  - ▶ Antiepileptics (**eslicarbazepine**, **oxcarbazepine**) potentially decrease the exposure to **pibrentasvir**. Avoid. [Severe] Theoretical

- ▶ Antiepileptics (**fosphenytoin, phenytoin**) are predicted to decrease the exposure to **pifneridone**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, phenobarbital, phenytoin, primidone**) are predicted to increase the risk of hypersensitivity reactions when given with **procarbazine**. [Severe] Anecdotal
- ▶ **Fosphenytoin** is predicted to increase the risk of hypersensitivity when given with **procarbazine**. [Severe] Anecdotal
- ▶ **Valproate** potentially increases the concentration of **propofol**. Adjust dose. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **quetiapine**. [Moderate] Study → Also see TABLE 11 p. 1448
- ▶ **Valproate** potentially increases the risk of neutropenia when given with **quetiapine**. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin)** affect the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor concentration and adjust dose. [Severe] Study
- ▶ Antiepileptics (**fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to affect the exposure to **raltegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Carbamazepine** is predicted to affect the exposure to **raltegravir**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ Antiepileptics (**phenobarbital, primidone**) are predicted to decrease the exposure to **rifampicin** and **rifampicin** is predicted to decrease the exposure to antiepileptics (**phenobarbital, primidone**). Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of antiepileptics (**fosphenytoin, phenytoin**). Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **brivaracetam**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** markedly increases the clearance of **lamotrigine**. Adjust **lamotrigine** dose, p. 334. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **perampanel**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) markedly decrease the exposure to **rilpivirine**. Avoid. [Severe] Study
- ▶ **Oxcarbazepine** is predicted to decrease the concentration of **rilpivirine**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1448
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to markedly decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **phenytoin**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenytoin**) are predicted to decrease the exposure to the active metabolite of **selexipag**. Adjust dose. [Moderate] Study
- ▶ **Valproate** is predicted to increase the exposure to **selexipag**. [Unknown] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **siponimod**. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Valproate** increases the exposure to **sodium oxybate**. Adjust **sodium oxybate** dose, p. 513. [Moderate] Study
- ▶ **Valproate** potentially decreases the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
- ▶ Antiepileptics (**fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **Carbamazepine** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **sofenacin**. [Moderate] Theoretical
- ▶ Antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**) are predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine, fluvoxamine)** are predicted to increase the concentration of antiepileptics (**fosphenytoin, phenytoin**). Monitor and adjust dose. [Severe] Anecdotal
- ▶ **SSRIs (sertraline)** potentially increase the risk of toxicity when given with antiepileptics (**fosphenytoin, phenytoin**). Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) decrease the concentration of **SSRIs (paroxetine)**. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of antiepileptics (**fosphenytoin, phenobarbital, phenytoin, primidone**). Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **brivaracetam**. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the concentration of **carbamazepine**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **perampanel**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **tiagabine**. Avoid. [Mild] Theoretical
- ▶ Antiepileptics (**carbamazepine, eslicarbazepine**) are predicted to decrease the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 1446
- ▶ Antiepileptics (**fosphenytoin, phenytoin**) potentially decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Anecdotal
- ▶ **Carbamazepine** moderately decreases the exposure to **statins (simvastatin)**. Monitor and adjust dose. [Severe] Study → Also see TABLE 1 p. 1446
- ▶ **Eslicarbazepine** moderately decreases the exposure to **statins (simvastatin)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Sulfonamides (sulfadiazine)** are predicted to increase the concentration of **fosphenytoin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Sulfonamides (sulfadiazine)** increase the concentration of **phenytoin**. Monitor and adjust dose. [Moderate] Study

## Antiepileptics (continued)

- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1057. [Moderate] Study
- ▶ Antiepileptics (fosphenytoin, phenytoin) increase the effects of **suxamethonium**. [Moderate] Study
- ▶ Carbamazepine increases the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **taxanes (cabazitaxel, paclitaxel)**. Avoid. [Severe] Study → Also see TABLE 12 p. 1449
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical → Also see TABLE 12 p. 1449
- ▶ **Tegafur** potentially increases the concentration of antiepileptics (fosphenytoin, phenytoin). Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) decrease the exposure to **tetracyclines (doxycycline)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 1 p. 1446
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (fosphenytoin, phenytoin) are predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ Antiepileptics (phenobarbital, primidone) are predicted to increase the clearance of **theophylline**. Adjust dose. [Moderate] Theoretical
- ▶ Carbamazepine potentially increases the clearance of **theophylline** and **theophylline** decreases the exposure to carbamazepine. Adjust dose. [Moderate] Anecdotal
- ▶ **Stiripentol** is predicted to increase the exposure to **theophylline**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenytoin) are predicted to increase the risk of hypothyroidism when given with **thyroid hormones**. [Moderate] Study
- ▶ Antiepileptics (phenobarbital, primidone) are predicted to decrease the effects of **thyroid hormones**. [Moderate] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ Antiepileptics (fosphenytoin, phenytoin) moderately decrease the exposure to **tizanidine**. [Mild] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **tofacinib**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ Antiepileptics (fosphenytoin, phenytoin) increase the clearance of **topotecan**. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical → Also see TABLE 1 p. 1446
- ▶ Carbamazepine decreases the concentration of **trazodone**. Adjust dose. [Moderate] Anecdotal
- ▶ Antiepileptics (phenobarbital, primidone) are predicted to decrease the exposure to **tricyclic antidepressants**. [Moderate] Study → Also see TABLE 11 p. 1448
- ▶ Carbamazepine decreases the exposure to **tricyclic antidepressants**. Adjust dose. [Moderate] Study → Also see TABLE 18 p. 1450
- ▶ **Tricyclic antidepressants (clomipramine, imipramine)** potentially increase the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. [Severe] Theoretical
- ▶ **Trimethoprim** increases the concentration of antiepileptics (fosphenytoin, phenytoin). [Moderate] Study
- ▶ Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate) decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Anecdotal
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
- ▶ Oxcarbazepine is predicted to decrease the exposure to **velpatasvir**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical → Also see TABLE 1 p. 1446 → Also see TABLE 12 p. 1449
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [Severe] Theoretical → Also see TABLE 12 p. 1449
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **vinca alkaloids (vinorelbine)**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 12 p. 1449
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ Antiepileptics (fosphenytoin, phenytoin) decrease the effects of **vitamin D substances**. [Moderate] Study
- ▶ Antiepileptics (phenobarbital, primidone) are predicted to decrease the effects of **vitamin D substances**. [Moderate] Theoretical
- ▶ Carbamazepine is predicted to decrease the effects of **vitamin D substances**. [Moderate] Study
- ▶ Antiepileptics (phenobarbital, primidone) potentially increase the risk of nephrotoxicity when given with **volatile halogenated anaesthetics (methoxyflurane)**. Avoid. [Severe] Theoretical → Also see TABLE 11 p. 1448
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ Oxcarbazepine is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Valproate** slightly increases the exposure to **zidovudine**. [Moderate] Study
- ▶ Carbamazepine moderately decreases the exposure to **zolidem**. [Moderate] Study

- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1448

**Antifungals, azoles** → see TABLE 1 p. 1446 (hepatotoxicity), TABLE 9 p. 1448 (QT-interval prolongation)

clotrimazole • fluconazole • isavuconazole • itraconazole • ketoconazole • miconazole • posaconazole • voriconazole

- ▶ Since systemic absorption can follow topical application, the possibility of interactions with topical **clotrimazole** and topical **ketoconazole** should be borne in mind.
- ▶ In general, **fluconazole** interactions relate to multiple-dose treatment.
- ▶ The use of carbonated drinks, such as cola, improves **itraconazole**, **ketoconazole**, and **posaconazole** bioavailability.
- ▶ Interactions of **miconazole** apply to the oral gel formulation, as a sufficient quantity can be absorbed to cause systemic effects. Systemic absorption from intravaginal and topical formulations might also occur.
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 1019. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **ketoconazole**. Avoid. [Moderate] Anecdotal
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose, p. 205. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Severe] Study
- ▶ **Itraconazole** markedly increases the exposure to **aliskiren**. Avoid. [Severe] Study
- ▶ **Ketoconazole** moderately increases the exposure to **aliskiren**. [Moderate] Study
- ▶ **Itraconazole** increases the risk of busulfan toxicity when given with **alkylating agents (busulfan)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Miconazole** is predicted to increase the concentration of **alkylating agents (busulfan)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Isavuconazole** is predicted to increase the exposure to **alkylating agents (cyclophosphamide)**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) increase the exposure to **almotriptan**. [Mild] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **alpha blockers (doxazosin)**. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) moderately increase the exposure to **alprazolam**. Avoid. [Moderate] Study
- ▶ **Miconazole** is predicted to increase the exposure to **alprazolam**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Miconazole** potentially decreases the exposure to **aminoglycosides (tobramycin)**. [Moderate] Anecdotal
- ▶ **Antacids** decrease the absorption of **itraconazole** (capsule). **Itraconazole** should be taken 2 hours before or 1 hour after antacids. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **ketoconazole**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Miconazole** is predicted to increase the exposure to **antiarrhythmics (disopyramide)**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **antiarrhythmics (disopyramide)**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Posaconazole** is predicted to increase the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [Severe] Theoretical
- ▶ **Fluconazole** is predicted to increase the exposure to **antiarrhythmics (dronedarone)**. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) very markedly increase the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the efficacy of **fluconazole** and **fluconazole** increases the concentration of **antiepileptics (carbamazepine)**. Avoid or monitor **carbamazepine** concentration and adjust dose accordingly, p. 327. [Severe] Theoretical → Also see TABLE 1 p. 1446
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the efficacy of **ketoconazole** and **ketoconazole** slightly increases the concentration of **antiepileptics (carbamazepine)**. Avoid or monitor **carbamazepine** concentration and adjust dose accordingly, p. 327. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the efficacy of **posaconazole** and **posaconazole** increases the concentration of **antiepileptics (carbamazepine)**. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Study
- ▶ **Antiepileptics (fosphenytoin)** very markedly decrease the exposure to **itraconazole**. Avoid and for 14 days after stopping **fosphenytoin**. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin)** decrease the exposure to **voriconazole** and **voriconazole** increases the exposure to **antiepileptics (fosphenytoin)**. Avoid or adjust **voriconazole** dose and monitor **phenytoin** concentration, p. 635. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the exposure to **ketoconazole**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **posaconazole**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital)** decrease the concentration of **itraconazole**. Avoid and for 14 days after stopping **phenobarbital**. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital)** are predicted to decrease the concentration of **ketoconazole**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital)** are predicted to decrease the concentration of **posaconazole**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the concentration of **voriconazole**. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (phenytoin)** very markedly decrease the exposure to **itraconazole**. Avoid and for 14 days after stopping **phenytoin**. [Moderate] Study

## Antifungals, azoles (continued)

- ▶ **Antiepileptics (phenytoin)** decrease the exposure to **voriconazole** and **voriconazole** increases the exposure to **antiepileptics (phenytoin)**. Avoid or adjust **voriconazole** dose and monitor **phenytoin** concentration, p. 635, p. 339. [Moderate] Study
- ▶ **Antiepileptics (primidone)** are predicted to decrease the concentration of **itraconazole**. [Moderate] Theoretical
- ▶ **Miconazole** increases the risk of carbamazepine toxicity when given with **antiepileptics (carbamazepine)**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Miconazole** increases the risk of phenytoin toxicity when given with **antiepileptics (fosphenytoin)**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Fluconazole** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the efficacy of antifungals, azoles (**itraconazole, voriconazole**) and antifungals, azoles (**itraconazole, voriconazole**) increase the concentration of **antiepileptics (carbamazepine)**. Avoid or adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 1446
- ▶ **Antiepileptics (primidone)** are predicted to decrease the concentration of antifungals, azoles (**ketoconazole, posaconazole**). Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to very slightly increase the exposure to **antiepileptics (perampanel)**. [Mild] Study
- ▶ **Miconazole** increases the risk of phenytoin toxicity when given with **antiepileptics (phenytoin)**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ Antifungals, azoles (**fluconazole**) are predicted to increase the exposure to antifungals, azoles (**isavuconazole**). [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to antifungals, azoles (**isavuconazole**). Avoid or monitor side effects. [Severe] Study
- ▶ Antifungals, azoles (**posaconazole**) are predicted to increase the exposure to antifungals, azoles (**isavuconazole**). [Moderate] Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole**) are predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Ketoconazole** increases the exposure to **antimalarials (mefloquine)**. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole, itraconazole, posaconazole, voriconazole**) are predicted to increase the exposure to **antimalarials (mefloquine)**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole**) are predicted to increase the concentration of **antimalarials (piperazine)**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **apalutamide**. [Mild] Study → Also see TABLE 9 p. 1448
- ▶ **Apalutamide** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Study
- ▶ **Itraconazole** is predicted to increase the exposure to **apixaban**. Avoid. [Severe] Theoretical
- ▶ **Ketoconazole** slightly to moderately increases the exposure to **apixaban**. Avoid. [Severe] Study
- ▶ **Voriconazole** is predicted to increase the exposure to **apixaban**. Avoid. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **Fluconazole** is predicted to increase the exposure to **aprepitant**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **isavuconazole**. [Moderate] Theoretical
- ▶ **Posaconazole** is predicted to increase the exposure to **aprepitant**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 413. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 1 p. 1446 → Also see TABLE 9 p. 1448
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study → Also see TABLE 1 p. 1446 → Also see TABLE 9 p. 1448
- ▶ Antifungals, azoles (**itraconazole, ketoconazole**) are predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **beta<sub>2</sub> agonists (salmeterol)**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole**) are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Posaconazole** is predicted to increase the exposure to **bictegravir**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) slightly increase the exposure to **bortezomib**. [Moderate] Study
- ▶ **Fluconazole** is predicted to increase the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- ▶ **Itraconazole** is predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ **Ketoconazole** moderately increases the exposure to **bosentan**. [Moderate] Study
- ▶ **Voriconazole** is predicted to increase the exposure to **bosentan**. Avoid. [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **brigatinib**. Adjust **brigatinib** dose, p. 1024. [Severe] Study
- ▶ **Isavuconazole** slightly increases the exposure to **bupropion**. Adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) are predicted to increase the exposure to **bupirone**. Adjust **bupirone** dose, p. 358. [Severe] Study
- ▶ **Miconazole** is predicted to increase the concentration of **bupirone**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole, isavuconazole, posaconazole**) are predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- ▶ Antifungals, azoles (**itraconazole, ketoconazole, voriconazole**) slightly increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **isavuconazole**. [Moderate] Theoretical

- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **calcium channel blockers** (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Miconazole** is predicted to increase the exposure to **calcium channel blockers** (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**, **verapamil**). Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **calcium channel blockers** (**amlodipine**, **felodipine**, **lacidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Miconazole** is predicted to increase the exposure to **calcium channel blockers** (**diltiazem**). [Moderate] Theoretical
- ▶ **Fluconazole** (high-dose) is predicted to increase the exposure to **calcium channel blockers** (**diltiazem**, **verapamil**). [Moderate] Theoretical
- ▶ **Posaconazole** is predicted to increase the exposure to **calcium channel blockers** (**diltiazem**, **verapamil**). [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **calcium channel blockers** (**diltiazem**, **verapamil**). [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **calcium channel blockers** (**lercanidipine**). Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study
- ▶ **Fluconazole** is predicted to increase the exposure to **cannabidiol**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 1026. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Miconazole** increases the concentration of **ciclosporin**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 246. [Moderate] Study
- ▶ **Fluconazole** is predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 246. [Moderate] Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to **cilostazol**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **voriconazole**) potentially increase the exposure to **clobazam**. Adjust dose. [Moderate] Theoretical
- ▶ **Fluconazole** is predicted to decrease the efficacy of **clodogrel**. Avoid. [Severe] Theoretical
- ▶ **Voriconazole** is predicted to decrease the efficacy of **clodogrel**. Avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to antifungals, azoles (**fluconazole**, **posaconazole**). [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to antifungals, azoles (**itraconazole**, **ketoconazole**). Adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **isavuconazole**. Avoid or monitor side effects. [Severe] Study
- ▶ **Cobicistat** is predicted to affect the exposure to **voriconazole**. Avoid. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **miconazole**, **posaconazole**) are predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1183. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1183. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **corticosteroids** (**beclomethasone**) (risk with beclomethasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **corticosteroids** (**betamethasone**, **budesonide**, **ciclesonide**, **deflazacort**, **dexamethasone**, **fludrocortisone**, **fluticasone**, **hydrocortisone**, **methylprednisolone**, **mometasone**, **prednisolone**, **triamcinolone**). Avoid or monitor side effects. [Severe] Study
- ▶ **Miconazole** is predicted to increase the concentration of **corticosteroids** (**methylprednisolone**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **corticosteroids** (**methylprednisolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Fluconazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Itraconazole** potentially increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Ketoconazole** potentially increases the anticoagulant effect of **coumarins** (**warfarin**). Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Miconazole** greatly increases the anticoagulant effect of **coumarins**. MHRA advises avoid unless INR can be monitored closely; monitor for signs of bleeding. [Severe] Study
- ▶ **Voriconazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Isavuconazole** is predicted to increase the exposure to **dabigatran**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) very slightly increase the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ Antifungals, azoles (**fluconazole**, **voriconazole**) moderately increase the exposure to **diazepam**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to slightly increase the exposure to **dienogest**. [Moderate] Study

## Antifungals, azoles (continued)

- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **dienogest**. [\[Moderate\]](#) Study
- Isavuconazole** slightly increases the exposure to **digoxin**. Monitor and adjust dose. [\[Moderate\]](#) Study
- Itraconazole** is predicted to markedly increase the concentration of **digoxin**. Monitor and adjust dose. [\[Severe\]](#) Study
- Ketoconazole** is predicted to markedly increase the concentration of **digoxin**. [\[Severe\]](#) Study
- Posaconazole** is predicted to increase the concentration of **digoxin**. [\[Severe\]](#) Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) increase the risk of QT-prolongation when given with **domperidone**. Avoid. [\[Severe\]](#) Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [\[Severe\]](#) Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) increase the exposure to **dopamine receptor agonists (bromocriptine)**. [\[Severe\]](#) Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [\[Moderate\]](#) Anecdotal
- Isavuconazole** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [\[Moderate\]](#) Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **doravirine**. [\[Mild\]](#) Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **dronabinol**. Adjust dose. [\[Mild\]](#) Study
- Ketoconazole** moderately increases the exposure to **doxipreneone**. [\[Severe\]](#) Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to moderately increase the exposure to **dutasteride**. [\[Mild\]](#) Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [\[Moderate\]](#) Theoretical
- Itraconazole** is predicted to slightly increase the exposure to **edoxaban**. [\[Severe\]](#) Theoretical
- Ketoconazole** slightly increases the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 135. [\[Severe\]](#) Study
- Efavirenz** is predicted to decrease the exposure to **isavuconazole**. Avoid. [\[Severe\]](#) Theoretical
- Efavirenz** slightly decreases the exposure to **itraconazole**. Avoid and for 14 days after stopping **efavirenz**. [\[Moderate\]](#) Study
- Efavirenz** moderately decreases the exposure to **ketoconazole**. [\[Severe\]](#) Study
- Efavirenz** slightly decreases the exposure to **posaconazole**. Avoid. [\[Moderate\]](#) Study
- Efavirenz** moderately decreases the exposure to **voriconazole** and **voriconazole** slightly increases the exposure to **efavirenz**. Adjust dose. [\[Severe\]](#) Study → Also see TABLE 9 p. 1448
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **elotriptan**. Avoid. [\[Severe\]](#) Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to moderately increase the exposure to **encorafenib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1448
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **encorafenib**. Avoid or monitor. [\[Severe\]](#) Study → Also see TABLE 9 p. 1448
- Enzalutamide** is predicted to decrease the exposure to **isavuconazole**. Avoid. [\[Severe\]](#) Study

- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the risk of ergotism when given with **ergometrine**. [\[Severe\]](#) Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [\[Severe\]](#) Theoretical
- Miconazole** is predicted to increase the exposure to **ergometrine**. Avoid. [\[Moderate\]](#) Theoretical
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the risk of ergotism when given with **ergotamine**. [\[Severe\]](#) Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [\[Severe\]](#) Theoretical
- Miconazole** is predicted to increase the exposure to **ergotamine**. Avoid. [\[Moderate\]](#) Theoretical
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **esketamine**. Adjust dose. [\[Moderate\]](#) Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [\[Moderate\]](#) Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of **everolimus**. Avoid. [\[Severe\]](#) Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 821. [\[Mild\]](#) Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 821. [\[Severe\]](#) Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **fosaprepitant**. [\[Moderate\]](#) Theoretical
- Posaconazole** is predicted to increase the exposure to **fosaprepitant**. [\[Moderate\]](#) Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **gefitinib**. [\[Moderate\]](#) Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **gilteritinib**. [\[Moderate\]](#) Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**) potentially increase the exposure to **glecaprevir**. [\[Moderate\]](#) Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [\[Severe\]](#) Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 370. [\[Moderate\]](#) Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 370. [\[Moderate\]](#) Study
- H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **itraconazole**. Administer **itraconazole** capsules with an acidic beverage, p. 632. [\[Moderate\]](#) Study
- H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **ketoconazole**. Administer **ketoconazole** with an acidic beverage, p. 718. [\[Moderate\]](#) Study
- H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **posaconazole**. Avoid use of posaconazole oral suspension. [\[Moderate\]](#) Study

- ▶ **Itraconazole** increases the concentration of **haloperidol**. [Moderate] Study
- ▶ **Fluconazole** slightly increases the exposure to **HIV-protease inhibitors (tipranavir)**. Avoid or adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **isavuconazole**. Avoid or monitor side effects. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **itraconazole**. Use with caution and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ketoconazole**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Miconazole** is predicted to increase the concentration of **HIV-protease inhibitors**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Posaconazole** is predicted to increase the exposure to **HIV-protease inhibitors**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to affect the exposure to **voriconazole** and **voriconazole** potentially affects the exposure to **HIV-protease inhibitors**. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 1037. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 1037. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **isavuconazole**. Avoid or monitor side effects. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **posaconazole**) are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **isavuconazole**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 225. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 308 or **tezacaftor** with **ivacaftor** p. 310 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 308 or **lumacaftor** with **ivacaftor** p. 309 or **tezacaftor** with **ivacaftor** p. 310 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Lanthanum** is predicted to decrease the absorption of **ketoconazole**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 1042. [Moderate] Study
- ▶ **Letermovir** slightly decreases the exposure to **voriconazole**. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical → Also see TABLE 1 p. 1446
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study → Also see TABLE 1 p. 1446
- ▶ **Clotrimazole** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose, p. 1044. [Severe] Study
- ▶ **Lumacaftor** is predicted to decrease the exposure to antifungals, azoles (**itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**). Avoid or monitor efficacy. [Moderate] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **fluconazole**. Adjust dose. [Mild] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**) are predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 416. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study
- ▶ **Posaconazole** moderately increases the exposure to **lurasidone**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **isavuconazole**. Avoid or monitor side effects. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **isavuconazole**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Metoclopramide** potentially decreases the absorption of **posaconazole** (oral suspension). [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
- ▶ **Miconazole** is predicted to increase the exposure to intravenous **midazolam**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to oral **midazolam**. Avoid. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 824. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) increase the risk of neutropenia when given with **monoclonal antibodies (brentuximab vedotin)**. Monitor and adjust dose. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [Severe] Theoretical
- ▶ **Isavuconazole** increases the exposure to **mycophenolate**. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **naldemedine**. [Moderate] Study

## Antifungals, azoles (continued)

- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 69. [Moderate] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **neratinib**. Avoid. [Severe] Study → Also see TABLE 1 p. 1446
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **neratinib**. Avoid or adjust **neratinib** dose, p. 1046. [Severe] Study → Also see TABLE 1 p. 1446
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **netupitant**. [Moderate] Study
- Netupitant** is predicted to decrease the exposure to **isavuconazole**. [Moderate] Theoretical
- Fluconazole** slightly to moderately increases the exposure to **nevirapine**. [Moderate] Study
- Nevirapine** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- Nevirapine** moderately decreases the exposure to **itraconazole**. Avoid and for 14 days after stopping **nevirapine**. [Moderate] Study
- Nevirapine** moderately decreases the exposure to **ketoconazole**. Avoid. [Severe] Study
- Nevirapine** is predicted to decrease the exposure to **voriconazole** and **voriconazole** increases the exposure to **nevirapine**. Monitor and adjust dose. [Severe] Theoretical
- Antifungals, azoles (**fluconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- Fluconazole** moderately increases the exposure to **NSAIDs (celecoxib)**. Adjust **celecoxib** dose, p. 1195. [Moderate] Study
- Voriconazole** slightly increases the exposure to **NSAIDs (diclofenac)**. Monitor and adjust dose. [Moderate] Study
- Voriconazole** moderately increases the exposure to **NSAIDs (ibuprofen)**. Adjust dose. [Moderate] Study
- Fluconazole** increases the exposure to **NSAIDs (parecoxib)**. Monitor and adjust dose. [Moderate] Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1063. [Moderate] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1063. [Moderate] Study
- Miconazole** is predicted to increase the exposure to **opioids (alfentanil)**. Use with caution and adjust dose. [Moderate] Theoretical
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Severe] Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical → Also see TABLE 9 p. 1448

- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **opioids (methadone)**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1448
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- Fluconazole** increases the exposure to **ospemifene**. Use with caution or avoid. [Moderate] Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **oxybutynin**. [Mild] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1050. [Severe] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 987. [Moderate] Study → Also see TABLE 9 p. 1448
- Posaconazole** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **paritaprevir**. Avoid. [Severe] Study
- Posaconazole** is predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir) and **paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **posaconazole**. Avoid. [Severe] Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 1051. [Moderate] Study → Also see TABLE 9 p. 1448
- Miconazole** greatly increases the anticoagulant effect of **phenindione**. [Severe] Theoretical
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 858. [Moderate] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- Miconazole** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Use with caution and adjust dose. [Severe] Theoretical
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 859. [Moderate] Study → Also see TABLE 9 p. 1448
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 859. [Severe] Study → Also see TABLE 9 p. 1448
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [Severe] Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1448
- Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1448

- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Miconazole** is predicted to increase the exposure to **pimozide**. Avoid. [Moderate] Theoretical
- ▶ **Pioglitazone** potentially decreases the exposure to **isavuconazole**. Use with caution or avoid. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1052. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) given with **carbamazole** are predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical
- ▶ **Proton pump inhibitors** decrease the absorption of **itraconazole**. Administer itraconazole capsules with an acidic beverage. [Moderate] Study
- ▶ **Proton pump inhibitors** decrease the absorption of **ketoconazole**. Administer ketoconazole with an acidic beverage. [Moderate] Study
- ▶ **Proton pump inhibitors** decrease the absorption of **posaconazole** (oral suspension). Avoid. [Moderate] Study
- ▶ **Voriconazole** increases the exposure to **proton pump inhibitors** (**esomeprazole**, **omeprazole**). Adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
- ▶ **Miconazole** is predicted to increase the concentration of **reboxetine**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **itraconazole**, **ketoconazole**, **miconazole**, **voriconazole**) are predicted to increase the exposure to **retinoids** (**alitretinoin**). Adjust alitretinoin dose, p. 1328. [Moderate] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the risk of tretinoin toxicity when given with **retinoids** (**tretinoin**). [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1054. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ Antifungals, azoles (**itraconazole**, **posaconazole**) increase the concentration of **rifabutin** and **rifabutin** decreases the concentration of antifungals, azoles (**itraconazole**, **posaconazole**). Avoid. [Severe] Study
- ▶ **Fluconazole** increases the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Study
- ▶ **Rifabutin** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- ▶ **Ketoconazole** is predicted to increase the concentration of **rifabutin** and **rifabutin** is predicted to decrease the concentration of **ketoconazole**. Avoid. [Severe] Theoretical
- ▶ **Miconazole** is predicted to increase the concentration of **rifabutin**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Rifabutin** decreases the concentration of **voriconazole** and **voriconazole** increases the concentration of **rifabutin**. Avoid or adjust **voriconazole** dose, p. 635. [Severe] Study
- ▶ **Rifampicin** slightly decreases the exposure to **fluconazole**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Study
- ▶ **Rifampicin** markedly decreases the exposure to **itraconazole**. Avoid and for 14 days after stopping **rifampicin**. [Moderate] Study
- ▶ **Rifampicin** markedly decreases the exposure to **ketoconazole** and **ketoconazole** potentially decreases the exposure to **rifampicin**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **posaconazole**. Avoid. [Moderate] Anecdotal
- ▶ **Rifampicin** very markedly decreases the exposure to **voriconazole**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **posaconazole**) are predicted to increase the exposure to **riociguat**. Adjust **riociguat** dose and monitor blood pressure, p. 196. [Moderate] Theoretical
- ▶ **Ketoconazole** moderately increases the exposure to **riociguat**. Adjust **riociguat** dose and monitor blood pressure, p. 196. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to moderately increase the exposure to **rivaroxaban**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **roxolitinib**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **roxolitinib**. Adjust dose and monitor side effects. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Fluconazole** is predicted to increase the exposure to **selexipag**. [Unknown] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ **Miconazole** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Miconazole** is predicted to increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ Oral **sodium bicarbonate** decreases the absorption of **ketoconazole**. [Moderate] Study
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **antifungals, azoles**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **solifenacin**. Adjust solifenacin p. 834 or tamsulosin with solifenacin p. 829 dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Voriconazole** is predicted to increase the exposure to **SSRIs** (**citalopram**). [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **SSRIs** (**dapoxetine**). Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 866. [Moderate] Theoretical

## Antifungals, azoles (continued)

- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **SSRIs** (**dapoxetine**). Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 866. [Severe] Study
- St John's Wort** is predicted to decrease the exposure to **isavuconazole**. Avoid. [Severe] Theoretical
- St John's Wort** moderately decreases the exposure to **voriconazole**. Avoid. [Moderate] Study
- Fluconazole** potentially increases the risk of rhabdomyolysis when given with **statins** (**atorvastatin**). Monitor and adjust dose. [Severe] Anecdotal → Also see TABLE 1 p. 1446
- Isavuconazole** slightly increases the exposure to **statins** (**atorvastatin**). [Moderate] Study
- Miconazole** potentially increases the exposure to **statins** (**atorvastatin**). [Severe] Anecdotal
- Posaconazole** is predicted to increase the exposure to **statins** (**atorvastatin**). Avoid. [Severe] Anecdotal
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **statins** (**atorvastatin**). Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study → Also see TABLE 1 p. 1446
- Antifungals, azoles (**fluconazole**, **miconazole**) are predicted to increase the exposure to **statins** (**fluvastatin**). [Severe] Theoretical → Also see TABLE 1 p. 1446
- Isavuconazole** is predicted to increase the exposure to **statins** (**fluvastatin**, **rosuvastatin**). [Moderate] Theoretical
- Fluconazole** is predicted to increase the exposure to **statins** (**simvastatin**). Monitor and adjust dose. [Severe] Anecdotal → Also see TABLE 1 p. 1446
- Isavuconazole** is predicted to increase the exposure to **statins** (**simvastatin**). Monitor and adjust dose. [Severe] Theoretical
- Miconazole** is predicted to increase the exposure to **statins** (**simvastatin**). Avoid. [Severe] Theoretical
- Posaconazole** markedly to very markedly increases the exposure to **statins** (**simvastatin**). Avoid. [Severe] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **statins** (**simvastatin**). Avoid. [Severe] Study → Also see TABLE 1 p. 1446
- Isavuconazole** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Theoretical
- Antifungals, azoles (**fluconazole**, **miconazole**) are predicted to increase the exposure to **sulfonyleureas**. Use with caution and adjust dose. [Moderate] Study
- Voriconazole** is predicted to increase the concentration of **sulfonyleureas**. Use with caution and adjust dose. [Moderate] Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1057. [Moderate] Study → Also see TABLE 9 p. 1448
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **tacrolimus**. [Severe] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- Miconazole** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1065. [Severe] Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **taxanes** (**cabazitaxel**). [Moderate] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **taxanes** (**cabazitaxel**). Avoid. [Severe] Study
- Miconazole** is predicted to increase the concentration of **taxanes** (**docetaxel**). Use with caution and adjust dose. [Moderate] Theoretical

- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **taxanes** (**docetaxel**). Avoid or adjust dose. [Severe] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **taxanes** (**paclitaxel**). [Severe] Theoretical
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor** with **ivacaftor** p. 310 dose with moderate inhibitors of CYP3A4. [Severe] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor** with **ivacaftor** p. 310 dose with potent inhibitors of CYP3A4. [Severe] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1167. [Moderate] Study
- Fluconazole** increases the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1167. [Moderate] Study
- Isavuconazole** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1167. [Moderate] Study
- Posaconazole** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1167. [Moderate] Theoretical
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1448
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4, p. 706. [Moderate] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent inhibitors of CYP3A4, p. 706. [Severe] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **topotecan**. [Severe] Study
- Isavuconazole** is predicted to increase the exposure to **topotecan**. [Moderate] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 1 p. 1446
- Antifungals, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study

- ▶ **Posaconazole** is predicted to increase the exposure to **upadactinib**. Use with caution or avoid. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to  **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **venlafaxine**. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 1 p. 1446 → Also see TABLE 9 p. 1448
- ▶ **Miconazole** is predicted to increase the concentration of **vinca alkaloids**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Antifungals, azoles (**clotrimazole**, **ketoconazole**) are predicted to decrease the exposure to **vitamin D substances (colecalciferol)**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [Moderate] Study
- ▶ **Fluconazole** slightly increases the exposure to **zidovudine**. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical

**Antihistamines, non-sedating** → see TABLE 9 p. 1448 (QT-interval prolongation)

acrivastine • azelastine • bilastine • cetirizine • desloratadine • fexofenadine • levocetirizine • loratadine • mizolastine • rupatadine

- ▶ Since systemic absorption can follow topical application, the possibility of interactions with topical **azelastine** should be borne in mind.
- ▶ Apple juice and orange juice decrease the exposure to **fexofenadine**.
- ▶ **Antacids** decrease the absorption of **fexofenadine**. Separate administration by 2 hours. [Mid] Study
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to antihistamines, non-sedating (**fexofenadine**, **mizolastine**). [Severe] Theoretical
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **mizolastine**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**miconazole**) are predicted to increase the exposure to **mizolastine**. Avoid. [Moderate] Theoretical
- ▶ **Apalutamide** slightly decreases the exposure to **fexofenadine**. [Mid] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ **Antihistamines, non-sedating** are predicted to decrease the effects of **betahistine**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **fexofenadine**. [Moderate] Theoretical

- ▶ **Cobicistat** is predicted to increase the exposure to **mizolastine**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **fexofenadine**. Adjust dose. [Moderate] Study
- ▶ **Grapefruit juice** slightly decreases the exposure to **bilastine**. Bilastine should be taken 1 hour before or 2 hours after grapefruit juice. [Moderate] Study
- ▶ **Grapefruit juice** increases the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **mizolastine**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **mizolastine**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **fexofenadine**. Avoid. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **fexofenadine**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the concentration of **fexofenadine**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **mizolastine**. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
- ▶ **MAOIs, irreversible** are predicted to increase the risk of antimuscarinic side-effects when given with antihistamines, non-sedating. Avoid. [Severe] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **fexofenadine**. [Mid] Theoretical
- ▶ **Neratinib** is predicted to increase the exposure to **fexofenadine**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **mizolastine**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **rupatadine**. Avoid. [Moderate] Study
- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **fexofenadine**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **fexofenadine**. [Mid] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **bilastine**. [Moderate] Theoretical
- ▶ **Rifampicin** increases the clearance of **fexofenadine**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **fexofenadine**. [Moderate] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **fexofenadine**. [Severe] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **fexofenadine**. [Moderate] Theoretical

**Antihistamines, sedating** → see TABLE 9 p. 1448 (QT-interval prolongation), TABLE 11 p. 1448 (CNS depressant effects), TABLE 10 p. 1448 (antimuscarinics)

alimemazine • antazoline • buclizine • chlorphenamine • cinnarizine • clemastine • cyclizine • cyproheptadine • doxylamine • hydroxyzine •

ketotifen • pizotifen • promethazine

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application of **ketotifen**, the possibility of interactions should be borne in mind.

- ▶ **Hydroxyzine** potentially increases the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [\[Severe\]](#) Theoretical
- ▶ **Antihistamines, sedating** are predicted to decrease the effects of **betahistine**. [\[Moderate\]](#) Theoretical
- ▶ **MAOIs, irreversible** are predicted to increase the risk of antimuscarinic side-effects when given with **antihistamines, sedating**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Cyproheptadine** decreases the effects of **metryapone**. Avoid. [\[Moderate\]](#) Study
- ▶ **Antihistamines, sedating** are predicted to decrease the efficacy of **pitolisant**. [\[Moderate\]](#) Theoretical
- ▶ **Cyproheptadine** potentially decreases the effects of **SSRIs**. [\[Moderate\]](#) Anecdotal

**Antimalarials** → see TABLE 15 p. 1449 (myelosuppression), TABLE 9 p. 1448 (QT-interval prolongation)

artemether • arteminol • atovaquone • chloroquine • lumefantrine • mefloquine • piperazine • primaquine • proguanil • pyrimethamine • quinine

**PHARMACOLOGY** **Piperazine** has a long half-life; there is a potential for drug interactions to occur for up to 3 months after treatment has been stopped.

- ▶ **Chloroquine** is predicted to decrease the effects of **agalsidase alfa**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Chloroquine** is predicted to decrease the effects of **agalsidase beta**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Antimalarials (chloroquine, primaquine)** are predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [\[Severe\]](#) Theoretical
- ▶ **Antacids** decrease the absorption of **chloroquine**. Separate administration by at least 4 hours. [\[Moderate\]](#) Study
- ▶ **Antacids** are predicted to decrease the absorption of **proguanil**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the concentration of **piperazine**. [\[Severe\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **artemether** (with lumefantrine). Avoid. [\[Severe\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **piperazine**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Antiepileptics (carbamazepine, phenobarbital, primidone)** potentially increase the risk of toxicity when given with **quinine**. [\[Unknown\]](#) Study
- ▶ **Pyrimethamine** increases the risk of haematological toxicity when given with **antiepileptics (fosphenytoin, phenytoin)**. [\[Severe\]](#) Study
- ▶ **Pyrimethamine** is predicted to increase the risk of haematological toxicity when given with **antiepileptics (phenobarbital, primidone)**. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the concentration of **piperazine**. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole, itraconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **mefloquine**. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles (ketoconazole)** increase the exposure to **mefloquine**. [\[Moderate\]](#) Study
- ▶ **Antimalarials (proguanil)** are predicted to increase the risk of side-effects when given with antimalarials (**pyrimethamine**). [\[Severe\]](#) Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to **artemether** (with lumefantrine). Avoid. [\[Severe\]](#) Study → Also see TABLE 9 p. 1448
- ▶ **Apalutamide** is predicted to decrease the concentration of **piperazine**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Aprépitant** is predicted to increase the concentration of **piperazine**. [\[Severe\]](#) Theoretical
- ▶ **Mefloquine** is predicted to increase the risk of bradycardia when given with **beta blockers, non-selective**. [\[Severe\]](#) Theoretical
- ▶ **Mefloquine** is predicted to increase the risk of bradycardia when given with **beta blockers, selective**. [\[Severe\]](#) Theoretical
- ▶ **Mefloquine** is predicted to increase the risk of bradycardia when given with **calcium channel blockers**. [\[Severe\]](#) Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **piperazine**. [\[Severe\]](#) Theoretical
- ▶ **Calcium salts (calcium carbonate)** decrease the absorption of **chloroquine**. Separate administration by at least 4 hours. [\[Moderate\]](#) Study
- ▶ **Calcium salts (calcium carbonate)** are predicted to decrease the absorption of **proguanil**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ **Chloroquine** decreases the efficacy of oral **cholera vaccine**. [\[Moderate\]](#) Study
- ▶ **Cobicistat** is predicted to increase the concentration of **piperazine**. [\[Severe\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of **piperazine**. [\[Severe\]](#) Theoretical
- ▶ **Antimalarials (chloroquine, primaquine)** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [\[Severe\]](#) Theoretical
- ▶ **Mefloquine** is predicted to increase the risk of bradycardia when given with **digoxin**. [\[Severe\]](#) Theoretical
- ▶ **Quinine** increases the concentration of **digoxin**. Monitor and adjust **digoxin** dose, p. 116. [\[Severe\]](#) Anecdotal
- ▶ **Efavirenz** decreases the concentration of **artemether**. [\[Severe\]](#) Study → Also see TABLE 9 p. 1448
- ▶ **Efavirenz** moderately decreases the exposure to **atovaquone**. Avoid. [\[Moderate\]](#) Study
- ▶ **Efavirenz** affects the exposure to **proguanil**. Avoid. [\[Moderate\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **artemether** (with lumefantrine). Avoid. [\[Severe\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the concentration of **piperazine**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Etravirine** decreases the exposure to **artemether**. [\[Moderate\]](#) Study
- ▶ **Grapefruit juice** increases the exposure to **artemether**. [\[Unknown\]](#) Study
- ▶ **Grapefruit juice** is predicted to increase the concentration of **piperazine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** decrease the clearance of **chloroquine**. [\[Moderate\]](#) Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **quinine**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** decrease the exposure to **atovaquone**. Avoid if boosted with ritonavir. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **piperazine**. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to decrease the exposure to **proguanil**. Avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to affect the exposure to **quinine**. [\[Severe\]](#) Study → Also see TABLE 9 p. 1448
- ▶ **Idelalisib** is predicted to increase the concentration of **piperazine**. [\[Severe\]](#) Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **piperazine**. [\[Severe\]](#) Theoretical
- ▶ **Lanthanum** is predicted to decrease the absorption of **chloroquine**. Separate administration by at least 2 hours. [\[Moderate\]](#) Theoretical
- ▶ **Chloroquine** is predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the concentration of **piperazine**. [\[Severe\]](#) Theoretical
- ▶ **Mepacrine** is predicted to increase the concentration of **primaquine**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Pyrimethamine** is predicted to increase the risk of side-effects when given with **methotrexate**. [\[Severe\]](#) Theoretical → Also see TABLE 15 p. 1449
- ▶ **Metoclopramide** decreases the concentration of **atovaquone**. Avoid. [\[Moderate\]](#) Study

- ▶ **Mitotane** is predicted to decrease the exposure to **artemether** (with lumefantrine). Avoid. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the concentration of **piperaquine**. Avoid. [Moderate] Theoretical
  - ▶ **Netupitant** is predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
  - ▶ **Nilotinib** is predicted to increase the concentration of **piperaquine**. [Severe] Theoretical
  - ▶ **Pyrimethamine** is predicted to increase the risk of side-effects when given with **pemetrexed**. [Severe] Theoretical → Also see TABLE 15 p. 1449
  - ▶ **Chloroquine** is predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [Severe] Theoretical
  - ▶ **Chloroquine** moderately decreases the exposure to **praziquantel**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Chloroquine** decreases the efficacy of **rabies vaccine** (intradermal). Avoid. [Moderate] Study
  - ▶ **Rifabutin** slightly decreases the exposure to **atovaquone**. Avoid. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **artemether** (with lumefantrine). Avoid. [Severe] Study
  - ▶ **Rifampicin** moderately decreases the exposure to **atovaquone** and **atovaquone** slightly increases the exposure to **rifampicin**. Avoid. [Moderate] Study
  - ▶ **Rifampicin** moderately decreases the exposure to **mefloquine**. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the concentration of **piperaquine**. Avoid. [Moderate] Theoretical
  - ▶ **Rifampicin** decreases the exposure to **quinine**. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the concentration of **piperaquine**. Avoid. [Moderate] Theoretical
  - ▶ **Pyrimethamine** increases the risk of side-effects when given with **sulfonamides**. [Severe] Study → Also see TABLE 15 p. 1449
  - ▶ **Tetracyclines (tetracycline)** decrease the concentration of **atovaquone**. [Moderate] Study
  - ▶ **Pyrimethamine** increases the risk of side-effects when given with **trimethoprim**. [Severe] Study → Also see TABLE 15 p. 1449
  - ▶ **Pyrimethamine** is predicted to increase the risk of side-effects when given with **zidovudine**. [Severe] Theoretical → Also see TABLE 15 p. 1449
- Antithymocyte immunoglobulin (rabbit)** → see immunoglobulins
- Apalutamide** → see TABLE 9 p. 1448 (QT-interval prolongation)
- ▶ **Apalutamide** is predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **abiraterone**. Avoid. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Theoretical
  - ▶ **Apalutamide** is predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical
  - ▶ **Apalutamide** is predicted to decrease the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
  - ▶ **Apalutamide** is predicted to decrease the efficacy of **antiarrhythmics (propafenone)**. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **anticholinesterases, centrally acting (donepezil)**. [Mild] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **antiepileptics (perampanel)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Apalutamide** potentially decreases the exposure to **antiepileptics (valproate)**. [Mild] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **apalutamide**. [Mild] Study → Also see TABLE 9 p. 1448
  - ▶ **Apalutamide** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Study
  - ▶ **Apalutamide** slightly decreases the exposure to **antihistamines, non-sedating (fexofenadine)**. [Mild] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **antimalarials (artemether)** (with lumefantrine). Avoid. [Severe] Study → Also see TABLE 9 p. 1448
  - ▶ **Apalutamide** is predicted to decrease the concentration of **antimalarials (piperaquine)**. Avoid. [Moderate] Theoretical
  - ▶ **Apalutamide** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
  - ▶ **Apalutamide** moderately decreases the exposure to **apremilast**. Avoid. [Severe] Study
  - ▶ **Apalutamide** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
  - ▶ **Apalutamide** is predicted to moderately decrease the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 413. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
  - ▶ **Apalutamide** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
  - ▶ **Apalutamide** is predicted to decrease the exposure to **beta<sub>2</sub> agonists (salmeterol)**. Avoid or monitor. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Study
  - ▶ **Apalutamide** slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study
  - ▶ **Apalutamide** affects the exposure to **bosentan**. Avoid. [Severe] Study
  - ▶ **Apalutamide** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
  - ▶ **Apalutamide** is predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. [Severe] Study
  - ▶ **Apalutamide** moderately decreases the exposure to **cabozantinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1448
  - ▶ **Apalutamide** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
  - ▶ **Apalutamide** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
  - ▶ **Apalutamide** decreases the concentration of **ciclosporin**. [Severe] Study
  - ▶ **Apalutamide** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
  - ▶ **Apalutamide** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Apalutamide** decreases the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Clopidogrel** is predicted to increase the exposure to **apalutamide**. [Mild] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **apalutamide**. [Mild] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **Apalutamide** is predicted to decrease the exposure to **colchicine**. [Mild] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **corticosteroids (budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **corticosteroids (fluticasone)**. [Unknown] Theoretical
  - ▶ **Apalutamide** is predicted to decrease the exposure to **coumarins**. Avoid or monitor. [Mild] Study
  - ▶ **Apalutamide** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
  - ▶ **Apalutamide** is predicted to decrease the exposure to **dabigatran**. [Mild] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
  - ▶ **Apalutamide** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical

## Apalutamide (continued)

- ▶ Apalutamide is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ Apalutamide is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ Apalutamide is predicted to decrease the exposure to **diazepam**. Avoid or monitor. [Mild] Study
- ▶ Apalutamide is predicted to markedly decrease the exposure to **dienogest**. [Severe] Study
- ▶ Apalutamide is predicted to decrease the exposure to **digoxin**. [Mild] Study
- ▶ Apalutamide decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ Apalutamide is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
- ▶ Apalutamide is predicted to decrease the exposure to **drabinol**. Avoid or adjust dose. [Mild] Study
- ▶ Apalutamide is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ Apalutamide is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ Apalutamide is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ Apalutamide is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ Apalutamide is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ Apalutamide is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 1033. [Severe] Study
- ▶ Apalutamide is predicted to decrease the exposure to **esketamine**. Adjust dose. [Moderate] Theoretical
- ▶ Apalutamide is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
- ▶ Apalutamide is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ Apalutamide moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ Apalutamide is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **Fibrates (gemfibrozil)** are predicted to increase the exposure to apalutamide. [Mild] Study
- ▶ Apalutamide is predicted to decrease the exposure to  **fingolimod**. [Moderate] Study
- ▶ Apalutamide is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ Apalutamide is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ Apalutamide is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ Apalutamide is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Study
- ▶ Apalutamide decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to apalutamide. [Mild] Study → Also see TABLE 9 p. 1448
- ▶ Apalutamide is predicted to decrease the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 1037. [Severe] Study
- ▶ Apalutamide is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to apalutamide. [Mild] Study
- ▶ Apalutamide is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ Apalutamide is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ Apalutamide is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ Apalutamide is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ Apalutamide is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ Apalutamide is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ Apalutamide is predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ Apalutamide is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ Apalutamide is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Apalutamide is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study
- ▶ Apalutamide is predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study
- ▶ Apalutamide is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to apalutamide. [Mild] Study → Also see TABLE 9 p. 1448
- ▶ Apalutamide is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ Apalutamide is predicted to decrease the exposure to **methotrexate**. [Mild] Study
- ▶ Apalutamide is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ Apalutamide is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ Apalutamide is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ Apalutamide is predicted to decrease the exposure to  **moclobemide**. Avoid or monitor. [Mild] Study
- ▶ Apalutamide is predicted to decrease the exposure to  **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- ▶ Apalutamide is predicted to decrease the exposure to **montelukast**. [Mild] Study
- ▶ Apalutamide is predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- ▶ Apalutamide is predicted to decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ Apalutamide is predicted to slightly decrease the exposure to **nateglinide**. [Mild] Study
- ▶ Apalutamide is predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ Apalutamide is predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
- ▶ Apalutamide is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ Apalutamide is predicted to decrease the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ Apalutamide is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ Apalutamide is predicted to decrease the exposure to **ondansetron**. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ Apalutamide is predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [Moderate] Study
- ▶ Apalutamide is predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Apalutamide decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ Apalutamide is predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ Apalutamide is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ Apalutamide is predicted to moderately decrease the exposure to **osprelfene**. [Moderate] Study
- ▶ Apalutamide is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
- ▶ Apalutamide is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ Apalutamide is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- ▶ Apalutamide is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ Apalutamide is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ Apalutamide is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [Severe] Study

- ▶ **Apalutamide** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [Moderate] Theoretical → Also see TABLE 9 p. 1448
  - ▶ **Apalutamide** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
  - ▶ **Apalutamide** is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
  - ▶ **Apalutamide** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **proton pump inhibitors (lansoprazole, rabeprazole)**. Avoid or monitor. [Mild] Study
  - ▶ **Apalutamide** markedly decreases the exposure to **proton pump inhibitors (omeprazole)**. Avoid or monitor. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
  - ▶ **Apalutamide** is predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
  - ▶ **Apalutamide** is predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
  - ▶ **Apalutamide** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
  - ▶ **Apalutamide** markedly decreases the exposure to **rilpivirine**. Avoid. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1448
  - ▶ **Apalutamide** is predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
  - ▶ **Apalutamide** is predicted to markedly decrease the exposure to **rolapitant**. Avoid. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Apalutamide** is predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **siponimod**. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
  - ▶ **Apalutamide** is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical → Also see TABLE 9 p. 1448
  - ▶ **Apalutamide** is predicted to decrease the exposure to **SSRIs (citalopram)**. Avoid or monitor. [Mild] Study → Also see TABLE 9 p. 1448
  - ▶ **Apalutamide** slightly decreases the exposure to **statins (rosuvastatin)**. [Mild] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **statins (simvastatin)**. Avoid or monitor. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1057. [Moderate] Study → Also see TABLE 9 p. 1448
  - ▶ **Apalutamide** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **taxanes (cabazitaxel, paclitaxel)**. Avoid. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical
  - ▶ **Apalutamide** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study
  - ▶ **Apalutamide** decreases the exposure to **tetracyclines (doxycycline)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
  - ▶ **Apalutamide** potentially decreases the exposure to **thyroid hormones (levothyroxine)**. [Mild] Theoretical
  - ▶ **Apalutamide** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **tivozanib**. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1448
  - ▶ **Apalutamide** is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical
  - ▶ **Apalutamide** is predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1448
  - ▶ **Apalutamide** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1448
  - ▶ **Apalutamide** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical
  - ▶ **Apalutamide** is predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1448
  - ▶ **Apalutamide** is predicted to decrease the exposure to **vinca alkaloids (vinorelbine)**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Apalutamide** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
  - ▶ **Apalutamide** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- Apixaban** → see TABLE 3 p. 1446 (anticoagulant effects)
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
  - ▶ **Antifungals, azoles (itraconazole)** are predicted to increase the exposure to **apixaban**. Avoid. [Severe] Theoretical
  - ▶ **Antifungals, azoles (ketoconazole)** slightly to moderately increase the exposure to **apixaban**. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (voriconazole)** are predicted to increase the exposure to **apixaban**. Avoid. [Moderate] Theoretical
  - ▶ **Apalutamide** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
  - ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **apixaban**. Avoid. [Severe] Theoretical
  - ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **apixaban**. Avoid. [Severe] Theoretical
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
  - ▶ **Mitotane** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **apixaban**. Use with caution or avoid. [Moderate] Theoretical
- Apomorphine** → see dopamine receptor agonists

**Apraclonidine** → see TABLE 6 p. 1447 (bradycardia), TABLE 8 p. 1447 (hypotension), TABLE 11 p. 1448 (CNS depressant effects)

- ▶ **Amfetamines** are predicted to decrease the effects of apraclonidine. Avoid. [Severe] Theoretical
- ▶ **Methyphenidate** is predicted to decrease the effects of apraclonidine. Avoid. [Severe] Theoretical
- ▶ **Sympathomimetics, inotropic** are predicted to decrease the effects of apraclonidine. Avoid. [Severe] Theoretical
- ▶ **Sympathomimetics, vasoconstrictor** are predicted to decrease the effects of apraclonidine. Avoid. [Severe] Theoretical

#### Apremilast

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** moderately decrease the exposure to apremilast. Avoid. [Severe] Study
- ▶ **Apalutamide** moderately decreases the exposure to apremilast. Avoid. [Severe] Study
- ▶ **Enzalutamide** moderately decreases the exposure to apremilast. Avoid. [Severe] Study
- ▶ **Mitotane** moderately decreases the exposure to apremilast. Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to apremilast. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to apremilast. Avoid. [Severe] Theoretical

#### Aprepitant

- ▶ **Aprepitant** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust eplerenone dose, p. 205. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **alkylating agents (ifosfamide)**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Aprepitant** increases the exposure to **antiarrhythmics (dronedronarone)**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to aprepitant. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to aprepitant. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to aprepitant. [Moderate] Study
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to aprepitant. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the concentration of **antimalarials (piperazine)**. [Severe] Theoretical
- ▶ **Apalutamide** is predicted to markedly decrease the exposure to aprepitant. Avoid. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **beta<sub>2</sub> agonists (salmeterol)**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to aprepitant. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to aprepitant and aprepitant is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to aprepitant. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **colchicine**. Adjust colchicine dose with moderate inhibitors of CYP3A4, p. 1183. [Severe] Study
- ▶ **Aprepitant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 839. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to oral **corticosteroids (budesonide)**. [Moderate] Study
- ▶ **Aprepitant** moderately increases the exposure to **corticosteroids (dexamethasone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **corticosteroids (fluticasone)**. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Aprepitant** decreases the anticoagulant effect of **coumarins**. [Moderate] Study
- ▶ **Aprepitant** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ **Aprepitant** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Aprepitant** increases the risk of QT-prolongation when given with **domeperidone**. Avoid. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Aprepitant** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to aprepitant. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **eletriptan**. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Aprepitant** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to aprepitant. Avoid. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **fesoterodine**. Adjust fesoterodine dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 821. [Mild] Study

