- Antiarrhythmics **(amiodarone, disopyramide, dronedarone, flecainide, lidocaine)** are predicted to increase the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. Use with caution or avoid. Severe Study → Also see **TABLE 6** p. 1335 → Also see **TABLE 9** p. 1336
- **Propafenone** is predicted to increase the risk of cardiovascular side-effects when given with beta blockers, non-selective **(labetalol, levobunolol, nadolol, oxprenolol, pindolol, sotalol)**. Use with caution or avoid. Severe Study
- **Propafenone** increases the risk of cardiovascular side-effects when given with beta blockers, non-selective **(propranolol)**. Use with caution or avoid. Severe Study
- **Propafenone** is predicted to increase the exposure to beta blockers, non-selective **(timolol)** and beta blockers, non-selective **(timolol)** are predicted to increase the risk of cardiodepression when given with **propafenone**. Severe Anecdotal
- Antiarrhythmics **(amiodarone, disopyramide, dronedarone, flecainide, lidocaine)** are predicted to increase the risk of cardiovascular side-effects when given with **beta blockers, selective**. Use with caution or avoid. Severe Study → Also see **TABLE 6** p. 1335
- **Propafenone** is predicted to increase the risk of cardiovascular side-effects when given with beta blockers, selective **(acebutolol, atenolol, betaxolol, bisoprolol, celiprolol, esmolol)**. Use with caution or avoid. Severe Study
- **Propafenone** is predicted to increase the exposure to beta blockers, selective **(metoprolol)**. Moderate Study
- **Propafenone** is predicted to increase the exposure to beta blockers, selective **(nebivolol)** and beta blockers, selective **(nebivolol)** are predicted to increase the risk of cardiodepression when given with **propafenone**. Avoid. Severe Theoretical
- **Bosentan** is predicted to decrease the exposure to **dronedarone**. Severe Theoretical
- **Dronedarone** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Dronedarone** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. Moderate Study
- **Dronedarone** is predicted to increase the exposure to **cabozantinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Caffeine citrate** decreases the efficacy of **adenosine**. Separate administration by 24 hours. Mild Study
- Calcium channel blockers **(diltiazem, verapamil)** increase the exposure to **dronedarone** and **dronedarone** increases the exposure to calcium channel blockers **(diltiazem, verapamil)**. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. Moderate Study
- Calcium channel blockers **(verapamil)** increase the risk of cardiodepression when given with **flecainide**. Severe Anecdotal → Also see **TABLE 6** p. 1335
- **Dronedarone** is predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Amiodarone** is predicted to increase the risk of cardiodepression when given with calcium channel blockers **(diltiazem, verapamil)**. Avoid. Severe Theoretical → Also see **TABLE 6** p. 1335
- **Disopyramide** is predicted to increase the risk of cardiodepression when given with calcium channel blockers **(verapamil)**. Severe Theoretical
- Antiarrhythmics **(amiodarone, dronedarone)** are predicted to increase the exposure to **ceritinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Amiodarone** increases the concentration of **ciclosporin**. Monitor concentration and adjust dose. Severe Study
- **Dronedarone** increases the concentration of **ciclosporin**. Severe Study
- **Ciclosporin** increases the exposure to **dronedarone**. Avoid. Severe Theoretical
- **Cobicistat** very markedly increases the exposure to **dronedarone**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. Severe Study
- **Dronedarone** is predicted to increase the exposure to **cobimetinib**. Severe Theoretical
- **Dronedarone** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. Severe Study
- **Dronedarone** is predicted to increase the exposure to corticosteroids **(methylprednisolone)**. Monitor and adjust dose. Moderate Study
- **Amiodarone** increases the anticoagulant effect of **coumarins**. Severe Study
- **Propafenone** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. Moderate Study
- **Amiodarone** increases the exposure to **dabigatran**. Adjust **dabigatran** dose, p. 135. Moderate Study
- **Dronedarone** slightly increases the exposure to **dabigatran**. Avoid. Severe Study
- **Daclatasvir** is predicted to increase the risk of severe bradycardia or heart block when given with **amiodarone**. Refer to specialist literature. Severe Anecdotal
- **Dronedarone** is predicted to slightly increase the exposure to **darifenacin**. Moderate Study
- **Darifenacin** is predicted to increase the concentration of **flecainide**. Moderate Theoretical
- **Dronedarone** is predicted to increase the exposure to **dasatinib**. Severe Study → Also see **TABLE 9** p. 1336

https://nhathuocngocanh.com/ www.getintopharma.com

- Antiarrhythmics **(amiodarone, dronedarone)** are predicted to moderately increase the exposure to **digoxin**. Monitor and adjust **digoxin** dose, p. 109. Severe Study → Also see **TABLE 6** p. 1335
- **Propafenone** increases the concentration of **digoxin**. Monitor and adjust dose. Severe Study
- **Dipyridamole** increases the exposure to **adenosine**. Avoid or adjust dose. Severe Study
- **Dronedarone** increases the risk of QT-prolongation when given with **domperidone**. Avoid. Severe Study
- **Dronedarone** is predicted to increase the exposure to dopamine receptor agonists **(bromocriptine)**. Severe Theoretical
- **Dronedarone** is predicted to increase the concentration of dopamine receptor agonists **(cabergoline)**. Severe Anecdotal
- **Dronedarone** is predicted to moderately increase the exposure to **dutasteride**. Mild Study
- **Amiodarone** slightly increases the exposure to **edoxaban**. Severe Study
- **Dronedarone** slightly increases the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 125. Severe Study
- **Efavirenz** is predicted to decrease the exposure to **dronedarone**. Severe Theoretical → Also see **TABLE 9** p. 1336
- Antiarrhythmics **(dronedarone, propafenone)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to antiarrhythmics **(disopyramide, dronedarone)**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the efficacy of **propafenone**. Moderate Study
- **Dronedarone** is predicted to increase the risk of ergotism when given with **ergometrine**. Severe Theoretical
- **Dronedarone** is predicted to increase the risk of ergotism when given with **ergotamine**. Severe Theoretical
- Antiarrhythmics **(amiodarone, dronedarone)** are predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- **Dronedarone** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. Moderate Study
- **Dronedarone** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. Mild Study
- Antiarrhythmics **(amiodarone, dronedarone)** are predicted to increase the exposure to **fidaxomicin**. Avoid. Moderate Study
- **Dronedarone** is predicted to increase the exposure to **gefitinib**. Moderate Theoretical
- **Dronedarone** potentially increases the exposure to **glecaprevir**. Moderate Theoretical
- **Grapefruit juice** increases the exposure to **amiodarone**. Avoid. Moderate Study
- **Grapefruit juice** moderately increases the exposure to **dronedarone**. Avoid. Severe Study
- **Grapefruit juice** increases the exposure to **propafenone**. Monitor and adjust dose. Moderate Study
- **Dronedarone** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Theoretical
- H_2 receptor antagonists **(cimetidine)** increase the exposure to **amiodarone**. Moderate Study
- H_2 receptor antagonists **(cimetidine)** slightly increase the exposure to **flecainide**. Monitor and adjust dose. Mild Study
- H_2 receptor antagonists **(cimetidine)** increase the exposure to **lidocaine**. Monitor and adjust dose. Moderate Study
- H_2 receptor antagonists **(cimetidine)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **amiodarone**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- **HIV-protease inhibitors** are predicted to increase the exposure to **disopyramide**. Severe Theoretical → Also see **TABLE 9** p. 1336
- **HIV-protease inhibitors** very markedly increase the exposure to **dronedarone**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **HIV-protease inhibitors** are predicted to increase the exposure to **lidocaine**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. Severe Study
- **Amiodarone** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose, p. 952. Severe Theoretical
- **Dronedarone** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. Severe Study
- **Idelalisib** is predicted to increase the exposure to **amiodarone**. Avoid. Moderate Theoretical
- **Idelalisib** very markedly increases the exposure to **dronedarone**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. Severe Study
- **Imatinib** is predicted to increase the exposure to **dronedarone**. Severe Theoretical
- **Imatinib** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. Moderate Study
- **Dronedarone** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 210. Severe Theoretical
- **Dronedarone** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. Severe Study
- **Dronedarone** is predicted to increase the exposure to **lapatinib**. Moderate Study → Also see **TABLE 9** p. 1336
- **Ledipasvir** increases the risk of severe bradycardia or heart block when given with **amiodarone**. Refer to specialist literature. Severe Anecdotal
- **Amiodarone** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Dronedarone** is predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- **Dronedarone** is predicted to increase the exposure to **loperamide**. Severe Theoretical
- **Dronedarone** is predicted to increase the exposure to **lurasidone**. Moderate Study
- Macrolides **(clarithromycin)** very markedly increase the exposure to **dronedarone**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. Severe Study
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to **lidocaine**. Moderate Theoretical
- Macrolides **(erythromycin)** are predicted to moderately increase the exposure to **dronedarone**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- Macrolides **(erythromycin)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. Moderate Study
- **Dronedarone** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. Severe Study
- **Dronedarone** is predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to antiarrhythmics **(disopyramide, dronedarone)**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the efficacy of **propafenone**. Moderate Study
- **Dronedarone** increases the risk of neutropenia when given with monoclonal antibodies **(brentuximab vedotin)**. Monitor and adjust dose. Severe Theoretical
- **Dronedarone** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. Moderate Study
- **Netupitant** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. Moderate Study
- **Nevirapine** is predicted to decrease the exposure to **dronedarone**. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **propafenone**. Monitor and adjust dose. Moderate Study
- Antiarrhythmics **(amiodarone, dronedarone)** are predicted to increase the exposure to **nintedanib**. Moderate Study
- NSAIDs **(celecoxib)** are predicted to increase the exposure to antiarrhythmics **(flecainide, propafenone)**. Monitor and adjust dose. Moderate Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Antiarrhythmics (continued)

- **Dronedarone** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Theoretical
- **Dronedarone** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study
- **Amiodarone** is predicted to increase the concentration of opioids **(fentanyl)**. Moderate Theoretical → Also see **TABLE 6** p. 1335
- **Dronedarone** is predicted to increase the exposure to opioids **(methadone, sufentanil)**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Dronedarone** is predicted to increase the exposure to **oxybutynin**. Mild Theoretical
- Antiarrhythmics **(amiodarone, dronedarone)** are predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Dronedarone** is predicted to increase the exposure to **pazopanib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Propafenone** is predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. Moderate Theoretical
- **Dronedarone** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil)**. Adjust **avanafil** dose, p. 794. Moderate Theoretical
- **Dronedarone** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. Moderate Study → Also see **TABLE 9** p. 1336
- **Dronedarone** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(tadalafil)**. Severe Theoretical
- **Dronedarone** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(vardenafil)**. Adjust dose. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Dronedarone** potentially increases the exposure to **pibrentasvir**. Moderate Theoretical
- **Dronedarone** is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Propafenone** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. Moderate Study
- **Dronedarone** is predicted to increase the exposure to **quetiapine**. Avoid. Moderate Study
- Quinolones **(ciprofloxacin)** slightly increase the exposure to **lidocaine**. Mild Study
- **Dronedarone** is predicted to increase the exposure to **ranolazine**. Severe Study → Also see **TABLE 9** p. 1336
- **Amiodarone** is predicted to increase the exposure to retinoids **(alitretinoin)**. Adjust **alitretinoin** dose, p. 1226. Moderate Theoretical
- **Ribociclib** (high-dose) is predicted to increase the exposure to **amiodarone**. Avoid. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Dronedarone** is predicted to increase the exposure to **ribociclib**. Moderate Study → Also see **TABLE 9** p. 1336
- **Rifampicin** is predicted to decrease the exposure to antiarrhythmics **(disopyramide, dronedarone)**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the efficacy of **propafenone**. Moderate Study
- **Dronedarone** is predicted to increase the exposure to **rivaroxaban**. Avoid. Moderate Theoretical
- **Rolapitant** is predicted to increase the exposure to **propafenone**. Severe Study
- **Dronedarone** is predicted to increase the exposure to **ruxolitinib**. Moderate Theoretical
- **Dronedarone** is predicted to increase the exposure to **saxagliptin**. Mild Study
- **Simeprevir** is predicted to increase the concentration of **amiodarone**. Refer to specialist literature. Severe Anecdotal
- **Dronedarone** is predicted to increase the exposure to **simeprevir**. Avoid. Severe Study
- **Amiodarone** is predicted to increase the concentration of **sirolimus**. Severe Anecdotal
- **Dronedarone** increases the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- **Sofosbuvir** is predicted to increase the risk of severe bradycardia or heart block when given with **amiodarone**. Refer to specialist literature. Severe Anecdotal
- SSRIs **(fluvoxamine)** are predicted to increase the exposure to **propafenone**. Monitor and adjust dose. Moderate Study
- **Dronedarone** is predicted to increase the exposure to SSRIs **(citalopram, escitalopram, fluoxetine, fluvoxamine, paroxetine, sertraline)**. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Dronedarone** is predicted to increase the exposure to SSRIs **(dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **dronedarone**. Avoid. Severe Theoretical
- **Amiodarone** is predicted to increase the risk of rhabdomyolysis when given with statins **(atorvastatin)**. Monitor and adjust dose. Moderate Theoretical
- **Dronedarone** is predicted to increase the exposure to statins **(atorvastatin)**. Monitor and adjust dose. Severe Study
- **Amiodarone** is predicted to increase the exposure to statins **(fluvastatin)**. Severe Theoretical
- **Dronedarone** slightly increases the exposure to statins **(rosuvastatin)**. Adjust dose. Severe Study
- **Amiodarone** increases the risk of rhabdomyolysis when given with statins **(simvastatin)**. Adjust **simvastatin** dose, p. 203. Severe Study
- **Dronedarone** is predicted to increase the exposure to statins **(simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 203. Severe Study
- **Amiodarone** is predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. Moderate Study
- **Dronedarone** is predicted to increase the exposure to **sunitinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Lidocaine** is predicted to increase the effects of **suxamethonium**. Moderate Study
- **Amiodarone** is predicted to increase the concentration of **tacrolimus**. Severe Anecdotal
- **Dronedarone** is predicted to increase the concentration of **tacrolimus**. Severe Study
- **Dronedarone** is predicted to increase the exposure to taxanes **(cabazitaxel)**. Moderate Theoretical
- **Dronedarone** is predicted to increase the exposure to taxanes **(paclitaxel)**. Severe Theoretical
- **Dronedarone** is predicted to increase the concentration of **temsirolimus**. Moderate Theoretical
- **Theophylline** decreases the efficacy of **adenosine**. Separate administration by 24 hours. Mild Study
- **Amiodarone** is predicted to increase the risk of thyroid dysfunction when given with **thyroid hormones**. Avoid. Moderate Study
- **Amiodarone** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. Severe Study
- **Dronedarone** is predicted to increase the exposure to **tofacitinib**. Moderate Study
- **Dronedarone** is predicted to increase the exposure to **tolterodine**. Mild Theoretical → Also see **TABLE 9** p. 1336
- **Dronedarone** is predicted to increase the exposure to **tolvaptan**. Adjust dose. Moderate Study
- Antiarrhythmics **(amiodarone, dronedarone)** are predicted to increase the exposure to **topotecan**. Severe Study
- Antiarrhythmics **(amiodarone, dronedarone)** are predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Dronedarone** is predicted to increase the exposure to **trazodone**. Moderate Theoretical
- **Dronedarone** is predicted to increase the exposure to **tricyclic antidepressants**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Propafenone** is predicted to increase the concentration of **tricyclic antidepressants**. Moderate Theoretical → Also see **TABLE 10** p. 1336
- **Dronedarone** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- **Amiodarone** is predicted to increase the concentration of **velpatasvir**. Avoid or monitor. Moderate Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

- **Amiodarone** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical
- **Dronedarone** is predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- **Dronedarone** is predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Dronedarone** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study

Anticholinesterases, centrally acting → see **TABLE 6** p. 1335 (bradycardia)

donepezil · galantamine · rivastigmine

- Antiarrhythmics **(amiodarone)** increase the risk of bradycardia when given with **anticholinesterases, centrally acting**. Moderate Anecdotal → Also see **TABLE 6** p. 1335
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **donepezil**. Mild Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **galantamine**. Monitor and adjust dose. Moderate Study
- **Anticholinesterases, centrally acting** are predicted to increase the risk of bradycardia when given with **beta blockers, non-selective**. Moderate Anecdotal → Also see **TABLE 6** p. 1335
- **Anticholinesterases, centrally acting** are predicted to increase the risk of bradycardia when given with **beta blockers, selective**. Moderate Anecdotal → Also see **TABLE 6** p. 1335
- **Bupropion** is predicted to increase the exposure to **galantamine**. Monitor and adjust dose. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** increase the risk of bradycardia when given with **anticholinesterases, centrally acting**. Moderate Anecdotal → Also see **TABLE 6** p. 1335
- **Cinacalcet** is predicted to increase the exposure to **galantamine**. Monitor and adjust dose. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **galantamine**. Monitor and adjust dose. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **donepezil**. Mild Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **galantamine**. Monitor and adjust dose. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **galantamine**. Monitor and adjust dose. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **galantamine**. Monitor and adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **donepezil**. Mild Study
- **Anticholinesterases, centrally acting** are predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. Moderate Theoretical → Also see **TABLE 6** p. 1335
- **Rifampicin** is predicted to decrease the exposure to **donepezil**. Mild Study
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to **galantamine**. Monitor and adjust dose. Moderate Study
- **Anticholinesterases, centrally acting** increase the effects of **suxamethonium**. Moderate Theoretical
- **Terbinafine** is predicted to increase the exposure to **galantamine**. Monitor and adjust dose. Moderate Study

Antiepileptics → see **TABLE 1** p. 1334 (hepatotoxicity), **TABLE 18** p. 1338 (hyponatraemia), **TABLE 15** p. 1337 (myelosuppression), **TABLE 12** p. 1337 (peripheral neuropathy), **TABLE 11** p. 1336 (CNS depressant effects)

brivaracetam · carbamazepine · eslicarbazepine · ethosuximide · fosphenytoin · gabapentin · lacosamide · lamotrigine · levetiracetam · oxcarbazepine · paraldehyde · perampanel · phenobarbital · phenytoin · pregabalin · primidone · retigabine · rufinamide · stiripentol · tiagabine · topiramate · valproate · vigabatrin · zonisamide

FOOD AND LIFESTYLE Avoid milk or dairy products, carbonated drinks, and fruit juices at the same time as stiripentol.

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **abacavir**. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **abiraterone**. Avoid. Severe Theoretical
- **Acetazolamide** potentially increases the risk of toxicity when given with **valproate**. Severe Study
- **Acetazolamide** potentially increases the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. Severe Theoretical
- **Carbamazepine** is predicted to decrease the exposure to **afatinib**. Moderate Study
- Antiepileptics **(fosphenytoin, phenytoin)** are predicted to decrease the exposure to **agomelatine**. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the concentration of **albendazole**. Moderate Study
- **Alcohol (beverage)** potentially increases the risk of visual disturbances when given with **retigabine**. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to aldosterone antagonists **(eplerenone)**. Avoid. Moderate Theoretical → Also see **TABLE 18** p. 1338
- **Carbamazepine** decreases the exposure to **aliskiren**. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **alprazolam**. Adjust dose. Moderate Theoretical → Also see **TABLE 11** p. 1336
- **Fosphenytoin** is predicted to decrease the exposure to **aminophylline**. Adjust dose. Moderate Study
- **Phenobarbital** is predicted to decrease the exposure to **aminophylline**. Adjust dose. Moderate Theoretical
- **Phenytoin** decreases the exposure to **aminophylline**. Adjust dose. Moderate Study
- **Primidone** is predicted to increase the clearance of **aminophylline**. Adjust dose. Moderate Theoretical
- **Stiripentol** is predicted to increase the exposure to **aminophylline**. Avoid. Moderate Theoretical
- Antiepileptics **(fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to increase the risk of methaemoglobinaemia when given with topical anaesthetics, local **(prilocaine)**. Use with caution or avoid. Severe Theoretical → Also see **TABLE 11** p. 1336
- **Phenytoin** is predicted to decrease the exposure to anaesthetics, local **(ropivacaine)**. Moderate Theoretical
- **Antacids** decrease the absorption of **gabapentin**. **Gabapentin** should be taken 2 hours after **antacids**. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to antiarrhythmics **(disopyramide, dronedarone)**. Avoid. Severe Study
- Antiarrhythmics **(amiodarone)** are predicted to slightly increase the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Monitor and adjust dose. Severe Study → Also see **TABLE 12** p. 1337
- Antiepileptics **(fosphenytoin, phenytoin)** are predicted to decrease the exposure to antiarrhythmics **(lidocaine)**. Severe Anecdotal
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the efficacy of antiarrhythmics **(propafenone)**. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to anticholinesterases, centrally acting **(donepezil)**. Mild Study
- Antiepileptics **(carbamazepine)** decrease the concentration of antiepileptics **(brivaracetam)**. Moderate Study
- Antiepileptics **(fosphenytoin, phenytoin)** decrease the concentration of antiepileptics **(brivaracetam)**. Moderate Study
- Antiepileptics **(lamotrigine)** potentially increase the concentration of antiepileptics **(carbamazepine)** and antiepileptics **(carbamazepine)** decrease the concentration of antiepileptics **(lamotrigine)**. Adjust **lamotrigine** dose and monitor **carbamazepine** concentration, p. 316, p. 309. Moderate Study

https://nhathuocngocanh.com/ www.getintopharma.com

Antiepileptics (continued)

- Antiepileptics **(phenobarbital)** affect the concentration of antiepileptics **(carbamazepine)** and antiepileptics **(carbamazepine)** increase the concentration of antiepileptics **(phenobarbital)**. Adjust dose. Moderate Study
- Antiepileptics **(topiramate)** increase the risk of carbamazepine toxicity when given with antiepileptics **(carbamazepine)**. Moderate Study
- Antiepileptics **(stiripentol)** increase the concentration of antiepileptics **(carbamazepine, phenobarbital)**. Avoid in Dravet syndrome. Severe Study
- Antiepileptics **(carbamazepine)** slightly decrease the exposure to antiepileptics **(eslicarbazepine, oxcarbazepine)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(oxcarbazepine)** are predicted to increase the concentration of antiepileptics **(fosphenytoin)**. Monitor concentration and adjust dose. Moderate Study
- Antiepileptics **(stiripentol)** are predicted to increase the concentration of antiepileptics **(fosphenytoin)**. Severe Study
- Antiepileptics **(carbamazepine)** affect the concentration of antiepileptics **(fosphenytoin, phenytoin)** and antiepileptics **(fosphenytoin, phenytoin)** decrease the concentration of antiepileptics **(carbamazepine)**. Monitor and adjust dose. Severe Study
- Antiepileptics **(eslicarbazepine)** increase the exposure to antiepileptics **(fosphenytoin, phenytoin)** and antiepileptics **(fosphenytoin, phenytoin)** decrease the exposure to antiepileptics **(eslicarbazepine)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(valproate)** affect the concentration of antiepileptics **(fosphenytoin, phenytoin)** and antiepileptics **(fosphenytoin, phenytoin)** decrease the concentration of antiepileptics **(valproate)**. Severe Study
- Antiepileptics **(vigabatrin)** decrease the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Mild Study
- Antiepileptics **(fosphenytoin)** decrease the concentration of antiepileptics **(lamotrigine)**. Monitor and adjust **lamotrigine** dose, p. 316. Moderate Study
- Antiepileptics **(phenobarbital, phenytoin, primidone)** decrease the concentration of antiepileptics **(lamotrigine)**. Monitor and adjust **lamotrigine** dose, p. 316. Moderate Study → Also see **TABLE 11** p. 1336
- Antiepileptics **(valproate)** increase the exposure to antiepileptics **(lamotrigine)**. Adjust **lamotrigine** dose and monitor rash, p. 316. Severe Study
- Antiepileptics **(lamotrigine)** are predicted to increase the concentration of antiepileptics **(oxcarbazepine)** and antiepileptics **(oxcarbazepine)** are predicted to decrease the concentration of antiepileptics **(lamotrigine)**. Monitor side effects and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin)** are predicted to decrease the exposure to antiepileptics **(perampanel)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(oxcarbazepine)** decrease the concentration of antiepileptics **(perampanel)** and antiepileptics **(perampanel)** increase the concentration of antiepileptics **(oxcarbazepine)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to antiepileptics **(perampanel)**. Monitor and adjust dose. Moderate Study → Also see **TABLE 11** p. 1336
- Antiepileptics **(phenytoin)** increase the concentration of antiepileptics **(phenobarbital)** and antiepileptics **(phenobarbital)** affect the concentration of antiepileptics **(phenytoin)**. Moderate Study
- Antiepileptics **(fosphenytoin)** increase the concentration of antiepileptics **(phenobarbital, primidone)** and antiepileptics **(phenobarbital, primidone)** affect the concentration of antiepileptics **(fosphenytoin)**. Moderate Study
- Antiepileptics **(oxcarbazepine)** are predicted to increase the concentration of antiepileptics **(phenytoin)**. Monitor concentration and adjust dose. Moderate Study
- Antiepileptics **(stiripentol)** are predicted to increase the concentration of antiepileptics **(phenytoin)**. Avoid in Dravet syndrome. Severe Study
- Antiepileptics **(carbamazepine)** potentially decrease the concentration of antiepileptics **(primidone)** and antiepileptics **(primidone)** potentially decrease the concentration of antiepileptics **(carbamazepine)**. Adjust dose. Moderate Anecdotal
- Antiepileptics **(phenytoin)** increase the concentration of antiepileptics **(primidone)** and antiepileptics **(primidone)** affect the concentration of antiepileptics **(phenytoin)**. Moderate Study
- Antiepileptics **(stiripentol)** are predicted to increase the concentration of antiepileptics **(primidone)**. Severe Theoretical
- Antiepileptics **(valproate)** affect the concentration of antiepileptics **(primidone)**. Monitor and adjust dose. Severe Study
- Antiepileptics **(carbamazepine)** slightly increase the clearance of antiepileptics **(retigabine)**. Moderate Study
- Antiepileptics **(fosphenytoin, phenytoin)** are predicted to slightly increase the clearance of antiepileptics **(retigabine)**. Moderate Study
- Antiepileptics **(valproate)** increase the exposure to antiepileptics **(rufinamide)**. Adjust **rufinamide** dose, p. 324. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to antiepileptics **(tiagabine)**. Monitor and adjust **tiagabine** dose, p. 327. Moderate Study
- Antiepileptics **(fosphenytoin, phenytoin)** decrease the concentration of antiepileptics **(topiramate)** and antiepileptics **(topiramate)** increase the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the concentration of antiepileptics **(topiramate)**. Mild Study
- Antiepileptics **(phenobarbital)** decrease the concentration of antiepileptics **(valproate)** and antiepileptics **(valproate)** increase the concentration of antiepileptics **(phenobarbital)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(topiramate)** increase the risk of toxicity when given with antiepileptics **(valproate)**. Severe Study
- Antiepileptics **(carbamazepine)** slightly to moderately decrease the concentration of antiepileptics **(zonisamide)** and antiepileptics **(zonisamide)** affect the concentration of antiepileptics **(carbamazepine)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(fosphenytoin, phenytoin)** slightly to moderately decrease the concentration of antiepileptics **(zonisamide)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the concentration of antiepileptics **(zonisamide)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(topiramate)** potentially increase the risk of overheating and dehydration when given with antiepileptics **(zonisamide)**. Avoid in children. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to very slightly increase the exposure to **perampanel**. Mild Study
- Antifungals, azoles **(miconazole)** increase the risk of carbamazepine toxicity when given with **carbamazepine**. Monitor and adjust dose. Severe Anecdotal
- Antifungals, azoles **(miconazole)** increase the risk of phenytoin toxicity when given with **fosphenytoin**. Monitor and adjust dose. Severe Anecdotal
- Antifungals, azoles **(miconazole)** increase the risk of phenytoin toxicity when given with **phenytoin**. Monitor and adjust dose. Severe Anecdotal
- **Carbamazepine** is predicted to decrease the efficacy of antifungals, azoles **(fluconazole)** and antifungals, azoles **(fluconazole)** increase the concentration of **carbamazepine**. Avoid or monitor **carbamazepine** concentration and adjust dose accordingly, p. 309. Severe Theoretical → Also see **TABLE 1** p. 1334
- Antifungals, azoles **(fluconazole)** increase the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to antifungals, azoles **(isavuconazole)**. Avoid. Severe Study

https://nhathuocngocanh.com/ www.getintopharma.com

- **Fosphenytoin** very markedly decreases the exposure to antifungals, azoles **(itraconazole)**. Avoid and for 14 days after stopping **fosphenytoin**, p. 313. Moderate Study
- **Phenobarbital** decreases the concentration of antifungals, azoles **(itraconazole)**. Avoid and for 14 days after stopping **phenobarbital**, p. 331. Moderate Study
- **Phenytoin** very markedly decreases the exposure to antifungals, azoles **(itraconazole)**. Avoid and for 14 days after stopping **phenytoin**, p. 321. Moderate Study
- **Primidone** is predicted to decrease the concentration of antifungals, azoles **(itraconazole)**. Moderate Theoretical
- **Carbamazepine** is predicted to decrease the efficacy of antifungals, azoles **(itraconazole, voriconazole)** and antifungals, azoles **(itraconazole, voriconazole)** increase the concentration of **carbamazepine**. Avoid or adjust dose. Moderate Theoretical → Also see **TABLE 1** p. 1334
- **Carbamazepine** is predicted to decrease the efficacy of antifungals, azoles **(ketoconazole)** and antifungals, azoles **(ketoconazole)** slightly increase the concentration of **carbamazepine**. Avoid or monitor **carbamazepine** concentration and adjust dose accordingly, p. 309. Moderate Study
- **Phenobarbital** is predicted to decrease the concentration of antifungals, azoles **(ketoconazole)**. Avoid. Moderate Study
- Antiepileptics **(fosphenytoin, phenytoin)** decrease the exposure to antifungals, azoles **(ketoconazole)**. Avoid. Moderate Study
- **Primidone** is predicted to decrease the concentration of antifungals, azoles **(ketoconazole, posaconazole)**. Avoid. Moderate Study
- **Carbamazepine** is predicted to decrease the efficacy of antifungals, azoles **(posaconazole)** and antifungals, azoles **(posaconazole)** increase the concentration of **carbamazepine**. Avoid. Moderate Theoretical
- **Phenobarbital** is predicted to decrease the concentration of antifungals, azoles **(posaconazole)**. Avoid. Moderate Study
- Antiepileptics **(fosphenytoin, phenytoin)** are predicted to decrease the exposure to antifungals, azoles **(posaconazole)**. Avoid. Moderate Study
- **Fosphenytoin** decreases the exposure to antifungals, azoles **(voriconazole)** and antifungals, azoles **(voriconazole)** increase the exposure to **fosphenytoin**. Avoid or adjust **voriconazole** dose and monitor phenytoin concentration, p. 588. Moderate Study
- **Phenytoin** decreases the exposure to antifungals, azoles **(voriconazole)** and antifungals, azoles **(voriconazole)** increase the exposure to **phenytoin**. Avoid or adjust **voriconazole** dose and monitor **phenytoin** concentration, p. 588, p. 321. Moderate Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the concentration of antifungals, azoles **(voriconazole)**. Avoid. Moderate Theoretical
- Antihistamines, sedating **(hydroxyzine)** potentially increase the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to antimalarials **(artemether)** (with lumafantrine). Avoid. Severe Study
- Antimalarials **(pyrimethamine)** increase the risk of haematological toxicity when given with antiepileptics **(fosphenytoin, phenytoin)**. Severe Study
- Antimalarials **(pyrimethamine)** are predicted to increase the risk of haematological toxicity when given with antiepileptics **(phenobarbital, primidone)**. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of antimalarials **(piperaquine)**. Avoid. Moderate Theoretical
- Antiepileptics **(carbamazepine, phenobarbital, primidone)** potentially increase the risk of toxicity when given with antimalarials **(quinine)**. Unknown Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** moderately decrease the exposure to **apremilast**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **aprepitant**. Avoid. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. Moderate Study → Also see **TABLE 11** p. 1336
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **bazedoxifene**. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **bedaquiline**. Avoid. Severe Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the exposure to beta blockers, non-selective **(carvedilol, labetalol)**. Moderate Theoretical
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the exposure to beta blockers, non-selective **(propranolol)**. Moderate Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the exposure to beta blockers, selective **(acebutolol, bisoprolol, metoprolol, nebivolol)**. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** slightly decrease the exposure to **bortezomib**. Avoid. Severe Study → Also see **TABLE 12** p. 1337
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** affect the exposure to **bosentan**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to very markedly decrease the exposure to **bosutinib**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **bupropion**. Severe Study
- **Valproate** increases the exposure to **bupropion**. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** moderately decrease the exposure to **cabozantinib**. Avoid. Moderate Study
- Antiepileptics **(fosphenytoin, phenytoin)** are predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. Moderate Study
- Calcium channel blockers **(diltiazem)** increase the concentration of **carbamazepine** and **carbamazepine** is predicted to decrease the exposure to calcium channel blockers **(diltiazem)**. Monitor concentration and adjust dose. Severe Anecdotal
- Calcium channel blockers **(verapamil)** increase the concentration of **carbamazepine** and **carbamazepine** is predicted to decrease the exposure to calcium channel blockers **(verapamil)**. Severe Anecdotal
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the exposure to calcium channel blockers **(diltiazem, verapamil)**. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** potentially increase the concentration of antiepileptics **(fosphenytoin, phenytoin)** and antiepileptics **(fosphenytoin, phenytoin)** are predicted to decrease the exposure to calcium channel blockers **(diltiazem, verapamil)**. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cannabis extract**. Avoid. Severe Theoretical → Also see **TABLE 11** p. 1336

https://nhathuocngocanh.com/ www.getintopharma.com

Antiepileptics (continued)

- **Capecitabine** increases the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Severe Anecdotal
- **Carbapenems** decrease the concentration of **valproate**. Avoid. Severe Anecdotal
- Antiepileptics **(carbamazepine, fosphenytoin, phenytoin)** are predicted to decrease the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 582. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ceritinib**. Avoid. Severe Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. Moderate Theoretical
- Antiepileptics **(phenobarbital, primidone)** decrease the concentration of **chloramphenicol**. Moderate Study
- Intravenous **chloramphenicol** increases the concentration of antiepileptics **(fosphenytoin, phenytoin)** and antiepileptics **(fosphenytoin, phenytoin)** affect the concentration of intravenous **chloramphenicol**. Monitor concentration and adjust dose. Severe Study
- **Chlordiazepoxide** affects the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Severe Study
- **Phenobarbital** decreases the effects of **cholic acid**. Avoid. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the concentration of **ciclosporin**. Severe Study
- **Oxcarbazepine** decreases the concentration of **ciclosporin**. Severe Anecdotal
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to alter the effects of **cilostazol**. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. Moderate Study
- **Carbamazepine** is predicted to increase the risk of haematological toxicity when given with oral **cladribine**. Moderate Theoretical
- **Clobazam** potentially affects the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Severe Anecdotal
- **Stiripentol** increases the concentration of **clobazam**. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **clomethiazole**. Monitor and adjust dose. Moderate Study → Also see **TABLE 11** p. 1336
- **Clonazepam** potentially affects the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Severe Anecdotal
- Antiepileptics **(fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **clozapine**. Moderate Anecdotal → Also see **TABLE 11** p. 1336
- **Carbamazepine** is predicted to increase the risk of myelosuppression when given with **clozapine**. Avoid. Severe Anecdotal
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cobicistat**. Avoid. Severe Theoretical
- **Oxcarbazepine** is predicted to decrease the concentration of **cobicistat**. Severe Theoretical
- **Cobicistat** is predicted to very slightly increase the exposure to **perampanel**. Mild Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cobimetinib**. Avoid. Severe Theoretical
- Antiepileptics **(carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Study
- **Combined hormonal contraceptives** alter the exposure to **lamotrigine**. Adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to corticosteroids **(budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, prednisone, triamcinolone)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to corticosteroids **(fluticasone)**. Unknown Theoretical
- Antiepileptics **(fosphenytoin, phenytoin)** are predicted to alter the anticoagulant effect of **coumarins**. Moderate Anecdotal
- Antiepileptics **(phenobarbital, primidone)** decrease the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. Moderate Study
- **Carbamazepine** decreases the effects of **coumarins**. Monitor and adjust dose. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **crizotinib**. Avoid. Severe Study
- **Carbamazepine** is predicted to decrease the exposure to **dabigatran**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **dabrafenib**. Avoid. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **daclatasvir**. Avoid. Severe Study
- **Oxcarbazepine** is predicted to decrease the exposure to **daclatasvir**. Avoid. Severe Theoretical
- **Danazol** moderately increases the concentration of **carbamazepine**. Monitor and adjust dose. Severe Study
- Antiepileptics **(fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **darifenacin**. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **dasabuvir**. Avoid. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **dasatinib**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to slightly decrease the exposure to **delamanid**. Avoid. Moderate Study
- **Lamotrigine** is predicted to increase the risk of hyponatraemia when given with **desmopressin**. Severe Theoretical
- Antiepileptics **(carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Desogestrel** is predicted to increase the exposure to **lamotrigine**. Moderate Study
- **Diazepam** potentially affects the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. Severe Study
- **Diazoxide** decreases the concentration of antiepileptics **(fosphenytoin, phenytoin)** and antiepileptics **(fosphenytoin, phenytoin)** are predicted to decrease the effects of **diazoxide**. Monitor concentration and adjust dose. Moderate Anecdotal
- Antiepileptics **(fosphenytoin, phenytoin)** are predicted to decrease the concentration of **digoxin**. Moderate Anecdotal
- **Disulfiram** increases the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. Severe Study → Also see **TABLE 12** p. 1337
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **dolutegravir**. Adjust dose. Severe Study
- **Oxcarbazepine** is predicted to decrease the exposure to **dolutegravir**. Adjust dose. Severe Theoretical
- **Phenytoin** is predicted to decrease the exposure to **duloxetine**. Moderate Theoretical
- **Carbamazepine** is predicted to decrease the exposure to **edoxaban**. Moderate Study

https://nhathuocngocanh.com/ www.getintopharma.com

- Antiepileptics **(fosphenytoin, phenytoin)** slightly decrease the exposure to **efavirenz** and **efavirenz** affects the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Severe Theoretical
- **Carbamazepine** slightly decreases the exposure to **efavirenz** and **efavirenz** slightly decreases the exposure to **carbamazepine**. Severe Study
- **Phenobarbital** is predicted to decrease the exposure to **efavirenz** and **efavirenz** affects the concentration of **phenobarbital**. Severe Theoretical
- **Efavirenz** is predicted to affect the efficacy of **primidone** and **primidone** is predicted to slightly decrease the exposure to **efavirenz**. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **elbasvir**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **eliglustat**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **elvitegravir**. Avoid. Severe Theoretical
- **Enteral feeds** decrease the absorption of **phenytoin**. Severe Study
- **Enzalutamide** is predicted to slightly decrease the exposure to **brivaracetam**. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **perampanel**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the effects of **ergotamine**. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 949. Severe Study
- Antiepileptics **(carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the efficacy of **etoposide**. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **etravirine**. Avoid. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** moderately decrease the exposure to **exemestane**. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **fesoterodine**. Avoid. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **fingolimod**. Moderate Study
- **Fluorouracil** increases the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. Severe Anecdotal
- **Folates** are predicted to decrease the concentration of antiepileptics **(fosphenytoin, phenobarbital, phenytoin, primidone)**. Monitor concentration and adjust dose. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **fosaprepitant**. Avoid. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **gefitinib**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **glecaprevir**. Avoid. Severe Study
- Antiepileptics **(eslicarbazepine, oxcarbazepine)** potentially decrease the exposure to **glecaprevir**. Avoid. Severe Theoretical
- **Valproate** potentially opposes the effects of **glycerol phenylbutyrate**. Moderate Theoretical
- **Grapefruit juice** slightly increases the exposure to **carbamazepine**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **grazoprevir**. Avoid. Severe Study
- Antiepileptics **(phenobarbital, primidone)** decrease the effects of **griseofulvin**. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Study → Also see **TABLE 11** p. 1336
- **Oxcarbazepine** is predicted to decrease the concentration of **guanfacine**. Monitor and adjust **guanfacine** dose, p. 349. Moderate Theoretical
- **Guanfacine** increases the concentration of **valproate**. Monitor and adjust dose. Moderate Study
- H_2 receptor antagonists **(cimetidine)** transiently increase the concentration of **carbamazepine**. Monitor concentration and adjust dose. Moderate Study
- H_2 receptor antagonists **(cimetidine)** increase the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the concentration of **haloperidol**. Adjust dose. Moderate Study → Also see **TABLE 11** p. 1336
- **Haloperidol** potentially increases the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. Severe Theoretical
- HIV-protease inhibitors **(ritonavir)** slightly decrease the exposure to **lamotrigine**. Severe Study
- **HIV-protease inhibitors** are predicted to affect the exposure to antiepileptics **(fosphenytoin, phenytoin)** and antiepileptics **(fosphenytoin, phenytoin)** decrease the concentration of **HIV-protease inhibitors**. Severe Theoretical
- **HIV-protease inhibitors** are predicted to affect the concentration of antiepileptics **(phenobarbital, primidone)** and antiepileptics **(phenobarbital, primidone)** are predicted to decrease the concentration of **HIV-protease inhibitors**. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **carbamazepine** and **carbamazepine** is predicted to decrease the exposure to **HIV-protease inhibitors**. Monitor and adjust dose. Severe Theoretical
- **HIV-protease inhibitors** are predicted to very slightly increase the exposure to **perampanel**. Mild Study
- HIV-protease inhibitors **(ritonavir)** are predicted to decrease the concentration of **valproate**. Severe Anecdotal
- Antiepileptics **(carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the effects of **hormone replacement therapy**. Moderate Anecdotal
- **Hormone replacement therapy** is predicted to alter the exposure to **lamotrigine**. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 952. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **idelalisib**. Avoid. Severe Study
- **Idelalisib** is predicted to very slightly increase the exposure to **perampanel**. Mild Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **imatinib**. Avoid. Moderate Study
- **Oxcarbazepine** decreases the exposure to **imatinib**. Avoid. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **irinotecan**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure

https://nhathuocngocanh.com/ www.getintopharma.com

Antiepileptics (continued)

to iron chelators **(deferasirox)**. Monitor serum ferritin and adjust dose. Moderate Theoretical

- **Isoniazid** increases the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Moderate Study → Also see **TABLE 12** p. 1337
- **Isoniazid** markedly increases the concentration of **carbamazepine** and **carbamazepine** increases the risk of hepatotoxicity when given with **isoniazid**. Monitor concentration and adjust dose. Severe Study → Also see **TABLE 1** p. 1334
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ivabradine**. Adjust dose. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ixazomib**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study
- **Carbamazepine** is predicted to decrease the exposure to **ledipasvir**. Avoid. Severe Theoretical
- Antiepileptics **(fosphenytoin, phenytoin)** decrease the effects of **levodopa**. Moderate Study
- Antiepileptics **(carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **linagliptin**. Moderate Study
- Antiepileptics **(carbamazepine, oxcarbazepine)** are predicted to increase the risk of neurotoxicity when given with **lithium**. Severe Anecdotal
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. Moderate Theoretical → Also see **TABLE 1** p. 1334
- Antiepileptics **(fosphenytoin, phenytoin)** decrease the effects of loop diuretics **(furosemide)**. Moderate Study
- **Lumacaftor** is predicted to decrease the exposure to antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)**. Avoid. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **lurasidone**. Avoid. Moderate Study → Also see **TABLE 11** p. 1336
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **macitentan**. Avoid. Severe Study
- Macrolides **(clarithromycin)** slightly increase the concentration of **carbamazepine**. Monitor concentration and adjust dose. Severe Study
- Macrolides **(clarithromycin)** are predicted to very slightly increase the exposure to **perampanel**. Mild Study
- Macrolides **(erythromycin)** markedly increase the concentration of **carbamazepine**. Monitor concentration and adjust dose. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **maraviroc**. Adjust dose. Severe Study
- **Phenytoin** is predicted to decrease the exposure to **melatonin**. Moderate Theoretical
- **Levetiracetam** decreases the clearance of **methotrexate**. Severe Anecdotal
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the exposure to **metronidazole**. Moderate Study
- Antiepileptics **(fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the effects of **metyrapone**. Avoid. Moderate Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the exposure to **mianserin**. Moderate Study → Also see **TABLE 11** p. 1336
- **Carbamazepine** markedly decreases the exposure to **mianserin**. Adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. Moderate Study → Also see **TABLE 11** p. 1336
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **midostaurin**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **mirtazapine**. Adjust dose. Moderate Study → Also see **TABLE 11** p. 1336
- **Mitotane** is predicted to decrease the exposure to **perampanel**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, phenobarbital, primidone)** are predicted to decrease the exposure to **modafinil**. Mild Theoretical
- Antiepileptics **(fosphenytoin, phenytoin)** are predicted to decrease the exposure to **modafinil** and **modafinil** is predicted to increase the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. Moderate Theoretical
- Antiepileptics **(phenobarbital, primidone)** are predicted to increase the effects of **monoamine-oxidase A and B inhibitors, irreversible**. Severe Theoretical
- **Carbamazepine** is predicted to increase the risk of severe toxic reaction when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical
- **Carbamazepine** is predicted to decrease the effects of monoclonal antibodies **(brentuximab vedotin)**. Severe Theoretical
- Monoclonal antibodies **(tocilizumab)** are predicted to decrease the exposure to antiepileptics **(fosphenytoin, phenytoin)**. Monitor and adjust dose. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **montelukast**. Mild Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **naloxegol**. Avoid. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to slightly decrease the exposure to **nateglinide**. Mild Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **netupitant**. Avoid. Severe Study
- **Carbamazepine** is predicted to decrease the effects of (but acute use increases the effects of) neuromuscular blocking drugs, non-depolarising **(atracurium, cisatracurium, pancuronium, rocuronium, vecuronium)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(fosphenytoin, phenytoin)** decrease the effects of (but acute use increases the effects of) neuromuscular blocking drugs, non-depolarising **(atracurium, cisatracurium, pancuronium, rocuronium, vecuronium)**. Moderate Study
- **Nevirapine** is predicted to decrease the concentration of antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** and antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **nevirapine**. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **nilotinib**. Avoid. Severe Study
- **Carbamazepine** is predicted to decrease the exposure to **nintedanib**. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- Antiepileptics **(carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin,**

https://nhathuocngocanh.com/ www.getintopharma.com

primidone, rufinamide, topiramate) are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal

- **Carbamazepine** potentially decreases the exposure to **olanzapine**. Monitor and adjust dose. Moderate Study
- **Phenytoin** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical
- **Carbamazepine** is predicted to decrease the exposure to **ombitasvir**. Avoid. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ondansetron**. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to opioids **(alfentanil, fentanyl)**. Moderate Study → Also see **TABLE 11** p. 1336
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to opioids **(buprenorphine)**. Monitor and adjust dose. Moderate Theoretical → Also see **TABLE 11** p. 1336
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to opioids **(methadone)**. Monitor and adjust dose. Severe Study → Also see **TABLE 11** p. 1336
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to opioids **(oxycodone)**. Monitor and adjust dose. Moderate Study → Also see **TABLE 11** p. 1336
- **Carbamazepine** decreases the concentration of opioids **(tramadol)**. Adjust dose. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **osimertinib**. Avoid. Moderate Study
- **Oxybutynin** potentially increases the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **palbociclib**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. Severe Study → Also see **TABLE 11** p. 1336
- **Valproate** slightly increases the exposure to **paliperidone**. Adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **panobinostat**. Avoid. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **paracetamol**. Moderate Study → Also see **TABLE 1** p. 1334
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **pazopanib**. Avoid. Severe Theoretical
- **Valproate** increases the risk of side-effects when given with penicillins **(pivmecillinam)**. Avoid. Severe Anecdotal
- Phenothiazines **(chlorpromazine)** decrease the concentration of antiepileptics **(phenobarbital, primidone)** and antiepileptics **(phenobarbital, primidone)** decrease the concentration of phenothiazines **(chlorpromazine)**. Moderate Study → Also see **TABLE 11** p. 1336
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(avanafil, tadalafil)**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(sildenafil, vardenafil)**. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- Antiepileptics **(eslicarbazepine, oxcarbazepine)** potentially decrease the exposure to **pibrentasvir**. Avoid. Severe Theoretical
- Antiepileptics **(fosphenytoin, phenytoin)** are predicted to decrease the exposure to **pirfenidone**. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **pitolisant**. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ponatinib**. Avoid. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **praziquantel**. Avoid. Moderate Study
- Antiepileptics **(carbamazepine, phenobarbital, phenytoin, primidone)** are predicted to increase the risk of hypersensitivity reactions when given with **procarbazine**. Severe Anecdotal
- **Fosphenytoin** is predicted to increase the risk of hypersensitivity when given with **procarbazine**. Severe Anecdotal
- **Valproate** potentially increases the concentration of **propofol**. Adjust dose. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **quetiapine**. Moderate Study → Also see **TABLE 11** p. 1336
- **Valproate** potentially increases the risk of neutropenia when given with **quetiapine**. Moderate Study
- Quinolones **(ciprofloxacin)** affect the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. Severe Study
- Antiepileptics **(fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to affect the exposure to **raltegravir**. Use with caution or avoid. Moderate Theoretical
- **Carbamazepine** is predicted to affect the exposure to **raltegravir**. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ranolazine**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **reboxetine**. Moderate Anecdotal
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **regorafenib**. Avoid. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **ribociclib**. Avoid. Severe Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the exposure to **rifampicin** and **rifampicin** is predicted to decrease the exposure to antiepileptics **(phenobarbital, primidone)**. Use with caution and adjust dose. Moderate Study
- **Rifampicin** decreases the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Use with caution and adjust dose. Moderate Study
- **Rifampicin** slightly decreases the exposure to **brivaracetam**. Adjust dose. Moderate Study
- **Rifampicin** markedly increases the clearance of **lamotrigine**. Adjust **lamotrigine** dose, p. 316. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **perampanel**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** markedly decrease the exposure to **rilpivirine**. Avoid. Severe Study
- **Oxcarbazepine** is predicted to decrease the concentration of **rilpivirine**. Avoid. Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Antiepileptics (continued)

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **risperidone**. Adjust dose. Moderate Study → Also see **TABLE 11** p. 1336
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **roflumilast**. Avoid. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **rolapitant**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **saxagliptin**. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenytoin)** are predicted to decrease the exposure to the active metabolite of **selexipag**. Adjust dose. Moderate Study
- **Valproate** is predicted to increase the exposure to **selexipag**. Unknown Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **simeprevir**. Avoid. Severe Study
- **Oxcarbazepine** is predicted to decrease the exposure to **simeprevir**. Avoid. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **sirolimus**. Avoid. Severe Study
- **Valproate** increases the exposure to **sodium oxybate**. Adjust **sodium oxybate** dose, p. 484. Moderate Study
- **Valproate** potentially decreases the effects of **sodium phenylbutyrate**. Moderate Anecdotal
- Antiepileptics **(fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. Severe Theoretical
- **Carbamazepine** is predicted to decrease the exposure to **sofosbuvir**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **solifenacin**. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sorafenib**. Moderate Theoretical
- SSRIs **(fluoxetine, fluvoxamine)** are predicted to increase the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Monitor and adjust dose. Severe Anecdotal
- SSRIs **(sertraline)** potentially increase the risk of toxicity when given with antiepileptics **(fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. Severe Anecdotal
- Antiepileptics **(fosphenytoin, phenytoin)** decrease the concentration of SSRIs **(paroxetine)**. Moderate Study
- **St John's Wort** is predicted to decrease the concentration of antiepileptics **(fosphenytoin, phenobarbital, phenytoin, primidone)**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **brivaracetam**. Moderate Theoretical
- **St John's Wort** is predicted to decrease the concentration of **carbamazepine**. Monitor and adjust dose. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **perampanel**. Monitor and adjust dose. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **tiagabine**. Avoid. Mild Theoretical
- Antiepileptics **(carbamazepine, eslicarbazepine)** are predicted to decrease the exposure to statins **(atorvastatin)**. Monitor and adjust dose. Moderate Theoretical → Also see **TABLE 1** p. 1334
- Antiepileptics **(fosphenytoin, phenytoin)** potentially decrease the exposure to statins **(atorvastatin, simvastatin)**. Moderate Anecdotal
- **Carbamazepine** moderately decreases the exposure to statins **(simvastatin)**. Monitor and adjust dose. Severe Study → Also see **TABLE 1** p. 1334
- **Eslicarbazepine** moderately decreases the exposure to statins **(simvastatin)**. Monitor and adjust dose. Moderate Study
- **Sulfinpyrazone** increases the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Moderate Study
- Sulfonamides **(sulfadiazine)** are predicted to increase the concentration of **fosphenytoin**. Monitor and adjust dose. Moderate Study
- Sulfonamides **(sulfadiazine)** increase the concentration of **phenytoin**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. Moderate Study
- Antiepileptics **(fosphenytoin, phenytoin)** increase the effects of **suxamethonium**. Moderate Study
- **Carbamazepine** increases the risk of prolonged neuromuscular blockade when given with **suxamethonium**. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to taxanes **(cabazitaxel, paclitaxel)**. Avoid. Severe Study → Also see **TABLE 12** p. 1337
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to taxanes **(docetaxel)**. Severe Theoretical → Also see **TABLE 12** p. 1337
- **Tegafur** potentially increases the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. Severe Anecdotal
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to tetracyclines **(doxycycline)**. Monitor and adjust dose. Moderate Study → Also see **TABLE 1** p. 1334
- Antiepileptics **(fosphenytoin, phenytoin)** are predicted to decrease the exposure to **theophylline**. Adjust dose. Moderate Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to increase the clearance of **theophylline**. Adjust dose. Moderate Theoretical
- **Carbamazepine** potentially increases the clearance of **theophylline** and **theophylline** decreases the exposure to **carbamazepine**. Adjust dose. Moderate Anecdotal
- **Stiripentol** is predicted to increase the exposure to **theophylline**. Avoid. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenytoin)** are predicted to increase the risk of hypothyroidism when given with **thyroid hormones**. Moderate Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the effects of **thyroid hormones**. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tivozanib**. Severe Study
- Antiepileptics **(fosphenytoin, phenytoin)** moderately decrease the exposure to **tizanidine**. Mild Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tofacitinib**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tolvaptan**. Avoid. Severe Study

https://nhathuocngocanh.com/ www.getintopharma.com

- Antiepileptics **(fosphenytoin, phenytoin)** increase the clearance of **topotecan**. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **toremifene**. Adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **trabectedin**. Avoid. Severe Theoretical → Also see **TABLE 1** p. 1334
- **Carbamazepine** decreases the concentration of **trazodone**. Adjust dose. Moderate Anecdotal
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the exposure to **tricyclic antidepressants**. Moderate Study
- **Carbamazepine** decreases the exposure to **tricyclic antidepressants**. Adjust dose. Moderate Study → Also see **TABLE 18** p. 1338
- Tricyclic antidepressants **(clomipramine, imipramine)** potentially increase the risk of overheating and dehydration when given with **zonisamide**. Avoid in children. Severe Theoretical
- **Trimethoprim** increases the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Moderate Study
- Antiepileptics **(carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vandetanib**. Avoid. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **velpatasvir**. Avoid. Severe Study
- **Oxcarbazepine** is predicted to decrease the exposure to **velpatasvir**. Avoid. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vemurafenib**. Avoid. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to vinca alkaloids **(vinblastine, vincristine, vindesine)**. Severe Theoretical → Also see **TABLE 1** p. 1334 → Also see **TABLE 12** p. 1337
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to vinca alkaloids **(vinflunine)**. Avoid. Severe Theoretical → Also see **TABLE 12** p. 1337
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to vinca alkaloids **(vinorelbine)**. Use with caution or avoid. Severe Theoretical → Also see **TABLE 12** p. 1337
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vismodegib**. Avoid. Moderate Theoretical
- Antiepileptics **(fosphenytoin, phenytoin)** decrease the effects of **vitamin D substances**. Moderate Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the effects of **vitamin D substances**. Moderate Theoretical
- **Carbamazepine** is predicted to decrease the effects of **vitamin D substances**. Moderate Study
- Antiepileptics **(phenobarbital, primidone)** potentially increase the risk of nephrotoxicity when given with volatile halogenated anaesthetics **(methoxyflurane)**. Avoid. Severe Theoretical → Also see **TABLE 11** p. 1336
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Study
- **Oxcarbazepine** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Theoretical
- **Valproate** slightly increases the exposure to **zidovudine**. Moderate Study
- **Carbamazepine** moderately decreases the exposure to **zolpidem**. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **zopiclone**. Adjust dose. Moderate Study → Also see **TABLE 11** p. 1336

Antifungals, azoles → see **TABLE 1** p. 1334 (hepatotoxicity), **TABLE 9** p. 1336 (QT-interval prolongation)

clotrimazole • fluconazole • isavuconazole • itraconazole • ketoconazole • miconazole • posaconazole • voriconazole

- In general, **fluconazole** interactions relate to multiple-dose treatment.
- The use of carbonated drinks, such as cola, improves **itraconazole**, **ketoconazole**, and **posaconazole** bioavailability.
- Since systemic absorption can follow topical application, the possibility of interactions with topical **ketoconazole** should be borne in mind.
- Interactions of **miconazole** apply to the oral gel formulation, as a sufficient quantity can be absorbed to cause systemic effects. Systemic absorption from intravaginal and topical formulations might also occur.

- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **abiraterone**. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole)** are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. Moderate Study
- **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **ketoconazole**. Avoid. Moderate Anecdotal
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to aldosterone antagonists **(eplerenone)**. Adjust **eplerenone** dose, p. 190. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to aldosterone antagonists **(eplerenone)**. Avoid. Severe Study
- **Itraconazole** markedly increases the exposure to **aliskiren**. Avoid. Severe Study
- **Ketoconazole** moderately increases the exposure to **aliskiren**. Moderate Study
- **Itraconazole** increases the risk of busulfan toxicity when given with alkylating agents **(busulfan)**. Monitor and adjust dose. Moderate Study
- **Miconazole** is predicted to increase the concentration of alkylating agents **(busulfan)**. Use with caution and adjust dose. Moderate Theoretical
- **Isavuconazole** is predicted to increase the exposure to alkylating agents **(cyclophosphamide)**. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** increase the exposure to **almotriptan**. Mild Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to alpha blockers **(alfuzosin, tamsulosin)**. Use with caution or avoid. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to alpha blockers **(doxazosin)**. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to alpha blockers **(tamsulosin)**. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **alprazolam**. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** moderately increase the exposure to **alprazolam**. Avoid. Moderate Study
- **Miconazole** is predicted to increase the exposure to **alprazolam**. Use with caution and adjust dose. Moderate Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Antifungals, azoles (continued)

- **Miconazole** potentially decreases the exposure to aminoglycosides **(tobramycin)**. Moderate Anecdotal
- **Antacids** decrease the absorption of **itraconazole** (capsule). **Antacids** should be taken 1 hour before or 2 hours after **itraconazole**. Moderate Study
- **Antacids** decrease the absorption of **ketoconazole**. Separate administration by at least 2 hours. Moderate Study
- **Miconazole** is predicted to increase the exposure to antiarrhythmics **(disopyramide)**. Use with caution and adjust dose. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to antiarrhythmics **(disopyramide)**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Posaconazole** is predicted to increase the exposure to antiarrhythmics **(disopyramide, dronedarone)**. Avoid. Severe Theoretical
- **Fluconazole** is predicted to increase the exposure to antiarrhythmics **(dronedarone)**. Severe Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** very markedly increase the exposure to antiarrhythmics **(dronedarone)**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to antiarrhythmics **(propafenone)**. Monitor and adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to antiarrhythmics **(propafenone)**. Monitor and adjust dose. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to anticholinesterases, centrally acting **(galantamine)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine)** are predicted to decrease the efficacy of **fluconazole** and **fluconazole** increases the concentration of antiepileptics **(carbamazepine)**. Avoid or monitor **carbamazepine** concentration and adjust dose accordingly. Severe Theoretical → Also see **TABLE 1** p. 1334
- Antiepileptics **(carbamazepine)** are predicted to decrease the efficacy of **ketoconazole** and **ketoconazole** slightly increases the concentration of antiepileptics **(carbamazepine)**. Avoid or monitor **carbamazepine** concentration and adjust dose accordingly. Moderate Study
- Antiepileptics **(carbamazepine)** are predicted to decrease the efficacy of **posaconazole** and **posaconazole** increases the concentration of antiepileptics **(carbamazepine)**. Avoid. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **isavuconazole**. Avoid. Severe Study
- Antiepileptics **(fosphenytoin)** very markedly decrease the exposure to **itraconazole**. Avoid and for 14 days after stopping **fosphenytoin**. Moderate Study
- Antiepileptics **(fosphenytoin)** decrease the exposure to **voriconazole** and **voriconazole** increases the exposure to antiepileptics **(fosphenytoin)**. Avoid or adjust **voriconazole** dose, p. 588 and monitor phenytoin concentration. Moderate Study
- Antiepileptics **(fosphenytoin, phenytoin)** decrease the exposure to **ketoconazole**. Avoid. Moderate Study
- Antiepileptics **(fosphenytoin, phenytoin)** are predicted to decrease the exposure to **posaconazole**. Avoid. Moderate Study
- Antiepileptics **(phenobarbital)** decrease the concentration of **itraconazole**. Avoid and for 14 days after stopping **phenobarbital**. Moderate Study
- Antiepileptics **(phenobarbital)** are predicted to decrease the concentration of **ketoconazole**. Avoid. Moderate Study
- Antiepileptics **(phenobarbital)** are predicted to decrease the concentration of **posaconazole**. Avoid. Moderate Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the concentration of **voriconazole**. Avoid. Moderate Theoretical
- Antiepileptics **(phenytoin)** very markedly decrease the exposure to **itraconazole**. Avoid and for 14 days after stopping **phenytoin**. Moderate Study
- Antiepileptics **(phenytoin)** decrease the exposure to **voriconazole** and **voriconazole** increases the exposure to antiepileptics **(phenytoin)**. Avoid or adjust **voriconazole** dose, p. 588 and monitor **phenytoin** concentration. Moderate Study
- Antiepileptics **(primidone)** are predicted to decrease the concentration of **itraconazole**. Moderate Theoretical
- **Miconazole** increases the risk of carbamazepine toxicity when given with antiepileptics **(carbamazepine)**. Monitor and adjust dose. Severe Anecdotal
- **Miconazole** increases the risk of phenytoin toxicity when given with antiepileptics **(fosphenytoin)**. Monitor and adjust dose. Severe Anecdotal
- **Fluconazole** increases the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine)** are predicted to decrease the efficacy of antifungals, azoles **(itraconazole, voriconazole)** and antifungals, azoles **(itraconazole, voriconazole)** increase the concentration of antiepileptics **(carbamazepine)**. Avoid or adjust dose. Moderate Theoretical → Also see **TABLE 1** p. 1334
- Antiepileptics **(primidone)** are predicted to decrease the concentration of antifungals, azoles **(ketoconazole, posaconazole)**. Avoid. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to very slightly increase the exposure to antiepileptics **(perampanel)**. Mild Study
- **Miconazole** increases the risk of phenytoin toxicity when given with antiepileptics **(phenytoin)**. Monitor and adjust dose. Severe Anecdotal
- Antifungals, azoles **(fluconazole)** are predicted to increase the exposure to antifungals, azoles **(isavuconazole)**. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to antifungals, azoles **(isavuconazole)**. Avoid or monitor side effects. Severe Study
- Antifungals, azoles **(posaconazole)** are predicted to increase the exposure to antifungals, azoles **(isavuconazole)**. Moderate Theoretical
- **Miconazole** is predicted to increase the exposure to antihistamines, non-sedating **(mizolastine)**. Avoid. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to antihistamines, non-sedating **(mizolastine)**. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to antihistamines, non-sedating **(mizolastine)**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to antihistamines, non-sedating **(rupatadine)**. Avoid. Moderate Study
- **Ketoconazole** increases the exposure to antimalarials **(mefloquine)**. Moderate Study
- Antifungals, azoles **(fluconazole, itraconazole, posaconazole, voriconazole)** are predicted to increase the exposure to antimalarials **(mefloquine)**. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the concentration of antimalarials **(piperaquine)**. Severe Theoretical
- **Itraconazole** is predicted to increase the exposure to **apixaban**. Avoid. Severe Theoretical
- **Ketoconazole** slightly to moderately increases the exposure to **apixaban**. Avoid. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **aprepitant**. Moderate Study
- **Aprepitant** is predicted to increase the exposure to **isavuconazole**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **axitinib**. Moderate Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole)** are predicted to increase the exposure to beta blockers, non-selective **(nadolol)**. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to $beta_2$ agonists **(salmeterol)**. Avoid. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** slightly increase the exposure to **bortezomib**. Moderate Study
- **Fluconazole** is predicted to increase the exposure to **bosentan**. Avoid. Severe Study
- **Bosentan** is predicted to decrease the exposure to **isavuconazole**. Avoid. Severe Theoretical
- **Itraconazole** is predicted to increase the exposure to **bosentan**. Moderate Theoretical
- **Ketoconazole** moderately increases the exposure to **bosentan**. Moderate Study
- **Voriconazole** is predicted to increase the exposure to **bosentan**. Avoid. Severe Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Study → Also see **TABLE 9** p. 1336
- **Isavuconazole** slightly increases the exposure to **bupropion**. Adjust dose. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 338. Severe Study
- **Miconazole** is predicted to increase the concentration of **buspirone**. Use with caution and adjust dose. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **cabozantinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** slightly increase the exposure to **cabozantinib**. Moderate Study → Also see **TABLE 9** p. 1336
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **isavuconazole**. Moderate Theoretical
- **Miconazole** is predicted to increase the exposure to calcium channel blockers **(amlodipine, clevidipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine, verapamil)**. Use with caution and adjust dose. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Fluconazole** (high-dose) is predicted to increase the exposure to calcium channel blockers **(diltiazem, verapamil)**. Moderate Theoretical
- **Posaconazole** is predicted to increase the exposure to calcium channel blockers **(diltiazem, verapamil)**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to calcium channel blockers **(diltiazem, verapamil)**. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to calcium channel blockers **(lercanidipine)**. Avoid. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ceritinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 945. Severe Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** increase the concentration of **ciclosporin**. Severe Study
- **Miconazole** increases the concentration of **ciclosporin**. Monitor and adjust dose. Severe Anecdotal
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. Moderate Study
- **Fluconazole** is predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. Moderate Theoretical
- **Miconazole** is predicted to increase the exposure to **cilostazol**. Use with caution and adjust dose. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. Moderate Study
- Antifungals, azoles **(fluconazole, voriconazole)** potentially increase the exposure to **clobazam**. Adjust dose. Moderate Theoretical
- **Fluconazole** is predicted to decrease the efficacy of **clopidogrel**. Avoid. Severe Theoretical
- **Voriconazole** is predicted to decrease the efficacy of **clopidogrel**. Avoid. Moderate Study
- **Cobicistat** is predicted to increase the exposure to antifungals, azoles **(fluconazole, posaconazole)**. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to antifungals, azoles **(itraconazole, ketoconazole)**. Adjust dose. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **isavuconazole**. Avoid or monitor side effects. Severe Study
- **Cobicistat** is predicted to affect the exposure to **voriconazole**. Avoid. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, miconazole, posaconazole)** are predicted to increase the exposure to **cobimetinib**. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1085. Severe Study
- Corticosteroids **(prednisone)** potentially decrease the exposure to **isavuconazole**. Use with caution or avoid. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to corticosteroids **(beclometasone)** (risk with beclometasone is likely to be lower than with other corticosteroids). Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to corticosteroids **(betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, prednisone, triamcinolone)**. Avoid or monitor side effects. Severe Study
- **Miconazole** is predicted to increase the concentration of corticosteroids **(methylprednisolone)**. Monitor and adjust dose. Moderate Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Antifungals, azoles (continued)

- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to corticosteroids **(methylprednisolone)**. Monitor and adjust dose. Moderate Study
- **Fluconazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. Severe Study
- **Itraconazole** potentially increases the anticoagulant effect of **coumarins**. Severe Anecdotal
- **Ketoconazole** potentially increases the anticoagulant effect of coumarins **(warfarin)**. Monitor INR and adjust dose. Severe Anecdotal
- **Miconazole** greatly increases the anticoagulant effect of **coumarins**. MHRA advises avoid unless INR can be monitored closely; monitor for signs of bleeding. Severe Study
- **Voriconazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **crizotinib**. Avoid. Moderate Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole)** are predicted to increase the exposure to **dabigatran**. Avoid. Severe Study
- **Isavuconazole** is predicted to increase the exposure to **dabigatran**. Monitor and adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 614. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to slightly increase the exposure to **darifenacin**. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **dasatinib**. Severe Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **dasatinib**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** very slightly increase the exposure to **delamanid**. Severe Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(fluconazole, voriconazole)** moderately increase the exposure to **diazepam**. Monitor and adjust dose. Moderate Study
- **Didanosine** (buffered) decreases the exposure to antifungals, azoles **(itraconazole, ketoconazole)**. Separate administration by 2 hours. Severe Study → Also see **TABLE 1** p. 1334
- **Isavuconazole** slightly increases the exposure to **digoxin**. Monitor and adjust dose. Moderate Study
- **Itraconazole** is predicted to markedly increase the concentration of **digoxin**. Monitor and adjust dose. Severe Study
- **Ketoconazole** is predicted to markedly increase the concentration of **digoxin**. Severe Study
- **Posaconazole** is predicted to increase the concentration of **digoxin**. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** increase the risk of QT-prolongation when given with **domperidone**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to dopamine receptor agonists **(bromocriptine)**. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** increase the exposure to dopamine receptor agonists **(bromocriptine)**. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the concentration of dopamine receptor agonists **(cabergoline)**. Moderate Anecdotal
- **Ketoconazole** moderately increases the exposure to **drospirenone**. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to moderately increase the exposure to **dutasteride**. Mild Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. Moderate Theoretical
- **Itraconazole** is predicted to slightly increase the exposure to **edoxaban**. Severe Theoretical
- **Ketoconazole** slightly increases the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 125. Severe Study
- **Efavirenz** is predicted to decrease the exposure to **isavuconazole**. Avoid. Severe Theoretical
- **Efavirenz** slightly decreases the exposure to **itraconazole**. Avoid and for 14 days after stopping **efavirenz**. Moderate Study
- **Efavirenz** moderately decreases the exposure to **ketoconazole**. Severe Study
- **Efavirenz** slightly decreases the exposure to **posaconazole**. Avoid. Moderate Study
- **Efavirenz** moderately decreases the exposure to **voriconazole** and **voriconazole** slightly increases the exposure to **efavirenz**. Adjust dose. Severe Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** slightly to moderately increase the exposure to **elbasvir**. Avoid. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **eletriptan**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **isavuconazole**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the risk of ergotism when given with **ergometrine**. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. Severe Theoretical
- **Miconazole** is predicted to increase the exposure to **ergometrine**. Avoid. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the risk of ergotism when given with **ergotamine**. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. Severe Theoretical
- **Miconazole** is predicted to increase the exposure to **ergotamine**. Avoid. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **everolimus**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. Mild Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 759. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole)** are predicted to increase the exposure to **fidaxomicin**. Avoid. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **fosaprepitant**. Moderate Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **gefitinib**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **gefitinib**. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole)** potentially increase the exposure to **glecaprevir**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Study
- **H_2 receptor antagonists** are predicted to decrease the absorption of **itraconazole**. Administer **itraconazole** capsules with an acidic beverage. Moderate Study
- **H_2 receptor antagonists** are predicted to decrease the absorption of **ketoconazole**. Administer **ketoconazole** with an acidic beverage. Moderate Study
- **H_2 receptor antagonists** are predicted to decrease the exposure to **posaconazole**. Avoid use of posaconazole oral suspension. Moderate Study
- **Itraconazole** increases the concentration of **haloperidol**. Moderate Study
- **Fluconazole** slightly increases the exposure to HIV-protease inhibitors **(tipranavir)**. Avoid or adjust dose. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **isavuconazole**. Avoid or monitor side effects. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **itraconazole**. Use with caution and adjust dose. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **ketoconazole**. Use with caution and adjust dose. Moderate Study
- **Miconazole** is predicted to increase the concentration of **HIV-protease inhibitors**. Use with caution and adjust dose. Moderate Theoretical
- **Posaconazole** is predicted to increase the exposure to **HIV-protease inhibitors**. Moderate Study
- **HIV-protease inhibitors** are predicted to affect the exposure to **voriconazole** and **voriconazole** potentially affects the exposure to **HIV-protease inhibitors**. Severe Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 952. Severe Study
- **Idelalisib** is predicted to increase the exposure to **isavuconazole**. Avoid or monitor side effects. Severe Study
- Antifungals, azoles **(fluconazole, posaconazole)** are predicted to increase the exposure to **imatinib**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **imatinib**. Moderate Study
- **Imatinib** is predicted to decrease the exposure to **isavuconazole**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 210. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ivabradine**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor,** p. 292 or **lumacaftor with ivacaftor** p. 293 dose with potent inhibitors of CYP3A4. Severe Study
- **Lanthanum** is predicted to decrease the absorption of **ketoconazole**. Separate administration by at least 2 hours. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **lapatinib**. Moderate Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **lapatinib**. Avoid. Moderate Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical → Also see **TABLE 1** p. 1334
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **lomitapide**. Avoid. Severe Study → Also see **TABLE 1** p. 1334
- **Clotrimazole** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Lumacaftor** is predicted to decrease the exposure to antifungals, azoles **(itraconazole, ketoconazole, posaconazole, voriconazole)**. Avoid or monitor efficacy. Moderate Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **fluconazole**. Adjust dose. Mild Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **lurasidone**. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **lurasidone**. Avoid. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **macitentan**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **isavuconazole**. Avoid or monitor side effects. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **isavuconazole**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **maraviroc**. Adjust dose. Severe Study
- **Metoclopramide** potentially decreases the absorption of **posaconazole** (oral suspension). Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. Severe Study
- **Miconazole** is predicted to increase the exposure to intravenous **midazolam**. Use with caution and adjust dose. Moderate Theoretical
- **Miconazole** is predicted to increase the exposure to oral **midazolam**. Avoid. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 763. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **mirtazapine**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **isavuconazole**. Avoid. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **modafinil**. Mild Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole)** increase the risk of neutropenia when given with monoclonal antibodies **(brentuximab vedotin)**. Monitor and adjust dose. Severe Study

https://nhathuocngocanh.com/ www.getintopharma.com

Antifungals, azoles (continued)

- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to monoclonal antibodies **(trastuzumab emtansine)**. Avoid. Severe Theoretical
- **Isavuconazole** increases the exposure to **mycophenolate**. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **naloxegol**. Avoid. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **netupitant**. Moderate Study
- **Netupitant** is predicted to decrease the exposure to **isavuconazole**. Moderate Theoretical
- **Fluconazole** slightly to moderately increases the exposure to **nevirapine**. Moderate Study
- **Nevirapine** is predicted to decrease the exposure to **isavuconazole**. Avoid. Severe Theoretical
- **Nevirapine** moderately decreases the exposure to **itraconazole**. Avoid and for 14 days after stopping **nevirapine**. Moderate Study
- **Nevirapine** moderately decreases the exposure to **ketoconazole**. Avoid. Severe Study
- **Nevirapine** is predicted to decrease the exposure to **voriconazole** and **voriconazole** increases the exposure to **nevirapine**. Monitor and adjust dose. Severe Theoretical
- Antifungals, azoles **(fluconazole, posaconazole)** are predicted to increase the exposure to **nilotinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **nilotinib**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole)** are predicted to increase the exposure to **nintedanib**. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- **Fluconazole** moderately increases the exposure to NSAIDs **(celecoxib)**. Adjust **celecoxib** dose, p. 1097. Moderate Study
- **Voriconazole** slightly increases the exposure to NSAIDs **(diclofenac)**. Monitor and adjust dose. Moderate Study
- **Voriconazole** moderately increases the exposure to NSAIDs **(ibuprofen)**. Adjust dose. Moderate Study
- **Fluconazole** increases the exposure to NSAIDs **(parecoxib)**. Monitor and adjust dose. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Study
- **Miconazole** is predicted to increase the exposure to opioids **(alfentanil)**. Use with caution and adjust dose. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil)**. Monitor and adjust dose. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to opioids **(methadone)**. Adjust dose. Severe Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to opioids **(methadone, sufentanil)**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **oxybutynin**. Mild Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **oxybutynin**. Mild Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 961. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 911. Moderate Study → Also see **TABLE 9** p. 1336
- **Posaconazole** is predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. Severe Theoretical
- **Posaconazole** is predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir) and **paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **posaconazole**. Avoid. Severe Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **pazopanib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 962. Moderate Study → Also see **TABLE 9** p. 1336
- **Miconazole** greatly increases the anticoagulant effect of **phenindione**. Severe Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil)**. Adjust **avanafil** dose, p. 794. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil, vardenafil)**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **Miconazole** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(sildenafil)**. Use with caution and adjust dose. Severe Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. Moderate Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(sildenafil)**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 794. Severe Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(tadalafil)**. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(tadalafil)**. Use with caution or avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(vardenafil)**. Adjust dose. Severe Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole)** potentially increase the exposure to **pibrentasvir**. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **pimozide**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **Miconazole** is predicted to increase the exposure to **pimozide**. Avoid. Moderate Theoretical
- **Pioglitazone** potentially decreases the exposure to **isavuconazole**. Use with caution or avoid. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 963. Moderate Study

https://nhathuocngocanh.com/ www.getintopharma.com

- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **praziquantel**. Mild Study
- **Proton pump inhibitors** decrease the absorption of **itraconazole**. Administer **itraconazole** capsules with an acidic beverage. Moderate Study
- **Proton pump inhibitors** decrease the absorption of **ketoconazole**. Administer **ketoconazole** with an acidic beverage. Moderate Study
- **Proton pump inhibitors** decrease the absorption of **posaconazole** (oral suspension). Avoid. Moderate Study
- **Voriconazole** increases the exposure to proton pump inhibitors **(esomeprazole, omeprazole)**. Adjust dose. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **quetiapine**. Avoid. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **quetiapine**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ranolazine**. Severe Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ranolazine**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **reboxetine**. Avoid. Moderate Study
- **Miconazole** is predicted to increase the concentration of **reboxetine**. Use with caution and adjust dose. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **regorafenib**. Avoid. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **repaglinide**. Moderate Study
- Antifungals, azoles **(fluconazole, itraconazole, ketoconazole, miconazole, voriconazole)** are predicted to increase the exposure to retinoids **(alitretinoin)**. Adjust **alitretinoin** dose, p. 1226. Moderate Theoretical
- Antifungals, azoles **(fluconazole, ketoconazole, voriconazole)** are predicted to increase the risk of tretinoin toxicity when given with retinoids **(tretinoin)**. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ribociclib**. Moderate Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 965. Moderate Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, posaconazole)** increase the concentration of **rifabutin** and **rifabutin** decreases the concentration of antifungals, azoles **(itraconazole, posaconazole)**. Avoid. Severe Study
- **Fluconazole** increases the risk of uveitis when given with **rifabutin**. Adjust dose. Severe Study
- **Rifabutin** is predicted to decrease the exposure to **isavuconazole**. Avoid. Severe Theoretical
- **Ketoconazole** is predicted to increase the concentration of **rifabutin** and **rifabutin** is predicted to decrease the concentration of **ketoconazole**. Avoid. Severe Theoretical
- **Miconazole** is predicted to increase the concentration of **rifabutin**. Use with caution and adjust dose. Moderate Theoretical
- **Rifabutin** decreases the concentration of **voriconazole** and **voriconazole** increases the concentration of **rifabutin**. Avoid or adjust **voriconazole** dose, p. 588. Severe Study
- **Rifampicin** slightly decreases the exposure to **fluconazole**. Adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **isavuconazole**. Avoid. Severe Study
- **Rifampicin** markedly decreases the exposure to **itraconazole**. Avoid and for 14 days after stopping **rifampicin**. Moderate Study
- **Rifampicin** markedly decreases the exposure to **ketoconazole** and **ketoconazole** potentially decreases the exposure to **rifampicin**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **posaconazole**. Avoid. Moderate Anecdotal
- **Rifampicin** very markedly decreases the exposure to **voriconazole**. Avoid. Moderate Study
- **Itraconazole** is predicted to increase the exposure to **riociguat**. Avoid. Moderate Study
- **Ketoconazole** moderately increases the exposure to **riociguat**. Avoid. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **risperidone**. Adjust dose. Moderate Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole)** are predicted to moderately increase the exposure to **rivaroxaban**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ruxolitinib**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor side effects. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **saxagliptin**. Mild Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **saxagliptin**. Moderate Study
- **Fluconazole** is predicted to increase the exposure to **selexipag**. Unknown Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **simeprevir**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** increase the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **sirolimus**. Avoid. Severe Study
- **Miconazole** is predicted to increase the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- Oral **sodium bicarbonate** decreases the absorption of **ketoconazole**. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin,** p. 761 or **tamsulosin with solifenacin** p. 768 dose; avoid in hepatic and renal impairment. Severe Study
- **Voriconazole** is predicted to increase the exposure to SSRIs **(citalopram)**. Severe Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to SSRIs **(dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to SSRIs **(dapoxetine)**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 801. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **isavuconazole**. Avoid. Severe Theoretical
- **St John's Wort** moderately decreases the exposure to **voriconazole**. Avoid. Moderate Study
- **Miconazole** potentially increases the exposure to statins **(atorvastatin)**. Severe Anecdotal
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to statins **(atorvastatin)**. Monitor and adjust dose. Severe Study → Also see **TABLE 1** p. 1334
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to statins **(atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. Severe Study → Also see **TABLE 1** p. 1334
- Antifungals, azoles **(fluconazole, miconazole)** are predicted to increase the exposure to statins **(fluvastatin)**. Severe Theoretical → Also see **TABLE 1** p. 1334

https://nhathuocngocanh.com/ www.getintopharma.com

Antifungals, azoles (continued)

- **Miconazole** is predicted to increase the exposure to statins **(simvastatin)**. Avoid. Severe Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to statins **(simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 203. Severe Study → Also see **TABLE 1** p. 1334
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to statins **(simvastatin)**. Avoid. Severe Study → Also see **TABLE 1** p. 1334
- Antifungals, azoles **(fluconazole, miconazole)** are predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. Moderate Study
- **Voriconazole** is predicted to increase the concentration of **sulfonylureas**. Use with caution and adjust dose. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **sunitinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. Moderate Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **tacrolimus**. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- **Miconazole** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. Severe Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to taxanes **(cabazitaxel)**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to taxanes **(cabazitaxel)**. Avoid. Severe Study
- **Miconazole** is predicted to increase the concentration of taxanes **(docetaxel)**. Use with caution and adjust dose. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to taxanes **(docetaxel)**. Avoid or adjust dose. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to taxanes **(paclitaxel)**. Severe Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **temsirolimus**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **temsirolimus**. Avoid. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1072. Moderate Study
- **Isavuconazole** is predicted to increase the exposure to **tofacitinib**. Moderate Study
- **Posaconazole** is predicted to increase the exposure to **tofacitinib**. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tolterodine**. Mild Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tolterodine**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tolvaptan**. Adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tolvaptan**. Adjust dose. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole)** are predicted to increase the exposure to **topotecan**. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **toremifene**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. Severe Theoretical → Also see **TABLE 1** p. 1334
- Antifungals, azoles **(itraconazole, ketoconazole)** are predicted to increase the concentration of **trametinib**. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **trazodone**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **vemurafenib**. Severe Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **venetoclax**. Avoid potent inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **venlafaxine**. Moderate Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 1** p. 1334 → Also see **TABLE 9** p. 1336
- **Miconazole** is predicted to increase the concentration of **vinca alkaloids**. Use with caution and adjust dose. Moderate Theoretical
- Antifungals, azoles **(clotrimazole, ketoconazole)** are predicted to decrease the exposure to vitamin D substances **(colecalciferol)**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to vitamin D substances **(paricalcitol)**. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Theoretical

Antihistamines, non-sedating → see **TABLE 9** p. 1336 (QT-interval prolongation)

acrivastine • azelastine • bilastine • cetirizine • desloratadine • fexofenadine • levocetirizine • loratadine • mizolastine • rupatadine

FOOD AND LIFESTYLE Apple juice and orange juice decrease the exposure to fexofenadine.

- **Antacids** decrease the absorption of **fexofenadine**. Separate administration by 2 hours. Mild Study
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **rupatadine**. Avoid. Moderate Study
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to antihistamines, non-sedating **(fexofenadine, mizolastine)**. Severe Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **rupatadine**. Avoid. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **mizolastine**. Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **mizolastine**. Avoid. Severe Study
- Antifungals, azoles **(miconazole)** are predicted to increase the exposure to **mizolastine**. Avoid. Moderate Theoretical
- **Aprepitant** is predicted to increase the exposure to **mizolastine**. Severe Theoretical
- **Aprepitant** is predicted to increase the exposure to **rupatadine**. Avoid. Moderate Study
- **Antihistamines, non-sedating** are predicted to decrease the effects of **betahistine**. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **mizolastine**. Severe Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **rupatadine**. Avoid. Moderate Study
- **Ceritinib** is predicted to increase the exposure to **fexofenadine**. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **mizolastine**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to **rupatadine**. Avoid. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **mizolastine**. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **rupatadine**. Avoid. Moderate Study
- **Mizolastine** is predicted to increase the risk of QT-prolongation when given with **drugs that prolong the QT interval**. Avoid. Severe Theoretical
- **Eliglustat** is predicted to increase the exposure to **fexofenadine**. Adjust dose. Moderate Study
- **Grapefruit juice** slightly decreases the exposure to **bilastine**. **Bilastine** should be taken 1 hour before or 2 hours after **grapefruit juice**. Moderate Study
- **Grapefruit juice** increases the exposure to **rupatadine**. Avoid. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **mizolastine**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **rupatadine**. Avoid. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **mizolastine**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **rupatadine**. Avoid. Moderate Study
- **Imatinib** is predicted to increase the exposure to **mizolastine**. Severe Theoretical
- **Imatinib** is predicted to increase the exposure to **rupatadine**. Avoid. Moderate Study
- **Lapatinib** is predicted to increase the exposure to **fexofenadine**. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **mizolastine**. Avoid. Severe Study
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to **rupatadine**. Avoid. Moderate Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **mizolastine**. Severe Theoretical
- **Mirabegron** is predicted to increase the exposure to **fexofenadine**. Mild Theoretical
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of antimuscarinic side-effects when given with **antihistamines, non-sedating**. Avoid. Severe Theoretical
- **Netupitant** is predicted to increase the exposure to **mizolastine**. Severe Theoretical
- **Netupitant** is predicted to increase the exposure to **rupatadine**. Avoid. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **mizolastine**. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **rupatadine**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **bilastine**. Moderate Theoretical
- **Rifampicin** increases the clearance of **fexofenadine**. Moderate Study
- **Velpatasvir** is predicted to increase the exposure to **fexofenadine**. Severe Theoretical

Antihistamines, sedating → see **TABLE 9** p. 1336 (QT-interval prolongation), **TABLE 11** p. 1336 (CNS depressant effects), **TABLE 10** p. 1336 (antimuscarinics)

alimemazine · antazoline · buclizine · chlorphenamine · cinnarizine · clemastine · cyclizine · cyproheptadine · hydroxyzine · ketotifen · pizotifen · promethazine

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application of **ketotifen**, the possibility of interactions should be borne in mind.

- **Hydroxyzine** potentially increases the risk of overheating and dehydration when given with antiepileptics **(zonisamide)**. Avoid in children. Severe Theoretical
- **Antihistamines, sedating** are predicted to decrease the effects of **betahistine**. Moderate Theoretical
- **Cyproheptadine** decreases the effects of **metyrapone**. Avoid. Moderate Study
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of antimuscarinic side-effects when given with **antihistamines, sedating**. Avoid. Severe Theoretical
- **Antihistamines, sedating** are predicted to decrease the efficacy of **pitolisant**. Unknown Theoretical
- **Cyproheptadine** potentially decreases the effects of **SSRIs**. Moderate Anecdotal

Antimalarials → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 9** p. 1336 (QT-interval prolongation)

artemether · artenimol · atovaquone · chloroquine · lumefantrine · mefloquine · piperaquine · primaquine · proguanil · pyrimethamine · quinine

PHARMACOLOGY Piperaquine has a long half-life; there is a potential for drug interactions to occur for up to 3 months after treatment has been stopped.

- **Chloroquine** is predicted to decrease the effects of **agalsidase**. Avoid. Moderate Theoretical
- Antimalarials **(chloroquine, primaquine)** are predicted to increase the risk of methaemoglobinaemia when given with topical anaesthetics, local **(prilocaine)**. Use with caution or avoid. Severe Theoretical
- **Antacids** decrease the absorption of **chloroquine**. Separate administration by at least 4 hours. Moderate Study
- **Antacids** are predicted to decrease the absorption of **proguanil**. Separate administration by at least 2 hours. Moderate Study
- Antiarrhythmics **(dronedarone)** are predicted to increase the concentration of **piperaquine**. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **artemether** (with lumafantrine). Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **piperaquine**. Avoid. Moderate Theoretical
- Antiepileptics **(carbamazepine, phenobarbital, primidone)** potentially increase the risk of toxicity when given with **quinine**. Unknown Study
- **Pyrimethamine** increases the risk of haematological toxicity when given with antiepileptics **(fosphenytoin, phenytoin)**. Severe Study
- **Pyrimethamine** is predicted to increase the risk of haematological toxicity when given with antiepileptics **(phenobarbital, primidone)**. Severe Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the concentration of **piperaquine**. Severe Theoretical
- Antifungals, azoles **(fluconazole, itraconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **mefloquine**. Moderate Theoretical
- Antifungals, azoles **(ketoconazole)** increase the exposure to **mefloquine**. Moderate Study
- Antimalarials **(proguanil)** are predicted to increase the risk of side-effects when given with antimalarials **(pyrimethamine)**. Severe Theoretical
- **Aprepitant** is predicted to increase the concentration of **piperaquine**. Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Antimalarials (continued)

- **Mefloquine** is predicted to increase the risk of bradycardia when given with **beta blockers, non-selective**. Severe Theoretical
- **Mefloquine** is predicted to increase the risk of bradycardia when given with **beta blockers, selective**. Severe Theoretical
- **Mefloquine** is predicted to increase the risk of bradycardia when given with **calcium channel blockers**. Severe Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the concentration of **piperaquine**. Severe Theoretical
- Calcium salts **(calcium carbonate)** decrease the absorption of **chloroquine**. Separate administration by at least 4 hours. Moderate Study
- Calcium salts **(calcium carbonate)** are predicted to decrease the absorption of **proguanil**. Separate administration by at least 2 hours. Moderate Study
- **Chloroquine** decreases the efficacy of oral **cholera vaccine**. Moderate Study
- **Cobicistat** is predicted to increase the concentration of **piperaquine**. Severe Theoretical
- **Crizotinib** is predicted to increase the concentration of **piperaquine**. Severe Theoretical
- Antimalarials **(chloroquine, primaquine)** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. Severe Theoretical
- **Mefloquine** is predicted to increase the risk of bradycardia when given with **digoxin**. Severe Theoretical
- **Quinine** increases the concentration of **digoxin**. Monitor and adjust **digoxin** dose, p. 109. Severe Anecdotal
- **Mefloquine** is predicted to increase the risk of QT-prolongation when given with **drugs that prolong the QT interval**. Severe Theoretical
- **Efavirenz** decreases the concentration of **artemether**. Severe Study → Also see **TABLE 9** p. 1336
- **Efavirenz** moderately decreases the exposure to **atovaquone**. Avoid. Moderate Study
- **Efavirenz** affects the exposure to **proguanil**. Avoid. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **artemether** (with lumafantrine). Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the concentration of **piperaquine**. Avoid. Moderate Theoretical
- **Etravirine** decreases the exposure to **artemether**. Moderate Study
- **Grapefruit juice** increases the exposure to **artemether**. Unknown Study
- **Grapefruit juice** is predicted to increase the concentration of **piperaquine**. Avoid. Severe Theoretical
- H_2 receptor antagonists **(cimetidine)** decrease the clearance of **chloroquine**. Moderate Study
- H_2 receptor antagonists **(cimetidine)** slightly increase the exposure to **quinine**. Moderate Study
- **HIV-protease inhibitors** decrease the exposure to **atovaquone**. Avoid if boosted with ritonavir. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the concentration of **piperaquine**. Severe Theoretical
- **HIV-protease inhibitors** are predicted to decrease the exposure to **proguanil**. Avoid. Moderate Study
- **HIV-protease inhibitors** are predicted to affect the exposure to **quinine**. Severe Study → Also see **TABLE 9** p. 1336
- **Idelalisib** is predicted to increase the concentration of **piperaquine**. Severe Theoretical
- **Imatinib** is predicted to increase the concentration of **piperaquine**. Severe Theoretical
- **Lanthanum** is predicted to decrease the absorption of **chloroquine**. Separate administration by at least 2 hours. Moderate Theoretical
- **Chloroquine** is predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. Severe Theoretical
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the concentration of **piperaquine**. Severe Theoretical
- **Mepacrine** is predicted to increase the concentration of **primaquine**. Avoid. Moderate Theoretical
- **Pyrimethamine** is predicted to increase the risk of side-effects when given with **methotrexate**. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Metoclopramide** decreases the concentration of **atovaquone**. Avoid. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **artemether** (with lumafantrine). Avoid. Severe Study
- **Mitotane** is predicted to decrease the concentration of **piperaquine**. Avoid. Moderate Theoretical
- **Netupitant** is predicted to increase the concentration of **piperaquine**. Severe Theoretical
- **Nilotinib** is predicted to increase the concentration of **piperaquine**. Severe Theoretical
- **Pyrimethamine** is predicted to increase the risk of side-effects when given with **pemetrexed**. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Chloroquine** is predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. Severe Theoretical
- **Chloroquine** moderately decreases the exposure to **praziquantel**. Use with caution and adjust dose. Moderate Study
- **Chloroquine** decreases the efficacy of **rabies vaccine**. Avoid. Moderate Study
- **Rifabutin** slightly decreases the exposure to **atovaquone**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **artemether** (with lumafantrine). Avoid. Severe Study
- **Rifampicin** moderately decreases the exposure to **atovaquone** and **atovaquone** slightly increases the exposure to **rifampicin**. Avoid. Moderate Study
- **Rifampicin** moderately decreases the exposure to **mefloquine**. Severe Study
- **Rifampicin** is predicted to decrease the concentration of **piperaquine**. Avoid. Moderate Theoretical
- **Rifampicin** decreases the exposure to **quinine**. Severe Study
- **St John's Wort** is predicted to decrease the concentration of **piperaquine**. Avoid. Moderate Theoretical
- **Pyrimethamine** increases the risk of side-effects when given with **sulfonamides**. Severe Study → Also see **TABLE 15** p. 1337
- Tetracyclines **(tetracycline)** decrease the concentration of **atovaquone**. Moderate Study
- **Pyrimethamine** increases the risk of side-effects when given with **trimethoprim**. Severe Study
- **Pyrimethamine** is predicted to increase the risk of side-effects when given with **zidovudine**. Severe Theoretical → Also see **TABLE 15** p. 1337

Apixaban → see **TABLE 3** p. 1334 (anticoagulant effects)

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **apixaban**. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. Severe Study
- Antifungals, azoles **(itraconazole)** are predicted to increase the exposure to **apixaban**. Avoid. Severe Theoretical
- Antifungals, azoles **(ketoconazole)** slightly to moderately increase the exposure to **apixaban**. Avoid. Severe Study
- Calcium channel blockers **(verapamil)** are predicted to increase the exposure to **apixaban**. Moderate Theoretical
- **Enzalutamide** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. Severe Study
- HIV-protease inhibitors **(ritonavir)** are predicted to increase the exposure to **apixaban**. Avoid. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **apixaban**. Severe Theoretical
- Macrolides **(erythromycin)** are predicted to increase the exposure to **apixaban**. Moderate Theoretical
- **Mitotane** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. Severe Study
- **Rifampicin** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **apixaban**. Use with caution or avoid. Moderate Theoretical

Apomorphine → see dopamine receptor agonists

https://nhathuocngocanh.com/ www.getintopharma.com

Apraclonidine → see **TABLE 6** p. 1335 (bradycardia), **TABLE 8** p. 1335 (hypotension), **TABLE 11** p. 1336 (CNS depressant effects)

- **Amfetamines** are predicted to decrease the effects of **apraclonidine**. Avoid. Severe Theoretical
- **Methylphenidate** is predicted to decrease the effects of **apraclonidine**. Avoid. Severe Theoretical
- **Sympathomimetics, inotropic** are predicted to decrease the effects of **apraclonidine**. Avoid. Severe Theoretical
- **Sympathomimetics, vasoconstrictor** are predicted to decrease the effects of **apraclonidine**. Avoid. Severe Theoretical

Apremilast

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** moderately decrease the exposure to **apremilast**. Avoid. Severe Study
- **Enzalutamide** moderately decreases the exposure to **apremilast**. Avoid. Severe Study
- **Mitotane** moderately decreases the exposure to **apremilast**. Avoid. Severe Study
- **Rifampicin** moderately decreases the exposure to **apremilast**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **apremilast**. Avoid. Severe Theoretical

Aprepitant

- **Aprepitant** is predicted to increase the exposure to aldosterone antagonists **(eplerenone)**. Adjust **eplerenone** dose, p. 190. Severe Study
- **Aprepitant** is predicted to increase the exposure to alpha blockers **(tamsulosin)**. Moderate Theoretical
- **Aprepitant** is predicted to increase the exposure to **alprazolam**. Severe Study
- **Aprepitant** increases the exposure to antiarrhythmics **(dronedarone)**. Severe Theoretical
- **Aprepitant** is predicted to increase the exposure to antiarrhythmics **(propafenone)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **aprepitant**. Avoid. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **aprepitant**. Moderate Study
- **Aprepitant** is predicted to increase the exposure to antifungals, azoles **(isavuconazole)**. Moderate Theoretical
- **Aprepitant** is predicted to increase the exposure to antihistamines, non-sedating **(mizolastine)**. Severe Theoretical
- **Aprepitant** is predicted to increase the exposure to antihistamines, non-sedating **(rupatadine)**. Avoid. Moderate Study
- **Aprepitant** is predicted to increase the concentration of antimalarials **(piperaquine)**. Severe Theoretical
- **Aprepitant** is predicted to increase the exposure to **axitinib**. Moderate Theoretical
- **Aprepitant** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Theoretical
- **Aprepitant** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Theoretical
- **Aprepitant** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. Moderate Study
- **Aprepitant** is predicted to increase the exposure to **cabozantinib**. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **aprepitant** and **aprepitant** is predicted to increase the exposure to calcium channel blockers **(diltiazem, verapamil)**. Moderate Study
- **Aprepitant** is predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Aprepitant** is predicted to increase the exposure to **ceritinib**. Moderate Theoretical
- **Aprepitant** increases the concentration of **ciclosporin**. Severe Study
- **Cobicistat** is predicted to markedly increase the exposure to **aprepitant**. Moderate Study
- **Aprepitant** is predicted to increase the exposure to **cobimetinib**. Severe Theoretical
- **Aprepitant** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. Severe Study
- **Aprepitant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Study
- **Aprepitant** moderately increases the exposure to corticosteroids **(dexamethasone)**. Monitor and adjust dose. Moderate Study
- **Aprepitant** is predicted to increase the exposure to corticosteroids **(methylprednisolone)**. Monitor and adjust dose. Moderate Study
- **Aprepitant** decreases the anticoagulant effect of **coumarins**. Moderate Study
- **Aprepitant** is predicted to slightly increase the exposure to **darifenacin**. Moderate Study
- **Aprepitant** is predicted to increase the exposure to **dasatinib**. Severe Study
- **Aprepitant** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Aprepitant** increases the risk of QT-prolongation when given with **domperidone**. Avoid. Severe Study
- **Aprepitant** is predicted to increase the exposure to dopamine receptor agonists **(bromocriptine)**. Severe Theoretical
- **Aprepitant** is predicted to increase the concentration of dopamine receptor agonists **(cabergoline)**. Moderate Anecdotal
- **Aprepitant** is predicted to moderately increase the exposure to **dutasteride**. Mild Study
- **Aprepitant** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Enzalutamide** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. Moderate Study
- **Aprepitant** is predicted to increase the risk of ergotism when given with **ergometrine**. Severe Theoretical
- **Aprepitant** is predicted to increase the risk of ergotism when given with **ergotamine**. Severe Theoretical
- **Aprepitant** is predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- **Aprepitant** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Aprepitant** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. Moderate Study
- **Aprepitant** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. Mild Study
- **Aprepitant** is predicted to increase the exposure to **gefitinib**. Moderate Theoretical
- **Aprepitant** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to markedly increase the exposure to **aprepitant**. Moderate Study
- **Aprepitant** is predicted to decrease the effects of **hormone replacement therapy**. Moderate Anecdotal
- **Aprepitant** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. Severe Study
- **Idelalisib** is predicted to markedly increase the exposure to **aprepitant**. Moderate Study
- **Aprepitant** is predicted to increase the exposure to **imatinib**. Moderate Theoretical
- **Aprepitant** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 210. Severe Theoretical
- **Aprepitant** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. Severe Study
- **Aprepitant** is predicted to increase the exposure to **lapatinib**. Moderate Study
- **Aprepitant** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Aprepitant** is predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Aprepitant (continued)
- **Aprepitant** is predicted to increase the exposure to **lurasidone**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to markedly increase the exposure to **aprepitant**. Moderate Study
- **Aprepitant** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. Severe Study
- **Aprepitant** is predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- **Mitotane** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. Moderate Study
- **Aprepitant** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. Moderate Study
- **Aprepitant** is predicted to increase the exposure to **nilotinib**. Moderate Theoretical
- **Aprepitant** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Aprepitant** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Theoretical
- **Aprepitant** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study
- **Aprepitant** is predicted to increase the exposure to opioids **(methadone, sufentanil)**. Moderate Theoretical
- **Aprepitant** is predicted to increase the exposure to **oxybutynin**. Mild Theoretical
- **Aprepitant** is predicted to increase the exposure to **pazopanib**. Moderate Theoretical
- **Aprepitant** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil)**. Adjust **avanafil** dose, p. 794. Moderate Theoretical
- **Aprepitant** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. Moderate Study
- **Aprepitant** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(tadalafil)**. Severe Theoretical
- **Aprepitant** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(vardenafil)**. Adjust dose. Severe Theoretical
- **Aprepitant** is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical
- **Aprepitant** is predicted to increase the exposure to **quetiapine**. Avoid. Moderate Study
- **Aprepitant** is predicted to increase the exposure to **ranolazine**. Severe Study
- **Aprepitant** is predicted to increase the exposure to **ribociclib**. Moderate Study
- **Rifampicin** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. Moderate Study
- **Aprepitant** is predicted to increase the exposure to **ruxolitinib**. Moderate Theoretical
- **Aprepitant** is predicted to increase the exposure to **saxagliptin**. Mild Study
- **Aprepitant** is predicted to increase the exposure to **simeprevir**. Avoid. Severe Study
- **Aprepitant** increases the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- **Aprepitant** is predicted to increase the exposure to SSRIs **(dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **aprepitant**. Avoid. Moderate Theoretical
- **Aprepitant** is predicted to increase the exposure to statins **(atorvastatin)**. Monitor and adjust dose. Severe Study
- **Aprepitant** is predicted to increase the exposure to statins **(simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 203. Severe Study
- **Aprepitant** is predicted to increase the exposure to **sunitinib**. Moderate Theoretical
- **Aprepitant** is predicted to increase the concentration of **tacrolimus**. Severe Study
- **Aprepitant** is predicted to increase the exposure to taxanes **(cabazitaxel)**. Moderate Theoretical
- **Aprepitant** is predicted to increase the concentration of **temsirolimus**. Moderate Theoretical
- **Aprepitant** is predicted to increase the exposure to **tofacitinib**. Moderate Study
- **Aprepitant** is predicted to increase the exposure to **tolterodine**. Mild Theoretical
- **Aprepitant** is predicted to increase the exposure to **tolvaptan**. Adjust dose. Moderate Study
- **Aprepitant** is predicted to increase the exposure to **trazodone**. Moderate Theoretical
- **Aprepitant** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Aprepitant** is predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- **Aprepitant** is predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical
- **Aprepitant** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study

Argatroban → see **TABLE 3** p. 1334 (anticoagulant effects)
- **Ranibizumab** is predicted to increase the risk of bleeding events when given with **argatroban**. Severe Theoretical

Aripiprazole → see **TABLE 8** p. 1335 (hypotension), **TABLE 11** p. 1336 (CNS depressant effects)
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. Moderate Study → Also see **TABLE 11** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. Moderate Study
- **Bupropion** is predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. Moderate Study
- **Cinacalcet** is predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. Moderate Study
- **Cobicistat** is predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. Moderate Study
- **Aripiprazole** is predicted to decrease the effects of **dopamine receptor agonists**. Moderate Theoretical → Also see **TABLE 8** p. 1335
- **Enzalutamide** is predicted to moderately decrease the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. Moderate Study
- **HIV-protease inhibitors** are predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. Moderate Study
- **Idelalisib** is predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. Moderate Study
- **Aripiprazole** is predicted to decrease the effects of **levodopa**. Severe Theoretical → Also see **TABLE 8** p. 1335
- Macrolides **(clarithromycin)** are predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. Moderate Study
- **Mitotane** is predicted to moderately decrease the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. Moderate Study
- **Rifampicin** is predicted to moderately decrease the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. Moderate Study
- SSRIs **(fluoxetine, paroxetine)** are predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. Moderate Study
- **Terbinafine** is predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. Moderate Study

Arsenic trioxide → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 9** p. 1336 (QT-interval prolongation)

Artemether → see antimalarials

Artenimol → see antimalarials

Articaine → see **TABLE 11** p. 1336 (CNS depressant effects)

Ascorbic acid
- **Ascorbic acid** is predicted to increase the risk of cardiovascular side-effects when given with **deferiprone**. Severe Theoretical
- **Ascorbic acid** is predicted to increase the risk of cardiovascular side-effects when given with iron chelators **(desferrioxamine)**. Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Asenapine → see **TABLE 8** p. 1335 (hypotension), **TABLE 11** p. 1336 (CNS depressant effects)
- **Asenapine** is predicted to decrease the effects of **dopamine receptor agonists**. Adjust dose. Moderate Theoretical → Also see **TABLE 8** p. 1335
- **Asenapine** is predicted to decrease the effects of **levodopa**. Adjust dose. Severe Theoretical → Also see **TABLE 8** p. 1335
- SSRIs **(fluvoxamine)** increase the exposure to **asenapine**. Moderate Study
- SSRIs **(paroxetine)** moderately increase the exposure to **asenapine**. Moderate Study

Asparaginase → see **TABLE 1** p. 1334 (hepatotoxicity), **TABLE 15** p. 1337 (myelosuppression)
- **Asparaginase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Asparaginase** affects the efficacy of **methotrexate**. Severe Anecdotal → Also see **TABLE 1** p. 1334 → Also see **TABLE 15** p. 1337
- **Asparaginase** potentially increases the risk of neurotoxicity when given with vinca alkaloids **(vincristine)**. **Vincristine** should be taken 3 to 24 hours before **asparaginase**, p. 908. Severe Anecdotal → Also see **TABLE 1** p. 1334 → Also see **TABLE 15** p. 1337

Aspirin → see **TABLE 4** p. 1334 (antiplatelet effects)
- **Acetazolamide** increases the risk of severe toxic reaction when given with **aspirin** (high-dose). Severe Study
- **Antacids** decrease the absorption of **aspirin** (high-dose). Moderate Study
- **Aspirin** (high-dose) is predicted to increase the risk of gastrointestinal irritation when given with bisphosphonates **(alendronic acid, ibandronic acid)**. Moderate Study
- **Aspirin** (high-dose) is predicted to increase the risk of renal impairment when given with bisphosphonates **(sodium clodronate)**. Severe Theoretical
- **Corticosteroids** are predicted to decrease the concentration of **aspirin** (high-dose) and **aspirin** (high-dose) increases the risk of gastrointestinal bleeding when given with **corticosteroids**. Moderate Study
- **Aspirin** (high-dose) increases the risk of renal impairment when given with **daptomycin**. Moderate Theoretical
- **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **aspirin** (high-dose). Severe Theoretical
- **Aspirin** (high-dose) is predicted to increase the risk of gastrointestinal bleeds when given with iron chelators **(deferasirox)**. Severe Theoretical
- **Aspirin** (high-dose) is predicted to increase the risk of toxicity when given with **methotrexate**. Severe Theoretical
- **Aspirin** is predicted to increase the risk of gastrointestinal perforation when given with **nicorandil**. Severe Theoretical
- **Aspirin** (high-dose) potentially increases the exposure to **pemetrexed**. Use with caution or avoid. Severe Theoretical
- **Aspirin** decreases the effects of **sulfinpyrazone**. Moderate Study → Also see **TABLE 4** p. 1334
- **Aspirin** (high-dose) increases the risk of acute renal failure when given with **thiazide diuretics**. Severe Theoretical
- **Zidovudine** increases the risk of haematological toxicity when given with **aspirin** (high-dose). Severe Study

Ataluren
- **Ataluren** increases the exposure to **adefovir**. Moderate Study
- **Ataluren** is predicted to increase the risk of nephrotoxicity when given with intravenous **aminoglycosides**. Avoid. Severe Study
- **Rifampicin** decreases the exposure to **ataluren**. Moderate Study

Atazanavir → see HIV-protease inhibitors

Atenolol → see beta blockers, selective

Atezolizumab → see monoclonal antibodies

Atomoxetine
- **Amfetamines** are predicted to increase the risk of side-effects when given with **atomoxetine**. Severe Theoretical
- **Atomoxetine** is predicted to increase the risk of cardiovascular side-effects when given with **beta$_2$ agonists** (high-dose). Moderate Study
- **Bupropion** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. Severe Study
- **Cinacalcet** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. Severe Study
- **Eliglustat** is predicted to increase the exposure to **atomoxetine**. Adjust dose. Moderate Theoretical
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of side-effects when given with **atomoxetine**. Avoid and for 2 weeks after stopping the MAOI. Severe Theoretical
- **Panobinostat** is predicted to increase the exposure to **atomoxetine**. Monitor and adjust dose. Severe Theoretical
- SSRIs **(fluoxetine, paroxetine)** are predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. Severe Study
- **Terbinafine** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. Severe Study

Atorvastatin → see statins

Atovaquone → see antimalarials

Atracurium → see neuromuscular blocking drugs, non-depolarising

Atropine → see **TABLE 10** p. 1336 (antimuscarinics)
- **Atropine** increases the risk of severe hypertension when given with sympathomimetics, vasoconstrictor **(phenylephrine)**. Severe Study

Avanafil → see phosphodiesterase type-5 inhibitors

Avelumab → see monoclonal antibodies

Axitinib → see **TABLE 15** p. 1337 (myelosuppression)
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **axitinib**. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **axitinib**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. Moderate Study
- **Aprepitant** is predicted to increase the exposure to **axitinib**. Moderate Theoretical
- **Bosentan** is predicted to decrease the exposure to **axitinib**. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **axitinib**. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. Moderate Study
- **Axitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **axitinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Efavirenz** is predicted to decrease the exposure to **axitinib**. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. Moderate Study
- **Grapefruit juice** is predicted to increase the exposure to **axitinib**. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. Moderate Study → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to increase the exposure to **axitinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. Moderate Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **axitinib**. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. Moderate Study → Also see **TABLE 15** p. 1337
- **Netupitant** is predicted to increase the exposure to **axitinib**. Moderate Theoretical
- **Nevirapine** is predicted to decrease the exposure to **axitinib**. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to **axitinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Axitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Axitinib (continued)
- **Rifampicin** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. Moderate Study
- **St John's Wort** is predicted to decrease the exposure to **axitinib**. Moderate Theoretical

Azacitidine → see **TABLE 15** p. 1337 (myelosuppression)

Azathioprine → see **TABLE 15** p. 1337 (myelosuppression)
- **ACE inhibitors** are predicted to increase the risk of anaemia and/or leucopenia when given with **azathioprine**. Severe Anecdotal
- **Allopurinol** potentially increases the risk of haematological toxicity when given with **azathioprine**. Adjust **azathioprine** dose, p. 816. Severe Study
- **Azathioprine** decreases the anticoagulant effect of **coumarins**. Moderate Study
- **Febuxostat** is predicted to increase the exposure to **azathioprine**. Avoid. Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **azathioprine** (high-dose). Public Health England advises avoid (refer to Green Book). Severe Theoretical

Azelastine → see antihistamines, non-sedating

Azilsartan → see angiotensin-II receptor antagonists

Azithromycin → see macrolides

Bacillus Calmette-Guérin vaccine → see live vaccines

Bacitracin → see **TABLE 2** p. 1334 (nephrotoxicity)

Baclofen → see **TABLE 8** p. 1335 (hypotension), **TABLE 11** p. 1336 (CNS depressant effects), **TABLE 10** p. 1336 (antimuscarinics)
- **Baclofen** is predicted to increase the risk of side-effects when given with **levodopa**. Severe Anecdotal → Also see **TABLE 8** p. 1335

Balsalazide → see **TABLE 15** p. 1337 (myelosuppression)
- **Balsalazide** is predicted to decrease the concentration of **digoxin**. Moderate Theoretical

Bambuterol → see beta$_2$ agonists

Baricitinib
- **Leflunomide** potentially increases the exposure to **baricitinib**. Moderate Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **baricitinib**. Avoid. Severe Theoretical
- **Teriflunomide** potentially increases the exposure to **baricitinib**. Moderate Theoretical

Basiliximab → see monoclonal antibodies

Bazedoxifene
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **bazedoxifene**. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **bazedoxifene**. Moderate Theoretical

Beclometasone → see corticosteroids

Bedaquiline → see **TABLE 9** p. 1336 (QT-interval prolongation)
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Theoretical → Also see **TABLE 9** p. 1336
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **bedaquiline**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Study → Also see **TABLE 9** p. 1336
- **Aprepitant** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Theoretical
- **Bosentan** is predicted to decrease the exposure to **bedaquiline**. Avoid. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Theoretical
- **Clofazimine** potentially increases the risk of QT-prolongation when given with **bedaquiline**. Severe Study
- **Cobicistat** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Study
- **Crizotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Theoretical → Also see **TABLE 9** p. 1336
- **Efavirenz** is predicted to decrease the exposure to **bedaquiline**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **Enzalutamide** decreases the exposure to **bedaquiline**. Avoid. Severe Study
- **Etravirine** is predicted to decrease the exposure to **bedaquiline**. Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Study → Also see **TABLE 9** p. 1336
- **Idelalisib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Study
- **Imatinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Study → Also see **TABLE 9** p. 1336
- Macrolides **(erythromycin)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Theoretical → Also see **TABLE 9** p. 1336
- **Mitotane** decreases the exposure to **bedaquiline**. Avoid. Severe Study
- **Netupitant** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Theoretical
- **Nevirapine** is predicted to decrease the exposure to **bedaquiline**. Avoid. Severe Study
- **Nilotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Theoretical → Also see **TABLE 9** p. 1336
- **Rifampicin** decreases the exposure to **bedaquiline**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **bedaquiline**. Avoid. Severe Study

Bee venom extract

GENERAL INFORMATION Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

Belatacept
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **belatacept**. Public Health England advises avoid (refer to Green Book). Severe Theoretical

Belimumab → see monoclonal antibodies

Bendamustine → see alkylating agents

Bendroflumethiazide → see thiazide diuretics

Benperidol → see **TABLE 8** p. 1335 (hypotension), **TABLE 11** p. 1336 (CNS depressant effects)
- **Benperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335
- **Benperidol** is predicted to decrease the effects of **guanethidine**. Moderate Theoretical → Also see **TABLE 8** p. 1335
- **Benperidol** is predicted to decrease the effects of **levodopa**. Severe Study → Also see **TABLE 8** p. 1335

Benralizumab → see monoclonal antibodies

Benzydamine → see NSAIDs

Benzylpenicillin → see penicillins

Beta blockers, non-selective → see **TABLE 6** p. 1335 (bradycardia), **TABLE 8** p. 1335 (hypotension), **TABLE 9** p. 1336 (QT-interval prolongation)

carvedilol • labetalol • levobunolol • nadolol • oxprenolol • pindolol • propranolol • sotalol • timolol

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application of **levobunolol**, and **timolol**, the possibility of interactions should be borne in mind.
- **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with **aminophylline**. Avoid. Severe Theoretical
- Antiarrhythmics **(amiodarone, disopyramide, dronedarone, flecainide, lidocaine)** are predicted to increase the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. Use with caution or avoid. Severe Study → Also see **TABLE 6** p. 1335 → Also see **TABLE 9** p. 1336

https://nhathuocngocanh.com/ www.getintopharma.com

- Antiarrhythmics **(propafenone)** increase the risk of cardiovascular side-effects when given with **propranolol**. Use with caution or avoid. Severe Study
- Antiarrhythmics **(propafenone)** are predicted to increase the exposure to **timolol** and **timolol** is predicted to increase the risk of cardiodepression when given with antiarrhythmics **(propafenone)**. Severe Anecdotal
- Antiarrhythmics **(propafenone)** are predicted to increase the risk of cardiovascular side-effects when given with beta blockers, non-selective **(labetalol, levobunolol, nadolol, oxprenolol, pindolol, sotalol)**. Use with caution or avoid. Severe Study
- **Anticholinesterases, centrally acting** are predicted to increase the risk of bradycardia when given with **beta blockers, non-selective**. Moderate Anecdotal → Also see **TABLE 6** p. 1335
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the exposure to **propranolol**. Moderate Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the exposure to beta blockers, non-selective **(carvedilol, labetalol)**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole)** are predicted to increase the exposure to **nadolol**. Moderate Study
- Antimalarials **(mefloquine)** are predicted to increase the risk of bradycardia when given with **beta blockers, non-selective**. Severe Theoretical
- Calcium channel blockers **(diltiazem)** are predicted to increase the risk of cardiodepression when given with **beta blockers, non-selective**. Severe Study → Also see **TABLE 6** p. 1335 → Also see **TABLE 8** p. 1335
- Intravenous calcium channel blockers **(verapamil)** increase the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. Avoid. Severe Study → Also see **TABLE 6** p. 1335 → Also see **TABLE 8** p. 1335
- Oral calcium channel blockers **(verapamil)** increase the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. Severe Study → Also see **TABLE 6** p. 1335 → Also see **TABLE 8** p. 1335
- **Ciclosporin** is predicted to increase the exposure to **nadolol**. Moderate Study
- **Eliglustat** is predicted to increase the exposure to **propranolol**. Adjust dose. Moderate Study
- **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergometrine**. Severe Study
- **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergotamine**. Severe Study
- HIV-protease inhibitors **(lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **nadolol**. Moderate Study
- **Beta blockers, non-selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. Moderate Theoretical
- **Lapatinib** is predicted to increase the exposure to **nadolol**. Moderate Study
- **Macrolides** are predicted to increase the exposure to **nadolol**. Moderate Study
- **Ranolazine** is predicted to increase the exposure to **nadolol**. Moderate Study
- **Rifampicin** moderately decreases the exposure to **carvedilol**. Moderate Study
- **Rifampicin** decreases the exposure to **propranolol**. Monitor and adjust dose. Moderate Study
- **Propranolol** slightly to moderately increases the exposure to **rizatriptan**. Adjust **rizatriptan** dose and separate administration by at least 2 hours. Moderate Study
- SSRIs **(fluvoxamine)** moderately increase the concentration of **propranolol**. Moderate Study
- **Beta blockers, non-selective** increase the risk of hypertension and bradycardia when given with sympathomimetics, inotropic **(dobutamine)**. Severe Theoretical
- **Beta blockers, non-selective** are predicted to increase the risk of hypertension and bradycardia when given with sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, noradrenaline/norepinephrine)**. Severe Study
- **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. Severe Theoretical
- **Vemurafenib** is predicted to increase the exposure to **nadolol**. Moderate Study

Beta blockers, selective → see **TABLE 6** p. 1335 (bradycardia), **TABLE 8** p. 1335 (hypotension)

acebutolol · atenolol · betaxolol · bisoprolol · celiprolol · esmolol · metoprolol · nebivolol

- Since systemic absorption can follow topical application of **betaxolol**, the possibility of interactions should be borne in mind.
- Orange juice greatly decreases the exposure to **celiprolol**.