- ▶ **Aprepitant** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
  - ▶ **Aprepitant** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
  - ▶ **Aprepitant** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
  - ▶ **Aprepitant** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 1037. [Severe] Study
  - ▶ **Idelalisib** is predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to intravenous **irinotecan**. [Severe] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 225. [Severe] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 308 or **tezacaftor** with **ivacaftor** p. 310 dose with moderate inhibitors of CYP3A4. [Severe] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
  - ▶ **Aprepitant** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 416. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **aprepitant**. [Moderate] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **maraviroc**. [Moderate] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
  - ▶ **Mitotane** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 69. [Moderate] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **neratinib**. Avoid. [Severe] Study
  - ▶ **Nevirapine** is predicted to decrease the exposure to **aprepitant**. [Moderate] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical
  - ▶ **Aprepitant** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Anecdotal
  - ▶ **Aprepitant** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1063. [Moderate] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil**). Adjust **avanafil** dose, p. 858. [Moderate] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**sildenafil**). Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 859. [Moderate] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**tadalafil**). [Severe] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**vardenafil**). Adjust dose. [Severe] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **ranolazine**. [Severe] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **ribociclib**. [Moderate] Study
  - ▶ **Rifampicin** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
  - ▶ **Aprepitant** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 866. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **aprepitant**. Avoid. [Moderate] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to **statins (atorvastatin, simvastatin)**. Monitor and adjust dose. [Severe] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
  - ▶ **Aprepitant** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
  - ▶ **Aprepitant** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor** with **ivacaftor** p. 310 dose with moderate inhibitors of CYP3A4. [Severe] Study
  - ▶ **Aprepitant** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1167. [Moderate] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4, p. 706. [Moderate] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
  - ▶ **Aprepitant** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Anecdotal
  - ▶ **Aprepitant** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- Argatroban** → see TABLE 3 p. 1446 (anticoagulant effects)
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **argatroban**. [Severe] Theoretical
- Aripiprazole** → see TABLE 8 p. 1447 (hypotension), TABLE 11 p. 1448 (CNS depressant effects)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 413. [Moderate] Study → Also see TABLE 11 p. 1448
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 413. [Moderate] Study
  - ▶ **Apalutamide** is predicted to moderately decrease the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 413. [Moderate] Study

## Aripiprazole (continued)

- ▶ **Bupropion** is predicted to moderately increase the exposure to aripiprazole. Adjust aripiprazole dose, p. 413. [Moderate] Study
  - ▶ **Cinacalcet** is predicted to moderately increase the exposure to aripiprazole. Adjust aripiprazole dose, p. 413. [Moderate] Study
  - ▶ **Cobicistat** is predicted to slightly increase the exposure to aripiprazole. Adjust aripiprazole dose, p. 413. [Moderate] Study
  - ▶ Aripiprazole is predicted to decrease the effects of **dopamine receptor agonists**. [Moderate] Theoretical → Also see TABLE 8 p. 1447
  - ▶ **Enzalutamide** is predicted to moderately decrease the exposure to aripiprazole. Adjust aripiprazole dose, p. 413. [Moderate] Study
  - ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to aripiprazole. Adjust aripiprazole dose, p. 413. [Moderate] Study
  - ▶ **Idelalisib** is predicted to slightly increase the exposure to aripiprazole. Adjust aripiprazole dose, p. 413. [Moderate] Study
  - ▶ Aripiprazole is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1447
  - ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to aripiprazole. Adjust aripiprazole dose, p. 413. [Moderate] Study
  - ▶ **Mitotane** is predicted to moderately decrease the exposure to aripiprazole. Adjust aripiprazole dose, p. 413. [Moderate] Study
  - ▶ **Rifampicin** is predicted to moderately decrease the exposure to aripiprazole. Adjust aripiprazole dose, p. 413. [Moderate] Study
  - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to moderately increase the exposure to aripiprazole. Adjust aripiprazole dose, p. 413. [Moderate] Study
  - ▶ **Terbinafine** is predicted to moderately increase the exposure to aripiprazole. Adjust aripiprazole dose, p. 413. [Moderate] Study
- Arsenic trioxide** → see TABLE 15 p. 1449 (myelosuppression), TABLE 9 p. 1448 (QT-interval prolongation)
- Artemether** → see antimalarials
- Artenimol** → see antimalarials
- Articaine** → see TABLE 11 p. 1448 (CNS depressant effects)
- Ascorbic acid**
- ▶ Ascorbic acid is predicted to increase the risk of cardiovascular side-effects when given with **iron chelators (deferiprone, desferrioxamine)**. [Severe] Theoretical
- Asenapine** → see TABLE 8 p. 1447 (hypotension), TABLE 11 p. 1448 (CNS depressant effects)
- ▶ Asenapine is predicted to decrease the effects of **dopamine receptor agonists**. Adjust dose. [Moderate] Theoretical → Also see TABLE 8 p. 1447
  - ▶ Asenapine is predicted to decrease the effects of **levodopa**. Adjust dose. [Severe] Theoretical → Also see TABLE 8 p. 1447
  - ▶ **SSRIs (fluvoxamine)** increase the exposure to asenapine. [Moderate] Study
  - ▶ **SSRIs (paroxetine)** moderately increase the exposure to asenapine. [Moderate] Study
- Asparaginase** → see TABLE 1 p. 1446 (hepatotoxicity), TABLE 15 p. 1449 (myelosuppression)
- ▶ Asparaginase is predicted to increase the risk of hepatotoxicity when given with **imatib**. [Severe] Theoretical → Also see TABLE 15 p. 1449
  - ▶ Asparaginase affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1446 → Also see TABLE 15 p. 1449
  - ▶ Asparaginase potentially increases the risk of neurotoxicity when given with **vinca alkaloids (vincristine)**. Vincristine should be taken 3 to 24 hours before asparaginase. [Severe] Anecdotal → Also see TABLE 1 p. 1446 → Also see TABLE 15 p. 1449
- Aspirin** → see TABLE 4 p. 1446 (antiplatelet effects)
- ▶ **Acetazolamide** increases the risk of severe toxic reaction when given with aspirin (high-dose). [Severe] Study
  - ▶ **Antacids** decrease the absorption of aspirin (high-dose). [Moderate] Study
  - ▶ **Bismuth subsalicylate** is predicted to increase the risk of side-effects when given with aspirin. Avoid. [Moderate] Theoretical
  - ▶ Aspirin (high-dose) is predicted to increase the risk of gastrointestinal irritation when given with **bisphosphonates (alendronate, ibandronate)**. [Moderate] Study
  - ▶ Aspirin (high-dose) is predicted to increase the risk of renal impairment when given with **bisphosphonates (clodronate)**. [Severe] Theoretical

- ▶ **Corticosteroids** are predicted to decrease the concentration of aspirin (high-dose) and aspirin (high-dose) increases the risk of gastrointestinal bleeding when given with **corticosteroids**. [Moderate] Study
- ▶ Aspirin (high-dose) increases the risk of renal impairment when given with **daptomycin**. [Moderate] Theoretical
- ▶ **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with aspirin (high-dose). [Severe] Theoretical
- ▶ Aspirin (high-dose) is predicted to increase the risk of gastrointestinal bleeds when given with **iron chelators (deferiasirox)**. [Severe] Theoretical
- ▶ Aspirin (high-dose) is predicted to increase the risk of toxicity when given with **methotrexate**. [Severe] Study
- ▶ Aspirin is predicted to increase the risk of gastrointestinal perforation when given with **nicorandil**. [Severe] Theoretical
- ▶ Aspirin (high-dose) potentially increases the exposure to **pemetrexed**. Use with caution or avoid. [Severe] Theoretical
- ▶ Aspirin (high-dose) increases the risk of acute renal failure when given with **thiazide diuretics**. [Severe] Theoretical
- ▶ **Zidovudine** increases the risk of haematological toxicity when given with aspirin (high-dose). [Severe] Study

## Ataluren

- ▶ Ataluren is predicted to increase the risk of nephrotoxicity when given with intravenous **aminoglycosides**. Avoid. [Severe] Study
  - ▶ **Rifampicin** decreases the exposure to ataluren. [Moderate] Study
- Atazanavir** → see HIV-protease inhibitors
- Atenolol** → see beta blockers, selective
- Atezolizumab** → see monoclonal antibodies
- Atomoxetine**
- ▶ **Amfetamines** are predicted to increase the risk of side-effects when given with atomoxetine. [Severe] Theoretical
  - ▶ Atomoxetine is predicted to increase the risk of cardiovascular side-effects when given with **beta<sub>2</sub> agonists** (high-dose). [Moderate] Study
  - ▶ **Bupropion** is predicted to markedly increase the exposure to atomoxetine. Adjust dose. [Severe] Study
  - ▶ **Cinacalcet** is predicted to markedly increase the exposure to atomoxetine. Adjust dose. [Severe] Study
  - ▶ **Dacomitinib** is predicted to markedly increase the exposure to atomoxetine. Avoid or adjust dose. [Severe] Study
  - ▶ **Eliglustat** is predicted to increase the exposure to atomoxetine. Adjust dose. [Moderate] Theoretical
  - ▶ **MAOIs, irreversible** are predicted to increase the risk of side-effects when given with atomoxetine. Avoid and for 2 weeks after stopping the MAOI. [Severe] Theoretical
  - ▶ **Panobinostat** is predicted to increase the exposure to atomoxetine. Monitor and adjust dose. [Severe] Theoretical
  - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to markedly increase the exposure to atomoxetine. Adjust dose. [Severe] Study
  - ▶ **Terbinafine** is predicted to markedly increase the exposure to atomoxetine. Adjust dose. [Severe] Study
- Atorvastatin** → see statins
- Atovaquone** → see antimalarials
- Atracurium** → see neuromuscular blocking drugs, non-depolarising
- Atropine** → see TABLE 10 p. 1448 (antimuscarinics)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ Atropine increases the risk of severe hypertension when given with **sympathomimetics, vasoconstrictor (phenylephrine)**. [Severe] Study
- ▶ **Avanafil** → see phosphodiesterase type-5 inhibitors
- ▶ **Avelumab** → see monoclonal antibodies
- ▶ **Axitinib** → see TABLE 15 p. 1449 (myelosuppression)
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to axitinib. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to axitinib. Avoid or adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to axitinib. [Moderate] Theoretical

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Apprepitant** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Axitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Efavirenz** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Imatinib** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Netupitant** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Axitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical
- Azacitidine** → see TABLE 15 p. 1449 (myelosuppression)
- Azathioprine** → see TABLE 15 p. 1449 (myelosuppression)
- ▶ **ACE inhibitors** are predicted to increase the risk of anaemia and/or leucopenia when given with **azathioprine**. [Severe] Anecdotal
- ▶ **Allopurinol** potentially increases the risk of haematological toxicity when given with **azathioprine**. Adjust **azathioprine** dose, p. 881. [Severe] Study
- ▶ **Azathioprine** decreases the anticoagulant effect of **coumarins**. [Moderate] Study
- ▶ **Febuxostat** is predicted to increase the exposure to **azathioprine**. Avoid. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **azathioprine** (high-dose). Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- Azelastine** → see antihistamines, non-sedating
- Azilsartan** → see angiotensin-II receptor antagonists
- Azithromycin** → see macrolides
- Bacillus Calmette-Guérin vaccine** → see live vaccines
- Bacitracin** → see TABLE 2 p. 1446 (nephrotoxicity)
- Baclofen** → see TABLE 8 p. 1447 (hypotension), TABLE 11 p. 1448 (CNS depressant effects), TABLE 10 p. 1448 (antimuscarinics)
- ▶ **Baclofen** is predicted to increase the risk of side-effects when given with **levodopa**. [Severe] Anecdotal → Also see TABLE 8 p. 1447
- Balsalazide** → see TABLE 15 p. 1449 (myelosuppression)
- ▶ **Balsalazide** is predicted to decrease the concentration of **digoxin**. [Moderate] Theoretical

**Bambuterol** → see beta<sub>2</sub> agonists

#### Baricitinib

- ▶ **Leflunomide** potentially increases the exposure to **baricitinib**. [Moderate] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **baricitinib**. Avoid. [Severe] Theoretical
- ▶ **Teriflunomide** potentially increases the exposure to **baricitinib**. [Moderate] Theoretical

**Basiliximab** → see monoclonal antibodies

#### Bazedoxifene

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **bazedoxifene**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **bazedoxifene**. [Moderate] Theoretical

**Beclometasone** → see corticosteroids

**Bedaquiline** → see TABLE 1 p. 1446 (hepatotoxicity), TABLE 9 p. 1448

(QT-interval prolongation)

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **bedaquiline**. Avoid. [Severe] Study → Also see TABLE 1 p. 1446
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Theoretical → Also see TABLE 1 p. 1446 → Also see TABLE 9 p. 1448
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Study → Also see TABLE 1 p. 1446 → Also see TABLE 9 p. 1448
- ▶ **Apalutamide** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Apprepitant** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Theoretical
- ▶ **Clofazimine** potentially increases the risk of QT-prolongation when given with **bedaquiline**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Efavirenz** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Enzalutamide** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Study → Also see TABLE 9 p. 1448
- ▶ **Idelalisib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Study
- ▶ **Imatinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Study → Also see TABLE 9 p. 1448
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Mitotane** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mid] Theoretical → Also see TABLE 9 p. 1448

Bedaquiline (continued)

- ▶ **Rifampicin** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study

#### Bee venom extract

**GENERAL INFORMATION** Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

#### Belatacept

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **belatacept**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

**Belimumab** → see monoclonal antibodies

**Bendamustine** → see alkylating agents

**Bendroflumethiazide** → see thiazide diuretics

**Benperidol** → see TABLE 8 p. 1447 (hypotension), TABLE 11 p. 1448 (CNS depressant effects)

- ▶ **Benperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1447

- ▶ **Benperidol** is predicted to decrease the effects of **levodopa**.

[Severe] Study → Also see TABLE 8 p. 1447

**Benzathine benzylpenicillin** → see penicillins

**Benzylamine** → see NSAIDs

**Benzylpenicillin** → see penicillins

**Beta blockers, non-selective** → see TABLE 6 p. 1447 (bradycardia), TABLE 8 p. 1447 (hypotension), TABLE 9 p. 1448 (QT-interval prolongation)

carvedilol · labetalol · levobunolol · nadolol · pindolol · propranolol · sotalol · timolol

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application of **levobunolol** and **timolol**, the possibility of interactions should be borne in mind.

- ▶ **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with **aminophylline**. Avoid. [Severe] Theoretical
- ▶ **Antiarrhythmics (amiodarone, disopyramide, dronedarone, flecainide, lidocaine)** are predicted to increase the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. Use with caution or avoid. [Severe] Study → Also see TABLE 6 p. 1447 → Also see TABLE 9 p. 1448
- ▶ **Antiarrhythmics (propafenone)** increase the risk of cardiovascular side-effects when given with **propranolol**. Use with caution or avoid. [Severe] Study
- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the exposure to **timolol** and **timolol** is predicted to increase the risk of cardiodepression when given with **antiarrhythmics (propafenone)**. [Severe] Anecdotal
- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the risk of cardiovascular side-effects when given with **beta blockers, non-selective (labetalol, levobunolol, nadolol, pindolol, sotalol)**. Use with caution or avoid. [Severe] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **propranolol**. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **beta blockers, non-selective (carvedilol, labetalol)**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **nadolol**. [Moderate] Study
- ▶ **Antimalarials (mefloquine)** are predicted to increase the risk of bradycardia when given with **beta blockers, non-selective**. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem)** are predicted to increase the risk of cardiodepression when given with **beta blockers, non-selective**. [Severe] Study → Also see TABLE 6 p. 1447 → Also see TABLE 8 p. 1447
- ▶ Intravenous **calcium channel blockers (verapamil)** increase the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. Avoid. [Severe] Study → Also see TABLE 6 p. 1447 → Also see TABLE 8 p. 1447

- ▶ Oral **calcium channel blockers (verapamil)** increase the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. [Severe] Study → Also see TABLE 6 p. 1447 → Also see TABLE 8 p. 1447

- ▶ **Chlorprocaine** is predicted to increase the risk of cardiovascular side-effects when given with **sotalol**. [Severe] Theoretical

- ▶ **Ciclosporin** is predicted to increase the exposure to **nadolol**.

[Moderate] Study

- ▶ **Dacomitinib** is predicted to markedly increase the exposure to **propranolol**. Avoid. [Severe] Study

- ▶ **Eliglustat** is predicted to increase the exposure to **propranolol**. Adjust dose. [Moderate] Study

- ▶ **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergometrine**. [Severe] Study

- ▶ **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergotamine**. [Severe] Study

- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **nadolol**. [Moderate] Study

- ▶ **Beta blockers, non-selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. [Moderate] Theoretical

- ▶ **Lapatinib** is predicted to increase the exposure to **nadolol**. [Moderate] Study

- ▶ **Macrolides** are predicted to increase the exposure to **nadolol**. [Moderate] Study

- ▶ **Mexiletine** potentially increases the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. Avoid or monitor. [Severe] Theoretical

- ▶ **Ranolazine** is predicted to increase the exposure to **nadolol**. [Moderate] Study

- ▶ **Rifampicin** moderately decreases the exposure to **carvedilol**. [Moderate] Study

- ▶ **Rifampicin** decreases the exposure to **propranolol**. Monitor and adjust dose. [Moderate] Study

- ▶ **Propranolol** slightly to moderately increases the exposure to **rizatriptan**. Adjust rizatriptan dose and separate administration by at least 2 hours, p. 502. [Moderate] Study

- ▶ **SSRIs (fluvoxamine)** moderately increase the concentration of **propranolol**. [Moderate] Study

- ▶ **Beta blockers, non-selective** increase the risk of hypertension and bradycardia when given with **sympathomimetics, inotropic (dobutamine)**. [Severe] Theoretical

- ▶ **Beta blockers, non-selective** are predicted to increase the risk of hypertension and bradycardia when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Severe] Study

- ▶ **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [Severe] Theoretical

- ▶ **Vemurafenib** is predicted to increase the exposure to **nadolol**. [Moderate] Study

**Beta blockers, selective** → see TABLE 6 p. 1447 (bradycardia), TABLE 8 p. 1447 (hypotension)

acebutolol · atenolol · betaxolol · bisoprolol · celiprolol · esmolol · metoprolol · nebivolol

▶ Since systemic absorption can follow topical application of **betaxolol**, the possibility of interactions should be borne in mind.

▶ Orange juice greatly decreases the exposure to **celiprolol**.

- ▶ **Abiraterone** is predicted to increase the exposure to **metoprolol**. [Moderate] Study

- ▶ **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with **aminophylline**. Avoid. [Severe] Theoretical

- ▶ **Antiarrhythmics (amiodarone, disopyramide, dronedarone, flecainide, lidocaine)** are predicted to increase the risk of cardiovascular side-effects when given with **beta blockers, selective**. Use with caution or avoid. [Severe] Study → Also see TABLE 6 p. 1447

- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the exposure to **metoprolol**. [Moderate] Study

- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the exposure to **neбиволol** and **небиволol** is predicted to increase the risk of cardiodepression when given with **antiarrhythmics (propafenone)**. Avoid. [Severe] Theoretical
  - ▶ **Antiarrhythmics (propafenone)** are predicted to increase the risk of cardiovascular side-effects when given with beta blockers, selective (**acebutolol**, **atenolol**, **betaxolol**, **bisoprolol**, **celiprolol**, **esmolol**). Use with caution or avoid. [Severe] Study
  - ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to beta blockers, selective (**acebutolol**, **bisoprolol**, **metoprolol**, **небиволol**). [Moderate] Study
  - ▶ **Antimalarials (mefloquine)** are predicted to increase the risk of bradycardia when given with **beta blockers, selective**. [Severe] Theoretical
  - ▶ **Bupropion** is predicted to increase the exposure to beta blockers, selective (**metoprolol**, **небиволol**). [Moderate] Study
  - ▶ **Calcium channel blockers (diltiazem)** are predicted to increase the risk of cardiodepression when given with **beta blockers, selective**. [Severe] Study → Also see TABLE 6 p. 1447 → Also see TABLE 8 p. 1447
  - ▶ Intravenous **calcium channel blockers (verapamil)** increase the risk of cardiovascular side-effects when given with **beta blockers, selective**. Avoid. [Severe] Study → Also see TABLE 6 p. 1447 → Also see TABLE 8 p. 1447
  - ▶ Oral **calcium channel blockers (verapamil)** increase the risk of cardiovascular side-effects when given with **beta blockers, selective**. [Severe] Study → Also see TABLE 6 p. 1447 → Also see TABLE 8 p. 1447
  - ▶ **Cinacalcet** is predicted to increase the exposure to beta blockers, selective (**metoprolol**, **небиволol**). [Moderate] Study
  - ▶ **Dacomitinib** is predicted to markedly increase the exposure to beta blockers, selective (**metoprolol**, **небиволol**). Avoid. [Severe] Study
  - ▶ **Duloxetine** is predicted to increase the exposure to **metoprolol**. [Moderate] Study
  - ▶ **Eliglustat** is predicted to increase the exposure to **metoprolol**. Adjust dose. [Moderate] Study
  - ▶ **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergometrine**. [Severe] Study
  - ▶ **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergotamine**. [Severe] Study
  - ▶ **Grapefruit juice** greatly decreases the exposure to **celiprolol**. [Moderate] Study
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **metoprolol**. [Moderate] Study
  - ▶ **Beta blockers, selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. [Moderate] Theoretical
  - ▶ **Mexiletine** potentially increases the risk of cardiovascular side-effects when given with **beta blockers, selective**. Avoid or monitor. [Severe] Theoretical
  - ▶ **Mirabegron** is predicted to increase the exposure to **metoprolol**. [Moderate] Study
  - ▶ **Panobinostat** is predicted to increase the exposure to **metoprolol**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Panobinostat** is predicted to increase the exposure to **небиволol**. Monitor and adjust dose. [Mild] Theoretical
  - ▶ **Rifampicin** slightly decreases the exposure to beta blockers, selective (**bisoprolol**, **metoprolol**). [Mild] Study
  - ▶ **Rifampicin** moderately decreases the exposure to **celiprolol**. [Moderate] Study
  - ▶ **Rolapitant** is predicted to moderately increase the exposure to **metoprolol**. [Severe] Study
  - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to beta blockers, selective (**metoprolol**, **небиволol**). [Moderate] Study
  - ▶ **Beta blockers, selective** increase the risk of hypertension and bradycardia when given with **sympathomimetics, inotropic (dobutamine)**. [Moderate] Theoretical
  - ▶ **Beta blockers, selective** are predicted to increase the risk of hypertension and bradycardia when given with **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine)**. [Severe] Study
  - ▶ **Terbinafine** is predicted to increase the exposure to beta blockers, selective (**metoprolol**, **небиволol**). [Moderate] Study
  - ▶ **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [Severe] Theoretical
  - ▶ **Vaborbactam** is predicted to increase the concentration of **metoprolol**. [Unknown] Theoretical
- Beta<sub>2</sub> agonists** → see TABLE 17 p. 1450 (reduced serum potassium)
- bambuterol • formoterol • indacaterol • olodaterol • salbutamol • salmeterol • terbutaline • vilanterol
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **salmeterol**. Avoid. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **salmeterol**. Avoid or monitor. [Moderate] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to **salmeterol**. [Moderate] Study
  - ▶ **Atomoxetine** is predicted to increase the risk of cardiovascular side-effects when given with **beta<sub>2</sub> agonists** (high-dose). [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **salmeterol**. Avoid. [Severe] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **salmeterol**. Avoid. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **salmeterol**. Avoid. [Severe] Study
  - ▶ **Beta<sub>2</sub> agonists** are predicted to increase the risk of glaucoma when given with **ipratropium**. [Moderate] Anecdotal
  - ▶ **Beta<sub>2</sub> agonists** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **salmeterol**. Avoid. [Severe] Study
  - ▶ **MAO-B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of severe hypertension when given with **beta<sub>2</sub> agonists**. Avoid. [Severe] Theoretical
  - ▶ **MAO-B inhibitors (safinamide)** are predicted to increase the risk of severe hypertension when given with **beta<sub>2</sub> agonists**. [Severe] Theoretical
  - ▶ **MAOIs, irreversible** are predicted to increase the risk of cardiovascular side-effects when given with **beta<sub>2</sub> agonists**. [Moderate] Anecdotal
  - ▶ **Netupitant** is predicted to increase the exposure to **salmeterol**. [Moderate] Study
- Betahistine**
- ▶ **Antihistamines, non-sedating** are predicted to decrease the effects of betahistine. [Moderate] Theoretical
  - ▶ **Antihistamines, sedating** are predicted to decrease the effects of betahistine. [Moderate] Theoretical
- Betamethasone** → see corticosteroids
- Betaxolol** → see beta blockers, selective
- Bevacizumab** → see monoclonal antibodies
- Bexarotene** → see retinoids
- Bezafibrate** → see fibrates
- Bicalutamide**
- ▶ **Bicalutamide** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- Bictegravir**
- ▶ **Antacids** decrease the exposure to **bictegravir**. Separate administration by at least 2 hours. [Moderate] Study
  - ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Study
  - ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
  - ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **bictegravir**. [Moderate] Theoretical

## Bictegravir (continued)

- ▶ **Apalutamide** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Study
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir)** moderately increase the exposure to **bictegravir**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Iron (oral)** decreases the exposure to **bictegravir**. Manufacturer advises take 2 hours before **iron (oral)**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Macrolides** are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Bictegravir** slightly increases the exposure to **metformin**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Study
- ▶ **Bictegravir** is predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Rifabutin** slightly decreases the exposure to **bictegravir**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Theoretical
- ▶ **Sucralfate** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical

**Bilastine** → see antihistamines, non-sedating

**Bismuth**

- ▶ **Bismuth** subsalicylate is predicted to increase the risk of side-effects when given with **aspirin**. Avoid. [Moderate] Theoretical
- ▶ **Bismuth** subsalicylate is predicted to increase the risk of bleeding events when given with **drugs with anticoagulant effects** (see TABLE 3 p. 1446). [Moderate] Theoretical
- ▶ **Bismuth** greatly decreases the efficacy of **tetracyclines**. Separate administration by 2 hours. [Moderate] Study

**Bisoprolol** → see beta blockers, selective

**Bisphosphonates** → see TABLE 2 p. 1446 (nephrotoxicity)

alendronate • clodronate • ibandronate • pamidronate • risedronate • zoledronate

- ▶ **Aminoglycosides** increase the risk of hypocalcaemia when given with **bisphosphonates**. [Moderate] Anecdotal → Also see TABLE 2 p. 1446
- ▶ **Antacids** decrease the absorption of **alendronate**. **Alendronate** should be taken at least 30 minutes before antacids. [Moderate] Study
- ▶ **Antacids** decrease the absorption of **clodronate**. Avoid antacids for 2 hours before or 1 hour after **clodronate**. [Moderate] Study
- ▶ **Antacids** are predicted to decrease the absorption of **ibandronate**. Avoid antacids for at least 6 hours before or 1 hour after **ibandronate**. [Moderate] Theoretical
- ▶ **Antacids** decrease the absorption of **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Aspirin** (high-dose) is predicted to increase the risk of gastrointestinal irritation when given with bisphosphonates (**alendronate, ibandronate**). [Moderate] Study
- ▶ **Aspirin** (high-dose) is predicted to increase the risk of renal impairment when given with **clodronate**. [Severe] Theoretical
- ▶ Oral **calcium salts** decrease the absorption of **alendronate**. **Alendronate** should be taken at least 30 minutes before calcium salts. [Moderate] Study

- ▶ Oral **calcium salts** decrease the absorption of **clodronate**. Avoid calcium salts for 2 hours before or 1 hour after **clodronate**. [Moderate] Study
  - ▶ Oral **calcium salts** are predicted to decrease the absorption of oral **ibandronate**. Avoid calcium salts for at least 6 hours before or 1 hour after **ibandronate**. [Moderate] Theoretical
  - ▶ Oral **calcium salts** decrease the absorption of **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
  - ▶ **Iron (oral)** decreases the absorption of **clodronate**. Avoid **iron (oral)** for 2 hours before or 1 hour after **clodronate**. [Moderate] Study
  - ▶ **Iron (oral)** is predicted to decrease the absorption of oral **ibandronate**. Avoid **iron (oral)** for at least 6 hours before or 1 hour after **ibandronate**. [Moderate] Theoretical
  - ▶ **Iron (oral)** decreases the absorption of **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
  - ▶ **Bisphosphonates** are predicted to increase the risk of gastrointestinal bleeding when given with **iron chelators (deferasirox)**. [Severe] Theoretical
  - ▶ Oral **magnesium** decreases the absorption of **alendronate**. **Alendronate** should be taken at least 30 minutes before magnesium. [Moderate] Study
  - ▶ Oral **magnesium** decreases the absorption of **clodronate**. Avoid magnesium for 2 hours before or 1 hour after **clodronate**. [Moderate] Study
  - ▶ Oral **magnesium** is predicted to decrease the absorption of oral **ibandronate**. Avoid for at least 6 hours before or 1 hour after **ibandronate**. [Moderate] Theoretical
  - ▶ Oral **magnesium** decreases the absorption of **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
  - ▶ **NSAIDs** are predicted to increase the risk of gastrointestinal irritation when given with bisphosphonates (**alendronate, ibandronate**). [Moderate] Study
  - ▶ **NSAIDs** are predicted to increase the risk of renal impairment when given with **clodronate**. [Moderate] Study
  - ▶ **Bisphosphonates** are predicted to decrease the effects of **parathyroid hormone**. Avoid. [Moderate] Study
  - ▶ Oral **zinc** decreases the absorption of oral **alendronate**. **Alendronate** should be taken at least 30 minutes before zinc. [Moderate] Study
  - ▶ Oral **zinc** decreases the absorption of oral **clodronate**. Avoid zinc for 2 hours before or 1 hour after **clodronate**. [Moderate] Study
  - ▶ Oral **zinc** is predicted to decrease the absorption of oral **ibandronate**. Avoid zinc for at least 6 hours before or 1 hour after **ibandronate**. [Moderate] Theoretical
  - ▶ Oral **zinc** decreases the absorption of oral **risedronate**. Separate administration by at least 2 hours. [Moderate] Study
- Bivalirudin** → see TABLE 3 p. 1446 (anticoagulant effects)
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **bivalirudin**. [Moderate] Theoretical
- Bleomycin** → see TABLE 15 p. 1449 (myelosuppression), TABLE 5 p. 1447 (thromboembolism)
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **bleomycin**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
  - ▶ **Monoclonal antibodies (brentuximab vedotin)** increase the risk of pulmonary toxicity when given with **bleomycin**. Avoid. [Severe] Study → Also see TABLE 15 p. 1449
  - ▶ **Platinum compounds (cisplatin)** increase the risk of pulmonary toxicity when given with **bleomycin**. [Severe] Study → Also see TABLE 15 p. 1449
- Blinatumomab** → see monoclonal antibodies
- Bortezomib** → see TABLE 8 p. 1447 (hypotension), TABLE 15 p. 1449 (myelosuppression), TABLE 12 p. 1449 (peripheral neuropathy)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** slightly decrease the exposure to **bortezomib**. Avoid. [Severe] Study → Also see TABLE 12 p. 1449
  - ▶ **Antifungals, azoles (itraconazole, ketconazole, voriconazole)** slightly increase the exposure to **bortezomib**. [Moderate] Study
  - ▶ **Apalutamide** slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study
  - ▶ **Cobicistat** slightly increases the exposure to **bortezomib**. [Moderate] Study

- ▶ **Enzalutamide** slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** slightly increase the exposure to **bortezomib**. [Moderate] Study
- ▶ **Idelalisib** slightly increases the exposure to **bortezomib**. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Macrolides (clarithromycin)** slightly increase the exposure to **bortezomib**. [Moderate] Study
- ▶ **Mitotane** slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Rifampicin** slightly decreases the exposure to **bortezomib**. Avoid. [Moderate] Study

## Bosentan

- ▶ **Bosentan** is predicted to decrease the exposure to **antiarrhythmics (dronedaron)**. [Severe] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** affect the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole)** are predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (ketoconazole)** moderately increase the exposure to **bosentan**. [Moderate] Study
- ▶ **Antifungals, azoles (voriconazole)** are predicted to increase the exposure to **bosentan**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Theoretical
- ▶ **Apalutamide** affects the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **aprepitant**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
- ▶ **Cephalosporins (ceftibiprole)** are predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ **Bosentan** moderately decreases the exposure to **ciclosporin** and **ciclosporin** moderately increases the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
- ▶ **Bosentan** decreases the anticoagulant effect of **coumarins**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **dasatinib**. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
- ▶ **Bosentan** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine p. 681 or lamivudine with tenofovir disoproxil and doravirine p. 690 dose. [Severe] Theoretical
- ▶ **Bosentan** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **eliglustat**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** affects the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **gefinitib**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **bosentan**. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Bosentan** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **ivacaftor**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **bosentan**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the concentration of **bosentan**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **maraviroc**. Avoid. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the concentration of **midazolam**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** affects the exposure to **bosentan**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **neratinib**. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **netupitant**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **nevirapine**. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Anecdotal

## Bosentan (continued)

- ▶ Bosentan is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
  - ▶ Bosentan decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
  - ▶ Bosentan is predicted to decrease the exposure to **osimertinib**. [Moderate] Theoretical
  - ▶ Bosentan is predicted to decrease the exposure to **ospemifene**. [Moderate] Study
  - ▶ Bosentan is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
  - ▶ Bosentan decreases the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Study
  - ▶ Bosentan is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
  - ▶ Bosentan is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
  - ▶ Bosentan is predicted to decrease the exposure to **ribociclib**. [Moderate] Study
  - ▶ **Rifampicin** affects the exposure to **bosentan**. Avoid. [Severe] Study
  - ▶ Bosentan is predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Theoretical
  - ▶ Bosentan is predicted to decrease the exposure to **rolapitant**. Avoid. [Severe] Study
  - ▶ Bosentan is predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ Bosentan is predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
  - ▶ Bosentan is predicted to decrease the concentration of **sirolimus** and **sirolimus** potentially increases the concentration of **bosentan**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **bosentan**. Avoid. [Moderate] Theoretical
  - ▶ Bosentan slightly decreases the exposure to **statins (atorvastatin)**. [Mild] Study
  - ▶ Bosentan moderately decreases the exposure to **statins (simvastatin)**. [Moderate] Study
  - ▶ Bosentan increases the risk of hepatotoxicity when given with **sulfonylureas (glibenclamide)**. Avoid. [Severe] Study
  - ▶ Bosentan is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** potentially increases the concentration of **bosentan**. Avoid. [Severe] Theoretical
  - ▶ Bosentan is predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study
  - ▶ Bosentan is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
  - ▶ **Teriflunomide** is predicted to increase the exposure to **bosentan**. [Moderate] Study
  - ▶ Bosentan is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
  - ▶ Bosentan is predicted to decrease the exposure to **tofacinib**. [Moderate] Study
  - ▶ Bosentan decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Anecdotal
  - ▶ Bosentan is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
  - ▶ Bosentan is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
  - ▶ **Venetoclax** is predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
  - ▶ Bosentan is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- Bosutinib** → see TABLE 15 p. 1449 (myelosuppression), TABLE 9 p. 1448 (QT-interval prolongation)
- ▶ **Antacids** are predicted to decrease the absorption of **bosutinib**. **Bosutinib** should be taken at least 12 hours before antacids. [Moderate] Theoretical
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1448

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Apalutamide** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Aprepitant** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical
- ▶ Bosentan is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study
- ▶ **Bosutinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 15 p. 1449 → Also see TABLE 9 p. 1448
- ▶ **Efavirenz** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Enzalutamide** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Fosaprepitant** is predicted to increase the exposure to **bosutinib**. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **bosutinib**. Avoid. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **bosutinib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Imatinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Mitotane** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Modafinil** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 15 p. 1449 → Also see TABLE 9 p. 1448
- ▶ **Bosutinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **bosutinib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical

**Botulinum toxin type A** → see botulinum toxins

**Botulinum toxin type B** → see botulinum toxins

**Botulinum toxins** → see TABLE 20 p. 1450 (neuromuscular blocking effects)

botulinum toxin type A • botulinum toxin type B

### Bowel cleansing preparations

**SEPARATION OF ADMINISTRATION** Other oral drugs should not be taken 1 hour before, or after, administration of bowel cleansing preparations because absorption may be impaired. Consider withholding ACE inhibitors, angiotensin-II receptor antagonists, and NSAIDs on the day that bowel cleansing preparations are given and for up to 72 hours after the procedure. Also consider withholding diuretics on the day that bowel cleansing preparations are given.

**Brentuximab vedotin** → see monoclonal antibodies

### Brigatinib

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to brigatinib. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to brigatinib. Adjust brigatinib dose, p. 1024. [Severe] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to brigatinib. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to brigatinib. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to brigatinib. Adjust brigatinib dose, p. 1024. [Severe] Study
- ▶ **Brigatinib** decreases the exposure to **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Brigatinib** potentially increases the concentration of **daigibatan**. [Moderate] Theoretical
- ▶ **Brigatinib** potentially increases the concentration of **digoxin**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to brigatinib. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to brigatinib. Avoid. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to brigatinib. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the concentration of brigatinib. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to brigatinib. Adjust brigatinib dose, p. 1024. [Severe] Study
- ▶ **Idealisib** is predicted to increase the exposure to brigatinib. Adjust brigatinib dose, p. 1024. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to brigatinib. Adjust brigatinib dose, p. 1024. [Severe] Study
- ▶ **Brigatinib** potentially increases the concentration of **methotrexate**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to brigatinib. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to brigatinib. Avoid. [Severe] Study
- ▶ **Brigatinib** potentially decreases the concentration of **opioids (alfentanil, fentanyl)**. Avoid. [Moderate] Theoretical
- ▶ **Rifabutin** is predicted to decrease the exposure to brigatinib. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to brigatinib. Avoid. [Severe] Study
- ▶ **Brigatinib** potentially decreases the concentration of **sirolimus**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to brigatinib. Avoid. [Severe] Study
- ▶ **Brigatinib** potentially decreases the concentration of **tacrolimus**. Avoid. [Moderate] Theoretical

**Brimonidine** → see TABLE 6 p. 1447 (bradycardia), TABLE 8 p. 1447 (hypotension), TABLE 11 p. 1448 (CNS depressant effects)

### Brinzolamide

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

**Brivaracetam** → see antiepileptics

**Brodalumab** → see monoclonal antibodies

**Bromfenac** → see NSAIDs

**Bromocriptine** → see dopamine receptor agonists

**Bucizine** → see antihistamines, sedating

**Budesonide** → see corticosteroids

**Bumetanide** → see loop diuretics

**Bupivacaine** → see anaesthetics, local

**Buprenorphine** → see opioids

**Bupropion** → see TABLE 13 p. 1449 (serotonin syndrome)

- ▶ **Bupropion** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to bupropion. [Severe] Study
- ▶ **Antiepileptics (valproate)** increase the exposure to bupropion. [Severe] Study
- ▶ **Antifungals, azoles (isavuconazole)** slightly increase the exposure to bupropion. Adjust dose. [Moderate] Study
- ▶ **Bupropion** is predicted to moderately increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 413. [Moderate] Study
- ▶ **Bupropion** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study
- ▶ **Bupropion** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
- ▶ **Bupropion** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **Bupropion** increases the risk of side-effects when given with **dopamine receptor agonists (amantadine)**. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to bupropion. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to bupropion. [Moderate] Study
- ▶ **Bupropion** increases the risk of side-effects when given with **levodopa**. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the risk of intraoperative hypertension when given with **linezolid**. [Severe] Anecdotal → Also see TABLE 13 p. 1449
- ▶ **MAO-B inhibitors** are predicted to increase the risk of severe hypertension when given with bupropion. Avoid. [Moderate] Theoretical → Also see TABLE 13 p. 1449
- ▶ **MAOIs, irreversible** are predicted to increase the risk of severe hypertension when given with bupropion. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1449
- ▶ **Methylnthionium chloride** is predicted to increase the risk of severe hypertension when given with bupropion. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1449
- ▶ **Bupropion** is predicted to increase the exposure to **mexiletine**. [Moderate] Study
- ▶ **Moclobemide** is predicted to increase the risk of severe hypertension when given with bupropion. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1449
- ▶ **Bupropion** is predicted to decrease the efficacy of **opioids (codeine)**. [Moderate] Theoretical
- ▶ **Bupropion** is predicted to decrease the efficacy of **opioids (tramadol)**. [Severe] Study → Also see TABLE 13 p. 1449
- ▶ **Bupropion** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to bupropion. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the exposure to **SSRIs (dapoxetine)**. [Moderate] Theoretical → Also see TABLE 13 p. 1449
- ▶ **Bupropion** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
- ▶ **Bupropion** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study → Also see TABLE 13 p. 1449

## Bupropion (continued)

► **Bupropion** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 13 p. 1449

**Buspiron** → see TABLE 13 p. 1449 (serotonin syndrome)

► **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **bupropion**. Use with caution and adjust dose. [Moderate] Study

► **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **bupropion**. Use with caution and adjust dose. [Severe] Study

► **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **bupropion**. Use with caution and adjust dose. [Moderate] Study

► **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **bupropion**. Adjust **bupropion** dose, p. 358. [Severe] Study

► **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **bupropion**. Use with caution and adjust dose. [Moderate] Theoretical

► **Apalutamide** is predicted to decrease the exposure to **bupropion**. Use with caution and adjust dose. [Severe] Study

► **Apreritant** is predicted to increase the exposure to **bupropion**. Use with caution and adjust dose. [Moderate] Study

► **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **bupropion**. Use with caution and adjust dose. [Moderate] Study

► **Cobicistat** is predicted to increase the exposure to **bupropion**. Adjust **bupropion** dose, p. 358. [Severe] Study

► **Crizotinib** is predicted to increase the exposure to **bupropion**. Use with caution and adjust dose. [Moderate] Study

► **Enzalutamide** is predicted to decrease the exposure to **bupropion**. Use with caution and adjust dose. [Severe] Study

► **Grapefruit juice** increases the exposure to **bupropion**. Avoid. [Mild] Study

► **HIV-protease inhibitors** are predicted to increase the exposure to **bupropion**. Adjust **bupropion** dose, p. 358. [Severe] Study

► **Idelalisib** is predicted to increase the exposure to **bupropion**. Adjust **bupropion** dose, p. 358. [Severe] Study

► **Imatinib** is predicted to increase the exposure to **bupropion**. Use with caution and adjust dose. [Moderate] Study

► **Bupropion** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1449

► **Macrolides (clarithromycin)** are predicted to increase the exposure to **bupropion**. Adjust **bupropion** dose, p. 358. [Severe] Study

► **Macrolides (erythromycin)** are predicted to increase the exposure to **bupropion**. Use with caution and adjust dose. [Moderate] Study

► **Bupropion** is predicted to increase the risk of elevated blood pressure when given with **MAOIs, irreversible**. Avoid. [Severe] Anecdotal → Also see TABLE 13 p. 1449

► **Mitotane** is predicted to decrease the exposure to **bupropion**. Use with caution and adjust dose. [Severe] Study

► **Netupitant** is predicted to increase the exposure to **bupropion**. Use with caution and adjust dose. [Moderate] Study

► **Nilotinib** is predicted to increase the exposure to **bupropion**. Use with caution and adjust dose. [Moderate] Study

► **Rifampicin** is predicted to decrease the exposure to **bupropion**. Use with caution and adjust dose. [Severe] Study

**Busulfan** → see alkylating agents

**Cabazitaxel** → see taxanes

**Cabergoline** → see dopamine receptor agonists

**Cabozantinib** → see TABLE 15 p. 1449 (myelosuppression), TABLE 9 p. 1448 (QT-interval prolongation)

► **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1448

► **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** moderately decrease the exposure to **cabozantinib**. Avoid. [Moderate] Study

► **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1448

► **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** slightly increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 1448

► **Apalutamide** moderately decreases the exposure to **cabozantinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1448

► **Apreritant** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical

► **Bosentan** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Theoretical

► **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical

► **Cobicistat** slightly increases the exposure to **cabozantinib**. [Moderate] Study

► **Cabozantinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical

► **Crizotinib** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1449 → Also see TABLE 9 p. 1448

► **Efavirenz** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1448

► **Enzalutamide** moderately decreases the exposure to **cabozantinib**. Avoid. [Moderate] Study

► **Grapefruit juice** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical

► **HIV-protease inhibitors** slightly increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 1448

► **Idelalisib** slightly increases the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 15 p. 1449

► **Imatinib** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1449

► **Macrolides (clarithromycin)** slightly increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 1448

► **Macrolides (erythromycin)** are predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1448

► **Mitotane** moderately decreases the exposure to **cabozantinib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1449

► **Netupitant** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical

► **Nevirapine** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Theoretical

► **Nilotinib** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1449 → Also see TABLE 9 p. 1448

► **Cabozantinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical

► **Rifampicin** moderately decreases the exposure to **cabozantinib**. Avoid. [Moderate] Study

► **St John's Wort** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Theoretical

**Caffeine citrate**

► **Caffeine citrate** decreases the efficacy of **antiarrhythmics (adenosine)**. Separate administration by 24 hours. [Mild] Study

► **Antiepileptics (fosphenytoin, phenytoin)** are predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study

► **HIV-protease inhibitors (ritonavir)** are predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study

► **Leflunomide** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study

► **Rifampicin** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study

► **SSRIs (fluvoxamine)** markedly decrease the clearance of **caffeine citrate**. Monitor and adjust dose. [Severe] Study

► **Teriflunomide** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study

► **Caffeine citrate** decreases the clearance of **theophylline**. [Moderate] Study

**Calcipotriol** → see vitamin D substances

**Calcitonins**

► **Calcitonins** decrease the concentration of **lithium**. Adjust dose. [Moderate] Study

**Calcitriol** → see vitamin D substances

**Calcium acetate** → see calcium salts

**Calcium carbonate** → see calcium salts

**Calcium channel blockers** → see TABLE 6 p. 1447 (bradycardia),  
TABLE 8 p. 1447 (hypotension)

amlodipine · diltiazem · felodipine · lacidipine · lercanidipine ·  
nicardipine · nifedipine · nimodipine · verapamil

- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Verapamil** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **aldosterone antagonists (epirenone)**. Adjust **epirenone** dose, p. 205. [Severe] Study → Also see TABLE 8 p. 1447
- ▶ **Verapamil** moderately increases the exposure to **aliskiren**. [Moderate] Study → Also see TABLE 8 p. 1447
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical → Also see TABLE 8 p. 1447
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **aprazolam**. [Severe] Study
- ▶ **Verapamil** moderately increases the exposure to **anthracyclines (doxorubicin)**. [Moderate] Study
- ▶ **Antiarrhythmics (disopyramide)** are predicted to increase the risk of cardiodepression when given with **verapamil**. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the risk of cardiodepression when given with calcium channel blockers (**diltiazem, verapamil**). Avoid. [Severe] Theoretical → Also see TABLE 6 p. 1447
- ▶ Calcium channel blockers (**diltiazem, verapamil**) increase the exposure to **antiarrhythmics (dronedaron)** and **antiarrhythmics (dronedaron)** increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Study
- ▶ **Verapamil** increases the risk of cardiodepression when given with **antiarrhythmics (flecainide)**. [Severe] Anecdotal → Also see TABLE 6 p. 1447
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (valproate)** increase the exposure to **nimodipine**. Adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Diltiazem** increases the concentration of **antiepileptics (carbamazepine)** and **antiepileptics (carbamazepine)** are predicted to decrease the exposure to **diltiazem**. Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ **Verapamil** increases the concentration of **antiepileptics (carbamazepine)** and **antiepileptics (carbamazepine)** are predicted to decrease the exposure to **verapamil**. [Severe] Anecdotal
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) potentially increase the concentration of **antiepileptics (fosphenytoin, phenytoin)** and **antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **diltiazem**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Antimalarials (mefloquine)** are predicted to increase the risk of bradycardia when given with calcium channel blockers. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the concentration of **antimalarials (piperazine)**. [Severe] Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Verapamil** is predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **aprepitant** and **aprepitant** is predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Diltiazem** is predicted to increase the risk of cardiodepression when given with **beta blockers, non-selective**. [Severe] Study → Also see TABLE 6 p. 1447 → Also see TABLE 8 p. 1447
- ▶ Intravenous **verapamil** increases the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. Avoid. [Severe] Study → Also see TABLE 6 p. 1447 → Also see TABLE 8 p. 1447
- ▶ Oral **verapamil** increases the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. [Severe] Study → Also see TABLE 6 p. 1447 → Also see TABLE 8 p. 1447
- ▶ **Diltiazem** is predicted to increase the risk of cardiodepression when given with **beta blockers, selective**. [Severe] Study → Also see TABLE 6 p. 1447 → Also see TABLE 8 p. 1447
- ▶ Intravenous **verapamil** increases the risk of cardiovascular side-effects when given with **beta blockers, selective**. Avoid. [Severe] Study → Also see TABLE 6 p. 1447 → Also see TABLE 8 p. 1447
- ▶ Oral **verapamil** increases the risk of cardiovascular side-effects when given with **beta blockers, selective**. [Severe] Study → Also see TABLE 6 p. 1447 → Also see TABLE 8 p. 1447
- ▶ **Verapamil** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical

## Calcium channel blockers (continued)

- ▶ **Bosentan** is predicted to decrease the exposure to calcium channel blockers (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to calcium channel blockers (**diltiazem**, **verapamil**). [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem**) are predicted to increase the exposure to calcium channel blockers (**amlodipine**). Monitor and adjust dose. [Moderate] Study → Also see TABLE 8 p. 1447
- ▶ Calcium channel blockers (**verapamil**) are predicted to increase the exposure to calcium channel blockers (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study → Also see TABLE 8 p. 1447
- ▶ Calcium channel blockers (**diltiazem**) are predicted to increase the exposure to calcium channel blockers (**felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study → Also see TABLE 8 p. 1447
- ▶ Calcium channel blockers (**diltiazem**) are predicted to increase the exposure to calcium channel blockers (**felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study → Also see TABLE 8 p. 1447
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **lercanidipine**. Use with caution or avoid. [Severe] Study
- ▶ **Nicardipine** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to calcium channel blockers (**amlodipine**, **felodipine**, **lacidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to calcium channel blockers (**diltiazem**, **verapamil**). [Severe] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1183. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **corticosteroids** (**methylprednisolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to calcium channel blockers (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Verapamil** increases the exposure to **dabigatran**. Adjust **dabigatran** dose, p. 146. [Severe] Study
- ▶ Intravenous **dantrolene** potentially increases the risk of acute hyperkalaemia and cardiovascular collapse when given with calcium channel blockers (**diltiazem**, **verapamil**). Avoid. [Severe] Anecdotal
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) increase the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study → Also see TABLE 6 p. 1447
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **dopamine receptor agonists** (**bromocriptine**). [Severe] Theoretical → Also see TABLE 8 p. 1447
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the concentration of **dopamine receptor agonists** (**cabergoline**). [Moderate] Anecdotal → Also see TABLE 8 p. 1447
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to calcium channel blockers (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to calcium channel blockers (**diltiazem**, **verapamil**). [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to calcium channel blockers (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nicardipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to calcium channel blockers (**diltiazem**, **verapamil**). [Severe] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 821. [Mild] Study
- ▶ **Verapamil** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **figulimod**. Avoid. [Moderate] Theoretical → Also see TABLE 6 p. 1447
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **gefatinib**. [Moderate] Theoretical
- ▶ **Grapefruit juice** very slightly increases the exposure to **amlodipine**. Avoid. [Mild] Study
- ▶ **Grapefruit juice** increases the exposure to calcium channel blockers (**nifedipine**, **verapamil**). Avoid. [Mild] Study
- ▶ **Grapefruit juice** increases the exposure to **felodipine**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **lercanidipine**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** increases the exposure to **nicardipine**. [Mild] Study
- ▶ **Grazoprevir** is predicted to increase the concentration of calcium channel blockers. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Theoretical → Also see TABLE 8 p. 1447
- ▶ **H<sub>2</sub> receptor antagonists** (**cimetidine**) (high-dose) are predicted to increase the exposure to **lercanidipine**. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** (**cimetidine**) moderately increase the exposure to **nifedipine**. Monitor and adjust dose. [Severe] Study
- ▶ **H<sub>2</sub> receptor antagonists** (**cimetidine**) increase the exposure to **verapamil**. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists** (**cimetidine**) slightly increase the exposure to calcium channel blockers (**diltiazem**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to calcium channel blockers (**amlodipine**, **felodipine**, **lacidipine**,

- nicardipine, nifedipine, nimodipine). Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
  - ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
  - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 1037. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
  - ▶ **Idelalisib** is predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
  - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
  - ▶ **Imatinib** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
  - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ivabradine**. Avoid. [Moderate] Study → Also see TABLE 6 p. 1447
  - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 308 or **tezacaftor** with **ivacaftor** p. 310 dose with moderate inhibitors of CYP3A4. [Severe] Study
  - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **lomitapide**. [Moderate] Study
  - ▶ **Verapamil** is predicted to increase the exposure to **larotrectinib**. [Mid] Theoretical
  - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
  - ▶ Calcium channel blockers (**amlodipine, lacidipine**) are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
  - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
  - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 416. [Moderate] Study → Also see TABLE 8 p. 1447
  - ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **lercanidipine**. Avoid. [Severe] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **diltiazem**. [Severe] Theoretical
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **verapamil**. [Severe] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
  - ▶ Intravenous **magnesium** potentially increases the risk of hypotension when given with calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine, verapamil**) in pregnant women. [Severe] Anecdotal
  - ▶ **Mexiletine** increases the risk of cardiovascular side-effects when given with **diltiazem**. Avoid or monitor. [Severe] Theoretical
  - ▶ **Mexiletine** potentially increases the risk of cardiovascular side-effects when given with **verapamil**. Avoid or monitor. [Severe] Theoretical
  - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
  - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **diltiazem**. [Severe] Study
  - ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to calcium channel blockers. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **naldemedine**. [Moderate] Study
  - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 69. [Moderate] Study
  - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **neratinib**. Avoid. [Severe] Study
  - ▶ **Netupitant** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
  - ▶ **Nevirapine** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
  - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
  - ▶ **Verapamil** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
  - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1063. [Moderate] Theoretical
  - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p. 1447
  - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical → Also see TABLE 6 p. 1447
  - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **oxybutynin**. [Mid] Theoretical
  - ▶ **Verapamil** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical
  - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
  - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 858. [Moderate] Theoretical → Also see TABLE 8 p. 1447
  - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 859. [Moderate] Study → Also see TABLE 8 p. 1447
  - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical → Also see TABLE 8 p. 1447
  - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 8 p. 1447
  - ▶ **Verapamil** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
  - ▶ Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1447

**Calcium channel blockers** (continued)

- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study → Also see TABLE 8 p. 1447
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ranolazine**. [Severe] Study
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ribociclib**. [Moderate] Study
- **Rifampicin** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nimodipine**). Monitor and adjust dose. [Moderate] Study
- **Rifampicin** greatly decreases the exposure to calcium channel blockers (**diltiazem, verapamil**). [Severe] Study
- **Rifampicin** moderately decreases the exposure to **nifedipine**. Avoid. [Severe] Study
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **rufoxitinib**. [Moderate] Theoretical
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **saxagliptin**. [Mild] Study
- Calcium channel blockers (**diltiazem, verapamil**) increase the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 866. [Moderate] Theoretical
- **St John's Wort** is predicted to decrease the exposure to calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). Monitor and adjust dose. [Moderate] Theoretical
- **St John's Wort** is predicted to decrease the exposure to calcium channel blockers (**diltiazem, verapamil**). [Moderate] Theoretical
- **Diltiazem** slightly to moderately increases the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Anecdotal
- **Verapamil** is predicted to slightly to moderately increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Theoretical
- **Amlodipine** slightly increases the exposure to **statins (simvastatin)**. Adjust **simvastatin** dose, p. 217. [Mild] Study
- Calcium channel blockers (**diltiazem, verapamil**) moderately increase the exposure to **statins (simvastatin)**. Monitor and adjust dose. [Severe] Study
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the concentration of **tacrolimus**. [Severe] Study
- **Nicardipine** potentially increases the concentration of **tacrolimus**. Monitor concentration and adjust dose. [Severe] Anecdotal
- **Verapamil** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1065. [Severe] Study
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the concentration of and the risk of angioedema when given with **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
- **Temsirolimus** is predicted to increase the risk of angioedema when given with calcium channel blockers (**amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine**). [Moderate] Theoretical
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor** with **ivacaftor** p. 310 dose with moderate inhibitors of CYP3A4. [Severe] Study
- Calcium channel blockers (**diltiazem, verapamil**) given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1167. [Moderate] Study
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **tolterodine**. [Mild] Theoretical

- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4, p. 706. [Moderate] Study
- **Verapamil** is predicted to increase the exposure to **topotecan**. [Severe] Study
- **Verapamil** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- Calcium channel blockers (**diltiazem, verapamil**) are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

**Calcium chloride** → see calcium salts**Calcium gluconate** → see calcium salts**Calcium lactate** → see calcium salts**Calcium phosphate** → see calcium salts**Calcium salts**

calcium acetate · calcium carbonate · calcium chloride · calcium gluconate · calcium lactate · calcium phosphate

**SEPARATION OF ADMINISTRATION** **Calcium carbonate-containing antacids** should preferably not be taken at the same time as other drugs since they might impair absorption. **Antacids** might damage enteric coatings designed to prevent dissolution in the stomach.