- **Abiraterone** is predicted to increase the exposure to **metoprolol**. Moderate Study
- **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with **aminophylline**. Avoid. Severe Theoretical
- Antiarrhythmics **(amiodarone, disopyramide, dronedarone, flecainide, lidocaine)** are predicted to increase the risk of cardiovascular side-effects when given with **beta blockers, selective**. Use with caution or avoid. Severe Study → Also see **TABLE 6** p. 1335
- Antiarrhythmics **(propafenone)** are predicted to increase the exposure to **metoprolol**. Moderate Study
- Antiarrhythmics **(propafenone)** are predicted to increase the exposure to **nebivolol** and **nebivolol** is predicted to increase the risk of cardiodepression when given with antiarrhythmics **(propafenone)**. Avoid. Severe Theoretical
- Antiarrhythmics **(propafenone)** are predicted to increase the risk of cardiovascular side-effects when given with beta blockers, selective **(acebutolol, atenolol, betaxolol, bisoprolol, celiprolol, esmolol)**. Use with caution or avoid. Severe Study
- **Anticholinesterases, centrally acting** are predicted to increase the risk of bradycardia when given with **beta blockers, selective**. Moderate Anecdotal → Also see **TABLE 6** p. 1335
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the exposure to beta blockers, selective **(acebutolol, bisoprolol, metoprolol, nebivolol)**. Moderate Study
- Antimalarials **(mefloquine)** are predicted to increase the risk of bradycardia when given with **beta blockers, selective**. Severe Theoretical
- **Bupropion** is predicted to increase the exposure to beta blockers, selective **(metoprolol, nebivolol)**. Moderate Study
- Calcium channel blockers **(diltiazem)** are predicted to increase the risk of cardiodepression when given with **beta blockers, selective**. Severe Study → Also see **TABLE 6** p. 1335 → Also see **TABLE 8** p. 1335
- Intravenous calcium channel blockers **(verapamil)** increase the risk of cardiovascular side-effects when given with **beta blockers, selective**. Avoid. Severe Study → Also see **TABLE 6** p. 1335 → Also see **TABLE 8** p. 1335
- Oral calcium channel blockers **(verapamil)** increase the risk of cardiovascular side-effects when given with **beta blockers, selective**. Severe Study → Also see **TABLE 6** p. 1335 → Also see **TABLE 8** p. 1335
- **Cinacalcet** is predicted to increase the exposure to beta blockers, selective **(metoprolol, nebivolol)**. Moderate Study
- **Duloxetine** is predicted to increase the exposure to **metoprolol**. Moderate Study
- **Eliglustat** is predicted to increase the exposure to **metoprolol**. Adjust dose. Moderate Study
- **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergometrine**. Severe Study
- **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergotamine**. Severe Study
- **Grapefruit juice** greatly decreases the exposure to **celiprolol**. Moderate Study
- HIV-protease inhibitors **(ritonavir)** are predicted to increase the exposure to **metoprolol**. Moderate Study
- **Beta blockers, selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. Moderate Theoretical
- **Mirabegron** is predicted to increase the exposure to **metoprolol**. Moderate Study

https://nhathuocngocanh.com/ www.getintopharma.com

Beta blockers, selective (continued)

- **Panobinostat** is predicted to increase the exposure to **metoprolol**. Monitor and adjust dose. Moderate Theoretical
- **Panobinostat** is predicted to increase the exposure to **nebivolol**. Monitor and adjust dose. Mild Theoretical
- **Rifampicin** slightly decreases the exposure to beta blockers, selective **(bisoprolol, metoprolol)**. Mild Study
- **Rifampicin** moderately decreases the exposure to **celiprolol**. Moderate Study
- **Rolapitant** is predicted to moderately increase the exposure to **metoprolol**. Severe Study
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to beta blockers, selective **(metoprolol, nebivolol)**. Moderate Study
- **Beta blockers, selective** increase the risk of hypertension and bradycardia when given with sympathomimetics, inotropic **(dobutamine)**. Moderate Theoretical
- **Beta blockers, selective** are predicted to increase the risk of hypertension and bradycardia when given with sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, noradrenaline/norepinephrine)**. Severe Study
- **Terbinafine** is predicted to increase the exposure to beta blockers, selective **(metoprolol, nebivolol)**. Moderate Study
- **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. Severe Theoretical

Beta$_2$ agonists → see **TABLE 17** p. 1338 (reduced serum potassium)

bambuterol · formoterol · indacaterol · olodaterol · salbutamol · salmeterol · terbutaline · vilanterol

- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **salmeterol**. Avoid. Severe Study
- **Atomoxetine** is predicted to increase the risk of cardiovascular side-effects when given with **beta$_2$ agonists** (high-dose). Moderate Study
- **Cobicistat** is predicted to increase the exposure to **salmeterol**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **salmeterol**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **salmeterol**. Avoid. Severe Study
- **Beta$_2$ agonists** are predicted to increase the risk of glaucoma when given with **ipratropium**. Moderate Anecdotal
- **Beta$_2$ agonists** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **salmeterol**. Avoid. Severe Study
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of cardiovascular side-effects when given with **beta$_2$ agonists**. Moderate Anecdotal
- Monoamine-oxidase B inhibitors **(rasagiline, selegiline)** are predicted to increase the risk of severe hypertension when given with **beta$_2$ agonists**. Avoid. Severe Theoretical
- Monoamine-oxidase B inhibitors **(safinamide)** are predicted to increase the risk of severe hypertension when given with **beta$_2$ agonists**. Severe Theoretical

Betahistine

- **Antihistamines, non-sedating** are predicted to decrease the effects of **betahistine**. Moderate Theoretical
- **Antihistamines, sedating** are predicted to decrease the effects of **betahistine**. Moderate Theoretical

Betamethasone → see corticosteroids

Betaxolol → see beta blockers, selective

Bevacizumab → see monoclonal antibodies

Bexarotene → see retinoids

Bezafibrate → see fibrates

Bicalutamide

- **Bicalutamide** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical

Bilastine → see antihistamines, non-sedating

Bisoprolol → see beta blockers, selective

Bisphosphonates → see **TABLE 2** p. 1334 (nephrotoxicity)

alendronic acid · ibandronic acid · pamidronate · risedronate · sodium clodronate · zoledronic acid

- **Aminoglycosides** increase the risk of hypocalcaemia when given with **bisphosphonates**. Moderate Anecdotal → Also see **TABLE 2** p. 1334
- **Antacids** decrease the absorption of **alendronic acid**. **Alendronic acid** should be taken at least 30 minutes before **antacids**, p. 710. Moderate Study
- **Antacids** are predicted to decrease the absorption of **ibandronic acid**. Avoid **antacids** for at least 6 hours before or 1 hour after **ibandronic acid**. Moderate Theoretical
- **Antacids** decrease the absorption of **risedronate**. Separate administration by at least 2 hours. Moderate Study
- **Antacids** decrease the absorption of **sodium clodronate**. Avoid **antacids** for 2 hours before or 1 hour after **sodium clodronate**. Moderate Study
- **Aspirin** (high-dose) is predicted to increase the risk of gastrointestinal irritation when given with bisphosphonates **(alendronic acid, ibandronic acid)**. Moderate Study
- **Aspirin** (high-dose) is predicted to increase the risk of renal impairment when given with **sodium clodronate**. Severe Theoretical
- Oral **calcium salts** decrease the absorption of **alendronic acid**. **Alendronic acid** should be taken at least 30 minutes before **calcium salts**. Moderate Study
- Oral **calcium salts** are predicted to decrease the absorption of oral **ibandronic acid**. Avoid **calcium salts** for at least 6 hours before or 1 hour after **ibandronic acid**. Moderate Theoretical
- Oral **calcium salts** decrease the absorption of **risedronate**. Separate administration by at least 2 hours. Moderate Study
- Oral **calcium salts** decrease the absorption of **sodium clodronate**. Avoid **calcium salts** for 2 hours before or 1 hour after **sodium clodronate**. Moderate Study
- **Iron (oral)** is predicted to decrease the absorption of oral **ibandronic acid**. Avoid **iron (oral)** for at least 6 hours before or 1 hour after **ibandronic acid**. Moderate Theoretical
- **Iron (oral)** decreases the absorption of **risedronate**. Separate administration by at least 2 hours. Moderate Study
- **Iron (oral)** decreases the absorption of **sodium clodronate**. Avoid **iron (oral)** for 2 hours before or 1 hour after **sodium clodronate**. Moderate Study
- **Bisphosphonates** are predicted to increase the risk of gastrointestinal bleeding when given with iron chelators **(deferasirox)**. Severe Theoretical
- Oral **magnesium** decreases the absorption of **alendronic acid**. **Alendronic acid** should be taken at least 30 minutes before **magnesium**. Moderate Study
- Oral **magnesium** is predicted to decrease the absorption of oral **ibandronic acid**. Avoid **magnesium** for at least 6 hours before or 1 hour after **ibandronic acid**. Moderate Theoretical
- Oral **magnesium** decreases the absorption of **risedronate**. Separate administration by at least 2 hours. Moderate Study
- Oral **magnesium** decreases the absorption of **sodium clodronate**. Avoid **magnesium** for 2 hours before or 1 hour after **sodium clodronate**. Moderate Study
- **NSAIDs** are predicted to increase the risk of gastrointestinal irritation when given with bisphosphonates **(alendronic acid, ibandronic acid)**. Moderate Study
- **NSAIDs** are predicted to increase the risk of renal impairment when given with **sodium clodronate**. Severe Theoretical
- **Bisphosphonates** are predicted to decrease the effects of **parathyroid hormone**. Avoid. Moderate Study
- Oral **zinc** decreases the absorption of oral **alendronic acid**. **Zinc** should be taken at least 30 minutes before **alendronic acid**. Moderate Study
- Oral **zinc** is predicted to decrease the absorption of oral **ibandronic acid**. Avoid **zinc** for at least 6 hours before or 1 hour after **ibandronic acid**. Moderate Theoretical
- Oral **zinc** decreases the absorption of oral **risedronate**. Separate administration by at least 2 hours. Moderate Study
- Oral **zinc** decreases the absorption of oral **sodium clodronate**. Avoid **zinc** for 2 hours before or 1 hour after **sodium clodronate**. Moderate Study

Bivalirudin → see **TABLE 3** p. 1334 (anticoagulant effects)

https://nhathuocngocanh.com/ www.getintopharma.com

- **Ranibizumab** is predicted to increase the risk of bleeding events when given with **bivalirudin**. Moderate Theoretical

Bleomycin → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 5** p. 1334 (thromboembolism)

- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **bleomycin**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- Monoclonal antibodies **(brentuximab vedotin)** increase the risk of pulmonary toxicity when given with **bleomycin**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- Platinum compounds **(cisplatin)** increase the risk of pulmonary toxicity when given with **bleomycin**. Severe Study → Also see **TABLE 15** p. 1337

Blinatumomab → see monoclonal antibodies

Bortezomib → see **TABLE 8** p. 1335 (hypotension), **TABLE 15** p. 1337 (myelosuppression), **TABLE 12** p. 1337 (peripheral neuropathy)

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** slightly decrease the exposure to **bortezomib**. Avoid. Severe Study → Also see **TABLE 12** p. 1337
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** slightly increase the exposure to **bortezomib**. Moderate Study
- **Cobicistat** slightly increases the exposure to **bortezomib**. Moderate Study
- **Enzalutamide** slightly decreases the exposure to **bortezomib**. Avoid. Severe Study
- **HIV-protease inhibitors** slightly increase the exposure to **bortezomib**. Moderate Study
- **Idelalisib** slightly increases the exposure to **bortezomib**. Moderate Study → Also see **TABLE 15** p. 1337
- Macrolides **(clarithromycin)** slightly increase the exposure to **bortezomib**. Moderate Study
- **Mitotane** slightly decreases the exposure to **bortezomib**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Rifampicin** slightly decreases the exposure to **bortezomib**. Avoid. Severe Study

Bosentan

- **Bosentan** is predicted to decrease the exposure to antiarrhythmics **(dronedarone)**. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** affect the exposure to **bosentan**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole)** are predicted to increase the exposure to **bosentan**. Avoid. Severe Study
- Antifungals, azoles **(itraconazole)** are predicted to increase the exposure to **bosentan**. Moderate Theoretical
- Antifungals, azoles **(ketoconazole)** moderately increase the exposure to **bosentan**. Moderate Study
- Antifungals, azoles **(voriconazole)** are predicted to increase the exposure to **bosentan**. Avoid. Severe Theoretical
- **Bosentan** is predicted to decrease the exposure to antifungals, azoles **(isavuconazole)**. Avoid. Severe Theoretical
- **Bosentan** is predicted to decrease the exposure to **axitinib**. Moderate Theoretical
- **Bosentan** is predicted to decrease the exposure to **bedaquiline**. Avoid. Severe Study
- **Bosentan** is predicted to decrease the exposure to **bosutinib**. Avoid. Severe Theoretical
- **Bosentan** is predicted to decrease the exposure to **cabozantinib**. Moderate Theoretical
- **Bosentan** is predicted to decrease the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Theoretical
- **Bosentan** is predicted to decrease the exposure to calcium channel blockers **(diltiazem, verapamil)**. Moderate Theoretical
- Cephalosporins **(ceftobiprole)** are predicted to increase the exposure to **bosentan**. Moderate Theoretical
- **Bosentan** moderately decreases the exposure to **ciclosporin** and **ciclosporin** moderately increases the exposure to **bosentan**. Avoid. Severe Study
- **Bosentan** is predicted to decrease the exposure to **cobicistat**. Avoid. Severe Theoretical
- **Bosentan** is predicted to decrease the exposure to **cobimetinib**. Avoid. Severe Theoretical
- **Bosentan** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Study
- **Bosentan** decreases the anticoagulant effect of **coumarins**. Moderate Study
- **Bosentan** is predicted to decrease the exposure to **crizotinib**. Avoid. Severe Theoretical
- **Bosentan** is predicted to decrease the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 614. Moderate Theoretical
- **Bosentan** is predicted to decrease the exposure to **dasatinib**. Severe Study
- **Bosentan** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Bosentan** decreases the exposure to **dolutegravir**. Adjust dose. Severe Study
- **Bosentan** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. Severe Study
- **Bosentan** is predicted to decrease the exposure to **eliglustat**. Moderate Theoretical
- **Bosentan** is predicted to decrease the concentration of **elvitegravir**. Avoid. Severe Theoretical
- **Enzalutamide** affects the exposure to **bosentan**. Avoid. Severe Study
- **Bosentan** is predicted to decrease the effects of **ergotamine**. Moderate Theoretical
- **Bosentan** is predicted to decrease the exposure to **erlotinib**. Severe Theoretical
- **Bosentan** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Bosentan** is predicted to decrease the exposure to **etravirine**. Avoid. Severe Study
- **Bosentan** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. Severe Study
- **Bosentan** is predicted to decrease the exposure to **gefitinib**. Avoid. Severe Theoretical
- **Bosentan** is predicted to decrease the exposure to **glecaprevir**. Avoid. Severe Study
- **Bosentan** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. Severe Study
- **Bosentan** is predicted to decrease the concentration of **guanfacine**. Adjust dose. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **bosentan**. Severe Study
- **Bosentan** is predicted to decrease the effects of **hormone replacement therapy**. Moderate Anecdotal
- **Bosentan** is predicted to decrease the exposure to **idelalisib**. Avoid. Moderate Theoretical
- **Bosentan** is predicted to decrease the exposure to **imatinib**. Moderate Study
- **Bosentan** is predicted to decrease the exposure to **ivacaftor**. Severe Theoretical
- **Bosentan** is predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study
- **Bosentan** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Bosentan** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **bosentan**. Moderate Theoretical
- **Bosentan** is predicted to decrease the exposure to **maraviroc**. Avoid. Moderate Theoretical
- **Bosentan** is predicted to decrease the concentration of **midazolam**. Monitor and adjust dose. Moderate Theoretical
- **Mitotane** affects the exposure to **bosentan**. Avoid. Severe Study
- **Bosentan** is predicted to decrease the exposure to **netupitant**. Moderate Theoretical
- **Bosentan** is predicted to decrease the exposure to **nilotinib**. Avoid. Severe Theoretical
- **Bosentan** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal

https://nhathuocngocanh.com/ www.getintopharma.com

Bosentan (continued)

- **Bosentan** is predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical
- **Bosentan** decreases the exposure to opioids **(methadone)**. Monitor and adjust dose. Severe Study
- **Bosentan** is predicted to decrease the exposure to **osimertinib**. Moderate Theoretical
- **Bosentan** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. Severe Study
- **Bosentan** decreases the exposure to **phosphodiesterase type-5 inhibitors**. Moderate Study
- **Bosentan** is predicted to decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- **Bosentan** is predicted to decrease the exposure to **quetiapine**. Moderate Study
- **Bosentan** is predicted to decrease the exposure to **ribociclib**. Moderate Study
- **Rifampicin** affects the exposure to **bosentan**. Avoid. Severe Study
- **Bosentan** is predicted to decrease the exposure to **rilpivirine**. Avoid. Severe Theoretical
- **Bosentan** is predicted to decrease the exposure to **rolapitant**. Avoid. Severe Study
- **Bosentan** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Theoretical
- **Bosentan** is predicted to decrease the exposure to **simeprevir**. Avoid. Severe Study
- **Bosentan** is predicted to decrease the concentration of **sirolimus** and **sirolimus** potentially increases the concentration of **bosentan**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **bosentan**. Avoid. Moderate Theoretical
- **Bosentan** slightly decreases the exposure to statins **(atorvastatin)**. Mild Study
- **Bosentan** moderately decreases the exposure to statins **(simvastatin)**. Moderate Study
- **Bosentan** increases the risk of hepatotoxicity when given with sulfonylureas **(glibenclamide)**. Avoid. Severe Study
- **Bosentan** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** potentially increases the concentration of **bosentan**. Avoid. Severe Theoretical
- **Bosentan** is predicted to decrease the exposure to taxanes **(cabazitaxel)**. Avoid. Severe Study
- **Bosentan** is predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Theoretical
- **Bosentan** is predicted to decrease the exposure to **ticagrelor**. Moderate Theoretical
- **Bosentan** is predicted to decrease the exposure to **tofacitinib**. Moderate Study
- **Bosentan** is predicted to decrease the exposure to **tolvaptan**. Moderate Theoretical
- **Bosentan** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Bosentan** is predicted to decrease the exposure to **velpatasvir**. Avoid. Moderate Theoretical
- **Bosentan** is predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- **Bosentan** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Theoretical

Bosutinib → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 9** p. 1336 (QT-interval prolongation)

- **Antacids** are predicted to decrease the absorption of **bosutinib**. **Bosutinib** should be taken at least 12 hours before **antacids**. Moderate Theoretical
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Theoretical → Also see **TABLE 9** p. 1336
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to very markedly decrease the exposure to **bosutinib**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Study → Also see **TABLE 9** p. 1336
- **Aprepitant** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Theoretical
- **Bosentan** is predicted to decrease the exposure to **bosutinib**. Avoid. Severe Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Theoretical
- **Cobicistat** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Study
- **Bosutinib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Theoretical → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- **Efavirenz** is predicted to decrease the exposure to **bosutinib**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Enzalutamide** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. Severe Study
- **Etravirine** is predicted to decrease the exposure to **bosutinib**. Avoid. Severe Theoretical
- **Fosaprepitant** is predicted to increase the exposure to **bosutinib**. Severe Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **bosutinib**. Avoid. Moderate Theoretical
- **H_2 receptor antagonists** are predicted to decrease the absorption of **bosutinib**. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Study → Also see **TABLE 9** p. 1336
- **Idelalisib** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Study → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Theoretical → Also see **TABLE 15** p. 1337
- Macrolides **(clarithromycin)** are predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Study → Also see **TABLE 9** p. 1336
- Macrolides **(erythromycin)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Mitotane** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Modafinil** is predicted to decrease the exposure to **bosutinib**. Avoid. Severe Theoretical
- **Netupitant** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Theoretical
- **Nevirapine** is predicted to decrease the exposure to **bosutinib**. Avoid. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Theoretical → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- **Bosutinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Pitolisant** is predicted to decrease the exposure to **bosutinib**. Avoid. Severe Theoretical
- **Proton pump inhibitors** are predicted to decrease the absorption of **bosutinib**. Moderate Study
- **Rifampicin** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **bosutinib**. Avoid. Severe Theoretical

Botulinum toxin type A → see **TABLE 20** p. 1338 (neuromuscular blocking effects)

Botulinum toxin type B → see **TABLE 20** p. 1338 (neuromuscular blocking effects)

Bowel cleansing preparations

SEPARATION OF ADMINISTRATION Other oral drugs should not be taken 1 hour before, or after, administration of bowel cleansing preparations because absorption may be impaired. Consider withholding ACE inhibitors, angiotensin-II receptor antagonists, and NSAIDs on the day that bowel cleansing

https://nhathuocngocanh.com/ www.getintopharma.com

preparations are given and for up to 72 hours after the procedure. Also consider withholding diuretics on the day that bowel cleansing preparations are given.

Brentuximab vedotin → see monoclonal antibodies
Brimonidine → see **TABLE 6** p. 1335 (bradycardia), **TABLE 8** p. 1335 (hypotension), **TABLE 11** p. 1336 (CNS depressant effects)
Brinzolamide

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

Brivaracetam → see antiepileptics
Brodalumab → see monoclonal antibodies
Bromfenac → see NSAIDs
Bromocriptine → see dopamine receptor agonists
Buclizine → see antihistamines, sedating
Budesonide → see corticosteroids
Bumetanide → see loop diuretics
Bupivacaine → see anaesthetics, local
Buprenorphine → see opioids
Bupropion → see **TABLE 13** p. 1337 (serotonin syndrome)
- **Bupropion** is predicted to increase the exposure to anticholinesterases, centrally acting **(galantamine)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **bupropion**. Severe Study
- Antiepileptics **(valproate)** increase the exposure to **bupropion**. Severe Study
- Antifungals, azoles **(isavuconazole)** slightly increase the exposure to **bupropion**. Adjust dose. Moderate Study
- **Bupropion** is predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. Moderate Study
- **Bupropion** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. Severe Study
- **Bupropion** is predicted to increase the exposure to beta blockers, selective **(metoprolol, nebivolol)**. Moderate Study
- **Bupropion** is predicted to slightly increase the exposure to **darifenacin**. Mild Study
- **Bupropion** increases the risk of side-effects when given with dopamine receptor agonists **(amantadine)**. Moderate Study
- **Efavirenz** is predicted to decrease the exposure to **bupropion**. Moderate Study
- **Bupropion** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- HIV-protease inhibitors **(ritonavir)** are predicted to decrease the exposure to **bupropion**. Moderate Study
- **Bupropion** increases the risk of side-effects when given with **levodopa**. Moderate Study
- **Bupropion** is predicted to increase the risk of intraoperative hypertension when given with **linezolid**. Severe Anecdotal → Also see **TABLE 13** p. 1337
- **Methylthioninium chloride** is predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Moclobemide** is predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Monoamine-oxidase B inhibitors** are predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. Moderate Theoretical → Also see **TABLE 13** p. 1337
- **Bupropion** is predicted to decrease the efficacy of opioids **(codeine)**. Moderate Theoretical
- **Bupropion** is predicted to decrease the efficacy of opioids **(tramadol)**. Severe Study → Also see **TABLE 13** p. 1337
- **Bupropion** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **bupropion**. Moderate Study
- **Bupropion** is predicted to increase the exposure to **risperidone**. Adjust dose. Moderate Study
- **Bupropion** is predicted to increase the exposure to SSRIs **(dapoxetine)**. Moderate Theoretical → Also see **TABLE 13** p. 1337
- **Bupropion** is predicted to decrease the efficacy of **tamoxifen**. Avoid. Severe Study
- **Bupropion** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. Severe Study → Also see **TABLE 13** p. 1337
- **Bupropion** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study → Also see **TABLE 13** p. 1337

Buspirone → see **TABLE 13** p. 1337 (serotonin syndrome)
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 338. Severe Study
- Antifungals, azoles **(miconazole)** are predicted to increase the concentration of **buspirone**. Use with caution and adjust dose. Moderate Theoretical
- **Aprepitant** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 338. Severe Study
- **Crizotinib** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. Severe Study
- **Grapefruit juice** increases the exposure to **buspirone**. Avoid. Mild Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 338. Severe Study
- **Idelalisib** is predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 338. Severe Study
- **Imatinib** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. Moderate Study
- **Buspirone** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. Severe Theoretical → Also see **TABLE 13** p. 1337
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 338. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. Severe Study
- **Buspirone** is predicted to increase the risk of elevated blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. Severe Anecdotal → Also see **TABLE 13** p. 1337
- **Netupitant** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. Severe Study

Busulfan → see alkylating agents
Cabazitaxel → see taxanes
Cabergoline → see dopamine receptor agonists
Cabozantinib → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 9** p. 1336 (QT-interval prolongation)
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **cabozantinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336

https://nhathuocngocanh.com/ www.getintopharma.com

Cabozantinib (continued)
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** moderately decrease the exposure to **cabozantinib**. Avoid. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **cabozantinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** slightly increase the exposure to **cabozantinib**. Moderate Study → Also see **TABLE 9** p. 1336
- **Aprepitant** is predicted to increase the exposure to **cabozantinib**. Moderate Theoretical
- **Bosentan** is predicted to decrease the exposure to **cabozantinib**. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **cabozantinib**. Moderate Theoretical
- **Cobicistat** slightly increases the exposure to **cabozantinib**. Moderate Study
- **Cabozantinib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **cabozantinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- **Efavirenz** is predicted to decrease the exposure to **cabozantinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Enzalutamide** moderately decreases the exposure to **cabozantinib**. Avoid. Moderate Study
- **Grapefruit juice** is predicted to increase the exposure to **cabozantinib**. Moderate Theoretical
- **HIV-protease inhibitors** slightly increase the exposure to **cabozantinib**. Moderate Study → Also see **TABLE 9** p. 1336
- **Idelalisib** slightly increases the exposure to **cabozantinib**. Moderate Study → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to increase the exposure to **cabozantinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- Macrolides **(clarithromycin)** slightly increase the exposure to **cabozantinib**. Moderate Study → Also see **TABLE 9** p. 1336
- Macrolides **(erythromycin)** are predicted to increase the exposure to **cabozantinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Mitotane** moderately decreases the exposure to **cabozantinib**. Avoid. Moderate Study → Also see **TABLE 15** p. 1337
- **Netupitant** is predicted to increase the exposure to **cabozantinib**. Moderate Theoretical
- **Nevirapine** is predicted to decrease the exposure to **cabozantinib**. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to **cabozantinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- **Cabozantinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Rifampicin** moderately decreases the exposure to **cabozantinib**. Avoid. Moderate Study
- **St John's Wort** is predicted to decrease the exposure to **cabozantinib**. Moderate Theoretical

Caffeine citrate
- **Caffeine citrate** decreases the efficacy of antiarrhythmics **(adenosine)**. Separate administration by 24 hours. Mild Study
- Antiepileptics **(fosphenytoin, phenytoin)** are predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. Moderate Study
- HIV-protease inhibitors **(ritonavir)** are predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. Moderate Study
- **Leflunomide** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. Moderate Study
- **Rifampicin** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. Moderate Study
- SSRIs **(fluvoxamine)** markedly decrease the clearance of **caffeine citrate**. Monitor and adjust dose. Severe Study
- **Teriflunomide** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. Moderate Study
- **Caffeine citrate** decreases the clearance of **theophylline**. Moderate Study

Calcipotriol → see vitamin D substances

Calcitonin (salmon)
- **Calcitonin (salmon)** decreases the concentration of **lithium**. Monitor concentration and adjust dose. Moderate Study

Calcitriol → see vitamin D substances

Calcium acetate → see calcium salts

Calcium carbonate → see calcium salts

Calcium channel blockers → see **TABLE 6** p. 1335 (bradycardia), **TABLE 8** p. 1335 (hypotension)

amlodipine · clevidipine · diltiazem · felodipine · lacidipine · lercanidipine · nicardipine · nifedipine · nimodipine · verapamil

- **Verapamil** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to aldosterone antagonists **(eplerenone)**. Adjust **eplerenone** dose, p. 190. Severe Study → Also see **TABLE 8** p. 1335
- **Verapamil** moderately increases the exposure to **aliskiren**. Moderate Study → Also see **TABLE 8** p. 1335
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to alpha blockers **(tamsulosin)**. Moderate Theoretical → Also see **TABLE 8** p. 1335
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **alprazolam**. Severe Study
- **Verapamil** moderately increases the exposure to anthracyclines **(doxorubicin)**. Moderate Study
- Antiarrhythmics **(disopyramide)** are predicted to increase the risk of cardiodepression when given with **verapamil**. Severe Theoretical
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- Antiarrhythmics **(amiodarone)** are predicted to increase the risk of cardiodepression when given with calcium channel blockers **(diltiazem, verapamil)**. Avoid. Severe Theoretical → Also see **TABLE 6** p. 1335
- Calcium channel blockers **(diltiazem, verapamil)** increase the exposure to antiarrhythmics **(dronedarone)** and antiarrhythmics **(dronedarone)** increase the exposure to calcium channel blockers **(diltiazem, verapamil)**. Moderate Study
- **Verapamil** increases the risk of cardiodepression when given with antiarrhythmics **(flecainide)**. Severe Anecdotal → Also see **TABLE 6** p. 1335
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to antiarrhythmics **(propafenone)**. Monitor and adjust dose. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** increase the risk of bradycardia when given with **anticholinesterases, centrally acting**. Moderate Anecdotal → Also see **TABLE 6** p. 1335
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Diltiazem** increases the concentration of antiepileptics **(carbamazepine)** and antiepileptics **(carbamazepine)** are predicted to decrease the exposure to **diltiazem**. Monitor concentration and adjust dose. Severe Anecdotal
- **Verapamil** increases the concentration of antiepileptics **(carbamazepine)** and antiepileptics **(carbamazepine)** are predicted to decrease the exposure to **verapamil**. Severe Anecdotal
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the exposure to calcium channel blockers **(diltiazem, verapamil)**. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** potentially increase the concentration of antiepileptics **(fosphenytoin, phenytoin)** and antiepileptics **(fosphenytoin, phenytoin)** are predicted to decrease the exposure to calcium channel blockers **(diltiazem, verapamil)**. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **lercanidipine**. Avoid. Severe Study

https://nhathuocngocanh.com/ www.getintopharma.com

- Antifungals, azoles **(miconazole)** are predicted to increase the exposure to calcium channel blockers **(amlodipine, clevidipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine, verapamil)**. Use with caution and adjust dose. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- Antifungals, azoles **(fluconazole)** (high-dose) are predicted to increase the exposure to calcium channel blockers **(diltiazem, verapamil)**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to calcium channel blockers **(diltiazem, verapamil)**. Severe Study
- Antifungals, azoles **(posaconazole)** are predicted to increase the exposure to calcium channel blockers **(diltiazem, verapamil)**. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to antifungals, azoles **(isavuconazole)**. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to antihistamines, non-sedating **(mizolastine)**. Severe Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to antihistamines, non-sedating **(rupatadine)**. Avoid. Moderate Study
- Antimalarials **(mefloquine)** are predicted to increase the risk of bradycardia when given with **calcium channel blockers**. Severe Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the concentration of antimalarials **(piperaquine)**. Severe Theoretical
- **Verapamil** is predicted to increase the exposure to **apixaban**. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **aprepitant** and **aprepitant** is predicted to increase the exposure to calcium channel blockers **(diltiazem, verapamil)**. Moderate Study
- **Aprepitant** is predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **axitinib**. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Theoretical
- **Diltiazem** is predicted to increase the risk of cardiodepression when given with **beta blockers, non-selective**. Severe Study → Also see **TABLE 6** p. 1335 → Also see **TABLE 8** p. 1335
- Intravenous **verapamil** increases the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. Avoid. Severe Study → Also see **TABLE 6** p. 1335 → Also see **TABLE 8** p. 1335
- Oral **verapamil** increases the risk of cardiovascular side-effects when given with **beta blockers, non-selective**. Severe Study → Also see **TABLE 6** p. 1335 → Also see **TABLE 8** p. 1335
- **Diltiazem** is predicted to increase the risk of cardiodepression when given with **beta blockers, selective**. Severe Study → Also see **TABLE 6** p. 1335 → Also see **TABLE 8** p. 1335
- Intravenous **verapamil** increases the risk of cardiovascular side-effects when given with **beta blockers, selective**. Avoid. Severe Study → Also see **TABLE 6** p. 1335 → Also see **TABLE 8** p. 1335
- Oral **verapamil** increases the risk of cardiovascular side-effects when given with **beta blockers, selective**. Severe Study → Also see **TABLE 6** p. 1335 → Also see **TABLE 8** p. 1335
- **Bosentan** is predicted to decrease the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Theoretical
- **Bosentan** is predicted to decrease the exposure to calcium channel blockers **(diltiazem, verapamil)**. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **cabozantinib**. Moderate Theoretical
- Calcium channel blockers **(diltiazem)** are predicted to increase the exposure to calcium channel blockers **(amlodipine)**. Monitor and adjust dose. Moderate Study → Also see **TABLE 8** p. 1335
- Calcium channel blockers **(verapamil)** are predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study → Also see **TABLE 8** p. 1335
- Calcium channel blockers **(diltiazem)** are predicted to increase the exposure to calcium channel blockers **(felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study → Also see **TABLE 8** p. 1335
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **ceritinib**. Moderate Theoretical
- Calcium channel blockers **(diltiazem, nicardipine, verapamil)** increase the concentration of **ciclosporin**. Severe Study
- **Ciclosporin** moderately increases the exposure to **lercanidipine**. Use with caution or avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Cobicistat** is predicted to increase the exposure to calcium channel blockers **(diltiazem, verapamil)**. Severe Study
- **Cobicistat** is predicted to markedly increase the exposure to **lercanidipine**. Avoid. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **cobimetinib**. Severe Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to corticosteroids **(methylprednisolone)**. Monitor and adjust dose. Moderate Study
- **Crizotinib** is predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Verapamil** increases the exposure to **dabigatran**. Adjust **dabigatran** dose, p. 135. Severe Study
- Intravenous **dantrolene** potentially increases the risk of acute hyperkalaemia and cardiovascular collapse when given with calcium channel blockers **(diltiazem, verapamil)**. Avoid. Severe Anecdotal
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to slightly increase the exposure to **darifenacin**. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **dasatinib**. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** increase the concentration of **digoxin**. Monitor and adjust dose. Severe Study → Also see **TABLE 6** p. 1335
- Calcium channel blockers **(diltiazem, verapamil)** increase the risk of QT-prolongation when given with **domperidone**. Avoid. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to dopamine receptor agonists **(bromocriptine)**. Severe Theoretical → Also see **TABLE 8** p. 1335
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the concentration of dopamine receptor agonists **(cabergoline)**. Moderate Anecdotal → Also see **TABLE 8** p. 1335
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to moderately increase the exposure to **dutasteride**. Mild Study

https://nhathuocngocanh.com/ www.getintopharma.com

Calcium channel blockers (continued)

- **Verapamil** is predicted to slightly increase the exposure to **edoxaban**. Severe Theoretical
- **Efavirenz** is predicted to decrease the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Theoretical
- **Efavirenz** is predicted to decrease the exposure to calcium channel blockers **(diltiazem, verapamil)**. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to calcium channel blockers **(diltiazem, verapamil)**. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the risk of ergotism when given with **ergometrine**. Severe Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the risk of ergotism when given with **ergotamine**. Severe Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. Mild Study
- **Verapamil** is predicted to increase the exposure to **fidaxomicin**. Avoid. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **fingolimod**. Avoid. Moderate Theoretical → Also see **TABLE 6** p. 1335
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **gefitinib**. Moderate Theoretical
- **Grapefruit juice** very slightly increases the exposure to **amlodipine**. Avoid. Mild Study
- **Grapefruit juice** increases the exposure to calcium channel blockers **(nifedipine, verapamil)**. Avoid. Mild Study
- **Grapefruit juice** increases the exposure to **felodipine**. Avoid. Moderate Study
- **Grapefruit juice** is predicted to increase the exposure to **lercanidipine**. Avoid. Moderate Theoretical
- **Grapefruit juice** increases the exposure to **nicardipine**. Mild Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Theoretical → Also see **TABLE 8** p. 1335
- H_2 receptor antagonists **(cimetidine)** (high-dose) are predicted to increase the exposure to **lercanidipine**. Moderate Theoretical
- H_2 receptor antagonists **(cimetidine)** moderately increase the exposure to **nifedipine**. Monitor and adjust dose. Severe Study
- H_2 receptor antagonists **(cimetidine)** increase the exposure to **verapamil**. Moderate Study
- H_2 receptor antagonists **(cimetidine)** slightly increase the exposure to calcium channel blockers **(diltiazem, nimodipine)**. Monitor and adjust dose. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to calcium channel blockers **(diltiazem, verapamil)**. Severe Study
- **HIV-protease inhibitors** are predicted to markedly increase the exposure to **lercanidipine**. Avoid. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. Severe Study
- **Idelalisib** is predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Idelalisib** is predicted to increase the exposure to calcium channel blockers **(diltiazem, verapamil)**. Severe Study
- **Idelalisib** is predicted to markedly increase the exposure to **lercanidipine**. Avoid. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **imatinib**. Moderate Theoretical
- **Imatinib** is predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **ivabradine**. Avoid. Moderate Study → Also see **TABLE 6** p. 1335
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **lapatinib**. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the risk of neurotoxicity when given with **lithium**. Severe Anecdotal
- Calcium channel blockers **(amlodipine, lacidipine)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **lurasidone**. Moderate Study → Also see **TABLE 8** p. 1335
- Macrolides **(clarithromycin)** are predicted to markedly increase the exposure to **lercanidipine**. Avoid. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **diltiazem**. Severe Theoretical
- Macrolides **(erythromycin)** are predicted to increase the exposure to **verapamil**. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to calcium channel blockers **(diltiazem, verapamil)**. Severe Study
- Intravenous **magnesium** potentially increases the risk of hypotension when given with calcium channel blockers **(amlodipine, clevidipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine, verapamil)** (in pregnant women). Severe Anecdotal
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- Monoclonal antibodies **(tocilizumab)** are predicted to decrease the exposure to **calcium channel blockers**. Monitor and adjust dose. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. Moderate Study
- **Netupitant** is predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Nevirapine** is predicted to decrease the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine,**

https://nhathuocngocanh.com/ www.getintopharma.com

lercanidipine, nicardipine, nifedipine, nimodipine). Monitor and adjust dose. Moderate Theoretical

- **Nevirapine** is predicted to decrease the exposure to calcium channel blockers **(diltiazem, verapamil).** Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **nilotinib.** Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine).** Monitor and adjust dose. Moderate Study
- **Verapamil** is predicted to increase the exposure to **nintedanib.** Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **olaparib.** Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone).** Monitor and adjust dose. Moderate Study → Also see **TABLE 6** p. 1335
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to opioids **(methadone, sufentanil).** Moderate Theoretical → Also see **TABLE 6** p. 1335
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **oxybutynin.** Mild Theoretical
- **Verapamil** is predicted to increase the exposure to **panobinostat.** Adjust dose. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **pazopanib.** Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil).** Adjust **avanafil** dose, p. 794. Moderate Theoretical → Also see **TABLE 8** p. 1335
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(sildenafil).** Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. Moderate Study → Also see **TABLE 8** p. 1335
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(tadalafil).** Severe Theoretical → Also see **TABLE 8** p. 1335
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(vardenafil).** Adjust dose. Severe Theoretical → Also see **TABLE 8** p. 1335
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **pimozide.** Avoid. Severe Theoretical → Also see **TABLE 8** p. 1335
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **quetiapine.** Avoid. Moderate Study → Also see **TABLE 8** p. 1335
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **ranolazine.** Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **ribociclib.** Moderate Study
- **Rifampicin** is predicted to decrease the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nimodipine).** Monitor and adjust dose. Moderate Study
- **Rifampicin** greatly decreases the exposure to calcium channel blockers **(diltiazem, verapamil).** Severe Study
- **Rifampicin** moderately decreases the exposure to **nifedipine.** Avoid. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **ruxolitinib.** Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **saxagliptin.** Mild Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **simeprevir.** Avoid. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** increase the concentration of **sirolimus.** Monitor and adjust dose. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to SSRIs **(dapoxetine).** Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine).** Monitor and adjust dose. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to calcium channel blockers **(diltiazem, verapamil).** Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to statins **(atorvastatin).** Monitor and adjust dose. Severe Study
- **Amlodipine** slightly increases the exposure to statins **(simvastatin).** Adjust **simvastatin** dose, p. 203. Mild Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to statins **(simvastatin).** Use with caution and adjust **simvastatin** dose, p. 203. Severe Study
- **Sulfinpyrazone** decreases the exposure to **verapamil.** Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **sunitinib.** Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the concentration of **tacrolimus.** Severe Study
- **Nicardipine** potentially increases the concentration of **tacrolimus.** Monitor concentration and adjust dose. Severe Anecdotal
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to taxanes **(cabazitaxel).** Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the concentration of **temsirolimus.** Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **tofacitinib.** Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **tolterodine.** Mild Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **tolvaptan.** Adjust dose. Moderate Study
- **Verapamil** is predicted to increase the exposure to **topotecan.** Severe Study
- **Verapamil** is predicted to increase the concentration of **trametinib.** Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **trazodone.** Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **ulipristal.** Avoid if used for uterine fibroids. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **venetoclax.** Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **vinca alkaloids.** Severe Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **zopiclone.** Adjust dose. Moderate Study

Calcium chloride → see calcium salts

Calcium gluconate → see calcium salts

Calcium lactate → see calcium salts

Calcium phosphate → see calcium salts

Calcium salts

calcium acetate • calcium carbonate • calcium chloride • calcium gluconate • calcium lactate • calcium phosphate

SEPARATION OF ADMINISTRATION Calcium carbonate-containing antacids should preferably not be taken at the same time as other drugs since they might impair absorption. Antacids might damage enteric coatings designed to prevent dissolution in the stomach.

- Oral **calcium salts** decrease the absorption of alkylating agents **(estramustine).** Severe Study
- **Calcium carbonate** decreases the absorption of antimalarials **(chloroquine).** Separate administration by at least 4 hours. Moderate Study
- **Calcium carbonate** is predicted to decrease the absorption of antimalarials **(proguanil).** Separate administration by at least 2 hours. Moderate Study

https://nhathuocngocanh.com/ www.getintopharma.com

Calcium salts (continued)

- Oral **calcium salts** decrease the absorption of bisphosphonates **(alendronic acid)**. **Alendronic acid** should be taken at least 30 minutes before **calcium salts**. Moderate Study
- Oral **calcium salts** are predicted to decrease the absorption of oral bisphosphonates **(ibandronic acid)**. Avoid **calcium salts** for at least 6 hours before or 1 hour after **ibandronic acid**. Moderate Theoretical
- Oral **calcium salts** decrease the absorption of bisphosphonates **(risedronate)**. Separate administration by at least 2 hours. Moderate Study
- Oral **calcium salts** decrease the absorption of bisphosphonates **(sodium clodronate)**. Avoid **calcium salts** for 2 hours before or 1 hour after **sodium clodronate**. Moderate Study
- Cephalosporins **(ceftriaxone)** increase the risk of cardio-respiratory arrest when given with **calcium chloride**. Avoid. Severe Anecdotal
- Cephalosporins **(ceftriaxone)** increase the risk of cardio-respiratory arrest when given with intravenous **calcium gluconate**. Avoid. Severe Anecdotal
- Intravenous **calcium salts** increase the concentration of **digoxin**. Avoid. Moderate Anecdotal
- Oral **calcium salts** decrease the absorption of **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after **calcium salts**. Moderate Study
- Oral **calcium salts** decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **calcium salts**. Severe Study
- **Calcium carbonate** decreases the absorption of **hydroxychloroquine**. Separate administration by at least 4 hours. Moderate Study
- **Calcium carbonate** decreases the absorption of **iron (oral)**. **Calcium carbonate** should be taken 1 hour before or 2 hours after **iron (oral)**. Moderate Study
- **Calcium carbonate** is predicted to decrease the exposure to **ledipasvir**. Separate administration by 4 hours. Moderate Theoretical
- **Calcium carbonate** decreases the absorption of quinolones **(ciprofloxacin)**. Separate administration by 2 hours. Moderate Study
- **Calcium carbonate** decreases the absorption of quinolones **(norfloxacin)**. **Norfloxacin** should be taken 2 hours before or 4 hours after **calcium carbonate**. Moderate Study
- **Calcium carbonate** greatly decreases the exposure to **raltegravir** (high-dose). Avoid. Severe Study
- **Calcium carbonate** is predicted to slightly decrease the exposure to **rilpivirine**. **Calcium carbonate** should be taken 2 hours before or 4 hours after **rilpivirine**. Severe Theoretical
- **Calcium carbonate** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. Moderate Theoretical
- **Thiazide diuretics** increase the risk of hypercalcaemia when given with **calcium salts**. Severe Anecdotal
- Oral **calcium salts** are predicted to decrease the absorption of thyroid hormones **(levothyroxine)**. Separate administration by at least 4 hours. Moderate Anecdotal
- **Calcium carbonate** is predicted to decrease the concentration of **velpatasvir**. Separate administration by 4 hours. Moderate Anecdotal
- Oral **calcium salts** decrease the absorption of **zinc**. Moderate Study

Canagliflozin → see **TABLE 14** p. 1337 (antidiabetic drugs), **TABLE 8** p. 1335 (hypotension)

- **Rifampicin** moderately decreases the exposure to **canagliflozin**. Adjust **canagliflozin** dose, p. 687. Moderate Study

Canakinumab → see monoclonal antibodies

Candesartan → see angiotensin-II receptor antagonists

Cangrelor → see **TABLE 4** p. 1334 (antiplatelet effects)

Cannabis extract → see **TABLE 11** p. 1336 (CNS depressant effects)

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cannabis extract**. Avoid. Severe Theoretical → Also see **TABLE 11** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **cannabis extract**. Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. Moderate Theoretical
- **Idelalisib** is predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **cannabis extract**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **cannabis extract**. Avoid. Severe Theoretical

Capecitabine → see **TABLE 15** p. 1337 (myelosuppression)

- **Allopurinol** is predicted to decrease the effects of **capecitabine**. Avoid. Severe Study
- **Capecitabine** increases the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Severe Anecdotal
- **Capecitabine** increases the effects of **coumarins**. Monitor INR and adjust dose. Moderate Anecdotal
- **Folates** are predicted to increase the risk of toxicity when given with **capecitabine**. Severe Anecdotal
- H_2 receptor antagonists **(cimetidine)** are predicted to slightly increase the exposure to **capecitabine**. Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **capecitabine**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Metronidazole** is predicted to increase the risk of capecitabine toxicity when given with **capecitabine**. Severe Theoretical

Capreomycin → see **TABLE 2** p. 1334 (nephrotoxicity), **TABLE 19** p. 1338 (ototoxicity)

Captopril → see ACE inhibitors

Carbamazepine → see antiepileptics

Carbapenems

ertapenem · imipenem · meropenem

- **Carbapenems** decrease the concentration of antiepileptics **(valproate)**. Avoid. Severe Anecdotal
- **Ganciclovir** is predicted to increase the risk of seizures when given with **imipenem**. Avoid. Severe Anecdotal
- **Valganciclovir** is predicted to increase the risk of seizures when given with **imipenem**. Avoid. Severe Anecdotal

Carbidopa

- **Iron (oral)** is predicted to decrease the exposure to **carbidopa**. Moderate Theoretical

Carbimazole → see **TABLE 15** p. 1337 (myelosuppression)

- **Carbimazole** affects the concentration of **digoxin**. Monitor and adjust dose. Moderate Theoretical
- **Carbimazole** decreases the effects of **metyrapone**. Avoid. Moderate Theoretical

Carboplatin → see platinum compounds

Carfilzomib → see **TABLE 15** p. 1337 (myelosuppression)

Carmustine → see alkylating agents

Carvedilol → see beta blockers, non-selective

Caspofungin

- Antiepileptics **(carbamazepine, fosphenytoin, phenytoin)** are predicted to decrease the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 582. Moderate Theoretical
- **Ciclosporin** slightly increases the exposure to **caspofungin**. Severe Study
- Corticosteroids **(dexamethasone)** are predicted to decrease the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 582. Moderate Theoretical
- **Efavirenz** is predicted to decrease the concentration of **caspofungin**. Adjust dose. Moderate Study
- **Nevirapine** is predicted to decrease the concentration of **caspofungin**. Adjust dose. Moderate Theoretical
- **Rifampicin** decreases the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 582. Moderate Study

https://nhathuocngocanh.com/ www.getintopharma.com

Cefaclor → see cephalosporins
Cefadroxil → see cephalosporins
Cefalexin → see cephalosporins
Cefixime → see cephalosporins
Cefotaxime → see cephalosporins
Cefradine → see cephalosporins
Ceftaroline → see cephalosporins
Ceftazidime → see cephalosporins
Ceftobiprole → see cephalosporins
Ceftolozane → see cephalosporins
Ceftriaxone → see cephalosporins
Cefuroxime → see cephalosporins
Celecoxib → see NSAIDs
Celiprolol → see beta blockers, selective
Cephalosporins → see **TABLE 2** p. 1334 (nephrotoxicity)

cefaclor · cefadroxil · cefalexin · cefixime · cefotaxime · cefradine · ceftaroline · ceftazidime · ceftobiprole · ceftolozane · ceftriaxone · cefuroxime

- **Ceftobiprole** is predicted to increase the exposure to **bosentan**. Moderate Theoretical
- **Ceftriaxone** increases the risk of cardio-respiratory arrest when given with calcium salts **(calcium chloride)**. Avoid. Severe Anecdotal
- **Ceftriaxone** increases the risk of cardio-respiratory arrest when given with intravenous calcium salts **(calcium gluconate)**. Avoid. Severe Anecdotal
- **Ceftriaxone** potentially increases the risk of bleeding events when given with **coumarins**. Severe Anecdotal
- **Ceftriaxone** potentially increases the risk of bleeding events when given with **phenindione**. Severe Anecdotal
- **Ceftobiprole** is predicted to increase the concentration of **statins**. Moderate Theoretical
- **Ceftobiprole** is predicted to increase the concentration of sulfonylureas **(glibenclamide)**. Moderate Theoretical

Ceritinib → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 9** p. 1336 (QT-interval prolongation)
- **Ceritinib** is predicted to increase the exposure to **aliskiren**. Moderate Theoretical
- **Antacids** are predicted to decrease the absorption of **ceritinib**. Separate administration by 2 hours. Moderate Theoretical
- Antiarrhythmics **(amiodarone, dronedarone)** are predicted to increase the exposure to **ceritinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ceritinib**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ceritinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 945. Severe Study → Also see **TABLE 9** p. 1336
- **Ceritinib** is predicted to increase the exposure to antihistamines, non-sedating **(fexofenadine)**. Moderate Theoretical
- **Aprepitant** is predicted to increase the exposure to **ceritinib**. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **ceritinib**. Moderate Theoretical
- **Ceritinib** is predicted to increase the exposure to **ciclosporin**. Avoid. Severe Theoretical
- **Cobicistat** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 945. Severe Study
- **Ceritinib** is predicted to increase the exposure to **colchicine**. Moderate Theoretical
- **Ceritinib** is predicted to increase the exposure to coumarins **(warfarin)**. Avoid. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **ceritinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- **Ceritinib** is predicted to increase the exposure to **dabigatran**. Moderate Theoretical
- **Ceritinib** is predicted to increase the risk of bradycardia when given with **digoxin**. Avoid. Severe Theoretical
- **Ceritinib** is predicted to increase the exposure to **edoxaban**. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **ceritinib**. Avoid. Severe Study
- **Ceritinib** is predicted to increase the exposure to **ergotamine**. Avoid. Severe Theoretical
- **Ceritinib** is predicted to increase the exposure to **everolimus**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Grapefruit juice** is predicted to increase the exposure to **ceritinib**. Avoid. Severe Theoretical
- **H_2 receptor antagonists** are predicted to decrease the absorption of **ceritinib**. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 945. Severe Study → Also see **TABLE 9** p. 1336
- **Idelalisib** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 945. Severe Study → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to increase the exposure to **ceritinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Lapatinib** is predicted to increase the exposure to **ceritinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Ceritinib** is predicted to increase the exposure to **loperamide**. Moderate Theoretical
- Macrolides **(azithromycin, erythromycin)** are predicted to increase the exposure to **ceritinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 945. Severe Study → Also see **TABLE 9** p. 1336
- **Mitotane** is predicted to decrease the exposure to **ceritinib**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Netupitant** is predicted to increase the exposure to **ceritinib**. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to **ceritinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- **Ceritinib** is predicted to increase the exposure to NSAIDs **(celecoxib, diclofenac)**. Adjust dose. Moderate Theoretical
- **Ceritinib** is predicted to increase the exposure to opioids **(alfentanil, fentanyl)**. Avoid. Severe Theoretical
- **Ceritinib** is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Proton pump inhibitors** are predicted to decrease the absorption of **ceritinib**. Moderate Theoretical
- **Ranolazine** is predicted to increase the exposure to **ceritinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Rifampicin** is predicted to decrease the exposure to **ceritinib**. Avoid. Severe Study
- **Ceritinib** is predicted to increase the exposure to **sirolimus**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **ceritinib**. Avoid. Severe Theoretical
- **Ceritinib** is predicted to increase the exposure to sulfonylureas **(glimepiride)**. Adjust dose. Moderate Theoretical
- **Ceritinib** is predicted to increase the exposure to **tacrolimus**. Avoid. Severe Theoretical
- **Ceritinib** is predicted to increase the exposure to taxanes **(paclitaxel)**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Ceritinib** is predicted to increase the exposure to **topotecan**. Moderate Theoretical → Also see **TABLE 15** p. 1337

Certolizumab pegol → see monoclonal antibodies
Cetirizine → see antihistamines, non-sedating
Cetuximab → see monoclonal antibodies
Chenodeoxycholic acid
- Oral antacids **(aluminium hydroxide)** decrease the absorption of **chenodeoxycholic acid**. Moderate Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. Moderate Theoretical
- **Ciclosporin** is predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. Moderate Theoretical
- Oral **combined hormonal contraceptives** potentially decrease the efficacy of **chenodeoxycholic acid**. Avoid. Moderate Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Chenodeoxycholic acid (continued)
- **Sirolimus** is predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. Moderate Theoretical

Chloral hydrate → see **TABLE 11** p. 1336 (CNS depressant effects)
- Intravenous loop diuretics **(furosemide)** potentially increase the risk of sweating, variable blood pressure, and tachycardia when given after **chloral hydrate**. Moderate Anecdotal

Chlorambucil → see alkylating agents

Chloramphenicol

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- Antiepileptics **(phenobarbital, primidone)** decrease the concentration of **chloramphenicol**. Moderate Study
- Intravenous **chloramphenicol** increases the concentration of antiepileptics **(fosphenytoin, phenytoin)** and antiepileptics **(fosphenytoin, phenytoin)** affect the concentration of intravenous **chloramphenicol**. Monitor concentration and adjust dose. Severe Study
- **Chloramphenicol** potentially increases the anticoagulant effect of **coumarins**. Moderate Anecdotal
- **Chloramphenicol** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Theoretical
- **Chloramphenicol** decreases the efficacy of intravenous **iron (injectable)**. Moderate Anecdotal
- **Chloramphenicol** decreases the efficacy of oral **iron (oral)**. Moderate Theoretical
- **Rifampicin** decreases the concentration of **chloramphenicol**. Moderate Study
- **Chloramphenicol** is predicted to increase the exposure to **sulfonylureas**. Severe Study
- **Chloramphenicol** increases the concentration of **tacrolimus**. Severe Study

Chlordiazepoxide → see **TABLE 11** p. 1336 (CNS depressant effects)
- **Chlordiazepoxide** affects the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **chlordiazepoxide**. Moderate Theoretical

Chloroquine → see antimalarials

Chlorothiazide → see **TABLE 18** p. 1338 (hyponatraemia), **TABLE 8** p. 1335 (hypotension), **TABLE 17** p. 1338 (reduced serum potassium)

Chlorphenamine → see antihistamines, sedating

Chlorpromazine → see phenothiazines

Chlortalidone → see thiazide diuretics

Cholera vaccine
- Antimalarials **(chloroquine)** decrease the efficacy of oral **cholera vaccine**. Moderate Study
- **Hydroxychloroquine** is predicted to decrease the efficacy of oral **cholera vaccine**. Moderate Theoretical

Cholic acid
- **Antacids** are predicted to decrease the absorption of **cholic acid**. Separate administration by 5 hours. Mild Theoretical
- Antiepileptics **(phenobarbital)** decrease the effects of **cholic acid**. Avoid. Moderate Study
- **Ciclosporin** affects the concentration of **cholic acid**. Avoid. Moderate Study

Choline salicylate
- **Corticosteroids** are predicted to decrease the concentration of **choline salicylate**. Moderate Study

Ciclesonide → see corticosteroids

Ciclosporin → see **TABLE 2** p. 1334 (nephrotoxicity), **TABLE 16** p. 1338 (increased serum potassium)

- Pomelo juice is predicted to increase ciclosporin exposure, and purple grape juice is predicted to decrease ciclosporin exposure.
- Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- **Ciclosporin** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. Moderate Study
- **Ciclosporin** markedly increases the exposure to **aliskiren**. Avoid. Severe Study → Also see **TABLE 16** p. 1338
- **Ciclosporin** moderately increases the exposure to **ambrisentan**. Adjust **ambrisentan** dose, p. 184. Moderate Study
- **Ciclosporin** increases the concentration of anthracyclines **(daunorubicin, doxorubicin, epirubicin, idarubicin, mitoxantrone)**. Severe Study
- Antiarrhythmics **(amiodarone)** increase the concentration of **ciclosporin**. Monitor concentration and adjust dose. Severe Study
- Antiarrhythmics **(dronedarone)** increase the concentration of **ciclosporin**. Severe Study
- **Ciclosporin** increases the exposure to antiarrhythmics **(dronedarone)**. Avoid. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the concentration of **ciclosporin**. Severe Study
- Antiepileptics **(oxcarbazepine)** decrease the concentration of **ciclosporin**. Severe Anecdotal
- Antifungals, azoles **(fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** increase the concentration of **ciclosporin**. Severe Study
- Antifungals, azoles **(miconazole)** increase the concentration of **ciclosporin**. Monitor and adjust dose. Severe Anecdotal
- **Aprepitant** increases the concentration of **ciclosporin**. Severe Study
- **Ciclosporin** is predicted to increase the exposure to beta blockers, non-selective **(nadolol)**. Moderate Study
- **Bosentan** moderately decreases the exposure to **ciclosporin** and **ciclosporin** moderately increases the exposure to **bosentan**. Avoid. Severe Study
- Calcium channel blockers **(diltiazem, nicardipine, verapamil)** increase the concentration of **ciclosporin**. Severe Study
- **Ciclosporin** moderately increases the exposure to calcium channel blockers **(lercanidipine)**. Use with caution or avoid. Severe Study
- **Ciclosporin** slightly increases the exposure to **caspofungin**. Severe Study
- **Ceritinib** is predicted to increase the exposure to **ciclosporin**. Avoid. Severe Theoretical
- **Ciclosporin** is predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. Moderate Theoretical
- **Ciclosporin** affects the concentration of **cholic acid**. Avoid. Moderate Study
- **Cobicistat** increases the concentration of **ciclosporin**. Severe Study
- **Ciclosporin** increases the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1085. Severe Study
- **Crizotinib** increases the concentration of **ciclosporin**. Severe Study
- **Ciclosporin** is predicted to increase the exposure to **dabigatran**. Avoid. Severe Theoretical
- **Danazol** increases the concentration of **ciclosporin**. Severe Study
- **Ciclosporin** is predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. Severe Theoretical
- **Ciclosporin** is predicted to increase the exposure to **darifenacin**. Avoid. Moderate Theoretical
- **Ciclosporin** increases the concentration of **digoxin**. Monitor and adjust dose. Severe Theoretical
- **Ciclosporin** slightly increases the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 125. Severe Study
- **Efavirenz** decreases the concentration of **ciclosporin**. Monitor concentration and adjust dose. Moderate Study
- **Ciclosporin** increases the exposure to **eluxadoline**. Avoid. Moderate Study
- **Enzalutamide** decreases the concentration of **ciclosporin**. Severe Study
- **Ciclosporin** is predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- **Ciclosporin** increases the exposure to **etoposide**. Monitor and adjust dose. Severe Study
- **Ciclosporin** moderately increases the exposure to **everolimus**. Avoid or adjust dose. Severe Study
- **Ciclosporin** moderately increases the exposure to **ezetimibe** and **ezetimibe** slightly increases the exposure to **ciclosporin**. Moderate Study

https://nhathuocngocanh.com/ www.getintopharma.com

- Fibrates **(bezafibrate)** are predicted to increase the risk of nephrotoxicity when given with **ciclosporin**. Severe Theoretical
- Fibrates **(fenofibrate)** increase the risk of nephrotoxicity when given with **ciclosporin**. Severe Study
- **Ciclosporin** is predicted to increase the exposure to **fidaxomicin**. Avoid. Moderate Study
- **Ciclosporin** increases the exposure to **glecaprevir**. Avoid or monitor. Severe Study
- **Grapefruit juice** increases the concentration of **ciclosporin**. Avoid. Severe Study
- **Ciclosporin** greatly increases the exposure to **grazoprevir**. Avoid. Severe Study
- H_2 receptor antagonists **(cimetidine)** increase the concentration of **ciclosporin**. Mild Study
- **HIV-protease inhibitors** increase the concentration of **ciclosporin**. Severe Study
- **Idelalisib** increases the concentration of **ciclosporin**. Severe Study
- **Imatinib** increases the concentration of **ciclosporin**. Severe Study
- **Lanreotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **ciclosporin**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Ciclosporin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **ciclosporin**. Avoid. Severe Theoretical
- Macrolides **(clarithromycin, erythromycin)** increase the concentration of **ciclosporin**. Severe Study
- **Ciclosporin** is predicted to decrease the efficacy of **mifamurtide**. Avoid. Severe Theoretical
- **Mitotane** decreases the concentration of **ciclosporin**. Severe Study
- Monoclonal antibodies **(blinatumomab)** are predicted to transiently increase the exposure to **ciclosporin**. Monitor and adjust dose. Moderate Theoretical
- Monoclonal antibodies **(sarilumab)** potentially affect the exposure to **ciclosporin**. Monitor and adjust dose. Moderate Theoretical
- Monoclonal antibodies **(tocilizumab)** are predicted to decrease the exposure to **ciclosporin**. Monitor and adjust dose. Moderate Theoretical
- **Netupitant** increases the concentration of **ciclosporin**. Severe Study
- **Nevirapine** is predicted to decrease the concentration of **ciclosporin**. Moderate Study
- **Nilotinib** increases the concentration of **ciclosporin**. Severe Study
- **Ciclosporin** is predicted to increase the exposure to **nintedanib**. Moderate Study
- **Ciclosporin** increases the concentration of NSAIDs **(diclofenac)**. Severe Study → Also see **TABLE 2** p. 1334 → Also see **TABLE 16** p. 1338
- **Octreotide** decreases the absorption of oral **ciclosporin**. Adjust **ciclosporin** dose, p. 818. Severe Anecdotal
- **Palbociclib** is predicted to increase the exposure to **ciclosporin**. Adjust dose. Moderate Theoretical
- **Ciclosporin** is predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical
- **Pasireotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. Severe Theoretical
- **Ciclosporin** increases the exposure to **pibrentasvir**. Avoid or monitor. Severe Study
- **Pitolisant** is predicted to decrease the exposure to **ciclosporin**. Avoid. Severe Theoretical
- **Ciclosporin** is predicted to increase the concentration of **ranolazine** and **ranolazine** is predicted to increase the concentration of **ciclosporin**. Moderate Theoretical
- **Ciclosporin** moderately increases the exposure to **repaglinide**. Moderate Study
- **Ribociclib** is predicted to increase the exposure to **ciclosporin**. Use with caution and adjust dose. Moderate Theoretical
- **Rifampicin** decreases the concentration of **ciclosporin**. Severe Study
- **Ciclosporin** very markedly increases the exposure to **rifaximin**. Severe Study
- **Ciclosporin** is predicted to increase the exposure to **riociguat**. Moderate Theoretical
- **Ciclosporin** moderately increases the exposure to **sirolimus**. Separate administration by 4 hours. Severe Study
- **St John's Wort** decreases the concentration of **ciclosporin**. Avoid. Moderate Study
- **Ciclosporin** very markedly increases the exposure to statins **(atorvastatin)**. Avoid or adjust **atorvastatin** dose, p. 200. Severe Study
- **Ciclosporin** moderately increases the exposure to statins **(fluvastatin)**. Severe Study
- **Ciclosporin** markedly to very markedly increases the exposure to statins **(pravastatin)**. Adjust dose. Severe Study
- **Ciclosporin** markedly increases the exposure to statins **(rosuvastatin, simvastatin)**. Avoid. Severe Study
- **Sulfinpyrazone** decreases the concentration of **ciclosporin**. Severe Study
- **Ciclosporin** increases the concentration of **tacrolimus**. Avoid. Severe Study → Also see **TABLE 2** p. 1334 → Also see **TABLE 16** p. 1338
- **Ciclosporin** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. Severe Study
- **Ciclosporin** increases the exposure to **tofacitinib**. Avoid. Severe Study
- **Ciclosporin** is predicted to increase the exposure to **topotecan**. Severe Study
- **Ciclosporin** is predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Ursodeoxycholic acid** affects the concentration of **ciclosporin**. Use with caution and adjust dose. Severe Anecdotal
- **Ciclosporin** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical
- **Vitamin E substances** affect the exposure to **ciclosporin**. Moderate Study
- **Ciclosporin** increases the concentration of **voxilaprevir**. Avoid. Severe Study

Cilostazol → see **TABLE 4** p. 1334 (antiplatelet effects)

GENERAL INFORMATION Concurrent use with 2 or more antiplatelets or anticoagulants is contra-indicated.

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to alter the effects of **cilostazol**. Moderate Theoretical
- Antifungals, azoles **(fluconazole)** are predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. Moderate Study
- Antifungals, azoles **(miconazole)** are predicted to increase the exposure to **cilostazol**. Use with caution and adjust dose. Moderate Theoretical
- **Cobicistat** is predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. Moderate Study
- **Enzalutamide** is predicted to alter the effects of **cilostazol**. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. Moderate Study
- **Idelalisib** is predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. Moderate Study
- **Cilostazol** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. Moderate Study
- Macrolides **(erythromycin)** slightly increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. Moderate Study
- **Mitotane** is predicted to alter the effects of **cilostazol**. Moderate Theoretical
- **Moclobemide** is predicted to increase the exposure to **cilostazol**. Moderate Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Cilostazol (continued)
- Proton pump inhibitors **(esomeprazole)** are predicted to increase the exposure to **cilostazol**. Moderate Theoretical
- Proton pump inhibitors **(omeprazole)** are predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. Moderate Study
- **Rifampicin** is predicted to alter the effects of **cilostazol**. Moderate Theoretical
- SSRIs **(fluoxetine, fluvoxamine)** are predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. Moderate Theoretical → Also see **TABLE 4** p. 1334
- **St John's Wort** is predicted to alter the effects of **cilostazol**. Moderate Theoretical

Cimetidine → see H_2 receptor antagonists

Cinacalcet

FOOD AND LIFESTYLE Dose adjustment might be necessary if smoking started or stopped during treatment.

- **Cinacalcet** is predicted to increase the exposure to anticholinesterases, centrally acting **(galantamine)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. Moderate Study
- **Cinacalcet** is predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. Moderate Study
- **Cinacalcet** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. Severe Study
- **Cinacalcet** is predicted to increase the exposure to beta blockers, selective **(metoprolol, nebivolol)**. Moderate Study
- **Cobicistat** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. Moderate Study
- **Cinacalcet** is predicted to slightly increase the exposure to **darifenacin**. Mild Study
- **Cinacalcet** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. Moderate Study
- **Cinacalcet** increases the risk of hypocalcaemia when given with **etelcalcetide**. Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. Moderate Study
- **Idelalisib** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. Moderate Study
- Macrolides **(clarithromycin)** are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. Moderate Study
- **Cinacalcet** is predicted to decrease the efficacy of opioids **(codeine)**. Moderate Theoretical
- **Cinacalcet** is predicted to decrease the efficacy of opioids **(tramadol)**. Severe Study
- **Cinacalcet** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. Moderate Study
- **Cinacalcet** is predicted to increase the exposure to **risperidone**. Adjust dose. Moderate Study
- SSRIs **(fluvoxamine)** are predicted to increase the exposure to **cinacalcet**. Adjust dose. Moderate Theoretical
- **Cinacalcet** is predicted to increase the exposure to SSRIs **(dapoxetine)**. Moderate Theoretical
- **Cinacalcet** is predicted to decrease the efficacy of **tamoxifen**. Avoid. Severe Study
- **Cinacalcet** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. Severe Study
- **Cinacalcet** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study

Cinnarizine → see antihistamines, sedating

Ciprofibrate → see fibrates

Ciprofloxacin → see quinolones

Cisatracurium → see neuromuscular blocking drugs, non-depolarising

Cisplatin → see platinum compounds

Citalopram → see SSRIs

Cladribine → see **TABLE 15** p. 1337 (myelosuppression)

SEPARATION OF ADMINISTRATION Oral cladribine might affect the absorption of concurrently administered drugs—consider separating administration by at least 3 hours.

- Antiepileptics **(carbamazepine)** are predicted to increase the risk of haematological toxicity when given with oral **cladribine**. Moderate Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **cladribine**. Public Health England advises avoid (refer to Green Book). Severe Theoretical

Clarithromycin → see macrolides

Clavulanic acid → see **TABLE 1** p. 1334 (hepatotoxicity)

Clemastine → see antihistamines, sedating

Clevidipine → see calcium channel blockers

Clindamycin

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- **Clindamycin** increases the effects of **neuromuscular blocking drugs, non-depolarising**. Severe Anecdotal
- **Clindamycin** increases the effects of **suxamethonium**. Severe Anecdotal

Clobazam → see **TABLE 11** p. 1336 (CNS depressant effects)
- Antiepileptics **(stiripentol)** increase the concentration of **clobazam**. Severe Study
- **Clobazam** potentially affects the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Severe Anecdotal
- Antifungals, azoles **(fluconazole, voriconazole)** potentially increase the exposure to **clobazam**. Adjust dose. Moderate Theoretical
- **Moclobemide** potentially increases the exposure to **clobazam**. Adjust dose. Moderate Theoretical
- Proton pump inhibitors **(esomeprazole, omeprazole)** potentially increase the exposure to **clobazam**. Adjust dose. Moderate Theoretical
- SSRIs **(fluoxetine, fluvoxamine)** potentially increase the exposure to **clobazam**. Adjust dose. Moderate Theoretical

Clofarabine → see **TABLE 15** p. 1337 (myelosuppression)
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **clofarabine**. Public Health England advises avoid (refer to Green Book). Severe Theoretical

Clofazimine
- **Clofazimine** potentially increases the risk of QT-prolongation when given with **bedaquiline**. Severe Study

Clomethiazole → see **TABLE 11** p. 1336 (CNS depressant effects)
- **Alcohol (beverage)** causes serious, potentially fatal, CNS depression when given with **clomethiazole**. Avoid. Severe Study → Also see **TABLE 11** p. 1336
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **clomethiazole**. Monitor and adjust dose. Moderate Study → Also see **TABLE 11** p. 1336
- **Enzalutamide** decreases the exposure to **clomethiazole**. Monitor and adjust dose. Moderate Study
- **Mitotane** decreases the exposure to **clomethiazole**. Monitor and adjust dose. Moderate Study
- **Rifampicin** decreases the exposure to **clomethiazole**. Monitor and adjust dose. Moderate Study

Clomipramine → see tricyclic antidepressants

Clonazepam → see **TABLE 11** p. 1336 (CNS depressant effects)
- **Clonazepam** potentially affects the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Severe Anecdotal

Clonidine → see **TABLE 6** p. 1335 (bradycardia), **TABLE 8** p. 1335 (hypotension), **TABLE 11** p. 1336 (CNS depressant effects)
- **Tricyclic antidepressants** decrease the antihypertensive effects of **clonidine**. Monitor and adjust dose. Moderate Anecdotal → Also see **TABLE 8** p. 1335

Clopamide → see thiazide diuretics

Clopidogrel → see **TABLE 4** p. 1334 (antiplatelet effects)

https://nhathuocngocanh.com/ www.getintopharma.com

- Antifungals, azoles **(fluconazole)** are predicted to decrease the efficacy of **clopidogrel**. Avoid. Severe Theoretical
- Antifungals, azoles **(voriconazole)** are predicted to decrease the efficacy of **clopidogrel**. Avoid. Moderate Study
- **Clopidogrel** is predicted to increase the exposure to **dabrafenib**. Moderate Theoretical
- **Clopidogrel** moderately increases the exposure to **enzalutamide**. Avoid or adjust **enzalutamide** dose, p. 921. Severe Study
- **Grapefruit juice** markedly decreases the exposure to **clopidogrel**. Severe Study
- **Moclobemide** is predicted to decrease the efficacy of **clopidogrel**. Avoid. Moderate Study
- **Clopidogrel** is predicted to moderately increase the exposure to **montelukast**. Moderate Study
- **Clopidogrel** increases the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. Severe Study
- Proton pump inhibitors **(esomeprazole, omeprazole)** are predicted to decrease the efficacy of **clopidogrel**. Avoid. Moderate Study
- **Clopidogrel** increases the exposure to **repaglinide**. Avoid. Severe Study
- **Clopidogrel** is predicted to increase the exposure to retinoids **(alitretinoin)**. Adjust **alitretinoin** dose, p. 1226. Moderate Theoretical
- **Clopidogrel** is predicted to increase the exposure to **selexipag**. Adjust dose. Moderate Study
- SSRIs **(fluoxetine, fluvoxamine)** are predicted to decrease the efficacy of **clopidogrel**. Avoid. Severe Theoretical → Also see **TABLE 4** p. 1334
- **Clopidogrel** increases the exposure to statins **(rosuvastatin)**. Adjust **rosuvastatin** dose, p. 202. Moderate Study
- **Clopidogrel** is predicted to increase the concentration of taxanes **(paclitaxel)**. Severe Anecdotal

Clotrimazole → see antifungals, azoles

Clozapine → see **TABLE 8** p. 1335 (hypotension), **TABLE 15** p. 1337 (myelosuppression), **TABLE 11** p. 1336 (CNS depressant effects), **TABLE 10** p. 1336 (antimuscarinics)

- Dose adjustment might be necessary if smoking started or stopped during treatment.
- Avoid concomitant use of clozapine with drugs that have a substantial potential for causing agranulocytosis.

- Antiepileptics **(carbamazepine)** are predicted to increase the risk of myelosuppression when given with **clozapine**. Avoid. Severe Anecdotal
- Antiepileptics **(fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **clozapine**. Moderate Anecdotal → Also see **TABLE 11** p. 1336
- **Combined hormonal contraceptives** increase the concentration of **clozapine**. Monitor side effects and adjust dose. Severe Study
- **Clozapine** is predicted to decrease the effects of **dopamine receptor agonists**. Moderate Theoretical → Also see **TABLE 8** p. 1335 → Also see **TABLE 10** p. 1336
- **Enzalutamide** is predicted to decrease the exposure to **clozapine**. Moderate Theoretical
- HIV-protease inhibitors **(ritonavir)** are predicted to affect the exposure to **clozapine**. Avoid. Severe Theoretical
- Iron chelators **(deferasirox)** are predicted to increase the exposure to **clozapine**. Avoid. Moderate Theoretical
- **Leflunomide** is predicted to decrease the exposure to **clozapine**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Clozapine** is predicted to decrease the effects of **levodopa**. Severe Theoretical → Also see **TABLE 8** p. 1335
- Macrolides **(erythromycin)** potentially increase the risk of toxicity when given with **clozapine**. Severe Anecdotal
- Quinolones **(ciprofloxacin)** increase the concentration of **clozapine**. Monitor side effects and adjust dose. Severe Study
- **Rifampicin** decreases the exposure to **clozapine**. Severe Anecdotal
- SSRIs **(fluvoxamine)** increase the concentration of **clozapine**. Monitor side effects and adjust dose. Severe Study
- **Teriflunomide** is predicted to decrease the exposure to **clozapine**. Moderate Theoretical

Co-trimoxazole → see sulfonamides

Cobicistat

- **Cobicistat** is predicted to increase the exposure to **abiraterone**. Severe Theoretical
- **Cobicistat** is predicted to markedly increase the exposure to aldosterone antagonists **(eplerenone)**. Avoid. Severe Study
- **Cobicistat** increases the exposure to **almotriptan**. Mild Study
- **Cobicistat** is predicted to moderately increase the exposure to alpha blockers **(alfuzosin, tamsulosin)**. Use with caution or avoid. Moderate Study
- **Cobicistat** is predicted to increase the exposure to alpha blockers **(doxazosin)**. Moderate Study
- **Cobicistat** moderately increases the exposure to **alprazolam**. Avoid. Moderate Study
- **Cobicistat** very markedly increases the exposure to antiarrhythmics **(dronedarone)**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to antiarrhythmics **(propafenone)**. Monitor and adjust dose. Severe Study
- **Cobicistat** is predicted to increase the exposure to anticholinesterases, centrally acting **(galantamine)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cobicistat**. Avoid. Severe Theoretical
- Antiepileptics **(oxcarbazepine)** are predicted to decrease the concentration of **cobicistat**. Severe Theoretical
- **Cobicistat** is predicted to very slightly increase the exposure to antiepileptics **(perampanel)**. Mild Study
- **Cobicistat** is predicted to increase the exposure to antifungals, azoles **(fluconazole, posaconazole)**. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to antifungals, azoles **(isavuconazole)**. Avoid or monitor side effects. Severe Study
- **Cobicistat** is predicted to increase the exposure to antifungals, azoles **(itraconazole, ketoconazole)**. Adjust dose. Moderate Theoretical
- **Cobicistat** is predicted to affect the exposure to antifungals, azoles **(voriconazole)**. Avoid. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to antihistamines, non-sedating **(mizolastine)**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to antihistamines, non-sedating **(rupatadine)**. Avoid. Moderate Study
- **Cobicistat** is predicted to increase the concentration of antimalarials **(piperaquine)**. Severe Theoretical
- **Cobicistat** is predicted to markedly increase the exposure to **aprepitant**. Moderate Study
- **Cobicistat** is predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Study
- **Cobicistat** is predicted to increase the exposure to beta$_2$ agonists **(salmeterol)**. Avoid. Severe Study
- **Cobicistat** slightly increases the exposure to **bortezomib**. Moderate Study
- **Bosentan** is predicted to decrease the exposure to **cobicistat**. Avoid. Severe Theoretical
- **Cobicistat** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Study
- **Cobicistat** is predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 338. Severe Study
- **Cobicistat** slightly increases the exposure to **cabozantinib**. Moderate Study
- **Cobicistat** is predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Cobicistat** is predicted to increase the exposure to calcium channel blockers **(diltiazem, verapamil)**. Severe Study
- **Cobicistat** is predicted to markedly increase the exposure to calcium channel blockers **(lercanidipine)**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. Moderate Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Cobicistat (continued)

- **Cobicistat** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 945. Severe Study
- **Cobicistat** increases the concentration of **ciclosporin**. Severe Study
- **Cobicistat** is predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. Moderate Study
- **Cobicistat** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. Moderate Study
- **Cobicistat** is predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. Severe Study
- **Cobicistat** is predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1085. Severe Study
- **Cobicistat** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to corticosteroids **(beclometasone)** (risk with beclometasone is likely to be lower than with other corticosteroids). Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to corticosteroids **(betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, prednisone, triamcinolone)**. Avoid or monitor side effects. Severe Study
- **Cobicistat** is predicted to moderately increase the exposure to **crizotinib**. Avoid. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. Moderate Study
- **Cobicistat** is predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 614. Moderate Study
- **Cobicistat** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. Severe Study
- **Cobicistat** is predicted to markedly increase the exposure to **dasatinib**. Avoid. Severe Study
- **Cobicistat** very slightly increases the exposure to **delamanid**. Severe Study
- **Cobicistat** increases the risk of QT-prolongation when given with **domperidone**. Avoid. Severe Study
- **Cobicistat** increases the exposure to dopamine receptor agonists **(bromocriptine)**. Severe Study
- **Cobicistat** is predicted to increase the concentration of dopamine receptor agonists **(cabergoline)**. Moderate Anecdotal
- **Cobicistat** is predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. Moderate Theoretical
- **Efavirenz** is predicted to decrease the exposure to **cobicistat**. Avoid. Severe Theoretical
- **Cobicistat** slightly to moderately increases the exposure to **elbasvir**. Avoid. Moderate Study
- **Cobicistat** is predicted to markedly increase the exposure to **eletriptan**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **cobicistat**. Avoid. Severe Theoretical
- **Cobicistat** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. Severe Theoretical
- **Cobicistat** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. Severe Theoretical
- **Cobicistat** is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. Moderate Study
- **Cobicistat** is predicted to increase the concentration of **everolimus**. Avoid. Severe Study
- **Cobicistat** is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 759. Severe Study
- **Cobicistat** is predicted to increase the exposure to **fosaprepitant**. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **gefitinib**. Moderate Study
- **Cobicistat** potentially increases the exposure to **glecaprevir**. Moderate Theoretical
- **Cobicistat** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Study
- **Cobicistat** is predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 952. Severe Study
- **Cobicistat** is predicted to increase the exposure to **imatinib**. Moderate Study
- **Cobicistat** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **ivabradine**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 292 or **lumacaftor with ivacaftor** p. 293 dose with potent inhibitors of CYP3A4. Severe Study
- **Cobicistat** is predicted to increase the exposure to **lapatinib**. Avoid. Moderate Study
- **Cobicistat** is predicted to markedly increase the exposure to **lomitapide**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to **lurasidone**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to **macitentan**. Moderate Study
- **Cobicistat** markedly increases the exposure to **maraviroc**. Refer to specialist literature. Severe Study
- **Cobicistat** is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. Severe Study
- **Cobicistat** is predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. Severe Study
- **Cobicistat** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 763. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **mirtazapine**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **cobicistat**. Avoid. Severe Theoretical
- **Cobicistat** is predicted to increase the exposure to **modafinil**. Mild Theoretical
- **Cobicistat** is predicted to increase the exposure to monoclonal antibodies **(trastuzumab emtansine)**. Avoid. Severe Theoretical
- **Cobicistat** is predicted to markedly increase the exposure to **naloxegol**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to **netupitant**. Moderate Study
- **Nevirapine** is predicted to decrease the exposure to **cobicistat**. Avoid. Severe Theoretical
- **Cobicistat** is predicted to moderately increase the exposure to **nilotinib**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Study
- **Cobicistat** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil)**. Monitor and adjust dose. Severe Study
- **Cobicistat** is predicted to increase the exposure to **oxybutynin**. Mild Study
- **Cobicistat** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 961. Severe Study
- **Cobicistat** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 911. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. Severe Theoretical
- **Cobicistat** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 962. Moderate Study
- **Cobicistat** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil, vardenafil)**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(sildenafil)**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 794. Severe Study

https://nhathuocngocanh.com/ www.getintopharma.com

- **Cobicistat** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(tadalafil)**. Use with caution or avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to **pimozide**. Avoid. Severe Study
- **Cobicistat** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 963. Moderate Study
- **Cobicistat** is predicted to moderately increase the exposure to **praziquantel**. Mild Study
- **Cobicistat** is predicted to increase the exposure to **quetiapine**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to **ranolazine**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to **reboxetine**. Avoid. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **regorafenib**. Avoid. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **repaglinide**. Moderate Study
- **Cobicistat** is predicted to increase the exposure to retinoids **(alitretinoin)**. Adjust **alitretinoin** dose, p. 1226. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 965. Moderate Study
- **Rifabutin** decreases the concentration of **cobicistat** and **cobicistat** increases the exposure to **rifabutin**. Avoid or adjust dose. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **cobicistat**. Avoid. Severe Theoretical
- **Cobicistat** is predicted to increase the exposure to **risperidone**. Adjust dose. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor side effects. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **saxagliptin**. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **simeprevir**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the concentration of **sirolimus**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 761 or **tamsulosin with solifenacin** p. 768 dose; avoid in hepatic and renal impairment. Severe Study
- **Cobicistat** is predicted to moderately increase the exposure to SSRIs **(dapoxetine)**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 801. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **cobicistat**. Avoid. Severe Theoretical
- **Cobicistat** is predicted to increase the exposure to statins **(atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. Severe Study
- **Cobicistat** is predicted to increase the exposure to statins **(simvastatin)**. Avoid. Severe Study
- **Cobicistat** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. Moderate Study
- **Cobicistat** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- **Cobicistat** is predicted to increase the exposure to taxanes **(cabazitaxel)**. Avoid. Severe Study
- **Cobicistat** is predicted to moderately increase the exposure to taxanes **(docetaxel)**. Avoid or adjust dose. Severe Study
- **Cobicistat** is predicted to increase the exposure to taxanes **(paclitaxel)**. Severe Theoretical
- **Cobicistat** is predicted to increase the concentration of **temsirolimus**. Avoid. Severe Theoretical
- **Cobicistat** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1072. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **tolterodine**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to **tolvaptan**. Adjust dose. Severe Study
- **Cobicistat** is predicted to increase the exposure to **toremifene**. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. Severe Theoretical
- **Cobicistat** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. Moderate Study
- **Cobicistat** is predicted to slightly increase the exposure to **tricyclic antidepressants**. Mild Study
- **Cobicistat** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Severe Study
- **Cobicistat** is predicted to increase the exposure to **vemurafenib**. Severe Theoretical
- **Cobicistat** is predicted to increase the exposure to **venetoclax**. Avoid potent inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- **Cobicistat** is predicted to increase the exposure to **venlafaxine**. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical
- **Cobicistat** is predicted to increase the exposure to vitamin D substances **(paricalcitol)**. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Theoretical

Cobimetinib

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **cobimetinib**. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cobimetinib**. Avoid. Severe Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, miconazole, posaconazole)** are predicted to increase the exposure to **cobimetinib**. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. Severe Study
- **Aprepitant** is predicted to increase the exposure to **cobimetinib**. Severe Theoretical
- **Bosentan** is predicted to decrease the exposure to **cobimetinib**. Avoid. Severe Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **cobimetinib**. Severe Theoretical
- **Cobicistat** is predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. Severe Study
- **Crizotinib** is predicted to increase the exposure to **cobimetinib**. Severe Theoretical
- **Efavirenz** is predicted to decrease the exposure to **cobimetinib**. Avoid. Severe Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **cobimetinib**. Avoid. Severe Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **cobimetinib**. Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. Severe Study
- **Idelalisib** is predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. Severe Study
- **Imatinib** is predicted to increase the exposure to **cobimetinib**. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **cobimetinib**. Severe Theoretical
- **Mitotane** is predicted to decrease the exposure to **cobimetinib**. Avoid. Severe Theoretical
- **Netupitant** is predicted to increase the exposure to **cobimetinib**. Severe Theoretical
- **Nevirapine** is predicted to decrease the exposure to **cobimetinib**. Avoid. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **cobimetinib**. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **cobimetinib**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **cobimetinib**. Avoid. Severe Theoretical

Codeine → see opioids

https://nhathuocngocanh.com/ www.getintopharma.com

Colchicine

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1085. Severe Study
- **Aprepitant** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. Severe Study
- **Ceritinib** is predicted to increase the exposure to **colchicine**. Moderate Theoretical
- **Ciclosporin** increases the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1085. Severe Study
- **Cobicistat** is predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1085. Severe Study
- **Crizotinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. Severe Study
- **Eliglustat** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1085. Severe Theoretical
- **Colchicine** increases the risk of rhabdomyolysis when given with **fibrates**. Severe Anecdotal
- **HIV-protease inhibitors** are predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1085. Severe Study
- **Idelalisib** is predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1085. Severe Study
- **Imatinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. Severe Study
- **Lapatinib** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1085. Moderate Theoretical
- Macrolides **(azithromycin)** are predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1085. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1085. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. Severe Study
- **Mirabegron** is predicted to increase the exposure to **colchicine**. Mild Theoretical
- **Netupitant** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. Severe Study
- **Nilotinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. Severe Study
- **Ranolazine** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1085. Severe Theoretical
- **Rolapitant** is predicted to increase the exposure to **colchicine**. Moderate Study
- **Colchicine** increases the risk of rhabdomyolysis when given with **statins**. Severe Anecdotal
- **Velpatasvir** is predicted to increase the exposure to **colchicine**. Severe Theoretical
- **Vemurafenib** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1085. Severe Theoretical

Colecalciferol → see vitamin D substances

Colesevelam

SEPARATION OF ADMINISTRATION Manufacturer advises take 4 hours before, or after, other drugs.

Colestipol

SEPARATION OF ADMINISTRATION Manufacturer advises take other drugs at least 1 hour before, or 4 hours after, colestipol.

Colestyramine

SEPARATION OF ADMINISTRATION Manufacturer advises take other drugs at least 1 hour before, or 4–6 hours after, colestyramine.

Colistimethate → see TABLE 2 p. 1334 (nephrotoxicity), TABLE 20 p. 1338 (neuromuscular blocking effects)

Combined hormonal contraceptives

- **Combined hormonal contraceptives** are predicted to increase the exposure to **agomelatine**. Moderate Study
- **Combined hormonal contraceptives** are predicted to increase the exposure to **aminophylline**. Adjust dose. Moderate Theoretical
- **Combined hormonal contraceptives** are predicted to increase the exposure to **anagrelide**. Moderate Theoretical
- Antiepileptics **(carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Study
- **Combined hormonal contraceptives** alter the exposure to antiepileptics **(lamotrigine)**. Adjust dose. Moderate Study
- **Aprepitant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Study
- **Bosentan** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Study
- Oral **combined hormonal contraceptives** potentially decrease the efficacy of **chenodeoxycholic acid**. Avoid. Moderate Theoretical
- **Combined hormonal contraceptives** increase the concentration of **clozapine**. Monitor side effects and adjust dose. Severe Study
- **Cobicistat** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. Severe Study
- **Combined hormonal contraceptives** increase the risk of raised liver function tests when given with **dasabuvir**. Avoid. Severe Study
- **Combined hormonal contraceptives** are predicted to increase the exposure to dopamine receptor agonists **(ropinirole)**. Adjust dose. Moderate Study
- **Efavirenz** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Study
- **Combined hormonal contraceptives** slightly increase the exposure to **erlotinib**. Monitor side effects and adjust dose. Moderate Study
- **Fosaprepitant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Study
- **Griseofulvin** potentially decreases the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- HIV-protease inhibitors **(atazanavir)** (unboosted) increase the exposure to **combined hormonal contraceptives**. Adjust dose. Severe Study
- HIV-protease inhibitors **(ritonavir)** are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Study
- **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. Avoid. Severe Theoretical
- Oral **combined hormonal contraceptives** slightly increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Combined hormonal contraceptives** are predicted to increase the exposure to **loxapine**. Avoid. Unknown Theoretical
- **Lumacaftor** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. Severe Theoretical
- **Combined hormonal contraceptives** are predicted to increase the exposure to **melatonin**. Moderate Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

- **Combined hormonal contraceptives** decrease the effects of **metyrapone**. Avoid. Moderate Theoretical
- **Modafinil** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Study
- **Combined hormonal contraceptives** slightly increase the exposure to monoamine-oxidase B inhibitors **(rasagiline)**. Moderate Study
- **Combined hormonal contraceptives** increase the exposure to monoamine-oxidase B inhibitors **(selegiline)**. Avoid. Severe Study
- Monoclonal antibodies **(sarilumab)** potentially decrease the exposure to **combined hormonal contraceptives**. Severe Theoretical
- **Nevirapine** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Study
- NSAIDs **(etoricoxib)** slightly increase the exposure to **combined hormonal contraceptives**. Moderate Study
- **Paritaprevir** (with ritonavir and ombitasvir) increases the risk of raised liver function tests when given with **combined hormonal contraceptives**. Avoid. Severe Study
- **Combined hormonal contraceptives** are predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. Moderate Study
- **Pitolisant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. Severe Theoretical
- **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. Avoid. Severe Theoretical
- **Rifabutin** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Study
- **Rifampicin** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Study
- **Combined hormonal contraceptives** are predicted to increase the exposure to **roflumilast**. Moderate Theoretical
- **St John's Wort** decreases the efficacy of **combined hormonal contraceptives**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Sugammadex** is predicted to decrease the exposure to oral **combined hormonal contraceptives**. Refer to patient information leaflet for missed pill advice. Severe Theoretical
- **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **thalidomide**. Avoid. Severe Study
- **Combined hormonal contraceptives** are predicted to increase the exposure to **theophylline**. Monitor and adjust dose. Moderate Theoretical
- **Combined hormonal contraceptives** increase the exposure to **tizanidine**. Avoid. Moderate Study
- **Ulipristal** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. Severe Theoretical
- **Combined hormonal contraceptives** are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 475. Moderate Theoretical

Corticosteroids → see **TABLE 17** p. 1338 (reduced serum potassium)

beclometasone · betamethasone · budesonide · ciclesonide · deflazacort · dexamethasone · fludrocortisone · fluticasone · hydrocortisone · methylprednisolone · mometasone · prednisolone · prednisone · triamcinolone

- Interactions do not generally apply to corticosteroids used for topical action (including inhalation) unless specified.
- With intravitreal use of **dexamethasone** in adults: caution with concurrent administration of anticoagulant or antiplatelet drugs—increased risk of haemorrhagic events.

- **Antacids** are predicted to decrease the absorption of **deflazacort**. Separate administration by 2 hours. Moderate Theoretical
- **Antacids** decrease the absorption of **dexamethasone**. Moderate Study
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **fluticasone**. Unknown Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to corticosteroids **(budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, prednisone, triamcinolone)**. Monitor and adjust dose. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **beclometasone** (risk with beclometasone is likely to be lower than with other corticosteroids). Moderate Theoretical
- Antifungals, azoles **(miconazole)** are predicted to increase the concentration of **methylprednisolone**. Monitor and adjust dose. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to corticosteroids **(betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, prednisone, triamcinolone)**. Avoid or monitor side effects. Severe Study
- **Prednisone** potentially decreases the exposure to antifungals, azoles **(isavuconazole)**. Use with caution or avoid. Moderate Theoretical
- **Aprepitant** moderately increases the exposure to **dexamethasone**. Monitor and adjust dose. Moderate Study
- **Aprepitant** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. Moderate Study
- **Corticosteroids** are predicted to decrease the concentration of **aspirin** (high-dose) and **aspirin** (high-dose) increases the risk of gastrointestinal bleeding when given with **corticosteroids**. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. Moderate Study
- **Dexamethasone** is predicted to decrease the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 582. Moderate Theoretical
- **Corticosteroids** are predicted to decrease the concentration of **choline salicylate**. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **beclometasone** (risk with beclometasone is likely to be lower than with other corticosteroids). Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to corticosteroids **(betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, prednisone, triamcinolone)**. Avoid or monitor side effects. Severe Study
- **Corticosteroids** are predicted to increase the effects of **coumarins**. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to corticosteroids **(budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, prednisone, triamcinolone)**. Monitor and adjust dose. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **fluticasone**. Unknown Theoretical
- **Corticosteroids** increase the risk of gastrointestinal perforation when given with **erlotinib**. Severe Theoretical
- **Fosaprepitant** is predicted to increase the exposure to corticosteroids **(dexamethasone, methylprednisolone)**. Monitor and adjust dose. Moderate Theoretical
- **Corticosteroids** potentially oppose the effects of **glycerol phenylbutyrate**. Moderate Theoretical
- **Grapefruit juice** moderately increases the exposure to oral **budesonide**. Avoid. Moderate Study

https://nhathuocngocanh.com/ www.getintopharma.com

Corticosteroids (continued)

- **HIV-protease inhibitors** are predicted to increase the exposure to **beclometasone** (risk with beclometasone is likely to be lower than with other corticosteroids). Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to corticosteroids **(betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, prednisone, triamcinolone)**. Avoid or monitor side effects. Severe Study
- **Idelalisib** is predicted to increase the exposure to **beclometasone** (risk with beclometasone is likely to be lower than with other corticosteroids). Moderate Theoretical
- **Idelalisib** is predicted to increase the exposure to corticosteroids **(betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, prednisone, triamcinolone)**. Avoid or monitor side effects. Severe Study
- **Imatinib** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. Moderate Study
- **Corticosteroids** are predicted to increase the risk of gastrointestinal bleeding when given with iron chelators **(deferasirox)**. Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **corticosteroids** (high-dose). Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Lumacaftor** is predicted to decrease the exposure to corticosteroids **(methylprednisolone, prednisone)**. Adjust dose. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **beclometasone** (risk with beclometasone is likely to be lower than with other corticosteroids). Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to corticosteroids **(betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, prednisone, triamcinolone)**. Avoid or monitor side effects. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. Moderate Study
- **Corticosteroids** are predicted to decrease the efficacy of **mifamurtide**. Avoid. Severe Theoretical
- **Mifepristone** is predicted to decrease the efficacy of **corticosteroids**. Use with caution and adjust dose. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to corticosteroids **(budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, prednisone, triamcinolone)**. Monitor and adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **fluticasone**. Unknown Theoretical
- Corticosteroids **(betamethasone, deflazacort, dexamethasone, hydrocortisone, methylprednisolone, prednisolone, prednisone)** are predicted to decrease the efficacy of monoclonal antibodies **(atezolizumab, ipilimumab, nivolumab, pembrolizumab)**. Use with caution or avoid. Severe Theoretical
- Monoclonal antibodies **(tocilizumab)** are predicted to decrease the exposure to corticosteroids **(dexamethasone, methylprednisolone)**. Monitor and adjust dose. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to **dexamethasone**. Adjust dose. Moderate Study
- **Netupitant** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. Moderate Study
- **Corticosteroids** are predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. Severe Anecdotal
- **Corticosteroids** increase the risk of gastrointestinal perforation when given with **nicorandil**. Severe Anecdotal
- **Nilotinib** is predicted to increase the exposure to **methylprednisolone**. Monitor and adjust dose. Moderate Study
- **NSAIDs** increase the risk of gastrointestinal bleeding when given with **corticosteroids**. Severe Study
- **Corticosteroids** are predicted to increase the effects of **phenindione**. Moderate Anecdotal
- **Dexamethasone** decreases the exposure to **praziquantel**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to corticosteroids **(budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, prednisone, triamcinolone)**. Monitor and adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **fluticasone**. Unknown Theoretical
- **Corticosteroids** potentially decrease the effects of **sodium phenylbutyrate**. Moderate Anecdotal
- **Corticosteroids** are predicted to decrease the effects of **somatropin**. Moderate Theoretical
- **Corticosteroids** are predicted to decrease the effects of **suxamethonium**. Severe Anecdotal

Coumarins → see TABLE 3 p. 1334 (anticoagulant effects)

acenocoumarol • warfarin

FOOD AND LIFESTYLE The effects of coumarins can be reduced or abolished by vitamin K, including that found in health foods, food supplements, enteral feeds, or large amounts of some green vegetables or green tea. Major changes in diet (especially involving salads and vegetables) and in alcohol consumption can affect anticoagulant control. Pomegranate increases the INR in response to **warfarin** and is predicted to increase the INR in response to **acenocoumarol**.

- **Alcohol (beverage)** (in those who drink heavily) potentially decreases the anticoagulant effect of **coumarins**. Severe Study
- Antiarrhythmics **(amiodarone)** increase the anticoagulant effect of **coumarins**. Severe Study
- Antiarrhythmics **(propafenone)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine)** decrease the effects of **coumarins**. Monitor and adjust dose. Severe Study
- Antiepileptics **(fosphenytoin, phenytoin)** are predicted to alter the anticoagulant effect of **coumarins**. Moderate Anecdotal
- Antiepileptics **(phenobarbital, primidone)** decrease the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. Moderate Study
- Antifungals, azoles **(fluconazole)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. Severe Study
- Antifungals, azoles **(itraconazole)** potentially increase the anticoagulant effect of **coumarins**. Severe Anecdotal
- Antifungals, azoles **(ketoconazole)** potentially increase the anticoagulant effect of **warfarin**. Monitor INR and adjust dose. Severe Anecdotal
- Antifungals, azoles **(miconazole)** greatly increase the anticoagulant effect of **coumarins**. MHRA advises avoid unless INR can be monitored closely; monitor for signs of bleeding. Severe Study
- Antifungals, azoles **(voriconazole)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. Moderate Study
- **Aprepitant** decreases the anticoagulant effect of **coumarins**. Moderate Study
- **Axitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Azathioprine** decreases the anticoagulant effect of **coumarins**. Moderate Study
- **Bosentan** decreases the anticoagulant effect of **coumarins**. Moderate Study
- **Bosutinib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Cabozantinib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Capecitabine** increases the effects of **coumarins**. Monitor INR and adjust dose. Moderate Anecdotal

https://nhathuocngocanh.com/ www.getintopharma.com

- Cephalosporins **(ceftriaxone)** potentially increase the risk of bleeding events when given with **coumarins**. Severe Anecdotal
- **Ceritinib** is predicted to increase the exposure to **warfarin**. Avoid. Severe Theoretical
- **Chloramphenicol** potentially increases the anticoagulant effect of **coumarins**. Moderate Anecdotal
- **Corticosteroids** are predicted to increase the effects of **coumarins**. Moderate Study
- **Cranberry juice** potentially increases the anticoagulant effect of **warfarin**. Avoid. Severe Anecdotal
- **Crizotinib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Dabrafenib** is predicted to decrease the anticoagulant effect of **coumarins**. Severe Theoretical
- **Danazol** potentially increases the anticoagulant effect of **coumarins**. Severe Anecdotal
- **Dasatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Disulfiram** increases the anticoagulant effect of **coumarins**. Monitor and adjust dose. Severe Study
- **Efavirenz** is predicted to affect the concentration of **coumarins**. Adjust dose. Moderate Theoretical
- **Elvitegravir** is predicted to decrease the anticoagulant effect of **coumarins**. Moderate Theoretical
- **Enteral feeds** (vitamin-K containing) potentially decrease the anticoagulant effect of **coumarins**. Severe Anecdotal
- **Enzalutamide** potentially decreases the exposure to **coumarins**. Avoid or adjust dose and monitor INR. Severe Study
- **Erlotinib** increases the anticoagulant effect of **coumarins**. Severe Anecdotal
- **Etravirine** increases the anticoagulant effect of **coumarins**. Moderate Theoretical
- **Fibrates** are predicted to increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. Severe Study
- **Fluorouracil** increases the anticoagulant effect of **coumarins**. Severe Anecdotal
- **Fosaprepitant** is predicted to decrease the anticoagulant effect of **coumarins**. Moderate Theoretical
- **Gefitinib** is predicted to increase the anticoagulant effect of **coumarins**. Severe Anecdotal
- **Glucagon** increases the anticoagulant effect of **warfarin**. Severe Study
- **Glucosamine** increases the anticoagulant effect of **warfarin**. Avoid. Moderate Anecdotal
- **Griseofulvin** potentially decreases the anticoagulant effect of **coumarins**. Moderate Anecdotal
- H_2 receptor antagonists **(cimetidine)** increase the anticoagulant effect of **coumarins**. Severe Study
- **HIV-protease inhibitors** are predicted to affect the anticoagulant effect of **coumarins**. Moderate Study
- **Imatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Ivacaftor** is predicted to increase the anticoagulant effect of **warfarin**. Severe Theoretical
- **Ivermectin** potentially increases the anticoagulant effect of **coumarins**. Severe Anecdotal
- **Lapatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Leflunomide** increases the anticoagulant effect of **coumarins**. Severe Anecdotal
- **Lomitapide** increases the exposure to **warfarin**. Monitor INR and adjust dose. Severe Study
- Macrolides **(clarithromycin, erythromycin)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. Severe Anecdotal
- **Mercaptopurine** decreases the anticoagulant effect of **coumarins**. Moderate Anecdotal
- **Metronidazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. Severe Study
- Monoclonal antibodies **(blinatumomab)** are predicted to transiently increase the exposure to **warfarin**. Monitor and adjust dose. Moderate Theoretical
- Monoclonal antibodies **(sarilumab)** potentially affect the exposure to **warfarin**. Monitor and adjust dose. Severe Theoretical
- Monoclonal antibodies **(tocilizumab)** are predicted to decrease the exposure to **warfarin**. Monitor and adjust dose. Moderate Theoretical
- **Nandrolone** is predicted to increase the anticoagulant effect of **coumarins**. Monitor and adjust dose. Severe Theoretical
- **Nevirapine** potentially alters the anticoagulant effect of **coumarins**. Severe Anecdotal
- **Nilotinib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Obeticholic acid** decreases the anticoagulant effect of **warfarin**. Severe Study
- **Oxymetholone** increases the anticoagulant effect of **coumarins**. Severe Anecdotal
- **Paracetamol** increases the anticoagulant effect of **coumarins**. Moderate Study
- **Pazopanib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Penicillins** potentially alter the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. Severe Anecdotal
- **Pitolisant** is predicted to decrease the exposure to **warfarin**. Unknown Theoretical
- **Ponatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Quinolones** increase the anticoagulant effect of **coumarins**. Severe Anecdotal
- **Ranibizumab** increases the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Regorafenib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Study
- **Rifampicin** decreases the anticoagulant effect of **coumarins**. Severe Study
- **Ruxolitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Sorafenib** increases the anticoagulant effect of **coumarins**. Severe Anecdotal
- **St John's Wort** decreases the anticoagulant effect of **coumarins**. Avoid. Severe Anecdotal
- Statins **(fluvastatin, rosuvastatin)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. Severe Study
- **Sucralfate** potentially decreases the effects of **warfarin**. Separate administration by 2 hours. Moderate Anecdotal
- **Sulfinpyrazone** increases the anticoagulant effect of **coumarins**. Avoid. Severe Study
- Sulfonamides **(sulfadiazine)** are predicted to increase the anticoagulant effect of **coumarins**. Severe Theoretical
- Sulfonamides **(sulfamethoxazole)** increase the anticoagulant effect of **coumarins**. Severe Study
- **Sunitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Tamoxifen** increases the anticoagulant effect of **coumarins**. Severe Study
- **Tegafur** increases the anticoagulant effect of **coumarins**. Moderate Theoretical
- **Teriflunomide** affects the anticoagulant effect of **coumarins**. Severe Study
- **Tetracyclines** increase the risk of bleeding events when given with **coumarins**. Moderate Anecdotal
- **Tinidazole** is predicted to increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. Severe Theoretical
- **Toremifene** is predicted to increase the anticoagulant effect of **coumarins**. Severe Theoretical
- **Trimethoprim** is predicted to increase the anticoagulant effect of **coumarins**. Severe Study
- **Vandetanib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Venetoclax** slightly increases the exposure to **warfarin**. Moderate Study

Cranberry juice

- **Cranberry juice** potentially increases the anticoagulant effect of coumarins **(warfarin)**. Avoid. Severe Anecdotal

Crisantaspase → see **TABLE 1** p. 1334 (hepatotoxicity), **TABLE 15** p. 1337 (myelosuppression)

- **Crisantaspase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. Severe Theoretical → Also see **TABLE 15** p. 1337

https://nhathuocngocanh.com/ www.getintopharma.com

Crisantaspase (continued)

- **Crisantaspase** affects the efficacy of **methotrexate**. Severe Anecdotal → Also see **TABLE 1** p. 1334 → Also see **TABLE 15** p. 1337
- **Crisantaspase** potentially increases the risk of neurotoxicity when given with vinca alkaloids **(vincristine)**. **Vincristine** should be taken 3 to 24 hours before **crisantaspase**, p. 908. Severe Anecdotal → Also see **TABLE 1** p. 1334 → Also see **TABLE 15** p. 1337

Crizotinib → see **TABLE 6** p. 1335 (bradycardia), **TABLE 15** p. 1337 (myelosuppression), **TABLE 9** p. 1336 (QT-interval prolongation)

GENERAL INFORMATION Caution with concurrent use of drugs that cause gastrointestinal perforation—discontinue treatment if gastrointestinal perforation occurs.

- **Crizotinib** is predicted to increase the exposure to aldosterone antagonists **(eplerenone)**. Adjust **eplerenone** dose, p. 190. Severe Study
- **Crizotinib** is predicted to increase the exposure to alpha blockers **(tamsulosin)**. Moderate Theoretical
- **Crizotinib** is predicted to increase the exposure to **alprazolam**. Severe Study
- **Crizotinib** is predicted to increase the exposure to antiarrhythmics **(propafenone)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **crizotinib**. Avoid. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **crizotinib**. Avoid. Moderate Study → Also see **TABLE 9** p. 1336
- **Crizotinib** is predicted to increase the exposure to antihistamines, non-sedating **(mizolastine)**. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to antihistamines, non-sedating **(rupatadine)**. Avoid. Moderate Study
- **Crizotinib** is predicted to increase the concentration of antimalarials **(piperaquine)**. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **axitinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Crizotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Theoretical → Also see **TABLE 9** p. 1336
- **Bosentan** is predicted to decrease the exposure to **crizotinib**. Avoid. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Theoretical → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- **Crizotinib** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **cabozantinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- **Crizotinib** is predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **ceritinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- **Crizotinib** increases the concentration of **ciclosporin**. Severe Study
- **Cobicistat** is predicted to moderately increase the exposure to **crizotinib**. Avoid. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **cobimetinib**. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. Severe Study
- **Crizotinib** is predicted to increase the exposure to corticosteroids **(methylprednisolone)**. Monitor and adjust dose. Moderate Study
- **Crizotinib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Crizotinib** is predicted to slightly increase the exposure to **darifenacin**. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **dasatinib**. Severe Study → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- **Crizotinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. Severe Study
- **Crizotinib** is predicted to increase the exposure to dopamine receptor agonists **(bromocriptine)**. Severe Theoretical
- **Crizotinib** is predicted to increase the concentration of dopamine receptor agonists **(cabergoline)**. Moderate Anecdotal
- **Crizotinib** is predicted to moderately increase the exposure to **dutasteride**. Mild Study
- **Efavirenz** is predicted to decrease the exposure to **crizotinib**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Crizotinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Enzalutamide** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. Severe Study
- **Crizotinib** is predicted to increase the risk of ergotism when given with **ergometrine**. Severe Theoretical
- **Crizotinib** is predicted to increase the risk of ergotism when given with **ergotamine**. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- **Crizotinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. Moderate Study → Also see **TABLE 15** p. 1337
- **Crizotinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. Mild Study
- **Crizotinib** is predicted to increase the exposure to **gefitinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Crizotinib** potentially decreases the exposure to **glecaprevir**. Avoid. Severe Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **crizotinib**. Avoid. Moderate Theoretical
- **Crizotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to **crizotinib**. Avoid. Moderate Study → Also see **TABLE 9** p. 1336
- **Crizotinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. Severe Study → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to moderately increase the exposure to **crizotinib**. Avoid. Moderate Study → Also see **TABLE 15** p. 1337
- **Crizotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 210. Severe Theoretical → Also see **TABLE 6** p. 1335
- **Crizotinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. Severe Study
- **Crizotinib** is predicted to increase the exposure to **lapatinib**. Moderate Study → Also see **TABLE 9** p. 1336
- **Crizotinib** is predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- **Crizotinib** is predicted to increase the exposure to **lurasidone**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to moderately increase the exposure to **crizotinib**. Avoid. Moderate Study → Also see **TABLE 9** p. 1336
- **Crizotinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. Severe Study
- **Crizotinib** is predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- **Mitotane** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Crizotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. Moderate Study
- **Nevirapine** is predicted to decrease the exposure to **crizotinib**. Avoid. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Crizotinib** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study → Also see **TABLE 6** p. 1335

https://nhathuocngocanh.com/ www.getintopharma.com

- **Crizotinib** is predicted to increase the exposure to opioids **(methadone, sufentanil)**. Moderate Theoretical → Also see **TABLE 6** p. 1335 → Also see **TABLE 9** p. 1336
- **Crizotinib** is predicted to increase the exposure to **oxybutynin**. Mild Theoretical
- **Crizotinib** is predicted to increase the exposure to **pazopanib**. Moderate Theoretical → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- **Crizotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil)**. Adjust **avanafil** dose, p. 794. Moderate Theoretical
- **Crizotinib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. Moderate Study → Also see **TABLE 9** p. 1336
- **Crizotinib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(tadalafil)**. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(vardenafil)**. Adjust dose. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Crizotinib** potentially decreases the exposure to **pibrentasvir**. Avoid. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Pitolisant** is predicted to decrease the exposure to **crizotinib**. Avoid. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **quetiapine**. Avoid. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **ranolazine**. Severe Study → Also see **TABLE 9** p. 1336
- **Crizotinib** is predicted to increase the exposure to **ribociclib**. Moderate Study → Also see **TABLE 9** p. 1336
- **Rifampicin** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. Severe Study
- **Crizotinib** is predicted to increase the exposure to **ruxolitinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Crizotinib** is predicted to increase the exposure to **saxagliptin**. Mild Study
- **Crizotinib** is predicted to increase the exposure to **simeprevir**. Avoid. Severe Study
- **Crizotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- **Crizotinib** is predicted to increase the exposure to SSRIs **(dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **crizotinib**. Avoid. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to statins **(atorvastatin)**. Monitor and adjust dose. Severe Study
- **Crizotinib** is predicted to increase the exposure to statins **(simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 203. Severe Study
- **Crizotinib** is predicted to increase the exposure to **sunitinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- **Crizotinib** is predicted to increase the concentration of **tacrolimus**. Severe Study
- **Crizotinib** is predicted to increase the exposure to taxanes **(cabazitaxel)**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Crizotinib** is predicted to increase the concentration of **temsirolimus**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Crizotinib** is predicted to increase the exposure to **tofacitinib**. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **tolterodine**. Mild Theoretical → Also see **TABLE 9** p. 1336
- **Crizotinib** is predicted to increase the exposure to **tolvaptan**. Adjust dose. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **trazodone**. Moderate Theoretical
- **Crizotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- **Crizotinib** is predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- **Crizotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study

Cyclizine → see antihistamines, sedating

Cyclopenthiazide → see thiazide diuretics

Cyclopentolate → see **TABLE 10** p. 1336 (antimuscarinics)

Cyclophosphamide → see alkylating agents

Cycloserine

- **Cycloserine** increases the risk of CNS toxicity when given with **isoniazid**. Monitor and adjust dose. Moderate Study

Cyproheptadine → see antihistamines, sedating

Cytarabine → see **TABLE 15** p. 1337 (myelosuppression)

- **Cytarabine** decreases the concentration of **flucytosine**. Avoid. Severe Study
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **cytarabine**. Public Health England advises avoid (refer to Green Book). Severe Theoretical

Dabigatran → see **TABLE 3** p. 1334 (anticoagulant effects)

- Antiarrhythmics **(amiodarone)** increase the exposure to **dabigatran**. Adjust **dabigatran** dose, p. 135. Moderate Study
- Antiarrhythmics **(dronedarone)** slightly increase the exposure to **dabigatran**. Avoid. Severe Study
- Antiepileptics **(carbamazepine)** are predicted to decrease the exposure to **dabigatran**. Avoid. Severe Study
- Antifungals, azoles **(isavuconazole)** are predicted to increase the exposure to **dabigatran**. Monitor and adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole)** are predicted to increase the exposure to **dabigatran**. Avoid. Severe Study
- Calcium channel blockers **(verapamil)** increase the exposure to **dabigatran**. Adjust **dabigatran** dose, p. 135. Severe Study
- **Ceritinib** is predicted to increase the exposure to **dabigatran**. Moderate Theoretical
- **Ciclosporin** is predicted to increase the exposure to **dabigatran**. Avoid. Severe Theoretical
- **Elbasvir** is predicted to increase the concentration of **dabigatran**. Moderate Theoretical
- **Eliglustat** is predicted to increase the exposure to **dabigatran**. Adjust dose. Moderate Study
- **Glecaprevir** (with pibrentasvir) increases the exposure to **dabigatran**. Avoid. Moderate Study
- HIV-protease inhibitors **(lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **dabigatran**. Avoid. Severe Theoretical
- **Lapatinib** is predicted to increase the exposure to **dabigatran**. Severe Theoretical
- **Macrolides** are predicted to increase the exposure to **dabigatran**. Moderate Theoretical
- **Mirabegron** is predicted to increase the exposure to **dabigatran**. Severe Theoretical
- **Pibrentasvir** (with glecaprevir) increases the exposure to **dabigatran**. Avoid. Moderate Study
- **Pitolisant** is predicted to decrease the exposure to **dabigatran**. Unknown Theoretical
- **Ranolazine** is predicted to increase the exposure to **dabigatran**. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **dabigatran**. Avoid. Severe Study
- **Rolapitant** is predicted to increase the exposure to **dabigatran**. Moderate Study
- **St John's Wort** is predicted to decrease the exposure to **dabigatran**. Avoid. Severe Study
- **Velpatasvir** is predicted to increase the exposure to **dabigatran**. Severe Theoretical
- **Vemurafenib** increases the exposure to **dabigatran**. Use with caution and adjust dose. Severe Theoretical
- **Voxilaprevir** is predicted to increase the concentration of **dabigatran**. Avoid. Severe Study

Dabrafenib → see **TABLE 15** p. 1337 (myelosuppression)

https://nhathuocngocanh.com/ www.getintopharma.com

Dabrafenib (continued)
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **dabrafenib**. Avoid. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. Moderate Study
- **Clopidogrel** is predicted to increase the exposure to **dabrafenib**. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. Moderate Study
- **Dabrafenib** is predicted to decrease the anticoagulant effect of **coumarins**. Severe Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **dabrafenib**. Avoid. Moderate Theoretical
- Fibrates **(gemfibrozil)** are predicted to increase the exposure to **dabrafenib**. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. Moderate Study → Also see **TABLE 15** p. 1337
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. Moderate Study
- **Dabrafenib** decreases the exposure to **midazolam**. Monitor and adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **dabrafenib**. Avoid. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Rifampicin** is predicted to decrease the exposure to **dabrafenib**. Avoid. Moderate Theoretical

Dacarbazine → see alkylating agents

Daclatasvir
- **Daclatasvir** is predicted to increase the risk of severe bradycardia or heart block when given with antiarrhythmics **(amiodarone)**. Refer to specialist literature. Severe Anecdotal
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **daclatasvir**. Avoid. Severe Study
- Antiepileptics **(oxcarbazepine)** are predicted to decrease the exposure to **daclatasvir**. Avoid. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 614. Moderate Study
- **Bosentan** is predicted to decrease the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 614. Moderate Theoretical
- **Cobicistat** is predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 614. Moderate Study
- **Daclatasvir** slightly increases the concentration of **digoxin**. Severe Study
- **Efavirenz** is predicted to decrease the exposure to **daclatasvir**. Adjust dose. Severe Study
- **Enzalutamide** is predicted to moderately decrease the exposure to **daclatasvir**. Avoid. Severe Study
- **Etravirine** is predicted to decrease the exposure to **daclatasvir**. Avoid. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 614. Moderate Study
- **Idelalisib** is predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 614. Moderate Study
- Macrolides **(clarithromycin)** are predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 614. Moderate Study
- **Mitotane** is predicted to moderately decrease the exposure to **daclatasvir**. Avoid. Severe Study
- **Nevirapine** is predicted to decrease the exposure to **daclatasvir**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to moderately decrease the exposure to **daclatasvir**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **daclatasvir**. Avoid. Severe Theoretical

Dactinomycin → see **TABLE 1** p. 1334 (hepatotoxicity), **TABLE 15** p. 1337 (myelosuppression)
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dactinomycin**. Public Health England advises avoid (refer to Green Book). Severe Theoretical

Dairy products
- **Dairy products** are predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **dairy products**. Severe Theoretical
- **Dairy products** decrease the exposure to tetracyclines **(demeclocycline, oxytetracycline, tetracycline)**. Avoid. Moderate Study

Dalteparin → see low molecular-weight heparins

Danaparoid → see **TABLE 3** p. 1334 (anticoagulant effects)
- **Ranibizumab** is predicted to increase the risk of bleeding events when given with **danaparoid**. Severe Theoretical

Danazol
- **Danazol** moderately increases the concentration of antiepileptics **(carbamazepine)**. Monitor and adjust dose. Severe Study
- **Danazol** increases the concentration of **ciclosporin**. Severe Study
- **Danazol** potentially increases the anticoagulant effect of **coumarins**. Severe Anecdotal
- **Danazol** is predicted to increase the risk of rhabdomyolysis when given with statins **(atorvastatin)**. Severe Theoretical
- **Danazol** increases the risk of rhabdomyolysis when given with statins **(simvastatin)**. Avoid. Severe Anecdotal
- **Danazol** potentially increases the concentration of **tacrolimus**. Severe Anecdotal

Dantrolene → see **TABLE 1** p. 1334 (hepatotoxicity)
- Intravenous **dantrolene** potentially increases the risk of acute hyperkalaemia and cardiovascular collapse when given with calcium channel blockers **(diltiazem, verapamil)**. Avoid. Severe Anecdotal

Dapagliflozin → see **TABLE 14** p. 1337 (antidiabetic drugs), **TABLE 8** p. 1335 (hypotension)

Dapoxetine → see SSRIs

Dapsone
- **Aminosalicylic acid** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. Severe Theoretical
- **Dapsone** is predicted to increase the risk of methaemoglobinaemia when given with topical anaesthetics, local **(prilocaine)**. Use with caution or avoid. Severe Theoretical
- Antiepileptics **(fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. Severe Theoretical
- Antimalarials **(chloroquine, primaquine)** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. Severe Theoretical
- **Nitrates** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. Severe Theoretical
- **Nitrofurantoin** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. Severe Theoretical
- **Paracetamol** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. Severe Theoretical
- **Rifabutin** decreases the exposure to **dapsone**. Moderate Study
- **Rifampicin** decreases the exposure to **dapsone**. Moderate Study
- **Sodium nitroprusside** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. Severe Theoretical
- **Sulfonamides** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. Severe Theoretical
- **Dapsone** increases the exposure to **trimethoprim** and **trimethoprim** increases the exposure to **dapsone**. Severe Study

Daptomycin
- **Aspirin** (high-dose) increases the risk of renal impairment when given with **daptomycin**. Moderate Theoretical
- **Ciclosporin** is predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

- **Fibrates** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. Severe Theoretical
- **NSAIDs** increase the risk of renal impairment when given with **daptomycin**. Moderate Theoretical
- **Statins** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. Severe Theoretical

Daratumumab → see monoclonal antibodies

Darbepoetin alfa → see **TABLE 5** p. 1334 (thromboembolism), **TABLE 16** p. 1338 (increased serum potassium)

Darifenacin → see **TABLE 10** p. 1336 (antimuscarinics)

- Antiarrhythmics **(dronedarone)** are predicted to slightly increase the exposure to **darifenacin**. Moderate Study
- **Darifenacin** is predicted to increase the concentration of antiarrhythmics **(flecainide)**. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **darifenacin**. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to slightly increase the exposure to **darifenacin**. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. Severe Study
- **Aprepitant** is predicted to slightly increase the exposure to **darifenacin**. Moderate Study
- **Bupropion** is predicted to slightly increase the exposure to **darifenacin**. Mild Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to slightly increase the exposure to **darifenacin**. Moderate Study
- **Ciclosporin** is predicted to increase the exposure to **darifenacin**. Avoid. Moderate Theoretical
- **Cinacalcet** is predicted to slightly increase the exposure to **darifenacin**. Mild Study
- **Cobicistat** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. Severe Study
- **Crizotinib** is predicted to slightly increase the exposure to **darifenacin**. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **darifenacin**. Moderate Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **darifenacin**. Moderate Study
- **HIV-protease inhibitors** are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. Severe Study
- **Idelalisib** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. Severe Study
- **Imatinib** is predicted to slightly increase the exposure to **darifenacin**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. Severe Study
- Macrolides **(erythromycin)** are predicted to slightly increase the exposure to **darifenacin**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **darifenacin**. Moderate Theoretical
- **Netupitant** is predicted to slightly increase the exposure to **darifenacin**. Moderate Study
- **Nilotinib** is predicted to slightly increase the exposure to **darifenacin**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **darifenacin**. Moderate Theoretical
- SSRIs **(fluoxetine, paroxetine)** are predicted to slightly increase the exposure to **darifenacin**. Mild Study
- **St John's Wort** is predicted to decrease the exposure to **darifenacin**. Moderate Theoretical
- **Terbinafine** is predicted to slightly increase the exposure to **darifenacin**. Mild Study
- **Darifenacin** is predicted to increase the exposure to **tricyclic antidepressants**. Moderate Theoretical → Also see **TABLE 10** p. 1336

Darunavir → see HIV-protease inhibitors

Dasabuvir

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **dasabuvir**. Avoid. Severe Theoretical
- **Combined hormonal contraceptives** increase the risk of raised liver function tests when given with **dasabuvir**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **dasabuvir**. Avoid. Severe Theoretical
- Fibrates **(gemfibrozil)** very markedly increase the exposure to **dasabuvir**. Avoid. Severe Study
- **Dasabuvir** (with ombitasvir, paritaprevir and ritonavir) increases the concentration of loop diuretics **(furosemide)**. Adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **dasabuvir**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **dasabuvir**. Avoid. Severe Theoretical
- **Dasabuvir** increases the exposure to statins **(rosuvastatin)**. Adjust **rosuvastatin** dose, p. 202. Moderate Study

Dasatinib → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 9** p. 1336 (QT-interval prolongation), **TABLE 4** p. 1334 (antiplatelet effects)

- **Antacids** decrease the absorption of **dasatinib**. Separate administration by at least 2 hours. Moderate Study
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **dasatinib**. Severe Study → Also see **TABLE 9** p. 1336
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **dasatinib**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **dasatinib**. Severe Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **dasatinib**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **Aprepitant** is predicted to increase the exposure to **dasatinib**. Severe Study
- **Bosentan** is predicted to decrease the exposure to **dasatinib**. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **dasatinib**. Severe Study
- **Cobicistat** is predicted to markedly increase the exposure to **dasatinib**. Avoid. Severe Study
- **Dasatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **dasatinib**. Severe Study → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- **Efavirenz** is predicted to decrease the exposure to **dasatinib**. Severe Study → Also see **TABLE 9** p. 1336
- **Enzalutamide** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. Severe Study
- **Grapefruit juice** is predicted to increase the exposure to **dasatinib**. Avoid. Moderate Theoretical
- **H_2 receptor antagonists** are predicted to decrease the exposure to **dasatinib**. Avoid. Moderate Study
- **HIV-protease inhibitors** are predicted to markedly increase the exposure to **dasatinib**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **Idelalisib** is predicted to markedly increase the exposure to **dasatinib**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to increase the exposure to **dasatinib**. Severe Study → Also see **TABLE 15** p. 1337
- Macrolides **(clarithromycin)** are predicted to markedly increase the exposure to **dasatinib**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- Macrolides **(erythromycin)** are predicted to increase the exposure to **dasatinib**. Severe Study → Also see **TABLE 9** p. 1336
- **Mitotane** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Netupitant** is predicted to increase the exposure to **dasatinib**. Severe Study
- **Nevirapine** is predicted to decrease the exposure to **dasatinib**. Severe Study
- **Nilotinib** is predicted to increase the exposure to **dasatinib**. Severe Study → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- **Dasatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Pitolisant** is predicted to decrease the exposure to **dasatinib**. Avoid. Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Dasatinib (continued)
- Proton pump inhibitors are predicted to slightly to moderately decrease the exposure to **dasatinib**. Avoid. Severe Study
- Rifampicin is predicted to markedly decrease the exposure to **dasatinib**. Avoid. Severe Study
- St John's Wort is predicted to decrease the exposure to **dasatinib**. Severe Study
- **Dasatinib** is predicted to increase the exposure to statins (simvastatin). Moderate Theoretical

Daunorubicin → see anthracyclines

Decitabine → see **TABLE 15** p. 1337 (myelosuppression)

Deferasirox → see iron chelators

Deferiprone → see **TABLE 15** p. 1337 (myelosuppression)
- Antacids (aluminium hydroxide) are predicted to decrease the absorption of **deferiprone**. Avoid. Moderate Theoretical
- Ascorbic acid is predicted to increase the risk of cardiovascular side-effects when given with **deferiprone**. Severe Theoretical

Deflazacort → see corticosteroids

Delamanid → see **TABLE 9** p. 1336 (QT-interval prolongation)
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to slightly decrease the exposure to **delamanid**. Avoid. Moderate Study
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) very slightly increase the exposure to **delamanid**. Severe Study → Also see **TABLE 9** p. 1336
- Cobicistat very slightly increases the exposure to **delamanid**. Severe Study
- Enzalutamide is predicted to slightly decrease the exposure to **delamanid**. Avoid. Moderate Study
- HIV-protease inhibitors very slightly increase the exposure to **delamanid**. Severe Study → Also see **TABLE 9** p. 1336
- Idelalisib very slightly increases the exposure to **delamanid**. Severe Study
- Macrolides (clarithromycin) very slightly increase the exposure to **delamanid**. Severe Study → Also see **TABLE 9** p. 1336
- Mitotane is predicted to slightly decrease the exposure to **delamanid**. Avoid. Moderate Study
- Rifampicin is predicted to slightly decrease the exposure to **delamanid**. Avoid. Moderate Study

Demeclocycline → see tetracyclines

Desferrioxamine → see iron chelators

Desflurane → see volatile halogenated anaesthetics

Desloratadine → see antihistamines, non-sedating

Desmopressin → see **TABLE 18** p. 1338 (hyponatraemia)
- Antiepileptics (lamotrigine) are predicted to increase the risk of hyponatraemia when given with **desmopressin**. Severe Theoretical
- Loperamide greatly increases the absorption of oral **desmopressin** (and possibly sublingual). Moderate Study
- Phenothiazines (chlorpromazine) are predicted to increase the risk of hyponatraemia when given with **desmopressin**. Severe Theoretical

Desogestrel
- Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate) are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Desogestrel** is predicted to increase the exposure to antiepileptics (lamotrigine). Moderate Study
- Aprepitant is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- Bosentan is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- Efavirenz is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- Fosaprepitant is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- Griseofulvin potentially decreases the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- HIV-protease inhibitors (ritonavir) are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- Modafinil is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- Nevirapine is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- Rifabutin is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- Rifampicin is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- St John's Wort is predicted to decrease the efficacy of **desogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- Sugammadex is predicted to decrease the exposure to **desogestrel**. Refer to patient information leaflet for missed pill advice. Severe Theoretical
- Ulipristal is predicted to decrease the efficacy of **desogestrel**. Avoid. Severe Theoretical

Dexamethasone → see corticosteroids

Dexamfetamine → see amfetamines

Dexibuprofen → see NSAIDs

Dexketoprofen → see NSAIDs

Dexmedetomidine → see **TABLE 11** p. 1336 (CNS depressant effects)

Dexrazoxane → see iron chelators

Diamorphine → see opioids

Diazepam → see **TABLE 11** p. 1336 (CNS depressant effects)
- **Diazepam** potentially affects the concentration of antiepileptics (fosphenytoin, phenytoin). Monitor concentration and adjust dose. Severe Study
- Antifungals, azoles (fluconazole, voriconazole) moderately increase the exposure to **diazepam**. Monitor and adjust dose. Moderate Study
- HIV-protease inhibitors (ritonavir) are predicted to increase the exposure to **diazepam**. Avoid. Moderate Theoretical
- Monoclonal antibodies (tocilizumab) are predicted to decrease the exposure to **diazepam**. Monitor and adjust dose. Moderate Theoretical
- Rifampicin moderately decreases the exposure to **diazepam**. Avoid. Moderate Study
- SSRIs (fluvoxamine) moderately increase the exposure to **diazepam**. Moderate Study

Diazoxide → see **TABLE 8** p. 1335 (hypotension)
- **Diazoxide** decreases the concentration of antiepileptics (fosphenytoin, phenytoin) and antiepileptics (fosphenytoin, phenytoin) are predicted to decrease the effects of **diazoxide**. Monitor concentration and adjust dose. Moderate Anecdotal
- **Diazoxide** increases the risk of severe hypotension when given with hydralazine. Severe Study → Also see **TABLE 8** p. 1335

Diclofenac → see NSAIDs

Dicycloverine → see **TABLE 10** p. 1336 (antimuscarinics)

Didanosine → see **TABLE 1** p. 1334 (hepatotoxicity), **TABLE 12** p. 1337 (peripheral neuropathy)

ROUTE-SPECIFIC INFORMATION Antacids in tablet formulation might affect absorption of other drugs—give at least 2 hours apart.
- Allopurinol moderately increases the exposure to **didanosine**. Avoid. Severe Study
- **Didanosine** (buffered) decreases the exposure to antifungals, azoles (itraconazole, ketoconazole). Separate administration by 2 hours. Severe Study → Also see **TABLE 1** p. 1334
- Febuxostat is predicted to increase the exposure to **didanosine**. Severe Theoretical
- Ganciclovir is predicted to increase the exposure to **didanosine**. Moderate Study
- HIV-protease inhibitors (tipranavir) decrease the exposure to **didanosine**. Separate administration by 2 hours. Moderate Study
- **Didanosine** (buffered) decreases the exposure to HIV-protease inhibitors (atazanavir). **Didanosine** should be taken 2 hours after **atazanavir**. Severe Study

https://nhathuocngocanh.com/ www.getintopharma.com

- **Didanosine** (buffered) is predicted to decrease the exposure to HIV-protease inhibitors **(darunavir** boosted with ritonavir**)**. **Didanosine** should be taken 1 hour before or 2 hours after **darunavir**. Moderate Theoretical
- **Hydroxycarbamide** increases the risk of toxicity when given with **didanosine**. Avoid. Severe Study
- **Isoniazid** is predicted to increase the risk of peripheral neuropathy when given with **didanosine**. Severe Theoretical → Also see **TABLE 1** p. 1334 → Also see **TABLE 12** p. 1337
- **Didanosine** is predicted to increase the risk of pancreatitis when given with **pentamidine**. Avoid. Severe Study
- **Didanosine** (buffered) is predicted to greatly decrease the exposure to oral **quinolones**. **Didanosine** should be taken 2 hours after quinolones. Moderate Study
- **Ribavirin** is predicted to increase the exposure to **didanosine**. Avoid. Severe Study
- **Didanosine** increases the risk of toxicity when given with **stavudine**. Avoid. Severe Study → Also see **TABLE 12** p. 1337
- **Tenofovir disoproxil** increases the risk of toxicity when given with **didanosine**. Avoid. Severe Study
- **Valganciclovir** is predicted to increase the exposure to **didanosine**. Moderate Study

Digoxin → see **TABLE 6** p. 1335 (bradycardia)

GENERAL INFORMATION Drugs that reduce serum potasium are predicted to increase the risk of digoxin toxicity, see **TABLE 17** p. 1335.