- Oral **calcium salts** decrease the absorption of **alkylating agents (estramustine)**. [Severe] Study
- **Calcium carbonate** decreases the absorption of **antimalarials (chloroquine)**. Separate administration by at least 4 hours. [Moderate] Study
- **Calcium carbonate** is predicted to decrease the absorption of **antimalarials (proguanil)**. Separate administration by at least 2 hours. [Moderate] Study
- Oral **calcium salts** decrease the absorption of **bisphosphonates (alendronate)**. **Alendronate** should be taken at least 30 minutes before **calcium salts**. [Moderate] Study
- Oral **calcium salts** decrease the absorption of **bisphosphonates (clodronate)**. Avoid **calcium salts** for 2 hours before or 1 hour after **clodronate**. [Moderate] Study
- Oral **calcium salts** are predicted to decrease the absorption of oral **bisphosphonates (ibandronate)**. Avoid **calcium salts** for at least 6 hours before or 1 hour after **ibandronate**. [Moderate] Theoretical
- Oral **calcium salts** decrease the absorption of **bisphosphonates (risedronate)**. Separate administration by at least 2 hours. [Moderate] Study
- **Cephalosporins (ceftriaxone)** increase the risk of cardio-respiratory arrest when given with **calcium chloride**. Avoid. [Severe] Anecdotal
- **Cephalosporins (ceftriaxone)** increase the risk of cardio-respiratory arrest when given with intravenous **calcium gluconate**. Avoid. [Severe] Anecdotal
- Intravenous **calcium salts** increase the effects of **digoxin**. Avoid. [Moderate] Anecdotal
- Oral **calcium salts** decrease the absorption of **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after **calcium salts**. [Moderate] Study
- Oral **calcium salts** decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **calcium salts**. [Severe] Study
- **Calcium carbonate** decreases the absorption of **hydroxychloroquine**. Separate administration by at least 4 hours. [Moderate] Study
- **Calcium carbonate** decreases the absorption of **iron (oral)**. **Calcium carbonate** should be taken 1 hour before or 2 hours after **iron (oral)**. [Moderate] Study

- ▶ **Calcium carbonate** is predicted to decrease the exposure to **ledipasvir**. Separate administration by 4 hours. [Moderate] Theoretical
- ▶ Oral **calcium carbonate** is predicted to decrease the exposure to oral **neratinib**. Separate administration by at least 3 hours. [Mild] Theoretical
- ▶ **Calcium carbonate** decreases the absorption of **quinolones** (**ciprofloxacin**). Separate administration by 2 hours. [Moderate] Study
- ▶ **Calcium carbonate** greatly decreases the exposure to **raltegravir** (high-dose). Avoid. [Severe] Study
- ▶ **Calcium carbonate** is predicted to slightly decrease the exposure to **rilpivirine**. **Calcium carbonate** should be taken 2 hours before or 4 hours after **rilpivirine**. [Severe] Theoretical
- ▶ Oral **calcium salts** decrease the exposure to **strontium**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Calcium carbonate** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [Moderate] Theoretical
- ▶ **Thiazide diuretics** increase the risk of hypercalcaemia when given with **calcium salts**. [Severe] Anecdotal
- ▶ Oral **calcium salts** are predicted to decrease the absorption of **thyroid hormones** (**levothyroxine**). Separate administration by at least 4 hours. [Moderate] Anecdotal
- ▶ **Calcium carbonate** is predicted to decrease the concentration of **velpatasvir**. Separate administration by 4 hours. [Moderate] Anecdotal
- ▶ Oral **calcium salts** decrease the absorption of **zinc**. [Moderate] Study
- Canagliflozin** → see TABLE 14 p. 1449 (antidiabetic drugs), TABLE 8 p. 1447 (hypotension)
- ▶ **Rifampicin** moderately decreases the exposure to **canagliflozin**. Adjust **canagliflozin** dose, p. 740. [Moderate] Study
- Canakinumab** → see monoclonal antibodies
- Candesartan** → see angiotensin-II receptor antagonists
- Cangrelor** → see TABLE 4 p. 1446 (antiplatelet effects)
- Cannabidiol** → see TABLE 11 p. 1448 (CNS depressant effects)
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1448
- ▶ **Cannabidiol** increases the risk of increased ALT concentrations when given with **antiepileptics** (**valproate**). Avoid or adjust dose. [Severe] Study
- ▶ **Antifungals, azoles** (**fluconazole**) are predicted to increase the exposure to **cannabidiol**. [Moderate] Theoretical
- ▶ **Antifungals, azoles** (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Moderate] Study
- ▶ **Cannabidiol** increases the exposure to the active metabolite of **clobazam** and **clobazam** increases the exposure to the active metabolite of **cannabidiol**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1448
- ▶ **Cobicistat** is predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Moderate] Study
- ▶ **Moclobemide** is predicted to increase the exposure to **cannabidiol**. [Moderate] Theoretical
- ▶ **Proton pump inhibitors** (**esomeprazole**) are predicted to increase the exposure to **cannabidiol**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Moderate] Study
- ▶ **SSRIs** (**fluoxetine**, **fluvoxamine**) are predicted to increase the exposure to **cannabidiol**. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Mild] Study
- Capecitabine** → see TABLE 15 p. 1449 (myelosuppression)
- ▶ **Allopurinol** is predicted to decrease the effects of **capecitabine**. Avoid. [Severe] Study
- ▶ **Capecitabine** increases the concentration of **antiepileptics** (**fosphenytoin**, **phenytoin**). [Severe] Anecdotal
- ▶ **Capecitabine** increases the effects of **coumarins**. Monitor INR and adjust dose. [Moderate] Anecdotal
- ▶ **Folates** are predicted to increase the risk of toxicity when given with **capecitabine**. [Severe] Anecdotal
- ▶ **H<sub>2</sub> receptor antagonists** (**cimetidine**) are predicted to slightly increase the exposure to **capecitabine**. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **capecitabine**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Metronidazole** is predicted to increase the risk of capecitabine toxicity when given with **capecitabine**. [Severe] Theoretical
- Caplacizumab**
- ▶ **Caplacizumab** is predicted to increase the risk of bleeding events when given with **drugs with anticoagulant effects** (see TABLE 3 p. 1446). [Severe] Theoretical
- ▶ **Caplacizumab** is predicted to increase the risk of bleeding events when given with **drugs with antiplatelet effects** (see TABLE 4 p. 1446). [Severe] Theoretical
- Captopril** → see TABLE 2 p. 1446 (nephrotoxicity), TABLE 19 p. 1450 (ototoxicity)
- Captopril** → see ACE inhibitors
- Carbamazepine** → see antiepileptics
- Carbapenems**
- ertapenem • imipenem • meropenem
- ▶ **Carbapenems** decrease the concentration of **antiepileptics** (**valproate**). Avoid. [Severe] Anecdotal
- ▶ **Ganciclovir** is predicted to increase the risk of seizures when given with **imipenem**. Avoid. [Severe] Anecdotal
- ▶ **Valganciclovir** is predicted to increase the risk of seizures when given with **imipenem**. Avoid. [Severe] Anecdotal
- Carbidopa**
- ▶ **Iron (oral)** is predicted to decrease the exposure to **carbidopa**. [Moderate] Theoretical
- Carbimazole** → see TABLE 15 p. 1449 (myelosuppression)
- ▶ **Carbimazole** affects the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Carbimazole** decreases the effects of **metypapone**. Avoid. [Moderate] Theoretical
- ▶ **Carbimazole** given with a potent CYP3A4 inhibitor is predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical
- Carboplatin** → see platinum compounds
- Carfilizomib** → see TABLE 15 p. 1449 (myelosuppression)
- ▶ **Carfilizomib** potentially decreases the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- Cariprazine** → see TABLE 8 p. 1447 (hypotension), TABLE 11 p. 1448 (CNS depressant effects)
- ▶ **Antiarrhythmics** (**dronedarone**) are predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical → Also see TABLE 11 p. 1448
- ▶ **Antifungals, azoles** (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles** (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical

## Cariprazine (continued)

- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study → Also see TABLE 8 p. 1447
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **cariprazine**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Macrolides** (**clarithromycin**) are predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Macrolides** (**erythromycin**) are predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical

**Carmustine** → see alkylating agents

**Carvedilol** → see beta blockers, non-selective

**Caspofungin**

- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenytoin**) are predicted to decrease the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 628. [Moderate] Theoretical
- ▶ **Ciclosporin** slightly increases the exposure to **caspofungin**. [Severe] Study
- ▶ **Corticosteroids** (**dexamethasone**) are predicted to decrease the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 628. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the concentration of **caspofungin**. Adjust dose. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the concentration of **caspofungin**. Adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 628. [Moderate] Study

**Cefaclor** → see cephalosporins

**Cefadroxil** → see cephalosporins

**Cefalexin** → see cephalosporins

**Cefepime** → see cephalosporins

**Cefixime** → see cephalosporins

**Cefotaxime** → see cephalosporins

**Cefoxitin** → see cephalosporins

**Cefradine** → see cephalosporins

**Ceftaroline** → see cephalosporins

**Ceftazidime** → see cephalosporins

**Ceftobiprole** → see cephalosporins

**Ceftolozane** → see cephalosporins

**Ceftriaxone** → see cephalosporins

**Cefuroxime** → see cephalosporins

**Celecoxib** → see NSAIDs

**Celiprolol** → see beta blockers, selective

**Cemiplimab** → see monoclonal antibodies

**Cephalosporins** → see TABLE 2 p. 1446 (nephrotoxicity)

cefaclor • cefadroxil • cefalexin • cefepime • cefixime • cefotaxime • cefoxitin • cefradine • ceftaroline • ceftazidime • ceftobiprole •

ceftolozane • ceftriaxone • cefuroxime

**ROUTE-SPECIFIC INFORMATION** Interactions do not generally apply to topical use of **cefturoxime** unless specified.

- ▶ **Ceftobiprole** is predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ **Ceftriaxone** increases the risk of cardio-respiratory arrest when given with **calcium salts** (**calcium chloride**). Avoid. [Severe] Anecdotal
- ▶ **Ceftriaxone** increases the risk of cardio-respiratory arrest when given with intravenous **calcium salts** (**calcium gluconate**). Avoid. [Severe] Anecdotal
- ▶ **Ceftriaxone** potentially increases the risk of bleeding events when given with **coumarins**. [Severe] Anecdotal
- ▶ **Leflunomide** is predicted to increase the exposure to **cefaclor**. [Moderate] Theoretical
- ▶ **Nitisinone** is predicted to increase the exposure to **cefaclor**. [Moderate] Study
- ▶ **Ceftriaxone** potentially increases the risk of bleeding events when given with **phenindione**. [Severe] Anecdotal
- ▶ **Ceftobiprole** is predicted to increase the concentration of **statins**. [Moderate] Theoretical
- ▶ **Ceftobiprole** is predicted to increase the concentration of **sulfonylureas** (**glibenclamide**). [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **cefaclor**. [Moderate] Study

**Ceritinib** → see TABLE 15 p. 1449 (myelosuppression), TABLE 9 p. 1448 (QT-interval prolongation)

▶ **Ceritinib** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical

▶ **Antacids** are predicted to decrease the absorption of **ceritinib**. Separate administration by 2 hours. [Moderate] Theoretical

▶ **Antiarrhythmics** (**amiodarone**) are predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1448

▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study

▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 1026. [Severe] Study → Also see TABLE 9 p. 1448

▶ **Ceritinib** is predicted to increase the exposure to **antihistamines, non-sedating** (**fexofenadine**). [Moderate] Theoretical

▶ **Apalutamide** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448

▶ **Ceritinib** is predicted to increase the exposure to **ciclosporin**. Avoid. [Severe] Theoretical

▶ **Cobicistat** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 1026. [Severe] Study

▶ **Ceritinib** is predicted to increase the exposure to **colchicine**. [Moderate] Theoretical

▶ **Ceritinib** is predicted to increase the exposure to **coumarins** (**warfarin**). Avoid. [Severe] Theoretical

▶ **Ceritinib** is predicted to increase the exposure to **dabigatran**. [Moderate] Theoretical

▶ **Ceritinib** is predicted to increase the risk of bradycardia when given with **digoxin**. Avoid. [Severe] Theoretical

▶ **Ceritinib** is predicted to increase the exposure to **edoxaban**. [Moderate] Theoretical

▶ **Enzalutamide** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study

▶ **Ceritinib** is predicted to increase the exposure to **ergotamine**. Avoid. [Severe] Theoretical

▶ **Ceritinib** is predicted to increase the exposure to **everolimus**. [Moderate] Theoretical → Also see TABLE 15 p. 1449

▶ **Grapefruit juice** is predicted to increase the exposure to **ceritinib**. Avoid. [Severe] Theoretical

▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **ceritinib**. [Moderate] Theoretical

▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 1026. [Severe] Study → Also see TABLE 9 p. 1448

▶ **Idelalisib** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 1026. [Severe] Study → Also see

TABLE 15 p. 1449

- ▶ **Lapatinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Ceritinib** is predicted to increase the exposure to **loperamide**. [Moderate] Theoretical
- ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 1026. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Mitotane** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Ceritinib** is predicted to increase the exposure to **NSAIDs (celecoxib, diclofenac)**. Adjust dose. [Moderate] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Avoid. [Severe] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Proton pump inhibitors** are predicted to decrease the absorption of **ceritinib**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Rifampicin** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **sirolimus**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **sulfonyleureas (glimepiride)**. Adjust dose. [Moderate] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Ceritinib** is predicted to increase the exposure to **topotecan**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- Certolizumab pegol** → see monoclonal antibodies
- Cetirizine** → see antihistamines, non-sedating
- Cetuximab** → see monoclonal antibodies
- Chenodeoxycholic acid**
  - ▶ Oral **antacids (aluminium hydroxide)** decrease the absorption of **chenodeoxycholic acid**. [Moderate] Study
  - ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Ciclosporin** is predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Oral **combined hormonal contraceptives** potentially decrease the efficacy of **chenodeoxycholic acid**. Avoid. [Moderate] Theoretical
- ▶ **Sirolimus** is predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [Moderate] Theoretical
- Chloral hydrate** → see TABLE 11 p. 1448 (CNS depressant effects)
- ▶ Intravenous **loop diuretics (furosemide)** potentially increase the risk of sweating, variable blood pressure, and tachycardia when given after **chloral hydrate**. [Moderate] Anecdotal
- Chlorambucil** → see alkylating agents
- Chloramphenicol**

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

  - ▶ **Antiepileptics (phenobarbital, primidone)** decrease the concentration of **chloramphenicol**. [Moderate] Study
  - ▶ Intravenous **chloramphenicol** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)** and **antiepileptics (fosphenytoin, phenytoin)** affect the concentration of intravenous **chloramphenicol**. Monitor concentration and adjust dose. [Severe] Study
  - ▶ **Chloramphenicol** potentially increases the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
  - ▶ **Chloramphenicol** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Theoretical
  - ▶ **Chloramphenicol** decreases the efficacy of intravenous **iron (injectable)**. [Moderate] Anecdotal

- ▶ **Chloramphenicol** decreases the efficacy of oral **iron (oral)**. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the concentration of **chloramphenicol**. [Moderate] Study
- ▶ **Chloramphenicol** is predicted to increase the exposure to **sulfonyleureas**. [Severe] Study
- ▶ **Chloramphenicol** increases the concentration of **tacrolimus**. [Severe] Study
- Chlordiazepoxide** → see TABLE 11 p. 1448 (CNS depressant effects)
- ▶ **Chlordiazepoxide** affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **chlordiazepoxide**. [Moderate] Theoretical
- Chlormethine** → see TABLE 15 p. 1449 (myelosuppression)

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- Chloroprocaine** → see TABLE 11 p. 1448 (CNS depressant effects)
- ▶ **Chloroprocaine** is predicted to increase the risk of cardiovascular side-effects when given with **antiarrhythmics (amiodarone, dronedarone, vernakalant)**. [Severe] Theoretical
- ▶ **Chloroprocaine** is predicted to increase the risk of cardiovascular side-effects when given with **beta blockers, non-selective (sotalol)**. [Severe] Theoretical
- ▶ **Chloroprocaine** is predicted to decrease the effects of **sulfonamides**. Avoid. [Severe] Theoretical
- Chloroquine** → see antimalarials
- Chlorothiazide** → see thiazide diuretics
- Chlorphenamine** → see antihistamines, sedating
- Chlorpromazine** → see phenothiazines
- Chlortalidone** → see thiazide diuretics
- Cholera vaccine**
  - ▶ **Antimalarials (chloroquine)** decrease the efficacy of oral **cholera vaccine**. [Moderate] Study
  - ▶ **Hydroxychloroquine** is predicted to decrease the efficacy of oral **cholera vaccine**. [Moderate] Theoretical
- Cholic acid**
  - ▶ **Antacids** are predicted to decrease the absorption of **cholic acid**. Separate administration by 5 hours. [Mild] Theoretical
  - ▶ **Antiepileptics (phenobarbital)** decrease the effects of **cholic acid**. Avoid. [Moderate] Study
  - ▶ **Ciclosporin** affects the concentration of **cholic acid**. Avoid. [Moderate] Study
- Choline salicylate**
  - ▶ **Corticosteroids** are predicted to decrease the concentration of **choline salicylate**. [Moderate] Study
- Ciclesonide** → see corticosteroids
- Ciclosporin** → see TABLE 2 p. 1446 (nephrotoxicity), TABLE 16 p. 1450 (increased serum potassium)
  - ▶ Pomelo juice is predicted to increase ciclosporin exposure, and purple grape juice is predicted to decrease ciclosporin exposure.
  - ▶ Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- ▶ **Ciclosporin** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ **Ciclosporin** markedly increases the exposure to **aliskiren**. Avoid. [Severe] Study → Also see TABLE 16 p. 1450
- ▶ **Ciclosporin** moderately increases the exposure to **ambrisentan**. Adjust **ambrisentan** dose, p. 195. [Moderate] Study
- ▶ **Ciclosporin** increases the concentration of **anthracyclines (daunorubicin, doxorubicin, epirubicin, idarubicin, mitoxantrone)**. [Severe] Study
- ▶ **Antiarrhythmics (amiodarone)** increase the concentration of **ciclosporin**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the concentration of **ciclosporin**. [Severe] Study
- ▶ **Antiepileptics (oxcarbazepine)** decrease the concentration of **ciclosporin**. [Severe] Anecdotal

## Cyclosporin (continued)

- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of cyclosporin. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** increase the concentration of cyclosporin. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (miconazole)** increase the concentration of cyclosporin. Monitor and adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Apalutamide** decreases the concentration of cyclosporin. [\[Severe\]](#) Study
- ▶ **Aprepitant** is predicted to increase the concentration of cyclosporin. [\[Severe\]](#) Study
- ▶ **Cyclosporin** is predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [\[Moderate\]](#) Study
- ▶ **Cyclosporin** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [\[Moderate\]](#) Theoretical
- ▶ **Bosentan** moderately decreases the exposure to cyclosporin and cyclosporin moderately increases the exposure to bosentan. Avoid. [\[Severe\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of cyclosporin. [\[Severe\]](#) Study
- ▶ **Calcium channel blockers (nifedipine)** increase the concentration of cyclosporin. [\[Severe\]](#) Study
- ▶ **Cyclosporin** moderately increases the exposure to **calcium channel blockers (lercanidipine)**. Use with caution or avoid. [\[Severe\]](#) Study
- ▶ **Cyclosporin** slightly increases the exposure to **caspofungin**. [\[Severe\]](#) Study
- ▶ **Ceritinib** is predicted to increase the exposure to cyclosporin. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Cyclosporin** is predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cyclosporin** affects the concentration of **cholic acid**. Avoid. [\[Moderate\]](#) Study
- ▶ **Cobicistat** increases the concentration of cyclosporin. [\[Severe\]](#) Study
- ▶ **Cyclosporin** increases the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose, p. 1183. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the concentration of cyclosporin. [\[Severe\]](#) Study
- ▶ **Cyclosporin** is predicted to increase the exposure to **dabigatran**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Danazol** increases the concentration of cyclosporin. [\[Severe\]](#) Study
- ▶ **Cyclosporin** is predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [\[Severe\]](#) Theoretical
- ▶ **Cyclosporin** is predicted to increase the exposure to **darifenacin**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Cyclosporin** increases the concentration of **digoxin**. Monitor and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Cyclosporin** slightly increases the exposure to **edoxaban**. Adjust edoxaban dose, p. 135. [\[Severe\]](#) Study
- ▶ **Efavirenz** decreases the concentration of cyclosporin. Monitor concentration and adjust dose. [\[Moderate\]](#) Study
- ▶ **Cyclosporin** decreases the exposure to **eltrombopag**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Enzalutamide** decreases the concentration of cyclosporin. [\[Severe\]](#) Study
- ▶ **Cyclosporin** is predicted to increase the exposure to **erlotinib**. [\[Moderate\]](#) Theoretical
- ▶ **Cyclosporin** increases the exposure to **etoposide**. Monitor and adjust dose. [\[Severe\]](#) Study
- ▶ **Cyclosporin** moderately increases the exposure to **everolimus**. Avoid or adjust dose. [\[Severe\]](#) Study
- ▶ **Cyclosporin** moderately increases the exposure to **ezetimibe** and **ezetimibe** slightly increases the exposure to cyclosporin. [\[Moderate\]](#) Study
- ▶ **Fibrates (bezafibrate)** are predicted to increase the risk of nephrotoxicity when given with cyclosporin. [\[Severe\]](#) Theoretical
- ▶ **Fibrates (fenofibrate)** increase the risk of nephrotoxicity when given with cyclosporin. [\[Severe\]](#) Study
- ▶ **Cyclosporin** is predicted to increase the exposure to **fidaxomicin**. Avoid. [\[Moderate\]](#) Study
- ▶ **Cyclosporin** increases the exposure to **glecaprevir**. Avoid or monitor. [\[Severe\]](#) Study
- ▶ **Grapefruit juice** increases the concentration of cyclosporin. Avoid. [\[Severe\]](#) Study
- ▶ **Cyclosporin** greatly increases the exposure to **grazoprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the concentration of cyclosporin. [\[Mild\]](#) Study
- ▶ **HIV-protease inhibitors** increase the concentration of cyclosporin. [\[Severe\]](#) Study
- ▶ **Idelalisib** increases the concentration of cyclosporin. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the concentration of cyclosporin. [\[Severe\]](#) Study
- ▶ **Lanreotide** is predicted to decrease the absorption of oral cyclosporin. Adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Cyclosporin** is predicted to increase the exposure to **larotrectinib**. [\[Mild\]](#) Study
- ▶ **Letermovir** increases the exposure to cyclosporin and cyclosporin increases the exposure to **letermovir**. Monitor and adjust **letermovir** dose, p. 676. [\[Severe\]](#) Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with cyclosporin. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Cyclosporin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
- ▶ **Lorlatinib** is predicted to decrease the exposure to cyclosporin. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to cyclosporin. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** increase the concentration of cyclosporin. [\[Severe\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of cyclosporin. [\[Severe\]](#) Study
- ▶ **Cyclosporin** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Mitotane** decreases the concentration of cyclosporin. [\[Severe\]](#) Study
- ▶ **Monoclonal antibodies (blinatumomab)** are predicted to transiently increase the exposure to cyclosporin. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to cyclosporin. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to cyclosporin. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cyclosporin** is predicted to increase the exposure to **naldemedine**. [\[Moderate\]](#) Study
- ▶ **Netupitant** is predicted to increase the concentration of cyclosporin. [\[Severe\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the concentration of cyclosporin. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the concentration of cyclosporin. [\[Severe\]](#) Study
- ▶ **Cyclosporin** is predicted to increase the exposure to **nintedanib**. [\[Moderate\]](#) Study
- ▶ **Cyclosporin** increases the concentration of **NSAIDs (diclofenac)**. [\[Severe\]](#) Study → Also see TABLE 2 p. 1446 → Also see TABLE 16 p. 1450
- ▶ **Octreotide** decreases the absorption of oral cyclosporin. Adjust cyclosporin dose, p. 883. [\[Severe\]](#) Anecdotal
- ▶ **Palbociclib** is predicted to increase the exposure to cyclosporin. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Cyclosporin** is predicted to increase the exposure to **panobinostat**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Pasireotide** is predicted to decrease the absorption of oral cyclosporin. Adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to cyclosporin. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Cyclosporin** is predicted to increase the concentration of **ranolazine** and **ranolazine** is predicted to increase the concentration of cyclosporin. [\[Moderate\]](#) Theoretical
- ▶ **Cyclosporin** moderately increases the exposure to **repaglinide**. [\[Moderate\]](#) Study

- ▶ **Ribociclib** is predicted to increase the exposure to **ciclosporin**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Ciclosporin** very markedly increases the exposure to **rifaximin**. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **riociguat**. [Moderate] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Ciclosporin** moderately increases the exposure to **sirolimus**. Separate administration by 4 hours. [Severe] Study
- ▶ **St John's Wort** decreases the concentration of **ciclosporin**. Avoid. [Moderate] Study
- ▶ **Ciclosporin** very markedly increases the exposure to **statins (atorvastatin)**. Avoid or adjust atorvastatin dose, p. 215. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **statins (fluvastatin)**. [Severe] Study
- ▶ **Ciclosporin** markedly to very markedly increases the exposure to **statins (pravastatin)**. Adjust dose. [Severe] Study
- ▶ **Ciclosporin** markedly increases the exposure to **statins (rosuvastatin, simvastatin)**. Avoid. [Severe] Study
- ▶ **Ciclosporin** increases the concentration of **tacrolimus**. Avoid. [Severe] Study → Also see TABLE 2 p. 1446 → Also see TABLE 16 p. 1450
- ▶ **Ciclosporin** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust talazoparib dose, p. 1065. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical → Also see TABLE 2 p. 1446
- ▶ **Ciclosporin** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Ciclosporin** increases the exposure to **tofacinib**. Avoid. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Ursodeoxycholic acid** affects the concentration of **ciclosporin**. Use with caution and adjust dose. [Severe] Anecdotal
- ▶ **Ciclosporin** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Vitamin E substances** affect the exposure to **ciclosporin**. [Moderate] Study
- ▶ **Ciclosporin** increases the concentration of **voxilaprevir**. Avoid. [Severe] Study

**Ciclosporin** → see TABLE 2 p. 1446 (nephrotoxicity)

**Cilostazol** → see TABLE 4 p. 1446 (antiplatelet effects)

**GENERAL INFORMATION** Concurrent use with 2 or more antiplatelets or anticoagulants is contra-indicated.

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to **cilostazol**. Adjust cilostazol dose, p. 246. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **cilostazol**. Adjust cilostazol dose, p. 246. [Moderate] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **cilostazol**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Apalutamide** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **cilostazol**. Adjust cilostazol dose, p. 246. [Moderate] Study
- ▶ **Enzalutamide** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cilostazol**. Adjust cilostazol dose, p. 246. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **cilostazol**. Adjust cilostazol dose, p. 246. [Moderate] Study

- ▶ **Cilostazol** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **cilostazol**. Adjust cilostazol dose, p. 246. [Moderate] Study
- ▶ **Macrolides (erythromycin)** slightly increase the exposure to **cilostazol**. Adjust cilostazol dose, p. 246. [Moderate] Study
- ▶ **Mitotane** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ **Moclobemide** is predicted to increase the exposure to **cilostazol**. [Moderate] Theoretical
- ▶ **Proton pump inhibitors (esomeprazole)** are predicted to increase the exposure to **cilostazol**. [Moderate] Theoretical
- ▶ **Proton pump inhibitors (omeprazole)** are predicted to increase the exposure to **cilostazol**. Adjust cilostazol dose, p. 246. [Moderate] Study
- ▶ **Rifampicin** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine, fluvoxamine)** are predicted to increase the exposure to **cilostazol**. Adjust cilostazol dose, p. 246. [Moderate] Theoretical → Also see TABLE 4 p. 1446
- ▶ **St John's Wort** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical

**Cimetidine** → see H<sub>2</sub> receptor antagonists

## Cinacalcet

**FOOD AND LIFESTYLE** Dose adjustment might be necessary if smoking started or stopped during treatment.

- ▶ **Cinacalcet** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cinacalcet** is predicted to moderately increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 413. [Moderate] Study
- ▶ **Cinacalcet** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study
- ▶ **Cinacalcet** is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Cinacalcet** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **Cinacalcet** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cinacalcet** increases the risk of hypocalcaemia when given with **etelcalcetide**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Cinacalcet** is predicted to increase the exposure to **mexiletine**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cinacalcet** is predicted to decrease the efficacy of **opioids (codeine)**. [Moderate] Theoretical
- ▶ **Cinacalcet** is predicted to decrease the efficacy of **opioids (tramadol)**. [Severe] Study
- ▶ **Cinacalcet** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cinacalcet** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study

## Cinacalcet (continued)

- **SSRIs (fluvoxamine)** are predicted to increase the exposure to cinacalcet. Adjust dose. [Moderate] Theoretical
  - **Cinacalcet** is predicted to increase the exposure to **SSRIs (dapoxetine)**. [Moderate] Theoretical
  - **Cinacalcet** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
  - **Cinacalcet** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
  - **Cinacalcet** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study
  - **Cinacalcet** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- Cinnarizine** → see antihistamines, sedating
- Ciprofibrate** → see fibrates
- Ciprofloxacin** → see quinolones
- Cisatracurium** → see neuromuscular blocking drugs, non-depolarising
- Cisplatin** → see platinum compounds
- Citalopram** → see SSRIs
- Cladribine** → see TABLE 15 p. 1449 (myelosuppression)

**SEPARATION OF ADMINISTRATION** Oral cladribine might affect the absorption of concurrently administered drugs—consider separating administration by at least 3 hours.

- **Antiepileptics (carbamazepine)** are predicted to increase the risk of haematological toxicity when given with oral cladribine. [Moderate] Theoretical
  - **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with cladribine. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- Clarithromycin** → see macrolides
- Clavulanate** → see TABLE 1 p. 1446 (hepatotoxicity)
- Clemastine** → see antihistamines, sedating
- Clindamycin**

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- **Clindamycin** increases the effects of **neuromuscular blocking drugs, non-depolarising**. [Severe] Anecdotal
  - **Clindamycin** increases the effects of **suxamethonium**. [Severe] Anecdotal
- Clobazam** → see TABLE 11 p. 1448 (CNS depressant effects)
- **Antiepileptics (stiripentol)** increase the concentration of clobazam. [Severe] Study
  - **Clobazam** potentially affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Severe] Anecdotal
  - **Antifungals, azoles (fluconazole, voriconazole)** potentially increase the exposure to clobazam. Adjust dose. [Moderate] Theoretical
  - **Cannabidiol** increases the exposure to the active metabolite of clobazam and clobazam increases the exposure to the active metabolite of **cannabidiol**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1448
  - **Moclobemide** potentially increases the exposure to clobazam. Adjust dose. [Moderate] Theoretical
  - **Proton pump inhibitors (esomeprazole, omeprazole)** potentially increase the exposure to clobazam. Adjust dose. [Moderate] Theoretical
  - **SSRIs (fluoxetine, fluvoxamine)** potentially increase the exposure to clobazam. Adjust dose. [Moderate] Theoretical
- Cloclonate** → see bisphosphonates
- Clofarabine** → see TABLE 15 p. 1449 (myelosuppression)
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with clofarabine. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- Clofazimine**
- **Clofazimine** potentially increases the risk of QT-prolongation when given with **bedaquiline**. [Severe] Study
- Clomethiazole** → see TABLE 11 p. 1448 (CNS depressant effects)
- **Alcohol (beverage)** causes serious, potentially fatal, CNS depression when given with clomethiazole. Avoid. [Severe] Study → Also see TABLE 11 p. 1448

- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to clomethiazole. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 1448
  - **Apalutamide** decreases the exposure to clomethiazole. Monitor and adjust dose. [Moderate] Study
  - **Enzalutamide** decreases the exposure to clomethiazole. Monitor and adjust dose. [Moderate] Study
  - **Mitomane** decreases the exposure to clomethiazole. Monitor and adjust dose. [Moderate] Study
  - **Rifampicin** decreases the exposure to clomethiazole. Monitor and adjust dose. [Moderate] Study
- Clomipramine** → see tricyclic antidepressants
- Clonazepam** → see TABLE 11 p. 1448 (CNS depressant effects)
- **Clonazepam** potentially affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Severe] Anecdotal
- Clonidine** → see TABLE 6 p. 1447 (bradycardia), TABLE 8 p. 1447 (hypotension), TABLE 11 p. 1448 (CNS depressant effects)
- **Tricyclic antidepressants** decrease the antihypertensive effects of clonidine. Monitor and adjust dose. [Moderate] Anecdotal → Also see TABLE 8 p. 1447 → Also see TABLE 11 p. 1448
- Clopidogrel** → see TABLE 4 p. 1446 (antiplatelet effects)
- **Antifungals, azoles (fluconazole)** are predicted to decrease the efficacy of clopidogrel. Avoid. [Severe] Theoretical
  - **Antifungals, azoles (voriconazole)** are predicted to decrease the efficacy of clopidogrel. Avoid. [Moderate] Study
  - **Clopidogrel** is predicted to increase the exposure to **apalutamide**. [Mild] Study
  - **Clopidogrel** is predicted to increase the exposure to **dabrafenib**. [Moderate] Theoretical
  - **Clopidogrel** is predicted to very markedly increase the exposure to **dasabuvir**. Avoid. [Severe] Study
  - **Clopidogrel** moderately increases the exposure to **enzalutamide**. Avoid or adjust enzalutamide dose, p. 999. [Severe] Study
  - **Grapefruit juice** markedly decreases the exposure to clopidogrel. [Severe] Study
  - **Moclobemide** is predicted to decrease the efficacy of clopidogrel. Avoid. [Moderate] Study
  - **Clopidogrel** is predicted to moderately increase the exposure to **montelukast**. [Moderate] Study
  - **Clopidogrel** increases the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. [Severe] Study
  - **Proton pump inhibitors (esomeprazole, omeprazole)** are predicted to decrease the efficacy of clopidogrel. Avoid. [Moderate] Study
  - **Clopidogrel** increases the exposure to **repaglinide**. Avoid. [Severe] Study
  - **Clopidogrel** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust alitretinoin dose, p. 1328. [Moderate] Theoretical
  - **Clopidogrel** is predicted to increase the exposure to **selexipag**. Adjust selexipag dose, p. 194. [Moderate] Study
  - **SSRIs (fluoxetine, fluvoxamine)** are predicted to decrease the efficacy of clopidogrel. Avoid. [Severe] Theoretical → Also see TABLE 4 p. 1446
  - **Clopidogrel** increases the exposure to **statins (rosuvastatin)**. Adjust rosuvastatin dose, p. 216. [Moderate] Study
  - **Clopidogrel** is predicted to increase the concentration of **taxanes (paclitaxel)**. [Severe] Anecdotal
- Clotrimazole** → see antifungals, azoles
- Clozapine** → see TABLE 8 p. 1447 (hypotension), TABLE 15 p. 1449 (myelosuppression), TABLE 11 p. 1448 (CNS depressant effects), TABLE 10 p. 1448 (antimuscarinics)

- Dose adjustment might be necessary if smoking started or stopped during treatment.
- Avoid concomitant use of clozapine with drugs that have a substantial potential for causing agranulocytosis.

- **Antiepileptics (carbamazepine)** are predicted to increase the risk of myelosuppression when given with clozapine. Avoid. [Severe] Anecdotal
- **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to clozapine. [Moderate] Anecdotal → Also see TABLE 11 p. 1448

- ▶ **Combined hormonal contraceptives** increase the concentration of **clozapine**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Clozapine** is predicted to decrease the effects of **dopamine receptor agonists**. [Moderate] Theoretical → Also see TABLE 8 p.1447 → Also see TABLE 10 p. 1448
- ▶ **Enzalutamide** is predicted to decrease the exposure to **clozapine**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to affect the exposure to **clozapine**. Avoid. [Severe] Theoretical
- ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **clozapine**. Avoid. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to decrease the exposure to **clozapine**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Clozapine** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p.1447
- ▶ **Tetracyclides (erythromycin)** potentially increase the risk of toxicity when given with **clozapine**. [Severe] Anecdotal
- ▶ **Mexiletine** increases the concentration of **clozapine**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Quinolones (ciprofloxacin)** increase the concentration of **clozapine**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Rifampicin** decreases the exposure to **clozapine**. [Severe] Anecdotal
- ▶ **SSRIs (fluvoxamine)** increase the concentration of **clozapine**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **clozapine**. [Moderate] Theoretical
- Cobicistat**
  - ▶ **Cobicistat** is predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p.1019. [Severe] Study
  - ▶ **Cobicistat** is predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Severe] Study
  - ▶ **Cobicistat** increases the exposure to **almotriptan**. [Mild] Study
  - ▶ **Cobicistat** is predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **alpha blockers (doxazosin)**. [Moderate] Study
  - ▶ **Cobicistat** moderately increases the exposure to **alprazolam**. Avoid. [Moderate] Study
  - ▶ **Cobicistat** potentially increases the concentration of **antiarrhythmics (amiodarone, disopyramide, flecainide, lidocaine)**. [Severe] Theoretical
  - ▶ **Cobicistat** very markedly increases the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
  - ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the concentration of **cobicistat**. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to very slightly increase the exposure to **antiepileptics (perampanel)**. [Mild] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **antifungals, azoles (fluconazole, posaconazole)**. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. Avoid or monitor side effects. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **antifungals, azoles (itraconazole, ketoconazole)**. Adjust dose. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to affect the exposure to **antifungals, azoles (voriconazole)**. Avoid. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
  - ▶ **Apalutamide** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **apalutamide**. [Mild] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **apixaban**. Avoid. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
  - ▶ **Cobicistat** is predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 413. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **beta<sub>2</sub> agonists (salmeterol)**. Avoid. [Severe] Study
  - ▶ **Cobicistat** slightly increases the exposure to **bortezomib**. [Moderate] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **brigatinib**. Adjust **brigatinib** dose, p.1024. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 358. [Severe] Study
  - ▶ **Cobicistat** slightly increases the exposure to **cabozantinib**. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
  - ▶ **Cobicistat** is predicted to markedly increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study
  - ▶ **Cobicistat** is predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p.1026. [Severe] Study
  - ▶ **Cobicistat** increases the concentration of **ciclosporin**. [Severe] Study
  - ▶ **Cobicistat** is predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 246. [Moderate] Study
  - ▶ **Cobicistat** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
  - ▶ **Cobicistat** is predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1183. [Severe] Study
  - ▶ **Cobicistat** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone)**. Avoid or monitor side effects. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone)**. Avoid or monitor side effects. [Severe] Study
  - ▶ **Cobicistat** is predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
  - ▶ **Cobicistat** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study

## Cobicistat (continued)

- **Cobicistat** is predicted to markedly increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study
- **Cobicistat** very slightly increases the exposure to **delamanid**. [Severe] Study
- **Cobicistat** is predicted to moderately increase the exposure to **dienogest**. [Moderate] Study
- **Cobicistat** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- **Cobicistat** increases the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Study
- **Cobicistat** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- **Cobicistat** is predicted to increase the exposure to **doravirine**. [Mild] Study
- **Cobicistat** is predicted to increase the exposure to **dronabinol**. Adjust dose. [Mild] Study
- **Cobicistat** is predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
- **Cobicistat** is predicted to increase the exposure to **edoxaban**. Avoid. [Severe] Theoretical
- **Efavirenz** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- **Cobicistat** is predicted to markedly increase the exposure to **elotriptan**. Avoid. [Severe] Study
- **Cobicistat** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- **Cobicistat** is predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study
- **Enzalutamide** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- **Cobicistat** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- **Cobicistat** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- **Cobicistat** is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [Moderate] Study
- **Cobicistat** is predicted to increase the exposure to **esketamine**. Adjust dose. [Moderate] Study
- **Cobicistat** is predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
- **Cobicistat** is predicted to moderately increase the exposure to **fosoterodine**. Adjust **fosoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 821. [Severe] Study
- **Cobicistat** is predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
- **Cobicistat** is predicted to increase the exposure to **gefitinib**. [Moderate] Study
- **Cobicistat** is predicted to increase the exposure to **gilteritinib**. [Moderate] Study
- **Cobicistat** potentially increases the exposure to **glecaprevir**. [Moderate] Theoretical
- **Cobicistat** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- **Cobicistat** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Study
- **Cobicistat** is predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 1037. [Severe] Study
- **Cobicistat** is predicted to increase the exposure to **imatinib**. [Moderate] Study
- **Cobicistat** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- **Cobicistat** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- **Cobicistat** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 308 or **lumacaftor** with **ivacaftor** p. 309 or **tezacaftor** with **ivacaftor** p. 310 dose with potent inhibitors of CYP3A4. [Severe] Study
- **Cobicistat** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study

- **Cobicistat** is predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 1042. [Moderate] Study
- **Cobicistat** is predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
- **Cobicistat** is predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose, p. 1044. [Severe] Study
- **Cobicistat** is predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study
- **Cobicistat** is predicted to increase the exposure to **macitentan**. [Moderate] Study
- **Cobicistat** markedly increases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
- **Cobicistat** potentially increases the exposure to **mexiletine**. [Severe] Theoretical
- **Cobicistat** is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
- **Cobicistat** is predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- **Cobicistat** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 824. [Moderate] Study
- **Cobicistat** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- **Mitotane** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- **Cobicistat** is predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- **Cobicistat** is predicted to increase the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- **Cobicistat** is predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [Severe] Theoretical
- **Cobicistat** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
- **Cobicistat** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- **Cobicistat** is predicted to increase the exposure to **neratinib**. Avoid or adjust **neratinib** dose, p. 1046. [Severe] Study
- **Cobicistat** is predicted to increase the exposure to **netupitant**. [Moderate] Study
- **Nevirapine** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- **Cobicistat** is predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study
- **Cobicistat** is predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- **Cobicistat** is predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1063. [Moderate] Study
- **Cobicistat** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Severe] Study
- **Cobicistat** is predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- **Cobicistat** is predicted to increase the exposure to **oxybutynin**. [Mild] Study
- **Cobicistat** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1050. [Severe] Study
- **Cobicistat** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 987. [Moderate] Study
- **Cobicistat** is predicted to increase the exposure to **paritaprevir**. Avoid. [Severe] Study
- **Cobicistat** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 1051. [Moderate] Study
- **Cobicistat** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Study
- **Cobicistat** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 859. [Severe] Study
- **Cobicistat** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [Severe] Study

- ▶ **Cobicistat** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1052. [Moderate] Study
  - ▶ **Cobicistat** is predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
  - ▶ **Cobicistat** given with carbimazole is predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **retinoids (all-tretinoin)**. Adjust **all-tretinoin** dose, p. 1328. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1054. [Moderate] Study
  - ▶ **Rifabutin** decreases the concentration of **cobicistat** and **cobicistat** increases the exposure to **rifabutin**. Avoid or adjust dose. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **rivaroxaban**. Avoid. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor side effects. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **saxagliptin**. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **solifenacin**. Adjust solifenacin p. 834 or tamsulosin with solifenacin p. 829 dose; avoid in hepatic and renal impairment. [Severe] Study
  - ▶ **Cobicistat** is predicted to moderately increase the exposure to **SRIs (dapoxetine)**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 866. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1057. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to moderately increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor** with **ivacaftor** p. 310 dose with potent inhibitors of CYP3A4. [Severe] Study
  - ▶ **Cobicistat** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1167. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent inhibitors of CYP3A4, p. 706. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
  - ▶ **Cobicistat** is predicted to slightly increase the exposure to **tricyclic antidepressants**. [Mild] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **venlafaxine**. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- Cobimetinib**
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, miconazole, posaconazole)** are predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **Aprepitant** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Idelalisib** is predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
  - ▶ **Netupitant** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical

**Cobimetinib** (continued)

- ▶ **Nevirapine** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical

**Codeine** → see opioids

**Colchicine**

- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose, p. 1183. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1183. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1183. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1183. [Severe] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **colchicine**. [Mild] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1183. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1183. [Severe] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **colchicine**. [Moderate] Theoretical
- ▶ **Ciclosporin** increases the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose, p. 1183. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1183. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1183. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1183. [Severe] Theoretical
- ▶ **Colchicine** increases the risk of rhabdomyolysis when given with **fibrates**. [Severe] Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1183. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1183. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1183. [Severe] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose, p. 1183. [Moderate] Theoretical
- ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose, p. 1183. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1183. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1183. [Severe] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **colchicine**. [Mild] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1183. [Severe] Study

- ▶ **Nilotinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1183. [Severe] Study
- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **colchicine**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **colchicine**. [Mild] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose, p. 1183. [Severe] Theoretical
- ▶ **Rolapitant** is predicted to increase the exposure to **colchicine**. [Moderate] Study
- ▶ **Colchicine** increases the risk of rhabdomyolysis when given with **statins**. [Severe] Anecdotal
- ▶ **Velpatasvir** is predicted to increase the exposure to **colchicine**. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose, p. 1183. [Severe] Theoretical

**Colecalciferol** → see vitamin D substances

**Colesevelam**

**SEPARATION OF ADMINISTRATION** Manufacturer advises take 4 hours before, or after, other drugs.

**Colestipol**

**SEPARATION OF ADMINISTRATION** Manufacturer advises take other drugs at least 1 hour before, or 4 hours after, colestipol.

**Colestyramine**

**SEPARATION OF ADMINISTRATION** Manufacturer advises take other drugs at least 1 hour before, or 4–6 hours after, colestyramine.

**Colistimethate** → see TABLE 2 p. 1446 (nephrotoxicity), TABLE 20 p. 1450 (neuromuscular blocking effects)

**Combined hormonal contraceptives**

- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **agomelatine**. [Moderate] Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see **Contraceptives**, interactions p. 839. [Severe] Study
- ▶ **Combined hormonal contraceptives** alter the exposure to **antiepileptics (lamotrigine)**. Adjust dose. [Moderate] Study
- ▶ **Aprepitant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see **Contraceptives**, interactions p. 839. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see **Contraceptives**, interactions p. 839. [Severe] Study
- ▶ **Brigatinib** decreases the exposure to **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Carfilzomib** potentially decreases the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Oral combined hormonal contraceptives** potentially decrease the efficacy of **chenodeoxycholic acid**. Avoid. [Moderate] Theoretical
- ▶ **Combined hormonal contraceptives** increase the concentration of **clozapine**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Cobicistat** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [Severe] Study
- ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) increase the risk of increased ALT concentrations when given with **dasabuvir**. Avoid. [Severe] Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [Moderate] Study

- ▶ **Efavirenz** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Study
  - ▶ **Encorafenib** is predicted to affect the exposure to **combined hormonal contraceptives**. [Severe] Theoretical
  - ▶ **Combined hormonal contraceptives** slightly increase the exposure to **erlotinib**. Monitor side effects and adjust dose. [Moderate] Study
  - ▶ **Fosaprepitant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Study
  - ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **glecaprevir**. Avoid. [Severe] Study
  - ▶ **Griseofulvin** potentially decreases the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Anecdotal
  - ▶ **HIV-protease inhibitors (atazanavir)** (unboosted) increase the exposure to **combined hormonal contraceptives**. Adjust dose. [Severe] Study
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Study
  - ▶ **Larotrectinib** potentially decreases the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
  - ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. Avoid. [Severe] Theoretical
  - ▶ **Oral combined hormonal contraceptives** slightly increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **combined hormonal contraceptives**. Avoid. [Moderate] Theoretical
  - ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
  - ▶ **Combined hormonal contraceptives** slightly increase the exposure to **MAO-B inhibitors (rasagiline)**. [Moderate] Study
  - ▶ **Combined hormonal contraceptives** increase the exposure to **MAO-B inhibitors (selegiline)**. Avoid. [Severe] Study
  - ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **melatonin**. [Moderate] Theoretical
  - ▶ **Combined hormonal contraceptives** decrease the effects of **metyrapone**. Avoid. [Moderate] Theoretical
  - ▶ **Modafinil** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Study
  - ▶ **Monoclonal antibodies (sarilumab)** potentially decrease the exposure to **combined hormonal contraceptives**. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Study
  - ▶ **NSAIDs (etoricoxib)** slightly increase the exposure to **combined hormonal contraceptives**. [Moderate] Study
  - ▶ **Olaparib** potentially affects the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Moderate] Theoretical
  - ▶ **Combined hormonal contraceptives** potentially oppose the effects of **ospemifene**. Avoid. [Severe] Theoretical
  - ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
  - ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **pibrentasvir**. Avoid. [Severe] Study
  - ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Pitolisant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [Severe] Theoretical
  - ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. Avoid. [Severe] Theoretical
  - ▶ **Combined hormonal contraceptives** potentially oppose the effects of **raloxifene**. Avoid. [Severe] Theoretical
  - ▶ **Rifabutin** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Study
  - ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
  - ▶ **St John's Wort** decreases the efficacy of **combined hormonal contraceptives**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Anecdotal
  - ▶ **Sugammadex** is predicted to decrease the exposure to oral **combined hormonal contraceptives**. Refer to patient information leaflet for missed pill advice. [Severe] Theoretical
  - ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **thalidomide**. Avoid. [Severe] Study
  - ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Combined hormonal contraceptives** increase the exposure to **tizanidine**. Avoid. [Moderate] Study
  - ▶ **Ulipristal** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [Severe] Theoretical
  - ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **voxilaprevir** (with sofosbuvir and velpatasvir). Avoid. [Severe] Study
  - ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **zolmitriptan**. Adjust zolmitriptan dose, p. 504. [Moderate] Theoretical
- Corticosteroids** → see TABLE 17 p. 1450 (reduced serum potassium)
- beclomethasone • betamethasone • budesonide • ciclesonide • deflazacort • dexamethasone • fludrocortisone • fluticasone • hydrocortisone • methylprednisolone • mometasone • prednisolone • triamcinolone
- ▶ With intravitreal use of **dexamethasone** in adults: caution with concurrent administration of anticoagulant or antiplatelet drugs—increased risk of haemorrhagic events.
  - ▶ Interactions do not generally apply to corticosteroids used for topical action (including inhalation, except budesonide and fluticasone) unless specified. However, as systemic absorption might occur with **hydrocortisone eye drops**, the possibility of interactions should be borne in mind.
- ▶ **Antacids** are predicted to decrease the absorption of **deflazacort**. Separate administration by 2 hours. [Moderate] Theoretical
  - ▶ **Antacids** decrease the absorption of **dexamethasone**. [Moderate] Study
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **fluticasone**. [Unknown] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to corticosteroids (budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone). Monitor and adjust dose. [Moderate] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **beclomethasone** (risk with

**Corticosteroids** (continued)

beclometasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical

- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **methylprednisolone**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to corticosteroids (**betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone**). Avoid or monitor side effects. [Severe] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to corticosteroids (**budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **fluticasone**. [Unknown] Theoretical
- ▶  **Aprepitant** is predicted to increase the exposure to oral **budesonide**. [Moderate] Study
- ▶ **Aprepitant** moderately increases the exposure to **dexamethasone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **fluticasone**. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Corticosteroids** are predicted to decrease the concentration of **aspirin** (high-dose) and **aspirin** (high-dose) increases the risk of gastrointestinal bleeding when given with **corticosteroids**. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Dexamethasone** is predicted to decrease the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 628. [Moderate] Theoretical
- ▶ **Corticosteroids** are predicted to decrease the concentration of **choline salicylate**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **beclometasone** (risk with **beclometasone** is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to corticosteroids (**betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone**). Avoid or monitor side effects. [Severe] Study
- ▶ **Corticosteroids** are predicted to increase the effects of **coumarins**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to corticosteroids (**budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **fluticasone**. [Unknown] Theoretical
- ▶ **Corticosteroids** increase the risk of gastrointestinal perforation when given with **erlotinib**. [Severe] Theoretical
- ▶ **Corticosteroids** potentially oppose the effects of **glycerol phenylbutyrate**. [Moderate] Theoretical
- ▶ **Grapefruit juice** moderately increases the exposure to oral **budesonide**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **beclometasone** (risk with **beclometasone** is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to corticosteroids (**betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone**). Avoid or monitor side effects. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **beclometasone** (risk with **beclometasone** is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to corticosteroids (**betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone**). Avoid or monitor side effects. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Corticosteroids** are predicted to increase the risk of gastrointestinal bleeding when given with **iron chelators (deferasirox)**. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **corticosteroids** (high-dose). Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to **methylprednisolone**. Adjust dose. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **beclometasone** (risk with **beclometasone** is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to corticosteroids (**betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone**). Avoid or monitor side effects. [Severe] Study
- ▶ **Corticosteroids** are predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Mifepristone** is predicted to decrease the efficacy of **corticosteroids**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to corticosteroids (**budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **fluticasone**. [Unknown] Theoretical
- ▶ **Corticosteroids** (**betamethasone, deflazacort, dexamethasone, hydrocortisone, methylprednisolone, prednisolone**) are predicted to decrease the efficacy of **monoclonal antibodies (atezolizumab, ipilimumab, nivolumab, pembrolizumab)**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to corticosteroids (**dexamethasone, methylprednisolone**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Corticosteroids** are predicted to increase the risk of immunosuppression when given with **monoclonal antibodies (dinutuximab)**. Avoid except in life-threatening situations. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to oral **budesonide**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **dexamethasone**. Adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **fluticasone**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Corticosteroids** are predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [Severe] Anecdotal
- ▶ **Corticosteroids** increase the risk of gastrointestinal perforation when given with **nicorandil**. [Severe] Anecdotal
- ▶ **Nilotinib** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. [Moderate] Study
- ▶ **NSAIDs** increase the risk of gastrointestinal bleeding when given with **corticosteroids**. [Severe] Study

- ▶ **Corticosteroids** are predicted to increase the effects of **phenindione**. [Moderate] Anecdotal
- ▶ **Dexamethasone** decreases the exposure to **praziquantel**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to corticosteroids (**budesonide**, **deflazacort**, **dexamethasone**, **fludrocortisone**, **hydrocortisone**, **methylprednisolone**, **prednisolone**, **triamcinolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **fluticasone**. [Unknown] Theoretical
- ▶ **Dexamethasone** is predicted to decrease the concentration of **rilpivirine**. Avoid multiple-dose dexamethasone. [Severe] Theoretical
- ▶ **Corticosteroids** potentially decrease the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
- ▶ **Corticosteroids** are predicted to decrease the effects of **somatotropin**. [Moderate] Theoretical
- ▶ **Corticosteroids** are predicted to decrease the effects of **suxamethonium**. [Severe] Anecdotal

**Coumarins** → see TABLE 3 p. 1446 (anticoagulant effects)

acenocoumarol • warfarin

**FOOD AND LIFESTYLE** The effects of coumarins can be reduced or abolished by vitamin K, including that found in health foods, food supplements, enteral feeds, or large amounts of some green vegetables or green tea. Major changes in diet (especially involving salads and vegetables) and in alcohol consumption can affect anticoagulant control. Pomegranate juice is predicted to increase the INR in response to **acenocoumarol** and **warfarin**.

- ▶ **Alcohol (beverage)** (in those who drink heavily) potentially decreases the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Antiarrhythmics (amiodarone)** increase the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Antiarrhythmics (propafenone)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine)** decrease the effects of **coumarins**. Monitor and adjust dose. [Severe] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to alter the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
- ▶ **Antiepileptics (phenobarbital, primidone)** decrease the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole)** potentially increase the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Antifungals, azoles (ketoconazole)** potentially increase the anticoagulant effect of **warfarin**. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Antifungals, azoles (miconazole)** greatly increase the anticoagulant effect of **coumarins**. MHRA advises avoid unless INR can be monitored closely; monitor for signs of bleeding. [Severe] Study
- ▶ **Antifungals, azoles (voriconazole)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **coumarins**. Avoid or monitor. [Mild] Study
- ▶ **Aprepitant** decreases the anticoagulant effect of **coumarins**. [Moderate] Study
- ▶ **Axitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Azathioprine** decreases the anticoagulant effect of **coumarins**. [Moderate] Study
- ▶ **Bosentan** decreases the anticoagulant effect of **coumarins**. [Moderate] Study
- ▶ **Bosutinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Cabozantinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Capecitabine** increases the effects of **coumarins**. Monitor INR and adjust dose. [Moderate] Anecdotal
- ▶ **Cephalosporins (ceftriaxone)** potentially increase the risk of bleeding events when given with **coumarins**. [Severe] Anecdotal
- ▶ **Certinib** is predicted to increase the exposure to **warfarin**. Avoid. [Severe] Theoretical
- ▶ **Chloramphenicol** potentially increases the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
- ▶ **Corticosteroids** are predicted to increase the effects of **coumarins**. [Moderate] Study
- ▶ **Cranberry juice** potentially increases the anticoagulant effect of **warfarin**. Avoid. [Severe] Anecdotal
- ▶ **Crizotinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Dabrafenib** is predicted to decrease the anticoagulant effect of **coumarins**. [Severe] Theoretical
- ▶ **Danazol** potentially increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Dasatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Disulfiram** increases the anticoagulant effect of **coumarins**. Monitor and adjust dose. [Severe] Study
- ▶ **Efavirenz** is predicted to affect the concentration of **coumarins**. Adjust dose. [Moderate] Theoretical
- ▶ **Elvitegravir** is predicted to decrease the anticoagulant effect of **coumarins**. [Moderate] Theoretical
- ▶ **Enteral feeds** (vitamin-K containing) potentially decrease the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Enzalutamide** potentially decreases the exposure to **coumarins**. Avoid or adjust dose and monitor INR. [Severe] Study
- ▶ **Erlotinib** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Etravirine** increases the anticoagulant effect of **coumarins**. [Moderate] Theoretical
- ▶ **Fibrates** are predicted to increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Fluorouracil** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Fosaprepitant** is predicted to decrease the anticoagulant effect of **coumarins**. [Moderate] Theoretical
- ▶ **Gefitinib** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Glucagon** increases the anticoagulant effect of **warfarin**. [Severe] Study
- ▶ **Glucosamine** potentially decreases the anticoagulant effect of **acenocoumarol**. [Moderate] Anecdotal
- ▶ **Glucosamine** potentially increases the anticoagulant effect of **warfarin**. Avoid. [Moderate] Anecdotal
- ▶ **Griseofulvin** potentially decreases the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to affect the anticoagulant effect of **coumarins**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Ivacaftor** is predicted to increase the anticoagulant effect of **warfarin**. [Severe] Theoretical
- ▶ **Ivermectin** potentially increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Lapatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Leflunomide** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Letermovir** is predicted to decrease the concentration of **warfarin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Lomitapide** increases the exposure to **warfarin**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Macrolides (clarithromycin, erythromycin)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Mercaptopurine** decreases the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
- ▶ **Metronidazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Mexiletine** potentially affects the exposure to **warfarin**. Avoid. [Unknown] Theoretical

## Coumarins (continued)

- ▶ **Monoclonal antibodies (blinatumomab)** are predicted to transiently increase the exposure to **warfarin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to **warfarin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to **warfarin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Nandrolone** is predicted to increase the anticoagulant effect of **coumarins**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Nevirapine** potentially alters the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Nilotinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Nitisinone** is predicted to increase the exposure to **warfarin**. [Moderate] Study
- ▶ **Obeticholic acid** decreases the anticoagulant effect of **warfarin**. [Severe] Study
- ▶ **Oxymetholone** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Paracetamol** increases the anticoagulant effect of **coumarins**. [Moderate] Study
- ▶ **Paritaprevir** (in fixed-dose combination with dasabuvir) decreases the anticoagulant effect of **acenocoumarol**. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Paritaprevir** (in fixed-dose combination) decreases the anticoagulant effect of **warfarin**. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Pazopanib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Penicillins** potentially alter the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Pitolisant** is predicted to decrease the exposure to **warfarin**. [Mild] Theoretical
- ▶ **Ponatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Quinolones** increase the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Ranibizumab** increases the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Regorafenib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Study
- ▶ **Rifampicin** decreases the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Rucaparib** slightly increases the exposure to **warfarin**. Monitor and adjust dose. [Severe] Study
- ▶ **Ruxolitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Sorafenib** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **St John's Wort** decreases the anticoagulant effect of **coumarins**. Avoid. [Severe] Anecdotal
- ▶ **Statins (fluvastatin, rosuvastatin)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Sucralfate** potentially decreases the effects of **warfarin**. Separate administration by 2 hours. [Moderate] Anecdotal
- ▶ **Sulfonamides (sulfadiazine)** are predicted to increase the anticoagulant effect of **coumarins**. [Severe] Theoretical
- ▶ **Sulfonamides (sulfamethoxazole)** increase the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Sunitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Tamoxifen** increases the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Tegafur** increases the anticoagulant effect of **coumarins**. [Moderate] Theoretical
- ▶ **Teriflunomide** affects the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Tetracyclines** increase the risk of bleeding events when given with **coumarins**. [Moderate] Anecdotal
- ▶ **Tigecycline** increases the risk of bleeding events when given with **coumarins**. [Moderate] Anecdotal

- ▶ **Tinidazole** is predicted to increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Theoretical
- ▶ **Toremifene** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Theoretical
- ▶ **Trimethoprim** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Vandetanib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Venetoclax** slightly increases the exposure to **warfarin**. [Moderate] Study

## Cranberry juice

- ▶ **Cranberry juice** potentially increases the anticoagulant effect of **coumarins (warfarin)**. Avoid. [Severe] Anecdotal

**Crisantaspase** → see TABLE 1 p. 1446 (hepatotoxicity), TABLE 15 p. 1449 (myelosuppression)

- ▶ **Crisantaspase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Crisantaspase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1446 → Also see TABLE 15 p. 1449
- ▶ **Crisantaspase** potentially increases the risk of neurotoxicity when given with **vinca alkaloids (vincristine)**. Vincristine should be taken 3 to 24 hours before **crisantaspase**. [Severe] Anecdotal → Also see TABLE 1 p. 1446 → Also see TABLE 15 p. 1449

**Crizotinib** → see TABLE 6 p. 1447 (bradycardia), TABLE 15 p. 1449 (myelosuppression), TABLE 9 p. 1448 (QT-interval prolongation)

**GENERAL INFORMATION** Caution with concurrent use of drugs that cause gastrointestinal perforation—discontinue treatment if gastrointestinal perforation occurs.

- ▶ **Crizotinib** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose, p. 205. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Crizotinib** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **Apalutamide** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Crizotinib** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Crizotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Bosentan** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 15 p. 1449 → Also see TABLE 9 p. 1448
- ▶ **Crizotinib** is predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1449 → Also see TABLE 9 p. 1448
- ▶ **Crizotinib** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study

- ▶ **Crizotinib** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1183. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 15 p. 1449 → Also see TABLE 9 p. 1448
- ▶ **Crizotinib** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Crizotinib** increases the risk of QT-prolongation when given with **domeperidone**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Crizotinib** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Crizotinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Crizotinib** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Crizotinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 821. [Mild] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Crizotinib** potentially decreases the exposure to **glecaprevir**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Crizotinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 1037. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Crizotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 225. [Severe] Theoretical → Also see TABLE 6 p. 1447
- ▶ **Crizotinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 308 or **tezacaftor** with **ivacaftor** p. 310 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Crizotinib** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 416. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Crizotinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Crizotinib** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 69. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1063. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Crizotinib** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 6 p. 1447
- ▶ **Crizotinib** is predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical → Also see TABLE 6 p. 1447 → Also see TABLE 9 p. 1448
- ▶ **Crizotinib** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 15 p. 1449 → Also see TABLE 9 p. 1448
- ▶ **Crizotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 858. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 859. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Crizotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Crizotinib** potentially decreases the exposure to **pibrentasvir**. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Pitolisant** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Crizotinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **roxolitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Crizotinib** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Crizotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 866. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical

## Crizotinib (continued)

- ▶ **Crizotinib** is predicted to increase the exposure to **statins** (**atorvastatin**, **simvastatin**). Monitor and adjust dose. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1449 → Also see TABLE 9 p. 1448
- ▶ **Crizotinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **taxanes** (**cabazitaxel**). [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Crizotinib** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Crizotinib** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 310 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Crizotinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust tofacitinib dose, p. 1167. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **tolterodine**. [Mid] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Crizotinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust tolvaptan dose with moderate inhibitors of CYP3A4, p. 706. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1449 → Also see TABLE 9 p. 1448
- ▶ **Crizotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- Cyclizine** → see antihistamines, sedating
- Cyclopentolate** → see TABLE 10 p. 1448 (antimuscarinics)
- Cyclophosphamide** → see alkylating agents
- Cycloserine**
  - ▶ Cycloserine increases the risk of CNS toxicity when given with **isoniazid**. Monitor and adjust dose. [Moderate] Study
- Cyproheptadine** → see antihistamines, sedating
- Cytarabine** → see TABLE 15 p. 1449 (myelosuppression)
- ▶ Cytarabine decreases the concentration of **flucytosine**. Avoid. [Severe] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with cytarabine. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- Cytomegalovirus immunoglobulin** → see immunoglobulins
- Dabigatran** → see TABLE 3 p. 1446 (anticoagulant effects)
  - ▶ **Antiarrhythmics (amiodarone)** increase the exposure to dabigatran. Adjust dabigatran dose, p. 146. [Moderate] Study
  - ▶ **Antiarrhythmics (dronedarone)** slightly increase the exposure to dabigatran. Avoid. [Severe] Study
  - ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to dabigatran. Avoid. [Severe] Study
  - ▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to dabigatran. Avoid. [Severe] Theoretical
  - ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to dabigatran. Monitor and adjust dose. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to dabigatran. Avoid. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to dabigatran. [Mid] Study
  - ▶ **Brigatinib** potentially increases the concentration of dabigatran. [Moderate] Theoretical
  - ▶ **Calcium channel blockers (verapamil)** increase the exposure to dabigatran. Adjust dabigatran dose, p. 146. [Severe] Study
  - ▶ **Certitinib** is predicted to increase the exposure to dabigatran. [Moderate] Theoretical
  - ▶ **Ciclosporin** is predicted to increase the exposure to dabigatran. Avoid. [Severe] Theoretical

- ▶ **Cobicistat** is predicted to increase the exposure to dabigatran. Avoid. [Severe] Theoretical
- ▶ **Elbasvir** is predicted to increase the concentration of dabigatran. [Moderate] Theoretical
- ▶ **Eliglustat** is predicted to increase the exposure to dabigatran. Adjust dose. [Moderate] Study
- ▶ **Glecaprevir** (with pibrentasvir) increases the exposure to dabigatran. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to dabigatran. Avoid. [Severe] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to dabigatran. [Severe] Theoretical
- ▶ **Ledipasvir** is predicted to increase the exposure to dabigatran. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to decrease the concentration of dabigatran. Avoid. [Severe] Theoretical
- ▶ **Macrolides** are predicted to increase the exposure to dabigatran. [Moderate] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to dabigatran. [Severe] Theoretical
- ▶ **Neratinib** is predicted to increase the exposure to dabigatran. [Moderate] Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to dabigatran. [Severe] Study
- ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to dabigatran. Avoid. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to dabigatran. [Mid] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to dabigatran. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to dabigatran. Avoid. [Severe] Study
- ▶ **Rolapitant** is predicted to increase the exposure to dabigatran. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to dabigatran. Avoid. [Severe] Study
- ▶ **Tacrolimus** is predicted to increase the exposure to dabigatran. Avoid. [Severe] Theoretical
- ▶ **Velpatasvir** increases the exposure to dabigatran. Avoid. [Severe] Study
- ▶ **Vemurafenib** increases the exposure to dabigatran. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to dabigatran. Avoid or adjust dose. [Severe] Study
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) increases the concentration of dabigatran. Avoid. [Severe] Study
- Dabrafenib** → see TABLE 15 p. 1449 (myelosuppression)
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to dabrafenib. Avoid. [Moderate] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to dabrafenib. Use with caution or avoid. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to dabrafenib. Avoid. [Moderate] Theoretical
  - ▶ **Clopidogrel** is predicted to increase the exposure to dabrafenib. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to dabrafenib. Use with caution or avoid. [Moderate] Study
  - ▶ **Dabrafenib** is predicted to decrease the anticoagulant effect of **coumarins**. [Severe] Theoretical
  - ▶ **Dabrafenib** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine p. 681 or lamivudine with tenofovir disoproxil and doravirine p. 690 dose. [Severe] Theoretical
  - ▶ **Enzalutamide** is predicted to decrease the exposure to dabrafenib. Avoid. [Moderate] Theoretical
  - ▶ **Fibrates (gemfibrozil)** are predicted to increase the exposure to dabrafenib. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to dabrafenib. Use with caution or avoid. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to dabrafenib. Use with caution or avoid. [Moderate] Study → Also see TABLE 15 p. 1449

- **Macrolides (clarithromycin)** are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- **Dabrafenib** decreases the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- **Mitotane** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- **Rifampicin** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical

**Dacarbazine** → see alkylating agents

#### Dacomitinib

- **Dacomitinib** is predicted to markedly increase the exposure to **atomoxetine**. Avoid or adjust dose. [Severe] Study
- **Dacomitinib** is predicted to markedly increase the exposure to **beta blockers, non-selective (propranolol)**. Avoid. [Severe] Study
- **Dacomitinib** is predicted to markedly increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. Avoid. [Severe] Study
- **Dacomitinib** is predicted to markedly increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- **H<sub>2</sub> receptor antagonists** are predicted to decrease the concentration of **dacomitinib**. **Dacomitinib** should be taken 2 hours before or 10 hours after **H<sub>2</sub> receptor antagonists**. [Mild] Study
- **Proton pump inhibitors** are predicted to decrease the exposure to **dacomitinib**. Avoid. [Moderate] Study
- **Dacomitinib** is predicted to markedly increase the exposure to **tolterodine**. Avoid. [Severe] Study
- **Dacomitinib** is predicted to markedly increase the exposure to **tricyclic antidepressants (imipramine, nortriptyline)**. Avoid. [Severe] Study

**Dactinomycin** → see TABLE 1 p. 1446 (hepatotoxicity), TABLE 15 p. 1449 (myelosuppression)

- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dactinomycin**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

#### Dairy products

- **Dairy products** are predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **dairy products**. [Severe] Theoretical
- **Dairy products** decrease the exposure to **tetracyclines (demeclocycline, oxytetracycline, tetracycline)**. Avoid. [Moderate] Study

**Daiteparin** → see low molecular-weight heparins

**Danaparoid** → see TABLE 3 p. 1446 (anticoagulant effects)

- **Ranibizumab** is predicted to increase the risk of bleeding events when given with **danaparoid**. [Severe] Theoretical

#### Danazol

- **Danazol** moderately increases the concentration of **antiepileptics (carbamazepine)**. Monitor and adjust dose. [Severe] Study
- **Danazol** increases the concentration of **ciclosporin**. [Severe] Study
- **Danazol** potentially increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- **Danazol** is predicted to increase the risk of rhabdomyolysis when given with **statins (atorvastatin)**. [Severe] Theoretical
- **Danazol** increases the risk of rhabdomyolysis when given with **statins (simvastatin)**. Avoid. [Severe] Anecdotal
- **Danazol** potentially increases the concentration of **tacrolimus**. [Severe] Anecdotal

**Dantrolene** → see TABLE 1 p. 1446 (hepatotoxicity)

- Intravenous **dantrolene** potentially increases the risk of acute hyperkalaemia and cardiovascular collapse when given with **calcium channel blockers (diltiazem, verapamil)**. Avoid. [Severe] Anecdotal

**Dapagliflozin** → see TABLE 14 p. 1449 (antidiabetic drugs), TABLE 8 p. 1447 (hypotension)

**Dapoxetine** → see SSRIs

#### Dapsone

- **Aminosalicylic acid** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical

- **Dapsone** is predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Theoretical
- **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- **Antimalarials (chloroquine, primaquine)** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- **Nitrates** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- **Nitrofurantoin** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- **Nitroprusside** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- **Paracetamol** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical

- **Rifabutin** decreases the exposure to **dapsone**. [Moderate] Study
- **Rifampicin** decreases the exposure to **dapsone**. [Moderate] Study
- **Sulfonamides** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical

- **Dapsone** increases the exposure to **trimethoprim** and **trimethoprim** increases the exposure to **dapsone**. [Severe] Study

#### Daptomycin

- **Aspirin** (high-dose) increases the risk of renal impairment when given with **daptomycin**. [Moderate] Theoretical
- **Ciclosporin** is predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
- **Fibrates** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
- **NSAIDs** increase the risk of renal impairment when given with **daptomycin**. [Moderate] Theoretical
- **Statins** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical

**Daratumumab** → see monoclonal antibodies

**Darbepoetin alfa** → see TABLE 5 p. 1447 (thromboembolism), TABLE 16 p. 1450 (increased serum potassium)

**Darifenacin** → see TABLE 10 p. 1448 (antimuscarinics)

- **Antiarrhythmics (dronedarone)** are predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- **Darifenacin** is predicted to increase the concentration of **antiarrhythmics (flecainide)**. [Moderate] Theoretical
- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- **Apalutamide** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- **Aprepitant** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- **Bupropion** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- **Calcium channel blockers (diltiazem, verapamil)** are predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- **Ciclosporin** is predicted to increase the exposure to **darifenacin**. Avoid. [Moderate] Theoretical
- **Cinacalcet** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- **Cobicistat** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- **Crizotinib** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- **Enzalutamide** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical

## Darifenacin (continued)

- ▶ **Grapefruit juice** is predicted to increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Nilotinib** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Terbinafine** is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **Darifenacin** is predicted to increase the exposure to **tricyclic antidepressants**. [Moderate] Theoretical → Also see TABLE 10 p. 1448

**Darunavir** → see HIV-protease inhibitors

**Dasabuvir**

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
  - ▶ **Clopidogrel** is predicted to very markedly increase the exposure to **dasabuvir**. Avoid. [Severe] Study
  - ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) increase the risk of increased ALT concentrations when given with **dasabuvir**. Avoid. [Severe] Study
  - ▶ **Efavirenz** increases the risk of increased ALT concentrations when given with **dasabuvir**. Avoid. [Severe] Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
  - ▶ **Etravirine** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
  - ▶ **Fibrates (gemfibrozil)** are predicted to very markedly increase the exposure to **dasabuvir**. Avoid. [Severe] Study
  - ▶ **Dasabuvir** (with ombitasvir, paritaprevir, and ritonavir) decreases the concentration of **HIV-protease inhibitors (darunavir)**. Avoid or adjust dose. [Moderate] Study
  - ▶ **Dasabuvir** (with ombitasvir, paritaprevir, and ritonavir) increases the concentration of **loop diuretics (furosemide)**. Adjust dose. [Moderate] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
  - ▶ **Dasabuvir** increases the exposure to **statins (rosuvastatin)**. Adjust **rosuvastatin** dose, p. 216. [Moderate] Study
- Dasatinib** → see TABLE 15 p. 1449 (myelosuppression), TABLE 9 p. 1448 (QT-interval prolongation), TABLE 4 p. 1446 (antiplatelet effects)
- ▶ **Antacids** decrease the absorption of **dasatinib**. Separate administration by at least 2 hours. [Moderate] Study
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1448
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study

- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1448
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study → Also see TABLE 9 p. 1448
  - ▶ **Apalutamide** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
  - ▶ **Aprepitant** is predicted to increase the exposure to **dasatinib**. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **dasatinib**. [Severe] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **dasatinib**. [Severe] Study
  - ▶ **Cobicistat** is predicted to markedly increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Dasatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
  - ▶ **Crizotinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 15 p. 1449 → Also see TABLE 9 p. 1448
  - ▶ **Efavirenz** is predicted to decrease the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1448
  - ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **dasatinib**. Avoid. [Moderate] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **dasatinib**. Avoid. [Moderate] Study
  - ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study → Also see TABLE 9 p. 1448
  - ▶ **Idelalisib** is predicted to markedly increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study → Also see TABLE 15 p. 1449
  - ▶ **Imatinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 15 p. 1449
  - ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study → Also see TABLE 9 p. 1448
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1448
  - ▶ **Mitotane** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1449
  - ▶ **Netupitant** is predicted to increase the exposure to **dasatinib**. [Severe] Study
  - ▶ **Nevirapine** is predicted to decrease the exposure to **dasatinib**. [Severe] Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 15 p. 1449 → Also see TABLE 9 p. 1448
  - ▶ **Dasatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
  - ▶ **Pitolisant** is predicted to decrease the exposure to **dasatinib**. Avoid. [Severe] Theoretical
  - ▶ **Proton pump inhibitors** are predicted to slightly to moderately decrease the exposure to **dasatinib**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
  - ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **dasatinib**. Separate administration by at least 2 hours. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **dasatinib**. [Severe] Study
  - ▶ **Dasatinib** is predicted to increase the exposure to **statins (simvastatin)**. [Moderate] Theoretical
- Daunorubicin** → see anthracyclines
- Decitabine** → see TABLE 15 p. 1449 (myelosuppression)
- Deferasirox** → see iron chelators
- Deferiprone** → see iron chelators
- Deflazacort** → see corticosteroids
- Delamanid** → see TABLE 9 p. 1448 (QT-interval prolongation)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** very slightly increase the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Apalutamide** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Cobicistat** very slightly increases the exposure to **delamanid**. [Severe] Study
- ▶ **Enzalutamide** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** very slightly increase the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Idelalisib** very slightly increases the exposure to **delamanid**. [Severe] Study
- ▶ **Macrolides (clarithromycin)** very slightly increase the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Mitotane** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- Demeclocycline** → see tetracyclines
- Desferrioxamine** → see iron chelators
- Desflurane** → see volatile halogenated anaesthetics
- Desloratadine** → see antihistamines, non-sedating
- Desmopressin** → see TABLE 18 p. 1450 (hyponatraemia)
- ▶ **Antiepileptics (lamotrigine)** are predicted to increase the risk of hyponatraemia when given with **desmopressin**. [Severe] Theoretical
- ▶ **Loperamide** greatly increases the absorption of oral **desmopressin** (and possibly sublingual). [Moderate] Study
- ▶ **Phenothiazines (chlorpromazine)** are predicted to increase the risk of hyponatraemia when given with **desmopressin**. [Severe] Theoretical
- Desogestrel**
  - ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
  - ▶ **Desogestrel** is predicted to increase the exposure to **antiepileptics (lamotrigine)**. [Moderate] Study
  - ▶ **Aprepitant** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
  - ▶ **Flavirinz** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
  - ▶ **Fosaprepitant** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
  - ▶ **Griseofulvin** potentially decreases the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Anecdotal
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
  - ▶ **Modafinil** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
  - ▶ **Rifabutin** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the efficacy of **desogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical

- ▶ **Sugammadex** is predicted to decrease the exposure to **desogestrel**. Refer to patient information leaflet for missed pill advice. [Severe] Theoretical
- ▶ **Ulipristal** is predicted to decrease the efficacy of **desogestrel**. Avoid. [Severe] Theoretical
- Dexamethasone** → see corticosteroids
- Dexamfetamine** → see amfetamines
- Dexibuprofen** → see NSAIDs
- Dexketoprofen** → see NSAIDs
- Dexmedetomidine** → see TABLE 11 p. 1448 (CNS depressant effects)
- Dextrazoxane** → see iron chelators
- Diamorphine** → see opioids
- Diazepam** → see TABLE 11 p. 1448 (CNS depressant effects)
- ▶ **Diazepam** potentially affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, voriconazole)** moderately increase the exposure to **diazepam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **diazepam**. Avoid or monitor. [Mild] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **diazepam**. Avoid. [Moderate] Theoretical
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to **diazepam**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** moderately decreases the exposure to **diazepam**. Avoid. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** moderately increase the exposure to **diazepam**. [Moderate] Study
- Diazoxide** → see TABLE 8 p. 1447 (hypotension)
- ▶ **Diazoxide** decreases the concentration of **antiepileptics (fosphenytoin, phenytoin)** and **antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the effects of **diazoxide**. Monitor concentration and adjust dose. [Moderate] Anecdotal
- ▶ **Diazoxide** increases the risk of severe hypotension when given with **hydralazine**. [Severe] Study → Also see TABLE 8 p. 1447
- Diclofenac** → see NSAIDs
- Dicycloverine** → see TABLE 10 p. 1448 (antimuscarinics)
- Dienogest**
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **dienogest**. [Severe] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **dienogest**. [Moderate] Study
  - ▶ **Apalutamide** is predicted to markedly decrease the exposure to **dienogest**. [Severe] Study
  - ▶ **Aprepitant** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
  - ▶ **Cobicistat** is predicted to moderately increase the exposure to **dienogest**. [Moderate] Study
  - ▶ **Crizotinib** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
  - ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **dienogest**. [Severe] Study
  - ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **dienogest**. [Moderate] Study
  - ▶ **Idelalisib** is predicted to moderately increase the exposure to **dienogest**. [Moderate] Study
  - ▶ **Imatinib** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **dienogest**. [Moderate] Study
  - ▶ **Macrolides (erythromycin)** are predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
  - ▶ **Mitotane** is predicted to markedly decrease the exposure to **dienogest**. [Severe] Study

## Dienogest (continued)

- ▶ **Netupitant** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Nilotinib** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **dienogest**. [Severe] Study

**Digoxin** → see TABLE 6 p. 1447 (bradycardia)

- ▶ **Acarbose** decreases the concentration of **digoxin**. [Moderate] Study
- ▶ **Aldosterone antagonists (eplerenone)** very slightly increase the exposure to **digoxin**. [Mild] Study
- ▶ **Aldosterone antagonists (spironolactone)** increase the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Aminoglycosides** potentially increase the concentration of **digoxin**. Monitor and adjust dose. [Mild] Study
- ▶ **Antacids** decrease the absorption of **digoxin**. Separate administration by 2 hours. [Mild] Study
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to moderately increase the exposure to **digoxin**. Monitor and adjust **digoxin** dose, p. 116. [Severe] Study → Also see TABLE 6 p. 1447
- ▶ **Antiarrhythmics (propafenone)** increase the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the concentration of **digoxin**. [Moderate] Anecdotal
- ▶ **Antifungals, azoles (isavuconazole)** slightly increase the exposure to **digoxin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole)** are predicted to markedly increase the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (ketoconazole)** are predicted to markedly increase the concentration of **digoxin**. [Severe] Study
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the concentration of **digoxin**. [Severe] Study
- ▶ **Antimalarials (mefloquine)** are predicted to increase the risk of bradycardia when given with **digoxin**. [Severe] Theoretical
- ▶ **Antimalarials (quinine)** increase the concentration of **digoxin**. Monitor and adjust **digoxin** dose, p. 116. [Severe] Anecdotal
- ▶ **Apalutamide** is predicted to decrease the exposure to **digoxin**. [Mild] Study
- ▶ **Balsalazide** is predicted to decrease the concentration of **digoxin**. [Moderate] Theoretical
- ▶ **Brigatinib** potentially increases the concentration of **digoxin**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** increase the concentration of **digoxin**. Monitor and adjust dose. [Severe] Study → Also see TABLE 6 p. 1447
- ▶ **Intravenous calcium salts** increase the effects of **digoxin**. Avoid. [Moderate] Anecdotal
- ▶ **Carbimazole** affects the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Ceritinib** is predicted to increase the risk of bradycardia when given with **digoxin**. Avoid. [Severe] Theoretical
- ▶ **Closporin** increases the concentration of **digoxin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Drugs that reduce serum potassium** (see TABLE 17 p. 1450) are predicted to increase the risk of **digoxin** toxicity when given with **digoxin**. [Severe] Study
- ▶ **Eliglustat** increases the exposure to **digoxin**. Adjust dose. [Moderate] Study
- ▶ **Glecaprevir** (with pibrentasvir) increases the exposure to **digoxin**. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** increase the concentration of **digoxin**. Adjust dose and monitor concentration. [Severe] Study
- ▶ **Ivacaftor** slightly increases the exposure to **digoxin**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **digoxin**. [Moderate] Theoretical
- ▶ **Ledipasvir** is predicted to increase the exposure to **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Macrolides** increase the concentration of **digoxin**. [Severe] Anecdotal
- ▶ **Mirabegron** slightly increases the exposure to **digoxin**. Monitor concentration and adjust dose. [Severe] Study

- ▶ **Neomycin** decreases the absorption of **digoxin**. [Moderate] Study
- ▶ **Neratinib** is predicted to slightly increase the exposure to **digoxin**. [Moderate] Study
- ▶ **Neuromuscular blocking drugs, non-depolarising (pancuronium)** are predicted to increase the risk of cardiovascular side-effects when given with **digoxin**. [Severe] Anecdotal
- ▶ **NSAIDs (indometacin)** increase the concentration of **digoxin**. [Severe] Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) increases the exposure to **digoxin**. Monitor and adjust **digoxin** dose, p. 116. [Moderate] Study
- ▶ **Penicillamine** potentially decreases the concentration of **digoxin**. Separate administration by 2 hours. [Severe] Anecdotal
- ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **digoxin**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **digoxin**. [Mild] Theoretical
- ▶ **Ranolazine** increases the concentration of **digoxin**. [Moderate] Study
- ▶ **Ribociclib** is predicted to increase the exposure to **digoxin**. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the concentration of **digoxin**. [Moderate] Study
- ▶ **Rolapitant** slightly increases the exposure to **digoxin**. [Moderate] Study
- ▶ **St John's Wort** decreases the concentration of **digoxin**. Avoid. [Severe] Anecdotal
- ▶ **Sucralfate** decreases the absorption of **digoxin**. Separate administration by 2 hours. [Severe] Anecdotal
- ▶ **Sulfasalazine** decreases the concentration of **digoxin**. [Moderate] Study
- ▶ **Suxamethonium** is predicted to increase the risk of cardiovascular side-effects when given with **digoxin**. [Severe] Anecdotal
- ▶ **Thyroid hormones** are predicted to affect the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Ticagrelor** increases the concentration of **digoxin**. [Moderate] Study
- ▶ **Tolvaptan** increases the concentration of **digoxin**. [Mild] Study
- ▶ **Trimethoprim** increases the concentration of **digoxin**. [Moderate] Study
- ▶ **Valdetanib** slightly increases the exposure to **digoxin**. Monitor ECG and adjust dose. [Moderate] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **digoxin**. [Severe] Study
- ▶ **Venetoclax** increases the exposure to **digoxin**. Avoid or adjust dose. [Severe] Study
- ▶ **Vitamin D substances** are predicted to increase the risk of toxicity when given with **digoxin**. [Severe] Theoretical
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) is predicted to increase the exposure to **digoxin**. Monitor and adjust dose. [Severe] Theoretical

**Dihydrocodeine** → see opioids

**Dihydrotachysterol** → see vitamin D substances

**Diltiazem** → see calcium channel blockers

**Dimenhydrinate** → see TABLE 10 p. 1448 (antimuscarinics)

**Dimethyl fumarate**

- ▶ **Alcohol (beverage)** (excessive consumption) potentially increases the risk of gastrointestinal side-effects when given with **dimethyl fumarate**. Avoid. [Moderate] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dimethyl fumarate**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

**Dinutuximab** → see monoclonal antibodies

**Diphenoxylate** → see opioids

**Dipipanone** → see opioids

**Dipyridamole** → see TABLE 8 p. 1447 (hypotension), TABLE 4 p. 1446 (antiplatelet effects)

- ▶ **Antacids** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [Moderate] Theoretical
- ▶ **Dipyridamole** increases the exposure to **antiarrhythmics (adenosine)**. Avoid or adjust dose. [Severe] Study

► **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [Moderate] Theoretical

► **Proton pump inhibitors** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [Moderate] Theoretical

**Disopyramide** → see antiarrhythmics

**Disulfiram** → see TABLE 12 p. 1449 (peripheral neuropathy)

► **Alcohol (beverage)** causes an extremely unpleasant systemic reaction when given with **disulfiram**. Avoid for at least 24 hours before and up to 14 days after stopping treatment. [Severe] Study

► **Disulfiram** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Study → Also see TABLE 12 p. 1449

► **Disulfiram** increases the anticoagulant effect of **coumarins**. Monitor and adjust dose. [Severe] Study

► **Disulfiram** increases the risk of acute psychoses when given with **metronidazole**. [Severe] Study → Also see TABLE 12 p. 1449

► **Disulfiram** is predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical

**Dobutamine** → see sympathomimetics, inotropic

**Docetaxel** → see taxanes

**Docusate sodium**

ROUTE-SPECIFIC INFORMATION Interactions do not generally apply to topical use of **docusate** unless specified.

**Dolutegravir**

► **Antacids** moderately decrease the exposure to **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after antacids. [Moderate] Study

► **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **dolutegravir**. Adjust dose. [Severe] Study

► **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to **dolutegravir**. Adjust dose. [Severe] Theoretical

► **Apalutamide** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study

► **Bosentan** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study

► Oral **calcium salts** decrease the absorption of **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after calcium salts. [Moderate] Study

► **Dolutegravir** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [Moderate] Study

► **Efavirenz** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study

► **Encorafenib** is predicted to increase the exposure to **dolutegravir**. [Moderate] Theoretical

► **Enzalutamide** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study

► **Etravirine** moderately decreases the exposure to **dolutegravir**. Avoid unless given with atazanavir, darunavir, or lopinavir (all boosted with ritonavir). [Severe] Study

► **HIV-protease inhibitors (fosamprenavir)** boosted with ritonavir slightly decrease the exposure to **dolutegravir**. Avoid if resistant to HIV-integrase inhibitors. [Severe] Study

► **HIV-protease inhibitors (tipranavir)** moderately decrease the exposure to **dolutegravir**. Refer to specialist literature. [Severe] Study

► **Iron (oral)** decreases the absorption of **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after iron (oral). [Moderate] Study

► **Dolutegravir** increases the exposure to **metformin**. Use with caution and adjust dose. [Severe] Study

► **Mitotane** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study

► **Nevirapine** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study

► **Rifampicin** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study

► **St John's Wort** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study

► **Sucralfate** decreases the absorption of **dolutegravir**. [Moderate] Study

**Domperidone** → see TABLE 9 p. 1448 (QT-interval prolongation)

► **Antiarrhythmics (dronedarone)** increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study

► **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study

► **Aprepitant** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study

► **Calcium channel blockers (diltiazem, verapamil)** increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study

► **Cobicistat** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study

► **Crizotinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study

► **Domperidone** is predicted to decrease the prolactin-lowering effect of **dopamine receptor agonists (bromocriptine, cabergoline)**. [Moderate] Theoretical

► **HIV-protease inhibitors** increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study

► **Idelalisib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study

► **Imatinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study

► **Macrolides (clarithromycin, erythromycin)** increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study

► **Netupitant** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study

► **Nilotinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study

**Donepezil** → see anticholinesterases, centrally acting

**Dopamine** → see sympathomimetics, inotropic

**Dopamine receptor agonists** → see TABLE 8 p. 1447 (hypotension), TABLE 9 p. 1448 (QT-interval prolongation), TABLE 10 p. 1448 (antimutagenicity)

amantadine • apomorphine • bromocriptine • cabergoline • pergolide • pramipexole • quinagolide • ropinirole • rotigotine

FOOD AND LIFESTYLE Dose adjustment might be necessary if smoking started or stopped during treatment with **ropinirole**.

► **Amisulpride** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1448

► **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical

► **Antiarrhythmics (dronedarone)** are predicted to increase the concentration of **cabergoline**. [Severe] Anecdotal

► **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal

► **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical

► **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study

► **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** increase the exposure to **bromocriptine**. [Severe] Study

► **Aprepitant** is predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical

► **Aprepitant** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal

► **Aripiprazole** is predicted to decrease the effects of **dopamine receptor agonists**. [Moderate] Theoretical → Also see TABLE 8 p. 1447

► **Asenapine** is predicted to decrease the effects of **dopamine receptor agonists**. Adjust dose. [Moderate] Theoretical → Also see TABLE 8 p. 1447

► **Benperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1447

► **Bupropion** increases the risk of side-effects when given with **amantadine**. [Moderate] Study

## Dopamine receptor agonists (continued)

- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical → Also see TABLE 8 p. 1447
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal → Also see TABLE 8 p. 1447
- ▶ **Clozapine** is predicted to decrease the effects of **dopamine receptor agonists**. [Moderate] Theoretical → Also see TABLE 8 p. 1447 → Also see TABLE 10 p. 1448
- ▶ **Cobicistat** increases the exposure to **bromocriptine**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
- ▶ **Dolutegravir** is predicted to increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study
- ▶ **Domperidone** is predicted to decrease the prolactin-lowering effect of dopamine receptor agonists (**bromocriptine**, **cabergoline**). [Moderate] Theoretical
- ▶ Dopamine receptor agonists (**cabergoline**) are predicted to increase the risk of ergotism when given with dopamine receptor agonists (**bromocriptine**). Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1447
- ▶ Dopamine receptor agonists (**bromocriptine**, **cabergoline**) are predicted to increase the risk of ergotism when given with dopamine receptor agonists (**pergolide**). Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1447
- ▶ Dopamine receptor agonists (**amantadine**) are predicted to increase the exposure to dopamine receptor agonists (**pramipexole**). Adjust dose. [Moderate] Theoretical → Also see TABLE 8 p. 1447
- ▶ **Droperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1447 → Also see TABLE 9 p. 1448
- ▶ **Ergometrine** is predicted to increase the risk of ergotism when given with dopamine receptor agonists (**cabergoline**, **pergolide**). Avoid. [Moderate] Theoretical
- ▶ **Ergotamine** is predicted to increase the risk of ergotism when given with dopamine receptor agonists (**bromocriptine**, **cabergoline**). Avoid. [Moderate] Theoretical
- ▶ **Ergotamine** is predicted to increase the risk of ergotism when given with **pergolide**. [Moderate] Theoretical
- ▶ **Flupentixol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1447
- ▶ **Apomorphine** is predicted to increase the risk of severe hypotension when given with **granisetron**. [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** are predicted to increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study
- ▶ **Haloperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1447 → Also see TABLE 9 p. 1448 → Also see TABLE 10 p. 1448
- ▶ **HIV-protease inhibitors** increase the exposure to **bromocriptine**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
- ▶ **Hormone replacement therapy** decreases the clearance of **ropinirole**. Monitor and adjust dose. [Moderate] Study
- ▶ **Idelalisib** increases the exposure to **bromocriptine**. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
- ▶ **Imatinib** is predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
- ▶ **Loxapine** is predicted to decrease the effects of **dopamine receptor agonists**. [Moderate] Theoretical → Also see TABLE 8 p. 1447 → Also see TABLE 10 p. 1448

- ▶ **Macrolides (clarithromycin)** increase the exposure to **bromocriptine**. [Severe] Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the concentration of **cabergoline**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
- ▶ **Amantadine** increases the risk of CNS toxicity when given with **memantine**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Memantine** is predicted to increase the effects of dopamine receptor agonists (**apomorphine**, **bromocriptine**, **cabergoline**, **pergolide**, **pramipexole**, **quinagolide**, **ropinirole**, **rotigotine**). [Moderate] Theoretical
- ▶ **Metoclopramide** is predicted to decrease the effects of dopamine receptor agonists (**apomorphine**, **bromocriptine**, **cabergoline**, **pergolide**, **pramipexole**, **quinagolide**, **ropinirole**, **rotigotine**). Avoid. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
- ▶ **Nilotinib** is predicted to increase the exposure to **bromocriptine**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the concentration of **cabergoline**. [Moderate] Anecdotal
- ▶ **Olanzapine** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1447
- ▶ **Apomorphine** increases the risk of severe hypotension when given with **ondansetron**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Paliperidone** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1447 → Also see TABLE 9 p. 1448
- ▶ **Apomorphine** is predicted to increase the risk of severe hypotension when given with **palonosetron**. [Severe] Theoretical
- ▶ **Phenothiazines** are predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1447 → Also see TABLE 9 p. 1448 → Also see TABLE 10 p. 1448
- ▶ **Pimozide** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1447 → Also see TABLE 9 p. 1448 → Also see TABLE 10 p. 1448
- ▶ **Quetiapine** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1447
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study
- ▶ **Risperidone** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1447 → Also see TABLE 9 p. 1448
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **ropinirole**. Adjust dose. [Moderate] Study
- ▶ **Sulpride** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1447 → Also see TABLE 9 p. 1448
- ▶ **Sympathomimetics, vasoconstrictor (isometheptene)** potentially increase the risk of side-effects when given with **bromocriptine**. Avoid. [Severe] Anecdotal
- ▶ **Trimethoprim** is predicted to increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study
- ▶ **Vandetanib** is predicted to increase the exposure to **pramipexole**. Adjust dose. [Moderate] Study
- ▶ **Zuclopenthixol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1447 → Also see TABLE 9 p. 1448

## Doravirine

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Theoretical

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **doravirine**. [Mild] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine p. 681 or lamivudine with tenofovir disoproxil and doravirine p. 690 dose. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **doravirine**. [Mild] Study
- ▶ **Dabrafenib** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine p. 681 or lamivudine with tenofovir disoproxil and doravirine p. 690 dose. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine p. 681 or lamivudine with tenofovir disoproxil and doravirine p. 690 dose. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **doravirine**. [Mild] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **doravirine**. [Mild] Study
- ▶ **Lumacaftor** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **doravirine**. [Mild] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
- ▶ **Modafinil** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine p. 681 or lamivudine with tenofovir disoproxil and doravirine p. 690 dose. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine p. 681 or lamivudine with tenofovir disoproxil and doravirine p. 690 dose. [Severe] Theoretical
- ▶ **Rifabutin** moderately decreases the exposure to **doravirine**. Adjust doravirine p. 681 or lamivudine with tenofovir disoproxil and doravirine p. 690 dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
- ▶ **Doravirine** is predicted to decrease the exposure to **sirolimus**. Monitor sirolimus concentration and adjust dose, p. 885. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Theoretical
- ▶ **Doravirine** is predicted to decrease the exposure to **tacrolimus**. Monitor tacrolimus concentration and adjust dose, p. 886. [Moderate] Theoretical
- ▶ **Telotristat ethyl** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine p. 681 or lamivudine with tenofovir disoproxil and doravirine p. 690 dose. [Severe] Theoretical

#### Dorzolamide

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

**Dosulepin** → see tricyclic antidepressants

#### Doxapram

- ▶ **Aminophylline** increases the risk of agitation when given with doxapram. [Moderate] Study
- ▶ **MAOIs, irreversible** are predicted to increase the effects of doxapram. [Moderate] Theoretical
- ▶ **Theophylline** increases the risk of agitation when given with doxapram. [Moderate] Study

**Doxazosin** → see alpha blockers

**Doxepin** → see tricyclic antidepressants

**Doxorubicin** → see anthracyclines

**Doxycycline** → see tetracyclines

**Doxylamine** → see antihistamines, sedating

**Dronabinol** → see TABLE 11 p. 1448 (CNS depressant effects)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [Mild] Study → Also see TABLE 11 p. 1448

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **dronabinol**. Adjust dose. [Mild] Study

- ▶ **Apalutamide** is predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [Mild] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **dronabinol**. Adjust dose. [Mild] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [Mild] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dronabinol**. Adjust dose. [Mild] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **dronabinol**. Adjust dose. [Mild] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **dronabinol**. Adjust dose. [Mild] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [Mild] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [Mild] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [Mild] Study

**Dronedarone** → see antiarrhythmics

**Droperidol** → see TABLE 8 p. 1447 (hypotension), TABLE 9 p. 1448 (QT-interval prolongation), TABLE 11 p. 1448 (CNS depressant effects)

- ▶ **Droperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1447 → Also see TABLE 9 p. 1448

- ▶ **Droperidol** decreases the effects of **levodopa**. [Severe] Study → Also see TABLE 8 p. 1447

**Drosiprenone** → see TABLE 16 p. 1450 (increased serum potassium)

- ▶ **Antifungals, azoles (ketoconazole)** moderately increase the exposure to **drosiprenone**. [Severe] Study

#### Drugs that reduce serum potassium

- ▶ **Drugs that reduce serum potassium** (see TABLE 17 p. 1450) are predicted to increase the risk of digoxin toxicity when given with **digoxin**. [Severe] Study

#### Drugs with anticoagulant effects

- ▶ **Bismuth subsalicylate** is predicted to increase the risk of bleeding events when given with **drugs with anticoagulant effects** (see TABLE 3 p. 1446). [Moderate] Theoretical
- ▶ **Caplacizumab** is predicted to increase the risk of bleeding events when given with **drugs with anticoagulant effects** (see TABLE 3 p. 1446). [Severe] Theoretical
- ▶ **Volanesorsen** potentially increases the risk of bleeding events when given with **drugs with anticoagulant effects** (see TABLE 3 p. 1446). Avoid depending on platelet count—consult product literature. [Severe] Theoretical

#### Drugs with antimuscarinic effects

- ▶ **Drugs with antimuscarinic effects** (see TABLE 10 p. 1448) decrease the absorption of **levodopa**. [Moderate] Theoretical

#### Drugs with antiplatelet effects

- ▶ **Caplacizumab** is predicted to increase the risk of bleeding events when given with **drugs with antiplatelet effects** (see TABLE 4 p. 1446). [Severe] Theoretical
- ▶ **Volanesorsen** potentially increases the risk of bleeding events when given with **drugs with antiplatelet effects** (see TABLE 4 p. 1446). Avoid depending on platelet count—consult product literature. [Severe] Theoretical
- ▶ **Dulaglutide** → see TABLE 14 p. 1449 (antidiabetic drugs)
- ▶ **Duloxetine** → see TABLE 18 p. 1450 (hyponatraemia), TABLE 13 p. 1449 (serotonin syndrome), TABLE 4 p. 1446 (antiplatelet effects)
- ▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **Duloxetine** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. [Moderate] Study
- ▶ **Duloxetine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **Duloxetine** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **duloxetine**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical

## Duloxetine (continued)

- ▶ **SSRIs (fluvoxamine)** markedly increase the exposure to duloxetine. Avoid. [Severe] Study → Also see TABLE 18 p. 1450 → Also see TABLE 13 p. 1449 → Also see TABLE 4 p. 1446
- ▶ **Teriflunomide** is predicted to decrease the exposure to duloxetine. [Moderate] Theoretical

**Dupilumab** → see monoclonal antibodies

**Durvalumab** → see monoclonal antibodies

**Dutasteride**

- ▶ **Antiarrhythmics (dronedarone)** are predicted to moderately increase the exposure to dutasteride. [Mild] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to moderately increase the exposure to dutasteride. [Mild] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to dutasteride. Monitor side effects and adjust dose. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to moderately increase the exposure to dutasteride. [Mild] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to moderately increase the exposure to dutasteride. [Mild] Study
- ▶ **Cobicistat** is predicted to increase the exposure to dutasteride. Monitor side effects and adjust dose. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to moderately increase the exposure to dutasteride. [Mild] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to dutasteride. Monitor side effects and adjust dose. [Moderate] Theoretical
- ▶ **Idealisib** is predicted to increase the exposure to dutasteride. Monitor side effects and adjust dose. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to moderately increase the exposure to dutasteride. [Mild] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to dutasteride. Monitor side effects and adjust dose. [Moderate] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to moderately increase the exposure to dutasteride. [Mild] Study
- ▶ **Netupitant** is predicted to moderately increase the exposure to dutasteride. [Mild] Study
- ▶ **Nilotinib** is predicted to moderately increase the exposure to dutasteride. [Mild] Study

**Ecuzimab** → see monoclonal antibodies

**Edoxaban** → see TABLE 3 p. 1446 (anticoagulant effects)

- ▶ **Antiarrhythmics (dronedarone)** slightly increase the exposure to edoxaban. Adjust edoxaban dose, p. 135. [Severe] Study
  - ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to edoxaban. [Moderate] Study
  - ▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to edoxaban. [Moderate] Theoretical
  - ▶ **Antifungals, azoles (itraconazole)** are predicted to slightly increase the exposure to edoxaban. [Severe] Theoretical
  - ▶ **Antifungals, azoles (ketoconazole)** slightly increase the exposure to edoxaban. Adjust edoxaban dose, p. 135. [Severe] Study
  - ▶ **Certinib** is predicted to increase the exposure to edoxaban. [Moderate] Theoretical
  - ▶ **Ciclosporin** slightly increases the exposure to edoxaban. Adjust edoxaban dose, p. 135. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to edoxaban. Avoid. [Severe] Theoretical
  - ▶ **Eliglustat** is predicted to increase the exposure to edoxaban. Adjust dose. [Moderate] Study
  - ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to slightly increase the exposure to edoxaban. [Severe] Theoretical
  - ▶ **Lapatinib** is predicted to slightly increase the exposure to edoxaban. [Severe] Theoretical
  - ▶ **Macrolides (azithromycin, clarithromycin)** are predicted to slightly increase the exposure to edoxaban. [Severe] Theoretical
  - ▶ **Macrolides (erythromycin)** slightly increase the exposure to edoxaban. Adjust edoxaban dose, p. 135. [Severe] Study
  - ▶ **Mirabegron** is predicted to increase the exposure to edoxaban. [Mild] Theoretical
  - ▶ **Neratinib** is predicted to increase the exposure to edoxaban. [Moderate] Study
  - ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to edoxaban. [Severe] Study
  - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to edoxaban. [Moderate] Study
  - ▶ **Pitolisant** is predicted to decrease the exposure to edoxaban. [Mild] Theoretical
  - ▶ **Ranolazine** is predicted to slightly increase the exposure to edoxaban. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to edoxaban. [Moderate] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to edoxaban. [Moderate] Study
  - ▶ **Velpatasvir** is predicted to increase the exposure to edoxaban. [Severe] Theoretical
  - ▶ **Vemurafenib** is predicted to slightly increase the exposure to edoxaban. [Severe] Theoretical
  - ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) is predicted to increase the concentration of edoxaban. Avoid. [Severe] Theoretical
- Efavirenz** → see TABLE 9 p. 1448 (QT-interval prolongation)
- ▶ **Efavirenz** is predicted to decrease the exposure to antiarrhythmics (dronedarone). [Severe] Theoretical → Also see TABLE 9 p. 1448
  - ▶ **Antiepileptics (carbamazepine)** slightly decrease the exposure to efavirenz and efavirenz slightly decreases the exposure to antiepileptics (carbamazepine). [Severe] Study
  - ▶ **Antiepileptics (fosphenytoin, phenytoin)** slightly decrease the exposure to efavirenz and efavirenz affects the concentration of antiepileptics (fosphenytoin, phenytoin). [Severe] Theoretical
  - ▶ **Antiepileptics (phenobarbital)** are predicted to decrease the exposure to efavirenz and efavirenz affects the concentration of antiepileptics (phenobarbital). [Severe] Theoretical
  - ▶ **Efavirenz** is predicted to affect the efficacy of antiepileptics (primidone) and antiepileptics (primidone) are predicted to slightly decrease the exposure to efavirenz. [Severe] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to antifungals, azoles (isavuconazole). Avoid. [Severe] Theoretical
  - ▶ **Efavirenz** slightly decreases the exposure to antifungals, azoles (itraconazole). Avoid and for 14 days after stopping efavirenz. [Moderate] Study
  - ▶ **Efavirenz** moderately decreases the exposure to antifungals, azoles (ketoconazole). [Severe] Study
  - ▶ **Efavirenz** slightly decreases the exposure to antifungals, azoles (posaconazole). Avoid. [Moderate] Study
  - ▶ **Efavirenz** moderately decreases the exposure to antifungals, azoles (voriconazole) and antifungals, azoles (voriconazole) slightly increase the exposure to efavirenz. Adjust dose. [Severe] Study → Also see TABLE 9 p. 1448
  - ▶ **Efavirenz** decreases the concentration of antimalarials (artemether). [Severe] Study → Also see TABLE 9 p. 1448
  - ▶ **Efavirenz** moderately decreases the exposure to antimalarials (atovaquone). Avoid. [Moderate] Study
  - ▶ **Efavirenz** affects the exposure to antimalarials (proguanil). Avoid. [Moderate] Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to aprepitant. [Moderate] Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to axitinib. [Moderate] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to bedaquiline. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
  - ▶ **Efavirenz** is predicted to decrease the exposure to bosutinib. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1448
  - ▶ **Efavirenz** is predicted to decrease the exposure to brigatinib. Avoid. [Severe] Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to bupropion. [Moderate] Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to cabozantinib. [Moderate] Theoretical → Also see TABLE 9 p. 1448
  - ▶ **Efavirenz** is predicted to decrease the exposure to calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nifedipine, nimodipine). Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to calcium channel blockers (diltiazem, verapamil). [Moderate] Theoretical