- **Acarbose** decreases the concentration of **digoxin**. Moderate Study
- Aldosterone antagonists **(eplerenone)** very slightly increase the exposure to **digoxin**. Mild Study
- Aldosterone antagonists **(spironolactone)** increase the concentration of **digoxin**. Monitor and adjust dose. Moderate Study
- **Aminoglycosides** potentially increase the concentration of **digoxin**. Monitor and adjust dose. Mild Study
- **Antacids** decrease the absorption of **digoxin**. Separate administration by 2 hours. Mild Study
- Antiarrhythmics **(amiodarone, dronedarone)** are predicted to moderately increase the exposure to **digoxin**. Monitor and adjust **digoxin** dose, p. 109. Severe Study → Also see **TABLE 6** p. 1335
- Antiarrhythmics **(propafenone)** increase the concentration of **digoxin**. Monitor and adjust dose. Severe Study
- Antiepileptics **(fosphenytoin, phenytoin)** are predicted to decrease the concentration of **digoxin**. Moderate Anecdotal
- Antifungals, azoles **(isavuconazole)** slightly increase the exposure to **digoxin**. Monitor and adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole)** are predicted to markedly increase the concentration of **digoxin**. Monitor and adjust dose. Severe Study
- Antifungals, azoles **(ketoconazole)** are predicted to markedly increase the concentration of **digoxin**. Severe Study
- Antifungals, azoles **(posaconazole)** are predicted to increase the concentration of **digoxin**. Severe Study
- Antimalarials **(mefloquine)** are predicted to increase the risk of bradycardia when given with **digoxin**. Severe Theoretical
- Antimalarials **(quinine)** increase the concentration of **digoxin**. Monitor and adjust **digoxin** dose, p. 109. Severe Anecdotal
- **Balsalazide** is predicted to decrease the concentration of **digoxin**. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** increase the concentration of **digoxin**. Monitor and adjust dose. Severe Study → Also see **TABLE 6** p. 1335
- Intravenous **calcium salts** increase the concentration of **digoxin**. Avoid. Moderate Anecdotal
- **Carbimazole** affects the concentration of **digoxin**. Monitor and adjust dose. Moderate Theoretical
- **Ceritinib** is predicted to increase the risk of bradycardia when given with **digoxin**. Avoid. Severe Theoretical
- **Ciclosporin** increases the concentration of **digoxin**. Monitor and adjust dose. Severe Theoretical
- **Daclatasvir** slightly increases the concentration of **digoxin**. Severe Study
- **Eliglustat** increases the exposure to **digoxin**. Adjust dose. Moderate Study
- **Glecaprevir** (with pibrentasvir) increases the exposure to **digoxin**. Moderate Study
- HIV-protease inhibitors **(ritonavir)** increase the concentration of **digoxin**. Adjust dose and monitor concentration. Severe Study
- **Ivacaftor** slightly increases the exposure to **digoxin**. Moderate Study
- **Lapatinib** is predicted to increase the exposure to **digoxin**. Moderate Theoretical
- **Macrolides** increase the concentration of **digoxin**. Severe Anecdotal
- **Mirabegron** slightly increases the exposure to **digoxin**. Monitor concentration and adjust dose. Severe Study
- **Neomycin** decreases the absorption of **digoxin**. Moderate Study
- Neuromuscular blocking drugs, non-depolarising **(pancuronium)** are predicted to increase the risk of cardiovascular side-effects when given with **digoxin**. Severe Anecdotal
- NSAIDs **(indometacin)** increase the concentration of **digoxin**. Severe Study
- **Penicillamine** potentially decreases the concentration of **digoxin**. Separate administration by 2 hours. Severe Anecdotal
- **Pibrentasvir** (with glecaprevir) increases the exposure to **digoxin**. Moderate Study
- **Pitolisant** is predicted to decrease the exposure to **digoxin**. Unknown Theoretical
- **Ranolazine** increases the concentration of **digoxin**. Moderate Study
- **Rifampicin** decreases the concentration of **digoxin**. Moderate Study
- **Rolapitant** slightly increases the exposure to **digoxin**. Moderate Study
- **St John's Wort** decreases the concentration of **digoxin**. Avoid. Severe Anecdotal
- **Sucralfate** decreases the absorption of **digoxin**. Separate administration by 2 hours. Severe Anecdotal
- **Sulfasalazine** decreases the concentration of **digoxin**. Moderate Study
- **Suxamethonium** is predicted to increase the risk of cardiovascular side-effects when given with **digoxin**. Severe Anecdotal
- **Thyroid hormones** are predicted to affect the concentration of **digoxin**. Monitor and adjust dose. Moderate Theoretical
- **Ticagrelor** increases the concentration of **digoxin**. Moderate Study
- **Tolvaptan** increases the concentration of **digoxin**. Mild Study
- **Trimethoprim** increases the concentration of **digoxin**. Moderate Study
- **Vandetanib** slightly increases the exposure to **digoxin**. Monitor ECG and adjust dose. Moderate Study
- **Velpatasvir** is predicted to increase the exposure to **digoxin**. Severe Study
- **Vitamin D substances** are predicted to increase the risk of toxicity when given with **digoxin**. Severe Theoretical

Dihydrocodeine → see opioids

Dihydrotachysterol → see vitamin D substances

Diltiazem → see calcium channel blockers

Dimenhydrinate → see **TABLE 10** p. 1336 (antimuscarinics)

Dimethyl fumarate

- **Alcohol (beverage)**(excessive consumption) potentially increases the risk of gastrointestinal side-effects when given with **dimethyl fumarate**. Avoid. Moderate Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dimethyl fumarate**. Public Health England advises avoid (refer to Green Book). Severe Theoretical

Diphenoxylate → see opioids

Dipipanone → see opioids

Dipyridamole → see **TABLE 8** p. 1335 (hypotension), **TABLE 4** p. 1334 (antiplatelet effects)

- **Antacids** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). Moderate Theoretical
- **Dipyridamole** increases the exposure to antiarrhythmics **(adenosine)**. Avoid or adjust dose. Severe Study
- **H_2 receptor antagonists** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). Moderate Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Dipyridamole (continued)
- **Proton pump inhibitors** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). Moderate Theoretical

Disopyramide → see antiarrhythmics

Disulfiram → see **TABLE 12** p. 1337 (peripheral neuropathy)
- **Alcohol (beverage)** causes an extremely unpleasant systemic reaction when given with **disulfiram**. Avoid for at least 24 hours before and up to 14 days after stopping treatment. Severe Study
- **Disulfiram** increases the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. Severe Study → Also see **TABLE 12** p. 1337
- **Disulfiram** increases the anticoagulant effect of **coumarins**. Monitor and adjust dose. Severe Study
- **Disulfiram** increases the risk of acute psychoses when given with **metronidazole**. Severe Study → Also see **TABLE 12** p. 1337
- **Disulfiram** is predicted to increase the anticoagulant effect of **phenindione**. Severe Theoretical

Dobutamine → see sympathomimetics, inotropic

Docetaxel → see taxanes

Dolutegravir
- **Antacids** moderately decrease the exposure to **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after **antacids**. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **dolutegravir**. Adjust dose. Severe Study
- Antiepileptics **(oxcarbazepine)** are predicted to decrease the exposure to **dolutegravir**. Adjust dose. Severe Theoretical
- **Bosentan** decreases the exposure to **dolutegravir**. Adjust dose. Severe Study
- Oral **calcium salts** decrease the absorption of **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after **calcium salts**. Moderate Study
- **Efavirenz** decreases the exposure to **dolutegravir**. Adjust dose. Severe Study
- **Enzalutamide** decreases the exposure to **dolutegravir**. Adjust dose. Severe Study
- **Etravirine** moderately decreases the exposure to **dolutegravir**. Avoid unless given with atazanavir, darunavir, or lopinavir (all boosted with ritonavir). Severe Study
- HIV-protease inhibitors **(fosamprenavir** boosted with ritonavir) slightly decrease the exposure to **dolutegravir**. Avoid if resistant to HIV-integrase inhibitors. Severe Study
- HIV-protease inhibitors **(tipranavir)** moderately decrease the exposure to **dolutegravir**. Refer to specialist literature. Severe Study
- **Iron (oral)** decreases the absorption of **dolutegravir**. **Dolutegravir** should be taken 2 hours before or 6 hours after **iron (oral)**. Moderate Study
- **Dolutegravir** slightly to moderately increases the exposure to **metformin**. Use with caution and adjust dose. Severe Study
- **Mitotane** decreases the exposure to **dolutegravir**. Adjust dose. Severe Study
- **Nevirapine** decreases the exposure to **dolutegravir**. Adjust dose. Severe Study
- **Rifampicin** decreases the exposure to **dolutegravir**. Adjust dose. Severe Study
- **St John's Wort** decreases the exposure to **dolutegravir**. Adjust dose. Severe Study
- **Sucralfate** decreases the absorption of **dolutegravir**. Moderate Study

Domperidone → see **TABLE 9** p. 1336 (QT-interval prolongation)
- Antiarrhythmics **(dronedarone)** increase the risk of QT-prolongation when given with **domperidone**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** increase the risk of QT-prolongation when given with **domperidone**. Avoid. Severe Study
- **Aprepitant** increases the risk of QT-prolongation when given with **domperidone**. Avoid. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** increase the risk of QT-prolongation when given with **domperidone**. Avoid. Severe Study
- **Cobicistat** increases the risk of QT-prolongation when given with **domperidone**. Avoid. Severe Study
- **Crizotinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. Severe Study
- **Domperidone** is predicted to decrease the prolactin-lowering effect of dopamine receptor agonists **(bromocriptine, cabergoline)**. Moderate Theoretical
- **HIV-protease inhibitors** increase the risk of QT-prolongation when given with **domperidone**. Avoid. Severe Study
- **Idelalisib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. Severe Study
- **Imatinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. Severe Study
- Macrolides **(clarithromycin, erythromycin)** increase the risk of QT-prolongation when given with **domperidone**. Avoid. Severe Study
- **Netupitant** increases the risk of QT-prolongation when given with **domperidone**. Avoid. Severe Study
- **Nilotinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. Severe Study

Donepezil → see anticholinesterases, centrally acting

Dopamine → see sympathomimetics, inotropic

Dopamine receptor agonists → see **TABLE 8** p. 1335 (hypotension), **TABLE 9** p. 1336 (QT-interval prolongation), **TABLE 10** p. 1336 (antimuscarinics)

amantadine · apomorphine · bromocriptine · cabergoline · pergolide · pramipexole · quinagolide · ropinirole · rotigotine

FOOD AND LIFESTYLE Dose adjustment might be necessary if smoking started or stopped during treatment with **ropinirole**.
- **Amisulpride** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 9** p. 1336
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **bromocriptine**. Severe Theoretical
- Antiarrhythmics **(dronedarone)** are predicted to increase the concentration of **cabergoline**. Severe Anecdotal
- Antifungals, azoles **(fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the concentration of **cabergoline**. Moderate Anecdotal
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **bromocriptine**. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** increase the exposure to **bromocriptine**. Severe Study
- **Aprepitant** is predicted to increase the exposure to **bromocriptine**. Severe Theoretical
- **Aprepitant** is predicted to increase the concentration of **cabergoline**. Moderate Anecdotal
- **Aripiprazole** is predicted to decrease the effects of **dopamine receptor agonists**. Moderate Theoretical → Also see **TABLE 8** p. 1335
- **Asenapine** is predicted to decrease the effects of **dopamine receptor agonists**. Adjust dose. Moderate Theoretical → Also see **TABLE 8** p. 1335
- **Benperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335
- **Bupropion** increases the risk of side-effects when given with **amantadine**. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **bromocriptine**. Severe Theoretical → Also see **TABLE 8** p. 1335
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the concentration of **cabergoline**. Moderate Anecdotal → Also see **TABLE 8** p. 1335
- **Clozapine** is predicted to decrease the effects of **dopamine receptor agonists**. Moderate Theoretical → Also see **TABLE 8** p. 1335 → Also see **TABLE 10** p. 1336
- **Cobicistat** increases the exposure to **bromocriptine**. Severe Study
- **Cobicistat** is predicted to increase the concentration of **cabergoline**. Moderate Anecdotal

https://nhathuocngocanh.com/ www.getintopharma.com

- **Combined hormonal contraceptives** are predicted to increase the exposure to **ropinirole**. Adjust dose. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **bromocriptine**. Severe Theoretical
- **Crizotinib** is predicted to increase the concentration of **cabergoline**. Moderate Anecdotal
- **Domperidone** is predicted to decrease the prolactin-lowering effect of dopamine receptor agonists **(bromocriptine, cabergoline)**. Moderate Theoretical
- Dopamine receptor agonists **(cabergoline)** are predicted to increase the risk of ergotism when given with dopamine receptor agonists **(bromocriptine)**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335
- Dopamine receptor agonists **(bromocriptine, cabergoline)** are predicted to increase the risk of ergotism when given with dopamine receptor agonists **(pergolide)**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335
- Dopamine receptor agonists **(amantadine)** are predicted to increase the exposure to dopamine receptor agonists **(pramipexole)**. Adjust dose. Moderate Theoretical → Also see **TABLE 8** p. 1335
- **Droperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335 → Also see **TABLE 9** p. 1336
- **Ergometrine** is predicted to increase the risk of ergotism when given with dopamine receptor agonists **(cabergoline, pergolide)**. Avoid. Moderate Theoretical
- **Ergotamine** is predicted to increase the risk of ergotism when given with dopamine receptor agonists **(bromocriptine, cabergoline)**. Avoid. Moderate Theoretical
- **Ergotamine** is predicted to increase the risk of ergotism when given with **pergolide**. Moderate Theoretical
- **Flupentixol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335
- **Apomorphine** is predicted to increase the risk of severe hypotension when given with **granisetron**. Severe Theoretical
- H_2 receptor antagonists **(cimetidine)** slightly increase the exposure to **pramipexole**. Adjust dose. Moderate Study
- **Haloperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335 → Also see **TABLE 9** p. 1336 → Also see **TABLE 10** p. 1336
- **HIV-protease inhibitors** increase the exposure to **bromocriptine**. Severe Study
- **HIV-protease inhibitors** are predicted to increase the concentration of **cabergoline**. Moderate Anecdotal
- **Hormone replacement therapy** decreases the clearance of **ropinirole**. Monitor and adjust dose. Moderate Study
- **Idelalisib** increases the exposure to **bromocriptine**. Severe Study
- **Idelalisib** is predicted to increase the concentration of **cabergoline**. Moderate Anecdotal
- **Imatinib** is predicted to increase the exposure to **bromocriptine**. Severe Theoretical
- **Imatinib** is predicted to increase the concentration of **cabergoline**. Moderate Anecdotal
- **Loxapine** is predicted to decrease the effects of **dopamine receptor agonists**. Moderate Theoretical → Also see **TABLE 8** p. 1335 → Also see **TABLE 10** p. 1336
- Macrolides **(clarithromycin)** increase the exposure to **bromocriptine**. Severe Study
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the concentration of **cabergoline**. Avoid. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **bromocriptine**. Severe Theoretical
- **Amantadine** increases the risk of CNS toxicity when given with **memantine**. Use with caution or avoid. Severe Theoretical
- **Memantine** is predicted to increase the effects of dopamine receptor agonists **(apomorphine, bromocriptine, cabergoline, pergolide, pramipexole, quinagolide, ropinirole, rotigotine)**. Moderate Theoretical
- **Metoclopramide** is predicted to decrease the effects of dopamine receptor agonists **(apomorphine, bromocriptine, cabergoline, pergolide, pramipexole, quinagolide, ropinirole, rotigotine)**. Avoid. Moderate Study
- **Netupitant** is predicted to increase the exposure to **bromocriptine**. Severe Theoretical
- **Netupitant** is predicted to increase the concentration of **cabergoline**. Moderate Anecdotal
- **Nilotinib** is predicted to increase the exposure to **bromocriptine**. Severe Theoretical
- **Nilotinib** is predicted to increase the concentration of **cabergoline**. Moderate Anecdotal
- **Olanzapine** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335
- **Apomorphine** increases the risk of severe hypotension when given with **ondansetron**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **Paliperidone** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335 → Also see **TABLE 9** p. 1336
- **Apomorphine** is predicted to increase the risk of severe hypotension when given with **palonosetron**. Severe Theoretical
- **Phenothiazines** are predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335 → Also see **TABLE 9** p. 1336 → Also see **TABLE 10** p. 1336
- **Pimozide** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335 → Also see **TABLE 9** p. 1336 → Also see **TABLE 10** p. 1336
- **Quetiapine** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335
- Quinolones **(ciprofloxacin)** are predicted to increase the exposure to **ropinirole**. Adjust dose. Moderate Study
- **Risperidone** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335 → Also see **TABLE 9** p. 1336
- SSRIs **(fluvoxamine)** are predicted to increase the exposure to **ropinirole**. Adjust dose. Moderate Study
- **Sulpiride** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335 → Also see **TABLE 9** p. 1336
- Sympathomimetics, vasoconstrictor **(isometheptene)** potentially increase the risk of side-effects when given with **bromocriptine**. Avoid. Severe Anecdotal
- **Zuclopenthixol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335 → Also see **TABLE 9** p. 1336

Dorzolamide

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

Dosulepin → see tricyclic antidepressants

Doxapram

- **Aminophylline** increases the risk of agitation when given with **doxapram**. Moderate Study
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the effects of **doxapram**. Moderate Theoretical
- **Theophylline** increases the risk of agitation when given with **doxapram**. Moderate Study

Doxazosin → see alpha blockers

Doxepin → see tricyclic antidepressants

Doxorubicin → see anthracyclines

Doxycycline → see tetracyclines

Dronedarone → see antiarrhythmics

Droperidol → see **TABLE 8** p. 1335 (hypotension), **TABLE 9** p. 1336 (QT-interval prolongation), **TABLE 11** p. 1336 (CNS depressant effects)

- **Droperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335 → Also see **TABLE 9** p. 1336
- **Droperidol** is predicted to decrease the effects of **guanethidine**. Monitor and adjust dose. Moderate Theoretical → Also see **TABLE 8** p. 1335
- **Droperidol** decreases the effects of **levodopa**. Severe Study → Also see **TABLE 8** p. 1335

Drospirenone → see **TABLE 16** p. 1338 (increased serum potassium)

https://nhathuocngocanh.com/ www.getintopharma.com

Drospirenone (continued)
- Antifungals, azoles **(ketoconazole)** moderately increase the exposure to **drospirenone**. Severe Study

Dulaglutide → see **TABLE 14** p. 1337 (antidiabetic drugs)

Duloxetine → see **TABLE 18** p. 1338 (hyponatraemia), **TABLE 13** p. 1337 (serotonin syndrome), **TABLE 4** p. 1334 (antiplatelet effects)
- Antiepileptics **(phenytoin)** are predicted to decrease the exposure to **duloxetine**. Moderate Theoretical
- **Duloxetine** is predicted to increase the exposure to beta blockers, selective **(metoprolol)**. Moderate Study
- **Duloxetine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- HIV-protease inhibitors **(ritonavir)** are predicted to decrease the exposure to **duloxetine**. Moderate Theoretical
- **Leflunomide** is predicted to decrease the exposure to **duloxetine**. Moderate Theoretical
- **Duloxetine** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. Moderate Study
- Quinolones **(ciprofloxacin)** are predicted to increase the exposure to **duloxetine**. Avoid. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **duloxetine**. Moderate Theoretical
- SSRIs **(fluvoxamine)** markedly increase the exposure to **duloxetine**. Avoid. Severe Study → Also see **TABLE 18** p. 1338 → Also see **TABLE 13** p. 1337 → Also see **TABLE 4** p. 1334
- **Teriflunomide** is predicted to decrease the exposure to **duloxetine**. Moderate Theoretical

Dupilumab → see monoclonal antibodies

Dutasteride
- Antiarrhythmics **(dronedarone)** are predicted to moderately increase the exposure to **dutasteride**. Mild Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to moderately increase the exposure to **dutasteride**. Mild Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. Moderate Theoretical
- **Aprepitant** is predicted to moderately increase the exposure to **dutasteride**. Mild Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to moderately increase the exposure to **dutasteride**. Mild Study
- **Cobicistat** is predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. Moderate Theoretical
- **Crizotinib** is predicted to moderately increase the exposure to **dutasteride**. Mild Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. Moderate Theoretical
- **Idelalisib** is predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. Moderate Theoretical
- **Imatinib** is predicted to moderately increase the exposure to **dutasteride**. Mild Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. Moderate Theoretical
- Macrolides **(erythromycin)** are predicted to moderately increase the exposure to **dutasteride**. Mild Study
- **Netupitant** is predicted to moderately increase the exposure to **dutasteride**. Mild Study
- **Nilotinib** is predicted to moderately increase the exposure to **dutasteride**. Mild Study

Eculizumab → see monoclonal antibodies

Edoxaban → see **TABLE 3** p. 1334 (anticoagulant effects)
- Antiarrhythmics **(amiodarone)** slightly increase the exposure to **edoxaban**. Severe Study
- Antiarrhythmics **(dronedarone)** slightly increase the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 125. Severe Study
- Antiepileptics **(carbamazepine)** are predicted to decrease the exposure to **edoxaban**. Moderate Study
- Antifungals, azoles **(itraconazole)** are predicted to slightly increase the exposure to **edoxaban**. Severe Theoretical
- Antifungals, azoles **(ketoconazole)** slightly increase the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 125. Severe Study
- Calcium channel blockers **(verapamil)** are predicted to slightly increase the exposure to **edoxaban**. Severe Theoretical
- **Ceritinib** is predicted to increase the exposure to **edoxaban**. Moderate Theoretical
- **Ciclosporin** slightly increases the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 125. Severe Study
- **Eliglustat** is predicted to increase the exposure to **edoxaban**. Adjust dose. Moderate Study
- HIV-protease inhibitors **(lopinavir, ritonavir, saquinavir)** are predicted to slightly increase the exposure to **edoxaban**. Severe Theoretical
- **Lapatinib** is predicted to slightly increase the exposure to **edoxaban**. Severe Theoretical
- Macrolides **(azithromycin, clarithromycin)** are predicted to slightly increase the exposure to **edoxaban**. Severe Theoretical
- Macrolides **(erythromycin)** slightly increase the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 125. Severe Study
- **Mirabegron** is predicted to increase the exposure to **edoxaban**. Mild Theoretical
- **Ranolazine** is predicted to slightly increase the exposure to **edoxaban**. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **edoxaban**. Moderate Study
- **St John's Wort** is predicted to decrease the exposure to **edoxaban**. Moderate Study
- **Velpatasvir** is predicted to increase the exposure to **edoxaban**. Severe Theoretical
- **Vemurafenib** is predicted to slightly increase the exposure to **edoxaban**. Severe Theoretical
- **Voxilaprevir** is predicted to increase the concentration of **edoxaban**. Avoid. Severe Theoretical

Efavirenz → see **TABLE 9** p. 1336 (QT-interval prolongation)
- **Efavirenz** is predicted to decrease the exposure to antiarrhythmics **(dronedarone)**. Severe Theoretical → Also see **TABLE 9** p. 1336
- Antiepileptics **(carbamazepine)** slightly decrease the exposure to **efavirenz** and **efavirenz** slightly decreases the exposure to antiepileptics **(carbamazepine)**. Severe Study
- Antiepileptics **(fosphenytoin, phenytoin)** slightly decrease the exposure to **efavirenz** and **efavirenz** affects the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Severe Theoretical
- Antiepileptics **(phenobarbital)** are predicted to decrease the exposure to **efavirenz** and **efavirenz** affects the concentration of antiepileptics **(phenobarbital)**. Severe Theoretical
- **Efavirenz** is predicted to affect the efficacy of antiepileptics **(primidone)** and antiepileptics **(primidone)** are predicted to slightly decrease the exposure to **efavirenz**. Severe Theoretical
- **Efavirenz** is predicted to decrease the exposure to antifungals, azoles **(isavuconazole)**. Avoid. Severe Theoretical
- **Efavirenz** slightly decreases the exposure to antifungals, azoles **(itraconazole)**. Avoid and for 14 days after stopping **efavirenz**. Moderate Study
- **Efavirenz** moderately decreases the exposure to antifungals, azoles **(ketoconazole)**. Severe Study
- **Efavirenz** slightly decreases the exposure to antifungals, azoles **(posaconazole)**. Avoid. Moderate Study
- **Efavirenz** moderately decreases the exposure to antifungals, azoles **(voriconazole)** and antifungals, azoles **(voriconazole)** slightly increase the exposure to **efavirenz**. Adjust dose. Severe Study → Also see **TABLE 9** p. 1336
- **Efavirenz** decreases the concentration of antimalarials **(artemether)**. Severe Study → Also see **TABLE 9** p. 1336
- **Efavirenz** moderately decreases the exposure to antimalarials **(atovaquone)**. Avoid. Moderate Study
- **Efavirenz** affects the exposure to antimalarials **(proguanil)**. Avoid. Moderate Study
- **Efavirenz** is predicted to decrease the exposure to **axitinib**. Moderate Theoretical
- **Efavirenz** is predicted to decrease the exposure to **bedaquiline**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **Efavirenz** is predicted to decrease the exposure to **bosutinib**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Efavirenz** is predicted to decrease the exposure to **bupropion**. Moderate Study
- **Efavirenz** is predicted to decrease the exposure to **cabozantinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336

https://nhathuocngocanh.com/ www.getintopharma.com

- **Efavirenz** is predicted to decrease the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Theoretical
- **Efavirenz** is predicted to decrease the exposure to calcium channel blockers **(diltiazem, verapamil)**. Moderate Theoretical
- **Efavirenz** is predicted to decrease the concentration of **caspofungin**. Adjust dose. Moderate Study
- **Efavirenz** decreases the concentration of **ciclosporin**. Monitor concentration and adjust dose. Moderate Study
- **Efavirenz** is predicted to decrease the exposure to **cobicistat**. Avoid. Severe Theoretical
- **Efavirenz** is predicted to decrease the exposure to **cobimetinib**. Avoid. Severe Theoretical
- **Efavirenz** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Study
- **Efavirenz** is predicted to affect the concentration of **coumarins**. Adjust dose. Moderate Theoretical
- **Efavirenz** is predicted to decrease the exposure to **crizotinib**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Efavirenz** is predicted to decrease the exposure to **daclatasvir**. Adjust dose. Severe Study
- **Efavirenz** is predicted to decrease the exposure to **dasatinib**. Severe Study → Also see **TABLE 9** p. 1336
- **Efavirenz** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Efavirenz** decreases the exposure to **dolutegravir**. Adjust dose. Severe Study
- **Efavirenz** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. Severe Study
- **Efavirenz** is predicted to decrease the exposure to **eliglustat**. Moderate Theoretical
- **Efavirenz** is predicted to decrease the concentration of **elvitegravir**. Avoid. Severe Theoretical
- **Efavirenz** is predicted to decrease the effects of **ergotamine**. Moderate Theoretical
- **Efavirenz** is predicted to decrease the exposure to **erlotinib**. Severe Theoretical
- **Efavirenz** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Efavirenz** is predicted to decrease the exposure to **etravirine**. Avoid. Severe Study
- **Efavirenz** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. Severe Study
- **Efavirenz** is predicted to decrease the exposure to **gefitinib**. Avoid. Severe Theoretical
- **Efavirenz** is predicted to decrease the exposure to **glecaprevir**. Avoid. Severe Study
- **Efavirenz** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. Severe Study
- **Efavirenz** is predicted to decrease the concentration of **guanfacine**. Adjust dose. Moderate Theoretical
- **Efavirenz** decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. Severe Study → Also see **TABLE 9** p. 1336
- **Efavirenz** is predicted to decrease the effects of **hormone replacement therapy**. Moderate Anecdotal
- **Efavirenz** is predicted to decrease the exposure to **idelalisib**. Avoid. Moderate Theoretical
- **Efavirenz** is predicted to decrease the exposure to **imatinib**. Moderate Study
- **Efavirenz** is predicted to decrease the exposure to **ivacaftor**. Severe Theoretical
- **Efavirenz** is predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **Efavirenz** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Efavirenz** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. Moderate Theoretical
- **Efavirenz** decreases the exposure to macrolides **(clarithromycin)**. Moderate Study → Also see **TABLE 9** p. 1336
- **Efavirenz** decreases the exposure to **maraviroc**. Refer to specialist literature. Severe Theoretical
- **Efavirenz** is predicted to alter the effects of **midazolam**. Avoid. Moderate Theoretical
- **Efavirenz** is predicted to decrease the exposure to **netupitant**. Moderate Theoretical
- **Nevirapine** decreases the concentration of **efavirenz**. Avoid. Severe Study
- **Efavirenz** is predicted to decrease the exposure to **nilotinib**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Efavirenz** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Efavirenz** is predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical
- **Efavirenz** decreases the exposure to opioids **(methadone)**. Monitor and adjust dose. Severe Study → Also see **TABLE 9** p. 1336
- **Efavirenz** is predicted to decrease the exposure to **osimertinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Efavirenz** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. Severe Study
- **Efavirenz** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Efavirenz** is predicted to decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- **Pitolisant** is predicted to decrease the exposure to **efavirenz**. Unknown Theoretical
- **Efavirenz** is predicted to decrease the exposure to **quetiapine**. Moderate Study
- **Efavirenz** is predicted to decrease the exposure to **ribociclib**. Moderate Study → Also see **TABLE 9** p. 1336
- **Efavirenz** slightly decreases the exposure to **rifabutin**. Adjust dose. Severe Study
- **Rifampicin** slightly decreases the exposure to **efavirenz**. Adjust dose. Severe Study
- **Efavirenz** is predicted to decrease the exposure to **rilpivirine**. Avoid. Severe Theoretical
- **Efavirenz** is predicted to decrease the exposure to **rolapitant**. Avoid. Severe Study
- **Efavirenz** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Theoretical
- **Efavirenz** is predicted to decrease the exposure to **simeprevir**. Avoid. Severe Study
- **Efavirenz** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. Moderate Theoretical
- **St John's Wort** is predicted to decrease the concentration of **efavirenz**. Avoid. Severe Theoretical
- **Efavirenz** slightly decreases the exposure to statins **(atorvastatin)**. Mild Study
- **Efavirenz** moderately decreases the exposure to statins **(simvastatin)**. Moderate Study
- **Efavirenz** is predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. Moderate Theoretical
- **Efavirenz** is predicted to decrease the exposure to taxanes **(cabazitaxel)**. Avoid. Severe Study
- **Efavirenz** is predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Theoretical
- **Efavirenz** is predicted to decrease the exposure to **ticagrelor**. Moderate Theoretical
- **Efavirenz** is predicted to decrease the exposure to **tofacitinib**. Moderate Study
- **Efavirenz** is predicted to decrease the exposure to **tolvaptan**. Moderate Theoretical
- **Efavirenz** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Efavirenz** is predicted to decrease the exposure to **velpatasvir**. Avoid. Moderate Theoretical
- **Efavirenz** is predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- **Efavirenz** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Elbasvir

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **elbasvir**. Avoid. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** slightly to moderately increase the exposure to **elbasvir**. Avoid. Moderate Study
- **Bosentan** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. Severe Study
- **Cobicistat** slightly to moderately increases the exposure to **elbasvir**. Avoid. Moderate Study
- **Elbasvir** is predicted to increase the concentration of **dabigatran**. Moderate Theoretical
- **Efavirenz** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **elbasvir**. Avoid. Severe Study
- **Etravirine** is predicted to decrease the exposure to **elbasvir**. Avoid. Unknown Theoretical
- **HIV-protease inhibitors** slightly to moderately increase the exposure to **elbasvir**. Avoid. Moderate Study
- **Idelalisib** slightly to moderately increases the exposure to **elbasvir**. Avoid. Moderate Study
- Macrolides **(clarithromycin)** slightly to moderately increase the exposure to **elbasvir**. Avoid. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **elbasvir**. Avoid. Severe Study
- **Modafinil** is predicted to decrease the exposure to **elbasvir**. Avoid. Unknown Theoretical
- **Nevirapine** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **elbasvir**. Avoid. Severe Study
- **St John's Wort** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. Severe Study
- **Elbasvir** potentially increases the exposure to statins **(atorvastatin)**. Adjust **atorvastatin** dose, p. 200. Moderate Study
- **Elbasvir** is predicted to increase the exposure to statins **(fluvastatin)**. Adjust **fluvastatin** dose, p. 201. Unknown Theoretical
- **Elbasvir** increases the exposure to statins **(rosuvastatin)**. Adjust **rosuvastatin** dose, p. 202. Moderate Study
- **Elbasvir** is predicted to increase the exposure to statins **(simvastatin)**. Adjust **simvastatin** dose, p. 203. Unknown Theoretical
- **Elbasvir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. Moderate Theoretical

Eletriptan → see TABLE 13 p. 1337 (serotonin syndrome)

- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **eletriptan**. Avoid. Severe Study
- **Cobicistat** is predicted to markedly increase the exposure to **eletriptan**. Avoid. Severe Study
- **Eletriptan** increases the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. Severe Study
- **HIV-protease inhibitors** are predicted to markedly increase the exposure to **eletriptan**. Avoid. Severe Study
- **Idelalisib** is predicted to markedly increase the exposure to **eletriptan**. Avoid. Severe Study
- Macrolides **(clarithromycin)** are predicted to markedly increase the exposure to **eletriptan**. Avoid. Severe Study
- Macrolides **(erythromycin)** moderately increase the exposure to **eletriptan**. Avoid. Moderate Study

Eliglustat

- **Abiraterone** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Eliglustat** is predicted to increase the exposure to **aliskiren**. Adjust dose. Moderate Study
- Antiarrhythmics **(dronedarone, propafenone)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **eliglustat**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Eliglustat** is predicted to increase the exposure to antihistamines, non-sedating **(fexofenadine)**. Adjust dose. Moderate Study
- **Aprepitant** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Eliglustat** is predicted to increase the exposure to **atomoxetine**. Adjust dose. Moderate Theoretical
- **Eliglustat** is predicted to increase the exposure to beta blockers, non-selective **(propranolol)**. Adjust dose. Moderate Study
- **Eliglustat** is predicted to increase the exposure to beta blockers, selective **(metoprolol)**. Adjust dose. Moderate Study
- **Bosentan** is predicted to decrease the exposure to **eliglustat**. Moderate Theoretical
- **Bupropion** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Cinacalcet** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Cobicistat** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Eliglustat** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1085. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Eliglustat** is predicted to increase the exposure to **dabigatran**. Adjust dose. Moderate Study
- **Eliglustat** increases the exposure to **digoxin**. Adjust dose. Moderate Study
- **Duloxetine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Eliglustat** is predicted to increase the exposure to **edoxaban**. Adjust dose. Moderate Study
- **Efavirenz** is predicted to decrease the exposure to **eliglustat**. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **eliglustat**. Avoid. Severe Study
- **Eliglustat** is predicted to increase the exposure to **everolimus**. Adjust dose. Moderate Study
- **Grapefruit juice** is predicted to increase the exposure to **eliglustat**. Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Idelalisib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Imatinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Eliglustat** is predicted to increase the exposure to **loperamide**. Adjust dose. Moderate Study
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Mirabegron** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Mitotane** is predicted to decrease the exposure to **eliglustat**. Avoid. Severe Study
- **Moclobemide** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Theoretical
- **Netupitant** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Nevirapine** is predicted to decrease the exposure to **eliglustat**. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Eliglustat** is predicted to increase the exposure to phenothiazines **(perphenazine)**. Adjust dose. Moderate Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

- Quinolones **(ciprofloxacin)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **eliglustat**. Avoid. Severe Study
- **Eliglustat** is predicted to increase the exposure to **sirolimus**. Adjust dose. Moderate Study
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **St John's Wort** is predicted to increase the exposure to **eliglustat**. Avoid. Severe Study
- **Eliglustat** is predicted to increase the exposure to taxanes **(paclitaxel)**. Adjust dose. Moderate Study
- **Terbinafine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Eliglustat** is predicted to increase the exposure to **tolterodine**. Adjust dose. Moderate Theoretical
- **Eliglustat** is predicted to increase the exposure to **topotecan**. Adjust dose. Moderate Study
- **Eliglustat** is predicted to increase the exposure to tricyclic antidepressants **(nortriptyline)**. Adjust dose. Moderate Theoretical

Elotuzumab → see monoclonal antibodies

Eltrombopag

- **Antacids** decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **antacids**. Severe Study
- Oral **calcium salts** decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **calcium salts**. Severe Study
- **Dairy products** are predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **dairy products**. Severe Theoretical
- **Iron (oral)** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **iron (oral)**. Severe Theoretical
- **Selenium** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **selenium**. Severe Theoretical
- **Eltrombopag** is predicted to increase the exposure to **statins**. Monitor and adjust dose. Moderate Study
- **Zinc** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **zinc**. Severe Theoretical

Eluxadoline

- **Ciclosporin** increases the exposure to **eluxadoline**. Avoid. Moderate Study
- Fibrates **(gemfibrozil)** are predicted to increase the exposure to **eluxadoline**. Avoid. Moderate Theoretical
- HIV-protease inhibitors **(atazanavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **eluxadoline**. Avoid. Moderate Theoretical
- **Rifampicin** is predicted to increase the exposure to **eluxadoline**. Avoid. Moderate Theoretical
- **Eluxadoline** is predicted to increase the exposure to **statins**. Moderate Study

Elvitegravir

- **Antacids** moderately decrease the exposure to **elvitegravir**. Separate administration by at least 4 hours. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **elvitegravir**. Avoid. Severe Theoretical
- **Bosentan** is predicted to decrease the concentration of **elvitegravir**. Avoid. Severe Theoretical
- **Elvitegravir** is predicted to decrease the anticoagulant effect of **coumarins**. Moderate Theoretical
- **Efavirenz** is predicted to decrease the concentration of **elvitegravir**. Avoid. Severe Theoretical
- **Enzalutamide** is predicted to decrease the concentration of **elvitegravir**. Avoid. Severe Theoretical
- HIV-protease inhibitors **(atazanavir, lopinavir)** (boosted with ritonavir) increase the concentration of **elvitegravir**. Refer to specialist literature. Moderate Study
- **Mitotane** is predicted to decrease the concentration of **elvitegravir**. Avoid. Severe Theoretical
- **Nevirapine** is predicted to decrease the concentration of **elvitegravir**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the concentration of **elvitegravir**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the concentration of **elvitegravir**. Avoid. Severe Theoretical

Empagliflozin → see **TABLE 14** p. 1337 (antidiabetic drugs), **TABLE 8** p. 1335 (hypotension)

Enalapril → see ACE inhibitors

Enoxaparin → see low molecular-weight heparins

Entacapone

- **Iron (oral)** is predicted to decrease the absorption of **entacapone**. Separate administration by at least 2 hours. Moderate Theoretical
- **Entacapone** increases the exposure to **levodopa**. Monitor side effects and adjust dose. Moderate Study
- **Entacapone** is predicted to increase the exposure to **methyldopa**. Moderate Theoretical
- **Entacapone** is predicted to increase the risk of elevated blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. Severe Theoretical
- **Entacapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic**. Moderate Theoretical
- **Entacapone** is predicted to increase the risk of cardiovascular side-effects when given with sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, noradrenaline/norepinephrine)**. Moderate Study

Enteral feeds

- Antacids **(aluminium hydroxide)** increase the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. Moderate Study
- **Enteral feeds** decrease the absorption of antiepileptics **(phenytoin)**. Severe Study
- **Enteral feeds** (vitamin-K containing) potentially decrease the anticoagulant effect of **coumarins**. Severe Anecdotal
- **Enteral feeds** (vitamin-K containing) potentially decrease the effects of **phenindione**. Severe Theoretical
- **Enteral feeds** decrease the exposure to quinolones **(ciprofloxacin)**. Moderate Study
- **Sucralfate** increases the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. Separate administration by 1 hour. Moderate Study
- **Enteral feeds** decrease the exposure to **theophylline**. Moderate Study

Enzalutamide

GENERAL INFORMATION Caution with concurrent chemotherapy—safety and efficacy not established.

- **Enzalutamide** is predicted to decrease the exposure to **abiraterone**. Avoid. Severe Theoretical
- **Enzalutamide** is predicted to decrease the exposure to aldosterone antagonists **(eplerenone)**. Avoid. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **alprazolam**. Adjust dose. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to antiarrhythmics **(disopyramide, dronedarone)**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the efficacy of antiarrhythmics **(propafenone)**. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to anticholinesterases, centrally acting **(donepezil)**. Mild Study
- **Enzalutamide** is predicted to slightly decrease the exposure to antiepileptics **(brivaracetam)**. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to antiepileptics **(perampanel)**. Monitor and adjust dose. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to antifungals, azoles **(isavuconazole)**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to antimalarials **(artemether)** (with lumafantrine). Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the concentration of antimalarials **(piperaquine)**. Avoid. Moderate Theoretical
- **Enzalutamide** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. Severe Study

https://nhathuocngocanh.com/ www.getintopharma.com

Enzalutamide (continued)

- **Enzalutamide** moderately decreases the exposure to **apremilast**. Avoid. Severe Study
- **Enzalutamide** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. Moderate Study
- **Enzalutamide** is predicted to moderately decrease the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. Moderate Study
- **Enzalutamide** decreases the exposure to **bedaquiline**. Avoid. Severe Study
- **Enzalutamide** slightly decreases the exposure to **bortezomib**. Avoid. Severe Study
- **Enzalutamide** affects the exposure to **bosentan**. Avoid. Severe Study
- **Enzalutamide** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. Severe Study
- **Enzalutamide** moderately decreases the exposure to **cabozantinib**. Avoid. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to calcium channel blockers **(diltiazem, verapamil)**. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **cannabis extract**. Avoid. Severe Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **ceritinib**. Avoid. Severe Study
- **Enzalutamide** decreases the concentration of **ciclosporin**. Severe Study
- **Enzalutamide** is predicted to alter the effects of **cilostazol**. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. Moderate Study
- **Enzalutamide** decreases the exposure to **clomethiazole**. Monitor and adjust dose. Moderate Study
- **Clopidogrel** moderately increases the exposure to **enzalutamide**. Avoid or adjust **enzalutamide** dose, p. 921. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **clozapine**. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **cobicistat**. Avoid. Severe Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **cobimetinib**. Avoid. Severe Theoretical
- **Enzalutamide** is predicted to decrease the exposure to corticosteroids **(budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, prednisone, triamcinolone)**. Monitor and adjust dose. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to corticosteroids **(fluticasone)**. Unknown Theoretical
- **Enzalutamide** potentially decreases the exposure to **coumarins**. Avoid or adjust dose and monitor INR. Severe Study
- **Enzalutamide** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **dabrafenib**. Avoid. Moderate Theoretical
- **Enzalutamide** is predicted to moderately decrease the exposure to **daclatasvir**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **darifenacin**. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **dasabuvir**. Avoid. Severe Theoretical
- **Enzalutamide** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. Severe Study
- **Enzalutamide** is predicted to slightly decrease the exposure to **delamanid**. Avoid. Moderate Study
- **Enzalutamide** decreases the exposure to **dolutegravir**. Adjust dose. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **elbasvir**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **eliglustat**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the concentration of **elvitegravir**. Avoid. Severe Theoretical
- **Enzalutamide** is predicted to decrease the effects of **ergotamine**. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 949. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **etravirine**. Avoid. Severe Theoretical
- **Enzalutamide** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. Severe Study
- **Enzalutamide** moderately decreases the exposure to **exemestane**. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **fesoterodine**. Avoid. Moderate Study
- Fibrates **(gemfibrozil)** moderately increase the exposure to **enzalutamide**. Avoid or adjust **enzalutamide** dose, p. 921. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **fingolimod**. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **fosaprepitant**. Avoid. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **gefitinib**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **grazoprevir**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Study
- **Enzalutamide** decreases the concentration of **haloperidol**. Adjust dose. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 952. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **idelalisib**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **imatinib**. Avoid. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **irinotecan**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **ivabradine**. Adjust dose. Moderate Theoretical
- **Enzalutamide** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **ixazomib**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **linagliptin**. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **lurasidone**. Avoid. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **macitentan**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **maraviroc**. Adjust dose. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **midostaurin**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **montelukast**. Mild Study
- **Enzalutamide** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. Moderate Study
- **Enzalutamide** is predicted to slightly decrease the exposure to **nateglinide**. Mild Study
- **Enzalutamide** is predicted to decrease the exposure to **netupitant**. Avoid. Severe Study
- **Enzalutamide** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. Severe Study

https://nhathuocngocanh.com/ www.getintopharma.com

- **Enzalutamide** is predicted to decrease the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **ondansetron**. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to opioids **(alfentanil, fentanyl)**. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to opioids **(buprenorphine)**. Monitor and adjust dose. Moderate Theoretical
- **Enzalutamide** decreases the exposure to opioids **(methadone)**. Monitor and adjust dose. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to opioids **(oxycodone)**. Monitor and adjust dose. Moderate Study
- **Enzalutamide** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **palbociclib**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **panobinostat**. Avoid. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **pazopanib**. Avoid. Severe Theoretical
- **Enzalutamide** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(avanafil, tadalafil)**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(sildenafil, vardenafil)**. Moderate Theoretical
- **Enzalutamide** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- **Enzalutamide** is predicted to moderately decrease the exposure to **pitolisant**. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **ponatinib**. Avoid. Moderate Theoretical
- **Enzalutamide** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **quetiapine**. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **ranolazine**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **reboxetine**. Moderate Anecdotal
- **Enzalutamide** is predicted to decrease the exposure to **regorafenib**. Avoid. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. Moderate Study
- **Enzalutamide** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. Severe Study
- **Enzalutamide** markedly decreases the exposure to **rilpivirine**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **risperidone**. Adjust dose. Moderate Study
- **Enzalutamide** is predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **roflumilast**. Avoid. Moderate Study
- **Enzalutamide** is predicted to markedly decrease the exposure to **rolapitant**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Study
- **Enzalutamide** is predicted to moderately decrease the exposure to **saxagliptin**. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **simeprevir**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the concentration of **sirolimus**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **solifenacin**. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **sorafenib**. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to statins **(simvastatin)**. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. Moderate Study
- **Enzalutamide** decreases the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to taxanes **(cabazitaxel, paclitaxel)**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to taxanes **(docetaxel)**. Severe Theoretical
- **Enzalutamide** is predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Study
- **Enzalutamide** decreases the exposure to tetracyclines **(doxycycline)**. Monitor and adjust dose. Moderate Study
- **Enzalutamide** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **tivozanib**. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **tofacitinib**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **tolvaptan**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **toremifene**. Adjust dose. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **trabectedin**. Avoid. Severe Theoretical
- **Enzalutamide** is predicted to markedly decrease the exposure to **ulipristal**. Avoid and for 4 weeks after stopping **ulipristal**. Severe Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **vandetanib**. Avoid. Moderate Study
- **Enzalutamide** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **vemurafenib**. Avoid. Severe Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to vinca alkaloids **(vinblastine, vincristine, vindesine)**. Severe Theoretical
- **Enzalutamide** is predicted to decrease the exposure to vinca alkaloids **(vinflunine)**. Avoid. Severe Theoretical
- **Enzalutamide** is predicted to decrease the exposure to vinca alkaloids **(vinorelbine)**. Use with caution or avoid. Severe Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **vismodegib**. Avoid. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study
- **Enzalutamide** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **zopiclone**. Adjust dose. Moderate Study

Ephedrine → see sympathomimetics, vasoconstrictor

Epirubicin → see anthracyclines

Eplerenone → see aldosterone antagonists

Epoetin alfa → see **TABLE 5** p. 1334 (thromboembolism), **TABLE 16** p. 1338 (increased serum potassium)

Epoetin beta → see **TABLE 5** p. 1334 (thromboembolism), **TABLE 16** p. 1338 (increased serum potassium)

Epoetin zeta → see **TABLE 5** p. 1334 (thromboembolism), **TABLE 16** p. 1338 (increased serum potassium)

Epoprostenol → see **TABLE 4** p. 1334 (antiplatelet effects)

Eprosartan → see angiotensin-II receptor antagonists

Eptifibatide → see **TABLE 4** p. 1334 (antiplatelet effects)

Ergocalciferol → see vitamin D substances

Ergometrine

- Antiarrhythmics **(dronedarone)** are predicted to increase the risk of ergotism when given with **ergometrine**. Severe Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the risk of ergotism when given with **ergometrine**. Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Ergometrine (continued)

- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. Severe Theoretical
- Antifungals, azoles **(miconazole)** are predicted to increase the exposure to **ergometrine**. Avoid. Moderate Theoretical
- **Aprepitant** is predicted to increase the risk of ergotism when given with **ergometrine**. Severe Theoretical
- **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergometrine**. Severe Study
- **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergometrine**. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the risk of ergotism when given with **ergometrine**. Severe Theoretical
- **Cobicistat** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. Severe Theoretical
- **Crizotinib** is predicted to increase the risk of ergotism when given with **ergometrine**. Severe Theoretical
- **Ergometrine** is predicted to increase the risk of ergotism when given with dopamine receptor agonists **(cabergoline, pergolide)**. Avoid. Moderate Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **ergometrine**. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. Severe Theoretical
- **Idelalisib** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. Severe Theoretical
- **Imatinib** is predicted to increase the risk of ergotism when given with **ergometrine**. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. Severe Theoretical
- Macrolides **(erythromycin)** are predicted to increase the risk of ergotism when given with **ergometrine**. Severe Theoretical
- **Netupitant** is predicted to increase the risk of ergotism when given with **ergometrine**. Severe Theoretical
- **Nilotinib** is predicted to increase the risk of ergotism when given with **ergometrine**. Severe Theoretical
- **Ergometrine** potentially increases the risk of peripheral vasoconstriction when given with sympathomimetics, inotropic **(dopamine)**. Avoid. Severe Anecdotal
- **Ergometrine** is predicted to increase the risk of peripheral vasoconstriction when given with sympathomimetics, vasoconstrictor **(noradrenaline/norepinephrine)**. Severe Anecdotal

Ergotamine

- **Almotriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **almotriptan**. Severe Theoretical
- Antiarrhythmics **(dronedarone)** are predicted to increase the risk of ergotism when given with **ergotamine**. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the effects of **ergotamine**. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the risk of ergotism when given with **ergotamine**. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. Severe Theoretical
- Antifungals, azoles **(miconazole)** are predicted to increase the exposure to **ergotamine**. Avoid. Moderate Theoretical
- **Aprepitant** is predicted to increase the risk of ergotism when given with **ergotamine**. Severe Theoretical
- **Beta blockers, non-selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergotamine**. Severe Study
- **Beta blockers, selective** are predicted to increase the risk of peripheral vasoconstriction when given with **ergotamine**. Severe Study
- **Bosentan** is predicted to decrease the effects of **ergotamine**. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the risk of ergotism when given with **ergotamine**. Severe Theoretical
- **Ceritinib** is predicted to increase the exposure to **ergotamine**. Avoid. Severe Theoretical
- **Cobicistat** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. Severe Theoretical
- **Crizotinib** is predicted to increase the risk of ergotism when given with **ergotamine**. Severe Theoretical
- **Ergotamine** is predicted to increase the risk of ergotism when given with dopamine receptor agonists **(bromocriptine, cabergoline)**. Avoid. Moderate Theoretical
- **Ergotamine** is predicted to increase the risk of ergotism when given with dopamine receptor agonists **(pergolide)**. Moderate Theoretical
- **Efavirenz** is predicted to decrease the effects of **ergotamine**. Moderate Theoretical
- **Eletriptan** increases the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. Severe Study
- **Enzalutamide** is predicted to decrease the effects of **ergotamine**. Moderate Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **ergotamine**. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. Severe Theoretical
- **Idelalisib** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. Severe Theoretical
- **Imatinib** is predicted to increase the risk of ergotism when given with **ergotamine**. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. Severe Theoretical
- Macrolides **(erythromycin)** are predicted to increase the risk of ergotism when given with **ergotamine**. Severe Theoretical
- **Mitotane** is predicted to decrease the effects of **ergotamine**. Moderate Theoretical
- **Naratriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. Severe Theoretical
- **Netupitant** is predicted to increase the risk of ergotism when given with **ergotamine**. Severe Theoretical
- **Nevirapine** is predicted to decrease the effects of **ergotamine**. Moderate Theoretical
- **Nilotinib** is predicted to increase the risk of ergotism when given with **ergotamine**. Severe Theoretical
- **Palbociclib** is predicted to increase the exposure to **ergotamine**. Adjust dose. Moderate Theoretical
- **Ribociclib** (high-dose) is predicted to increase the exposure to **ergotamine**. Avoid. Moderate Theoretical
- **Rifampicin** is predicted to decrease the effects of **ergotamine**. Moderate Theoretical
- **Rizatriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **rizatriptan**. Severe Theoretical
- **St John's Wort** is predicted to decrease the effects of **ergotamine**. Moderate Theoretical
- **Sumatriptan** increases the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **sumatriptan**. Severe Study
- **Ticagrelor** is predicted to increase the exposure to **ergotamine**. Avoid. Severe Theoretical

Eribulin → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 12** p. 1337 (peripheral neuropathy), **TABLE 9** p. 1336 (QT-interval prolongation)

Erlotinib

FOOD AND LIFESTYLE Dose adjustment may be necessary if smoking started or stopped during treatment.

- **Antacids** are predicted to decrease the absorption of **erlotinib**. **Antacids** should be taken 4 hours before or 2 hours after **erlotinib**. Moderate Theoretical
- Antiarrhythmics **(amiodarone, dronedarone)** are predicted to increase the exposure to **erlotinib**. Moderate Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 949. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. Moderate Study
- **Aprepitant** is predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **aspirin** (high-dose). Severe Theoretical
- **Bosentan** is predicted to decrease the exposure to **erlotinib**. Severe Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- **Ciclosporin** is predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- **Cobicistat** is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. Moderate Study
- **Combined hormonal contraceptives** slightly increase the exposure to **erlotinib**. Monitor side effects and adjust dose. Moderate Study
- **Corticosteroids** increase the risk of gastrointestinal perforation when given with **erlotinib**. Severe Theoretical
- **Erlotinib** increases the anticoagulant effect of **coumarins**. Severe Anecdotal
- **Crizotinib** is predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- **Efavirenz** is predicted to decrease the exposure to **erlotinib**. Severe Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 949. Severe Study
- **Grapefruit juice** is predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- **H_2 receptor antagonists** are predicted to decrease the exposure to **erlotinib**. **Erlotinib** should be taken 2 hours before or 10 hours after **H_2 receptor antagonists**. Moderate Study
- **HIV-protease inhibitors** are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. Moderate Study
- **Idelalisib** is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. Moderate Study
- **Imatinib** is predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- **Lapatinib** is predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- Macrolides **(azithromycin, erythromycin)** are predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 949. Severe Study
- **Netupitant** is predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- **Nevirapine** is predicted to decrease the exposure to **erlotinib**. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. Severe Theoretical
- **Erlotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Proton pump inhibitors** are predicted to slightly decrease the exposure to **erlotinib**. Avoid. Moderate Study
- Quinolones **(ciprofloxacin)** slightly increase the exposure to **erlotinib**. Monitor side effects and adjust dose. Moderate Study
- **Ranolazine** is predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 949. Severe Study
- SSRIs **(fluvoxamine)** are predicted to increase the exposure to **erlotinib**. Monitor side effects and adjust dose. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **erlotinib**. Severe Theoretical
- **Vemurafenib** is predicted to increase the exposure to **erlotinib**. Moderate Theoretical

Ertapenem → see carbapenems

Erythromycin → see macrolides

Escitalopram → see SSRIs

Eslicarbazepine → see antiepileptics

Esmolol → see beta blockers, selective

Esomeprazole → see proton pump inhibitors

Estramustine → see alkylating agents

Etanercept

- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etanercept**. Public Health England advises avoid (refer to Green Book). Severe Theoretical

Etelcalcetide

- **Cinacalcet** increases the risk of hypocalcaemia when given with **etelcalcetide**. Avoid. Severe Theoretical

Ethambutol

- **Isoniazid** increases the risk of optic neuropathy when given with **ethambutol**. Severe Anecdotal

Ethosuximide → see antiepileptics

Etodolac → see NSAIDs

Etomidate → see **TABLE 8** p. 1335 (hypotension), **TABLE 11** p. 1336 (CNS depressant effects)

Etonogestrel

- Antiepileptics **(carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Aprepitant** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Bosentan** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Efavirenz** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Fosaprepitant** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Griseofulvin** decreases the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- HIV-protease inhibitors **(ritonavir)** are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Modafinil** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Nevirapine** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Rifabutin** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Rifampicin** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **St John's Wort** is predicted to decrease the efficacy of **etonogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Sugammadex** is predicted to decrease the efficacy of **etonogestrel**. Use additional contraceptive precautions. Severe Theoretical
- **Ulipristal** is predicted to decrease the efficacy of **etonogestrel**. Avoid. Severe Theoretical

Etoposide → see **TABLE 15** p. 1337 (myelosuppression)

https://nhathuocngocanh.com/ www.getintopharma.com

Etoposide (continued)
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the efficacy of **etoposide**. Moderate Study
- **Ciclosporin** increases the exposure to **etoposide**. Monitor and adjust dose. Severe Study
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etoposide**. Public Health England advises avoid (refer to Green Book). Severe Theoretical

Etoricoxib → see NSAIDs

Etravirine
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **etravirine**. Avoid. Severe Theoretical
- **Etravirine** decreases the exposure to antimalarials **(artemether)**. Moderate Study
- **Etravirine** is predicted to decrease the exposure to **bedaquiline**. Avoid. Severe Theoretical
- **Bosentan** is predicted to decrease the exposure to **etravirine**. Avoid. Severe Study
- **Etravirine** is predicted to decrease the exposure to **bosutinib**. Avoid. Severe Theoretical
- **Etravirine** increases the anticoagulant effect of **coumarins**. Moderate Theoretical
- **Etravirine** is predicted to decrease the exposure to **daclatasvir**. Avoid. Moderate Theoretical
- **Etravirine** moderately decreases the exposure to **dolutegravir**. Avoid unless given with atazanavir, darunavir, or lopinavir (all boosted with ritonavir). Severe Study
- **Efavirenz** is predicted to decrease the exposure to **etravirine**. Avoid. Severe Study
- **Etravirine** is predicted to decrease the exposure to **elbasvir**. Avoid. Unknown Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **etravirine**. Avoid. Severe Theoretical
- **Etravirine** is predicted to decrease the exposure to **grazoprevir**. Avoid. Mild Theoretical
- HIV-protease inhibitors **(tipranavir)** decrease the exposure to **etravirine**. Avoid. Severe Study
- **Etravirine** increases the exposure to HIV-protease inhibitors **(fosamprenavir)** (boosted with ritonavir). Refer to specialist literature. Moderate Study
- **Etravirine** decreases the exposure to macrolides **(clarithromycin)**. Severe Study
- **Etravirine** (with a boosted protease inhibitor) increases the exposure to **maraviroc**. Avoid or adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **etravirine**. Avoid. Severe Theoretical
- **Nevirapine** is predicted to decrease the exposure to **etravirine**. Avoid. Severe Study
- **Etravirine** moderately decreases the exposure to **phosphodiesterase type-5 inhibitors**. Adjust dose. Moderate Study
- **Rifabutin** decreases the exposure to **etravirine**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **etravirine**. Avoid. Severe Theoretical
- **Etravirine** is predicted to decrease the exposure to **rilpivirine**. Avoid. Severe Theoretical
- **Etravirine** is predicted to decrease the exposure to **simeprevir**. Avoid. Moderate Study
- **St John's Wort** is predicted to decrease the exposure to **etravirine**. Avoid. Severe Study

Everolimus → see **TABLE 15** p. 1337 (myelosuppression)
- Antiarrhythmics **(dronedarone)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **everolimus**. Avoid. Severe Study
- **Aprepitant** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. Moderate Study
- **Bosentan** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. Moderate Study
- **Ceritinib** is predicted to increase the exposure to **everolimus**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Ciclosporin** moderately increases the exposure to **everolimus**. Avoid or adjust dose. Severe Study
- **Cobicistat** is predicted to increase the concentration of **everolimus**. Avoid. Severe Study
- **Crizotinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. Moderate Study → Also see **TABLE 15** p. 1337
- **Efavirenz** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. Severe Study
- **Eliglustat** is predicted to increase the exposure to **everolimus**. Adjust dose. Moderate Study
- **Enzalutamide** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. Severe Study
- **Grapefruit juice** is predicted to increase the exposure to **everolimus**. Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the concentration of **everolimus**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the concentration of **everolimus**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. Moderate Study → Also see **TABLE 15** p. 1337
- **Lapatinib** is predicted to increase the exposure to **everolimus**. Moderate Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **everolimus**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Everolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **everolimus**. Avoid. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the concentration of **everolimus**. Avoid. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. Moderate Study
- **Mirabegron** is predicted to increase the exposure to **everolimus**. Mild Theoretical
- **Mitotane** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. Severe Study → Also see **TABLE 15** p. 1337
- **Netupitant** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. Moderate Study
- **Nevirapine** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. Severe Study
- **Nilotinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. Moderate Study → Also see **TABLE 15** p. 1337
- **Palbociclib** is predicted to increase the exposure to **everolimus**. Adjust dose. Moderate Theoretical
- **Pitolisant** is predicted to decrease the exposure to **everolimus**. Avoid. Severe Theoretical
- **Ribociclib** is predicted to increase the exposure to **everolimus**. Use with caution and adjust dose. Moderate Theoretical
- **Rifampicin** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. Severe Study
- **St John's Wort** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. Severe Study
- **Velpatasvir** is predicted to increase the exposure to **everolimus**. Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Exemestane

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** moderately decrease the exposure to **exemestane**. Moderate Study
- **Enzalutamide** moderately decreases the exposure to **exemestane**. Moderate Study
- **Mitotane** moderately decreases the exposure to **exemestane**. Moderate Study
- **Rifampicin** moderately decreases the exposure to **exemestane**. Moderate Study
- **St John's Wort** is predicted to decrease the exposure to **exemestane**. Moderate Theoretical

Exenatide → see **TABLE 14** p. 1337 (antidiabetic drugs)

SEPARATION OF ADMINISTRATION With standard-release exenatide: some orally administered drugs should be taken at least 1 hour before, or 4 hours after, exenatide injection.

Ezetimibe

- **Ciclosporin** moderately increases the exposure to **ezetimibe** and **ezetimibe** slightly increases the exposure to **ciclosporin**. Moderate Study
- **Fibrates** are predicted to increase the risk of gallstones when given with **ezetimibe**. Severe Theoretical
- **Ezetimibe** potentially increases the risk of rhabdomyolysis when given with **statins**. Severe Anecdotal

Famotidine → see H_2 receptor antagonists

Fampridine

- H_2 receptor antagonists **(cimetidine)** increase the concentration of **fampridine**. Avoid. Severe Theoretical

Febuxostat

- **Febuxostat** is predicted to increase the exposure to **azathioprine**. Avoid. Severe Theoretical
- **Febuxostat** is predicted to increase the exposure to **didanosine**. Severe Theoretical
- **Febuxostat** is predicted to increase the exposure to **mercaptopurine**. Avoid. Severe Theoretical

Felbinac → see NSAIDs

Felodipine → see calcium channel blockers

Fenofibrate → see fibrates

Fenoprofen → see NSAIDs

Fentanyl → see opioids

Ferric carboxymaltose → see iron (injectable)

Ferric maltol → see iron (oral)

Ferrous fumarate → see iron (oral)

Ferrous gluconate → see iron (oral)

Ferrous sulfate → see iron (oral)

Fesoterodine → see **TABLE 10** p. 1336 (antimuscarinics)

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. Mild Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **fesoterodine**. Avoid. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. Mild Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 759. Severe Study
- **Aprepitant** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. Mild Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. Mild Study
- **Cobicistat** is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 759. Severe Study
- **Crizotinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. Mild Study
- **Enzalutamide** is predicted to decrease the exposure to **fesoterodine**. Avoid. Moderate Study
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 759. Severe Study
- **Idelalisib** is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 759. Severe Study
- **Imatinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. Mild Study
- Macrolides **(clarithromycin)** are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 759. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. Mild Study
- **Mitotane** is predicted to decrease the exposure to **fesoterodine**. Avoid. Moderate Study
- **Netupitant** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. Mild Study
- **Nilotinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. Mild Study
- **Rifampicin** is predicted to decrease the exposure to **fesoterodine**. Avoid. Moderate Study
- **St John's Wort** is predicted to decrease the exposure to **fesoterodine**. Avoid. Severe Theoretical

Fexofenadine → see antihistamines, non-sedating

Fibrates

bezafibrate · ciprofibrate · fenofibrate · gemfibrozil

- **Antacids** slightly to moderately decrease the exposure to **gemfibrozil**. Moderate Study
- **Bezafibrate** is predicted to increase the risk of nephrotoxicity when given with **ciclosporin**. Severe Theoretical
- **Fenofibrate** increases the risk of nephrotoxicity when given with **ciclosporin**. Severe Study
- **Colchicine** increases the risk of rhabdomyolysis when given with **fibrates**. Severe Anecdotal
- **Fibrates** are predicted to increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. Severe Study
- **Gemfibrozil** is predicted to increase the exposure to **dabrafenib**. Moderate Theoretical
- **Fibrates** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. Severe Theoretical
- **Gemfibrozil** very markedly increases the exposure to **dasabuvir**. Avoid. Severe Study
- **Gemfibrozil** is predicted to increase the exposure to **eluxadoline**. Avoid. Moderate Theoretical
- **Gemfibrozil** moderately increases the exposure to **enzalutamide**. Avoid or adjust **enzalutamide** dose, p. 921. Severe Study
- **Fibrates** are predicted to increase the risk of gallstones when given with **ezetimibe**. Severe Theoretical
- **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **insulins**. Moderate Theoretical
- **Gemfibrozil** is predicted to moderately increase the exposure to **montelukast**. Moderate Study
- **Fibrates** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. Severe Study
- **Gemfibrozil** increases the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. Severe Study
- **Gemfibrozil** increases the exposure to **repaglinide**. Avoid. Severe Study
- **Gemfibrozil** is predicted to increase the exposure to retinoids **(alitretinoin)**. Adjust **alitretinoin** dose, p. 1226. Moderate Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Fibrates (continued)
- **Gemfibrozil** increases the concentration of retinoids **(bexarotene)**. Avoid. Severe Study
- **Gemfibrozil** increases the exposure to **selexipag**. Avoid. Severe Study
- **Ciprofibrate** increases the risk of rhabdomyolysis when given with statins **(atorvastatin)**. Avoid or adjust dose. Severe Study
- **Bezafibrate** increases the risk of rhabdomyolysis when given with statins **(atorvastatin, fluvastatin)**. Severe Study
- **Fenofibrate** increases the risk of rhabdomyolysis when given with statins **(atorvastatin, simvastatin)**. Adjust **fenofibrate** dose, p. 198. Severe Anecdotal
- **Ciprofibrate** increases the risk of rhabdomyolysis when given with statins **(fluvastatin)**. Severe Study
- **Fenofibrate** is predicted to increase the risk of rhabdomyolysis when given with statins **(fluvastatin)**. Adjust **fenofibrate** dose, p. 198. Severe Theoretical
- **Fenofibrate** is predicted to increase the risk of rhabdomyolysis when given with statins **(pravastatin)**. Avoid. Severe Theoretical
- Fibrates **(bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with statins **(pravastatin)**. Avoid. Severe Study
- **Fenofibrate** increases the risk of rhabdomyolysis when given with statins **(rosuvastatin)**. Adjust **fenofibrate** and **rosuvastatin** doses, p. 198, p. 202. Severe Anecdotal
- Fibrates **(bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with statins **(rosuvastatin)**. Adjust **rosuvastatin** dose, p. 202. Severe Study
- Fibrates **(bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with statins **(simvastatin)**. Adjust **simvastatin** dose, p. 203. Severe Study
- **Gemfibrozil** increases the risk of rhabdomyolysis when given with **statins**. Avoid. Severe Anecdotal
- **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **sulfonylureas**. Moderate Theoretical
- **Gemfibrozil** is predicted to increase the concentration of taxanes **(paclitaxel)**. Severe Anecdotal
- **Fibrates** are predicted to decrease the efficacy of **ursodeoxycholic acid**. Avoid. Severe Theoretical

Fidaxomicin
- Antiarrhythmics **(amiodarone, dronedarone)** are predicted to increase the exposure to **fidaxomicin**. Avoid. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole)** are predicted to increase the exposure to **fidaxomicin**. Avoid. Moderate Study
- Calcium channel blockers **(verapamil)** are predicted to increase the exposure to **fidaxomicin**. Avoid. Moderate Study
- **Ciclosporin** is predicted to increase the exposure to **fidaxomicin**. Avoid. Moderate Study
- HIV-protease inhibitors **(lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **fidaxomicin**. Avoid. Moderate Study
- **Lapatinib** is predicted to increase the exposure to **fidaxomicin**. Avoid. Moderate Study
- **Macrolides** are predicted to increase the exposure to **fidaxomicin**. Avoid. Moderate Study
- **Ranolazine** is predicted to increase the exposure to **fidaxomicin**. Avoid. Moderate Study
- **Vemurafenib** is predicted to increase the exposure to **fidaxomicin**. Avoid. Moderate Study

Fingolimod → see **TABLE 6** p. 1335 (bradycardia), **TABLE 9** p. 1336 (QT-interval prolongation)
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **fingolimod**. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **fingolimod**. Avoid. Moderate Theoretical → Also see **TABLE 6** p. 1335
- **Enzalutamide** is predicted to decrease the exposure to **fingolimod**. Moderate Study
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fingolimod**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Mitotane** is predicted to decrease the exposure to **fingolimod**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **fingolimod**. Moderate Study
- **St John's Wort** is predicted to decrease the exposure to **fingolimod**. Avoid. Moderate Theoretical

Flavoxate → see **TABLE 10** p. 1336 (antimuscarinics)

Flecainide → see antiarrhythmics

Flucloxacillin → see penicillins

Fluconazole → see antifungals, azoles

Flucytosine
- **Amphotericin** increases the risk of toxicity when given with **flucytosine**. Severe Study
- **Cytarabine** decreases the concentration of **flucytosine**. Avoid. Severe Study

Fludarabine → see **TABLE 15** p. 1337 (myelosuppression)
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fludarabine**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Fludarabine** increases the risk of pulmonary toxicity when given with **pentostatin**. Avoid. Severe Study → Also see **TABLE 15** p. 1337

Fludrocortisone → see corticosteroids

Fluocinolone

ROUTE-SPECIFIC INFORMATION With intravitreal use in adults: caution with concurrent administration of anticoagulant or antiplatelet drugs (higher incidence of conjunctival haemorrhage).

Fluorouracil → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 5** p. 1334 (thromboembolism)

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- **Fluorouracil** increases the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. Severe Anecdotal
- **Fluorouracil** increases the anticoagulant effect of **coumarins**. Severe Anecdotal
- Folates **(folic acid)** are predicted to increase the risk of toxicity when given with **fluorouracil**. Avoid. Severe Theoretical
- Folates **(folinic acid)** are predicted to increase the risk of toxicity when given with **fluorouracil**. Monitor and adjust dose. Severe Theoretical
- H_2 receptor antagonists **(cimetidine)** slightly increase the exposure to **fluorouracil**. Severe Study
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fluorouracil**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Metronidazole** increases the risk of toxicity when given with **fluorouracil**. Severe Study

Fluoxetine → see SSRIs

Flupentixol → see **TABLE 8** p. 1335 (hypotension), **TABLE 11** p. 1336 (CNS depressant effects)
- **Flupentixol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335
- **Flupentixol** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. Severe Theoretical → Also see **TABLE 8** p. 1335

Fluphenazine → see phenothiazines

Flurazepam → see **TABLE 11** p. 1336 (CNS depressant effects)
- HIV-protease inhibitors **(ritonavir)** are predicted to increase the exposure to **flurazepam**. Avoid. Moderate Theoretical

Flurbiprofen → see NSAIDs

Fluticasone → see corticosteroids

Fluvastatin → see statins

Fluvoxamine → see SSRIs

Folates

folic acid · folinic acid · levofolinic acid
- **Folates** are predicted to decrease the concentration of antiepileptics **(fosphenytoin, phenobarbital, phenytoin, primidone)**. Monitor concentration and adjust dose. Severe Study

https://nhathuocngocanh.com/ www.getintopharma.com

- **Folates** are predicted to increase the risk of toxicity when given with **capecitabine**. Severe Anecdotal
- **Folic acid** is predicted to increase the risk of toxicity when given with **fluorouracil**. Avoid. Severe Theoretical
- **Folinic acid** is predicted to increase the risk of toxicity when given with **fluorouracil**. Monitor and adjust dose. Severe Theoretical
- **Folates** are predicted to alter the effects of **raltitrexed**. Avoid. Moderate Study
- **Sulfasalazine** is predicted to decrease the absorption of **folates**. Moderate Study
- **Folates** are predicted to increase the risk of toxicity when given with **tegafur**. Severe Theoretical

Folic acid → see folates

Folinic acid → see folates

Fondaparinux → see **TABLE 3** p. 1334 (anticoagulant effects)

Formoterol → see beta$_2$ agonists

Fosamprenavir → see HIV-protease inhibitors

Fosaprepitant

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **fosaprepitant**. Avoid. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **fosaprepitant**. Moderate Theoretical
- **Fosaprepitant** is predicted to increase the exposure to **bosutinib**. Severe Theoretical
- **Cobicistat** is predicted to increase the exposure to **fosaprepitant**. Moderate Theoretical
- **Fosaprepitant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Study
- **Fosaprepitant** is predicted to increase the exposure to corticosteroids **(dexamethasone, methylprednisolone)**. Monitor and adjust dose. Moderate Theoretical
- **Fosaprepitant** is predicted to decrease the anticoagulant effect of **coumarins**. Moderate Theoretical
- **Fosaprepitant** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **fosaprepitant**. Avoid. Moderate Theoretical
- **Fosaprepitant** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Fosaprepitant** is predicted to increase the concentration of **guanfacine**. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **fosaprepitant**. Moderate Theoretical
- **Fosaprepitant** is predicted to decrease the effects of **hormone replacement therapy**. Moderate Anecdotal
- **Fosaprepitant** is predicted to slightly increase the exposure to **ibrutinib**. Moderate Theoretical
- **Idelalisib** is predicted to increase the exposure to **fosaprepitant**. Moderate Theoretical
- **Fosaprepitant** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Fosaprepitant** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **fosaprepitant**. Moderate Theoretical
- **Fosaprepitant** slightly increases the exposure to **midazolam**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **fosaprepitant**. Avoid. Moderate Theoretical
- **Fosaprepitant** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Fosaprepitant** is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **fosaprepitant**. Avoid. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **fosaprepitant**. Avoid. Moderate Theoretical
- **Fosaprepitant** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal

Foscarnet → see **TABLE 2** p. 1334 (nephrotoxicity)

- **Foscarnet** increases the risk of hypocalcaemia when given with **pentamidine**. Severe Anecdotal → Also see **TABLE 2** p. 1334

Fosinopril → see ACE inhibitors

Fosphenytoin → see antiepileptics

Frovatriptan → see **TABLE 13** p. 1337 (serotonin syndrome)

- SSRIs **(fluvoxamine)** increase the concentration of **frovatriptan**. Severe Study → Also see **TABLE 13** p. 1337

Fulvestrant → see **TABLE 5** p. 1334 (thromboembolism)

Furosemide → see loop diuretics

Fusidic acid

- **Fusidic acid** increases the risk of rhabdomyolysis when given with **statins**. Avoid. Severe Anecdotal

Gabapentin → see antiepileptics

Galantamine → see anticholinesterases, centrally acting

Ganciclovir → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 2** p. 1334 (nephrotoxicity)

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- **Ganciclovir** is predicted to increase the risk of seizures when given with carbapenems **(imipenem)**. Avoid. Severe Anecdotal
- **Ganciclovir** is predicted to increase the exposure to **didanosine**. Moderate Study
- **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **ganciclovir**. Moderate Theoretical → Also see **TABLE 15** p. 1337

Gefitinib → see **TABLE 15** p. 1337 (myelosuppression)

- **Antacids** are predicted to slightly decrease the exposure to **gefitinib**. Moderate Theoretical
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **gefitinib**. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **gefitinib**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **gefitinib**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **gefitinib**. Moderate Study
- **Aprepitant** is predicted to increase the exposure to **gefitinib**. Moderate Theoretical
- **Bosentan** is predicted to decrease the exposure to **gefitinib**. Avoid. Severe Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **gefitinib**. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **gefitinib**. Moderate Study
- **Gefitinib** is predicted to increase the anticoagulant effect of **coumarins**. Severe Anecdotal
- **Crizotinib** is predicted to increase the exposure to **gefitinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Efavirenz** is predicted to decrease the exposure to **gefitinib**. Avoid. Severe Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **gefitinib**. Avoid. Severe Study
- **H$_2$ receptor antagonists** are predicted to slightly to moderately decrease the exposure to **gefitinib**. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **gefitinib**. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **gefitinib**. Moderate Study → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to increase the exposure to **gefitinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **gefitinib**. Moderate Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **gefitinib**. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **gefitinib**. Avoid. Severe Study → Also see **TABLE 15** p. 1337

https://nhathuocngocanh.com/ www.getintopharma.com

Gefitinib (continued)
- **Netupitant** is predicted to increase the exposure to **gefitinib**. Moderate Theoretical
- **Nevirapine** is predicted to decrease the exposure to **gefitinib**. Avoid. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **gefitinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Gefitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Proton pump inhibitors** are predicted to decrease the exposure to **gefitinib**. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **gefitinib**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **gefitinib**. Avoid. Severe Theoretical

Gemcitabine → see **TABLE 15** p. 1337 (myelosuppression)
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **gemcitabine**. Public Health England advises avoid (refer to Green Book). Severe Theoretical

Gemfibrozil → see fibrates
Gentamicin → see aminoglycosides
Glecaprevir
- Antiarrhythmics **(dronedarone)** potentially increase the exposure to **glecaprevir**. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **glecaprevir**. Avoid. Severe Study
- Antiepileptics **(eslicarbazepine, oxcarbazepine)** potentially decrease the exposure to **glecaprevir**. Avoid. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole)** potentially increase the exposure to **glecaprevir**. Moderate Theoretical
- **Bosentan** is predicted to decrease the exposure to **glecaprevir**. Avoid. Severe Study
- **Ciclosporin** increases the exposure to **glecaprevir**. Avoid or monitor. Severe Study
- **Cobicistat** potentially increases the exposure to **glecaprevir**. Moderate Theoretical
- **Crizotinib** potentially decreases the exposure to **glecaprevir**. Avoid. Severe Theoretical
- **Glecaprevir** (with pibrentasvir) increases the exposure to **dabigatran**. Avoid. Moderate Study
- **Glecaprevir** (with pibrentasvir) increases the exposure to **digoxin**. Moderate Study
- **Efavirenz** is predicted to decrease the exposure to **glecaprevir**. Avoid. Severe Study
- HIV-protease inhibitors **(atazanavir, darunavir, lopinavir)** (boosted with ritonavir) increase the exposure to **glecaprevir**. Avoid. Severe Study
- HIV-protease inhibitors **(ritonavir)** potentially increase the exposure to **glecaprevir**. Severe Theoretical
- **Lumacaftor** potentially decreases the exposure to **glecaprevir**. Avoid. Severe Theoretical
- **Nevirapine** is predicted to decrease the exposure to **glecaprevir**. Avoid. Severe Study
- **Rifampicin** markedly affects the exposure to **glecaprevir**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **glecaprevir**. Avoid. Severe Study
- **Glecaprevir** (with pibrentasvir) increases the exposure to statins **(atorvastatin, simvastatin)**. Avoid. Moderate Study
- **Glecaprevir** (with pibrentasvir) is predicted to increase the exposure to statins **(fluvastatin)**. Moderate Theoretical
- **Glecaprevir** (with pibrentasvir) increases the exposure to statins **(pravastatin)**. Use with caution and adjust **pravastatin** dose. Moderate Study
- **Glecaprevir** (with pibrentasvir) increases the exposure to statins **(rosuvastatin)**. Use with caution and adjust **rosuvastatin** dose, p. 202. Moderate Study

Glibenclamide → see sulfonylureas
Gliclazide → see sulfonylureas
Glimepiride → see sulfonylureas
Glipizide → see sulfonylureas

Glucagon
- **Glucagon** increases the anticoagulant effect of coumarins **(warfarin)**. Severe Study

Glucosamine
- **Glucosamine** increases the anticoagulant effect of coumarins **(warfarin)**. Avoid. Moderate Anecdotal

Glucose → see **TABLE 3** p. 1334 (anticoagulant effects)
Glycerol phenylbutyrate
- Antiepileptics **(valproate)** potentially oppose the effects of **glycerol phenylbutyrate**. Moderate Theoretical
- Corticosteroids potentially oppose the effects of **glycerol phenylbutyrate**. Moderate Theoretical
- **Haloperidol** potentially opposes the effects of **glycerol phenylbutyrate**. Moderate Theoretical

Glyceryl trinitrate → see nitrates
Glycopyrronium → see **TABLE 10** p. 1336 (antimuscarinics)
Golimumab → see monoclonal antibodies
Granisetron → see **TABLE 13** p. 1337 (serotonin syndrome), **TABLE 9** p. 1336 (QT-interval prolongation)
- Dopamine receptor agonists **(apomorphine)** are predicted to increase the risk of severe hypotension when given with **granisetron**. Severe Theoretical

Grapefruit juice
- **Grapefruit juice** moderately decreases the exposure to **aliskiren**. Avoid. Severe Study
- **Grapefruit juice** increases the exposure to antiarrhythmics **(amiodarone)**. Avoid. Moderate Study
- **Grapefruit juice** moderately increases the exposure to antiarrhythmics **(dronedarone)**. Avoid. Severe Study
- **Grapefruit juice** increases the exposure to antiarrhythmics **(propafenone)**. Monitor and adjust dose. Moderate Study
- **Grapefruit juice** slightly increases the exposure to antiepileptics **(carbamazepine)**. Monitor and adjust dose. Moderate Study
- **Grapefruit juice** slightly decreases the exposure to antihistamines, non-sedating **(bilastine)**. **Bilastine** should be taken 1 hour before or 2 hours after **grapefruit juice**. Moderate Study
- **Grapefruit juice** increases the exposure to antihistamines, non-sedating **(rupatadine)**. Avoid. Moderate Study
- **Grapefruit juice** increases the exposure to antimalarials **(artemether)**. Unknown Study
- **Grapefruit juice** is predicted to increase the concentration of antimalarials **(piperaquine)**. Avoid. Severe Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **axitinib**. Moderate Theoretical
- **Grapefruit juice** greatly decreases the exposure to beta blockers, selective **(celiprolol)**. Moderate Study
- **Grapefruit juice** is predicted to increase the exposure to **bosutinib**. Avoid. Moderate Theoretical
- **Grapefruit juice** increases the exposure to **buspirone**. Avoid. Mild Study
- **Grapefruit juice** is predicted to increase the exposure to **cabozantinib**. Moderate Theoretical
- **Grapefruit juice** very slightly increases the exposure to calcium channel blockers **(amlodipine)**. Avoid. Mild Study
- **Grapefruit juice** increases the exposure to calcium channel blockers **(felodipine)**. Avoid. Moderate Study
- **Grapefruit juice** is predicted to increase the exposure to calcium channel blockers **(lercanidipine)**. Avoid. Moderate Theoretical
- **Grapefruit juice** increases the exposure to calcium channel blockers **(nicardipine)**. Mild Study
- **Grapefruit juice** increases the exposure to calcium channel blockers **(nifedipine, verapamil)**. Avoid. Mild Study
- **Grapefruit juice** is predicted to increase the exposure to **ceritinib**. Avoid. Severe Theoretical
- **Grapefruit juice** increases the concentration of **ciclosporin**. Avoid. Severe Study
- **Grapefruit juice** markedly decreases the exposure to **clopidogrel**. Severe Study
- **Grapefruit juice** is predicted to increase the exposure to **cobimetinib**. Avoid. Severe Theoretical
- **Grapefruit juice** moderately increases the exposure to oral corticosteroids **(budesonide)**. Avoid. Moderate Study

https://nhathuocngocanh.com/ www.getintopharma.com

- **Grapefruit juice** is predicted to increase the exposure to **crizotinib**. Avoid. Moderate Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **darifenacin**. Moderate Study
- **Grapefruit juice** is predicted to increase the exposure to **dasatinib**. Avoid. Moderate Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **eliglustat**. Avoid. Severe Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **ergometrine**. Severe Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **ergotamine**. Severe Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **everolimus**. Avoid. Severe Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **guanfacine**. Avoid. Moderate Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **ibrutinib**. Avoid. Moderate Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **imatinib**. Moderate Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **ivabradine**. Avoid. Moderate Study
- **Grapefruit juice** is predicted to increase the exposure to **ivacaftor**. Avoid. Moderate Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **lapatinib**. Avoid. Moderate Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **lurasidone**. Avoid. Severe Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **naloxegol**. Avoid. Moderate Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **nilotinib**. Avoid. Severe Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **olaparib**. Avoid. Moderate Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **palbociclib**. Avoid. Severe Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **pazopanib**. Avoid. Severe Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors**. Use with caution or avoid. Moderate Study
- **Grapefruit juice** increases the exposure to **pimozide**. Avoid. Severe Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **ponatinib**. Moderate Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **praziquantel**. Moderate Study
- **Grapefruit juice** is predicted to increase the exposure to **quetiapine**. Avoid. Severe Theoretical
- **Grapefruit juice** is predicted to increase the concentration of **ranolazine**. Avoid. Severe Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **regorafenib**. Avoid. Moderate Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **ribociclib**. Avoid. Moderate Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **ruxolitinib**. Severe Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **saxagliptin**. Mild Theoretical
- **Grapefruit juice** increases the concentration of **sirolimus**. Avoid. Moderate Study
- **Grapefruit juice** moderately increases the exposure to SSRIs **(sertraline)**. Avoid. Moderate Study
- **Grapefruit juice** increases the exposure to statins **(atorvastatin)**. Mild Study
- **Grapefruit juice** increases the exposure to statins **(simvastatin)**. Avoid. Severe Study
- **Grapefruit juice** is predicted to increase the exposure to **sunitinib**. Avoid. Moderate Theoretical
- **Grapefruit juice** increases the concentration of **tacrolimus**. Avoid. Severe Study
- **Grapefruit juice** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. Moderate Theoretical
- **Grapefruit juice** moderately increases the exposure to **ticagrelor**. Moderate Study
- **Grapefruit juice** increases the exposure to **tolvaptan**. Avoid. Moderate Study
- **Grapefruit juice** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **venetoclax**. Avoid. Severe Theoretical

Grass pollen extract

GENERAL INFORMATION Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

Grazoprevir

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **grazoprevir**. Avoid. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. Severe Study
- **Bosentan** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. Severe Study
- **Ciclosporin** greatly increases the exposure to **grazoprevir**. Avoid. Severe Study
- **Cobicistat** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. Severe Study
- **Efavirenz** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **grazoprevir**. Avoid. Severe Study
- **Etravirine** is predicted to decrease the exposure to **grazoprevir**. Avoid. Mild Theoretical
- **HIV-protease inhibitors** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. Severe Study
- **Idelalisib** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. Severe Study
- Macrolides **(clarithromycin)** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **grazoprevir**. Avoid. Severe Study
- **Modafinil** is predicted to decrease the exposure to **grazoprevir**. Avoid. Unknown Theoretical
- **Nevirapine** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **grazoprevir**. Avoid. Severe Study
- **St John's Wort** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. Severe Study
- **Grazoprevir** increases the exposure to statins **(atorvastatin)**. Adjust **atorvastatin** dose, p. 200. Moderate Study
- **Grazoprevir** is predicted to increase the exposure to statins **(fluvastatin)**. Adjust **fluvastatin** dose, p. 201. Unknown Theoretical
- **Grazoprevir** increases the exposure to statins **(rosuvastatin)**. Adjust **rosuvastatin** dose, p. 202. Moderate Study
- **Grazoprevir** is predicted to increase the exposure to statins **(simvastatin)**. Adjust **simvastatin** dose, p. 203. Unknown Theoretical
- **Grazoprevir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. Moderate Theoretical
- **Grazoprevir** increases the exposure to **tacrolimus**. Moderate Study

Griseofulvin

- **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **griseofulvin**. Moderate Anecdotal
- Antiepileptics **(phenobarbital, primidone)** decrease the effects of **griseofulvin**. Moderate Study

https://nhathuocngocanh.com/ www.getintopharma.com

Griseofulvin (continued)
- **Griseofulvin** potentially decreases the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Griseofulvin** potentially decreases the anticoagulant effect of **coumarins**. Moderate Anecdotal
- **Griseofulvin** potentially decreases the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Griseofulvin** decreases the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Griseofulvin** potentially decreases the efficacy of oral **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Griseofulvin** potentially decreases the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Griseofulvin** potentially decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal

Guanethidine → see **TABLE 8** p. 1335 (hypotension)
- Amfetamines **(dexamfetamine)** decrease the effects of **guanethidine**. Severe Study
- **Benperidol** is predicted to decrease the effects of **guanethidine**. Moderate Theoretical → Also see **TABLE 8** p. 1335
- **Droperidol** is predicted to decrease the effects of **guanethidine**. Monitor and adjust dose. Moderate Theoretical → Also see **TABLE 8** p. 1335
- **Haloperidol** is predicted to decrease the antihypertensive effects of **guanethidine**. Monitor and adjust dose. Moderate Theoretical → Also see **TABLE 8** p. 1335
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to decrease the antihypertensive effects of **guanethidine**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 8** p. 1335
- **Phenothiazines** are predicted to decrease the antihypertensive effects of **guanethidine**. Moderate Theoretical → Also see **TABLE 8** p. 1335
- **Guanethidine** is predicted to increase the effects of sympathomimetics, inotropic **(dopamine)**. Severe Theoretical
- **Guanethidine** is predicted to increase the effects of sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, noradrenaline/norepinephrine)**. Moderate Study
- **Guanethidine** increases the effects of sympathomimetics, vasoconstrictor **(metaraminol)**. Severe Anecdotal
- **Guanethidine** increases the effects of sympathomimetics, vasoconstrictor **(phenylephrine)**. Severe Study
- **Tricyclic antidepressants** are predicted to decrease the antihypertensive effects of **guanethidine**. Moderate Study → Also see **TABLE 8** p. 1335

Guanfacine → see **TABLE 8** p. 1335 (hypotension), **TABLE 11** p. 1336 (CNS depressant effects)
- Antiarrhythmics **(dronedarone)** are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Study → Also see **TABLE 11** p. 1336
- Antiepileptics **(oxcarbazepine)** are predicted to decrease the concentration of **guanfacine**. Monitor and adjust **guanfacine** dose, p. 349. Moderate Theoretical
- **Guanfacine** increases the concentration of antiepileptics **(valproate)**. Monitor and adjust dose. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Study
- **Aprepitant** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Theoretical
- **Bosentan** is predicted to decrease the concentration of **guanfacine**. Adjust dose. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Theoretical → Also see **TABLE 8** p. 1335
- **Chloramphenicol** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Study
- **Crizotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Theoretical
- **Efavirenz** is predicted to decrease the concentration of **guanfacine**. Adjust dose. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Study
- **Fosaprepitant** is predicted to increase the concentration of **guanfacine**. Moderate Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **guanfacine**. Avoid. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Study
- **Imatinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Study
- Macrolides **(erythromycin)** are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Theoretical
- **Mitotane** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Study
- **Netupitant** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Theoretical
- **Nevirapine** is predicted to decrease the concentration of **guanfacine**. Adjust dose. Moderate Theoretical
- **Nilotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Theoretical
- **Rifampicin** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Study
- **St John's Wort** is predicted to decrease the concentration of **guanfacine**. Adjust dose. Moderate Theoretical

Guselkumab → see monoclonal antibodies

H_2 receptor antagonists

cimetidine · famotidine · nizatidine · ranitidine
- **Cimetidine** decreases the clearance of **albendazole**. Moderate Study
- **Cimetidine** increases the concentration of **aminophylline**. Adjust dose. Severe Study
- **Cimetidine** slightly increases the exposure to anthracyclines **(epirubicin)**. Avoid. Moderate Study
- **Cimetidine** increases the exposure to antiarrhythmics **(amiodarone)**. Moderate Study
- **Cimetidine** slightly increases the exposure to antiarrhythmics **(flecainide)**. Monitor and adjust dose. Mild Study
- **Cimetidine** increases the exposure to antiarrhythmics **(lidocaine)**. Monitor and adjust dose. Moderate Study
- **Cimetidine** is predicted to increase the exposure to antiarrhythmics **(propafenone)**. Monitor and adjust dose. Moderate Theoretical
- **Cimetidine** transiently increases the concentration of antiepileptics **(carbamazepine)**. Monitor concentration and adjust dose. Moderate Study
- **Cimetidine** increases the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. Severe Study
- **H_2 receptor antagonists** are predicted to decrease the absorption of antifungals, azoles **(itraconazole)**. Administer **itraconazole** capsules with an acidic beverage. Moderate Study
- **H_2 receptor antagonists** are predicted to decrease the absorption of antifungals, azoles **(ketoconazole)**. Administer **ketoconazole** with an acidic beverage. Moderate Study
- **H_2 receptor antagonists** are predicted to decrease the exposure to antifungals, azoles **(posaconazole)**. Avoid use of posaconazole oral suspension. Moderate Study

https://nhathuocngocanh.com/ www.getintopharma.com

- **Cimetidine** decreases the clearance of antimalarials **(chloroquine)**. Moderate Study
- **Cimetidine** slightly increases the exposure to antimalarials **(quinine)**. Moderate Study
- **H_2 receptor antagonists** are predicted to decrease the absorption of **bosutinib**. Moderate Theoretical
- **Cimetidine** slightly increases the exposure to calcium channel blockers **(diltiazem, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Cimetidine** (high-dose) is predicted to increase the exposure to calcium channel blockers **(lercanidipine)**. Moderate Theoretical
- **Cimetidine** moderately increases the exposure to calcium channel blockers **(nifedipine)**. Monitor and adjust dose. Severe Study
- **Cimetidine** increases the exposure to calcium channel blockers **(verapamil)**. Moderate Study
- **Cimetidine** is predicted to slightly increase the exposure to **capecitabine**. Severe Theoretical
- **H_2 receptor antagonists** are predicted to decrease the absorption of **ceritinib**. Moderate Theoretical
- **Cimetidine** increases the concentration of **ciclosporin**. Mild Study
- **Cimetidine** increases the anticoagulant effect of **coumarins**. Severe Study
- **H_2 receptor antagonists** are predicted to decrease the exposure to **dasatinib**. Avoid. Moderate Study
- **H_2 receptor antagonists** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). Moderate Theoretical
- **Cimetidine** slightly increases the exposure to dopamine receptor agonists **(pramipexole)**. Adjust dose. Moderate Study
- **H_2 receptor antagonists** are predicted to decrease the exposure to **erlotinib**. **Erlotinib** should be taken 2 hours before or 10 hours after **H_2 receptor antagonists**. Moderate Study
- **Cimetidine** increases the concentration of **fampridine**. Avoid. Severe Theoretical
- **Cimetidine** slightly increases the exposure to **fluorouracil**. Severe Study
- **H_2 receptor antagonists** are predicted to slightly to moderately decrease the exposure to **gefitinib**. Moderate Study
- **H_2 receptor antagonists** decrease the exposure to HIV-protease inhibitors **(atazanavir)**. Monitor and adjust dose. Moderate Study
- **Cimetidine** is predicted to decrease the clearance of **hydroxychloroquine**. Moderate Theoretical
- **H_2 receptor antagonists** are predicted to decrease the absorption of **lapatinib**. Avoid. Moderate Theoretical
- **H_2 receptor antagonists** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 617. Moderate Study
- H_2 receptor antagonists **(cimetidine, ranitidine)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Cimetidine** slightly increases the exposure to macrolides **(erythromycin)**. Moderate Study
- **Cimetidine** increases the concentration of **mebendazole**. Moderate Study
- **Cimetidine** slightly increases the exposure to **metformin**. Monitor and adjust dose. Moderate Study
- **Cimetidine** slightly increases the exposure to **mirtazapine**. Use with caution and adjust dose. Moderate Theoretical
- **Cimetidine** increases the exposure to **moclobemide**. Adjust **moclobemide** dose, p. 359. Mild Study
- **H_2 receptor antagonists** are predicted to decrease the absorption of **nilotinib**. **H_2 receptor antagonists** should be taken 10 hours before or 2 hours after **nilotinib**. Mild Theoretical
- **Cimetidine** increases the concentration of opioids **(alfentanil)**. Use with caution and adjust dose. Severe Study
- **Cimetidine** increases the exposure to opioids **(fentanyl)**. Moderate Study
- **H_2 receptor antagonists** are predicted to decrease the exposure to **pazopanib**. **H_2 receptor antagonists** should be taken 10 hours before or 2 hours after **pazopanib**. Moderate Theoretical
- **Cimetidine** increases the exposure to **phenindione**. Severe Anecdotal
- **Cimetidine** moderately increases the exposure to **praziquantel**. Moderate Study
- **H_2 receptor antagonists** are predicted to decrease the exposure to **rilpivirine**. **H_2 receptor antagonists** should be taken 12 hours before or 4 hours after **rilpivirine**. Severe Study
- **Cimetidine** slightly increases the exposure to **roflumilast**. Moderate Study
- **H_2 receptor antagonists** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see ledipasvir with sofosbuvir p. 617, sofosbuvir with velpatasvir p. 619, and sofosbuvir with velpatasvir and voxilaprevir p. 619. Moderate Study
- **Cimetidine** slightly increases the exposure to SSRIs **(citalopram, escitalopram)**. Adjust dose. Moderate Study
- **Cimetidine** slightly increases the exposure to SSRIs **(paroxetine, sertraline)**. Moderate Study
- **Cimetidine** is predicted to increase the risk of toxicity when given with **tegafur**. Severe Theoretical
- **Cimetidine** increases the concentration of **theophylline**. Adjust dose. Severe Study
- **Cimetidine** increases the exposure to **tricyclic antidepressants**. Moderate Study
- **H_2 receptor antagonists** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir p. 619. Moderate Study
- **Cimetidine** slightly increases the exposure to **venlafaxine**. Mild Study
- **Cimetidine** slightly increases the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 475. Mild Study

Haloperidol → see **TABLE 8** p. 1335 (hypotension), **TABLE 9** p. 1336 (QT-interval prolongation), **TABLE 11** p. 1336 (CNS depressant effects), **TABLE 10** p. 1336 (antimuscarinics)

FOOD AND LIFESTYLE Dose adjustment might be necessary if smoking started or stopped during treatment.

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the concentration of **haloperidol**. Adjust dose. Moderate Study → Also see **TABLE 11** p. 1336
- **Haloperidol** potentially increases the risk of overheating and dehydration when given with antiepileptics **(zonisamide)**. Avoid in children. Severe Theoretical
- Antifungals, azoles **(itraconazole)** increase the concentration of **haloperidol**. Moderate Study
- **Haloperidol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335 → Also see **TABLE 9** p. 1336 → Also see **TABLE 10** p. 1336
- **Enzalutamide** decreases the concentration of **haloperidol**. Adjust dose. Moderate Study
- **Haloperidol** potentially opposes the effects of **glycerol phenylbutyrate**. Moderate Theoretical
- **Haloperidol** is predicted to decrease the antihypertensive effects of **guanethidine**. Monitor and adjust dose. Moderate Theoretical → Also see **TABLE 8** p. 1335
- HIV-protease inhibitors **(ritonavir)** are predicted to increase the exposure to **haloperidol**. Severe Theoretical
- **Haloperidol** decreases the effects of **levodopa**. Severe Study → Also see **TABLE 8** p. 1335
- **Mitotane** decreases the concentration of **haloperidol**. Adjust dose. Moderate Study
- **Rifampicin** decreases the concentration of **haloperidol**. Adjust dose. Moderate Study
- **Haloperidol** potentially decreases the effects of **sodium phenylbutyrate**. Moderate Anecdotal
- SSRIs **(fluoxetine)** increase the concentration of **haloperidol**. Adjust dose. Moderate Anecdotal
- SSRIs **(fluvoxamine)** increase the concentration of **haloperidol**. Adjust dose. Moderate Study
- **Venlafaxine** slightly increases the exposure to **haloperidol**. Severe Study → Also see **TABLE 9** p. 1336 → Also see **TABLE 11** p. 1336

Heparin (unfractionated) → see **TABLE 16** p. 1338 (increased serum potassium), **TABLE 3** p. 1334 (anticoagulant effects)

- **Ranibizumab** increases the risk of bleeding events when given with **heparin (unfractionated)**. Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

HIV-protease inhibitors → see **TABLE 9** p. 1336 (QT-interval prolongation)

atazanavir · darunavir · fosamprenavir · lopinavir · ritonavir · saquinavir · tipranavir

- Caution on concurrent use of **atazanavir**, **lopinavir with ritonavir**, or **ritonavir** with drugs that prolong the PR interval.
- Concurrent use of **saquinavir** with drugs that prolong the PR interval is contra-indicated.
- Caution with concurrent use of **tipranavir** with drugs that increase risk of bleeding.

- **Tipranavir** slightly decreases the exposure to **abacavir**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **abiraterone**. Severe Theoretical
- HIV-protease inhibitors **(lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. Moderate Study
- **Ritonavir** is predicted to decrease the exposure to **agomelatine**. Moderate Theoretical
- **Ritonavir** decreases the exposure to **albendazole**. Moderate Study
- **HIV-protease inhibitors** are predicted to markedly increase the exposure to aldosterone antagonists **(eplerenone)**. Avoid. Severe Study
- HIV-protease inhibitors **(ritonavir, saquinavir)** are predicted to increase the exposure to **aliskiren**. Moderate Theoretical
- **HIV-protease inhibitors** increase the exposure to **almotriptan**. Mild Study
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to alpha blockers **(alfuzosin, tamsulosin)**. Use with caution or avoid. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to alpha blockers **(doxazosin)**. Moderate Study
- **HIV-protease inhibitors** moderately increase the exposure to **alprazolam**. Avoid. Moderate Study
- HIV-protease inhibitors **(ritonavir, tipranavir)** are predicted to increase the exposure to **amfetamines**. Severe Theoretical
- **Ritonavir** decreases the exposure to **aminophylline**. Adjust dose. Moderate Study
- **Ritonavir** is predicted to decrease the exposure to anaesthetics, local **(ropivacaine)**. Moderate Theoretical
- **Antacids** are predicted to decrease the absorption of **atazanavir**. **Atazanavir** should be taken 2 hours before or 1 hour after **antacids**. Severe Theoretical
- **Antacids** are predicted to decrease the absorption of **tipranavir**. Separate administration by 2 hours. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to antiarrhythmics **(amiodarone)**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- **HIV-protease inhibitors** are predicted to increase the exposure to antiarrhythmics **(disopyramide)**. Severe Theoretical → Also see **TABLE 9** p. 1336
- **HIV-protease inhibitors** very markedly increase the exposure to antiarrhythmics **(dronedarone)**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **HIV-protease inhibitors** are predicted to increase the exposure to antiarrhythmics **(lidocaine)**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to antiarrhythmics **(propafenone)**. Monitor and adjust dose. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to anticholinesterases, centrally acting **(galantamine)**. Monitor and adjust dose. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to antiepileptics **(carbamazepine)** and antiepileptics **(carbamazepine)** are predicted to decrease the exposure to **HIV-protease inhibitors**. Monitor and adjust dose. Severe Theoretical
- **HIV-protease inhibitors** are predicted to affect the exposure to antiepileptics **(fosphenytoin, phenytoin)** and antiepileptics **(fosphenytoin, phenytoin)** decrease the concentration of **HIV-protease inhibitors**. Severe Theoretical
- **Ritonavir** slightly decreases the exposure to antiepileptics **(lamotrigine)**. Severe Study
- **HIV-protease inhibitors** are predicted to very slightly increase the exposure to antiepileptics **(perampanel)**. Mild Study
- **HIV-protease inhibitors** are predicted to affect the concentration of antiepileptics **(phenobarbital, primidone)** and antiepileptics **(phenobarbital, primidone)** are predicted to decrease the concentration of **HIV-protease inhibitors**. Severe Theoretical
- **Ritonavir** is predicted to decrease the concentration of antiepileptics **(valproate)**. Severe Anecdotal
- Antifungals, azoles **(fluconazole)** slightly increase the exposure to **tipranavir**. Avoid or adjust dose. Moderate Study
- Antifungals, azoles **(miconazole)** are predicted to increase the concentration of **HIV-protease inhibitors**. Use with caution and adjust dose. Moderate Theoretical
- Antifungals, azoles **(posaconazole)** are predicted to increase the exposure to **HIV-protease inhibitors**. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to antifungals, azoles **(isavuconazole)**. Avoid or monitor side effects. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to antifungals, azoles **(itraconazole)**. Use with caution and adjust dose. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to antifungals, azoles **(ketoconazole)**. Use with caution and adjust dose. Moderate Study
- **HIV-protease inhibitors** are predicted to affect the exposure to antifungals, azoles **(voriconazole)** and antifungals, azoles **(voriconazole)** potentially affect the exposure to **HIV-protease inhibitors**. Severe Study → Also see **TABLE 9** p. 1336
- **HIV-protease inhibitors** are predicted to increase the exposure to antihistamines, non-sedating **(mizolastine)**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to antihistamines, non-sedating **(rupatadine)**. Avoid. Moderate Study
- **HIV-protease inhibitors** decrease the exposure to antimalarials **(atovaquone)**. Avoid if boosted with ritonavir. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the concentration of antimalarials **(piperaquine)**. Severe Theoretical
- **HIV-protease inhibitors** are predicted to decrease the exposure to antimalarials **(proguanil)**. Avoid. Moderate Study
- **HIV-protease inhibitors** are predicted to affect the exposure to antimalarials **(quinine)**. Severe Study → Also see **TABLE 9** p. 1336
- **Ritonavir** is predicted to increase the exposure to **apixaban**. Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to markedly increase the exposure to **aprepitant**. Moderate Study
- **HIV-protease inhibitors** are predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **axitinib**. Avoid or adjust dose. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Study → Also see **TABLE 9** p. 1336
- HIV-protease inhibitors **(lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to beta blockers, non-selective **(nadolol)**. Moderate Study
- **Ritonavir** is predicted to increase the exposure to beta blockers, selective **(metoprolol)**. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to beta$_2$ agonists **(salmeterol)**. Avoid. Severe Study
- **HIV-protease inhibitors** slightly increase the exposure to **bortezomib**. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **bosentan**. Severe Study
- **HIV-protease inhibitors** are predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Study → Also see **TABLE 9** p. 1336
- **Ritonavir** is predicted to decrease the exposure to **bupropion**. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 338. Severe Study

https://nhathuocngocanh.com/ www.getintopharma.com

- **HIV-protease inhibitors** slightly increase the exposure to **cabozantinib**. Moderate Study → Also see **TABLE 9** p. 1336
- **Ritonavir** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to calcium channel blockers **(diltiazem, verapamil)**. Severe Study
- **HIV-protease inhibitors** are predicted to markedly increase the exposure to calcium channel blockers **(lercanidipine)**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 945. Severe Study → Also see **TABLE 9** p. 1336
- **HIV-protease inhibitors** increase the concentration of **ciclosporin**. Severe Study
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. Moderate Study
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. Moderate Study
- **Ritonavir** is predicted to affect the exposure to **clozapine**. Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1085. Severe Study
- **Atazanavir** (unboosted) increases the exposure to **combined hormonal contraceptives**. Adjust dose. Severe Study
- **Ritonavir** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to corticosteroids **(beclometasone)** (risk with beclometasone is likely to be lower than with other corticosteroids). Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to corticosteroids **(betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, prednisone, triamcinolone)**. Avoid or monitor side effects. Severe Study
- **HIV-protease inhibitors** are predicted to affect the anticoagulant effect of **coumarins**. Moderate Study
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to **crizotinib**. Avoid. Moderate Study → Also see **TABLE 9** p. 1336
- HIV-protease inhibitors **(lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **dabigatran**. Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. Moderate Study
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 614. Moderate Study
- **HIV-protease inhibitors** are predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to markedly increase the exposure to **dasatinib**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **HIV-protease inhibitors** very slightly increase the exposure to **delamanid**. Severe Study → Also see **TABLE 9** p. 1336
- **Ritonavir** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Ritonavir** is predicted to increase the exposure to **diazepam**. Avoid. Moderate Theoretical
- **Didanosine** (buffered) decreases the exposure to **atazanavir**. **Didanosine** should be taken 2 hours after **atazanavir**. Severe Study
- **Didanosine** (buffered) is predicted to decrease the exposure to **darunavir** (boosted with ritonavir). **Didanosine** should be taken 1 hour before or 2 hours after **darunavir**. Moderate Theoretical
- **Tipranavir** decreases the exposure to **didanosine**. Separate administration by 2 hours. Moderate Study
- **Ritonavir** increases the concentration of **digoxin**. Adjust dose and monitor concentration. Severe Study
- **Fosamprenavir** (boosted with ritonavir) slightly decreases the exposure to **dolutegravir**. Avoid if resistant to HIV-integrase inhibitors. Severe Study
- **Tipranavir** moderately decreases the exposure to **dolutegravir**. Refer to specialist literature. Severe Study
- **HIV-protease inhibitors** increase the risk of QT-prolongation when given with **domperidone**. Avoid. Severe Study
- **HIV-protease inhibitors** increase the exposure to dopamine receptor agonists **(bromocriptine)**. Severe Study
- **HIV-protease inhibitors** are predicted to increase the concentration of dopamine receptor agonists **(cabergoline)**. Moderate Anecdotal
- **Ritonavir** is predicted to decrease the exposure to **duloxetine**. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. Moderate Theoretical
- HIV-protease inhibitors **(lopinavir, ritonavir, saquinavir)** are predicted to slightly increase the exposure to **edoxaban**. Severe Theoretical
- **Efavirenz** decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. Severe Study → Also see **TABLE 9** p. 1336
- **HIV-protease inhibitors** slightly to moderately increase the exposure to **elbasvir**. Avoid. Moderate Study
- **HIV-protease inhibitors** are predicted to markedly increase the exposure to **eletriptan**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- HIV-protease inhibitors **(atazanavir, lopinavir, ritonavir, saquinavir, tipranavir)** are predicted to increase the exposure to **eluxadoline**. Avoid. Moderate Theoretical
- HIV-protease inhibitors **(atazanavir, lopinavir)** (boosted with ritonavir) increase the concentration of **elvitegravir**. Refer to specialist literature. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. Moderate Study
- **Ritonavir** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Etravirine** increases the exposure to **fosamprenavir** (boosted with ritonavir). Refer to specialist literature. Moderate Study
- **Tipranavir** decreases the exposure to **etravirine**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the concentration of **everolimus**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 759. Severe Study
- HIV-protease inhibitors **(lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **fidaxomicin**. Avoid. Moderate Study
- **Ritonavir** is predicted to increase the exposure to **flurazepam**. Avoid. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **fosaprepitant**. Moderate Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

HIV-protease inhibitors (continued)

- **HIV-protease inhibitors** are predicted to increase the exposure to **gefitinib**. Moderate Study
- HIV-protease inhibitors **(atazanavir, darunavir, lopinavir)** (boosted with ritonavir) increase the exposure to **glecaprevir**. Avoid. Severe Study
- **Ritonavir** potentially increases the exposure to **glecaprevir**. Severe Theoretical
- **HIV-protease inhibitors** are predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Study
- **H_2 receptor antagonists** decrease the exposure to **atazanavir**. Monitor and adjust dose. Moderate Study
- **Ritonavir** is predicted to increase the exposure to **haloperidol**. Severe Theoretical
- **Ritonavir** is predicted to decrease the effects of **hormone replacement therapy**. Moderate Anecdotal
- **HIV-protease inhibitors** are predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 952. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **imatinib**. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. Moderate Study
- **Ritonavir** is predicted to decrease the exposure to iron chelators **(deferasirox)**. Monitor serum ferritin and adjust dose. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **ivabradine**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 292 or **lumacaftor with ivacaftor** p. 293 dose with potent inhibitors of CYP3A4. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **lapatinib**. Avoid. Moderate Study → Also see **TABLE 9** p. 1336
- **Ritonavir** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **HIV-protease inhibitors** are predicted to markedly increase the exposure to **lomitapide**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **lurasidone**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **macitentan**. Moderate Study
- Macrolides **(clarithromycin)** increase the exposure to **saquinavir** and **saquinavir** increases the exposure to macrolides **(clarithromycin)**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- Macrolides **(erythromycin)** are predicted to increase the exposure to **saquinavir**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Atazanavir** is predicted to increase the exposure to macrolides **(clarithromycin)**. Adjust dose in renal impairment. Severe Study
- **Ritonavir** increases the exposure to macrolides **(clarithromycin)**. Adjust dose in renal impairment. Severe Study
- **Tipranavir** (boosted with ritonavir) increases the exposure to macrolides **(clarithromycin)** and macrolides **(clarithromycin)** increase the exposure to **tipranavir** (boosted with ritonavir). Monitor; adjust dose in renal impairment. Severe Study
- HIV-protease inhibitors **(darunavir, fosamprenavir, lopinavir)** (boosted with ritonavir) are predicted to increase the exposure to macrolides **(clarithromycin)**. Adjust dose in renal impairment. Severe Study
- HIV-protease inhibitors **(atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, tipranavir)** are predicted to increase the exposure to macrolides **(erythromycin)**. Severe Theoretical
- **Darunavir** (boosted with ritonavir) markedly increases the exposure to **maraviroc**. Refer to specialist literature. Severe Study
- **Maraviroc** potentially decreases the exposure to **fosamprenavir** and **fosamprenavir** potentially decreases the exposure to **maraviroc**. Avoid. Severe Study
- HIV-protease inhibitors **(atazanavir, saquinavir)** moderately to markedly increase the exposure to **maraviroc**. Refer to specialist literature. Severe Study
- **Lopinavir** (boosted with ritonavir) moderately increases the exposure to **maraviroc**. Refer to specialist literature. Severe Study
- **Ritonavir** markedly increases the exposure to **maraviroc**. Refer to specialist literature. Severe Study
- **Ritonavir** is predicted to decrease the exposure to **melatonin**. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. Severe Study
- **HIV-protease inhibitors** are predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 763. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **mirtazapine**. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **modafinil**. Mild Theoretical
- HIV-protease inhibitors **(lopinavir, ritonavir, saquinavir)** are predicted to increase the risk of neutropenia when given with monoclonal antibodies **(brentuximab vedotin)**. Monitor and adjust dose. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to monoclonal antibodies **(trastuzumab emtansine)**. Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to markedly increase the exposure to **naloxegol**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **netupitant**. Moderate Study
- **Nevirapine** decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. Moderate Study
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to **nilotinib**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- HIV-protease inhibitors **(lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **nintedanib**. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- **Ritonavir** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Ritonavir** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil)**. Monitor and adjust dose. Severe Study
- **HIV-protease inhibitors** (boosted with ritonavir) are predicted to decrease the exposure to opioids **(methadone)**. Moderate Study → Also see **TABLE 9** p. 1336
- **Ritonavir** is predicted to decrease the concentration of opioids **(morphine)**. Moderate Theoretical
- **Ritonavir** increases the risk of CNS toxicity when given with opioids **(pethidine)**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **oxybutynin**. Mild Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 961. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 911. Moderate Study → Also see **TABLE 9** p. 1336
- **HIV-protease inhibitors** are predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 962. Moderate Study → Also see **TABLE 9** p. 1336

https://nhathuocngocanh.com/ www.getintopharma.com

- **HIV-protease inhibitors** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil, vardenafil)**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **HIV-protease inhibitors** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(sildenafil)**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 794. Severe Study → Also see **TABLE 9** p. 1336
- **HIV-protease inhibitors** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(tadalafil)**. Use with caution or avoid. Severe Study
- HIV-protease inhibitors **(atazanavir, lopinavir)** (boosted with ritonavir) increase the exposure to **pibrentasvir**. Avoid. Severe Study
- **Ritonavir** potentially increases the exposure to **pibrentasvir**. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **pimozide**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **Ritonavir** is predicted to decrease the exposure to **pirfenidone**. Moderate Theoretical
- **Ritonavir** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. Moderate Study
- **HIV-protease inhibitors** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 963. Moderate Study
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to **praziquantel**. Mild Study
- **Proton pump inhibitors** decrease the exposure to **atazanavir**. Avoid or adjust dose. Severe Study
- **Proton pump inhibitors** increase the exposure to **saquinavir**. Avoid. Severe Study
- **Tipranavir** decreases the exposure to **proton pump inhibitors**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **quetiapine**. Avoid. Severe Study
- **Atazanavir** increases the exposure to **raltegravir** (high-dose). Avoid. Moderate Study
- **Darunavir** increases the risk of rash when given with **raltegravir**. Moderate Study
- **Fosamprenavir** (boosted with ritonavir) decreases the exposure to **raltegravir** and **raltegravir** decreases the exposure to **fosamprenavir** (boosted with ritonavir). Avoid. Severe Study
- **Tipranavir** (boosted with ritonavir) is predicted to decrease the exposure to **raltegravir** (high-dose). Avoid. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **ranolazine**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **HIV-protease inhibitors** are predicted to increase the exposure to **reboxetine**. Avoid. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **regorafenib**. Avoid. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **repaglinide**. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to retinoids **(alitretinoin)**. Adjust **alitretinoin** dose, p. 1226. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 965. Moderate Study → Also see **TABLE 9** p. 1336
- HIV-protease inhibitors **(atazanavir, darunavir, fosamprenavir, lopinavir, saquinavir, tipranavir)** (boosted with ritonavir) increase the exposure to **rifabutin**. Monitor and adjust dose. Severe Study
- **Ritonavir** markedly increases the exposure to **rifabutin**. Avoid or adjust dose. Severe Study
- **Rifampicin** is predicted to moderately to markedly decrease the exposure to HIV-protease inhibitors **(atazanavir, darunavir, fosamprenavir, lopinavir, saquinavir)**. Avoid. Severe Study
- **Rifampicin** slightly decreases the exposure to **ritonavir**. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **tipranavir**. Avoid. Severe Study
- **Ritonavir** is predicted to increase the exposure to **riociguat**. Avoid. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **risperidone**. Adjust dose. Moderate Study → Also see **TABLE 9** p. 1336
- **Ritonavir** moderately increases the exposure to **rivaroxaban**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor side effects. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **saxagliptin**. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **simeprevir**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the concentration of **sirolimus**. Avoid. Severe Study
- **Tipranavir** is predicted to decrease the exposure to **sofosbuvir**. Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 761 or **tamsulosin with solifenacin** p. 768 dose; avoid in hepatic and renal impairment. Severe Study
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to SSRIs **(dapoxetine)**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 801. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **HIV-protease inhibitors**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to statins **(atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. Severe Study
- **HIV-protease inhibitors** slightly to moderately increase the exposure to statins **(rosuvastatin)**. Avoid or adjust dose. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to statins **(simvastatin)**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. Moderate Study → Also see **TABLE 9** p. 1336
- **HIV-protease inhibitors** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to taxanes **(cabazitaxel)**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to taxanes **(docetaxel)**. Avoid or adjust dose. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to taxanes **(paclitaxel)**. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the concentration of **temsirolimus**. Avoid. Severe Theoretical
- HIV-protease inhibitors **(atazanavir, darunavir)** increase the exposure to **tenofovir alafenamide**. Avoid. Moderate Study
- **Tipranavir** is predicted to affect the exposure to **tenofovir alafenamide**. Avoid. Moderate Theoretical
- **Ritonavir** is predicted to decrease the exposure to **theophylline**. Adjust dose. Moderate Study
- **HIV-protease inhibitors** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. Severe Study
- **Ritonavir** moderately decreases the exposure to **tizanidine**. Mild Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1072. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **tolterodine**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **HIV-protease inhibitors** are predicted to increase the exposure to **tolvaptan**. Adjust dose. Severe Study
- HIV-protease inhibitors **(lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **topotecan**. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **toremifene**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **HIV-protease inhibitors** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. Severe Theoretical
- HIV-protease inhibitors **(lopinavir, ritonavir, saquinavir)** are predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. Moderate Study

https://nhathuocngocanh.com/ www.getintopharma.com

HIV-protease inhibitors (continued)

- HIV-protease inhibitors **(ritonavir, tipranavir)** are predicted to increase the exposure to **tricyclic antidepressants**. Moderate Theoretical
- HIV-protease inhibitors **(atazanavir, darunavir, fosamprenavir, lopinavir, saquinavir, tipranavir)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Severe Study
- **Ritonavir** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **HIV-protease inhibitors** are predicted to increase the exposure to **vemurafenib**. Severe Theoretical → Also see **TABLE 9** p. 1336
- **HIV-protease inhibitors** are predicted to increase the exposure to **venetoclax**. Avoid potent inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **venlafaxine**. Moderate Study → Also see **TABLE 9** p. 1336
- **HIV-protease inhibitors** are predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 9** p. 1336
- **HIV-protease inhibitors** are predicted to increase the exposure to vitamin D substances **(paricalcitol)**. Moderate Study
- **Atazanavir** (boosted with ritonavir) increases the concentration of **voxilaprevir**. Avoid. Severe Study
- **Lopinavir** is predicted to increase the concentration of **voxilaprevir**. Avoid. Severe Theoretical
- **Tipranavir** slightly decreases the exposure to **zidovudine**. Avoid. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Theoretical

Homatropine → see **TABLE 10** p. 1336 (antimuscarinics)

Hormone replacement therapy

- Antiepileptics **(carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the effects of **hormone replacement therapy**. Moderate Anecdotal
- **Hormone replacement therapy** is predicted to alter the exposure to antiepileptics **(lamotrigine)**. Moderate Theoretical
- **Aprepitant** is predicted to decrease the effects of **hormone replacement therapy**. Moderate Anecdotal
- **Bosentan** is predicted to decrease the effects of **hormone replacement therapy**. Moderate Anecdotal
- **Hormone replacement therapy** decreases the clearance of dopamine receptor agonists **(ropinirole)**. Monitor and adjust dose. Moderate Study
- **Efavirenz** is predicted to decrease the effects of **hormone replacement therapy**. Moderate Anecdotal
- **Fosaprepitant** is predicted to decrease the effects of **hormone replacement therapy**. Moderate Anecdotal
- HIV-protease inhibitors **(ritonavir)** are predicted to decrease the effects of **hormone replacement therapy**. Moderate Anecdotal
- **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. Severe Theoretical
- **Modafinil** is predicted to decrease the effects of **hormone replacement therapy**. Moderate Anecdotal
- **Hormone replacement therapy** is predicted to increase the exposure to monoamine-oxidase B inhibitors **(selegiline)**. Avoid. Moderate Study
- **Nevirapine** is predicted to decrease the effects of **hormone replacement therapy**. Moderate Anecdotal
- NSAIDs **(etoricoxib)** slightly increase the exposure to **hormone replacement therapy**. Moderate Study
- **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. Severe Theoretical
- **Rifabutin** is predicted to decrease the effects of **hormone replacement therapy**. Moderate Anecdotal
- **Rifampicin** is predicted to decrease the effects of **hormone replacement therapy**. Moderate Anecdotal
- **St John's Wort** is predicted to decrease the efficacy of **hormone replacement therapy**. Moderate Theoretical
- **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **thalidomide**. Severe Theoretical
- Oral **hormone replacement therapy** is predicted to decrease the effects of **thyroid hormones**. Moderate Theoretical

Hydralazine → see **TABLE 8** p. 1335 (hypotension)

- **Diazoxide** increases the risk of severe hypotension when given with **hydralazine**. Severe Study → Also see **TABLE 8** p. 1335

Hydrochlorothiazide → see thiazide diuretics

Hydrocortisone → see corticosteroids

Hydroflumethiazide → see thiazide diuretics

Hydromorphone → see opioids

Hydroxycarbamide → see **TABLE 15** p. 1337 (myelosuppression)

- **Hydroxycarbamide** increases the risk of toxicity when given with **didanosine**. Avoid. Severe Study
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **hydroxycarbamide**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Hydroxycarbamide** increases the risk of toxicity when given with **stavudine**. Avoid. Severe Study

Hydroxychloroquine

- **Hydroxychloroquine** is predicted to decrease the effects of **agalsidase**. Moderate Theoretical
- **Antacids** decrease the absorption of **hydroxychloroquine**. Separate administration by at least 4 hours. Moderate Study
- Calcium salts **(calcium carbonate)** decrease the absorption of **hydroxychloroquine**. Separate administration by at least 4 hours. Moderate Study
- **Hydroxychloroquine** is predicted to decrease the efficacy of oral **cholera vaccine**. Moderate Theoretical
- H_2 receptor antagonists **(cimetidine)** are predicted to decrease the clearance of **hydroxychloroquine**. Moderate Theoretical
- **Lanthanum** is predicted to decrease the absorption of **hydroxychloroquine**. Separate administration by at least 2 hours. Moderate Theoretical
- **Hydroxychloroquine** is predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. Severe Theoretical
- **Hydroxychloroquine** is predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. Severe Theoretical
- **Hydroxychloroquine** is predicted to decrease efficacy **rabies vaccine**. Moderate Theoretical

Hydroxyzine → see antihistamines, sedating

Hyoscine → see **TABLE 10** p. 1336 (antimuscarinics)

Ibandronic acid → see bisphosphonates

Ibrutinib → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 4** p. 1334 (antiplatelet effects)

FOOD AND LIFESTYLE Avoid food or drink containing bitter (Seville) oranges as they are predicted to increase the exposure to ibrutinib.