- ▶ **Efavirenz** is predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the concentration of **caspofungin**. Adjust dose. [Moderate] Study
- ▶ **Efavirenz** decreases the concentration of **ciclosporin**. Monitor concentration and adjust dose. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Study
- ▶ **Efavirenz** is predicted to affect the concentration of **coumarins**. Adjust dose. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Efavirenz** increases the risk of increased ALT concentrations when given with **dasabuvir**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Efavirenz** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
- ▶ **Efavirenz** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine p. 681 or lamivudine with tenofovir disoproxil and doravirine p. 690 dose. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **eliglustat**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **Efavirenz** decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Efavirenz** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ **Efavirenz** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **ivacaftor**. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Efavirenz** is predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the concentration of **letefmovir**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Efavirenz** decreases the exposure to **macrolides (clarithromycin)**. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Efavirenz** decreases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to alter the effects of **midazolam**. Avoid. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **neratinib**. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **netupitant**. [Moderate] Theoretical
- ▶ **Nevirapine** decreases the concentration of **efavirenz**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Efavirenz** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Anecdotal
- ▶ **Efavirenz** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Efavirenz** is predicted to decrease the exposure to **osimertinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Efavirenz** is predicted to decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Efavirenz** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **efavirenz**. [Mild] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Efavirenz** slightly decreases the exposure to **rifabutin**. Adjust dose. [Severe] Study
- ▶ **Rifampicin** slightly decreases the exposure to **efavirenz**. Adjust dose. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the concentration of **efavirenz**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** slightly decreases the exposure to **statins (atorvastatin)**. [Mild] Study
- ▶ **Efavirenz** moderately decreases the exposure to **statins (simvastatin)**. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical

**Efavirenz** (continued)

- ▶ **Efavirenz** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
- ▶ **Efavirenz** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Anecdotal
- ▶ **Efavirenz** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical

**Elbasvir**

- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Elbasvir** is predicted to increase the concentration of **dabigatran**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **elbasvir**. Avoid. [Unknown] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Modafinil** is predicted to decrease the exposure to **elbasvir**. Avoid. [Unknown] Theoretical
- ▶ **Nevirapine** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Elbasvir** increases the exposure to **statins** (**atorvastatin**). Adjust atorvastatin dose, p. 215. [Moderate] Study
- ▶ **Elbasvir** is predicted to increase the exposure to **statins** (**fluvastatin**). Adjust fluvastatin dose, p. 215. [Unknown] Theoretical
- ▶ **Elbasvir** increases the exposure to **statins** (**rosuvastatin**). Adjust rosuvastatin dose, p. 216. [Moderate] Study
- ▶ **Elbasvir** is predicted to increase the exposure to **statins** (**simvastatin**). Adjust simvastatin dose, p. 217. [Unknown] Theoretical
- ▶ **Elbasvir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. [Moderate] Theoretical

**Eletriptan** → see TABLE 13 p. 1449 (serotonin syndrome)

- ▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **eletriptan**. [Moderate] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Eletriptan** increases the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Macrolides** (**clarithromycin**) are predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Macrolides** (**erythromycin**) moderately increase the exposure to **eletriptan**. Avoid. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **eletriptan**. [Moderate] Study

**Eliglustat**

- ▶ **Abiraterone** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study

- ▶ **Eliglustat** is predicted to increase the exposure to **aliskiren**. Adjust dose. [Moderate] Study
- ▶ **Antiarrhythmics** (**dronedaron**, **propafenone**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Antifungals**, azoles (**fluconazole**, **isavuconazole**, **itraconazole**, **ketoconazole**, **posaconazole**, **voriconazole**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **antihistamines**, **non-sedating** (**fexofenadine**). Adjust dose. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **atomoxetine**. Adjust dose. [Moderate] Theoretical
- ▶ **Eliglustat** is predicted to increase the exposure to **beta blockers**, **non-selective** (**propranolol**). Adjust dose. [Moderate] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **beta blockers**, **selective** (**metoprolol**). Adjust dose. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **eliglustat**. [Moderate] Theoretical
- ▶ **Bupropion** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Cinacalcet** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **colchicine**. Avoid or adjust colchicine dose, p. 1183. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **dabigatran**. Adjust dose. [Moderate] Study
- ▶ **Dacomitinib** is predicted to markedly increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eliglustat** increases the exposure to **digoxin**. Adjust dose. [Moderate] Study
- ▶ **Duloxetine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **edoxaban**. Adjust dose. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **eliglustat**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **everolimus**. Adjust dose. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **eliglustat**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **loperamide**. Adjust dose. [Moderate] Study
- ▶ **Macrolides** (**clarithromycin**, **erythromycin**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study

- ▶ **Moclobemide** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **eliglustat**. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **eliglustat**. Avoid. [\[Severe\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **sirolimus**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **St John's Wort** is predicted to increase the exposure to **eliglustat**. Avoid. [\[Severe\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **taxanes (paclitaxel)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Terbinafine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [\[Severe\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **tolterodine**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Eliglustat** is predicted to increase the exposure to **topotecan**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Eliglustat** is predicted to increase the exposure to **tricyclic antidepressants (nortriptyline)**. Adjust dose. [\[Moderate\]](#) Theoretical
- Elotuzumab** → see monoclonal antibodies
- Eltrombopag**
  - ▶ **Antacids** decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after antacids. [\[Severe\]](#) Study
  - ▶ Oral **calcium salts** decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after calcium salts. [\[Severe\]](#) Study
  - ▶ **Ciclosporin** decreases the exposure to **eltrombopag**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Dairy products** are predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **dairy products**. [\[Severe\]](#) Theoretical
  - ▶ **Iron (oral)** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **iron (oral)**. [\[Severe\]](#) Theoretical
  - ▶ **Eltrombopag** is predicted to increase the exposure to **larotrectinib**. [\[Mild\]](#) Study
  - ▶ **Eltrombopag** is predicted to increase the concentration of **letermovir**. [\[Moderate\]](#) Study
  - ▶ **Eltrombopag** is predicted to increase the concentration of **methotrexate**. [\[Moderate\]](#) Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **eltrombopag** and **eltrombopag** is predicted to increase the concentration of **rifampicin**. [\[Moderate\]](#) Theoretical
  - ▶ Oral **selenium** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **selenium**. [\[Severe\]](#) Theoretical
  - ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **eltrombopag**. [\[Moderate\]](#) Theoretical
  - ▶ **Eltrombopag** is predicted to increase the exposure to **statins**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Eltrombopag** potentially increases the exposure to **talazoparib**. Avoid or monitor. [\[Moderate\]](#) Theoretical
  - ▶ **Eltrombopag** is predicted to increase the exposure to **tenofovir alafenamide**. [\[Moderate\]](#) Theoretical
  - ▶ **Eltrombopag** is predicted to increase the exposure to **tenofovir disoproxil**. [\[Moderate\]](#) Theoretical
  - ▶ Oral **zinc** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **zinc**. [\[Severe\]](#) Theoretical
- Elvitegravir**
  - ▶ **Antacids** moderately decrease the exposure to **elvitegravir**. Separate administration by at least 4 hours. [\[Moderate\]](#) Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **elvitegravir**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Apalutamide** is predicted to decrease the concentration of **elvitegravir**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Bosentan** is predicted to decrease the concentration of **elvitegravir**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Elvitegravir** is predicted to decrease the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Theoretical
  - ▶ **Efavirenz** is predicted to decrease the concentration of **elvitegravir**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Enzalutamide** is predicted to decrease the concentration of **elvitegravir**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Elvitegravir** markedly increases the exposure to **grazoprevir**. Avoid. [\[Severe\]](#) Study
  - ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** boosted with ritonavir increase the concentration of **elvitegravir**. Refer to specialist literature. [\[Moderate\]](#) Study
  - ▶ **Mitotane** is predicted to decrease the concentration of **elvitegravir**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Nevirapine** is predicted to decrease the concentration of **elvitegravir**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Rifampicin** is predicted to decrease the concentration of **elvitegravir**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **St John's Wort** is predicted to decrease the concentration of **elvitegravir**. Avoid. [\[Severe\]](#) Theoretical
- Empagliflozin** → see TABLE 14 p. 1449 (antidiabetic drugs), TABLE 8 p. 1447 (hypotension)
- Enalapril** → see ACE inhibitors
- Encorafenib** → see TABLE 9 p. 1448 (QT-interval prolongation)
- ▶ **Antiarrhythmics (dronedaron)** are predicted to moderately increase the exposure to **encorafenib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1448
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **encorafenib**. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to moderately increase the exposure to **encorafenib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1448
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **encorafenib**. Avoid or monitor. [\[Severe\]](#) Study → Also see TABLE 9 p. 1448
- ▶ **Apalutamide** is predicted to decrease the exposure to **encorafenib**. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1448
- ▶ **Aprepitant** is predicted to moderately increase the exposure to **encorafenib**. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to moderately increase the exposure to **encorafenib**. [\[Moderate\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **encorafenib**. Avoid or monitor. [\[Severe\]](#) Study
- ▶ **Encorafenib** is predicted to affect the exposure to **combined hormonal contraceptives**. [\[Severe\]](#) Theoretical
- ▶ **Crizotinib** is predicted to moderately increase the exposure to **encorafenib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1448
- ▶ **Encorafenib** is predicted to increase the exposure to **dolutegravir**. [\[Moderate\]](#) Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **encorafenib**. [\[Severe\]](#) Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **encorafenib**. Avoid. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **encorafenib**. Avoid or monitor. [\[Severe\]](#) Study → Also see TABLE 9 p. 1448
- ▶ **Idelalisib** is predicted to increase the exposure to **encorafenib**. Avoid or monitor. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to moderately increase the exposure to **encorafenib**. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **encorafenib**. Avoid or monitor. [\[Severe\]](#) Study → Also see TABLE 9 p. 1448
- ▶ **Macrolides (erythromycin)** are predicted to moderately increase the exposure to **encorafenib**. [\[Moderate\]](#) Study → Also see TABLE 9 p. 1448

**Encorafenib** (continued)

- **Mitotane** is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
- **Netupitant** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
- **Nilotinib** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 1448
- **Encorafenib** is predicted to increase the exposure to **raltegravir**. [Moderate] Theoretical
- **Rifampicin** is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
- **St John's Wort** is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical

**Enoxaparin** → see low molecular-weight heparins

**Entacapone**

- **Iron (oral)** is predicted to decrease the absorption of **entacapone**. Separate administration by at least 2 hours. [Moderate] Theoretical
- **Entacapone** increases the exposure to **levodopa**. Monitor side effects and adjust dose. [Moderate] Study
- **Entacapone** is predicted to increase the risk of elevated blood pressure when given with **MAOIs**, **irreversible**. Avoid. [Severe] Theoretical
- **Entacapone** is predicted to increase the exposure to **methyl dopa**. [Moderate] Theoretical
- **Entacapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics**, **inotropic**. [Moderate] Theoretical
- **Entacapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics**, **vasoconstrictor** (**adrenaline/epinephrine**, **noradrenaline/norepinephrine**). [Moderate] Study

**Enteral feeds**

- **Antacids (aluminium hydroxide)** increase the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. [Moderate] Study
- **Enteral feeds** decrease the absorption of **antiepileptics (phenytoin)**. [Severe] Study
- **Enteral feeds** (vitamin-K containing) potentially decrease the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- **Enteral feeds** (vitamin-K containing) potentially decrease the effects of **phenindione**. [Severe] Theoretical
- **Enteral feeds** decrease the exposure to **quinolones (ciprofloxacin)**. [Moderate] Study
- **Sucralfate** increases the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. Separate administration by 1 hour. [Moderate] Study
- **Enteral feeds** decrease the exposure to **theophylline**. [Moderate] Study

**Enzalutamide**

**GENERAL INFORMATION** Caution with concurrent chemotherapy—safety and efficacy not established.

- **Enzalutamide** is predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
- **Enzalutamide** is predicted to decrease the exposure to **abiraterone**. Avoid. [Severe] Study
- **Enzalutamide** is predicted to decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [Severe] Study
- **Enzalutamide** is predicted to decrease the efficacy of **antiarrhythmics (propafenone)**. [Moderate] Study
- **Enzalutamide** is predicted to decrease the exposure to **anticholinesterases, centrally acting (donepezil)**. [Mild] Study
- **Enzalutamide** is predicted to slightly decrease the exposure to **antiepileptics (brivaracetam)**. [Moderate] Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **antiepileptics (perampanel)**. Monitor and adjust dose. [Moderate] Study
- **Enzalutamide** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Study
- **Enzalutamide** is predicted to decrease the exposure to **antimalarials (artemether)** (with lumefantrine). Avoid. [Severe] Study
- **Enzalutamide** is predicted to decrease the concentration of **antimalarials (piperaquine)**. Avoid. [Moderate] Theoretical
- **Enzalutamide** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
- **Enzalutamide** moderately decreases the exposure to **apremilast**. Avoid. [Severe] Study
- **Enzalutamide** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
- **Enzalutamide** is predicted to moderately decrease the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 413. [Moderate] Study
- **Enzalutamide** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- **Enzalutamide** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study
- **Enzalutamide** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Study
- **Enzalutamide** slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study
- **Enzalutamide** affects the exposure to **bosentan**. Avoid. [Severe] Study
- **Enzalutamide** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- **Enzalutamide** is predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
- **Enzalutamide** is predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. [Severe] Study
- **Enzalutamide** moderately decreases the exposure to **cabozantinib**. Avoid. [Moderate] Study
- **Enzalutamide** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- **Enzalutamide** is predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- **Enzalutamide** is predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Moderate] Study
- **Enzalutamide** is predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study
- **Enzalutamide** decreases the concentration of **ciclosporin**. [Severe] Study
- **Enzalutamide** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- **Enzalutamide** decreases the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study
- **Clopidogrel** moderately increases the exposure to **enzalutamide**. Avoid or adjust enzalutamide dose, p. 999. [Severe] Study
- **Enzalutamide** is predicted to decrease the exposure to **clozapine**. [Moderate] Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **corticosteroids (budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone)**. Monitor and adjust dose. [Moderate] Study
- **Enzalutamide** is predicted to decrease the exposure to **corticosteroids (fluticasone)**. [Unknown] Theoretical
- **Enzalutamide** potentially decreases the exposure to **coumarins**. Avoid or adjust dose and monitor INR. [Severe] Study
- **Enzalutamide** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- **Enzalutamide** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical

- ▶ **Enzalutamide** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **dienogest**. [Severe] Study
- ▶ **Enzalutamide** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [Mild] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **encorafenib**. [Severe] theoretical
- ▶ **Enzalutamide** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 1033. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **esketamine**. Adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Enzalutamide** moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **Fibrates (gemfibrozil)** moderately increase the exposure to **enzalutamide**. Avoid or adjust **enzalutamide** dose, p. 999. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to  **fingolimod**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to greatly decrease the concentration of **glecaprevir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Study
- ▶ **Enzalutamide** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 1037. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **montelukast**. [Mild] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to slightly decrease the exposure to **nateglinide**. [Mild] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **nevirapine**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **nitisnone**. Adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **ondansetron**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ **Enzalutamide** is predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study

## Enzalutamide (continued)

- ▶ Enzalutamide is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
- ▶ Enzalutamide is predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ Enzalutamide is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ Enzalutamide markedly decreases the exposure to **rilpivirine**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ Enzalutamide is predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ Enzalutamide is predicted to markedly decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **roxolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ Enzalutamide is predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **siponimod**. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **statins (simvastatin)**. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1057. [Moderate] Study
- ▶ Enzalutamide decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **taxanes (cabazitaxel, paclitaxel)**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical
- ▶ Enzalutamide is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study
- ▶ Enzalutamide decreases the exposure to **tetracyclines (doxycycline)**. Monitor and adjust dose. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
- ▶ Enzalutamide is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical
- ▶ Enzalutamide is predicted to markedly decrease the exposure to **ulipristal**. Avoid and for 4 weeks after stopping **ulipristal**. [Severe] Theoretical

- ▶ Enzalutamide is predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
- ▶ Enzalutamide is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [Severe] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **vinca alkaloids (vinorelbine)**. Use with caution or avoid. [Severe] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ Enzalutamide is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ Enzalutamide is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ Enzalutamide is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- Epheдрine** → see sympathomimetics, vasoconstrictor
- Epirubicin** → see anthracyclines
- Eplerenone** → see aldosterone antagonists
- Epoetin alfa** → see TABLE 5 p. 1447 (thromboembolism), TABLE 16 p. 1450 (increased serum potassium)
- Epoetin beta** → see TABLE 5 p. 1447 (thromboembolism), TABLE 16 p. 1450 (increased serum potassium)
- Epoetin zeta** → see TABLE 5 p. 1447 (thromboembolism), TABLE 16 p. 1450 (increased serum potassium)
- Epoprostenol** → see TABLE 8 p. 1447 (hypotension), TABLE 4 p. 1446 (antiplatelet effects)
- Eprosartan** → see angiotensin-II receptor antagonists
- Eptifibatide** → see TABLE 4 p. 1446 (antiplatelet effects)
- Ergocalciferol** → see vitamin D substances
- Ergometrine**
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
  - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **ergometrine**. Avoid. [Moderate] Theoretical
  - ▶ **Aprepitant** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
  - ▶ **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergometrine**. [Severe] Study
  - ▶ **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergometrine**. [Severe] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
  - ▶ **Crizotinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
  - ▶ **Ergometrine** is predicted to increase the risk of ergotism when given with **dopamine receptor agonists (cabergoline, pergolide)**. Avoid. [Moderate] Theoretical
  - ▶ **Esketamine** is predicted to increase the risk of elevated blood pressure when given with **ergometrine**. Avoid. [Severe] Theoretical
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **ergometrine**. [Severe] Theoretical

- ▶ **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Ketamine** is predicted to increase the risk of elevated blood pressure when given with **ergometrine**. [Severe] Theoretical
- ▶ **Letermovir** is predicted to increase the concentration of **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Ergometrine** potentially increases the risk of peripheral vasoconstriction when given with **sympathomimetics, inotropic (dopamine)**. Avoid. [Severe] Anecdotal
- ▶ **Ergometrine** is predicted to increase the risk of peripheral vasoconstriction when given with **sympathomimetics, vasoconstrictor (noradrenaline/norepinephrine)**. [Severe] Anecdotal

#### Ergotamine

- ▶ **Almotriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **almotriptan**. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **ergotamine**. Avoid. [Moderate] Theoretical
- ▶ **Apalutamide** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergotamine**. [Severe] Study
- ▶ **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergotamine**. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Ergotamine** is predicted to increase the risk of ergotism when given with **dopamine receptor agonists (bromocriptine, cabergoline)**. Avoid. [Moderate] Theoretical
- ▶ **Ergotamine** is predicted to increase the risk of ergotism when given with **dopamine receptor agonists (pergolide)**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical

- ▶ **Eletriptan** increases the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Frovatriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ergotamine**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Larotrectinib** is predicted to increase the exposure to **ergotamine**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **Letermovir** is predicted to increase the concentration of **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Lorlatinib** is predicted to decrease the exposure to **ergotamine**. Avoid. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Naratriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Palbociclib** is predicted to increase the exposure to **ergotamine**. Adjust dose. [Moderate] Theoretical
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **ergotamine**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Rizatriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **rizatriptan**. [Severe] Theoretical
- ▶ **Rucaparib** is predicted to increase the exposure to **ergotamine**. Monitor and adjust dose. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Sumatriptan** increases the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **sumatriptan**. [Severe] Study
- ▶ **Ticagrelor** is predicted to increase the exposure to **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Zolmitriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **zolmitriptan**. [Severe] Theoretical

**Eribulin** → see TABLE 15 p. 1449 (myelosuppression), TABLE 12 p. 1449 (peripheral neuropathy), TABLE 9 p. 1448 (QT-interval prolongation)

#### Erolotinib

**FOOD AND LIFESTYLE** Dose adjustment may be necessary if smoking started or stopped during treatment.

- ▶ **Antacids** are predicted to decrease the absorption of **erlotinib**. **Erlotinib** should be taken 2 hours before or 4 hours after antacids. [Moderate] Theoretical
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 1033. [Severe] Study

## Erlotinib (continued)

- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 1033. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **aspirin** (high-dose). [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Combined hormonal contraceptives** slightly increase the exposure to **erlotinib**. Monitor side effects and adjust dose. [Moderate] Study
- ▶ **Corticosteroids** increase the risk of gastrointestinal perforation when given with **erlotinib**. [Severe] Theoretical
- ▶ **Erlotinib** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Crizotinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 1033. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **erlotinib**. Erlotinib should be taken 2 hours before or 10 hours after **H<sub>2</sub> receptor antagonists**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Mexiletine** slightly increases the exposure to **erlotinib**. Monitor side effects and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 1033. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. [Severe] Theoretical
- ▶ **Erlotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Proton pump inhibitors** are predicted to slightly decrease the exposure to **erlotinib**. Avoid. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin)** slightly increase the exposure to **erlotinib**. Monitor side effects and adjust dose. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical

- ▶ **Rifampicin** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 1033. [Severe] Study
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **erlotinib**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **erlotinib**. Monitor side effects and adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- Ertapenem** → see carbapenems
- Ertugliflozin** → see TABLE 14 p. 1449 (antidiabetic drugs), TABLE 8 p. 1447 (hypotension)
- Erythromycin** → see macrolides
- Escitalopram** → see SSRIs
- Esketamine** → see TABLE 8 p. 1447 (hypotension), TABLE 11 p. 1448 (CNS depressant effects)
- ▶ **Esketamine** is predicted to increase the risk of seizures when given with **aminophylline**. Avoid. [Severe] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **esketamine**. Adjust dose. [Moderate] Theoretical → Also see TABLE 11 p. 1448
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **esketamine**. Adjust dose. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **esketamine**. Adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **esketamine**. Adjust dose. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **esketamine**. Adjust dose. [Moderate] Theoretical
- ▶ **Esketamine** is predicted to increase the risk of elevated blood pressure when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **esketamine**. Adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **esketamine**. Adjust dose. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **esketamine**. Adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **esketamine**. Adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **esketamine**. Adjust dose. [Moderate] Theoretical
- ▶ **Esketamine** is predicted to increase the risk of seizures when given with **theophylline**. Avoid. [Severe] Theoretical
- Eslicarbazepine** → see antiepileptics
- Esmolol** → see beta blockers, selective
- Esomeprazole** → see proton pump inhibitors
- Estramustine** → see alkylating agents
- Etanercept**
- ▶ **Anakinra** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etanercept**. Avoid. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etanercept**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- Etelcalcetide**
- ▶ **Cinacalcet** increases the risk of hypocalcaemia when given with **etelcalcetide**. Avoid. [Severe] Theoretical
- Ethambutol**
- ▶ **Isoniazid** increases the risk of optic neuropathy when given with **ethambutol**. [Severe] Anecdotal
- Ethosuximide** → see antiepileptics
- Etodolac** → see NSAIDs
- Etomidate** → see TABLE 8 p. 1447 (hypotension), TABLE 11 p. 1448 (CNS depressant effects)
- Etonogestrel**
- ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease

- the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
  - ▶ **Fosaprepitant** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
  - ▶ **Griseofulvin** decreases the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Anecdotal
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
  - ▶ **Modafinil** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
  - ▶ **Rifabutin** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the efficacy of **etonogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
  - ▶ **Sugammadex** is predicted to decrease the efficacy of **etonogestrel**. Use additional contraceptive precautions. [Severe] Theoretical
  - ▶ **Ulipristal** is predicted to decrease the efficacy of **etonogestrel**. Avoid. [Severe] Theoretical
- Etoposide** → see TABLE 15 p. 1449 (myelosuppression)
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the efficacy of **etoposide**. [Moderate] Study
  - ▶ **Ciclosporin** increases the exposure to **etoposide**. Monitor and adjust dose. [Severe] Study
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etoposide**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
  - ▶ **Netupitant** slightly increases the exposure to **etoposide**. [Moderate] Study
- Etoricoxib** → see NSAIDs
- Etravirine**
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
  - ▶ **Etravirine** decreases the exposure to **antimalarials (artemether)**. [Moderate] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
  - ▶ **Etravirine** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
  - ▶ **Etravirine** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
  - ▶ **Etravirine** is predicted to decrease the exposure to **brigatinib**. Avoid. [Moderate] Theoretical
  - ▶ **Etravirine** increases the anticoagulant effect of **coumarins**. [Moderate] Theoretical
  - ▶ **Etravirine** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical

- ▶ **Etravirine** moderately decreases the exposure to **dolutegravir**. Avoid unless given with atazanavir, darunavir, or lopinavir (all boosted with ritonavir). [Severe] Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
  - ▶ **Etravirine** is predicted to decrease the exposure to **elbasvir**. Avoid. [Unknown] Theoretical
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
  - ▶ **Etravirine** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Mild] Theoretical
  - ▶ **HIV-protease inhibitors (tipranavir)** decrease the exposure to **etravirine**. Avoid. [Severe] Study
  - ▶ **Etravirine** increases the exposure to **HIV-protease inhibitors (fosamprenavir)** boosted with ritonavir. Refer to specialist literature. [Moderate] Study
  - ▶ **Etravirine** is predicted to decrease the exposure to **letegravir**. [Moderate] Theoretical
  - ▶ **Etravirine** decreases the exposure to **macrolides (clarithromycin)** and **macrolides (clarithromycin)** slightly increase the exposure to **etravirine**. [Severe] Study
  - ▶ **Etravirine** (with a boosted protease inhibitor) increases the exposure to **maraviroc**. Avoid or adjust dose. [Moderate] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
  - ▶ **Etravirine** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
  - ▶ **Etravirine** is predicted to decrease the exposure to **paritaprevir**. Avoid. [Severe] Theoretical
  - ▶ **Etravirine** moderately decreases the exposure to **phosphodiesterase type-5 inhibitors**. Adjust dose. [Moderate] Study
  - ▶ **Rifabutin** decreases the exposure to **etravirine**. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
  - ▶ **Etravirine** is predicted to decrease the exposure to **rilpivirine**. Avoid. [Severe] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Study
- Everolimus** → see TABLE 15 p. 1449 (myelosuppression)
- ▶ **Everolimus** potentially increases the risk of angioedema when given with **ACE inhibitors**. [Severe] Anecdotal
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
  - ▶ **Aprepitant** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
  - ▶ **Bosentan** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
  - ▶ **Certinib** is predicted to increase the exposure to **everolimus**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
  - ▶ **Ciclosporin** moderately increases the exposure to **everolimus**. Avoid or adjust dose. [Severe] Study
  - ▶ **Cobicistat** is predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
  - ▶ **Crizotinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1449

## Everolimus (continued)

- **Efavirenz** is predicted to decrease the concentration of everolimus. Avoid or adjust dose. [Severe] Study
- **Eliglustat** is predicted to increase the exposure to everolimus. Adjust dose. [Moderate] Study
- **Enzalutamide** is predicted to decrease the concentration of everolimus. Avoid or adjust dose. [Severe] Study
- **Grapefruit juice** is predicted to increase the exposure to everolimus. [Severe] Theoretical
- **HIV-protease inhibitors** are predicted to increase the concentration of everolimus. Avoid. [Severe] Study
- **Idelalisib** is predicted to increase the concentration of everolimus. Avoid. [Severe] Study → Also see TABLE 15 p. 1449
- **Imatinib** is predicted to increase the concentration of everolimus. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1449
- **Lapatinib** is predicted to increase the exposure to everolimus. [Moderate] Theoretical
- **Letermovir** is predicted to increase the concentration of everolimus. Monitor and adjust dose. [Severe] Study
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with everolimus. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- Everolimus is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- **Lumacaftor** is predicted to decrease the exposure to everolimus. Avoid. [Severe] Theoretical
- **Macrolides (clarithromycin)** are predicted to increase the concentration of everolimus. Avoid. [Severe] Study
- **Macrolides (erythromycin)** are predicted to increase the concentration of everolimus. Avoid or adjust dose. [Moderate] Study
- **Mirabegron** is predicted to increase the exposure to everolimus. [Mild] Theoretical
- **Mitotane** is predicted to decrease the concentration of everolimus. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 1449
- **Neratinib** is predicted to increase the exposure to everolimus. [Moderate] Study
- **Netupitant** is predicted to increase the concentration of everolimus. Avoid or adjust dose. [Moderate] Study
- **Nevirapine** is predicted to decrease the concentration of everolimus. Avoid or adjust dose. [Severe] Study
- **Nilotinib** is predicted to increase the concentration of everolimus. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1449
- **Palbociclib** is predicted to increase the exposure to everolimus. Adjust dose. [Moderate] Theoretical
- **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to everolimus. [Moderate] Study
- **Pitolisant** is predicted to decrease the exposure to everolimus. Avoid. [Severe] Theoretical
- **Ribociclib** is predicted to increase the exposure to everolimus. Use with caution and adjust dose. [Moderate] Theoretical
- **Rifampicin** is predicted to decrease the concentration of everolimus. Avoid or adjust dose. [Severe] Study
- **St John's Wort** is predicted to decrease the concentration of everolimus. Avoid or adjust dose. [Severe] Study
- **Velpatasvir** is predicted to increase the exposure to everolimus. [Severe] Theoretical
- **Venetoclax** is predicted to increase the exposure to everolimus. Avoid or adjust dose. [Severe] Study

## Exemestane

- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** moderately decrease the exposure to exemestane. [Moderate] Study
- **Apalutamide** moderately decreases the exposure to exemestane. [Moderate] Study
- **Enzalutamide** moderately decreases the exposure to exemestane. [Moderate] Study
- **Mitotane** moderately decreases the exposure to exemestane. [Moderate] Study
- **Rifampicin** moderately decreases the exposure to exemestane. [Moderate] Study

- **St John's Wort** is predicted to decrease the exposure to exemestane. [Moderate] Theoretical

**Exenatide** → see TABLE 14 p. 1449 (antidiabetic drugs)

**SEPARATION OF ADMINISTRATION** With standard-release exenatide: some orally administered drugs should be taken at least 1 hour before, or 4 hours after, exenatide injection.

## Ezetimibe

- **Ciclosporin** moderately increases the exposure to ezetimibe and ezetimibe slightly increases the exposure to **ciclosporin**. [Moderate] Study
- **Fibrates** are predicted to increase the risk of gallstones when given with ezetimibe. [Severe] Theoretical
- **Ezetimibe** potentially increases the risk of rhabdomyolysis when given with **statins**. [Severe] Anecdotal
- **Famotidine** → see H<sub>2</sub> receptor antagonists
- **Fampridine**
  - **H<sub>2</sub> receptor antagonists (cimetidine)** increase the concentration of fampridine. Avoid. [Severe] Theoretical
- **Febuxostat**
  - **Febuxostat** is predicted to increase the exposure to **azathioprine**. Avoid. [Severe] Theoretical
  - **Febuxostat** is predicted to increase the exposure to **mercaptopurine**. Avoid. [Severe] Theoretical
- **Felbinac** → see NSAIDs
- **Felodipine** → see calcium channel blockers
- **Fenofibrate** → see fibrates
- **Fentanyl** → see opioids
- **Ferric carboxymaltose** → see iron (injectable)
- **Ferric maltol** → see iron (oral)
- **Ferrous fumarate** → see iron (oral)
- **Ferrous gluconate** → see iron (oral)
- **Ferrous sulfate** → see iron (oral)
- **Fesoterodine** → see TABLE 10 p. 1448 (antimuscarinics)
- **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to fesoterodine. Adjust fesoterodine dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 821. [Mild] Study
- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to fesoterodine. Avoid. [Moderate] Study
- **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to fesoterodine. Adjust fesoterodine dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 821. [Mild] Study
- **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to fesoterodine. Adjust fesoterodine dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 821. [Severe] Study
- **Apalutamide** is predicted to decrease the exposure to fesoterodine. Avoid. [Moderate] Study
- **Apreritant** is predicted to increase the exposure to fesoterodine. Adjust fesoterodine dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 821. [Mild] Study
- **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to fesoterodine. Adjust fesoterodine dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 821. [Mild] Study
- **Cobicistat** is predicted to moderately increase the exposure to fesoterodine. Adjust fesoterodine dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 821. [Severe] Study
- **Crizotinib** is predicted to increase the exposure to fesoterodine. Adjust fesoterodine dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 821. [Mild] Study
- **Enzalutamide** is predicted to decrease the exposure to fesoterodine. Avoid. [Moderate] Study
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to fesoterodine. Adjust fesoterodine dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 821. [Severe] Study
- **Idelalisib** is predicted to moderately increase the exposure to fesoterodine. Adjust fesoterodine dose with potent inhibitors

of CYP3A4; avoid in hepatic and renal impairment, p. 821. [Severe] Study

- ▶ **Imatinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 821. [Mild] Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 821. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 821. [Mild] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 821. [Mild] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 821. [Mild] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Severe] Theoretical

**Fexofenadine** → see antihistamines, non-sedating

### Fibrates

bezafibrate · ciprofibrate · fenofibrate · gemfibrozil

- ▶ **Antacids** slightly to moderately decrease the exposure to **gemfibrozil**. [Moderate] Study
- ▶ **Gemfibrozil** is predicted to increase the exposure to **apalutamide**. [Mild] Study
- ▶ **Bezafibrate** is predicted to increase the risk of nephrotoxicity when given with **ciclosporin**. [Severe] Theoretical
- ▶ **Fenofibrate** increases the risk of nephrotoxicity when given with **ciclosporin**. [Severe] Study
- ▶ **Colchicine** increases the risk of rhabdomyolysis when given with **fibrates**. [Severe] Anecdotal
- ▶ **Fibrates** are predicted to increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Gemfibrozil** is predicted to increase the exposure to **dabrafenib**. [Moderate] Theoretical
- ▶ **Fibrates** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
- ▶ **Gemfibrozil** is predicted to very markedly increase the exposure to **dasabuvir**. Avoid. [Severe] Study
- ▶ **Gemfibrozil** moderately increases the exposure to **enzalutamide**. Avoid or adjust **enzalutamide** dose, p. 999. [Severe] Study
- ▶ **Fibrates** are predicted to increase the risk of gallstones when given with **ezetimibe**. [Severe] Theoretical
- ▶ **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **insulins**. [Moderate] Theoretical
- ▶ **Gemfibrozil** is predicted to increase the exposure to **irinotecan**. Avoid. [Moderate] Theoretical
- ▶ **Gemfibrozil** is predicted to increase the concentration of **letermovir**. [Moderate] Study
- ▶ **Gemfibrozil** is predicted to moderately increase the exposure to **montelukast**. [Moderate] Study
- ▶ **Fibrates** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Gemfibrozil** increases the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. [Severe] Study
- ▶ **Gemfibrozil** increases the exposure to **repaglinide**. Avoid. [Severe] Study
- ▶ **Gemfibrozil** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust **alitretinoin** dose, p. 1328. [Moderate] Theoretical
- ▶ **Gemfibrozil** increases the concentration of **retinoids (bexarotene)**. Avoid. [Severe] Study
- ▶ **Gemfibrozil** increases the exposure to **selexipag**. Avoid. [Severe] Study
- ▶ **Ciprofibrate** increases the risk of rhabdomyolysis when given with **statins (atorvastatin)**. Avoid or adjust dose. [Severe] Study

- ▶ **Bezafibrate** increases the risk of rhabdomyolysis when given with **statins (atorvastatin, fluvastatin)**. [Severe] Study
- ▶ **Fenofibrate** increases the risk of rhabdomyolysis when given with **statins (atorvastatin, simvastatin)**. Adjust **fenofibrate** dose, p. 212. [Severe] Anecdotal
- ▶ **Ciprofibrate** increases the risk of rhabdomyolysis when given with **statins (fluvastatin)**. [Severe] Study
- ▶ **Fenofibrate** is predicted to increase the risk of rhabdomyolysis when given with **statins (fluvastatin)**. Adjust **fenofibrate** dose, p. 212. [Severe] Theoretical
- ▶ **Fenofibrate** is predicted to increase the risk of rhabdomyolysis when given with **statins (pravastatin)**. Avoid. [Severe] Theoretical
- ▶ **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **statins (pravastatin)**. Avoid. [Severe] Study
- ▶ **Fenofibrate** increases the risk of rhabdomyolysis when given with **statins (rosuvastatin)**. Adjust **fenofibrate** and **rosuvastatin** doses, p. 212, p. 216. [Severe] Anecdotal
- ▶ **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **statins (rosuvastatin)**. Adjust **rosuvastatin** dose, p. 216. [Severe] Study
- ▶ **Fibrates (bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **statins (simvastatin)**. Adjust **simvastatin** dose, p. 217. [Severe] Study
- ▶ **Gemfibrozil** increases the risk of rhabdomyolysis when given with **statins**. Avoid. [Severe] Anecdotal
- ▶ **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **sulfonylureas**. [Moderate] Theoretical
- ▶ **Gemfibrozil** is predicted to increase the concentration of **taxanes (paclitaxel)**. [Severe] Anecdotal
- ▶ **Fibrates** are predicted to decrease the efficacy of **ursodeoxycholic acid**. Avoid. [Severe] Theoretical

### Fidaxomicin

- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Macrolides** are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study

**Fingolimod** → see TABLE 6 p. 1447 (bradycardia), TABLE 9 p. 1448 (QT-interval prolongation)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **fingolimod**. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **fingolimod**. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **fingolimod**. Avoid. [Moderate] Theoretical → Also see TABLE 6 p. 1447
- ▶ **Enzalutamide** is predicted to decrease the exposure to **fingolimod**. [Moderate] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fingolimod**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **fingolimod**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **fingolimod**. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **fingolimod**. Avoid. [Moderate] Theoretical

**Flavoxate** → see TABLE 10 p. 1448 (antimuscarinics)

**Flecainide** → see antiarrhythmics

**Flucloxacillin** → see penicillins

**Fluconazole** → see antifungals, azoles

**Flucytosine**

▶ **Amphotericin** increases the risk of toxicity when given with flucytosine. [Severe] Study

▶ **Cytarabine** decreases the concentration of flucytosine. Avoid. [Severe] Study

▶ **Zidovudine** increases the risk of haematological toxicity when given with flucytosine. Monitor and adjust dose. [Severe] Theoretical

**Fludarabine** → see TABLE 15 p. 1449 (myelosuppression)

▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with fludarabine. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

▶ Fludarabine increases the risk of pulmonary toxicity when given with **pentostatin**. Avoid. [Severe] Study → Also see TABLE 15 p. 1449

**Fludrocortisone** → see corticosteroids

**Fluocinolone**

- ▶ With intravitreal use in adults: caution with concurrent administration of anticoagulant or antiplatelet drugs (higher incidence of conjunctival haemorrhage).
- ▶ Interactions do not generally apply to corticosteroids used for topical action unless specified.

**Fluorouracil** → see TABLE 15 p. 1449 (myelosuppression), TABLE 5 p. 1447 (thromboembolism)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

▶ **Fluorouracil** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Anecdotal

▶ **Fluorouracil** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal

▶ **Folates (folic acid)** are predicted to increase the risk of toxicity when given with fluorouracil. Avoid. [Severe] Theoretical

▶ **Folates (folic acid)** are predicted to increase the risk of toxicity when given with fluorouracil. Monitor and adjust dose. [Severe] Theoretical

▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to fluorouracil. [Severe] Study

▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with fluorouracil. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

▶ **Methotrexate** potentially increases the risk of severe skin reaction when given with topical fluorouracil. [Severe] Anecdotal → Also see TABLE 15 p. 1449 → Also see TABLE 5 p. 1447

▶ **Metronidazole** increases the risk of toxicity when given with fluorouracil. [Severe] Study

**Fluoxetine** → see SSRIs

**Flupentixol** → see TABLE 8 p. 1447 (hypotension), TABLE 11 p. 1448 (CNS depressant effects)

▶ Flupentixol is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1447

▶ Flupentixol decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Theoretical → Also see TABLE 8 p. 1447

**Fluphenazine** → see phenothiazines

**Flurazepam** → see TABLE 11 p. 1448 (CNS depressant effects)

▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to flurazepam. Avoid. [Moderate] Theoretical

**Flurbiprofen** → see NSAIDs

**Fluticasone** → see corticosteroids

**Fluvastatin** → see statins

**Flvoxamine** → see SSRIs

**Folates**

folic acid · folinic acid · levofolinic acid

▶ **Folates** are predicted to decrease the concentration of **antiepileptics (fosphenytoin, phenobarbital, phenytoin,**

**primidone)**. Monitor concentration and adjust dose. [Severe] Study

▶ **Folates** are predicted to increase the risk of toxicity when given with **capecitabine**. [Severe] Anecdotal

▶ **Folic acid** is predicted to increase the risk of toxicity when given with **fluorouracil**. Avoid. [Severe] Theoretical

▶ **Folinic acid** is predicted to increase the risk of toxicity when given with **fluorouracil**. Monitor and adjust dose. [Severe] Theoretical

▶ **Folates** are predicted to alter the effects of **ralitrexed**. Avoid. [Moderate] Study

▶ **Sulfasalazine** is predicted to decrease the absorption of folates. [Moderate] Study

▶ **Folates** are predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical

**Folic acid** → see folates

**Folinic acid** → see folates

**Fondaparinux** → see TABLE 3 p. 1446 (anticoagulant effects)

**Formoterol** → see beta<sub>2</sub> agonists

**Fosamprenavir** → see HIV-protease inhibitors

**Fosaprepitant**

▶ Fosaprepitant is predicted to increase the exposure to alkylating agents (**ifosfamide**). [Severe] Theoretical

▶ Fosaprepitant is predicted to increase the exposure to **alprazolam**. [Moderate] Study

▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to fosaprepitant. Avoid. [Moderate] Theoretical

▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to fosaprepitant. [Moderate] Theoretical

▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to fosaprepitant. [Moderate] Study

▶ **Apalutamide** is predicted to decrease the exposure to fosaprepitant. Avoid. [Moderate] Theoretical

▶ **Bosentan** is predicted to decrease the exposure to fosaprepitant. [Moderate] Theoretical

▶ Fosaprepitant is predicted to increase the exposure to **bosutinib**. [Severe] Theoretical

▶ **Cobicistat** is predicted to increase the exposure to fosaprepitant. [Moderate] Theoretical

▶ Fosaprepitant is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Study

▶ Fosaprepitant is predicted to decrease the anticoagulant effect of **coumarins**. [Moderate] Theoretical

▶ Fosaprepitant is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical

▶ **Efavirenz** is predicted to decrease the exposure to fosaprepitant. [Moderate] Theoretical

▶ **Enzalutamide** is predicted to decrease the exposure to fosaprepitant. Avoid. [Moderate] Theoretical

▶ Fosaprepitant is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical

▶ Fosaprepitant is predicted to increase the concentration of **guanfacine**. [Moderate] Theoretical

▶ **HIV-protease inhibitors** are predicted to increase the exposure to fosaprepitant. [Moderate] Theoretical

▶ Fosaprepitant is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal

▶ Fosaprepitant is predicted to slightly increase the exposure to **ibrutinib**. [Moderate] Theoretical

▶ **Idelalisib** is predicted to increase the exposure to fosaprepitant. [Moderate] Theoretical

▶ Fosaprepitant is predicted to increase the exposure to intravenous **irinotecan**. [Severe] Theoretical

▶ Fosaprepitant is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical

▶ Fosaprepitant is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical

- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ **Fosaprepitant** slightly increases the exposure to **midazolam**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ **Fosaprepitant** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Anecdotal
- ▶ **Fosaprepitant** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to increase the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ **Fosaprepitant** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Anecdotal
- ▶ **Fosaprepitant** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- Foscarnet** → see TABLE 2 p. 1446 (nephrotoxicity)
- ▶ **Foscarnet** increases the risk of hypocalcaemia when given with **pentamidine**. [Severe] Anecdotal → Also see TABLE 2 p. 1446
- Fosinopril** → see ACE inhibitors
- Fosphenytoin** → see antiepileptics
- Frovatriptan** → see TABLE 13 p. 1449 (serotonin syndrome)
- ▶ **Frovatriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Theoretical
- ▶ **SSRIs (fluvoxamine)** increase the concentration of **frovatriptan**. [Severe] Study → Also see TABLE 13 p. 1449
- Fulvestrant** → see TABLE 5 p. 1447 (thromboembolism)
- Furosemide** → see loop diuretics
- Fusidate**
  - ▶ **Fusidate** increases the risk of rhabdomyolysis when given with **statins**. Avoid. [Severe] Anecdotal
- Gabapentin** → see antiepileptics
- Galantamine** → see anticholinesterases, centrally acting
- Ganciclovir** → see TABLE 15 p. 1449 (myelosuppression), TABLE 2 p. 1446 (neurotoxicity)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Ganciclovir** is predicted to increase the risk of seizures when given with **carbapenems (imipenem)**. Avoid. [Severe] Anecdotal
- ▶ **Leflunomide** is predicted to increase the exposure to **ganciclovir**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **ganciclovir**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Nitisinone** is predicted to increase the exposure to **ganciclovir**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **ganciclovir**. [Moderate] Study
- Gefitinib** → see TABLE 15 p. 1449 (myelosuppression)
- ▶ **Antacids** are predicted to slightly decrease the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Gefitinib** is predicted to increase the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Crizotinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Efavirenz** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to slightly to moderately decrease the exposure to **gefitinib**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **gefitinib**. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Imatinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Netupitant** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Gefitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **gefitinib**. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical
- Gemcitabine** → see TABLE 15 p. 1449 (myelosuppression)
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **gemcitabine**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- Gemfibrozil** → see fibrates
- Gentamicin** → see aminoglycosides
- Gilteritinib**
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenytoin)** are predicted to decrease the exposure to **gilteritinib**. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **gilteritinib**. [Moderate] Study
  - ▶ **Cobicistat** is predicted to increase the exposure to **gilteritinib**. [Moderate] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **gilteritinib**. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **gilteritinib**. [Moderate] Study
  - ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **gilteritinib**. [Moderate] Study
  - ▶ **Rifampicin** moderately decreases the exposure to **gilteritinib**. Avoid. [Severe] Study
  - ▶ **Gilteritinib** is predicted to decrease the efficacy of **SSRIs (escitalopram, fluoxetine, sertraline)**. Avoid. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **gilteritinib**. Avoid. [Severe] Study
- Glecaprevir**
  - ▶ **Antiarrhythmics (dronedarone)** potentially increase the exposure to **glecaprevir**. [Moderate] Theoretical

## Glecaprevir (continued)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
  - ▶ **Antiepileptics (eslicarbazepine, oxcarbazepine)** potentially decrease the exposure to **glecaprevir**. Avoid. [Severe] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** potentially increase the exposure to **glecaprevir**. [Moderate] Theoretical
  - ▶ **Bosentan** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
  - ▶ **Ciclosporin** increases the exposure to **glecaprevir**. Avoid or monitor. [Severe] Study
  - ▶ **Cobicistat** potentially increases the exposure to **glecaprevir**. [Moderate] Theoretical
  - ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **glecaprevir**. Avoid. [Severe] Study
  - ▶ **Crizotinib** potentially decreases the exposure to **glecaprevir**. Avoid. [Severe] Theoretical
  - ▶ **Glecaprevir** (with pibrentasvir) increases the exposure to **dabigatran**. Avoid. [Moderate] Study
  - ▶ **Glecaprevir** (with pibrentasvir) increases the exposure to **digoxin**. [Moderate] Study
  - ▶ **Efavirenz** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
  - ▶ **Enzalutamide** is predicted to greatly decrease the concentration of **glecaprevir**. Avoid. [Severe] Study
  - ▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** boosted with ritonavir increase the exposure to **glecaprevir**. Avoid. [Severe] Study
  - ▶ **HIV-protease inhibitors (ritonavir)** increase the exposure to **glecaprevir**. Avoid. [Severe] Study
  - ▶ **Lumacaftor** potentially decreases the exposure to **glecaprevir**. Avoid. [Severe] Theoretical
  - ▶ **Mitotane** is predicted to greatly decrease the concentration of **glecaprevir**. Avoid. [Severe] Study
  - ▶ **Nevirapine** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
  - ▶ **Rifampicin** markedly affects the exposure to **glecaprevir**. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
  - ▶ **Glecaprevir** (with pibrentasvir) markedly increases the exposure to **statins (atorvastatin)**. Avoid. [Severe] Study
  - ▶ **Glecaprevir** (with pibrentasvir) is predicted to increase the exposure to **statins (fluvastatin)**. [Moderate] Theoretical
  - ▶ **Glecaprevir** (with pibrentasvir) increases the exposure to **statins (pravastatin)**. Use with caution and adjust pravastatin dose. [Moderate] Study
  - ▶ **Glecaprevir** (with pibrentasvir) increases the exposure to **statins (rosuvastatin)**. Use with caution and adjust rosuvastatin dose, p. 216. [Moderate] Study
  - ▶ **Glecaprevir** (with pibrentasvir) increases the exposure to **statins (simvastatin)**. Avoid. [Moderate] Study
  - ▶ **Glecaprevir** (with pibrentasvir) slightly increases the exposure to **tacrolimus**. Monitor and adjust dose. [Mild] Study
- Glibenclamide** → see sulfonylureas  
**Gliclazide** → see sulfonylureas  
**Glimepiride** → see sulfonylureas  
**Glipizide** → see sulfonylureas  
**Glucagon**  
 ▶ **Glucagon** increases the anticoagulant effect of **coumarins (warfarin)**. [Severe] Study
- Glucosamine**  
 ▶ **Glucosamine** potentially decreases the anticoagulant effect of **coumarins (acenocoumarol)**. [Moderate] Anecdotal  
 ▶ **Glucosamine** potentially increases the anticoagulant effect of **coumarins (warfarin)**. Avoid. [Moderate] Anecdotal

## Glycerol phenylbutyrate

- ▶ **Antiepileptics (valproate)** potentially oppose the effects of glycerol phenylbutyrate. [Moderate] Theoretical
- ▶ **Corticosteroids** potentially oppose the effects of glycerol phenylbutyrate. [Moderate] Theoretical

- ▶ **Haloperidol** potentially opposes the effects of glycerol phenylbutyrate. [Moderate] Theoretical

**Glyceril trinitrate** → see nitrates

**Glycopyrronium** → see TABLE 10 p. 1448 (antimuscarinics)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

**Golimimumab** → see monoclonal antibodies

**Granisetron** → see TABLE 9 p. 1448 (QT-interval prolongation), TABLE 13 p. 1449 (serotonin syndrome)

- ▶ **Dopamine receptor agonists (apomorphine)** are predicted to increase the risk of severe hypotension when given with **granisetron**. [Severe] Theoretical

## Grapefruit juice

- ▶ **Grapefruit juice** is predicted to increase the exposure to **abemaciclib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** moderately decreases the exposure to **aliskiren**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** increases the exposure to **antiarrhythmics (amiodarone)**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** moderately increases the exposure to **antiarrhythmics (dronedrone)**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** increases the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Grapefruit juice** slightly increases the exposure to **antiepileptics (carbamazepine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Grapefruit juice** slightly decreases the exposure to **antihistamines, non-sedating (bilastine)**. Bilastine should be taken 1 hour before or 2 hours after **grapefruit juice**. [Moderate] Study
- ▶ **Grapefruit juice** increases the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** increases the exposure to **antimalarials (artemether)**. [Unknown] Study
- ▶ **Grapefruit juice** is predicted to increase the concentration of **antimalarials (piperazine)**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Grapefruit juice** greatly decreases the exposure to **beta blockers, selective (celiprolol)**. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **bosutinib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the concentration of **brigatinib**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** increases the exposure to **buspirone**. Avoid. [Mild] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **Grapefruit juice** very slightly increases the exposure to **calcium channel blockers (amlodipine)**. Avoid. [Mild] Study
- ▶ **Grapefruit juice** increases the exposure to **calcium channel blockers (felodipine)**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** increases the exposure to **calcium channel blockers (nicardipine)**. [Mild] Study
- ▶ **Grapefruit juice** increases the exposure to **calcium channel blockers (nifedipine, verapamil)**. Avoid. [Mild] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **cariprazine**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ceritinib**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** increases the concentration of **ciclosporin**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** markedly decreases the exposure to **clopidogrel**. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** moderately increases the exposure to oral **corticosteroids (budesonide)**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **crizotinib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **darifenacin**. [Moderate] Study

- ▶ **Grapefruit juice** is predicted to increase the exposure to **dasatinib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **eliglustat**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **encorafenib**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ergometrine**. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ergotamine**. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **everolimus**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **guanfacine**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ibrutinib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ivabradine**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ivacaftor**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **larotrectinib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the concentration of **lorlatinib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **naloxegol**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **neratinib**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **palbociclib**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors**. Use with caution or avoid. [Moderate] Study
- ▶ **Grapefruit juice** increases the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ponatinib**. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **praziquantel**. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the concentration of **ranolazine**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ribociclib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ruixotinib**. [Severe] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **saxagliptin**. [Mild] Theoretical
- ▶ **Grapefruit juice** increases the concentration of **sirolimus**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** moderately increases the exposure to **SSRIs (sertraline)**. Avoid. [Moderate] Study

- ▶ **Grapefruit juice** increases the exposure to **statins (atorvastatin)**. [Mild] Study
- ▶ **Grapefruit juice** increases the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **sunitinib**. Avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** greatly increases the concentration of **tacrolimus**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **tezacaftor**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** moderately increases the exposure to **ticagrelor**. [Moderate] Study
- ▶ **Grapefruit juice** increases the exposure to **tolvaptan**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **venetoclax**. Avoid. [Severe] Theoretical

#### Grass pollen extract

**GENERAL INFORMATION** Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

#### Grazoprevir

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Grazoprevir** is predicted to increase the concentration of **calcium channel blockers**. [Moderate] Theoretical
- ▶ **Ciclosporin** greatly increases the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Efavirenz** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Elvitegravir** markedly increases the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Etravirine** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Mild] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Modafinil** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Grazoprevir** increases the exposure to **statins (atorvastatin)**. Adjust atorvastatin dose, p. 215. [Moderate] Study
- ▶ **Grazoprevir** is predicted to increase the exposure to **statins (fluvastatin)**. Adjust fluvastatin dose, p. 215. [Unknown] Theoretical
- ▶ **Grazoprevir** increases the exposure to **statins (rosuvastatin)**. Adjust rosuvastatin dose, p. 216. [Moderate] Study

## Grazoprevir (continued)

- ▶ **Grazoprevir** is predicted to increase the exposure to **statins (simvastatin)**. Adjust **simvastatin** dose, p. 217. [Unknown] Theoretical
- ▶ **Grazoprevir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Grazoprevir** increases the exposure to **tacrolimus**. [Moderate] Study

## Griseofulvin

**ROUTE-SPECIFIC INFORMATION** Interactions do not generally apply to topical use unless specified.

- ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **griseofulvin**. [Moderate] Anecdotal
- ▶ **Antiepileptics (phenobarbital, primidone)** decrease the effects of **griseofulvin**. [Moderate] Study
- ▶ **Griseofulvin** potentially decreases the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Anecdotal
- ▶ **Griseofulvin** potentially decreases the anticoagulant effect of **coumarins**. [Moderate] Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Anecdotal
- ▶ **Griseofulvin** decreases the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of oral **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Anecdotal
- ▶ **Griseofulvin** potentially decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Anecdotal

**Guanfacine** → see TABLE 8 p. 1447 (hypotension), TABLE 11 p. 1448 (CNS depressant effects)

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Study → Also see TABLE 11 p. 1448
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the concentration of **guanfacine**. Monitor and adjust **guanfacine** dose, p. 370. [Moderate] Theoretical
- ▶ **Guanfacine** increases the concentration of **antiepileptics (valproate)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Study
- ▶ **Aprépitant** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Theoretical → Also see TABLE 8 p. 1447
- ▶ **Chloramphenicol** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Study

- ▶ **Fosaprepitant** is predicted to increase the concentration of **guanfacine**. [Moderate] Theoretical
  - ▶ **Grapefruit juice** is predicted to increase the exposure to **guanfacine**. Avoid. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Study
  - ▶ **Imatinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Theoretical
  - ▶ **Guanfacine** is predicted to increase the concentration of **metformin**. [Moderate] Theoretical
  - ▶ **Mitotane** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Study
  - ▶ **Netupitant** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Theoretical
  - ▶ **Nevirapine** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
  - ▶ **Nilotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Study
  - ▶ **St John's Wort** is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- Guselkumab** → see monoclonal antibodies

H<sub>2</sub> receptor antagonists

cimetidine · famotidine · nizatidine · ranitidine

- ▶ **Cimetidine** decreases the clearance of **albendazole**. [Moderate] Study
- ▶ **Cimetidine** increases the concentration of **aminophylline**. Adjust dose. [Severe] Study
- ▶ **Cimetidine** slightly increases the exposure to **anthracyclines (epirubicin)**. Avoid. [Moderate] Study
- ▶ **Cimetidine** increases the exposure to **antiarrhythmics (amiodarone)**. [Moderate] Study
- ▶ **Cimetidine** slightly increases the exposure to **antiarrhythmics (flecainide)**. Monitor and adjust dose. [Mild] Study
- ▶ **Cimetidine** increases the exposure to **antiarrhythmics (lidocaine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cimetidine** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Cimetidine** transiently increases the concentration of **antiepileptics (carbamazepine)**. Monitor concentration and adjust dose. [Moderate] Study
- ▶ **Cimetidine** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **antifungals, azoles (itraconazole)**. Administer **itraconazole** capsules with an acidic beverage, p. 632. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **antifungals, azoles (ketoconazole)**. Administer **ketoconazole** with an acidic beverage, p. 718. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **antifungals, azoles (posaconazole)**. Avoid use of posaconazole oral suspension. [Moderate] Study
- ▶ **Cimetidine** decreases the clearance of **antimalarials (chloroquine)**. [Moderate] Study
- ▶ **Cimetidine** slightly increases the exposure to **antimalarials (quinine)**. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **bosutinib**. [Moderate] Theoretical
- ▶ **Cimetidine** slightly increases the exposure to **calcium channel blockers (diltiazem, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Cimetidine** (high-dose) is predicted to increase the exposure to **calcium channel blockers (lercanidipine)**. [Moderate] Theoretical

- ▶ **Cimetidine** moderately increases the exposure to **calcium channel blockers (nifedipine)**. Monitor and adjust dose. [Severe] Study
  - ▶ **Cimetidine** increases the exposure to **calcium channel blockers (verapamil)**. [Moderate] Study
  - ▶ **Cimetidine** is predicted to slightly increase the exposure to **capecitabine**. [Severe] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **ceritinib**. [Moderate] Theoretical
  - ▶ **Cimetidine** increases the concentration of **ciclosporin**. [Mild] Study
  - ▶ **Cimetidine** increases the anticoagulant effect of **coumarins**. [Severe] Study
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the concentration of **dacomitinib**. Dacomitinib should be taken 2 hours before or 10 hours after **H<sub>2</sub> receptor antagonists**. [Mild] Study
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **dasatinib**. Avoid. [Moderate] Study
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [Moderate] Theoretical
  - ▶ **Cimetidine** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [Moderate] Study
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **erlotinib**. Erlotinib should be taken 2 hours before or 10 hours after **H<sub>2</sub> receptor antagonists**. [Moderate] Study
  - ▶ **Cimetidine** increases the concentration of **fampridine**. Avoid. [Severe] Theoretical
  - ▶ **Cimetidine** slightly increases the exposure to **fluorouracil**. [Severe] Study
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to slightly to moderately decrease the exposure to **gefatinib**. [Moderate] Study
  - ▶ **H<sub>2</sub> receptor antagonists** decrease the exposure to **HIV-protease inhibitors (atazanavir)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Cimetidine** is predicted to decrease the clearance of **hydroxychloroquine**. [Moderate] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **lapatinib**. Avoid. [Moderate] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 664. [Moderate] Study
  - ▶ **Leflunomide** is predicted to increase the exposure to **H<sub>2</sub> receptor antagonists (cimetidine, famotidine)**. [Moderate] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists (cimetidine, ranitidine)** are predicted to increase the exposure to **lomitinapide**. Separate administration by 12 hours. [Moderate] Theoretical
  - ▶ **Cimetidine** slightly increases the exposure to **macrolides (erythromycin)**. [Moderate] Study
  - ▶ **Cimetidine** increases the concentration of **mebendazole**. [Moderate] Study
  - ▶ **Cimetidine** increases the exposure to **metformin**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Cimetidine** slightly increases the exposure to **mirtazapine**. Use with caution and adjust dose. [Moderate] Theoretical
  - ▶ **Cimetidine** increases the exposure to **moclobemide**. Adjust moclobemide dose, p. 380. [Mild] Study
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Theoretical
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **nilotinib**. **H<sub>2</sub> receptor antagonists** should be taken 10 hours before or 2 hours after nilotinib. [Mild] Theoretical
  - ▶ **Nitisinone** is predicted to increase the exposure to **H<sub>2</sub> receptor antagonists (cimetidine, famotidine)**. [Moderate] Study
  - ▶ **Cimetidine** increases the concentration of **opioids (alfentanil)**. Use with caution and adjust dose. [Severe] Study
  - ▶ **Cimetidine** increases the exposure to **opioids (fentanyl)**. [Moderate] Study
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **pazopanib**. **H<sub>2</sub> receptor antagonists** should be taken 10 hours before or 2 hours after pazopanib. [Moderate] Theoretical
  - ▶ **Cimetidine** increases the exposure to **phenindione**. [Severe] Anecdotal
  - ▶ **Cimetidine** moderately increases the exposure to **praziquantel**. [Moderate] Study
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **rilpivirine**. **H<sub>2</sub> receptor antagonists** should be taken 12 hours before or 4 hours after rilpivirine. [Severe] Study
  - ▶ **Cimetidine** slightly increases the exposure to **roflumilast**. [Moderate] Study
  - ▶ **H<sub>2</sub> receptor antagonists** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see ledipasvir with sofosbuvir p. 664, sofosbuvir with velpatasvir p. 666, and sofosbuvir with velpatasvir and voxilaprevir p. 667. [Moderate] Study
  - ▶ **Cimetidine** slightly increases the exposure to **SSRIs (citalopram, escitalopram)**. Adjust dose. [Moderate] Study
  - ▶ **Cimetidine** slightly increases the exposure to **SSRIs (paroxetine, sertraline)**. [Moderate] Study
  - ▶ **Cimetidine** is predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
  - ▶ **Teriflunomide** is predicted to increase the exposure to **H<sub>2</sub> receptor antagonists (cimetidine, famotidine)**. [Moderate] Study
  - ▶ **Cimetidine** increases the concentration of **theophylline**. Adjust dose. [Severe] Study
  - ▶ **Cimetidine** increases the exposure to **tricyclic antidepressants**. [Moderate] Study
  - ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir p. 666. [Moderate] Study
  - ▶ **Cimetidine** slightly increases the exposure to **venlafaxine**. [Mild] Study
  - ▶ **Cimetidine** slightly increases the exposure to **zolmitriptan**. Adjust zolmitriptan dose, p. 504. [Mild] Study
- Haloperidol** → see TABLE 8 p. 1447 (hypotension), TABLE 9 p. 1448 (QT-interval prolongation), TABLE 11 p. 1448 (CNS depressant effects), TABLE 10 p. 1448 (antimuscarinics)
- FOOD AND LIFESTYLE** Dose adjustment might be necessary if smoking started or stopped during treatment.
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the concentration of **haloperidol**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1448
  - ▶ **Haloperidol** potentially increases the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [Severe] Theoretical
  - ▶ **Antifungals, azoles (itraconazole)** increase the concentration of **haloperidol**. [Moderate] Study
  - ▶ **Apalutamide** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1448
  - ▶ **Haloperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1447 → Also see TABLE 9 p. 1448 → Also see TABLE 10 p. 1448
  - ▶ **Enzalutamide** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
  - ▶ **Haloperidol** potentially opposes the effects of **glycerol phenylbutyrate**. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **haloperidol**. [Severe] Theoretical
  - ▶ **Haloperidol** decreases the effects of **levodopa**. [Severe] Study → Also see TABLE 8 p. 1447
  - ▶ **Mitotane** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
  - ▶ **Rifampicin** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
  - ▶ **Haloperidol** potentially decreases the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
  - ▶ **SSRIs (fluoxetine)** increase the concentration of **haloperidol**. Adjust dose. [Moderate] Anecdotal
  - ▶ **SSRIs (fluvoxamine)** increase the concentration of **haloperidol**. Adjust dose. [Moderate] Study
  - ▶ **Venlafaxine** slightly increases the exposure to **haloperidol**. [Severe] Study → Also see TABLE 9 p. 1448 → Also see TABLE 11 p. 1448
- Heparin (unfractionated)** → see TABLE 16 p. 1450 (increased serum potassium), TABLE 3 p. 1446 (anticoagulant effects)
- ▶ **Ranibizumab** increases the risk of bleeding events when given with **heparin (unfractionated)**. [Severe] Theoretical
- Hepatitis B immunoglobulin** → see immunoglobulins

**HIV-protease inhibitors** → see TABLE 9 p. 1448 (QT-interval prolongation)

atazanavir • darunavir • fosamprenavir • lopinavir • ritonavir • saquinavir • tipranavir

- ▶ Caution on concurrent use of **atazanavir**, **lopinavir with ritonavir**, and **ritonavir** with drugs that prolong the PR interval.
- ▶ Concurrent use of **saquinavir** with drugs that prolong the PR interval is contra-indicated.
- ▶ Caution with concurrent use of **tipranavir** with drugs that increase risk of bleeding.

- ▶ **Tipranavir** slightly decreases the exposure to **abacavir**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 1019. [Severe] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **Ritonavir** decreases the exposure to **albendazole**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir, saquinavir)** are predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** increase the exposure to **almotriptan**. [Mild] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **alpha blockers (doxazosin, tamsulosin)**. Use with caution or avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **alpha blockers (doxazosin)**. [Moderate] Study
- ▶ **HIV-protease inhibitors** moderately increase the exposure to **alprazolam**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir, tipranavir)** are predicted to increase the exposure to **amfetamines**. [Severe] Theoretical
- ▶ **Ritonavir** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
- ▶ **Antacids** are predicted to decrease the absorption of atazanavir. Atazanavir should be taken 2 hours before or 1 hour after antacids. [Severe] Theoretical
- ▶ **Antacids** are predicted to decrease the absorption of tipranavir. Separate administration by 2 hours. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antiarrhythmics (amiodarone)**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antiarrhythmics (disopyramide)**. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **HIV-protease inhibitors** very markedly increase the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Ritonavir** is predicted to increase the exposure to **antiarrhythmics (flecainide)**. Avoid or monitor side effects. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antiarrhythmics (lidocaine)**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antiepileptics (carbamazepine)** and **antiepileptics (carbamazepine)** are predicted to decrease the exposure to **HIV-protease inhibitors**. Monitor and adjust dose. [Severe] Theoretical

- ▶ **HIV-protease inhibitors** are predicted to affect the exposure to **antiepileptics (fosphenytoin, phenytoin)** and **antiepileptics (fosphenytoin, phenytoin)** decrease the concentration of **HIV-protease inhibitors**. [Severe] Theoretical
- ▶ **Ritonavir** slightly decreases the exposure to **antiepileptics (lamotrigine)**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to very slightly increase the exposure to **antiepileptics (perampanel)**. [Mild] Study
- ▶ **HIV-protease inhibitors** are predicted to affect the concentration of **antiepileptics (phenobarbital, primidone)** and **antiepileptics (phenobarbital, primidone)** are predicted to decrease the concentration of **HIV-protease inhibitors**. [Severe] Theoretical
- ▶ **Ritonavir** is predicted to decrease the concentration of **antiepileptics (valproate)**. [Severe] Anecdotal
- ▶ **Antifungals, azoles (fluconazole)** slightly increase the exposure to **tipranavir**. Avoid or adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **HIV-protease inhibitors**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **HIV-protease inhibitors**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. Avoid or monitor side effects. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antifungals, azoles (itraconazole)**. Use with caution and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antifungals, azoles (ketoconazole)**. Use with caution and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to affect the exposure to **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** potentially affect the exposure to **HIV-protease inhibitors**. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** decrease the exposure to **antimalarials (atovaquone)**. Avoid if boosted with ritonavir. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to decrease the exposure to **antimalarials (proguanil)**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to affect the exposure to **antimalarials (quinine)**. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **apalutamide**. [Mild] Study → Also see TABLE 9 p. 1448
- ▶ **Ritonavir** is predicted to increase the exposure to **apixaban**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 413. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study → Also see TABLE 9 p. 1448
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ **Ritonavir** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **beta<sub>2</sub> agonists (salmeterol)**. Avoid. [Severe] Study
- ▶ **Atazanavir** moderately increases the exposure to **bictegravir**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical

- ▶ **HIV-protease inhibitors** slightly increase the exposure to **bortezomib**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **bosentan**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **brigatinib**. Adjust brigatinib dose, p. 1024. [Severe] Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **bupropion**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **buspirone**. Adjust buspirone dose, p. 358. [Severe] Study
- ▶ **HIV-protease inhibitors** slightly increase the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Ritonavir** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mid] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ceritinib**. Avoid or adjust ceritinib dose, p. 1026. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **HIV-protease inhibitors** increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cilostazol**. Adjust cilostazol dose, p. 246. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Ritonavir** is predicted to affect the exposure to **clozapine**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust colchicine dose, p. 1183. [Severe] Study
- ▶ **Atazanavir** (unboosted) increases the exposure to **combined hormonal contraceptives**. Adjust dose. [Severe] Study
- ▶ **Ritonavir** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **corticosteroids (beclomethasone)** (risk with beclomethasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone)**. Avoid or monitor side effects. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to affect the anticoagulant effect of **coumarins**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Dasabuvir** (with ombitasvir, paritaprevir, and ritonavir) decreases the concentration of **darunavir**. Avoid or adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **HIV-protease inhibitors** very slightly increase the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Ritonavir** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
- ▶ **Ritonavir** is predicted to increase the exposure to **diazepam**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Ritonavir** increases the concentration of **digoxin**. Adjust dose and monitor concentration. [Severe] Study
- ▶ **Fosamprenavir** boosted with ritonavir slightly decreases the exposure to **dolutegravir**. Avoid if resistant to HIV-integrase inhibitors. [Severe] Study
- ▶ **Tipranavir** moderately decreases the exposure to **dolutegravir**. Refer to specialist literature. [Severe] Study
- ▶ **HIV-protease inhibitors** increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **doravirine**. [Mid] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dronabinol**. Adjust dose. [Mid] Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Efavirenz** decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **elotriptan**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** boosted with ritonavir increase the concentration of **elvitegravir**. Refer to specialist literature. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **esketamine**. Adjust dose. [Moderate] Study
- ▶ **Ritonavir** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
- ▶ **Etravirine** increases the exposure to **fosamprenavir** boosted with ritonavir. Refer to specialist literature. [Moderate] Study
- ▶ **Tipranavir** decreases the exposure to **etravirine**. Avoid. [Severe] Study

## HIV-protease inhibitors (continued)

- ▶ HIV-protease inhibitors are predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to moderately increase the exposure to **fesoterodine**. Adjust fesoterodine dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 821. [Severe] Study
- ▶ HIV-protease inhibitors (**lopinavir**, **ritonavir**, **saquinavir**) are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ Ritonavir is predicted to increase the exposure to **flurazepam**. Avoid. [Moderate] Theoretical
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **gilteritinib**. [Moderate] Study
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **lopinavir**) boosted with ritonavir increase the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ Ritonavir increases the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **guanfacine**. Adjust guanfacine dose, p. 370. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists** decrease the exposure to **atazanavir**. Monitor and adjust dose. [Moderate] Study
- ▶ Ritonavir is predicted to increase the exposure to **haloperidol**. [Severe] Theoretical
- ▶ Ritonavir is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ HIV-protease inhibitors are predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust ibrutinib dose, p. 1037. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- ▶ Ritonavir is predicted to decrease the exposure to **iron chelators (deferasirox)**. Monitor serum ferritin and adjust dose. [Moderate] Theoretical
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **ivacaftor**. Adjust ivacaftor p. 308 or lumacaftor with ivacaftor p. 309 or tezacaftor with ivacaftor p. 310 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ HIV-protease inhibitors are predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust larotrectinib dose, p. 1042. [Moderate] Study
- ▶ Tipranavir boosted with ritonavir is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- ▶ HIV-protease inhibitors (**atazanavir**, **lopinavir**) boosted with ritonavir are predicted to increase the concentration of **letermovir**. [Moderate] Study
- ▶ Ritonavir is predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ Ritonavir is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
- ▶ HIV-protease inhibitors are predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **lorlatinib**. Avoid or adjust lorlatinib dose, p. 1044. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** increase the exposure to **saquinavir** and **saquinavir** increases the exposure to **macrolides (clarithromycin)**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **saquinavir**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Atazanavir** is predicted to increase the exposure to **macrolides (clarithromycin)**. Adjust dose in renal impairment. [Severe] Study
- ▶ Ritonavir increases the exposure to **macrolides (clarithromycin)**. Adjust dose in renal impairment. [Severe] Study
- ▶ Tipranavir boosted with ritonavir increases the exposure to **macrolides (clarithromycin)** and **macrolides (clarithromycin)** increase the exposure to **tipranavir** boosted with ritonavir. Monitor; adjust dose in renal impairment. [Severe] Study
- ▶ HIV-protease inhibitors (**darunavir**, **fosamprenavir**, **lopinavir**) boosted with ritonavir are predicted to increase the exposure to **macrolides (clarithromycin)**. Adjust dose in renal impairment. [Severe] Study
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **ritonavir**, **tipranavir**) are predicted to increase the exposure to **macrolides (erythromycin)**. [Severe] Theoretical
- ▶ **Darunavir** boosted with ritonavir markedly increases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
- ▶ **Maraviroc** potentially decreases the exposure to **fosamprenavir** and **fosamprenavir** potentially decreases the exposure to **maraviroc**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors (**atazanavir**, **saquinavir**) moderately to markedly increase the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
- ▶ **Lopinavir** boosted with ritonavir moderately increases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
- ▶ Ritonavir markedly increases the exposure to **maraviroc**. Refer to specialist literature. [Severe] Study
- ▶ Ritonavir is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
- ▶ Ritonavir is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **mirabegron**. Adjust mirabegron dose in hepatic and renal impairment, p. 824. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ HIV-protease inhibitors (**lopinavir**, **ritonavir**, **saquinavir**) are predicted to increase the risk of neutropenia when given with **monoclonal antibodies (brentuximab vedotin)**. Monitor and adjust dose. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [Severe] Theoretical
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
- ▶ HIV-protease inhibitors are predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **neratinib**. Avoid or adjust neratinib dose, p. 1046. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **netupitant**. [Moderate] Study
- ▶ **Nevirapine** decreases the exposure to HIV-protease inhibitors. Refer to specialist literature. [Moderate] Study

- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **nitisone**. Adjust dose. [Moderate] Theoretical
- ▶ **Ritonavir** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Anecdotal
- ▶ **Ritonavir** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1063. [Moderate] Study
- ▶ **Ombitasvir** (in fixed-dose combination with dasabuvir) decreases the concentration of **darunavir**. Avoid or adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** boosted with ritonavir are predicted to decrease the exposure to **opioids (methadone)**. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Ritonavir** is predicted to decrease the concentration of **opioids (morphine)**. [Moderate] Theoretical
- ▶ **Ritonavir** increases the risk of CNS toxicity when given with **opioids (pethidine)**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **oxybutynin**. [Mild] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1050. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 987. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Atazanavir** boosted with ritonavir markedly increases the exposure to **paritaprevir**. Avoid or give unboosted. [Moderate] Study
- ▶ **Darunavir** boosted with ritonavir slightly decreases the exposure to **paritaprevir**. Avoid or give unboosted. [Moderate] Study
- ▶ **HIV-protease inhibitors (fosamprenavir, tipranavir)** boosted with ritonavir are predicted to increase the exposure to **paritaprevir**. Avoid. [Severe] Study
- ▶ **Lopinavir** boosted with ritonavir moderately to markedly increases the exposure to **paritaprevir**. Avoid. [Severe] Study
- ▶ **Saquinavir** is predicted to increase the exposure to **paritaprevir** (in fixed-dose combination). Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 1051. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 859. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** boosted with ritonavir increase the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ **Ritonavir** potentially increases the exposure to **pibrentasvir**. [Severe] Theoretical
- ▶ **Saquinavir** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Ritonavir** is predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1052. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
- ▶ **HIV-protease inhibitors** given with carbimazole are predicted to increase the exposure to **propriverine**. Adjust starting dose. [Moderate] Theoretical
- ▶ **Proton pump inhibitors** decrease the exposure to **atazanavir**. Avoid or adjust dose. [Severe] Study
- ▶ **Proton pump inhibitors** increase the exposure to **saquinavir**. Avoid. [Severe] Study
- ▶ **Tipranavir** decreases the exposure to **proton pump inhibitors**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
- ▶ **Atazanavir** increases the exposure to **raltegravir** (high-dose). Avoid. [Moderate] Study
- ▶ **Darunavir** increases the risk of rash when given with **raltegravir**. [Moderate] Study
- ▶ **Fosamprenavir** boosted with ritonavir decreases the exposure to **raltegravir** and **raltegravir** decreases the exposure to **fosamprenavir** boosted with ritonavir. Avoid. [Severe] Study
- ▶ **Tipranavir** boosted with ritonavir is predicted to decrease the exposure to **raltegravir** (high-dose). Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust **alitretinoin** dose, p. 1328. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1054. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, saquinavir, tipranavir)** boosted with ritonavir increase the exposure to **rifabutin**. Monitor and adjust dose. [Severe] Study
- ▶ **Ritonavir** markedly increases the exposure to **rifabutin**. Avoid or adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately to markedly decrease the exposure to HIV-protease inhibitors (**atazanavir, darunavir, fosamprenavir, lopinavir, saquinavir**). Avoid. [Severe] Study
- ▶ **Rifampicin** slightly decreases the exposure to **ritonavir**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **tipranavir**. Avoid. [Severe] Study
- ▶ **Ritonavir** is predicted to increase the exposure to **riociguat**. Adjust dose and monitor blood pressure. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Ritonavir** moderately increases the exposure to **rivaroxaban**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor side effects. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **saxagliptin**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study

## HIV-protease inhibitors (continued)

- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **HIV-protease inhibitors**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Tipranavir** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **solifenacin**. Adjust solifenacin p. 834 or tamsulosin with solifenacin p. 829 dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **SSRIs (dapoxetine)**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 866. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **HIV-protease inhibitors**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **HIV-protease inhibitors** slightly to moderately increase the exposure to **statins (rosuvastatin)**. Avoid or adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1057. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1065. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **taxanes (paclitaxel)**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** increase the exposure to **tenofovir alafenamide**. Avoid or adjust dose. [Moderate] Study
- ▶ **Tipranavir** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** are predicted to increase the risk of renal impairment when given with **tenofovir disoproxil**. [Severe] Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor** with **ivacaftor** p. 310 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Ritonavir** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ **Ritonavir** decreases the concentration of **thyroid hormones (levothyroxine)**. MHRA advises monitor TSH for at least one month after starting or stopping ritonavir. [Moderate] Anecdotal
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Ritonavir** moderately decreases the exposure to **tizanidine**. [Mild] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1167. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent inhibitors of CYP3A4, p. 706. [Severe] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical

- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
  - ▶ **HIV-protease inhibitors (ritonavir, tipranavir)** are predicted to increase the exposure to **tricyclic antidepressants**. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, saquinavir, tipranavir)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
  - ▶ **Ritonavir** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Anecdotal
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
  - ▶ **Tipranavir** is predicted to increase the exposure to **velpatasvir**. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **venurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1448
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **venlafaxine**. [Moderate] Study → Also see TABLE 9 p. 1448
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1448
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [Moderate] Study
  - ▶ **Atazanavir** boosted with ritonavir increases the concentration of **voxilaprevir**. Avoid. [Severe] Study
  - ▶ **Lopinavir** boosted with ritonavir is predicted to increase the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
  - ▶ **Tipranavir** boosted with ritonavir is predicted to increase the concentration of **voxilaprevir**. [Severe] Theoretical
  - ▶ **Tipranavir** slightly decreases the exposure to **zidovudine**. Avoid. [Moderate] Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- Homatropine** → see TABLE 10 p. 1448 (antimuscarinics)
- Hormone replacement therapy**
- ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rifinamide, topiramate)** are predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
  - ▶ **Hormone replacement therapy** is predicted to alter the exposure to **antiepileptics (lamotrigine)**. [Moderate] Theoretical
  - ▶ **Aprepitant** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
  - ▶ **Bosentan** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
  - ▶ **Hormone replacement therapy** decreases the clearance of **dopamine receptor agonists (ropinirole)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Efavirenz** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
  - ▶ **Fosaprepitant** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
  - ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. [Severe] Theoretical
  - ▶ **Hormone replacement therapy** is predicted to increase the exposure to **MAO-B inhibitors (selegiline)**. Avoid. [Moderate] Study
  - ▶ **Modafinil** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
  - ▶ **Nevirapine** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
  - ▶ **NSAIDs (etoricoxib)** slightly increase the exposure to **hormone replacement therapy**. [Moderate] Study
  - ▶ **Hormone replacement therapy** potentially opposes the effects of **osimifene**. Avoid. [Severe] Theoretical

- **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. [Severe] Theoretical
  - **Hormone replacement therapy** potentially opposes the effects of **raloxifene**. Avoid. [Severe] Theoretical
  - **Rifabutin** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
  - **Rifampicin** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
  - **St John's Wort** is predicted to decrease the efficacy of **hormone replacement therapy**. [Moderate] Theoretical
  - **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **thalidomide**. [Severe] Theoretical
  - **Oral hormone replacement therapy** is predicted to decrease the effects of **thyroid hormones**. [Moderate] Theoretical
- Hydralazine** → see TABLE 8 p. 1447 (hypotension)
- **Diazoxide** increases the risk of severe hypotension when given with **hydralazine**. [Severe] Study → Also see TABLE 8 p. 1447

**Hydrochlorothiazide** → see thiazide diuretics

**Hydrocortisone** → see corticosteroids

**Hydroflumethiazide** → see thiazide diuretics

**Hydromorphone** → see opioids

**Hydroxycarbamide** → see TABLE 15 p. 1449 (myelosuppression)

- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **hydroxycarbamide**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- **Hydroxycarbamide** increases the risk of toxicity when given with **stavudine**. Avoid. [Severe] Study

#### Hydroxychloroquine

- **Hydroxychloroquine** is predicted to decrease the effects of **agalsidase alfa**. [Moderate] Theoretical
- **Hydroxychloroquine** is predicted to decrease the exposure to **agalsidase beta**. [Moderate] Theoretical
- **Antacids** decrease the absorption of **hydroxychloroquine**. Separate administration by at least 4 hours. [Moderate] Study
- **Calcium salts (calcium carbonate)** decrease the absorption of **hydroxychloroquine**. Separate administration by at least 4 hours. [Moderate] Study
- **Hydroxychloroquine** is predicted to decrease the efficacy of oral **cholera vaccine**. [Moderate] Theoretical
- **H<sub>2</sub> receptor antagonists (cimetidine)** are predicted to decrease the clearance of **hydroxychloroquine**. [Moderate] Theoretical
- **Lanthanum** is predicted to decrease the absorption of **hydroxychloroquine**. Separate administration by at least 2 hours. [Moderate] Theoretical
- **Hydroxychloroquine** is predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. [Severe] Theoretical
- **Hydroxychloroquine** is predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [Severe] Theoretical
- **Hydroxychloroquine** is predicted to decrease efficacy **rabies vaccine**. [Moderate] Theoretical

**Hydroxyzine** → see antihistamines, sedating

**Hyoscine** → see TABLE 10 p. 1448 (antimuscarinics)

**Ibandronate** → see bisphosphonates

**Ibrutinib** → see TABLE 15 p. 1449 (myelosuppression), TABLE 4 p. 1446 (antiplatelet effects)

**FOOD AND LIFESTYLE** Avoid food or drink containing bitter (Seville) oranges as they are predicted to increase the exposure to ibrutinib.

- **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose, p. 1037. [Severe] Theoretical
- **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate inhibitors of CYP3A4, p. 1037. [Severe] Study
- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to ibrutinib. Avoid or adjust ibrutinib dose, p. 1037. [Severe] Study
- **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to ibrutinib. Adjust

ibrutinib dose with moderate inhibitors of CYP3A4, p. 1037.

[Severe] Study

- **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to very markedly increase the exposure to ibrutinib. Avoid potent inhibitors of CYP3A4 or adjust ibrutinib dose, p. 1037. [Severe] Study
- **Apalutamide** is predicted to decrease the exposure to ibrutinib. Avoid or adjust ibrutinib dose, p. 1037. [Severe] Study
- **Aprepitant** is predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate inhibitors of CYP3A4, p. 1037. [Severe] Study
- **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate inhibitors of CYP3A4, p. 1037. [Severe] Study
- **Cobicistat** is predicted to very markedly increase the exposure to ibrutinib. Avoid potent inhibitors of CYP3A4 or adjust ibrutinib dose, p. 1037. [Severe] Study
- **Crizotinib** is predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate inhibitors of CYP3A4, p. 1037. [Severe] Study → Also see TABLE 15 p. 1449
- **Enzalutamide** is predicted to decrease the exposure to ibrutinib. Avoid or adjust ibrutinib dose, p. 1037. [Severe] Study
- **Fosaprepitant** is predicted to slightly increase the exposure to ibrutinib. [Moderate] Theoretical
- **Grapefruit juice** is predicted to increase the exposure to ibrutinib. Avoid. [Moderate] Theoretical
- **HIV-protease inhibitors** are predicted to very markedly increase the exposure to ibrutinib. Avoid potent inhibitors of CYP3A4 or adjust ibrutinib dose, p. 1037. [Severe] Study
- **Idelalisib** is predicted to very markedly increase the exposure to ibrutinib. Avoid potent inhibitors of CYP3A4 or adjust ibrutinib dose, p. 1037. [Severe] Study → Also see TABLE 15 p. 1449
- **Imatinib** is predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate inhibitors of CYP3A4, p. 1037. [Severe] Study → Also see TABLE 15 p. 1449
- **Macrolides (clarithromycin)** are predicted to very markedly increase the exposure to ibrutinib. Avoid potent inhibitors of CYP3A4 or adjust ibrutinib dose, p. 1037. [Severe] Study
- **Macrolides (erythromycin)** are predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate inhibitors of CYP3A4, p. 1037. [Severe] Study
- **Mitotane** is predicted to decrease the exposure to ibrutinib. Avoid or adjust ibrutinib dose, p. 1037. [Severe] Study → Also see TABLE 15 p. 1449
- **Netupitant** is predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate inhibitors of CYP3A4, p. 1037. [Severe] Study
- **Nilotinib** is predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose with moderate inhibitors of CYP3A4, p. 1037. [Severe] Study → Also see TABLE 15 p. 1449
- **Quinolones (ciprofloxacin)** are predicted to increase the exposure to ibrutinib. Adjust ibrutinib dose, p. 1037. [Severe] Theoretical
- **Rifampicin** is predicted to decrease the exposure to ibrutinib. Avoid or adjust ibrutinib dose, p. 1037. [Severe] Study
- **St John's Wort** is predicted to decrease the exposure to ibrutinib. Avoid. [Severe] Theoretical

**Ibuprofen** → see NSAIDs

#### Icecatiban

- **ACE inhibitors** are predicted to decrease the efficacy of icecatiban and icecatiban is predicted to decrease the efficacy of **ACE inhibitors**. Avoid. [Moderate] Theoretical

**Idarubicin** → see anthracyclines

**Idelalisib** → see TABLE 15 p. 1449 (myelosuppression)

- **Idelalisib** is predicted to increase the exposure to **abemaciclib**. Avoid or adjust abemaciclib dose, p. 1019. [Severe] Study
- **Idelalisib** is predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Severe] Study
- **Idelalisib** increases the exposure to **almotriptan**. [Mild] Study
- **Idelalisib** is predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [Moderate] Study
- **Idelalisib** is predicted to increase the exposure to **alpha blockers (doxazosin)**. [Moderate] Study

## Idelalisib (continued)

- ▶ **Idelalisib** moderately increases the exposure to **alprazolam**. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **antiarrhythmics (amiodarone)**. Avoid. [Moderate] Theoretical
- ▶ **Idelalisib** very markedly increases the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to very slightly increase the exposure to **antiepileptics (perampanel)**. [Mild] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. Avoid or monitor side effects. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **apalutamide**. [Mild] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 413. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Idelalisib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **beta<sub>2</sub> agonists (salmeterol)**. Avoid. [Severe] Study
- ▶ **Idelalisib** slightly increases the exposure to **bortezomib**. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Bosentan** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Idelalisib** is predicted to increase the exposure to **brigatinib**. Adjust brigatinib dose, p. 1024. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **buspirone**. Adjust buspirone dose, p. 358. [Severe] Study
- ▶ **Idelalisib** slightly increases the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Idelalisib** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ceritinib**. Avoid or adjust ceritinib dose, p. 1026. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Idelalisib** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **cilostazol**. Adjust cilostazol dose, p. 246. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **colbinetnib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1183. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **corticosteroids (beclomethasone)** (risk with beclomethasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **corticosteroids (betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone)**. Avoid or monitor side effects. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Idelalisib** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Idelalisib** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Idelalisib** very slightly increases the exposure to **delamanid**. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Idelalisib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Idelalisib** increases the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Idelalisib** is predicted to increase the exposure to **doravirine**. [Mild] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **dronabinol**. Adjust dose. [Mild] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **esketamine**. Adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 821. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **gefitinib**. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Idelalisib** is predicted to increase the exposure to **gilteritinib**. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Study

- ▶ **Idelalisib** is predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 1037. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Idelalisib** is predicted to increase the exposure to **imatinitib**. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Idelalisib** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Idelalisib** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ivacaftor**. Adjust ivacaftor p. 308 or lumacaftor with ivacaftor p. 309 or tezacaftor with ivacaftor p. 310 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 1042. [Moderate] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **lomitapide**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose, p. 1044. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Idelalisib** markedly increases the exposure to **maraviroc**. Adjust dose. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 824. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Idelalisib** is predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Idelalisib** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **neratinib**. Avoid or adjust **neratinib** dose, p. 1046. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **netupitant**. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Idelalisib** is predicted to increase the exposure to **nitisnone**. Adjust dose. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1063. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Idelalisib** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **opioids (methadone)**. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **oxybutynin**. [Mild] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1050. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 987. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Paritaprevir** is predicted to increase the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 1051. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Idelalisib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 859. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1052. [Moderate] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
- ▶ **Idelalisib** given with carbimazole is predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Idelalisib** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust **alitretinoin** dose, p. 1328. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1054. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ruxitinib**. Adjust dose and monitor side effects. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Idelalisib** is predicted to increase the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 834 or **tamsulosin** with **solifenacin** p. 829 dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **SSRIs (dapoxetine)**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 866. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1057. [Moderate] Study → Also see TABLE 15 p. 1449

## Idelalisib (continued)

- ▶ **Idelalisib** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study → Also see TABLE 15 p. 1449
  - ▶ **Idelalisib** is predicted to moderately increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 1449
  - ▶ **Idelalisib** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Severe] Theoretical → Also see TABLE 15 p. 1449
  - ▶ **Idelalisib** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1449
  - ▶ **Idelalisib** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 310 dose with potent inhibitors of CYP3A4. [Severe] Study
  - ▶ **Idelalisib** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **tofacitinib**. Adjust tofacitinib dose, p. 1167. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust tolvaptan dose with potent inhibitors of CYP3A4, p. 706. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical
  - ▶ **Idelalisib** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 15 p. 1449
  - ▶ **Idelalisib** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
  - ▶ **Idelalisib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **venlafaxine**. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1449
  - ▶ **Idelalisib** is predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [Moderate] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- Ifosfamide** → see alkylating agents
- Iloprost** → see TABLE 8 p. 1447 (hypotension), TABLE 4 p. 1446 (antiplatelet effects)
- Imatinib** → see TABLE 15 p. 1449 (myelosuppression)
- ▶ **Imatinib** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust eplerenone dose, p. 205. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
  - ▶ **Imatinib** is predicted to increase the exposure to **alprazolam**. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **antiarrhythmics (dronedarone)**. [Severe] Theoretical
  - ▶ **Imatinib** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
  - ▶ **Antiepileptics (oxcarbazepine)** decrease the exposure to **imatinib**. Avoid. [Moderate] Study
  - ▶ **Antifungals, azoles (fluconazole, posaconazole)** are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **imatinib**. [Moderate] Study

- ▶ **Imatinib** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the concentration of **antimalarials (piperazine)**. [Severe] Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Apreritant** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Asparaginase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Imatinib** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Imatinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Imatinib** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **colchicine**. Adjust colchicine dose with moderate inhibitors of CYP3A4, p. 1183. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **corticosteroids (methylprednisolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crisantaspase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Imatinib** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Imatinib** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Imatinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dopamine receptor agonists (bromocriptine)**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **dopamine receptor agonists (cabergoline)**. [Moderate] Anecdotal
- ▶ **Imatinib** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Imatinib** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study

- ▶ **Imatinib** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Imatinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 821. [Mild] Study
- ▶ **Imatinib** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Grapefruit juice** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 1037. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Idelalisib** is predicted to increase the exposure to **imatinib**. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Imatinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 225. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 308 or **tezacaftor** with **ivacaftor** p. 310 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 416. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Imatinib** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 69. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1063. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Imatinib** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- ▶ **Imatinib** increases the risk of hepatotoxicity when given with **paracetamol**. [Severe] Anecdotal
- ▶ **Imatinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Pegaspargase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Imatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 858. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 859. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ribiciclib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **imatinib**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Imatinib** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Imatinib** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 866. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Imatinib** moderately increases the exposure to **statins (simvastatin)**. Monitor and adjust dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Imatinib** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Tedizolid** is predicted to increase the exposure to **imatinib**. Avoid. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Imatinib** is predicted to increase the exposure to **tezacaftor**. Adjust **tezacaftor** with **ivacaftor** p. 310 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Imatinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1167. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4, p. 706. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Imatinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

**Imidapril** → see ACE inhibitors

**Imipenem** → see carbapenems

**Imipramine** → see tricyclic antidepressants

## Immunoglobulins

Anti-D (Rh<sub>0</sub>) immunoglobulin · antithymocyte immunoglobulin (rabbit) · cytomegalovirus immunoglobulin · hepatitis B immunoglobulin · normal immunoglobulin · rabies immunoglobulin · tetanus immunoglobulin · varicella-zoster immunoglobulin

- ▶ **Cytomegalovirus immunoglobulin** is predicted to decrease the efficacy of **live vaccines**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Cytomegalovirus immunoglobulin** is predicted to increase the risk of side-effects when given with **loop diuretics**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Immunoglobulins** are predicted to alter the effects of **monoclonal antibodies (dinutuximab)**. Avoid. [\[Severe\]](#) Theoretical

**Indacaterol** → see beta<sub>2</sub> agonists

**Indapamide** → see thiazide diuretics

**Idmonetacin** → see NSAIDs

**Indoramin** → see alpha blockers

**Infliximab** → see monoclonal antibodies

**Influenza vaccine (live)** → see live vaccines

**Intotersen** → see TABLE 4 p. 1446 (antiplatelet effects)

**Intotuzumab ozogamicin** → see monoclonal antibodies

**Insulins** → see TABLE 14 p. 1449 (antidiabetic drugs)

- ▶ **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **insulins**. [\[Moderate\]](#) Theoretical

**Interferon alfa** → see interferons

**Interferon beta** → see interferons

**Interferons** → see TABLE 15 p. 1449 (myelosuppression)

interferon alfa · interferon beta · peginterferon alfa

- ▶ **Interferons** are predicted to slightly increase the exposure to **aminophylline**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Interferon alfa** is predicted to increase the risk of peripheral neuropathy when given with **telbivudine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Peginterferon alfa** increases the risk of peripheral neuropathy when given with **telbivudine**. Avoid. [\[Severe\]](#) Study
- ▶ **Interferons** slightly increase the exposure to **theophylline**. Adjust dose. [\[Moderate\]](#) Study

**Ipilimumab** → see monoclonal antibodies

**Ipratropium** → see TABLE 10 p. 1448 (antimuscarinics)

- ▶ **Beta<sub>2</sub> agonists** are predicted to increase the risk of glaucoma when given with **ipratropium**. [\[Moderate\]](#) Anecdotal

**Irbesartan** → see angiotensin-II receptor antagonists

**Irinotecan** → see TABLE 15 p. 1449 (myelosuppression)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **irinotecan**. Avoid. [\[Severe\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [\[Moderate\]](#) Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **irinotecan**. Avoid. [\[Severe\]](#) Study
- ▶ **Aprepitant** is predicted to increase the exposure to intravenous **irinotecan**. [\[Severe\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [\[Moderate\]](#) Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **irinotecan**. Avoid. [\[Severe\]](#) Study
- ▶ **Fibrates (gemfibrozil)** are predicted to increase the exposure to **irinotecan**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Fosaprepitant** is predicted to increase the exposure to intravenous **irinotecan**. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [\[Moderate\]](#) Study → Also see TABLE 15 p. 1449
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **irinotecan**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **irinotecan**. Avoid. [\[Severe\]](#) Study → Also see TABLE 15 p. 1449

- ▶ **Netupitant** is predicted to increase the exposure to **irinotecan**. [\[Moderate\]](#) Study

- ▶ **Irinotecan** is predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [\[Moderate\]](#) Theoretical

- ▶ **Pitolisant** is predicted to decrease the exposure to **irinotecan**. [\[Mild\]](#) Theoretical

- ▶ **Rifampicin** is predicted to decrease the exposure to **irinotecan**. Avoid. [\[Severe\]](#) Study

- ▶ **Rolapitant** is predicted to increase the exposure to **irinotecan**. Avoid or monitor. [\[Moderate\]](#) Study

- ▶ **St John's Wort** slightly decreases the exposure to **irinotecan**. Avoid. [\[Severe\]](#) Study

- ▶ **Irinotecan** is predicted to increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [\[Moderate\]](#) Theoretical

## Iron (injectable)

ferric carboxymaltose · iron dextran · iron isomaltoside 1000 · iron sucrose

- ▶ **Chloramphenicol** decreases the efficacy of intravenous iron (injectable). [\[Moderate\]](#) Anecdotal

## Iron (oral)

ferric maltol · ferrous fumarate · ferrous gluconate · ferrous sulfate · sodium ferredetate

- ▶ **Antacids** decrease the absorption of iron (oral). Iron (oral) should be taken 1 hour before or 2 hours after antacids. [\[Moderate\]](#) Study
- ▶ **Iron (oral)** decreases the exposure to **bictegravir**. Manufacturer advises take 2 hours before iron (oral). [\[Moderate\]](#) Study
- ▶ **Iron (oral)** decreases the absorption of **bisphosphonates (clodronate)**. Avoid iron (oral) for 2 hours before or 1 hour after **clodronate**. [\[Moderate\]](#) Study
- ▶ **Iron (oral)** is predicted to decrease the absorption of oral **bisphosphonates (ibandronate)**. Avoid iron (oral) for at least 6 hours before or 1 hour after **ibandronate**. [\[Moderate\]](#) Theoretical
- ▶ **Iron (oral)** decreases the absorption of **bisphosphonates (risedronate)**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ **Calcium salts (calcium carbonate)** decrease the absorption of iron (oral). Calcium carbonate should be taken 1 hour before or 2 hours after iron (oral). [\[Moderate\]](#) Study
- ▶ **Iron (oral)** is predicted to decrease the exposure to **carbidoopa**. [\[Moderate\]](#) Theoretical
- ▶ **Chloramphenicol** decreases the efficacy of oral iron (oral). [\[Moderate\]](#) Theoretical
- ▶ **Iron (oral)** decreases the absorption of **dolutegravir**. Dolutegravir should be taken 2 hours before or 6 hours after iron (oral). [\[Moderate\]](#) Study
- ▶ **Iron (oral)** is predicted to decrease the absorption of **eltrombopag**. Eltrombopag should be taken 2 hours before or 4 hours after iron (oral). [\[Severe\]](#) Theoretical
- ▶ **Iron (oral)** is predicted to decrease the absorption of **entacapone**. Separate administration by at least 2 hours. [\[Moderate\]](#) Theoretical
- ▶ **Iron (oral)** are predicted to decrease the absorption of **iron chelators (deferiprone)**. [\[Moderate\]](#) Theoretical
- ▶ **Iron (oral)** decreases the absorption of **levodopa**. [\[Moderate\]](#) Study
- ▶ **Iron (oral)** decreases the effects of **methyldopa**. [\[Moderate\]](#) Study
- ▶ **Iron (oral)** is predicted to decrease the absorption of **penicillamine**. Separate administration by at least 2 hours. [\[Mild\]](#) Study
- ▶ **Iron (oral)** decreases the exposure to **quinolones**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ **Iron (oral)** decreases the absorption of **tetracyclines**. Tetracyclines should be taken 2 to 3 hours after iron (oral). [\[Moderate\]](#) Study
- ▶ **Iron (oral)** decreases the absorption of **thyroid hormones (levothyroxine)**. Separate administration by at least 4 hours. [\[Moderate\]](#) Study
- ▶ **Trientine** potentially decreases the absorption of iron (oral). [\[Moderate\]](#) Theoretical

- **Zinc** is predicted to decrease the efficacy of **iron (oral)** and **iron (oral)** is predicted to decrease the efficacy of **zinc**. [Moderate] Study

**Iron chelators** → see TABLE 15 p. 1449 (myelosuppression)

deferasirox • deferiprone • desferrioxamine • dextrazoxane

- **Deferasirox** is predicted to increase the exposure to **aminophylline**. Avoid. [Moderate] Theoretical
- **Antacids (aluminium hydroxide)** are predicted to decrease the exposure to **deferasirox**. Avoid. [Moderate] Theoretical
- **Antacids (aluminium hydroxide)** are predicted to decrease the absorption of **deferiprone**. Avoid. [Moderate] Theoretical
- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **deferasirox**. Monitor serum ferritin and adjust dose. [Moderate] Theoretical
- **Ascorbic acid** is predicted to increase the risk of cardiovascular side-effects when given with iron chelators (**deferiprone, desferrioxamine**). [Severe] Theoretical
- **Aspirin** (high-dose) is predicted to increase the risk of gastrointestinal bleeds when given with **deferasirox**. [Severe] Theoretical
- **Bisphosphonates** are predicted to increase the risk of gastrointestinal bleeding when given with **deferasirox**. [Severe] Theoretical
- **Deferasirox** is predicted to increase the exposure to **clozapine**. Avoid. [Moderate] Theoretical
- **Corticosteroids** are predicted to increase the risk of gastrointestinal bleeding when given with **deferasirox**. [Severe] Theoretical
- **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **deferasirox**. Monitor serum ferritin and adjust dose. [Moderate] Theoretical
- **Iron (oral)** are predicted to decrease the absorption of **deferiprone**. [Moderate] Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dextrazoxane**. Avoid. [Severe] Theoretical
- **Deferasirox** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
- **NSAIDs** are predicted to increase the risk of gastrointestinal bleeding when given with **deferasirox**. [Severe] Theoretical
- **NSAIDs (diclofenac)** are predicted to increase the exposure to **deferiprone**. [Moderate] Theoretical
- **Deferasirox** is predicted to increase the exposure to **pioglitazone**. [Moderate] Study
- **Deferasirox** moderately increases the exposure to **repaglinide**. Avoid. [Moderate] Study
- **Rifampicin** is predicted to decrease the exposure to **deferasirox**. Monitor serum ferritin and adjust dose. [Moderate] Study
- **Deferasirox** is predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose, p. 194. [Moderate] Study
- **Deferasirox** is predicted to increase the concentration of **taxanes (paclitaxel)**. [Severe] Anecdotal
- **Deferasirox** increases the exposure to **theophylline**. Avoid. [Moderate] Study
- **Deferasirox** is predicted to increase the exposure to **tizanidine**. Avoid. [Moderate] Theoretical
- Oral **zinc** is predicted to decrease the absorption of oral **deferiprone**. [Moderate] Theoretical

**Iron dextran** → see iron (injectable)

**Iron isomaltoside 1000** → see iron (injectable)

**Iron sucrose** → see iron (injectable)

**Isavuconazole** → see antifungals, azoles

**Isocarboxazid** → see MAOIs, irreversible

**Isoflurane** → see volatile halogenated anaesthetics

**Isometheptene** → see sympathomimetics, vasoconstrictor

**Isoniazid** → see TABLE 1 p. 1446 (hepatotoxicity), TABLE 12 p. 1449 (peripheral neuropathy)

**FOOD AND LIFESTYLE** Avoid tyramine-rich foods (such as mature cheeses, salami, pickled herring, *Bovril*®, *Oxo*®, *Marmite*® or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines) or histamine-rich foods (such as very mature cheese or fish from

the scombroid family (e.g. tuna, mackerel, salmon)), as tachycardia, palpitation, hypotension, flushing, headache, dizziness, and sweating reported.