- Antiarrhythmics **(amiodarone)** are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose, p. 952. Severe Theoretical
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 952. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 952. Severe Study
- **Aprepitant** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. Severe Study
- **Cobicistat** is predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 952. Severe Study

https://nhathuocngocanh.com/ www.getintopharma.com

- **Crizotinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. Severe Study → Also see **TABLE 15** p. 1337
- **Enzalutamide** is predicted to decrease the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 952. Severe Study
- **Fosaprepitant** is predicted to slightly increase the exposure to **ibrutinib**. Moderate Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **ibrutinib**. Avoid. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 952. Severe Study
- **Idelalisib** is predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 952. Severe Study → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. Severe Study → Also see **TABLE 15** p. 1337
- Macrolides **(clarithromycin)** are predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 952. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. Severe Study
- **Mitotane** is predicted to decrease the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 952. Severe Study → Also see **TABLE 15** p. 1337
- **Netupitant** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. Severe Study
- **Nilotinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. Severe Study → Also see **TABLE 15** p. 1337
- Quinolones **(ciprofloxacin)** are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose, p. 952. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 952. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **ibrutinib**. Avoid. Severe Theoretical

Ibuprofen → see NSAIDs

Icatibant

- **ACE inhibitors** are predicted to decrease the efficacy of **icatibant** and **icatibant** is predicted to decrease the efficacy of **ACE inhibitors**. Avoid. Moderate Theoretical

Idarubicin → see anthracyclines

Idelalisib → see **TABLE 15** p. 1337 (myelosuppression)

- **Idelalisib** is predicted to increase the exposure to **abiraterone**. Severe Theoretical
- **Idelalisib** is predicted to markedly increase the exposure to aldosterone antagonists **(eplerenone)**. Avoid. Severe Study
- **Idelalisib** increases the exposure to **almotriptan**. Mild Study
- **Idelalisib** is predicted to moderately increase the exposure to alpha blockers **(alfuzosin, tamsulosin)**. Use with caution or avoid. Moderate Study
- **Idelalisib** is predicted to increase the exposure to alpha blockers **(doxazosin)**. Moderate Study
- **Idelalisib** moderately increases the exposure to **alprazolam**. Avoid. Moderate Study
- **Idelalisib** is predicted to increase the exposure to antiarrhythmics **(amiodarone)**. Avoid. Moderate Theoretical
- **Idelalisib** very markedly increases the exposure to antiarrhythmics **(dronedarone)**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to antiarrhythmics **(propafenone)**. Monitor and adjust dose. Severe Study
- **Idelalisib** is predicted to increase the exposure to anticholinesterases, centrally acting **(galantamine)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **idelalisib**. Avoid. Severe Study
- **Idelalisib** is predicted to very slightly increase the exposure to antiepileptics **(perampanel)**. Mild Study
- **Idelalisib** is predicted to increase the exposure to antifungals, azoles **(isavuconazole)**. Avoid or monitor side effects. Severe Study
- **Idelalisib** is predicted to increase the exposure to antihistamines, non-sedating **(mizolastine)**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to antihistamines, non-sedating **(rupatadine)**. Avoid. Moderate Study
- **Idelalisib** is predicted to increase the concentration of antimalarials **(piperaquine)**. Severe Theoretical
- **Idelalisib** is predicted to markedly increase the exposure to **aprepitant**. Moderate Study
- **Idelalisib** is predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. Moderate Study → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Study
- **Idelalisib** is predicted to increase the exposure to beta$_2$ agonists **(salmeterol)**. Avoid. Severe Study
- **Idelalisib** slightly increases the exposure to **bortezomib**. Moderate Study → Also see **TABLE 15** p. 1337
- **Bosentan** is predicted to decrease the exposure to **idelalisib**. Avoid. Moderate Theoretical
- **Idelalisib** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Study → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 338. Severe Study
- **Idelalisib** slightly increases the exposure to **cabozantinib**. Moderate Study → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Idelalisib** is predicted to increase the exposure to calcium channel blockers **(diltiazem, verapamil)**. Severe Study
- **Idelalisib** is predicted to markedly increase the exposure to calcium channel blockers **(lercanidipine)**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. Moderate Theoretical
- **Idelalisib** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 945. Severe Study → Also see **TABLE 15** p. 1337
- **Idelalisib** increases the concentration of **ciclosporin**. Severe Study
- **Idelalisib** is predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. Moderate Study
- **Idelalisib** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. Moderate Study
- **Idelalisib** is predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. Severe Study
- **Idelalisib** is predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1085. Severe Study
- **Idelalisib** is predicted to increase the exposure to corticosteroids **(beclometasone)** (risk with beclometasone is likely to be lower than with other corticosteroids). Moderate Theoretical
- **Idelalisib** is predicted to increase the exposure to corticosteroids **(betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, prednisone, triamcinolone)**. Avoid or monitor side effects. Severe Study
- **Idelalisib** is predicted to moderately increase the exposure to **crizotinib**. Avoid. Moderate Study → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. Moderate Study → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 614. Moderate Study
- **Idelalisib** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. Severe Study
- **Idelalisib** is predicted to markedly increase the exposure to **dasatinib**. Avoid. Severe Study → Also see **TABLE 15** p. 1337

https://nhathuocngocanh.com/ www.getintopharma.com

Idelalisib (continued)

- **Idelalisib** very slightly increases the exposure to **delamanid**. Severe Study
- **Idelalisib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. Severe Study
- **Idelalisib** increases the exposure to dopamine receptor agonists **(bromocriptine)**. Severe Study
- **Idelalisib** is predicted to increase the concentration of dopamine receptor agonists **(cabergoline)**. Moderate Anecdotal
- **Idelalisib** is predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. Moderate Theoretical
- **Efavirenz** is predicted to decrease the exposure to **idelalisib**. Avoid. Moderate Theoretical
- **Idelalisib** slightly to moderately increases the exposure to **elbasvir**. Avoid. Moderate Study
- **Idelalisib** is predicted to markedly increase the exposure to **eletriptan**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **idelalisib**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. Severe Theoretical
- **Idelalisib** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. Severe Theoretical
- **Idelalisib** is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. Moderate Study
- **Idelalisib** is predicted to increase the concentration of **everolimus**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 759. Severe Study
- **Idelalisib** is predicted to increase the exposure to **fosaprepitant**. Moderate Theoretical
- **Idelalisib** is predicted to increase the exposure to **gefitinib**. Moderate Study → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Study
- **Idelalisib** is predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 952. Severe Study → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to increase the exposure to **imatinib**. Moderate Study → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. Moderate Study → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to increase the exposure to **ivabradine**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 292 or **lumacaftor with ivacaftor** p. 293 dose with potent inhibitors of CYP3A4. Severe Study
- **Idelalisib** is predicted to increase the exposure to **lapatinib**. Avoid. Moderate Study
- **Idelalisib** is predicted to markedly increase the exposure to **lomitapide**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **lurasidone**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **macitentan**. Moderate Study
- **Idelalisib** markedly increases the exposure to **maraviroc**. Adjust dose. Severe Theoretical
- **Idelalisib** is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. Severe Study
- **Idelalisib** is predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. Severe Study
- **Idelalisib** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 763. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **mirtazapine**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **idelalisib**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to increase the exposure to **modafinil**. Mild Theoretical
- **Idelalisib** is predicted to increase the exposure to monoclonal antibodies **(trastuzumab emtansine)**. Avoid. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to markedly increase the exposure to **naloxegol**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **netupitant**. Moderate Study
- **Nevirapine** is predicted to decrease the exposure to **idelalisib**. Avoid. Moderate Theoretical
- **Idelalisib** is predicted to moderately increase the exposure to **nilotinib**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to increase the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- **Idelalisib** is predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Study → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil)**. Monitor and adjust dose. Severe Study
- **Idelalisib** is predicted to increase the exposure to opioids **(methadone)**. Severe Theoretical
- **Idelalisib** is predicted to increase the exposure to **oxybutynin**. Mild Study
- **Idelalisib** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 961. Severe Study
- **Idelalisib** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 911. Moderate Study → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. Severe Theoretical
- **Idelalisib** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 962. Moderate Study → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil, vardenafil)**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(sildenafil)**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 794. Severe Study
- **Idelalisib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(tadalafil)**. Use with caution or avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **pimozide**. Avoid. Severe Study
- **Idelalisib** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 963. Moderate Study
- **Idelalisib** is predicted to moderately increase the exposure to **praziquantel**. Mild Study
- **Idelalisib** is predicted to increase the exposure to **quetiapine**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **ranolazine**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **reboxetine**. Avoid. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **regorafenib**. Avoid. Moderate Study → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to increase the exposure to **repaglinide**. Moderate Study
- **Idelalisib** is predicted to increase the exposure to retinoids **(alitretinoin)**. Adjust **alitretinoin** dose, p. 1226. Moderate Theoretical
- **Idelalisib** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 965. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **idelalisib**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **risperidone**. Adjust dose. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor side effects. Moderate Study → Also see **TABLE 15** p. 1337

https://nhathuocngocanh.com/ www.getintopharma.com

- **Idelalisib** is predicted to increase the exposure to **saxagliptin**. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **simeprevir**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the concentration of **sirolimus**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** or tamsulosin with solifenacin p. 768 dose; avoid in hepatic and renal impairment, p. 761. Severe Study
- **Idelalisib** is predicted to moderately increase the exposure to SSRIs **(dapoxetine)**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 801. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **idelalisib**. Avoid. Moderate Theoretical
- **Idelalisib** is predicted to increase the exposure to statins **(atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. Severe Study
- **Idelalisib** is predicted to increase the exposure to statins **(simvastatin)**. Avoid. Severe Study
- **Idelalisib** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. Moderate Study → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- **Idelalisib** is predicted to increase the exposure to taxanes **(cabazitaxel)**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to moderately increase the exposure to taxanes **(docetaxel)**. Avoid or adjust dose. Severe Study → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to increase the exposure to taxanes **(paclitaxel)**. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to increase the concentration of **temsirolimus**. Avoid. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1072. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **tolterodine**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **tolvaptan**. Adjust dose. Severe Study
- **Idelalisib** is predicted to increase the exposure to **toremifene**. Moderate Theoretical
- **Idelalisib** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Severe Study
- **Idelalisib** is predicted to increase the exposure to **vemurafenib**. Severe Theoretical
- **Idelalisib** is predicted to increase the exposure to **venetoclax**. Avoid potent inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- **Idelalisib** is predicted to increase the exposure to **venlafaxine**. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to increase the exposure to vitamin D substances **(paricalcitol)**. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Theoretical

Ifosfamide → see alkylating agents

Iloprost → see **TABLE 4** p. 1334 (antiplatelet effects)

Imatinib → see **TABLE 15** p. 1337 (myelosuppression)

- **Imatinib** is predicted to increase the exposure to aldosterone antagonists **(eplerenone)**. Adjust **eplerenone** dose, p. 190. Severe Study
- **Imatinib** is predicted to increase the exposure to alpha blockers **(tamsulosin)**. Moderate Theoretical
- **Imatinib** is predicted to increase the exposure to **alprazolam**. Severe Study
- **Imatinib** is predicted to increase the exposure to antiarrhythmics **(dronedarone)**. Severe Theoretical
- **Imatinib** is predicted to increase the exposure to antiarrhythmics **(propafenone)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **imatinib**. Avoid. Moderate Study
- Antiepileptics **(oxcarbazepine)** decrease the exposure to **imatinib**. Avoid. Moderate Study
- Antifungals, azoles **(fluconazole, posaconazole)** are predicted to increase the exposure to **imatinib**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **imatinib**. Moderate Study
- **Imatinib** is predicted to decrease the exposure to antifungals, azoles **(isavuconazole)**. Moderate Theoretical
- **Imatinib** is predicted to increase the exposure to antihistamines, non-sedating **(mizolastine)**. Severe Theoretical
- **Imatinib** is predicted to increase the exposure to antihistamines, non-sedating **(rupatadine)**. Avoid. Moderate Study
- **Imatinib** is predicted to increase the concentration of antimalarials **(piperaquine)**. Severe Theoretical
- **Aprepitant** is predicted to increase the exposure to **imatinib**. Moderate Theoretical
- **Asparaginase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to increase the exposure to **axitinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Theoretical
- **Bosentan** is predicted to decrease the exposure to **imatinib**. Moderate Study
- **Imatinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. Moderate Study
- **Imatinib** is predicted to increase the exposure to **cabozantinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **imatinib**. Moderate Theoretical
- **Imatinib** is predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Imatinib** is predicted to increase the exposure to **ceritinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Imatinib** increases the concentration of **ciclosporin**. Severe Study
- **Cobicistat** is predicted to increase the exposure to **imatinib**. Moderate Study
- **Imatinib** is predicted to increase the exposure to **cobimetinib**. Severe Theoretical
- **Imatinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. Severe Study
- **Imatinib** is predicted to increase the exposure to corticosteroids **(methylprednisolone)**. Monitor and adjust dose. Moderate Study
- **Imatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Crisantaspase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to slightly increase the exposure to **darifenacin**. Moderate Study
- **Imatinib** is predicted to increase the exposure to **dasatinib**. Severe Study → Also see **TABLE 15** p. 1337
- **Imatinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. Severe Study
- **Imatinib** is predicted to increase the exposure to dopamine receptor agonists **(bromocriptine)**. Severe Theoretical
- **Imatinib** is predicted to increase the concentration of dopamine receptor agonists **(cabergoline)**. Moderate Anecdotal
- **Imatinib** is predicted to moderately increase the exposure to **dutasteride**. Mild Study

https://nhathuocngocanh.com/ www.getintopharma.com

Imatinib (continued)
- **Efavirenz** is predicted to decrease the exposure to **imatinib**. Moderate Study
- **Imatinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **imatinib**. Avoid. Moderate Study
- **Imatinib** is predicted to increase the risk of ergotism when given with **ergometrine**. Severe Theoretical
- **Imatinib** is predicted to increase the risk of ergotism when given with **ergotamine**. Severe Theoretical
- **Imatinib** is predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- **Imatinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. Moderate Study → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. Mild Study
- **Imatinib** is predicted to increase the exposure to **gefitinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Grapefruit juice** is predicted to increase the exposure to **imatinib**. Moderate Theoretical
- **Imatinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **imatinib**. Moderate Study
- **Imatinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. Severe Study → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to increase the exposure to **imatinib**. Moderate Study → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 210. Severe Theoretical
- **Imatinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. Severe Study
- **Imatinib** is predicted to increase the exposure to **lapatinib**. Moderate Study
- **Imatinib** is predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- **Imatinib** is predicted to increase the exposure to **lurasidone**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **imatinib**. Moderate Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **imatinib**. Moderate Theoretical
- **Imatinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. Severe Study
- **Imatinib** is predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **imatinib**. Avoid. Moderate Study → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. Moderate Study
- **Netupitant** is predicted to increase the exposure to **imatinib**. Moderate Theoretical
- **Nevirapine** is predicted to decrease the exposure to **imatinib**. Moderate Study
- **Imatinib** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study
- **Imatinib** is predicted to increase the exposure to opioids **(methadone, sufentanil)**. Moderate Theoretical
- **Imatinib** is predicted to increase the exposure to **oxybutynin**. Mild Theoretical
- **Imatinib** increases the risk of hepatotoxicity when given with **paracetamol**. Severe Anecdotal
- **Imatinib** is predicted to increase the exposure to **pazopanib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Pegaspargase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Imatinib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil)**. Adjust **avanafil** dose, p. 794. Moderate Theoretical
- **Imatinib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. Moderate Study
- **Imatinib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(tadalafil)**. Severe Theoretical
- **Imatinib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(vardenafil)**. Adjust dose. Severe Theoretical
- **Imatinib** is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical
- **Imatinib** is predicted to increase the exposure to **quetiapine**. Avoid. Moderate Study
- **Imatinib** is predicted to increase the exposure to **ranolazine**. Severe Study
- **Imatinib** is predicted to increase the exposure to **ribociclib**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **imatinib**. Avoid. Moderate Study
- **Imatinib** is predicted to increase the exposure to **ruxolitinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to increase the exposure to **saxagliptin**. Mild Study
- **Imatinib** is predicted to increase the exposure to **simeprevir**. Avoid. Severe Study
- **Imatinib** increases the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- **Imatinib** is predicted to increase the exposure to SSRIs **(dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **imatinib**. Moderate Study
- **Imatinib** is predicted to increase the exposure to statins **(atorvastatin)**. Monitor and adjust dose. Severe Study
- **Imatinib** is predicted to increase the exposure to statins **(simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 203. Severe Study
- **Imatinib** is predicted to increase the exposure to **sunitinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to increase the concentration of **tacrolimus**. Severe Study
- **Imatinib** is predicted to increase the exposure to taxanes **(cabazitaxel)**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Tedizolid** is predicted to increase the exposure to **imatinib**. Avoid. Moderate Theoretical
- **Imatinib** is predicted to increase the concentration of **temsirolimus**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to increase the exposure to **tofacitinib**. Moderate Study
- **Imatinib** is predicted to increase the exposure to **tolterodine**. Mild Theoretical
- **Imatinib** is predicted to increase the exposure to **tolvaptan**. Adjust dose. Moderate Study
- **Imatinib** is predicted to increase the exposure to **trazodone**. Moderate Theoretical
- **Imatinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- **Imatinib** is predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- **Imatinib** is predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study

Imidapril → see ACE inhibitors

Imipenem → see carbapenems

Imipramine → see tricyclic antidepressants

https://nhathuocngocanh.com/ www.getintopharma.com

Indacaterol → see beta$_2$ agonists
Indapamide → see thiazide diuretics
Indometacin → see NSAIDs
Indoramin → see alpha blockers
Infliximab → see monoclonal antibodies
Influenza vaccine (live) → see live vaccines
Inotuzumab ozogamicin → see monoclonal antibodies
Insulins → see **TABLE 14** p. 1337 (antidiabetic drugs)
- Fibrates are predicted to increase the risk of hypoglycaemia when given with **insulins**. Moderate Theoretical

Interferon alfa → see interferons
Interferon beta → see interferons
Interferons → see **TABLE 15** p. 1337 (myelosuppression)

interferon alfa · interferon beta · peginterferon alfa

- **Interferons** are predicted to slightly increase the exposure to aminophylline. Adjust dose. Moderate Theoretical
- **Interferon alfa** is predicted to increase the risk of peripheral neuropathy when given with telbivudine. Avoid. Severe Theoretical
- **Peginterferon alfa** increases the risk of peripheral neuropathy when given with telbivudine. Avoid. Severe Study
- **Interferons** slightly increase the exposure to theophylline. Adjust dose. Moderate Study

Ipilimumab → see monoclonal antibodies
Ipratropium → see **TABLE 10** p. 1336 (antimuscarinics)
- Beta$_2$ agonists are predicted to increase the risk of glaucoma when given with **ipratropium**. Moderate Anecdotal

Irbesartan → see angiotensin-II receptor antagonists
Irinotecan → see **TABLE 15** p. 1337 (myelosuppression)
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **irinotecan**. Avoid. Severe Study
- Antifungals, azoles (itraconazole, ketoconazole, voriconazole) are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. Moderate Study
- Cobicistat is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. Moderate Study
- Enzalutamide is predicted to decrease the exposure to **irinotecan**. Avoid. Severe Study
- HIV-protease inhibitors are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. Moderate Study
- Idelalisib is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. Moderate Study → Also see **TABLE 15** p. 1337
- Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **irinotecan**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- Macrolides (clarithromycin) are predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. Moderate Study
- Mitotane is predicted to decrease the exposure to **irinotecan**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Irinotecan** is predicted to decrease the effects of neuromuscular blocking drugs, non-depolarising. Moderate Theoretical
- Pitolisant is predicted to decrease the exposure to **irinotecan**. Unknown Theoretical
- Rifampicin is predicted to decrease the exposure to **irinotecan**. Avoid. Severe Study
- Rolapitant is predicted to increase the exposure to **irinotecan**. Avoid or monitor. Moderate Study
- St John's Wort slightly decreases the exposure to **irinotecan**. Avoid. Severe Study
- **Irinotecan** is predicted to increase the risk of prolonged neuromuscular blockade when given with suxamethonium. Moderate Theoretical

Iron (injectable)

ferric carboxymaltose · iron dextran · iron isomaltoside 1000 · iron sucrose

- Chloramphenicol decreases the efficacy of intravenous **iron (injectable)**. Moderate Anecdotal

Iron (oral)

ferric maltol · ferrous fumarate · ferrous gluconate · ferrous sulfate · polysaccharide-iron complex · sodium feredetate

- Antacids decrease the absorption of **iron (oral)**. **Iron (oral)** should be taken 1 hour before or 2 hours after **antacids**. Moderate Study
- **Iron (oral)** is predicted to decrease the absorption of oral bisphosphonates (**ibandronic acid**). Avoid **iron (oral)** for at least 6 hours before or 1 hour after **ibandronic acid**. Moderate Theoretical
- **Iron (oral)** decreases the absorption of bisphosphonates (**risedronate**). Separate administration by at least 2 hours. Moderate Study
- **Iron (oral)** decreases the absorption of bisphosphonates (**sodium clodronate**). Avoid **iron (oral)** for 2 hours before or 1 hour after **sodium clodronate**. Moderate Study
- Calcium salts (**calcium carbonate**) decrease the absorption of **iron (oral)**. **Calcium carbonate** should be taken 1 hour before or 2 hours after **iron (oral)**. Moderate Study
- **Iron (oral)** is predicted to decrease the exposure to carbidopa. Moderate Theoretical
- Chloramphenicol decreases the efficacy of oral **iron (oral)**. Moderate Theoretical
- **Iron (oral)** decreases the absorption of dolutegravir. **Dolutegravir** should be taken 2 hours before or 6 hours after **iron (oral)**. Moderate Study
- **Iron (oral)** is predicted to decrease the absorption of eltrombopag. **Eltrombopag** should be taken 2 hours before or 4 hours after **iron (oral)**. Severe Theoretical
- **Iron (oral)** is predicted to decrease the absorption of entacapone. Separate administration by at least 2 hours. Moderate Theoretical
- **Iron (oral)** decreases the absorption of levodopa. Moderate Study
- **Iron (oral)** decreases the effects of methyldopa. Moderate Study
- **Iron (oral)** is predicted to decrease the absorption of penicillamine. Separate administration by at least 2 hours. Mild Study
- **Iron (oral)** decreases the exposure to quinolones. Separate administration by at least 2 hours. Moderate Study
- **Iron (oral)** decreases the absorption of tetracyclines. **Tetracyclines** should be taken 2 to 3 hours after **iron (oral)**. Moderate Study
- **Iron (oral)** decreases the absorption of thyroid hormones (**levothyroxine**). Separate administration by at least 4 hours. Moderate Study
- Trientine potentially decreases the absorption of **iron (oral)**. Moderate Theoretical
- Zinc is predicted to decrease the efficacy of **iron (oral)** and **iron (oral)** is predicted to decrease the efficacy of zinc. Moderate Study

Iron chelators

deferasirox · desferrioxamine · dexrazoxane

- **Deferasirox** is predicted to increase the exposure to aminophylline. Avoid. Moderate Theoretical
- Antacids (**aluminium hydroxide**) are predicted to decrease the exposure to **deferasirox**. Avoid. Moderate Theoretical
- Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone) are predicted to decrease the exposure to **deferasirox**. Monitor serum ferritin and adjust dose. Moderate Theoretical
- Ascorbic acid is predicted to increase the risk of cardiovascular side-effects when given with **desferrioxamine**. Severe Theoretical
- Aspirin (high-dose) is predicted to increase the risk of gastrointestinal bleeds when given with **deferasirox**. Severe Theoretical
- Bisphosphonates are predicted to increase the risk of gastrointestinal bleeding when given with **deferasirox**. Severe Theoretical
- **Deferasirox** is predicted to increase the exposure to clozapine. Avoid. Moderate Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Iron chelators (continued)

- **Corticosteroids** are predicted to increase the risk of gastrointestinal bleeding when given with **deferasirox**. Severe Theoretical
- HIV-protease inhibitors **(ritonavir)** are predicted to decrease the exposure to **deferasirox**. Monitor serum ferritin and adjust dose. Moderate Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dexrazoxane**. Avoid. Severe Theoretical
- **NSAIDs** are predicted to increase the risk of gastrointestinal bleeding when given with **deferasirox**. Severe Theoretical
- **Deferasirox** moderately increases the exposure to **repaglinide**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **deferasirox**. Monitor serum ferritin and adjust dose. Moderate Study
- **Deferasirox** is predicted to increase the exposure to **selexipag**. Adjust dose. Moderate Study
- **Deferasirox** increases the exposure to **theophylline**. Avoid. Moderate Study
- **Deferasirox** is predicted to increase the exposure to **tizanidine**. Avoid. Moderate Theoretical

Iron dextran → see iron (injectable)

Iron isomaltoside 1000 → see iron (injectable)

Iron sucrose → see iron (injectable)

Isavuconazole → see antifungals, azoles

Isocarboxazid → see monoamine-oxidase A and B inhibitors, irreversible

Isoflurane → see volatile halogenated anaesthetics

Isometheptene → see sympathomimetics, vasoconstrictor

Isoniazid → see **TABLE 1** p. 1334 (hepatotoxicity), **TABLE 12** p. 1337 (peripheral neuropathy)

FOOD AND LIFESTYLE Avoid tyramine or histamine rich foods, as tachycardia, palpitation, hypotension, flushing, headache, dizziness, and sweating reported.

- **Isoniazid** is predicted to affect the clearance of **aminophylline**. Severe Theoretical
- **Isoniazid** markedly increases the concentration of antiepileptics **(carbamazepine)** and antiepileptics **(carbamazepine)** increase the risk of hepatotoxicity when given with **isoniazid**. Monitor concentration and adjust dose. Severe Study → Also see **TABLE 1** p. 1334
- **Isoniazid** increases the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Moderate Study → Also see **TABLE 12** p. 1337
- **Cycloserine** increases the risk of CNS toxicity when given with **isoniazid**. Monitor and adjust dose. Moderate Study
- **Isoniazid** is predicted to increase the risk of peripheral neuropathy when given with **didanosine**. Severe Theoretical → Also see **TABLE 1** p. 1334 → Also see **TABLE 12** p. 1337
- **Isoniazid** increases the risk of optic neuropathy when given with **ethambutol**. Severe Anecdotal
- **Isoniazid** decreases the effects of **levodopa**. Moderate Study
- **Isoniazid** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Unknown Theoretical → Also see **TABLE 1** p. 1334
- **Isoniazid** is predicted to increase the risk of peripheral neuropathy when given with **stavudine**. Severe Theoretical → Also see **TABLE 12** p. 1337
- **Isoniazid** is predicted to affect the clearance of **theophylline**. Severe Anecdotal
- **Isoniazid** potentially increases the risk of nephrotoxicity when given with volatile halogenated anaesthetics **(methoxyflurane)**. Avoid. Severe Theoretical

Isosorbide dinitrate → see nitrates

Isosorbide mononitrate → see nitrates

Isotretinoin → see retinoids

Itraconazole → see antifungals, azoles

Ivabradine → see **TABLE 6** p. 1335 (bradycardia), **TABLE 9** p. 1336 (QT-interval prolongation)

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 210. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ivabradine**. Adjust dose. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 210. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ivabradine**. Avoid. Severe Study
- **Aprepitant** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 210. Severe Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **ivabradine**. Avoid. Moderate Study → Also see **TABLE 6** p. 1335
- **Cobicistat** is predicted to increase the exposure to **ivabradine**. Avoid. Severe Study
- **Crizotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 210. Severe Theoretical → Also see **TABLE 6** p. 1335
- **Enzalutamide** is predicted to decrease the exposure to **ivabradine**. Adjust dose. Moderate Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **ivabradine**. Avoid. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **ivabradine**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **ivabradine**. Avoid. Severe Study
- **Imatinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 210. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **ivabradine**. Avoid. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **ivabradine**. Avoid. Severe Theoretical
- **Mitotane** is predicted to decrease the exposure to **ivabradine**. Adjust dose. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 210. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 210. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **ivabradine**. Adjust dose. Moderate Theoretical
- **St John's Wort** decreases the exposure to **ivabradine**. Avoid. Moderate Study

Ivacaftor

FOOD AND LIFESTYLE Avoid bitter (Seville) oranges as they are predicted to increase the exposure to ivacaftor.

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 292 or **lumacaftor with ivacaftor** p. 293 dose with potent inhibitors of CYP3A4. Severe Study
- **Aprepitant** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. Severe Study
- **Bosentan** is predicted to decrease the exposure to **ivacaftor**. Severe Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. Severe Study
- **Cobicistat** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 292 or **lumacaftor with ivacaftor** p. 293 dose with potent inhibitors of CYP3A4. Severe Study
- **Ivacaftor** is predicted to increase the anticoagulant effect of coumarins **(warfarin)**. Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

- **Crizotinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. Severe Study
- **Ivacaftor** slightly increases the exposure to **digoxin**. Moderate Study
- **Efavirenz** is predicted to decrease the exposure to **ivacaftor**. Severe Theoretical
- **Enzalutamide** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. Severe Study
- **Grapefruit juice** is predicted to increase the exposure to **ivacaftor**. Avoid. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 292 or **lumacaftor with ivacaftor** p. 293 dose with potent inhibitors of CYP3A4,. Severe Study
- **Idelalisib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 292 or **lumacaftor with ivacaftor** p. 293 dose with potent inhibitors of CYP3A4. Severe Study
- **Imatinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. Severe Study
- **Ivacaftor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 292 or **lumacaftor with ivacaftor** p. 293 dose with potent inhibitors of CYP3A4. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. Severe Study
- **Mitotane** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. Severe Study
- **Netupitant** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. Severe Study
- **Nevirapine** is predicted to decrease the exposure to **ivacaftor**. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. Severe Study
- **Rifampicin** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **ivacaftor**. Severe Theoretical

Ivermectin

- **Ivermectin** potentially increases the anticoagulant effect of **coumarins**. Severe Anecdotal
- **Levamisole** increases the exposure to **ivermectin**. Moderate Study

Ixazomib

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ixazomib**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **ixazomib**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **ixazomib**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **ixazomib**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **ixazomib**. Avoid. Severe Theoretical

Ixekizumab → see monoclonal antibodies

Kaolin

- **Kaolin** is predicted to decrease the absorption of **tetracyclines**. Moderate Theoretical

Ketamine → see **TABLE 8** p. 1335 (hypotension), **TABLE 11** p. 1336 (CNS depressant effects)

- **Memantine** is predicted to increase the risk of CNS side-effects when given with **ketamine**. Avoid. Severe Theoretical

Ketoconazole → see antifungals, azoles

Ketoprofen → see NSAIDs

Ketorolac → see NSAIDs

Ketotifen → see antihistamines, sedating

Labetalol → see beta blockers, non-selective

Lacidipine → see calcium channel blockers

Lacosamide → see antiepileptics

Lamivudine → see **TABLE 12** p. 1337 (peripheral neuropathy)

- **Trimethoprim** slightly increases the exposure to **lamivudine**. Moderate Study

Lamotrigine → see antiepileptics

Lanreotide

- **Beta blockers, non-selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. Moderate Theoretical
- **Beta blockers, selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. Moderate Theoretical
- **Lanreotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. Severe Theoretical

Lansoprazole → see proton pump inhibitors

Lanthanum

- **Lanthanum** is predicted to decrease the absorption of antifungals, azoles **(ketoconazole)**. Separate administration by at least 2 hours. Moderate Theoretical
- **Lanthanum** is predicted to decrease the absorption of antimalarials **(chloroquine)**. Separate administration by at least 2 hours. Moderate Theoretical
- **Lanthanum** is predicted to decrease the absorption of **hydroxychloroquine**. Separate administration by at least 2 hours. Moderate Theoretical
- **Lanthanum** moderately decreases the exposure to **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after **lanthanum**. Moderate Study
- **Lanthanum** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 hours. Moderate Theoretical
- **Lanthanum** decreases the absorption of **thyroid hormones**. Separate administration by 2 hours. Moderate Study

Lapatinib → see **TABLE 9** p. 1336 (QT-interval prolongation)

- **Lapatinib** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. Moderate Study
- **Lapatinib** is predicted to increase the exposure to **aliskiren**. Moderate Theoretical
- **Antacids** are predicted to decrease the absorption of **lapatinib**. Avoid. Moderate Theoretical
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **lapatinib**. Moderate Study → Also see **TABLE 9** p. 1336
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **lapatinib**. Moderate Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **lapatinib**. Avoid. Moderate Study → Also see **TABLE 9** p. 1336
- **Lapatinib** is predicted to increase the exposure to antihistamines, non-sedating **(fexofenadine)**. Moderate Theoretical
- **Aprepitant** is predicted to increase the exposure to **lapatinib**. Moderate Study
- **Lapatinib** is predicted to increase the exposure to beta blockers, non-selective **(nadolol)**. Moderate Study
- **Bosentan** is predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **lapatinib**. Moderate Study
- **Lapatinib** is predicted to increase the exposure to **ceritinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Cobicistat** is predicted to increase the exposure to **lapatinib**. Avoid. Moderate Study
- **Lapatinib** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1085. Moderate Theoretical
- **Lapatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **lapatinib**. Moderate Study → Also see **TABLE 9** p. 1336
- **Lapatinib** is predicted to increase the exposure to **dabigatran**. Severe Theoretical
- **Lapatinib** is predicted to increase the exposure to **digoxin**. Moderate Theoretical
- **Lapatinib** is predicted to slightly increase the exposure to **edoxaban**. Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Lapatinib (continued)

- **Efavirenz** is predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **Enzalutamide** is predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study
- **Lapatinib** is predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- **Lapatinib** is predicted to increase the exposure to **everolimus**. Moderate Theoretical
- **Lapatinib** is predicted to increase the exposure to **fidaxomicin**. Avoid. Moderate Study
- **Grapefruit juice** is predicted to increase the exposure to **lapatinib**. Avoid. Moderate Theoretical
- **H_2 receptor antagonists** are predicted to decrease the absorption of **lapatinib**. Avoid. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **lapatinib**. Avoid. Moderate Study → Also see **TABLE 9** p. 1336
- **Idelalisib** is predicted to increase the exposure to **lapatinib**. Avoid. Moderate Study
- **Imatinib** is predicted to increase the exposure to **lapatinib**. Moderate Study
- **Lapatinib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Lapatinib** is predicted to increase the exposure to **loperamide**. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **lapatinib**. Avoid. Moderate Study → Also see **TABLE 9** p. 1336
- Macrolides **(erythromycin)** are predicted to increase the exposure to **lapatinib**. Moderate Study → Also see **TABLE 9** p. 1336
- **Mitotane** is predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study
- **Netupitant** is predicted to increase the exposure to **lapatinib**. Moderate Study
- **Nevirapine** is predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study
- **Nilotinib** is predicted to increase the exposure to **lapatinib**. Moderate Study → Also see **TABLE 9** p. 1336
- **Lapatinib** is predicted to increase the exposure to **nintedanib**. Moderate Study
- **Lapatinib** is predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Lapatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study
- **Lapatinib** is predicted to increase the exposure to **sirolimus**. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study
- **Lapatinib** slightly increases the exposure to taxanes **(paclitaxel)**. Severe Study
- **Tedizolid** is predicted to increase the exposure to **lapatinib**. Avoid. Moderate Theoretical
- **Lapatinib** is predicted to increase the exposure to **topotecan**. Severe Study
- **Lapatinib** is predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Lapatinib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical

Laronidase

- Antimalarials **(chloroquine)** are predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. Severe Theoretical
- **Hydroxychloroquine** is predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. Severe Theoretical

Ledipasvir

- **Antacids** are predicted to decrease the exposure to **ledipasvir**. Separate administration by 4 hours. Moderate Theoretical
- **Ledipasvir** increases the risk of severe bradycardia or heart block when given with antiarrhythmics **(amiodarone)**. Refer to specialist literature. Severe Anecdotal
- Antiepileptics **(carbamazepine)** are predicted to decrease the exposure to **ledipasvir**. Avoid. Severe Theoretical
- Calcium salts **(calcium carbonate)** are predicted to decrease the exposure to **ledipasvir**. Separate administration by 4 hours. Moderate Theoretical
- **H_2 receptor antagonists** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 617. Moderate Study
- **Proton pump inhibitors** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 617. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **ledipasvir**. Avoid. Severe Theoretical
- **Ledipasvir** moderately increases the exposure to **simeprevir** and **simeprevir** slightly increases the exposure to **ledipasvir**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **ledipasvir**. Avoid. Severe Theoretical
- **Ledipasvir** is predicted to increase the exposure to statins **(atorvastatin, fluvastatin, pravastatin, simvastatin)**. Monitor and adjust dose. Moderate Theoretical
- **Ledipasvir** is predicted to increase the exposure to statins **(rosuvastatin)**. Avoid. Severe Theoretical
- **Ledipasvir** (with sofosbuvir) slightly increases the exposure to **tenofovir disoproxil**. Moderate Study

Leflunomide → see **TABLE 1** p. 1334 (hepatotoxicity), **TABLE 15** p. 1337 (myelosuppression)

PHARMACOLOGY Leflunomide has a long half-life; washout procedure recommended before switching to other DMARDs (consult product literature).

- **Leflunomide** is predicted to decrease the exposure to **agomelatine**. Moderate Theoretical
- **Leflunomide** decreases the exposure to **aminophylline**. Adjust dose. Moderate Study
- **Leflunomide** is predicted to decrease the exposure to anaesthetics, local **(ropivacaine)**. Moderate Theoretical
- **Leflunomide** potentially increases the exposure to **baricitinib**. Moderate Theoretical
- **Leflunomide** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. Moderate Study
- **Leflunomide** is predicted to decrease the exposure to **clozapine**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Leflunomide** increases the anticoagulant effect of **coumarins**. Severe Anecdotal
- **Leflunomide** is predicted to decrease the exposure to **duloxetine**. Moderate Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **leflunomide**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Leflunomide** is predicted to decrease the exposure to **melatonin**. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to **montelukast**. Moderate Theoretical
- **Leflunomide** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. Moderate Study → Also see **TABLE 15** p. 1337
- **Leflunomide** is predicted to increase the exposure to **pioglitazone**. Moderate Study
- **Leflunomide** is predicted to decrease the exposure to **pirfenidone**. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to **repaglinide**. Moderate Study
- **Leflunomide** is predicted to increase the exposure to **selexipag**. Adjust dose. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to statins **(rosuvastatin)**. Adjust dose. Moderate Study → Also see **TABLE 1** p. 1334
- **Leflunomide** is predicted to increase the concentration of taxanes **(paclitaxel)**. Severe Anecdotal → Also see **TABLE 15** p. 1337
- **Leflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. Moderate Study
- **Leflunomide** moderately decreases the exposure to **tizanidine**. Mild Study

https://nhathuocngocanh.com/ www.getintopharma.com

Lenalidomide → see **TABLE 1** p. 1334 (hepatotoxicity), **TABLE 15** p. 1337 (myelosuppression), **TABLE 5** p. 1334 (thromboembolism)
- **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. Avoid. Severe Theoretical
- **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. Severe Theoretical

Lercanidipine → see calcium channel blockers

Levamisole
- **Albendazole** slightly decreases the exposure to **levamisole** and **levamisole** moderately decreases the exposure to **albendazole**. Moderate Study
- **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **levamisole**. Moderate Study
- **Levamisole** increases the exposure to **ivermectin**. Moderate Study

Levetiracetam → see antiepileptics

Levobunolol → see beta blockers, non-selective

Levobupivacaine → see anaesthetics, local

Levocetirizine → see antihistamines, non-sedating

Levodopa → see **TABLE 8** p. 1335 (hypotension)

GENERAL INFORMATION Drugs with antimuscarinic effects might reduce the absorption of levodopa, see **TABLE 10** p. 1336
- **Amisulpride** is predicted to decrease the effects of **levodopa**. Avoid. Severe Theoretical
- Antiepileptics **(fosphenytoin, phenytoin)** decrease the effects of **levodopa**. Moderate Study
- **Aripiprazole** is predicted to decrease the effects of **levodopa**. Severe Theoretical → Also see **TABLE 8** p. 1335
- **Asenapine** is predicted to decrease the effects of **levodopa**. Adjust dose. Severe Theoretical → Also see **TABLE 8** p. 1335
- **Baclofen** is predicted to increase the risk of side-effects when given with **levodopa**. Severe Anecdotal → Also see **TABLE 8** p. 1335
- **Benperidol** is predicted to decrease the effects of **levodopa**. Severe Study → Also see **TABLE 8** p. 1335
- **Bupropion** increases the risk of side-effects when given with **levodopa**. Moderate Study
- **Clozapine** is predicted to decrease the effects of **levodopa**. Severe Theoretical → Also see **TABLE 8** p. 1335
- **Droperidol** decreases the effects of **levodopa**. Severe Study → Also see **TABLE 8** p. 1335
- **Entacapone** increases the exposure to **levodopa**. Monitor side effects and adjust dose. Moderate Study
- **Flupentixol** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. Severe Theoretical → Also see **TABLE 8** p. 1335
- **Haloperidol** decreases the effects of **levodopa**. Severe Study → Also see **TABLE 8** p. 1335
- **Iron (oral)** decreases the absorption of **levodopa**. Moderate Study
- **Isoniazid** decreases the effects of **levodopa**. Moderate Study
- **Levodopa** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. Severe Theoretical
- **Loxapine** is predicted to decrease the effects of **levodopa**. Severe Theoretical → Also see **TABLE 8** p. 1335
- **Lurasidone** is predicted to decrease the effects of **levodopa**. Severe Theoretical → Also see **TABLE 8** p. 1335
- **Memantine** is predicted to increase the effects of **levodopa**. Moderate Theoretical
- **Metoclopramide** decreases the effects of **levodopa**. Avoid. Moderate Study
- **Levodopa** increases the risk of side-effects when given with **moclobemide**. Moderate Study
- **Levodopa** increases the risk of a hypertensive crisis when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Study → Also see **TABLE 8** p. 1335
- **Monoamine-oxidase B inhibitors** are predicted to increase the effects of **levodopa**. Adjust dose. Mild Study → Also see **TABLE 8** p. 1335
- **Olanzapine** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. Severe Anecdotal → Also see **TABLE 8** p. 1335
- **Opicapone** increases the exposure to **levodopa**. Adjust dose. Moderate Study
- **Paliperidone** is predicted to decrease the effects of **levodopa**. Severe Theoretical → Also see **TABLE 8** p. 1335
- **Phenothiazines** decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. Severe Study → Also see **TABLE 8** p. 1335
- **Pimozide** decreases the effects of **levodopa**. Severe Theoretical → Also see **TABLE 8** p. 1335
- **Quetiapine** decreases the effects of **levodopa**. Severe Anecdotal → Also see **TABLE 8** p. 1335
- **Risperidone** is predicted to decrease the effects of **levodopa**. Avoid or adjust dose. Severe Anecdotal → Also see **TABLE 8** p. 1335
- **Sulpiride** is predicted to decrease the effects of **levodopa**. Avoid. Severe Theoretical → Also see **TABLE 8** p. 1335
- **Tetrabenazine** is predicted to decrease the effects of **levodopa**. Use with caution or avoid. Moderate Theoretical
- **Tolcapone** increases the exposure to **levodopa**. Monitor and adjust dose. Moderate Study
- **Tryptophan** greatly decreases the concentration of **levodopa**. Moderate Study
- **Zuclopenthixol** is predicted to decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. Severe Theoretical → Also see **TABLE 8** p. 1335

Levofloxacin → see quinolones

Levofolinic acid → see folates

Levomepromazine → see phenothiazines

Levonorgestrel
- Antiepileptics **(carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Aprepitant** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Bosentan** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Efavirenz** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Fosaprepitant** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Griseofulvin** potentially decreases the efficacy of oral **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- HIV-protease inhibitors **(ritonavir)** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Lumacaftor** is predicted to decrease the efficacy of **levonorgestrel**. Use additional contraceptive precautions. Severe Theoretical
- **Modafinil** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Nevirapine** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Rifabutin** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Rifampicin** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **St John's Wort** is predicted to decrease the efficacy of **levonorgestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Sugammadex** is predicted to decrease the exposure to **levonorgestrel**. Use additional contraceptive precautions. Severe Theoretical
- **Ulipristal** is predicted to decrease the efficacy of **levonorgestrel**. Avoid. Severe Theoretical

Levothyroxine → see thyroid hormones

https://nhathuocngocanh.com/ www.getintopharma.com

Lidocaine → see antiarrhythmics

Linagliptin → see **TABLE 14** p. 1337 (antidiabetic drugs)

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **linagliptin**. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **linagliptin**. Moderate Study
- **Linagliptin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **linagliptin**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **linagliptin**. Moderate Study

Linezolid → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 13** p. 1337 (serotonin syndrome)

FOOD AND LIFESTYLE Patients taking linezolid should avoid consuming large amounts of tyramine-rich foods (such as mature cheese, salami, pickled herring, *Bovril*®, *Oxo*®, *Marmite*® or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- **Beta$_2$ agonists** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. Severe Theoretical
- **Bupropion** is predicted to increase the risk of intraoperative hypertension when given with **linezolid**. Severe Anecdotal → Also see **TABLE 13** p. 1337
- **Buspirone** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Levodopa** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. Severe Theoretical
- Macrolides **(clarithromycin)** increase the exposure to **linezolid**. Moderate Anecdotal
- **Methylphenidate** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. Severe Theoretical
- **Moclobemide** is predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping **moclobemide**. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 13** p. 1337
- Monoamine-oxidase B inhibitors **(rasagiline, selegiline)** are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 13** p. 1337
- Monoamine-oxidase B inhibitors **(safinamide)** are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 1 week after stopping **safinamide**. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **linezolid**. Avoid. Severe Theoretical
- **Rifampicin** slightly decreases the exposure to **linezolid**. Moderate Study
- **Sympathomimetics, inotropic** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. Severe Theoretical
- Sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, ephedrine, isometheptene, noradrenaline/norepinephrine, phenylephrine)** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. Severe Theoretical
- Sympathomimetics, vasoconstrictor **(pseudoephedrine)** increase the risk of elevated blood pressure when given with **linezolid**. Avoid. Severe Study

Liothyronine → see thyroid hormones

Liraglutide → see **TABLE 14** p. 1337 (antidiabetic drugs)

Lisdexamfetamine → see amfetamines

Lisinopril → see ACE inhibitors

Lithium → see **TABLE 13** p. 1337 (serotonin syndrome), **TABLE 9** p. 1336 (QT-interval prolongation)

- **ACE inhibitors** are predicted to increase the concentration of **lithium**. Monitor and adjust dose. Severe Anecdotal
- **Acetazolamide** alters the concentration of **lithium**. Severe Anecdotal
- Aldosterone antagonists **(eplerenone)** potentially increase the concentration of **lithium**. Avoid. Moderate Theoretical
- Aldosterone antagonists **(spironolactone)** potentially increase the concentration of **lithium**. Moderate Study
- **Aminophylline** is predicted to decrease the concentration of **lithium**. Moderate Theoretical
- **Angiotensin-II receptor antagonists** potentially increase the concentration of **lithium**. Monitor concentration and adjust dose. Severe Anecdotal
- Antiepileptics **(carbamazepine, oxcarbazepine)** are predicted to increase the risk of neurotoxicity when given with **lithium**. Severe Anecdotal
- **Calcitonin (salmon)** decreases the concentration of **lithium**. Monitor concentration and adjust dose. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the risk of neurotoxicity when given with **lithium**. Severe Anecdotal
- **Loop diuretics** increase the concentration of **lithium**. Monitor and adjust dose. Severe Study
- **Methyldopa** increases the risk of neurotoxicity when given with **lithium**. Severe Anecdotal
- **NSAIDs** increase the concentration of **lithium**. Monitor and adjust dose. Severe Study
- **Phenothiazines** potentially increase the risk of neurotoxicity when given with **lithium**. Severe Anecdotal → Also see **TABLE 9** p. 1336
- Potassium-sparing diuretics **(triamterene)** potentially increase the clearance of **lithium**. Moderate Study
- **Quetiapine** potentially increases the risk of neurotoxicity when given with **lithium**. Severe Anecdotal
- **Risperidone** potentially increases the risk of neurotoxicity when given with **lithium**. Severe Anecdotal → Also see **TABLE 9** p. 1336
- **Sodium bicarbonate** decreases the concentration of **lithium**. Severe Anecdotal
- **Sulpiride** potentially increases the risk of neurotoxicity when given with **lithium**. Severe Anecdotal → Also see **TABLE 9** p. 1336
- **Theophylline** is predicted to decrease the concentration of **lithium**. Monitor concentration and adjust dose. Moderate Anecdotal
- **Thiazide diuretics** increase the concentration of **lithium**. Avoid or adjust dose and monitor concentration. Severe Study
- **Tricyclic antidepressants** potentially increase the risk of neurotoxicity when given with **lithium**. Severe Anecdotal → Also see **TABLE 13** p. 1337 → Also see **TABLE 9** p. 1336
- **Zuclopenthixol** potentially increases the risk of neurotoxicity when given with **lithium**. Severe Anecdotal → Also see **TABLE 9** p. 1336

Live vaccines

Bacillus Calmette-Guérin vaccine · influenza vaccine (live) · measles, mumps and rubella vaccine, live · rotavirus vaccine · typhoid vaccine, oral · varicella-zoster vaccine · yellow fever vaccine, live

GENERAL INFORMATION Oral typhoid vaccine is inactivated by concurrent administration of antibacterials or antimalarials: antibacterials should be avoided for 3 days before and after oral typhoid vaccination; *mefloquine* should be avoided for at least 12 hours before or after oral typhoid vaccination; for other antimalarials oral typhoid vaccine vaccination should be completed at least 3 days before the first dose of the antimalarial (except proguanil hydrochloride with atovaquone, which can be given concurrently).

- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **abatacept**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **alkylating agents**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with

https://nhathuocngocanh.com/ www.getintopharma.com

amsacrine. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with anakinra. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with anthracyclines. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with azathioprine (high-dose). Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with baricitinib. Avoid. Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with belatacept. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with bleomycin. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with capecitabine. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with ciclosporin. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with cladribine. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with clofarabine. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with corticosteroids (high-dose). Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with cytarabine. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with dactinomycin. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with dimethyl fumarate. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with etanercept. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with etoposide. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with everolimus. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with fingolimod. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with fludarabine. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with fluorouracil. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with gemcitabine. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with hydroxycarbamide. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with irinotecan. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with iron chelators (dexrazoxane). Avoid. Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with leflunomide. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with mercaptopurine (high-dose). Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with methotrexate (high-dose). Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with mitomycin. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with monoclonal antibodies. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with mycophenolate. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with pemetrexed. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with platinum compounds. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with procarbazine. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with raltitrexed. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with sirolimus. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with tacrolimus. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with taxanes (docetaxel, paclitaxel). Public Health England advises avoid (refer to Green Book). Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Live vaccines (continued)

- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tegafur**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **temsirolimus**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **teriflunomide**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tioguanine**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** potentially increase the risk of generalised infection (possibly life-threatening) when given with **tofacitinib**. Avoid. Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **topotecan**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **trabectedin**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Venetoclax** potentially decreases the efficacy of **live vaccines**. Avoid. Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **vinca alkaloids**. Public Health England advises avoid (refer to Green Book). Severe Theoretical

Lixisenatide → see **TABLE 14** p. 1337 (antidiabetic drugs)

SEPARATION OF ADMINISTRATION Some orally administered drugs should be taken at least 1 hour before, or 4 hours after, lixisenatide injection.

Lofepramine → see tricyclic antidepressants

Lofexidine → see **TABLE 8** p. 1335 (hypotension), **TABLE 9** p. 1336 (QT-interval prolongation), **TABLE 11** p. 1336 (CNS depressant effects)

Lomitapide → see **TABLE 1** p. 1334 (hepatotoxicity)

FOOD AND LIFESTYLE Bitter (Seville) orange is predicted to increase the exposure to lomitapide; separate administration by 12 hours.

- **Alprazolam** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- Antiarrhythmics **(amiodarone)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. Moderate Theoretical → Also see **TABLE 1** p. 1334
- Antifungals, azoles **(clotrimazole)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical → Also see **TABLE 1** p. 1334
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **lomitapide**. Avoid. Severe Study → Also see **TABLE 1** p. 1334
- **Aprepitant** is predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- **Bicalutamide** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- Calcium channel blockers **(amlodipine, lacidipine)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- **Ciclosporin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Cilostazol** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Cobicistat** is predicted to markedly increase the exposure to **lomitapide**. Avoid. Severe Study
- Oral **combined hormonal contraceptives** slightly increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Lomitapide** increases the exposure to coumarins **(warfarin)**. Monitor INR and adjust dose. Severe Study
- **Crizotinib** is predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. Moderate Theoretical
- **Everolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Fosaprepitant** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- H_2 receptor antagonists **(cimetidine, ranitidine)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to markedly increase the exposure to **lomitapide**. Avoid. Severe Study
- **Idelalisib** is predicted to markedly increase the exposure to **lomitapide**. Avoid. Severe Study
- **Imatinib** is predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- **Isoniazid** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Unknown Theoretical → Also see **TABLE 1** p. 1334
- **Ivacaftor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Lapatinib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Linagliptin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- Macrolides **(azithromycin)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to markedly increase the exposure to **lomitapide**. Avoid. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- **Pazopanib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Peppermint oil** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Propiverine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Ranolazine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. Moderate Theoretical
- SSRIs **(fluoxetine)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Unknown Theoretical
- SSRIs **(fluvoxamine)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

- **Lomitapide** increases the exposure to statins **(atorvastatin)**. Adjust **lomitapide** dose or separate administration by 12 hours. Mild Study → Also see **TABLE 1** p. 1334
- **Lomitapide** increases the exposure to statins **(simvastatin)**. Monitor and adjust **simvastatin** dose, p. 203. Moderate Study → Also see **TABLE 1** p. 1334
- **Tacrolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Ticagrelor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Tolvaptan** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical

Lomustine → see alkylating agents

Loop diuretics → see **TABLE 18** p. 1338 (hyponatraemia), **TABLE 8** p. 1335 (hypotension), **TABLE 19** p. 1338 (ototoxicity), **TABLE 17** p. 1338 (reduced serum potassium)

bumetanide · furosemide · torasemide

- **Aliskiren** slightly decreases the exposure to **furosemide**. Moderate Study → Also see **TABLE 8** p. 1335
- **Loop diuretics** increase the risk of nephrotoxicity when given with **aminoglycosides**. Avoid. Moderate Study → Also see **TABLE 19** p. 1338
- Antiepileptics **(fosphenytoin, phenytoin)** decrease the effects of **furosemide**. Moderate Study
- Intravenous **furosemide** potentially increases the risk of sweating, variable blood pressure, and tachycardia when given after **chloral hydrate**. Moderate Anecdotal
- **Dasabuvir** (with ombitasvir, paritaprevir and ritonavir) increases the concentration of **furosemide**. Adjust dose. Moderate Study
- **Loop diuretics** increase the concentration of **lithium**. Monitor and adjust dose. Severe Study
- **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **furosemide**. Adjust dose. Moderate Theoretical
- **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **loop diuretics**. Moderate Theoretical

Loperamide

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **loperamide**. Severe Theoretical
- **Ceritinib** is predicted to increase the exposure to **loperamide**. Moderate Theoretical
- **Loperamide** greatly increases the absorption of oral **desmopressin** (and possibly sublingual). Moderate Study
- **Eliglustat** is predicted to increase the exposure to **loperamide**. Adjust dose. Moderate Study
- **Lapatinib** is predicted to increase the exposure to **loperamide**. Moderate Theoretical
- **Mirabegron** is predicted to increase the exposure to **loperamide**. Mild Theoretical
- **Opicapone** is predicted to increase the exposure to **loperamide**. Avoid. Moderate Study
- **Velpatasvir** is predicted to increase the exposure to **loperamide**. Severe Theoretical

Lopinavir → see HIV-protease inhibitors

Loprazolam → see **TABLE 11** p. 1336 (CNS depressant effects)

Loratadine → see antihistamines, non-sedating

Lorazepam → see **TABLE 11** p. 1336 (CNS depressant effects)

- **Rifampicin** increases the clearance of **lorazepam**. Moderate Study

Lormetazepam → see **TABLE 11** p. 1336 (CNS depressant effects)

Losartan → see angiotensin-II receptor antagonists

Low molecular-weight heparins → see **TABLE 16** p. 1338 (increased serum potassium), **TABLE 3** p. 1334 (anticoagulant effects)

dalteparin · enoxaparin · tinzaparin

- **Ranibizumab** increases the risk of bleeding events when given with **low molecular-weight heparins**. Severe Theoretical

Loxapine → see **TABLE 8** p. 1335 (hypotension), **TABLE 11** p. 1336 (CNS depressant effects), **TABLE 10** p. 1336 (antimuscarinics)

- **Combined hormonal contraceptives** are predicted to increase the exposure to **loxapine**. Avoid. Unknown Theoretical
- **Loxapine** is predicted to decrease the effects of **dopamine receptor agonists**. Moderate Theoretical → Also see **TABLE 8** p. 1335, → Also see **TABLE 10** p. 1336
- **Loxapine** is predicted to decrease the effects of **levodopa**. Severe Theoretical → Also see **TABLE 8** p. 1335
- Quinolones **(ciprofloxacin)** are predicted to increase the exposure to **loxapine**. Avoid. Unknown Theoretical
- SSRIs **(fluvoxamine)** are predicted to increase the exposure to **loxapine**. Avoid. Unknown Theoretical

Lumacaftor

- **Lumacaftor** is predicted to decrease the exposure to antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)**. Avoid. Severe Theoretical
- **Lumacaftor** is predicted to decrease the exposure to antifungals, azoles **(fluconazole)**. Adjust dose. Mild Theoretical
- **Lumacaftor** is predicted to decrease the exposure to antifungals, azoles **(itraconazole, ketoconazole, posaconazole, voriconazole)**. Avoid or monitor efficacy. Moderate Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **ciclosporin**. Avoid. Severe Theoretical
- **Lumacaftor** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. Severe Theoretical
- **Lumacaftor** is predicted to decrease the exposure to corticosteroids **(methylprednisolone, prednisone)**. Adjust dose. Severe Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **everolimus**. Avoid. Severe Theoretical
- **Lumacaftor** potentially decreases the exposure to **glecaprevir**. Avoid. Severe Theoretical
- **Lumacaftor** is predicted to decrease the efficacy of **levonorgestrel**. Use additional contraceptive precautions. Severe Theoretical
- **Lumacaftor** is predicted to decrease the exposure to macrolides **(clarithromycin, erythromycin)**. Moderate Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **midazolam**. Avoid. Severe Theoretical
- **Lumacaftor** potentially decreases the exposure to **pibrentasvir**. Avoid. Severe Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **rifabutin**. Adjust dose. Moderate Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **sirolimus**. Avoid. Severe Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **tacrolimus**. Avoid. Severe Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **temsirolimus**. Avoid. Severe Theoretical
- **Lumacaftor** is predicted to decrease the efficacy of **ulipristal**. Use additional contraceptive precautions. Severe Theoretical

Lumefantrine → see antimalarials

Lurasidone → see **TABLE 8** p. 1335 (hypotension), **TABLE 11** p. 1336 (CNS depressant effects)

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **lurasidone**. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **lurasidone**. Avoid. Moderate Study → Also see **TABLE 11** p. 1336
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **lurasidone**. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **lurasidone**. Avoid. Severe Study
- **Aprepitant** is predicted to increase the exposure to **lurasidone**. Moderate Study
- **Bosentan** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **lurasidone**. Moderate Study → Also see **TABLE 8** p. 1335
- **Cobicistat** is predicted to increase the exposure to **lurasidone**. Avoid. Severe Study
- **Crizotinib** is predicted to increase the exposure to **lurasidone**. Moderate Study
- **Efavirenz** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **lurasidone**. Avoid. Moderate Study

https://nhathuocngocanh.com/ www.getintopharma.com

Lurasidone (continued)
- **Grapefruit juice** is predicted to increase the exposure to **lurasidone**. Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **lurasidone**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **lurasidone**. Avoid. Severe Study
- **Imatinib** is predicted to increase the exposure to **lurasidone**. Moderate Study
- **Lurasidone** is predicted to decrease the effects of **levodopa**. Severe Theoretical → Also see TABLE 8 p. 1335
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **lurasidone**. Avoid. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **lurasidone**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **lurasidone**. Avoid. Moderate Study
- **Netupitant** is predicted to increase the exposure to **lurasidone**. Moderate Study
- **Nevirapine** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to **lurasidone**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **lurasidone**. Avoid. Moderate Study
- **St John's Wort** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. Moderate Theoretical

Lymecycline → see tetracyclines

Macitentan
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **macitentan**. Avoid. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **macitentan**. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **macitentan**. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **macitentan**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **macitentan**. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **macitentan**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **macitentan**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **macitentan**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **macitentan**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **macitentan**. Avoid. Severe Theoretical

Macrolides → see TABLE 9 p. 1336 (QT-interval prolongation)

azithromycin • clarithromycin • erythromycin

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- **Clarithromycin** is predicted to increase the exposure to **abiraterone**. Severe Theoretical
- **Macrolides** are predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. Moderate Study
- **Clarithromycin** is predicted to markedly increase the exposure to aldosterone antagonists **(eplerenone)**. Avoid. Severe Study
- **Erythromycin** is predicted to increase the exposure to aldosterone antagonists **(eplerenone)**. Adjust **eplerenone** dose, p. 190. Severe Study
- **Azithromycin** is predicted to increase the exposure to **aliskiren**. Moderate Theoretical
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to **aliskiren**. Moderate Study
- **Clarithromycin** increases the exposure to **almotriptan**. Mild Study
- **Clarithromycin** is predicted to moderately increase the exposure to alpha blockers **(alfuzosin, tamsulosin)**. Use with caution or avoid. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to alpha blockers **(doxazosin)**. Moderate Study
- **Erythromycin** is predicted to increase the exposure to alpha blockers **(tamsulosin)**. Moderate Theoretical
- **Clarithromycin** moderately increases the exposure to **alprazolam**. Avoid. Moderate Study
- **Erythromycin** is predicted to increase the exposure to **alprazolam**. Severe Study
- **Azithromycin** is predicted to increase the exposure to **aminophylline**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to **aminophylline**. Adjust dose. Moderate Theoretical
- **Aminophylline** is predicted to decrease the exposure to **erythromycin**. Adjust dose. Severe Study
- **Clarithromycin** very markedly increases the exposure to antiarrhythmics **(dronedarone)**. Avoid. Severe Study → Also see TABLE 9 p. 1336
- **Erythromycin** is predicted to moderately increase the exposure to antiarrhythmics **(dronedarone)**. Avoid. Severe Theoretical → Also see TABLE 9 p. 1336
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to antiarrhythmics **(lidocaine)**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to antiarrhythmics **(propafenone)**. Monitor and adjust dose. Severe Study
- **Erythromycin** is predicted to increase the exposure to antiarrhythmics **(propafenone)**. Monitor and adjust dose. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to anticholinesterases, centrally acting **(galantamine)**. Monitor and adjust dose. Moderate Study
- **Clarithromycin** slightly increases the concentration of antiepileptics **(carbamazepine)**. Monitor concentration and adjust dose. Severe Study
- **Erythromycin** markedly increases the concentration of antiepileptics **(carbamazepine)**. Monitor concentration and adjust dose. Severe Study
- **Clarithromycin** is predicted to very slightly increase the exposure to antiepileptics **(perampanel)**. Mild Study
- **Clarithromycin** is predicted to increase the exposure to antifungals, azoles **(isavuconazole)**. Avoid or monitor side effects. Severe Study
- **Erythromycin** is predicted to increase the exposure to antifungals, azoles **(isavuconazole)**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to antihistamines, non-sedating **(mizolastine)**. Avoid. Severe Study
- **Erythromycin** is predicted to increase the exposure to antihistamines, non-sedating **(mizolastine)**. Severe Theoretical
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to antihistamines, non-sedating **(rupatadine)**. Avoid. Moderate Study
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the concentration of antimalarials **(piperaquine)**. Severe Theoretical
- **Clarithromycin** is predicted to increase the exposure to **apixaban**. Severe Theoretical
- **Erythromycin** is predicted to increase the exposure to **apixaban**. Moderate Theoretical
- **Clarithromycin** is predicted to markedly increase the exposure to **aprepitant**. Moderate Study
- **Clarithromycin** is predicted to slightly increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. Moderate Study
- **Erythromycin** is predicted to increase the exposure to **axitinib**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Study → Also see TABLE 9 p. 1336
- **Erythromycin** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Theoretical → Also see TABLE 9 p. 1336
- **Macrolides** are predicted to increase the exposure to beta blockers, non-selective **(nadolol)**. Moderate Study

https://nhathuocngocanh.com/ www.getintopharma.com

- **Clarithromycin** is predicted to increase the exposure to beta$_2$ agonists **(salmeterol)**. Avoid. Severe Study
- **Clarithromycin** slightly increases the exposure to **bortezomib**. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **bosentan**. Moderate Theoretical
- **Clarithromycin** is predicted to markedly increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Study → Also see **TABLE 9** p. 1336
- **Erythromycin** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Clarithromycin** is predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 338. Severe Study
- **Erythromycin** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. Moderate Study
- **Clarithromycin** slightly increases the exposure to **cabozantinib**. Moderate Study → Also see **TABLE 9** p. 1336
- **Erythromycin** is predicted to increase the exposure to **cabozantinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Erythromycin** is predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Erythromycin** is predicted to increase the exposure to calcium channel blockers **(diltiazem)**. Severe Theoretical
- **Clarithromycin** is predicted to increase the exposure to calcium channel blockers **(diltiazem, verapamil)**. Severe Study
- **Clarithromycin** is predicted to markedly increase the exposure to calcium channel blockers **(lercanidipine)**. Avoid. Severe Study
- **Erythromycin** is predicted to increase the exposure to calcium channel blockers **(verapamil)**. Severe Study
- **Clarithromycin** is predicted to increase the exposure to **cannabis extract**. Use with caution and adjust dose. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 945. Severe Study → Also see **TABLE 9** p. 1336
- Macrolides **(azithromycin, erythromycin)** are predicted to increase the exposure to **ceritinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- Macrolides **(clarithromycin, erythromycin)** increase the concentration of **ciclosporin**. Severe Study
- **Clarithromycin** is predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. Moderate Study
- **Erythromycin** slightly increases the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. Moderate Study
- **Clarithromycin** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. Moderate Study
- **Erythromycin** potentially increases the risk of toxicity when given with **clozapine**. Severe Anecdotal
- **Clarithromycin** is predicted to markedly increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. Severe Study
- **Erythromycin** is predicted to increase the exposure to **cobimetinib**. Severe Theoretical
- **Azithromycin** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1085. Severe Theoretical
- **Clarithromycin** is predicted to increase the exposure to **colchicine**. Avoid potent inhibitors of CYP3A4 or adjust **colchicine** dose, p. 1085. Severe Study
- **Erythromycin** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. Severe Study
- **Clarithromycin** is predicted to increase the exposure to corticosteroids **(beclometasone)** (risk with beclometasone is likely to be lower than with other corticosteroids). Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to corticosteroids **(betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, prednisone, triamcinolone)**. Avoid or monitor side effects. Severe Study
- **Erythromycin** is predicted to increase the exposure to corticosteroids **(methylprednisolone)**. Monitor and adjust dose. Moderate Study
- Macrolides **(clarithromycin, erythromycin)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. Severe Anecdotal
- **Clarithromycin** is predicted to moderately increase the exposure to **crizotinib**. Avoid. Moderate Study → Also see **TABLE 9** p. 1336
- **Macrolides** are predicted to increase the exposure to **dabigatran**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. Moderate Study
- **Clarithromycin** is predicted to moderately increase the exposure to **daclatasvir**. Adjust **daclatasvir** dose, p. 614. Moderate Study
- **Clarithromycin** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. Severe Study
- **Erythromycin** is predicted to slightly increase the exposure to **darifenacin**. Moderate Study
- **Clarithromycin** is predicted to markedly increase the exposure to **dasatinib**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **Erythromycin** is predicted to increase the exposure to **dasatinib**. Severe Study → Also see **TABLE 9** p. 1336
- **Clarithromycin** very slightly increases the exposure to **delamanid**. Severe Study → Also see **TABLE 9** p. 1336
- **Macrolides** increase the concentration of **digoxin**. Severe Anecdotal
- Macrolides **(clarithromycin, erythromycin)** increase the risk of QT-prolongation when given with **domperidone**. Avoid. Severe Study
- **Clarithromycin** increases the exposure to dopamine receptor agonists **(bromocriptine)**. Severe Study
- **Erythromycin** is predicted to increase the exposure to dopamine receptor agonists **(bromocriptine)**. Severe Theoretical
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the concentration of dopamine receptor agonists **(cabergoline)**. Avoid. Severe Study
- **Clarithromycin** is predicted to increase the exposure to **dutasteride**. Monitor side effects and adjust dose. Moderate Theoretical
- **Erythromycin** is predicted to moderately increase the exposure to **dutasteride**. Mild Study
- **Erythromycin** slightly increases the exposure to **edoxaban**. Adjust **edoxaban** dose, p. 125. Severe Study
- Macrolides **(azithromycin, clarithromycin)** are predicted to slightly increase the exposure to **edoxaban**. Severe Theoretical
- **Efavirenz** decreases the exposure to **clarithromycin**. Moderate Study → Also see **TABLE 9** p. 1336
- **Clarithromycin** slightly to moderately increases the exposure to **elbasvir**. Avoid. Moderate Study
- **Clarithromycin** is predicted to markedly increase the exposure to **eletriptan**. Avoid. Severe Study
- **Erythromycin** moderately increases the exposure to **eletriptan**. Avoid. Moderate Study
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Clarithromycin** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. Severe Theoretical
- **Erythromycin** is predicted to increase the risk of ergotism when given with **ergometrine**. Severe Theoretical
- **Clarithromycin** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. Severe Theoretical
- **Erythromycin** is predicted to increase the risk of ergotism when given with **ergotamine**. Severe Theoretical
- **Clarithromycin** is predicted to slightly increase the exposure to **erlotinib**. Use with caution and adjust dose. Moderate Study
- Macrolides **(azithromycin, erythromycin)** are predicted to increase the exposure to **erlotinib**. Moderate Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Macrolides (continued)

- **Etravirine** decreases the exposure to **clarithromycin**. Severe Study
- **Clarithromycin** is predicted to increase the concentration of **everolimus**. Avoid. Severe Study
- **Erythromycin** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. Moderate Study
- **Clarithromycin** is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent inhibitors of CYP3A4; avoid in hepatic and renal impairment, p. 759. Severe Study
- **Erythromycin** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. Mild Study
- **Macrolides** are predicted to increase the exposure to **fidaxomicin**. Avoid. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **fosaprepitant**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to **gefitinib**. Moderate Study
- **Erythromycin** is predicted to increase the exposure to **gefitinib**. Moderate Theoretical
- **Clarithromycin** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. Severe Study
- **Clarithromycin** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Study
- **Erythromycin** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Theoretical
- H_2 receptor antagonists **(cimetidine)** slightly increase the exposure to **erythromycin**. Moderate Study
- HIV-protease inhibitors **(atazanavir)** are predicted to increase the exposure to **clarithromycin**. Adjust dose in renal impairment. Severe Study
- HIV-protease inhibitors **(atazanavir, darunavir, fosamprenavir, lopinavir, ritonavir, tipranavir)** are predicted to increase the exposure to **erythromycin**. Severe Theoretical
- HIV-protease inhibitors **(darunavir, fosamprenavir, lopinavir)** (boosted with ritonavir) are predicted to increase the exposure to **clarithromycin**. Adjust dose in renal impairment. Severe Study
- HIV-protease inhibitors **(ritonavir)** increase the exposure to **clarithromycin**. Adjust dose in renal impairment. Severe Study
- HIV-protease inhibitors **(tipranavir)** (boosted with ritonavir) increase the exposure to **clarithromycin** and **clarithromycin** increases the exposure to HIV-protease inhibitors **(tipranavir)** (boosted with ritonavir). Monitor; adjust dose in renal impairment. Severe Study
- **Clarithromycin** increases the exposure to HIV-protease inhibitors **(saquinavir)** and HIV-protease inhibitors **(saquinavir)** increase the exposure to **clarithromycin**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **Erythromycin** is predicted to increase the exposure to HIV-protease inhibitors **(saquinavir)**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Clarithromycin** is predicted to very markedly increase the exposure to **ibrutinib**. Avoid potent inhibitors of CYP3A4 or adjust **ibrutinib** dose, p. 952. Severe Study
- **Erythromycin** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. Severe Study
- **Clarithromycin** is predicted to increase the exposure to **imatinib**. Moderate Study
- **Erythromycin** is predicted to increase the exposure to **imatinib**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **ivabradine**. Avoid. Severe Study
- **Erythromycin** is predicted to increase the exposure to **ivabradine**. Avoid. Severe Theoretical
- **Clarithromycin** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** p. 292 or **lumacaftor with ivacaftor** p. 293 dose with potent inhibitors of CYP3A4. Severe Study
- **Erythromycin** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. Severe Study
- **Clarithromycin** is predicted to increase the exposure to **lapatinib**. Avoid. Moderate Study → Also see **TABLE 9** p. 1336
- **Erythromycin** is predicted to increase the exposure to **lapatinib**. Moderate Study → Also see **TABLE 9** p. 1336
- **Clarithromycin** increases the exposure to **linezolid**. Moderate Anecdotal
- **Azithromycin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Clarithromycin** is predicted to markedly increase the exposure to **lomitapide**. Avoid. Severe Study
- **Erythromycin** is predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- **Lumacaftor** is predicted to decrease the exposure to macrolides **(clarithromycin, erythromycin)**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to **lurasidone**. Avoid. Severe Study
- **Erythromycin** is predicted to increase the exposure to **lurasidone**. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **macitentan**. Moderate Study
- **Clarithromycin** is predicted to markedly increase the exposure to **maraviroc**. Adjust dose. Severe Study
- **Clarithromycin** is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. Severe Study
- **Erythromycin** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. Severe Study
- **Clarithromycin** is predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. Severe Study
- **Erythromycin** is predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 763. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **mirtazapine**. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **modafinil**. Mild Theoretical
- **Clarithromycin** increases the risk of neutropenia when given with monoclonal antibodies **(brentuximab vedotin)**. Monitor and adjust dose. Severe Theoretical
- **Clarithromycin** is predicted to increase the exposure to monoclonal antibodies **(trastuzumab emtansine)**. Avoid. Severe Theoretical
- **Clarithromycin** is predicted to markedly increase the exposure to **naloxegol**. Avoid. Severe Study
- **Erythromycin** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **netupitant**. Moderate Study
- **Nevirapine** decreases the exposure to **clarithromycin**. Moderate Study
- **Clarithromycin** is predicted to moderately increase the exposure to **nilotinib**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **Erythromycin** is predicted to increase the exposure to **nilotinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Macrolides** are predicted to increase the exposure to **nintedanib**. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Study
- **Erythromycin** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

- **Erythromycin** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil)**. Monitor and adjust dose. Severe Study
- **Clarithromycin** is predicted to increase the concentration of opioids **(methadone)**. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Erythromycin** is predicted to increase the exposure to opioids **(methadone, sufentanil)**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Clarithromycin** is predicted to increase the exposure to **oxybutynin**. Mild Study
- **Erythromycin** is predicted to increase the exposure to **oxybutynin**. Mild Theoretical
- **Clarithromycin** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 961. Severe Study
- **Clarithromycin** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 911. Moderate Study → Also see **TABLE 9** p. 1336
- Macrolides **(azithromycin, erythromycin)** are predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Clarithromycin** is predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. Severe Theoretical
- **Clarithromycin** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 962. Moderate Study → Also see **TABLE 9** p. 1336
- **Erythromycin** is predicted to increase the exposure to **pazopanib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Erythromycin** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil)**. Adjust **avanafil** dose, p. 794. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil, vardenafil)**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **Clarithromycin** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(sildenafil)**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 794. Severe Study → Also see **TABLE 9** p. 1336
- **Erythromycin** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. Moderate Study → Also see **TABLE 9** p. 1336
- **Clarithromycin** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(tadalafil)**. Use with caution or avoid. Severe Study
- **Erythromycin** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(tadalafil)**. Severe Theoretical
- **Erythromycin** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(vardenafil)**. Adjust dose. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Clarithromycin** is predicted to increase the exposure to **pimozide**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **Erythromycin** is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Clarithromycin** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 963. Moderate Study
- **Clarithromycin** is predicted to moderately increase the exposure to **praziquantel**. Mild Study
- **Clarithromycin** is predicted to increase the exposure to **quetiapine**. Avoid. Severe Study
- **Erythromycin** is predicted to increase the exposure to **quetiapine**. Avoid. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **ranolazine**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **Erythromycin** is predicted to increase the exposure to **ranolazine**. Severe Study → Also see **TABLE 9** p. 1336
- **Clarithromycin** is predicted to increase the exposure to **reboxetine**. Avoid. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **regorafenib**. Avoid. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **repaglinide**. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to retinoids **(alitretinoin)**. Adjust **alitretinoin** dose, p. 1226. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 965. Moderate Study → Also see **TABLE 9** p. 1336
- **Erythromycin** is predicted to increase the exposure to **ribociclib**. Moderate Study → Also see **TABLE 9** p. 1336
- **Azithromycin** increases the risk of neutropenia when given with **rifabutin**. Severe Study
- **Clarithromycin** increases the risk of uveitis when given with **rifabutin**. Adjust dose. Severe Study
- **Erythromycin** is predicted to increase the risk of uveitis when given with **rifabutin**. Adjust dose. Severe Theoretical
- **Rifampicin** decreases the concentration of **clarithromycin**. Severe Study
- **Clarithromycin** is predicted to increase the exposure to **risperidone**. Adjust dose. Moderate Study → Also see **TABLE 9** p. 1336
- **Clarithromycin** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor side effects. Moderate Study
- **Erythromycin** is predicted to increase the exposure to **ruxolitinib**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to **saxagliptin**. Moderate Study
- **Erythromycin** is predicted to increase the exposure to **saxagliptin**. Mild Study
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to **simeprevir**. Avoid. Severe Study
- **Clarithromycin** is predicted to increase the concentration of **sirolimus**. Avoid. Severe Study
- **Erythromycin** increases the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 761 or **tamsulosin with solifenacin** p. 768 dose; avoid in hepatic and renal impairment. Severe Study
- **Clarithromycin** is predicted to moderately increase the exposure to SSRIs **(dapoxetine)**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 801. Severe Study
- **Erythromycin** is predicted to increase the exposure to SSRIs **(dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to statins **(atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. Severe Study
- **Erythromycin** is predicted to increase the exposure to statins **(atorvastatin)**. Monitor and adjust dose. Severe Study
- **Clarithromycin** moderately increases the exposure to statins **(pravastatin)**. Severe Study
- **Erythromycin** is predicted to increase the exposure to statins **(pravastatin)**. Severe Study
- **Clarithromycin** is predicted to increase the exposure to statins **(simvastatin)**. Avoid. Severe Study
- **Erythromycin** is predicted to increase the exposure to statins **(simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 203. Severe Study
- **Clarithromycin** is predicted to slightly increase the exposure to **sulfonylureas**. Moderate Theoretical
- **Clarithromycin** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. Moderate Study → Also see **TABLE 9** p. 1336
- **Erythromycin** is predicted to increase the exposure to **sunitinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Clarithromycin** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- **Erythromycin** is predicted to increase the concentration of **tacrolimus**. Severe Study
- **Clarithromycin** is predicted to increase the exposure to taxanes **(cabazitaxel)**. Avoid. Severe Study
- **Erythromycin** is predicted to increase the exposure to taxanes **(cabazitaxel)**. Moderate Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Macrolides (continued)
- **Clarithromycin** is predicted to moderately increase the exposure to taxanes **(docetaxel)**. Avoid or adjust dose. Severe Study
- **Clarithromycin** is predicted to increase the exposure to taxanes **(paclitaxel)**. Severe Theoretical
- **Clarithromycin** is predicted to increase the concentration of **temsirolimus**. Avoid. Severe Theoretical
- **Erythromycin** is predicted to increase the concentration of **temsirolimus**. Moderate Theoretical
- **Erythromycin** decreases the clearance of **theophylline** and **theophylline** potentially decreases the clearance of **erythromycin**. Adjust dose. Severe Study
- Macrolides **(azithromycin, clarithromycin)** are predicted to increase the exposure to **theophylline**. Adjust dose. Moderate Anecdotal
- **Azithromycin** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. Severe Study
- **Clarithromycin** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. Severe Study
- **Clarithromycin** is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1072. Moderate Study
- **Erythromycin** is predicted to increase the exposure to **tofacitinib**. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **tolterodine**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **Erythromycin** is predicted to increase the exposure to **tolterodine**. Mild Theoretical → Also see **TABLE 9** p. 1336
- **Clarithromycin** is predicted to increase the exposure to **tolvaptan**. Adjust dose. Severe Study
- **Erythromycin** is predicted to increase the exposure to **tolvaptan**. Adjust dose. Moderate Study
- **Macrolides** are predicted to increase the exposure to **topotecan**. Severe Study
- **Clarithromycin** is predicted to increase the exposure to **toremifene**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Clarithromycin** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. Severe Theoretical
- **Macrolides** are predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Clarithromycin** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. Moderate Study
- **Erythromycin** is predicted to increase the exposure to **trazodone**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Severe Study
- **Erythromycin** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **vemurafenib**. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Azithromycin** decreases the exposure to **venetoclax**. Mild Study
- **Clarithromycin** is predicted to increase the exposure to **venetoclax**. Avoid potent inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- **Erythromycin** is predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- **Clarithromycin** is predicted to increase the exposure to **venlafaxine**. Moderate Study → Also see **TABLE 9** p. 1336
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Clarithromycin** is predicted to increase the exposure to vitamin D substances **(paricalcitol)**. Moderate Study
- **Clarithromycin** decreases the absorption of **zidovudine**. Separate administration by at least 2 hours. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Theoretical
- **Erythromycin** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study

Magnesium
- Oral **magnesium** decreases the absorption of bisphosphonates **(alendronic acid)**. **Alendronic acid** should be taken at least 30 minutes before **magnesium**. Moderate Study
- Oral **magnesium** is predicted to decrease the absorption of oral bisphosphonates **(ibandronic acid)**. Avoid **magnesium** for at least 6 hours before or 1 hour after **ibandronic acid**. Moderate Theoretical
- Oral **magnesium** decreases the absorption of bisphosphonates **(risedronate)**. Separate administration by at least 2 hours. Moderate Study
- Oral **magnesium** decreases the absorption of bisphosphonates **(sodium clodronate)**. Avoid **magnesium** for 2 hours before or 1 hour after **sodium clodronate**. Moderate Study
- Intravenous **magnesium** potentially increases the risk of hypotension when given with calcium channel blockers **(amlodipine, clevidipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine, verapamil)** (in pregnant women). Severe Anecdotal
- Intravenous **magnesium** increases the effects of **neuromuscular blocking drugs, non-depolarising**. Moderate Study
- Intravenous **magnesium** is predicted to increase the effects of **suxamethonium**. Moderate Study

Magnesium carbonate → see antacids

Magnesium trisilicate → see antacids

Maraviroc
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **maraviroc**. Adjust dose. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **maraviroc**. Adjust dose. Severe Study
- **Bosentan** is predicted to decrease the exposure to **maraviroc**. Avoid. Moderate Theoretical
- **Cobicistat** markedly increases the exposure to **maraviroc**. Refer to specialist literature. Severe Study
- **Efavirenz** decreases the exposure to **maraviroc**. Refer to specialist literature. Severe Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **maraviroc**. Adjust dose. Severe Study
- **Etravirine** (with a boosted protease inhibitor) increases the exposure to **maraviroc**. Avoid or adjust dose. Moderate Study
- HIV-protease inhibitors **(atazanavir, saquinavir)** moderately to markedly increase the exposure to **maraviroc**. Refer to specialist literature. Severe Study
- HIV-protease inhibitors **(darunavir)** (boosted with ritonavir) markedly increase the exposure to **maraviroc**. Refer to specialist literature. Severe Study
- HIV-protease inhibitors **(lopinavir)** (boosted with ritonavir) moderately increase the exposure to **maraviroc**. Refer to specialist literature. Severe Study
- HIV-protease inhibitors **(ritonavir)** markedly increase the exposure to **maraviroc**. Refer to specialist literature. Severe Study
- **Maraviroc** potentially decreases the exposure to HIV-protease inhibitors **(fosamprenavir)** and HIV-protease inhibitors **(fosamprenavir)** potentially decrease the exposure to **maraviroc**. Avoid. Severe Study
- **Idelalisib** markedly increases the exposure to **maraviroc**. Adjust dose. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to markedly increase the exposure to **maraviroc**. Adjust dose. Severe Study
- **Mitotane** is predicted to decrease the exposure to **maraviroc**. Adjust dose. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **maraviroc**. Adjust dose. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **maraviroc**. Avoid. Severe Theoretical

Measles, mumps and rubella vaccine, live → see live vaccines

Mebendazole
- H_2 receptor antagonists **(cimetidine)** increase the concentration of **mebendazole**. Moderate Study

Medroxyprogesterone
- **Sugammadex** is predicted to decrease the exposure to **medroxyprogesterone**. Use additional contraceptive precautions. Severe Theoretical

Mefenamic acid → see NSAIDs

Mefloquine → see antimalarials

Melatonin → see **TABLE 11** p. 1336 (CNS depressant effects)

https://nhathuocngocanh.com/ www.getintopharma.com

- Antiepileptics **(phenytoin)** are predicted to decrease the exposure to **melatonin**. Moderate Theoretical
- **Combined hormonal contraceptives** are predicted to increase the exposure to **melatonin**. Moderate Theoretical
- HIV-protease inhibitors **(ritonavir)** are predicted to decrease the exposure to **melatonin**. Moderate Theoretical
- **Leflunomide** is predicted to decrease the exposure to **melatonin**. Moderate Theoretical
- Quinolones **(ciprofloxacin)** are predicted to increase the exposure to **melatonin**. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **melatonin**. Moderate Theoretical
- SSRIs **(fluvoxamine)** very markedly increase the exposure to **melatonin**. Avoid. Severe Study
- **Teriflunomide** is predicted to decrease the exposure to **melatonin**. Moderate Theoretical

Meloxicam → see NSAIDs

Melphalan → see alkylating agents

Memantine

- Dopamine receptor agonists **(amantadine)** increase the risk of CNS toxicity when given with **memantine**. Use with caution or avoid. Severe Theoretical
- **Memantine** is predicted to increase the effects of dopamine receptor agonists **(apomorphine, bromocriptine, cabergoline, pergolide, pramipexole, quinagolide, ropinirole, rotigotine)**. Moderate Theoretical
- **Memantine** is predicted to increase the risk of CNS side-effects when given with **ketamine**. Avoid. Severe Theoretical
- **Memantine** is predicted to increase the effects of **levodopa**. Moderate Theoretical

Mepacrine

- **Mepacrine** is predicted to increase the concentration of antimalarials **(primaquine)**. Avoid. Moderate Theoretical

Mepivacaine → see anaesthetics, local

Meprobamate → see **TABLE 11** p. 1336 (CNS depressant effects)

Meptazinol → see opioids

Mercaptopurine → see **TABLE 1** p. 1334 (hepatotoxicity), **TABLE 15** p. 1337 (myelosuppression)

- **Allopurinol** potentially increases the risk of haematological toxicity when given with **mercaptopurine**. Adjust **mercaptopurine** dose, p. 887. Severe Study
- **Mercaptopurine** decreases the anticoagulant effect of **coumarins**. Moderate Anecdotal
- **Febuxostat** is predicted to increase the exposure to **mercaptopurine**. Avoid. Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mercaptopurine** (high-dose). Public Health England advises avoid (refer to Green Book). Severe Theoretical

Meropenem → see carbapenems

Mesalazine

ROUTE-SPECIFIC INFORMATION The manufacturers of some mesalazine gastro-resistant and modified-release medicines (Asacol MR tablets, Ipocol, Salofalk granules) suggest that preparations that lower stool pH (e.g. lactulose) might prevent the release of mesalazine.

Metaraminol → see sympathomimetics, vasoconstrictor

Metformin → see **TABLE 14** p. 1337 (antidiabetic drugs)

- **Alcohol (beverage)**(excessive consumption) potentially increases the risk of lactic acidosis when given with **metformin**. Avoid excessive alcohol consumption. Moderate Theoretical
- **Dolutegravir** slightly to moderately increases the exposure to **metformin**. Use with caution and adjust dose. Severe Study
- H_2 receptor antagonists **(cimetidine)** slightly increase the exposure to **metformin**. Monitor and adjust dose. Moderate Study
- **Pitolisant** is predicted to increase the exposure to **metformin**. Unknown Theoretical
- **Vandetanib** slightly increases the exposure to **metformin**. Monitor and adjust dose. Moderate Study

Methadone → see opioids

Methenamine

- **Acetazolamide** is predicted to decrease the efficacy of **methenamine**. Avoid. Moderate Theoretical
- **Potassium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. Moderate Theoretical
- **Sodium bicarbonate** is predicted to decrease the efficacy of **methenamine**. Avoid. Moderate Theoretical
- **Sodium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. Moderate Theoretical

Methocarbamol → see **TABLE 11** p. 1336 (CNS depressant effects)

Methotrexate → see **TABLE 1** p. 1334 (hepatotoxicity), **TABLE 15** p. 1337 (myelosuppression), **TABLE 2** p. 1334 (nephrotoxicity), **TABLE 5** p. 1334 (thromboembolism)

- **Acetazolamide** increases the urinary excretion of **methotrexate**. Moderate Study
- **Methotrexate** is predicted to decrease the clearance of **aminophylline**. Moderate Theoretical
- Antiepileptics **(levetiracetam)** decrease the clearance of **methotrexate**. Severe Anecdotal
- Antimalarials **(pyrimethamine)** are predicted to increase the risk of side-effects when given with **methotrexate**. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Asparaginase** affects the efficacy of **methotrexate**. Severe Anecdotal → Also see **TABLE 1** p. 1334 → Also see **TABLE 15** p. 1337
- **Aspirin** (high-dose) is predicted to increase the risk of toxicity when given with **methotrexate**. Severe Theoretical
- **Crisantaspase** affects the efficacy of **methotrexate**. Severe Anecdotal → Also see **TABLE 1** p. 1334 → Also see **TABLE 15** p. 1337
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **methotrexate** (high-dose). Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **NSAIDs** are predicted to increase the risk of toxicity when given with **methotrexate**. Monitor and adjust dose. Severe Study → Also see **TABLE 2** p. 1334
- **Pegaspargase** affects the efficacy of **methotrexate**. Severe Anecdotal → Also see **TABLE 1** p. 1334 → Also see **TABLE 15** p. 1337
- **Penicillins** are predicted to increase the risk of toxicity when given with **methotrexate**. Severe Theoretical → Also see **TABLE 1** p. 1334
- **Proton pump inhibitors** decrease the clearance of **methotrexate** (high-dose). Use with caution or avoid. Severe Study
- Quinolones **(ciprofloxacin)** potentially increase the risk of toxicity when given with **methotrexate**. Avoid. Severe Anecdotal
- **Regorafenib** is predicted to increase the exposure to **methotrexate**. Severe Theoretical → Also see **TABLE 15** p. 1337
- Retinoids **(acitretin)** are predicted to increase the concentration of **methotrexate**. Avoid. Moderate Anecdotal
- **Rolapitant** is predicted to increase the exposure to **methotrexate**. Avoid or monitor. Moderate Study
- **Methotrexate** is predicted to decrease the efficacy of **saropterin**. Moderate Theoretical
- **Sulfonamides** are predicted to increase the exposure to **methotrexate**. Use with caution or avoid. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Tedizolid** is predicted to increase the exposure to **methotrexate**. Avoid. Moderate Theoretical
- **Methotrexate** is predicted to increase the risk of toxicity when given with **tegafur**. Severe Theoretical
- **Methotrexate** decreases the clearance of **theophylline**. Moderate Study
- **Trimethoprim** is predicted to increase the risk of side-effects when given with **methotrexate**. Avoid. Severe Theoretical → Also see **TABLE 2** p. 1334

Methoxyflurane → see volatile halogenated anaesthetics

Methyldopa → see **TABLE 8** p. 1335 (hypotension)

- **Entacapone** is predicted to increase the exposure to **methyldopa**. Moderate Theoretical
- **Iron (oral)** decreases the effects of **methyldopa**. Moderate Study
- **Methyldopa** increases the risk of neurotoxicity when given with **lithium**. Severe Anecdotal
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to alter the antihypertensive effects of **methyldopa**. Avoid. Severe Theoretical → Also see **TABLE 8** p. 1335

Methylphenidate

- **Methylphenidate** is predicted to decrease the effects of **apraclonidine**. Avoid. Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Methylphenidate (continued)

- **Methylphenidate** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. Severe Theoretical
- **Methylphenidate** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Severe Theoretical
- **Methylphenidate** is predicted to increase the risk of a hypertensive crisis when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical
- Monoamine-oxidase B inhibitors **(rasagiline, selegiline)** are predicted to increase the risk of a hypertensive crisis when given with **methylphenidate**. Avoid. Severe Theoretical
- **Risperidone** increases the risk of dyskinesias when given with **methylphenidate**. Severe Anecdotal

Methylprednisolone → see corticosteroids

Methylthioninium chloride → see **TABLE 13** p. 1337 (serotonin syndrome)

- **Methylthioninium chloride** is predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. Severe Theoretical → Also see **TABLE 13** p. 1337

Metoclopramide

- **Metoclopramide** is predicted to increase the risk of methaemoglobinaemia when given with topical anaesthetics, local **(prilocaine)**. Avoid. Severe Theoretical
- **Metoclopramide** potentially decreases the absorption of antifungals, azoles **(posaconazole)** (oral suspension). Moderate Study
- **Metoclopramide** decreases the concentration of antimalarials **(atovaquone)**. Avoid. Moderate Study
- **Metoclopramide** is predicted to decrease the effects of dopamine receptor agonists **(apomorphine, bromocriptine, cabergoline, pergolide, pramipexole, quinagolide, ropinirole, rotigotine)**. Avoid. Moderate Study
- **Metoclopramide** decreases the effects of **levodopa**. Avoid. Moderate Study
- **Metoclopramide** is predicted to increase the effects of **neuromuscular blocking drugs, non-depolarising**. Moderate Theoretical
- **Metoclopramide** increases the effects of **suxamethonium**. Moderate Study

Metolazone → see thiazide diuretics

Metoprolol → see beta blockers, selective

Metronidazole → see **TABLE 12** p. 1337 (peripheral neuropathy)

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **metronidazole**. Avoid for at least 48 hours stopping treatment. Moderate Study
- **Metronidazole** increases the risk of toxicity when given with alkylating agents **(busulfan)**. Severe Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the exposure to **metronidazole**. Moderate Study
- **Metronidazole** is predicted to increase the risk of capecitabine toxicity when given with **capecitabine**. Severe Theoretical
- **Metronidazole** increases the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. Severe Study
- **Disulfiram** increases the risk of acute psychoses when given with **metronidazole**. Severe Study → Also see **TABLE 12** p. 1337
- **Metronidazole** increases the risk of toxicity when given with **fluorouracil**. Severe Study

Metyrapone

- Antiepileptics **(fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the effects of **metyrapone**. Avoid. Moderate Study
- Antihistamines, sedating **(cyproheptadine)** decrease the effects of **metyrapone**. Avoid. Moderate Study
- **Carbimazole** decreases the effects of **metyrapone**. Avoid. Moderate Theoretical
- **Combined hormonal contraceptives** decrease the effects of **metyrapone**. Avoid. Moderate Theoretical
- Phenothiazines **(chlorpromazine)** decrease the effects of **metyrapone**. Avoid. Moderate Theoretical
- **Propylthiouracil** is predicted to decrease the effects of **metyrapone**. Avoid. Moderate Theoretical
- Tricyclic antidepressants **(amitriptyline)** decrease the effects of **metyrapone**. Avoid. Moderate Theoretical

Mianserin → see **TABLE 13** p. 1337 (serotonin syndrome), **TABLE 11** p. 1336 (CNS depressant effects)

- Antiepileptics **(carbamazepine)** markedly decrease the exposure to **mianserin**. Adjust dose. Moderate Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the exposure to **mianserin**. Moderate Study → Also see **TABLE 11** p. 1336
- **Mianserin** is predicted to increase the risk of toxicity when given with **moclobemide**. Avoid and for 1 week after stopping **mianserin**. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Mianserin** is predicted to increase the risk of toxicity when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Mianserin** is predicted to decrease the efficacy of **pitolisant**. Unknown Theoretical
- **Mianserin** decreases the effects of sympathomimetics, vasoconstrictor **(ephedrine)**. Severe Anecdotal

Micafungin → see **TABLE 1** p. 1334 (hepatotoxicity)

- **Micafungin** slightly increases the exposure to **amphotericin**. Avoid or monitor toxicity. Moderate Study

Miconazole → see antifungals, azoles

Midazolam → see **TABLE 11** p. 1336 (CNS depressant effects)

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. Moderate Study → Also see **TABLE 11** p. 1336
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. Severe Study
- Antifungals, azoles **(miconazole)** are predicted to increase the exposure to intravenous **midazolam**. Use with caution and adjust dose. Moderate Theoretical
- Antifungals, azoles **(miconazole)** are predicted to increase the exposure to oral **midazolam**. Avoid. Moderate Theoretical
- **Aprepitant** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. Severe Study
- **Bosentan** is predicted to decrease the concentration of **midazolam**. Monitor and adjust dose. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. Severe Study
- **Cobicistat** is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. Severe Study
- **Crizotinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. Severe Study
- **Dabrafenib** decreases the exposure to **midazolam**. Monitor and adjust dose. Moderate Study
- **Efavirenz** is predicted to alter the effects of **midazolam**. Avoid. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. Moderate Study
- **Fosaprepitant** slightly increases the exposure to **midazolam**. Moderate Study
- **HIV-protease inhibitors** are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. Severe Study
- **Idelalisib** is predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. Severe Study
- **Imatinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. Severe Study
- **Lumacaftor** is predicted to decrease the exposure to **midazolam**. Avoid. Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

- Macrolides **(clarithromycin)** are predicted to markedly to very markedly increase the exposure to **midazolam**. Avoid or adjust dose. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. Severe Study
- **Mitotane** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. Moderate Study
- Monoclonal antibodies **(tocilizumab)** are predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. Severe Study
- **Nevirapine** decreases the concentration of **midazolam**. Monitor and adjust dose. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. Severe Study
- **Palbociclib** increases the exposure to **midazolam**. Moderate Study
- **Ribociclib** moderately increases the exposure to **midazolam**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. Moderate Study
- **St John's Wort** moderately decreases the exposure to **midazolam**. Monitor and adjust dose. Moderate Study
- **Telotristat ethyl** decreases the exposure to **midazolam**. Moderate Study

Midodrine → see sympathomimetics, vasoconstrictor

Midostaurin

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **midostaurin**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. Severe Study
- **Aprepitant** is predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- **Cobicistat** is predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. Severe Study
- **Crizotinib** is predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **midostaurin**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. Severe Study
- **Idelalisib** is predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. Severe Study
- **Imatinib** is predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to very markedly increase the exposure to **midostaurin**. Avoid or monitor for toxicity. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **midostaurin**. Avoid. Severe Study
- **Netupitant** is predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **midostaurin**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **midostaurin**. Avoid. Severe Theoretical

Mifamurtide

- **Ciclosporin** is predicted to decrease the efficacy of **mifamurtide**. Avoid. Severe Theoretical
- **Corticosteroids** are predicted to decrease the efficacy of **mifamurtide**. Avoid. Severe Theoretical
- **NSAIDs** (high-dose) are predicted to decrease the efficacy of **mifamurtide**. Avoid. Severe Theoretical
- **Pimecrolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. Severe Theoretical
- **Sirolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. Severe Theoretical
- **Tacrolimus** is predicted to affect the efficacy of **mifamurtide**. Avoid. Severe Theoretical

Mifepristone

- **Mifepristone** is predicted to decrease the efficacy of **corticosteroids**. Use with caution and adjust dose. Moderate Theoretical

Minocycline → see tetracyclines

Minoxidil → see **TABLE 8** p. 1335 (hypotension)

Mirabegron

- **Mirabegron** is predicted to increase the exposure to **aliskiren**. Mild Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 763. Moderate Study
- **Mirabegron** is predicted to increase the exposure to antihistamines, non-sedating **(fexofenadine)**. Mild Theoretical
- **Mirabegron** is predicted to increase the exposure to beta blockers, selective **(metoprolol)**. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 763. Moderate Study
- **Mirabegron** is predicted to increase the exposure to **colchicine**. Mild Theoretical
- **Mirabegron** is predicted to increase the exposure to **dabigatran**. Severe Theoretical
- **Mirabegron** slightly increases the exposure to **digoxin**. Monitor concentration and adjust dose. Severe Study
- **Mirabegron** is predicted to increase the exposure to **edoxaban**. Mild Theoretical
- **Mirabegron** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Mirabegron** is predicted to increase the exposure to **everolimus**. Mild Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 763. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 763. Moderate Study
- **Mirabegron** is predicted to increase the exposure to **loperamide**. Mild Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 763. Moderate Study
- **Mirabegron** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. Moderate Study
- **Mirabegron** is predicted to increase the exposure to **sirolimus**. Mild Theoretical
- **Mirabegron** is predicted to increase the exposure to taxanes **(paclitaxel)**. Mild Theoretical
- **Mirabegron** is predicted to increase the exposure to **topotecan**. Mild Theoretical

Mirtazapine → see **TABLE 13** p. 1337 (serotonin syndrome), **TABLE 11** p. 1336 (CNS depressant effects)

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **mirtazapine**. Adjust dose. Moderate Study → Also see **TABLE 11** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **mirtazapine**. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **mirtazapine**. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. Moderate Study

https://nhathuocngocanh.com/ www.getintopharma.com

Mirtazapine (continued)
- H_2 receptor antagonists **(cimetidine)** slightly increase the exposure to **mirtazapine**. Use with caution and adjust dose. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **mirtazapine**. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **mirtazapine**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **mirtazapine**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. Moderate Study
- **Mirtazapine** is predicted to decrease the efficacy of **pitolisant**. Unknown Theoretical
- **Rifampicin** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. Moderate Study

Mitomycin → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 5** p. 1334 (thromboembolism)
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mitomycin**. Public Health England advises avoid (refer to Green Book). Severe Theoretical

Mitotane → see **TABLE 15** p. 1337 (myelosuppression)
- **Mitotane** is predicted to decrease the exposure to **abiraterone**. Avoid. Severe Theoretical
- Aldosterone antagonists **(spironolactone)** are predicted to decrease the effects of **mitotane**. Avoid. Severe Anecdotal
- **Mitotane** is predicted to decrease the exposure to aldosterone antagonists **(eplerenone)**. Avoid. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **alprazolam**. Adjust dose. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to antiarrhythmics **(disopyramide, dronedarone)**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the efficacy of antiarrhythmics **(propafenone)**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to anticholinesterases, centrally acting **(donepezil)**. Mild Study
- **Mitotane** is predicted to decrease the exposure to antiepileptics **(perampanel)**. Monitor and adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to antifungals, azoles **(isavuconazole)**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to antimalarials **(artemether)** (with lumafantrine). Avoid. Severe Study
- **Mitotane** is predicted to decrease the concentration of antimalarials **(piperaquine)**. Avoid. Moderate Theoretical
- **Mitotane** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. Severe Study
- **Mitotane** moderately decreases the exposure to **apremilast**. Avoid. Severe Study
- **Mitotane** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. Moderate Study
- **Mitotane** is predicted to moderately decrease the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. Moderate Study → Also see **TABLE 15** p. 1337
- **Mitotane** decreases the exposure to **bedaquiline**. Avoid. Severe Study
- **Mitotane** slightly decreases the exposure to **bortezomib**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Mitotane** affects the exposure to **bosentan**. Avoid. Severe Study
- **Mitotane** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Mitotane** is predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. Severe Study
- **Mitotane** moderately decreases the exposure to **cabozantinib**. Avoid. Moderate Study → Also see **TABLE 15** p. 1337
- **Mitotane** is predicted to decrease the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **cannabis extract**. Avoid. Severe Theoretical
- **Mitotane** is predicted to decrease the exposure to **ceritinib**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Mitotane** decreases the concentration of **ciclosporin**. Severe Study
- **Mitotane** is predicted to alter the effects of **cilostazol**. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. Moderate Study
- **Mitotane** decreases the exposure to **clomethiazole**. Monitor and adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **cobicistat**. Avoid. Severe Theoretical
- **Mitotane** is predicted to decrease the exposure to **cobimetinib**. Avoid. Severe Theoretical
- **Mitotane** is predicted to decrease the exposure to corticosteroids **(budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, prednisone, triamcinolone)**. Monitor and adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to corticosteroids **(fluticasone)**. Unknown Theoretical
- **Mitotane** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Mitotane** is predicted to decrease the exposure to **dabrafenib**. Avoid. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Mitotane** is predicted to moderately decrease the exposure to **daclatasvir**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **darifenacin**. Moderate Theoretical
- **Mitotane** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Mitotane** is predicted to slightly decrease the exposure to **delamanid**. Avoid. Moderate Study
- **Mitotane** decreases the exposure to **dolutegravir**. Adjust dose. Severe Study
- **Mitotane** is predicted to decrease the exposure to **elbasvir**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **eliglustat**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the concentration of **elvitegravir**. Avoid. Severe Theoretical
- **Mitotane** is predicted to decrease the effects of **ergotamine**. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 949. Severe Study
- **Mitotane** is predicted to decrease the exposure to **etravirine**. Avoid. Severe Theoretical
- **Mitotane** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. Severe Study → Also see **TABLE 15** p. 1337
- **Mitotane** moderately decreases the exposure to **exemestane**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **fesoterodine**. Avoid. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **fingolimod**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **fosaprepitant**. Avoid. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **gefitinib**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Mitotane** is predicted to decrease the exposure to **grazoprevir**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Study
- **Mitotane** decreases the concentration of **haloperidol**. Adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 952. Severe Study → Also see **TABLE 15** p. 1337
- **Mitotane** is predicted to decrease the exposure to **idelalisib**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Mitotane** is predicted to decrease the exposure to **imatinib**. Avoid. Moderate Study → Also see **TABLE 15** p. 1337
- **Mitotane** is predicted to decrease the exposure to **irinotecan**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Mitotane** is predicted to decrease the exposure to **ivabradine**. Adjust dose. Moderate Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

- **Mitotane** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **ixazomib**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **linagliptin**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **lurasidone**. Avoid. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **macitentan**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **maraviroc**. Adjust dose. Severe Study
- **Mitotane** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **midostaurin**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **montelukast**. Mild Study
- **Mitotane** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. Moderate Study
- **Mitotane** is predicted to slightly decrease the exposure to **nateglinide**. Mild Study
- **Mitotane** is predicted to decrease the exposure to **netupitant**. Avoid. Severe Study
- **Mitotane** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Mitotane** is predicted to decrease the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Mitotane** is predicted to decrease the exposure to **ondansetron**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to opioids **(alfentanil, fentanyl)**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to opioids **(buprenorphine)**. Monitor and adjust dose. Moderate Theoretical
- **Mitotane** decreases the exposure to opioids **(methadone)**. Monitor and adjust dose. Severe Study
- **Mitotane** is predicted to decrease the exposure to opioids **(oxycodone)**. Monitor and adjust dose. Moderate Study
- **Mitotane** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **palbociclib**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. Severe Study
- **Mitotane** is predicted to decrease the exposure to **panobinostat**. Avoid. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Mitotane** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **pazopanib**. Avoid. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Mitotane** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(avanafil, tadalafil)**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(sildenafil, vardenafil)**. Moderate Theoretical
- **Mitotane** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- **Mitotane** is predicted to moderately decrease the exposure to **pitolisant**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **ponatinib**. Avoid. Moderate Theoretical
- **Mitotane** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **quetiapine**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **ranolazine**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **reboxetine**. Moderate Anecdotal
- **Mitotane** is predicted to decrease the exposure to **regorafenib**. Avoid. Moderate Study → Also see **TABLE 15** p. 1337
- **Mitotane** is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. Moderate Study
- **Mitotane** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. Severe Study
- **Mitotane** markedly decreases the exposure to **rilpivirine**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **risperidone**. Adjust dose. Moderate Study
- **Mitotane** is predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. Severe Study
- **Mitotane** is predicted to decrease the exposure to **roflumilast**. Avoid. Moderate Study
- **Mitotane** is predicted to markedly decrease the exposure to **rolapitant**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Study → Also see **TABLE 15** p. 1337
- **Mitotane** is predicted to moderately decrease the exposure to **saxagliptin**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **simeprevir**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the concentration of **sirolimus**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **solifenacin**. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **sorafenib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Mitotane** is predicted to decrease the exposure to statins **(simvastatin)**. Severe Study
- **Mitotane** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. Moderate Study → Also see **TABLE 15** p. 1337
- **Mitotane** decreases the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- **Mitotane** is predicted to decrease the exposure to taxanes **(cabazitaxel, paclitaxel)**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Mitotane** is predicted to decrease the exposure to taxanes **(docetaxel)**. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Mitotane** is predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Mitotane** decreases the exposure to tetracyclines **(doxycycline)**. Monitor and adjust dose. Moderate Study
- **Mitotane** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **tivozanib**. Severe Study
- **Mitotane** is predicted to decrease the exposure to **tofacitinib**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **tolvaptan**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **toremifene**. Adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **trabectedin**. Avoid. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Mitotane** is predicted to decrease the exposure to **vandetanib**. Avoid. Moderate Study
- **Mitotane** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **vemurafenib**. Avoid. Severe Theoretical
- **Mitotane** is predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to vinca alkaloids **(vinblastine, vincristine, vindesine)**. Severe Theoretical → Also see **TABLE 15** p. 1337

https://nhathuocngocanh.com/ www.getintopharma.com

Mitotane (continued)
- **Mitotane** is predicted to decrease the exposure to vinca alkaloids **(vinflunine)**. Avoid. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Mitotane** is predicted to decrease the exposure to vinca alkaloids **(vinorelbine)**. Use with caution or avoid. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Mitotane** is predicted to decrease the exposure to **vismodegib**. Avoid. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Mitotane** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **zopiclone**. Adjust dose. Moderate Study

Mitoxantrone → see anthracyclines
Mivacurium → see neuromuscular blocking drugs, non-depolarising
Mizolastine → see antihistamines, non-sedating
Moclobemide → see **TABLE 13** p. 1337 (serotonin syndrome)

FOOD AND LIFESTYLE Moclobemide is claimed to cause less potentiation of the pressor effect of tyramine than the traditional (irreversible) MAOIs, but patients should avoid consuming large amounts of tyramine-rich foods (such as mature cheese, salami, pickled herring, *Bovril®*, *Oxo®*, *Marmite®* or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- **Moclobemide** is predicted to increase the risk of a hypertensive crisis when given with **amfetamines**. Avoid. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Moclobemide** is predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Moclobemide** is predicted to increase the exposure to **cilostazol**. Moderate Theoretical
- **Moclobemide** potentially increases the exposure to **clobazam**. Adjust dose. Moderate Theoretical
- **Moclobemide** is predicted to decrease the efficacy of **clopidogrel**. Avoid. Moderate Study
- **Moclobemide** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Theoretical
- H_2 receptor antagonists **(cimetidine)** increase the exposure to **moclobemide**. Adjust **moclobemide** dose, p. 359. Mild Study
- **Levodopa** increases the risk of side-effects when given with **moclobemide**. Moderate Study
- **Moclobemide** is predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping **moclobemide**. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Methylphenidate** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Severe Theoretical
- **Mianserin** is predicted to increase the risk of toxicity when given with **moclobemide**. Avoid and for 1 week after stopping **mianserin**. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Moclobemide** is predicted to increase the effects of monoamine-oxidase B inhibitors **(rasagiline, selegiline)**. Avoid. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Moclobemide** is predicted to increase the risk of side-effects when given with monoamine-oxidase B inhibitors **(safinamide)**. Avoid and for 1 week after stopping **safinamide**. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **moclobemide**. Avoid. Severe Theoretical
- **Moclobemide** increases the risk of side-effects when given with phenothiazines **(levomepromazine)**. Moderate Study
- **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. Severe Theoretical
- **Moclobemide** moderately increases the exposure to **rizatriptan**. Avoid. Moderate Study → Also see **TABLE 13** p. 1337
- **Moclobemide** moderately increases the exposure to **sumatriptan**. Avoid. Moderate Study → Also see **TABLE 13** p. 1337
- **Moclobemide** is predicted to increase the risk of a hypertensive crisis when given with sympathomimetics, vasoconstrictor **(ephedrine, isometheptene, phenylephrine, pseudoephedrine)**. Avoid. Severe Study
- **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **moclobemide**. Avoid. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Moclobemide** slightly increases the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 475. Moderate Study → Also see **TABLE 13** p. 1337

Modafinil
- Antiepileptics **(carbamazepine, phenobarbital, primidone)** are predicted to decrease the exposure to **modafinil**. Mild Theoretical
- Antiepileptics **(fosphenytoin, phenytoin)** are predicted to decrease the exposure to **modafinil** and **modafinil** is predicted to increase the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **modafinil**. Mild Theoretical
- **Modafinil** is predicted to decrease the exposure to **bosutinib**. Avoid. Severe Theoretical
- **Cobicistat** is predicted to increase the exposure to **modafinil**. Mild Theoretical
- **Modafinil** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Study
- **Modafinil** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Modafinil** is predicted to decrease the exposure to **elbasvir**. Avoid. Unknown Theoretical
- **Modafinil** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Modafinil** is predicted to decrease the exposure to **grazoprevir**. Avoid. Unknown Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **modafinil**. Mild Theoretical
- **Modafinil** is predicted to decrease the effects of **hormone replacement therapy**. Moderate Anecdotal
- **Idelalisib** is predicted to increase the exposure to **modafinil**. Mild Theoretical
- **Modafinil** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **modafinil**. Mild Theoretical
- **Modafinil** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Rifampicin** is predicted to decrease the exposure to **modafinil**. Moderate Theoretical
- **Modafinil** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Modafinil** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Theoretical

Mometasone → see corticosteroids
Monoamine-oxidase A and B inhibitors, irreversible → see **TABLE 8** p. 1335 (hypotension), **TABLE 13** p. 1337 (serotonin syndrome)

isocarboxazid • phenelzine • tranylcypromine

FOOD AND LIFESTYLE Potentially life-threatening hypertensive crisis can develop in those taking MAOIs who eat tyramine-rich food (such as mature cheese, salami, pickled herring, *Bovril®*, *Oxo®*, *Marmite®* or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines) or foods containing dopa (such as broad bean pods). Avoid tyramine-rich or dopa-rich food or drinks with, or for 2 to 3 weeks after stopping, the MAOI.

- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the effects of alpha blockers **(indoramin)**. Avoid. Severe Theoretical → Also see **TABLE 8** p. 1335
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of a hypertensive crisis when

https://nhathuocngocanh.com/ www.getintopharma.com

given with **amfetamines**. Avoid and for 14 days after stopping the MAOI. Severe Anecdotal → Also see **TABLE 13** p. 1337

- Antiepileptics **(carbamazepine)** are predicted to increase the risk of severe toxic reaction when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical
- Antiepileptics **(phenobarbital, primidone)** are predicted to increase the effects of **monoamine-oxidase A and B inhibitors, irreversible**. Severe Theoretical
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of antimuscarinic side-effects when given with **antihistamines, non-sedating**. Avoid. Severe Theoretical
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of antimuscarinic side-effects when given with **antihistamines, sedating**. Avoid. Severe Theoretical
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of side-effects when given with **atomoxetine**. Avoid and for 2 weeks after stopping the MAOI. Severe Theoretical
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of cardiovascular side-effects when given with **beta$_2$ agonists**. Moderate Anecdotal
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Buspirone** is predicted to increase the risk of elevated blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. Severe Anecdotal → Also see **TABLE 13** p. 1337
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the effects of **doxapram**. Moderate Theoretical
- **Entacapone** is predicted to increase the risk of elevated blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. Severe Theoretical
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to decrease the antihypertensive effects of **guanethidine**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 8** p. 1335
- **Levodopa** increases the risk of a hypertensive crisis when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Study → Also see **TABLE 8** p. 1335
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to alter the antihypertensive effects of **methyldopa**. Avoid. Severe Theoretical → Also see **TABLE 8** p. 1335
- **Methylphenidate** is predicted to increase the risk of a hypertensive crisis when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical
- **Mianserin** is predicted to increase the risk of toxicity when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 13** p. 1337
- Monoamine-oxidase B inhibitors **(rasagiline, selegiline)** are predicted to increase the risk of side-effects when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 8** p. 1335 → Also see **TABLE 13** p. 1337
- Monoamine-oxidase B inhibitors **(safinamide)** are predicted to increase the risk of side-effects when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 1 week after stopping **safinamide**. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Nefopam** is predicted to increase the risk of serious elevations in blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. Severe Theoretical
- **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. Severe Theoretical
- **Opioids** are predicted to increase the risk of CNS excitation or depression when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. Severe Study → Also see **TABLE 13** p. 1337
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of neuroleptic malignant syndrome when given with **phenothiazines**. Severe Theoretical → Also see **TABLE 8** p. 1335
- **Pholcodine** is predicted to increase the risk of CNS excitation or depression when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical
- **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. Severe Theoretical
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the exposure to **rizatriptan**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the exposure to **sumatriptan**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, inotropic**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, vasoconstrictor**. Avoid and for 14 days after stopping the MAOI. Severe Study
- **Tetrabenazine** is predicted to increase the risk of CNS toxicity when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical
- **Tolcapone** is predicted to increase the effects of **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. Severe Theoretical
- **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 8** p. 1335 → Also see **TABLE 13** p. 1337
- **Tryptophan** increases the risk of side-effects when given with **monoamine-oxidase A and B inhibitors, irreversible**. Severe Anecdotal → Also see **TABLE 13** p. 1337
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the exposure to **zolmitriptan**. Severe Theoretical → Also see **TABLE 13** p. 1337

Monoamine-oxidase B inhibitors → see **TABLE 6** p. 1335 (bradycardia), **TABLE 8** p. 1335 (hypotension), **TABLE 13** p. 1337 (serotonin syndrome)

rasagiline · safinamide · selegiline

FOOD AND LIFESTYLE Hypertension is predicted to occur when high-dose **selegiline** is taken with tyramine-rich foods (such as mature cheese, salami, pickled herring, *Bovril®*, *Oxo®*, *Marmite®* or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- Monoamine-oxidase B inhibitors **(rasagiline, selegiline)** are predicted to increase the risk of severe hypertension when given with **amfetamines**. Avoid. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Safinamide** is predicted to increase the risk of severe hypertension when given with **amfetamines**. Severe Theoretical → Also see **TABLE 13** p. 1337
- Monoamine-oxidase B inhibitors **(rasagiline, selegiline)** are predicted to increase the risk of severe hypertension when given with **beta$_2$ agonists**. Avoid. Severe Theoretical
- **Safinamide** is predicted to increase the risk of severe hypertension when given with **beta$_2$ agonists**. Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Monoamine-oxidase B inhibitors (continued)

- **Monoamine-oxidase B inhibitors** are predicted to increase the risk of severe hypertension when given with **bupropion**. Avoid. Moderate Theoretical → Also see **TABLE 13** p. 1337
- **Combined hormonal contraceptives** slightly increase the exposure to **rasagiline**. Moderate Study
- **Combined hormonal contraceptives** increase the exposure to **selegiline**. Avoid. Severe Study
- **Hormone replacement therapy** is predicted to increase the exposure to **selegiline**. Avoid. Moderate Study
- **Monoamine-oxidase B inhibitors** are predicted to increase the effects of **levodopa**. Adjust dose. Mild Study → Also see **TABLE 8** p. 1335
- Monoamine-oxidase B inhibitors **(rasagiline, selegiline)** are predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Safinamide** is predicted to increase the risk of side-effects when given with **linezolid**. Avoid and for 1 week after stopping **safinamide**. Severe Theoretical → Also see **TABLE 13** p. 1337
- Monoamine-oxidase B inhibitors **(rasagiline, selegiline)** are predicted to increase the risk of a hypertensive crisis when given with **methylphenidate**. Avoid. Severe Theoretical
- **Moclobemide** is predicted to increase the effects of monoamine-oxidase B inhibitors **(rasagiline, selegiline)**. Avoid. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Moclobemide** is predicted to increase the risk of side-effects when given with **safinamide**. Avoid and for 1 week after stopping **safinamide**. Severe Theoretical → Also see **TABLE 13** p. 1337
- Monoamine-oxidase B inhibitors **(rasagiline, selegiline)** are predicted to increase the risk of side-effects when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 8** p. 1335 → Also see **TABLE 13** p. 1337
- **Safinamide** is predicted to increase the risk of side-effects when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 1 week after stopping **safinamide**. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Rasagiline** is predicted to increase the risk of side-effects when given with opioids **(pethidine)**. Avoid and for 14 days after stopping **rasagiline**. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Safinamide** is predicted to increase the risk of side-effects when given with opioids **(pethidine)**. Avoid and for 1 week after stopping **safinamide**. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Selegiline** increases the risk of side-effects when given with opioids **(pethidine)**. Avoid. Severe Anecdotal → Also see **TABLE 13** p. 1337
- Quinolones **(ciprofloxacin)** slightly increase the exposure to **rasagiline**. Moderate Study
- **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with monoamine-oxidase B inhibitors **(rasagiline, selegiline)**. Avoid. Severe Theoretical
- **Monoamine-oxidase B inhibitors** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, inotropic**. Avoid. Severe Anecdotal
- **Monoamine-oxidase B inhibitors** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, vasoconstrictor**. Avoid. Severe Anecdotal

Monoclonal antibodies → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 12** p. 1337 (peripheral neuropathy), **TABLE 9** p. 1336 (QT-interval prolongation), **TABLE 4** p. 1334 (antiplatelet effects)

adalimumab · alemtuzumab · atezolizumab · avelumab · basiliximab · belimumab · benralizumab · bevacizumab · blinatumomab · brentuximab vedotin · brodalumab · canakinumab · certolizumab pegol · cetuximab · daratumumab · dupilumab · eculizumab · elotuzumab · golimumab · guselkumab · infliximab · inotuzumab ozogamicin · ipilimumab · ixekizumab · natalizumab · necitumumab · nivolumab · obinutuzumab · ocrelizumab · ofatumumab · olaratumab · panitumumab · pembrolizumab · pertuzumab · ramucirumab · rituximab · sarilumab · secukinumab · siltuximab · tocilizumab · trastuzumab · trastuzumab emtansine · ustekinumab · vedolizumab

- **Tocilizumab** is predicted to decrease the exposure to **alprazolam**. Monitor and adjust dose. Moderate Theoretical
- **Blinatumomab** is predicted to transiently increase the exposure to **aminophylline**. Monitor and adjust dose. Moderate Theoretical
- **Sarilumab** potentially affects the exposure to **aminophylline**. Monitor and adjust dose. Moderate Theoretical
- **Tocilizumab** is predicted to decrease the exposure to **aminophylline**. Monitor and adjust dose. Moderate Theoretical
- **Anthracyclines** are predicted to increase the risk of cardiotoxicity when given with monoclonal antibodies **(trastuzumab, trastuzumab emtansine)**. Avoid. Severe Theoretical → Also see **TABLE 15** p. 1337
- Antiarrhythmics **(dronedarone)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. Severe Theoretical
- Antiepileptics **(carbamazepine)** are predicted to decrease the effects of **brentuximab vedotin**. Severe Theoretical
- **Tocilizumab** is predicted to decrease the exposure to antiepileptics **(fosphenytoin, phenytoin)**. Monitor and adjust dose. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **trastuzumab emtansine**. Avoid. Severe Theoretical
- **Brentuximab vedotin** increases the risk of pulmonary toxicity when given with **bleomycin**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Tocilizumab** is predicted to decrease the exposure to **calcium channel blockers**. Monitor and adjust dose. Moderate Theoretical
- **Blinatumomab** is predicted to transiently increase the exposure to **ciclosporin**. Monitor and adjust dose. Moderate Theoretical
- **Sarilumab** potentially affects the exposure to **ciclosporin**. Monitor and adjust dose. Moderate Theoretical
- **Tocilizumab** is predicted to decrease the exposure to **ciclosporin**. Monitor and adjust dose. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **trastuzumab emtansine**. Avoid. Severe Theoretical
- **Sarilumab** potentially decreases the exposure to **combined hormonal contraceptives**. Severe Theoretical
- Corticosteroids **(betamethasone, deflazacort, dexamethasone, hydrocortisone, methylprednisolone, prednisolone, prednisone)** are predicted to decrease the efficacy of monoclonal antibodies **(atezolizumab, ipilimumab, nivolumab, pembrolizumab)**. Use with caution or avoid. Severe Theoretical
- **Tocilizumab** is predicted to decrease the exposure to corticosteroids **(dexamethasone, methylprednisolone)**. Monitor and adjust dose. Moderate Theoretical
- **Blinatumomab** is predicted to transiently increase the exposure to coumarins **(warfarin)**. Monitor and adjust dose. Moderate Theoretical
- **Sarilumab** potentially affects the exposure to coumarins **(warfarin)**. Monitor and adjust dose. Severe Theoretical
- **Tocilizumab** is predicted to decrease the exposure to coumarins **(warfarin)**. Monitor and adjust dose. Moderate Theoretical
- **Tocilizumab** is predicted to decrease the exposure to **diazepam**. Monitor and adjust dose. Moderate Theoretical
- HIV-protease inhibitors **(lopinavir, ritonavir, saquinavir)** are predicted to increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **trastuzumab emtansine**. Avoid. Severe Theoretical
- **Idelalisib** is predicted to increase the exposure to **trastuzumab emtansine**. Avoid. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **monoclonal antibodies**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- Macrolides **(clarithromycin)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **trastuzumab emtansine**. Avoid. Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

- **Tocilizumab** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. [Moderate] Theoretical
- **Rifampicin** decreases the effects of **brentuximab vedotin**. [Severe] Study
- **Sarilumab** potentially affects the exposure to **sirolimus**. Monitor and adjust dose. [Moderate] Theoretical
- **Sarilumab** is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. [Moderate] Study
- **Tocilizumab** is predicted to decrease the exposure to **statins (atorvastatin, simvastatin)**. Monitor and adjust dose. [Moderate] Study
- **Sarilumab** potentially affects the exposure to **tacrolimus**. Monitor and adjust dose. [Moderate] Theoretical
- **Blinatumomab** is predicted to transiently increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- **Sarilumab** potentially affects the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- **Tocilizumab** is predicted to decrease the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical

Montelukast

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **montelukast**. [Mild] Study
- **Clopidogrel** is predicted to moderately increase the exposure to **montelukast**. [Moderate] Study
- **Enzalutamide** is predicted to decrease the exposure to **montelukast**. [Mild] Study
- Fibrates **(gemfibrozil)** are predicted to moderately increase the exposure to **montelukast**. [Moderate] Study
- **Leflunomide** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
- **Mitotane** is predicted to decrease the exposure to **montelukast**. [Mild] Study
- **Opicapone** is predicted to increase the exposure to **montelukast**. Avoid. [Moderate] Study
- **Rifampicin** is predicted to decrease the exposure to **montelukast**. [Mild] Study
- **Teriflunomide** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical

Morphine → see opioids

Moxifloxacin → see quinolones

Moxisylyte → see **TABLE 8** p. 1335 (hypotension)

Moxonidine → see **TABLE 8** p. 1335 (hypotension), **TABLE 11** p. 1336 (CNS depressant effects)

- **Tricyclic antidepressants** are predicted to decrease the effects of **moxonidine**. Avoid. [Moderate] Theoretical → Also see **TABLE 8** p. 1335

Mycophenolate → see **TABLE 15** p. 1337 (myelosuppression)

- **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **aciclovir**. [Moderate] Theoretical
- **Antacids** decrease the exposure to **mycophenolate**. [Moderate] Study
- Antifungals, azoles **(isavuconazole)** increase the exposure to **mycophenolate**. [Moderate] Study
- **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **ganciclovir**. [Moderate] Theoretical → Also see **TABLE 15** p. 1337
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mycophenolate**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- **Rifampicin** decreases the concentration of **mycophenolate**. Monitor and adjust dose. [Severe] Study
- **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valaciclovir**. [Moderate] Theoretical
- **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valganciclovir**. [Moderate] Theoretical → Also see **TABLE 15** p. 1337

Nabilone → see **TABLE 11** p. 1336 (CNS depressant effects)

- **Nabilone** is predicted to increase the risk of cardiovascular side-effects when given with **amfetamines**. [Severe] Theoretical

Nabumetone → see NSAIDs

Nadolol → see beta blockers, non-selective

Nalmefene

GENERAL INFORMATION Discontinue treatment 1 week before anticipated use of opioids; if emergency analgesia is required during treatment, an increased dose of opioid analgesic might be necessary (monitor for opioid intoxication).