- **Isoniazid** is predicted to affect the clearance of **aminophylline**. [Severe] Theoretical
  - **Isoniazid** markedly increases the concentration of **antiepileptics (carbamazepine)** and **antiepileptics (carbamazepine)** increases the risk of hepatotoxicity when given with **isoniazid**. Monitor concentration and adjust dose. [Severe] Study → Also see TABLE 1 p. 1446
  - **Isoniazid** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [Moderate] Study → Also see TABLE 12 p. 1449
  - **Cycloserine** increases the risk of CNS toxicity when given with **isoniazid**. Monitor and adjust dose. [Moderate] Study
  - **Isoniazid** increases the risk of optic neuropathy when given with **ethambutol**. [Severe] Anecdotal
  - **Isoniazid** decreases the effects of **levodopa**. [Moderate] Study
  - **Isoniazid** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Unknown] Theoretical → Also see TABLE 1 p. 1446
  - **Isoniazid** is predicted to increase the risk of peripheral neuropathy when given with **stavudine**. [Severe] Theoretical → Also see TABLE 12 p. 1449
  - **Isoniazid** is predicted to affect the clearance of **theophylline**. [Severe] Anecdotal
  - **Isoniazid** potentially increases the risk of nephrotoxicity when given with **volatile halogenated anaesthetics (methoxyflurane)**. Avoid. [Severe] Theoretical
- Isosorbide dinitrate** → see nitrates
- Isosorbide mononitrate** → see nitrates
- Isotretinoin** → see retinoids
- Itraconazole** → see antifungals, azoles
- Ivabradine** → see TABLE 6 p. 1447 (bradycardia), TABLE 9 p. 1448 (QT-interval prolongation)
- **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 225. [Severe] Theoretical
  - **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
  - **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 225. [Severe] Theoretical
  - **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
  - **Apalutamide** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
  - **Aprepitant** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 225. [Severe] Theoretical
  - **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ivabradine**. Avoid. [Moderate] Study → Also see TABLE 6 p. 1447
  - **Cobicistat** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
  - **Crizotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 225. [Severe] Theoretical → Also see TABLE 6 p. 1447
  - **Enzalutamide** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
  - **Grapefruit juice** is predicted to increase the exposure to **ivabradine**. Avoid. [Moderate] Study
  - **HIV-protease inhibitors** are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
  - **Idelalisib** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
  - **Imatinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 225. [Severe] Theoretical
  - **Macrolides (clarithromycin)** are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
  - **Macrolides (erythromycin)** are predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Theoretical
  - **Mitotane** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical

**Ivabradine** (continued)

- ▶ **Netupitant** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 225. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 225. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **St John's Wort** decreases the exposure to **ivabradine**. Avoid. [Moderate] Study

**Ivacaftor**

**FOOD AND LIFESTYLE** Avoid bitter (Seville) oranges as they are predicted to increase the exposure to **ivacaftor**.

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 308 or tezacaftor with **ivacaftor** p. 310 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 308 or tezacaftor with **ivacaftor** p. 310 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 308 or lumacaftor with **ivacaftor** p. 309 or tezacaftor with **ivacaftor** p. 310 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Apalutamide** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 308 or tezacaftor with **ivacaftor** p. 310 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **ivacaftor**. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 308 or tezacaftor with **ivacaftor** p. 310 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 308 or lumacaftor with **ivacaftor** p. 309 or tezacaftor with **ivacaftor** p. 310 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Ivacaftor** is predicted to increase the anticoagulant effect of **coumarins (warfarin)**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 308 or tezacaftor with **ivacaftor** p. 310 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Ivacaftor** slightly increases the exposure to **digoxin**. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **ivacaftor**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ivacaftor**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 308 or lumacaftor with **ivacaftor** p. 309 or tezacaftor with **ivacaftor** p. 310 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 308 or lumacaftor with **ivacaftor** p. 309 or tezacaftor with **ivacaftor** p. 310 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 308 or tezacaftor with **ivacaftor** p. 310 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Ivacaftor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 308 or lumacaftor with **ivacaftor** p. 309 or tezacaftor with **ivacaftor** p. 310 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 308 or tezacaftor

with **ivacaftor** p. 310 dose with moderate inhibitors of CYP3A4. [Severe] Study

- ▶ **Mitotane** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 308 or tezacaftor with **ivacaftor** p. 310 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **ivacaftor**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 308 or tezacaftor with **ivacaftor** p. 310 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to **ivacaftor**. Avoid. [Severe] Study

**Ivermectin**

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Ivermectin** potentially increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Levamisole** increases the exposure to **ivermectin**. [Moderate] Study

**Ixazomib**

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Theoretical
- Ixekizumab** → see monoclonal antibodies

**Kaolin**

- ▶ **Kaolin** is predicted to decrease the absorption of **tetracyclines**. [Moderate] Theoretical

**Ketamine** → see TABLE 8 p. 1447 (hypotension), TABLE 11 p. 1448 (CNS depressant effects)

- ▶ **Ketamine** is predicted to increase the risk of elevated blood pressure when given with **ergometrine**. [Severe] Theoretical
- ▶ **Memantine** is predicted to increase the risk of CNS side-effects when given with **ketamine**. Avoid. [Severe] Theoretical

**Ketoconazole** → see antifungals, azoles

**Ketoprofen** → see NSAIDs

**Ketorolac** → see NSAIDs

**Ketotifen** → see antihistamines, sedating

**Labetalol** → see beta blockers, non-selective

**Lacidipine** → see calcium channel blockers

**Lacosamide** → see antiepileptics

**Lamivudine** → see TABLE 12 p. 1449 (peripheral neuropathy)

- ▶ **Trimethoprim** slightly increases the exposure to **lamivudine**. [Moderate] Study

▶ **Zidovudine** increases the risk of toxicity when given with **lamivudine**. [Severe] Anecdotal

**Lamotrigine** → see antiepileptics

**Lanreotide**

- ▶ **Beta blockers, non-selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. [Moderate] Theoretical
- ▶ **Beta blockers, selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. [Moderate] Theoretical
- ▶ **Lanreotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. [Severe] Theoretical

**Lansoprazole** → see proton pump inhibitors

**Lanthanum**

- ▶ **Lanthanum** is predicted to decrease the absorption of **antifungals, azoles (ketoconazole)**. Separate administration by at least 2 hours. [Moderate] Theoretical

- ▶ **Lanthanum** is predicted to decrease the absorption of **antimalarials (chloroquine)**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Lanthanum** is predicted to decrease the absorption of **hydroxychloroquine**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Lanthanum** moderately decreases the exposure to **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after lanthanum, p. 1115. [Moderate] Study
- ▶ **Lanthanum** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 hours. [Moderate] Theoretical
- ▶ **Lanthanum** decreases the absorption of **thyroid hormones**. Separate administration by 2 hours. [Moderate] Study
- Lapatinib** → see TABLE 9 p. 1448 (QT-interval prolongation)
- ▶ **Lapatinib** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **Antacids** are predicted to decrease the absorption of **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Lapatinib** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Aprepitant** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **bictegravir**. Avoid P-glycoprotein inhibitors or adjust colchicine dose, p. 1183. [Moderate] Theoretical
- ▶ **Bosentan** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Cobicistat** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust colchicine dose, p. 1183. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Lapatinib** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **digoxin**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Enzalutamide** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **everolimus**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the absorption of **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Idelalisib** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **loperamide**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Mitotane** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Lapatinib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Lapatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **sirolimus**. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Lapatinib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust talazoparib dose, p. 1065. [Severe] Study
- ▶ **Lapatinib** slightly increases the exposure to **taxanes (paclitaxel)**. [Severe] Study
- ▶ **Tedizolid** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Lapatinib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- Laronidase**
- ▶ **Antimalarials (chloroquine)** are predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. [Severe] Theoretical
- ▶ **Hydroxychloroquine** is predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. [Severe] Theoretical
- Larotrectinib**
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust larotrectinib dose, p. 1042. [Moderate] Study
- ▶ **Apalutamide** is predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study

## Larotrectinib (continued)

- **Bosentan** is predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- **Ciclosporin** is predicted to increase the exposure to **larotrectinib**. [Mild] Study
- **Cobicistat** is predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 1042. [Moderate] Study
- **Larotrectinib** potentially decreases the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical
- **Efavirenz** is predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- **Eltrombopag** is predicted to increase the exposure to **larotrectinib**. [Mild] Study
- **Enzalutamide** is predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- **Larotrectinib** is predicted to increase the exposure to **ergotamine**. Use with caution and adjust dose. [Mild] Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **larotrectinib**. Avoid. [Moderate] Theoretical
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 1042. [Moderate] Study
- **Idelalisib** is predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 1042. [Moderate] Study
- **Lapatinib** is predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- **Leflunomide** is predicted to increase the exposure to **larotrectinib**. [Mild] Study
- **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 1042. [Moderate] Study
- **Larotrectinib** slightly increases the exposure to **midazolam**. Use with caution and adjust dose. [Mild] Study
- **Mitotane** is predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- **Nevirapine** is predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- **Larotrectinib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Use with caution and adjust dose. [Mild] Theoretical
- **Larotrectinib** is predicted to increase the exposure to **pimozide**. Use with caution and adjust dose. [Mild] Theoretical
- **Ranolazine** is predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- **Rifampicin** is predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- **Larotrectinib** is predicted to increase the exposure to **sirinilimus**. Use with caution and adjust dose. [Mild] Theoretical
- **St John's Wort** is predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- **Larotrectinib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. [Mild] Theoretical
- **Teriflunomide** is predicted to increase the exposure to **larotrectinib**. [Mild] Study
- **Vemurafenib** is predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical

## Ledipasvir

- **Antacids** are predicted to decrease the exposure to **ledipasvir**. Separate administration by 4 hours. [Moderate] Theoretical
- **Ledipasvir** increases the risk of severe bradycardia or heart block when given with **antiarrhythmics (amiodarone)**. Refer to specialist literature. [Severe] Anecdotal
- **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
- **Antiepileptics (fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical

- **Calcium salts (calcium carbonate)** are predicted to decrease the exposure to **ledipasvir**. Separate administration by 4 hours. [Moderate] Theoretical
- **Ledipasvir** is predicted to increase the exposure to **dabigatran**. [Moderate] Theoretical
- **Ledipasvir** is predicted to increase the exposure to **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
- **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see **ledipasvir** with sofosbuvir p. 664. [Moderate] Study
- **HIV-protease inhibitors (tipranavir)** boosted with ritonavir are predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- **Proton pump inhibitors** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see **ledipasvir** with sofosbuvir p. 664. [Moderate] Theoretical
- **Rifabutin** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- **Rifampicin** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
- **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **ledipasvir**. Separate administration by at least 2 hours. [Moderate] Theoretical
- **St John's Wort** is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
- **Ledipasvir** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin, pravastatin, simvastatin)**. Monitor and adjust dose. [Moderate] Theoretical
- **Ledipasvir** is predicted to increase the exposure to **statins (rosuvastatin)**. Avoid. [Severe] Theoretical
- **Ledipasvir** (with sofosbuvir) slightly increases the exposure to **tenofovir disoproxil**. [Moderate] Study

**Leflunomide** → see TABLE 1 p. 1446 (hepatotoxicity), TABLE 15 p. 1449 (myelosuppression)

**PHARMACOLOGY** Leflunomide has a long half-life; washout procedure recommended before switching to other DMARDs (consult product literature).

- **Leflunomide** is predicted to increase the exposure to **adefovir**. [Moderate] Theoretical
- **Leflunomide** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- **Leflunomide** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- **Leflunomide** is predicted to decrease the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
- **Leflunomide** is predicted to increase the exposure to **anthracyclines (daunorubicin, doxorubicin, mitoxantrone)**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- **Leflunomide** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Study
- **Leflunomide** potentially increases the exposure to **baricitinib**. [Moderate] Theoretical
- **Leflunomide** is predicted to increase the exposure to **bosentan**. [Moderate] Study
- **Leflunomide** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- **Leflunomide** is predicted to increase the exposure to **cephalosporins (cefaclor)**. [Moderate] Theoretical
- **Leflunomide** is predicted to decrease the exposure to **clozapine**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- **Leflunomide** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- **Leflunomide** is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- **Leflunomide** is predicted to increase the exposure to **ganciclovir**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- **Leflunomide** is predicted to increase the exposure to **H<sub>2</sub> receptor antagonists (cimetidine, famotidine)**. [Moderate] Theoretical
- **Leflunomide** is predicted to increase the exposure to **larotrectinib**. [Mild] Study
- **Leflunomide** is predicted to increase the concentration of **letermovir**. [Moderate] Study
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with

leflunomide. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

- ▶ **Leflunomide** is predicted to increase the exposure to **loop diuretics (furosemide)**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **methotrexate**. [Moderate] Theoretical → Also see TABLE 1 p. 1446 → Also see TABLE 15 p. 1449
- ▶ **Leflunomide** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **neteglinide**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **NSAIDs (indometacin, ketoprofen)**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Leflunomide** is predicted to increase the exposure to **oseltamivir**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **penicillins (benzylpenicillin)**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **pioglitazone**. [Moderate] Study
- ▶ **Leflunomide** is predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **quinolones (ciprofloxacin)**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **rifampicin**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **selexipag**. Adjust selexipag dose, p. 194. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin, pravastatin, simvastatin)**. [Moderate] Study → Also see TABLE 1 p. 1446
- ▶ **Leflunomide** is predicted to increase the exposure to **statins (rosuvastatin)**. Adjust dose. [Moderate] Study → Also see TABLE 1 p. 1446
- ▶ **Leflunomide** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 1 p. 1446 → Also see TABLE 15 p. 1449
- ▶ **Leflunomide** is predicted to increase the exposure to **sulfonylureas (glibenclamide)**. [Moderate] Study
- ▶ **Leflunomide** potentially increases the exposure to **talazoparib**. Avoid or monitor. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the concentration of **taxanes (paclitaxel)**. [Severe] Anecdotal → Also see TABLE 15 p. 1449
- ▶ **Leflunomide** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ **Leflunomide** moderately decreases the exposure to **tizanidine**. [Mild] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **topotecan**. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Leflunomide** is predicted to increase the exposure to **zidovudine**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Lenalidomide** → see TABLE 1 p. 1446 (hepatotoxicity), TABLE 15 p. 1449 (myelosuppression), TABLE 5 p. 1447 (thromboembolism)
- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. Avoid. [Severe] Theoretical
- ▶ **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. [Severe] Theoretical

**Lenvatinib** → see TABLE 9 p. 1448 (QT-interval prolongation)

**Lercanidipine** → see calcium channel blockers

## Letermovir

- ▶ **Letermovir** is predicted to increase the concentration of **antiarrhythmics (amiodarone)**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, phenobarbital, primidone)** are predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to decrease the concentration of **antiepileptics (fosphenytoin, phenytoin)** and **antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **Letermovir** slightly decreases the exposure to **antifungals, azoles (voriconazole)**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the concentration of **antihistamines, non-sedating (fexofenadine)**. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the concentration of **bosentan**. [Moderate] Theoretical
- ▶ **Letermovir** increases the exposure to **ciclosporin** and **ciclosporin** increases the exposure to **letermovir**. Monitor and adjust **letermovir** dose, p. 676. [Severe] Study
- ▶ **Letermovir** is predicted to decrease the concentration of **coumarins (warfarin)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to decrease the concentration of **digibigatran**. Avoid. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **Eltrombopag** is predicted to increase the concentration of **letermovir**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the concentration of **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Letermovir** is predicted to increase the concentration of **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Etravirine** is predicted to decrease the exposure to **letermovir**. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the concentration of **evolimolus**. Monitor and adjust dose. [Severe] Study
- ▶ **Fibrates (gemfibrozil)** are predicted to increase the concentration of **letermovir**. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** boosted with **ritonavir** are predicted to increase the concentration of **letermovir**. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the concentration of **letermovir**. [Moderate] Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the concentration of **letermovir**. [Moderate] Study
- ▶ **Letermovir** slightly to moderately increases the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Modafinil** is predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the concentration of **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Letermovir** is predicted to increase the concentration of **repaglinide**. Avoid. [Moderate] Theoretical
- ▶ **Rifabutin** is predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to affect the concentration of **letermovir**. [Severe] Theoretical
- ▶ **Letermovir** moderately increases the exposure to **sirolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **St John's Wort** is predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ **Letermovir** moderately increases the exposure to **statins (atorvastatin)**. Avoid or adjust **atorvastatin** dose, p. 215. [Severe] Study
- ▶ **Letermovir** is predicted to increase the exposure to **statins (fluvastatin)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **statins (pravastatin)**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **statins (rosuvastatin, simvastatin)**. Avoid. [Severe] Study

## Letermovir (continued)

- ▶ **Letermovir** is predicted to increase the concentration of **sulfonylureas (glibenclamide)**. [Moderate] Theoretical
- ▶ **Letermovir** moderately increases the exposure to **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Teriflunomide** is predicted to increase the concentration of **letermovir**. [Moderate] Study

## Levamisole

- ▶ **Albendazole** slightly decreases the exposure to **levamisole** and **levamisole** moderately decreases the exposure to **albendazole**. [Moderate] Study
- ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **levamisole**. [Moderate] Study
- ▶ **Levamisole** increases the exposure to **ivermectin**. [Moderate] Study

**Levetiracetam** → see antiepileptics

**Levobunolol** → see beta blockers, non-selective

**Levobupivacaine** → see anaesthetics, local

**Levocetirizine** → see antihistamines, non-sedating

**Levodopa** → see TABLE 8 p. 1447 (hypotension)

- ▶ **Amisulpride** is predicted to decrease the effects of **levodopa**. Avoid. [Severe] Theoretical
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of **levodopa**. [Moderate] Study
- ▶ **Aripiprazole** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1447
- ▶ **Asenapine** is predicted to decrease the effects of **levodopa**. Adjust dose. [Severe] Theoretical → Also see TABLE 8 p. 1447
- ▶ **Baclofen** is predicted to increase the risk of side-effects when given with **levodopa**. [Severe] Anecdotal → Also see TABLE 8 p. 1447
- ▶ **Benperidol** is predicted to decrease the effects of **levodopa**. [Severe] Study → Also see TABLE 8 p. 1447
- ▶ **Bupropion** increases the risk of side-effects when given with **levodopa**. [Moderate] Study
- ▶ **Clozapine** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1447
- ▶ **Droperidol** decreases the effects of **levodopa**. [Severe] Study → Also see TABLE 8 p. 1447
- ▶ **Drugs with antimuscarinic effects** (see TABLE 10 p. 1448) decrease the absorption of **levodopa**. [Moderate] Theoretical
- ▶ **Entacapone** increases the exposure to **levodopa**. Monitor side effects and adjust dose. [Moderate] Study
- ▶ **Flupentixol** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Theoretical → Also see TABLE 8 p. 1447
- ▶ **Haloperidol** decreases the effects of **levodopa**. [Severe] Study → Also see TABLE 8 p. 1447
- ▶ **Iron (oral)** decreases the absorption of **levodopa**. [Moderate] Study
- ▶ **Isoniazid** decreases the effects of **levodopa**. [Moderate] Study
- ▶ **Levodopa** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Loxapine** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1447
- ▶ **Lurasidone** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1447
- ▶ **MAO-B inhibitors** are predicted to increase the effects of **levodopa**. Adjust dose. [Mild] Study → Also see TABLE 8 p. 1447
- ▶ **Levodopa** increases the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Study → Also see TABLE 8 p. 1447
- ▶ **Mementine** is predicted to increase the effects of **levodopa**. [Moderate] Theoretical
- ▶ **Metoclopramide** decreases the effects of **levodopa**. Avoid. [Moderate] Study
- ▶ **Levodopa** increases the risk of side-effects when given with **moclobemide**. [Moderate] Study
- ▶ **Olanzapine** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Anecdotal → Also see TABLE 8 p. 1447
- ▶ **Opicapone** increases the exposure to **levodopa**. Adjust dose. [Moderate] Study
- ▶ **Paliperidone** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1447

- ▶ **Phenothiazines** decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Study → Also see TABLE 8 p. 1447
- ▶ **Pimozide** decreases the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1447
- ▶ **Quetiapine** decreases the effects of **levodopa**. [Severe] Anecdotal → Also see TABLE 8 p. 1447
- ▶ **Risperidone** is predicted to decrease the effects of **levodopa**. Avoid or adjust dose. [Severe] Anecdotal → Also see TABLE 8 p. 1447
- ▶ **Sulpiride** is predicted to decrease the effects of **levodopa**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1447
- ▶ **Tetrabenazine** is predicted to decrease the effects of **levodopa**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Tolcapone** increases the exposure to **levodopa**. Monitor and adjust dose. [Moderate] Study
- ▶ **Tryptophan** greatly decreases the concentration of **levodopa**. [Moderate] Study
- ▶ **Zuclopenthixol** is predicted to decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Theoretical → Also see TABLE 8 p. 1447

**Levofloxacin** → see quinolones

**Levofolinic acid** → see folates

**Levomepromazine** → see phenothiazines

## Levonorgestrel

- ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rifinamide, topiramate)** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
- ▶ **Aprepitant** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
- ▶ **Bosentan** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
- ▶ **Efavirenz** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
- ▶ **Fosaprepitant** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
- ▶ **Griseofulvin** potentially decreases the efficacy of oral **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Anecdotal
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the efficacy of **levonorgestrel**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Modafinil** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
- ▶ **Rifabutin** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
- ▶ **St John's Wort** is predicted to decrease the efficacy of **levonorgestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
- ▶ **Sugammadex** is predicted to decrease the exposure to **levonorgestrel**. Use additional contraceptive precautions. [Severe] Theoretical
- ▶ **Ulipristal** is predicted to decrease the efficacy of **levonorgestrel**. Avoid. [Severe] Theoretical

**Levothyroxine** → see thyroid hormones

**Lidocaine** → see antiarrhythmics

**Linagliptin** → see TABLE 14 p. 1449 (antidiabetic drugs)

- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ **Linagliptin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **linagliptin**. [Moderate] Study

**Linezolid** → see TABLE 15 p. 1449 (myelosuppression), TABLE 13 p. 1449 (serotonin syndrome)

**FOOD AND LIFESTYLE** Patients taking linezolid should avoid consuming large amounts of tyramine-rich foods (such as mature cheese, salami, pickled herring, *Bovril*®, *Oxo*®, *Marmite*® or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- ▶ **Beta<sub>2</sub> agonists** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Bupropion** is predicted to increase the risk of intraoperative hypertension when given with **linezolid**. [Severe] Anecdotal → Also see TABLE 13 p. 1449
- ▶ **Buprion** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1449
- ▶ **Levodopa** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Macrolides** (**clarithromycin**) increase the exposure to **linezolid**. [Moderate] Anecdotal
- ▶ **MAO-B inhibitors** (**rasagiline**, **selegiline**) are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1449
- ▶ **MAO-B inhibitors** (**safinamide**) are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 1 week after stopping **safinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1449
- ▶ **MAOIs, irreversible** are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1449
- ▶ **Methylphenidate** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Moclobemide** is predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping **moclobemide**, p. 380. [Severe] Theoretical → Also see TABLE 13 p. 1449
- ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** slightly decreases the exposure to **linezolid**. [Moderate] Study
- ▶ **Symphathomimetics, inotropic** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Symphathomimetics, vasoconstrictor** (**adrenaline/epinephrine**, **ephedrine**, **isometheptene**, **noradrenaline/norepinephrine**, **phenylephrine**) are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Symphathomimetics, vasoconstrictor** (**pseudoephedrine**) increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Study
- Liotyronine** → see thyroid hormones
- Liraglutide** → see TABLE 14 p. 1449 (antidiabetic drugs)
- Lisdexamfetamine** → see amfetamines
- Lisinopril** → see ACE inhibitors
- Lithium** → see TABLE 13 p. 1449 (serotonin syndrome), TABLE 9 p. 1448 (QT-interval prolongation)
- ▶ **ACE inhibitors** are predicted to increase the concentration of **lithium**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Acetazolamide** alters the concentration of **lithium**. [Severe] Anecdotal
- ▶ **Aldosterone antagonists** (**eplerenone**) potentially increase the concentration of **lithium**. Avoid. [Moderate] Theoretical
- ▶ **Aldosterone antagonists** (**spironolactone**) potentially increase the concentration of **lithium**. [Moderate] Study
- ▶ **Aminophylline** is predicted to decrease the concentration of **lithium**. [Moderate] Theoretical
- ▶ **Angiotensin-II receptor antagonists** potentially increase the concentration of **lithium**. Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ **Antiepileptics** (**carbamazepine**, **oxcarbazepine**) are predicted to increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ **Calcitonins** decrease the concentration of **lithium**. Adjust dose. [Moderate] Study
- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ **Loop diuretics** increase the concentration of **lithium**. Monitor and adjust dose. [Severe] Study
- ▶ **Methyldopa** increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ **Metronidazole** is predicted to increase the concentration of **lithium**. Avoid or adjust dose. [Severe] Anecdotal
- ▶ **Mexiletine** potentially affects the exposure to **lithium**. Avoid. [Unknown] Theoretical
- ▶ **NSAIDs** increase the concentration of **lithium**. Monitor and adjust dose. [Severe] Study
- ▶ **Phenothiazines** potentially increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1448
- ▶ **Potassium-sparing diuretics** (**triamterene**) potentially increase the clearance of **lithium**. [Moderate] Study
- ▶ **Quetiapine** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ **Risperidone** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1448
- ▶ **Sodium bicarbonate** decreases the concentration of **lithium**. [Severe] Anecdotal
- ▶ **Sulpiride** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1448
- ▶ **Tetracyclines** are predicted to increase the risk of **lithium** toxicity when given with **lithium**. Avoid or adjust dose. [Severe] Anecdotal
- ▶ **Theophylline** is predicted to decrease the concentration of **lithium**. Monitor concentration and adjust dose. [Moderate] Anecdotal
- ▶ **Thiazide diuretics** increase the concentration of **lithium**. Avoid or adjust dose and monitor concentration. [Severe] Study
- ▶ **Tricyclic antidepressants** potentially increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 13 p. 1449 → Also see TABLE 9 p. 1448
- ▶ **Zuclopenthixol** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1448

## Live vaccines

Bacillus Calmette-Guérin vaccine • influenza vaccine (live) • measles, mumps and rubella vaccine, live • rotavirus vaccine • typhoid vaccine, oral • varicella-zoster vaccine • yellow fever vaccine, live

**GENERAL INFORMATION** **Oral typhoid vaccine** is inactivated by concurrent administration of antibacterials or antimalarials: antibacterials should be avoided for 3 days before and after oral typhoid vaccination; **mefloquine** should be avoided for at least 12 hours before or after oral typhoid vaccination; for other antimalarials oral typhoid vaccine vaccination should be completed at least 3 days before the first dose of the antimalarial (except proguanil hydrochloride with atovaquone, which can be given concurrently).

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **abatacept**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

**siponimod.** Avoid and for 4 weeks after stopping siponimod.

[Severe] Theoretical

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **sirolimus**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **streptozocin**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tacrolimus**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **taxanes (docetaxel, paclitaxel)**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tegafur**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **temsirolimus**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **teriflunomide**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tioguanine**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** potentially increase the risk of generalised infection (possibly life-threatening) when given with **tofacitinib**. Avoid. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **topotecan**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **trabectedin**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **upadacitinib**. Avoid. [Severe] Theoretical
- ▶ **Venetoclax** potentially decreases the efficacy of **live vaccines**. Avoid. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **vinca alkaloids**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

**Lixisenatide** → see TABLE 14 p. 1449 (antidiabetic drugs)

**SEPARATION OF ADMINISTRATION** Some orally administered drugs should be taken at least 1 hour before, or 4 hours after, lixisenatide injection.

**Lofepramine** → see tricyclic antidepressants

**Lofexidine** → see TABLE 8 p. 1447 (hypotension), TABLE 9 p. 1448 (QT-interval prolongation), TABLE 11 p. 1448 (CNS depressant effects)

**Lomitapide** → see TABLE 1 p. 1446 (hepatotoxicity)

**FOOD AND LIFESTYLE** Bitter (Seville) orange is predicted to increase the exposure to lomitapide; separate administration by 12 hours.

- ▶ **Alprazolam** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to lomitapide. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure

to lomitapide. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 1446

- ▶ **Antifungals, azoles (clotrimazole)** are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to lomitapide. Avoid. [Moderate] Theoretical → Also see TABLE 1 p. 1446
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to lomitapide. Avoid. [Severe] Study → Also see TABLE 1 p. 1446
- ▶ **Apalutamide** is predicted to decrease the exposure to lomitapide. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Aprepitant** is predicted to increase the exposure to lomitapide. Avoid. [Moderate] Theoretical
- ▶ **Bicalutamide** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Calcium channel blockers (amlodipine, lacidipine)** are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to lomitapide. Avoid. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Clostrazol** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to markedly increase the exposure to lomitapide. Avoid. [Severe] Study
- ▶ Oral **combined hormonal contraceptives** slightly increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Lomitapide** increases the exposure to **coumarins (warfarin)**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to lomitapide. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to lomitapide. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Everolimus** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Fosaprepitant** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine, ranitidine)** are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to lomitapide. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to lomitapide. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to lomitapide. Avoid. [Moderate] Theoretical
- ▶ **Isoniazid** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Unknown] Theoretical → Also see TABLE 1 p. 1446
- ▶ **Ivacaftor** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Linagliptin** is predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to lomitapide. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to lomitapide. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to lomitapide. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to lomitapide. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to lomitapide. Avoid. [Moderate] Theoretical

**Lomitapide** (continued)

- ▶ **Nilotinib** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Pazopanib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Peppermint** oil is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Propiverine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Unknown] Theoretical
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Lomitapide** increases the exposure to **statins (atorvastatin)**. Adjust **lomitapide** dose or separate administration by 12 hours, p. 220. [Mild] Study → Also see TABLE 1 p. 1446
- ▶ **Lomitapide** increases the exposure to **statins (simvastatin)**. Monitor and adjust **simvastatin** dose, p. 217. [Moderate] Study → Also see TABLE 1 p. 1446
- ▶ **Tacrolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Ticagrelor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Tolvaptan** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical

**Lomustine** → see alkylating agents

**Loop diuretics** → see TABLE 18 p. 1450 (hyponatraemia), TABLE 8 p. 1447 (hypotension), TABLE 19 p. 1450 (ototoxicity), TABLE 17 p. 1450 (reduced serum potassium)

bumetanide • furosemide • torasemide

- ▶ **Aliskiren** slightly decreases the exposure to **furosemide**. [Moderate] Study → Also see TABLE 8 p. 1447
- ▶ **Loop diuretics** increase the risk of nephrotoxicity when given with **aminoglycosides**. Avoid. [Moderate] Study → Also see TABLE 19 p. 1450
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of **furosemide**. [Moderate] Study
- ▶ Intravenous **furosemide** potentially increases the risk of sweating, variable blood pressure, and tachycardia when given after **chloral hydrate**. [Moderate] Anecdotal
- ▶ **Dasabuvir** (with ombitasvir, paritaprevir, and ritonavir) increases the concentration of **furosemide**. Adjust dose. [Moderate] Study
- ▶ **Immunoglobulins (cytomegalovirus immunoglobulin)** are predicted to increase the risk of side-effects when given with **loop diuretics**. Avoid. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **furosemide**. [Moderate] Theoretical
- ▶ **Loop diuretics** increase the concentration of **lithium**. Monitor and adjust dose. [Severe] Study
- ▶ **Nitisinone** is predicted to increase the exposure to **furosemide**. [Moderate] Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **furosemide**. Adjust dose. [Moderate] Theoretical
- ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **loop diuretics**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **furosemide**. [Moderate] Study

**Loperamide**

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **loperamide**. [Severe] Theoretical
- ▶ **Certitinib** is predicted to increase the exposure to **loperamide**. [Moderate] Theoretical
- ▶ **Loperamide** greatly increases the absorption of oral **desmopressin** (and possibly sublingual). [Moderate] Study

- ▶ **Eliglustat** is predicted to increase the exposure to **loperamide**. Adjust dose. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **loperamide**. [Moderate] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **loperamide**. [Mild] Theoretical
- ▶ **Opicapone** is predicted to increase the exposure to **loperamide**. Avoid. [Moderate] Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **loperamide**. [Moderate] Study
- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **loperamide**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **loperamide**. [Mild] Theoretical
- ▶ **Velpatasvir** is predicted to increase the exposure to **loperamide**. [Severe] Theoretical
- Lopinavir** → see HIV-protease inhibitors
- Loprazolam** → see TABLE 11 p. 1448 (CNS depressant effects)
- Loratadine** → see antihistamines, non-sedating
- Lorazepam** → see TABLE 11 p. 1448 (CNS depressant effects)
- ▶ **Rifampicin** increases the clearance of **lorazepam**. [Moderate] Study
- Lorlatinib**
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose, p. 1044. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study
  - ▶ **Bosentan** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Theoretical
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose, p. 1044. [Severe] Study
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **combined hormonal contraceptives**. Avoid. [Moderate] Theoretical
  - ▶ **Efavirenz** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Theoretical
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **ergotamine**. Avoid. [Moderate] Theoretical
  - ▶ **Grapefruit juice** is predicted to increase the concentration of **lorlatinib**. Avoid. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose, p. 1044. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose, p. 1044. [Severe] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose, p. 1044. [Severe] Study
  - ▶ **Lorlatinib** moderately decreases the exposure to **midazolam**. Avoid. [Moderate] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study
  - ▶ **Nevirapine** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Theoretical
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. Avoid. [Moderate] Theoretical
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **pimozide**. Avoid. [Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **sirolimus**. Avoid. [Moderate] Theoretical
  - ▶ **St John's Wort** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Theoretical
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Moderate] Theoretical
- Lormetazepam** → see TABLE 11 p. 1448 (CNS depressant effects)
- Losartan** → see angiotensin-II receptor antagonists

**Low molecular-weight heparins** → see TABLE 16 p. 1450 (increased serum potassium), TABLE 3 p. 1446 (anticoagulant effects)

dalteparin • enoxaparin • tinzaparin

▶ **Ranibizumab** increases the risk of bleeding events when given with low molecular-weight heparins. [Severe] Theoretical

**Loxapine** → see TABLE 8 p. 1447 (hypotension), TABLE 11 p. 1448 (CNS depressant effects), TABLE 10 p. 1448 (antimuscarinics)

▶ **Combined hormonal contraceptives** are predicted to increase the exposure to loxapine. Avoid. [Unknown] Theoretical

▶ **Loxapine** is predicted to decrease the effects of **dopamine receptor agonists**. [Moderate] Theoretical → Also see TABLE 8 p. 1447 → Also see TABLE 10 p. 1448

▶ **Loxapine** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1447

▶ **Mexiletine** is predicted to increase the exposure to loxapine. Avoid. [Unknown] Theoretical

▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to loxapine. Avoid. [Unknown] Theoretical

▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to loxapine. Avoid. [Unknown] Theoretical

#### Lumacaftor

▶ **Lumacaftor** is predicted to decrease the exposure to antiepileptics (**carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone**). Avoid. [Severe] Theoretical

▶ **Lumacaftor** is predicted to decrease the exposure to antifungals, azoles (**itraconazole**). Adjust dose. [Mild] Theoretical

▶ **Lumacaftor** is predicted to decrease the exposure to antifungals, azoles (**itraconazole, ketoconazole, posaconazole, voriconazole**). Avoid or monitor efficacy. [Moderate] Theoretical

▶ **Lumacaftor** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Severe] Theoretical

▶ **Lumacaftor** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. [Severe] Theoretical

▶ **Lumacaftor** is predicted to decrease the exposure to **corticosteroids (methylprednisolone)**. Adjust dose. [Severe] Theoretical

▶ **Lumacaftor** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Theoretical

▶ **Lumacaftor** is predicted to decrease the exposure to **everolimus**. Avoid. [Severe] Theoretical

▶ **Lumacaftor** potentially decreases the exposure to **glecaprevir**. Avoid. [Severe] Theoretical

▶ **Lumacaftor** is predicted to decrease the efficacy of **levonorgestrel**. Use additional contraceptive precautions. [Severe] Theoretical

▶ **Lumacaftor** is predicted to decrease the exposure to **macrolides (clarithromycin, erythromycin)**. [Moderate] Theoretical

▶ **Lumacaftor** is predicted to decrease the exposure to **midazolam**. Avoid. [Severe] Theoretical

▶ **Lumacaftor** potentially decreases the exposure to **pibrentasvir**. Avoid. [Severe] Theoretical

▶ **Lumacaftor** is predicted to decrease the exposure to **rifabutin**. Adjust dose. [Moderate] Theoretical

▶ **Lumacaftor** is predicted to decrease the exposure to **sirolimus**. Avoid. [Severe] Theoretical

▶ **Lumacaftor** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Severe] Theoretical

▶ **Lumacaftor** is predicted to decrease the exposure to **temsirolimus**. Avoid. [Severe] Theoretical

▶ **Lumacaftor** is predicted to decrease the efficacy of **ulipristal**. Use additional contraceptive precautions. [Severe] Theoretical

**Lumefantrine** → see antimalarials

**Lurasidone** → see TABLE 8 p. 1447 (hypotension), TABLE 11 p. 1448 (CNS depressant effects)

▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to lurasidone. Adjust lurasidone dose, p. 416. [Moderate] Study

▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to lurasidone. Avoid. [Moderate] Study → Also see TABLE 11 p. 1448

▶ **Antifungals, azoles (fluconazole, isavuconazole)** are predicted to increase the exposure to lurasidone. Adjust lurasidone dose, p. 416. [Moderate] Study

▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to lurasidone. Avoid. [Severe] Study

▶ **Antifungals, azoles (posaconazole)** moderately increase the exposure to lurasidone. Avoid. [Severe] Study

▶ **Apalutamide** is predicted to decrease the exposure to lurasidone. Avoid. [Moderate] Study

▶ **Aprepitant** is predicted to increase the exposure to lurasidone. Adjust lurasidone dose, p. 416. [Moderate] Study

▶ **Bosentan** is predicted to decrease the exposure to lurasidone. Monitor and adjust dose. [Moderate] Theoretical

▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to lurasidone. Adjust lurasidone dose, p. 416. [Moderate] Study → Also see TABLE 8 p. 1447

▶ **Cobicistat** is predicted to increase the exposure to lurasidone. Avoid. [Severe] Study

▶ **Crizotinib** is predicted to increase the exposure to lurasidone. Adjust lurasidone dose, p. 416. [Moderate] Study

▶ **Efavirenz** is predicted to decrease the exposure to lurasidone. Monitor and adjust dose. [Moderate] Theoretical

▶ **Enzalutamide** is predicted to decrease the exposure to lurasidone. Avoid. [Moderate] Study

▶ **Grapefruit juice** is predicted to increase the exposure to lurasidone. Avoid. [Severe] Theoretical

▶ **HIV-protease inhibitors** are predicted to increase the exposure to lurasidone. Avoid. [Severe] Study

▶ **Idelalisib** is predicted to increase the exposure to lurasidone. Avoid. [Severe] Study

▶ **Imatinib** is predicted to increase the exposure to lurasidone. Adjust lurasidone dose, p. 416. [Moderate] Study

▶ **Lurasidone** is predicted to decrease the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1447

▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to lurasidone. Avoid. [Severe] Study

▶ **Macrolides (erythromycin)** are predicted to increase the exposure to lurasidone. Adjust lurasidone dose, p. 416. [Moderate] Study

▶ **Mitotane** is predicted to decrease the exposure to lurasidone. Avoid. [Moderate] Study

▶ **Netupitant** is predicted to increase the exposure to lurasidone. Adjust lurasidone dose, p. 416. [Moderate] Study

▶ **Nevirapine** is predicted to decrease the exposure to lurasidone. Monitor and adjust dose. [Moderate] Theoretical

▶ **Nilotinib** is predicted to increase the exposure to lurasidone. Adjust lurasidone dose, p. 416. [Moderate] Study

▶ **Rifampicin** is predicted to decrease the exposure to lurasidone. Avoid. [Moderate] Study

▶ **St John's Wort** is predicted to decrease the exposure to lurasidone. Monitor and adjust dose. [Moderate] Theoretical

**Lymecycline** → see tetracyclines

#### Macitentan

▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to macitentan. Avoid. [Severe] Study

▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to macitentan. [Moderate] Study

▶ **Apalutamide** is predicted to decrease the exposure to macitentan. Avoid. [Severe] Study

▶ **Cobicistat** is predicted to increase the exposure to macitentan. [Moderate] Study

▶ **Enzalutamide** is predicted to decrease the exposure to macitentan. Avoid. [Severe] Study

▶ **HIV-protease inhibitors** are predicted to increase the exposure to macitentan. [Moderate] Study

▶ **Idelalisib** is predicted to increase the exposure to macitentan. [Moderate] Study

▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to macitentan. [Moderate] Study

▶ **Mitotane** is predicted to decrease the exposure to macitentan. Avoid. [Severe] Study

▶ **Rifampicin** is predicted to decrease the exposure to macitentan. Avoid. [Severe] Study

▶ **St John's Wort** is predicted to decrease the exposure to macitentan. Avoid. [Severe] Theoretical

**Macrolides** → see TABLE 9 p. 1448 (QT-interval prolongation)

azithromycin · clarithromycin · erythromycin

- ▶ Interactions do not generally apply to topical use of **azithromycin** unless specified.
- ▶ Since systemic absorption can follow topical application of **erythromycin**, the possibility of interactions should be borne in mind.
- ▶ **Clarithromycin** is predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 1019. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Macrolides** are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust **eplerenone** dose, p. 205. [Severe] Study
- ▶ **Azithromycin** is predicted to increase the exposure to **aliskiren**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **aliskiren**. [Moderate] Study
- ▶ **Clarithromycin** increases the exposure to **almotriptan**. [Mild] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **alpha blockers (alfuzosin, tamsulosin)**. Use with caution or avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **alpha blockers (doxazosin)**. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- ▶ **Clarithromycin** moderately increases the exposure to **alprazolam**. Avoid. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Azithromycin** is predicted to increase the exposure to **aminophylline**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Aminophylline** is predicted to decrease the exposure to **erythromycin**. Adjust dose. [Severe] Study
- ▶ **Clarithromycin** very markedly increases the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Erythromycin** is predicted to moderately increase the exposure to **antiarrhythmics (dronedarone)**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **antiarrhythmics (lidocaine)**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** slightly increases the concentration of **antiepileptics (carbamazepine)**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Erythromycin** markedly increases the concentration of **antiepileptics (carbamazepine)**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to very slightly increase the exposure to **antiepileptics (perampanel)**. [Mild] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. Avoid or monitor side effects. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the concentration of **antimalarials (piperaquine)**. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **apalutamide**. [Mild] Study → Also see TABLE 9 p. 1448
- ▶ **Erythromycin** is predicted to increase the exposure to **apixaban**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **aprepitant**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 413. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Study → Also see TABLE 9 p. 1448
- ▶ **Erythromycin** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Macrolides** are predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **beta<sub>2</sub> agonists (salmeterol)**. Avoid. [Severe] Study
- ▶ **Macrolides** are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Clarithromycin** slightly increases the exposure to **bortezomib**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **bosentan**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Erythromycin** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Clarithromycin** is predicted to increase the exposure to **brigatinib**. Adjust brigatinib dose, p. 1024. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **buspirone**. Adjust buspirone dose, p. 358. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** slightly increases the exposure to **cabozantinib**. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Erythromycin** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Erythromycin** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **calcium channel blockers (diltiazem)**. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **calcium channel blockers (lercanidipine)**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **calcium channel blockers (verapamil)**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. [Mild] Study

- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Azithromycin** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 1026. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Clarithromycin** increases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 246. [Moderate] Study
- ▶ **Erythromycin** slightly increases the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 246. [Moderate] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Study
- ▶ **Erythromycin** potentially increases the risk of toxicity when given with **clozapine**. [Severe] Anecdotal
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Azithromycin** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose, p. 1183. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1183. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1183. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to corticosteroids (**beclomethasone**) (risk with beclomethasone is likely to be lower than with other corticosteroids). [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to corticosteroids (**betamethasone**, **budesonide**, **ciclesonide**, **deflazacort**, **dexamethasone**, **fludrocortisone**, **fluticasone**, **hydrocortisone**, **methylprednisolone**, **mometasone**, **prednisolone**, **triamcinolone**). Avoid or monitor side effects. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to corticosteroids (**methylprednisolone**). Monitor and adjust dose. [Moderate] Study
- ▶ Macrolides (**clarithromycin**, **erythromycin**) increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **crizotinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Macrolides** are predicted to increase the exposure to **dabigatran**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Erythromycin** is predicted to increase the exposure to **dasatinib**. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Clarithromycin** very slightly increases the exposure to **delamanid**. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Erythromycin** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Macrolides** increase the concentration of **digoxin**. [Severe] Anecdotal
- ▶ Macrolides (**clarithromycin**, **erythromycin**) increase the risk of QT-prolongation when given with **domperidone**. Avoid. [Severe] Study
- ▶ **Clarithromycin** increases the exposure to **dopamine receptor agonists** (**bromocriptine**). [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **dopamine receptor agonists** (**bromocriptine**). [Severe] Theoretical
- ▶ Macrolides (**clarithromycin**, **erythromycin**) are predicted to increase the concentration of **dopamine receptor agonists** (**cabergoline**). Avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **doravirine**. [Mild] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **dronabinol**. Adjust dose. [Mild] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. [Moderate] Theoretical
- ▶ **Erythromycin** is predicted to moderately increase the exposure to **dutasteride**. [Mild] Study
- ▶ **Erythromycin** slightly increases the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 135. [Severe] Study
- ▶ Macrolides (**azithromycin**, **clarithromycin**) are predicted to slightly increase the exposure to **edoxaban**. [Severe] Theoretical
- ▶ **Efavirenz** decreases the exposure to **clarithromycin**. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Erythromycin** moderately increases the exposure to **eletriptan**. Avoid. [Moderate] Study
- ▶ Macrolides (**clarithromycin**, **erythromycin**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **encorafenib**. Avoid or monitor. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Erythromycin** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Clarithromycin** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. [Moderate] Study
- ▶ Macrolides (**azithromycin**, **erythromycin**) are predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **esketamine**. Adjust dose. [Moderate] Study
- ▶ **Etravirine** decreases the exposure to **clarithromycin** and **clarithromycin** slightly increases the exposure to **etravirine**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the concentration of **everolimus**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 821. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 821. [Mild] Study
- ▶ **Macrolides** are predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **fosaprepitant**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **gefitinib**. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical

## Macrolides (continued)

- ▶ **Clarithromycin** is predicted to increase the exposure to **gilteritinib**. [Moderate] Study
- ▶ Macrolides (**azithromycin**, **erythromycin**) are predicted to increase the exposure to **gilteritinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Theoretical
- ▶  $H_2$  receptor antagonists (**cimetidine**) slightly increase the exposure to **erythromycin**. [Moderate] Study
- ▶ **HIV-protease inhibitors (atazanavir)** are predicted to increase the exposure to **clarithromycin**. Adjust dose in renal impairment. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, tipranavir)** are predicted to increase the exposure to **erythromycin**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (darunavir, fosamprenavir, lopinavir)** boosted with **ritonavir** are predicted to increase the exposure to **clarithromycin**. Adjust dose in renal impairment. [Severe] Study
- ▶ **HIV-protease inhibitors (ritonavir)** increase the exposure to **clarithromycin**. Adjust dose in renal impairment. [Severe] Study
- ▶ **HIV-protease inhibitors (tipranavir)** boosted with **ritonavir** increase the exposure to **clarithromycin** and **clarithromycin** increases the exposure to **HIV-protease inhibitors (tipranavir)** boosted with **ritonavir**. Monitor; adjust dose in renal impairment. [Severe] Study
- ▶ **Clarithromycin** increases the exposure to **HIV-protease inhibitors (saquinavir)** and **HIV-protease inhibitors (saquinavir)** increase the exposure to **clarithromycin**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Erythromycin** is predicted to increase the exposure to **HIV-protease inhibitors (saquinavir)**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Clarithromycin** is predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 1037. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 1037. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **imatinib**. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **ivabradine**. Avoid. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 308 or **lumacaftor** with **ivacaftor** p. 309 or **tezacaftor** with **ivacaftor** p. 310 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 308 or **tezacaftor** with **ivacaftor** p. 310 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Erythromycin** is predicted to increase the exposure to **lapatinib**. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 1042. [Moderate] Study
- ▶ Macrolides (**azithromycin**, **erythromycin**) are predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ Macrolides (**clarithromycin**, **erythromycin**) are predicted to increase the concentration of **letermovir**. [Moderate] Study
- ▶ **Clarithromycin** increases the exposure to **linezolid**. [Moderate] Anecdotal
- ▶ **Azithromycin** is predicted to increase the exposure to **lomitinib**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **lomitinib**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **lomitinib**. Avoid. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose, p. 1044. [Severe] Study
- ▶ **Lumacaftor** is predicted to decrease the exposure to macrolides (**clarithromycin**, **erythromycin**). [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **lurasidone**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 416. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **macitentan**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **midazolam**. Avoid or adjust dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 824. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **modafinil**. [Mild] Theoretical
- ▶ **Clarithromycin** increases the risk of neutropenia when given with **monoclonal antibodies (brentuximab vedotin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **monoclonal antibodies (trastuzumab emtansine)**. Avoid. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
- ▶ Macrolides (**azithromycin**, **erythromycin**) are predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 69. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **neratinib**. Avoid or adjust **neratinib** dose, p. 1046. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **netupitant**. [Moderate] Study
- ▶ **Nevirapine** decreases the exposure to **clarithromycin**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Erythromycin** is predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- ▶ Macrolides are predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1063. [Moderate] Study

- ▶ **Erythromycin** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1063. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **opioids (alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the concentration of **opioids (methadone)**. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Erythromycin** is predicted to increase the exposure to **opioids (methadone)**. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Clarithromycin** is predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **oxybutynin**. [Mild] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1050. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 987. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ Macrolides (**azithromycin, erythromycin**) are predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Clarithromycin** is predicted to increase the exposure to **paritaprevir**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **paritaprevir**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 1051. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Erythromycin** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil)**. Adjust **avanafil** dose, p. 858. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Clarithromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 859. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 859. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Clarithromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. Use with caution or avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (tadalafil)**. [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (vardenafil)**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Macrolides** are predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Erythromycin** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1052. [Moderate] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **praziquantel**. [Mild] Study
- ▶ **Clarithromycin** given with carbimazole is predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **quetiapine**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Erythromycin** is predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Clarithromycin** is predicted to increase the exposure to **reboxetine**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **repaglinide**. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **retinoids (alitretinoin)**. Adjust **alitretinoin** dose, p. 1328. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1054. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Erythromycin** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Azithromycin** increases the risk of neutropenia when given with **rifabutin**. [Severe] Study
- ▶ **Clarithromycin** increases the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Theoretical
- ▶ **Rifampicin** decreases the concentration of **clarithromycin**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **risperidone**. Adjust dose. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Clarithromycin** is predicted to increase the exposure to **rufoxitinib**. Adjust dose and monitor side effects. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **rufoxitinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Erythromycin** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 834 or **tamsulosin** with **solifenacin** p. 829 dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **SSRIs (dapoxetine)**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 866. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **SSRIs (dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 866. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **statins (atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Erythromycin** slightly increases the exposure to **statins (atorvastatin)**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Clarithromycin** moderately increases the exposure to **statins (pravastatin)**. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **statins (pravastatin)**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ **Erythromycin** markedly increases the exposure to **statins (simvastatin)**. Avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **sulfonylureas**. [Moderate] Theoretical

## Macrolides (continued)

- ▶ **Clarithromycin** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1057. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Erythromycin** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Clarithromycin** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Macrolides** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1065. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **taxanes (cabazitaxel)**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **taxanes (docetaxel)**. Avoid or adjust dose. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Severe] Theoretical
- ▶ **Clarithromycin** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Erythromycin** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 310 dose with potent inhibitors of CYP3A4. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 310 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Erythromycin** decreases the clearance of **theophylline** and **theophylline** potentially decreases the clearance of erythromycin. Adjust dose. [Severe] Study
- ▶ **Macrolides (azithromycin, clarithromycin)** are predicted to increase the exposure to **theophylline**. Adjust dose. [Moderate] Anecdotal
- ▶ **Azithromycin** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1167. [Moderate] Study
- ▶ **Erythromycin** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1167. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1448
- ▶ **Erythromycin** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Clarithromycin** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent inhibitors of CYP3A4, p. 706. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4, p. 706. [Moderate] Study
- ▶ **Macrolides** are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **toremifene**. [Moderate] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Clarithromycin** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [Severe] Theoretical
- ▶ **Macrolides** are predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [Moderate] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Clarithromycin** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
- ▶ **Erythromycin** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study

- ▶ **Clarithromycin** is predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **venlafaxine**. [Moderate] Study → Also see TABLE 9 p. 1448
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1448
- ▶ **Clarithromycin** is predicted to increase the exposure to **vitamin D substances (paricalcitol)**. [Moderate] Study
- ▶ **Clarithromycin** decreases the absorption of **zidovudine**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ **Clarithromycin** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Theoretical
- ▶ **Erythromycin** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

## Magnesium

- ▶ Oral **magnesium** decreases the absorption of **bisphosphonates (alendronate)**. **Alendronate** should be taken at least 30 minutes before **magnesium**. [Moderate] Study
- ▶ Oral **magnesium** decreases the absorption of **bisphosphonates (clodronate)**. Avoid **magnesium** for 2 hours before or 1 hour after **clodronate**. [Moderate] Study
- ▶ Oral **magnesium** is predicted to decrease the absorption of oral **bisphosphonates (ibandronate)**. Avoid for at least 6 hours before or 1 hour after **ibandronate**. [Moderate] Theoretical
- ▶ Oral **magnesium** decreases the absorption of **bisphosphonates (risedronate)**. Separate administration by at least 2 hours. [Moderate] Study
- ▶ Intravenous **magnesium** potentially increases the risk of hypotension when given with **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine, verapamil)** in pregnant women. [Severe] Anecdotal
- ▶ Intravenous **magnesium** increases the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Study
- ▶ Intravenous **magnesium** is predicted to increase the effects of **suxamethonium**. [Moderate] Study

**Magnesium carbonate** → see antacids

**Magnesium trisilicate** → see antacids

**MAO-B inhibitors** → see TABLE 6 p. 1447 (bradycardia), TABLE 8 p. 1447 (hypotension), TABLE 13 p. 1449 (serotonin syndrome)

rasagiline · safinamide · selegiline

**FOOD AND LIFESTYLE** Hypertension is predicted to occur when high-dose **selegiline** is taken with tyramine-rich foods (such as mature cheese, salami, pickled herring, Bovril®, Oxo®, Marmite® or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- ▶ **MAO-B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of severe hypertension when given with **amfetamines**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1449
- ▶ **Safinamide** is predicted to increase the risk of severe hypertension when given with **amfetamines**. [Severe] Theoretical → Also see TABLE 13 p. 1449
- ▶ **MAO-B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of severe hypertension when given with **beta<sub>2</sub> agonists**. Avoid. [Severe] Theoretical
- ▶ **Safinamide** is predicted to increase the risk of severe hypertension when given with **beta<sub>2</sub> agonists**. [Severe] Theoretical
- ▶ **MAO-B inhibitors** are predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. [Moderate] Theoretical → Also see TABLE 13 p. 1449
- ▶ **Combined hormonal contraceptives** slightly increase the exposure to **rasagiline**. [Moderate] Study
- ▶ **Combined hormonal contraceptives** increase the exposure to **selegiline**. Avoid. [Severe] Study
- ▶ **Hormone replacement therapy** is predicted to increase the exposure to **selegiline**. Avoid. [Moderate] Study
- ▶ **MAO-B inhibitors** are predicted to increase the effects of **levodopa**. Adjust dose. [Mild] Study → Also see TABLE 8 p. 1447

- MAO-B inhibitors (**rasagiline**, **selegiline**) are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1449
  - Safinamide** is predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 1 week after stopping **safinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1449
  - MAO-B inhibitors (**rasagiline**, **selegiline**) are predicted to increase the risk of side-effects when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 8 p. 1447 → Also see TABLE 13 p. 1449
  - Safinamide** is predicted to increase the risk of side-effects when given with **MAOIs, irreversible**. Avoid and for 1 week after stopping **safinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1449
  - MAO-B inhibitors (**rasagiline**, **selegiline**) are predicted to increase the risk of a hypertensive crisis when given with **methylphenidate**. Avoid. [Severe] Theoretical
  - Mexiletine** slightly increases the exposure to **rasagiline**. [Moderate] Study
  - Moclobemide** is predicted to increase the effects of MAO-B inhibitors (**rasagiline**, **selegiline**). Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1449
  - Moclobemide** is predicted to increase the risk of side-effects when given with **safinamide**. Avoid and for 1 week after stopping **safinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1449
  - Rasagiline** is predicted to increase the risk of side-effects when given with **opioids (pethidine)**. Avoid and for 14 days after stopping **rasagiline**. [Severe] Theoretical → Also see TABLE 13 p. 1449
  - Safinamide** is predicted to increase the risk of side-effects when given with **opioids (pethidine)**. Avoid and for 1 week after stopping **safinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1449
  - Selegiline** increases the risk of side-effects when given with **opioids (pethidine)**. Avoid. [Severe] Anecdotal → Also see TABLE 13 p. 1449
  - Quinolones (ciprofloxacin)** slightly increase the exposure to **rasagiline**. [Moderate] Study
  - Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with MAO-B inhibitors (**rasagiline**, **selegiline**). Avoid. [Severe] Theoretical
  - MAO-B inhibitors are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, inotropic**. Avoid. [Severe] Anecdotal
  - MAO-B inhibitors are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, vasoconstrictor**. Avoid. [Severe] Anecdotal
  - Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **MAO-B inhibitors**. [Severe] Theoretical
- MAOIs, irreversible** → see TABLE 8 p. 1447 (hypotension), TABLE 13 p. 1449 (serotonin syndrome)
- isocarboxazid • phenelzine • tranylcypromine
- FOOD AND LIFESTYLE** Potentially life-threatening hypertensive crisis can develop in those taking MAOIs who eat tyramine-rich food (such as mature cheese, salami, pickled herring, *Bovril*®, *Oxo*®, *Marmite*® or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines) or foods containing dopa (such as broad bean pods). Avoid tyramine-rich or dopa-rich food or drinks with, or for 2 to 3 weeks after stopping, the MAOI.
- MAOIs, irreversible** are predicted to increase the effects of **alpha blockers (indoramin)**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1447
  - MAOIs, irreversible** are predicted to increase the risk of a hypertensive crisis when given with **amfetamines**. Avoid and for 14 days after stopping the MAOI. [Severe] Anecdotal → Also see TABLE 13 p. 1449
  - Antiepileptics (carbamazepine)** are predicted to increase the risk of severe toxic reaction when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
  - Antiepileptics (phenobarbital, primidone)** are predicted to increase the effects of **MAOIs, irreversible**. [Severe] Theoretical
  - MAOIs, irreversible** are predicted to increase the risk of antimuscarinic side-effects when given with **antihistamines, non-sedating**. Avoid. [Severe] Theoretical
  - MAOIs, irreversible** are predicted to increase the risk of antimuscarinic side-effects when given with **antihistamines, sedating**. Avoid. [Severe] Theoretical
  - MAOIs, irreversible** are predicted to increase the risk of side-effects when given with **atomoxetine**. Avoid and for 2 weeks after stopping the MAOI. [Severe] Theoretical
  - MAOIs, irreversible** are predicted to increase the risk of cardiovascular side-effects when given with **beta<sub>2</sub> agonists**. [Moderate] Anecdotal
  - MAOIs, irreversible** are predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1449
  - Buspirone** is predicted to increase the risk of elevated blood pressure when given with **MAOIs, irreversible**. Avoid. [Severe] Anecdotal → Also see TABLE 13 p. 1449
  - MAOIs, irreversible** are predicted to increase the effects of **doxapram**. [Moderate] Theoretical
  - Entacapone** is predicted to increase the risk of elevated blood pressure when given with **MAOIs, irreversible**. Avoid. [Severe] Theoretical
  - Levodopa** increases the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Study → Also see TABLE 8 p. 1447
  - MAOIs, irreversible** are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1449
  - MAO-B inhibitors (**rasagiline**, **selegiline**) are predicted to increase the risk of side-effects when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 8 p. 1447 → Also see TABLE 13 p. 1449
  - MAO-B inhibitors (**safinamide**) are predicted to increase the risk of side-effects when given with **MAOIs, irreversible**. Avoid and for 1 week after stopping **safinamide**. [Severe] Theoretical → Also see TABLE 13 p. 1449
  - MAOIs, irreversible** are predicted to alter the antihypertensive effects of **methylodopa**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1447
  - Methylphenidate** is predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
  - Mianserin** is predicted to increase the risk of toxicity when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
  - Nefopam** is predicted to increase the risk of serious elevations in blood pressure when given with **MAOIs, irreversible**. Avoid. [Severe] Theoretical
  - Opicapone** is predicted to increase the risk of elevated blood pressure when given with **MAOIs, irreversible**. Avoid. [Severe] Theoretical
  - Opioids** are predicted to increase the risk of CNS excitation or depression when given with **MAOIs, irreversible**. Avoid. [Severe] Study → Also see TABLE 13 p. 1449
  - MAOIs, irreversible** are predicted to increase the risk of neuroleptic malignant syndrome when given with **phenothiazines**. [Severe] Theoretical → Also see TABLE 8 p. 1447
  - Pholcodine** is predicted to increase the risk of CNS excitation or depression when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
  - Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid. [Severe] Theoretical
  - MAOIs, irreversible** are predicted to increase the exposure to **rizatriptan**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1449
  - MAOIs, irreversible** are predicted to increase the exposure to **sumatriptan**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1449
  - MAOIs, irreversible** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics,**