- **Nalmefene** is predicted to decrease the efficacy of **opioids**. Avoid. [Severe] Theoretical

Naloxegol

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. [Moderate] Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. [Moderate] Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- **Aprepitant** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. [Moderate] Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. [Moderate] Study
- **Cobicistat** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- **Crizotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. [Moderate] Study
- **Enzalutamide** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- **Grapefruit juice** is predicted to increase the exposure to **naloxegol**. Avoid. [Moderate] Theoretical
- **HIV-protease inhibitors** are predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- **Idelalisib** is predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- **Imatinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. [Moderate] Study
- Macrolides **(clarithromycin)** are predicted to markedly increase the exposure to **naloxegol**. Avoid. [Severe] Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. [Moderate] Study
- **Mitotane** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- **Netupitant** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. [Moderate] Study
- **Nilotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. [Moderate] Study
- **Rifampicin** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- **St John's Wort** is predicted to decrease the exposure to **naloxegol**. Avoid. [Moderate] Theoretical

Naltrexone

GENERAL INFORMATION Avoid concurrent use of opioids.

Nandrolone

- **Nandrolone** is predicted to increase the anticoagulant effect of **coumarins**. Monitor and adjust dose. [Severe] Theoretical
- **Nandrolone** is predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [Severe] Theoretical

Naproxen → see NSAIDs

Naratriptan → see **TABLE 13** p. 1337 (serotonin syndrome)

- **Naratriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Theoretical

Natalizumab → see monoclonal antibodies

Nateglinide → see **TABLE 14** p. 1337 (antidiabetic drugs)

https://nhathuocngocanh.com/ www.getintopharma.com

Nateglinide (continued)
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to slightly decrease the exposure to **nateglinide**. Mild Study
- **Enzalutamide** is predicted to slightly decrease the exposure to **nateglinide**. Mild Study
- **Mitotane** is predicted to slightly decrease the exposure to **nateglinide**. Mild Study
- **Rifampicin** is predicted to slightly decrease the exposure to **nateglinide**. Mild Study
- **Sulfinpyrazone** slightly increases the exposure to **nateglinide**. Mild Study

Nebivolol → see beta blockers, selective

Necitumumab → see monoclonal antibodies

Nefopam → see **TABLE 10** p. 1336 (antimuscarinics)
- **Nefopam** is predicted to increase the risk of serious elevations in blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. Severe Theoretical

Nelarabine → see **TABLE 15** p. 1337 (myelosuppression)

Neomycin → see **TABLE 2** p. 1334 (nephrotoxicity), **TABLE 19** p. 1338 (ototoxicity), **TABLE 20** p. 1338 (neuromuscular blocking effects)
- **Neomycin** decreases the absorption of **digoxin**. Moderate Study
- **Neomycin** moderately decreases the exposure to **sorafenib**. Moderate Study

Neostigmine → see **TABLE 6** p. 1335 (bradycardia), **TABLE 20** p. 1338 (neuromuscular blocking effects)
- **Aminoglycosides** are predicted to decrease the effects of **neostigmine**. Moderate Theoretical → Also see **TABLE 20** p. 1338

Nepafenac → see NSAIDs

Netupitant
- **Netupitant** is predicted to increase the exposure to aldosterone antagonists **(eplerenone)**. Adjust **eplerenone** dose, p. 190. Severe Study
- **Netupitant** is predicted to increase the exposure to alpha blockers **(tamsulosin)**. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to **alprazolam**. Severe Study
- **Netupitant** is predicted to increase the exposure to antiarrhythmics **(propafenone)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **netupitant**. Avoid. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **netupitant**. Moderate Study
- **Netupitant** is predicted to decrease the exposure to antifungals, azoles **(isavuconazole)**. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to antihistamines, non-sedating **(mizolastine)**. Severe Theoretical
- **Netupitant** is predicted to increase the exposure to antihistamines, non-sedating **(rupatadine)**. Avoid. Moderate Study
- **Netupitant** is predicted to increase the concentration of antimalarials **(piperaquine)**. Severe Theoretical
- **Netupitant** is predicted to increase the exposure to **axitinib**. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Theoretical
- **Bosentan** is predicted to decrease the exposure to **netupitant**. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Theoretical
- **Netupitant** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. Moderate Study
- **Netupitant** is predicted to increase the exposure to **cabozantinib**. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Netupitant** is predicted to increase the exposure to **ceritinib**. Moderate Theoretical
- **Netupitant** increases the concentration of **ciclosporin**. Severe Study
- **Cobicistat** is predicted to increase the exposure to **netupitant**. Moderate Study
- **Netupitant** is predicted to increase the exposure to **cobimetinib**. Severe Theoretical
- **Netupitant** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. Severe Study
- **Netupitant** is predicted to increase the exposure to corticosteroids **(dexamethasone)**. Adjust dose. Moderate Study
- **Netupitant** is predicted to increase the exposure to corticosteroids **(methylprednisolone)**. Monitor and adjust dose. Moderate Study
- **Netupitant** is predicted to slightly increase the exposure to **darifenacin**. Moderate Study
- **Netupitant** is predicted to increase the exposure to **dasatinib**. Severe Study
- **Netupitant** increases the risk of QT-prolongation when given with **domperidone**. Avoid. Severe Study
- **Netupitant** is predicted to increase the exposure to dopamine receptor agonists **(bromocriptine)**. Severe Theoretical
- **Netupitant** is predicted to increase the concentration of dopamine receptor agonists **(cabergoline)**. Moderate Anecdotal
- **Netupitant** is predicted to moderately increase the exposure to **dutasteride**. Mild Study
- **Efavirenz** is predicted to decrease the exposure to **netupitant**. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **netupitant**. Avoid. Severe Study
- **Netupitant** is predicted to increase the risk of ergotism when given with **ergometrine**. Severe Theoretical
- **Netupitant** is predicted to increase the risk of ergotism when given with **ergotamine**. Severe Theoretical
- **Netupitant** is predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- **Netupitant** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. Moderate Study
- **Netupitant** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. Mild Study
- **Netupitant** is predicted to increase the exposure to **gefitinib**. Moderate Theoretical
- **Netupitant** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **netupitant**. Moderate Study
- **Netupitant** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. Severe Study
- **Idelalisib** is predicted to increase the exposure to **netupitant**. Moderate Study
- **Netupitant** is predicted to increase the exposure to **imatinib**. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 210. Severe Theoretical
- **Netupitant** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. Severe Study
- **Netupitant** is predicted to increase the exposure to **lapatinib**. Moderate Study
- **Netupitant** is predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to **lurasidone**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **netupitant**. Moderate Study
- **Netupitant** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. Severe Study
- **Netupitant** is predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **netupitant**. Avoid. Severe Study

https://nhathuocngocanh.com/ www.getintopharma.com

- **Netupitant** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. Moderate Study
- **Nevirapine** is predicted to decrease the exposure to **netupitant**. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to **nilotinib**. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study
- **Netupitant** is predicted to increase the exposure to opioids **(methadone, sufentanil)**. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to **oxybutynin**. Mild Theoretical
- **Netupitant** is predicted to increase the exposure to **pazopanib**. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil)**. Adjust **avanafil** dose, p. 794. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. Moderate Study
- **Netupitant** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(tadalafil)**. Severe Theoretical
- **Netupitant** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(vardenafil)**. Adjust dose. Severe Theoretical
- **Netupitant** is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical
- **Netupitant** is predicted to increase the exposure to **quetiapine**. Avoid. Moderate Study
- **Netupitant** is predicted to increase the exposure to **ranolazine**. Severe Study
- **Netupitant** is predicted to increase the exposure to **ribociclib**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **netupitant**. Avoid. Severe Study
- **Netupitant** is predicted to increase the exposure to **ruxolitinib**. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to **saxagliptin**. Mild Study
- **Netupitant** is predicted to increase the exposure to **simeprevir**. Avoid. Severe Study
- **Netupitant** increases the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- **Netupitant** is predicted to increase the exposure to SSRIs **(dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **netupitant**. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to statins **(atorvastatin)**. Monitor and adjust dose. Severe Study
- **Netupitant** is predicted to increase the exposure to statins **(simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 203. Severe Study
- **Netupitant** is predicted to increase the exposure to **sunitinib**. Moderate Theoretical
- **Netupitant** is predicted to increase the concentration of **tacrolimus**. Severe Study
- **Netupitant** is predicted to increase the exposure to taxanes **(cabazitaxel)**. Moderate Theoretical
- **Netupitant** is predicted to increase the concentration of **temsirolimus**. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to **tofacitinib**. Moderate Study
- **Netupitant** is predicted to increase the exposure to **tolterodine**. Mild Theoretical
- **Netupitant** is predicted to increase the exposure to **tolvaptan**. Adjust dose. Moderate Study
- **Netupitant** is predicted to increase the exposure to **trazodone**. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- **Netupitant** is predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- **Netupitant** is predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical
- **Netupitant** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study

Neuromuscular blocking drugs, non-depolarising → see TABLE 6 p. 1335 (bradycardia), TABLE 20 p. 1338 (neuromuscular blocking effects)

atracurium · cisatracurium · mivacurium · pancuronium · rocuronium · vecuronium

- **Anticholinesterases, centrally acting** are predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. Moderate Theoretical → Also see TABLE 6 p. 1335
- Antiepileptics **(carbamazepine)** are predicted to decrease the effects of (but acute use increases the effects of) neuromuscular blocking drugs, non-depolarising **(atracurium, cisatracurium, pancuronium, rocuronium, vecuronium)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(fosphenytoin, phenytoin)** decrease the effects of (but acute use increases the effects of) neuromuscular blocking drugs, non-depolarising **(atracurium, cisatracurium, pancuronium, rocuronium, vecuronium)**. Moderate Study
- **Clindamycin** increases the effects of **neuromuscular blocking drugs, non-depolarising**. Severe Anecdotal
- **Corticosteroids** are predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. Severe Anecdotal
- **Pancuronium** is predicted to increase the risk of cardiovascular side-effects when given with **digoxin**. Severe Anecdotal
- **Irinotecan** is predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. Moderate Theoretical
- Intravenous **magnesium** increases the effects of **neuromuscular blocking drugs, non-depolarising**. Moderate Study
- **Metoclopramide** is predicted to increase the effects of **neuromuscular blocking drugs, non-depolarising**. Moderate Theoretical
- Penicillins **(piperacillin)** increase the effects of **neuromuscular blocking drugs, non-depolarising**. Moderate Study
- **SSRIs** potentially increase the risk of prolonged neuromuscular blockade when given with **mivacurium**. Unknown Theoretical

Nevirapine

- **Nevirapine** is predicted to decrease the exposure to antiarrhythmics **(dronedarone)**. Severe Theoretical
- **Nevirapine** is predicted to decrease the concentration of antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** and antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **nevirapine**. Severe Study
- Antifungals, azoles **(fluconazole)** slightly to moderately increase the exposure to **nevirapine**. Moderate Study
- **Nevirapine** is predicted to decrease the exposure to antifungals, azoles **(isavuconazole)**. Avoid. Severe Theoretical
- **Nevirapine** moderately decreases the exposure to antifungals, azoles **(itraconazole)**. Avoid and for 14 days after stopping **nevirapine**. Moderate Study
- **Nevirapine** moderately decreases the exposure to antifungals, azoles **(ketoconazole)**. Avoid. Severe Study
- **Nevirapine** is predicted to decrease the exposure to antifungals, azoles **(voriconazole)** and antifungals, azoles **(voriconazole)** increase the exposure to **nevirapine**. Monitor and adjust dose. Severe Theoretical
- **Nevirapine** is predicted to decrease the exposure to **axitinib**. Moderate Theoretical
- **Nevirapine** is predicted to decrease the exposure to **bedaquiline**. Avoid. Severe Study
- **Nevirapine** is predicted to decrease the exposure to **bosutinib**. Avoid. Severe Theoretical
- **Nevirapine** is predicted to decrease the exposure to **cabozantinib**. Moderate Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Nevirapine (continued)
- **Nevirapine** is predicted to decrease the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Theoretical
- **Nevirapine** is predicted to decrease the exposure to calcium channel blockers **(diltiazem, verapamil)**. Moderate Theoretical
- **Nevirapine** is predicted to decrease the concentration of **caspofungin**. Adjust dose. Moderate Theoretical
- **Nevirapine** is predicted to decrease the concentration of **ciclosporin**. Moderate Study
- **Nevirapine** is predicted to decrease the exposure to **cobicistat**. Avoid. Severe Theoretical
- **Nevirapine** is predicted to decrease the exposure to **cobimetinib**. Avoid. Severe Theoretical
- **Nevirapine** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Study
- **Nevirapine** potentially alters the anticoagulant effect of **coumarins**. Severe Anecdotal
- **Nevirapine** is predicted to decrease the exposure to **crizotinib**. Avoid. Severe Theoretical
- **Nevirapine** is predicted to decrease the exposure to **daclatasvir**. Avoid. Severe Theoretical
- **Nevirapine** is predicted to decrease the exposure to **dasatinib**. Severe Study
- **Nevirapine** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Nevirapine** decreases the exposure to **dolutegravir**. Adjust dose. Severe Study
- **Nevirapine** decreases the concentration of **efavirenz**. Avoid. Severe Study
- **Nevirapine** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. Severe Study
- **Nevirapine** is predicted to decrease the exposure to **eliglustat**. Moderate Theoretical
- **Nevirapine** is predicted to decrease the concentration of **elvitegravir**. Avoid. Severe Theoretical
- **Nevirapine** is predicted to decrease the effects of **ergotamine**. Moderate Theoretical
- **Nevirapine** is predicted to decrease the exposure to **erlotinib**. Severe Theoretical
- **Nevirapine** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Nevirapine** is predicted to decrease the exposure to **etravirine**. Avoid. Severe Study
- **Nevirapine** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. Severe Study
- **Nevirapine** is predicted to decrease the exposure to **gefitinib**. Avoid. Severe Theoretical
- **Nevirapine** is predicted to decrease the exposure to **glecaprevir**. Avoid. Severe Study
- **Nevirapine** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. Severe Study
- **Nevirapine** is predicted to decrease the concentration of **guanfacine**. Adjust dose. Moderate Theoretical
- **Nevirapine** decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. Moderate Study
- **Nevirapine** is predicted to decrease the effects of **hormone replacement therapy**. Moderate Anecdotal
- **Nevirapine** is predicted to decrease the exposure to **idelalisib**. Avoid. Moderate Theoretical
- **Nevirapine** is predicted to decrease the exposure to **imatinib**. Moderate Study
- **Nevirapine** is predicted to decrease the exposure to **ivacaftor**. Severe Theoretical
- **Nevirapine** is predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study
- **Nevirapine** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Nevirapine** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. Moderate Theoretical
- **Nevirapine** decreases the exposure to macrolides **(clarithromycin)**. Moderate Study
- **Nevirapine** decreases the concentration of **midazolam**. Monitor and adjust dose. Moderate Study
- **Nevirapine** is predicted to decrease the exposure to **netupitant**. Moderate Theoretical
- **Nevirapine** is predicted to decrease the exposure to **nilotinib**. Avoid. Severe Theoretical
- **Nevirapine** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Nevirapine** is predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical
- **Nevirapine** decreases the exposure to opioids **(methadone)**. Monitor and adjust dose. Severe Study
- **Nevirapine** is predicted to decrease the exposure to **osimertinib**. Severe Theoretical
- **Nevirapine** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. Severe Study
- **Nevirapine** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. Moderate Theoretical
- **Nevirapine** is predicted to decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- **Nevirapine** is predicted to decrease the exposure to **quetiapine**. Moderate Study
- **Nevirapine** is predicted to decrease the exposure to **ribociclib**. Moderate Study
- **Rifampicin** decreases the concentration of **nevirapine**. Avoid. Severe Study
- **Nevirapine** is predicted to decrease the exposure to **rilpivirine**. Avoid. Severe Theoretical
- **Nevirapine** is predicted to decrease the exposure to **rolapitant**. Avoid. Severe Study
- **Nevirapine** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Theoretical
- **Nevirapine** is predicted to decrease the exposure to **simeprevir**. Avoid. Severe Study
- **Nevirapine** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. Moderate Theoretical
- **St John's Wort** is predicted to decrease the concentration of **nevirapine**. Avoid. Severe Theoretical
- **Nevirapine** slightly decreases the exposure to statins **(atorvastatin)**. Mild Study
- **Nevirapine** moderately decreases the exposure to statins **(simvastatin)**. Moderate Study
- **Nevirapine** is predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. Moderate Theoretical
- **Nevirapine** is predicted to decrease the exposure to taxanes **(cabazitaxel)**. Avoid. Severe Study
- **Nevirapine** is predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Theoretical
- **Nevirapine** is predicted to decrease the exposure to **ticagrelor**. Moderate Theoretical
- **Nevirapine** is predicted to decrease the exposure to **tofacitinib**. Moderate Study
- **Nevirapine** is predicted to decrease the exposure to **tolvaptan**. Moderate Theoretical
- **Nevirapine** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Nevirapine** is predicted to decrease the exposure to **velpatasvir**. Avoid. Moderate Theoretical
- **Nevirapine** is predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- **Nevirapine** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Theoretical
- **Nevirapine** is predicted to decrease the concentration of **zidovudine**. Refer to specialist literature. Severe Theoretical

Nicardipine → see calcium channel blockers

Nicorandil → see TABLE 8 p. 1335 (hypotension)
- **Aspirin** is predicted to increase the risk of gastrointestinal perforation when given with **nicorandil**. Severe Theoretical
- **Corticosteroids** increase the risk of gastrointestinal perforation when given with **nicorandil**. Severe Anecdotal

https://nhathuocngocanh.com/ www.getintopharma.com

- **Nicorandil** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. Severe Theoretical
- **Nicorandil** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. Severe Theoretical → Also see **TABLE 8** p. 1335

Nicotinic acid → see **TABLE 3** p. 1334 (anticoagulant effects)

- **Nicotinic acid** is predicted to increase the risk of rhabdomyolysis when given with **statins**. Severe Theoretical

Nifedipine → see calcium channel blockers

Nilotinib → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 9** p. 1336 (QT-interval prolongation)

- **Nilotinib** is predicted to increase the exposure to aldosterone antagonists **(eplerenone)**. Adjust **eplerenone** dose, p. 190. Severe Study
- **Nilotinib** is predicted to increase the exposure to alpha blockers **(tamsulosin)**. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to **alprazolam**. Severe Study
- **Antacids** are predicted to decrease the absorption of **nilotinib**. Separate administration by at least 2 hours. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to antiarrhythmics **(propafenone)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **nilotinib**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, posaconazole)** are predicted to increase the exposure to **nilotinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **nilotinib**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **Nilotinib** is predicted to increase the exposure to antihistamines, non-sedating **(mizolastine)**. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to antihistamines, non-sedating **(rupatadine)**. Avoid. Moderate Study
- **Nilotinib** is predicted to increase the concentration of antimalarials **(piperaquine)**. Severe Theoretical
- **Aprepitant** is predicted to increase the exposure to **nilotinib**. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to **axitinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Nilotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Theoretical → Also see **TABLE 9** p. 1336
- **Bosentan** is predicted to decrease the exposure to **nilotinib**. Avoid. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Theoretical → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- **Nilotinib** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **cabozantinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **nilotinib**. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **ceritinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- **Nilotinib** increases the concentration of **ciclosporin**. Severe Study
- **Cobicistat** is predicted to moderately increase the exposure to **nilotinib**. Avoid. Severe Study
- **Nilotinib** is predicted to increase the exposure to **cobimetinib**. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate inhibitors of CYP3A4, p. 1085. Severe Study
- **Nilotinib** is predicted to increase the exposure to corticosteroids **(methylprednisolone)**. Monitor and adjust dose. Moderate Study
- **Nilotinib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Nilotinib** is predicted to slightly increase the exposure to **darifenacin**. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **dasatinib**. Severe Study → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- **Nilotinib** increases the risk of QT-prolongation when given with **domperidone**. Avoid. Severe Study
- **Nilotinib** is predicted to increase the exposure to dopamine receptor agonists **(bromocriptine)**. Severe Theoretical
- **Nilotinib** is predicted to increase the concentration of dopamine receptor agonists **(cabergoline)**. Moderate Anecdotal
- **Nilotinib** is predicted to moderately increase the exposure to **dutasteride**. Mild Study
- **Efavirenz** is predicted to decrease the exposure to **nilotinib**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Nilotinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Enzalutamide** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. Severe Study
- **Nilotinib** is predicted to increase the risk of ergotism when given with **ergometrine**. Severe Theoretical
- **Nilotinib** is predicted to increase the risk of ergotism when given with **ergotamine**. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- **Nilotinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. Moderate Study → Also see **TABLE 15** p. 1337
- **Nilotinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate inhibitors of CYP3A4 in hepatic and renal impairment, p. 759. Mild Study
- **Nilotinib** is predicted to increase the exposure to **gefitinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Grapefruit juice** is predicted to increase the exposure to **nilotinib**. Avoid. Severe Theoretical
- **Nilotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Theoretical
- **H_2 receptor antagonists** are predicted to decrease the absorption of **nilotinib**. **H_2 receptor antagonists** should be taken 10 hours before or 2 hours after **nilotinib**. Mild Theoretical
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to **nilotinib**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **Nilotinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate inhibitors of CYP3A4, p. 952. Severe Study → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to moderately increase the exposure to **nilotinib**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Nilotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 210. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **ivacaftor**. Adjust **ivacaftor** dose with moderate inhibitors of CYP3A4, p. 292. Severe Study
- **Nilotinib** is predicted to increase the exposure to **lapatinib**. Moderate Study → Also see **TABLE 9** p. 1336
- **Nilotinib** is predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to **lurasidone**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to moderately increase the exposure to **nilotinib**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- Macrolides **(erythromycin)** are predicted to increase the exposure to **nilotinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Nilotinib** is predicted to increase the exposure to **midazolam**. Monitor side effects and adjust dose. Severe Study
- **Nilotinib** is predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- **Mitotane** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Nilotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor side effects, p. 64. Moderate Study

https://nhathuocngocanh.com/ www.getintopharma.com

Nilotinib (continued)
- **Netupitant** is predicted to increase the exposure to **nilotinib**. Moderate Theoretical
- **Nevirapine** is predicted to decrease the exposure to **nilotinib**. Avoid. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Nilotinib** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study
- **Nilotinib** is predicted to increase the exposure to opioids **(methadone, sufentanil)**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Nilotinib** is predicted to increase the exposure to **oxybutynin**. Mild Theoretical
- **Nilotinib** is predicted to increase the exposure to **pazopanib**. Moderate Theoretical → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- **Nilotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil)**. Adjust **avanafil** dose, p. 794. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(sildenafil)**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. Moderate Study → Also see **TABLE 9** p. 1336
- **Nilotinib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(tadalafil)**. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(vardenafil)**. Adjust dose. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Nilotinib** is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Nilotinib** is predicted to increase the exposure to **quetiapine**. Avoid. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **ranolazine**. Severe Study → Also see **TABLE 9** p. 1336
- **Nilotinib** is predicted to increase the exposure to **ribociclib**. Moderate Study → Also see **TABLE 9** p. 1336
- **Rifampicin** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. Severe Study
- **Nilotinib** is predicted to increase the exposure to **ruxolitinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Nilotinib** is predicted to increase the exposure to **saxagliptin**. Mild Study
- **Nilotinib** is predicted to increase the exposure to **simeprevir**. Avoid. Severe Study
- **Nilotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- **Nilotinib** is predicted to increase the exposure to SSRIs **(dapoxetine)**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **nilotinib**. Avoid. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to statins **(atorvastatin)**. Monitor and adjust dose. Severe Study
- **Nilotinib** is predicted to increase the exposure to statins **(simvastatin)**. Use with caution and adjust **simvastatin** dose, p. 203. Severe Study
- **Nilotinib** is predicted to increase the exposure to **sunitinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- **Nilotinib** is predicted to increase the concentration of **tacrolimus**. Severe Study
- **Nilotinib** is predicted to increase the exposure to taxanes **(cabazitaxel)**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Nilotinib** is predicted to increase the concentration of **temsirolimus**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Nilotinib** is predicted to increase the exposure to **tofacitinib**. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **tolterodine**. Mild Theoretical → Also see **TABLE 9** p. 1336
- **Nilotinib** is predicted to increase the exposure to **tolvaptan**. Adjust dose. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **trazodone**. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- **Nilotinib** is predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- **Nilotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study

Nimodipine → see calcium channel blockers

Nintedanib
- Antiarrhythmics **(amiodarone, dronedarone)** are predicted to increase the exposure to **nintedanib**. Moderate Study
- Antiepileptics **(carbamazepine)** are predicted to decrease the exposure to **nintedanib**. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole)** are predicted to increase the exposure to **nintedanib**. Moderate Study
- Calcium channel blockers **(verapamil)** are predicted to increase the exposure to **nintedanib**. Moderate Study
- **Ciclosporin** is predicted to increase the exposure to **nintedanib**. Moderate Study
- HIV-protease inhibitors **(lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **nintedanib**. Moderate Study
- **Lapatinib** is predicted to increase the exposure to **nintedanib**. Moderate Study
- **Macrolides** are predicted to increase the exposure to **nintedanib**. Moderate Study
- **Ranolazine** is predicted to increase the exposure to **nintedanib**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **nintedanib**. Moderate Study
- **St John's Wort** is predicted to decrease the exposure to **nintedanib**. Moderate Study
- **Vemurafenib** is predicted to increase the exposure to **nintedanib**. Moderate Study

Nitisinone
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- **Idelalisib** is predicted to increase the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **nitisinone**. Adjust dose. Moderate Theoretical

Nitrates → see **TABLE 7** p. 1335 (first-dose hypotension), **TABLE 8** p. 1335 (hypotension)

glyceryl trinitrate • isosorbide dinitrate • isosorbide mononitrate

PHARMACOLOGY Drugs with antimuscarinic effects can cause dry mouth, which can reduce the effectiveness of sublingual glyceryl trinitrate tablets.
- **Nitrates** are predicted to increase the risk of methaemoglobinaemia when given with topical anaesthetics, local **(prilocaine)**. Avoid. Severe Theoretical
- **Nitrates** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

- **Nitrates** potentially increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. Severe Study → Also see **TABLE 8** p. 1335

Nitrazepam → see **TABLE 11** p. 1336 (CNS depressant effects)
- **Rifampicin** increases the clearance of **nitrazepam**. Moderate Study

Nitrofurantoin → see **TABLE 12** p. 1337 (peripheral neuropathy)
- **Nitrofurantoin** is predicted to increase the risk of methaemoglobinaemia when given with topical anaesthetics, local **(prilocaine)**. Use with caution or avoid. Severe Theoretical
- Antacids **(magnesium trisilicate)** decrease the absorption of **nitrofurantoin**. Moderate Study
- **Nitrofurantoin** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. Severe Theoretical

Nitrous oxide → see **TABLE 8** p. 1335 (hypotension), **TABLE 11** p. 1336 (CNS depressant effects)

Nivolumab → see monoclonal antibodies

Nizatidine → see H_2 receptor antagonists

Noradrenaline/norepinephrine → see sympathomimetics, vasoconstrictor

Norethisterone
- Antiepileptics **(carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Aprepitant** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Bosentan** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Efavirenz** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Fosaprepitant** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Griseofulvin** potentially decreases the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- HIV-protease inhibitors **(ritonavir)** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Modafinil** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Nevirapine** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Rifabutin** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Rifampicin** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **St John's Wort** is predicted to decrease the efficacy of **norethisterone**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Sugammadex** is predicted to decrease the exposure to **norethisterone**. Use additional contraceptive precautions. Severe Theoretical
- **Ulipristal** is predicted to decrease the efficacy of **norethisterone**. Avoid. Severe Theoretical

Norfloxacin → see quinolones

Nortriptyline → see tricyclic antidepressants

NSAIDs → see **TABLE 18** p. 1338 (hyponatraemia), **TABLE 2** p. 1334 (nephrotoxicity), **TABLE 16** p. 1338 (increased serum potassium), **TABLE 4** p. 1334 (antiplatelet effects)

aceclofenac · acemetacin · benzydamine · bromfenac · celecoxib · dexibuprofen · dexketoprofen · diclofenac · etodolac · etoricoxib · felbinac · fenoprofen · flurbiprofen · ibuprofen · indometacin · ketoprofen · ketorolac · mefenamic acid · meloxicam · nabumetone · naproxen · nepafenac · parecoxib · piroxicam · sulindac · tenoxicam · tiaprofenic acid · tolfenamic acid ·

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- **Celecoxib** is predicted to increase the exposure to antiarrhythmics **(flecainide, propafenone)**. Monitor and adjust dose. Moderate Theoretical
- Antifungals, azoles **(fluconazole)** moderately increase the exposure to **celecoxib**. Adjust **celecoxib** dose, p. 1097. Moderate Study
- Antifungals, azoles **(fluconazole)** increase the exposure to **parecoxib**. Monitor and adjust dose. Moderate Study
- Antifungals, azoles **(voriconazole)** slightly increase the exposure to **diclofenac**. Monitor and adjust dose. Moderate Study
- Antifungals, azoles **(voriconazole)** moderately increase the exposure to **ibuprofen**. Adjust dose. Moderate Study
- **NSAIDs** are predicted to increase the risk of gastrointestinal irritation when given with bisphosphonates **(alendronic acid, ibandronic acid)**. Moderate Study
- **NSAIDs** are predicted to increase the risk of renal impairment when given with bisphosphonates **(sodium clodronate)**. Severe Theoretical
- **Ceritinib** is predicted to increase the exposure to NSAIDs **(celecoxib, diclofenac)**. Adjust dose. Moderate Theoretical
- **Ciclosporin** increases the concentration of **diclofenac**. Severe Study → Also see **TABLE 2** p. 1334 → Also see **TABLE 16** p. 1338
- **Etoricoxib** slightly increases the exposure to **combined hormonal contraceptives**. Moderate Study
- **NSAIDs** increase the risk of gastrointestinal bleeding when given with **corticosteroids**. Severe Study
- **NSAIDs** increase the risk of renal impairment when given with **daptomycin**. Moderate Theoretical
- **Indometacin** increases the concentration of **digoxin**. Severe Study
- **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. Severe Theoretical
- **Etoricoxib** slightly increases the exposure to **hormone replacement therapy**. Moderate Study
- **NSAIDs** are predicted to increase the risk of gastrointestinal bleeding when given with iron chelators **(deferasirox)**. Severe Theoretical
- **NSAIDs** increase the concentration of **lithium**. Monitor and adjust dose. Severe Study
- **NSAIDs** are predicted to increase the risk of toxicity when given with **methotrexate**. Monitor and adjust dose. Severe Study → Also see **TABLE 2** p. 1334
- **NSAIDs** (high-dose) are predicted to decrease the efficacy of **mifamurtide**. Avoid. Severe Theoretical
- **Nicorandil** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. Severe Theoretical
- **NSAIDs** are predicted to increase the exposure to **pemetrexed**. Use with caution or avoid. Severe Theoretical → Also see **TABLE 2** p. 1334
- **NSAIDs** potentially increase the risk of seizures when given with **quinolones**. Severe Theoretical
- **Regorafenib** is predicted to increase the exposure to **mefenamic acid**. Avoid. Moderate Theoretical → Also see **TABLE 4** p. 1334
- **Rifampicin** moderately decreases the exposure to NSAIDs **(celecoxib, diclofenac, etoricoxib)**. Moderate Study
- **NSAIDs** increase the risk of acute renal failure when given with **thiazide diuretics**. Severe Theoretical → Also see **TABLE 18** p. 1338
- **Zidovudine** increases the risk of haematological toxicity when given with **NSAIDs**. Severe Study → Also see **TABLE 2** p. 1334

Obeticholic acid
- **Obeticholic acid** decreases the anticoagulant effect of coumarins **(warfarin)**. Severe Study
- **Obeticholic acid** is predicted to increase the exposure to **theophylline**. Severe Theoretical
- **Obeticholic acid** is predicted to increase the exposure to **tizanidine**. Severe Theoretical

Obinutuzumab → see monoclonal antibodies

Ocrelizumab → see monoclonal antibodies

Octreotide
- **Octreotide** decreases the absorption of oral **ciclosporin**. Adjust **ciclosporin** dose, p. 818. Severe Anecdotal

https://nhathuocngocanh.com/ www.getintopharma.com

Octreotide (continued)

- **Octreotide** (short-acting) decreases the exposure to **telotristat ethyl**. **Telotristat ethyl** should be taken at least 30 minutes before **octreotide**. Moderate Study

Ofatumumab → see monoclonal antibodies

Ofloxacin → see quinolones

Olanzapine → see **TABLE 8** p. 1335 (hypotension), **TABLE 15** p. 1337 (myelosuppression), **TABLE 11** p. 1336 (CNS depressant effects)

FOOD AND LIFESTYLE Dose adjustment might be necessary if smoking started or stopped during treatment.

- Antiepileptics **(carbamazepine)** potentially decrease the exposure to **olanzapine**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(phenytoin)** are predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. Moderate Study
- **Olanzapine** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335
- HIV-protease inhibitors **(ritonavir)** are predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. Moderate Study
- **Leflunomide** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. Moderate Study → Also see **TABLE 15** p. 1337
- **Olanzapine** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. Severe Anecdotal → Also see **TABLE 8** p. 1335
- **Rifampicin** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. Moderate Study
- SSRIs **(fluvoxamine)** moderately increase the exposure to **olanzapine**. Adjust dose. Severe Anecdotal
- **Teriflunomide** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. Moderate Study

Olaparib → see **TABLE 15** p. 1337 (myelosuppression)

FOOD AND LIFESTYLE Bitter (Seville) orange is predicted to increase the exposure to olaparib.

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Study
- **Aprepitant** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Theoretical
- **Bosentan** is predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Efavirenz** is predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **olaparib**. Avoid. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Study → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Theoretical → Also see **TABLE 15** p. 1337
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **olaparib**. Avoid potent inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Netupitant** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Theoretical
- **Nevirapine** is predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to **olaparib**. Avoid moderate inhibitors of CYP3A4 or adjust **olaparib** dose, p. 973. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Rifampicin** is predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical

Olaratumab → see monoclonal antibodies

Olmesartan → see angiotensin-II receptor antagonists

Olodaterol → see beta$_2$ agonists

Olsalazine → see **TABLE 15** p. 1337 (myelosuppression)

Ombitasvir

- Antiepileptics **(carbamazepine)** are predicted to decrease the exposure to **ombitasvir**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **ombitasvir**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **ombitasvir**. Avoid. Severe Theoretical

Omega-3-acid ethyl esters → see **TABLE 3** p. 1334 (anticoagulant effects)

Omeprazole → see proton pump inhibitors

Ondansetron → see **TABLE 13** p. 1337 (serotonin syndrome), **TABLE 9** p. 1336 (QT-interval prolongation)

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ondansetron**. Moderate Study
- Dopamine receptor agonists **(apomorphine)** increase the risk of severe hypotension when given with **ondansetron**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **Enzalutamide** is predicted to decrease the exposure to **ondansetron**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **ondansetron**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **ondansetron**. Moderate Study

Opicapone

- **Opicapone** increases the exposure to **levodopa**. Adjust dose. Moderate Study
- **Opicapone** is predicted to increase the exposure to **loperamide**. Avoid. Moderate Study
- **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **moclobemide**. Avoid. Severe Theoretical
- **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. Severe Theoretical
- **Opicapone** is predicted to increase the exposure to **montelukast**. Avoid. Moderate Study
- **Opicapone** is predicted to increase the exposure to **pioglitazone**. Avoid. Moderate Study
- **Opicapone** is predicted to increase the exposure to **repaglinide**. Avoid. Moderate Study
- **Opicapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic**. Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

- **Opicapone** is predicted to increase the risk of cardiovascular side-effects when given with sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, noradrenaline/norepinephrine)**. Severe Theoretical

Opioids → see **TABLE 6** p. 1335 (bradycardia), **TABLE 13** p. 1337 (serotonin syndrome), **TABLE 9** p. 1336 (QT-interval prolongation), **TABLE 11** p. 1336 (CNS depressant effects)

alfentanil · buprenorphine · codeine · diamorphine · dihydrocodeine · diphenoxylate · dipipanone · fentanyl · hydromorphone · meptazinol · methadone · morphine · oxycodone · papaveretum · pentazocine · pethidine · remifentanil · sufentanil · tapentadol · tramadol

- **Alcohol (beverage)** causes rapid release of opioids **(hydromorphone, morphine)** (from extended-release preparations). Avoid. Severe Study → Also see **TABLE 11** p. 1336
- Antiarrhythmics **(amiodarone)** are predicted to increase the concentration of **fentanyl**. Moderate Theoretical → Also see **TABLE 6** p. 1335
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to opioids **(methadone, sufentanil)**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- Antiepileptics **(carbamazepine)** decrease the concentration of **tramadol**. Adjust dose. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. Moderate Theoretical → Also see **TABLE 11** p. 1336
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **methadone**. Monitor and adjust dose. Severe Study → Also see **TABLE 11** p. 1336
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. Moderate Study → Also see **TABLE 11** p. 1336
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to opioids **(alfentanil, fentanyl)**. Moderate Study → Also see **TABLE 11** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **methadone**. Adjust dose. Severe Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(miconazole)** are predicted to increase the exposure to **alfentanil**. Use with caution and adjust dose. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil)**. Monitor and adjust dose. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to opioids **(methadone, sufentanil)**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Aprepitant** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study
- **Aprepitant** is predicted to increase the exposure to opioids **(methadone, sufentanil)**. Moderate Theoretical
- **Bosentan** decreases the exposure to **methadone**. Monitor and adjust dose. Severe Study
- **Bupropion** is predicted to decrease the efficacy of **codeine**. Moderate Theoretical
- **Bupropion** is predicted to decrease the efficacy of **tramadol**. Severe Study → Also see **TABLE 13** p. 1337
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study → Also see **TABLE 6** p. 1335
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to opioids **(methadone, sufentanil)**. Moderate Theoretical → Also see **TABLE 6** p. 1335
- **Ceritinib** is predicted to increase the exposure to opioids **(alfentanil, fentanyl)**. Avoid. Severe Theoretical
- **Cinacalcet** is predicted to decrease the efficacy of **codeine**. Moderate Theoretical
- **Cinacalcet** is predicted to decrease the efficacy of **tramadol**. Severe Study
- **Cobicistat** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil)**. Monitor and adjust dose. Severe Study
- **Crizotinib** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study → Also see **TABLE 6** p. 1335
- **Crizotinib** is predicted to increase the exposure to opioids **(methadone, sufentanil)**. Moderate Theoretical → Also see **TABLE 6** p. 1335 → Also see **TABLE 9** p. 1336
- **Efavirenz** decreases the exposure to **methadone**. Monitor and adjust dose. Severe Study → Also see **TABLE 9** p. 1336
- **Enzalutamide** is predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. Moderate Theoretical
- **Enzalutamide** decreases the exposure to **methadone**. Monitor and adjust dose. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to opioids **(alfentanil, fentanyl)**. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. Moderate Study
- H_2 receptor antagonists **(cimetidine)** increase the concentration of **alfentanil**. Use with caution and adjust dose. Severe Study
- H_2 receptor antagonists **(cimetidine)** increase the exposure to **fentanyl**. Moderate Study
- **HIV-protease inhibitors** (boosted with ritonavir) are predicted to decrease the exposure to **methadone**. Moderate Study → Also see **TABLE 9** p. 1336
- HIV-protease inhibitors **(ritonavir)** are predicted to decrease the concentration of **morphine**. Moderate Theoretical
- HIV-protease inhibitors **(ritonavir)** increase the risk of CNS toxicity when given with **pethidine**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil)**. Monitor and adjust dose. Severe Study
- **Idelalisib** is predicted to increase the exposure to **methadone**. Severe Theoretical
- **Idelalisib** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil)**. Monitor and adjust dose. Severe Study
- **Imatinib** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study
- **Imatinib** is predicted to increase the exposure to opioids **(methadone, sufentanil)**. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the concentration of **methadone**. Severe Theoretical → Also see **TABLE 9** p. 1336
- Macrolides **(erythromycin)** are predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone, sufentanil)**. Monitor and adjust dose. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to opioids **(methadone, sufentanil)**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Mitotane** is predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. Moderate Theoretical
- **Mitotane** decreases the exposure to **methadone**. Monitor and adjust dose. Severe Study
- **Mitotane** is predicted to decrease the exposure to opioids **(alfentanil, fentanyl)**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. Moderate Study
- **Opioids** are predicted to increase the risk of CNS excitation or depression when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. Severe Study → Also see **TABLE 13** p. 1337

https://nhathuocngocanh.com/ www.getintopharma.com

Opioids (continued)

- Monoamine-oxidase B inhibitors **(rasagiline)** are predicted to increase the risk of side-effects when given with **pethidine**. Avoid and for 14 days after stopping **rasagiline**. Severe Theoretical → Also see **TABLE 13** p. 1337
- Monoamine-oxidase B inhibitors **(safinamide)** are predicted to increase the risk of side-effects when given with **pethidine**. Avoid and for 1 week after stopping **safinamide**. Severe Theoretical → Also see **TABLE 13** p. 1337
- Monoamine-oxidase B inhibitors **(selegiline)** increase the risk of side-effects when given with **pethidine**. Avoid. Severe Anecdotal → Also see **TABLE 13** p. 1337
- **Nalmefene** is predicted to decrease the efficacy of **opioids**. Avoid. Severe Theoretical
- **Netupitant** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study
- **Netupitant** is predicted to increase the exposure to opioids **(methadone, sufentanil)**. Moderate Theoretical
- **Nevirapine** decreases the exposure to **methadone**. Monitor and adjust dose. Severe Study
- **Nilotinib** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study
- **Nilotinib** is predicted to increase the exposure to opioids **(methadone, sufentanil)**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- Opioids **(buprenorphine)** are predicted to increase the risk of opiate withdrawal when given with opioids **(alfentanil)**. Severe Theoretical → Also see **TABLE 11** p. 1336
- Opioids **(pentazocine)** are predicted to increase the risk of opiate withdrawal when given with opioids **(alfentanil, codeine, diamorphine, dihydrocodeine, dipipanone, fentanyl, hydromorphone, meptazinol, methadone, morphine, oxycodone, papaveretum)**. Severe Theoretical → Also see **TABLE 13** p. 1337 → Also see **TABLE 11** p. 1336
- Opioids **(buprenorphine)** are predicted to increase the risk of opiate withdrawal when given with opioids **(codeine, diamorphine, dihydrocodeine, dipipanone, fentanyl, hydromorphone, meptazinol, methadone, morphine, oxycodone, papaveretum, pentazocine, pethidine, remifentanil, sufentanil, tapentadol, tramadol)**. Severe Theoretical → Also see **TABLE 11** p. 1336 → Also see **TABLE 13** p. 1337
- Opioids **(pentazocine)** are predicted to increase the risk of opiate withdrawal when given with opioids **(pethidine, remifentanil, tapentadol, tramadol)**. Severe Theoretical → Also see **TABLE 11** p. 1336 → Also see **TABLE 13** p. 1337
- Opioids **(pentazocine)** are predicted to increase the risk of opiate withdrawal when given with opioids **(sufentanil)**. Severe Anecdotal → Also see **TABLE 11** p. 1336
- **Palbociclib** is predicted to increase the exposure to opioids **(alfentanil, fentanyl)**. Adjust dose. Moderate Theoretical
- **Pitolisant** is predicted to decrease the exposure to **morphine**. Unknown Theoretical
- **Ribociclib** is predicted to increase the exposure to opioids **(alfentanil, fentanyl)**. Use with caution and adjust dose. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. Moderate Theoretical
- **Rifampicin** decreases the exposure to **methadone**. Monitor and adjust dose. Severe Study
- **Rifampicin** is predicted to decrease the exposure to opioids **(alfentanil, fentanyl)**. Moderate Study
- **Rifampicin** decreases the exposure to opioids **(codeine, morphine)**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. Moderate Study
- SSRIs **(fluoxetine, paroxetine)** are predicted to decrease the efficacy of **codeine**. Moderate Theoretical
- SSRIs **(fluoxetine, paroxetine)** are predicted to decrease the efficacy of **tramadol**. Severe Study → Also see **TABLE 13** p. 1337
- **St John's Wort** decreases the exposure to **methadone**. Monitor and adjust dose. Severe Study → Also see **TABLE 13** p. 1337
- **St John's Wort** moderately decreases the exposure to **oxycodone**. Adjust dose. Moderate Study
- **Terbinafine** is predicted to decrease the efficacy of **codeine**. Moderate Theoretical
- **Terbinafine** is predicted to decrease the efficacy of **tramadol**. Severe Study

Orlistat

SEPARATION OF ADMINISTRATION Orlistat might affect the absorption of concurrently administered drugs—consider separating administration. Particular care should be taken with antiepileptics, antiretrovirals, and drugs that have a narrow therapeutic index.

Orphenadrine → see **TABLE 10** p. 1336 (antimuscarinics)

Osimertinib → see **TABLE 9** p. 1336 (QT-interval prolongation)

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **osimertinib**. Avoid. Moderate Study
- **Bosentan** is predicted to decrease the exposure to **osimertinib**. Moderate Theoretical
- **Efavirenz** is predicted to decrease the exposure to **osimertinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Enzalutamide** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. Moderate Study
- **Mitotane** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. Moderate Study
- **Nevirapine** is predicted to decrease the exposure to **osimertinib**. Severe Theoretical
- **Rifampicin** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. Moderate Study
- **St John's Wort** is predicted to decrease the exposure to **osimertinib**. Avoid. Moderate Theoretical
- **Osimertinib** slightly increases the exposure to statins **(rosuvastatin)**. Moderate Study

Oxaliplatin → see platinum compounds

Oxazepam → see **TABLE 11** p. 1336 (CNS depressant effects)

Oxcarbazepine → see antiepileptics

Oxprenolol → see beta blockers, non-selective

Oxybuprocaine → see anaesthetics, local

Oxybutynin → see **TABLE 10** p. 1336 (antimuscarinics)

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **oxybutynin**. Mild Theoretical
- **Oxybutynin** potentially increases the risk of overheating and dehydration when given with antiepileptics **(zonisamide)**. Avoid in children. Severe Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **oxybutynin**. Mild Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **oxybutynin**. Mild Study
- **Aprepitant** is predicted to increase the exposure to **oxybutynin**. Mild Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **oxybutynin**. Mild Theoretical
- **Cobicistat** is predicted to increase the exposure to **oxybutynin**. Mild Study
- **Crizotinib** is predicted to increase the exposure to **oxybutynin**. Mild Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **oxybutynin**. Mild Study
- **Idelalisib** is predicted to increase the exposure to **oxybutynin**. Mild Study
- **Imatinib** is predicted to increase the exposure to **oxybutynin**. Mild Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **oxybutynin**. Mild Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **oxybutynin**. Mild Theoretical
- **Netupitant** is predicted to increase the exposure to **oxybutynin**. Mild Theoretical
- **Nilotinib** is predicted to increase the exposure to **oxybutynin**. Mild Theoretical

Oxycodone → see opioids

Oxymetholone

- **Oxymetholone** increases the anticoagulant effect of **coumarins**. Severe Anecdotal
- **Oxymetholone** increases the anticoagulant effect of **phenindione**. Severe Anecdotal

https://nhathuocngocanh.com/ www.getintopharma.com

Oxytetracycline → see tetracyclines

Paclitaxel → see taxanes

Palbociclib

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **palbociclib**. Avoid. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 961. Severe Study
- **Palbociclib** is predicted to increase the exposure to **ciclosporin**. Adjust dose. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 961. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **palbociclib**. Avoid. Severe Study
- **Palbociclib** is predicted to increase the exposure to **ergotamine**. Adjust dose. Moderate Theoretical
- **Palbociclib** is predicted to increase the exposure to **everolimus**. Adjust dose. Moderate Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **palbociclib**. Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 961. Severe Study
- **Idelalisib** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 961. Severe Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 961. Severe Study
- **Palbociclib** increases the exposure to **midazolam**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **palbociclib**. Avoid. Severe Study
- **Palbociclib** is predicted to increase the exposure to opioids **(alfentanil, fentanyl)**. Adjust dose. Moderate Theoretical
- **Palbociclib** is predicted to increase the exposure to **pimozide**. Adjust dose. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **palbociclib**. Avoid. Severe Study
- **Palbociclib** is predicted to increase the exposure to **sirolimus**. Adjust dose. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **palbociclib**. Avoid. Severe Theoretical
- **Palbociclib** is predicted to increase the exposure to **tacrolimus**. Adjust dose. Moderate Theoretical

Paliperidone → see **TABLE 8** p. 1335 (hypotension), **TABLE 9** p. 1336 (QT-interval prolongation), **TABLE 11** p. 1336 (CNS depressant effects)

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. Severe Study → Also see **TABLE 11** p. 1336
- Antiepileptics **(valproate)** slightly increase the exposure to **paliperidone**. Adjust dose. Moderate Study
- **Paliperidone** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335 → Also see **TABLE 9** p. 1336
- **Enzalutamide** is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. Severe Study
- **Paliperidone** is predicted to decrease the effects of **levodopa**. Severe Theoretical → Also see **TABLE 8** p. 1335
- **Mitotane** is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **paliperidone**. Severe Theoretical

Palonosetron → see **TABLE 13** p. 1337 (serotonin syndrome), **TABLE 9** p. 1336 (QT-interval prolongation)

- Dopamine receptor agonists **(apomorphine)** are predicted to increase the risk of severe hypotension when given with **palonosetron**. Severe Theoretical

Pamidronate → see bisphosphonates

Pancreatin

- **Pancreatin** is predicted to decrease the effects of **acarbose**. Avoid. Moderate Theoretical

Pancuronium → see neuromuscular blocking drugs, non-depolarising

Panitumumab → see monoclonal antibodies

Panobinostat → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 9** p. 1336 (QT-interval prolongation)

FOOD AND LIFESTYLE Avoid pomegranate, pomegranate juice, and star fruit as they are predicted to increase panobinostat exposure.

- Antiarrhythmics **(amiodarone, dronedarone)** are predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical → Also see **TABLE 9** p. 1336
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **panobinostat**. Avoid. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 911. Moderate Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(posaconazole)** are predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical
- **Panobinostat** is predicted to increase the exposure to **atomoxetine**. Monitor and adjust dose. Severe Theoretical
- **Panobinostat** is predicted to increase the exposure to beta blockers, selective **(metoprolol)**. Monitor and adjust dose. Moderate Theoretical
- **Panobinostat** is predicted to increase the exposure to beta blockers, selective **(nebivolol)**. Monitor and adjust dose. Mild Theoretical
- Calcium channel blockers **(verapamil)** are predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical
- **Ciclosporin** is predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 911. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **panobinostat**. Avoid. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 911. Moderate Study → Also see **TABLE 9** p. 1336
- **Idelalisib** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 911. Moderate Study → Also see **TABLE 15** p. 1337
- **Lapatinib** is predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical → Also see **TABLE 9** p. 1336
- Macrolides **(azithromycin, erythromycin)** are predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical → Also see **TABLE 9** p. 1336
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 911. Moderate Study → Also see **TABLE 9** p. 1336
- **Mitotane** is predicted to decrease the exposure to **panobinostat**. Avoid. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Panobinostat** is predicted to increase the exposure to phenothiazines **(perphenazine)**. Monitor and adjust dose. Severe Theoretical
- **Panobinostat** is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Ranolazine** is predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Rifampicin** is predicted to decrease the exposure to **panobinostat**. Avoid. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **panobinostat**. Avoid. Moderate Theoretical
- **Vemurafenib** is predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical → Also see **TABLE 9** p. 1336

Pantoprazole → see proton pump inhibitors

Papaveretum → see opioids

Paracetamol → see **TABLE 1** p. 1334 (hepatotoxicity)

https://nhathuocngocanh.com/ www.getintopharma.com

Paracetamol (continued)
- **Alcohol (beverage)** (in those who drink heavily) causes severe liver damage when given with **paracetamol**. Severe Study → Also see **TABLE 1** p. 1334
- **Paracetamol** is predicted to decrease the clearance of alkylating agents **(busulfan)**. Moderate Theoretical
- **Paracetamol** is predicted to increase the risk of methaemoglobinaemia when given with topical anaesthetics, local **(prilocaine)**. Use with caution or avoid. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **paracetamol**. Moderate Study → Also see **TABLE 1** p. 1334
- **Paracetamol** increases the anticoagulant effect of **coumarins**. Moderate Study
- **Paracetamol** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. Severe Theoretical
- **Imatinib** increases the risk of hepatotoxicity when given with **paracetamol**. Severe Anecdotal
- **Paracetamol** is predicted to increase the anticoagulant effect of **phenindione**. Severe Theoretical
- **Pitolisant** is predicted to decrease the exposure to **paracetamol**. Unknown Theoretical
- **Rifampicin** decreases the exposure to **paracetamol**. Moderate Study

Paraldehyde → see antiepileptics

Parathyroid hormone
- **Bisphosphonates** are predicted to decrease the effects of **parathyroid hormone**. Avoid. Moderate Study

Parecoxib → see NSAIDs

Paricalcitol → see vitamin D substances

Paritaprevir
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. Severe Theoretical
- Antifungals, azoles **(posaconazole)** are predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir) and **paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to antifungals, azoles **(posaconazole)**. Avoid. Severe Theoretical
- **Bosentan** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. Severe Theoretical
- **Paritaprevir** (with ritonavir and ombitasvir) increases the risk of raised liver function tests when given with **combined hormonal contraceptives**. Avoid. Severe Study
- **Efavirenz** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. Severe Theoretical
- **Idelalisib** is predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. Severe Theoretical
- **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to loop diuretics **(furosemide)**. Adjust dose. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. Severe Theoretical
- **Mitotane** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. Severe Study
- **Nevirapine** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. Severe Study
- **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to statins **(fluvastatin)**. Avoid. Moderate Theoretical
- **Paritaprevir** (with ritonavir and ombitasvir) increases the exposure to statins **(pravastatin)**. Adjust **pravastatin** dose. Moderate Study
- **Paritaprevir** (with ritonavir and ombitasvir) increases the exposure to statins **(rosuvastatin)**. Adjust **rosuvastatin** dose, p. 202. Moderate Study

Paroxetine → see SSRIs

Pasireotide → see **TABLE 6** p. 1335 (bradycardia), **TABLE 9** p. 1336 (QT-interval prolongation)
- **Pasireotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. Severe Theoretical

Patiromer

SEPARATION OF ADMINISTRATION Manufacturer advises take 3 hours before, or after, other drugs.

Pazopanib → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 9** p. 1336 (QT-interval prolongation)
- **Antacids** are predicted to decrease the absorption of **pazopanib**. **Pazopanib** should be taken 1 hour before or 2 hours after **antacids**. Moderate Theoretical
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **pazopanib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **pazopanib**. Avoid. Severe Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **pazopanib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 962. Moderate Study → Also see **TABLE 9** p. 1336
- **Aprepitant** is predicted to increase the exposure to **pazopanib**. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **pazopanib**. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 962. Moderate Study
- **Pazopanib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **pazopanib**. Moderate Theoretical → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- **Enzalutamide** is predicted to decrease the exposure to **pazopanib**. Avoid. Severe Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **pazopanib**. Avoid. Severe Theoretical
- **H_2 receptor antagonists** are predicted to decrease the exposure to **pazopanib**. **H_2 receptor antagonists** should be taken 10 hours before or 2 hours after **pazopanib**. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 962. Moderate Study → Also see **TABLE 9** p. 1336
- **Idelalisib** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 962. Moderate Study → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to increase the exposure to **pazopanib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Pazopanib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 962. Moderate Study → Also see **TABLE 9** p. 1336
- Macrolides **(erythromycin)** are predicted to increase the exposure to **pazopanib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Mitotane** is predicted to decrease the exposure to **pazopanib**. Avoid. Severe Theoretical → Also see **TABLE 15** p. 1337

https://nhathuocngocanh.com/ www.getintopharma.com

- **Netupitant** is predicted to increase the exposure to **pazopanib**. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to **pazopanib**. Moderate Theoretical → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- **Pazopanib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Proton pump inhibitors** are predicted to decrease the exposure to **pazopanib**. Avoid or administer concurrently without food. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **pazopanib**. Avoid. Severe Theoretical

Pegaspargase → see **TABLE 1** p. 1334 (hepatotoxicity), **TABLE 15** p. 1337 (myelosuppression)

- **Pegaspargase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Pegaspargase** affects the efficacy of **methotrexate**. Severe Anecdotal → Also see **TABLE 1** p. 1334 → Also see **TABLE 15** p. 1337
- **Pegaspargase** potentially increases the risk of neurotoxicity when given with vinca alkaloids **(vincristine)**. **Vincristine** should be taken 3 to 24 hours before **pegaspargase**. Severe Anecdotal → Also see **TABLE 1** p. 1334 → Also see **TABLE 15** p. 1337

Peginterferon alfa → see interferons

Peginterferon beta-1a → see **TABLE 15** p. 1337 (myelosuppression)

Pembrolizumab → see monoclonal antibodies

Pemetrexed → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 2** p. 1334 (nephrotoxicity)

- Antimalarials **(pyrimethamine)** are predicted to increase the risk of side-effects when given with **pemetrexed**. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Aspirin** (high-dose) potentially increases the exposure to **pemetrexed**. Use with caution or avoid. Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **pemetrexed**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **NSAIDs** are predicted to increase the exposure to **pemetrexed**. Use with caution or avoid. Severe Theoretical → Also see **TABLE 2** p. 1334

Penicillamine → see **TABLE 2** p. 1334 (nephrotoxicity)

- **Antacids** decrease the absorption of **penicillamine**. Separate administration by 2 hours. Mild Study
- Antimalarials **(chloroquine)** are predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. Severe Theoretical
- **Penicillamine** potentially decreases the concentration of **digoxin**. Separate administration by 2 hours. Severe Anecdotal
- **Hydroxychloroquine** is predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. Severe Theoretical
- **Iron (oral)** is predicted to decrease the absorption of **penicillamine**. Separate administration by at least 2 hours. Mild Study
- **Sodium aurothiomalate** potentially increases the risk of side-effects when given with **penicillamine** (in those who have had previous adverse reactions to gold). Avoid. Severe Study
- **Zinc** is predicted to decrease the absorption of **penicillamine**. Mild Theoretical

Penicillins → see **TABLE 1** p. 1334 (hepatotoxicity)

amoxicillin · ampicillin · benzylpenicillin · flucloxacillin · phenoxymethylpenicillin · piperacillin · pivmecillinam · temocillin · ticarcillin

- **Allopurinol** increases the risk of skin rash when given with penicillins **(amoxicillin, ampicillin)**. Moderate Study
- Antiepileptics **(valproate)** increase the risk of side-effects when given with **pivmecillinam**. Avoid. Severe Anecdotal
- **Penicillins** potentially alter the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. Severe Anecdotal
- **Penicillins** are predicted to increase the risk of toxicity when given with **methotrexate**. Severe Theoretical → Also see **TABLE 1** p. 1334
- **Piperacillin** increases the effects of **neuromuscular blocking drugs, non-depolarising**. Moderate Study
- **Penicillins** are predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Piperacillin** increases the effects of **suxamethonium**. Moderate Study

Pentamidine → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 2** p. 1334 (nephrotoxicity), **TABLE 9** p. 1336 (QT-interval prolongation)

- **Didanosine** is predicted to increase the risk of pancreatitis when given with **pentamidine**. Avoid. Severe Study
- Intravenous **pentamidine** potentially increases the risk of QT-prolongation when given with **drugs that prolong the QT interval**. Severe Anecdotal
- **Foscarnet** increases the risk of hypocalcaemia when given with **pentamidine**. Severe Anecdotal → Also see **TABLE 2** p. 1334

Pentazocine → see opioids

Pentostatin → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 5** p. 1334 (thromboembolism)

- Alkylating agents **(cyclophosphamide)** (high-dose) increase the risk of toxicity when given with **pentostatin**. Avoid. Severe Anecdotal → Also see **TABLE 15** p. 1337 → Also see **TABLE 5** p. 1334
- **Fludarabine** increases the risk of pulmonary toxicity when given with **pentostatin**. Avoid. Severe Study → Also see **TABLE 15** p. 1337

Pentoxifylline

- **Pentoxifylline** is predicted to increase the concentration of **aminophylline**. Use with caution or avoid. Severe Theoretical
- Quinolones **(ciprofloxacin)** very slightly increase the exposure to **pentoxifylline**. Moderate Study
- SSRIs **(fluvoxamine)** are predicted to increase the exposure to **pentoxifylline**. Moderate Theoretical
- **Pentoxifylline** increases the concentration of **theophylline**. Monitor and adjust dose. Severe Study

Peppermint oil

- **Peppermint oil** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical

Perampanel → see antiepileptics

Pergolide → see dopamine receptor agonists

Pericyazine → see phenothiazines

Perindopril → see ACE inhibitors

Perphenazine → see phenothiazines

Pertuzumab → see monoclonal antibodies

Pethidine → see opioids

Phenelzine → see monoamine-oxidase A and B inhibitors, irreversible

Phenindione → see **TABLE 3** p. 1334 (anticoagulant effects)

FOOD AND LIFESTYLE The effects of phenindione can be reduced or abolished by vitamin K, including that found in health foods, food supplements, enteral feeds, or large amounts of some green vegetables or green tea. Major changes in diet (especially involving salads and vegetables) and in alcohol consumption can affect anticoagulant control.

- Antiarrhythmics **(propafenone)** are predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. Moderate Theoretical
- Antifungals, azoles **(miconazole)** greatly increase the anticoagulant effect of **phenindione**. Severe Theoretical
- **Axitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Bosutinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Cabozantinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- Cephalosporins **(ceftriaxone)** potentially increase the risk of bleeding events when given with **phenindione**. Severe Anecdotal
- **Corticosteroids** are predicted to increase the effects of **phenindione**. Moderate Anecdotal
- **Crizotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Dasatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Disulfiram** is predicted to increase the anticoagulant effect of **phenindione**. Severe Theoretical
- **Enteral feeds** (vitamin-K containing) potentially decrease the effects of **phenindione**. Severe Theoretical
- **Erlotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Phenindione (continued)
- **Fibrates** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. Severe Study
- **Gefitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- H_2 receptor antagonists **(cimetidine)** increase the exposure to **phenindione**. Severe Anecdotal
- **Imatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Lapatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Nandrolone** is predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. Severe Theoretical
- **Nilotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Oxymetholone** increases the anticoagulant effect of **phenindione**. Severe Anecdotal
- **Paracetamol** is predicted to increase the anticoagulant effect of **phenindione**. Severe Theoretical
- **Pazopanib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Penicillins** are predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Ponatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Ranibizumab** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Regorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Ruxolitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Sorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- Statins **(rosuvastatin)** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. Severe Theoretical
- **Sunitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Vandetanib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical

Phenobarbital → see antiepileptics

Phenothiazines → see **TABLE 8** p. 1335 (hypotension), **TABLE 9** p. 1336 (QT-interval prolongation), **TABLE 11** p. 1336 (CNS depressant effects), **TABLE 10** p. 1336 (antimuscarinics)

chlorpromazine • fluphenazine • levomepromazine • pericyazine • perphenazine • prochlorperazine • promazine • trifluoperazine

- **Chlorpromazine** dose adjustment might be necessary if smoking started or stopped during treatment.
- **Fluphenazine** dose adjustment might be necessary if smoking started or stopped during treatment.

- **Amfetamines** are predicted to decrease the effects of **chlorpromazine**. Moderate Study
- **Phenothiazines** are predicted to decrease the effects of **amfetamines**. Moderate Study
- **Antacids** decrease the absorption of **phenothiazines**. Moderate Anecdotal
- **Chlorpromazine** decreases the concentration of antiepileptics **(phenobarbital, primidone)** and antiepileptics **(phenobarbital, primidone)** decrease the concentration of **chlorpromazine**. Moderate Study → Also see **TABLE 11** p. 1336
- **Chlorpromazine** is predicted to increase the risk of hyponatraemia when given with **desmopressin**. Severe Theoretical
- **Phenothiazines** are predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335 → Also see **TABLE 9** p. 1336 → Also see **TABLE 10** p. 1336
- **Eliglustat** is predicted to increase the exposure to **perphenazine**. Adjust dose. Moderate Theoretical
- **Phenothiazines** are predicted to decrease the antihypertensive effects of **guanethidine**. Moderate Theoretical → Also see **TABLE 8** p. 1335
- **Phenothiazines** decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. Severe Study → Also see **TABLE 8** p. 1335
- **Phenothiazines** potentially increase the risk of neurotoxicity when given with **lithium**. Severe Anecdotal → Also see **TABLE 9** p. 1336
- **Chlorpromazine** decreases the effects of **metyrapone**. Avoid. Moderate Theoretical
- **Moclobemide** increases the risk of side-effects when given with **levomepromazine**. Moderate Study
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of neuroleptic malignant syndrome when given with **phenothiazines**. Severe Theoretical → Also see **TABLE 8** p. 1335
- **Panobinostat** is predicted to increase the exposure to **perphenazine**. Monitor and adjust dose. Severe Theoretical
- SSRIs **(paroxetine)** markedly increase the exposure to **perphenazine**. Severe Study

Phenoxymethylpenicillin → see penicillins

Phenylephrine → see sympathomimetics, vasoconstrictor

Phenytoin → see antiepileptics

Pholcodine
- **Pholcodine** is predicted to increase the risk of CNS excitation or depression when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical

Phosphodiesterase type-5 inhibitors → see **TABLE 8** p. 1335 (hypotension), **TABLE 9** p. 1336 (QT-interval prolongation)

avanafil • sildenafil • tadalafil • vardenafil

- **Alpha blockers** cause significant hypotensive effects when given with **phosphodiesterase type-5 inhibitors**. Patient should be stabilised on first drug then second drug should be added at the lowest recommended dose. Severe Study → Also see **TABLE 8** p. 1335
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 794. Moderate Theoretical
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. Moderate Study → Also see **TABLE 9** p. 1336
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **tadalafil**. Severe Theoretical
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **vardenafil**. Adjust dose. Severe Theoretical → Also see **TABLE 9** p. 1336
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(avanafil, tadalafil)**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(sildenafil, vardenafil)**. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 794. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. Moderate Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tadalafil**. Severe Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **vardenafil**. Adjust dose. Severe Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **sildenafil**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 794. Severe Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. Severe Study

https://nhathuocngocanh.com/ www.getintopharma.com

- Antifungals, azoles **(miconazole)** are predicted to increase the exposure to **sildenafil**. Use with caution and adjust dose. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil, vardenafil)**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **Aprepitant** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 794. Moderate Theoretical
- **Aprepitant** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. Moderate Study
- **Aprepitant** is predicted to increase the exposure to **tadalafil**. Severe Theoretical
- **Aprepitant** is predicted to increase the exposure to **vardenafil**. Adjust dose. Severe Theoretical
- **Bosentan** decreases the exposure to **phosphodiesterase type-5 inhibitors**. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 794. Moderate Theoretical → Also see **TABLE 8** p. 1335
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. Moderate Study → Also see **TABLE 8** p. 1335
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **tadalafil**. Severe Theoretical → Also see **TABLE 8** p. 1335
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **vardenafil**. Adjust dose. Severe Theoretical → Also see **TABLE 8** p. 1335
- **Cobicistat** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil, vardenafil)**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to **sildenafil**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 794. Severe Study
- **Cobicistat** is predicted to increase the exposure to **tadalafil**. Use with caution or avoid. Severe Study
- **Crizotinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 794. Moderate Theoretical
- **Crizotinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. Moderate Study → Also see **TABLE 9** p. 1336
- **Crizotinib** is predicted to increase the exposure to **tadalafil**. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **vardenafil**. Adjust dose. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Efavirenz** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Enzalutamide** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(avanafil, tadalafil)**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(sildenafil, vardenafil)**. Moderate Theoretical
- **Etravirine** moderately decreases the exposure to **phosphodiesterase type-5 inhibitors**. Adjust dose. Moderate Study
- **Grapefruit juice** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors**. Use with caution or avoid. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil, vardenafil)**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **HIV-protease inhibitors** are predicted to increase the exposure to **sildenafil**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 794. Severe Study → Also see **TABLE 9** p. 1336
- **HIV-protease inhibitors** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil, vardenafil)**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **sildenafil**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 794. Severe Study
- **Idelalisib** is predicted to increase the exposure to **tadalafil**. Use with caution or avoid. Severe Study
- **Imatinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 794. Moderate Theoretical
- **Imatinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. Moderate Study
- **Imatinib** is predicted to increase the exposure to **tadalafil**. Severe Theoretical
- **Imatinib** is predicted to increase the exposure to **vardenafil**. Adjust dose. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **sildenafil**. Avoid potent inhibitors of CYP3A4 or adjust **sildenafil** dose, p. 794. Severe Study → Also see **TABLE 9** p. 1336
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 794. Moderate Theoretical
- Macrolides **(erythromycin)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. Moderate Study → Also see **TABLE 9** p. 1336
- Macrolides **(erythromycin)** are predicted to increase the exposure to **tadalafil**. Severe Theoretical
- Macrolides **(erythromycin)** are predicted to increase the exposure to **vardenafil**. Adjust dose. Severe Theoretical → Also see **TABLE 9** p. 1336
- Macrolides **(clarithromycin)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil, vardenafil)**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **Mitotane** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(avanafil, tadalafil)**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(sildenafil, vardenafil)**. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 794. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. Moderate Study
- **Netupitant** is predicted to increase the exposure to **tadalafil**. Severe Theoretical
- **Netupitant** is predicted to increase the exposure to **vardenafil**. Adjust dose. Severe Theoretical
- **Nevirapine** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. Moderate Theoretical
- **Nicorandil** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. Severe Theoretical → Also see **TABLE 8** p. 1335
- **Nilotinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 794. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate inhibitors of CYP3A4, p. 794. Moderate Study → Also see **TABLE 9** p. 1336
- **Nilotinib** is predicted to increase the exposure to **tadalafil**. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **vardenafil**. Adjust dose. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Nitrates** potentially increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. Severe Study → Also see **TABLE 8** p. 1335
- **Ribociclib** is predicted to increase the exposure to **sildenafil**. Avoid. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Rifampicin** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(avanafil, tadalafil)**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(sildenafil, vardenafil)**. Moderate Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Phosphodiesterase type-5 inhibitors (continued)

- Riociguat is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. Severe Theoretical → Also see **TABLE 8** p. 1335
- **Phosphodiesterase type-5 inhibitors** are predicted to increase the risk of hypotension when given with sapropterin. Moderate Theoretical → Also see **TABLE 8** p. 1335
- St John's Wort is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. Moderate Theoretical

Pibrentasvir

- Antiarrhythmics **(dronedarone)** potentially increase the exposure to **pibrentasvir**. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- Antiepileptics **(eslicarbazepine, oxcarbazepine)** potentially decrease the exposure to **pibrentasvir**. Avoid. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole)** potentially increase the exposure to **pibrentasvir**. Moderate Theoretical
- Bosentan is predicted to decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- Ciclosporin increases the exposure to **pibrentasvir**. Avoid or monitor. Severe Study
- Crizotinib potentially decreases the exposure to **pibrentasvir**. Avoid. Severe Theoretical
- **Pibrentasvir** (with glecaprevir) increases the exposure to dabigatran. Avoid. Moderate Study
- **Pibrentasvir** (with glecaprevir) increases the exposure to digoxin. Moderate Study
- Efavirenz is predicted to decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- Enzalutamide is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- HIV-protease inhibitors **(atazanavir, lopinavir)** (boosted with ritonavir) increase the exposure to **pibrentasvir**. Avoid. Severe Study
- HIV-protease inhibitors **(ritonavir)** potentially increase the exposure to **pibrentasvir**. Severe Theoretical
- Lumacaftor potentially decreases the exposure to **pibrentasvir**. Avoid. Severe Theoretical
- Mitotane is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- Nevirapine is predicted to decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- Rifampicin is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- St John's Wort is predicted to decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- **Pibrentasvir** (with glecaprevir) increases the exposure to statins **(atorvastatin, simvastatin)**. Avoid. Moderate Study
- **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to statins **(fluvastatin)**. Moderate Theoretical
- **Pibrentasvir** (with glecaprevir) increases the exposure to statins **(pravastatin)**. Use with caution and adjust **pravastatin** dose, p. 202. Moderate Study
- **Pibrentasvir** (with glecaprevir) increases the exposure to statins **(rosuvastatin)**. Use with caution and adjust **rosuvastatin** dose, p. 202. Moderate Study

Pilocarpine

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

Pimecrolimus

- Alcohol (beverage) increases the risk of facial flushing and skin irritation when given with topical **pimecrolimus**. Moderate Study
- **Pimecrolimus** is predicted to decrease the efficacy of mifamurtide. Avoid. Severe Theoretical

Pimozide → see **TABLE 8** p. 1335 (hypotension), **TABLE 9** p. 1336 (QT-interval prolongation), **TABLE 11** p. 1336 (CNS depressant effects), **TABLE 10** p. 1336 (antimuscarinics)

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **pimozide**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(miconazole)** are predicted to increase the exposure to **pimozide**. Avoid. Moderate Theoretical
- Aprepitant is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical → Also see **TABLE 8** p. 1335
- Ceritinib is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- Cobicistat is predicted to increase the exposure to **pimozide**. Avoid. Severe Study
- Crizotinib is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Pimozide** is predicted to decrease the effects of dopamine receptor agonists. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335 → Also see **TABLE 9** p. 1336 → Also see **TABLE 10** p. 1336
- Fosaprepitant is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical
- Grapefruit juice increases the exposure to **pimozide**. Avoid. Severe Theoretical
- HIV-protease inhibitors are predicted to increase the exposure to **pimozide**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- Idelalisib is predicted to increase the exposure to **pimozide**. Avoid. Severe Study
- Imatinib is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical
- **Pimozide** decreases the effects of levodopa. Severe Theoretical → Also see **TABLE 8** p. 1335
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **pimozide**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- Macrolides **(erythromycin)** are predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- Netupitant is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical
- Nilotinib is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- Palbociclib is predicted to increase the exposure to **pimozide**. Adjust dose. Moderate Theoretical
- Panobinostat is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- Pitolisant is predicted to decrease the exposure to **pimozide**. Avoid. Severe Theoretical
- Ribociclib (high-dose) is predicted to increase the exposure to **pimozide**. Avoid. Moderate Theoretical → Also see **TABLE 9** p. 1336
- Rolapitant is predicted to increase the exposure to **pimozide**. Severe Study

Pindolol → see beta blockers, non-selective

Pioglitazone → see **TABLE 14** p. 1337 (antidiabetic drugs)

- **Pioglitazone** potentially decreases the exposure to antifungals, azoles **(isavuconazole)**. Use with caution or avoid. Moderate Theoretical
- Clopidogrel increases the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. Severe Study
- Fibrates **(gemfibrozil)** increase the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. Severe Study
- Leflunomide is predicted to increase the exposure to **pioglitazone**. Moderate Study
- Opicapone is predicted to increase the exposure to **pioglitazone**. Avoid. Moderate Study
- Rifampicin moderately decreases the exposure to **pioglitazone**. Monitor and adjust dose. Moderate Study
- St John's Wort slightly decreases the exposure to **pioglitazone**. Mild Study
- Teriflunomide is predicted to increase the exposure to **pioglitazone**. Moderate Study

Piperacillin → see penicillins

Piperaquine → see antimalarials

https://nhathuocngocanh.com/ www.getintopharma.com

Pirfenidone

FOOD AND LIFESTYLE Smoking increases pirfenidone clearance; patients should be encouraged to stop smoking before and during treatment with pirfenidone.

- Antiepileptics **(fosphenytoin, phenytoin)** are predicted to decrease the exposure to **pirfenidone**. Moderate Theoretical
- **Combined hormonal contraceptives** are predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. Moderate Study
- HIV-protease inhibitors **(ritonavir)** are predicted to decrease the exposure to **pirfenidone**. Moderate Theoretical
- **Leflunomide** is predicted to decrease the exposure to **pirfenidone**. Moderate Theoretical
- Quinolones **(ciprofloxacin)** are predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **pirfenidone**. Avoid. Moderate Theoretical
- SSRIs **(fluvoxamine)** are predicted to moderately increase the exposure to **pirfenidone**. Avoid. Moderate Study
- **Teriflunomide** is predicted to decrease the exposure to **pirfenidone**. Moderate Theoretical

Piroxicam → see NSAIDs

Pitolisant

- **Abiraterone** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. Moderate Study
- Antiarrhythmics **(propafenone)** are predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **pitolisant**. Moderate Study
- **Antihistamines, sedating** are predicted to decrease the efficacy of **pitolisant**. Unknown Theoretical
- **Pitolisant** is predicted to decrease the exposure to **bosutinib**. Avoid. Severe Theoretical
- **Bupropion** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. Moderate Study
- **Pitolisant** is predicted to decrease the exposure to **ciclosporin**. Avoid. Severe Theoretical
- **Cinacalcet** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. Moderate Study
- **Pitolisant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. Severe Theoretical
- **Pitolisant** is predicted to decrease the exposure to coumarins **(warfarin)**. Unknown Theoretical
- **Pitolisant** is predicted to decrease the exposure to **crizotinib**. Avoid. Severe Theoretical
- **Pitolisant** is predicted to decrease the exposure to **dabigatran**. Unknown Theoretical
- **Pitolisant** is predicted to decrease the exposure to **dasatinib**. Avoid. Severe Theoretical
- **Pitolisant** is predicted to decrease the exposure to **digoxin**. Unknown Theoretical
- **Duloxetine** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. Moderate Study
- **Pitolisant** is predicted to decrease the exposure to **efavirenz**. Unknown Theoretical
- **Enzalutamide** is predicted to moderately decrease the exposure to **pitolisant**. Moderate Study
- **Pitolisant** is predicted to decrease the exposure to **everolimus**. Avoid. Severe Theoretical
- HIV-protease inhibitors **(ritonavir)** are predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. Moderate Study
- **Pitolisant** is predicted to decrease the exposure to **irinotecan**. Unknown Theoretical
- **Pitolisant** is predicted to increase the exposure to **metformin**. Unknown Theoretical
- **Mianserin** is predicted to decrease the efficacy of **pitolisant**. Unknown Theoretical
- **Mirabegron** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. Moderate Study
- **Mirtazapine** is predicted to decrease the efficacy of **pitolisant**. Unknown Theoretical
- **Mitotane** is predicted to moderately decrease the exposure to **pitolisant**. Moderate Study
- **Pitolisant** is predicted to decrease the exposure to opioids **(morphine)**. Unknown Theoretical
- **Pitolisant** is predicted to decrease the exposure to **paracetamol**. Unknown Theoretical
- **Pitolisant** is predicted to decrease the exposure to **pimozide**. Avoid. Severe Theoretical
- **Pitolisant** is predicted to decrease the exposure to **repaglinide**. Unknown Theoretical
- **Rifampicin** is predicted to moderately decrease the exposure to **pitolisant**. Moderate Study
- **Pitolisant** is predicted to decrease the exposure to **sirolimus**. Avoid. Severe Theoretical
- SSRIs **(fluoxetine, paroxetine)** are predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. Moderate Study
- **St John's Wort** is predicted to decrease the exposure to **pitolisant**. Monitor and adjust dose. Moderate Theoretical
- **Pitolisant** is predicted to decrease the exposure to **tacrolimus**. Avoid. Severe Theoretical
- **Pitolisant** is predicted to decrease the exposure to taxanes **(docetaxel)**. Avoid. Severe Theoretical
- **Pitolisant** is predicted to decrease the exposure to **temsirolimus**. Avoid. Severe Theoretical
- **Terbinafine** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. Moderate Study
- **Tricyclic antidepressants** are predicted to decrease the efficacy of **pitolisant**. Mild Theoretical

Pivmecillinam → see penicillins

Pixantrone → see anthracyclines

Pizotifen → see antihistamines, sedating

Platinum compounds → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 2** p. 1334 (nephrotoxicity), **TABLE 19** p. 1338 (ototoxicity), **TABLE 12** p. 1337 (peripheral neuropathy)

carboplatin • cisplatin • oxaliplatin

- **Cisplatin** increases the risk of pulmonary toxicity when given with **bleomycin**. Severe Study → Also see **TABLE 15** p. 1337
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **platinum compounds**. Public Health England advises avoid (refer to Green Book). Severe Theoretical

Polymyxins → see **TABLE 2** p. 1334 (nephrotoxicity), **TABLE 20** p. 1338 (neuromuscular blocking effects)

Polysaccharide-iron complex → see iron (oral)

Polystyrene sulfonate

- **Antacids** increase the risk of metabolic alkalosis when given with **polystyrene sulfonate**. Severe Anecdotal
- **Polystyrene sulfonate** is predicted to decrease the absorption of thyroid hormones **(levothyroxine)**. Separate administration by at least 4 hours. Moderate Theoretical

Pomalidomide → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 5** p. 1334 (thromboembolism)

- **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. Avoid. Severe Theoretical
- **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. Severe Theoretical
- Quinolones **(ciprofloxacin)** are predicted to increase the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 935. Moderate Theoretical
- SSRIs **(fluvoxamine)** moderately increase the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 935. Moderate Study

Ponatinib

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ponatinib**. Avoid. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 963. Moderate Study
- **Cobicistat** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 963. Moderate Study

https://nhathuocngocanh.com/ www.getintopharma.com

Ponatinib (continued)
- **Ponatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **ponatinib**. Avoid. Moderate Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **ponatinib**. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 963. Moderate Study
- **Idelalisib** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 963. Moderate Study
- Macrolides **(clarithromycin)** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 963. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **ponatinib**. Avoid. Moderate Theoretical
- **Ponatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **ponatinib**. Avoid. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **ponatinib**. Avoid. Severe Theoretical

Posaconazole → see antifungals, azoles

Potassium canrenoate → see **TABLE 16** p. 1338 (increased serum potassium)

Potassium chloride → see **TABLE 16** p. 1338 (increased serum potassium)

Potassium citrate
- **Potassium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. Moderate Theoretical
- **Potassium citrate** increases the risk of side-effects when given with **sucralfate**. Avoid. Moderate Theoretical

Potassium-sparing diuretics → see **TABLE 18** p. 1338 (hyponatraemia), **TABLE 16** p. 1338 (increased serum potassium)

amiloride • triamterene

- **Triamterene** potentially increases the clearance of **lithium**. Moderate Study

Pramipexole → see dopamine receptor agonists

Prasugrel → see **TABLE 4** p. 1334 (antiplatelet effects)

Pravastatin → see statins

Praziquantel
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **praziquantel**. Avoid. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **praziquantel**. Mild Study
- Antimalarials **(chloroquine)** moderately decrease the exposure to **praziquantel**. Use with caution and adjust dose. Moderate Study
- **Cobicistat** is predicted to moderately increase the exposure to **praziquantel**. Mild Study
- Corticosteroids **(dexamethasone)** decrease the exposure to **praziquantel**. Moderate Study
- **Enzalutamide** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. Moderate Study
- **Grapefruit juice** is predicted to increase the exposure to **praziquantel**. Moderate Study
- H_2 receptor antagonists **(cimetidine)** moderately increase the exposure to **praziquantel**. Moderate Study
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to **praziquantel**. Mild Study
- **Idelalisib** is predicted to moderately increase the exposure to **praziquantel**. Mild Study
- Macrolides **(clarithromycin)** are predicted to moderately increase the exposure to **praziquantel**. Mild Study
- **Mitotane** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. Moderate Study
- **Rifampicin** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. Moderate Study

Prazosin → see alpha blockers

Prednisolone → see corticosteroids

Prednisone → see corticosteroids

Pregabalin → see antiepileptics

Prilocaine → see anaesthetics, local

Primaquine → see antimalarials

Primidone → see antiepileptics

Procarbazine → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 13** p. 1337 (serotonin syndrome)

FOOD AND LIFESTYLE Procarbazine is a mild monoamine-oxidase inhibitor and might rarely interact with tyramine-rich foods (such as mature cheese, salami, pickled herring, *Bovril*®, *Oxo*®, *Marmite*® or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **procarbazine**. Moderate Anecdotal
- Antiepileptics **(carbamazepine, phenobarbital, phenytoin, primidone)** are predicted to increase the risk of hypersensitivity reactions when given with **procarbazine**. Severe Anecdotal
- Antiepileptics **(fosphenytoin)** are predicted to increase the risk of hypersensitivity when given with **procarbazine**. Severe Anecdotal
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **procarbazine**. Public Health England advises avoid (refer to Green Book). Severe Theoretical

Prochlorperazine → see phenothiazines

Procyclidine → see **TABLE 10** p. 1336 (antimuscarinics)
- SSRIs **(paroxetine)** slightly increase the exposure to **procyclidine**. Monitor and adjust dose. Moderate Study

Proguanil → see antimalarials

Promazine → see phenothiazines

Promethazine → see antihistamines, sedating

Propafenone → see antiarrhythmics

Propantheline → see **TABLE 10** p. 1336 (antimuscarinics)

Propiverine → see **TABLE 10** p. 1336 (antimuscarinics)
- **Propiverine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical

Propofol → see **TABLE 8** p. 1335 (hypotension), **TABLE 11** p. 1336 (CNS depressant effects)
- Antiepileptics **(valproate)** potentially increase the concentration of **propofol**. Adjust dose. Severe Theoretical

Propranolol → see beta blockers, non-selective

Propylthiouracil → see **TABLE 15** p. 1337 (myelosuppression)
- **Propylthiouracil** is predicted to decrease the effects of **metyrapone**. Avoid. Moderate Theoretical

Proton pump inhibitors

esomeprazole • lansoprazole • omeprazole • pantoprazole • rabeprazole

- Antifungals, azoles **(voriconazole)** increase the exposure to proton pump inhibitors **(esomeprazole, omeprazole)**. Adjust dose. Moderate Study
- **Proton pump inhibitors** decrease the absorption of antifungals, azoles **(itraconazole)**. Administer **itraconazole** capsules with an acidic beverage. Moderate Study
- **Proton pump inhibitors** decrease the absorption of antifungals, azoles **(ketoconazole)**. Administer **ketoconazole** with an acidic beverage. Moderate Study
- **Proton pump inhibitors** decrease the absorption of antifungals, azoles **(posaconazole)** (oral suspension). Avoid. Moderate Study
- **Proton pump inhibitors** are predicted to decrease the absorption of **bosutinib**. Moderate Study
- **Proton pump inhibitors** are predicted to decrease the absorption of **ceritinib**. Moderate Theoretical
- **Esomeprazole** is predicted to increase the exposure to **cilostazol**. Moderate Theoretical
- **Omeprazole** is predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. Moderate Study
- Proton pump inhibitors **(esomeprazole, omeprazole)** potentially increase the exposure to **clobazam**. Adjust dose. Moderate Theoretical
- Proton pump inhibitors **(esomeprazole, omeprazole)** are predicted to decrease the efficacy of **clopidogrel**. Avoid. Moderate Study

https://nhathuocngocanh.com/ www.getintopharma.com

- **Proton pump inhibitors** are predicted to slightly to moderately decrease the exposure to **dasatinib**. Avoid. Severe Study
- **Proton pump inhibitors** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). Moderate Theoretical
- **Proton pump inhibitors** are predicted to slightly decrease the exposure to **erlotinib**. Avoid. Moderate Study
- **Proton pump inhibitors** are predicted to decrease the exposure to **gefitinib**. Severe Theoretical
- HIV-protease inhibitors **(tipranavir)** decrease the exposure to **proton pump inhibitors**. Avoid. Severe Study
- **Proton pump inhibitors** decrease the exposure to HIV-protease inhibitors **(atazanavir)**. Avoid or adjust dose. Severe Study
- **Proton pump inhibitors** increase the exposure to HIV-protease inhibitors **(saquinavir)**. Avoid. Severe Study
- **Proton pump inhibitors** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 617. Moderate Theoretical
- **Proton pump inhibitors** decrease the clearance of **methotrexate** (high-dose). Use with caution or avoid. Severe Study
- **Proton pump inhibitors** are predicted to decrease the exposure to **pazopanib**. Avoid or administer concurrently without food. Moderate Study
- **Proton pump inhibitors** are predicted to decrease the exposure to **rilpivirine**. Avoid. Severe Study
- **Proton pump inhibitors** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see ledipasvir with sofosbuvir p. 617, sofosbuvir with velpatasvir p. 619, and sofosbuvir with velpatasvir and voxilaprevir p. 619. Moderate Study
- **Esomeprazole** is predicted to slightly to moderately increase the exposure to SSRIs **(citalopram, escitalopram)**. Monitor and adjust dose. Severe Theoretical
- **Omeprazole** slightly to moderately increases the exposure to SSRIs **(citalopram, escitalopram)**. Monitor and adjust dose. Severe Study
- **Proton pump inhibitors** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir p. 619. Moderate Study
- **Proton pump inhibitors** are predicted to decrease the exposure to **voxilaprevir**. Adjust dose, see sofosbuvir with velpatasvir and voxilaprevir p. 619. Moderate Study

Proxymetacaine → see anaesthetics, local

Pseudoephedrine → see sympathomimetics, vasoconstrictor

Pyrazinamide

- **Allopurinol** is predicted to increase the risk of hyperuricaemia when given with **pyrazinamide**. Moderate Theoretical
- **Pyrazinamide** is predicted to decrease the effects of **sulfinpyrazone**. Moderate Theoretical

Pyridostigmine → see **TABLE 6** p. 1335 (bradycardia), **TABLE 20** p. 1338 (neuromuscular blocking effects)

- **Aminoglycosides** are predicted to decrease the effects of **pyridostigmine**. Moderate Theoretical → Also see **TABLE 20** p. 1338

Pyrimethamine → see antimalarials

Quetiapine → see **TABLE 8** p. 1335 (hypotension), **TABLE 11** p. 1336 (CNS depressant effects)

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **quetiapine**. Avoid. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **quetiapine**. Moderate Study → Also see **TABLE 11** p. 1336
- Antiepileptics **(valproate)** potentially increase the risk of neutropenia when given with **quetiapine**. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **quetiapine**. Avoid. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **quetiapine**. Avoid. Severe Study
- **Aprepitant** is predicted to increase the exposure to **quetiapine**. Avoid. Moderate Study
- **Bosentan** is predicted to decrease the exposure to **quetiapine**. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **quetiapine**. Avoid. Moderate Study → Also see **TABLE 8** p. 1335
- **Cobicistat** is predicted to increase the exposure to **quetiapine**. Avoid. Severe Study
- **Crizotinib** is predicted to increase the exposure to **quetiapine**. Avoid. Moderate Study
- **Quetiapine** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335
- **Efavirenz** is predicted to decrease the exposure to **quetiapine**. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **quetiapine**. Moderate Study
- **Grapefruit juice** is predicted to increase the exposure to **quetiapine**. Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **quetiapine**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **quetiapine**. Avoid. Severe Study
- **Imatinib** is predicted to increase the exposure to **quetiapine**. Avoid. Moderate Study
- **Quetiapine** decreases the effects of **levodopa**. Severe Anecdotal → Also see **TABLE 8** p. 1335
- **Quetiapine** potentially increases the risk of neurotoxicity when given with **lithium**. Severe Anecdotal
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **quetiapine**. Avoid. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **quetiapine**. Avoid. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **quetiapine**. Moderate Study
- **Netupitant** is predicted to increase the exposure to **quetiapine**. Avoid. Moderate Study
- **Nevirapine** is predicted to decrease the exposure to **quetiapine**. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **quetiapine**. Avoid. Moderate Study
- **Ribociclib** (high-dose) is predicted to increase the exposure to **quetiapine**. Avoid. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **quetiapine**. Moderate Study
- **St John's Wort** is predicted to decrease the exposure to **quetiapine**. Moderate Study

Quinagolide → see dopamine receptor agonists

Quinapril → see ACE inhibitors

Quinine → see antimalarials

Quinolones → see **TABLE 9** p. 1336 (QT-interval prolongation)

ciprofloxacin · levofloxacin · moxifloxacin · norfloxacin · ofloxacin

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- **Ciprofloxacin** is predicted to increase the exposure to **agomelatine**. Moderate Study
- Quinolones **(ciprofloxacin, norfloxacin)** are predicted to increase the exposure to **aminophylline**. Adjust dose. Moderate Theoretical
- **Ciprofloxacin** is predicted to increase the exposure to **anagrelide**. Moderate Theoretical
- **Antacids** decrease the absorption of **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after **antacids**. Moderate Study
- **Ciprofloxacin** slightly increases the exposure to antiarrhythmics **(lidocaine)**. Mild Study
- **Ciprofloxacin** affects the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. Severe Study
- Calcium salts **(calcium carbonate)** decrease the absorption of **ciprofloxacin**. Separate administration by 2 hours. Moderate Study
- Calcium salts **(calcium carbonate)** decrease the absorption of **norfloxacin**. **Norfloxacin** should be taken 2 hours before or 4 hours after **calcium carbonate**. Moderate Study
- **Ciprofloxacin** increases the concentration of **clozapine**. Monitor side effects and adjust dose. Severe Study
- **Quinolones** increase the anticoagulant effect of **coumarins**. Severe Anecdotal

https://nhathuocngocanh.com/ www.getintopharma.com

Quinolones (continued)
- **Didanosine** (buffered) is predicted to greatly decrease the exposure to oral **quinolones**. **Didanosine** should be taken 2 hours after quinolones. Moderate Study
- **Ciprofloxacin** is predicted to increase the exposure to dopamine receptor agonists **(ropinirole)**. Adjust dose. Moderate Study
- **Ciprofloxacin** is predicted to increase the exposure to **duloxetine**. Avoid. Moderate Theoretical
- **Ciprofloxacin** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Theoretical
- **Enteral feeds** decrease the exposure to **ciprofloxacin**. Moderate Study
- **Ciprofloxacin** slightly increases the exposure to **erlotinib**. Monitor side effects and adjust dose. Moderate Study
- **Ciprofloxacin** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose, p. 952. Severe Theoretical
- **Iron (oral)** decreases the exposure to **quinolones**. Separate administration by at least 2 hours. Moderate Study
- **Lanthanum** moderately decreases the exposure to **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after **lanthanum**. Moderate Study
- **Ciprofloxacin** is predicted to increase the exposure to **loxapine**. Avoid. Unknown Theoretical
- **Ciprofloxacin** is predicted to increase the exposure to **melatonin**. Moderate Theoretical
- **Ciprofloxacin** potentially increases the risk of toxicity when given with **methotrexate**. Avoid. Severe Anecdotal
- **Ciprofloxacin** slightly increases the exposure to monoamine-oxidase B inhibitors **(rasagiline)**. Moderate Study
- **NSAIDs** potentially increase the risk of seizures when given with **quinolones**. Severe Theoretical
- **Ciprofloxacin** very slightly increases the exposure to **pentoxifylline**. Moderate Study
- **Ciprofloxacin** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. Moderate Study
- **Ciprofloxacin** is predicted to increase the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 935. Moderate Theoretical
- **Ciprofloxacin** is predicted to increase the exposure to **roflumilast**. Moderate Theoretical
- **Sucralfate** decreases the exposure to **quinolones**. Separate administration by 2 hours. Moderate Study
- **Ciprofloxacin** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. Moderate Theoretical
- **Norfloxacin** is predicted to increase the exposure to **theophylline**. Adjust dose. Moderate Anecdotal
- **Ciprofloxacin** increases the exposure to **tizanidine**. Avoid. Moderate Study
- **Zinc** is predicted to decrease the exposure to **quinolones**. Separate administration by 2 hours. Moderate Study
- **Ciprofloxacin** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 475. Moderate Theoretical

Rabeprazole → see proton pump inhibitors

Rabies vaccine
- Antimalarials **(chloroquine)** decrease the efficacy of **rabies vaccine**. Avoid. Moderate Study
- **Hydroxychloroquine** is predicted to decrease efficacy **rabies vaccine**. Moderate Theoretical

Raloxifene → see **TABLE 5** p. 1334 (thromboembolism)

Raltegravir
- **Antacids** slightly decrease the exposure to **raltegravir**. Avoid. Moderate Study
- Antiepileptics **(carbamazepine)** are predicted to affect the exposure to **raltegravir**. Moderate Theoretical
- Antiepileptics **(fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to affect the exposure to **raltegravir**. Use with caution or avoid. Moderate Theoretical
- Calcium salts **(calcium carbonate)** greatly decrease the exposure to **raltegravir** (high-dose). Avoid. Severe Study
- HIV-protease inhibitors **(atazanavir)** increase the exposure to **raltegravir** (high-dose). Avoid. Moderate Study
- HIV-protease inhibitors **(darunavir)** increase the risk of rash when given with **raltegravir**. Moderate Study
- HIV-protease inhibitors **(fosamprenavir)** (boosted with ritonavir) decrease the exposure to **raltegravir** and **raltegravir** decreases the exposure to HIV-protease inhibitors **(fosamprenavir)** (boosted with ritonavir). Avoid. Severe Study
- HIV-protease inhibitors **(tipranavir)** (boosted with ritonavir) are predicted to decrease the exposure to **raltegravir** (high-dose). Avoid. Moderate Study
- **Rifampicin** slightly decreases the exposure to **raltegravir**. Avoid or adjust dose—consult product literature. Moderate Study

Raltitrexed → see **TABLE 15** p. 1337 (myelosuppression)
- **Folates** are predicted to alter the effects of **raltitrexed**. Avoid. Moderate Study
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **raltitrexed**. Public Health England advises avoid (refer to Green Book). Severe Theoretical

Ramipril → see ACE inhibitors

Ramucirumab → see monoclonal antibodies

Ranibizumab
- **Ranibizumab** is predicted to increase the risk of bleeding events when given with **argatroban**. Severe Theoretical
- **Ranibizumab** is predicted to increase the risk of bleeding events when given with **bivalirudin**. Moderate Theoretical
- **Ranibizumab** increases the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Ranibizumab** is predicted to increase the risk of bleeding events when given with **danaparoid**. Severe Theoretical
- **Ranibizumab** increases the risk of bleeding events when given with **heparin (unfractionated)**. Severe Theoretical
- **Ranibizumab** increases the risk of bleeding events when given with **low molecular-weight heparins**. Severe Theoretical
- **Ranibizumab** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical

Ranitidine → see H_2 receptor antagonists

Ranolazine → see **TABLE 9** p. 1336 (QT-interval prolongation)
- **Ranolazine** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. Moderate Study
- **Ranolazine** is predicted to increase the exposure to **aliskiren**. Moderate Theoretical
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **ranolazine**. Severe Study → Also see **TABLE 9** p. 1336
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ranolazine**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ranolazine**. Severe Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ranolazine**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **Aprepitant** is predicted to increase the exposure to **ranolazine**. Severe Study
- **Ranolazine** is predicted to increase the exposure to beta blockers, non-selective **(nadolol)**. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **ranolazine**. Severe Study
- **Ranolazine** is predicted to increase the exposure to **ceritinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Ciclosporin** is predicted to increase the concentration of **ranolazine** and **ranolazine** is predicted to increase the concentration of **ciclosporin**. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **ranolazine**. Avoid. Severe Study
- **Ranolazine** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1085. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **ranolazine**. Severe Study → Also see **TABLE 9** p. 1336
- **Ranolazine** is predicted to increase the exposure to **dabigatran**. Severe Theoretical
- **Ranolazine** increases the concentration of **digoxin**. Moderate Study
- **Ranolazine** is predicted to slightly increase the exposure to **edoxaban**. Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

- **Enzalutamide** is predicted to decrease the exposure to **ranolazine**. Avoid. Severe Study
- **Ranolazine** is predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- **Ranolazine** is predicted to increase the exposure to **fidaxomicin**. Avoid. Moderate Study
- **Grapefruit juice** is predicted to increase the concentration of **ranolazine**. Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **ranolazine**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **Idelalisib** is predicted to increase the exposure to **ranolazine**. Avoid. Severe Study
- **Imatinib** is predicted to increase the exposure to **ranolazine**. Severe Study
- **Ranolazine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **ranolazine**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- Macrolides **(erythromycin)** are predicted to increase the exposure to **ranolazine**. Severe Study → Also see **TABLE 9** p. 1336
- **Mitotane** is predicted to decrease the exposure to **ranolazine**. Avoid. Severe Study
- **Netupitant** is predicted to increase the exposure to **ranolazine**. Severe Study
- **Nilotinib** is predicted to increase the exposure to **ranolazine**. Severe Study → Also see **TABLE 9** p. 1336
- **Ranolazine** is predicted to increase the exposure to **nintedanib**. Moderate Study
- **Ranolazine** is predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Rifampicin** is predicted to decrease the exposure to **ranolazine**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **ranolazine**. Avoid. Severe Study
- **Ranolazine** is predicted to increase the exposure to statins **(atorvastatin)**. Moderate Theoretical
- **Ranolazine** slightly increases the exposure to statins **(simvastatin)**. Adjust **simvastatin** dose, p. 203. Moderate Study
- **Ranolazine** increases the concentration of **tacrolimus**. Adjust dose. Severe Anecdotal
- **Ranolazine** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. Severe Study
- **Ranolazine** is predicted to increase the exposure to **topotecan**. Severe Study
- **Ranolazine** is predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Ranolazine** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical

Rasagiline → see monoamine-oxidase B inhibitors

Reboxetine

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **reboxetine**. Moderate Anecdotal
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **reboxetine**. Avoid. Moderate Study
- Antifungals, azoles **(miconazole)** are predicted to increase the concentration of **reboxetine**. Use with caution and adjust dose. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **reboxetine**. Avoid. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **reboxetine**. Moderate Anecdotal
- **HIV-protease inhibitors** are predicted to increase the exposure to **reboxetine**. Avoid. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **reboxetine**. Avoid. Moderate Study
- **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **linezolid**. Avoid. Severe Theoretical
- **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **loop diuretics**. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **reboxetine**. Avoid. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **reboxetine**. Moderate Anecdotal
- **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. Severe Theoretical
- **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. Severe Theoretical
- **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with monoamine-oxidase B inhibitors **(rasagiline, selegiline)**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **reboxetine**. Moderate Anecdotal
- **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **thiazide diuretics**. Moderate Anecdotal

Regorafenib → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 4** p. 1334 (antiplatelet effects)

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **regorafenib**. Avoid. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **regorafenib**. Avoid. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **regorafenib**. Avoid. Moderate Study
- **Regorafenib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **regorafenib**. Avoid. Moderate Study
- **Grapefruit juice** is predicted to increase the exposure to **regorafenib**. Avoid. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **regorafenib**. Avoid. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **regorafenib**. Avoid. Moderate Study → Also see **TABLE 15** p. 1337
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **regorafenib**. Avoid. Moderate Study
- **Regorafenib** is predicted to increase the exposure to **methotrexate**. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Mitotane** is predicted to decrease the exposure to **regorafenib**. Avoid. Moderate Study → Also see **TABLE 15** p. 1337
- **Regorafenib** is predicted to increase the exposure to NSAIDs **(mefenamic acid)**. Avoid. Moderate Theoretical → Also see **TABLE 4** p. 1334
- **Regorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **regorafenib**. Avoid. Moderate Study
- **Regorafenib** is predicted to increase the exposure to statins **(atorvastatin, fluvastatin, rosuvastatin)**. Severe Theoretical

Remifentanil → see opioids

Repaglinide → see **TABLE 14** p. 1337 (antidiabetic drugs)

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **repaglinide**. Moderate Study
- **Ciclosporin** moderately increases the exposure to **repaglinide**. Moderate Study
- **Clopidogrel** increases the exposure to **repaglinide**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to **repaglinide**. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. Moderate Study
- Fibrates **(gemfibrozil)** increase the exposure to **repaglinide**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **repaglinide**. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **repaglinide**. Moderate Study
- Iron chelators **(deferasirox)** moderately increase the exposure to **repaglinide**. Avoid. Moderate Study

https://nhathuocngocanh.com/ www.getintopharma.com

Repaglinide (continued)
- **Leflunomide** is predicted to increase the exposure to **repaglinide**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **repaglinide**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. Moderate Study
- **Opicapone** is predicted to increase the exposure to **repaglinide**. Avoid. Moderate Study
- **Pitolisant** is predicted to decrease the exposure to **repaglinide**. Unknown Theoretical
- **Rifampicin** is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. Moderate Study
- **Teriflunomide** is predicted to increase the exposure to **repaglinide**. Moderate Study
- **Trimethoprim** slightly increases the exposure to **repaglinide**. Avoid or monitor blood glucose. Moderate Study

Retigabine → see antiepileptics

Retinoids → see **TABLE 5** p. 1334 (thromboembolism)

acitretin · adapalene · alitretinoin · bexarotene · isotretinoin · tazarotene · tretinoin

- Avoid concomitant use of keratolytics in patients taking **acitretin** and **isotretinoin**.
- Since systemic absorption can follow topical application of **isotretinoin**, the possibility of interactions should be borne in mind.

- **Alcohol (beverage)** potentially increases the concentration of **acitretin**. Avoid and for 2 months after stopping **acitretin**, p. 1225. Moderate Study
- Antiarrhythmics **(amiodarone)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1226. Moderate Theoretical
- Antifungals, azoles **(fluconazole, itraconazole, ketoconazole, miconazole, voriconazole)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1226. Moderate Theoretical
- Antifungals, azoles **(fluconazole, ketoconazole, voriconazole)** are predicted to increase the risk of tretinoin toxicity when given with **tretinoin**. Moderate Study
- **Clopidogrel** is predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1226. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1226. Moderate Theoretical
- Fibrates **(gemfibrozil)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1226. Moderate Theoretical
- Fibrates **(gemfibrozil)** increase the concentration of **bexarotene**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1226. Moderate Theoretical
- **Idelalisib** is predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1226. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1226. Moderate Theoretical
- **Acitretin** is predicted to increase the concentration of **methotrexate**. Avoid. Moderate Anecdotal
- **Sulfinpyrazone** is predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1226. Moderate Theoretical
- Retinoids **(acitretin, alitretinoin, isotretinoin, tretinoin)** increase the risk of benign intracranial hypertension when given with **tetracyclines**. Avoid. Severe Anecdotal
- **Bexarotene** is predicted to increase the risk of toxicity when given with **vitamin A**. Adjust dose. Moderate Theoretical
- Retinoids **(acitretin, alitretinoin, isotretinoin)** are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. Severe Theoretical
- **Tretinoin** is predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. Severe Study

Ribavirin
- **Ribavirin** is predicted to increase the exposure to **didanosine**. Avoid. Severe Study
- **Ribavirin** increases the risk of toxicity when given with **stavudine**. Avoid. Severe Study
- **Ribavirin** increases the risk of anaemia and/or leucopenia when given with **zidovudine**. Avoid. Severe Study

Ribociclib → see **TABLE 9** p. 1336 (QT-interval prolongation)

FOOD AND LIFESTYLE Avoid concomitant use of pomegranate or pomegranate juice as it is predicted to increase ribociclib exposure.

- **Ribociclib** (high-dose) is predicted to increase the exposure to alpha blockers **(alfuzosin)**. Avoid. Moderate Theoretical
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **ribociclib**. Moderate Study → Also see **TABLE 9** p. 1336
- **Ribociclib** (high-dose) is predicted to increase the exposure to antiarrhythmics **(amiodarone)**. Avoid. Moderate Theoretical → Also see **TABLE 9** p. 1336
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **ribociclib**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ribociclib**. Moderate Study → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 965. Moderate Study → Also see **TABLE 9** p. 1336
- **Aprepitant** is predicted to increase the exposure to **ribociclib**. Moderate Study
- **Bosentan** is predicted to decrease the exposure to **ribociclib**. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **ribociclib**. Moderate Study
- **Ribociclib** is predicted to increase the exposure to **ciclosporin**. Use with caution and adjust dose. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 965. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **ribociclib**. Moderate Study → Also see **TABLE 9** p. 1336
- **Efavirenz** is predicted to decrease the exposure to **ribociclib**. Moderate Study → Also see **TABLE 9** p. 1336
- **Enzalutamide** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. Severe Study
- **Ribociclib** (high-dose) is predicted to increase the exposure to **ergotamine**. Avoid. Moderate Theoretical
- **Ribociclib** is predicted to increase the exposure to **everolimus**. Use with caution and adjust dose. Moderate Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **ribociclib**. Avoid. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 965. Moderate Study → Also see **TABLE 9** p. 1336
- **Idelalisib** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 965. Moderate Study
- **Imatinib** is predicted to increase the exposure to **ribociclib**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 965. Moderate Study → Also see **TABLE 9** p. 1336
- Macrolides **(erythromycin)** are predicted to increase the exposure to **ribociclib**. Moderate Study → Also see **TABLE 9** p. 1336
- **Ribociclib** moderately increases the exposure to **midazolam**. Avoid. Moderate Study
- **Mitotane** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. Severe Study
- **Netupitant** is predicted to increase the exposure to **ribociclib**. Moderate Study
- **Nevirapine** is predicted to decrease the exposure to **ribociclib**. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **ribociclib**. Moderate Study → Also see **TABLE 9** p. 1336
- **Ribociclib** is predicted to increase the exposure to opioids **(alfentanil, fentanyl)**. Use with caution and adjust dose. Moderate Theoretical
- **Ribociclib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(sildenafil)**. Avoid. Moderate Theoretical → Also see **TABLE 9** p. 1336

https://nhathuocngocanh.com/ www.getintopharma.com

- **Ribociclib** (high-dose) is predicted to increase the exposure to **pimozide**. Avoid. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Ribociclib** (high-dose) is predicted to increase the exposure to **quetiapine**. Avoid. Moderate Theoretical
- **Rifampicin** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. Severe Study
- **Ribociclib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **ribociclib**. Avoid. Severe Study
- **Ribociclib** (high-dose) is predicted to increase the exposure to statins **(simvastatin)**. Avoid. Moderate Theoretical
- **Ribociclib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. Moderate Theoretical

Rifabutin

GENERAL INFORMATION Although some manufacturers class rifabutin as a potent inducer of CYP3A4, clinical data suggests it is potentially a weak inducer, and therefore the BNF does not extrapolate the interactions of potent CYP3A4 inducers to rifabutin. For those who wish to err on the side of caution, see the interactions of rifampicin but bear in mind other mechanisms might be involved.

- Antifungals, azoles **(fluconazole)** increase the risk of uveitis when given with **rifabutin**. Adjust dose. Severe Study
- Antifungals, azoles **(itraconazole, posaconazole)** increase the concentration of **rifabutin** and **rifabutin** decreases the concentration of antifungals, azoles **(itraconazole, posaconazole)**. Avoid. Severe Study
- Antifungals, azoles **(ketoconazole)** are predicted to increase the concentration of **rifabutin** and **rifabutin** is predicted to decrease the concentration of antifungals, azoles **(ketoconazole)**. Avoid. Severe Theoretical
- Antifungals, azoles **(miconazole)** are predicted to increase the concentration of **rifabutin**. Use with caution and adjust dose. Moderate Theoretical
- **Rifabutin** is predicted to decrease the exposure to antifungals, azoles **(isavuconazole)**. Avoid. Severe Theoretical
- **Rifabutin** decreases the concentration of antifungals, azoles **(voriconazole)** and antifungals, azoles **(voriconazole)** increase the concentration of **rifabutin**. Avoid or adjust **voriconazole** dose, p. 588. Severe Study
- **Rifabutin** slightly decreases the exposure to antimalarials **(atovaquone)**. Avoid. Moderate Study
- **Rifabutin** decreases the concentration of **cobicistat** and **cobicistat** increases the exposure to **rifabutin**. Avoid or adjust dose. Severe Study
- **Rifabutin** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Study
- **Rifabutin** decreases the exposure to **dapsone**. Moderate Study
- **Rifabutin** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Efavirenz** slightly decreases the exposure to **rifabutin**. Adjust dose. Severe Study
- **Rifabutin** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Rifabutin** decreases the exposure to **etravirine**. Moderate Study
- HIV-protease inhibitors **(atazanavir, darunavir, fosamprenavir, lopinavir, saquinavir, tipranavir)** (boosted with ritonavir) increase the exposure to **rifabutin**. Monitor and adjust dose. Severe Study
- HIV-protease inhibitors **(ritonavir)** markedly increase the exposure to **rifabutin**. Avoid or adjust dose. Severe Study
- **Rifabutin** is predicted to decrease the effects of **hormone replacement therapy**. Moderate Anecdotal
- **Rifabutin** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **rifabutin**. Adjust dose. Moderate Theoretical
- Macrolides **(azithromycin)** increase the risk of neutropenia when given with **rifabutin**. Severe Study
- Macrolides **(clarithromycin)** increase the risk of uveitis when given with **rifabutin**. Adjust dose. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the risk of uveitis when given with **rifabutin**. Adjust dose. Severe Theoretical
- **Rifabutin** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Rifabutin** slightly decreases the exposure to **rilpivirine**. Adjust dose. Severe Study
- **Rifabutin** is predicted to decrease the exposure to **rolapitant**. Avoid. Moderate Theoretical
- **Rifabutin** is predicted to decrease the exposure to **simeprevir**. Avoid. Moderate Theoretical
- **Rifabutin** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. Moderate Theoretical
- **Rifabutin** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Rifabutin** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Theoretical

Rifampicin

- **Rifampicin** is predicted to decrease the exposure to **abiraterone**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **afatinib**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **agomelatine**. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to aldosterone antagonists **(eplerenone)**. Avoid. Moderate Theoretical
- **Rifampicin** decreases the exposure to **aliskiren**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **alprazolam**. Adjust dose. Moderate Theoretical
- **Rifampicin** transiently increases the exposure to **ambrisentan**. Moderate Study
- **Rifampicin** decreases the exposure to **aminophylline**. Adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to anaesthetics, local **(ropivacaine)**. Moderate Theoretical
- **Antacids** decrease the absorption of **rifampicin**. **Rifampicin** should be taken 1 hour before **antacids**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to antiarrhythmics **(disopyramide, dronedarone)**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the efficacy of antiarrhythmics **(propafenone)**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to anticholinesterases, centrally acting **(donepezil)**. Mild Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the exposure to **rifampicin** and **rifampicin** is predicted to decrease the exposure to antiepileptics **(phenobarbital, primidone)**. Use with caution and adjust dose. Moderate Study
- **Rifampicin** slightly decreases the exposure to antiepileptics **(brivaracetam)**. Adjust dose. Moderate Study
- **Rifampicin** decreases the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Use with caution and adjust dose. Moderate Study
- **Rifampicin** markedly increases the clearance of antiepileptics **(lamotrigine)**. Adjust **lamotrigine** dose, p. 316. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to antiepileptics **(perampanel)**. Monitor and adjust dose. Moderate Study
- **Rifampicin** slightly decreases the exposure to antifungals, azoles **(fluconazole)**. Adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to antifungals, azoles **(isavuconazole)**. Avoid. Severe Study
- **Rifampicin** markedly decreases the exposure to antifungals, azoles **(itraconazole)**. Avoid and for 14 days after stopping **rifampicin**. Moderate Study
- **Rifampicin** markedly decreases the exposure to antifungals, azoles **(ketoconazole)** and antifungals, azoles **(ketoconazole)** potentially decrease the exposure to **rifampicin**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to antifungals, azoles **(posaconazole)**. Avoid. Moderate Anecdotal

https://nhathuocngocanh.com/ www.getintopharma.com

Rifampicin (continued)

- **Rifampicin** very markedly decreases the exposure to antifungals, azoles **(voriconazole)**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to antihistamines, non-sedating **(bilastine)**. Moderate Theoretical
- **Rifampicin** increases the clearance of antihistamines, non-sedating **(fexofenadine)**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to antimalarials **(artemether)** (with lumafantrine). Avoid. Severe Study
- **Rifampicin** moderately decreases the exposure to antimalarials **(atovaquone)** and antimalarials **(atovaquone)** slightly increase the exposure to **rifampicin**. Avoid. Moderate Study
- **Rifampicin** moderately decreases the exposure to antimalarials **(mefloquine)**. Severe Study
- **Rifampicin** is predicted to decrease the concentration of antimalarials **(piperaquine)**. Avoid. Moderate Theoretical
- **Rifampicin** decreases the exposure to antimalarials **(quinine)**. Severe Study
- **Rifampicin** is predicted to moderately decrease the exposure to **apixaban**. Use with caution or avoid. Severe Study
- **Rifampicin** moderately decreases the exposure to **apremilast**. Avoid. Severe Study
- **Rifampicin** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. Moderate Study
- **Rifampicin** is predicted to moderately decrease the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. Moderate Study
- **Rifampicin** decreases the exposure to **ataluren**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **bazedoxifene**. Moderate Theoretical
- **Rifampicin** decreases the exposure to **bedaquiline**. Avoid. Severe Study
- **Rifampicin** moderately decreases the exposure to beta blockers, non-selective **(carvedilol)**. Moderate Study
- **Rifampicin** decreases the exposure to beta blockers, non-selective **(propranolol)**. Monitor and adjust dose. Moderate Study
- **Rifampicin** slightly decreases the exposure to beta blockers, selective **(bisoprolol, metoprolol)**. Mild Study
- **Rifampicin** moderately decreases the exposure to beta blockers, selective **(celiprolol)**. Moderate Study
- **Rifampicin** slightly decreases the exposure to **bortezomib**. Avoid. Severe Study
- **Rifampicin** affects the exposure to **bosentan**. Avoid. Severe Study
- **Rifampicin** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **bupropion**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. Severe Study
- **Rifampicin** moderately decreases the exposure to **cabozantinib**. Avoid. Moderate Study
- **Rifampicin** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Rifampicin** greatly decreases the exposure to calcium channel blockers **(diltiazem, verapamil)**. Severe Study
- **Rifampicin** moderately decreases the exposure to calcium channel blockers **(nifedipine)**. Avoid. Severe Study
- **Rifampicin** moderately decreases the exposure to **canagliflozin**. Adjust **canagliflozin** dose, p. 687. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **cannabis extract**. Avoid. Severe Theoretical
- **Rifampicin** decreases the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 582. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **ceritinib**. Avoid. Severe Study
- **Rifampicin** decreases the concentration of **chloramphenicol**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **chlordiazepoxide**. Moderate Theoretical
- **Rifampicin** decreases the concentration of **ciclosporin**. Severe Study
- **Rifampicin** is predicted to alter the effects of **cilostazol**. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. Moderate Study
- **Rifampicin** decreases the exposure to **clomethiazole**. Monitor and adjust dose. Moderate Study
- **Rifampicin** decreases the exposure to **clozapine**. Severe Anecdotal
- **Rifampicin** is predicted to decrease the exposure to **cobicistat**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **cobimetinib**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Study
- **Rifampicin** is predicted to decrease the exposure to corticosteroids **(budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, prednisone, triamcinolone)**. Monitor and adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to corticosteroids **(fluticasone)**. Unknown Theoretical
- **Rifampicin** decreases the anticoagulant effect of **coumarins**. Severe Study
- **Rifampicin** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **dabigatran**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **dabrafenib**. Avoid. Moderate Theoretical
- **Rifampicin** is predicted to moderately decrease the exposure to **daclatasvir**. Avoid. Severe Study
- **Rifampicin** decreases the exposure to **dapsone**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **darifenacin**. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **dasabuvir**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. Severe Study
- **Rifampicin** is predicted to slightly decrease the exposure to **delamanid**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Rifampicin** moderately decreases the exposure to **diazepam**. Avoid. Moderate Study
- **Rifampicin** decreases the concentration of **digoxin**. Moderate Study
- **Rifampicin** decreases the exposure to **dolutegravir**. Adjust dose. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **duloxetine**. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **edoxaban**. Moderate Study
- **Rifampicin** slightly decreases the exposure to **efavirenz**. Adjust dose. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **elbasvir**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **eliglustat**. Avoid. Severe Study
- **Rifampicin** is predicted to increase the exposure to **eluxadoline**. Avoid. Moderate Theoretical
- **Rifampicin** is predicted to decrease the concentration of **elvitegravir**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the effects of **ergotamine**. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 949. Severe Study
- **Rifampicin** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

- **Rifampicin** is predicted to decrease the exposure to **etravirine**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. Severe Study
- **Rifampicin** moderately decreases the exposure to **exemestane**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **fesoterodine**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **fingolimod**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **fosaprepitant**. Avoid. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **gefitinib**. Avoid. Severe Study
- **Rifampicin** markedly affects the exposure to **glecaprevir**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **grazoprevir**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 349. Moderate Study
- **Rifampicin** decreases the concentration of **haloperidol**. Adjust dose. Moderate Study
- **Rifampicin** is predicted to moderately to markedly decrease the exposure to HIV-protease inhibitors **(atazanavir, darunavir, fosamprenavir, lopinavir, saquinavir)**. Avoid. Severe Study
- **Rifampicin** slightly decreases the exposure to HIV-protease inhibitors **(ritonavir)**. Severe Study
- **Rifampicin** is predicted to decrease the exposure to HIV-protease inhibitors **(tipranavir)**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the effects of **hormone replacement therapy**. Moderate Anecdotal
- **Rifampicin** is predicted to decrease the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 952. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **idelalisib**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **imatinib**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **irinotecan**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to iron chelators **(deferasirox)**. Monitor serum ferritin and adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **ivabradine**. Adjust dose. Moderate Theoretical
- **Rifampicin** is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **ixazomib**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **ledipasvir**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **linagliptin**. Moderate Study
- **Rifampicin** slightly decreases the exposure to **linezolid**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. Moderate Theoretical
- **Rifampicin** increases the clearance of **lorazepam**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **lurasidone**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **macitentan**. Avoid. Severe Study
- **Rifampicin** decreases the concentration of macrolides **(clarithromycin)**. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **maraviroc**. Adjust dose. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **melatonin**. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **midazolam**. Monitor and adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **midostaurin**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **modafinil**. Moderate Theoretical
- **Rifampicin** decreases the effects of monoclonal antibodies **(brentuximab vedotin)**. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **montelukast**. Mild Study
- **Rifampicin** decreases the concentration of **mycophenolate**. Monitor and adjust dose. Severe Study
- **Rifampicin** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. Moderate Study
- **Rifampicin** is predicted to slightly decrease the exposure to **nateglinide**. Mild Study
- **Rifampicin** is predicted to decrease the exposure to **netupitant**. Avoid. Severe Study
- **Rifampicin** decreases the concentration of **nevirapine**. Avoid. Severe Study
- **Rifampicin** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **nintedanib**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- **Rifampicin** increases the clearance of **nitrazepam**. Moderate Study
- **Rifampicin** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Rifampicin** moderately decreases the exposure to NSAIDs **(celecoxib, diclofenac, etoricoxib)**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **ombitasvir**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **ondansetron**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to opioids **(alfentanil, fentanyl)**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to opioids **(buprenorphine)**. Monitor and adjust dose. Moderate Theoretical
- **Rifampicin** decreases the exposure to opioids **(codeine, morphine)**. Moderate Study
- **Rifampicin** decreases the exposure to opioids **(methadone)**. Monitor and adjust dose. Severe Study
- **Rifampicin** is predicted to decrease the exposure to opioids **(oxycodone)**. Monitor and adjust dose. Moderate Study
- **Rifampicin** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **palbociclib**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **paliperidone**. Monitor and adjust dose. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **panobinostat**. Avoid. Moderate Theoretical
- **Rifampicin** decreases the exposure to **paracetamol**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **pazopanib**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(avanafil, tadalafil)**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(sildenafil, vardenafil)**. Moderate Theoretical
- **Rifampicin** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. Severe Study

https://nhathuocngocanh.com/ www.getintopharma.com

Rifampicin (continued)

- **Rifampicin** moderately decreases the exposure to **pioglitazone**. Monitor and adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **pirfenidone**. Avoid. Moderate Theoretical
- **Rifampicin** is predicted to moderately decrease the exposure to **pitolisant**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **ponatinib**. Avoid. Moderate Theoretical
- **Rifampicin** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **quetiapine**. Moderate Study
- **Rifampicin** slightly decreases the exposure to **raltegravir**. Avoid or adjust dose—consult product literature. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **ranolazine**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **reboxetine**. Moderate Anecdotal
- **Rifampicin** is predicted to decrease the exposure to **regorafenib**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. Moderate Study
- **Rifampicin** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. Severe Study
- **Rifampicin** markedly decreases the exposure to **rilpivirine**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **risperidone**. Adjust dose. Moderate Study
- **Rifampicin** is predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **roflumilast**. Avoid. Moderate Study
- **Rifampicin** is predicted to markedly decrease the exposure to **rolapitant**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Study
- **Rifampicin** is predicted to moderately decrease the exposure to **saxagliptin**. Moderate Study
- **Rifampicin** moderately decreases the exposure to the active metabolite of **selexipag**. Adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **simeprevir**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the concentration of **sirolimus**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **sofosbuvir**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **solifenacin**. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **sorafenib**. Moderate Theoretical
- **Rifampicin** markedly decreases the exposure to statins **(atorvastatin)**. **Atorvastatin** should be taken at the same time as **rifampicin**, p. 200, p. 571. Moderate Study
- **Rifampicin** moderately decreases the exposure to statins **(fluvastatin)**. Monitor and adjust dose. Moderate Study
- **Rifampicin** very markedly decreases the exposure to statins **(simvastatin)**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **sulfonylureas**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. Moderate Study
- **Rifampicin** decreases the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- **Rifampicin** markedly decreases the exposure to **tamoxifen**. Unknown Study
- **Rifampicin** is predicted to decrease the exposure to taxanes **(cabazitaxel, paclitaxel)**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to taxanes **(docetaxel)**. Severe Theoretical
- **Rifampicin** is predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. Moderate Theoretical
- **Rifampicin** decreases the exposure to **terbinafine**. Adjust dose. Moderate Study
- **Rifampicin** decreases the exposure to tetracyclines **(doxycycline)**. Monitor and adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **theophylline**. Adjust dose. Moderate Study
- **Rifampicin** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **tivozanib**. Severe Study
- **Rifampicin** moderately decreases the exposure to **tizanidine**. Mild Study
- **Rifampicin** is predicted to decrease the exposure to **tofacitinib**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **tolvaptan**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **toremifene**. Adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **trabectedin**. Avoid. Severe Theoretical
- **Rifampicin** decreases the exposure to **trimethoprim**. Moderate Study
- **Rifampicin** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Rifampicin** is predicted to decrease the exposure to **vandetanib**. Avoid. Moderate Study
- **Rifampicin** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **vemurafenib**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to vinca alkaloids **(vinblastine, vincristine, vindesine)**. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to vinca alkaloids **(vinflunine)**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to vinca alkaloids **(vinorelbine)**. Use with caution or avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **vismodegib**. Avoid. Moderate Theoretical
- **Rifampicin** potentially increases the risk of nephrotoxicity when given with volatile halogenated anaesthetics **(methoxyflurane)**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Study
- **Rifampicin** markedly decreases the exposure to **zaleplon**. Moderate Study
- **Rifampicin** moderately decreases the exposure to **zolpidem**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **zopiclone**. Adjust dose. Moderate Study

Rifaximin

- **Ciclosporin** very markedly increases the exposure to **rifaximin**. Severe Study

Rilpivirine

- **Antacids** are predicted to decrease the exposure to **rilpivirine**. **Antacids** should be taken 2 hours before or 4 hours after **rilpivirine**, p. 634. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** markedly decrease the exposure to **rilpivirine**. Avoid. Severe Study
- Antiepileptics **(oxcarbazepine)** are predicted to decrease the concentration of **rilpivirine**. Avoid. Severe Theoretical
- **Bosentan** is predicted to decrease the exposure to **rilpivirine**. Avoid. Severe Theoretical
- Calcium salts **(calcium carbonate)** are predicted to slightly decrease the exposure to **rilpivirine**. **Calcium carbonate** should be taken 2 hours before or 4 hours after **rilpivirine**. Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

- **Efavirenz** is predicted to decrease the exposure to **rilpivirine**. Avoid. Severe Theoretical
- **Enzalutamide** markedly decreases the exposure to **rilpivirine**. Avoid. Severe Study
- **Etravirine** is predicted to decrease the exposure to **rilpivirine**. Avoid. Severe Theoretical
- **H_2 receptor antagonists** are predicted to decrease the exposure to **rilpivirine**. **H_2 receptor antagonists** should be taken 12 hours before or 4 hours after **rilpivirine**. Severe Study
- **Mitotane** markedly decreases the exposure to **rilpivirine**. Avoid. Severe Study
- **Nevirapine** is predicted to decrease the exposure to **rilpivirine**. Avoid. Severe Theoretical
- **Proton pump inhibitors** are predicted to decrease the exposure to **rilpivirine**. Avoid. Severe Study
- **Rifabutin** slightly decreases the exposure to **rilpivirine**. Adjust dose. Severe Study
- **Rifampicin** markedly decreases the exposure to **rilpivirine**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **rilpivirine**. Avoid. Severe Theoretical

Riluzole

FOOD AND LIFESTYLE Charcoal-grilled foods are predicted to decrease the exposure to riluzole.