## MAOIs, irreversible (continued)

- inotropic.** Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical
- ▶ **MAOIs, irreversible** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics**, **vasoconstrictor**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Study
  - ▶ **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical
  - ▶ **Tolcapone** is predicted to increase the effects of **MAOIs, irreversible**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1447 → Also see TABLE 13 p. 1449
  - ▶ **Tryptophan** increases the risk of side-effects when given with **MAOIs, irreversible**. [\[Severe\]](#) Anecdotal → Also see TABLE 13 p. 1449
  - ▶ **MAOIs, irreversible** are predicted to increase the exposure to **zolmitriptan**. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 1449
- Maraviroc**
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to maraviroc. Adjust dose. [\[Severe\]](#) Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to maraviroc. Adjust dose. [\[Severe\]](#) Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to maraviroc. Adjust dose. [\[Severe\]](#) Study
  - ▶ **Aprepitant** is predicted to increase the exposure to maraviroc. [\[Moderate\]](#) Study
  - ▶ **Bosentan** is predicted to decrease the exposure to maraviroc. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Cobicistat** markedly increases the exposure to maraviroc. Refer to specialist literature. [\[Severe\]](#) Study
  - ▶ **Efavirenz** decreases the exposure to maraviroc. Refer to specialist literature. [\[Severe\]](#) Theoretical
  - ▶ **Enzalutamide** is predicted to decrease the exposure to maraviroc. Adjust dose. [\[Severe\]](#) Study
  - ▶ **Etravirine** (with a boosted protease inhibitor) increases the exposure to maraviroc. Avoid or adjust dose. [\[Moderate\]](#) Study
  - ▶ **HIV-protease inhibitors (atazanavir, saquinavir)** moderately to markedly increase the exposure to maraviroc. Refer to specialist literature. [\[Severe\]](#) Study
  - ▶ **HIV-protease inhibitors (darunavir)** boosted with ritonavir markedly increase the exposure to maraviroc. Refer to specialist literature. [\[Severe\]](#) Study
  - ▶ **HIV-protease inhibitors (lopinavir)** boosted with ritonavir moderately increase the exposure to maraviroc. Refer to specialist literature. [\[Severe\]](#) Study
  - ▶ **HIV-protease inhibitors (ritonavir)** markedly increase the exposure to maraviroc. Refer to specialist literature. [\[Severe\]](#) Study
  - ▶ **Maraviroc** potentially decreases the exposure to **HIV-protease inhibitors (fosamprenavir)** and **HIV-protease inhibitors (fosamprenavir)** potentially decrease the exposure to maraviroc. Avoid. [\[Severe\]](#) Study
  - ▶ **Idelalisib** markedly increases the exposure to maraviroc. Adjust dose. [\[Severe\]](#) Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to maraviroc. Adjust dose. [\[Severe\]](#) Study
  - ▶ **Mitotane** is predicted to decrease the exposure to maraviroc. Adjust dose. [\[Severe\]](#) Study
  - ▶ **Netupitant** is predicted to increase the exposure to maraviroc. [\[Moderate\]](#) Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to maraviroc. Adjust dose. [\[Severe\]](#) Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to maraviroc. Avoid. [\[Severe\]](#) Theoretical
- Measles, mumps and rubella vaccine, live** → see live vaccines
- Mebendazole**
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the concentration of mebendazole. [\[Moderate\]](#) Study

## Medroxyprogesterone

- ▶ **Sugammadex** is predicted to decrease the exposure to medroxyprogesterone. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- Mefenamic acid** → see NSAIDs
- Mefloquine** → see antimalarials
- Melatonin** → see TABLE 11 p. 1448 (CNS depressant effects)
- ▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to melatonin. [\[Moderate\]](#) Theoretical
  - ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to melatonin. [\[Moderate\]](#) Theoretical
  - ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to melatonin. [\[Moderate\]](#) Theoretical
  - ▶ **Leflunomide** is predicted to decrease the exposure to melatonin. [\[Moderate\]](#) Theoretical
  - ▶ **Mexiletine** is predicted to increase the exposure to melatonin. [\[Moderate\]](#) Theoretical
  - ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to melatonin. [\[Moderate\]](#) Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to melatonin. [\[Moderate\]](#) Theoretical
  - ▶ **SSRIs (fluvoxamine)** very markedly increase the exposure to melatonin. Avoid. [\[Severe\]](#) Study
  - ▶ **Teriflunomide** is predicted to decrease the exposure to melatonin. [\[Moderate\]](#) Theoretical
- Meloxicam** → see NSAIDs
- Melphalan** → see alkylating agents
- Memantine**
- ▶ **Dopamine receptor agonists (amantadine)** increase the risk of CNS toxicity when given with memantine. Use with caution or avoid. [\[Severe\]](#) Theoretical
  - ▶ **Memantine** is predicted to increase the effects of **dopamine receptor agonists (apomorphine, bromocriptine, cabergoline, pergolide, pramipexole, quinagolide, ropinirole, rotigotine)**. [\[Moderate\]](#) Theoretical
  - ▶ **Memantine** is predicted to increase the risk of CNS side-effects when given with **ketamine**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Memantine** is predicted to increase the effects of **levodopa**. [\[Moderate\]](#) Theoretical
- Mepacrine**
- ▶ **Mepacrine** is predicted to increase the concentration of **antimalarials (primaquine)**. Avoid. [\[Moderate\]](#) Theoretical
- Mepivacaine** → see anaesthetics, local
- Meprobanamate** → see TABLE 11 p. 1448 (CNS depressant effects)
- Meptazinol** → see opioids
- Mercaptopurine** → see TABLE 1 p. 1446 (hepatotoxicity), TABLE 15 p. 1449 (myelosuppression)
- ▶ **Allopurinol** potentially increases the risk of haematological toxicity when given with **mercaptopurine**. Adjust mercaptopurine dose, p. 963. [\[Severe\]](#) Study
  - ▶ **Mercaptopurine** decreases the anticoagulant effect of **coumarins**. [\[Moderate\]](#) Anecdotal
  - ▶ **Febuxostat** is predicted to increase the exposure to mercaptopurine. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mercaptopurine** (high-dose). Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- Meropenem** → see carbapenems
- Mesalazine**
- ROUTE-SPECIFIC INFORMATION** The manufacturers of some mesalazine gastro-resistant and modified-release medicines (*Asacol MR* tablets, *Ipsacol*, *Salofalk* granules) suggest that preparations that lower stool pH (e.g. lactulose) might prevent the release of mesalazine.
- Metaraminol** → see sympathomimetics, vasoconstrictor
- Metformin** → see TABLE 14 p. 1449 (antidiabetic drugs)
- ▶ **Alcohol (beverage)** (excessive consumption) potentially increases the risk of lactic acidosis when given with metformin. Avoid excessive alcohol consumption. [\[Moderate\]](#) Theoretical
  - ▶ **Bictegravir** slightly increases the exposure to metformin. [\[Moderate\]](#) Study
  - ▶ **Dolutegravir** increases the exposure to metformin. Use with caution and adjust dose. [\[Severe\]](#) Study

- ▶ **Guanfacine** is predicted to increase the concentration of **metformin**. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **metformin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mexiletine** is predicted to affect the exposure to **metformin**. [Unknown] Theoretical
- ▶ **Pitolisant** is predicted to increase the exposure to **metformin**. [Mild] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to **metformin**. [Moderate] Theoretical
- ▶ **Vandetanib** increases the exposure to **metformin**. Monitor and adjust dose. [Moderate] Study

**Methadone** → see opioids

#### Methenamine

- ▶ **Acetazolamide** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
- ▶ **Potassium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
- ▶ **Sodium bicarbonate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
- ▶ **Sodium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical

**Methocarbamol** → see TABLE 11 p. 1448 (CNS depressant effects)

**Methotrexate** → see TABLE 1 p. 1446 (hepatotoxicity), TABLE 15 p. 1449 (myelosuppression), TABLE 2 p. 1446 (nephrotoxicity), TABLE 5 p. 1447 (thromboembolism)

- ▶ **Acetazolamide** increases the urinary excretion of **methotrexate**. [Moderate] Study
- ▶ **Methotrexate** is predicted to decrease the clearance of **aminophylline**. [Moderate] Theoretical
- ▶ **Antiepileptics (levetiracetam)** decrease the clearance of **methotrexate**. [Severe] Anecdotal
- ▶ **Antimalarials (pyrimethamine)** are predicted to increase the risk of side-effects when given with **methotrexate**. [Severe] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Apalutamide** is predicted to decrease the exposure to **methotrexate**. [Mild] Study
- ▶ **Asparaginase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1446 → Also see TABLE 15 p. 1449
- ▶ **Aspirin** (high-dose) is predicted to increase the risk of toxicity when given with **methotrexate**. [Severe] Study
- ▶ **Brigatinib** potentially increases the concentration of **methotrexate**. [Moderate] Theoretical
- ▶ **Crisantaspase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1446 → Also see TABLE 15 p. 1449
- ▶ **Eltrombopag** is predicted to increase the concentration of **methotrexate**. [Moderate] Theoretical
- ▶ **Methotrexate** potentially increases the risk of severe skin reaction when given with topical **fluorouracil**. [Severe] Anecdotal → Also see TABLE 15 p. 1449 → Also see TABLE 5 p. 1447
- ▶ **Leflunomide** is predicted to increase the exposure to **methotrexate**. [Moderate] Theoretical → Also see TABLE 1 p. 1446 → Also see TABLE 15 p. 1449
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **methotrexate** (high-dose). Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Nitisinone** is predicted to increase the exposure to **methotrexate**. [Moderate] Study
- ▶ **Nitrous oxide** potentially increases the risk of **methotrexate** toxicity when given with **methotrexate**. Avoid. [Severe] Study
- ▶ **NSAIDs** are predicted to increase the risk of toxicity when given with **methotrexate**. [Severe] Study → Also see TABLE 2 p. 1446
- ▶ **Pegaspargase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1446 → Also see TABLE 15 p. 1449
- ▶ **Penicillins** are predicted to increase the risk of toxicity when given with **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1446
- ▶ **Potassium aminobenzoate** increases the concentration of **methotrexate**. [Moderate] Theoretical
- ▶ **Proton pump inhibitors** decrease the clearance of **methotrexate** (high-dose). Use with caution or avoid. [Severe] Study
- ▶ **Quinolones (ciprofloxacin)** potentially increase the risk of toxicity when given with **methotrexate**. [Severe] Anecdotal

- ▶ **Regorafenib** is predicted to increase the exposure to **methotrexate**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Retinoids (acitretin)** are predicted to increase the concentration of **methotrexate**. Avoid. [Moderate] Anecdotal
- ▶ **Rolapitant** is predicted to increase the exposure to **methotrexate**. Avoid or monitor. [Moderate] Study
- ▶ **Methotrexate** is predicted to decrease the efficacy of **sapropterin**. [Moderate] Theoretical
- ▶ **Sulfonamides** are predicted to increase the exposure to **methotrexate**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Tedizolid** is predicted to increase the exposure to **methotrexate**. Avoid. [Moderate] Theoretical
- ▶ **Methotrexate** is predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **methotrexate**. [Moderate] Study → Also see TABLE 1 p. 1446
- ▶ **Methotrexate** decreases the clearance of **theophylline**. [Moderate] Study
- ▶ **Trimethoprim** increases the risk of side-effects when given with **methotrexate**. Avoid. [Severe] Anecdotal → Also see TABLE 15 p. 1449 → Also see TABLE 2 p. 1446

**Methoxyflurane** → see volatile halogenated anaesthetics

**Methyldopa** → see TABLE 8 p. 1447 (hypotension)

- ▶ **Entacapone** is predicted to increase the exposure to **methyldopa**. [Moderate] Theoretical
- ▶ **Iron (oral)** decreases the effects of **methyldopa**. [Moderate] Study
- ▶ **Methyldopa** increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal
- ▶ **MAOIs, irreversible** are predicted to alter the antihypertensive effects of **methyldopa**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1447

#### Methylphenidate

- ▶ **Methylphenidate** is predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
- ▶ **Methylphenidate** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **MAO-B inhibitors (rasagiline, selegiline)** are predicted to increase the risk of a hypertensive crisis when given with **methylphenidate**. Avoid. [Severe] Theoretical
- ▶ **Methylphenidate** is predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Methylphenidate** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. [Severe] Theoretical
- ▶ **Methylphenidate** increases the risk of dyskinesias when given with **paliperidone**. [Severe] Theoretical
- ▶ **Risperidone** increases the risk of dyskinesias when given with **methylphenidate**. [Severe] Anecdotal

**Methylprednisolone** → see corticosteroids

**Methylthioninium chloride** → see TABLE 13 p. 1449 (serotonin syndrome)

- ▶ **Methylthioninium chloride** is predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1449

#### Metoclopramide

- ▶ **Metoclopramide** is predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Avoid. [Severe] Theoretical
- ▶ **Metoclopramide** potentially decreases the absorption of **antifungals, azoles (posaconazole)** (oral suspension). [Moderate] Study
- ▶ **Metoclopramide** decreases the concentration of **antimalarials (atovaquone)**. Avoid. [Moderate] Study
- ▶ **Metoclopramide** is predicted to decrease the effects of dopamine receptor agonists (**apomorphine, bromocriptine, cabergoline, pergolide, pramipexole, quinagolide, ropinirole, rotigotine**). Avoid. [Moderate] Study
- ▶ **Metoclopramide** decreases the effects of **levodopa**. Avoid. [Moderate] Study
- ▶ **Metoclopramide** is predicted to increase the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Theoretical

**Metoclopramide** (continued)

- ▶ **Metoclopramide** increases the effects of **suxamethonium**.

[Moderate] Study

**Metolazone** → see thiazide diuretics**Metoprolol** → see beta blockers, selective**Metronidazole** → see TABLE 12 p. 1449 (peripheral neuropathy)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **metronidazole**. Avoid for at least 48 hours stopping treatment. [Moderate] Study
- ▶ **Metronidazole** increases the risk of toxicity when given with alkylating agents (**busulfan**). [Severe] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **metronidazole**. [Moderate] Study
- ▶ **Metronidazole** is predicted to increase the risk of capcitabine toxicity when given with **capecitabine**. [Severe] Theoretical
- ▶ **Metronidazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Disulfiram** increases the risk of acute psychoses when given with **metronidazole**. [Severe] Study → Also see TABLE 12 p. 1449
- ▶ **Metronidazole** increases the risk of toxicity when given with **fluorouracil**. [Severe] Study
- ▶ **Metronidazole** is predicted to increase the concentration of **lithium**. Avoid or adjust dose. [Severe] Anecdotal

**Metyrapone**

- ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the effects of **metyrapone**. Avoid. [Moderate] Study
- ▶ **Antihistamines, sedating (cyproheptadine)** decrease the effects of **metyrapone**. Avoid. [Moderate] Study
- ▶ **Carbamazepine** decreases the effects of **metyrapone**. Avoid. [Moderate] Theoretical
- ▶ **Combined hormonal contraceptives** decrease the effects of **metyrapone**. Avoid. [Moderate] Theoretical
- ▶ **Phenothiazines (chlorpromazine)** decrease the effects of **metyrapone**. Avoid. [Moderate] Theoretical
- ▶ **Propylthiouracil** is predicted to decrease the effects of **metyrapone**. Avoid. [Moderate] Theoretical
- ▶ **Tricyclic antidepressants (amitriptyline)** decrease the effects of **metyrapone**. Avoid. [Moderate] Theoretical

**Mexiletine**

**FOOD AND LIFESTYLE** Dose adjustment might be necessary if smoking started or stopped during treatment.

- ▶ **Mexiletine** is predicted to increase the exposure to **agomelatine**. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical
- ▶ **Mexiletine** increases the risk of torsade de pointes when given with **antiarrhythmics**. Avoid. [Severe] Theoretical
- ▶ **Antiepileptics (phenytoin)** are predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mexiletine** potentially increases the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. Avoid or monitor. [Severe] Theoretical
- ▶ **Mexiletine** potentially increases the risk of cardiovascular side-effects when given with **beta blockers, selective**. Avoid or monitor. [Severe] Theoretical
- ▶ **Bupropion** is predicted to increase the exposure to **mexiletine**. [Moderate] Study
- ▶ **Mexiletine** increases the risk of cardiovascular side-effects when given with **calcium channel blockers (diltiazem)**. Avoid or monitor. [Severe] Theoretical
- ▶ **Mexiletine** potentially increases the risk of cardiovascular side-effects when given with **calcium channel blockers (verapamil)**. Avoid or monitor. [Severe] Theoretical
- ▶ **Cinacalcet** is predicted to increase the exposure to **mexiletine**. [Moderate] Study
- ▶ **Mexiletine** increases the concentration of **clozapine**. Monitor side effects and adjust dose. [Severe] Study

- ▶ **Cobicistat** potentially increases the exposure to **mexiletine**. [Severe] Theoretical
- ▶ **Mexiletine** potentially affects the exposure to **coumarins (warfarin)**. Avoid. [Unknown] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [Moderate] Study
- ▶ **Mexiletine** slightly increases the exposure to **erlotinib**. Monitor side effects and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mexiletine** potentially affects the exposure to **lithium**. Avoid. [Unknown] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
- ▶ **Mexiletine** slightly increases the exposure to **MAO-B inhibitors (rasagiline)**. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to affect the exposure to **metformin**. [Unknown] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **olanzapine**. Adjust dose. [Moderate] Anecdotal
- ▶ **Opioids** potentially decrease the absorption of oral **mexiletine**. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **phenothiazines (chlorpromazine)**. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
- ▶ **SSRIs (fluoxetine, fluvoxamine, paroxetine)** are predicted to increase the exposure to **mexiletine**. [Moderate] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **mexiletine**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Mexiletine** increases the exposure to **tizanidine**. Avoid. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **zolmitriptan**. Adjust zolmitriptan dose, p. 504. [Moderate] Theoretical

**Mianserin** → see TABLE 11 p. 1448 (CNS depressant effects)

- ▶ **Antiepileptics (carbamazepine)** markedly decrease the exposure to **mianserin**. Adjust dose. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **mianserin**. [Moderate] Study → Also see TABLE 11 p. 1448
- ▶ **Mianserin** is predicted to increase the risk of toxicity when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Mianserin** is predicted to increase the risk of toxicity when given with **moclobemide**. Avoid and for 1 week after stopping **mianserin**, p. 389. [Severe] Theoretical
- ▶ **Mianserin** is predicted to decrease the efficacy of **pitolisant**. [Moderate] Theoretical
- ▶ **Mianserin** decreases the effects of **sympathomimetics, vasoconstrictor (ephedrine)**. [Severe] Anecdotal

**Micafungin** → see TABLE 1 p. 1446 (hepatotoxicity)

- ▶ **Micafungin** slightly increases the exposure to **amphotericin**. Avoid or monitor toxicity. [Moderate] Study

**Miconazole** → see antifungals, azoles**Midazolam** → see TABLE 11 p. 1448 (CNS depressant effects)

- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to midazolam. Monitor and adjust dose. [Moderate] Study → Also see TABLE 11 p. 1448
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to midazolam. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly to very markedly increase the exposure to midazolam. Avoid or adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to intravenous midazolam. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to oral midazolam. Avoid. [Moderate] Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to midazolam. Monitor and adjust dose. [Moderate] Study
- ▶ **Aprepitant** is predicted to increase the exposure to midazolam. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the concentration of midazolam. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to midazolam. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Cobicistat** is predicted to markedly to very markedly increase the exposure to midazolam. Avoid or adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to midazolam. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Dabrafenib** decreases the exposure to midazolam. Monitor and adjust dose. [Moderate] Study
- ▶ **Efavirenz** is predicted to alter the effects of midazolam. Avoid. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to midazolam. Monitor and adjust dose. [Moderate] Study
- ▶ **Fosaprepitant** slightly increases the exposure to midazolam. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly to very markedly increase the exposure to midazolam. Avoid or adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly to very markedly increase the exposure to midazolam. Avoid or adjust dose. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to midazolam. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Larotrectinib** slightly increases the exposure to midazolam. Use with caution and adjust dose. [Mild] Study
- ▶ **Letermovir** slightly to moderately increases the exposure to midazolam. Monitor and adjust dose. [Moderate] Study
- ▶ **Lorlatinib** moderately decreases the exposure to midazolam. Avoid. [Moderate] Study
- ▶ **Lumacaftor** is predicted to decrease the exposure to midazolam. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to markedly to very markedly increase the exposure to midazolam. Avoid or adjust dose. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to midazolam. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to midazolam. Monitor and adjust dose. [Moderate] Study
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to midazolam. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to midazolam. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Nevirapine** decreases the concentration of midazolam. Monitor and adjust dose. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to midazolam. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Palbociclib** increases the exposure to midazolam. [Moderate] Study
- ▶ **Ribociclib** moderately increases the exposure to midazolam. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to midazolam. Monitor and adjust dose. [Moderate] Study

- ▶ **Rucaparib** slightly increases the exposure to midazolam. Monitor and adjust dose. [Severe] Study
- ▶ **St John's Wort** moderately decreases the exposure to midazolam. Monitor and adjust dose. [Moderate] Study
- ▶ **Telotristat ethyl** decreases the exposure to midazolam. [Moderate] Study
- Midodrine** → see sympathomimetics, vasoconstrictor
- Midostaurin**
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to midostaurin. [Moderate] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to midostaurin. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to midostaurin. [Moderate] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to very markedly increase the exposure to midostaurin. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to midostaurin. Avoid. [Severe] Study
  - ▶ **Aprepitant** is predicted to increase the exposure to midostaurin. [Moderate] Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to midostaurin. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to very markedly increase the exposure to midostaurin. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to midostaurin. [Moderate] Theoretical
  - ▶ **Enzalutamide** is predicted to decrease the exposure to midostaurin. Avoid. [Severe] Study
  - ▶ **HIV-protease inhibitors** are predicted to very markedly increase the exposure to midostaurin. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Idelalisib** is predicted to very markedly increase the exposure to midostaurin. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to midostaurin. [Moderate] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to very markedly increase the exposure to midostaurin. Avoid or monitor for toxicity. [Severe] Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to midostaurin. [Moderate] Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to midostaurin. Avoid. [Severe] Study
  - ▶ **Netupitant** is predicted to increase the exposure to midostaurin. [Moderate] Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to midostaurin. [Moderate] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to midostaurin. Avoid. [Severe] Study
  - ▶ **St John's Wort** is predicted to decrease the exposure to midostaurin. Avoid. [Severe] Theoretical

#### Mifamurtide

- ▶ **Ciclosporin** is predicted to decrease the efficacy of mifamurtide. Avoid. [Severe] Theoretical
- ▶ **Corticosteroids** are predicted to decrease the efficacy of mifamurtide. Avoid. [Severe] Theoretical
- ▶ **NSAIDs (high-dose)** are predicted to decrease the efficacy of mifamurtide. Avoid. [Severe] Theoretical
- ▶ **Pimecrolimus** is predicted to decrease the efficacy of mifamurtide. Avoid. [Severe] Theoretical
- ▶ **Sirolimus** is predicted to decrease the efficacy of mifamurtide. Avoid. [Severe] Theoretical
- ▶ **Tacrolimus** is predicted to affect the efficacy of mifamurtide. Avoid. [Severe] Theoretical

#### Mifepristone

- ▶ **Mifepristone** is predicted to decrease the efficacy of **corticosteroids**. Use with caution and adjust dose. [Moderate] Theoretical

#### Minocycline

→ see tetracyclines

#### Minoxidil

→ see TABLE 8 p. 1447 (hypotension)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

**Mirabegron**

- ▶ **Mirabegron** is predicted to increase the exposure to **aliskiren**. [Mid] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 824. [Moderate] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Mid] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 824. [Moderate] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **colchicine**. [Mid] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Mirabegron** slightly increases the exposure to **digoxin**. Monitor concentration and adjust dose. [Severe] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **edoxaban**. [Mid] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **everolimus**. [Mid] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 824. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 824. [Moderate] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **loperamide**. [Mid] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 824. [Moderate] Study
- ▶ **Mirabegron** is predicted to increase the exposure to **sirolimus**. [Mid] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Mid] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **topotecan**. [Mid] Theoretical

**Mirtazapine** → see TABLE 13 p. 1449 (serotonin syndrome), TABLE 11 p. 1448 (CNS depressant effects)

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study → Also see TABLE 11 p. 1448
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **mirtazapine**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **mirtazapine**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ **Mirtazapine** is predicted to decrease the efficacy of **pitolisant**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study

**Mitomycin** → see TABLE 15 p. 1449 (myelosuppression), TABLE 5 p. 1447 (thromboembolism)

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mitomycin**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- Mitotane** → see TABLE 15 p. 1449 (myelosuppression)
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **abiraterone**. Avoid. [Severe] Study
  - ▶ **Aldosterone antagonists (spironolactone)** are predicted to decrease the effects of **mitotane**. Avoid. [Severe] Anecdotal
  - ▶ **Mitotane** is predicted to decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to **alprazolam**. Adjust dose. [Moderate] Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the efficacy of **antiarrhythmics (propafenone)**. [Moderate] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **anticholinesterases, centrally acting (donepezil)**. [Mid] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **antiepileptics (perampanel)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **antimalarials (artemether)** (with lumefantrine). Avoid. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the concentration of **antimalarials (piperazine)**. Avoid. [Moderate] Theoretical
  - ▶ **Mitotane** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. [Severe] Study
  - ▶ **Mitotane** moderately decreases the exposure to **apremilast**. Avoid. [Severe] Study
  - ▶ **Mitotane** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. [Moderate] Study
  - ▶ **Mitotane** is predicted to moderately decrease the exposure to **aripiprazole**. Adjust aripiprazole dose, p. 413. [Moderate] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study → Also see TABLE 15 p. 1449
  - ▶ **Mitotane** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Study
  - ▶ **Mitotane** slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1449
  - ▶ **Mitotane** affects the exposure to **bosentan**. Avoid. [Severe] Study
  - ▶ **Mitotane** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1449
  - ▶ **Mitotane** is predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. [Severe] Study
  - ▶ **Mitotane** moderately decreases the exposure to **cabozantinib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1449
  - ▶ **Mitotane** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **calcium channel blockers (diltiazem)**. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Moderate] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1449
  - ▶ **Mitotane** decreases the concentration of **ciclosporin**. [Severe] Study
  - ▶ **Mitotane** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Mitotane** decreases the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study

- ▶ **Mitotane** is predicted to decrease the exposure to **cobicicistat**.  
Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **cobimetinib**.  
Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to corticosteroids (**budesonide**, **deflazacort**, **dexamethasone**, **fludrocortisone**, **hydrocortisone**, **methylprednisolone**, **prednisolone**, **triamcinolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to corticosteroids (**fluticasone**). [Unknown] Theoretical
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Mitotane** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Mitotane** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Mitotane** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **dienogest**. [Severe] Study
- ▶ **Mitotane** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **doravirine**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [Mild] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 1033. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **esketamine**. Adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **etravirine**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Mitotane** moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **fesoterodine**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **figingolimod**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **fosaprepitant**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **gefatinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Mitotane** is predicted to greatly decrease the concentration of **glecaprevir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Study
- ▶ **Mitotane** decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 1037. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Mitotane** is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Mitotane** is predicted to decrease the exposure to **imatatinib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Mitotane** is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Mitotane** is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **linagliptin**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **lurasidone**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **macitentan**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **montelukast**. [Mild] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to slightly decrease the exposure to **nateline**. [Mild] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **nevirapine**. [Severe] Theoretical
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Mitotane** is predicted to decrease the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Mitotane** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **ondansetron**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Mitotane** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1449

**Mitotane** (continued)

- ▶ **Mitotane** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Mitotane** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors** (**avanafil**, **tadalafil**). Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors** (**sildenafil**, **varidenafil**). [Moderate] Theoretical
- ▶ **Mitotane** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **quetiapine**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
- ▶ **Mitotane** is predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Mitotane** is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **Mitotane** markedly decreases the exposure to **rilpivirine**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **risperidone**. Adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **rolapitant**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **roxotinib**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **saxagliptin**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **siponimod**. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Mitotane** is predicted to decrease the exposure to **statins** (**simvastatin**). [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1057. [Moderate] Study → Also see TABLE 15 p. 1449
- ▶ **Mitotane** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **taxanes** (**cabazitaxel**, **paclitaxel**). Avoid. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Mitotane** is predicted to decrease the exposure to **taxanes** (**docetaxel**). [Severe] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Mitotane** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Mitotane** decreases the exposure to **tetracyclines** (**doxycycline**). Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study

- ▶ **Mitotane** is predicted to decrease the exposure to **tivozanib**. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Mitotane** is predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **vinca alkaloids** (**vinblastine**, **vincristine**, **vindesine**). [Severe] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Mitotane** is predicted to decrease the exposure to **vinca alkaloids** (**vinflunine**). Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Mitotane** is predicted to decrease the exposure to **vinca alkaloids** (**vinorelbine**). Use with caution or avoid. [Severe] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Mitotane** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Mitotane** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study

**Mitoxantrone** → see anthracyclines

**Mivacurium** → see neuromuscular blocking drugs, non-depolarising

**Molastine** → see antihistamines, non-sedating

**Moclobemide** → see TABLE 13 p. 1449 (serotonin syndrome)

**FOOD AND LIFESTYLE** Moclobemide is claimed to cause less potentiation of the pressor effect of tyramine than the traditional (irreversible) MAOIs, but patients should avoid consuming large amounts of tyramine-rich foods (such as mature cheese, salami, pickled herring, Bovril®, Oxo®, Marmite® or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- ▶ **Moclobemide** is predicted to increase the risk of a hypertensive crisis when given with **amfetamines**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1449
- ▶ **Apalutamide** is predicted to decrease the exposure to **moclobemide**. Avoid or monitor. [Mild] Study
- ▶ **Moclobemide** is predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1449
- ▶ **Moclobemide** is predicted to increase the exposure to **cannabidiol**. [Moderate] Theoretical
- ▶ **Moclobemide** is predicted to increase the exposure to **cilostazol**. [Moderate] Theoretical
- ▶ **Moclobemide** potentially increases the exposure to **clobazam**. Adjust dose. [Moderate] Theoretical
- ▶ **Moclobemide** is predicted to decrease the efficacy of **clopidogrel**. Avoid. [Moderate] Study
- ▶ **Moclobemide** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** (**cimetidine**) increase the exposure to **moclobemide**. Adjust **moclobemide** dose, p. 380. [Mild] Study
- ▶ **Levodopa** increases the risk of side-effects when given with **moclobemide**. [Moderate] Study
- ▶ **Moclobemide** is predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after

- stopping **moclobemide**. [Severe] Theoretical → Also see TABLE 13 p. 1449
- ▶ **Moclobemide** is predicted to increase the effects of **MAO-B inhibitors (rasagiline, selegiline)**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1449
  - ▶ **Moclobemide** is predicted to increase the risk of side-effects when given with **MAO-B inhibitors (safinamide)**. Avoid and for 1 week after stopping **safranamide**. [Severe] Theoretical → Also see TABLE 13 p. 1449
  - ▶ **Methylphenidate** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. [Severe] Theoretical
  - ▶ **Mianserin** is predicted to increase the risk of toxicity when given with **moclobemide**. Avoid and for 1 week after stopping **mianserin**. [Severe] Theoretical
  - ▶ **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **moclobemide**. Avoid. [Severe] Theoretical
  - ▶ **Moclobemide** increases the risk of side-effects when given with **phenothiazines (levomepromazine)**. [Moderate] Study
  - ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Theoretical
  - ▶ **Moclobemide** moderately increases the exposure to **rizatriptan**. Avoid. [Moderate] Study → Also see TABLE 13 p. 1449
  - ▶ **Moclobemide** moderately increases the exposure to **sumatriptan**. Avoid. [Moderate] Study → Also see TABLE 13 p. 1449
  - ▶ **Moclobemide** is predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, vasoconstrictor (ephedrine, isometheptene, phenylephrine, pseudoephedrine)**. Avoid. [Severe] Study
  - ▶ **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **moclobemide**. [Severe] Theoretical
  - ▶ **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **moclobemide**. Avoid. [Severe] Theoretical → Also see TABLE 13 p. 1449
  - ▶ **Moclobemide** slightly increases the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 504. [Moderate] Study → Also see TABLE 13 p. 1449
- Modafinil**
- ▶ **Antiepileptics (carbamazepine, phenobarbital, primidone)** are predicted to decrease the exposure to **modafinil**. [Mild] Theoretical
  - ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **modafinil** and **modafinil** is predicted to increase the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Moderate] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **modafinil**. [Mild] Theoretical
  - ▶ **Modafinil** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **modafinil**. [Mild] Theoretical
  - ▶ **Modafinil** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
  - ▶ **Modafinil** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
  - ▶ **Modafinil** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine p. 681 or lamivudine with tenofovir disoproxil and doravirine p. 690 dose. [Severe] Theoretical
  - ▶ **Modafinil** is predicted to decrease the exposure to **elbasvir**. Avoid. [Unknown] Theoretical
  - ▶ **Modafinil** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
  - ▶ **Modafinil** is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **modafinil**. [Mild] Theoretical
  - ▶ **Modafinil** is predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal

- ▶ **Idelalisib** is predicted to increase the exposure to **modafinil**. [Mild] Theoretical
  - ▶ **Modafinil** is predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
  - ▶ **Modafinil** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **modafinil**. [Mild] Theoretical
  - ▶ **Modafinil** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Anecdotal
  - ▶ **Rifampicin** is predicted to decrease the exposure to **modafinil**. [Moderate] Theoretical
  - ▶ **Modafinil** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
  - ▶ **Modafinil** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 839. [Severe] Anecdotal
  - ▶ **Modafinil** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Severe] Theoretical
  - ▶ **Modafinil** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- Mogamulizumab** → see monoclonal antibodies
- Mometasone** → see corticosteroids
- Monoclonal antibodies** → see TABLE 15 p. 1449 (myelosuppression), TABLE 12 p. 1449 (peripheral neuropathy), TABLE 9 p. 1448 (QT-interval prolongation), TABLE 4 p. 1446 (antiplatelet effects)
- adalimumab • alemtuzumab • atezolizumab • avelumab • basiliximab • belimumab • bevacizumab • blinatumomab • brentuximab vedotin • brodalumab • canakinumab • cemiplimab • certolizumab pegol • cetuximab • daratumumab • dinutuximab • dupilumab • durvalumab • eculizumab • elotuzumab • golimumab • guselkumab • infliximab • inotuzumab • ozogamicin • ipilimumab • ixekizumab • mogamulizumab • natalizumab • necitumab • nivolumab • obinutuzumab • ocrelizumab • panitumumab • pembrolizumab • pertuzumab • polatuzumab vedotin • ramucirumab • risankizumab • rituximab • sarilumab • secukinumab • siltuximab • tildrakizumab • tocilizumab • trastuzumab • trastuzumab emtansine • ustekinumab • vedolizumab
- ▶ **Abatacept** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **golimumab**. Avoid. [Severe] Theoretical
  - ▶ **Tocilizumab** is predicted to decrease the exposure to **alprazolam**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Blinatumomab** is predicted to transiently increase the exposure to **aminophylline**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Sarilumab** potentially affects the exposure to **aminophylline**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Tocilizumab** is predicted to decrease the exposure to **aminophylline**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Anakinra** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **golimumab**. Avoid. [Severe] Theoretical
  - ▶ **Anthracyclines** are predicted to increase the risk of cardiotoxicity when given with monoclonal antibodies (**trastuzumab, trastuzumab emtansine**). Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1449
  - ▶ **Antiarthritics (dronedarone)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [Severe] Theoretical
  - ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the effects of **brentuximab vedotin**. [Severe] Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **polatuzumab vedotin**. [Moderate] Theoretical
  - ▶ **Tocilizumab** is predicted to decrease the exposure to **antiepileptics (fosphenytoin, phenytoin)**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [Severe] Study

**Monoclonal antibodies** (continued)

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **polatuzumab vedotin**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [Severe] Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to **polatuzumab vedotin**. [Moderate] Theoretical
- ▶ **Brentuximab vedotin** increases the risk of pulmonary toxicity when given with **bleomycin**. Avoid. [Severe] Study → Also see TABLE 15 p. 1449
- ▶ **Tocilizumab** is predicted to decrease the exposure to **calcium channel blockers**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Blinatumomab** is predicted to transiently increase the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Sarilumab** potentially affects the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Tocilizumab** is predicted to decrease the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **polatuzumab vedotin**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [Severe] Theoretical
- ▶ **Sarilumab** potentially decreases the exposure to **combined hormonal contraceptives**. [Severe] Theoretical
- ▶ **Corticosteroids** are predicted to increase the risk of immunosuppression when given with **dinutuximab**. Avoid except in life-threatening situations. [Severe] Theoretical
- ▶ **Corticosteroids (betamethasone, deflazacort, dexamethasone, hydrocortisone, methylprednisolone, prednisolone)** are predicted to decrease the efficacy of monoclonal antibodies (atezolizumab, ipilimumab, nivolumab, pembrolizumab). Use with caution or avoid. [Severe] Theoretical
- ▶ **Tocilizumab** is predicted to decrease the exposure to **corticosteroids (dexamethasone, methylprednisolone)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Blinatumomab** is predicted to transiently increase the exposure to **coumarins (warfarin)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Sarilumab** potentially affects the exposure to **coumarins (warfarin)**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Tocilizumab** is predicted to decrease the exposure to **coumarins (warfarin)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Tocilizumab** is predicted to decrease the exposure to **diazepam**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Enzalutamide** is predicted to decrease the exposure to **polatuzumab vedotin**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **polatuzumab vedotin**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **polatuzumab vedotin**. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1449
- ▶ **Immunoglobulins** are predicted to alter the effects of **dinutuximab**. Avoid. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **monoclonal antibodies**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **polatuzumab vedotin**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **trastuzumab emtansine**. Avoid. [Severe] Theoretical
- ▶ **Tocilizumab** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Theoretical

- ▶ **Mitotane** is predicted to decrease the exposure to **polatuzumab vedotin**. [Moderate] Theoretical
  - ▶ **Rifampicin** decreases the effects of **brentuximab vedotin**. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **polatuzumab vedotin**. [Moderate] Theoretical
  - ▶ **Siponimod** potentially increases the risk of immunosuppression when given with **alemtuzumab**. Avoid. [Severe] Theoretical
  - ▶ **Sarilumab** potentially affects the exposure to **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Sarilumab** is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Study
  - ▶ **Tocilizumab** is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Sarilumab** potentially affects the exposure to **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Blinatumomab** is predicted to transiently increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Sarilumab** potentially affects the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Tocilizumab** is predicted to decrease the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- Montelukast**
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **montelukast**. [Mild] Study
  - ▶ **Apalutamide** is predicted to decrease the exposure to **montelukast**. [Mild] Study
  - ▶ **Clopidogrel** is predicted to moderately increase the exposure to **montelukast**. [Moderate] Study
  - ▶ **Enzalutamide** is predicted to decrease the exposure to **montelukast**. [Mild] Study
  - ▶ **Fibrates (gemfibrozil)** are predicted to moderately increase the exposure to **montelukast**. [Moderate] Study
  - ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
  - ▶ **Leflunomide** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to **montelukast**. [Mild] Study
  - ▶ **Opicapone** is predicted to increase the exposure to **montelukast**. Avoid. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **montelukast**. [Mild] Study
  - ▶ **Teriflunomide** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
- Morphine** → see opioids
- Moxifloxacin** → see quinolones
- Moxisylyte** → see TABLE 8 p. 1447 (hypotension)
- Moxonidine** → see TABLE 8 p. 1447 (hypotension), TABLE 11 p. 1448 (CNS depressant effects)
- ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **moxonidine**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1447 → Also see TABLE 11 p. 1448
- Mycophenolate** → see TABLE 15 p. 1449 (myelosuppression)
- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **aciclovir**. [Moderate] Theoretical
  - ▶ **Antacids** decrease the exposure to **mycophenolate**. [Moderate] Study
  - ▶ **Antifungals, azoles (isavuconazole)** increase the exposure to **mycophenolate**. [Moderate] Study
  - ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **ganciclovir**. [Moderate] Theoretical → Also see TABLE 15 p. 1449
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mycophenolate**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
  - ▶ **Rifampicin** decreases the concentration of **mycophenolate**. Monitor and adjust dose. [Severe] Study

- **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valaciclovir**. [Moderate] Theoretical
- **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valganciclovir**. [Moderate] Theoretical → Also see TABLE 15 p. 1449

**Nabilone** → see TABLE 11 p. 1448 (CNS depressant effects)

- **Nabilone** is predicted to increase the risk of cardiovascular side-effects when given with **amfetamines**. [Severe] Theoretical

**Nabumetone** → see NSAIDs

**Nadolol** → see beta blockers, non-selective

### Naldemedine

- **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **naldemedine**. [Moderate] Study
- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- **Antifungals, azoles (itraconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **naldemedine**. [Moderate] Study
- **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
- **Apalutamide** is predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- **Aprepitant** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **naldemedine**. [Moderate] Study
- **Ciclosporin** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- **Cobicistat** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
- **Crizotinib** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- **Enzalutamide** is predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- **Grapefruit juice** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
- **Idelalisib** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
- **Imatinib** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **naldemedine**. [Moderate] Study
- **Macrolides (clarithromycin)** are predicted to increase the exposure to **naldemedine**. Avoid or monitor. [Moderate] Study
- **Mitotane** is predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- **Netupitant** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- **Nilotinib** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- **Ranolazine** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- **Rifampicin** is predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- **St John's Wort** is predicted to decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- **Vemurafenib** is predicted to increase the exposure to **naldemedine**. [Moderate] Study

### Nalmefene

**GENERAL INFORMATION** Discontinue treatment 1 week before anticipated use of opioids; if emergency analgesia is required during treatment, an increased dose of opioid analgesic might be necessary (monitor for opioid intoxication).

- **Nalmefene** is predicted to decrease the efficacy of **opioids**. Avoid. [Severe] Theoretical

### Naloxegol

- **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 69. [Moderate] Study

- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 69. [Moderate] Study
- **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- **Apalutamide** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- **Aprepitant** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 69. [Moderate] Study
- **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 69. [Moderate] Study
- **Cobicistat** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- **Crizotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 69. [Moderate] Study
- **Enzalutamide** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- **Grapefruit juice** is predicted to increase the exposure to **naloxegol**. Avoid. [Moderate] Theoretical
- **HIV-protease inhibitors** are predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- **Idelalisib** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- **Imatinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 69. [Moderate] Study
- **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- **Macrolides (erythromycin)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 69. [Moderate] Study
- **Mitotane** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- **Netupitant** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 69. [Moderate] Study
- **Nilotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 69. [Moderate] Study
- **Rifampicin** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- **St John's Wort** is predicted to decrease the exposure to **naloxegol**. Avoid. [Moderate] Theoretical

### Naltrexone

**GENERAL INFORMATION** Avoid concurrent use of opioids.

### Nandrolone

- **Nandrolone** is predicted to increase the anticoagulant effect of **coumarins**. Monitor and adjust dose. [Severe] Theoretical
- **Nandrolone** is predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [Severe] Theoretical

**Naproxen** → see NSAIDs

**Naratriptan** → see TABLE 13 p. 1449 (serotonin syndrome)

- **Naratriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Theoretical

**Natalizumab** → see monoclonal antibodies

**Nateglinide** → see TABLE 14 p. 1449 (antidiabetic drugs)

- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to slightly decrease the exposure to **nateglinide**. [Mid] Study
- **Apalutamide** is predicted to slightly decrease the exposure to **nateglinide**. [Mid] Study
- **Enzalutamide** is predicted to slightly decrease the exposure to **nateglinide**. [Mid] Study
- **Leflunomide** is predicted to increase the exposure to **nateglinide**. [Moderate] Theoretical
- **Mitotane** is predicted to slightly decrease the exposure to **nateglinide**. [Mid] Study

## Nateglinide (continued)

- ▶ **Rifampicin** is predicted to slightly decrease the exposure to nateglinide. [Mild] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to nateglinide. [Moderate] Theoretical
- Nebivolol** → see beta blockers, selective
- Necitumumab** → see monoclonal antibodies
- Nefopam** → see TABLE 10 p. 1448 (antimuscarinics)
- ▶ **Nefopam** is predicted to increase the risk of serious elevations in blood pressure when given with **MAOIs**, **irreversible**. Avoid. [Severe] Theoretical
- Nelarabine** → see TABLE 15 p. 1449 (myelosuppression)
- Neomycin** → see TABLE 2 p. 1446 (nephrotoxicity), TABLE 19 p. 1450 (ototoxicity), TABLE 20 p. 1450 (neuromuscular blocking effects)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Neomycin** decreases the absorption of **digoxin**. [Moderate] Study
- ▶ **Neomycin** moderately decreases the exposure to **sorafenib**. [Moderate] Study
- Neostigmine** → see TABLE 6 p. 1447 (bradycardia)
- ▶ **Aminoglycosides** are predicted to decrease the effects of neostigmine. [Moderate] Theoretical
- Nepafenac** → see NSAIDs
- Neratinib** → see TABLE 1 p. 1446 (hepatotoxicity)
- ▶ Oral **antacids** are predicted to decrease the exposure to oral neratinib. Separate administration by at least 3 hours. [Mild] Theoretical
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to neratinib. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to neratinib. Avoid. [Severe] Study → Also see TABLE 1 p. 1446
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to neratinib. Avoid. [Severe] Study → Also see TABLE 1 p. 1446
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to neratinib. Avoid or adjust neratinib dose, p. 1046. [Severe] Study → Also see TABLE 1 p. 1446
- ▶ **Neratinib** is predicted to increase the exposure to antihistamines, non-sedating (**fexofenadine**). [Moderate] Study
- ▶ **Apalutamide** is predicted to decrease the exposure to neratinib. Avoid. [Severe] Study
- ▶ **Aprepitant** is predicted to increase the exposure to neratinib. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to neratinib. [Severe] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to neratinib. Avoid. [Severe] Study
- ▶ Oral **calcium salts (calcium carbonate)** are predicted to decrease the exposure to oral neratinib. Separate administration by at least 3 hours. [Mild] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to neratinib. Avoid or adjust neratinib dose, p. 1046. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to neratinib. Avoid. [Severe] Study
- ▶ **Neratinib** is predicted to increase the exposure to **dabigatran**. [Moderate] Study
- ▶ **Neratinib** is predicted to slightly increase the exposure to **digoxin**. [Moderate] Study
- ▶ **Neratinib** is predicted to increase the exposure to **edoxaban**. [Moderate] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to neratinib. [Severe] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to neratinib. Avoid. [Severe] Study
- ▶ **Neratinib** is predicted to increase the exposure to **everolimus**. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to neratinib. Avoid. [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to neratinib. Avoid. [Severe] Theoretical

- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to neratinib. Avoid or adjust neratinib dose, p. 1046. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to neratinib. Avoid or adjust neratinib dose, p. 1046. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to neratinib. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to neratinib. Avoid or adjust neratinib dose, p. 1046. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to neratinib. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to neratinib. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to neratinib. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to neratinib. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to neratinib. Avoid. [Severe] Study
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to neratinib. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to neratinib. Avoid. [Severe] Study
- ▶ **Neratinib** is predicted to increase the exposure to **sirolimus**. [Moderate] Study
- ▶ **St John's Wort** is predicted to decrease the exposure to neratinib. Avoid. [Severe] Theoretical

## Netupitant

- ▶ **Netupitant** is predicted to increase the exposure to **abemaciclib**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **aldosterone antagonists (eplerenone)**. Adjust eplerenone dose, p. 205. [Severe] Study
- ▶ **Netupitant** very slightly increases the exposure to **alkylating agents (cyclophosphamide)**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **alkylating agents (ifosfamide)**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **alpha blockers (tamsulosin)**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **alprazolam**. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to netupitant. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to netupitant. [Moderate] Study
- ▶ **Netupitant** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **antihistamines, non-sedating (mizolastine)**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **antihistamines, non-sedating (rupatadine)**. Avoid. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the concentration of **antimalarials (piperazine)**. [Severe] Theoretical
- ▶ **Apalutamide** is predicted to decrease the exposure to netupitant. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. [Mild] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **beta<sub>2</sub> agonists (salmeterol)**. [Moderate] Study
- ▶ **Bosentan** is predicted to decrease the exposure to netupitant. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **bupirone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **cabozantinib**. [Moderate] Theoretical

- ▶ **Netupitant** is predicted to increase the exposure to **calcium channel blockers** (**amlodipine**, **felodipine**, **lacidipine**, **lercanidipine**, **nifedipine**, **nimodipine**). Monitor and adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **cariprazine**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the concentration of **ciclosporin**. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **netupitant**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **cobimetinib**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1183. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to oral **corticosteroids** (**budesonide**). [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **corticosteroids** (**dexamethasone**). Adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **corticosteroids** (**fluticasone**). [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **corticosteroids** (**methylprednisolone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to slightly increase the exposure to **darifenacin**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **dasatinib**. [Severe] Study
- ▶ **Netupitant** is predicted to slightly increase the exposure to **dienogest**. [Moderate] Study
- ▶ **Netupitant** increases the risk of QT-prolongation when given with **domeperidone**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **dopamine receptor agonists** (**bromocriptine**). [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the concentration of **dopamine receptor agonists** (**cabergoline**). [Moderate] Anecdotal
- ▶ **Netupitant** is predicted to moderately increase the exposure to **dufasteride**. [Mild] Study
- ▶ **Efavirenz** is predicted to decrease the exposure to **netupitant**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **eletriptan**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Netupitant** is predicted to moderately increase the exposure to **encorafenib**. [Moderate] Study
- ▶ **Enzalutamide** is predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the risk of ergotism when given with **ergometrine**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the risk of ergotism when given with **ergotamine**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Netupitant** slightly increases the exposure to **etoposide**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 821. [Mild] Study
- ▶ **Netupitant** is predicted to increase the exposure to **gefitinib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 370. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **netupitant**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 1037. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **netupitant**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **imatinib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **irinotecan**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 225. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 308 or **tezacaftor** with **ivacaftor** p. 310 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **lapatinib**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **lomitapide**. Avoid. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **lurasidone**. Adjust **lurasidone** dose, p. 416. [Moderate] Study
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **netupitant**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **maraviroc**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **midostaurin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 69. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **netupitant**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **nilotinib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 1063. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **opioids** (**alfentanil**, **buprenorphine**, **fentanyl**, **oxycodone**). Monitor and adjust dose. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **opioids** (**methadone**). [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **oxybutynin**. [Mild] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**avanafil**). Adjust **avanafil** dose, p. 858. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**sildenafil**). Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 859. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**tadalafil**). [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors** (**ildenafil**). Adjust dose. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **quetiapine**. Avoid. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **ranolazine**. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **ribiciclib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **netupitant**. Avoid. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **saxagliptin**. [Mild] Study
- ▶ **Netupitant** increases the concentration of **sirolimus**. Monitor and adjust dose. [Moderate] Study

## Netupitant (continued)

- ▶ **Netupitant** is predicted to increase the exposure to **SSRIs** (**dapoxetine**). Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 866. [Moderate] Theoretical
- ▶ **St John's Wort** is predicted to decrease the exposure to **netupitant**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **statins** (**atorvastatin**, **simvastatin**). Monitor and adjust dose. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **taxanes** (**cabazitaxel**). [Moderate] Theoretical
- ▶ **Netupitant** slightly increases the exposure to **taxanes** (**docetaxel**). [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **taxanes** (**paclitaxel**). [Moderate] Study
- ▶ **Netupitant** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 310 dose with moderate inhibitors of CYP3A4. [Severe] Study
- ▶ **Netupitant** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1167. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate inhibitors of CYP3A4, p. 706. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **trazodone**. [Moderate] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Moderate] Study
- ▶ **Netupitant** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Netupitant** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Netupitant** is predicted to increase the exposure to **zopiclone**. Adjust dose. [Moderate] Study

**Neuromuscular blocking drugs, non-depolarising** → see TABLE 6 p. 1447 (bradycardia), TABLE 20 p. 1450 (neuromuscular blocking effects)

atracurium · cisatracurium · mivacurium · pancuronium · rocuronium · vecuronium

- ▶ **Anticholinesterases, centrally acting** are predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Theoretical → Also see TABLE 6 p. 1447
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the effects of (but acute use increases the effects of) **neuromuscular blocking drugs, non-depolarising** (**atracurium**, **cisatracurium**, **pancuronium**, **rocuronium**, **vecuronium**). Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of (but acute use increases the effects of) **neuromuscular blocking drugs, non-depolarising** (**atracurium**, **cisatracurium**, **pancuronium**, **rocuronium**, **vecuronium**). [Moderate] Study
- ▶ **Clindamycin** increases the effects of **neuromuscular blocking drugs, non-depolarising**. [Severe] Anecdotal
- ▶ **Corticosteroids** are predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [Severe] Anecdotal
- ▶ **Pancuronium** is predicted to increase the risk of cardiovascular side-effects when given with **digoxin**. [Severe] Anecdotal
- ▶ **Irinotecan** is predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Theoretical
- ▶ Intravenous **magnesium** increases the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Study
- ▶ **Metoclopramide** is predicted to increase the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Theoretical
- ▶ **Penicillins (piperacillin)** increase the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Study
- ▶ **SSRIs** potentially increase the risk of prolonged neuromuscular blockade when given with **mivacurium**. [Unknown] Theoretical

**Nevirapine**

- ▶ **Nevirapine** is predicted to decrease the exposure to **antiarrhythmics (dronedarone)**. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the concentration of **antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** and **antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **nevirapine**. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole)** slightly to moderately increase the exposure to **nevirapine**. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Theoretical
- ▶ **Nevirapine** moderately decreases the exposure to **antifungals, azoles (itraconazole)**. Avoid and for 14 days after stopping **nevirapine**. [Moderate] Study
- ▶ **Nevirapine** moderately decreases the exposure to **antifungals, azoles (ketoconazole)**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** increase the exposure to **nevirapine**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **aprepitant**. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Bosentan** is predicted to decrease the exposure to **nevirapine**. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the exposure to **cariprazine**. Avoid. [Severe] Theoretical
- ▶ **Nevirapine** is predicted to decrease the concentration of **caspofungin**. Adjust dose. [Moderate] Theoretical
- ▶ **Nevirapine** is predicted to decrease the concentration of **ciclosporin**. [Moderate] Study
- ▶ **Nevirapine** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