- SSRIs **(fluvoxamine)** are predicted to increase the exposure to **riluzole**. Moderate Theoretical

Riociguat → see **TABLE 8** p. 1335 (hypotension)

- **Antacids** slightly decrease the exposure to **riociguat**. **Antacids** should be taken 2 hours before or 1 hour after **riociguat**. Mild Study
- Antifungals, azoles **(itraconazole)** are predicted to increase the exposure to **riociguat**. Avoid. Moderate Study
- Antifungals, azoles **(ketoconazole)** moderately increase the exposure to **riociguat**. Avoid. Moderate Study
- **Ciclosporin** is predicted to increase the exposure to **riociguat**. Moderate Theoretical
- HIV-protease inhibitors **(ritonavir)** are predicted to increase the exposure to **riociguat**. Avoid. Moderate Theoretical
- **Riociguat** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. Severe Theoretical → Also see **TABLE 8** p. 1335

Risedronate → see bisphosphonates

Risperidone → see **TABLE 8** p. 1335 (hypotension), **TABLE 9** p. 1336 (QT-interval prolongation), **TABLE 11** p. 1336 (CNS depressant effects)

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **risperidone**. Adjust dose. Moderate Study → Also see **TABLE 11** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **risperidone**. Adjust dose. Moderate Study → Also see **TABLE 9** p. 1336
- **Bupropion** is predicted to increase the exposure to **risperidone**. Adjust dose. Moderate Study
- **Cinacalcet** is predicted to increase the exposure to **risperidone**. Adjust dose. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **risperidone**. Adjust dose. Moderate Study
- **Risperidone** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335 → Also see **TABLE 9** p. 1336
- **Enzalutamide** is predicted to decrease the exposure to **risperidone**. Adjust dose. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **risperidone**. Adjust dose. Moderate Study → Also see **TABLE 9** p. 1336
- **Idelalisib** is predicted to increase the exposure to **risperidone**. Adjust dose. Moderate Study
- **Risperidone** is predicted to decrease the effects of **levodopa**. Avoid or adjust dose. Severe Anecdotal → Also see **TABLE 8** p. 1335
- **Risperidone** potentially increases the risk of neurotoxicity when given with **lithium**. Severe Anecdotal → Also see **TABLE 9** p. 1336
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **risperidone**. Adjust dose. Moderate Study → Also see **TABLE 9** p. 1336
- **Risperidone** increases the risk of dyskinesias when given with **methylphenidate**. Severe Anecdotal
- **Mitotane** is predicted to decrease the exposure to **risperidone**. Adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **risperidone**. Adjust dose. Moderate Study
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to **risperidone**. Adjust dose. Moderate Study
- **Terbinafine** is predicted to increase the exposure to **risperidone**. Adjust dose. Moderate Study

Ritonavir → see HIV-protease inhibitors

Rituximab → see monoclonal antibodies

Rivaroxaban → see **TABLE 3** p. 1334 (anticoagulant effects)

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **rivaroxaban**. Avoid. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole)** are predicted to moderately increase the exposure to **rivaroxaban**. Avoid. Severe Study
- **Enzalutamide** is predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. Severe Study
- HIV-protease inhibitors **(ritonavir)** moderately increase the exposure to **rivaroxaban**. Avoid. Severe Study
- **Mitotane** is predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. Severe Study
- **Rifampicin** is predicted to moderately decrease the exposure to **rivaroxaban**. Avoid unless patient can be monitored for signs of thrombosis. Severe Study

Rivastigmine → see anticholinesterases, centrally acting

Rizatriptan → see **TABLE 13** p. 1337 (serotonin syndrome)

- Beta blockers, non-selective **(propranolol)** slightly to moderately increase the exposure to **rizatriptan**. Adjust **rizatriptan** dose and separate administration by at least 2 hours. Moderate Study
- **Rizatriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **rizatriptan**. Severe Theoretical
- **Moclobemide** moderately increases the exposure to **rizatriptan**. Avoid. Moderate Study → Also see **TABLE 13** p. 1337
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the exposure to **rizatriptan**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 13** p. 1337

Rocuronium → see neuromuscular blocking drugs, non-depolarising

Roflumilast

- **Aminophylline** is predicted to slightly increase the exposure to **roflumilast**. Avoid. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **roflumilast**. Avoid. Moderate Study
- **Combined hormonal contraceptives** are predicted to increase the exposure to **roflumilast**. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **roflumilast**. Avoid. Moderate Study
- H_2 receptor antagonists **(cimetidine)** slightly increase the exposure to **roflumilast**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **roflumilast**. Avoid. Moderate Study
- Quinolones **(ciprofloxacin)** are predicted to increase the exposure to **roflumilast**. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **roflumilast**. Avoid. Moderate Study
- SSRIs **(fluvoxamine)** are predicted to increase the exposure to **roflumilast**. Moderate Study
- **Theophylline** is predicted to slightly increase the exposure to **roflumilast**. Avoid. Moderate Theoretical

Rolapitant

- **Rolapitant** is predicted to increase the exposure to alkylating agents **(bendamustine)**. Avoid or monitor. Moderate Study

https://nhathuocngocanh.com/ www.getintopharma.com

Rolapitant (continued)
- **Rolapitant** is predicted to increase the exposure to anthracyclines **(doxorubicin, mitoxantrone)**. Avoid or monitor. Moderate Study
- **Rolapitant** is predicted to increase the exposure to antiarrhythmics **(propafenone)**. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **rolapitant**. Avoid. Severe Study
- **Rolapitant** is predicted to moderately increase the exposure to beta blockers, selective **(metoprolol)**. Severe Study
- **Bosentan** is predicted to decrease the exposure to **rolapitant**. Avoid. Severe Study
- **Rolapitant** is predicted to increase the exposure to **colchicine**. Moderate Study
- **Rolapitant** is predicted to increase the exposure to **dabigatran**. Moderate Study
- **Rolapitant** slightly increases the exposure to **digoxin**. Moderate Study
- **Efavirenz** is predicted to decrease the exposure to **rolapitant**. Avoid. Severe Study
- **Enzalutamide** is predicted to markedly decrease the exposure to **rolapitant**. Avoid. Severe Study
- **Rolapitant** is predicted to increase the exposure to **irinotecan**. Avoid or monitor. Moderate Study
- **Rolapitant** is predicted to increase the exposure to **methotrexate**. Avoid or monitor. Moderate Study
- **Mitotane** is predicted to markedly decrease the exposure to **rolapitant**. Avoid. Severe Study
- **Nevirapine** is predicted to decrease the exposure to **rolapitant**. Avoid. Severe Study
- **Rolapitant** is predicted to increase the exposure to **pimozide**. Severe Study
- **Rifabutin** is predicted to decrease the exposure to **rolapitant**. Avoid. Moderate Theoretical
- **Rifampicin** is predicted to markedly decrease the exposure to **rolapitant**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **rolapitant**. Avoid. Severe Study
- **Rolapitant** is predicted to increase the exposure to statins **(rosuvastatin)**. Monitor and adjust dose. Severe Study
- **Rolapitant** increases the exposure to **sulfasalazine**. Severe Study
- **Rolapitant** is predicted to increase the exposure to **tamoxifen**. Severe Study
- **Rolapitant** is predicted to increase the exposure to **topotecan**. Avoid or monitor. Moderate Study

Ropinirole → see dopamine receptor agonists
Ropivacaine → see anaesthetics, local
Rosuvastatin → see statins
Rotavirus vaccine → see live vaccines
Rotigotine → see dopamine receptor agonists
Rufinamide → see antiepileptics
Rupatadine → see antihistamines, non-sedating
Ruxolitinib → see **TABLE 15** p. 1337 (myelosuppression)
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **ruxolitinib**. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ruxolitinib**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor side effects. Moderate Study
- **Aprepitant** is predicted to increase the exposure to **ruxolitinib**. Moderate Theoretical
- **Bosentan** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **ruxolitinib**. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor side effects. Moderate Study
- **Ruxolitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **ruxolitinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Efavirenz** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Study
- **Grapefruit juice** is predicted to increase the exposure to **ruxolitinib**. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor side effects. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor side effects. Moderate Study → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to increase the exposure to **ruxolitinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor side effects. Moderate Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **ruxolitinib**. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Study → Also see **TABLE 15** p. 1337
- **Netupitant** is predicted to increase the exposure to **ruxolitinib**. Moderate Theoretical
- **Nevirapine** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to **ruxolitinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Ruxolitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Study
- **St John's Wort** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Theoretical

Sacubitril → see **TABLE 8** p. 1335 (hypotension)
- **Sacubitril** is predicted to increase the exposure to **statins**. Severe Study

Safinamide → see monoamine-oxidase B inhibitors
Salbutamol → see beta$_2$ agonists
Salmeterol → see beta$_2$ agonists
Sapropterin → see **TABLE 8** p. 1335 (hypotension)
- **Methotrexate** is predicted to decrease the efficacy of **sapropterin**. Moderate Theoretical
- **Phosphodiesterase type-5 inhibitors** are predicted to increase the risk of hypotension when given with **sapropterin**. Moderate Theoretical → Also see **TABLE 8** p. 1335
- **Trimethoprim** is predicted to decrease the efficacy of **sapropterin**. Moderate Theoretical

Saquinavir → see HIV-protease inhibitors
Sarilumab → see monoclonal antibodies
Saxagliptin → see **TABLE 14** p. 1337 (antidiabetic drugs)
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **saxagliptin**. Mild Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **saxagliptin**. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **saxagliptin**. Mild Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **saxagliptin**. Moderate Study
- **Aprepitant** is predicted to increase the exposure to **saxagliptin**. Mild Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **saxagliptin**. Mild Study
- **Cobicistat** is predicted to increase the exposure to **saxagliptin**. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **saxagliptin**. Mild Study
- **Enzalutamide** is predicted to moderately decrease the exposure to **saxagliptin**. Moderate Study

https://nhathuocngocanh.com/ www.getintopharma.com

- **Grapefruit juice** is predicted to increase the exposure to **saxagliptin**. Mild Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **saxagliptin**. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **saxagliptin**. Moderate Study
- **Imatinib** is predicted to increase the exposure to **saxagliptin**. Mild Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **saxagliptin**. Moderate Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **saxagliptin**. Mild Study
- **Mitotane** is predicted to moderately decrease the exposure to **saxagliptin**. Moderate Study
- **Netupitant** is predicted to increase the exposure to **saxagliptin**. Mild Study
- **Nilotinib** is predicted to increase the exposure to **saxagliptin**. Mild Study
- **Rifampicin** is predicted to moderately decrease the exposure to **saxagliptin**. Moderate Study

Secukinumab → see monoclonal antibodies

Selegiline → see monoamine-oxidase B inhibitors

Selenium

- **Selenium** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **selenium**, p. 1001, p. 1037. Severe Theoretical

Selexipag

- Antiepileptics **(carbamazepine, fosphenytoin, phenytoin)** are predicted to decrease the exposure to the active metabolite of **selexipag**. Adjust dose. Moderate Study
- Antiepileptics **(valproate)** are predicted to increase the exposure to **selexipag**. Unknown Theoretical
- Antifungals, azoles **(fluconazole)** are predicted to increase the exposure to **selexipag**. Unknown Theoretical
- **Clopidogrel** is predicted to increase the exposure to **selexipag**. Adjust dose. Moderate Study
- Fibrates **(gemfibrozil)** increase the exposure to **selexipag**. Avoid. Severe Study
- Iron chelators **(deferasirox)** are predicted to increase the exposure to **selexipag**. Adjust dose. Moderate Study
- **Leflunomide** is predicted to increase the exposure to **selexipag**. Adjust dose. Moderate Theoretical
- **Rifampicin** moderately decreases the exposure to the active metabolite of **selexipag**. Adjust dose. Moderate Study
- **Teriflunomide** is predicted to increase the exposure to **selexipag**. Adjust dose. Moderate Theoretical

Sertraline → see SSRIs

Sevoflurane → see volatile halogenated anaesthetics

Sildenafil → see phosphodiesterase type-5 inhibitors

Siltuximab → see monoclonal antibodies

Silver sulfadiazine

PHARMACOLOGY Silver might inactivate enzymatic debriding agents—concurrent use might not be appropriate.

Simeprevir

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **simeprevir**. Avoid. Severe Study
- **Simeprevir** is predicted to increase the concentration of antiarrhythmics **(amiodarone)**. Refer to specialist literature. Severe Anecdotal
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **simeprevir**. Avoid. Severe Study
- Antiepileptics **(oxcarbazepine)** are predicted to decrease the exposure to **simeprevir**. Avoid. Severe Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **simeprevir**. Avoid. Severe Study
- **Aprepitant** is predicted to increase the exposure to **simeprevir**. Avoid. Severe Study
- **Bosentan** is predicted to decrease the exposure to **simeprevir**. Avoid. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **simeprevir**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to **simeprevir**. Avoid. Severe Study
- **Crizotinib** is predicted to increase the exposure to **simeprevir**. Avoid. Severe Study
- **Efavirenz** is predicted to decrease the exposure to **simeprevir**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **simeprevir**. Avoid. Severe Study
- **Etravirine** is predicted to decrease the exposure to **simeprevir**. Avoid. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **simeprevir**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **simeprevir**. Avoid. Severe Study
- **Imatinib** is predicted to increase the exposure to **simeprevir**. Avoid. Severe Study
- **Ledipasvir** moderately increases the exposure to **simeprevir** and **simeprevir** slightly increases the exposure to **ledipasvir**. Avoid. Severe Study
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to **simeprevir**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **simeprevir**. Avoid. Severe Study
- **Netupitant** is predicted to increase the exposure to **simeprevir**. Avoid. Severe Study
- **Nevirapine** is predicted to decrease the exposure to **simeprevir**. Avoid. Severe Study
- **Nilotinib** is predicted to increase the exposure to **simeprevir**. Avoid. Severe Study
- **Rifabutin** is predicted to decrease the exposure to **simeprevir**. Avoid. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **simeprevir**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **simeprevir**. Avoid. Severe Study
- **Simeprevir** moderately increases the exposure to statins **(atorvastatin)**. Monitor and adjust dose. Moderate Study
- **Simeprevir** is predicted to increase the exposure to statins **(pravastatin)**. Monitor and adjust dose. Severe Theoretical
- **Simeprevir** moderately increases the exposure to statins **(rosuvastatin)**. Adjust **rosuvastatin** dose, p. 202. Moderate Study
- **Simeprevir** slightly increases the exposure to statins **(simvastatin)**. Monitor and adjust dose. Moderate Study

Simvastatin → see statins

Sirolimus

- Antiarrhythmics **(amiodarone)** are predicted to increase the concentration of **sirolimus**. Severe Anecdotal
- Antiarrhythmics **(dronedarone)** increase the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **sirolimus**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** increase the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **sirolimus**. Avoid. Severe Study
- Antifungals, azoles **(miconazole)** are predicted to increase the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- **Aprepitant** increases the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- **Bosentan** is predicted to decrease the concentration of **sirolimus** and **sirolimus** potentially increases the concentration of **bosentan**. Avoid. Severe Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** increase the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- **Ceritinib** is predicted to increase the exposure to **sirolimus**. Avoid. Severe Theoretical
- **Sirolimus** is predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. Moderate Theoretical
- **Ciclosporin** moderately increases the exposure to **sirolimus**. Separate administration by 4 hours. Severe Study
- **Cobicistat** is predicted to increase the concentration of **sirolimus**. Avoid. Severe Study

https://nhathuocngocanh.com/ www.getintopharma.com

Sirolimus (continued)
- **Crizotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- **Efavirenz** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. Moderate Theoretical
- **Eliglustat** is predicted to increase the exposure to **sirolimus**. Adjust dose. Moderate Study
- **Enzalutamide** is predicted to decrease the concentration of **sirolimus**. Avoid. Severe Study
- **Grapefruit juice** increases the concentration of **sirolimus**. Avoid. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the concentration of **sirolimus**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the concentration of **sirolimus**. Avoid. Severe Study
- **Imatinib** increases the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- **Lapatinib** is predicted to increase the exposure to **sirolimus**. Moderate Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **sirolimus**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **sirolimus**. Avoid. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the concentration of **sirolimus**. Avoid. Severe Study
- Macrolides **(erythromycin)** increase the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- **Sirolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. Severe Theoretical
- **Mirabegron** is predicted to increase the exposure to **sirolimus**. Mild Theoretical
- **Mitotane** is predicted to decrease the concentration of **sirolimus**. Avoid. Severe Study
- Monoclonal antibodies **(sarilumab)** potentially affect the exposure to **sirolimus**. Monitor and adjust dose. Moderate Theoretical
- **Netupitant** increases the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- **Nevirapine** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. Moderate Theoretical
- **Nilotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- **Palbociclib** is predicted to increase the exposure to **sirolimus**. Adjust dose. Moderate Theoretical
- **Pitolisant** is predicted to decrease the exposure to **sirolimus**. Avoid. Severe Theoretical
- **Ribociclib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. Moderate Theoretical
- **Rifampicin** is predicted to decrease the concentration of **sirolimus**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. Severe Theoretical
- **Sirolimus** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** increases the exposure to **sirolimus**. Severe Study
- **Velpatasvir** is predicted to increase the exposure to **sirolimus**. Severe Theoretical

Sitagliptin → see **TABLE 14** p. 1337 (antidiabetic drugs)

Sodium aurothiomalate
- **ACE inhibitors** are predicted to increase the risk of hypersensitivity when given with **sodium aurothiomalate**. Severe Anecdotal
- **Sodium aurothiomalate** potentially increases the risk of side-effects when given with **penicillamine** (in those who have had previous adverse reactions to gold). Avoid. Severe Study

Sodium bicarbonate
- Oral **sodium bicarbonate** decreases the absorption of antifungals, azoles **(ketoconazole)**. Moderate Study
- **Sodium bicarbonate** decreases the concentration of **lithium**. Severe Anecdotal
- **Sodium bicarbonate** is predicted to decrease the efficacy of **methenamine**. Avoid. Moderate Theoretical

Sodium citrate
- **Sodium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. Moderate Theoretical
- **Sodium citrate** is predicted to increase the risk of side-effects when given with **sucralfate**. Avoid. Moderate Theoretical

Sodium clodronate → see bisphosphonates

Sodium feredetate → see iron (oral)

Sodium nitroprusside → see **TABLE 8** p. 1335 (hypotension)
- **Sodium nitroprusside** is predicted to increase the risk of methaemoglobinaemia when given with topical anaesthetics, local **(prilocaine)**. Use with caution or avoid. Severe Theoretical
- **Sodium nitroprusside** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. Severe Theoretical

Sodium oxybate → see **TABLE 8** p. 1335 (hypotension), **TABLE 11** p. 1336 (CNS depressant effects)
- Antiepileptics **(valproate)** increase the exposure to **sodium oxybate**. Adjust **sodium oxybate** dose, p. 484. Moderate Study

Sodium phenylbutyrate
- Antiepileptics **(valproate)** potentially decrease the effects of **sodium phenylbutyrate**. Moderate Anecdotal
- **Corticosteroids** potentially decrease the effects of **sodium phenylbutyrate**. Moderate Anecdotal
- **Haloperidol** potentially decreases the effects of **sodium phenylbutyrate**. Moderate Anecdotal

Sodium picosulfate → see **TABLE 18** p. 1338 (hyponatraemia)

Sodium stibogluconate
- **Sodium stibogluconate** increases the risk of cardiovascular side-effects when given with **amphotericin**. Separate administration by 14 days. Severe Study

Sofosbuvir
- **Sofosbuvir** is predicted to increase the risk of severe bradycardia or heart block when given with antiarrhythmics **(amiodarone)**. Refer to specialist literature. Severe Anecdotal
- Antiepileptics **(carbamazepine)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. Severe Study
- Antiepileptics **(fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. Severe Theoretical
- **H_2 receptor antagonists** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see ledipasvir with sofosbuvir p. 617, sofosbuvir with velpatasvir p. 619, and sofosbuvir with velpatasvir and voxilaprevir p. 619. Moderate Study
- HIV-protease inhibitors **(tipranavir)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. Severe Theoretical
- **Proton pump inhibitors** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see ledipasvir with sofosbuvir p. 617, sofosbuvir with velpatasvir p. 619, and sofosbuvir with velpatasvir and voxilaprevir p. 619. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **sofosbuvir**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **sofosbuvir**. Avoid. Severe Study

Solifenacin → see **TABLE 10** p. 1336 (antimuscarinics)
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **solifenacin**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 761 or **tamsulosin with solifenacin** p. 768 dose; avoid in hepatic and renal impairment. Severe Study
- **Cobicistat** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 761 or **tamsulosin with solifenacin** p. 768 dose; avoid in hepatic and renal impairment. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **solifenacin**. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 761 or **tamsulosin with solifenacin** p. 768 dose; avoid in hepatic and renal impairment. Severe Study
- **Idelalisib** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 761 or **tamsulosin with solifenacin** p. 768 dose; avoid in hepatic and renal impairment. Severe Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 761 or **tamsulosin**

https://nhathuocngocanh.com/ www.getintopharma.com

with solifenacin p. 768 dose; avoid in hepatic and renal impairment. Severe Study
- **Mitotane** is predicted to decrease the exposure to **solifenacin**. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **solifenacin**. Moderate Theoretical

Somatropin
- **Corticosteroids** are predicted to decrease the effects of **somatropin**. Moderate Theoretical

Sorafenib → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 9** p. 1336 (QT-interval prolongation)
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sorafenib**. Moderate Theoretical
- **Sorafenib** increases the anticoagulant effect of **coumarins**. Severe Anecdotal
- **Enzalutamide** is predicted to decrease the exposure to **sorafenib**. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **sorafenib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Neomycin** moderately decreases the exposure to **sorafenib**. Moderate Study
- **Sorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **sorafenib**. Moderate Theoretical

Sotalol → see beta blockers, non-selective

Spironolactone → see aldosterone antagonists

SSRIs → see **TABLE 18** p. 1338 (hyponatraemia), **TABLE 13** p. 1337 (serotonin syndrome), **TABLE 9** p. 1336 (QT-interval prolongation), **TABLE 4** p. 1334 (antiplatelet effects)

citalopram • dapoxetine • escitalopram • fluoxetine • fluvoxamine • paroxetine • sertraline
- **Fluvoxamine** very markedly increases the exposure to **agomelatine**. Avoid. Severe Study
- **Fluvoxamine** moderately increases the exposure to **alprazolam**. Adjust dose. Moderate Study
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to **amfetamines**. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Fluvoxamine** moderately to markedly increases the exposure to **aminophylline**. Avoid. Severe Study
- **Fluvoxamine** decreases the clearance of anaesthetics, local **(ropivacaine)**. Avoid prolonged use. Moderate Study
- **Fluvoxamine** is predicted to increase the exposure to **anagrelide**. Moderate Theoretical → Also see **TABLE 4** p. 1334
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. Moderate Theoretical
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to SSRIs **(citalopram, escitalopram, fluoxetine, fluvoxamine, paroxetine, sertraline)**. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Fluvoxamine** is predicted to increase the exposure to antiarrhythmics **(propafenone)**. Monitor and adjust dose. Moderate Study
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to anticholinesterases, centrally acting **(galantamine)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(fosphenytoin, phenytoin)** decrease the concentration of **paroxetine**. Moderate Study
- **Sertraline** potentially increases the risk of toxicity when given with antiepileptics **(fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. Severe Anecdotal
- SSRIs **(fluoxetine, fluvoxamine)** are predicted to increase the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Monitor and adjust dose. Severe Anecdotal
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 801. Severe Study
- Antifungals, azoles **(voriconazole)** are predicted to increase the exposure to **citalopram**. Severe Theoretical → Also see **TABLE 9** p. 1336
- Antihistamines, sedating **(cyproheptadine)** potentially decrease the effects of **SSRIs**. Moderate Anecdotal
- **Aprepitant** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. Moderate Theoretical
- SSRIs **(fluoxetine, paroxetine)** are predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. Moderate Study
- **Fluvoxamine** increases the exposure to **asenapine**. Moderate Study
- **Paroxetine** moderately increases the exposure to **asenapine**. Moderate Study
- SSRIs **(fluoxetine, paroxetine)** are predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. Severe Study
- **Fluvoxamine** moderately increases the concentration of beta blockers, non-selective **(propranolol)**. Moderate Study
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to beta blockers, selective **(metoprolol, nebivolol)**. Moderate Study
- **Bupropion** is predicted to increase the exposure to **dapoxetine**. Moderate Theoretical → Also see **TABLE 13** p. 1337
- **Fluvoxamine** markedly decreases the clearance of **caffeine citrate**. Monitor and adjust dose. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. Moderate Theoretical
- SSRIs **(fluoxetine, fluvoxamine)** are predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 231. Moderate Theoretical → Also see **TABLE 4** p. 1334
- **Cinacalcet** is predicted to increase the exposure to **dapoxetine**. Moderate Theoretical
- **Fluvoxamine** is predicted to increase the exposure to **cinacalcet**. Adjust dose. Moderate Theoretical
- SSRIs **(fluoxetine, fluvoxamine)** potentially increase the exposure to **clobazam**. Adjust dose. Moderate Theoretical
- SSRIs **(fluoxetine, fluvoxamine)** are predicted to decrease the efficacy of **clopidogrel**. Avoid. Severe Theoretical → Also see **TABLE 4** p. 1334
- **Fluvoxamine** increases the concentration of **clozapine**. Monitor side effects and adjust dose. Severe Study
- **Cobicistat** is predicted to moderately increase the exposure to **dapoxetine**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 801. Severe Study
- **Crizotinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. Moderate Theoretical
- SSRIs **(fluoxetine, paroxetine)** are predicted to slightly increase the exposure to **darifenacin**. Mild Study
- **Fluvoxamine** moderately increases the exposure to **diazepam**. Moderate Study
- **Fluvoxamine** is predicted to increase the exposure to dopamine receptor agonists **(ropinirole)**. Adjust dose. Moderate Study
- **Fluvoxamine** markedly increases the exposure to **duloxetine**. Avoid. Severe Study → Also see **TABLE 18** p. 1338 → Also see **TABLE 13** p. 1337 → Also see **TABLE 4** p. 1334
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Fluvoxamine** is predicted to increase the exposure to **erlotinib**. Monitor side effects and adjust dose. Moderate Theoretical
- **Fluvoxamine** increases the concentration of **frovatriptan**. Severe Study → Also see **TABLE 13** p. 1337
- **Grapefruit juice** moderately increases the exposure to **sertraline**. Avoid. Moderate Study
- H_2 receptor antagonists **(cimetidine)** slightly increase the exposure to SSRIs **(citalopram, escitalopram)**. Adjust dose. Moderate Study
- H_2 receptor antagonists **(cimetidine)** slightly increase the exposure to SSRIs **(paroxetine, sertraline)**. Moderate Study
- **Fluoxetine** increases the concentration of **haloperidol**. Adjust dose. Moderate Anecdotal

https://nhathuocngocanh.com/ www.getintopharma.com

SSRIs (continued)

- **Fluvoxamine** increases the concentration of **haloperidol**. Adjust dose. Moderate Study
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 801. Severe Study
- **Idelalisib** is predicted to moderately increase the exposure to **dapoxetine**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 801. Severe Study
- **Imatinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. Moderate Theoretical
- **Fluoxetine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Unknown Theoretical
- **Fluvoxamine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Fluvoxamine** is predicted to increase the exposure to **loxapine**. Avoid. Unknown Theoretical
- Macrolides **(clarithromycin)** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent inhibitors of CYP3A4 or adjust **dapoxetine** dose, p. 801. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. Moderate Theoretical
- **Fluvoxamine** very markedly increases the exposure to **melatonin**. Avoid. Severe Study
- **Netupitant** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. Moderate Theoretical
- **SSRIs** potentially increase the risk of prolonged neuromuscular blockade when given with neuromuscular blocking drugs, non-depolarising **(mivacurium)**. Unknown Theoretical
- **Nilotinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate inhibitors of CYP3A4, p. 801. Moderate Theoretical
- **Fluvoxamine** moderately increases the exposure to **olanzapine**. Adjust dose. Severe Anecdotal
- SSRIs **(fluoxetine, paroxetine)** are predicted to decrease the efficacy of opioids **(codeine)**. Moderate Theoretical
- SSRIs **(fluoxetine, paroxetine)** are predicted to decrease the efficacy of opioids **(tramadol)**. Severe Study → Also see **TABLE 13** p. 1337
- **Fluvoxamine** is predicted to increase the exposure to **pentoxifylline**. Moderate Theoretical
- **Paroxetine** markedly increases the exposure to phenothiazines **(perphenazine)**. Severe Study
- **Fluvoxamine** is predicted to moderately increase the exposure to **pirfenidone**. Avoid. Moderate Study
- SSRIs **(fluoxetine, paroxetine)** are predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. Moderate Study
- **Fluvoxamine** moderately increases the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 935. Moderate Study
- **Paroxetine** slightly increases the exposure to **procyclidine**. Monitor and adjust dose. Moderate Study
- Proton pump inhibitors **(esomeprazole)** are predicted to slightly to moderately increase the exposure to SSRIs **(citalopram, escitalopram)**. Monitor and adjust dose. Severe Theoretical
- Proton pump inhibitors **(omeprazole)** slightly to moderately increase the exposure to SSRIs **(citalopram, escitalopram)**. Monitor and adjust dose. Severe Study
- **Fluvoxamine** is predicted to increase the exposure to **riluzole**. Moderate Theoretical
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to **risperidone**. Adjust dose. Moderate Study
- **Fluvoxamine** is predicted to increase the exposure to **roflumilast**. Moderate Study
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to SSRIs **(dapoxetine)**. Moderate Theoretical → Also see **TABLE 18** p. 1338 → Also see **TABLE 13** p. 1337 → Also see **TABLE 4** p. 1334
- **SSRIs** potentially increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. Unknown Theoretical
- SSRIs **(fluoxetine, paroxetine)** are predicted to decrease the efficacy of **tamoxifen**. Avoid. Severe Study
- **Terbinafine** is predicted to increase the exposure to **fluoxetine**. Adjust dose. Moderate Theoretical
- **Terbinafine** moderately increases the exposure to **paroxetine**. Moderate Study
- **Terbinafine** is predicted to increase the exposure to SSRIs **(citalopram, dapoxetine, escitalopram, fluvoxamine, sertraline)**. Moderate Theoretical
- **Fluvoxamine** moderately to markedly increases the exposure to **theophylline**. Avoid. Severe Study
- **Fluvoxamine** very markedly increases the exposure to **tizanidine**. Avoid. Severe Study
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. Severe Study → Also see **TABLE 18** p. 1338 → Also see **TABLE 13** p. 1337
- **Fluvoxamine** increases the exposure to tricyclic antidepressants **(amitriptyline, imipramine)**. Adjust dose. Severe Study → Also see **TABLE 18** p. 1338 → Also see **TABLE 13** p. 1337
- **Fluvoxamine** markedly increases the exposure to tricyclic antidepressants **(clomipramine)**. Adjust dose. Severe Study → Also see **TABLE 18** p. 1338 → Also see **TABLE 13** p. 1337
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study → Also see **TABLE 13** p. 1337 → Also see **TABLE 4** p. 1334
- **Fluvoxamine** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 475. Severe Theoretical → Also see **TABLE 13** p. 1337

St John's Wort → see **TABLE 13** p. 1337 (serotonin syndrome)

- **St John's Wort** is predicted to decrease the exposure to **afatinib**. Moderate Study
- **St John's Wort** is predicted to slightly decrease the exposure to aldosterone antagonists **(eplerenone)**. Avoid. Moderate Study
- **St John's Wort** decreases the exposure to **aliskiren**. Moderate Study
- **St John's Wort** moderately decreases the exposure to **alprazolam**. Moderate Study
- **St John's Wort** is predicted to decrease the concentration of **aminophylline**. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to antiarrhythmics **(dronedarone)**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to antiepileptics **(brivaracetam)**. Moderate Theoretical
- **St John's Wort** is predicted to decrease the concentration of antiepileptics **(carbamazepine)**. Monitor and adjust dose. Moderate Theoretical
- **St John's Wort** is predicted to decrease the concentration of antiepileptics **(fosphenytoin, phenobarbital, phenytoin, primidone)**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to antiepileptics **(perampanel)**. Monitor and adjust dose. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to antiepileptics **(tiagabine)**. Avoid. Mild Theoretical
- **St John's Wort** is predicted to decrease the exposure to antifungals, azoles **(isavuconazole)**. Avoid. Severe Theoretical
- **St John's Wort** moderately decreases the exposure to antifungals, azoles **(voriconazole)**. Avoid. Moderate Study
- **St John's Wort** is predicted to decrease the concentration of antimalarials **(piperaquine)**. Avoid. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **apixaban**. Use with caution or avoid. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **apremilast**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **aprepitant**. Avoid. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **axitinib**. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **bedaquiline**. Avoid. Severe Study

https://nhathuocngocanh.com/ www.getintopharma.com

- **St John's Wort** is predicted to decrease the exposure to **bosentan**. Avoid. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **bosutinib**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **cabozantinib**. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to calcium channel blockers **(diltiazem, verapamil)**. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **ceritinib**. Avoid. Severe Theoretical
- **St John's Wort** decreases the concentration of **ciclosporin**. Avoid. Moderate Study
- **St John's Wort** is predicted to alter the effects of **cilostazol**. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **cobicistat**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **cobimetinib**. Avoid. Severe Theoretical
- **St John's Wort** decreases the efficacy of **combined hormonal contraceptives**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **St John's Wort** decreases the anticoagulant effect of **coumarins**. Avoid. Severe Anecdotal
- **St John's Wort** is predicted to decrease the exposure to **crizotinib**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **dabigatran**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **daclatasvir**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **darifenacin**. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **dasabuvir**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **dasatinib**. Severe Study
- **St John's Wort** is predicted to decrease the efficacy of **desogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **St John's Wort** decreases the concentration of **digoxin**. Avoid. Severe Anecdotal
- **St John's Wort** decreases the exposure to **dolutegravir**. Adjust dose. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **edoxaban**. Moderate Study
- **St John's Wort** is predicted to decrease the concentration of **efavirenz**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. Severe Study
- **St John's Wort** is predicted to increase the exposure to **eliglustat**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the concentration of **elvitegravir**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the effects of **ergotamine**. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **erlotinib**. Severe Theoretical
- **St John's Wort** is predicted to decrease the efficacy of **etonogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **etravirine**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **exemestane**. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **fesoterodine**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **fingolimod**. Avoid. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **fosaprepitant**. Avoid. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **gefitinib**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **glecaprevir**. Avoid. Severe Study
- **St John's Wort** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the concentration of **guanfacine**. Adjust dose. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **HIV-protease inhibitors**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the efficacy of **hormone replacement therapy**. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **ibrutinib**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **idelalisib**. Avoid. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **imatinib**. Moderate Study
- **St John's Wort** slightly decreases the exposure to **irinotecan**. Avoid. Severe Study
- **St John's Wort** decreases the exposure to **ivabradine**. Avoid. Moderate Study
- **St John's Wort** is predicted to decrease the exposure to **ivacaftor**. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **ixazomib**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **ledipasvir**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the efficacy of **levonorgestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **lurasidone**. Monitor and adjust dose. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **macitentan**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **maraviroc**. Avoid. Severe Theoretical
- **St John's Wort** moderately decreases the exposure to **midazolam**. Monitor and adjust dose. Moderate Study
- **St John's Wort** is predicted to decrease the exposure to **midostaurin**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **naloxegol**. Avoid. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **netupitant**. Moderate Theoretical
- **St John's Wort** is predicted to decrease the concentration of **nevirapine**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **nilotinib**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **nintedanib**. Moderate Study
- **St John's Wort** is predicted to decrease the efficacy of **norethisterone**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **St John's Wort** is predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **ombitasvir**. Avoid. Severe Theoretical
- **St John's Wort** decreases the exposure to opioids **(methadone)**. Monitor and adjust dose. Severe Study → Also see **TABLE 13** p. 1337
- **St John's Wort** moderately decreases the exposure to opioids **(oxycodone)**. Adjust dose. Moderate Study
- **St John's Wort** is predicted to decrease the exposure to **osimertinib**. Avoid. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **palbociclib**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **paliperidone**. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **panobinostat**. Avoid. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. Severe Study

https://nhathuocngocanh.com/ www.getintopharma.com

St John's Wort (continued)
- **St John's Wort** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- **St John's Wort** slightly decreases the exposure to **pioglitazone**. Mild Study
- **St John's Wort** is predicted to decrease the exposure to **pitolisant**. Monitor and adjust dose. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **ponatinib**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **quetiapine**. Moderate Study
- **St John's Wort** is predicted to decrease the exposure to **ranolazine**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **ribociclib**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **rilpivirine**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **rolapitant**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **simeprevir**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **sofosbuvir**. Avoid. Severe Study
- **St John's Wort** slightly decreases the exposure to statins **(atorvastatin)**. Mild Study
- **St John's Wort** moderately decreases the exposure to statins **(simvastatin)**. Moderate Study
- **St John's Wort** decreases the concentration of **tacrolimus**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to taxanes **(cabazitaxel)**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. Moderate Theoretical
- **St John's Wort** potentially decreases the exposure to **theophylline**. Severe Anecdotal
- **St John's Wort** is predicted to decrease the exposure to **ticagrelor**. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **tivozanib**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **tofacitinib**. Moderate Study
- **St John's Wort** is predicted to decrease the exposure to **tolvaptan**. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **topotecan**. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **velpatasvir**. Avoid. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **vismodegib**. Avoid. Moderate Theoretical
- **St John's Wort** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Theoretical

Statins → see **TABLE 1** p. 1334 (hepatotoxicity)

atorvastatin • fluvastatin • pravastatin • rosuvastatin • simvastatin

- **Atorvastatin** slightly to moderately increases the exposure to **aliskiren**. Moderate Study
- **Antacids** moderately decrease the absorption of **rosuvastatin**. Separate administration by 2 hours. Moderate Study
- Antiarrhythmics **(amiodarone)** are predicted to increase the risk of rhabdomyolysis when given with **atorvastatin**. Monitor and adjust dose. Moderate Theoretical
- Antiarrhythmics **(amiodarone)** are predicted to increase the exposure to **fluvastatin**. Severe Theoretical
- Antiarrhythmics **(amiodarone)** increase the risk of rhabdomyolysis when given with **simvastatin**. Adjust **simvastatin** dose, p. 203. Severe Study
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. Severe Study
- Antiarrhythmics **(dronedarone)** slightly increase the exposure to **rosuvastatin**. Adjust dose. Severe Study
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 203. Severe Study
- Antiepileptics **(carbamazepine)** moderately decrease the exposure to **simvastatin**. Monitor and adjust dose. Severe Study → Also see **TABLE 1** p. 1334
- Antiepileptics **(carbamazepine, eslicarbazepine)** are predicted to decrease the exposure to **atorvastatin**. Monitor and adjust dose. Moderate Theoretical → Also see **TABLE 1** p. 1334
- Antiepileptics **(eslicarbazepine)** moderately decrease the exposure to **simvastatin**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(fosphenytoin, phenytoin)** potentially decrease the exposure to statins **(atorvastatin, simvastatin)**. Moderate Anecdotal
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. Severe Study → Also see **TABLE 1** p. 1334
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 203. Severe Study → Also see **TABLE 1** p. 1334
- Antifungals, azoles **(fluconazole, miconazole)** are predicted to increase the exposure to **fluvastatin**. Severe Theoretical → Also see **TABLE 1** p. 1334
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. Severe Study → Also see **TABLE 1** p. 1334
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **simvastatin**. Avoid. Severe Study → Also see **TABLE 1** p. 1334
- Antifungals, azoles **(miconazole)** potentially increase the exposure to **atorvastatin**. Severe Anecdotal
- Antifungals, azoles **(miconazole)** are predicted to increase the exposure to **simvastatin**. Avoid. Severe Theoretical
- **Aprepitant** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. Severe Study
- **Aprepitant** is predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 203. Severe Study
- **Bosentan** slightly decreases the exposure to **atorvastatin**. Mild Study
- **Bosentan** moderately decreases the exposure to **simvastatin**. Moderate Study
- Calcium channel blockers **(amlodipine)** slightly increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 203. Mild Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 203. Severe Study
- Cephalosporins **(ceftobiprole)** are predicted to increase the concentration of **statins**. Moderate Theoretical
- **Ciclosporin** very markedly increases the exposure to **atorvastatin**. Avoid or adjust **atorvastatin** dose, p. 200. Severe Study
- **Ciclosporin** moderately increases the exposure to **fluvastatin**. Severe Study
- **Ciclosporin** markedly to very markedly increases the exposure to **pravastatin**. Adjust dose. Severe Study
- **Ciclosporin** markedly increases the exposure to statins **(rosuvastatin, simvastatin)**. Avoid. Severe Study
- **Clopidogrel** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 202. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. Severe Study

https://nhathuocngocanh.com/ www.getintopharma.com

- **Cobicistat** is predicted to increase the exposure to **simvastatin**. Avoid. Severe Study
- **Colchicine** increases the risk of rhabdomyolysis when given with **statins**. Severe Anecdotal
- Statins **(fluvastatin, rosuvastatin)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. Severe Study
- **Crizotinib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. Severe Study
- **Crizotinib** is predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 203. Severe Study
- **Danazol** is predicted to increase the risk of rhabdomyolysis when given with **atorvastatin**. Severe Theoretical
- **Danazol** increases the risk of rhabdomyolysis when given with **simvastatin**. Avoid. Severe Anecdotal
- **Statins** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. Severe Theoretical
- **Dasabuvir** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 202. Moderate Study
- **Dasatinib** is predicted to increase the exposure to **simvastatin**. Moderate Theoretical
- **Efavirenz** slightly decreases the exposure to **atorvastatin**. Mild Study
- **Efavirenz** moderately decreases the exposure to **simvastatin**. Moderate Study
- **Elbasvir** potentially increases the exposure to **atorvastatin**. Adjust **atorvastatin** dose, p. 200. Moderate Study
- **Elbasvir** is predicted to increase the exposure to **fluvastatin**. Adjust **fluvastatin** dose, p. 201. Unknown Theoretical
- **Elbasvir** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 202. Moderate Study
- **Elbasvir** is predicted to increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 203. Unknown Theoretical
- **Eltrombopag** is predicted to increase the exposure to **statins**. Monitor and adjust dose. Moderate Study
- **Eluxadoline** is predicted to increase the exposure to **statins**. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **simvastatin**. Severe Study
- **Ezetimibe** potentially increases the risk of rhabdomyolysis when given with **statins**. Severe Anecdotal
- Fibrates **(bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **pravastatin**. Avoid. Severe Study
- Fibrates **(bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **rosuvastatin**. Adjust **rosuvastatin** dose, p. 202. Severe Study
- Fibrates **(bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **simvastatin**. Adjust **simvastatin** dose, p. 203. Severe Study
- Fibrates **(ciprofibrate)** increase the risk of rhabdomyolysis when given with **atorvastatin**. Avoid or adjust dose. Severe Study
- Fibrates **(ciprofibrate)** increase the risk of rhabdomyolysis when given with **fluvastatin**. Severe Study
- Fibrates **(fenofibrate)** are predicted to increase the risk of rhabdomyolysis when given with **fluvastatin**. Adjust **fenofibrate** dose, p. 198. Severe Theoretical
- Fibrates **(fenofibrate)** are predicted to increase the risk of rhabdomyolysis when given with **pravastatin**. Avoid. Severe Theoretical
- Fibrates **(fenofibrate)** increase the risk of rhabdomyolysis when given with **rosuvastatin**. Adjust **fenofibrate** and **rosuvastatin** doses, p. 198, p. 202. Severe Anecdotal
- Fibrates **(gemfibrozil)** increase the risk of rhabdomyolysis when given with **statins**. Avoid. Severe Anecdotal
- Fibrates **(bezafibrate)** increase the risk of rhabdomyolysis when given with statins **(atorvastatin, fluvastatin)**. Severe Study
- Fibrates **(fenofibrate)** increase the risk of rhabdomyolysis when given with statins **(atorvastatin, simvastatin)**. Adjust **fenofibrate** dose, p. 198. Severe Anecdotal
- **Fusidic acid** increases the risk of rhabdomyolysis when given with **statins**. Avoid. Severe Anecdotal
- **Glecaprevir** (with pibrentasvir) is predicted to increase the exposure to **fluvastatin**. Moderate Theoretical
- **Glecaprevir** (with pibrentasvir) increases the exposure to **pravastatin**. Use with caution and adjust **pravastatin** dose, p. 202. Moderate Study
- **Glecaprevir** (with pibrentasvir) increases the exposure to **rosuvastatin**. Use with caution and adjust **rosuvastatin** dose, p. 202. Moderate Study
- **Glecaprevir** (with pibrentasvir) increases the exposure to statins **(atorvastatin, simvastatin)**. Avoid. Moderate Study
- **Grapefruit juice** increases the exposure to **atorvastatin**. Mild Study
- **Grapefruit juice** increases the exposure to **simvastatin**. Avoid. Severe Study
- **Grazoprevir** increases the exposure to **atorvastatin**. Adjust **atorvastatin** dose, p. 200. Moderate Study
- **Grazoprevir** is predicted to increase the exposure to **fluvastatin**. Adjust **fluvastatin** dose, p. 201. Unknown Theoretical
- **Grazoprevir** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 202. Moderate Study
- **Grazoprevir** is predicted to increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 203. Unknown Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. Severe Study
- **HIV-protease inhibitors** slightly to moderately increase the exposure to **rosuvastatin**. Avoid or adjust dose. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **simvastatin**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. Severe Study
- **Idelalisib** is predicted to increase the exposure to **simvastatin**. Avoid. Severe Study
- **Imatinib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. Severe Study
- **Imatinib** is predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 203. Severe Study
- **Ledipasvir** is predicted to increase the exposure to **rosuvastatin**. Avoid. Severe Theoretical
- **Ledipasvir** is predicted to increase the exposure to statins **(atorvastatin, fluvastatin, pravastatin, simvastatin)**. Monitor and adjust dose. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to **rosuvastatin**. Adjust dose. Moderate Study → Also see **TABLE 1** p. 1334
- **Lomitapide** increases the exposure to **atorvastatin**. Adjust **lomitapide** dose or separate administration by 12 hours, p. 206. Mild Study → Also see **TABLE 1** p. 1334
- **Lomitapide** increases the exposure to **simvastatin**. Monitor and adjust **simvastatin** dose, p. 203. Moderate Study → Also see **TABLE 1** p. 1334
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. Severe Study
- Macrolides **(clarithromycin)** moderately increase the exposure to **pravastatin**. Severe Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **simvastatin**. Avoid. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **pravastatin**. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 203. Severe Study
- **Mitotane** is predicted to decrease the exposure to **simvastatin**. Severe Study
- Monoclonal antibodies **(sarilumab)** are predicted to decrease the exposure to statins **(atorvastatin, simvastatin)**. Moderate Study
- Monoclonal antibodies **(tocilizumab)** are predicted to decrease the exposure to statins **(atorvastatin, simvastatin)**. Monitor and adjust dose. Moderate Study
- **Netupitant** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. Severe Study

https://nhathuocngocanh.com/ www.getintopharma.com

Statins (continued)
- **Netupitant** is predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 203. Severe Study
- **Nevirapine** slightly decreases the exposure to **atorvastatin**. Mild Study
- **Nevirapine** moderately decreases the exposure to **simvastatin**. Moderate Study
- **Nicotinic acid** is predicted to increase the risk of rhabdomyolysis when given with **statins**. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. Severe Study
- **Nilotinib** is predicted to increase the exposure to **simvastatin**. Use with caution and adjust **simvastatin** dose, p. 203. Severe Study
- **Osimertinib** slightly increases the exposure to **rosuvastatin**. Moderate Study
- **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **fluvastatin**. Avoid. Moderate Theoretical
- **Paritaprevir** (with ritonavir and ombitasvir) increases the exposure to **pravastatin**. Adjust **pravastatin** dose, p. 202. Moderate Study
- **Paritaprevir** (with ritonavir and ombitasvir) increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 202. Moderate Study
- **Rosuvastatin** is predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. Severe Theoretical
- **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **fluvastatin**. Moderate Theoretical
- **Pibrentasvir** (with glecaprevir) increases the exposure to **pravastatin**. Use with caution and adjust **pravastatin** dose, p. 202. Moderate Study
- **Pibrentasvir** (with glecaprevir) increases the exposure to **rosuvastatin**. Use with caution and adjust **rosuvastatin** dose, p. 202. Moderate Study
- **Pibrentasvir** (with glecaprevir) increases the exposure to statins **(atorvastatin, simvastatin)**. Avoid. Moderate Study
- **Ranolazine** is predicted to increase the exposure to **atorvastatin**. Moderate Theoretical
- **Ranolazine** slightly increases the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 203. Moderate Study
- **Regorafenib** is predicted to increase the exposure to statins **(atorvastatin, fluvastatin, rosuvastatin)**. Severe Theoretical
- **Ribociclib** (high-dose) is predicted to increase the exposure to **simvastatin**. Avoid. Moderate Theoretical
- **Rifampicin** markedly decreases the exposure to **atorvastatin**. **Atorvastatin** should be taken at the same time as **rifampicin**, p. 200, p. 571. Moderate Study
- **Rifampicin** moderately decreases the exposure to **fluvastatin**. Monitor and adjust dose. Moderate Study
- **Rifampicin** very markedly decreases the exposure to **simvastatin**. Moderate Study
- **Rolapitant** is predicted to increase the exposure to **rosuvastatin**. Monitor and adjust dose. Severe Study
- **Sacubitril** is predicted to increase the exposure to **statins**. Severe Study
- **Simeprevir** moderately increases the exposure to **atorvastatin**. Monitor and adjust dose. Moderate Study
- **Simeprevir** is predicted to increase the exposure to **pravastatin**. Monitor and adjust dose. Severe Theoretical
- **Simeprevir** moderately increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 202. Moderate Study
- **Simeprevir** slightly increases the exposure to **simvastatin**. Monitor and adjust dose. Moderate Study
- **St John's Wort** slightly decreases the exposure to **atorvastatin**. Mild Study
- **St John's Wort** moderately decreases the exposure to **simvastatin**. Moderate Study
- **Sulfinpyrazone** is predicted to increase the exposure to **fluvastatin**. Severe Theoretical
- **Fluvastatin** slightly increases the exposure to sulfonylureas **(glibenclamide)**. Mild Study
- **Tedizolid** increases the exposure to **rosuvastatin**. Avoid. Moderate Study
- **Teriflunomide** moderately increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 202. Moderate Study
- **Ticagrelor** slightly increases the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 203. Moderate Study
- **Tivozanib** is predicted to decrease the exposure to **rosuvastatin**. Moderate Theoretical
- **Velpatasvir** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose and monitor side effects, p. 202. Severe Study
- **Velpatasvir** is predicted to increase the exposure to statins **(atorvastatin, simvastatin)**. Monitor side effects and adjust dose. Severe Theoretical
- **Voxilaprevir** is predicted to increase the exposure to **pravastatin**. Monitor and adjust **pravastatin** dose, p. 202. Severe Study
- **Voxilaprevir** is predicted to increase the exposure to **rosuvastatin**. Avoid. Severe Study
- **Voxilaprevir** is predicted to increase the exposure to statins **(atorvastatin, fluvastatin, simvastatin)**. Avoid. Severe Theoretical

Stavudine → see **TABLE 12** p. 1337 (peripheral neuropathy)
- **Didanosine** increases the risk of toxicity when given with **stavudine**. Avoid. Severe Study → Also see **TABLE 12** p. 1337
- **Hydroxycarbamide** increases the risk of toxicity when given with **stavudine**. Avoid. Severe Study
- **Isoniazid** is predicted to increase the risk of peripheral neuropathy when given with **stavudine**. Severe Theoretical → Also see **TABLE 12** p. 1337
- **Ribavirin** increases the risk of toxicity when given with **stavudine**. Avoid. Severe Study
- **Zidovudine** is predicted to decrease the efficacy of **stavudine**. Avoid. Severe Theoretical

Stiripentol → see antiepileptics

Streptokinase → see **TABLE 3** p. 1334 (anticoagulant effects)

Streptomycin → see aminoglycosides

Sucralfate
- **Sucralfate** potentially decreases the effects of coumarins **(warfarin)**. Separate administration by 2 hours. Moderate Anecdotal
- **Sucralfate** decreases the absorption of **digoxin**. Separate administration by 2 hours. Severe Anecdotal
- **Sucralfate** decreases the absorption of **dolutegravir**. Moderate Study
- **Sucralfate** increases the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. Separate administration by 1 hour. Moderate Study
- **Potassium citrate** increases the risk of side-effects when given with **sucralfate**. Avoid. Moderate Theoretical
- **Sucralfate** decreases the exposure to **quinolones**. Separate administration by 2 hours. Moderate Study
- **Sodium citrate** is predicted to increase the risk of side-effects when given with **sucralfate**. Avoid. Moderate Theoretical
- **Sucralfate** decreases the absorption of **sulpiride**. Separate administration by 2 hours. Moderate Study
- **Sucralfate** potentially decreases the absorption of **theophylline**. Separate administration by at least 2 hours. Moderate Study
- **Sucralfate** decreases the absorption of thyroid hormones **(levothyroxine)**. Separate administration by at least 4 hours. Moderate Study
- **Sucralfate** is predicted to decrease the absorption of **tricyclic antidepressants**. Moderate Study

Sufentanil → see opioids

Sugammadex
- **Sugammadex** is predicted to decrease the exposure to oral **combined hormonal contraceptives**. Refer to patient information leaflet for missed pill advice. Severe Theoretical
- **Sugammadex** is predicted to decrease the exposure to **desogestrel**. Refer to patient information leaflet for missed pill advice. Severe Theoretical
- **Sugammadex** is predicted to decrease the efficacy of **etonogestrel**. Use additional contraceptive precautions. Severe Theoretical
- **Sugammadex** is predicted to decrease the exposure to **levonorgestrel**. Use additional contraceptive precautions. Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

- **Sugammadex** is predicted to decrease the exposure to **medroxyprogesterone**. Use additional contraceptive precautions. Severe Theoretical
- **Sugammadex** is predicted to decrease the exposure to **norethisterone**. Use additional contraceptive precautions. Severe Theoretical

Sulfadiazine → see sulfonamides

Sulfadoxine → see sulfonamides

Sulfamethoxazole → see sulfonamides

Sulfasalazine → see **TABLE 1** p. 1334 (hepatotoxicity), **TABLE 15** p. 1337 (myelosuppression)

- **Sulfasalazine** decreases the concentration of **digoxin**. Moderate Study
- **Sulfasalazine** is predicted to decrease the absorption of **folates**. Moderate Study
- **Rolapitant** increases the exposure to **sulfasalazine**. Severe Study
- **Tedizolid** is predicted to increase the exposure to **sulfasalazine**. Avoid. Moderate Theoretical

Sulfinpyrazone → see **TABLE 4** p. 1334 (antiplatelet effects)

- **Sulfinpyrazone** increases the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Moderate Study
- **Aspirin** decreases the effects of **sulfinpyrazone**. Moderate Study → Also see **TABLE 4** p. 1334
- **Sulfinpyrazone** decreases the exposure to calcium channel blockers **(verapamil)**. Moderate Study
- **Sulfinpyrazone** decreases the concentration of **ciclosporin**. Severe Study
- **Sulfinpyrazone** increases the anticoagulant effect of **coumarins**. Avoid. Severe Study
- **Sulfinpyrazone** slightly increases the exposure to **nateglinide**. Mild Study
- **Pyrazinamide** is predicted to decrease the effects of **sulfinpyrazone**. Moderate Theoretical
- **Sulfinpyrazone** is predicted to increase the exposure to retinoids **(alitretinoin)**. Adjust **alitretinoin** dose, p. 1226. Moderate Theoretical
- **Sulfinpyrazone** is predicted to increase the exposure to statins **(fluvastatin)**. Severe Theoretical
- **Sulfinpyrazone** is predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. Moderate Study

Sulfonamides → see **TABLE 15** p. 1337 (myelosuppression)

co-trimoxazole · sulfadiazine · sulfadoxine · sulfamethoxazole

- **Sulfonamides** potentially increase the risk of methaemoglobinaemia when given with topical anaesthetics, local **(prilocaine)**. Use with caution or avoid. Severe Anecdotal
- **Sulfadiazine** is predicted to increase the concentration of antiepileptics **(fosphenytoin)**. Monitor and adjust dose. Moderate Study
- **Sulfadiazine** increases the concentration of antiepileptics **(phenytoin)**. Monitor and adjust dose. Moderate Study
- Antimalarials **(pyrimethamine)** increase the risk of side-effects when given with **sulfonamides**. Severe Study → Also see **TABLE 15** p. 1337
- **Sulfadiazine** is predicted to increase the anticoagulant effect of **coumarins**. Severe Theoretical
- **Sulfamethoxazole** increases the anticoagulant effect of **coumarins**. Severe Study
- **Sulfonamides** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. Severe Theoretical
- **Sulfonamides** are predicted to increase the exposure to **methotrexate**. Use with caution or avoid. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Sulfonamides** are predicted to increase the exposure to **sulfonylureas**. Moderate Study
- **Sulfonamides** are predicted to increase the effects of **thiopental**. Moderate Theoretical

Sulfonylureas → see **TABLE 14** p. 1337 (antidiabetic drugs)

glibenclamide · gliclazide · glimepiride · glipizide · tolbutamide

- Antiarrhythmics **(amiodarone)** are predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. Moderate Study
- Antifungals, azoles **(fluconazole, miconazole)** are predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. Moderate Study
- Antifungals, azoles **(voriconazole)** are predicted to increase the concentration of **sulfonylureas**. Use with caution and adjust dose. Moderate Study
- **Bosentan** increases the risk of hepatotoxicity when given with **glibenclamide**. Avoid. Severe Study
- Cephalosporins **(ceftobiprole)** are predicted to increase the concentration of **glibenclamide**. Moderate Theoretical
- **Ceritinib** is predicted to increase the exposure to **glimepiride**. Adjust dose. Moderate Theoretical
- **Chloramphenicol** is predicted to increase the exposure to **sulfonylureas**. Severe Study
- **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **sulfonylureas**. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to slightly increase the exposure to **sulfonylureas**. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **sulfonylureas**. Moderate Study
- Statins **(fluvastatin)** slightly increase the exposure to **glibenclamide**. Mild Study
- **Sulfinpyrazone** is predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. Moderate Study
- **Sulfonamides** are predicted to increase the exposure to **sulfonylureas**. Moderate Study

Sulindac → see NSAIDs

Sulpiride → see **TABLE 8** p. 1335 (hypotension), **TABLE 9** p. 1336 (QT-interval prolongation), **TABLE 11** p. 1336 (CNS depressant effects)

- **Antacids** decrease the absorption of **sulpiride**. Separate administration by 2 hours. Moderate Study
- **Sulpiride** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335 → Also see **TABLE 9** p. 1336
- **Sulpiride** is predicted to decrease the effects of **levodopa**. Avoid. Severe Theoretical → Also see **TABLE 8** p. 1335
- **Sulpiride** potentially increases the risk of neurotoxicity when given with **lithium**. Severe Anecdotal → Also see **TABLE 9** p. 1336
- **Sucralfate** decreases the absorption of **sulpiride**. Separate administration by 2 hours. Moderate Study

Sumatriptan → see **TABLE 13** p. 1337 (serotonin syndrome)

- **Sumatriptan** increases the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **sumatriptan**. Severe Study
- **Moclobemide** moderately increases the exposure to **sumatriptan**. Avoid. Moderate Study → Also see **TABLE 13** p. 1337
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the exposure to **sumatriptan**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 13** p. 1337

Sunitinib → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 9** p. 1336 (QT-interval prolongation)

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **sunitinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **sunitinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. Moderate Study → Also see **TABLE 9** p. 1336
- **Aprepitant** is predicted to increase the exposure to **sunitinib**. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **sunitinib**. Moderate Theoretical
- **Cobicistat** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. Moderate Study
- **Sunitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Sunitinib (continued)

- **Crizotinib** is predicted to increase the exposure to **sunitinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- **Elbasvir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. Moderate Study
- **Grapefruit juice** is predicted to increase the exposure to **sunitinib**. Avoid. Moderate Theoretical
- **Grazoprevir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. Moderate Study → Also see **TABLE 9** p. 1336
- **Idelalisib** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. Moderate Study → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to increase the exposure to **sunitinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- Macrolides **(clarithromycin)** are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. Moderate Study → Also see **TABLE 9** p. 1336
- Macrolides **(erythromycin)** are predicted to increase the exposure to **sunitinib**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Mitotane** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. Moderate Study → Also see **TABLE 15** p. 1337
- **Netupitant** is predicted to increase the exposure to **sunitinib**. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to **sunitinib**. Moderate Theoretical → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- **Sunitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 967. Moderate Study

Suxamethonium → see **TABLE 20** p. 1338 (neuromuscular blocking effects)

- Alkylating agents **(cyclophosphamide)** increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. Moderate Study
- Antiarrhythmics **(lidocaine)** are predicted to increase the effects of **suxamethonium**. Moderate Study
- **Anticholinesterases, centrally acting** increase the effects of **suxamethonium**. Moderate Theoretical
- Antiepileptics **(carbamazepine)** increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. Moderate Study
- Antiepileptics **(fosphenytoin, phenytoin)** increase the effects of **suxamethonium**. Moderate Study
- **Clindamycin** increases the effects of **suxamethonium**. Severe Anecdotal
- **Corticosteroids** are predicted to decrease the effects of **suxamethonium**. Severe Anecdotal
- **Suxamethonium** is predicted to increase the risk of cardiovascular side-effects when given with **digoxin**. Severe Anecdotal
- **Irinotecan** is predicted to increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. Moderate Theoretical
- Intravenous **magnesium** is predicted to increase the effects of **suxamethonium**. Moderate Study
- **Metoclopramide** increases the effects of **suxamethonium**. Moderate Study
- Penicillins **(piperacillin)** increase the effects of **suxamethonium**. Moderate Study
- **SSRIs** potentially increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. Unknown Theoretical

Sympathomimetics, inotropic

dobutamine • dopamine

- **Sympathomimetics, inotropic** are predicted to decrease the effects of **apraclonidine**. Avoid. Severe Theoretical
- **Beta blockers, non-selective** increase the risk of hypertension and bradycardia when given with **dobutamine**. Severe Theoretical
- **Beta blockers, selective** increase the risk of hypertension and bradycardia when given with **dobutamine**. Moderate Theoretical
- **Entacapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic**. Moderate Theoretical
- **Ergometrine** potentially increases the risk of peripheral vasoconstriction when given with **dopamine**. Avoid. Severe Anecdotal
- **Guanethidine** is predicted to increase the effects of **dopamine**. Severe Theoretical
- **Sympathomimetics, inotropic** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. Severe Theoretical
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, inotropic**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical
- **Monoamine-oxidase B inhibitors** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, inotropic**. Avoid. Severe Anecdotal
- **Opicapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic**. Severe Theoretical
- **Tolcapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic**. Moderate Theoretical

Sympathomimetics, vasoconstrictor

adrenaline/epinephrine • ephedrine • isometheptene • metaraminol • midodrine • noradrenaline/norepinephrine • phenylephrine • pseudoephedrine • xylometazoline

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- **Ephedrine** increases the risk of side-effects when given with **aminophylline**. Avoid in children. Moderate Study
- **Sympathomimetics, vasoconstrictor** are predicted to decrease the effects of **apraclonidine**. Avoid. Severe Theoretical
- **Atropine** increases the risk of severe hypertension when given with **phenylephrine**. Severe Study
- **Beta blockers, non-selective** are predicted to increase the risk of hypertension and bradycardia when given with sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, noradrenaline/norepinephrine)**. Severe Study
- **Beta blockers, selective** are predicted to increase the risk of hypertension and bradycardia when given with sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, noradrenaline/norepinephrine)**. Severe Study
- **Isometheptene** potentially increases the risk of side-effects when given with dopamine receptor agonists **(bromocriptine)**. Avoid. Severe Anecdotal
- **Entacapone** is predicted to increase the risk of cardiovascular side-effects when given with sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, noradrenaline/norepinephrine)**. Moderate Study
- **Ergometrine** is predicted to increase the risk of peripheral vasoconstriction when given with **noradrenaline/norepinephrine**. Severe Anecdotal
- **Guanethidine** increases the effects of **metaraminol**. Severe Anecdotal
- **Guanethidine** increases the effects of **phenylephrine**. Severe Study
- **Guanethidine** is predicted to increase the effects of sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, noradrenaline/norepinephrine)**. Moderate Study
- **Pseudoephedrine** increases the risk of elevated blood pressure when given with **linezolid**. Avoid. Severe Study
- Sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, ephedrine, isometheptene, noradrenaline/norepinephrine, phenylephrine)** are predicted to increase the risk of elevated

https://nhathuocngocanh.com/ www.getintopharma.com

blood pressure when given with **linezolid**. Avoid. Severe Theoretical
- **Mianserin** decreases the effects of **ephedrine**. Severe Anecdotal
- **Moclobemide** is predicted to increase the risk of a hypertensive crisis when given with sympathomimetics, vasoconstrictor **(ephedrine, isometheptene, phenylephrine, pseudoephedrine)**. Avoid. Severe Study
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, vasoconstrictor**. Avoid and for 14 days after stopping the MAOI. Severe Study
- **Monoamine-oxidase B inhibitors** are predicted to increase the risk of a hypertensive crisis when given with **sympathomimetics, vasoconstrictor**. Avoid. Severe Anecdotal
- **Opicapone** is predicted to increase the risk of cardiovascular side-effects when given with sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, noradrenaline/norepinephrine)**. Severe Theoretical
- **Ephedrine** increases the risk of side-effects when given with **theophylline**. Avoid in children. Moderate Study
- **Tolcapone** is predicted to increase the effects of sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, noradrenaline/norepinephrine)**. Moderate Theoretical
- **Tricyclic antidepressants** are predicted to decrease the effects of **ephedrine**. Avoid. Severe Study
- **Tricyclic antidepressants** increase the effects of sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, noradrenaline/norepinephrine, phenylephrine)**. Avoid. Severe Study

Tacalcitol → see vitamin D substances

Tacrolimus → see **TABLE 2** p. 1334 (nephrotoxicity), **TABLE 16** p. 1338 (increased serum potassium)

- Pomelo might greatly increase the concentration of tacrolimus.
- Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- **Alcohol (beverage)** increases the risk of facial flushing and skin irritation when given with topical **tacrolimus**. Moderate Study
- Antiarrhythmics **(amiodarone)** are predicted to increase the concentration of **tacrolimus**. Severe Anecdotal
- Antiarrhythmics **(dronedarone)** are predicted to increase the concentration of **tacrolimus**. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **tacrolimus**. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- Antifungals, azoles **(miconazole)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. Severe Theoretical
- **Aprepitant** is predicted to increase the concentration of **tacrolimus**. Severe Study
- **Bosentan** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** potentially increases the concentration of **bosentan**. Avoid. Severe Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the concentration of **tacrolimus**. Severe Study
- Calcium channel blockers **(nicardipine)** potentially increase the concentration of **tacrolimus**. Monitor concentration and adjust dose. Severe Anecdotal
- **Ceritinib** is predicted to increase the exposure to **tacrolimus**. Avoid. Severe Theoretical
- **Chloramphenicol** increases the concentration of **tacrolimus**. Severe Study
- **Ciclosporin** increases the concentration of **tacrolimus**. Avoid. Severe Study → Also see **TABLE 2** p. 1334 → Also see **TABLE 16** p. 1338
- **Cobicistat** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- **Crizotinib** is predicted to increase the concentration of **tacrolimus**. Severe Study
- **Danazol** potentially increases the concentration of **tacrolimus**. Severe Anecdotal
- **Efavirenz** is predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. Moderate Theoretical
- **Enzalutamide** decreases the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- **Grapefruit juice** increases the concentration of **tacrolimus**. Avoid. Severe Study
- **Grazoprevir** increases the exposure to **tacrolimus**. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- **Idelalisib** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- **Imatinib** is predicted to increase the concentration of **tacrolimus**. Severe Study
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tacrolimus**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Tacrolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **tacrolimus**. Avoid. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the concentration of **tacrolimus**. Severe Study
- **Tacrolimus** is predicted to affect the efficacy of **mifamurtide**. Avoid. Severe Theoretical
- **Mitotane** decreases the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- Monoclonal antibodies **(sarilumab)** potentially affect the exposure to **tacrolimus**. Monitor and adjust dose. Moderate Theoretical
- **Netupitant** is predicted to increase the concentration of **tacrolimus**. Severe Study
- **Nevirapine** is predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. Moderate Theoretical
- **Nilotinib** is predicted to increase the concentration of **tacrolimus**. Severe Study
- **Palbociclib** is predicted to increase the exposure to **tacrolimus**. Adjust dose. Moderate Theoretical
- **Pitolisant** is predicted to decrease the exposure to **tacrolimus**. Avoid. Severe Theoretical
- **Ranolazine** increases the concentration of **tacrolimus**. Adjust dose. Severe Anecdotal
- **Ribociclib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. Moderate Theoretical
- **Rifampicin** decreases the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- **Sirolimus** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** increases the exposure to **sirolimus**. Severe Study
- **St John's Wort** decreases the concentration of **tacrolimus**. Avoid. Severe Study
- **Tacrolimus** increases the exposure to **tofacitinib**. Avoid. Severe Study
- **Tacrolimus** potentially increases the risk of serotonin syndrome when given with **venlafaxine**. Severe Anecdotal

Tadalafil → see phosphodiesterase type-5 inhibitors

Tamoxifen → see **TABLE 5** p. 1334 (thromboembolism)
- **Bupropion** is predicted to decrease the efficacy of **tamoxifen**. Avoid. Severe Study
- **Cinacalcet** is predicted to decrease the efficacy of **tamoxifen**. Avoid. Severe Study
- **Tamoxifen** increases the anticoagulant effect of **coumarins**. Severe Study
- **Rifampicin** markedly decreases the exposure to **tamoxifen**. Unknown Study
- **Rolapitant** is predicted to increase the exposure to **tamoxifen**. Severe Study

https://nhathuocngocanh.com/ www.getintopharma.com

Tamoxifen (continued)

- SSRIs **(fluoxetine, paroxetine)** are predicted to decrease the efficacy of **tamoxifen**. Avoid. Severe Study
- **Terbinafine** is predicted to decrease the efficacy of **tamoxifen**. Avoid. Severe Study

Tamsulosin → see alpha blockers

Tapentadol → see opioids

Taxanes → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 12** p. 1337 (peripheral neuropathy)

cabazitaxel · docetaxel · paclitaxel

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **cabazitaxel**. Moderate Theoretical
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **paclitaxel**. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **docetaxel**. Severe Theoretical → Also see **TABLE 12** p. 1337
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to taxanes **(cabazitaxel, paclitaxel)**. Avoid. Severe Study → Also see **TABLE 12** p. 1337
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **cabazitaxel**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **cabazitaxel**. Avoid. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **paclitaxel**. Severe Theoretical
- Antifungals, azoles **(miconazole)** are predicted to increase the concentration of **docetaxel**. Use with caution and adjust dose. Moderate Theoretical
- **Aprepitant** is predicted to increase the exposure to **cabazitaxel**. Moderate Theoretical
- **Bosentan** is predicted to decrease the exposure to **cabazitaxel**. Avoid. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **cabazitaxel**. Moderate Theoretical
- **Ceritinib** is predicted to increase the exposure to **paclitaxel**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Clopidogrel** is predicted to increase the concentration of **paclitaxel**. Severe Anecdotal
- **Cobicistat** is predicted to increase the exposure to **cabazitaxel**. Avoid. Severe Study
- **Cobicistat** is predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. Severe Study
- **Cobicistat** is predicted to increase the exposure to **paclitaxel**. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **cabazitaxel**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Efavirenz** is predicted to decrease the exposure to **cabazitaxel**. Avoid. Severe Study
- **Eliglustat** is predicted to increase the exposure to **paclitaxel**. Adjust dose. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **docetaxel**. Severe Theoretical
- **Enzalutamide** is predicted to decrease the exposure to taxanes **(cabazitaxel, paclitaxel)**. Avoid. Severe Study
- Fibrates **(gemfibrozil)** are predicted to increase the concentration of **paclitaxel**. Severe Anecdotal
- **HIV-protease inhibitors** are predicted to increase the exposure to **cabazitaxel**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **paclitaxel**. Severe Theoretical
- **Idelalisib** is predicted to increase the exposure to **cabazitaxel**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. Severe Study → Also see **TABLE 15** p. 1337
- **Idelalisib** is predicted to increase the exposure to **paclitaxel**. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to increase the exposure to **cabazitaxel**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Lapatinib** slightly increases the exposure to **paclitaxel**. Severe Study
- **Leflunomide** is predicted to increase the concentration of **paclitaxel**. Severe Anecdotal → Also see **TABLE 15** p. 1337
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with taxanes **(docetaxel, paclitaxel)**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **cabazitaxel**. Avoid. Severe Study
- Macrolides **(clarithromycin)** are predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. Severe Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **paclitaxel**. Severe Theoretical
- Macrolides **(erythromycin)** are predicted to increase the exposure to **cabazitaxel**. Moderate Theoretical
- **Mirabegron** is predicted to increase the exposure to **paclitaxel**. Mild Theoretical
- **Mitotane** is predicted to decrease the exposure to **docetaxel**. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Mitotane** is predicted to decrease the exposure to taxanes **(cabazitaxel, paclitaxel)**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Netupitant** is predicted to increase the exposure to **cabazitaxel**. Moderate Theoretical
- **Nevirapine** is predicted to decrease the exposure to **cabazitaxel**. Avoid. Severe Study
- **Nilotinib** is predicted to increase the exposure to **cabazitaxel**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Pitolisant** is predicted to decrease the exposure to **docetaxel**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **docetaxel**. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to taxanes **(cabazitaxel, paclitaxel)**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **cabazitaxel**. Avoid. Severe Study
- **Teriflunomide** is predicted to increase the concentration of **paclitaxel**. Severe Anecdotal
- **Velpatasvir** is predicted to increase the exposure to **paclitaxel**. Severe Theoretical

Tazarotene → see retinoids

Tedizolid

- **Tedizolid** is predicted to increase the exposure to **imatinib**. Avoid. Moderate Theoretical
- **Tedizolid** is predicted to increase the exposure to **lapatinib**. Avoid. Moderate Theoretical
- **Tedizolid** is predicted to increase the exposure to **methotrexate**. Avoid. Moderate Theoretical
- **Tedizolid** increases the exposure to statins **(rosuvastatin)**. Avoid. Moderate Study
- **Tedizolid** is predicted to increase the exposure to **sulfasalazine**. Avoid. Moderate Theoretical
- **Tedizolid** is predicted to increase the exposure to **topotecan**. Avoid. Moderate Theoretical

Tegafur

- **Tegafur** potentially increases the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. Severe Anecdotal
- **Tegafur** increases the anticoagulant effect of **coumarins**. Moderate Theoretical
- **Folates** are predicted to increase the risk of toxicity when given with **tegafur**. Severe Theoretical
- H_2 receptor antagonists **(cimetidine)** are predicted to increase the risk of toxicity when given with **tegafur**. Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tegafur**. Public Health England advises avoid (refer to Green Book). Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

- **Methotrexate** is predicted to increase the risk of toxicity when given with **tegafur**. Severe Theoretical

Teicoplanin

GENERAL INFORMATION If other nephrotoxic or neurotoxic drugs are given, monitor renal and auditory function on prolonged administration.

Telavancin → see **TABLE 2** p. 1334 (nephrotoxicity), **TABLE 19** p. 1338 (ototoxicity), **TABLE 9** p. 1336 (QT-interval prolongation)

Telbivudine

- Interferons **(interferon alfa)** are predicted to increase the risk of peripheral neuropathy when given with **telbivudine**. Avoid. Severe Theoretical
- Interferons **(peginterferon alfa)** increase the risk of peripheral neuropathy when given with **telbivudine**. Avoid. Severe Study

Telmisartan → see angiotensin-II receptor antagonists

Telotristat ethyl

- **Telotristat ethyl** decreases the exposure to **midazolam**. Moderate Study
- **Octreotide** (short-acting) decreases the exposure to **telotristat ethyl**. **Telotristat ethyl** should be taken at least 30 minutes before **octreotide**, p. 864, p. 924. Moderate Study

Temazepam → see **TABLE 11** p. 1336 (CNS depressant effects)

Temocillin → see penicillins

Temozolomide → see alkylating agents

Temsirolimus → see **TABLE 15** p. 1337 (myelosuppression)

- Antiarrhythmics **(dronedarone)** are predicted to increase the concentration of **temsirolimus**. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **temsirolimus**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **temsirolimus**. Avoid. Severe Theoretical
- **Aprepitant** is predicted to increase the concentration of **temsirolimus**. Moderate Theoretical
- **Bosentan** is predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the concentration of **temsirolimus**. Moderate Theoretical
- **Cobicistat** is predicted to increase the concentration of **temsirolimus**. Avoid. Severe Theoretical
- **Crizotinib** is predicted to increase the concentration of **temsirolimus**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Efavirenz** is predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Theoretical
- **Enzalutamide** is predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Study
- **Grapefruit juice** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the concentration of **temsirolimus**. Avoid. Severe Theoretical
- **Idelalisib** is predicted to increase the concentration of **temsirolimus**. Avoid. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Imatinib** is predicted to increase the concentration of **temsirolimus**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **temsirolimus**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **temsirolimus**. Avoid. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the concentration of **temsirolimus**. Avoid. Severe Theoretical
- Macrolides **(erythromycin)** are predicted to increase the concentration of **temsirolimus**. Moderate Theoretical
- **Mitotane** is predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Study → Also see **TABLE 15** p. 1337
- **Netupitant** is predicted to increase the concentration of **temsirolimus**. Moderate Theoretical
- **Nevirapine** is predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Theoretical
- **Nilotinib** is predicted to increase the concentration of **temsirolimus**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Pitolisant** is predicted to decrease the exposure to **temsirolimus**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Theoretical

Tenecteplase → see **TABLE 3** p. 1334 (anticoagulant effects)

Tenofovir alafenamide

- Antiepileptics **(carbamazepine, fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. Moderate Theoretical
- HIV-protease inhibitors **(atazanavir, darunavir)** increase the exposure to **tenofovir alafenamide**. Avoid. Moderate Study
- HIV-protease inhibitors **(tipranavir)** are predicted to affect the exposure to **tenofovir alafenamide**. Avoid. Moderate Theoretical
- **Rifabutin** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. Moderate Theoretical
- **St John's Wort** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. Moderate Theoretical

Tenofovir disoproxil → see **TABLE 2** p. 1334 (nephrotoxicity)

- **Tenofovir disoproxil** increases the risk of toxicity when given with **didanosine**. Avoid. Severe Study
- **Ledipasvir** (with sofosbuvir) slightly increases the exposure to **tenofovir disoproxil**. Moderate Study
- **Velpatasvir** is predicted to increase the exposure to **tenofovir disoproxil**. Severe Study
- **Voxilaprevir** is predicted to increase the exposure to **tenofovir disoproxil**. Severe Study

Tenoxicam → see NSAIDs

Terazosin → see alpha blockers

Terbinafine

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- **Terbinafine** is predicted to increase the exposure to anticholinesterases, centrally acting **(galantamine)**. Monitor and adjust dose. Moderate Study
- **Terbinafine** is predicted to moderately increase the exposure to **aripiprazole**. Adjust **aripiprazole** dose, p. 391. Moderate Study
- **Terbinafine** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. Severe Study
- **Terbinafine** is predicted to increase the exposure to beta blockers, selective **(metoprolol, nebivolol)**. Moderate Study
- **Terbinafine** is predicted to slightly increase the exposure to **darifenacin**. Mild Study
- **Terbinafine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Terbinafine** is predicted to decrease the efficacy of opioids **(codeine)**. Moderate Theoretical
- **Terbinafine** is predicted to decrease the efficacy of opioids **(tramadol)**. Severe Study
- **Terbinafine** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. Moderate Study
- **Rifampicin** decreases the exposure to **terbinafine**. Adjust dose. Moderate Study
- **Terbinafine** is predicted to increase the exposure to **risperidone**. Adjust dose. Moderate Study
- **Terbinafine** is predicted to increase the exposure to SSRIs **(citalopram, dapoxetine, escitalopram, fluvoxamine, sertraline)**. Moderate Theoretical
- **Terbinafine** is predicted to increase the exposure to SSRIs **(fluoxetine)**. Adjust dose. Moderate Theoretical
- **Terbinafine** moderately increases the exposure to SSRIs **(paroxetine)**. Moderate Study
- **Terbinafine** is predicted to decrease the efficacy of **tamoxifen**. Avoid. Severe Study
- **Terbinafine** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. Severe Study

https://nhathuocngocanh.com/ www.getintopharma.com

Terbinafine (continued)
- **Terbinafine** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study

Terbutaline → see beta$_2$ agonists

Teriflunomide
- **Teriflunomide** is predicted to decrease the exposure to **agomelatine**. Moderate Theoretical
- **Teriflunomide** decreases the exposure to **aminophylline**. Adjust dose. Moderate Study
- **Teriflunomide** is predicted to decrease the exposure to anaesthetics, local **(ropivacaine)**. Moderate Theoretical
- **Teriflunomide** potentially increases the exposure to **baricitinib**. Moderate Theoretical
- **Teriflunomide** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. Moderate Study
- **Teriflunomide** is predicted to decrease the exposure to **clozapine**. Moderate Theoretical
- **Teriflunomide** affects the anticoagulant effect of **coumarins**. Severe Study
- **Teriflunomide** is predicted to decrease the exposure to **duloxetine**. Moderate Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **teriflunomide**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Teriflunomide** is predicted to decrease the exposure to **melatonin**. Moderate Theoretical
- **Teriflunomide** is predicted to increase the exposure to **montelukast**. Moderate Theoretical
- **Teriflunomide** is predicted to decrease the exposure to **olanzapine**. Monitor and adjust dose. Moderate Study
- **Teriflunomide** is predicted to increase the exposure to **pioglitazone**. Moderate Study
- **Teriflunomide** is predicted to decrease the exposure to **pirfenidone**. Moderate Theoretical
- **Teriflunomide** is predicted to increase the exposure to **repaglinide**. Moderate Study
- **Teriflunomide** is predicted to increase the exposure to **selexipag**. Adjust dose. Moderate Theoretical
- **Teriflunomide** moderately increases the exposure to statins **(rosuvastatin)**. Adjust **rosuvastatin** dose, p. 202. Moderate Study
- **Teriflunomide** is predicted to increase the concentration of taxanes **(paclitaxel)**. Severe Anecdotal
- **Teriflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. Moderate Study
- **Teriflunomide** moderately decreases the exposure to **tizanidine**. Mild Study

Tetrabenazine → see **TABLE 9** p. 1336 (QT-interval prolongation)
- **Tetrabenazine** is predicted to decrease the effects of **levodopa**. Use with caution or avoid. Moderate Theoretical
- **Tetrabenazine** is predicted to increase the risk of CNS toxicity when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical

Tetracaine → see anaesthetics, local

Tetracycline → see tetracyclines

Tetracyclines → see **TABLE 1** p. 1334 (hepatotoxicity)

demeclocycline • doxycycline • lymecycline • minocycline • oxytetracycline • tetracycline • tigecycline

- ACE inhibitors **(quinapril)** (tablet) decrease the absorption of oral **tetracycline**. Avoid. Moderate Study
- **Antacids** decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **doxycycline**. Monitor and adjust dose. Moderate Study → Also see **TABLE 1** p. 1334
- **Tetracycline** decreases the concentration of antimalarials **(atovaquone)**. Moderate Study
- Calcium salts **(calcium carbonate)** are predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. Moderate Theoretical
- **Tetracyclines** increase the risk of bleeding events when given with **coumarins**. Moderate Anecdotal
- **Dairy products** decrease the exposure to tetracyclines **(demeclocycline, oxytetracycline, tetracycline)**. Avoid. Moderate Study
- **Enzalutamide** decreases the exposure to **doxycycline**. Monitor and adjust dose. Moderate Study
- **Iron (oral)** decreases the absorption of **tetracyclines**. **Tetracyclines** should be taken 2 to 3 hours after **iron (oral)**. Moderate Study
- **Kaolin** is predicted to decrease the absorption of **tetracyclines**. Moderate Theoretical
- **Lanthanum** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 hours. Moderate Theoretical
- **Mitotane** decreases the exposure to **doxycycline**. Monitor and adjust dose. Moderate Study
- Retinoids **(acitretin, alitretinoin, isotretinoin, tretinoin)** increase the risk of benign intracranial hypertension when given with **tetracyclines**. Avoid. Severe Anecdotal
- **Rifampicin** decreases the exposure to **doxycycline**. Monitor and adjust dose. Moderate Study
- Oral **zinc** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. Moderate Theoretical

Thalidomide → see **TABLE 6** p. 1335 (bradycardia), **TABLE 15** p. 1337 (myelosuppression), **TABLE 12** p. 1337 (peripheral neuropathy), **TABLE 5** p. 1334 (thromboembolism), **TABLE 11** p. 1336 (CNS depressant effects)
- **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **thalidomide**. Avoid. Severe Study
- **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **thalidomide**. Severe Theoretical

Theophylline → see **TABLE 17** p. 1338 (reduced serum potassium)

FOOD AND LIFESTYLE Smoking can increase theophylline clearance and increased doses of theophylline are therefore required; dose adjustments are likely to be necessary if smoking started or stopped during treatment.

- **Aciclovir** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. Severe Theoretical
- **Theophylline** decreases the efficacy of antiarrhythmics **(adenosine)**. Separate administration by 24 hours. Mild Study
- Antiepileptics **(carbamazepine)** potentially increase the clearance of **theophylline** and **theophylline** decreases the exposure to antiepileptics **(carbamazepine)**. Adjust dose. Moderate Anecdotal
- Antiepileptics **(fosphenytoin, phenytoin)** are predicted to decrease the exposure to **theophylline**. Adjust dose. Moderate Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to increase the clearance of **theophylline**. Adjust dose. Moderate Theoretical
- Antiepileptics **(stiripentol)** are predicted to increase the exposure to **theophylline**. Avoid. Moderate Theoretical
- **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. Severe Theoretical
- **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. Severe Theoretical
- **Caffeine citrate** decreases the clearance of **theophylline**. Moderate Study
- **Combined hormonal contraceptives** are predicted to increase the exposure to **theophylline**. Monitor and adjust dose. Moderate Theoretical
- **Theophylline** increases the risk of agitation when given with **doxapram**. Moderate Study
- **Enteral feeds** decrease the exposure to **theophylline**. Moderate Study
- H$_2$ receptor antagonists **(cimetidine)** increase the concentration of **theophylline**. Adjust dose. Severe Study
- HIV-protease inhibitors **(ritonavir)** are predicted to decrease the exposure to **theophylline**. Adjust dose. Moderate Study
- **Interferons** slightly increase the exposure to **theophylline**. Adjust dose. Moderate Study

https://nhathuocngocanh.com/ www.getintopharma.com

- Iron chelators **(deferasirox)** increase the exposure to **theophylline**. Avoid. Moderate Study
- **Isoniazid** is predicted to affect the clearance of **theophylline**. Severe Anecdotal
- **Leflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. Moderate Study
- **Theophylline** is predicted to decrease the concentration of **lithium**. Monitor concentration and adjust dose. Moderate Anecdotal
- Macrolides **(azithromycin, clarithromycin)** are predicted to increase the exposure to **theophylline**. Adjust dose. Moderate Anecdotal
- Macrolides **(erythromycin)** decrease the clearance of **theophylline** and **theophylline** potentially decreases the clearance of macrolides **(erythromycin)**. Adjust dose. Severe Study
- **Methotrexate** decreases the clearance of **theophylline**. Moderate Study
- Monoclonal antibodies **(blinatumomab)** are predicted to transiently increase the exposure to **theophylline**. Monitor and adjust dose. Moderate Theoretical
- Monoclonal antibodies **(sarilumab)** potentially affect the exposure to **theophylline**. Monitor and adjust dose. Moderate Theoretical
- Monoclonal antibodies **(tocilizumab)** are predicted to decrease the exposure to **theophylline**. Monitor and adjust dose. Moderate Theoretical
- **Obeticholic acid** is predicted to increase the exposure to **theophylline**. Severe Theoretical
- **Pentoxifylline** increases the concentration of **theophylline**. Monitor and adjust dose. Severe Study
- Quinolones **(ciprofloxacin)** are predicted to increase the exposure to **theophylline**. Monitor and adjust dose. Moderate Theoretical
- Quinolones **(norfloxacin)** are predicted to increase the exposure to **theophylline**. Adjust dose. Moderate Anecdotal
- **Rifampicin** is predicted to decrease the exposure to **theophylline**. Adjust dose. Moderate Study
- **Theophylline** is predicted to slightly increase the exposure to **roflumilast**. Avoid. Moderate Theoretical
- SSRIs **(fluvoxamine)** moderately to markedly increase the exposure to **theophylline**. Avoid. Severe Study
- **St John's Wort** potentially decreases the exposure to **theophylline**. Severe Anecdotal
- **Sucralfate** potentially decreases the absorption of **theophylline**. Separate administration by at least 2 hours. Moderate Study
- Sympathomimetics, vasoconstrictor **(ephedrine)** increase the risk of side-effects when given with **theophylline**. Avoid in children. Moderate Study
- **Teriflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. Moderate Study
- **Valaciclovir** is predicted to increase the exposure to **theophylline**. Severe Theoretical

Thiazide diuretics → see **TABLE 18** p. 1338 (hyponatraemia), **TABLE 8** p. 1335 (hypotension), **TABLE 17** p. 1338 (reduced serum potassium)

bendroflumethiazide • chlortalidone • clopamide • cyclopenthiazide • hydrochlorothiazide • hydroflumethiazide • indapamide • metolazone • xipamide

- **Thiazide diuretics** are predicted to increase the risk of hypersensitivity reactions when given with **allopurinol**. Severe Theoretical
- **Aspirin** (high-dose) increases the risk of acute renal failure when given with **thiazide diuretics**. Severe Theoretical
- **Thiazide diuretics** increase the risk of hypercalcaemia when given with **calcium salts**. Severe Anecdotal
- **Thiazide diuretics** increase the concentration of **lithium**. Avoid or adjust dose and monitor concentration. Severe Study
- **NSAIDs** increase the risk of acute renal failure when given with **thiazide diuretics**. Severe Theoretical → Also see **TABLE 18** p. 1338
- **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **thiazide diuretics**. Moderate Anecdotal
- **Thiazide diuretics** are predicted to increase the risk of hypercalcaemia when given with **toremifene**. Severe Theoretical
- **Thiazide diuretics** increase the risk of hypercalcaemia when given with **vitamin D substances**. Moderate Theoretical

Thiopental → see **TABLE 8** p. 1335 (hypotension), **TABLE 11** p. 1336 (CNS depressant effects)

- **Sulfonamides** are predicted to increase the effects of **thiopental**. Moderate Theoretical
- **Tricyclic antidepressants** increase the risk of cardiac arrhythmias and hypotension when given with **thiopental**. Moderate Study → Also see **TABLE 8** p. 1335

Thiotepa → see alkylating agents

Thyroid hormones

levothyroxine • liothyronine

- **Antacids** are predicted to decrease the absorption of **levothyroxine**. Separate administration by at least 4 hours. Moderate Anecdotal
- Antiarrhythmics **(amiodarone)** are predicted to increase the risk of thyroid dysfunction when given with **thyroid hormones**. Avoid. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenytoin)** are predicted to increase the risk of hypothyroidism when given with **thyroid hormones**. Moderate Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the effects of **thyroid hormones**. Moderate Theoretical
- Oral **calcium salts** are predicted to decrease the absorption of **levothyroxine**. Separate administration by at least 4 hours. Moderate Anecdotal
- **Thyroid hormones** are predicted to affect the concentration of **digoxin**. Monitor and adjust dose. Moderate Theoretical
- Oral **hormone replacement therapy** is predicted to decrease the effects of **thyroid hormones**. Moderate Theoretical
- **Iron (oral)** decreases the absorption of **levothyroxine**. Separate administration by at least 4 hours. Moderate Study
- **Lanthanum** decreases the absorption of **thyroid hormones**. Separate administration by 2 hours. Moderate Study
- **Polystyrene sulfonate** is predicted to decrease the absorption of **levothyroxine**. Separate administration by at least 4 hours. Moderate Theoretical
- **Sucralfate** decreases the absorption of **levothyroxine**. Separate administration by at least 4 hours. Moderate Study

Tiagabine → see antiepileptics

Tiaprofenic acid → see NSAIDs

Tibolone → see **TABLE 5** p. 1334 (thromboembolism)

Ticagrelor → see **TABLE 4** p. 1334 (antiplatelet effects)

- Antiarrhythmics **(amiodarone)** are predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. Severe Study
- **Bosentan** is predicted to decrease the exposure to **ticagrelor**. Moderate Theoretical
- **Ciclosporin** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. Severe Study
- **Cobicistat** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. Severe Study
- **Ticagrelor** increases the concentration of **digoxin**. Moderate Study
- **Efavirenz** is predicted to decrease the exposure to **ticagrelor**. Moderate Theoretical
- **Enzalutamide** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. Severe Study
- **Ticagrelor** is predicted to increase the exposure to **ergotamine**. Avoid. Severe Theoretical
- **Grapefruit juice** moderately increases the exposure to **ticagrelor**. Moderate Study
- **HIV-protease inhibitors** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. Severe Study
- **Idelalisib** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. Severe Study
- **Ticagrelor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- Macrolides **(azithromycin)** are predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. Severe Study

https://nhathuocngocanh.com/ www.getintopharma.com

Ticagrelor (continued)
- Macrolides **(clarithromycin)** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. Severe Study
- **Mitotane** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. Severe Study
- **Nevirapine** is predicted to decrease the exposure to **ticagrelor**. Moderate Theoretical
- **Ranolazine** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. Severe Study
- **Rifampicin** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **ticagrelor**. Moderate Theoretical
- **Ticagrelor** slightly increases the exposure to statins **(simvastatin)**. Adjust **simvastatin** dose, p. 203. Moderate Study
- **Vemurafenib** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. Severe Study

Ticarcillin → see penicillins

Tigecycline → see tetracyclines

Timolol → see beta blockers, non-selective

Tinidazole
- **Alcohol (beverage)** potentially causes a disulfiram-like reaction when given with **tinidazole**. Avoid for 72 hours stopping treatment. Moderate Theoretical
- **Tinidazole** is predicted to increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. Severe Theoretical

Tinzaparin → see low molecular-weight heparins

Tioguanine → see **TABLE 15** p. 1337 (myelosuppression)
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tioguanine**. Public Health England advises avoid (refer to Green Book). Severe Theoretical

Tiotropium → see **TABLE 10** p. 1336 (antimuscarinics)

Tipranavir → see HIV-protease inhibitors

Tirofiban → see **TABLE 4** p. 1334 (antiplatelet effects)

Tivozanib
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tivozanib**. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **tivozanib**. Severe Study
- **Mitotane** is predicted to decrease the exposure to **tivozanib**. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **tivozanib**. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **tivozanib**. Avoid. Severe Study
- **Tivozanib** is predicted to decrease the exposure to statins **(rosuvastatin)**. Moderate Theoretical

Tizanidine → see **TABLE 6** p. 1335 (bradycardia), **TABLE 8** p. 1335 (hypotension), **TABLE 9** p. 1336 (QT-interval prolongation), **TABLE 11** p. 1336 (CNS depressant effects)
- Antiepileptics **(fosphenytoin, phenytoin)** moderately decrease the exposure to **tizanidine**. Mild Study
- **Combined hormonal contraceptives** increase the exposure to **tizanidine**. Avoid. Moderate Study
- HIV-protease inhibitors **(ritonavir)** moderately decrease the exposure to **tizanidine**. Mild Study
- Iron chelators **(deferasirox)** are predicted to increase the exposure to **tizanidine**. Avoid. Moderate Theoretical
- **Leflunomide** moderately decreases the exposure to **tizanidine**. Mild Study
- **Obeticholic acid** is predicted to increase the exposure to **tizanidine**. Severe Theoretical
- Quinolones **(ciprofloxacin)** increase the exposure to **tizanidine**. Avoid. Moderate Study
- **Rifampicin** moderately decreases the exposure to **tizanidine**. Mild Study
- SSRIs **(fluvoxamine)** very markedly increase the exposure to **tizanidine**. Avoid. Severe Study
- **Teriflunomide** moderately decreases the exposure to **tizanidine**. Mild Study

Tobramycin → see aminoglycosides

Tocilizumab → see monoclonal antibodies

Tofacitinib
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **tofacitinib**. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tofacitinib**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1072. Moderate Study
- Antifungals, azoles **(isavuconazole)** are predicted to increase the exposure to **tofacitinib**. Moderate Study
- Antifungals, azoles **(posaconazole)** are predicted to increase the exposure to **tofacitinib**. Moderate Theoretical
- **Aprepitant** is predicted to increase the exposure to **tofacitinib**. Moderate Study
- **Bosentan** is predicted to decrease the exposure to **tofacitinib**. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **tofacitinib**. Moderate Study
- **Ciclosporin** increases the exposure to **tofacitinib**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1072. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **tofacitinib**. Moderate Study
- **Efavirenz** is predicted to decrease the exposure to **tofacitinib**. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **tofacitinib**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1072. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1072. Moderate Study
- **Imatinib** is predicted to increase the exposure to **tofacitinib**. Moderate Study
- **Live vaccines** potentially increase the risk of generalised infection (possibly life-threatening) when given with **tofacitinib**. Avoid. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1072. Moderate Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **tofacitinib**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **tofacitinib**. Avoid. Severe Study
- **Netupitant** is predicted to increase the exposure to **tofacitinib**. Moderate Study
- **Nevirapine** is predicted to decrease the exposure to **tofacitinib**. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **tofacitinib**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **tofacitinib**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **tofacitinib**. Moderate Study
- **Tacrolimus** increases the exposure to **tofacitinib**. Avoid. Severe Study

Tolbutamide → see sulfonylureas

Tolcapone
- **Tolcapone** increases the exposure to **levodopa**. Monitor and adjust dose. Moderate Study
- **Tolcapone** is predicted to increase the effects of **monoamine-oxidase A and B inhibitors, irreversible**. Avoid. Severe Theoretical
- **Tolcapone** is predicted to increase the risk of cardiovascular side-effects when given with **sympathomimetics, inotropic**. Moderate Theoretical
- **Tolcapone** is predicted to increase the effects of sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, noradrenaline/norepinephrine)**. Moderate Theoretical

Tolfenamic acid → see NSAIDs

Tolterodine → see **TABLE 9** p. 1336 (QT-interval prolongation), **TABLE 10** p. 1336 (antimuscarinics)
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **tolterodine**. Mild Theoretical → Also see **TABLE 9** p. 1336

https://nhathuocngocanh.com/ www.getintopharma.com

- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tolterodine**. Mild Theoretical → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tolterodine**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **Aprepitant** is predicted to increase the exposure to **tolterodine**. Mild Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **tolterodine**. Mild Theoretical
- **Cobicistat** is predicted to increase the exposure to **tolterodine**. Avoid. Severe Study
- **Crizotinib** is predicted to increase the exposure to **tolterodine**. Mild Theoretical → Also see **TABLE 9** p. 1336
- **Eliglustat** is predicted to increase the exposure to **tolterodine**. Adjust dose. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **tolterodine**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- **Idelalisib** is predicted to increase the exposure to **tolterodine**. Avoid. Severe Study
- **Imatinib** is predicted to increase the exposure to **tolterodine**. Mild Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **tolterodine**. Avoid. Severe Study → Also see **TABLE 9** p. 1336
- Macrolides **(erythromycin)** are predicted to increase the exposure to **tolterodine**. Mild Theoretical → Also see **TABLE 9** p. 1336
- **Netupitant** is predicted to increase the exposure to **tolterodine**. Mild Theoretical
- **Nilotinib** is predicted to increase the exposure to **tolterodine**. Mild Theoretical → Also see **TABLE 9** p. 1336

Tolvaptan → see **TABLE 16** p. 1338 (increased serum potassium)

GENERAL INFORMATION Avoid concurrent use of drugs that increase serum-sodium concentrations.

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **tolvaptan**. Adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tolvaptan**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tolvaptan**. Adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tolvaptan**. Adjust dose. Severe Study
- **Aprepitant** is predicted to increase the exposure to **tolvaptan**. Adjust dose. Moderate Study
- **Bosentan** is predicted to decrease the exposure to **tolvaptan**. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **tolvaptan**. Adjust dose. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **tolvaptan**. Adjust dose. Severe Study
- **Crizotinib** is predicted to increase the exposure to **tolvaptan**. Adjust dose. Moderate Study
- **Tolvaptan** increases the concentration of **digoxin**. Mild Study
- **Efavirenz** is predicted to decrease the exposure to **tolvaptan**. Moderate Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **tolvaptan**. Avoid. Severe Study
- **Grapefruit juice** increases the exposure to **tolvaptan**. Avoid. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **tolvaptan**. Adjust dose. Severe Study
- **Idelalisib** is predicted to increase the exposure to **tolvaptan**. Adjust dose. Severe Study
- **Imatinib** is predicted to increase the exposure to **tolvaptan**. Adjust dose. Moderate Study
- **Tolvaptan** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **tolvaptan**. Adjust dose. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **tolvaptan**. Adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **tolvaptan**. Avoid. Severe Study
- **Netupitant** is predicted to increase the exposure to **tolvaptan**. Adjust dose. Moderate Study
- **Nevirapine** is predicted to decrease the exposure to **tolvaptan**. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to **tolvaptan**. Adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **tolvaptan**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **tolvaptan**. Moderate Theoretical

Topiramate → see antiepileptics

Topotecan → see **TABLE 15** p. 1337 (myelosuppression)

- Antiarrhythmics **(amiodarone, dronedarone)** are predicted to increase the exposure to **topotecan**. Severe Study
- Antiepileptics **(fosphenytoin, phenytoin)** increase the clearance of **topotecan**. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole)** are predicted to increase the exposure to **topotecan**. Severe Study
- Calcium channel blockers **(verapamil)** are predicted to increase the exposure to **topotecan**. Severe Study
- **Ceritinib** is predicted to increase the exposure to **topotecan**. Moderate Theoretical → Also see **TABLE 15** p. 1337
- **Ciclosporin** is predicted to increase the exposure to **topotecan**. Severe Study
- **Eliglustat** is predicted to increase the exposure to **topotecan**. Adjust dose. Moderate Study
- HIV-protease inhibitors **(lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **topotecan**. Severe Study
- **Lapatinib** is predicted to increase the exposure to **topotecan**. Severe Study
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **topotecan**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- **Macrolides** are predicted to increase the exposure to **topotecan**. Severe Study
- **Mirabegron** is predicted to increase the exposure to **topotecan**. Mild Theoretical
- **Ranolazine** is predicted to increase the exposure to **topotecan**. Severe Study
- **Rolapitant** is predicted to increase the exposure to **topotecan**. Avoid or monitor. Moderate Study
- **St John's Wort** is predicted to decrease the exposure to **topotecan**. Severe Theoretical
- **Tedizolid** is predicted to increase the exposure to **topotecan**. Avoid. Moderate Theoretical
- **Velpatasvir** is predicted to increase the exposure to **topotecan**. Severe Theoretical
- **Vemurafenib** is predicted to increase the exposure to **topotecan**. Severe Study

Torasemide → see loop diuretics

Toremifene → see **TABLE 5** p. 1334 (thromboembolism), **TABLE 9** p. 1336 (QT-interval prolongation)

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **toremifene**. Adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **toremifene**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Cobicistat** is predicted to increase the exposure to **toremifene**. Moderate Theoretical
- **Toremifene** is predicted to increase the anticoagulant effect of **coumarins**. Severe Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **toremifene**. Adjust dose. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **toremifene**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Idelalisib** is predicted to increase the exposure to **toremifene**. Moderate Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

Toremifene (continued)

- Macrolides **(clarithromycin)** are predicted to increase the exposure to **toremifene**. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Mitotane** is predicted to decrease the exposure to **toremifene**. Adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **toremifene**. Adjust dose. Moderate Study
- **Thiazide diuretics** are predicted to increase the risk of hypercalcaemia when given with **toremifene**. Severe Theoretical

Trabectedin → see **TABLE 1** p. 1334 (hepatotoxicity), **TABLE 15** p. 1337 (myelosuppression)

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **trabectedin**. Avoid. Severe Theoretical → Also see **TABLE 1** p. 1334
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. Severe Theoretical → Also see **TABLE 1** p. 1334
- **Cobicistat** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. Severe Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **trabectedin**. Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. Severe Theoretical
- **Idelalisib** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **trabectedin**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. Severe Theoretical
- **Mitotane** is predicted to decrease the exposure to **trabectedin**. Avoid. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Rifampicin** is predicted to decrease the exposure to **trabectedin**. Avoid. Severe Theoretical

Tramadol → see opioids

Trametinib

- Antiarrhythmics **(amiodarone, dronedarone)** are predicted to increase the concentration of **trametinib**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole)** are predicted to increase the concentration of **trametinib**. Moderate Theoretical
- Calcium channel blockers **(verapamil)** are predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Ciclosporin** is predicted to increase the concentration of **trametinib**. Moderate Theoretical
- HIV-protease inhibitors **(lopinavir, ritonavir, saquinavir)** are predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Lapatinib** is predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Macrolides** are predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Ranolazine** is predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Vemurafenib** is predicted to increase the concentration of **trametinib**. Moderate Theoretical

Trandolapril → see ACE inhibitors

Tranexamic acid → see **TABLE 5** p. 1334 (thromboembolism)

Tranylcypromine → see monoamine-oxidase A and B inhibitors, irreversible

Trastuzumab → see monoclonal antibodies

Trastuzumab emtansine → see monoclonal antibodies

Trazodone → see **TABLE 13** p. 1337 (serotonin syndrome), **TABLE 11** p. 1336 (CNS depressant effects)

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **trazodone**. Moderate Theoretical
- Antiepileptics **(carbamazepine)** decrease the concentration of **trazodone**. Adjust dose. Moderate Anecdotal
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **trazodone**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. Moderate Study
- **Aprepitant** is predicted to increase the exposure to **trazodone**. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **trazodone**. Moderate Theoretical
- **Cobicistat** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **trazodone**. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. Moderate Study
- **Idelalisib** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. Moderate Study
- **Imatinib** is predicted to increase the exposure to **trazodone**. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. Moderate Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **trazodone**. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to **trazodone**. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to **trazodone**. Moderate Theoretical

Tree pollen extract

GENERAL INFORMATION Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

Treosulfan → see alkylating agents

Tretinoin → see retinoids

Triamcinolone → see corticosteroids

Triamterene → see potassium-sparing diuretics

Tricyclic antidepressants → see **TABLE 18** p. 1338 (hyponatraemia), **TABLE 8** p. 1335 (hypotension), **TABLE 13** p. 1337 (serotonin syndrome), **TABLE 9** p. 1336 (QT-interval prolongation), **TABLE 10** p. 1336 (antimuscarinics)

amitriptyline · clomipramine · dosulepin · doxepin · imipramine · lofepramine · nortriptyline · trimipramine

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **tricyclic antidepressants**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1336
- Antiarrhythmics **(propafenone)** are predicted to increase the concentration of **tricyclic antidepressants**. Moderate Theoretical → Also see **TABLE 10** p. 1336
- Antiepileptics **(carbamazepine)** decrease the exposure to **tricyclic antidepressants**. Adjust dose. Moderate Study → Also see **TABLE 18** p. 1338
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the exposure to **tricyclic antidepressants**. Moderate Study
- Tricyclic antidepressants **(clomipramine, imipramine)** potentially increase the risk of overheating and dehydration when given with antiepileptics **(zonisamide)**. Avoid in children. Severe Theoretical
- **Bupropion** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. Severe Study → Also see **TABLE 13** p. 1337
- **Cinacalcet** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. Severe Study
- **Tricyclic antidepressants** decrease the antihypertensive effects of **clonidine**. Monitor and adjust dose. Moderate Anecdotal → Also see **TABLE 8** p. 1335
- **Cobicistat** is predicted to slightly increase the exposure to **tricyclic antidepressants**. Mild Study
- **Darifenacin** is predicted to increase the exposure to **tricyclic antidepressants**. Moderate Theoretical → Also see **TABLE 10** p. 1336
- **Eliglustat** is predicted to increase the exposure to **nortriptyline**. Adjust dose. Moderate Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

- **Tricyclic antidepressants** are predicted to decrease the antihypertensive effects of **guanethidine**. Moderate Study → Also see **TABLE 8** p. 1335
- H_2 receptor antagonists **(cimetidine)** increase the exposure to **tricyclic antidepressants**. Moderate Study
- HIV-protease inhibitors **(ritonavir, tipranavir)** are predicted to increase the exposure to **tricyclic antidepressants**. Moderate Theoretical
- **Tricyclic antidepressants** potentially increase the risk of neurotoxicity when given with **lithium**. Severe Anecdotal → Also see **TABLE 13** p. 1337 → Also see **TABLE 9** p. 1336
- **Amitriptyline** decreases the effects of **metyrapone**. Avoid. Moderate Theoretical
- **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **moclobemide**. Avoid. Severe Theoretical → Also see **TABLE 13** p. 1337
- **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **monoamine-oxidase A and B inhibitors, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 8** p. 1335 → Also see **TABLE 13** p. 1337
- **Tricyclic antidepressants** are predicted to decrease the effects of **moxonidine**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335
- **Tricyclic antidepressants** are predicted to decrease the efficacy of **pitolisant**. Mild Theoretical
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. Severe Study → Also see **TABLE 18** p. 1338 → Also see **TABLE 13** p. 1337
- SSRIs **(fluvoxamine)** markedly increase the exposure to **clomipramine**. Adjust dose. Severe Study → Also see **TABLE 18** p. 1338 → Also see **TABLE 13** p. 1337
- SSRIs **(fluvoxamine)** increase the exposure to tricyclic antidepressants **(amitriptyline, imipramine)**. Adjust dose. Severe Study → Also see **TABLE 18** p. 1338 → Also see **TABLE 13** p. 1337
- **Sucralfate** is predicted to decrease the absorption of **tricyclic antidepressants**. Moderate Study
- **Tricyclic antidepressants** increase the effects of sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, noradrenaline/norepinephrine, phenylephrine)**. Avoid. Severe Study
- **Tricyclic antidepressants** are predicted to decrease the effects of sympathomimetics, vasoconstrictor **(ephedrine)**. Avoid. Severe Study
- **Terbinafine** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. Severe Study
- **Tricyclic antidepressants** increase the risk of cardiac arrhythmias and hypotension when given with **thiopental**. Moderate Study → Also see **TABLE 8** p. 1335

Trientine

- **Trientine** potentially decreases the absorption of **iron (oral)**. Moderate Theoretical
- **Trientine** potentially decreases the absorption of **zinc**. Moderate Theoretical

Trifluoperazine → see phenothiazines

Trihexyphenidyl → see **TABLE 10** p. 1336 (antimuscarinics)

Trimethoprim → see **TABLE 18** p. 1338 (hyponatraemia), **TABLE 2** p. 1334 (nephrotoxicity), **TABLE 16** p. 1338 (increased serum potassium)

- **Trimethoprim** increases the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Moderate Study
- Antimalarials **(pyrimethamine)** increase the risk of side-effects when given with **trimethoprim**. Severe Study
- **Trimethoprim** is predicted to increase the anticoagulant effect of **coumarins**. Severe Study
- **Dapsone** increases the exposure to **trimethoprim** and **trimethoprim** increases the exposure to **dapsone**. Severe Study
- **Trimethoprim** increases the concentration of **digoxin**. Moderate Study
- **Trimethoprim** slightly increases the exposure to **lamivudine**. Moderate Study
- **Trimethoprim** is predicted to increase the risk of side-effects when given with **methotrexate**. Avoid. Severe Theoretical → Also see **TABLE 2** p. 1334
- **Trimethoprim** slightly increases the exposure to **repaglinide**. Avoid or monitor blood glucose. Moderate Study
- **Rifampicin** decreases the exposure to **trimethoprim**. Moderate Study
- **Trimethoprim** is predicted to decrease the efficacy of **saropterin**. Moderate Theoretical

Trimipramine → see tricyclic antidepressants

Tropicamide → see **TABLE 10** p. 1336 (antimuscarinics)

Trospium → see **TABLE 10** p. 1336 (antimuscarinics)

Tryptophan → see **TABLE 13** p. 1337 (serotonin syndrome)

- **Tryptophan** greatly decreases the concentration of **levodopa**. Moderate Study
- **Tryptophan** increases the risk of side-effects when given with **monoamine-oxidase A and B inhibitors, irreversible**. Severe Anecdotal → Also see **TABLE 13** p. 1337

Typhoid vaccine, oral → see live vaccines

Ulipristal

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- Antiepileptics **(carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Severe Study
- **Aprepitant** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Bosentan** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Severe Study
- **Ulipristal** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- **Ulipristal** is predicted to decrease the efficacy of **desogestrel**. Avoid. Severe Theoretical
- **Efavirenz** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Enzalutamide** is predicted to markedly decrease the exposure to **ulipristal**. Avoid and for 4 weeks after stopping **ulipristal**, p. 785. Severe Theoretical
- **Ulipristal** is predicted to decrease the efficacy of **etonogestrel**. Avoid. Severe Theoretical
- **Fosaprepitant** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Grapefruit juice** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Theoretical
- **Griseofulvin** potentially decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- HIV-protease inhibitors **(atazanavir, darunavir, fosamprenavir, lopinavir, saquinavir, tipranavir)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Severe Study
- HIV-protease inhibitors **(ritonavir)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Idelalisib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Severe Study
- **Imatinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study

https://nhathuocngocanh.com/ www.getintopharma.com

Ulipristal (continued)
- **Ulipristal** is predicted to decrease the efficacy of **levonorgestrel**. Avoid. Severe Theoretical
- **Lumacaftor** is predicted to decrease the efficacy of **ulipristal**. Use additional contraceptive precautions. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- **Modafinil** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Netupitant** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- **Nevirapine** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Nilotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- **Ulipristal** is predicted to decrease the efficacy of **norethisterone**. Avoid. Severe Theoretical
- **Rifabutin** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal
- **Rifampicin** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 775. Severe Anecdotal

Umeclidinium → see **TABLE 10** p. 1336 (antimuscarinics)

Urokinase → see **TABLE 3** p. 1334 (anticoagulant effects)

Ursodeoxycholic acid
- **Antacids** are predicted to decrease the absorption of **ursodeoxycholic acid**. Separate administration by 2 hours. Moderate Theoretical
- **Ursodeoxycholic acid** affects the concentration of **ciclosporin**. Use with caution and adjust dose. Severe Anecdotal
- **Fibrates** are predicted to decrease the efficacy of **ursodeoxycholic acid**. Avoid. Severe Theoretical

Ustekinumab → see monoclonal antibodies

Valaciclovir → see **TABLE 2** p. 1334 (nephrotoxicity)
- **Valaciclovir** is predicted to increase the exposure to **aminophylline**. Severe Anecdotal
- **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valaciclovir**. Moderate Theoretical
- **Valaciclovir** is predicted to increase the exposure to **theophylline**. Severe Theoretical

Valganciclovir → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 2** p. 1334 (nephrotoxicity)
- **Valganciclovir** is predicted to increase the risk of seizures when given with carbapenems **(imipenem)**. Avoid. Severe Anecdotal
- **Valganciclovir** is predicted to increase the exposure to **didanosine**. Moderate Study
- **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valganciclovir**. Moderate Theoretical → Also see **TABLE 15** p. 1337

Valproate → see antiepileptics

Valsartan → see angiotensin-II receptor antagonists

Vancomycin → see **TABLE 2** p. 1334 (nephrotoxicity), **TABLE 19** p. 1338 (ototoxicity)

Vandetanib → see **TABLE 9** p. 1336 (QT-interval prolongation)
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vandetanib**. Avoid. Moderate Study
- **Vandetanib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Vandetanib** slightly increases the exposure to **digoxin**. Monitor ECG and adjust dose. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **vandetanib**. Avoid. Moderate Study
- **Vandetanib** slightly increases the exposure to **metformin**. Monitor and adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **vandetanib**. Avoid. Moderate Study
- **Vandetanib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **vandetanib**. Avoid. Moderate Study

Vardenafil → see phosphodiesterase type-5 inhibitors

Varicella-zoster vaccine → see live vaccines

Vecuronium → see neuromuscular blocking drugs, non-depolarising

Vedolizumab → see monoclonal antibodies

Velpatasvir
- **Velpatasvir** is predicted to increase the exposure to **aliskiren**. Severe Theoretical
- **Antacids** are predicted to decrease the concentration of **velpatasvir**. Separate administration by 4 hours. Moderate Theoretical
- Antiarrhythmics **(amiodarone)** are predicted to increase the concentration of **velpatasvir**. Avoid or monitor. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **velpatasvir**. Avoid. Severe Study
- Antiepileptics **(oxcarbazepine)** are predicted to decrease the exposure to **velpatasvir**. Avoid. Severe Theoretical
- **Velpatasvir** is predicted to increase the exposure to antihistamines, non-sedating **(fexofenadine)**. Severe Theoretical
- **Bosentan** is predicted to decrease the exposure to **velpatasvir**. Avoid. Moderate Theoretical
- Calcium salts **(calcium carbonate)** are predicted to decrease the concentration of **velpatasvir**. Separate administration by 4 hours. Moderate Anecdotal
- **Velpatasvir** is predicted to increase the exposure to **colchicine**. Severe Theoretical
- **Velpatasvir** is predicted to increase the exposure to **dabigatran**. Severe Theoretical
- **Velpatasvir** is predicted to increase the exposure to **digoxin**. Severe Study
- **Velpatasvir** is predicted to increase the exposure to **edoxaban**. Severe Theoretical
- **Efavirenz** is predicted to decrease the exposure to **velpatasvir**. Avoid. Moderate Theoretical
- **Enzalutamide** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. Severe Study
- **Velpatasvir** is predicted to increase the exposure to **everolimus**. Severe Theoretical
- **H_2 receptor antagonists** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir p. 619. Moderate Study
- **Velpatasvir** is predicted to increase the exposure to **loperamide**. Severe Theoretical
- **Mitotane** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. Severe Study
- **Nevirapine** is predicted to decrease the exposure to **velpatasvir**. Avoid. Moderate Theoretical
- **Proton pump inhibitors** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir p. 619. Moderate Study
- **Rifampicin** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. Severe Study
- **Velpatasvir** is predicted to increase the exposure to **sirolimus**. Severe Theoretical
- **St John's Wort** is predicted to decrease the exposure to **velpatasvir**. Avoid. Moderate Theoretical
- **Velpatasvir** is predicted to increase the exposure to statins **(atorvastatin, simvastatin)**. Monitor side effects and adjust dose. Severe Theoretical
- **Velpatasvir** increases the exposure to statins **(rosuvastatin)**. Adjust **rosuvastatin** dose and monitor side effects, p. 202. Severe Study
- **Velpatasvir** is predicted to increase the exposure to taxanes **(paclitaxel)**. Severe Theoretical
- **Velpatasvir** is predicted to increase the exposure to **tenofovir disoproxil**. Severe Study
- **Velpatasvir** is predicted to increase the exposure to **topotecan**. Severe Theoretical

Vemurafenib → see **TABLE 9** p. 1336 (QT-interval prolongation)

https://nhathuocngocanh.com/ www.getintopharma.com

- **Vemurafenib** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. Moderate Study
- **Vemurafenib** is predicted to increase the exposure to **aliskiren**. Use with caution and adjust dose. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vemurafenib**. Avoid. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **vemurafenib**. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Vemurafenib** is predicted to increase the exposure to beta blockers, non-selective **(nadolol)**. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **vemurafenib**. Severe Theoretical
- **Vemurafenib** is predicted to increase the exposure to **colchicine**. Avoid or adjust **colchicine** dose, p. 1085. Severe Theoretical
- **Vemurafenib** increases the exposure to **dabigatran**. Use with caution and adjust dose. Severe Theoretical
- **Vemurafenib** is predicted to slightly increase the exposure to **edoxaban**. Severe Theoretical
- **Enzalutamide** is predicted to decrease the exposure to **vemurafenib**. Avoid. Severe Theoretical
- **Vemurafenib** is predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- **Vemurafenib** is predicted to increase the exposure to **fidaxomicin**. Avoid. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **vemurafenib**. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Idelalisib** is predicted to increase the exposure to **vemurafenib**. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **vemurafenib**. Severe Theoretical → Also see **TABLE 9** p. 1336
- **Mitotane** is predicted to decrease the exposure to **vemurafenib**. Avoid. Severe Theoretical
- **Vemurafenib** is predicted to increase the exposure to **nintedanib**. Moderate Study
- **Vemurafenib** is predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical → Also see **TABLE 9** p. 1336
- **Rifampicin** is predicted to decrease the exposure to **vemurafenib**. Avoid. Severe Theoretical
- **Vemurafenib** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. Severe Study
- **Vemurafenib** is predicted to increase the exposure to **topotecan**. Severe Study
- **Vemurafenib** is predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Vemurafenib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical

Venetoclax

FOOD AND LIFESTYLE Avoid Seville (bitter orange) and star fruit as they might increase the exposure to venetoclax.

- Antiarrhythmics **(amiodarone)** are predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **venetoclax**. Avoid potent inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- **Aprepitant** is predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- **Bosentan** is predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- **Ciclosporin** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical
- **Cobicistat** is predicted to increase the exposure to **venetoclax**. Avoid potent inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- **Venetoclax** slightly increases the exposure to coumarins **(warfarin)**. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- **Efavirenz** is predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- **Enzalutamide** is predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- **Grapefruit juice** is predicted to increase the exposure to **venetoclax**. Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **venetoclax**. Avoid potent inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- **Idelalisib** is predicted to increase the exposure to **venetoclax**. Avoid potent inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- **Imatinib** is predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- **Lapatinib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical
- **Venetoclax** potentially decreases the efficacy of **live vaccines**. Avoid. Severe Theoretical
- Macrolides **(azithromycin)** decrease the exposure to **venetoclax**. Mild Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **venetoclax**. Avoid potent inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- **Mitotane** is predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- **Netupitant** is predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- **Nevirapine** is predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- **Nilotinib** is predicted to increase the exposure to **venetoclax**. Avoid moderate inhibitors of CYP3A4 or adjust **venetoclax** dose, p. 974. Severe Study
- **Ranolazine** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- **Vemurafenib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical

Venlafaxine → see **TABLE 13** p. 1337 (serotonin syndrome), **TABLE 9** p. 1336 (QT-interval prolongation), **TABLE 11** p. 1336 (CNS depressant effects), **TABLE 4** p. 1334 (antiplatelet effects)

- **Abiraterone** potentially increases the exposure to **venlafaxine**. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **venlafaxine**. Moderate Study → Also see **TABLE 9** p. 1336
- **Cobicistat** is predicted to increase the exposure to **venlafaxine**. Moderate Study
- H_2 receptor antagonists **(cimetidine)** slightly increase the exposure to **venlafaxine**. Mild Study
- **Venlafaxine** slightly increases the exposure to **haloperidol**. Severe Study → Also see **TABLE 9** p. 1336 → Also see **TABLE 11** p. 1336

https://nhathuocngocanh.com/ www.getintopharma.com

Venlafaxine (continued)

- HIV-protease inhibitors are predicted to increase the exposure to **venlafaxine**. Moderate Study → Also see **TABLE 9** p. 1336
- Idelalisib is predicted to increase the exposure to **venlafaxine**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **venlafaxine**. Moderate Study → Also see **TABLE 9** p. 1336
- Tacrolimus potentially increases the risk of serotonin syndrome when given with **venlafaxine**. Severe Anecdotal

Verapamil → see calcium channel blockers

Verteporfin

GENERAL INFORMATION Caution on concurrent use with other photosensitising drugs.

Vigabatrin → see antiepileptics

Vilanterol → see beta$_2$ agonists

Vildagliptin → see **TABLE 14** p. 1337 (antidiabetic drugs)

Vinblastine → see vinca alkaloids

Vinca alkaloids → see **TABLE 1** p. 1334 (hepatotoxicity), **TABLE 15** p. 1337 (myelosuppression), **TABLE 19** p. 1338 (ototoxicity), **TABLE 12** p. 1337 (peripheral neuropathy), **TABLE 5** p. 1334 (thromboembolism), **TABLE 9** p. 1336 (QT-interval prolongation)

vinblastine · vincristine · vindesine · vinflunine · vinorelbine

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 9** p. 1336
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vinflunine**. Avoid. Severe Theoretical → Also see **TABLE 12** p. 1337
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. Severe Theoretical → Also see **TABLE 12** p. 1337
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to vinca alkaloids **(vinblastine, vincristine, vindesine)**. Severe Theoretical → Also see **TABLE 1** p. 1334 → Also see **TABLE 12** p. 1337
- Antifungals, azoles **(fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 1** p. 1334 → Also see **TABLE 9** p. 1336
- Antifungals, azoles **(miconazole)** are predicted to increase the concentration of **vinca alkaloids**. Use with caution and adjust dose. Moderate Theoretical
- Aprepitant is predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical
- Asparaginase potentially increases the risk of neurotoxicity when given with **vincristine**. **Vincristine** should be taken 3 to 24 hours before **asparaginase**. Severe Anecdotal → Also see **TABLE 1** p. 1334 → Also see **TABLE 15** p. 1337
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical
- Cobicistat is predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical
- Crisantaspase potentially increases the risk of neurotoxicity when given with **vincristine**. **Vincristine** should be taken 3 to 24 hours before **crisantaspase**. Severe Anecdotal → Also see **TABLE 1** p. 1334 → Also see **TABLE 15** p. 1337
- Crizotinib is predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- Enzalutamide is predicted to decrease the exposure to vinca alkaloids **(vinblastine, vincristine, vindesine)**. Severe Theoretical
- Enzalutamide is predicted to decrease the exposure to **vinflunine**. Avoid. Severe Theoretical
- Enzalutamide is predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. Severe Theoretical
- HIV-protease inhibitors are predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 9** p. 1336
- Idelalisib is predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 15** p. 1337
- Imatinib is predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 15** p. 1337
- Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **vinca alkaloids**. Public Health England advises avoid (refer to Green Book). Severe Theoretical
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 9** p. 1336
- Mitotane is predicted to decrease the exposure to vinca alkaloids **(vinblastine, vincristine, vindesine)**. Severe Theoretical → Also see **TABLE 15** p. 1337
- Mitotane is predicted to decrease the exposure to **vinflunine**. Avoid. Severe Theoretical → Also see **TABLE 15** p. 1337
- Mitotane is predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. Severe Theoretical → Also see **TABLE 15** p. 1337
- Netupitant is predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical
- Nilotinib is predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 15** p. 1337 → Also see **TABLE 9** p. 1336
- Pegaspargase potentially increases the risk of neurotoxicity when given with **vincristine**. **Vincristine** should be taken 3 to 24 hours before **pegaspargase**. Severe Anecdotal → Also see **TABLE 1** p. 1334 → Also see **TABLE 15** p. 1337
- Rifampicin is predicted to decrease the exposure to vinca alkaloids **(vinblastine, vincristine, vindesine)**. Severe Theoretical
- Rifampicin is predicted to decrease the exposure to **vinflunine**. Avoid. Severe Theoretical
- Rifampicin is predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. Severe Theoretical

Vincristine → see vinca alkaloids

Vindesine → see vinca alkaloids

Vinflunine → see vinca alkaloids

Vinorelbine → see vinca alkaloids

Vismodegib → see **TABLE 15** p. 1337 (myelosuppression)

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vismodegib**. Avoid. Moderate Theoretical
- Enzalutamide is predicted to decrease the exposure to **vismodegib**. Avoid. Moderate Theoretical
- Mitotane is predicted to decrease the exposure to **vismodegib**. Avoid. Moderate Theoretical → Also see **TABLE 15** p. 1337
- Rifampicin is predicted to decrease the exposure to **vismodegib**. Avoid. Moderate Theoretical
- St John's Wort is predicted to decrease the exposure to **vismodegib**. Avoid. Moderate Theoretical

Vitamin A

- Retinoids **(acitretin, alitretinoin, isotretinoin)** are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. Severe Theoretical
- Retinoids **(bexarotene)** are predicted to increase the risk of toxicity when given with **vitamin A**. Adjust dose. Moderate Theoretical
- Retinoids **(tretinoin)** are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. Severe Study

Vitamin D substances

alfacalcidol · calcipotriol · calcitriol · colecalciferol · dihydrotachysterol · ergocalciferol · paricalcitol · tacalcitol

- Antiepileptics **(carbamazepine)** are predicted to decrease the effects of **vitamin D substances**. Moderate Study
- Antiepileptics **(fosphenytoin, phenytoin)** decrease the effects of **vitamin D substances**. Moderate Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the effects of **vitamin D substances**. Moderate Theoretical
- Antifungals, azoles **(clotrimazole, ketoconazole)** are predicted to decrease the exposure to **colecalciferol**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **paricalcitol**. Moderate Study
- Cobicistat is predicted to increase the exposure to **paricalcitol**. Moderate Study
- **Vitamin D substances** are predicted to increase the risk of toxicity when given with **digoxin**. Severe Theoretical

https://nhathuocngocanh.com/ www.getintopharma.com

- **HIV-protease inhibitors** are predicted to increase the exposure to **paricalcitol**. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **paricalcitol**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **paricalcitol**. Moderate Study
- **Thiazide diuretics** increase the risk of hypercalcaemia when given with **vitamin D substances**. Moderate Theoretical

Vitamin E substances

alpha tocopherol • alpha tocopheryl acetate

- **Vitamin E substances** affect the exposure to **ciclosporin**. Moderate Study

Volatile halogenated anaesthetics → see **TABLE 8** p. 1335 (hypotension), **TABLE 11** p. 1336 (CNS depressant effects)

desflurane • isoflurane • methoxyflurane • sevoflurane

- Antiepileptics **(phenobarbital, primidone)** potentially increase the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. Severe Theoretical → Also see **TABLE 11** p. 1336
- **Isoniazid** potentially increases the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. Severe Theoretical
- **Rifampicin** potentially increases the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. Severe Theoretical

Voriconazole → see antifungals, azoles

Vortioxetine → see **TABLE 13** p. 1337 (serotonin syndrome), **TABLE 4** p. 1334 (antiplatelet effects)

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study
- **Bupropion** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study → Also see **TABLE 13** p. 1337
- **Cinacalcet** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study → Also see **TABLE 13** p. 1337 → Also see **TABLE 4** p. 1334
- **Terbinafine** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study

Voxilaprevir

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Study
- Antiepileptics **(oxcarbazepine)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Theoretical
- **Bosentan** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Theoretical
- **Ciclosporin** increases the concentration of **voxilaprevir**. Avoid. Severe Study
- **Voxilaprevir** is predicted to increase the concentration of **dabigatran**. Avoid. Severe Study
- **Voxilaprevir** is predicted to increase the concentration of **edoxaban**. Avoid. Severe Theoretical
- **Efavirenz** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Theoretical
- **Enzalutamide** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Study
- HIV-protease inhibitors **(atazanavir)** (boosted with ritonavir) increase the concentration of **voxilaprevir**. Avoid. Severe Study
- HIV-protease inhibitors **(lopinavir)** are predicted to increase the concentration of **voxilaprevir**. Avoid. Severe Theoretical
- **Mitotane** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Study
- **Modafinil** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Theoretical
- **Nevirapine** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Theoretical
- **Proton pump inhibitors** are predicted to decrease the exposure to **voxilaprevir**. Adjust dose, see sofosbuvir with velpatasvir and voxilaprevir p. 619. Moderate Study
- **Rifabutin** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Study
- **St John's Wort** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Theoretical
- **Voxilaprevir** is predicted to increase the exposure to statins **(atorvastatin, fluvastatin, simvastatin)**. Avoid. Severe Theoretical
- **Voxilaprevir** is predicted to increase the exposure to statins **(pravastatin)**. Monitor and adjust **pravastatin** dose. Severe Study
- **Voxilaprevir** is predicted to increase the exposure to statins **(rosuvastatin)**. Avoid. Severe Study
- **Voxilaprevir** is predicted to increase the exposure to **tenofovir disoproxil**. Severe Study

Warfarin → see coumarins

Wasp venom extract

GENERAL INFORMATION Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

Xipamide → see thiazide diuretics

Xylometazoline → see sympathomimetics, vasoconstrictor

Yellow fever vaccine, live → see live vaccines

Zaleplon → see **TABLE 11** p. 1336 (CNS depressant effects)

- **Rifampicin** markedly decreases the exposure to **zaleplon**. Moderate Study

Zidovudine → see **TABLE 15** p. 1337 (myelosuppression), **TABLE 2** p. 1334 (nephrotoxicity)

- Antiepileptics **(valproate)** slightly increase the exposure to **zidovudine**. Moderate Study
- Antimalarials **(pyrimethamine)** are predicted to increase the risk of side-effects when given with **zidovudine**. Severe Theoretical → Also see **TABLE 15** p. 1337
- **Zidovudine** increases the risk of haematological toxicity when given with **aspirin** (high-dose). Severe Study
- HIV-protease inhibitors **(tipranavir)** slightly decrease the exposure to **zidovudine**. Avoid. Moderate Study
- Macrolides **(clarithromycin)** decrease the absorption of **zidovudine**. Separate administration by at least 2 hours. Moderate Study
- **Nevirapine** is predicted to decrease the concentration of **zidovudine**. Refer to specialist literature. Severe Theoretical
- **Zidovudine** increases the risk of haematological toxicity when given with **NSAIDs**. Severe Study → Also see **TABLE 2** p. 1334
- **Ribavirin** increases the risk of anaemia and/or leucopenia when given with **zidovudine**. Avoid. Severe Study
- **Zidovudine** is predicted to decrease the efficacy of **stavudine**. Avoid. Severe Theoretical

Zinc

- Oral **zinc** decreases the absorption of oral bisphosphonates **(alendronic acid)**. **Zinc** should be taken at least 30 minutes before **alendronic acid**. Moderate Study
- Oral **zinc** is predicted to decrease the absorption of oral bisphosphonates **(ibandronic acid)**. Avoid **zinc** for at least 6 hours before or 1 hour after **ibandronic acid**. Moderate Theoretical
- Oral **zinc** decreases the absorption of oral bisphosphonates **(risedronate)**. Separate administration by at least 2 hours. Moderate Study
- Oral **zinc** decreases the absorption of oral bisphosphonates **(sodium clodronate)**. Avoid **zinc** for 2 hours before or 1 hour after **sodium clodronate**. Moderate Study
- Oral **calcium salts** decrease the absorption of **zinc**. Moderate Study
- **Zinc** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **zinc**. Severe Theoretical
- **Zinc** is predicted to decrease the efficacy of **iron (oral)** and **iron (oral)** is predicted to decrease the efficacy of **zinc**. Moderate Study

https://nhathuocngocanh.com/ www.getintopharma.com

Zinc (continued)
- **Zinc** is predicted to decrease the absorption of **penicillamine**. Mild Theoretical
- **Zinc** is predicted to decrease the exposure to **quinolones**. Separate administration by 2 hours. Moderate Study
- Oral **zinc** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. Moderate Theoretical
- **Trientine** potentially decreases the absorption of **zinc**. Moderate Theoretical

Zoledronic acid → see bisphosphonates

Zolmitriptan → see **TABLE 13** p. 1337 (serotonin syndrome)
- **Combined hormonal contraceptives** are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 475. Moderate Theoretical
- H_2 receptor antagonists **(cimetidine)** slightly increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 475. Mild Study
- **Moclobemide** slightly increases the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 475. Moderate Study → Also see **TABLE 13** p. 1337
- **Monoamine-oxidase A and B inhibitors, irreversible** are predicted to increase the exposure to **zolmitriptan**. Severe Theoretical → Also see **TABLE 13** p. 1337
- Quinolones **(ciprofloxacin)** are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 475. Moderate Theoretical
- SSRIs **(fluvoxamine)** are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 475. Severe Theoretical → Also see **TABLE 13** p. 1337

Zolpidem → see **TABLE 11** p. 1336 (CNS depressant effects)
- Antiepileptics **(carbamazepine)** moderately decrease the exposure to **zolpidem**. Moderate Study
- **Rifampicin** moderately decreases the exposure to **zolpidem**. Moderate Study

Zonisamide → see antiepileptics

Zopiclone → see **TABLE 11** p. 1336 (CNS depressant effects)
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **zopiclone**. Adjust dose. Moderate Study → Also see **TABLE 11** p. 1336
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Theoretical
- **Aprepitant** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Theoretical
- **Crizotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study
- **Enzalutamide** is predicted to decrease the exposure to **zopiclone**. Adjust dose. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Theoretical
- **Idelalisib** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Theoretical
- **Imatinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Theoretical
- Macrolides **(erythromycin)** are predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **zopiclone**. Adjust dose. Moderate Study
- **Netupitant** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **zopiclone**. Adjust dose. Moderate Study

Zuclopenthixol → see **TABLE 8** p. 1335 (hypotension), **TABLE 9** p. 1336 (QT-interval prolongation), **TABLE 11** p. 1336 (CNS depressant effects)
- **Zuclopenthixol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1335 → Also see **TABLE 9** p. 1336
- **Zuclopenthixol** is predicted to decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. Severe Theoretical → Also see **TABLE 8** p. 1335
- **Zuclopenthixol** potentially increases the risk of neurotoxicity when given with **lithium**. Severe Anecdotal → Also see **TABLE 9** p. 1336

Appendix 2
Borderline substances

CONTENTS

Enteral feeds (non-disease specific)	page 1502
Enteral feeds (non-disease specific): less than 5 g protein/100 mL	1502
Enteral feeds (non-disease specific): 5 g (or more) protein/100 mL	1504
Enteral feeds (non-disease specific): Child under 12 years	1507
Nutritional supplements (non-disease specific)	1507
Nutritional supplements: less than 5 g protein/100 mL	1507
Nutritional supplements: 5 g (or more) protein/100 mL	1507
Specialised formulas	1512
Specialised formulas: Infant and child	1512
Specialised formulas for specific clinical conditions	1512
Feed supplements	1514
High-energy supplements	1514
Fibre, vitamin, and mineral supplements	1518
Feed additives	1520
Special additives for conditions of intolerance	1520
Feed thickeners and pre-thickened drinks	page 1520
Flavouring preparations	1521
Foods for special diets	1521
Gluten-free foods	1521
Low-protein foods	1524
Nutritional supplements for metabolic diseases	1527
Glutaric aciduria (type 1)	1527
Glycogen storage disease	1527
Homocystinuria or hypermethioninaemia	1527
Hyperlysinaemia	1528
Isovaleric acidaemia	1528
Maple syrup urine disease	1528
Methylmalonic or propionic acidaemia	1529
Other inborn errors of metabolism	1529
Phenylketonuria	1530
Tyrosinaemia	1532

In certain conditions some foods (and toilet preparations) have characteristics of drugs and the Advisory Committee on Borderline Substances (ACBS) advises as to the circumstances in which such substances may be regarded as drugs. Prescriptions issued in accordance with the Committee's advice and endorsed 'ACBS' will normally not be investigated.

Information

General Practitioners are reminded that the ACBS recommends products on the basis that they may be regarded as drugs for the management of specified conditions. Doctors should satisfy themselves that the products can safely be prescribed, that patients are adequately monitored and that, where necessary, expert hospital supervision is available.

Foods which may be prescribed on FP10, GP10 (Scotland), or WP10 (Wales)

All the food products listed in this appendix have ACBS approval. The clinical condition for which the product has been approved is included with each entry.
Note Foods included in this appendix may contain cariogenic sugars and patients should be advised to take appropriate oral hygiene measures.

Enteral feeds and supplements

For most enteral feeds and nutritional supplements, the main source of **carbohydrate** is either maltodextrin or glucose syrup; other carbohydrate sources are listed in the relevant table, below. Feeds containing residual lactose (less than 1 g lactose/100 mL formula) are described as 'clinically lactose-free' or 'lactose-free' by some manufacturers. The presence of lactose (including residual lactose) in feeds is indicated in the relevant table, below. The primary sources of **protein** or **amino acids** are included with each product entry. The **fat** or **oil** content is derived from a variety of sources such as vegetables, soya bean, corn, palm nuts, and seeds; where the fat content is derived from animal or fish sources, this information is included in the relevant table, below. The presence of medium chain triglycerides (MCT) is also noted where the quantity exceeds 30% of the fat content.
Enteral feeds and nutritional supplements can contain varying amounts of **vitamins**, **minerals**, and **trace elements**—the manufacturer's product literature should be consulted for more detailed information. Feeds containing vitamin K may affect the INR in patients receiving warfarin. The suitability of food products for patients requiring a vegan, kosher, halal, or other compliant diet should be confirmed with individual manufacturers.
Note Feeds containing more than 6 g/100 mL protein or 2 g/100 mL fibre should be avoided in children unless recommended by an appropriate specialist or dietician.

Nutritional values

Nutritional values of products vary with flavour and pack size—consult product literature.

Other conditions for which ACBS products can be prescribed

This is a list of clinical conditions for which the ACBS has approved toilet preparations.

Birthmarks

Dermatitis

Excema and Pruritus

Aveeno® Bath Oil; *Aveeno*® Cream; *Aveeno*® Lotion; *E45*® Emollient Bath Oil; *E45*® Emollient Wash Cream; *E45*® Lotion

Disfiguring skin lesions (birthmarks, mutilating lesions, scars, vitiligo)

Covermark® classic foundation and finishing powder; *Dermablend*® *Ultra* corrective foundation; *Dermacolor*® Camouflage cream and fixing powder; *Keromask*® masking cream and finishing powder; *Veil*® Cover cream and Finishing Powder. (Cleansing Creams, Cleansing Milks, and Cleansing Lotions are excluded).

Disinfectants (antiseptics)

May be prescribed on an FP10 only when ordered in such quantities and with such directions as are appropriate for

https://nhathuocngocanh.com/ www.getintopharma.com

the treatment of patients, but not for general hygenic purposes.

Dry mouth (xerostomia)

For patients suffering from dry mouth as a result of having (or having undergone) radiotherapy, or sicca syndrome.

AS Saliva Orthana®; *Biotène Oralbalance*®; *Glandosane*®; *Saliveze*®

Photodermatoses (skin protection in)

Anthelios® XL SPF 50+ Melt-in cream; *Sunsense*® Ultra; *Uvistat*® Lipscreen SPF 50, *Uvistat*® Suncream SPF 30 and 50

Standard ACBS indications: Disease-related malnutrition, intractable malabsorption, pre-operative preparation of malnourished patients, dysphagia, proven inflammatory bowel disease, following total gastrectomy, short-bowel syndrome, bowel fistula

https://nhathuocngocanh.com/ www.getintopharma.com

Table 1 Enteral feeds (non-disease specific)

Less than 5 g protein/100 mL

Enteral feeds: 1 kcal/mL and less than 5 g protein/100 mL

Not suitable for use in child under 1 year unless otherwise stated; not recommended for child 1-6 years

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 1500 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) **per 100 mL**	420 kJ (100 kcal)	3.8 g cows' milk soya	13 g (sugars 0.9 g)	3.4 g	1.5 g	Gluten-free Residual lactose Contains fish oil	Borderline substances standard ACBS indications p. 1500 except bowel fistula and pre-operative preparation of malnourished patients. Not suitable for child under 2 years	Fresubin 1500 Complete liquid: 1.5 litre = £14.05
Fresubin® Original (Fresenius Kabi Ltd)	Liquid (sip or tube feed) **per 100 mL**	420 kJ (100 kcal)	3.8 g cows' milk soya	13.8 g (sugars 3.5 g)	3.4 g	Nil	Gluten-free Residual lactose Contains fish gelatin Feed in flexible pack contains fish oil and fish gelatin	Borderline substances standard ACBS indications p. 1500	Fresubin Original drink: blackcurrant, chocolate, nut, peach, vanilla 200 ml = £2.28; Fresubin Original tube feed liquid: 1000 ml = £8.74; 1500 ml = £13.10; 500 ml = £4.41
Fresubin® Original Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) **per 100 mL**	420 kJ (100 kcal)	3.8 g cows' milk soya	13 g (sugars 0.9 g)	3.4 g	1.5 g	Gluten-free Residual lactose Contains fish oil	Borderline substances standard ACBS indications p. 1500 except bowel fistula and pre-operative preparation of malnourished patients. Not suitable for child under 2 years	Fresubin Original Fibre liquid: 500 ml = £4.99; 1000 ml = £9.96
Jevity® (Abbott Laboratories Ltd)	Liquid (tube feed) **per 100 mL**	449 kJ (107 kcal)	4 g caseinates	14.1 g (sugars 470 mg)	3.47 g	1.76 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1500 except bowel fistula. Not suitable for child under 2 years	Jevity liquid: 1000 ml = £10.59; 1500 ml = £15.85; 500 ml = £5.62
Nutrison® (Nutricia Ltd)	Liquid (tube feed) **per 100 mL**	420 kJ (100 kcal)	4 g cows' milk	12.3 g (sugars 1 g)	3.9 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1500	Nutrison liquid: 500 ml = £5.20; 500 ml = £4.68; 1000 ml = £9.12; 1500 ml = £13.68
Nutrison® Multi Fibre (Nutricia Ltd)	Liquid (tube feed) **per 100 mL**	420 kJ (100 kcal)	4 g cows' milk	12.3 g (sugars 1 g)	3.9 g	1.5 g	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1500 except bowel fistula	Nutrison Multi Fibre liquid: 1500 ml = £15.83; 500 ml = £5.62; 500 ml = £5.27; 1000 ml = £10.57
Osmolite® (Abbott Laboratories Ltd)	Liquid (tube feed) **per 100 mL**	424 kJ (100 kcal)	4 g caseinates soy isolate	13.6 g (sugars 630 mg)	3.4 g	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1500	Osmolite liquid: 500 ml = £5.21; 1000 ml = £9.14; 1500 ml = £13.71

SOYA PROTEIN FORMULA

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® Soya Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) **per 100 mL**	420 kJ (100 kcal)	3.8 g soya protein	13.3 g (sugars 4.1 g)	3.6 g	2 g	Gluten-free Lactose-free Contains fish oil	Borderline substances standard ACBS indications p. 1500; also cows' milk protein intolerance, lactose intolerance	Fresubin Soya Fibre liquid: 500 ml = £5.16
Nutrison® Soya (Nutricia Ltd)	Liquid (tube feed) **per 100 mL**	420 kJ (100 kcal)	4 g soy isolate	12.3 g (sugars 1 g)	3.9 g	Nil	Gluten-free Residual lactose Milk protein-free	Borderline substances standard ACBS indications p. 1500; also cows' milk protein and lactose intolerance	Nutrison Soya liquid: 500 ml = £5.61; 1000 ml = £11.23
Nutrison® Soya Multi Fibre (Nutricia Ltd)	Liquid (tube feed) **per 100 mL**	420 kJ (100 kcal)	4 g soy isolate	12.3 g (sugars 700 mg)	3.9 g	1.5 g	Gluten-free Residual lactose Milk protein-free	Borderline substances standard ACBS indications p. 1500 except bowel fistula; also cows' milk protein and lactose intolerance	Nutrison Soya Multi Fibre liquid: 1.5 litre = £18.68

PEPTIDE-BASED FORMULA

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Nutrison Peptisorb® (Nutricia Ltd)	Liquid (tube feed) **per 100 mL**	425 kJ (100 kcal)	4 g whey protein hydrolysate	17.6 g (sugars 1.7 g)	1.7 g (MCT 47 %)	Nil	Gluten-free Residual lactose	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula	Nutrison Peptisorb liquid: 500 ml = £7.44; 1000 ml = £14.74; 500 ml = £8.18
Peptamen® (Nestle Health Science)	Liquid (sip or tube feed) **per 100 mL**	420 kJ (100 kcal)	4 g whey peptides	12.7 g (sugars 480 mg)	3.7 g (MCT 70 %)	Nil	Gluten-free Residual lactose	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula	Peptamen liquid: vanilla 800 ml = £12.56; unflavoured 500 ml = £7.06; 1000 ml = £13.25
Survimed® OPD (Fresenius Kabi Ltd)	Liquid (tube feed) **per 100 mL**	420 kJ (100 kcal)	4.5 g whey protein hydrolysate	14.3 g (sugars 1.1 g)	2.8 g (MCT 51 %)	0.1 g	Gluten-free Residual lactose Contains fish oil	Borderline substances standard ACBS indications p. 1500; also growth failure	Survimed OPD: liquid 500 ml = £7.36; 800 ml = £13.60; 1000 ml = £14.72; HN liquid 500 ml = £7.09

Enteral feeds: Less than 1 kcal/mL and less than 5 g protein/100 mL

AMINO ACID FORMULA (ESSENTIAL AND NON-ESSENTIAL AMINO ACIDS)

Not suitable for use in child under 1 year unless otherwise stated; not recommended for child 1–6 years

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Elemental 028® Extra (Nutricia Ltd)	Liquid (sip feed) **per 100 mL**	360 kJ (86 kcal)	2.5 g (protein equivalent)	11 g (sugars 4.7 g)	3.5 g (MCT 35 %)	Nil		Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula	Elemental 028 Extra liquid: orange & pineapple, grapefruit, summer fruits 250 ml = £3.86
	Standard dilution (20 %) of powder (sip or tube feed) **per 100 mL**	374 kJ (89 kcal)	2.5 g (protein equivalent)	11.8 g (sugars 1.8 g)	3.5 g (MCT 35 %)	Nil		Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula.	Elemental 028 Extra powder: plain, orange, banana 100 gram = £7.49

Powder provides protein equivalent 12.5 g, carbohydrate 59 g, fat 17.45 g, energy 1871 kJ (443 kcal)/100 g.

Table 3 Specialised formulas

Specialised formulas: Infant and child see *BNF for Children*

Specialised formulas for specific clinical conditions

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Alicalm® (Nutricia Ltd)	Standard dilution (30%) of powder **per 100 mL**	567 kJ (135 kcal)	4.5 g caseinate whey	17.4 g (sugars 3.2 g)	5.3 g	Nil	Residual lactose	Crohn's disease Not suitable for child under 1 year; use as nutritional supplement only in children 1–6 years.	Alicalm oral powder: 400 gram = £22.53
Powder provides: protein 15 g, carbohydrate 58 g, fat 17.5 g, energy 1889 kJ (450 kcal)/100 g.									
Forticare® (Nutricia Ltd)	Liquid (sip feed) **per 100 mL.**	675 kJ (160 kcal)	9 g cows' milk	19.1 g (sugars 13.6 g)	5.3 g	2.1 g	Gluten-free Residual lactose Contains fish oil	Nutritional supplement in patients with lung cancer undergoing chemotherapy, or with pancreatic cancer Not suitable in child under 3 years	Forticare liquid: cappuccino, orange & lemon, peach & ginger 500 ml = £9.40
Heparon® Junior (Nutricia Ltd)	Standard dilution (18%) of powder **per 100 mL**	363 kJ (86 kcal)	2 g cows' milk	11.6 g (sugars 2.9 g)	3.6 g	Nil	Contains lactose Electrolytes/100 mL: Na^+ 0.56 mmol K^+ 1.9 mmol Ca^{2+} 2.3 mmol P^+ 1.6 mmol	Enteral feed or nutritional supplement for children with acute or chronic liver failure	Heparon Junior powder: 400 gram = £22.70
Powder provides: protein 11.1 g, carbohydrate 64.2 g, fat 19.9 g, energy 2016 kJ (480 kcal)/100 g.									
KetoCal® (Nutricia Ltd)	Standard dilution (20 %) of powder **per 100 mL**	602 kJ (146 kcal)	3.1 g cows' milk with additional amino acids	600 mg (sugars 120 mg)	14.6 g (LCT 100 %)	Nil	Electrolytes/100 mL: Na^+ 4.3 mmol K^+ 4.1 mmol Ca^{2+} 2.15 mmol P^+ 2.77 mmol	Enteral feed or nutritional supplement as part of ketogenic diet in management of epilepsy resistant to drug therapy, in children over 1 year, only on the advice of secondary care physician with experience of ketogenic diet.	KetoCal 4:1 powder: unflavoured, vanilla 300 gram = £31.96
Powder provides: protein 15.25 g, carbohydrate 3 g, fat 73 g, energy 3011 kJ (730 kcal)/100 g.									
KetoCal® 3:1 (Nutricia Ltd)	Standard dilution (9.5%) of powder **per 100 mL**	276 kJ (66 kcal)	1.5 g	680 mg (sugars 570 mg)	6.4 g	Nil	Electrolytes/100 mL: Na^+ 1.3 mmol K^+ 2.4 mmol Ca^{2+} 2 mmol P^+ 1.7 mmol	Enteral feed or nutritional supplement as part of ketogenic diet in management of drug resistant epilepsy or other conditions for which a ketogenic diet is indicated in children from birth to 6 years; as a nutritional supplement in children over 6 years.	KetoCal 3:1 powder: 300 gram = £30.93
Powder provides: protein 15.3 g, carbohydrate 7.2 g, fat 67.7 g, energy 2927 kJ (699 kcal)/100 g.									
KetoCal® 4:1 LQ (Nutricia Ltd)	Liquid (sip or tube feed) **per 100 mL**	620 kJ (150 kcal)	3.09 g casein and whey with additional amino acids	610 mg (sugars 230 mg)	14.8 g (LCT 100 %)	1.12 g	Residual lactose Electrolytes/100 mL: Na^+ 4.9 mmol K^+ 4.7 mmol Ca^{2+} 2.4 mmol P^+ 3.1 mmol	Enteral feed or nutritional supplement as part of ketogenic diet in management of drug resistant epilepsy or other conditions for which a ketogenic diet is indicated in children 1–10 years; as a nutritional supplement in children over 10 years.	KetoCal 4:1 LQ liquid: unflavoured, vanilla 200 ml = £4.56

https://nhathuocngocanh.com/ www.getintopharma.com

Kindergen® (Nutricia Ltd)	Standard dilution (20 %) of powder **per 100 mL**	421 kJ (101 kcal)	1.5 g whey protein	11.8 g (sugars 1.2 g)	5.3 g (LCT 93 %)	Nil	Electrolytes/100 mL: Na^+ 2 mmol K^+ 0.6 mmol Ca^{2+} 2.8 mmol P^+ 3 mmol Low Vitamin A	Enteral feed or nutritional supplement for children with chronic renal failure receiving peritoneal rapid overnight dialysis.	Kindergen powder: 400 gram = £30.47
Powder provides: protein 7.5 g, carbohydrate 59 g, fat 26.3 g, energy 2104 kJ (504 kcal)/100 g.									
Modulen IBD® (Nestle Health Science)	Standard dilution (20%) of powder (sip or tube feed) **per 100 mL**	420 kJ (100 kcal)	3.6 g casein	11 g (sugars 3.98 g)	4.7 g	Nil	Gluten-free Residual lactose	Crohn's disease active phase, and in remission if malnourished	Modulen IBD powder: 400 gram = £15.59
Powder provides: protein 18 g, carbohydrate 54 g, fat 23 g, energy 2070 kJ (500 kcal)/100 g.									
ProSure® (Abbott Laboratories Ltd)	Liquid (sip or tube feed) **per 100 mL**	536 kJ (127 kcal)	6.65 g cows' milk	18.3 g (sugars 2.95 g)	2.56 g	2.07 g	Gluten-free Residual lactose Contains fish oil	Nutritional supplement for patients with pancreatic cancer. Not suitable for child under 1 year; use with caution in child 1-4 years.	ProSure liquid: 220 ml = £3.47
Renamil® (Stanningley Pharma Ltd)	Powder (sip or tube feed when reconstituted) **per 100 g**	2003 kJ (477 kcal)	4.6 g cows' milk	70.8 g	19.3 g	Nil	Contains lactose Gluten-free Electrolytes/100 g: Na^+ 1.04 mmol K^+ 0.13 mmol Ca^{2+} 10.22 mmol P^+ 1.06 mmol Contains no vitamin A or vitamin D	Enteral feed or nutritional supplement for adults and children over 1 year with chronic renal failure.	Renamil powder: 1000 gram = £25.40
Renapro® (Stanningley Pharma Ltd)	Powder **per 100 g**	1580 kJ (372 kcal)	90 g whey protein	800 mg	1 g	Nil	Gluten-free Residual lactose Electrolytes/100 g: Na^+ 23 mmol K^+ 2 mmol Ca^{2+} 4.99 mmol P^+ 4.84 mmol	Nutritional supplement for biochemically proven hypoproteinaemia and patients undergoing dialysis. Not suitable for child under 1 year.	Renapro powder: 600 gram = £69.60
Powder provides: protein 18 g, energy 316 kJ (74 kcal)/20-g sachet.									
Renastart® (Vitaflo International Ltd)	Standard dilution (20%) of powder **per 100 mL**	414 kJ (99 kcal)	1.5 g cows' milk soya	12.5 g (sugars 1.3 g)	4.8 g	Nil	Contains lactose Electrolytes/100 mL: Na^+ 2.1 mmol K^+ 0.6 mmol Ca^{2+} 0.6 mmol P^+ 0.6 mmol	Dietary management of renal failure in child from birth to 10 years.	Renastart powder: 400 gram = £27.92
Powder provides: protein 7.5 g, carbohydrate 62.5 g, fat 23.8 g, energy 2071 kJ (494 kcal)/100 g.

Specialised formulas for specific clinical conditions (product list continued)

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Respifor® (Nutricia Ltd)	Liquid (sip feed) **per 100 mL**	633 kJ (150 kcal)	7.5 g cows' milk	22.5 g (sugars 6.4 g)	3.3 g	Nil	Contains lactose	Nutritional supplement for dietary management of disease-related malnutrition in patients with chronic obstructive pulmonary disease and body-mass index less than 20.	Respifor milkshake style liquid: chocolate, strawberry, vanilla 500 ml = £8.96
Supportan® (Fresenius Kabi Ltd)	Liquid (sip feed) **per 100 mL**	630 kJ (150 kcal)	10 g cows' milk	12.4 g (sugars 7.5 g)	6.7 g	1.5 g	Gluten-free Residual lactose Contains fish oil	Nutritional supplement in patients with pancreatic cancer or with lung cancer undergoing chemotherapy Not suitable for child under 1 year; use with caution in child 1-4 years	Supportan drink: cappuccino, tropical fruits 800 ml = £11.28

Table 4 Feed supplements

High-energy supplements

High-energy supplements: carbohydrate

Flavoured carbohydrate supplements are not suitable for child under 1 year; liquid supplements should be diluted before use in child under 5 years.

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Maxijul® Super Soluble (Nutricia Ltd)	Powder **per 100 g**	1615 kJ (380 kcal)	Nil	95 g Glucose polymer (sugars 8.6 g)	Nil	Nil	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high or readily available carbohydrate supplement.	Maxijul Super Soluble powder: 200 gram = £2.73; 528 gram = £6.80; 25000 gram = £163.10
Polycal® (Nutricia Ltd)	Liquid **per 100 mL**	1050 kJ (247 kcal)	Nil	61.9 g Maltodextrin (sugars 12.2 g)	Nil	Nil	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high or readily available carbohydrate supplement. Liquid not suitable for child under 3 years.	Polycal liquid: neutral, orange 200 ml = £1.81
	Powder **per 100 g**	1630 kJ (384 kcal)	Nil	96 g Maltodextrin (sugars 6 g)	Nil	Nil	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high or readily available carbohydrate supplement.	Polycal powder: 400 gram = £4.53
S.O.S.® (Vitaflo International Ltd)	Powder **per 100 g**	1590 kJ (380 kcal)	Nil	95 g (sugars 9 g)	Nil	Nil	*S.O.S.* products are age-range specific—consult product literature	For use as an emergency regimen in the dietary management of inborn errors of metabolism in adults and children from birth.	S.O.S.: 10 oral powder 21g sachets 30 sachet = £7.74; 15 oral powder 31g sachets 30 sachet = £11.43; 20 oral powder 42g sachets 30 sachet = £15.48; 25 oral powder 52g sachets 30 sachet = £19.15

Contents of each sachet should be reconstituted with water to a total volume of 200ml

https://nhathuocngocanh.com/ www.getintopharma.com

Vitajoule® (Vitaflo International Ltd)	Powder **per 100 g**	1590 kJ (380 kcal)	Nil	95 g Dried glucose syrup (sugars 9 g)	Nil	Nil	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high or readily available carbohydrate supplement.	Vitajoule powder: 500 gram = £4.63

High-energy supplements: fat

Liquid supplements should be diluted before use in child under 5 years

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Calogen® (Nutricia Ltd)	Liquid (emulsion) **per 100 mL**	1850 kJ (450 kcal)	Nil	100 mg	50 g (LCT 100 %)	Nil	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat (or fat and carbohydrate) supplement.	Calogen emulsion: banana 500 ml = £11.33; neutral 200 ml = £4.61; 500 ml = £11.33; strawberry 200 ml = £4.61; 500 ml = £11.33
Fresubin® 5 kcal Shot (Fresenius Kabi Ltd)	Liquid (emulsion) **per 100 mL**	2100 kJ (500 kcal)	Nil	4.0 g (sucrose)	53.8 g	400 mg	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat (or fat and carbohydrate) supplement. Not suitable for child under 3 years.	Fresubin 5kcal shot drink: lemon, neutral 480 ml = £11.84
Liquigen® (Nutricia Ltd)	Liquid (emulsion) **per 100 mL**	1850 kJ (450 kcal)	Nil	Nil	50 g (MCT 97 %) Fractionated coconut oil	Nil	Gluten-free Lactose-free	Steatorrhoea associated with cystic fibrosis of the pancreas, intestinal lymphangiectasia, intestinal surgery, chronic liver disease, liver cirrhosis, other proven malabsorption syndromes, ketogenic diet in epilepsy, and in type 1 lipoproteinaemia Not suitable for child under 1 year	Liquigen emulsion: 250 ml = £9.71
Medium-chain Triglyceride (MCT) Oil (Nutricia Ltd)	Liquid **per 100 mL**	3515 kJ (855 kcal)	Nil	Nil	MCT 100 %	Nil		Nutritional supplement for steatorrhoea associated with cystic fibrosis of the pancreas, intestinal lymphangiectasia, intestinal surgery, chronic liver disease and liver cirrhosis, other proven malabsorption syndromes, ketogenic diet in management of epilepsy, type 1 hyperlipoproteinaemia	MCT oil: 500 ml = £15.40

FAT AND CARBOHYDRATE

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Duocal® Super Soluble (Nutricia Ltd)	Powder **per 100 g**	2061 kJ (492 kcal)	Nil	72.7 g (sugars 6.5 g)	22.3 g (MCT 35 %)	Nil	Gluten-free Lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat (or fat and carbohydrate) supplement.	Duocal Super Soluble powder: 400 gram = £18.96
Energivit® (Nutricia Ltd)	Standard dilution (15%) of powder **per 100 mL**	309 kJ (74 kcal)	Nil	10 g (sugars 900 mg)	3.75 g	Nil	Lactose-free With vitamins, minerals, and trace elements	For children requiring additional energy, vitamins, minerals, and trace elements following a protein-restricted diet	Energivit powder: 400 gram = £23.06

Powder provides: carbohydrate 66.7 g, fat 25 g, energy 2059 kJ (492 kcal)/100 g.

High-energy supplements: protein

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
ProSource® Jelly (Nutrinovo Ltd)	Semi-solid **per 100 mL**	315 kJ (75 kcal)	16.9 g collagen protein hydrolysate whey protein isolate	Less than 1 g	Nil	Less than 1 g	Gluten-free Lactose-free Contains porcine derivatives	Hypoproteinaemia Not recommended for child under 3 years	ProSource jelly: fruit punch, orange 118 ml = £1.87
Protifar® (Nutricia Ltd)	Powder **per 100 g**	1580 kJ (373 kcal)	88.5 g cows' milk	less than 1.5 g	1.6 g	Nil	Gluten-free Residual lactose Electrolytes/100 mL: Na^+ 1.3 mmol K^+ 1.28 mmol Ca^{2+} 33.75 mmol P^+ 22.58 mmol	Nutritional supplement for use in biochemically proven hypoproteinaemia.	Protifar powder: 225 gram = £9.20

Powder provides: protein 2.2 g per 2.5 g scoopful.

PROTEIN AND CARBOHYDRATE

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Dialamine® (Nutricia Ltd)	Standard dilution (20%) of powder **per 100 mL**	264 kJ (62 kcal)	4.3 g protein equivalent (essential and non-essential amino acids)	11.2 g (sugars 10.2 g)	Nil	Nil	Contains vitamin C	Hypoproteinaemia, chronic renal failure, wound fistula leakage with excessive protein loss, conditions requiring a controlled nitrogen intake, and haemodialysis. Not suitable for child under 6 months.	Dialamine powder: 400 gram = £77.02

Powder provides: protein equivalent 25 g, carbohydrate 65 g, vitamin C 125 mg, energy 1530 kJ (360 kcal)/100 g.

ProSource® Liquid (Nutrinovo Ltd)	Liquid **per 30 mL**	420 kJ (100 kcal)	10 g collagen protein whey protein isolate	15 g (sugars 8 g)	Nil	Nil	Gluten-free Lactose-free May contain porcine derivatives	Biochemically proven hypoproteinaemia Not recommended for child under 3 years.	ProSource liquid 30ml sachets: citrus berry, lemon, orange creme, neutral 100 sachet = £101.16

https://nhathuocngocanh.com/ www.getintopharma.com

ProSource® Plus (Nutrinovo Ltd)	Liquid **per 30 mL**	420 kJ (100 kcal)	15 g collagen protein whey protein isolate	11 g (sugars 10 g)	Nil	Nil	Gluten-free Lactose-free May contain porcine derivatives	Hypoproteinaemia Not recommended for child under 3 years	ProSource Plus liquid 30ml sachets neutral: 100 sachet = £143.90
PROTEIN, FAT, AND CARBOHYDRATE									
Product	**Formulation**	**Energy**	**Protein**	**Carbohydrate**	**Fat**	**Fibre**	**Special Characteristics**	**ACBS Indications**	**Presentation & Flavour**
Calogen® Extra (Nutricia Ltd)	Liquid **per 100 mL**	1650 kJ (400 kcal)	5 g cows' milk	4.5 g (sugars 3.5 g)	40.3 g	Nil	Gluten-free Residual lactose Contains vitamins and minerals	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat or carbohydrate (with protein) supplement. Not suitable for child under 3 years; use with caution in child 3-6 years. May require dilution for child 3-5 years.	Calogen Extra emulsion: neutral, strawberry 200 ml = £4.98
Calogen® Extra Shots (Nutricia Ltd)	Liquid **per 100 mL**	1650 kJ (400 kcal)	5 g cows' milk	4.5 g (sugars 3.5 g)	40.3 g	Nil	Gluten-free Residual lactose With vitamins and minerals	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat or carbohydrate (with protein) supplement. Not suitable for child under 3 years; use with caution in child 3-6 years. May require dilution for child 3-5 years.	Calogen Extra Shots emulsion: neutral, strawberry 240 ml = £5.75
Calshake® (Fresenius Kabi Ltd)	Powder **per 87 g**	1841 kJ (439 kcal)	4.1 g cows' milk	56.4 g (sugars 20 g)	22 g	Nil	Contains lactose Gluten-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat or carbohydrate (with protein) supplement. Not suitable for child under 1 year.	Calshake powder: banana, neutral, strawberry, vanilla 609 gram = £17.71; chocolate 630 gram = £17.71
Powder: one sachet reconstituted with 240 mL whole milk provides approx. 2 kcal/mL and protein 12 g.									
Enshake® (Abbott Laboratories Ltd)	Powder **per 100 g**	1893 kJ (450 kcal)	8.4 g cows' milk, soy protein isolate	69 g (sugars 14.5 g)	15.6 g	Nil	Residual lactose Contains vitamins and minerals	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat or carbohydrate (with protein) supplement. Not suitable for child under 1 year; use with caution in child 1-6 years.	Enshake oral powder 96.5g sachets: banana, chocolate, strawberry, vanilla 6 sachet = £14.68
Powder: 96.5 g reconstituted with 240 mL whole milk provides approx. 2 kcal/mL and protein 16 g.									
MCT Procal® (Vitaflo International Ltd)	Powder **per 100 g**	2742 kJ (657 kcal)	12.5 g cows' milk	20.6 g (sugars 3.1 g)	63.1 g (MCT 99%)	Nil	Contains lactose	Dietary management of disorders of long-chain fatty acid oxidation, fat malabsorption, and other disorders requiring a low LCT, high MCT supplement. Not suitable for child under 1 year.	MCT procal oral powder 16g sachets: 30 sachet = £25.15
Powder 16 g provides: protein 2 g, carbohydrate 3.3 g, fat 10.1 g, energy 439 kJ (105 kcal).

▸ Nutritional supplement for the dietary management of type 1 glutaric aciduria in children and adults; requires additional source of vitamins, minerals, and trace elements.
POWDER, protein equivalent (essential and non-essential amino acids except lysine and tryptophan) 79 g, carbohydrate 4 g, energy 1411 kJ (332 kcal)/100 g.

XLYS TRY Glutaridon powder (Nutricia Ltd)
500 gram (ACBS) · NHS indicative price = £195.11

Glycogen storage disease

Corn flour and corn starch
▸ For glycogen storage disease

Glycosade ®
▸ A nutritional supplement for use in the dietary management of glycogen storage disease and other metabolic conditions where a constant supply of glucose is essential. Not suitable for use in children under 2 years.
POWDER, protein 200 mg, carbohydrate (maize starch) 47.6 g, fat 100 mg, fibre less than 600 mg, energy 803 kJ (192 kcal)/60 g.

Glycosade oral powder 60g sachets (Vitaflo International Ltd)
30 sachet (ACBS) · NHS indicative price = £118.21

Homocystinuria or hypermethioninaemia

HCU Anamix ® **Infant**
▸ Nutritional supplement for the dietary management of proven vitamin B6 non-responsive homocystinuria or hypermethioninaemia in children from birth to 3 years.
POWDER, protein equivalent (essential and non-essential amino acids except methionine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

HCU Anamix Infant powder (Nutricia Ltd)
400 gram (ACBS) · NHS indicative price = £40.79

HCU cooler ® **15**
▸ A methionine-free protein substitute for use as a nutritional supplement in children over 3 years with homocystinuria.
LIQUID, protein (essential and non-essential amino acids except methionine) 15 g, carbohydrate 7 g, fat 500 mg, energy 393 kJ (92 kcal)/130 mL, with vitamins, minerals, and trace elements.

HCU orange cooler 15 liquid (Vitaflo International Ltd)
130 ml (ACBS) · NHS indicative price = £11.87

HCU Express ® **15**
▸ A methionine-free protein substitute for use as a nutritional supplement in children over 8 years with homocystinuria.
POWDER, protein (essential and non-essential amino acids except methionine) 15 g, carbohydrate 3.8 g, fat 30 mg, energy 315 kJ (75.3 kcal)/25 g with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1521.

HCU express 15 oral powder 25g sachets (Vitaflo International Ltd)
30 sachet (ACBS) · NHS indicative price = £349.27

HCU Express ® **20**
▸ A methionine-free protein substitute for use as a nutritional supplement in children over 8 years with homocystinuria.
POWDER, protein (essential and non-essential amino acids except methionine) 20 g, carbohydrate 4.7 g, fat 70 mg, energy 416 kJ (99 kcal)/34 g with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1521

HCU express 20 oral powder 34g sachets (Vitaflo International Ltd)
30 sachet (ACBS) · NHS indicative price = £451.25

HCU gel ®
▸ A methionine-free protein substitute for use as a nutritional supplement for the dietary management of children 1–10 years with homocystinuria.
POWDER, protein (essential and non-essential amino acids except methionine) 10 g, carbohydrate 10.3 g, fat 20 mg, energy 339 kJ (81 kcal)/24 g with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1521.

HCU gel oral powder 24g sachets (Vitaflo International Ltd)
30 sachet (ACBS) · NHS indicative price = £224.86

HCU Lophlex ® **LQ 20**
▸ Nutritional supplement for the dietary management of homocystinuria in children over 3 years.
LIQUID, protein equivalent (essential and non-essential amino acids except methionine) 20 g, carbohydrate 8.8 g, fat 440 mg, energy 509 kJ (120 kcal)/125 mL, with vitamins, minerals, and trace elements.

HCU Lophlex LQ 20 liquid (Nutricia Ltd)
125 ml (ACBS) · NHS indicative price = £16.82

HCU LV ®
▸ Nutritional supplement for the dietary management of hypermethioninaemia or vitamin B6 non-responsive homocystinuria in children over 8 years.
POWDER, protein (essential and non-essential amino acids except methionine) 20 g, carbohydrate 2.5 g, fat 190 mg, energy 390 kJ (92 kcal)/27.8-g sachet, with vitamins, minerals, and trace elements.

XMET Homidon ®
▸ Nutritional supplement for the dietary management of hypermethioninaemia or homocystinuria in children and adults.

https://nhathuocngocanh.com/ www.getintopharma.com

POWDER, protein equivalent (essential and non-essential amino acids, except methionine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g.

XMET Homidon powder (Nutricia Ltd)
500 gram (ACBS) · NHS indicative price = £195.11

HCU Maxamum ®
▸ Nutritional supplement for the dietary management of hypermethioninaemia or homocystinuria.
POWDER, protein equivalent (essential and non-essential amino acids except methionine) 39 g, carbohydrate 34 g, fat less than 500 mg, energy 1260 kJ (297 kcal)/100 g, with vitamins, minerals, and trace elements. Maxamum products are generally intended for use in children over 8 years.

HCU Maxamum powder (Nutricia Ltd)
500 gram (ACBS) · NHS indicative price = £165.09

Hyperlysinaemia

HYPER LYS Anamix ® Infant
▸ Nutritional supplement for the dietary management of proven hyperlysinaemia in children from birth to 3 years.
POWDER, protein equivalent (essential and non-essential amino acids except lysine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

HYPER LYS Anamix Infant powder (Nutricia Ltd)
400 gram (ACBS) · NHS indicative price = £40.79

HYPER LYS Maxamaid ®
▸ Nutritional supplement for the dietary management of hyperlysinaemia.
POWDER, protein equivalent (essential and non-essential amino acids except lysine) 25 g, carbohydrate 51 g, fat less than 500 mg, energy 1311 kJ (309 kcal)/100 g with vitamins, minerals, and trace elements. Maxamaid products are generally intended for use in children 1-8 years.

HYPER LYS Maxamaid powder (Nutricia Ltd)
500 gram (ACBS) · NHS indicative price = £103.00

Isovaleric acidaemia

IVA Anamix ® Infant
▸ Nutritional supplement for the dietary management of proven isovaleric acidaemia or other proven disorders of leucine metabolism in children from birth to 3 years.
POWDER, protein equivalent (essential and non-essential amino acids except leucine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

IVA Anamix Infant powder (Nutricia Ltd)
400 gram (ACBS) · NHS indicative price = £40.79

Maple syrup urine disease

MSUD Aid III ®
▸ Nutritional supplement for the dietary management of maple syrup urine disease and related conditions in children and adults where it is necessary to limit the intake of branched chain amino acids.
POWDER, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g.

MSUD Aid 111 powder (Nutricia Ltd)
500 gram (ACBS) · NHS indicative price = £195.11

MSUD Anamix ® Infant
▸ Nutritional supplement for the dietary management of proven maple syrup urine disease in children from birth to 3 years.
POWDER, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

MSUD Anamix Infant powder (Nutricia Ltd)
400 gram (ACBS) · NHS indicative price = £40.79

MSUD Anamix ® Junior
▸ Nutritional supplement for the dietary management of maple syrup urine disease in children 1–10 years.
POWDER, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 8.4 g, carbohydrate 11 g, fat 3.9 g, energy 474 kJ (113 kcal)/29-g sachet, with vitamins, minerals, and trace elements.

MSUD Anamix Junior oral powder 36 g sachets (Nutricia Ltd)
30 sachet (ACBS) · NHS indicative price = £218.10

MSUD Anamix ® Junior LQ
▸ Nutritional supplement for the dietary management of maple syrup urine disease in children 1–10 years.
LIQUID, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 10 g, carbohydrate 8.8 g, fat 4.8 g, fibre 310 mg, energy 497 kJ (118 kcal)/125 mL, with vitamins, minerals, and trace elements. Lactose-free.

MSUD Anamix Junior LQ liquid (Nutricia Ltd)
125 ml (ACBS) · NHS indicative price = £9.46

MSUD cooler ® 15
▸ Nutritional supplement for the dietary management of maple syrup urine disease in children over 3 years and adults.
LIQUID, protein equivalent (essential and non-essential amino acids except leucine, isoleucine, and valine) 15 g, carbohydrate 7 g, fat 500 mg, energy 393 kJ (92 kcal)/130-mL pouch, with vitamins, minerals, and trace elements.

MSUD orange cooler 15 liquid (Vitaflo International Ltd)

Methylmalonic or propionic acidaemia

MMA/PA Anamix ® **Infant**
▸ Nutritional supplement for the dietary management of proven methylmalonic acidaemia or propionic acidaemia in children from birth to 3 years.
POWDER, protein equivalent (essential and non-essential amino acids except methionine, threonine, and valine, and low isoleucine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

MMA / PA Anamix Infant powder (Nutricia Ltd)
400 gram (ACBS) · NHS indicative price = £40.79

XMTVI Asadon ®
▸ Nutritional supplement for the dietary management of methylmalonic acidaemia or propionic acidaemia in children and adults.
POWDER, protein equivalent (essential and non-essential amino acids except methionine, threonine, and valine, and low isoleucine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g.

XMTVI Asadon powder (Nutricia Ltd)
200 gram (ACBS) · NHS indicative price = £78.04

MMA/PA Maxamum ®
▸ Nutritional supplement for the dietary management of methylmalonic acidaemia or propionic acidaemia.
POWDER, protein equivalent (essential and non-essential amino acids except methionine, threonine, and valine, and low isoleucine) 39 g, carbohydrate 34 g, fat less than 500 mg, energy 1260 kJ (297 kcal)/100 g, with vitamins, minerals, and trace elements. Maxamum products are generally intended for use in children over 8 years.

MMA/PA Maxamum powder (Nutricia Ltd)
500 gram (ACBS) · NHS indicative price = £165.09

Other inborn errors of metabolism

Cystine500 ®
▸ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.
POWDER, cystine 500 mg, carbohydrate 3.3 g, fat nil, energy 63 kJ (15 kcal)/4 g

Cystine500 oral powder sachets (Vitaflo International Ltd)
30 sachet (ACBS) · NHS indicative price = £57.14

DocOmega ®
▸ Nutritional supplement for the dietary management of inborn errors of metabolism for adults and children from birth.
POWDER, protein (cows' milk, soya) 100 mg, carbohydrate 3.2 g, fat 500 mg (of which docosahexaenoic acid 200 mg), fibre nil, energy 74 kJ (18 kcal)/4 g, with minerals

DocOmega oral powder 4g sachets (Vitaflo International Ltd)
30 sachet (ACBS) · NHS indicative price = £41.35

EAA ® **Supplement**
▸ Nutritional supplement for the dietary management of disorders of protein metabolism including urea cycle disorders in children over 3 years.
POWDER, protein equivalent (essential amino acids) 5 g, carbohydrate 4 g, fat nil, energy 151 kJ (36 kcal)/12.5 g, with vitamins, minerals, and trace elements.

EAA Supplement oral powder 12.5g sachets (Vitaflo International Ltd)
50 sachet (ACBS) · NHS indicative price = £215.60

Isoleucine50 ®
▸ Nutritional supplement for use in the dietary management of inborn errors of amino acid metabolism in adults and children from birth.
POWDER, isoleucine 50 mg, carbohydrate 3.8 g, fat nil, energy 63 kJ (15 kcal)/4 g

Isoleucine50 oral powder 4g sachets (Vitaflo International Ltd)
30 sachet (ACBS) · NHS indicative price = £57.14

KeyOmega ®
▸ Nutritional supplement for the dietary management of inborn errors of metabolism.
POWDER, protein (cows' milk, soya) 170 mg, carbohydrate 2.8 g, fat 800 mg (of which arachidonic acid 200 mg, docosahexaenoic acid 100 mg), energy 80 kJ (19 kcal)/4 g.

KeyOmega oral powder 4g sachets (Vitaflo International Ltd)
30 sachet (ACBS) · NHS indicative price = £42.29

Leucine100 ®
▸ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.
POWDER, leucine 100 mg, carbohydrate 3.7 g, fat nil, energy 63 kJ (15 kcal)/4 g

Leucine100 oral powder sachets (Vitaflo International Ltd)
30 sachet (ACBS) · NHS indicative price = £57.14

Low protein drink
▸ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children over 1 year.
POWDER, protein (cows' milk) 4.5 g (phenylalanine 100 mg), carbohydrate 59.5 g, fat 29.9 g, fibre nil, energy 2194 kJ (528 kcal)/100 g, with vitamins, minerals, and trace elements. Contains lactose.
Termed *Milupa* ® *lp-drink* by manufacturer.

Milupa LP drink (Nutricia Ltd)
400 gram (ACBS) · NHS indicative price = £9.68

Phenylalanine50 ®
▸ Nutritional supplement for use in the dietary management of inborn errors of metabolism in adults and children from birth.
POWDER, phenylalanine 50 mg, carbohydrate 3.8 g, fat nil, energy 63 kJ (15 kcal)/4 g

Phenylalanine50 oral powder sachets (Vitaflo International Ltd)
30 sachet (ACBS) · NHS indicative price = £55.48

ProZero ®
▸ A protein-free nutritional supplement for the dietary management of inborn errors of metabolism in children over 6 months and adults.
LIQUID, carbohydrate 8.1 g (of which sugars 3.5 g), fat 3.8 g, energy 278 kJ (66 kcal)/100 mL. Contains lactose.

ProZero liquid (Vitaflo International Ltd)
250 ml (ACBS) · NHS indicative price = £1.52 | 1000 ml (ACBS) · NHS indicative price = £6.09

Tyrosinaemia

Methionine-free TYR Anamix ® **Infant**
▸ Nutritional supplement for the dietary management of proven tyrosinaemia type 1 in children from birth to 3 years.
POWDER, protein equivalent (essential and non-essential amino acids except methionine, phenylalanine, and tyrosine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

TYR Anamix Infant methionine free powder (Nutricia Ltd)
400 gram (ACBS) · NHS indicative price = £40.79

TYR Anamix ® **Infant**
▸ Nutritional supplement for the dietary management of proven tyrosinaemia where plasma-methionine concentrations are normal in children from birth to 3 years.
POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

TYR Anamix Infant methionine free powder (Nutricia Ltd)
400 gram (ACBS) · NHS indicative price = £40.79

TYR Anamix Infant powder (Nutricia Ltd)
400 gram (ACBS) · NHS indicative price = £40.79

TYR Anamix ® **Junior**
▸ Nutritional supplement for the dietary management of proven tyrosinaemia in children 1–10 years.
POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 8.4 g, carbohydrate 11 g, fat 3.9 g, energy 475 kJ (113 kcal)/29-g sachet, with vitamins, minerals, and trace elements.

TYR Anamix Junior oral powder 29g sachets (Nutricia Ltd)
30 sachet (ACBS) · NHS indicative price = £206.40

TYR Anamix ® **Junior LQ**
▸ Nutritional supplement for the dietary management of tyrosinaemia type 1 (when nitisinone (NTBC) is used, see nitisinone p. 1035), type II, and type III, in children over 1 year.
LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 10 g,carbohydrate 8.8 g, fat 4.8 g, fibre 310 mg, energy 500 kJ (119 kcal)/125 mL, with vitamins, minerals and trace elements.

TYR Anamix Junior LQ liquid (Nutricia Ltd)
125 ml (ACBS) · NHS indicative price = £9.46

TYR cooler ® **15**
▸ Nutritional supplement for the dietary management of tyrosinaemia in children over 3 years and adults.
LIQUID, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 15 g, carbohydrate 7 g, fat 500 mg, energy 393 kJ (92 kcal)/130 mL, with vitamins, minerals, and trace elements.

TYR orange cooler 15 liquid (Vitaflo International Ltd)
130 ml (ACBS) · NHS indicative price = £11.87

TYR red cooler 10 liquid (Vitaflo International Ltd)
87 ml (ACBS) · NHS indicative price = £7.60

TYR red cooler 15 liquid (Vitaflo International Ltd)
130 ml (ACBS) · NHS indicative price = £11.87

TYR red cooler 20 liquid (Vitaflo International Ltd)
174 ml (ACBS) · NHS indicative price = £15.89

TYR express15 ®
▸ Nutritional supplement for the dietary management of tyrosinaemia in children over 8 years and adults.
POWDER, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 15 g, carbohydrate 3.4 g, fat less than 100 mg, energy 310 kJ (74 kcal)/25 g, with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1521.

TYR express 15 oral powder 25g sachets (Vitaflo International Ltd)
30 sachet (ACBS) · NHS indicative price = £349.27

TYR express20 ®
▸ Nutritional supplement for the dietary management of tyrosinaemia in children over 8 years.
POWDER, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 20 g, carbohydrate 4.7 g, fat less than 100 mg, energy 416 kJ (99 kcal)/34 g, with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1521.

TYR express 20 oral powder 34g sachets (Vitaflo International Ltd)
30 sachet (ACBS) · NHS indicative price = £451.25

TYR Gel ®
▸ Nutritional supplement for the dietary management of tyrosinaemia in children 1–10 years.
GEL, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 10 g, carbohydrate 10.3 g, fat less than 100 mg, energy 339 kJ (81 kcal)/24 g, with vitamins, minerals and trace elements. To flavour unflavoured products, see FlavourPac p. 1521.

TYR gel oral powder 24g sachets (Vitaflo International Ltd)
30 sachet (ACBS) · NHS indicative price = £224.86

TYR Lophlex ® **LQ 20**
▸ Nutritional supplement for the dietary management of tyrosinaemia in children over 3 years and adults.
LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 20 g, carbohydrate 8.8 g, fat less than 500 mg, fibre 500 mg, energy 509 kJ (120 kcal)/125 mL, with vitamins, minerals, and trace elements.

TYR Lophlex LQ 20 liquid (Nutricia Ltd)
125 ml (ACBS) · NHS indicative price = £16.82

XPHEN TYR Tyrosidon ®
▸ Nutritional supplement for the management of tyrosinaemia in children and adults where plasma-methionine concentrations are normal.
POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g.

XPHEN TYR Tyrosidon Free AA Mix powder (Nutricia Ltd)
500 gram (ACBS) · NHS indicative price = £195.11

https://nhathuocngocanh.com/ www.getintopharma.com

XPTM Tyrosidon ®

▸ Nutritional supplement for the dietary management of tyrosinaemia type I in children and adults where plasma-methionine concentrations are above normal.
POWDER, protein equivalent (essential and non-essential amino acids except methionine, phenylalanine, and tyrosine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g.

XPTM Tyrosidon powder (Nutricia Ltd)
500 gram • NHS indicative price = £91.31

https://nhathuocngocanh.com/ www.getintopharma.com

Appendix 3
Cautionary and advisory labels for dispensed medicines

Guidance for cautionary and advisory labels

Medicinal forms within BNF publications include code numbers of the cautionary labels that pharmacists are recommended to add when dispensing. It is also expected that pharmacists will counsel patients and carers when necessary.

Counselling needs to be related to the age, experience, background, and understanding of the individual patient or carer. The pharmacist should ensure understanding of how to take or use the medicine and how to follow the correct dosage schedule. Any effects of the medicine on co-ordination, performance of skilled tasks (e.g. driving or work), any foods or medicines to be avoided, and what to do if a dose is missed should also be explained. Other matters, such as the possibility of staining of the clothes or skin, or discolouration of urine or stools by a medicine should also be mentioned.

For some medicines there is a special need for counselling, such as an unusual method or time of administration or a potential interaction with a common food or domestic remedy, and this should be mentioned where necessary.

Original packs

Most preparations are dispensed in unbroken original packs that include further advice for the patient in the form of patient information leaflets. Label 10 may be of value where appropriate. More general leaflets advising on the administration of preparations such as eye drops, eye ointments, inhalers, and suppositories are also available.

Scope of labels

In general no label recommendations have been made for injections on the assumption that they will be administered by a healthcare professional or a well-instructed patient. The labelling is not exhaustive and pharmacists are recommended to use their professional discretion in labelling new preparations and those for which no labels are shown.

Individual labelling advice is not given on the administration of the large variety of antacids. In the absence of instructions from the prescriber, and if on enquiry the patient has had no verbal instructions, the directions given under 'Dose' should be used on the label.

It is recognised that there may be occasions when pharmacists will use their knowledge and professional discretion and decide to omit one or more of the recommended labels for a particular patient. In this case counselling is of the utmost importance. There may also be an occasion when a prescriber does not wish additional cautionary labels to be used, in which case the prescription should be endorsed 'NCL' (no cautionary labels). The exact wording that is required instead should then be specified on the prescription.

Pharmacists label medicines with various wordings in addition to those directions specified on the prescription. Such labels include 'Shake the bottle', 'For external use only', and 'Store in a cool place', as well as 'Discard.... days after opening' and 'Do not use after....', which apply particularly to antibiotic mixtures, diluted liquid and topical preparations, and to eye-drops. Although not listed in the BNF these labels should continue to be used when appropriate; indeed, 'For external use only' is a legal requirement on external liquid preparations, while 'Keep out of the reach of children' is a legal requirement on all dispensed medicines. Care should be taken not to obscure other relevant information with adhesive labelling.

It is the usual practice for patients to take standard tablets with water or other liquid and for this reason no separate label has been recommended.

The label wordings recommended by the BNF apply to medicines dispensed against a prescription. Patients should be aware that a dispensed medicine should never be taken by, or shared with, anyone other than for whom the prescriber intended it. Therefore, the BNF does not include warnings against the use of a dispensed medicine by persons other than for whom it was specifically prescribed.

The label or labels for each preparation are recommended after careful consideration of the information available. However, it is recognised that in some cases this information may be either incomplete or open to a different interpretation. The BNF will therefore be grateful to receive any constructive comments on the labelling suggested for any preparation.

Recommended label wordings

For BNF 61 (March 2011), a revised set of cautionary and advisory labels were introduced. All of the existing labels were user-tested, and the revised wording selected reflects terminology that is better understood by patients.

Wordings which can be given as separate warnings are labels 1–19, 29–30, and 32. Wordings which can be incorporated in an appropriate position in the directions for dosage or administration are labels 21–28. A label has been omitted for number 20; labels 31 and 33 no longer apply to any medicines in the BNF and have therefore been deleted.

If separate labels are used it is recommended that the wordings be used without modification. If changes are made to suit computer requirements, care should be taken to retain the sense of the original.

Welsh labels

Comprehensive Welsh translations are available for each cautionary and advisory label.

Labels

1 Warning: This medicine may make you sleepy

Rhybudd: Gall y feddyginiaeth hon eich gwneud yn gysglyd

To be used on *preparations for children* containing antihistamines, or other preparations given to children where the warnings of label 2 on driving or alcohol would not be appropriate.

2 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol

Rhybudd: Gall y feddyginiaeth hon eich gwneud yn gysglyd. Peidiwch â gyrru, defnyddio offer llaw neu beiriannau os yw hyn yn digwydd. Peidiwch ag yfed alcohol

To be used on *preparations for adults that can cause drowsiness*, thereby affecting coordination and the ability to drive and operate hazardous machinery; label 1 is more appropriate for children. *It is an offence to drive while under the influence of drink or drugs*.

Some of these preparations only cause drowsiness in the first few days of treatment and some only cause drowsiness in higher doses.

In such cases the patient should be told that the advice applies until the effects have worn off. However many of these preparations can produce a slowing of reaction time and a loss of mental concentration that can have the same effects as drowsiness.

Avoidance of alcoholic drink is recommended because the effects of CNS depressants are enhanced by alcohol. Strict prohibition however could lead to some patients not taking the medicine. Pharmacists should therefore explain the risk

https://nhathuocngocanh.com/ www.getintopharma.com

and encourage compliance, particularly in patients who may think they already tolerate the effects of alcohol (see also label 3). Queries from patients with epilepsy regarding fitness to drive should be referred back to the patient's doctor.

Side-effects unrelated to drowsiness that may affect a patient's ability to drive or operate machinery safely include *blurred vision, dizziness, or nausea*. In general, no label has been recommended to cover these cases, but the patient should be suitably counselled.

3 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines

Rhybudd: Gall y feddyginiaeth hon eich gwneud yn gysglyd. Peidiwch â gyrru, defnyddio offer llaw neu beiriannau os yw hyn yn digwydd

To be used on *preparations containing monoamine-oxidase inhibitors*; the warning to avoid alcohol and dealcoholised (low alcohol) drink is covered by the patient information leaflet.

Also to be used as for label 2 but where alcohol is not an issue.

4 Warning: Do not drink alcohol

Rhybudd: Peidiwch ag yfed alcohol

To be used on *preparations where a reaction such as flushing may occur if alcohol is taken* (e.g. metronidazole). Alcohol may also enhance the hypoglycaemia produced by some oral antidiabetic drugs but routine application of a warning label is not considered necessary.

Patients should be advised not to drink alcohol for as long as they are receiving/using a course of medication, and in some cases for a period of time after the course is finished.

5 Do not take indigestion remedies 2 hours before or after you take this medicine

Peidiwch â chymryd meddyginiaethau camdreuliad 2 awr cyn neu ar ôl y feddyginiaeth hon

To be used with label 25 on *preparations coated to resist gastric acid* (e.g. enteric-coated tablets). This is to avoid the possibility of premature dissolution of the coating in the presence of an alkaline pH.

Label 5 also applies to drugs such as gabapentin *where the absorption is significantly affected by antacids*. Pharmacists will be aware (from a knowledge of physiology) that the usual time during which indigestion remedies should be avoided is at least 2 hours before and after the majority of medicines have been taken; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.

6 Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine

Peidiwch â chymryd meddyginiaethau camdreuliad neu feddyginiaethau sy'n cynnwys haearn neu sinc, 2 awr cyn neu ar ôl y feddyginiaeth hon

To be used on *preparations containing ofloxacin and some other quinolones, doxycycline, lymecycline, minocycline, and penicillamine* . These drugs chelate calcium, iron, and zinc and are less well absorbed when taken with calcium-containing antacids or preparations containing iron or zinc. Pharmacists will be aware (from a knowledge of physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.

7 Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine

Peidiwch â chymryd llaeth, meddyginiaethau camdreuliad, neu feddyginiaeth sy'n cynnwys haearn neu sinc, 2 awr cyn neu ar ôl cymryd y feddyginiaeth hon

To be used on *preparations containing ciprofloxacin, norfloxacin, or tetracyclines that chelate calcium, iron, magnesium, and zinc,* and are thus less available for absorption. Pharmacists will be aware (from a knowledge of physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient. Doxycycline, lymecycline, and minocycline are less liable to form chelates and therefore only require label 6 (see above).

8 Warning: Do not stop taking this medicine unless your doctor tells you to stop

Rhybudd: Peidiwch â stopio cymryd y feddyginiaeth hon, oni bai fod eich meddyg yn dweud wrthych am stopio

To be used on *preparations that contain a drug which is required to be taken over long periods without the patient necessarily perceiving any benefit* (e.g. antituberculous drugs).

Also to be used on *preparations that contain a drug whose withdrawal is likely to be a particular hazard* (e.g. clonidine for hypertension). Label 10 (see below) is more appropriate for corticosteroids.

9 Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop

Gadewch yr un faint o amser rhwng pob dôs yn ystod y dydd. Parhewch i gymryd y feddyginiaeth nes bod y cyfan wedi'i orffen, oni bai eich bod yn cael cyngor i stopio

To be used on *preparations where a course of treatment should be completed* to reduce the incidence of relapse or failure of treatment.

The preparations are antimicrobial drugs given by mouth. Very occasionally, some may have severe side-effects (e.g. diarrhoea in patients receiving clindamycin) and in such cases the patient may need to be advised of reasons for stopping treatment quickly and returning to the doctor.

10 Warning: Read the additional information given with this medicine

Rhybudd: Darllenwch y wybodaeth ychwanegol gyda'r feddyginiaeth hon

To be used particularly on *preparations containing anticoagulants, lithium, and oral corticosteroids* . The appropriate treatment card should be given to the patient and any necessary explanations given.

This label may also be used on other preparations to remind the patient of the instructions that have been given.

11 Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds

Diogelwch eich croen rhag golau'r haul, hyd yn oed ar ddiwrnod braf ond cymylog. Peidiwch â defnyddio gwely haul

To be used on *preparations that may cause phototoxic or photoallergic reactions* if the patient is exposed to ultraviolet radiation. Exposure to high intensity ultraviolet radiation from sunray lamps and sunbeds is particularly likely to cause reactions.

12 Do not take anything containing aspirin while taking this medicine

Peidiwch â chymryd unrhyw beth sy'n cynnwys aspirin gyda'r feddyginiaeth hon

To be used on *preparations containing sulfinpyrazone* whose activity is reduced by aspirin.

Label 12 should not be used for anticoagulants since label 10 is more appropriate.

13 Dissolve or mix with water before taking

Gadewch i doddi mewn dŵr cyn ei gymryd

To be used on *preparations that are intended to be dissolved in water* (e.g. soluble tablets) or *mixed with water* (e.g. powders, granules) before use. In a few cases other liquids such as fruit juice or milk may be used.

14 This medicine may colour your urine. This is harmless

Gall y feddyginiaeth hon liwio eich dŵr. Nid yw hyn yn arwydd o ddrwg

To be used on *preparations that may cause the patient's urine to turn an unusual colour* . These include triamterene (blue under some lights), levodopa (dark reddish), and rifampicin (red).

https://nhathuocngocanh.com/ www.getintopharma.com

15 **Caution: flammable. Keep your body away from fire or flames after you have put on the medicine**

Rhybudd: Fflamadwy. Ar ôl rhoi'r feddyginiaeth ymlaen, cadwch yn glir o dân neu fflamau

To be used on *preparations containing sufficient flammable solvent to render them flammable if exposed to a naked flame* .

16 **Dissolve the tablet under your tongue—do not swallow. Store the tablets in this bottle with the cap tightly closed. Get a new supply 8 weeks after opening**

Rhowch y dabled i doddi dan eich tafod - peidiwch â'i lyncu. Cadwch y tabledi yn y botel yma gyda'r caead wedi'i gau yn dynn. Gofynnwch am dabledi newydd 8 wythnos ar ôl ei hagor

To be used on *glyceryl trinitrate tablets* to remind the patient not to transfer the tablets to plastic or less suitable containers.

17 **Do not take more than... in 24 hours**

Peidiwch â chymryd mwy na... mewn 24 awr

To be used on *preparations for the treatment of acute migraine* except those containing ergotamine, for which label 18 is used. The dose form should be specified, e.g. tablets or capsules.

It may also be used on preparations for which no dose has been specified by the prescriber.

18 **Do not take more than... in 24 hours. Also, do not take more than... in any one week**

Peidiwch â chymryd mwy na... mewn 24 awr. Hefyd, peidiwch â chymryd mwy na... mewn wythnos

To be used on preparations containing ergotamine. The dose form should be specified, e.g. tablets or suppositories.

19 **Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink alcohol**

Rhybudd: Bydd y feddyginiaeth hon yn eich gwneud yn gysglyd. Os ydych yn dal i deimlo'n gysglyd drannoeth, peidiwch â gyrru, defnyddio offer llaw neu beiriannau. Peidiwch ag yfed alcohol

To be used on *preparations containing hypnotics (or some other drugs with sedative effects) prescribed to be taken at night* . On the rare occasions when hypnotics are prescribed for daytime administration (e.g. nitrazepam in epilepsy), this label would clearly not be appropriate. Also to be used as an *alternative to the label 2 wording* (the choice being at the discretion of the pharmacist) *for anxiolytics prescribed to be taken at night*.

It is hoped that this wording will convey adequately the problem of residual morning sedation after taking 'sleeping tablets'.

21 **Take with or just after food, or a meal**

Cymerwch gyda neu ar ôl bwyd

To be used on *preparations that are liable to cause gastric irritation, or those that are better absorbed with food* .

Patients should be advised that a *small amount of food is sufficient*.

22 **Take 30 to 60 minutes before food**

Cymerwch 30 i 60 munud cyn bwyd

To be used on some preparations *whose absorption is thereby improved.*

Most oral antibacterials require label 23 instead (see below).

23 **Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food**

Cymerwch y feddyginiaeth hon ar stumog wag. Mae hyn yn golygu awr cyn, neu 2 awr ar ôl bwyd

To be used on *oral antibacterials whose absorption may be reduced by the presence of food and acid in the stomach* .

24 **Suck or chew this medicine**

Bydd angen cnoi neu sugno'r feddyginiaeth hon

To be used on *preparations that should be sucked or chewed*.

The pharmacist should use discretion as to which of these words is appropriate.

25 **Swallow this medicine whole. Do not chew or crush**

Llyncwch yn gyfan. Peidiwch â chnoi neu falu'n fân

To be used on *preparations that are enteric-coated or designed for modified-release*.

Also to be used on *preparations that taste very unpleasant or may damage the mouth* if not swallowed whole.

Patients should be advised (where relevant) that some modified-release preparations can be broken in half, but that the halved tablet should still be swallowed whole, and not chewed or crushed.

26 **Dissolve this medicine under your tongue**

Gadewch i'r feddyginiaeth hon doddi o dan y tafod

To be used on *preparations designed for sublingual use*. Patients should be advised to hold under the tongue and avoid swallowing until dissolved. The buccal mucosa between the gum and cheek is occasionally specified by the prescriber.

27 **Take with a full glass of water**

Cymerwch gyda llond gwydr o ddŵr

To be used on *preparations that should be well diluted* (e.g. chloral hydrate), *where a high fluid intake is required* (e.g. sulfonamides), or *where water is required to aid the action* (e.g. methylcellulose). The patient should be advised that 'a full glass' means at least 150 mL. In most cases fruit juice, tea, or coffee may be used.

28 **Spread thinly on the affected skin only**

Taenwch yn denau ar y croen sydd wedi'i effeithio yn unig

To be used on *external preparations* that should be applied sparingly (e.g. corticosteroids, dithranol).

29 **Do not take more than 2 at any one time. Do not take more than 8 in 24 hours**

Peidiwch â chymryd mwy na 2 ar unrhyw un adeg. Peidiwch â chymryd mwy nag 8 mewn 24 awr

To be used on containers of dispensed *solid dose preparations containing paracetamol for adults when the instruction on the label indicates that the dose can be taken on an 'as required' basis* . The dose form should be specified, e.g. tablets or capsules.

This label has been introduced because of the serious consequences of overdosage with paracetamol.

30 **Contains paracetamol. Do not take anything else containing paracetamol while taking this medicine. Talk to a doctor at once if you take too much of this medicine, even if you feel well**

Yn cynnwys paracetamol. Peidiwch â chymryd unrhyw beth arall sy'n cynnwys paracetamol tra'n cymryd y feddyginiaeth hon. Siaradwch gyda'ch meddyg ar unwaith os ydych yn cymryd gormod, hyd yn oed os ydych yn teimlo'n iawn

To be used on all containers of dispensed *preparations containing paracetamol*.

32 **Contains aspirin. Do not take anything else containing aspirin while taking this medicine**

Yn cynnwys aspirin. Peidiwch â chymryd unrhyw beth arall sy'n cynnwys aspirin tra'n cymryd y feddyginiaeth hon

To be used on containers of dispensed *preparations containing aspirin when the name on the label does not include the word 'aspirin'* .

The correct dressing for wound management depends not only on the type of wound but also on the stage of the healing process. The principal stages of healing are: cleansing, removal of debris; granulation, vascularisation; epithelialisation. The ideal dressing for moist wound healing needs to ensure that the wound remains: moist with exudate, but not macerated; free of clinical infection and excessive slough; free of toxic chemicals, particles or fibres; at the optimum temperature for healing; undisturbed by the need for frequent changes; at the optimum pH value. As wound healing passes through its different stages, different types of dressings may be required to satisfy better one or other of these requirements. Under normal circumstances, a moist environment is a necessary part of the wound healing process; exudate provides a moist environment and promotes healing, but excessive exudate can cause maceration of the wound and surrounding healthy tissue. The volume and viscosity of exudate changes as the wound heals. There are certain circumstances where moist wound healing is not appropriate (e.g. gangrenous toes associated with vascular disease).

Advanced wound dressings are designed to control the environment for wound healing, for example to donate fluid (hydrogels), maintain hydration (hydrocolloids), or to absorb wound exudate (alginates, foams).

Practices such as the use of irritant cleansers and desloughing agents may be harmful and are largely obsolete; removal of debris and dressing remnants should need minimal irrigation with lukewarm sterile sodium chloride 0.9% solution or water.

Hydrogel, hydrocolloid, and medical grade honey dressings can be used to deslough wounds by promoting autolytic debridement; there is insufficient evidence to support any particular method of debridement for difficult-to-heal surgical wounds. Sterile larvae (maggots) are also available for biosurgical removal of wound debris.

There have been few clinical trials able to establish a clear advantage for any particular product. The choice between different dressings depends not only on the type and stage of the wound, but also on patient preference or tolerance, site of the wound, and cost. For further information, see Buyers' Guide: Advanced wound dressings (October 2008); NHS Purchasing and Supply Agency, Centre for Evidence-based Purchasing.

Prices quoted in Appendix 4 are basic NHS net prices; for further information see *Prices in the BNF* under How to use the BNF.

The table below gives suggestions for choices of primary dressing depending on the type of wound (a secondary dressing may be needed in some cases).

Basic wound contact dressings

Low adherence dressing

Low adherence dressings are used as interface layers under secondary absorbent dressings. Placed directly on the wound bed, non-absorbent, low adherence dressings are suitable for clean, granulating, lightly exuding wounds without necrosis, and protect the wound bed from direct contact with secondary dressings. Care must be taken to avoid granulation tissue growing into the weave of these dressings.

Wound contact material for different types of wounds

Wound PINK (epithelialising)

Low Exudate	Moderate Exudate
Low adherence p. 1537 Vapour-permeable film p. 1541 Soft polymer p. 1542 Hydrocolloid p. 1544	Soft ploymer p. 1542 Foam, low absorbent p. 1545 Alginate p. 1547

Wound RED (granulating)
Symptoms or signs of infection, see Wounds with signs of infection

Low Exudate	Moderate Exudate	Heavy Exudate
Low adherence p. 1537 Soft polymer p. 1542 Hydrocolloid p. 1544 Foam, low absorbent p. 1545	Hydrocolloid-fibrous p. 1544 Foam p. 1545 Alginate p. 1547	Foam with extra absorbency p. 1545 Hydrocolloid-fibrous p. 1544 Alginate p. 1547

Wound YELLOW (Sloughy) (granulating)
Symptoms or signs of infection, see Wounds with signs of infection

Low Exudate	Moderate Exudate	Heavy Exudate
Hydrogel p. 1540 Hydrocolloid p. 1544	Hydrocolloid-fibrous p. 1544 Alginate p. 1547	Hydrocolloid-fibrous p. 1544 Alginate p. 1547 Capillary-action p. 1547

Wound BLACK (Necrotic/ Eschar)
Consider mechanical debridement alongside autolytic debridement

Low Exudate	Moderate Exudate	Heavy Exudate
Hydrogel p. 1540 Hydrocolloid p. 1544	Hydrocolloid p. 1544 Hydrocolloid-fibrous p. 1544 Foam p. 1545	Seek advice from wound care specialist

Wounds with signs of infection
Consider systemic antibacterials if appropriate; also consider odour-absorbent dressings. For malodourous wounds with slough or necrotic tissue, consider mechanical or autolytic debridement

Low Exudate	Moderate Exudate	Heavy Exudate
Low adherence with honey p. 1548 Low adherence with iodine p. 1548 Low adherence with silver p. 1550 Hydrocolloid with silver p. 1550	Hydrocolloid-fibrous with silver p. 1550 Foam with silver p. 1550 Alginate with silver p. 1549 Honey-topical p. 1548 Cadexomer-iodine p. 1548	Hydrocolloid-fibrous with silver p. 1550 Foam extra absorbent, with silver p. 1550 Alginate with honey p. 1548 Alginate with silver p. 1549

Note In each section of this table the dressings are listed in order of increasing absorbency.
Some wound contact (primary) dressings require a secondary dressing

Tulle dressings are manufactured from cotton or viscose fibres which are impregnated with white or yellow soft paraffin to prevent the fibres from sticking, but this is only partly successful and it may be necessary to change the dressings frequently. The paraffin reduces absorbency of the dressing. Dressings with a reduced content (light loading) of soft paraffin are less liable to interfere with absorption; dressings with 'normal loading' (such as Jelonet®) have been used for skin graft transfer. Knitted viscose primary dressing is an alternative to tulle dressings for exuding wounds; it can be used as the initial layer of multi-layer compression bandaging in the treatment of venous leg ulcers.

Knitted polyester primary dressing

Atrauman
Non-adherent knitted polyester primary dressing impregnated with neutral triglycerides
Atrauman dressing (Paul Hartmann Ltd) 10cm × 20cm= £0.80, 20cm × 30cm= £2.20, 5cm × 5cm= £0.34, 7.5cm × 10cm= £0.35

Knitted viscose primary dressing

N-A Dressing
Warp knitted fabric manufactured from a bright viscose monofilament.
N-A dressing (Systagenix Wound Management Ltd) 19cm × 9.5cm= £0.67, 9.5cm × 9.5cm= £0.35

N-A Ultra
Warp knitted fabric manufactured from a bright viscose monofilament.
N-A Ultra dressing (Systagenix Wound Management Ltd) 19cm × 9.5cm= £0.63, 9.5cm × 9.5cm= £0.33

Profore
Warp knitted fabric manufactured from a bright viscose monofilament.
Profore (Smith & Nephew Healthcare Ltd) wound contact layer 14cm × 20cm= £0.32

Tricotex
Warp knitted fabric manufactured from a bright viscose monofilament.
Tricotex dressing (Smith & Nephew Healthcare Ltd) 9.5cm × 9.5cm= £0.35

Paraffin Gauze Dressing

Cuticell
(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading
Cuticell (BSN medical Ltd) Classic dressing 10cm × 10cm= £0.29

Jelonet
(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading
Jelonet dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £0.42

https://nhathuocngocanh.com/ www.getintopharma.com

Neotulle
(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading
Neotulle (Neomedic Ltd) dressing 10cm × 10cm= £0.29

Absorbent dressings

Perforated film absorbent dressings are suitable only for wounds with mild to moderate amounts of exudate; they are not appropriate for leg ulcers or for other lesions that produce large quantities of viscous exudate. Dressings with an absorbent cellulose or polymer wadding layer are suitable for use on moderately to heavily exuding wounds.

Absorbent cellulose dressing

CelluDress
Absorbent Cellulose Dressing with Fluid Repellent Backing
CelluDress dressing (Medicareplus International Ltd) 10cm × 10cm= £0.19, 10cm × 15cm= £0.20, 10cm × 20cm= £0.22, 15cm × 20cm= £0.30, 20cm × 25cm= £0.40, 20cm × 30cm= £0.85

Eclypse
Absorbent Cellulose Dressing with Fluid Repellent Backing
Eclypse (Advancis Medical) Boot dressing 60cm × 70cm= £13.88, dressing 15cm × 15cm= £0.98, 20cm × 30cm= £2.16, 60cm × 40cm= £8.21

Exu-Dry
Absorbent Cellulose Dressing with Fluid Repellent Backing
Exu-Dry dressing (Smith & Nephew Healthcare Ltd) 10cm × 15cm= £1.15, 15cm × 23cm= £2.34, 23cm × 38cm= £5.44

Mesorb
Cellulose wadding pad with gauze wound contact layer and non-woven repellent backing
Mesorb dressing (Molnlycke Health Care Ltd) 10cm × 10cm= £0.63, 10cm × 15cm= £0.82, 10cm × 20cm= £1.01, 15cm × 20cm= £1.44, 20cm × 25cm= £2.27, 20cm × 30cm= £2.57

Zetuvit E
Absorbent Cellulose Dressing with Fluid Repellent Backing; sterile or non-sterile
Zetuvit (Paul Hartmann Ltd) E non-sterile dressing 10cm × 10cm= £0.07, 10cm × 20cm= £0.09, 20cm × 20cm= £0.15, 20cm × 40cm= £0.28, sterile dressing 10cm × 10cm= £0.22, 10cm × 20cm= £0.25, 20cm × 20cm= £0.40, 20cm × 40cm= £1.12

Absorbent perforated dressing

Adpore
Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.
Adpore dressing (Medicareplus International Ltd) 10cm × 10cm= £0.10, 10cm × 15cm= £0.16, 10cm × 20cm= £0.30, 10cm × 25cm= £0.34, 10cm × 30cm= £0.42, 10cm × 35cm= £0.50, 7cm × 8cm= £0.08

Cosmopore E
Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.
Cosmopor E dressing (Paul Hartmann Ltd) 10cm × 20cm= £0.46, 10cm × 25cm= £0.57, 10cm × 35cm= £0.79, 5cm × 7.2cm= £0.08, 8cm × 10cm= £0.18, 8cm × 15cm= £0.28

Cutiplast Steril
Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.
Cutiplast Steril dressing (Smith & Nephew Healthcare Ltd) 10cm × 20cm= £0.31, 10cm × 25cm= £0.32, 10cm × 30cm= £0.43, 8cm × 10cm= £0.11, 8cm × 15cm= £0.25

Leukomed
Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.
Leukomed dressing (BSN medical Ltd) 10cm × 20cm= £0.44, 10cm × 25cm= £0.49, 10cm × 30cm= £0.64, 10cm × 35cm= £0.74, 5cm × 7.2cm= £0.09, 8cm × 10cm= £0.19, 8cm × 15cm= £0.33

Medipore + Pad
Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.
Medipore + Pads dressing (3M Health Care Ltd) 10cm × 10cm= £0.15, 10cm × 15cm= £0.25, 10cm × 20cm= £0.37, 10cm × 25cm= £0.46, 10cm × 35cm= £0.64, 5cm × 7.2cm= £0.07

Medisafe
Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.
Medisafe dressing (Neomedic Ltd) 6cm × 8cm= £0.08, 8cm × 10cm= £0.13, 8cm × 12cm= £0.23, 9cm × 15cm= £0.29, 9cm × 20cm= £0.34, 9cm × 25cm= £0.36

Mepore
Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.
Mepore dressing (Molnlycke Health Care Ltd) 10cm × 11cm= £0.22, 11cm × 15cm= £0.36, 7cm × 8cm= £0.11, 9cm × 20cm= £0.44, 9cm × 25cm= £0.61, 9cm × 30cm= £0.70, 9cm × 35cm= £0.76

PremierPore
Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.
PremierPore dressing (Shermond) 10cm × 10cm= £0.12, 10cm × 15cm= £0.18, 10cm × 20cm= £0.32, 10cm × 25cm= £0.36, 10cm × 30cm= £0.45, 10cm × 35cm= £0.52, 5cm × 7cm= £0.05

Primapore
Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.
Primapore dressing (Smith & Nephew Healthcare Ltd) 10cm × 20cm= £0.44, 10cm × 25cm= £0.51, 10cm × 30cm= £0.64, 10cm × 35cm= £0.98, 6cm × 8.3cm= £0.18, 8cm × 10cm= £0.20, 8cm × 15cm= £0.34

Softpore
Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.
Softpore dressing (Richardson Healthcare Ltd) 10cm × 10cm= £0.13, 10cm × 15cm= £0.20, 10cm × 20cm= £0.35, 10cm × 25cm= £0.40, 10cm × 30cm= £0.49, 10cm × 35cm= £0.58, 6cm × 7cm= £0.06

Telfa Island
Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.
Telfa Island dressing (H & R Healthcare Ltd) 10cm × 12.5cm= £0.27, 10cm × 20cm= £0.35, 10cm × 25.5cm= £0.45, 10cm × 35cm= £0.62, 5cm × 10cm= £0.08

Absorbent perforated plastic film faced dressing

Absopad
Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.
Absopad dressing (Medicareplus International Ltd) 10cm × 10cm= £0.13, 20cm × 10cm= £0.28

Askina Pad
Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.
Askina (B.Braun Medical Ltd) Pad dressing 10cm × 10cm= £0.21

Melolin
Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.
Melolin dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £0.28, 20cm × 10cm= £0.55, 5cm × 5cm= £0.17

Skintact
Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.
Skintact dressing (Robinson Healthcare) 10cm × 10cm= £0.17, 20cm × 10cm= £0.34, 5cm × 5cm= £0.10

Solvaline N
Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.
Solvaline N dressing (Lohmann & Rauscher) 10cm × 10cm= £0.18, 20cm × 10cm= £0.36, 5cm × 5cm= £0.10

https://nhathuocngocanh.com/ www.getintopharma.com

Telfa
Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.
Telfa dressing (H & R Healthcare Ltd) 10cm × 7.5cm= £0.16, 15cm × 7.5cm= £0.18, 20cm × 7.5cm= £0.29, 7.5cm × 5cm= £0.12

Super absorbent cellulose and polymer primary dressing
Curea P1
Super absorbent cellulose and polymer primary dressing.
Curea P1 dressing (Charles S. Bullen Stomacare Ltd) 10cm × 10cm square= £2.15, 10cm × 20cm rectangular= £3.64, 10cm × 30cm rectangular= £5.20, 12cm × 12cm square= £2.65, 20cm × 20cm square= £6.89, 20cm × 30cm rectangular= £10.03, 7.5cm × 7.5cm square= £1.72

Curea P2
Super absorbent cellulose and polymer primary dressing (non-adherent)
Curea P2 dressing (Charles S. Bullen Stomacare Ltd) 10cm × 20cm rectangular= £4.49, 11cm × 11cm square= £2.47, 20cm × 20cm square= £7.82, 20cm × 30cm rectangular= £10.60

Cutisorb Ultra
Super absorbent cellulose and polymer primary dressing
Cutisorb Ultra dressing (BSN medical Ltd) 10cm × 10cm square= £2.13, 10cm × 20cm rectangular= £3.56, 20cm × 20cm square= £6.68, 20cm × 30cm rectangular= £10.06

DryMax Extra
Super absorbent cellulose and polymer primary dressing
DryMax Extra Soft dressing (Espere Healthcare Ltd) 10cm × 10cm square= £0.87, 10cm × 20cm rectangular= £1.04, 20cm × 20cm square= £1.84, 20cm × 30cm rectangular= £2.33

Zetuvit Plus
Super absorbent cellulose primary dressing
Zetuvit Plus dressing (Paul Hartmann Ltd) 10cm × 10cm= £0.83, 10cm × 20cm= £1.15, 15cm × 20cm= £1.32, 20cm × 25cm= £1.80, 20cm × 40cm= £2.79

Super absorbent hydroconductive dressing
Drawtex
Super absorbent hydroconductive dressing with absorbent, cross-action structures of viscose, polyester and cotton
Drawtex dressing (Martindale Pharmaceuticals Ltd) 10cm × 1.3m= £16.00, 10cm × 10cm= £2.24, 10cm × 1m= £16.00, 15cm × 20cm= £6.00, 20cm × 1m= £25.00, 20cm × 20cm= £6.98, 5cm × 5cm= £0.95, 7.5cm × 1m= £15.50, 7.5cm × 7.5cm= £1.77

Advanced wound dressings

Advanced wound dressings can be used for both acute and chronic wounds. Categories for dressings in this section start with the least absorptive, moisture-donating hydrogel dressings, followed by increasingly more absorptive dressings. These dressings are classified according to their primary component; some dressings are comprised of several components.

Hydrogel dressings

Hydrogel dressings are most commonly supplied as an amorphous, cohesive topical application that can take up the shape of a wound. A secondary, non-absorbent dressing is needed. These dressings are generally used to donate liquid to dry sloughy wounds and facilitate autolytic debridement of necrotic tissue; some also have the ability to absorb very small amounts of exudate. Hydrogel products that do not contain propylene glycol should be used if the wound is to be treated with larval therapy. Hydrogel sheets have a fixed structure and limited fluid-handling capacity; hydrogel sheet dressings are best avoided in the presence of infection, and are unsuitable for heavily exuding wounds.

Hydrogel application (amorphous)
ActivHeal Hydrogel
Hydrogel containing guar gum and propylene glycol
ActivHeal (Advanced Medical Solutions Ltd) Hydrogel dressing= £1.41

Aquaform
Hydrogel containing modified starch copolymer
AquaForm (Aspen Medical Europe Ltd) Hydrogel dressing= £2.04

Askina Gel
Hydrogel containing modified starch and glycerol
Askina (B.Braun Medical Ltd) Gel dressing= £2.05

Cutimed
Hydrogel
Cutimed (BSN medical Ltd) Gel dressing= £3.08

Flexigran
Hydrogel containing modified starch and glycerol
Flexigran (A1 Pharmaceuticals) Gel dressing= £1.90

GranuGel
Hydrogel containing carboxymethylcellulose, pectin and propylene glycol
GranuGEL (ConvaTec Ltd) Hydrocolloid Gel dressing= £2.37

Intrasite Gel
Hydrogel containing modified carmellose polymer and propylene glycol
IntraSite (Smith & Nephew Healthcare Ltd) Gel dressing= £3.65

Nu-Gel
Hydrogel containing alginate and propylene glycol
Nu-Gel (Systagenix Wound Management Ltd) dressing= £2.09

Purilon Gel
Hydrogel containing carboxymethylcellulose and calcium alginate
Purilon (Coloplast Ltd) Gel dressing= £2.31

Hydrogel sheet dressings
ActiFormCool
Hydrogel dressing
ActiFormCool sheet (L&R Medical UK Ltd) 10cm × 10cm square= £2.68, 10cm × 15cm rectangular= £3.86, 20cm × 20cm square= £8.08, 5cm × 6.5cm rectangular= £1.83

Aquaflo
Hydrogel dressing
Aquaflo (Covidien (UK) Commercial Ltd) sheet 7.5cm discs= £2.60

Coolie
Hydrogel dressing (without adhesive border)
Coolie (Zeroderma Ltd) sheet 7cm discs= £1.96

Gel FX
Hydrogel dressing (without adhesive border)
Gel FX sheet (Synergy Health (UK) Ltd) 10cm × 10cm square= £1.60, 15cm × 15cm square= £3.20

Geliperm
Hydrogel sheets
Geliperm (Geistlich Sons Ltd) sheet 10cm × 10cm square= £2.53

Hydrosorb
Absorbent, transparent, hydrogel sheets containing polyurethane polymers covered with a semi-permeable film
Hydrosorb sheet (Paul Hartmann Ltd) 10cm × 10cm square= £2.29, 20cm × 20cm square= £6.87, 5cm × 7.5cm rectangular= £1.60

Hydrosorb Comfort
Absorbent, transparent, hydrogel sheets containing polyurethane polymers covered with a semi-permeable film (with adhesive border, waterproof)
Hydrosorb Comfort sheet (Paul Hartmann Ltd) 12.5cm × 12.5cm square= £3.66, 4.5cm × 6.5cm rectangular= £1.90, 7.5cm × 10cm rectangular= £2.52

Intrasite Conformable
Soft non-woven dressing impregnated with Intrasite ® gel
IntraSite Conformable dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £1.84, 10cm × 20cm rectangular= £2.48, 10cm × 40cm rectangular= £4.43

Novogel
Glycerol-based hydrogel sheets (standard or thin)
Novogel sheet (Ford Medical Associates Ltd) 10cm × 10cm square= £3.18, 15cm × 20cm rectangular= £6.07, 20cm × 40cm rectangular= £11.56, 30cm × 30cm (0.15cm thickness) square= £12.71, (0.30cm thickness) square= £13.47, 5cm × 7.5cm rectangular= £1.99, 7.5cm diameter circular= £2.89

https://nhathuocngocanh.com/ www.getintopharma.com

SanoSkin NET
Hydrogel sheet (without adhesive border)
SanoSkin (Ideal Medical Solutions Ltd) NET sheet 8.5cm × 12cm rectangular= £2.28

Vacunet
Non-adherent, hydrogel coated polyester net dressing
Vacunet dressing (Protex Healthcare Ltd) 10cm × 10cm square= £1.93, 10cm × 15cm rectangular= £2.86

Sodium hyaluronate dressings
The hydrating properties of sodium hyaluronate promote wound healing, and dressings can be applied directly to the wound, or to a primary dressing (a secondary dressing should also be applied). The iodine and potassium iodide in these dressings prevent the bacterial decay of sodium hyaluronate in the wound.
Hyiodine® should be used with caution in thyroid disorders.

Hyiodine
Sodium hyaluronate 1.5%, potassium iodide 0.15%, iodine 0.1%, in a viscous solution

Vapour-permeable films and membranes
Vapour-permeable films and membranes allow the passage of water vapour and oxygen but are impermeable to water and micro-organisms, and are suitable for lightly exuding wounds. They are highly conformable, provide protection, and a moist healing environment; transparent film dressings permit constant observation of the wound. Water vapour loss can occur at a slower rate than exudate is generated, so that fluid accumulates under the dressing, which can lead to tissue maceration and to wrinkling at the adhesive contact site (with risk of bacterial entry). Newer versions of these dressings have increased moisture vapour permeability. Despite these advances, vapour-permeable films and membranes are unsuitable for infected, large heavily exuding wounds, and chronic leg ulcers. Vapour-permeable films and membranes are suitable for partial-thickness wounds with minimal exudate, or wounds with eschar. Most commonly, they are used as a secondary dressing over alginates or hydrogels; film dressings can also be used to protect the fragile skin of patients at risk of developing minor skin damage caused by friction or pressure.

Non-woven fabric dressing with viscose-rayon pad.
Niko Fix
For intravenous and subcutaneous catheter sites
Niko (Unomedical Ltd) Fix dressing 7cm × 8.5cm= £0.20

Vapour-permeable Adhesive Film Dressing (Semi-permeable Adhesive Dressing)
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces.

Askina Derm
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
Askina Derm dressing (B.Braun Medical Ltd) 10cm × 12cm= £1.10, 10cm × 20cm= £2.10, 15cm × 20cm= £2.54, 20cm × 30cm= £4.55, 6cm × 7cm= £0.38

C-View
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
C-View dressing (Aspen Medical Europe Ltd) 10cm × 12cm= £1.03, 12cm × 12cm= £1.10, 15cm × 20cm= £2.38, 6cm × 7cm= £0.38

Dressfilm
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
Dressfilm (St Georges Medical Ltd) dressing 15cm × 20cm= £1.90

Hydrofilm
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
Hydrofilm dressing (Paul Hartmann Ltd) 10cm × 12.5cm= £0.43, 10cm × 15cm= £0.54, 10cm × 25cm= £0.83, 12cm × 25cm= £0.88, 15cm × 20cm= £0.99, 20cm × 30cm= £1.63, 6cm × 7cm= £0.23

Hypafix Transparent
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
Hypafix Transparent (BSN medical Ltd) dressing 10cm × 2m= £8.95

Leukomed T
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
Leukomed T dressing (BSN medical Ltd) 10cm × 12.5cm= £1.04, 11cm × 14cm= £1.26, 15cm × 20cm= £2.42, 15cm × 25cm= £2.58, 7.2cm × 5cm= £0.38, 8cm × 10cm= £0.71

Mepitel Film
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
Mepitel Film dressing (Molnlycke Health Care Ltd) 10.5cm × 12cm= £1.32, 10.5cm × 25cm= £2.57, 15.5cm × 20cm= £3.26, 6.5cm × 7cm= £0.49

Mepore Film
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
Mepore Film dressing (Molnlycke Health Care Ltd) 10cm × 12cm= £1.24, 10cm × 25cm= £2.41, 15cm × 20cm= £3.06, 6cm × 7cm= £0.46

OpSite Flexifix
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
OpSite Flexifix dressing (Smith & Nephew Healthcare Ltd) 10cm × 1m= £6.72, 5cm × 1m= £3.98

OpSite Flexigrid
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
OpSite Flexigrid dressing (Smith & Nephew Healthcare Ltd) 12cm × 12cm= £1.15, 15cm × 20cm= £2.91, 6cm × 7cm= £0.40

Polyskin II
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
Kendall Film dressing (H & R Healthcare Ltd) 10cm × 12cm= £1.03, 10cm × 20cm= £2.04, 15cm × 20cm= £2.35, 20cm × 25cm= £4.11, 4cm × 4cm= £0.36, 5cm × 7cm= £0.40

ProtectFilm
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
ProtectFilm dressing (Wallace, Cameron & Company Ltd) 10cm × 12cm= £0.20, 15cm × 20cm= £0.40, 6cm × 7cm= £0.11

Suprasorb F
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
Suprasorb F dressing (Lohmann & Rauscher) 10cm × 12cm= £0.82, 15cm × 20cm= £2.56, 5cm × 7cm= £0.34

Tegaderm
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
Tegaderm Film dressing (3M Health Care Ltd) 12cm × 12cm= £1.11, 15cm × 20cm= £2.41, 6cm × 7cm= £0.39

https://nhathuocngocanh.com/ www.getintopharma.com

Tegaderm diamond
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
Tegaderm Diamond dressing (3M Health Care Ltd) 10cm × 12cm= £1.21, 6cm × 7cm= £0.45

Vellafilm
Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces
Vellafilm dressing (Advancis Medical) 12cm × 12cm= £1.11, 12cm × 35cm= £2.77, 15cm × 20cm= £2.12

Vapour-permeable Adhesive Film Dressing with absorbent pad
Adpore Ultra
Film dressing with adsorbent pad
Adpore Ultra dressing (Medicareplus International Ltd) 10cm × 10cm= £0.14, 10cm × 15cm= £0.22, 10cm × 20cm= £0.33, 10cm × 25cm= £0.35, 10cm × 30cm= £0.52, 7cm × 8cm= £0.12

Vapour-permeable Adhesive Film Dressing with adsorbent pad
Alldress
Film dressing with adsorbent pad
Alldress dressing (Molnlycke Health Care Ltd) 10cm × 10cm= £0.97, 15cm × 15cm= £2.11, 15cm × 20cm= £2.61

C-View Post-Op
Film dressing with adsorbent pad
C-View Post-Op dressing (Aspen Medical Europe Ltd) 10cm × 12cm= £1.11, 10cm × 25cm= £1.61, 10cm × 35cm= £2.62, 6cm × 7cm= £0.40

Clearpore
Film dressing with adsorbent pad
Clearpore dressing (Richardson Healthcare Ltd) 10cm × 10cm= £0.20, 10cm × 15cm= £0.24, 10cm × 20cm= £0.36, 10cm × 25cm= £0.40, 10cm × 30cm= £0.65, 6cm × 10cm= £0.15, 6cm × 7cm= £0.12

Hydrofilm Plus
Film dressing with adsorbent pad
Hydrofilm Plus dressing (Paul Hartmann Ltd) 10cm × 20cm= £0.46, 10cm × 25cm= £0.61, 10cm × 30cm= £0.69, 7.2cm × 5cm= £0.18, 9cm × 10cm= £0.27, 9cm × 15cm= £0.30

Leukomed T Plus
Film dressing with adsorbent pad
Leukomed T plus dressing (BSN medical Ltd) 10cm × 20cm= £1.37, 10cm × 25cm= £1.54, 10cm × 30cm= £2.58, 10cm × 35cm= £3.13, 7.2cm × 5cm= £0.27, 8cm × 10cm= £0.55, 8cm × 15cm= £0.82

Mepore Film & Pad
Film dressing with adsorbent pad
Mepore Film & Pad dressing (Molnlycke Health Care Ltd) 4cm × 5cm= £0.24, 5cm × 7cm= £0.25, 9cm × 10cm= £0.63, 9cm × 15cm= £0.92, 9cm × 20cm= £1.37, 9cm × 25cm= £1.51, 9cm × 30cm= £2.03, 9cm × 35cm= £2.52

Mepore Ultra
Film dressing with adsorbent pad
Mepore Ultra dressing (Molnlycke Health Care Ltd) 10cm × 11cm= £0.81, 11cm × 15cm= £1.19, 7cm × 8cm= £0.41, 9cm × 20cm= £1.52, 9cm × 25cm= £1.68, 9cm × 30cm= £2.77

OpSite Plus
Film dressing with adsorbent pad
OpSite Plus dressing (Smith & Nephew Healthcare Ltd) 10cm × 12cm= £1.22, 10cm × 20cm= £2.06, 10cm × 35cm= £3.41, 6.5cm × 5cm= £0.33, 8.5cm × 9.5cm= £0.90

OpSite Post-op
Film dressing with adsorbent pad
OpSite Post-Op dressing (Smith & Nephew Healthcare Ltd) 10cm × 12cm= £1.20, 10cm × 20cm= £2.01, 10cm × 25cm= £2.54, 10cm × 30cm= £3.01, 10cm × 35cm= £3.34, 8.5cm × 15.5cm= £1.22, 8.5cm × 9.5cm= £0.88

Pharmapore-PU
Film dressing with adsorbent pad
Pharmapore-PU dressing (Wallace, Cameron & Company Ltd) 10cm × 25cm= £0.38, 10cm × 30cm= £0.58, 8.5cm × 15.5cm= £0.20

PremierPore VP
Film dressing with adsorbent pad
PremierPore VP dressing (Shermond) 10cm × 10cm= £0.16, 10cm × 15cm= £0.24, 10cm × 20cm= £0.36, 10cm × 25cm= £0.38, 10cm × 30cm= £0.57, 10cm × 35cm= £0.70, 5cm × 7cm= £0.13

Tegaderm
Film dressing with adsorbent pad
Tegaderm + Pad dressing (3M Health Care Ltd) 5cm × 7cm= £0.26, 9cm × 10cm= £0.65, 9cm × 15cm= £0.95, 9cm × 20cm= £1.40, 9cm × 25cm= £1.57, 9cm × 35cm= £2.60

Tegaderm Absorbent Clear
Film dressing with clear acrylic polymer oval-shaped pad or rectangular-shaped pad
Tegaderm Absorbent Clear Acrylic dressing (3M Health Care Ltd) 11.1cm × 12.7cm oval= £4.11, 14.2cm × 15.8cm oval= £5.78, 14.9cm × 15.2cm rectangular= £8.66, 16.8cm × 19cm sacral= £10.37, 20cm × 20.3cm rectangular= £13.91, 7.6cm × 9.5cm oval= £3.17

Vapour–permeable transparent film dressing with adhesive foam border.
Central Gard
For intravenous and subcutaneous catheter sites
Central Gard dressing (Unomedical Ltd) 16cm × 7cm= £0.97, 16cm × 8.8cm= £1.06

EasI-V
For intravenous and subcutaneous catheter sites
EasI-V (ConvaTec Ltd) dressing 7cm × 7.5cm= £0.38

Vapour–permeable transparent, adhesive film dressing.
Hydrofilm I.V. Control
For intravenous and subcutaneous catheter sites
Hydrofilm (Paul Hartmann Ltd) I.V. Control dressing 7cm × 9cm= £0.31

Vapour–permeable, transparent, adhesive film dressing.
IV3000
For intravenous and subcutaneous catheter sites
IV3000 dressing (Smith & Nephew Healthcare Ltd) 10cm × 12cm= £1.42, 5cm × 6cm= £0.43, 6cm × 7cm= £0.57, 7cm × 9cm= £0.74, 9cm × 12cm= £1.48

Mepore IV
For intravenous and subcutaneous catheter sites
Mepore IV dressing (Molnlycke Health Care Ltd) 10cm × 11cm= £1.08, 5cm × 5.5cm= £0.31, 8cm × 9cm= £0.40

Pharmapore-PU IV
For intravenous and subcutaneous catheter sites
Pharmapore-PU-I.V dressing (Wallace, Cameron & Company Ltd) 6cm × 7cm= £0.08, 7cm × 8.5cm= £0.07, 7cm × 9cm= £0.17

Tegaderm IV
For intravenous and subcutaneous catheter sites
Tegaderm IV dressing with securing tapes (3M Health Care Ltd) 10cm × 15.5cm= £1.67, 7cm × 8.5cm= £0.59

Soft polymer dressings
Dressings with soft polymer, often a soft silicone polymer, in a non-adherent or gently adherent layer are suitable for use on lightly to moderately exuding wounds. For moderately to heavily exuding wounds, an absorbent secondary dressing can be added, or a soft polymer dressing with an absorbent pad can be used. Wound contact dressings coated with soft silicone have gentle adhesive properties and can be used on fragile skin areas or where it is beneficial to reduce the frequency of primary dressing changes. Soft polymer dressings should not be used on heavily bleeding wounds; blood clots can cause the dressing to adhere to the wound surface. For silicone keloid dressings see under Specialised dressings.

Cellulose dressings
Sorbion Sachet Border
Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope, with adhesive border
Cutimed Sorbion Sachet Border dressing (BSN medical Ltd) 10cm × 10cm square= £3.01, 15cm × 15cm square= £4.57, 25cm × 15cm rectangular= £7.12

https://nhathuocngocanh.com/ www.getintopharma.com

Sorbion Sachet EXTRA
Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope
Cutimed Sorbion Sachet Extra dressing (BSN medical Ltd) 10cm × 10cm= £2.29, 20cm × 10cm= £3.80, 20cm × 20cm= £7.14, 30cm × 20cm= £10.18, 5cm × 5cm= £1.48, 7.5cm × 7.5cm= £1.81

Sorbion Sachet Multi Star
Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope
Cutimed Sorbion Sachet Multi Star dressing (BSN medical Ltd) 14cm × 14cm= £4.98, 8cm × 8cm= £3.05

Sorbion Sachet S Drainage
Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope ('v' shaped dressing)
Cutimed (BSN medical Ltd) Sorbion Sachet S drainage dressing 10cm × 10cm= £2.69

Suprasorb X
Biosynthetic cellulose fibre dressing
Suprasorb X dressing (Lohmann & Rauscher) 14cm × 20cm rectangular= £8.59, 2cm × 21cm rope= £6.67, 5cm × 5cm square= £2.08, 9cm × 9cm square= £4.33

With absorbent pad

Advazorb Border
Soft silicone wound contact dressing with polyurethane foam film backing and adhesive border
Advazorb Border dressing (Advancis Medical) 10cm × 10cm= £2.12, 10cm × 20cm= £2.92, 10cm × 30cm= £4.28, 12.5cm × 12.5cm= £2.60, 15cm × 15cm= £3.17, 20cm × 20cm= £5.50, 7.5cm × 7.5cm= £1.20

Advazorb Border Lite
Soft silicone wound contact dressing with polyurethane foam film backing and adhesive border
Advazorb Border Lite dressing (Advancis Medical) 10cm × 10cm= £1.90, 10cm × 20cm= £2.63, 10cm × 30cm= £3.86, 12.5cm × 12.5cm= £2.34, 15cm × 15cm= £2.86, 20cm × 20cm= £4.95, 7.5cm × 7.5cm= £1.08

Advazorb Silfix
Soft silicone wound contact dressing with polyurethane foam film backing
Advazorb Silfix dressing (Advancis Medical) 10cm × 10cm= £1.86, 10cm × 20cm= £3.20, 12.5cm × 12.5cm= £2.61, 15cm × 15cm= £3.38, 20cm × 20cm= £5.02, 7.5cm × 7.5cm= £1.00

Advazorb Silfix Lite
Soft silicone wound contact dressing with polyurethane foam film backing
Advazorb Silfix Lite dressing (Advancis Medical) 10cm × 10cm= £1.68, 10cm × 20cm= £2.88, 12.5cm × 12.5cm= £2.35, 15cm × 15cm= £3.04, 20cm × 20cm= £4.51, 7.5cm × 7.5cm= £0.90

Allevyn Gentle
Soft gel wound contact dressing, with polyurethane foam film backing
Allevyn Gentle dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £2.55, 10cm × 20cm= £4.10, 15cm × 15cm= £4.28, 20cm × 20cm= £6.84, 5cm × 5cm= £1.29

Allevyn Gentle Border
Silicone gel wound contact dressing, with polyurethane foam film backing
Allevyn Gentle Border (Smith & Nephew Healthcare Ltd) Heel dressing 23cm × 23.2cm= £9.82, dressing 10cm × 10cm= £2.23, 12.5cm × 12.5cm= £2.73, 17.5cm × 17.5cm= £5.38, 7.5cm × 7.5cm= £1.52

Allevyn Gentle Border Lite
Silicone gel wound contact dressing, with polyurethane foam film backing
Allevyn Gentle Border Lite dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £2.20, 15cm × 15cm= £3.88, 5.5cm × 12cm= £1.88, 5cm × 5cm= £0.91, 8cm × 15cm= £3.49

Allevyn Life
Soft silicone wound contact dressing, with central mesh screen, polyurethane foam film backing and adhesive border
Allevyn Life dressing (Smith & Nephew Healthcare Ltd) 10.3cm × 10.3cm= £1.72, 12.9cm × 12.9cm= £2.53, 15.4cm × 15.4cm= £3.09, 21cm × 21cm= £6.09

Cutimed Siltec
Soft silicone wound contact dressing, with polyurethane foam film backing
Cutimed Siltec (BSN medical Ltd) Sacrum dressing 17.5cm × 17.5cm= £4.54, 23cm × 23cm= £6.20, dressing 10cm × 10cm= £2.26, 10cm × 20cm= £3.73, 15cm × 15cm= £4.22, 20cm × 20cm= £6.40, 5cm × 6cm= £1.21

Cutimed Siltec B
Soft silicone wound contact dressing, with polyurethane foam film backing, with adhesive border, for lightly to moderately exuding wounds
Cutimed Siltec B dressing (BSN medical Ltd) 12.5cm × 12.5cm= £2.30, 15cm × 15cm= £3.06, 17.5cm × 17.5cm= £4.95, 22.5cm × 22.5cm= £6.04, 7.5cm × 7.5cm= £1.35

Cutimed Siltec L
Soft silicone wound contact dressing, with polyurethane foam film backing, for lightly to moderately exuding wounds
Cutimed Siltec L dressing (BSN medical Ltd) 10cm × 10cm= £1.57, 15cm × 15cm= £3.45, 5cm × 6cm= £1.07

Eclypse Adherent
Soft silicone wound contact layer with absorbent pad and film backing
Eclypse Adherent dressing (Advancis Medical) 10cm × 10cm= £3.01, 10cm × 20cm= £3.78, 15cm × 15cm= £5.03, 20cm × 30cm= £10.06, 17cm × 19cm sacral= £3.79, 22cm × 23cm sacral= £6.28

Flivasorb
Absorbent polymer dressing with non-adherent wound contact layer
Flivasorb dressing (Lohmann & Rauscher) 10cm × 10cm square= £0.89, 10cm × 20cm rectangular= £1.06, 20cm × 20cm square= £1.88, 20cm × 30cm rectangular= £2.37

Flivasorb Adhesive
Absorbent polymer dressing with non-adherent wound contact layer and adhesive border
Flivasorb Adhesive dressing (Lohmann & Rauscher) 12cm × 12cm square= £3.39, 15cm × 15cm square= £4.65

Mepilex
Absorbent soft silicone dressing with polyurethane foam film backing
Mepilex (Molnlycke Health Care Ltd) Heel dressing 13cm × 20cm= £5.45, 15cm × 22cm= £6.31, XT dressing 10cm × 11cm= £2.68, 11cm × 20cm= £4.43, 15cm × 16cm= £4.86, 20cm × 21cm= £7.34, dressing 5cm × 5cm= £1.22

Mepilex Border
Absorbent soft silicone dressing with polyurethane foam film backing and adhesive border
Mepilex Border (Molnlycke Health Care Ltd) Heel dressing 18.5cm × 24cm= £6.63, Sacrum dressing 18cm × 18cm= £4.85, 23cm × 23cm= £7.91, dressing 10cm × 12.5cm= £2.72, 10cm × 20cm= £3.72, 10cm × 30cm= £5.58, 15cm × 17.5cm= £4.18, 17cm × 20cm= £6.07

Mepilex Border Lite
Thin absorbent soft silicone dressing with polyurethane foam film backing and adhesive border
Mepilex Border Lite dressing (Molnlycke Health Care Ltd) 15cm × 15cm= £3.94, 4cm × 5cm= £0.92, 5cm × 12.5cm= £2.01, 7.5cm × 7.5cm= £1.35

Mepilex Lite
Thin absorbent soft silicone dressing with polyurethane foam film backing
Mepilex Lite dressing (Molnlycke Health Care Ltd) 10cm × 10cm= £2.17, 15cm × 15cm= £4.22, 20cm × 50cm= £26.66, 6cm × 8.5cm= £1.82

Mepilex Transfer
Soft silicone exudate transfer dressing
Mepilex Transfer dressing (Molnlycke Health Care Ltd) 10cm × 12cm= £3.54, 15cm × 20cm= £10.72, 20cm × 50cm= £27.39, 7.5cm × 8.5cm= £2.25

https://nhathuocngocanh.com/ www.getintopharma.com

Sorbion Sana
Non-adherent polyethylene wound contact dressing with absorbent core
Cutimed Sorbion Sana Gentle dressing (BSN medical Ltd) 12cm × 12cm= £2.54, 12cm × 22cm= £4.57, 22cm × 22cm= £8.14, 8.5cm × 8.5cm= £2.03

Urgotul Duo
Non-adherent soft polymer wound contact dressing with absorbent pad
UrgotulDuo dressing (Urgo Ltd) 10cm × 12cm= £3.90, 15cm × 20cm= £9.06, 5cm × 10cm= £2.52

Without absorbent pad

Adaptic Touch
Non-adherent soft silicone wound contact dressing
Adaptic Touch dressing (Systagenix Wound Management Ltd) 12.7cm × 15cm= £4.65, 20cm × 32cm= £12.50, 5cm × 7.6cm= £1.13, 7.6cm × 11cm= £2.25

Askina SilNet
Soft silicone-coated wound contact dressing
Askina SilNet dressing (B.Braun Medical Ltd) 10cm × 18cm= £5.08, 20cm × 30cm= £12.42, 5cm × 7.5cm= £1.15, 7.5cm × 10cm= £2.33

Mepitel
Soft silicone, semi-transparent wound contact dressing
Mepitel dressing (Molnlycke Health Care Ltd) 12cm × 15cm= £5.60, 5cm × 7cm= £1.40, 8cm × 10cm= £2.80

Mepitel One
Soft silicone, thin, transparent wound contact dressing
Mepitel One dressing (Molnlycke Health Care Ltd) 13cm × 15cm= £4.98, 24cm × 27.5cm= £14.25, 6cm × 7cm= £1.22, 9cm × 10cm= £2.41

Physiotulle
Non-adherent soft polymer wound contact dressing
Physiotulle dressing (Coloplast Ltd) 10cm × 10cm= £2.30, 15cm × 20cm= £7.02

Silflex
Soft silicone-coated polyester wound contact dressing
Silflex dressing (Advancis Medical) 12cm × 15cm= £4.61, 20cm × 30cm= £11.88, 35cm × 60cm= £39.83, 5cm × 7cm= £1.12, 8cm × 10cm= £2.29

Silon-TSR
Soft silicone polymer wound contact dressing
Silon-TSR dressing (Bio Med Sciences) 13cm × 13cm= £3.52, 13cm × 25cm= £5.47, 28cm × 30cm= £7.37

Sobion Contact
Non-adherent soft polymer wound contact dressing
Cutimed Sorbion Contact dressing (BSN medical Ltd) 10cm × 10cm= £2.03, 10cm × 20cm= £4.06, 20cm × 20cm= £7.12, 20cm × 30cm= £10.18, 7.5cm × 7.5cm= £1.52

Tegaderm Contact
Non-adherent soft polymer wound contact dressing
Tegaderm Contact dressing (3M Health Care Ltd) 20cm × 25cm= £10.86, 7.5cm × 10cm= £2.27

Urgotul
Non-adherent soft polymer wound contact dressing
Urgotul dressing (Urgo Ltd) 10cm × 10cm= £3.13, 10cm × 40cm= £10.53, 15cm × 15cm= £6.66, 15cm × 20cm= £8.86, 20cm × 30cm= £14.25, 5cm × 5cm= £1.57

Hydrocolloid dressings

Hydrocolloid dressings are usually presented as a hydrocolloid layer on a vapour-permeable film or foam pad. Semi-permeable to water vapour and oxygen, these dressings form a gel in the presence of exudate to facilitate rehydration in lightly to moderately exuding wounds and promote autolytic debridement of dry, sloughy, or necrotic wounds; they are also suitable for promoting granulation. Hydrocolloid-fibrous dressings made from modified carmellose fibres resemble alginate dressings; hydrocolloid-fibrous dressings are more absorptive and suitable for moderately to heavily exuding wounds.

Hydrocolloid-fibrous dressings

Aquacel
Soft non-woven pad containing hydrocolloid-fibres
Aquacel (ConvaTec Ltd) Ribbon dressing 1cm × 45cm= £1.88, 2cm × 45cm= £2.50, dressing 10cm × 10cm square= £2.47, 15cm × 15cm square= £4.64, 4cm × 10cm rectangular= £1.33, 4cm × 20cm rectangular= £1.95, 4cm × 30cm rectangular= £2.94, 5cm × 5cm square= £1.04

Aquacel Foam
Soft non-woven pad containing hydrocolloid-fibres with foam layer; with or without adhesive border
Aquacel Foam dressing (adhesive) (ConvaTec Ltd) 10cm × 10cm= £2.18, 12.5cm × 12.5cm= £2.70, 17.5cm × 17.5cm= £5.40, 19.8cm × 14cm heel= £5.53, 20cm × 16.9cm sacral= £4.96, 21cm × 21cm= £7.91, 25cm × 30cm= £10.24, 8cm × 8cm= £1.42, **(non-adhesive)** 10cm × 10cm= £2.58, 15cm × 15cm= £4.33, 15cm × 20cm= £5.92, 20cm × 20cm= £7.07

UrgoClean Pad
Pad, hydrocolloid fibres coated with soft-adherent lipo-colloidal wound contact layer
UrgoClean Pad dressing (Urgo Ltd) 10cm × 10cm square= £2.16, 20cm × 15cm rectangular= £4.06, 6cm × 6cm square= £0.97

UrgoClean Rope
Rope, non-woven rope containing hydrocolloid fibres
UrgoClean rope dressing (Urgo Ltd) 2.5cm × 40cm= £2.43, 5cm × 40cm= £3.21

Polyurethane matrix dressing

Cutinova Hydro
Polyurethane matrix with absorbent particles and waterproof polyurethane film
Cutinova Hydro dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £2.59, 15cm × 20cm rectangular= £5.48, 5cm × 6cm rectangular= £1.29

With adhesive border

Biatain Super
Semi-permeable hydrocolloid dressing; without adhesive border
Biatain Super dressing (adhesive) (Coloplast Ltd) 10cm × 10cm square= £2.21, 12.5cm × 12.5cm square= £3.66, 12cm × 20cm rectangular= £3.67, 15cm × 15cm square= £4.41, 20cm × 20cm square= £6.87

Granuflex Bordered
Hydrocolloid wound contact layer bonded to plastic foam layer, with outer semi-permeable polyurethane film
Granuflex Bordered dressing (ConvaTec Ltd) 10cm × 10cm square= £3.39, 10cm × 13cm triangular= £4.01, 15cm × 15cm square= £6.48, 15cm × 18cm triangular= £6.24, 6cm × 6cm square= £1.79

Hydrocoll Border
Hydrocolloid dressing with adhesive border and absorbent wound contact pad
Hydrocoll Border (bevelled edge) dressing (Paul Hartmann Ltd) 10cm × 10cm square= £2.46, 12cm × 18cm sacral= £3.69, 15cm × 15cm square= £4.63, 5cm × 5cm square= £1.03, 7.5cm × 7.5cm square= £1.69, 8cm × 12cm concave= £2.17

Tegaderm Hydrocolloid
Hydrocolloid dressing with adhesive border; normal or thin
Tegaderm Hydrocolloid (3M Health Care Ltd) Thin dressing 10cm × 12cm oval= £1.55, 13cm × 15cm oval= £2.89, dressing 10cm × 12cm oval= £2.33, 13cm × 15cm oval= £4.34, 17.1cm × 16.1cm sacral= £4.85

Ultec Pro
Semi-permeable hydrocolloid dressing with adhesive border
Ultec Pro dressing (adhesive) (Covidien (UK) Commercial Ltd) 15cm × 18cm sacral= £3.30, 19.5cm × 23cm sacral= £4.98, 21cm × 21cm square= £4.67

Without adhesive border

ActivHeal Hydrocolloid
Semi-permeable polyurethane film backing, hydrocolloid wound contact layer, with or without polyurethane foam later

https://nhathuocngocanh.com/ www.getintopharma.com

ActivHeal Hydrocolloid (Advanced Medical Solutions Ltd) dressing 10cm × 10cm square= £1.58, 15cm × 15cm square= £3.43, 15cm × 18cm sacral= £3.98, 5cm × 7.5cm rectangular= £0.78, foam backed dressing 10cm × 10cm square= £1.55, 15cm × 15cm square= £2.91, 15cm × 18cm sacral= £3.36, 5cm × 7.5cm rectangular= £0.97

Askina Biofilm Transparent
Semi-permeable, polyurethane film dressing with hydrocolloid adhesive
Askina Biofilm Transparent dressing (B.Braun Medical Ltd) 10cm × 10cm square= £1.09, 20cm × 20cm square= £3.22

Biatain Super
Semi-permeable, hydrocolloid film dressing without adhesive border
Biatain Super dressing (non-adhesive) (Coloplast Ltd) 10cm × 10cm square= £2.21, 12.5cm × 12.5cm square= £3.66, 12cm × 20cm rectangular= £3.67, 15cm × 15cm square= £4.41, 20cm × 20cm square= £6.87

Comfeel Plus Contour
Hydrocolloid dressings containing carmellose sodium and calcium alginate
Comfeel Plus Contour dressing (Coloplast Ltd) 6cm × 8cm= £2.24, 9cm × 11cm= £3.89

Comfeel Plus Pressure Relieving
Hydrocolloid dressings containing carmellose sodium and calcium alginate
Comfeel Plus Pressure Relief dressing (Coloplast Ltd) 10cm diameter circular= £4.69, 15cm diameter circular= £7.06, 7cm diameter circular= £3.50

Comfeel Plus Transparent
Hydrocolloid dressings containing carmellose sodium and calcium alginate
Comfeel Plus Transparent dressing (Coloplast Ltd) 10cm × 10cm square= £1.29, 15cm × 15cm square= £3.37, 15cm × 20cm rectangular= £3.42, 20cm × 20cm square= £3.44, 5cm × 15cm rectangular= £1.60, 5cm × 25cm rectangular= £2.61, 5cm × 7cm rectangular= £0.68, 9cm × 14cm rectangular= £2.46, 9cm × 25cm rectangular= £3.49

Comfeel Plus Ulcer
Hydrocolloid dressings containing carmellose sodium and calcium alginate
Comfeel Plus dressing (Coloplast Ltd) 10cm × 10cm square= £2.48, 20cm × 20cm square= £7.64, 4cm × 6cm rectangular= £0.97

DuoDERM Extra Thin
Semi-permeable hydrocolloid dressing
DuoDERM Extra Thin dressing (ConvaTec Ltd) 10cm × 10cm square= £1.34, 15cm × 15cm square= £2.90, 5cm × 10cm rectangular= £0.78, 7.5cm × 7.5cm square= £0.81, 9cm × 15cm rectangular= £1.80, 9cm × 25cm rectangular= £2.87, 9cm × 35cm rectangular= £4.02

DuoDERM Signal
Semi-permeable hydrocolloid dressing with 'Time to change' indicator
DuoDERM Signal dressing (ConvaTec Ltd) 10cm × 10cm square= £2.16, 11cm × 19cm oval= £3.31, 14cm × 14cm square= £3.78, 18.5cm × 19.5cm heel= £5.29, 20cm × 20cm square= £7.52, 22.5cm × 20cm sacral= £6.18

Flexigran
Semi-permeable hydrocolloid dressing without adhesive border; normal or thin
Flexigran (A1 Pharmaceuticals) Thin dressing 10cm × 10cm square= £1.08, dressing 10cm × 10cm square= £2.19

Granuflex
Hydrocolloid wound contact layer bonded to plastic foam layer, with outer semi-permeable polyurethane film
Granuflex (modified) dressing (ConvaTec Ltd) 10cm × 10cm square= £2.85, 15cm × 15cm square= £5.40, 15cm × 20cm rectangular= £5.86, 20cm × 20cm square= £8.13

Hydrocoll Basic
Hydrocolloid dressing with absorbent wound contact pad
Hydrocoll (Paul Hartmann Ltd) Basic dressing 10cm × 10cm square= £2.50

Hydrocoll Thin Film
Thin hydrocolloid dressing with absorbent wound contact pad
Hydrocoll Thin Film dressing (Paul Hartmann Ltd) 10cm × 10cm square= £1.18, 15cm × 15cm square= £2.65, 7.5cm × 7.5cm square= £0.71

Nu-Derm
Semi-permeable hydrocolloid dressing (normal and thin)
Nu-Derm dressing (Systagenix Wound Management Ltd) 10cm × 10cm square= £1.56, 15cm × 15cm square= £3.18, 15cm × 18cm sacral= £4.45, 20cm × 20cm square= £6.36, 5cm × 5cm square= £0.85, 8cm × 12cm heel/elbow= £3.18, thin 10cm × 10cm square= £1.06

Tegaderm Hydrocolloid
Hydrocolloid dressing without adhesive border; normal and thin
Tegaderm Hydrocolloid (3M Health Care Ltd) Thin dressing 10cm × 10cm square= £1.55, dressing 10cm × 10cm square= £2.37

Ultec Pro
Semi-permeable hydrocolloid dressing; without adhesive border
Ultec Pro dressing (Covidien (UK) Commercial Ltd) 10cm × 10cm square= £2.28, 15cm × 15cm square= £4.44, 20cm × 20cm square= £6.69

Foam dressings

Dressings containing hydrophilic polyurethane foam (adhesive or non-adhesive), with or without plastic film-backing, are suitable for all types of exuding wounds, but not for dry wounds; some foam dressings have a moisture-sensitive film backing with variable permeability dependant on the level of exudate Foam dressings vary in their ability to absorb exudate; some are suitable only for lightly to moderately exuding wounds, others have greater fluid-handing capacity and are suitable for heavily exuding wounds. Saturated foam dressings can cause maceration of healthy skin if left in contact with the wound. Foam dressings can be used in combination with other primary wound contact dressings. If used under compression bandaging or compression garments, the fluid-handling capacity of the foam dressing may be reduced. Foam dressings can also be used to provide a protective cushion for fragile skin. A foam dressing containing ibuprofen is available and may be useful for treating painful exuding wounds.

Cavi-Care
Soft, conforming cavity wound dressing prepared by mixing thoroughly for 15 seconds immediately before use and allowing to expand its volume within the cavity

Polyurethane Foam Dressing
Cutimed Cavity
Cutimed Cavity dressing (BSN medical Ltd) 10cm × 10cm= £3.17, 15cm × 15cm= £4.77, 5cm × 6cm= £1.91

Alginate dressings

Non-woven or fibrous, non-occlusive, alginate dressings, made from calcium alginate, or calcium sodium alginate, derived from brown seaweed, form a soft gel in contact with wound exudate. Alginate dressings are highly absorbent and suitable for use on exuding wounds, and for the promotion of autolytic debridement of debris in very moist wounds. Alginate dressings also act as a haemostatic, but caution is needed because blood clots can cause the dressing to adhere to the wound surface. Alginate dressings should not be used if bleeding is heavy and extreme caution is needed if used for tumours with friable tissue. Alginate sheets are suitable for use as a wound contact dressing for moderately to heavily exuding wounds and can be layered into deep wounds; alginate rope can be used in sinus and cavity wounds to improve absorption of exudate and prevent maceration. If the dressing does not have an adhesive border or integral adhesive plastic film backing, a secondary dressing will be required.

ActivHeal Alginate
Calcium sodium alginate dressing
ActivHeal Alginate dressing (Advanced Medical Solutions Ltd) 10cm × 10cm= £1.15, 10cm × 20cm= £2.83, 5cm × 5cm= £0.59

ActivHeal Aquafiber
Non-woven, calcium sodium alginate dressing
ActivHeal Aquafiber (Advanced Medical Solutions Ltd) Rope dressing 2cm × 42cm= £1.81, dressing 10cm × 10cm= £1.80, 15cm × 15cm= £3.40, 5cm × 5cm= £0.76

Alginate and carboxymethylcellulose dressing without adhesive border
Urgosorb (Urgo Ltd) Pad dressing 10cm × 10cm= £2.15, 10cm × 20cm= £3.94, 5cm × 5cm= £0.90, Rope dressing 30cm= £2.81

Capillary-acting dressings

Vacutex
Low-adherent dressing consisting of two external polyester wound contact layers with central wicking polyester/cotton mix absorbent layer
Vacutex dressing (Haddenham Healthcare Ltd) 10cm × 10cm= £1.69, 10cm × 15cm= £2.27, 10cm × 20cm= £2.72, 5cm × 5cm= £0.95

Odour absorbent dressings

Dressings containing activated charcoal are used to absorb odour from wounds. The underlying cause of wound odour should be identified. Wound odour is most effectively reduced by debridement of slough, reduction in bacterial levels, and frequent dressing changes. Fungating wounds and chronic infected wounds produce high volumes of exudate which can reduce the effectiveness of odour absorbent dressings. Many odour absorbent dressings are intended for use in combination with other dressings; odour absorbent dressings with a suitable wound contact layer can be used as a primary dressing.

Askina Carbosorb
Activated charcoal and non-woven viscose rayon dressing
Askina Carbosorb dressing (B.Braun Medical Ltd) 10cm × 10cm= £2.95, 10cm × 20cm= £5.68

CarboFLEX
Dressing in 5 layers: wound-facing absorbent layer containing alginate and hydrocolloid; water-resistant second layer; third layer containing activated charcoal; non-woven absorbent fourth layer; water-resistant backing layer
CarboFlex dressing (ConvaTec Ltd) 10cm × 10cm= £3.27, 15cm × 20cm= £7.44, 8cm × 15cm oval= £3.92

https://nhathuocngocanh.com/ www.getintopharma.com

Carbopad VC
Activated charcoal non-absorbent dressing
Carbopad VC dressing (Synergy Health (UK) Ltd) 10cm × 10cm= £1.62, 10cm × 20cm= £2.19

CliniSorb Odour Control Dressings
Activated charcoal cloth enclosed in viscose rayon with outer polyamide coating
CliniSorb dressing (CliniMed Ltd) 10cm × 10cm= £1.92, 10cm × 20cm= £2.56, 15cm × 25cm= £4.12

Antimicrobial dressings

Spreading infection at the wound site requires treatment with systemic antibacterials. For local wound infection, a topical antimicrobial dressing can be used to reduce the level of bacteria at the wound surface but will not eliminate a spreading infection. Some dressings are designed to release the antimicrobial into the wound, others act upon the bacteria after absorption from the wound. The amount of exudate present and the level of infection should be taken into account when selecting an antimicrobial dressing. Medical grade honey has antimicrobial and anti-inflammatory properties. Dressings impregnated with iodine can be used to treat clinically infected wounds. Dressings containing silver should be used only when clinical signs or symptoms of infection are present. Dressings containing other antimicrobials such as polihexanide (polyhexamethylene biguanide) or dialkylcarbamoyl chloride are available for use on infected wounds. Although hypersensitivity is unlikely with chlorhexidine impregnated tulle dressing, the antibacterial efficacy of these dressings has not been established.

Honey

Medical grade honey has antimicrobial and anti-inflammatory properties and can be used for acute or chronic wounds. Medical grade honey has osmotic properties, producing an environment that promotes autolytic debridement; it can help control wound malodour. Honey dressings should not be used on patients with extreme sensitivity to honey, bee stings or bee products. Patients with diabetes should be monitored for changes in blood-glucose concentrations during treatment with topical honey or honey-impregnated dressings.
For *Activon Tulle*®, where no size is stated by the prescriber the 5 cm size is to be supplied.
Medihoney® *Antimicrobial Wound Gel* is not recommended for use in deep wounds or body cavities where removal of waxes may be difficult.

Honey-based topical application

Activon Honey
Medical grade manuka honey
Activon Medical Grade Manuka Honey dressing (Advancis Medical) 25 gram= £2.77

L-Mesitran SOFT ointment dressing
Honey (medical grade) 40%
L-Mesitran (Aspen Medical Europe Ltd) SOFT ointment dressing= £3.62

MANUKApli Honey
Medical grade manuka honey
MANUKApli (Manuka Medical Ltd) dressing= £5.90

Medihoney Antibacterial Medical Honey
Medical grade, Leptospermum sp.
Medihoney (Derma Sciences Europe, Ltd) Antibacterial Medical Honey dressing= £9.97

Medihoney Antibacterial Wound Gel
Medical grade, Leptospermum sp. 80% in natural waxes and oils
Medihoney (Derma Sciences Europe, Ltd) Antibacterial Wound Gel dressing= £4.05

Sheet dressing

Actilite
Knitted viscose impregnated with medical grade manuka honey and manuka oil
Actilite gauze dressing (Advancis Medical) 10cm × 10cm= £1.23, 10cm × 20cm= £2.38, 5cm × 5cm= £0.71

Activon Tulle
Knitted viscose impregnated with medical grade manuka honey
Activon Tulle gauze dressing (Advancis Medical) 10cm × 10cm= £3.71, 5cm × 5cm= £2.25

Algivon
Absorbent, non-adherent calcium alginate dressing impregnated with medical grade manuka honey
Algivon dressing (Advancis Medical) 10cm × 10cm= £4.25, 5cm × 5cm= £2.48

Algivon Plus
Reinforced calcium alginate dressing impregnated with medical grade manuka honey
Algivon Plus (Advancis Medical) Ribbon dressing 2.5cm × 20cm= £4.20, dressing 10cm × 10cm= £4.20, 5cm × 5cm= £2.45

L-Mesitran Border
Hydrogel, semi-permeable dressing impregnated with medical grade honey, with adhesive border
L-Mesitran (Aspen Medical Europe Ltd) Border sheet 10cm × 10cm square= £2.76

L-Mesitran Hydro
Hydrogel, semi-permeable dressing impregnated with medical grade honey, without adhesive border
L-Mesitran Hydro sheet (Aspen Medical Europe Ltd) 10cm × 10cm square= £2.65, 15cm × 20cm rectangular= £5.48

L-Mesitran Net
Hydrogel, non-adherent wound contact layer, without adhesive border
L-Mesitran (Aspen Medical Europe Ltd) Net sheet 10cm × 10cm square= £2.55

Medihoney Antibacterial Honey Apinate
Non-adherent calcium alginate dressing, impregnated with medical grade honey
Medihoney Antibacterial Honey Apinate (Derma Sciences Europe, Ltd) dressing 10cm × 10cm square= £3.42, 5cm × 5cm square= £2.01, rope dressing 1.9cm × 30cm= £4.23

Medihoney Antibacterial Honey Tulle
Woven fabric impregnated with medical grade manuka honey
Medihoney (Derma Sciences Europe, Ltd) Tulle dressing 10cm x10cm= £3.00

Medihoney Gel sheet
Sodium alginate dressing impregnated with medical grade honey
Medihoney Gel Sheet dressing (Derma Sciences Europe, Ltd) 10cm × 10cm= £4.23, 5cm × 5cm= £1.76

MelMax
Acetate wound contact layer impregnated with buckwheat honey 75% in ointment basis
MelMax dressing (DoubleWing Medical) 5cm × 6cm rectangular= £1.68, 8cm × 10cm rectangular= £2.00, 8cm × 20cm rectangular= £3.75

Melladerm Plus Tulle
Knitted viscose impregnated with medical grade honey (Bulgarian, mountain flower) 45% in a basis containing polyethylene glycol
Melladerm (SanoMed Manufacturing BV) Plus Tulle dressing 10cm × 10cm= £2.10

Iodine

Cadexomer–iodine, like povidone–iodine, releases free iodine when exposed to wound exudate. The free iodine acts as an antiseptic on the wound surface, the cadexomer absorbs wound exudate and encourages de-sloughing. Two-component hydrogel dressings containing glucose oxidase and iodide ions generate a low level of free iodine in the

https://nhathuocngocanh.com/ www.getintopharma.com

presence of moisture and oxygen. Povidone–iodine fabric dressing is a knitted viscose dressing with povidone–iodine incorporated in a hydrophilic polyethylene glycol basis; this facilitates diffusion of the iodine into the wound and permits removal of the dressing by irrigation. The iodine has a wide spectrum of antimicrobial activity but it is rapidly deactivated by wound exudate. Systemic absorption of iodine may occur, particularly from large wounds or with prolonged use.

Iodoflex® and *Iodosorb*® are used for the treatment of chronic exuding wounds; max. single application 50 g, max. weekly application 150 g; max. duration up to 3 months in any single course of treatment. They are contra-indicated in patients receiving lithium, in thyroid disorders, in pregnancy and breast feeding, and in children; they should be used with caution in patients with severe renal impairment or history of thyroid disorder.

Iodozyme® is an antimicrobial dressing used for lightly to moderately exuding wounds. It is contra-indicated in thyroid disorders and in patients receiving lithium; it should be used with caution in children and in women who are pregnant or breast-feeding.

Oxyzyme® is used for non-infected, dry to moderately exuding wounds. It is contra-indicated in thyroid disorders and in patients receiving lithium; it should be used with caution in children and in women who are pregnant or breast-feeding.

Povidone-iodine Fabric Dressing is used as a wound contact layer for abrasions and superficial burns. It is contra-indicated in patients with severe renal impairment and in women who are pregnant or breast-feeding; it should be used with caution in patients with thyroid disease and in children under 6 months.

Iodoflex Paste

Iodine 0.9% as cadexomer–iodine in a paste basis with gauze backing

Iodoflex paste dressing (Smith & Nephew Healthcare Ltd) 5 gram= £4.19, 10 gram= £8.37, 17 gram= £13.25

Iodosorb Ointment

Iodine 0.9% as cadexomer–iodine in an ointment basis

Iodosorb (Smith & Nephew Healthcare Ltd) ointment dressing= £9.25

Iodosorb Powder

Iodine 0.9% as cadexomer–iodine microbeads, 3-g sachet

Iodosorb (Smith & Nephew Healthcare Ltd) powder dressing sachets= £1.98

Povidone-iodine fabric dressing

Inadine

(Drug Tariff specification 43). Knitted viscose primary dressing impregnated with povidone–iodine ointment 10%

Inadine dressing (Systagenix Wound Management Ltd) 5cm × 5cm= £0.33, 9.5cm × 9.5cm= £0.49

Silver

Antimicrobial dressings containing silver should be used only when infection is suspected as a result of clinical signs or symptoms (see also notes above). Silver ions exert an antimicrobial effect in the presence of wound exudate; the volume of wound exudate as well as the presence of infection should be considered when selecting a silver-containing dressing. Silver-impregnated dressings should not be used routinely for the management of uncomplicated ulcers. It is recommended that these dressings should not be used on acute wounds as there is some evidence to suggest they delay wound healing. Dressings impregnated with silver sulfadiazine have broad antimicrobial activity; if silver sulfadiazine is applied to large areas, or used for prolonged periods, there is a risk of blood disorders and skin discoloration. The use of silver sulfadiazine-impregnated dressings is contra-indicated in neonates, in pregnancy, and in patients with significant renal or hepatic impairment, sensitivity to sulfonamides, or G6PD deficiency. Large amounts of silver sulfadiazine applied topically may interact with other drugs—see Appendix 1 (sulfonamides).

Alginate dressings

Algisite Ag

Calcium alginate dressing, with silver

Algisite Ag dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £4.23, 10cm × 20cm= £7.79, 2g= £5.85, 5cm × 5cm= £1.69

Askina Calgitrol Ag

Calcium alginate and silver alginate dressing with polyurethane foam backing

Askina Calgitrol Ag dressing (B.Braun Medical Ltd) 10cm × 10cm square= £3.26, 15cm × 15cm square= £6.32, 20cm × 20cm square= £14.74

Askina Calgitrol Thin

Calcium alginate and silver alginate matrix, for use with absorptive secondary dressings

Askina Calgitrol Thin dressing (B.Braun Medical Ltd) 10cm × 10cm square= £4.16, 15cm × 15cm square= £9.33, 20cm × 20cm square= £16.48, 5cm × 5cm square= £2.00

Melgisorb Ag

Alginate and carboxymethylcellulose dressing, with ionic silver

Melgisorb Ag (Molnlycke Health Care Ltd) Cavity dressing 3cm × 44cm= £4.57, dressing 10cm × 10cm= £3.67, 15cm × 15cm= £7.76, 5cm × 5cm= £1.83

Silvercel

Alginate and carboxymethylcellulose dressing impregnated with silver

Silvercel dressing (Systagenix Wound Management Ltd) 10cm × 20cm rectangular= £7.68, 11cm × 11cm square= £4.14, 2.5cm × 30.5cm rectangular= £4.45, 5cm × 5cm square= £1.68

Silvercel Non-adherent

Alginate and carboxymethylcellulose dressing with film wound contact layer, impregnated with silver

Silvercel Non-Adherent (Systagenix Wound Management Ltd) cavity dressing 2.5cm × 30.5cm= £3.94, dressing 10cm × 20cm rectangular= £7.25, 11cm × 11cm square= £3.89, 5cm × 5cm square= £1.62

Sorbsan Silver Flat

Calcium alginate fibre, highly absorbent, flat non-woven pads, with silver

Sorbsan Silver Flat dressing (Aspen Medical Europe Ltd) 10cm × 10cm= £4.00, 10cm × 20cm= £7.31, 5cm × 5cm= £1.58

Sorbsan Silver Plus

Calcium alginate dressing with absorbent backing, with silver

Sorbsan Silver Plus dressing (Aspen Medical Europe Ltd) 10cm × 15cm= £5.60, 10cm × 20cm= £6.82, 15cm × 20cm= £9.15, 7.5cm × 10cm= £3.37

Sorbsan Silver Ribbon

With silver

Sorbsan (Aspen Medical Europe Ltd) Silver Ribbon dressing 1g= £4.18

Sorbsan Silver Surgical Packing

With silver

Sorbsan (Aspen Medical Europe Ltd) Silver Packing dressing 2g= £5.80

Suprasorb A + Ag

Calcium alginate dressing, with silver

Suprasorb A + Ag (Lohmann & Rauscher) dressing 10cm × 10cm= £4.17, 10cm × 20cm= £7.70, 5cm × 5cm= £1.66, rope dressing 2g= £6.17

Tegaderm Alginate Ag

Calcium alginate and carboxymethylcellulose dressing, with silver

Tegaderm Alginate Ag dressing (3M Health Care Ltd) 10cm × 10cm= £3.24, 3cm × 30cm= £3.70, 5cm × 5cm= £1.39

Urgosorb Silver

Alginate and carboxymethylcellulose dressing, impregnated with silver

Urgosorb Silver (Urgo Ltd) Rope dressing 2.5cm × 30cm= £3.74, dressing 10cm × 10cm= £3.71, 10cm × 20cm= £7.00, 5cm × 5cm= £1.56

https://nhathuocngocanh.com/ www.getintopharma.com

Foam dressings

Acticoat Moisture Control

Three layer polyurethane dressing consisting of a silver coated layer, a foam layer, and a waterproof layer

Acticoat Moisture Control dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £17.09, 10cm × 20cm rectangular= £33.31, 5cm × 5cm square= £7.31

Allevyn Ag

Silver sulfadiazine impregnated polyurethane foam film dressing with or without adhesive border

Allevyn Ag (Smith & Nephew Healthcare Ltd) (Adhesive dressing) 10cm × 10cm square= £5.60, 12.5cm × 12.5cm square= £7.36, 17.5cm × 17.5cm square= £14.16, 17cm × 17cm sacral= £11.05, 22cm × 22cm sacral= £14.81, 7.5cm × 7.5cm square= £3.56, Heel Non-Adhesive dressing 10.5cm × 13.5cm= £10.96, (Non-Adhesive dressing) 10cm × 10cm square= £6.25, 15cm × 15cm square= £11.85, 20cm × 20cm square= £17.36, 5cm × 5cm square= £3.32

Biatain Ag

Silver impregnated polyurethane foam film dressing, with or without adhesive border

Biatain Ag (Coloplast Ltd) cavity dressing 5cm × 8cm= £4.10, dressing 10cm × 10cm square= £8.23, 10cm × 20cm rectangular= £15.12, 12.5cm × 12.5cm square= £9.41, 15cm × 15cm square= £16.51, 18cm × 18cm square= £18.88, 19cm × 20cm heel= £18.62, 20cm × 20cm square= £23.29, 23cm × 23cm sacral= £19.79, 5cm × 7cm rectangular= £3.38

PolyMem Silver

Silver impregnated polyurethane foam film dressing, with or without adhesive border

PolyMem Silver (Aspen Medical Europe Ltd) WIC dressing 8cm × 8cm= £7.10, dressing 10.8cm × 10.8cm square= £8.93, 12.7cm × 8.8cm oval= £5.64, 17cm × 19cm rectangular= £17.89, 5cm × 7.6cm oval= £2.29

UrgoCell Silver

Non-adherent, polyurethane foam film dressing with silver in wound contact layer

UrgoCell Silver dressing (Urgo Ltd) 10cm × 10cm= £6.00, 15cm × 20cm= £10.99, 6cm × 6cm= £4.36

Hydrocolloid dressings

Aquacel Ag

Soft non-woven pad containing hydrocolloid fibres, (silver impregnated),

Aquacel Ag (ConvaTec Ltd) Ribbon dressing 1cm × 45cm= £3.14, 2cm × 45cm= £4.80, dressing 10cm × 10cm square= £4.77, 15cm × 15cm square= £8.99, 20cm × 30cm rectangular= £22.30, 4cm × 10cm rectangular= £2.91, 4cm × 20cm rectangular= £3.79, 4cm × 30cm rectangular= £5.67

Physiotulle Ag

Non-adherent polyester fabric with hydrocolloid and silver sulfadiazine

Physiotulle (Coloplast Ltd) dressing 10cm × 10cm= £2.30

Low adherence dressing

Acticoat

Three-layer antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 3-day wear)

Acticoat dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £8.72, 10cm × 20cm rectangular= £13.64, 20cm × 40cm rectangular= £46.66, 5cm × 5cm square= £3.57

Acticoat 7

Five-layer antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 7-day wear)

Acticoat 7 dressing (Smith & Nephew Healthcare Ltd) 10cm × 12.5cm rectangular= £18.49, 15cm × 15cm square= £33.24, 5cm × 5cm square= £6.21

Acticoat Flex 3

Conformable antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 3-day wear)

Acticoat Flex 3 dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £8.80, 10cm × 20cm rectangular= £13.75, 20cm × 40cm rectangular= £47.07, 5cm × 5cm square= £3.60

Acticoat Flex 7

Conformable antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 7-day wear)

Acticoat Flex 7 dressing (Smith & Nephew Healthcare Ltd) 10cm × 12.5cm rectangular= £18.65, 15cm × 15cm square= £33.54, 5cm × 5cm square= £6.26

Atrauman Ag

Non-adherent polyamide fabric impregnated with silver and neutral triglycerides

Atrauman Ag dressing (Paul Hartmann Ltd) 10cm × 10cm= £1.28, 10cm × 20cm= £2.51, 5cm × 5cm= £0.53

Soft polymer dressings

Allevyn Ag Gentle

Soft polymer wound contact dressing, with silver sulfadiazine impregnated polyurethane foam layer, with or without adhesive border

Allevyn Ag Gentle (Smith & Nephew Healthcare Ltd) Border dressing 10cm × 10cm= £6.48, 12.5cm × 12.5cm= £8.33, 17.5cm × 17.5cm= £15.87, 7.5cm × 7.5cm= £4.31, dressing 10cm × 10cm= £6.29, 10cm × 20cm= £10.40, 15cm × 15cm= £11.70, 20cm × 20cm= £17.33, 5cm × 5cm= £3.38

Mepilex Ag

Soft silicone wound contact dressing with polyurethane foam film backing, with silver, with or without adhesive border

Mepilex (Molnlycke Health Care Ltd) Ag dressing 10cm × 10cm= £6.17, 10cm × 20cm= £10.17, 15cm × 15cm= £11.44, 20cm × 20cm= £16.96, 20cm × 50cm= £63.64, Border Ag dressing 10cm × 12.5cm= £6.21, 10cm × 20cm= £9.03, 10cm × 30cm= £13.55, 15cm × 17.5cm= £11.39, 17cm × 20cm= £14.76, 7cm × 7.5cm= £3.43, Border Sacrum Ag dressing 18cm × 18cm= £11.91, 20cm × 20cm= £14.48, 23cm × 23cm= £19.02, Heel Ag dressing 13cm × 20cm= £12.87, 15cm × 22cm= £14.42

Urgotul Silver

Non-adherent soft polymer wound contact dressing, with silver

Urgotul Silver dressing (Urgo Ltd) 10cm × 12cm= £3.61, 15cm × 20cm= £9.83

With charcoal

Actisorb Silver 220

Knitted fabric of activated charcoal, with one-way stretch, with silver residues, within spun-bonded nylon sleeve

Actisorb Silver 220 dressing (Systagenix Wound Management Ltd) 10.5cm × 10.5cm= £2.58, 10.5cm × 19cm= £4.70, 6.5cm × 9.5cm= £1.64

Other antimicrobials

Cutimed Siltec Sorbact

Polyurethane foam dressing with acetate fabric coated with dialkylcarbamoyl chloride, with adhesive border

Cutimed Siltec Sorbact dressing (BSN medical Ltd) 12.5cm × 12.5cm= £6.56, 15cm × 15cm= £8.13, 17.5cm × 17.5cm= £11.38, 22.5cm × 22.5cm= £17.31, 7.5cm × 7.5cm= £2.56, 17.5cm × 17.5cm sacral= £8.22, 23cm × 23cm sacral= £12.36

Cutimed Sorbact

Low adherence acetate tissue impregnated with dialkylcarbamoyl chloride; dressing pad, swabs, round swabs or ribbon gauze, cotton

Cutimed Sorbact (BSN medical Ltd) Ribbon dressing 2cm × 50cm= £4.11, 5cm × 200cm= £8.10, Round swab 3cm= £3.36, dressing pad 10cm × 10cm= £5.60, 10cm × 20cm= £8.74, 7cm × 9cm= £3.58, swab 4cm × 6cm= £1.68, 7cm × 9cm= £2.80

https://nhathuocngocanh.com/ www.getintopharma.com

Cutimed Sorbact Gel
Hydrogel dressing impregnated with dialkylcarbamoyl chloride
Cutimed Sorbact Gel dressing (BSN medical Ltd) 7.5cm × 15cm rectangular= £4.56, 7.5cm × 7.5cm square= £2.70

Cutimed Sorbact Hydroactive
Non-adhesive gel dressing with hydropolymer matrix and acetate fabric coated with dialkylcarbamoyl chloride
Cutimed Sorbact Hydroactive dressing (BSN medical Ltd) 14cm × 14cm= £5.47, 14cm × 24cm= £8.76, 19cm × 19cm= £10.29, 24cm × 24cm= £15.60, 7cm × 8.5cm= £3.75

Cutimed Sorbact Hydroactive B
Gel dressing with hydropolymer matrix and acetate fabric coated with dialkylcarbamoyl chloride, with adhesive border
Cutimed Sorbact Hydroactive B dressing (BSN medical Ltd) 10cm × 10cm= £7.22, 10cm × 20cm= £11.56, 15cm × 15cm= £13.58, 5cm × 6.5cm= £4.05

Flaminal Forte gel
Alginate with glucose oxidase and lactoperoxidase, for moderately to heavily exuding wounds
Flaminal Forte gel dressing (Flen Health UK Ltd) 15g= £7.79, 50g= £25.78

Flaminal Hydro gel
Alginate with glucose oxidase and lactoperoxidase, for lightly to moderately exuding wounds
Flaminal Hydro gel dressing (Flen Health UK Ltd) 15g= £7.79, 50g= £25.78

Kendall AMD
Foam dressing with polihexanide, without adhesive border
Kendall AMD Antimicrobial foam dressing (H & R Healthcare Ltd) 10cm × 10cm square= £4.71, 10cm × 20cm rectangular= £8.92, 15cm × 15cm square= £8.92, 20cm × 20cm square= £13.07, 5cm × 5cm square= £2.50, 8.8cm × 7.5cm rectangular (fenestrated)= £4.23

Kendall AMD Plus
Foam dressing with polihexanide, without adhesive border
Kendall AMD Antimicrobial Plus foam dressing (H & R Healthcare Ltd) 10cm × 10cm square= £4.94, 8.8cm × 7.5cm rectangular (fenestrated)= £4.43

Octenilin Wound gel
Wound gel, hydroxyethylcellulose and propylene glycol, with octenidine hydrochloride
Octenilin Wound Gel dressing (Schulke & Mayr Ltd) 20ml= £4.78

Prontosan Wound Gel
Hydrogel containing betaine surfactant and polihexanide
Prontosan Wound Gel dressing (B.Braun Medical Ltd) 30ml= £6.50

Suprasorb X + PHMB
Biosynthetic cellulose fibre dressing with polihexanide
Suprasorb X + PHMB dressing (Lohmann & Rauscher) 14cm × 20cm rectangular= £11.80, 2cm × 21cm rope= £7.35, 5cm × 5cm square= £2.61, 9cm × 9cm square= £5.19

Telfa AMD
Low adherence absorbent perforated plastic film faced dressing with polihexanide
Telfa AMD dressing (H & R Healthcare Ltd) 10cm × 7.5cm= £0.18, 20cm × 7.5cm= £0.28

Telfa AMD Island
Low adherence dressing with adhesive border and absorbent pad, with polihexanide
Telfa AMD Island dressing (H & R Healthcare Ltd) 10cm × 12.5cm= £0.59, 10cm × 20cm= £0.86, 10cm × 25.5cm= £0.98, 10cm × 35cm= £1.22

Chlorhexidine gauze dressing
Bactigras
Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with ointment containing chlorhexidine acetate
Bactigras gauze dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm= no price available, 5cm × 5cm= no price available

Irrigation fluids
Octenilin Wound irrigation solution
Aqueous solution containing glycerol, ethylhexylglycerin and octenidine hydrochloride
Octenilin irrigation solution (Schulke & Mayr Ltd) 350mL bottles= £4.60

Prontosan Wound Irrigation Solution
Aqueous solution containing betaine surfactant and polihexanide
Prontosan irrigation solution (B.Braun Medical Ltd) 350ml bottles= £4.86, 40ml unit dose= £14.45

Specialised dressings

Protease-modulating matrix dressings

Cadesorb Ointment
Cadesorb (Smith & Nephew Healthcare Ltd) ointment= £9.40

Catrix
Catrix dressing (Cranage Healthcare Ltd) sachets= £3.80

Promogran
Collagen and oxidised regenerated cellulose matrix, applied directly to wound and covered with suitable dressing
Promogran dressing (Systagenix Wound Management Ltd) 123 square cm= £15.62, 28 square cm= £5.19

Promogran Prisma Matrix
Collagen, silver and oxidised regenerated cellulose matrix, applied directly to wound and covered with suitable dressing
Promogran Prisma dressing (Systagenix Wound Management Ltd) 123 square cm= £17.98, 28 square cm= £6.31

UrgoStart
Soft adherent polymer matrix containing nano-oligosaccharide factor (NOSF), with polyurethane foam film backing
UrgoStart dressing (Urgo Ltd) 10cm × 10cm= £6.21, 15cm × 20cm= £11.17, 6cm × 6cm= £4.49, 12cm × 19cm heel= £8.56

UrgoStart Contact
Non-adherent soft polymer wound contact dressing containing nano-oligosaccharide factor (NOSF)
UrgoStart (Urgo Ltd) Contact dressing 5cm × 7cm= £3.03

Silicone keloid dressings

Silicone gel and gel sheets are used to reduce or prevent hypertrophic and keloid scarring. They should not be used on open wounds. Application times should be increased gradually. Silicone sheets can be washed and reused.

Silicone gel
Bapscarcare
Silicone gel
Bapscarcare (Espere Healthcare Ltd) gel= £17.12

Ciltech
Silicone gel
Ciltech (Su-Med International (UK) Ltd) gel= £50.00

Dermatix
Silicone gel
Dermatix gel (Meda Pharmaceuticals Ltd) = £60.53

Kelo-cote UV
Silicone gel with SPF 30 UV protection
Kelo-cote (Alliance Pharmaceuticals Ltd) UV gel= £17.88

Kelo-cote gel
Silicone gel
Kelo-cote (Alliance Pharmaceuticals Ltd) gel= £51.00

Kelo-cote spray
Silicone spray
Kelo-cote (Alliance Pharmaceuticals Ltd) spray= £51.00

NewGel+E
Silicone gel with vitamin E
NewGel+E (Advantech Surgical Ltd) gel= £17.70

ScarSil
Silicone gel
ScarSil (Jobskin Ltd) gel= £15.19

https://nhathuocngocanh.com/ www.getintopharma.com

Silgel STC-SE
Silicone gel
Silgel (Nagor Ltd) STC-SE gel= £19.00

Silicone sheets
Advasil Conform
Self-adhesive silicone gel sheet with polyurethane film backing
Advasil Conform sheet (Advancis Medical) 10cm × 10cm square= £5.24, 15cm × 10cm rectangular= £9.24

Bapscarcare T
Self-adhesive silicone gel sheet
Bapscarcare T sheet (Espere Healthcare Ltd) 10cm × 15cm rectangular= £9.07, 5cm × 30cm rectangular= £9.07, 5cm × 7cm rectangular= £3.17

Cica-Care
Soft, self-adhesive, semi-occlusive silicone gel sheet with backing
Cica-Care sheet (Smith & Nephew Healthcare Ltd) 15cm × 12cm rectangular= £29.06, 6cm × 12cm rectangular= £14.91

Ciltech
Silicone gel sheet
Ciltech sheet (Su-Med International (UK) Ltd) 10cm × 10cm square= £7.50, 10cm × 20cm rectangular= £12.50, 15cm × 15cm square= £14.00

Dermatix
Self-adhesive silicone gel sheet (clear- or fabric-backed)
Dermatix (Meda Pharmaceuticals Ltd) Clear sheet 13cm × 13cm square= £15.79, 13cm × 25cm rectangular= £28.53, 20cm × 30cm rectangular= £51.97, 4cm × 13cm rectangular= £6.88, Fabric sheet 13cm × 13cm square= £15.79, 13cm × 25cm rectangular= £28.53, 20cm × 30cm rectangular= £51.97, 4cm × 13cm rectangular= £6.88

Mepiform
Self-adhesive silicone gel sheet with polyurethane film backing
Mepiform sheet (Molnlycke Health Care Ltd) 4cm × 31cm rectangular= £11.10, 5cm × 7cm rectangular= £3.51, 9cm × 18cm rectangular= £13.75

Scar FX
Self-adhesive, transparent, silicone gel sheet
Scar Fx sheet (Jobskin Ltd) 10cm × 20cm rectangular= £16.00, 22.5cm × 14.5cm shaped= £12.00, 25.5cm × 30.5cm rectangular= £60.00, 3.75cm × 22.5cm rectangular= £12.00, 7.5cm diameter shaped= £8.50

Silgel
Silicone gel sheet
Silgel sheet (Nagor Ltd) 10cm × 10cm square= £13.50, 10cm × 30cm rectangular= £31.50, 10cm × 5cm rectangular= £7.50, 15cm × 10cm rectangular= £19.50, 20cm × 20cm square= £40.00, 25cm × 15cm shaped= £21.12, 30cm × 5cm rectangular= £19.50, 40cm × 40cm square= £144.00, 46cm × 8.5cm shaped= £39.46, 5.5cm diameter shaped= £4.00

Adjunct dressings and appliances

Surgical absorbents

Surgical absorbents applied directly to the wound have many disadvantages—dehydration of and adherence to the wound, shedding of fibres, and the leakage of exudate ('strike through') with an associated risk of infection. Gauze and cotton absorbent dressings can be used as secondary layers in the management of heavily exuding wounds (but see also Capillary-action dressings). Absorbent cotton gauze fabric can be used for swabbing and cleaning skin. Ribbon gauze can be used post-operatively to pack wound cavities, but adherence to the wound bed will cause bleeding and tissue damage on removal of the dressing—an advanced wound dressing (e.g. hydrocolloid-fibrous, foam, or alginate) layered into the cavity is often more suitable.

Cotton
Absorbent Cotton, BP
Carded cotton fibres of not less than 10 mm average staple length, available in rolls and balls
Absorbent (Robert Bailey & Son Plc) cotton BP 1988

Absorbent Cotton, Hospital Quality
As for absorbent cotton but lower quality materials, shorter staple length etc.
Absorbent (Robert Bailey & Son Plc) cotton hospital quality

Gauze and cotton tissue
Gamgee Tissue (blue)
Consists of absorbent cotton enclosed in absorbent cotton gauze type 12 or absorbent cotton and viscose gauze type 2
Gamgee (Robinson Healthcare) tissue blue label

Gamgee Tissue (pink)
Consists of absorbent cotton enclosed in absorbent cotton gauze type 12 or absorbent cotton and viscose gauze type 2
Gamgee (Robinson Healthcare) tissue pink label DT

Gauze and tissue
Absorbent Cotton Gauze, BP 1988
Cotton fabric of plain weave, in rolls and as swabs (see below), usually Type 13 light, sterile
Absorbent (Robert Bailey & Son Plc) cotton BP 1988
Alvita (Alliance Healthcare (Distribution) Ltd) absorbent cotton BP 1988
Clini (CliniSupplies Ltd) absorbent cotton BP 1988
Vernaid (Synergy Health (UK) Ltd) absorbent cotton BP 1988

Absorbent Cotton and Viscose Ribbon Gauze, BP 1988
Woven fabric in ribbon form with fast selvedge edges, warp threads of cotton, weft threads of viscose or combined cotton and viscose yarn, sterile
Vernaid Fast Edge ribbon gauze sterile (Synergy Health (UK) Ltd) 1.25cm, 2.5cm

Lint
Absorbent Lint, BPC
Cotton cloth of plain weave with nap raised on one side from warp yarns
Absorbent (Robinson Healthcare) lint
Alvita (Alliance Healthcare (Distribution) Ltd) absorbent lint BPC
Clini (CliniSupplies Ltd) absorbent lint BPC

Pads
Drisorb
Absorbent Dressing Pads, Sterile
Drisorb (Synergy Health (UK) Ltd) dressing pad 10cm × 20cm= £0.17

PremierPad
Absorbent Dressing Pads, Sterile
PremierPad dressing pad (Shermond) 10cm × 20cm= £0.18, 20cm × 20cm= £0.25

XuPad
Absorbent Dressing Pads, Sterile
Xupad dressing pad (Richardson Healthcare Ltd) 10cm × 20cm= £0.17, 20cm × 20cm= £0.28, 20cm × 40cm= £0.40

Wound drainage pouches

Wound drainage pouches can be used in the management of wounds and fistulas with significant levels of exudate.

Biotrol Draina S
Wound drainage pouch
Biotrol Draina S wound drainage bag (B.Braun Medical Ltd) large (Transparent)= £97.23, medium (Transparent)= £79.06, mini (Transparent)= £79.30

Biotrol Draina S Vision
Wound drainage pouch
Draina S Vision (B.Braun Medical Ltd) 100 wound drainage bag= £126.25, 50 wound drainage bag= £103.00, 75 wound drainage bag= £108.81

Eakin Access window
For use with Eakin ® pouches
Eakin (Pelican Healthcare Ltd) access window large= £38.45

https://nhathuocngocanh.com/ www.getintopharma.com

Eakin Wound pouch, bung closure
Wound pouch, bung closure
Eakin wound drainage bag with bung closure (Pelican Healthcare Ltd) large= £104.36, medium= £76.90, small= £54.93, and access window for horizontal wounds, extra large= £104.36, for horizontal wounds, extra large= £93.38, for vertical incision wounds, extra large= £93.38, wounds, extra large= £93.38

Eakin Wound pouch, fold and tuck closure
Wound pouch, fold and tuck closure
Eakin wound drainage bag with fold and tuck closure (Pelican Healthcare Ltd) large= £93.38, medium= £71.41, small= £49.44, extra large= £82.39

Option Wound Manager
Wound drainage bag
Option wound manager bag (Oakmed Ltd) large= £161.34, medium= £135.36, small= £132.42, square= £141.25, extra small= £119.06

Option Wound Manager with access port
Wound drainage bag, with access port
Option wound manager bag with access port (Oakmed Ltd) large= £172.46, medium= £141.25, small= £138.31, square= £147.13, extra small= £130.18

Option Wound Manager, cut to fit
Wound drainage bag, cut to fit
Option wound manager bag (Oakmed Ltd) large= £84.82, medium= £80.98, small= £73.10

Welland Fistula bag
Wound drainage bag, cut-to-fit
Welland (Welland Medical Ltd) Fistula wound drainage bag= £83.60

Physical debridement pads
DebriSoft ® is a pad that is used for the debridement of superficial wounds containing loose slough and debris, and for the removal of hyperkeratosis from the skin. DebriSoft ® must be fully moistened with a wound cleansing solution before use and is not appropriate for use as a wound dressing.

DebriSoft Pad
Polyester fibres with bound edges and knitted outer surface coated with polyacrylate
DebriSoft (Lohmann & Rauscher) pad 10cm × 10cm= £6.55

Complex adjunct therapies

Topical negative pressure therapy
Accessories
Renasys
Soft port and connector
Renasys (Smith & Nephew Healthcare Ltd) Soft Port= £11.38, connector for use with soft port= £3.31

V.A.C.
Drape, gel for canister, Sensa T.R.A.C. Pad
SensaT.R.A.C. (KCI Medical Ltd) pad= £10.95
T.R.A.C. (KCI Medical Ltd) connector= £3.13
V.A.C. (KCI Medical Ltd) drape= £9.39, gel strips= £3.76

Venturi
Gel patches, adhesive, and connector
Venturi (Talley Group Ltd) adhesive gel patch= £15.00, connector= £15.00

WoundASSIST gel strip
WoundASSIST (Huntleigh Healthcare Ltd) TNP gel strip= £3.37

Vacuum assisted closure products
Exsu-Fast kit 1
Dressing Kit
Exsu-Fast (Synergy Health (UK) Ltd) dressing kit 1= £28.04

Exsu-Fast kit 2
Dressing Kit
Exsu-Fast (Synergy Health (UK) Ltd) dressing kit 2= £35.83

Exsu-Fast kit 3
Dressing Kit
Exsu-Fast (Synergy Health (UK) Ltd) dressing kit 3= £35.83

Exsu-Fast kit 4
Dressing Kit
Exsu-Fast (Synergy Health (UK) Ltd) dressing kit 4= £28.04

V.A.C GranuFoam
Polyurethane foam dressing (with adhesive drapes and pad connector); with or without silver
V.A.C. GranuFoam (KCI Medical Ltd) Bridge dressing kit= £32.04, Silver with SensaT.R.A.C dressing kit medium= £38.04, small= £32.79, dressing kit large= £31.70, medium= £27.32, small= £22.95

V.A.C Simplace
Spiral-cut polyurethane foam dressings, vapour-permeable adhesive film dressings (with adhesive drapes and pad connector)
V.A.C. Simplace EX dressing kit (KCI Medical Ltd) medium= £30.58, small= £26.60

V.A.C WhiteFoam
Polyvinyl alcohol foam dressing or dressing kit
V.A.C. WhiteFoam dressing (KCI Medical Ltd) large= £17.04, small= £10.64, kit large= £33.54, small= £25.91

Venturi
Wound sealing kit, flat drain; with or without channel drain
Venturi wound sealing kit with (Talley Group Ltd) channel drain= £15.00, flat drain, large= £17.50, standard= £15.00

WoundASSIST
Wound pack and channel drain
WoundASSIST TNP dressing pack (Huntleigh Healthcare Ltd) medium/large= £23.85, small/medium= £20.81, channel drain medium/large= £23.85, small/medium= £20.81, extra large= £34.05

Wound drainage collection devices
ActiV.A.C.
Canister with gel
ActiV.A.C (KCI Medical Ltd) canister with gel= £28.42

S-Canister
Canister kit
S-Canister (Smith & Nephew Healthcare Ltd) kit= £19.00

V.A.C Freedom
Canister with gel
V.A.C.(KCI Medical Ltd) Freedom Canister with gel= £28.85

Venturi
Canister kit with solidifier
Venturi (Talley Group Ltd) Compact canister kit= £12.50, canister kit= £12.50

WoundASSIST wound pack
Canister
WoundASSIST (Huntleigh Healthcare Ltd) TNP canister= £20.30

Wound care accessories

Dressing packs
The role of dressing packs is very limited. They are used to provide a clean or sterile working surface; some packs shown below include cotton wool balls, which are not recommended for use on wounds.

Multiple Pack Dressing No. 1
Contains absorbent cotton, absorbent cotton gauze type 13 light (sterile), open-wove bandages (banded)
Vernaid (Synergy Health (UK) Ltd) multiple pack dressing

Non-drug tariff specification sterile dressing packs
Dressit
Vitrex gloves, large apron, disposable bag, paper towel, softswabs, adsorbent pad, sterile field
Dressit sterile dressing pack (Richardson Healthcare Ltd) with medium/large gloves= £0.60, small/medium gloves= £0.60

Nurse It
Contains latex-free, powder-free nitrile gloves, sterile laminated paper sheet, large apron, non-woven swabs, paper towel, disposable bag, compartmented tray, disposable forceps, paper measuring tape
Nurse It sterile dressing pack (Medicareplus International Ltd) with medium/large gloves= £0.55, small/medium gloves= £0.55

https://nhathuocngocanh.com/ www.getintopharma.com

Polyfield Nitrile Patient Pack
Contains powder-free nitrile gloves, laminate sheet, non-woven swabs, towel, polythene disposable bag, apron
Polyfield Nitrile Patient Pack (Shermond) with large gloves= £0.52, medium gloves= £0.52, small gloves= £0.52

Sterile Dressing Pack with Non-Woven Pads
Vernaid
(Drug Tariff specification 35). Contains non-woven fabric covered dressing pad, non-woven fabric swabs, absorbent cotton wool balls, absorbent paper towel, water repellent inner wrapper
Vernaid (Synergy Health (UK) Ltd) sterile dressing pack with non-woven pads

Sterile dressing packs
Vernaid
(Drug Tariff specification 10). Contains gauze and cotton tissue pad, gauze swabs, absorbent cotton wool balls, absorbent paper towel, water repellent inner wrapper
Vernaid (Synergy Health (UK) Ltd) sterile dressing pack

Woven and fabric swabs

Gauze Swab, PB 1988
Consists of absorbent cotton gauze type 13 light or absorbent cotton and viscose gauze type 1 folded into squares or rectangles of 8-ply with no cut edges exposed, sterile or non-sterile
Alvita gauze swab 8ply (Alliance Healthcare (Distribution) Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm
CS (CliniSupplies Ltd) gauze swab 8ply non-sterile 10cm × 10cm
Clini gauze swab 8ply (CliniSupplies Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm
Gauze (Robert Bailey & Son Plc) swab 8ply non-sterile 10cm × 10cm
MeCoBo gauze swab 8ply (MeCoBo Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm
Propax gauze (BSN medical Ltd) swab 8ply sterile 7.5cm × 7.5cm
Sovereign (Waymade Healthcare Plc) gauze swab 8ply sterile 7.5cm × 7.5cm
Steraid (Robert Bailey & Son Plc) gauze swab 8ply sterile 7.5cm × 7.5cm
Vernaid gauze swab 8ply (Synergy Health (UK) Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

Non-woven Fabric Swab
(Drug Tariff specification 28). Consists of non-woven fabric folded 4-ply; alternative to gauze swabs, type 13 light, sterile or non-sterile
CS (CliniSupplies Ltd) non-woven fabric swab 4ply non-sterile 10cm × 10cm
Clini non-woven fabric swab 4ply (CliniSupplies Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm
CliniMed (CliniMed Ltd) non-woven fabric swab 4ply non-sterile 10cm × 10cm
MeCoBo (MeCoBo Ltd) non-woven fabric swab 4ply non-sterile 10cm × 10cm
Multisorb (BSN medical Ltd) non-woven fabric swab 4ply sterile 7.5cm × 7.5cm
Sofsorb non-woven fabric swab 4ply (Synergy Health (UK) Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm
Softswab non-woven fabric swab 4ply (Richardson Healthcare Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm
Topper 8 non-woven fabric swab 4ply (Systagenix Wound Management Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

Filmated non-woven Fabric Swab
Regal
(Drug Tariff specification 29). Film of viscose fibres enclosed within non-woven viscose fabric folded 8-ply, non-sterile
Regal (Systagenix Wound Management Ltd) filmated swab 8ply 10cm × 10cm

Surgical adhesive tapes

Adhesive tapes are useful for retaining dressings on joints or awkward body parts. These tapes, particularly those containing rubber, can cause irritant and allergic reactions in susceptible patients; synthetic adhesives have been developed to overcome this problem, but they, too, may sometimes be associated with reactions. Synthetic adhesive, or silicon adhesive, tapes can be used for patients with skin reactions to plasters and strapping containing rubber, or undergoing prolonged treatment.
Adhesive tapes that are occlusive may cause skin maceration. Care is needed not to apply these tapes under tension, to avoid creating a tourniquet effect. If applied over joints they need to be orientated so that the area of maximum extensibility of the fabric is in the direction of movement of the limb.

Occlusive adhesive tapes
Blenderm
(Impermeable Plastic Adhesive Tape, BP 1988). Extensible water-impermeable plastic film spread with a polymericadhesive mass
Blenderm tape (3M Health Care Ltd) 2.5cm= £1.77, 5cm= £3.37

Sleek
(Impermeable Plastic Adhesive Tape, BP 1988). Extensible water-impermeable plastic film spread with an adhesive mass
Leukoplast Sleek tape (BSN medical Ltd) 2.5cm, 5cm, 7.5cm

Permeable adhesive tapes
3m Kind Removal Silicone Tape
Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape
3M Micropore Silicone tape (3M Health Care Ltd) 2.5cm= £3.58, 5cm= £6.48

Chemifix
(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive
Chemifix tape (Medicareplus International Ltd) 10cm= £2.10, 2.5cm= £0.90, 5cm= £1.40

Chemipore
(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass
Chemipore tape (Medicareplus International Ltd) 1.25cm= £0.27, 2.5cm= £0.70, 5cm= £0.95

Clinipore
(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass
Clinipore tape (CliniSupplies Ltd) 1.25cm= £0.35, 2.5cm= £0.74, 5cm= £1.00

Elastoplast
(Elastic Adhesive Tape, BP 1988). Woven fabric, elastic in warp (crepe-twisted cotton threads), weft of cotton and/or viscose threads, spread with adhesive mass containing zinc oxide
Tensoplast (BSN medical Ltd) elastic adhesive tape 2.5cm

Hypafix
(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive
Hypafix tape (BSN medical Ltd) 10cm= £4.76, 15cm= £7.05, 2.5cm= £1.72, 20cm= £9.35, 30cm= £13.52, 5cm= £2.73

Insil
Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape
Insil tape (Insight Medical Products Ltd) 2cm= £5.77, 4cm= £5.77

Leukofix
(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass
Leukofix tape (BSN medical Ltd) 1.25cm= £0.56, 2.5cm= £0.91, 5cm= £1.60

https://nhathuocngocanh.com/ www.getintopharma.com

Leukopor
(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass
Leukopor tape (BSN medical Ltd) 1.25cm= £0.50, 2.5cm= £0.78, 5cm= £1.38

Mediplast
(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass
Mediplast tape (Neomedic Ltd) 1.25cm= £0.30, 2.5cm= £0.50

Mediplast
Fabric, plain weave, warp and weft of cotton and /or viscose, spread with an adhesive containing zinc oxide
Mediplast Zinc Oxide plaster (Neomedic Ltd) 1.25cm= £0.82, 2.5cm= £1.19, 5cm= £1.99, 7.5cm= £2.99

Mefix
(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive
Mefix tape (Molnlycke Health Care Ltd) 10cm= £2.92, 15cm= £3.98, 2.5cm= £1.03, 20cm= £5.10, 30cm= £7.32, 5cm= £1.83

Mepitac
Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape
Mepitac tape (Molnlycke Health Care Ltd) 2cm= £7.01, 4cm= £7.01

Micropore
(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass
Micropore tape (3M Health Care Ltd) 1.25cm= £0.62, 2.5cm= £0.92, 5cm= £1.62

Omnifix
(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive
Omnifix tape (Paul Hartmann Ltd) 10cm= £4.14, 15cm= £6.11, 5cm= £2.46

OpSite Flexifix Gentle
Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape
OpSite Flexifix Gentle tape (Smith & Nephew Healthcare Ltd) 2.5cm= £10.49, 5cm= £19.67

Primafix
(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive
Primafix tape (Smith & Nephew Healthcare Ltd) 10cm= £2.38, 15cm= £3.51, 20cm= £4.32, 5cm= £1.62

Scanpor
(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass
Scanpor tape (Bio-Diagnostics Ltd) 1.25cm= £0.55, 2.5cm= £0.92, 5cm= £1.75, 7.5cm= £2.56

Siltape
Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape
Siltape (Advancis Medical) 2cm= £5.64, 4cm= £5.64

Strappal
Fabric, plain weave, warp and weft of cotton and /or viscose, spread with an adhesive containing zinc oxide
Strappal adhesive tape (BSN medical Ltd) 2.5cm= £1.41, 5cm= £2.39, 7.5cm= £3.59

Transpore
(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass
Transpore tape (3M Health Care Ltd) 2.5cm= £0.84, 5cm= £1.48

Zinc Oxide Adhesive Tape, BP 1988
Fabric, plain weave, warp and weft of cotton and /or viscose, spread with an adhesive containing zinc oxide
Fast Aid zinc oxide adhesive tape (Robinson Healthcare) 1.25cm, 2.5cm, 5cm, 7.5cm

Skin closure dressings

Skin closure strips are used as an alternative to sutures for minor cuts and lacerations. Skin tissue adhesive can be used for closure of minor skin wounds and for additional suture support.

Skin closure strips, sterile

Leukostrip
Drug Tariff specifies that these are specifically for personal administration by the prescriber
Leukostrip (Smith & Nephew Healthcare Ltd) skin closure strips 6.4mm × 76mm= £6.43

Omnistrip
Drug Tariff specifies that these are specifically for personal administration by the prescriber
Omnistrip (Paul Hartmann Ltd) skin closure strips sterile 6mm × 76mm= £24.68

Steri-strip
Drug Tariff specifies that these are specifically for personal administration by the prescriber
Steri-strip (3M Health Care Ltd) skin closure strips 6mm × 75mm= £8.77

Bandages

Non-extensible bandages

Skin closure strips are used as an alternative to sutures for minor cuts and lacerations. Skin tissue adhesive can be used for closure of minor skin wounds and for additional suture support.

Open-wove Bandage, Type 1 BP 1988
Cotton cloth, plain weave, warp of cotton, weft of cotton, viscose, or combination, one continuous length
Clini open wove bandage Type 1 BP 1988 (CliniSupplies Ltd) 10cm × 5m, 2.5cm × 5m, 5cm × 5m, 7.5cm × 5m
Vernaid white open wove bandage (Synergy Health (UK) Ltd) 10cm × 5m, 2.5cm × 5m, 5cm × 5m, 7.5cm × 5m
White open wove bandage (Robert Bailey & Son Plc) 10cm × 5m, 2.5cm × 5m, 5cm × 5m, 7.5cm × 5m

Triangular Calico Bandage, BP 1980
Unbleached calico right-angled triangle
Clini (CliniSupplies Ltd) triangular calico bandage BP 1980 90cm × 127cm
Triangular (BSN medical Ltd) calico bandage 90cm × 127cm

Light-weight conforming bandages

Lightweight conforming bandages are used for dressing retention, with the aim of keeping the dressing close to the wound without inhibiting movement or restricting blood flow. The elasticity of conforming-stretch bandages (also termed contour bandages) is greater than that of cotton conforming bandages.

Acti-Wrap
Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)
Acti-Wrap (cohesive/latex free) bandage (L&R Medical UK Ltd) 10cm × 4m= £0.82, 6cm × 4m= £0.47, 8cm × 4m= £0.69

Cotton Conforming Bandage, BP 1988
Cotton fabric, plain weave, treated to impart some elasticity to warp and weft
Easifix Crinx bandage (BSN medical Ltd) 10cm × 3.5m= £1.05, 15cm × 3.5m= £1.43, 5cm × 3.5m= £0.69, 7.5cm × 3.5m= £0.85

Easifix
Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)
Easifix bandage (BSN medical Ltd) 10cm × 4m= £0.52, 15cm × 4m= £0.88, 5cm × 4m= £0.36, 7.5cm × 4m= £0.43

https://nhathuocngocanh.com/ www.getintopharma.com

Easifix K
Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length. 4 m stretched
Easifix K bandage (BSN medical Ltd) 10cm × 4m= £0.19, 15cm × 4m= £0.33, 2.5cm × 4m= £0.10, 5cm × 4m= £0.11, 7.5cm × 4m= £0.16

Hospiform
Fabric, plain weave, warp of polyamide, weft of viscose
Hospiform bandage (Paul Hartmann Ltd) 10cm × 4m= £0.19, 12cm × 4m= £0.24, 6cm × 4m= £0.14, 8cm × 4m= £0.17

K-Band
Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length. 4 m stretched

Stayform bandage (Robinson Healthcare) 10cm × 4m= £0.40, 15cm × 4m= £0.68, 5cm × 4m= £0.29, 7.5cm × 4m= £0.36

Tubular bandages and garments
Tubular bandages are available in different forms, according to the function required of them. Some are used under orthopaedic casts and some are suitable for protecting areas to which creams or ointments (other than those containing potent corticosteroids) have been applied. The conformability of the elasticated versions makes them particularly suitable for retaining dressings on difficult parts of the body or for soft tissue injury, but their use as the only means of applying pressure to an oedematous limb or to a varicose ulcer is not appropriate, since the pressure they exert is inadequate. Compression hosiery reduces the recurrence of venous leg ulcers and should be considered for use after wound healing. Silk clothing is available as an alternative to elasticated viscose stockinette garments, for use in the management of severe eczema and allergic skin conditions.
Elasticated Surgical Tubular Stockinette, Foam padded is used for relief of pressure and elimination of friction in relevant area; porosity of foam lining allows normal water loss from skin surface.
For *Elasticated Tubular Bandage, BP* 1993, where no size stated by the prescriber, the 50 cm length should be supplied and width endorsed.
Non-elasticated Cotton Stockinette, Bleached, BP 1988 1m lengths is used as basis (with wadding) for Plaster of Paris bandages etc.; 6 m length, compression bandage.
For *Non-elasticated Ribbed Cotton and Viscose Surgical Tubular Stockinette, BP* 1988, the Drug Tariff specifies various combinations of sizes to provide sufficient material for part or full body coverage. It is used as protective dressings with tar-based and other steroid ointments.

Elasticated

Acti-Fast
(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage
Acti-Fast 2-way stretch stockinette (L&R Medical UK Ltd) 10.75cm= £6.04, 17.5cm= £1.83, 20cm= £3.20, 3.5cm= £0.56, 5cm= £0.58, 7.5cm= £0.77

Support bandages

Light support bandages, which include the various forms of crepe bandage, are used in the prevention of oedema; they are also used to provide support for mild sprains and joints but their effectiveness has not been proven for this purpose. Since they have limited extensibility, they are able to provide light support without exerting undue pressure. For a warning against injudicious compression see Compression bandages.

CliniLite

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

CliniLite bandage (CliniSupplies Ltd) 10cm × 4.5m= £0.81, 15cm × 4.5m= £1.17, 5cm × 4.5m= £0.44, 7.5cm × 4.5m= £0.61

CliniPlus

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

CliniPlus (CliniSupplies Ltd) bandage 10cm × 8.7m= £1.81

K-Plus (Urgo Ltd) Long bandage 10cm × 10.25m= £2.67, bandage 10cm × 8.7m= £2.31

Knit-Firm

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

Knit-Firm bandage (Millpledge Healthcare) 10cm × 4.5m= £0.66, 15cm × 4.5m= £0.96, 5cm × 4.5m= £0.36, 7cm × 4.5m= £0.51

L3

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

L3 (Smith & Nephew Healthcare Ltd) bandage 10cm × 8.6m= £2.24

Neosport

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

Neosport bandage (Neomedic Ltd) 10cm × 4.5m= £0.91, 15cm × 4.5m= £1.12, 5cm × 4.5m= £0.54, 7.5cm × 4.5m= £0.73

PremierBand

Fabric, plain weave, warp of crepe-twisted cotton threads, weft of cotton threads; stretch bandage, lighter than cotton crepe, 4.5 m stretched (all)

PremierBand bandage (Shermond) 10cm × 4.5m= £0.79, 15cm × 4.5m= £1.18, 5cm × 4.5m= £0.45, 7.5cm × 4.5m= £0.63

Profore #2

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

Profore #2 (Smith & Nephew Healthcare Ltd) bandage 10cm × 4.5m= £1.37, latex free bandage 10cm × 4.5m= £1.46

Profore #3

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

Profore #3 (Smith & Nephew Healthcare Ltd) bandage 10cm × 8.7m= £4.00, latex free bandage 10cm × 8.7m= £4.34

Setocrepe

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

Setocrepe (Molnlycke Health Care Ltd) bandage 10cm × 4.5m= £1.21

Soffcrepe

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

Soffcrepe bandage (BSN medical Ltd) 10cm × 4.5m= £1.26, 15cm × 4.5m= £1.84, 5cm × 4.5m= £0.71, 7.5cm × 4.5m= £1.00

Adhesive bandages

Elastic adhesive bandages are used to provide compression in the treatment of varicose veins and for the support of injured joints; they should no longer be used for the support of fractured ribs and clavicles. They have also been used with zinc paste bandage in the treatment of venous ulcers, but they can cause skin reactions in susceptible patients and may not produce sufficient pressures for healing (significantly lower than those provided by other compression bandages).

Elastic Adhesive Bandage, BP 1993

Woven fabric, elastic in warp (crepe-twisted cotton threads), weft of cotton and/or viscose threads spread with adhesive mass containing zinc oxide. 4.5 m stretched

https://nhathuocngocanh.com/ www.getintopharma.com

Tensoplast bandage (BSN medical Ltd) 10cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m

Cohesive bandages

Cohesive bandages adhere to themselves, but not to the skin, and are useful for providing support for sports use where ordinary stretch bandages might become displaced and adhesive bandages are inappropriate. Care is needed in their application, however, since the loss of ability for movement between turns of the bandage to equalise local areas of high tension carries the potential for creating a tourniquet effect. Cohesive bandages can be used to support sprained joints and as an outer layer for multi-layer compression bandaging; they should not be used if arterial disease is suspected.

Cohesive extensible bandages

Coban
Bandage
Coban (3M Health Care Ltd) self-adherent bandage 10cm × 6m= £2.93

K Press
Bandage
K Press bandage (Urgo Ltd) 10cm × 6.5m= £2.96, 10cm × 7.5m= £3.45, 12cm × 7.5m= £4.34, 8cm × 7.5cm= £3.25

Profore #4
Bandage
Profore #4 (Smith & Nephew Healthcare Ltd) bandage 10cm × 2.5m= £3.30, latex free bandage 10cm × 2.5m= £3.59

Ultra Fast
Bandage
Ultra (Robinson Healthcare) Fast cohesive bandage 10cm × 6.3m= £2.59

Compression bandages

High compression products are used to provide the high compression needed for the management of gross varices, post-thrombotic venous insufficiency, venous leg ulcers, and gross oedema in average-sized limbs. Their use calls for an expert knowledge of the elastic properties of the products and experience in the technique of providing careful graduated compression. Incorrect application can lead to uneven and inadequate pressures or to hazardous levels of pressure. In particular, injudicious use of compression in limbs with arterial disease has been reported to cause severe skin and tissue necrosis (in some instances calling for amputation). Doppler testing is required before treatment with compression. Oral pentoxifylline p. 233 can be used as adjunct therapy if a chronic venous leg ulcer does not respond to compression bandaging [unlicensed indication].

High compression bandages

High Compression Bandage
Cotton, viscose, nylon, and Lycra ® extensible bandage, 3 m (unstretched)
K-ThreeC (Urgo Ltd) bandage 10cm × 3m= £2.87
SurePress (ConvaTec Ltd) bandage 10cm × 3m= £3.68

PEC High Compression Bandages
Polyamide, elastane, and cotton compression (high) extensible bandage, 3.5 m unstretched
Setopress (Molnlycke Health Care Ltd) bandage 10cm × 3.5m= £3.58

VEC High Compression Bandages
Viscose, elastane, and cotton compression (high) extensible bandage, 3 m unstretched (both)
Tensopress bandage (BSN medical Ltd) 10cm × 3m= £3.51, 7.5cm × 3m= £2.73

Short stretch compression bandages

Actico
Bandage
Actico bandage (L&R Medical UK Ltd) 10cm × 6m= £3.41, 12cm × 6m= £4.34, 4cm × 6m= £2.44, 6cm × 6m= £2.85, 8cm × 6m= £3.28

Comprilan
Bandage
Comprilan bandage (BSN medical Ltd) 10cm × 5m= £3.44, 12cm × 5m= £4.19, 6cm × 5m= £2.72, 8cm × 5m= £3.20

Rosidal K
Bandage
Rosidal K bandage (Lohmann & Rauscher) 10cm × 10m= £6.11, 10cm × 5m= £3.51, 12cm × 5m= £4.26, 6cm × 5m= £2.69, 8cm × 5m= £3.21

Sub-compression wadding bandage

Cellona Undercast Padding
Padding
Cellona Undercast padding bandage (Lohmann & Rauscher) 10cm × 2.75m= £0.48, 15cm × 2.75m= £0.61, 5cm × 2.75m= £0.32, 7.5cm × 2.75m= £0.39

Flexi-Ban
Padding
Flexi-Ban (L&R Medical UK Ltd) bandage 10cm × 3.5m= £0.51

K Tech Reduced
Padding
K Tech Reduced bandage 10cm x (Urgo Ltd) 6m= £4.79, 7.3m= £5.23

K-Soft
Padding
K-Soft (Urgo Ltd) Long bandage 10cm × 4.5m= £0.58, bandage 10cm × 3.5m= £0.46

K-Tech (K Tech in DMD)
Padding
K Tech (Urgo Ltd) Reduced bandage 10cm × 7.3m= £5.23, bandage 10cm × 5m= £3.99, 10cm × 6m= £4.79, 12cm × 6m= £6.04, 12cm × 7.3m= £6.60, 8cm × 6m= £4.52, 8cm × 7.3m= £4.93

Ortho-Band Plus
Padding
Ortho-Band (Millpledge Healthcare) Plus bandage 10cm × 3.5m= £0.37

Profore #1
Padding
Profore #1 (Smith & Nephew Healthcare Ltd) bandage 10cm × 3.5m= £0.72, latex free bandage 10cm × 3.5m= £0.77

Softexe
Padding
Softexe (Molnlycke Health Care Ltd) bandage 10cm × 3.5m= £0.62

SurePres
Padding
SurePress (ConvaTec Ltd) bandage 10cm × 3m= £3.68

Ultra Soft
Padding
Ultra (Robinson Healthcare) Soft wadding bandage 10cm × 3.5m= £0.39

Velband
Padding
Velband (BSN medical Ltd) absorbent padding bandage 10cm × 4.5m= £0.74

Multi-layer compression bandaging

Multi-layer compression bandaging systems are an alternative to High Compression Bandages for the treatment of venous leg ulcers. Compression is achieved by the combined effects of two or three extensible bandages applied over a layer of orthopaedic wadding and a wound contact dressing.

Four layer systems

K-Four
Padding

K-Four
Multi-layer compression bandaging kit, four layer system
K-Four (Urgo Ltd) Reduced Compression multi-layer compression bandage kit 18cm+ ankle circumference = £4.55, multi-layer compression bandage kit 18cm-25cm ankle circumference= £6.96, 25cm-30cm ankle circumference= £6.96, greater than 30cm ankle circumference= £9.58, less than 18cm ankle circumference= £7.27

Medicated bandages

Zinc Paste Bandage has been used with compression bandaging for the treatment of venous leg ulcers. However, paste bandages are associated with hypersensitivity reactions and should be used with caution. Zinc paste bandages are also used with coal tar or ichthammol in chronic lichenified skin conditions such as chronic eczema (ichthammol often being preferred since its action is considered to be milder). They are also used with calamine in milder eczematous skin conditions.
Zipzoc® can be used under appropriate compression bandages or hosiery in chronic venous insufficiency.

Zinc Paste Bandage, BP 1993
Cotton fabric, plain weave, impregnated with suitable paste containing zinc oxide; requires additional bandaging
Excipients: may include cetostearyl alcohol, hydroxybenzoates
Viscopaste (Evolan Pharma AB) PB7 bandage 7.5cm × 6m= £3.72

Zinc Paste and Ichthammol Bandage, BP 1993
Cotton fabric, plain weave, impregnated with suitable paste containing zinc oxide and ichthammol; requires additional bandaging
Excipients: may include cetostearyl alcohol
Ichthopaste (Evolan Pharma AB) bandage 7.5cm × 6m= £3.75

Medicated stocking

Zipzoc
Sterile rayon stocking impregnated with ointment containing zinc oxide 20%
Zipzoc (Evolan Pharma AB) stockings= £34.70

Compression hosiery and garments

Compression (elastic) hosiery is used to treat conditions associated with chronic venous insufficiency, to prevent recurrence of thrombosis, or to reduce the risk of further venous ulceration after treatment with compression bandaging. Doppler testing to confirm arterial sufficiency is required before recommending the use of compression hosiery.
Before elastic hosiery can be dispensed, the quantity (single or pair), article (including accessories), and compression class must be specified by the prescriber. There are different compression values for graduated compression hosiery and lymphoedema garments (see table below). All dispensed elastic hosiery articles must state on the packaging that they conform with Drug Tariff technical specification No. 40, for further details see Drug Tariff.
Graduated Compression hosiery, Class 1 *Light Support* is used for superficial or early varices, varicosis during pregnancy.
Graduated Compression hosiery, Class 2 *Medium Support* is used for varices of medium severity, ulcer treatment and prophylaxis, mild oedema, varicosis during pregnancy.
Graduated Compression hosiery, Class 3 *Strong Support* is used for gross varices, post thrombotic venous insufficiency, gross oedema, ulcer treatment and prophylaxis.
Compression values for hosiery and lymphoedema garments *Class* 1: Compression hosiery (British standard) 14–17 mmHg, lymphoedema garments (European classification) 18–21 mmHg; *Class* 2 Compression hosiery (British standard) 18–24 mmHg, lymphoedema garments (European classification) 23–32 mmHg; *Class* 3 Compression hosiery (British standard) 25–35 mmHg, lymphoedema garments (European classification) 34–46 mmHg; *Class* 4 Compression hosiery (British standard)—not available, lymphoedema garments (European classification) 49–70 mmHg; *Class* 4 *super* Compression hosiery (British standard)—not available, lymphoedema garments (European classification) 60–90 mmHg.

Graduated compression hosiery

Class 1 Light Support
Hosiery, compression at ankle 14–17 mmHg, thigh length or below knee with knitted in heel

Class 2 Light Support
Hosiery, compression at ankle 14–17 mmHg, thigh length or below knee with knitted in heel

Accessories
Suspender
Suspender, for thigh stockings

Anklets
Class 2 Medium Support
Anklets, compression 18–24 mmHg, circular knit (standard and made-to-measure)

Class 3 Strong Support
Anklets, compression 18–24 mmHg, circular knit (standard and made-to-measure)

Knee caps
Class 2 Medium Support
Kneecaps, compression 18–24 mmHg, circular knit (standard and made-to-measure)

Class 3 Strong Support
Kneecaps, compression 18–24 mmHg, circular knit (standard and made-to-measure)

Lymphoedema garments

Lymphoedema compression garments are used to maintain limb shape and prevent additional fluid retention. Either

https://nhathuocngocanh.com/ www.getintopharma.com

flat-bed or circular knitting methods are used in the manufacture of elasticated compression garments. Seamless, circular-knitted garments (in standard sizes) can be used to prevent swelling if the lymphoedema is well controlled and if the limb is in good shape and without skin folds. Flat-knitted garments (usually made-to-measure) with a seam, provide greater rigidity and stiffness to maintain reduction of lymphoedema following treatment with compression bandages. A standard range of light, medium, or high compression garments are available, as well as low compression (12–16 mmHg) armsleeves, made-to-measure garments up to compression 90 mmHg, and accessories—see Drug Tariff for details. Note: There are different compression values for lymphoedema garments and graduated compression hosiery, see Compression hosiery and garments p. 1560.

Dental Practitioners' Formulary

List of Dental Preparations

The following list has been approved by the appropriate Secretaries of State, and the preparations therein may be prescribed by dental practitioners on form FP10D (GP14 in Scotland, WP10D in Wales).
Licensed **sugar-free** versions, where available, are preferred.
Licensed **alcohol-free** mouthwashes, where available, are preferred.

Aciclovir Cream, BP
Aciclovir Oral Suspension, BP, 200 mg/5 mL
Aciclovir Tablets, BP, 200 mg
Aciclovir Tablets, BP, 800 mg
Amoxicillin Capsules, BP
Amoxicillin Oral Powder, DPF
Amoxicillin Oral Suspension, BP
Artificial Saliva Gel, DPF
Artificial Saliva Oral Spray, DPF
Artificial Saliva Pastilles, DPF
Artificial Saliva Protective Spray, DPF
Artificial Saliva Substitutes as listed below (to be prescribed only for indications approved by ACBS (patients suffering from dry mouth as a result of having or, having undergone, radiotherapy or sicca syndrome):
BioXtra® Gel Mouthspray
BioXtra® Moisturising Gel
Glandosane®
Saliveze®
Artificial Saliva Substitute Spray, DPF
Aspirin Tablets, Dispersible, BP
Azithromycin Capsules, 250 mg, DPF
Azithromycin Oral Suspension, 200 mg/5 mL, DPF
Azithromycin Tablets, 250 mg, DPF
Azithromycin Tablets, 500 mg, DPF
Beclometasone Pressurised Inhalation, BP, 50 micrograms/metered inhalation, CFC-free, as:
Clenil Modulite®
Benzydamine Mouthwash, BP 0.15%
Benzydamine Oromucosal Spray, BP 0.15%
Betamethasone Soluble Tablets, 500 micrograms, DPF
Carbamazepine Tablets, BP
Cefalexin Capsules, BP
Cefalexin Oral Suspension, BP
Cefalexin Tablets, BP
Cefradine Capsules, BP
Cetirizine Oral Solution, BP, 5 mg/5 mL
Cetirizine Tablets, BP, 10 mg
Chlorhexidine Gluconate Gel, BP
Chlorhexidine Mouthwash, BP
Chlorhexidine Oral Spray, DPF
Chlorphenamine Oral Solution, BP
Chlorphenamine Tablets, BP
Choline Salicylate Dental Gel, BP
Clarithromycin Oral Suspension, 125 mg/5 mL, DPF
Clarithromycin Oral Suspension, 250 mg/5 mL, DPF
Clarithromycin Tablets, BP
Clindamycin Capsules, BP
Co-amoxiclav Tablets, BP, 250/125 (amoxicillin 250 mg as trihydrate, clavulanic acid 125 mg as potassium salt)
Co-amoxiclav Oral Suspension, BP, 125/31 (amoxicillin 125 mg as trihydrate, clavulanic acid 31.25 mg as potassium salt)/5 mL
Co-amoxiclav Oral Suspension, BP, 250/62 (amoxicillin 250 mg as trihydrate, clavulanic acid 62.5 mg as potassium salt)/5 mL
Diazepam Oral Solution, BP, 2 mg/5 mL
Diazepam Tablets, BP
Diclofenac Sodium Tablets, Gastro-resistant, BP
Dihydrocodeine Tablets, BP, 30 mg
Doxycycline Tablets, Dispersible, BP
Doxycycline Capsules, BP, 100 mg
Doxycycline Tablets, 20 mg, DPF
Ephedrine Nasal Drops, BP
Erythromycin Ethyl Succinate Oral Suspension, BP
Erythromycin Ethyl Succinate Tablets, BP
Erythromycin Stearate Tablets, BP
Erythromycin Tablets, Gastro-resistant, BP
Fluconazole Capsules, 50 mg, DPF
Fluconazole Oral Suspension, 50 mg/5 mL, DPF
Hydrocortisone Cream, BP, 1%
Hydrocortisone Oromucosal Tablets, BP
Hydrogen Peroxide Mouthwash, BP, 6%
Ibuprofen Oral Suspension, BP, sugar-free
Ibuprofen Tablets, BP
Lansoprazole Capsules, Gastro-resistant, BP
Lidocaine Ointment, BP, 5%
Lidocaine Spray 10%, DPF
Loratadine Syrup, 5 mg/5 mL, DPF
Loratadine Tablets, BP, 10 mg
Menthol and Eucalyptus Inhalation, BP 1980
Metronidazole Oral Suspension, BP
Metronidazole Tablets, BP
Miconazole Cream, BP
Miconazole Oromucosal Gel, BP
Miconazole and Hydrocortisone Cream, BP
Miconazole and Hydrocortisone Ointment, BP
Nystatin Oral Suspension, BP
Omeprazole Capsules, Gastro-resistant, BP
Oxytetracycline Tablets, BP
Paracetamol Oral Suspension, BP
Paracetamol Tablets, BP
Paracetamol Tablets, Soluble, BP
Phenoxymethylpenicillin Oral Solution, BP
Phenoxymethylpenicillin Tablets, BP
Promethazine Hydrochloride Tablets, BP
Promethazine Oral Solution, BP
Saliva Stimulating Tablets, DPF
Sodium Chloride Mouthwash, Compound, BP
Sodium Fluoride Mouthwash, BP
Sodium Fluoride Oral Drops, BP
Sodium Fluoride Tablets, BP
Sodium Fluoride Toothpaste 0.619%, DPF
Sodium Fluoride Toothpaste 1.1%, DPF
Sodium Fusidate Ointment, BP
Temazepam Oral Solution, BP
Temazepam Tablets, BP
Tetracycline Tablets, BP

Preparations in this list which are not included in the BP or BPC are described under Details of DPF preparations.
For details of preparations that can be prescribed, see individual entries under the relevant drug monographs throughout the BNF publications.

Details of DPF preparations

Preparations on the List of Dental Preparations which are specified as DPF are described as follows in the DPF.
Although brand names have sometimes been included for identification purposes preparations on the list should be prescribed by non-proprietary name.

Amoxicillin Oral Powder
amoxicillin (as trihydrate) 3 g sachet

https://nhathuocngocanh.com/ www.getintopharma.com

Artificial Saliva Gel
(proprietary product: *Biotene Oralbalance*), lactoperoxidase, lactoferrin, lysozyme, glucose oxidase, xylitol in a gel basis

Artificial Saliva Oral Spray
(proprietary product: *Xerotin*) consists of water, sorbitol, carmellose (carboxymethylcellulose), potassium chloride, sodium chloride, potassium phosphate, magnesium chloride, calcium chloride and other ingredients, pH neutral

Artificial Saliva Pastilles
(proprietary product: *Salivix*), consists of acacia, malic acid, and other ingredients

Artificial Saliva Protective Spray
(proprietary product: *Aquoral*) consists of oxidised glycerol triesters, silicon dioxide, flavouring agents, aspartame

Artificial Saliva Substitute Spray
(proprietary product: *AS Saliva Orthana Spray*) consists of mucin, methylparaben, benzalkonium chloride, EDTA, xylitol, peppermint oil, spearmint oil, mineral salts

Azithromycin Capsules
azithromycin 250 mg

Azithromycin Oral Suspension 200 mg/5 mL
azithromycin 200 mg/5 mL when reconstituted with water

Azithromycin Tablets
azithromycin 250 mg and 500 mg

Betamethasone Soluble Tablets 500 micrograms
betamethasone (as sodium phosphate) 500 micrograms

Chlorhexidine Oral Spray
(proprietary product: *Corsodyl Oral Spray*), chlorhexidine gluconate 0.2%

Clarithromycin Oral Suspension 125 mg/5 mL
clarithromycin 125 mg/5 mL when reconstituted with water

Clarithromycin Oral Suspension 250 mg/5 mL
clarithromycin 250 mg/5 mL when reconstituted with water

Doxycycline Tablets 20 mg
(proprietary product: *Periostat*), doxycycline (as hyclate) 20 mg

Fluconazole Capsules 50 mg
fluconazole 50 mg

Fluconazole Oral Suspension 50 mg/5 mL
(proprietary product: *Diflucan*), fluconazole 50 mg/5 mL when reconstituted with water

Lidocaine Spray 10%
(proprietary product: *Xylocaine Spray*), lidocaine 10% supplying 10 mg lidocaine/spray

Loratadine Syrup 5 mg/5 mL
loratadine 5 mg/5 mL

Saliva Stimulating Tablets
(proprietary product: *SST*), citric acid, malic acid and other ingredients in a sorbitol base

Sodium Fluoride Toothpaste 0.619%
(proprietary product: *Duraphat* '2800 *ppm' Toothpaste*), sodium fluoride 0.619%

Sodium Fluoride Toothpaste 1.1%
(proprietary product: *Duraphat* '5000 *ppm' Toothpaste*), sodium fluoride 1.1%

Nurse Prescribers' Formulary

Nurse Prescribers' Formulary for Community Practitioners

List of preparations approved by the Secretary of State which may be prescribed on form FP10P (form HS21(N) in Northern Ireland, form GP10(N) in Scotland, forms WP10CN and WP10PN in Wales) by Nurses for National Health Service patients.

Community practitioners who have completed the necessary training may only prescribe items appearing in the nurse prescribers' list set out below. Community Practitioner Nurse Prescribers are recommended to prescribe generically, except where this would not be clinically appropriate or where there is no approved generic name.

Medicinal Preparations

Preparations on this list which are not included in the BP or BPC are described under Details of NPF preparations.

Almond Oil Ear Drops, BP
Arachis Oil Enema, NPF
Aspirin Tablets, Dispersible, 300 mg, BP (max. 96 tablets; max. pack size 32 tablets)
Bisacodyl Suppositories, BP (includes 5-mg and 10-mg strengths)
Bisacodyl Tablets, BP
Catheter Maintenance Solution, Sodium Chloride, NPF
Catheter Maintenance Solution, 'Solution G', NPF
Catheter Maintenance Solution, 'Solution R', NPF
Chlorhexidine Gluconate Alcoholic Solutions containing at least 0.05%
Chlorhexidine Gluconate Aqueous Solutions containing at least 0.05%
Choline Salicylate Dental Gel, BP
Clotrimazole Cream 1%, BP
Co-danthramer Capsules, NPF
Co-danthramer Capsules, Strong, NPF
Co-danthramer Oral Suspension, NPF
Co-danthramer Oral Suspension, Strong, NPF
Co-danthrusate Capsules, BP
Co-danthrusate Oral Suspension, NPF
Crotamiton Cream, BP
Crotamiton Lotion, BP
Dimeticone barrier creams containing at least 10%
Dimeticone Lotion, NPF
Docusate Capsules, BP
Docusate Enema, NPF
Docusate Oral Solution, BP
Docusate Oral Solution, Paediatric, BP
Econazole Cream 1%, BP
Emollients as listed below:
- Aquadrate ® 10% w/w Cream
- Arachis Oil, BP
- Balneum ® Plus Cream
- Cetraben ® Emollient Cream
- Dermamist ®
- Diprobase ® Cream
- Diprobase ® Ointment
- Doublebase ®
- Doublebase ® Dayleve Gel
- E45 ® Cream
- E45 ® Itch Relief Cream
- Emulsifying Ointment, BP
- Eucerin ® Intensive 10% w/w Urea Treatment Cream
- Eucerin ® Intensive 10% w/w Urea Treatment Lotion
- Hydromol ® Cream
- Hydromol ® Intensive
- Hydrous Ointment, BP
- Lipobase ®
- Liquid and White Soft Paraffin Ointment, NPF
- Neutrogena ® Norwegian Formula Dermatological Cream
- Nutraplus ® Cream
- Oilatum ® Cream
- Oilatum ® Junior Cream
- Paraffin, White Soft, BP
- Paraffin, Yellow Soft, BP
- Ultrabase ®
- Unguentum M ®

Emollient Bath and Shower Preparations as listed below:
- Aqueous Cream, BP
- Balneum ® (except pack sizes that are not to be prescribed under the NHS (see Part XVIIIA of the Drug Tariff, Part XI of the Northern Ireland Drug Tariff))
- Balneum Plus ® Bath Oil (except pack sizes that are not to be prescribed under the NHS (see Part XVIIIA of the Drug Tariff, Part XI of the Northern Ireland Drug Tariff))
- Cetraben ® Emollient Bath Additive
- Dermalo ® Bath Emollient
- Doublebase ® Emollient Bath Additive
- Doublebase ® Emollient Shower Gel
- Doublebase ® Emollient Wash Gel
- Hydromol ® Bath and Shower Emollient
- Oilatum ® Emollient
- Oilatum ® Gel
- Oilatum ® Junior Bath Additive
- Zerolatum ® Emollient Medicinal Bath Oil

Folic Acid Tablets 400 micrograms, BP
Glycerol Suppositories, BP
Ibuprofen Oral Suspension, BP (except for indications and doses that are prescription-only)
Ibuprofen Tablets, BP (except for indications and doses that are prescription-only)
Ispaghula Husk Granules, BP
Ispaghula Husk Granules, Effervescent, BP
Ispaghula Husk Oral Powder, BP
Lactulose Solution, BP
Lidocaine Ointment, BP
Lidocaine and Chlorhexidine Gel, BP
Macrogol Oral Liquid, Compound, NPF
Macrogol Oral Powder, Compound, NPF
Macrogol Oral Powder, Compound, Half-strength, NPF
Magnesium Hydroxide Mixture, BP
Magnesium Sulfate Paste, BP
Malathion aqueous lotions containing at least 0.5%
Mebendazole Oral Suspension, NPF
Mebendazole Tablets, NPF
Methylcellulose Tablets, BP
Miconazole Cream 2%, BP
Miconazole Oromucosal Gel, BP
Mouthwash Solution-tablets, NPF
Nicotine Inhalation Cartridge for Oromucosal Use, NPF
Nicotine Lozenge, NPF
Nicotine Medicated Chewing Gum, NPF
Nicotine Nasal Spray, NPF
Nicotine Oral Spray, NPF
Nicotine Sublingual Tablets, NPF
Nicotine Transdermal Patches, NPF
Nystatin Oral Suspension, BP
Olive Oil Ear Drops, BP
Paracetamol Oral Suspension, BP (includes 120 mg/5 mL and 250 mg/5 mL strengths—both of which are available as sugar-free formulations)

https://nhathuocngocanh.com/ www.getintopharma.com

Paracetamol Tablets, BP (max. 96 tablets; max. pack size 32 tablets)
Paracetamol Tablets, Soluble, BP (includes 120-mg and 500-mg tablets; max. 96 tablets; max. pack size 32 tablets)
Permethrin Cream, NPF
Phosphates Enema, BP
Povidone–Iodine Solution, BP
Senna Oral Solution, NPF
Senna Tablets, BP
Senna and Ispaghula Granules, NPF
Sodium Chloride Solution, Sterile, BP
Sodium Citrate Compound Enema, NPF
Sodium Picosulfate Capsules, NPF
Sodium Picosulfate Elixir, NPF
Spermicidal contraceptives as listed below:
Gygel ® Contraceptive Jelly
Sterculia Granules, NPF
Sterculia and Frangula Granules, NPF
Titanium Ointment, BP
Water for Injections, BP
Zinc and Castor Oil Ointment, BP
Zinc Oxide and Dimeticone Spray, NPF
Zinc Oxide Impregnated Medicated Bandage, NPF
Zinc Oxide Impregnated Medicated Stocking, NPF
Zinc Paste Bandage, BP 1993
Zinc Paste and Ichthammol Bandage, BP 1993

Appliances and Reagents (including Wound Management Products)

Community Practitioner Nurse Prescribers in England, Wales and Northern Ireland can prescribe any appliance or reagent in the relevant Drug Tariff. In the Scottish Drug Tariff, Appliances and Reagents which may **not** be prescribed by Nurses are annotated **Nx**.

Appliances (including Contraceptive Devices) as listed in Part IXA of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 3 (Appliances) and Part 2 (Dressings) of the Scottish Drug Tariff). (Where it is not appropriate for nurse prescribers in family planning clinics to prescribe contraceptive devices using form FP10(P) (forms WP10CN and WP10PN in Wales), they may prescribe using the same system as doctors in the clinic.)

Incontinence Appliances as listed in Part IXB of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 5 of the Scottish Drug Tariff).

Stoma Appliances and Associated Products as listed in Part IXC of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 6 of the Scottish Drug Tariff).

Chemical Reagents as listed in Part IXR of the Drug Tariff (Part II of the Northern Ireland Drug Tariff, Part 9 of the Scottish Drug Tariff).

The Drug Tariffs can be accessed online at:
National Health Service Drug Tariff for England and Wales: www.ppa.org.uk/ppa/edt_intro.htm
Health and Personal Social Services for Northern Ireland Drug Tariff: www.hscbusiness.hscni.net/services/2034.htm
Scottish Drug Tariff: www.isdscotland.org/Health-topics/Prescribing-and-Medicines/Scottish-Drug-Tariff/

Details of NPF preparations

Preparations on the Nurse Prescribers' Formulary which are not included in the BP or BPC are described as follows in the Nurse Prescribers' Formulary. Although brand names have sometimes been included for identification purposes, it is recommended that non-proprietary names should be used for prescribing medicinal preparations in the NPF except where a non-proprietary name is not available.

Arachis Oil Enema
arachis oil 100%
Catheter Maintenance Solution, Sodium Chloride
(proprietary products: *OptiFlo S; Uro-Tainer Sodium Chloride; Uriflex-S*), sodium chloride 0.9%
Catheter Maintenance Solution, 'Solution G'
(proprietary products: *OptiFlo G; Uro-Tainer Suby G; Uriflex G*), citric acid 3.23%, magnesium oxide 0.38%, sodium bicarbonate 0.7%, disodium edetate 0.01%
Catheter Maintenance Solution, 'Solution R'
(proprietary products: *OptiFlo R; Uro-Tainer Solution R; Uriflex R*), citric acid 6%, gluconolactone 0.6%, magnesium carbonate 2.8%, disodium edetate 0.01%
Chlorhexidine gluconate alcoholic solutions
(proprietary products: *ChloraPrep; Hydrex Solution; Hydrex spray*), chlorhexidine gluconate in alcoholic solution
Chlorhexidine gluconate aqueous solutions
(proprietary product: *Unisept*), chlorhexidine gluconate in aqueous solution
Co-danthramer Capsules PoM
co-danthramer 25/200 (dantron 25 mg, poloxamer '188' 200 mg)
Co-danthramer Capsules, Strong PoM
co-danthramer 37.5/500 (dantron 37.5 mg, poloxamer '188' 500 mg)
Co-danthramer Oral Suspension PoM
(proprietary product: *Codalax*), co-danthramer 25/200 in 5 mL (dantron 25 mg, poloxamer '188' 200 mg/5 mL)
Co-danthramer Oral Suspension, Strong PoM
(proprietary product: *Codalax Forte*), co-danthramer 75/1000 in 5 mL (dantron 75 mg, poloxamer '188' 1 g/5 mL)
Co-danthrusate Oral Suspension PoM
(proprietary product: *Normax*), co-danthrusate 50/60 (dantron 50 mg, docusate sodium 60 mg/5 mL)
Dimeticone barrier creams
(proprietary products *Conotrane Cream*, dimeticone '350' 22%; *Siopel Barrier Cream*, dimeticone '1000' 10%), dimeticone 10–22%
Dimeticone Lotion
(proprietary product: *Hedrin*), dimeticone 4%
Docusate Enema
(proprietary product: *Norgalax Micro-enema*), docusate sodium 120 mg in 10 g
Liquid and White Soft Paraffin Ointment
liquid paraffin 50%, white soft paraffin 50%
Macrogol Oral Liquid, Compound
(proprietary product: *Movicol Liquid*), macrogol '3350' (polyethylene glycol '3350') 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/25 mL
Macrogol Oral Powder, Compound
(proprietary products: *Laxido Orange, Molaxole, Movicol*), macrogol '3350' (polyethylene glycol '3350') 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/sachet; (amount of potassium chloride varies according to flavour of *Movicol* ® as follows: plain-flavour (sugar-free) = 50.2 mg/sachet; lime and lemon flavour = 46.6 mg/sachet; chocolate flavour = 31.7 mg/sachet. 1 sachet when reconstituted with 125 mL water provides K^+ 5.4 mmol/litre)
Macrogol Oral Powder, Compound, Half-strength
(proprietary product: *Movicol-Half*), macrogol '3350' (polyethylene glycol '3350') 6.563 g, sodium bicarbonate 89.3 g, sodium chloride 175.4 mg, potassium chloride 23.3 mg/sachet
Malathion aqueous lotions
(proprietary products: *Derbac-M Liquid*), malathion 0.5% in an aqueous basis
Mebendazole Oral Suspension PoM
(proprietary product: *Vermox*), mebendazole 100 mg/5 mL

https://nhathuocngocanh.com/ www.getintopharma.com

Mebendazole Tablets PoM
(proprietary products: *Ovex, Vermox*), mebendazole 100 mg (can be supplied for oral use in the treatment of enterobiasis in adults and children over 2 years provided its container or package is labelled to show a max. single dose of 100 mg and it is supplied in a container or package containing not more than 800 mg)

Mouthwash Solution-tablets
consist of tablets which may contain antimicrobial, colouring and flavouring agents in a suitable soluble effervescent basis to make a mouthwash

Nicotine Inhalation Cartridge for Oromucosal Use
(proprietary products: *NicAssist Inhalator, Nicorette Inhalator*), nicotine 15 mg (for use with inhalation mouthpiece; to be prescribed as either a starter pack (6 cartridges with inhalator device and holder) or refill pack (42 cartridges with inhalator device)

Nicotine Lozenge
nicotine (as bitartrate) 1 mg or 2 mg (proprietary product: *Nicorette Mint Lozenge, Nicotinell Mint Lozenge*), or nicotine (as resinate) 1.5 mg, 2 mg, or 4 mg (proprietary product: *NiQuitin Lozenges, NiQuitin Minis, NiQuitin Pre-quit*)

Nicotine Medicated Chewing Gum
(proprietary products: *NicAssist Gum, Nicorette Gum, Nicotinell Gum, NiQuitin Gum*), nicotine 2 mg or 4 mg

Nicotine Nasal Spray
(proprietary product: *NicAssist Nasal Spray, Nicorette Nasal Spray*), nicotine 500 micrograms/metered spray

Nicotine Oral Spray
(proprietary product: *Nicorette Quickmist*), nicotine 1 mg/metered spray

Nicotine Sublingual Tablets
(proprietary product: *NicAssist Microtab, Nicorette Microtab*), nicotine (as a cyclodextrin complex) 2 mg (to be prescribed as either a starter pack (2 × 15-tablet discs with dispenser) or refill pack (7 × 15-tablet discs))

Nicotine Transdermal Patches
releasing in each 16 hours, nicotine approx. 5 mg, 10 mg, or 15 mg (proprietary products: *Boots NicAssist Patch, Nicorette Patch*), or releasing in each 16 hours approx. 10 mg, 15 mg, or 25 mg (proprietary products: *NicAssist Translucent Patch, Nicorette Invisi Patch*), or releasing in each 24 hours nicotine approx. 7 mg, 14 mg, or 21 mg (proprietary products: *Nicopatch, Nicotinell TTS, NiQuitin, NiQuitin Clear*) (prescriber should specify the brand to be dispensed)

Permethrin Cream
(proprietary product: *Lyclear Dermal Cream*), permethrin 5%

Senna Oral Solution
(proprietary product: *Senokot Syrup*), sennosides 7.5 mg/5 mL

Senna and Ispaghula Granules
(proprietary product: *Manevac Granules*), senna fruit 12.4%, ispaghula 54.2%

Sodium Citrate Compound Enema
(proprietary products: *Micolette Micro-enema; Micralax Micro-enema; Relaxit Micro-enema*),sodium citrate 450 mg with glycerol, sorbitol and an anionic surfactant

Sodium Picosulfate Capsules
(proprietary products: *Dulcolax Perles*), sodium picosulfate 2.5 mg

Sodium Picosulfate Elixir
(proprietary product: *Dulcolax Liquid*), sodium picosulfate 5 mg/5 mL

Sterculia Granules
(proprietary product: *Normacol Granules*), sterculia 62%

Sterculia and Frangula Granules
(proprietary product: *Normacol Plus Granules*), sterculia 62%, frangula (standardised) 8%

Zinc Oxide and Dimeticone Spray
(proprietary product: *Sprilon*), dimeticone 1.04%, zinc oxide 12.5% in a pressurised aerosol unit

Zinc Oxide Impregnated Medicated Bandage
(proprietary product: *Steripaste*), sterile cotton bandage impregnated with paste containing zinc oxide 15%

Zinc Oxide Impregnated Medicated Stocking
(proprietary product: *Zipzoc*), sterile rayon stocking impregnated with ointment containing zinc oxide 20%

https://nhathuocngocanh.com/ www.getintopharma.com

Non-medical prescribing

Overview

A range of non-medical healthcare professionals can prescribe medicines for patients as either Independent or Supplementary Prescribers.

Independent prescribers are practitioners responsible and accountable for the assessment of patients with previously undiagnosed or diagnosed conditions and for decisions about the clinical management required, including prescribing. They are recommended to prescribe generically, except where this would not be clinically appropriate or where there is no approved non-proprietary name.

Supplementary prescribing is a partnership between an independent prescriber (a doctor or a dentist) and a supplementary prescriber to implement an agreed Clinical Management Plan for an individual patient with that patient's agreement.

Independent and Supplementary Prescribers are identified by an annotation next to their name in the relevant professional register.

Information and guidance on non-medical prescribing is available on the Department of Health website at www.dh.gov.uk/health/2012/04/prescribing-change.

For information on the mixing of medicines by Independent and Supplementary Prescribers, see *Mixing of medicines prior to administration in clinical practice: medical and non-medical prescribing*, National Prescribing Centre, May 2010 (available at www.gov.uk/government/uploads/system/uploads/attachment_data/file/213885/dh_116360.pdf).

For information on the supply and administration of medicines to groups of patients using Patient Group Directions see Guidance on prescribing p. 1.

In order to protect patient safety, the initial prescribing and supply of medicines prescribed should normally remain separate functions performed by separate healthcare professionals.

Nurses

Nurse Independent Prescribers (formerly known as Extended Formulary Nurse Prescribers) are able to prescribe any medicine for any medical condition. Unlicensed medicines are excluded from the Nurse Prescribing Formulary in Scotland.

Nurse Independent Prescribers are able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine hydrochloride p. 449, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction.

Nurse Independent Prescribers must work within their own level of professional competence and expertise.

The Nurse Prescribers' Formulary p. 1564 for Community Practitioners provides information on prescribing.

Pharmacists

Pharmacist Independent Prescribers can prescribe any medicine for any medical condition. This includes unlicensed medicines, subject to accepted clinical good practice.

They are also able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine hydrochloride p. 449, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction.

Pharmacist Independent Prescribers must work within their own level of professional competence and expertise.

Physiotherapists

Physiotherapist Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. They are also allowed to prescribe the following Controlled Drugs: oral or injectable morphine p. 456, transdermal fentanyl p. 451 and oral diazepam p. 340, dihydrocodeine tartrate p. 450, lorazepam p. 335, oxycodone hydrochloride p. 459 or temazepam p. 481.

Physiotherapist Independent Prescribers must work within their own level of professional competence and expertise.

Therapeutic radiographers

Therapeutic Radiographer Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. Therapeutic Radiographer Independent Prescribers must work within their own level of professional competence and expertise.

Optometrists

Optometrist Independent Prescribers can prescribe any licensed medicine for ocular conditions affecting the eye and the tissues surrounding the eye, except Controlled Drugs or medicines for parenteral administration. Optometrist Independent Prescribers must work within their own level of professional competence and expertise.

Podiatrists

Podiatrist Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. They are also allowed to prescribe the following Controlled Drugs for oral administration: diazepam p. 340, dihydrocodeine tartrate p. 450, lorazepam p. 335 and temazepam p. 481.

Podiatrist Independent Prescribers must work within their own level of professional competence and expertise.

Further Information

For further details about the different types of prescribers, see *Medicines, Ethics and Practice*, London, Pharmaceutical Press (always consult latest edition).

Special-order manufacturers

Unlicensed medicines are available from 'special-order' manufacturers and specialist-importing companies; the MHRA maintains a register of these companies at tinyurl.com/cdslke.

Licensed **hospital manufacturing units** also manufacture 'special-order' products as unlicensed medicines, the principal NHS units are listed below. A database (*Pro-File*; www.pro-file.nhs.uk) provides information on medicines manufactured in the NHS; access is restricted to NHS pharmacy staff.

The Association of Pharmaceutical Specials Manufacturers may also be able to provide further information about commercial companies (www.apsm-uk.com).

The MHRA recommends that an unlicensed medicine should only be used when a patient has special requirements that cannot be met by use of a licensed medicine.

As well as being available direct from the hospital manufacturer(s) concerned, many NHS-manufactured Specials may be bought from the Oxford Pharmacy Store, owned and operated by Oxford Health NHS Foundation Trust.

YellowCard

COMMISSION ON HUMAN MEDICINES (CHM)

It's easy to report online at:
www.mhra.gov.uk/yellowcard

MHRA
Regulating Medicines and Medical Devices

REPORT OF SUSPECTED ADVERSE DRUG REACTIONS

If you suspect an adverse reaction may be related to one or more drugs/vaccines/complementary remedies, please complete this Yellow Card. See `Adverse reactions to drugs' section in BNF or **www.mhra.gov.uk/yellowcard** for guidance. Do not be put off reporting because some details are not known.

PATIENT DETAILS

Patient Initials:_____ Sex: M / F Is the patient pregnant? Y / N Ethnicity:_____

Age (at time of reaction):_____ Weight (kg):_____ Identification number (e.g. Practice or Hospital Ref):_____

SUSPECTED DRUG(S)/VACCINE(S)

Drug/Vaccine (Brand if known)	Batch	Route	Dosage	Date started	Date stopped	Prescribed for

SUSPECTED REACTION(S)

Please describe the reaction(s) and any treatment given. (Please attach additional pages if necessary):

Outcome

Recovered ☐
Recovering ☐
Continuing ☐
Other ☐

Date reaction(s) started:_____ Date reaction(s) stopped: _____

Do you consider the reactions to be serious? Yes / No

If yes, please indicate why the reaction is considered to be serious (please tick all that apply):

☐ Patient died due to reaction
☐ Life threatening
☐ Congenital abnormality
☐ Involved or prolonged inpatient hospitalisation
☐ Involved persistent or significant disability or incapacity
Medically significant; please give details: _____

If the reactions were not serious according to the categories above, how bad was the suspected reaction?

☐ Mild ☐ Unpleasant, but did not affect everyday activities ☐ Bad enough to affect everyday activities

https://nhathuocngocanh.com/ www.getintopharma.com

It's easy to report online: www.mhra.gov.uk/yellowcard

OTHER DRUG(S) (including self-medication and complementary remedies)

Did the patient take any other medicines/vaccines/complementary remedies in the last 3 months prior to the reaction? Yes / No

If yes, please give the following information if known:

Drug/Vaccine (Brand if known)	Batch	Route	Dosage	Date started	Date stopped	Prescribed for

Additional relevant information e.g. medical history, test results, known allergies, rechallenge (if performed). For reactions relating to use of a medicine during pregnancy please state all other drugs taken during pregnancy, the last menstrual period, information on previous pregnancies, ultrasound scans, any delivery complications, birth defects or developmental concerns.

Please list any medicines obtained from the internet:

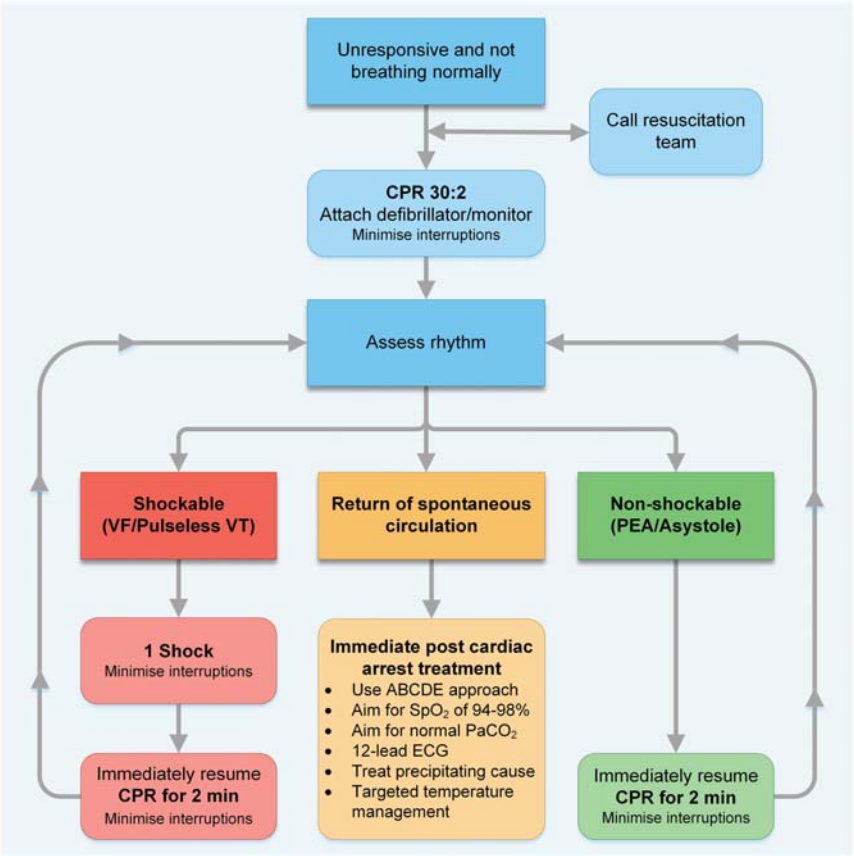
Adult Advanced Life Support Algorithm

Resuscitation Council (UK) GUIDELINES 2015

Adult Advanced Life Support



During CPR

- Ensure high quality chest compressions
- Minimise interruptions to compressions
- Give oxygen
- Use waveform capnography
- Continuous compressions when advanced airway in place
- Vascular access (intravenous or intraosseous)
- Give adrenaline every 3-5 min
- Give amiodarone after 3 shocks

Treat Reversible Causes

- Hypoxia
- Hypovolaemia
- Hypo-/hyperkalaemia/metabolic
- Hypothermia
- Thrombosis - coronary or pulmonary
- Tension pneumothorax
- Tamponade – cardiac
- Toxins

Consider

- Ultrasound imaging
- Mechanical chest compressions to facilitate transfer/treatment
- Coronary angiography and percutaneous coronary intervention
- Extracorporeal CPR

Reproduced with the kind permission of the Resuscitation Council (UK) from Resuscitation Guidelines, 2015

https://nhathuocngocanh.com/ www.getintopharma.com

Medical emergencies in the community

Overview

Drug treatment outlined below is intended for use by appropriately qualified healthcare professionals. Only drugs that are used for immediate relief are shown; advice on supporting care is not given. Where the patient's condition requires investigation and further treatment, the patient should be transferred to hospital promptly.

Acute coronary syndromes

▸ **ANGINA: UNSTABLE**

Aspirin dispersible tablets p. 121 (75 mg, 300 mg)
BY MOUTH (DISPERSED IN WATER OR CHEWED)
- Adult: 300 mg

▸ PLUS

▸ EITHER **Glyceryl trinitrate aerosol spray p. 217** (400 micrograms/metered dose)
SUBLINGUALLY
- Adult: 1–2 sprays, repeated as required

▸ OR **Glyceryl trinitrate tablets** (300 micrograms, 500 micrograms, 600 micrograms)
SUBLINGUALLY
- Adult: 0.3–1 mg, repeated as required

▸ **MYOCARDIAL INFARCTION: NON-ST-SEGMENT ELEVATION**

Treat as for Angina: unstable

▸ **MYOCARDIAL INFARCTION: ST-SEGMENT ELEVATION**

Aspirin dispersible tablets (75 mg, 300 mg)
BY MOUTH (DISPERSED IN WATER OR CHEWED)
- Adult: 300 mg

Glyceryl trinitrate aerosol spray (400 micrograms/metered dose)
SUBLINGUALLY
- Adult: 1–2 sprays, repeated as required

▸ OR **Glyceryl trinitrate tablets** (300 micrograms, 500 micrograms, 600 micrograms)
SUBLINGUALLY
- Adult: 0.3–1 mg, repeated as required

Metoclopramide hydrochloride injection p. 426 (5 mg/mL)
BY INTRAVENOUS INJECTION
- Adult 18–19 years (body-weight up to 60 kg): 5 mg
- Adult 18–19 years (body-weight 60 kg and over): 10 mg
- Adult over 19 years: 10 mg

Diamorphine hydrochloride injection p. 449 (5 mg powder for reconstitution)
BY SLOW INTRAVENOUS INJECTION (1–2 MG/MINUTE)
- Adult: 5 mg followed by a further 2.5–5 mg if necessary
- Elderly or frail patients: reduce dose by half

▸ OR **Morphine sulfate injection p. 456** (10 mg/mL)
BY SLOW INTRAVENOUS INJECTION (1–2 MG/MINUTE)
- Adult: 5–10 mg followed by a further 5–10 mg if necessary
- Elderly or frail patients: reduce dose by half

Oxygen, if appropriate

Airways disease, obstructive

▸ **ASTHMA: ACUTE**

Regard each emergency consultation as being for **severe acute asthma** until shown otherwise; failure to respond adequately **at any time** requires immediate transfer to hospital

▸ EITHER **Salbutamol aerosol inhaler p. 252** (100 micrograms/metered inhalation)
BY AEROSOL INHALATION VIA LARGE-VOLUME SPACER (AND A CLOSE-FITTING FACE MASK IF CHILD UNDER 3 YEARS)
- Adult and child: 2–10 puffs each inhaled separately, repeated every 10–20 minutes or as necessary

▸ OR **Salbutamol nebuliser solution** (1 mg/mL, 2 mg/mL)
BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)
- Child 4 years and below: 2.5 mg every 20–30 minutes or as necessary
- Child 5-11 years: 2.5–5 mg every 20–30 minutes or as necessary
- Child 12-17 years: 5 mg every 20–30 minutes or as necessary
- Adult: 5 mg every 20–30 minutes or as necessary

▸ OR **Terbutaline sulfate nebuliser solution p. 254** (2.5 mg/mL)
BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)
- Child 4 years and below: 5 mg every 20–30 minutes or as necessary
- Child 5-11 years: 5–10 mg every 20–30 minutes or as necessary
- Child 12-17 years: 10 mg every 20–30 minutes or as necessary
- Adult: 10 mg every 20–30 minutes or as necessary

▸ PLUS **(in all cases)**

▸ EITHER **Prednisolone tablets p. 664 (*or* prednisolone soluble tablets)** (5 mg)
BY MOUTH
- Child 11 years and below: 1–2 mg/kg (max. 40 mg) once daily for up to 3 days or longer if necessary; if child has been taking an oral corticosteroid for more than a few days, give prednisolone 2 mg/kg (max. 60 mg) once daily
- Child 12-17 years: 40–50 mg once daily for at least 5 days
- Adult: 40–50 mg once daily for at least 5 days

▸ OR **Hydrocortisone p. 662 (preferably as sodium succinate)**
BY INTRAVENOUS INJECTION
- Child 17 years and below: 4 mg/kg (max. 100 mg) every 6 hours until conversion to oral prednisolone is possible; alternative dose if weight unavailable:
- Child 1 year and below: 25 mg
- Child 2-4 years: 50 mg
- Child 5-17 years: 100 mg
- Adult: 100 mg every 6 hours until conversion to oral prednisolone is possible

High-flow **oxygen** should be given if available (via face mask in children)

Monitor response 15 to 30 minutes after nebulisation; if any signs of acute asthma persist, arrange hospital admission. While awaiting ambulance, repeat **nebulised beta$_2$ agonist** (as above) and give with

https://nhathuocngocanh.com/ www.getintopharma.com

Ipratropium bromide nebuliser solution p. 246 (250 micrograms/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

- Child 11 years and below: 250 micrograms, repeated every 20–30 minutes for the first 2 hours, then every 4–6 hours as necessary
- Child 12-17 years: 500 micrograms every 4–6 hours as necessary
- Adult: 500 micrograms every 4–6 hours as necessary

▸ **CROUP**

Dexamethasone oral solution p. 660 (2 mg/5 mL)

BY MOUTH

- Child 1 month-2 years: 150 micrograms/kg as a single dose

Anaphylaxis

▸ **ANAPHYLAXIS**

Adrenaline/epinephrine injection p. 221 (1 mg/mL (1 in 1000))

BY INTRAMUSCULAR INJECTION

- Child 5 years and below: 150 micrograms (0.15 mL), repeated every 5 minutes if necessary
- Child 6-11 years: 300 micrograms (0.3 mL), repeated every 5 minutes if necessary
- Child 12-17 years: 500 micrograms (0.5 mL), repeated every 5 minutes if necessary; 300 micrograms (0.3 mL) should be given if child is small or prepubertal
- Adult: 500 micrograms (0.5 mL), repeated every 5 minutes if necessary

High-flow **oxygen** and **intravenous fluids** should be given as soon as available.

Chlorphenamine maleate injection p. 283

BY INTRAMUSCULAR OR INTRAVENOUS INJECTION

May help counter histamine-mediated vasodilation and bronchoconstriction.

Hydrocortisone(preferably as sodium succinate)

BY INTRAVENOUS INJECTION

Has delayed action but should be given to severely affected patients to prevent further deterioration.

Bacterial infection

▸ **MENINGOCOCCAL DISEASE**

Benzylpenicillin sodium injection p. 537 (600 mg, 1.2 g)

BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)

- Neonate: 300 mg
- Child 1 month-11 months: 300 mg
- Child 1-9 years: 600 mg
- Child 10-17 years: 1.2 g
- Adult: 1.2 g

NOTE A single dose should be given before urgent transfer to hospital, so long as this does not delay the transfer.

▸ OR **if history of allergy to penicillin**

Cefotaxime injection p. 519 (1 g)

BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)

- Neonate: 50 mg/kg
- Child 1 month-11 years: 50 mg/kg (max. 1 g)
- Child 12-17 years: 1 g
- Adult: 1 g

NOTE A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

▸ OR **if history of immediate hypersensitivity reaction (including anaphylaxis, angioedema, urticaria, or rash immediately after administration) to penicillin or to cephalosporins**

Chloramphenicol injection p. 558 (1 g)

BY INTRAVENOUS INJECTION

- Child: 12.5–25 mg/kg
- Adult: 12.5–25 mg/kg

NOTE A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

See also Central nervous system infections, antibacterial therapy p. 504.

Hypoglycaemia

▸ **DIABETIC HYPOGLYCAEMIA**

Glucose or sucrose

BY MOUTH

- Adult and child over 2 years: approx. 10–20 g (110–220 mL *Lucozade® Energy Original or* 100–200 mL *Coca-Cola®*—both non-diet versions *or* 2–4 teaspoonfuls of sugar *or* 3–6 sugar lumps) repeated after 10–15 minutes if necessary

▸ OR **if hypoglycaemia unresponsive *or* if oral route cannot be used**

Glucagon injection p. 707 (1 mg/mL)

BY SUBCUTANEOUS OR INTRAMUSCULAR INJECTION

- Child body-weight up to 25 kg: 500 micrograms (0.5 mL)
- Child body-weight 25 kg and over: 1 mg (1 mL)
- Adult: 1 mg (1 mL)

▸ OR **if hypoglycaemia prolonged *or* unresponsive to glucagon after 10 minutes**

Glucose intravenous infusion p. 1009 (10%)

BY INTRAVENOUS INJECTION INTO LARGE VEIN

- Child: 5 mL/kg (glucose 500 mg/kg)

Glucose intravenous infusion (20%)

BY INTRAVENOUS INJECTION INTO LARGE VEIN

- Adult: 50 mL

Seizures

▸ **CONVULSIVE (INCLUDING FEBRILE) SEIZURES LASTING LONGER THAN 5 MINUTES**

▸ EITHER **Diazepam rectal solution p. 340** (2 mg/mL, 4 mg/mL)

BY RECTUM

- Neonate: 1.25–2.5 mg, repeated once after 10–15 minutes if necessary
- Child 1 month-1 year: 5 mg, repeated once after 10–15 minutes if necessary
- Child 2-11 years: 5–10 mg, repeated once after 10–15 minutes if necessary
- Child 12-17 years: 10–20 mg, repeated once after 10–15 minutes if necessary
- Adult: 10–20 mg, repeated once after 10–15 minutes if necessary
- Elderly: 10 mg, repeated once after 10–15 minutes if necessary

▸ OR **Midazolam oromucosal solution p. 336**

BY BUCCAL ADMINISTRATION, REPEATED ONCE AFTER 10 MINUTES IF NECESSARY

- Neonate: 300 micrograms/kg [unlicensed]
- Child 1-2 months: 300 micrograms/kg (max. 2.5 mg) [unlicensed]
- Child 3 months-11 months: 2.5 mg
- Child 1-4 years: 5 mg
- Child 5-9 years: 7.5 mg
- Child 10-17 years: 10 mg
- Adult: 10 mg [unlicensed]

Approximate Conversions and Units

Conversion of pounds to kilograms

lb	kg
1	0.45
2	0.91
3	1.36
4	1.81
5	2.27
6	2.72
7	3.18
8	3.63
9	4.08
10	4.54
11	4.99
12	5.44
13	5.90
14	6.35

Conversion of stones to kilograms

stones	kg
1	6.35
2	12.70
3	19.05
4	25.40
5	31.75
6	38.10
7	44.45
8	50.80
9	57.15
10	63.50
11	69.85
12	76.20
13	82.55
14	88.90
15	95.25

Conversion from millilitres to fluid ounces

mL	fl oz
50	1.8
100	3.5
150	5.3
200	7.0
500	17.6
1000	35.2

Length

1 metre (m) = 1000 millimetres (mm)
1 centimetre (cm) = 10 mm
1 inch (in) = 25.4 mm
1 foot (ft) = 12 inches
12 inches = 304.8 mm

Mass

1 kilogram (kg) = 1000 grams (g)
1 gram (g) = 1000 milligrams (mg)
1 milligram (mg) = 1000 micrograms
1 microgram = 1000 nanograms
1 nanogram = 1000 picograms

Volume

1 litre = 1000 millilitres (mL)
1 millilitre (1 mL) = 1000 microlitres
1 pint ≈ 568 mL

Other units

1 kilocalorie (kcal) = 4186.8 joules (J)
1000 kilocalories (kcal) = 4.1868 megajoules (MJ)
1 megajoule (MJ) = 238.8 kilocalories (kcal)
1 millimetre of mercury (mmHg) = 133.3 pascals (Pa)
1 kilopascal (kPa) = 7.5 mmHg (pressure)

Plasma-drug concentrations

Plasma-drug concentrations in BNF publications are expressed in mass units per litre (e.g. mg/litre). The approximate equivalent in terms of amount of substance units (e.g. micromol/litre) is given in brackets.

Prescribing for children: weight, height, and gender

The table below shows the **mean values** for weight, height, and gender by age; these values have been derived from the UK-WHO growth charts 2009 and UK1990 standard centile charts, by extrapolating the 50th centile, and may be used to calculate doses in the absence of measurements. However, an individual's weight and height might vary considerably from the values in the table and it is important to ensure that the value chosen is appropriate. In most cases the actual measurement should be obtained as soon as possible and the dose re-calculated.

Age	Weight (kg)	Height (cm)
Full-term neonate	3.5	51
1 month	4.3	55
2 months	5.4	58
3 months	6.1	61
4 months	6.7	63
6 months	7.6	67
1 year	9	75
3 years	14	96
5 years	18	109
7 years	23	122
10 years	32	138
12 years	39	149
14 year old boy	49	163
14 year old girl	50	159
Adult male	68	176
Adult female	58	164

Recommended wording of cautionary and advisory labels

For details including Welsh Language translation see p. 1534

1 Warning: This medicine may make you sleepy

2 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol

3 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines

4 Warning: Do not drink alcohol

5 Do not take indigestion remedies 2 hours before or after you take this medicine

6 Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine

7 Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine

8 Warning: Do not stop taking this medicine unless your doctor tells you to stop

9 Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop

10 Warning: Read the additional information given with this medicine

11 Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds

12 Do not take anything containing aspirin while taking this medicine

13 Dissolve or mix with water before taking

14 This medicine may colour your urine. This is harmless

15 Caution: flammable. Keep your body away from fire or flames after you have put on the medicine

16 Dissolve the tablet under your tongue—do not swallow. Store the tablets in this bottle with the cap tightly closed. Get a new supply 8 weeks after opening

17 Do not take more than... in 24 hours

18 Do not take more than... in 24 hours. Also, do not take more than... in any one week

19 Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink alcohol

21 Take with or just after food, or a meal

22 Take 30 to 60 minutes before food

23 Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food

24 Suck or chew this medicine

25 Swallow this medicine whole. Do not chew or crush

26 Dissolve this medicine under your tongue

27 Take with a full glass of water

28 Spread thinly on the affected skin only

29 Do not take more than 2 at any one time. Do not take more than 8 in 24 hours

30 Contains paracetamol. Do not take anything else containing paracetamol while taking this medicine. Talk to a doctor at once if you take too much of this medicine, even if you feel well

32 Contains aspirin. Do not take anything else containing aspirin while taking this medicine

Latin abbreviations

Directions should be in English without abbreviation. However, Latin abbreviations have been used when prescribing.

The following is a list of appropriate abbreviations. It should be noted that the English version is not always an exact translation.

a. c. = ante cibum (before food)
b. d. = bis die (twice daily)
o. d. = omni die (every day)
o. m. = omni mane (every morning)
o. n. = omni nocte (every night)
p. c. = post cibum (after food)
p. r. n. = pro re nata (when required)
q. d. s. = quater die sumendum (to be taken four times daily)
q. q. h. = quarta quaque hora (every four hours)
stat = immediately
t. d. s. = ter die sumendum (to be taken three times daily)
t.i.d. = ter in die (three times daily)

E numbers

The following is a list of common E numbers and the inactive ingredients to which they correspond.

E102	Tartrazine
E211	Sodium Benzoate
E104	Quinoline Yellow
E223	Sodium Metabisulfite
E110	Sunset Yellow FCF
E320	Butylated Hydroxyanisole
E123	Amaranth
E321	Butylated Hydroxytoluene
E124	Ponceau 4R
E322	Lecithins
E127	Erythrosine BS
E420	Sorbitol
E132	Indigo Carmine
E421	Mannitol
E142	Green S
E422	Glycerol
E171	Titanium Dioxide
E901	Beeswax (white and yellow)
E172	Iron oxides, iron hydroxides
E1520	Propylene Glycol
E200	Sorbic Acid
